
Dictionary of Mining, Mineral, and Related Terms

Second Edition

Dictionary of Mining, Mineral, & Related Terms

Compiled and edited

by the Staff of

the U.S. Bureau of Mines

Second Edition

U.S. DEPARTMENT OF THE INTERIOR

1996

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

U.S. DEPARTMENT OF THE INTERIOR

Bruce Babbitt, Secretary

U.S. BUREAU OF MINES

Rhea Lydia Graham, Director

FOREWORD

The need for a revised mining dictionary is obvious when one considers the technological advances, environmental regulations, and other changes that have occurred since the Bureau's previous mining dictionaries were published. The Bureau had pioneered efforts in this field, beginning in 1918 with Fay's "Glossary of the Mining and Minerals Industry," and continuing to the 1968 publication "A Dictionary of Mining, Minerals, and Related Terms."

To develop a modern mining dictionary, the U.S. Bureau of Mines initiated a collaborative project with the American Geological Institute. The Bureau's staff, the Institute's staff and members, and many minerals experts throughout the Nation contributed their expertise to this work. In the 5-year project's final phase, more than 100

Bureau personnel were involved in the technical review and publication production process. I would like to thank all those who assisted in producing this new mining dictionary, especially the Dictionary Revision Group members and the Bureau's engineers, scientists, and editors.

The CD-ROM version of the Dictionary Revision is one of the last publications of the U.S. Bureau of Mines. Although the agency is closing, the Bureau's minerals information functions will transfer to the U.S. Geological Survey.

I believe this new dictionary will benefit the Nation by continuing one of the Bureau of Mines important missions, that of providing information on minerals, the building blocks of our modern society, and mining, one of the world's oldest industries.

Rhea Lydia Graham
Director
January 1996

PREFACE

Technological developments and environmental laws and regulations that affect mining have proliferated during the past 25 years. Concurrently, the need for a modern mining dictionary has grown--one that incorporates not only standard mining-related terms but also terms in peripheral areas, such as the environment, pollution, automation, health and safety. The new edition of the Dictionary of Mining and Mineral Related Terms is the culmination of a 5-year effort between the U.S. Bureau of Mines and the American Geological Institute (USBM CONTRACT NUMBER J0101017) that will serve the needs of those engaged in minerals-related activities. It is organized to aid the user in appreciating the essential role that minerals and their products play in our quality of life.

The Bureau's development of mining dictionaries dates back to Albert Fay's *Glossary of the Mining and Mineral Industry*, which first appeared in December 1918. That glossary contained about 18,000 terms. In 1968, the Bureau published *A Dictionary of Mining, Mineral, and Related Terms*, edited by Paul W. Thrush, with about 55,000 terms. The 1968 dictionary contained many new mining terms and terms from such related areas as metallurgy, ceramics, and glassmaking. That edition was as complete as possible with regard to technical and regional terms, historical terms, foreign terms that attained general usage in the United States, and terminology from the entire English-speaking world. For the past three decades that work has stood as the definitive authority on mineral-related terms.

The 1996 edition reflects a departure from the previous one in scope and in format. This edition, containing some 28,500 terms, is not meant to be exhaustive in its coverage. It focuses on mining-related terms and excludes such related categories as ceramics, glass, metallurgy, petroleum, and other specialized disciplines. Geological terms which relate to mining are included, as are minerals which have a commercial value or which are

associated with such minerals. Many chemicals and materials that are not usually connected with mining or minerals processing do not appear, nor do the chemical elements unless they are classified as minerals. Abbreviations and acronyms have largely been excluded, because they usually are explained and defined within the context of an individual report. The front material, however, includes a list of abbreviations used in the definitions. New terms on marine mining, leaching, and automation appear in this edition as do a plethora of pollution and environmental terms, many of which have a legal definition based on law or regulation.

The task of deciding which terms should be deleted from this edition, how to ensure the collection of new terms since 1968, and how to cull terms for inclusion was formidable. Terms from the 1968 edition were categorized by computer, and each category was reviewed by at least one subject specialist. The reviewers judged which terms should be retained or deleted, and they revised definitions as necessary and defined new terms. Final judgment on the inclusion of existing terms or the addition of new ones was left to the collective discretion of a panel of experts called the Dictionary Review Group. This group also examined the Society of Mining Engineers' *Mining Engineering Handbook*, 1993 edition, to ensure that the most modern terms and their definitions would be considered.

ACKNOWLEDGMENTS

Specialists in many aspects of mining have volunteered their help in bringing the widely used "Dictionary of Mining, Mineral, and Related Terms" up to date, by reviewing definitions, adding new terms, recommending corrections, and citing references. Hundreds of specialists contributed to the new edition. The mining and minerals community owes special gratitude to the members of the Dictionary Revision Group: Robert L. Bates; V. A. Cammarota; M. Elizabeth Clare; John DeYoung, Jr.; James F. Donahue; Charles D. Hoyt; Tim O'Neil; Eugene Palowitch; John W. Padan; Gloria Ruggiero; Al Schreck; Robert Tuchman; and Dirk Van Zyl.

ABBREVIATIONS

Abbreviations of certain terms, place names, and units of measure are used in the definitions as follows:

Abbrev.	abbreviation
adj.	adjective
Ant.	antonym
CF:	compare
e.g.	for example

esp.	especially
et al.	and others
etc.	and so forth
Etymol.	etymology
i.e.	that is
Pl.	plural
Pron.	pronunciation
q.v.	which see
Sing.	singular
sp gr	specific gravity
specif.	specifically
Syn: or syn.	synonym
v. or V.	verb
var.	variant

Place names	
Arg	Argentina.
Aust	Australia.
Belg	Belgium.
Berks	Berkshire, England.
Bol	Bolivia.
Braz	Brazil.
Brist	Bristol Coalfield, England.
Can	Dominion of Canada.
Cent. Am	Central America.
Ches	Cheshire, England.

Clev	Cleveland iron district, England.
Colom	Republic of Colombia.
Corn	Cornwall, England.
Cumb	Cumberland Coalfield, England.
Derb	Derbyshire Coalfield, England.
Dev	Devonshire, England.
E. Ind	East Indies.
Eng	England.
Forest of Dean	Forest of Dean Coalfield, England.
Fr	French.
Ger	German.
Gr. Brit	Great Britain.
Glouc	Gloucestershire Coalfield, England.
Hid	Hidalgo, Mex.
Hind	Hindustan.
Ire	Ireland.
It	Italian.
Kent	Kent, England.
Lanc	Lancashire Coalfield, England.
Leic	Leicestershire, England.
Mex	Mexico.
Mid	Midland Coalfield, England.
Newc	Newcastle Coalfield, England.
N.S.W.	New South Wales, Australia.
N.Z.	New Zealand.

Norf	Norfolk, England.
N. of Eng	North of England.
N. Staff	North Staffordshire Coalfield, England.
Northumb	Northumberland Coalfield, England.
N. Wales	North Wales.
Pac	Pacific Coast, U.S.A.
Pat	Patagonia, South America.
Port	Portuguese (mostly in Brazil).
Prov	Provincial, United States, unless otherwise specified.
Pr	Prussian.
Russ	Russia.
Scot	Scotland.
Shrop	Shropshire, England.
S. Afr	Republic of South Africa.
S. Am	South America.
S. Staff	South Staffordshire, England.
S. Wales	South Wales, Great Britain.
Som	Somerset, England.
Sp	Spanish origin but not necessarily used in Spain.
Sp Am	Spanish America.
Staff	Staffordshire, England.
Suff	Suffolk, England.
Sw	Swedish.
Trans	Transvaal, Republic of South Africa.
U.K.	United Kingdom of Great Britain and Northern Ireland.

U.S.	United States of America.
U.S.S.R.	Former Union of Soviet Socialist Republics.
Venez	Venezuela.
W. Afr	West Africa.
War	Warwickshire, England.
York	Yorkshire, England.

Units of Measure

Abbreviations for Compound Units

Two types of compound unit abbreviations are common.

1. In the metric system, many units comprise a basic unit, such as "m" (meter) modified by a prefix that acts as a "power of ten" multiplier. Thus "cm" is a "centi" "meter", one-hundredth of a meter or 10^2 meter.

Several compound metric units are widely used in this volume:

µm *	micrometer(s)
cm	centimeter(s)
kJ	kilojoule(s)
km	kilometer(s)

kPa	kilopascal(s)
MJ	megajoule(s)
mL	milliliter(s)
mm	millimeter(s)
mPa	megapascal(s)
* No Greek letter symbols appear	

2. Complex units are developed by multiplying or dividing units. The metric units for momentum, for example, are kg-m/s, which is read Newton meters per second.

Abbreviations for Units of Measure

degrees C	degrees Celsius
degrees F	degrees Fahrenheit
A	ampere(s)
atm	standard atmosphere
AU	astronomical unit
bbl	barrel(s)
Bcf	billion cubic feet (gas flow)
Bcfd	billion cubic feet per day (gas flow)
Bcfy	billion cubic feet per year (gas flow)
Btu	British thermal unit(s)
Bunit	billion unit(s)
c	cycle(s)
c	centi (one-hundredth); prefix only
C	coulomb(s)
cal	calorie(s)
cd	candela(s)

Ci	curie(s)
cmil	circular mil
cp	candlepower
cpm	count(s) per minute
cps	count(s) per second
d	day(s)
d	deci (one-tenth); prefix only
D	darcy(s)
dB	decibel(s)
dyn	dyne(s)
eV	electron volt(s)
F	fermi(s)
F	farad(s)
fc	footcandle(s)
fl oz	fluid ounce(s)
ft	foot/feet
ft/s	foot/feet per second
ft ²	square foot/feet
ft-lbf	foot pound(s) (force)
g	gram(s)
g, G	Gal (gravity constant)
G	giga (one billion); prefix only
gal	gallon(s)
Gs	gauss
h	hour(s)

ha	hectare(s)
H.E.	high explosive(s)
hp	horsepower
hp-h	horsepower hour
Hz	cycle(s) per second
in Hg	inch(es) of mercury
in	inch(es)
in H ₂ O	inch(es) of water
J	joule(s)
k	kilo (one thousand); prefix only
K	kelvin
l	liter(s)
L	liter(s) (preferred form)
L	lambert(s)
lb	pound(s)
lbf	pound(s) force
lbf-ft	pound(s) force foot
lt	long ton(s)
m	meter
m	milli (one-thousandth); prefix only
M	mega (one million)
Mcf	thousand cubic feet (gas flow)
Mcfd	thousand cubic feet per day
mho	mho(s)
mi	mile(s)

mil	thousandth of an inch
MMbbl	million barrels
MMcf	million cubic feet (gas flow)
MMcfd	million cubic feet per day (gas flow)
MMcfy	million cubic feet per year (gas flow)
mol	mole(s)
mol wt	mole weight
mol %	mole percent
mpg	mile(s) per gallon
mph	mile(s) per hour
Mx	maxwell(s)
n	nano (one-billionth); prefix only
n	refractive index
N	Newton(s)
nmi	nautical mile(s)
Oe	oersted(s)
ohm-cmil/ft	ohm circular mil per foot
oz	ounce(s)
p	pico (one-trillionth); prefix only
P	poise(s)
Pa	pascal(s)
pct	percent
ppb	part(s) per billion
ppm	part(s) per million
psi	pound(s) (force) per square inch

psia	pound(s) force per square inch, absolute
psig	pound(s) force per square inch, gauge
r	revolution(s)
R	roentgen(s)
rad	radian(s)
rpm	revolutions per minute
s	second(s)
S	siemens(s)
sr	steradian(s)
st	stere(s)
st	short ton(s)
St	stokes
std ft ³	standard cubic foot/feet
t	metric ton(s)
t/w-h	metric ton(s) per worker hour
t/w-d	metric ton(s) per worker day
T	tesla(s)
tr oz	troy ounce(s)
unit ⁻¹	reciprocal unit
unit ²	square unit (or unit squared)
unit ³	cubic unit
W	watt(s)
Wb	weber(s)
wt %, wt pct	weight percent
yd	yard(s)

yr	year(s)

A

a

a. Symbol in structural petrology for the direction of tectonic transport, similar to the direction in which cards might slide over one another. Striations in a slickensided surface are parallel to direction a. *AGI* b. A crystallographic axis: In the isometric system each axis is designated a; in hexagonal, tetragonal, and trigonal systems the nonunique axes are a; in the orthorhombic system a is always shorter than b with c either the longest or the shortest axis; in the monoclinic and triclinic systems a may be determined by one of several conventions.

aa

A Hawaiian term for lava consisting of a rough assemblage of clinkerlike scoriaceous masses. It is contrasted with pahoehoe used to designate the smoother flows. Pron. ah-ah. *Fay; Hess*

a axis

a. One of the three crystallographic axes used as reference in crystal description. It is oriented horizontally, front to back. b. One of the three reference axes used in describing a rock fabric possessing monoclinic symmetry, such as progressive simple shear. The a axis is the direction of tectonic transport, i.e., the direction of shear. Syn: [a direction](#). CF: [b axis](#); [c axis](#).

abandoned mine

See: [abandoned workings](#)

abandoned workings

Excavations, either caved or sealed, that are deserted and in which further mining is not intended and open workings that are not ventilated and inspected regularly. Syn: [abandoned mine](#). *Federal Mine Safety*

abandonment

Abandonment of a mining claim may be by failure to perform work, by conveyance, by absence, and by lapse of time. The abandonment of a mining claim is a question of intent. To constitute an abandonment of a mining claim, there must be a going away and a

relinquishment of rights, with the intention never to return and with a voluntary and independent purpose to surrender the location or claim to the next comer. CF: [forfeiture](#)

Abbe jar

In mineral processing, a porcelain jar used for laboratory batch grinding tests in ceramic ware. *Pryor, 1*

Abbe refractometer

An instrument to determine the index of refraction of a liquid between two high-index glass prisms. CF: [refractometer](#)

Abbe theory

The visibility of an object under the microscope is directly proportional to the wavelength of light, and inversely to the aperture of lens. *Pryor, 3*

Abbe tube mill

A gear-driven tube mill supported on a pair of riding rings and distinguished by an Archimedes spiral, through which the ore is fed and discharged. Grinding is effected by flint pebbles fed into the mill. See also: [ball mill](#)

ABC system

A method of seismic surveying by which the effect of irregular weathering thickness may be determined by a simple calculation from reciprocal placement of shotholes and seismometers. The method was originally used to solve refraction problems arising from irregularities in the top of the high-velocity layer. *AGI*

Abel's reagent

Etching agent consisting of 10% chromium trioxide in water. Used in the analysis of carbon steels. *Bennett*

abernathyite

A tetragonal mineral, $K(UO_2)(AsO_4) \cdot 4H_2O$; in small yellow crystals; in the Temple Mountains, UT.

aberration

a. The failure of a lens or mirror to bring the light rays to the same focus. When aberration is due to the form of the lens or mirror, it is called spherical aberration. When

due to the different refrangibility of light of different colors, it is called chromatic aberration. When present in magnifiers it often causes inaccurate decisions as to flawlessness or color of gems. b. Distortion produced by a lens. It is spherical if a flat image appears closer to the viewer in the middle than toward the edges of the field of view. It is chromatic if the visible spectrum is spread to give both a red and a blue image. CF: [achromatic](#); [aplanatic lens](#); [aplanachromatic lens](#). See also: [chromatic aberration](#)

abime

A large, steep-sided vertical shaft opening at the surface of the ground. *AGI*

ablation breccia

See: [solution breccia](#)

A.B. Meco-Moore

A bulky machine that cuts a deep web of coal up to 6 ft (1.8 m) and is used in cyclic mining in medium to thick seams. It runs on the floor of the seam and does not require a prop-free front. It carries two horizontal jibs, one cutting at floor level and the other at a height depending on seam conditions. *Nelson*

Abney level

A surveying instrument for taking levels up steep slopes; also used as a clinometer. *Hammond*

abnormal place

A working place in a coal mine with adverse geological or other conditions and in which the miner is unable to earn a wage, based on the pricelist, equal to or above the minimum wage. A term generally associated with stalls or pillar methods of working. *Nelson*

abraser

A device for assessing the wear resistance of surfaces. The specimen to be tested is rubbed alternately by the flat faces of two weighted abrasive wheels that revolve in opposite directions through frictional contact with the specimen and exert a combined abrasive, compressive, and twisting action twice in each revolution of the specimen holder. *Osborne*

abrasion

a. The mechanical wearing away of rock surfaces by friction and impact of rock particles transported by wind, ice, waves, running water, or gravity. Syn: [corrasion](#) b. The wearing

away of diamonds, drill-bit matrices, and drill-stem equipment by frictional contact with the rock material penetrated or by contact with the cuttings produced by the action of the drill bit in drilling a borehole. *Long*

abrasion hardness

Hardness expressed in quantitative terms or numbers indicating the degree to which a substance resists being worn away by frictional contact with an abrasive material, such as silica or carborundum grits. Also called abrasion resistance; wear resistance. *Long*

abrasion index

The percentage of a specially prepared 3-in by 2-in (76-mm by 51-mm) sample of coke remaining on a 1/8-in (3.2-mm) mesh British Standards test sieve after the sample of coke has been subjected to a standardized abrasion procedure in a rotating drum. *BS, I*

abrasive

a. Any natural or artificial substance suitable for grinding, polishing, cutting, or scouring. Natural abrasives include diamond, emery, garnet, silica sand, diatomite, and pumice; manufactured abrasives include esp., silicon carbide, fused alumina, and boron nitride. *AGI* b. Tending to abrade or wear away. *AGI*

abrasive blasting respirator

A respirator designed to protect the wearer from inhalation or impact of, and abrasion by, materials used or generated in abrasive blasting. *ANSI*

abrasive formation

A rock consisting of small, hard, sharp-cornered, angular fragments, or a rock, the cuttings from which, produced by the action of a drill bit, are hard, sharp-cornered, angular grains, which grind away or abrade the metal on bits and drill-stem equipment at a rapid rate. Syn: [abrasive ground](#). *Long*

abrasive ground

See: [abrasive formation](#)

abrasive hardness test

Test employing a rotating abrasive wheel or plate against which specimens are held. The specimens are abraded for a given number of revolutions, and the weight of material lost is a measure of the abrasive hardness. *Lewis*

abraum salts

See: [abraumsalze](#)

abraumsalze

Ger. Mixed sulfates and chlorides of potassium, sodium, and magnesium overlying the rock salt in the Stassfurt salt deposits. Syn: [abraum salts](#); [stripping salt](#). *Holmes, 2*

abriachanite

An earthy, amorphous variety of crocidolite asbestos. *Dana, 1*

absolute

a. In chemistry, free from impurity or admixture. *Hess* b. In physics, not dependent on any arbitrary standard. *Hess* c. Frequently used in the trades to indicate a thing as being perfect or exact. Abbrev. abs. *Crispin*

absolute age

The geologic age of a fossil organism, rock, or geologic feature or event given in units of time, usually years. Commonly used as a syn. of isotopic age or radiometric age, but may also refer to ages obtained from tree rings, varves, etc. Term is now in disfavor as it implies a certainty or exactness that may not be possible by present dating methods; i.e., two absolute ages for the same pluton may disagree by hundreds of millions of years. CF: [relative age](#)

absolute atmosphere

An absolute unit of pressure equal to 1 million times the pressure produced on 1 cm² by the force of 1 dyn. *Fay*

absolute bulk strength

A measure of available energy per unit volume of explosive. Syn: [bulk strength](#)

absolute chronology

Geochronology in which the time-order is based on absolute age, usually measured in years by radiometric dating, rather than on superposition and/or fossil content as in relative chronology. *AGI*

absolute daily range

During the 24 h of the day the difference between the maximum easterly and maximum westerly values of the magnetic declination at any point. *Mason*

absolute humidity

The content of water vapor in air, expressed as the mass of water per unit volume of air. CF: [relative humidity](#)

absolute isohypse

A line that has the properties of both constant pressure and constant height above mean sea level. Therefore, it can be any contour line on a constant-pressure chart, or any isobar on a constant-height chart. *Hunt*

absolute ownership

In law, an unqualified title to property and the unquestioned right to immediate and unconditional possession thereof. Applies to mining claims and properties. *Standard, 2; Hess*

absolute permeability

A measure of possible flow of a standard liquid under fixed conditions through a porous medium when there is no reaction between the liquid and the solids. This measure is arbitrarily taken for isothermal viscous flow. It can be duplicated with gases if tests are so conducted that extrapolation to infinite pressure can be made; specific permeability. *Hess*

absolute potential

True potential difference between a metal and the solution in which it is immersed. *Pryor, 3*

absolute pressure

a. Total pressure at a point in a fluid equaling the sum of the gage pressure and the atmospheric pressure. *Webster 3rd* b. Pressure measured with respect to zero pressure, in units of force per unit of area. *CTD*

absolute roof

The entire mass of strata overlying a coal seam or a subsurface point of reference. See also: [nether roof](#)

absolute scale

See: [Kelvin temperature scale](#)

absolute temperature

Temperature reckoned from absolute zero. See also: [temperature](#). *Handbook of Chemistry and Physics*, 2

absolute time

Geologic time measured in terms of years by radioactive decay of elements. CF: [relative time](#)

absolute viscosity

See: [viscosity coefficient](#)

absolute weight strength

A measure of available energy per gram of explosive. Syn: [weight strength](#)

absolute zero

The temperature at which a gas would show no pressure if the general law for gases would hold for all temperatures. It is equal to -273.16 degrees C or -459 degrees F. CF: [temperature](#). *Handbook of Chemistry and Physics*, 2

absorbed water

Water held mechanically in a soil mass and having physical properties not substantially different from those of ordinary water at the same temperature and pressure. *ASCE*

absorbent formation

A rock or rock material, which, by virtue of its dryness, porosity, or permeability, has the ability to drink in or suck up a drilling liquid, as a sponge absorbs water. Syn: [absorbent ground](#)

absorbent ground

See: [absorbent formation](#)

absorbents

Substances, such as wood meal and wheat flour, that are forms of low explosive when mixed with metallic nitrates and tend to reduce the blasting power of the explosives, making them suitable for coal blasting. *Cooper*

absorber

a. An apparatus in which gases are brought into intimate contact with an extended surface of an absorbing fluid so that they enter rapidly into solution. *Hess* b. The resistance and capacitance in series that is placed across a break in an electrical circuit in order to damp any possible oscillatory circuit and would tend to maintain an arc or spark when a current is interrupted. Syn: [spark absorber](#) c. Any material that absorbs or stops ionizing radiation, such as neutrons, gamma rays, alpha particles, and beta particles. *Lyman*

absorptiometer

A device for measuring the solubility of a gas in a liquid. *Bennett*

absorption

a. The phenomenon observed when a pleochroic mineral is rotated in plane polarized light. In certain positions, the mineral is darker than in others, owing to the absorption of light. b. In hydrology, a term applied to the entrance of surface water into the lithosphere by all methods. *AGI* c. The reduction of light intensity in transmission through an absorbing substance or in reflection from a surface. In crystals, the absorption may vary with the wavelength and with the electric vector of the transmitted light with respect to crystallographic directions. d. Any mechanism by which energy, e.g., electromagnetic or seismic, is converted into heat. e. Taking up, assimilation, or incorporation, e.g., of liquids in solids or of gases in liquids. CF: [adsorption](#) f. The entrance of surface water into the lithosphere by any method.

absorption hygrometer

A type of hygrometer with which the water vapor content of the atmosphere is measured by means of the absorption of vapor by a hygroscopic chemical. The amount of vapor absorbed may be determined in an absolute manner by weighing the hygroscopic material, or in a nonabsolute manner by measuring a physical property of the substance that varies with the amount of water vapor absorbed. The lithium chloride humidity strip and carbon-film hygrometer element are examples of the latter. *Hunt*

absorption loss

a. The loss of water occurring during initial filling of a reservoir in wetting rocks and soil. *Hammond* b. That part of the transmission loss due to dissipation or the conversion of sound energy into some other form of energy, usually heat. This conversion may take place within the medium itself or upon a reflection at one of its boundaries. *Hy*

absorption rate

a. The rate, expressed in quantitative terms, at which a liquid, such as a drilling circulation medium, is absorbed by the rocks or rock materials penetrated by the drill bit. *Long* b. The amount of water absorbed when a brick is partially immersed for 1 min; usually expressed either in grams or ounces per minute. Also called suction rate; initial rate of absorption. *ACSG, 1*

absorption spectra

Specific wavelengths of electromagnetic radiation have precisely the energy to cause atomic or molecular transitions in substances they are passing through; their removal from the incident radiation produces reductions in intensity of those wavelengths, or absorption spectra, characteristic of the substance under study. CF: [emission spectra](#)

absorption spectrum

The array of absorption bands or lines seen when a continuous spectrum is transmitted through a selectively absorbing medium. *AGI*

absorption tower

A tower in which a liquid absorbs a gas.

abundant vitrain

A field term denoting, in accordance with an arbitrary scale established for use in describing banded coal, a frequency of occurrence of vitrain bands comprising 30% to 60% of the total coal layer. CF: [dominant vitrain](#); [moderate vitrain](#); [sparse vitrain](#). *AGI*

abutment

A surface or mass provided to withstand thrust, for example, the end supports of an arch or bridge. In coal mining, (1) the weight of the rocks above a narrow roadway is transferred to the solid coal along the sides, which act as abutments of the arch of strata spanning the roadway; and (2) the weight of the rocks over a longwall face is transferred to the front abutment (the solid coal ahead of the face) and the back abutment (the settled packs behind the face). See also: [overarching weight](#); pressure arch; load transfer. Syn: [arch structure](#)

abutment load

In underground mining, the weight of rock above an excavation that has been transferred to the adjoining walls. *Pryor, 3*

abutment pillars

Pillars intended to support vertical load in excess of the weight of the strata directly above them. Generally, these abutment pillars are large pillars adjacent to smaller pillars, sometimes called yield pillars, which are incapable of carrying the weight of the strata above them. *SME, 1*

abysmal

See: [abyssal](#)

abysmal sea

That part of the sea occupying the ocean basins proper. *Fay*

abyss

a. A very deep, unfathomable place. The term is used to refer to a particularly deep part of the ocean, or to any part below 3,000 fathoms (18,000 ft or 5.5 km). *Hunt* b. Syn: [pit](#); [pot](#); [pothole](#); [chasm](#); [shaft](#).

abyssal

a. Pertaining to an igneous intrusion that occurs at considerable depth, or to the resulting rock; plutonic. CF: [hypabyssal](#) b. Pertaining to the ocean environment or depth zone of 500 fathoms (3,000 ft or 915 m) or deeper; also, pertaining to the organisms of that environment. *AGI* c. Of, or pertaining to, deep within the Earth, the oceanic deeps below 1,000 fathoms (6,000 ft or 1.83 km), or great depths of seas or lakes where light is absent. See also: [plutonic](#) d. In oceanography, relating to the greatest depths of the ocean; relating to the abyssal realm. Syn: [abysmal](#)

abyssal deposit

A deposit of the deep sea, accumulating in depths of more than 1,500 fathoms (9,000 ft or 2.7 km) of water; these deposits comprise the organic oozes, various muds, and red clay of the deepest regions. *CTD*

abyssal injection

The process by which magmas, originating at considerable depths, are considered to have been driven up through deep-seated contraction fissures.

abyssal plain

An area of the ocean floor with a slope of less than 1 in 1,000 or flat, nearly level areas that occupy the deepest portions of many ocean basins. *Schieferdecker*

abyssal realm

The deep waters of the ocean below 1,000 fathoms or 6,000 ft (1.83 km).

abyssal theory

A theory of mineral-deposit formation involving the separation and sinking of ore minerals below a silicate shell during the cooling of the Earth from a liquid stage, followed by their transport to and deposition in the crust as it was fractured (Shand, 1947). Modern thought ascribes more complex origins to mineral deposits. *AGI*

abyssal zone

The marine-life zone of the deep sea embracing the water and bottom below a depth of 6,000 ft (1.83 km). *Stokes*

abyssobenthic

Relating to that part of the abyssal realm that includes the ocean floor; pertaining to or living on the ocean floor at great depths. *CTD*

abyssolith

See: [batholith](#)

abyssopelagic

a. Relating to that part of the abyssal realm that excludes the ocean floor; floating in the depths of the ocean. *CTD* b. Pertaining to that portion of the deep waters of the ocean that lie below depths of 6,000 ft (1.83 km). *AGI*

acanthite

A monoclinic mineral, $4[\text{Ag}_2\text{S}]$; dimorphous with argentite, pseudohexagonal, in slender prisms; sp gr, 7.2 to 7.3; a source of silver.

accelerated weathering test

A test to indicate the effect of weather on coal, in which the coal is alternately exposed to freezing, wetting, warming, and light; the alternation may be varied to suit. This test may be applied to other bituminous materials. *Hess*

accelerator

a. A machine that accelerates electrically charged atomic particles, such as electrons, protons, deuterons, and alpha particles, to high velocities. *Lyman* b. A substance added to increase the rate of a chemical reaction. *Nelson*

accelerometer

A seismometer with response linearly proportional to the acceleration of earth materials with which it is in contact. *AGI*

accented contour

See: [index contour](#)

acceptor

A charge of explosives or blasting agent receiving an impulse from an exploding donor charge. Syn: [receptor](#)

accessory

a. Applied to minerals occurring in small quantities in a rock. The presence or absence of these minor minerals does not affect the classification or the naming of the rock. *Holmes*, 2 b. Fragments derived from previously solidified volcanic rocks of related origin; i.e., the debris of earlier lavas and pyroclastic rocks from the same cone. See also: [accessory mineral](#) c. Said of pyroclastics that are formed from fragments of the volcanic cone or earlier lavas; it is part of a classification of volcanic ejecta based on mode of origin, and is equivalent to resurgent ejecta. CF: [auxiliary](#)

accessory element

See: [trace element](#)

accessory mineral

Any mineral the presence of which is not essential to the classification of the rock. Accessory minerals generally occur in minor amounts; in sedimentary rocks they are mostly heavy minerals. CF: [essential mineral](#). Syn: [accessory](#)

accessory plate

a. The quartz wedge inserted in the microscope substage above the polarizer in order to estimate birefringence and to determine optical sign of uniaxial minerals. CF: [quartz wedge](#) b. The selenite plate that gives the sensitive tint of a specimen between crossed

nicols. *Pryor*, 3 c. The mica plate that retards yellow light. *Pryor*, 3 d. In polarized-light microscopy, an optical device that may be inserted into the light train to alter light interference after passage through, or reflection by, a crystalline material; e.g., quartz wedge, mica plate, gypsum plate, or Bertrand lens. e. In polarized-light microscopy, an optical compensator that may be inserted into the light train to alter birefringence after light passage through or reflection by an anisotropic material; e.g., quartz wedge, mica plate, gypsum plate, or Berek compensator. Syn: [gips plate](#); glimmer plate; compensator. CF: [Berek compensator](#); [gypsum plate](#).

access road

A route constructed to enable plant, supplies, and vehicles to reach a mine, quarry, or opencast pit. In remote and isolated regions, the provision of an access road may be very costly. *Nelson*

accidental inclusion

See: [xenolith](#); xenocryst.

accordion roller conveyor

A roller conveyor with a flexible latticed frame that permits variation in length.

accretion vein

A vein formed by the repeated filling of a channelway and its reopening by the development of fractures in the zone undergoing mineralization.

accumulation

a. In coal mining, bodies of combustible gases that tend to collect in higher parts of mine workings and at the edge of goaves and wastes. They are found in cavities, at ripping lips, at other sheltered places protected from the ventilating current, and at the higher sides of rise faces. *Mason* b. The concentration or gathering of oil or gas in some form of trap. Commercial accumulation is a volume or quantity sufficient for profitable exploitation. *AGI*

accumulative rock

See: [cumulate](#)

accumulator

a. A cylinder containing water or oil under pressure of a weighted piston for hydraulic presses, hoists, winches, etc. It is between the pumps and the presses, keeps a constant

pressure on the system, and absorbs shocks. b. A storage battery. c. In oceanography, a spring of rubber or steel attached to a trawling warp, to lessen any sudden strain due to the trawl catching. *CTD*

accumulator conveyor

Any conveyor designed to permit accumulation of packages or objects. Usually roller, live roller conveyor, roller slat conveyor, or belt conveyor.

accuracy

The degree of conformity with a standard, or the degree of perfection attained in a measurement. Accuracy relates to the quality of a result, and is distinguished from precision, which relates to the quality of the operation by which the result is obtained. *AGI*

acetamide

A trigonal mineral, CH_3CONH_2 . Syn: [acetic acid amine](#); ethanamide.

acetic acid amine

See: [acetamide](#)

acetylene

The most brilliant of illuminating gases, C_2H_2 . It may be produced synthetically from its elements, by incomplete combustion of coal gas, and commercially from calcium carbide, CaC_2 . It also may be produced by reaction with water. Used in manufacturing explosives. Formerly used as an illuminating gas in mines and around drill rigs. When combined with oxygen, acetylene burns to produce an intensely hot flame and hence now is used principally in welding and metal-cutting flame torches. Syn: [ethyne](#); [ethine](#). CF: [gas](#). *Standard, 2; Bennett; Long*

acetylene lamp

See: [carbide lamp](#)

acetylene tetrabromide

Yellowish liquid; $\text{CHBr}_2\text{CHBr}_2$; sp gr, 2.98 to 3.00; boiling point, 239 to 242 degrees C with decomposition (at 760 mm); also, boiling point, 151 degrees C (at 54 mm); melting point, 0.1 degrees C; and refractive index, 1.638. Used for separating minerals by specific gravity; a solvent for fats, oils, and waxes; a fluid in liquid gases; and a solvent in microscopy. *CCD, 2*

achavalite

Former name for iron selenide, FeSe .

Acheson graphite

Artificial graphite made from coke by electric furnace heating. *Bennett*

Acheson process

A process for the production of artificial or synthetic graphite. It consists of sintering pulverized coke in the Acheson furnace at 2,760 to 3,316 degrees C. *Henderson*

achirite

Former name for diopase.

achroite

A colorless variety of elbaite tourmaline used as a gemstone.

achromatic

In microscopy, a compound lens that does not spread white light into its spectral colors. CF: [aberration](#)

acicular

a. A mineral consisting of fine needlelike crystals; e.g., natrolite. *Nelson* b. Slender needlelike crystal. c. Refers to needlelike crystals. CF: [equant](#); [sagenitic](#); [tabular](#); rodlike.

acicular bismuth

See: [aikinite](#)

acicular powder

In powder metallurgy, needle-shaped particles. *ASM, 1*

aciculite

See: [aikinite](#)

acid

a. A solution of pH less than 7.0 at 25 degrees C. b. A substance containing hydrogen that may be replaced by metals with the formation of salts. *CTD*

acid Bessemer converter

One lined with acid refractories.

acid bottom and lining

The inner bottom and lining of a melting furnace, consisting of materials like sand, siliceous rock, or silica brick, which give an acid reaction at the operating temperature.

Syn: [acid lining](#)

acid clay

a. A clay that is used mainly as a decolorant or refining agent, and sometimes as a desulfurizer, coagulant, or catalyst. b. A clay that yields hydrogen ions in a water suspension; a hydrogen clay.

acid cure

In uranium extraction, sulfation of moist ore before leaching. *Pryor, I*

acid-dip survey

A method of determining the angular inclination of a borehole in which a glass, test-tubelike bottle partly filled with a dilute solution of hydrofluoric acid is inserted in a watertight metal case. When the assemblage is lowered into a borehole and left for 20 to 30 min, the acid etches the bottle at a level plane from which the inclination of the borehole can be measured. CF: [Kiruna method](#). Syn: acid-dip test; acid test; acid-etch tube. *Long*

acid-dip test

See: [acid-dip survey](#)

acid drainage

Water with a pH of less than 6.0 and in which total acidity exceeds total alkalinity; discharged from an active, inactive, or abandoned surface coal mine and reclamation operation.

acid electric furnace

An arc furnace having an acid refractory hearth.

acid embrittlement

A form of hydrogen embrittlement that may be induced in some metals by acid treatment. *ASM, 1*

acid-etch tube

A soda-lime glass tube charged with dilute hydrofluoric acid, left in a borehole for 20 to 30 min to measure inclination as indicated by the angle of etch line on the tube. May be fitted in a clinometer. Syn: [acid-etch vial](#); [culture tube](#); [etch tube](#); [sargent tube](#). See also: [acid-dip survey](#)

acid-etch vial

See: [acid-etch tube](#)

acid flux

Metallurgically acid material (usually some form of silica) used as a flux. *Bennett*

acid-forming materials

Earth materials that contain sulfide minerals or other materials that, if exposed to air, water, or weathering processes, form acids that may create acid drainage.

acidic

a. A descriptive term applied to those igneous rocks that contain more than 60% silica. Acidic is one of four subdivisions of a widely used system for classifying igneous rocks based on their silica content: acidic, intermediate, basic, and ultrabasic. *AGI* b. Applied loosely to any igneous rock composed predominantly of light-colored minerals having a relatively low specific gravity. CF: [felsic](#)

acidization

The process of forcing acid into a limestone, dolomite, or sandstone in order to increase permeability and porosity by dissolving and removing a part of the rock constituents. It is also used to remove mud injected during drilling. The general objective of acidization is to increase productivity. Syn: [acidizing](#)

acidize

To treat a limestone or dolomitic formation with dilute hydrochloric acid to enlarge its void spaces. *Wheeler, R.R.*

acidizing

See: [acidization](#)

acid leach

Metallurgical process for dissolution of metals by means of acid solution. Examples include extraction of copper from oxide- or sulfide-bearing ore and dissolution of uranium from sandstone ores. Acid leaching can occur on heap-leach pads or in situ.

acid lining

See: [acid bottom and lining](#)

acid mine drainage

a. Acidic drainage from bituminous coal mines containing a high concentration of acidic sulfates, esp. ferrous sulfate. See also: [acid water](#) b. Drainage with a pH of 2.0 to 4.5 from mines and mine wastes. It results from the oxidation of sulfides exposed during mining, which produces sulfuric acid and sulfate salts. The acid dissolves minerals in the rocks, further degrading the quality of the drainage water. *AGI*

acid mine water

a. Mine water that contains free sulfuric acid, mainly due to the weathering of iron pyrites. A pit water, which corrodes iron pipes and pumps, usually contains a high proportion of solids per gallon, principally the sulfates of iron, chiefly ferrous and alumina. See also: [acid water](#) b. Where sulfide minerals break down under chemical influence of oxygen and water, the mine drainage becomes acidic and can corrode ironwork. If it reaches a river system, biological damage may also result. *Pryor, 3*

acid neutralizers

Calcium carbonate, CaCO_3 , magnesium carbonate, MgCO_3 , and china clay, which neutralize free acids, thereby preventing explosives from decomposing in storage. They also have a cooling effect and tend to reduce the sensitivity of the explosive. *Cooper*

acid open-hearth steel

Low-phosphorus pig iron treated in an acid (silica or sand)-lined furnace. *Mersereau, 2*

acid ore

See: [siliceous ore](#)

acid process

A steelmaking process--Bessemer, open-hearth, or electric--in which the furnace is lined with a siliceous refractory, and for which pig iron low in phosphorus is required, as this element is not removed. See also: [acid steel](#); [basic process](#). *CTD*

acid-recovery operator

In the coke products industry, a person who recovers sulfuric acid used in processing coke-gas byproducts by cooking sludge with steam in acid regenerator pots. Syn: [acid regenerator](#)

acid refractory material

A general term for those types of refractory material that contain a high proportion of silica; e.g., silica refractories (greater than 92% SiO₂) and siliceous refractories (78% to 92% SiO₂). The name derives from the fact that silica behaves chemically as an acid and at high temperatures reacts with bases such as lime or alkalis. *Dodd*

acid refractory product

Refractory product made of clay-silica mixture or pure silica. *Rosenthal*

acid regenerator

See: [acid-recovery operator](#)

acid rock drainage

Drainage that occurs as a result of natural oxidation of sulfide minerals contained in rock that is exposed to air and water. It is not confined to mining activities, but can occur wherever sulfide-bearing rock is exposed to air and water. Abbrev. ARD.

acid slag

Slag that contains substantial amounts of active silica.

acid sludge

Products of refining of tar, shale oil, and petroleum in which sulfuric acid reacts to form a sulfonic acid mixture, green acids, and mahogany acids and salts. Used in the flotation process and in proprietary collector agents for flotation of iron ores. *Pryor, I*

acid soil

A soil with a pH of less than 7.0. *AGI*

acid steel

Steel melted in a furnace with an acid bottom and lining and under a slag containing an excess of an acid substance, such as silica. See also: [acid process](#)

acid strength

Related to ability to liberate hydrogen ions to solution, and hence to electrical conductivity of equivalent aqueous solutions of acids. *Pryor, 3*

acid test

a. See: [acid-dip survey](#) b. A severe or decisive trial, as of usability or authenticity. *Long*

acid water

Water charged naturally with carbon dioxide. Also applied to natural waters containing sulfur compounds, esp. sulfates. See also: [acid mine water](#); [acid mine drainage](#).

aciform

Needle-shaped.

aciniform

A mineral aggregate shaped like a cluster of grapes. Also, full of small kernels like a grape. Syn: [acinose](#); [acinous](#).

acinose

a. Grapelike; applied to the structure of clustered mineral aggregates. Syn: [aciniform](#); [acinous](#). b. Granulated; like grape seeds; applied to the texture of some mineral aggregates.

acinote

Former name for actinolite.

acinous

See: [aciniform](#); acinose.

aclinal

A little-used term said of strata that have no inclination; horizontal. Syn: [acclinic](#)

acclinic

See: [aclinal](#)

acclinic line

The line through those points on the Earth's surface at which the magnetic inclination is zero. The acclinic line is a particular case of an isoclinic line. *Hunt*

acmite

A brown variety of aegirine having pointed terminations. See also: [aegirine](#); [pyroxene](#).

acopolado

Mex. Ore containing 50 to 60 oz/st (1.56 to 1.88 kg/t) of silver. *Hess*

acoustic

Used when the term that it modifies designates something that has the properties, dimensions, or physical characteristics associated with sound waves. *Hy*

acoustical well logging

Any determination of the physical properties or dimensions of a borehole by acoustical means, including measurement of the depth of fluid level in a well. *AGI*

acoustic attenuation log

In theory, a log designed to measure the manner in which the energy of elastic waves is dissipated in passing through rock. Although no practical log of this type has yet evolved, the belief that a log of this parameter would permit the estimation of the permeability of formations would seem to ensure such a development since no log has been developed to record permeability. *Wyllie*

acoustic dispersion

The change of speed of sound with frequency. *Hunt*

acoustic impedance

The acoustic impedance of a given surface area of an acoustic medium perpendicular, at every point, to the direction of propagation of sinusoidal acoustic waves of given

frequency, and having equal acoustic pressures and equal volume velocities per unit area at every point of the surface at any instance, is the quotient obtained by dividing (1) the phasor corresponding to the acoustic pressure by (2) the phasor corresponding to the volume velocity. See also: [impedance](#)

acoustic interferometer

An instrument for making physical observations upon standing waves. It may be used, e.g., to measure velocity, wavelength, absorption, or impedance. *Hunt*

acoustic log

A continuous record made in a borehole showing the velocity of sound waves over short distances in adjacent rock; velocity is related to porosity and nature of the liquid occupying pores. *AGI*

acoustic-radiation pressure

A unidirectional steady-state pressure exerted upon a surface exposed to an acoustic wave. Such a steady pressure is usually quite small in magnitude and is really observable only in the presence of very intense sound waves. *Hunt*

acoustic radiometer

An instrument for measuring acoustic-radiation pressure by determining the unidirectional steady-state force resulting from reflection or absorption of a sound wave at its boundaries. *Hunt*

acoustic resistance

Product of longitudinal wave velocity and density, being the property that controls the reflective power at a boundary plane. *Schieferdecker*

acoustics

The study of sound, including its production, transmission, reception, and utilization, esp. in fluid media such as air or water. With reference to Earth sciences, it is esp. relevant to oceanography. The term is sometimes used to include compressional waves in solids; e.g., seismic waves. *AGI*

acoustic scattering

The irregular reflection, refraction, or diffraction of sound waves in many directions. *Hy*

acoustic sounding

The indirect evaluation of water depth, using the principle of measuring the length of time necessary for a sound wave to travel to the bottom, reflect, and travel back to the water surface. *Hunt*

acoustic-strain gage

An instrument for measuring strains; e.g., in concrete linings to shafts or roadways. It contains a length of fine wire under tension, the tension being varied by the strain to which the gage is subjected. The measurement made is that of the frequency of vibration of the wire when it is plucked by means of an electromagnetic impulse, and this measurement can be made with great accuracy. The gage is highly stable, and readings can be made over a period of years without any fear of zero drift. See also: [electrical resistance strain gage](#); [mechanical extensometer](#). *Nelson*

acoustic theodolite

An instrument designed to provide a continuous vertical profile of ocean currents at a specific location. *Hunt*

acoustic wave

a. The waves that contain sound energy and by the motion of which sound energy is transmitted in air, in water, or in the ground. The wave may be described in terms of change of pressure, of particle displacement, or of density. *AGI* b. Used increasingly to study the physical properties of rocks and composition of gases. Investigations may be made both in situ and in the laboratory. *Nelson*

acquired lands

Defined by the U.S. Department of the Interior as "lands in Federal ownership which were obtained by the Government through purchase, condemnation, or gift, or by exchange for such purchased, condemned, or donated lands, or for timber on such lands. They are one category of public lands." Public land laws are generally inapplicable to acquired lands. *SME, 1*

acre

a. A measure of surficial area, usually of land. The statute acre of the United States and England contains 43,560 ft² (4,840 yd²; 4,047 m² ; or 160 square rods). The so-called Scotch acre contains about 6,150 yd² (5,142 m²), and the Irish acre 7,840 yd² (6,555 m²). There are various special or local acres in England (as in Cheshire or among the hop growers), varying from 440 yd² (368 m²) to more than 10,000 yd² (8,361 m²). *Standard, 2* b. Can. In Quebec, a linear measure that equals the square root of 43,560, or approx. 208.7 ft (63.6 m). *Fay* c. For the calculation of coal reserves, a convenient rule is to

allow 1,200 st/ft (coal thickness) per acre (8,821 t/m/ha). For known and dependable areas, 1,500 st/ft per acre (11,027 t/m/ha) may be used. *Nelson*

acreage rent

Royalty or rent paid by the lessee for working and disposing of minerals at the rate of so much per acre.

acre-foot

The quantity of water that would cover 1 acre, 1 ft deep (1 ha, 13.6 cm deep). One acre-foot contains 43,560 ft³ (1,233 m³).

acre-inch

The volume of water, soil, or other material that will cover 1 acre, 1 in deep (1 ha, 1.1 cm deep). *AGI*

acre-yield

The average quantity of oil, gas, or water recovered from 1 acre (0.4 ha) of a reservoir. *AGI*

actetic acid amine

See: [acetamide](#)

actinide

A chemical element with atomic number greater than 88; all are radioactive. Syn: [actinide element](#)

actinide element

a. One of the group of chemical elements of increasing atomic number, starting with actinium (atomic number 89) and extending through atomic number 103. These elements occupy one single place in the extended periodic table, in the same group into which the rare-earth elements (lanthanides) are classified. See also: [actinide](#) b. One of the radioactive elements, atomic numbers 89 to 103. *Hurlbut*

actinolite

A monoclinic mineral, $2[\text{Ca}_2(\text{Mg,Fe})_5\text{Si}_8\text{O}_{22}(\text{OH})_2]$ in the hornblende series $\text{Mg}/(\text{Mg}+\text{Fe}^{2+}) = 0.5$ to 0.89 of the amphibole group; forms a series with tremolite;

green, bladed, acicular, fibrous (byssolite asbestos), or massive (nephrite jade); prismatic cleavage; in low-grade metamorphic rocks. Syn: [actinote](#); strahlite. CF: [tremolite](#)

actinote

See: [actinolite](#)

activated alumina

Highly porous, granular aluminum oxide that preferentially absorbs liquids from gases and vapors, and moisture from some liquids. *McGraw-Hill, 1*

activated carbon

Carbon, mostly of vegetable origin, and of high adsorptive capacity. Syn: [activated charcoal](#)

activated charcoal

See: [activated carbon](#)

activated clay

A clay whose adsorbent character or bleaching action has been enhanced by treatment with acid. *CCD, 2*

activated coal plow

With a view to applying the coal plow to seams too hard to be sheared by the normal cutting blade, German mining engineers have developed various types of power-operated cutters. One consists of a series of compressed-air picks mounted above each other; another, of a resonance pattern, houses two high-speed motors eccentrically mounted and rotating in opposite directions. The latter imparts a vibration to the cutting edge equivalent to 2,500 blows per minute with a stroke of 3/16 to 1/4 in (4.8 to 6.4 mm) and a force of approx. 200 st (181 t). *Mason*

activated plow

See: [Huwood slicer](#)

activating agent

a. A substance that when added to a mineral pulp promotes flotation in the presence of a collecting agent. Syn: [activator](#) b. Reagent used particularly in differential mineral flotation to help cleanse the mineral surface so that a collector may adhere to it and

permit or aid its floatability. Frequently used to allow floating minerals that had been previously depressed. *Mitchell*

activation

a. In the flotation process of mineral dressing, the process of altering the surface of specific mineral particles in a mineral pulp to promote adherence of certain reagents. *Pryor, 3* b. The changing of the passive surface of a metal to a chemically active state. CF: [passivation](#) c. In the flotation process of ore beneficiation, the process of altering the surface of specific mineral particles in an ore pulp to promote adherence of certain reagents. *Henderson* d. The process of making a material radioactive by bombardment with neutrons, protons, or other nuclear particles. See also: [activation analysis](#)

activation analysis

A method for identifying and measuring the chemical elements in a sample to be analyzed. The sample is first made radioactive by bombardment with neutrons, charged particles, or other nuclear radiation. The newly radioactive atoms in the sample give off characteristic nuclear radiations that can identify the atoms and indicate their quantity. See also: [activation](#)

activator

a. In flotation, a chemical added to the pulp to increase the floatability of a mineral in a froth or to refloat a depressed (sunk) mineral. Also called activating reagent. *CTD* b. A reagent that affects the surface of minerals in such a way that it is easy for the collector atoms to become attached. It has the opposite effect of a depressor. CF: [depressor](#) c. A substance that is required in trace quantities to impart luminescence to certain crystals. *CCD, 2* d. Ions that are photon emitters. *Van Vlack* e. Any agent that causes activation. See also: [activating agent](#). *Bennett*

active agent

Surface-active substance that immunizes solids against a parting liquid. *Hess*

active earth pressure

The minimum value of lateral earth pressure exerted by soil on a structure, occurring when the soil is allowed to yield sufficiently to cause its internal shearing resistance along a potential failure surface to be completely mobilized. See also: [surcharge](#) CF: [passive earth pressure](#)

active entry

An entry in which coal is being mined from a portion thereof or from connected sections. *USBM, 1*

active fault

One liable to further movement. CF: [passive fault](#)

active layer

a. The surficial deposit that undergoes seasonal changes of volume, swelling when frozen or wet, and shrinking when thawing and drying. *AGI* b. A surface layer of ground, above the permafrost, that is frozen in the winter and thawed in the summer. Its thickness ranges from several centimeters to a few meters. *AGI*

active mining area

a. The area, on and beneath land, used or disturbed in activity related to the extraction, removal, or recovery of coal from its natural deposits. This term excludes coal preparation plants, areas associated with coal preparation plants, and post-mining areas. *SME, 1* b. The area in which active mining takes place relative also to extraction of metal ores, industrial minerals, and other minerals of economic value.

active workings

All places in a mine that are ventilated and inspected regularly. *Federal Mine Safety*

activity

a. In nuclear physics, the rate of decay of atoms by radioactivity. It is measured in curies. *Bennett* b. The ideal or thermodynamic concentration of a substance, the substitution of which for the true concentration, permits the application of the law of mass action. See also: [ionization constant](#)

actual age

See: [absolute age](#)

actual breaking strength

The breaking load obtained from a tensile test to destruction on a sample of rope. *Hammond*

actual horsepower

The horsepower really developed, as proved by trial. *Standard, 2*

actual performance curve

A performance curve showing the results actually obtained from a coal preparation treatment. *BS*, 5

actuated roller switch

A switch placed in contact with the belt conveyor immediately preceding the conveyor it is desired to control. In the centrifugal sequence control switch, a driving pulley bears against the driving belt; as the latter moves, the pulley rotates and the governor weights attached to the pulley shaft are flung out and so complete an electrical pilot circuit and thus start the subsidiary belt. *Nelson*

acute bisectrix

a. The line that bisects the acute angle of the optic axes of biaxial minerals. *Fay* b. The angle <90 degrees between the optic axes in a biaxial crystal, bxa. CF: [optic angle](#)

adamantine

a. Like the diamond in luster. *Webster 3rd* b. Diamond hard. A commercial name for chilled steel shot used in the adamantite drill, which is a core-barrel type of rock-cutting drill with a cutting edge fed by these shots. CF: [vitreous](#)

adamantine luster

Diamondlike luster. *Hurlbut*

adamellite

See: [quartz monzonite](#)

adamic earth

A term used for common clay, in reference to the material of which Adam, the first man, was made; specif. a kind of red clay. *AGI*

adamite

A rare hydrous zinc arsenate, $Zn_2(AsO_4)(OH)$, occurring granular or in crusts and crystallizing in the orthorhombic system. Weakly radioactive; variable color--yellowish, greenish, or violet, rarely colorless or white; found in the oxidized zone of zinc orebodies. Associated with smithsonite, calcite, malachite, hemimorphite, limonite, and azurite. Small amounts of uranium have been found in some specimens of adamite. *Fay*; *Crosby*

adamsite

A greenish-black muscovite found in a schist at Derby, VT; has been called margarodite. *Dana, 1*

Adam's snuffbox

Hollow, roughly rectangular pebble lined with goethite; Lenham beds, Netley Heath, Surrey, U.K. (Arkell, 1953)

ada mud

A conditioning material that may be added to drilling mud in order to obtain satisfactory cores and samples of formations. *Williams*

adapter trough

A short section of a shaker conveyor trough that serves as a connecting link between any two sizes of trough. *Jones, 1*

added diamonds

As used by the diamond-bit manufacturing industry, the number or carat weight of new diamonds that must be added to the resettable diamonds salvaged from a worn bit in order to have enough to set a new bit. *Long*

additive

A correction applied to times of seismic reflections measured from an arbitrary time origin. The additive is normally applied for the purpose of translating the time origin to correspond to the datum elevation chosen for computation, and it is algebraic in sign. *AGI*

addlings

A term used in the northern and parts of other coalfields in Great Britain to describe earnings or wages. *Nelson*

Adeline steelmaking process

A process of producing precision castings of steel or steel alloys, which comprises first forming the steel or steel alloy in molten form by the aluminothermic process, by igniting a mixture of iron ore and aluminum; then running the molten metal into a mold prepared by packing a refractory mold composition around a model made of wax or other comparatively low-melting-point substance and heating to melt out the wax and consolidate the mold; and finally centrifuging the mold. *Osborne*

adelite

a. An orthorhombic mineral, $\text{CaMg}(\text{AsO}_4)(\text{OH})$; occurs with manganese ores. b. The mineral group adelite, austinite, conichalcite, duftite, and gabrielsonite.

ader wax

See: [ozocerite](#)

adhesion

a. The molecular force holding together two different substances that are in contact, as water in the pore spaces of a rock. CF: [cohesion](#) b. Shearing resistance between soil and another material under zero externally applied pressure. *ASCE* c. In the flotation process, the attachment of a particle to air-water interface or to a bubble.

adhesive slate

A very absorbent slate that adheres to the tongue if touched by it. *Standard, 2*

adiabatic calorimeter

A calorimeter that practically remains unaffected by its surroundings and neither gains nor loses heat. *Osborne*

adiabatic compression

Compression in which no heat is added to or subtracted from the air and the internal energy of the air is increased by an amount equivalent to the external work done on the air. The increase in temperature of the air during adiabatic compression tends to increase the pressure on account of the decrease in volume alone; therefore, the pressure during adiabatic compression rises faster than the volume diminishes. *Lewis*

adiabatic efficiency

A compression term obtained by dividing the power theoretically necessary to compress the gas and deliver it without loss of heat, by the power supplied to the fan or compressor driveshaft.

adiabatic expansion

Expansion in which no heat is added to or subtracted from the air, which cools during the expansion because of the work done by the air. *Lewis*

adiabatic temperature

The temperature that would be attained if no heat were gained from or lost to the surroundings. *Newton, 1*

adiabatic temperature change

The compression of a fluid without gain or loss to the surroundings when work is performed on the system and produces a rise of temperature. In very deep water such a rise of temperature occurs and must be considered in the vertical temperature distribution. *Hy*

adinole

An argillaceous sediment that has undergone albitization as a result of contact metamorphism along the margins of a sodium-rich mafic intrusion. CF: [spilosite](#); [spotted slate](#). *AGI*

adipite

An aluminosilicate of calcium, magnesium, and potassium having the composition of chabazite. *Dana, 1*

adipocerite

See: [hatchettite](#)

adipocire

See: [hatchettite](#)

a direction

See: [a axis](#)

adit

a. A horizontal or nearly horizontal passage driven from the surface for the working or dewatering of a mine. If driven through the hill or mountain to the surface on the opposite side, it would be a tunnel. Syn: [drift](#); [adit level](#). See also: [tunnel](#) b. As used in the Colorado statutes, it may apply to a cut either open or undercover, or open in part and undercover in part, dependent on the nature of the ground. c. A passage driven into a mine from the side of a hill. *Statistical Research Bureau*

adit end

The furthest end or part of an adit from its beginning or the very place where the miners are working underground toward the mine. *Hess*

adit level

Mine workings on a level with an adit. See also: [adit](#)

adjacent sea

A sea adjacent to and connected with the oceans, but semienclosed by land. The North Polar, Mediterranean, and Caribbean Seas are examples. Syn: [marginal sea](#)

adjustment of error

Method of distributing the revealed irregularities over a series of results. *Pryor, 3*

adjutage

Nozzle or tube from which hydraulic water is discharged. Syn: [ajutage](#)

admission

See: [admittance](#)

admittance

a. In a crystal structure, substitution of a trace element for a major element of higher valence; e.g., Li^+ for Mg^{2+} . Admitted trace elements generally have a lower concentration relative to the major element in the mineral than in the fluid from which the mineral crystallized. CF: [capture](#); [camouflage](#). Syn: [admission](#) b. The reciprocal of impedance or the ratio of complex current to voltage in a linear circuit. *AGI*

adobe

A fine-grained, usually calcareous, hard-baked clayey deposit mixed with silt, usually forming as sheets in the central or lower parts of desert basins, as in the playas of the southwestern United States and in the arid parts of Mexico and South America. It is probably a windblown deposit, although it is often reworked and redeposited by running water. *AGI*

adobe charge

A mud-covered or unconfined explosive charge fired in contact with a rock surface without the use of a borehole. Syn: [bulldoze](#); [mudcapping](#). *Atlas*

adobe flat

A generally narrow plain formed by sheetflood deposition of fine sandy clay or adobe brought down by an ephemeral stream, and having a smooth, hard surface (when dry) usually unmarked by stream channels. *AGI*

adobe shot

Ordinarily referred to as a dobe shot. A stick or part of a stick of dynamite is laid on the rock to be broken and covered with mud to add to the force of the explosion. A mudcap shot. *Hess*

adsorption

a. Adherence of gas molecules, or of ions or molecules in solution, to the surface of solids with which they are in contact, as methane to coal or moisture to silica gel. CF: [absorption](#) b. The assimilation of gas, vapor, or dissolved matter by the surface of a solid or liquid. c. The attachment of a thin film of liquid or gas, commonly monomolecular in thickness, to a solid substrate.

adsorption analysis

Separation by differential adsorption. *Pryor, 1*

adular

See: [adularia](#)

adularescence

a. A milky white to bluish sheen in gemstones. *CMD* b. The changeable white to pale bluish luster of an adularia cut cabochon. *Webster 3rd* c. A floating, billowy, white or bluish light, seen in certain directions as a gemstone (usually adularia) is turned, caused by diffused reflection of light from parallel intergrowths of another feldspar of slightly different refractive index from the main mass. Syn: [schiller](#)

adularia

A colorless, moderate- to low-temperature variety of orthoclase feldspar typically with a relatively high barium content. Syn: [adular](#)

adularia moonstone

Precious moonstone, a gem variety of adularia.

advance

a. The work of excavating as mining goes forward in an entry and in driving rooms; to extract all or part of an area; first mining as distinguished from retreat. *BCI* b. Rate at which a drill bit penetrates a rock formation. *Long* c. Feet drilled in any specific unit of time. *Long* d. The linear distance (in feet or meters) driven during a certain time in tunneling, drifting, or in raising or sinking a shaft. *Fraenkel*

advance development

S. Afr. Development to provide an ore reserve in advance of mining operations. *Beerman*

advanced gallery

In tunnel excavation, a small heading driven in advance of the main tunnel.

advanced materials

Materials developed since 1960 and being developed at present that exhibit greater strength, higher strength-density ratios, greater hardness, and/or one or more superior thermal, electrical, optical, or chemical properties, when compared with traditional materials (Sorrel, 1987) and with properties needed to perform a specific function and often entirely new functions. *SME, 1*

advance gate

Gate road that is driven simultaneously with the longwall coal face, when the advancing longwall technique is used, but which is maintained some 10 to 20 yd (9 to 18 m) or more in advance of the face. The area immediately ahead of the coal face is therefore preexplored, and steps can be taken to cope with minor disturbances and thus prevent a serious loss of output. *Nelson*

advance overburden

Overburden in excess of the average overburden-to-ore ratio that must be removed in opencut mining. *Mining*

advance per round

The length, measured along the longitudinal axis of the working, tunnel, or gallery, of the hollow space broken out by each round of shots. For raises, it is upward advance; for sunk shafts, downward advance. *Fraenkel*

advance stope

A stope in which sections of the face or some pillars are a little in advance of the others. This is achieved either by beginning the stoping of the section that is to be advanced earlier, or by proceeding more quickly. *Stoces*

advance stripping

The removal of overburden required to expose and permit the minable grade of ore to be mined. The removal of overburden is known as stripping.

advance wave

The air-pressure wave preceding the flame in a coal-dust explosion. The bringing of the dust into suspension is accomplished by such a wave and the violent eddies resulting therefrom. Syn: [pioneer wave](#). *Rice, 2*

advance working

Mine working that is being advanced into the solid, and from which no pillar is being removed. See also: [first working](#)

advancing

Mining from the shaft out toward the boundary. See also: [working out](#). *Stoces*

advancing longwall

A longwall mining technique, most commonly found in European coal mines, where the gate roads are advanced while the longwall face is advanced toward the mining limits. The gate roads are maintained throughout the worked-out portion of the longwall panel.

adventurine

Spelling variant of aventurine.

adverse

To oppose the granting of a patent to a mining claim.

adverse claim

A claim made to prevent the patenting of part of the ground within the area in question; e.g., an adverse claim is made by a senior locator to exclude the part of his or her claim that is overlapped by the claim of a junior locator, when the junior locator is applying for patent. *Lewis*

adverse intent

The terms "claim of right," "claim of title," and "claim of ownership," when used in the books to express adverse intent, mean nothing more than the intention of the dispossessor to appropriate and use the land as his or her own to the exclusion of all others, irrespective of any semblance or shadow of actual title. *Ricketts*

advertised out

A term used to express the result of the action of a joint owner of a mining claim who by proper notices causes the interest of the co-owner to be forfeited for failure to perform his or her share of the assessment work.

aedelforsite

A name given to (1) a mixture of wollastonite, quartz, and feldspar from Edelfors, Sweden; (2) impure wollastonite from Gillebak, Sweden (called also gillebackit); and (3) impure laumontite, under the impression that they were new minerals. Syn: [edelforsite](#)

aedelite

See: [prehnite](#)

AED process

An electrostatic process under development, in which fine-size dry coal is passed through an ionized field that selectively charges the coal and the liberated mineral matter. The output of the ionizer is then fed into an electrostatic separator where the coal and impurities are separated.

aegirine

A sodium-ferric iron silicate, $\text{NaFe}^{3+}\text{Si}_2\text{O}_6$, occurring commonly in soda-rich igneous rocks; monoclinic; Mohs hardness, 6 to 6.5; sp gr, 3.40 to 3.55. Syn: [acmite](#); [aegirite](#).

See also: [pyroxene](#)

aegirine-augite

A monoclinic mineral, $(\text{Ca},\text{Na})(\text{Ca},\text{Mg},\text{Fe})\text{Si}_2\text{O}_6$, in the range 20% augite to 20% aegirine end members of the pyroxene group. Formerly called acmite-augite, aegirineaugite.

aegirite

Former spelling of aegirine. See also: [pyroxene](#); [aegirine](#).

aenigmatite

a. A triclinic mineral, $\text{Na}_2 \text{Fe}_5^{2+} \text{TiSi}_6 \text{O}_{20}$; a rare titanium-bearing silicate; black color; found associated with alkalic rocks. *Dana*, 4 b. The mineral group aenigmatite, rhoenite, serendibite, and welshite. CF: [enigmatite](#)

aeolian

See: [eolian](#)

Aeonite

Trade name for a bitumen allied to wurtzilite. Similar to elaterite. *Tomkeieff; English*

aerate

a. To expose to the action of the air; to supply or to charge with air. *Standard*, 2 b. To charge with carbon dioxide or other gas, as soda water. *Standard*, 2

aeration

a. The introduction of air into the pulp in a flotation cell in order to form air bubbles. *BS*, 5 b. In mineral beneficiation, use of copious air bubbled into mineral pulps (1) to provide oxygen in cyanidation, (2) to prevent settlement of solids, and (3) to remove aerophilic minerals in froth flotation by binding them into a mineralized froth that is temporarily stabilized by frothing agents. *Pryor*, 1 c. The process of relieving the effects of cavitation by admitting air to the section affected. *Seelye*, 1

aeration zone

The zone in which the interstices of the functional permeable rocks are not (except temporarily) filled with water under hydrostatic pressure; the interstices are either not filled with water or are filled with water that is held by capillarity. *Rice*, 1

aerator

An apparatus for charging water with gas under pressure, esp. with carbon dioxide. *Standard*, 2

aerial

Relating to the air or atmosphere. Subaerial is applied to phenomena occurring under the atmosphere as subaqueous is applied to phenomena occurring underwater. *Fay*

aerial cableway

An arrangement of overhead cable supporting a traveling carriage from which is suspended a skip or container that can be lowered and raised at any desired point. *Nelson*

aerial mapping

The taking of aerial photographs for making maps and for geologic interpretation. *AGI*

aerial photograph

Any photograph taken from the air, such as a photograph of a part of the Earth's surface taken by a camera mounted in an aircraft. Syn: [air photograph](#)

aerial photomosaic

See: [mosaic](#)

aerial railroad

A system of cables from which to suspend cars or baskets, as in hoisting ore. See also: [aerial tramway](#)

aerial ropeway

System of ore transport used in rough or mountainous country. A cable is carried on pylons, and loaded buckets are (1) towed from loading point to discharge, (2) suspended from a carriage running on this cable and then returned empty along a second cable, or (3) the whole cable moves continuously carrying buckets that hang from saddle clips and are loaded and discharged automatically or by hand control. Syn: [overhead ropeway](#). See also: [bicable](#); [monocable](#); [aerial tramway](#); [telpher](#). *Pryor, 3*

aerial spud

A cable for moving and anchoring a dredge. *Fay*

aerial survey

a. A survey using aerial photographs as part of the surveying operation. *AGI* b. The taking of aerial photographs for surveying purposes. *AGI*

aerial tramway

A system for the transportation of material, such as ore or rock, in buckets suspended from pulleys or grooved wheels that run on a cable, usually stationary. See also: [tramway](#); [aerial railroad](#); [aerial ropeway](#). *Fay; Peele*

aerobe

An organism that lives in the presence of free oxygen. The oxygen is usually used in the cell's metabolism. See also: [aerobic](#)

aerobic

a. Said of an organism (esp. a bacterium) that can live only in the presence of free oxygen; also, said of its activities. Syn: [aerobe](#). *AGI* b. Said of conditions that can exist only in the presence of free oxygen. CF: [anaerobic](#)

aeroclay

Clay, particularly china clay, that has been dried and air separated to remove any coarse particles. *Dodd*

aerodynamical efficiency

This furnishes a measure of the capacity of a fan to produce useful depression (or positive pressure in the case of a forcing fan) and indicates the extent to which the total pressure produced by the fan is absorbed within the fan itself. *Sinclair, I*

aerodynamic diameter

The diameter of a unit density sphere having the same terminal settling velocity as the particle in question. *ANSI*

aerodynamic fan

A fan that consists of several streamlined blades mounted in a revolving casing. The cross section and spacing of the blades are designed aerodynamically. This design ensures that the air flows without recirculation between the blades and leaves the rotor in a steady and regularly distributed stream. This appreciably reduces frictional, conversion, and recirculation losses. Fans of a convenient size can handle large volumes of air at the highest pressures likely to be required in mine ventilation.

aerodynamic instability

Flutter that may occur in a structure exposed to wind force. This form of instability can be guarded against by suitable design. *Hammond*

aeroembolism

a. The formation or liberation of gases in the blood vessels of the body, as brought on by a change from a high, or relatively high, atmospheric pressure to a lower one. *Hunt* b.

The disease or condition caused by the formation or liberation of gases in the body. The disease is characterized principally by neuralgic pains, cramps, and swelling, and sometimes results in death. Syn: [decompression sickness](#)

aerofall mill

A short, cylindrical grinding mill with a large diameter, used dry, with coarse lumps of ore, pebbles, or steel balls as crushing bodies. The mill load is flushed with an air stream to remove finish mesh material. *Pryor, 3*

aerofloc

Synthetic water-soluble polymer used as a flocculating agent. *Bennett*

aerofoil-vane fan

An improved centrifugal-type mine fan. The vanes, of aerofoil section, are curved backward from the direction of rotation. This fan is popular in British coal mines, and total efficiencies of about 90% have been obtained. See also: [mine-ventilation fan](#)

aerohydrous

a. Enclosing a liquid in the pores or cavities, as some minerals. *Standard, 2* b. Characterized by the presence of both air and water. *Standard, 2*

aeroides

Pale sky-blue aquamarine beryl.

aeromagnetic prospecting

A technique of geophysical exploration of an area using an airborne magnetometer to survey that area. Syn: [airborne magnetic prospecting](#). *AGI*

aerometer

An instrument for ascertaining the weight or the density of air or other gases. *Webster 3rd*

aerosite

Former name for pyrargyrite.

aerosol

a. A suspension of ultramicroscopic solid or liquid particles in air or gas, as smoke, fog, or mist. *Webster 3rd* b. Particles, solid or liquid, suspended in air. *ANSI* c. A sol in which the dispersion medium is a gas (usually air) and the dispersed or colloidal phase consists of solid particles or liquid droplets, e.g., mist, haze, most smoke, and some fog. *AGI*

Aerosol

Trade name of strong wetting agent based on sulfonated bi-carboxy-acid esters. *Pryor, 3*

aerugite

A grass-green to brown nickel arsenate, perhaps $\text{Ni}_{17} \text{As}_6 \text{O}_{32}$; an analysis gave 48.77% nickel. It is an oxidized vein mineral. *Hess*

aerugo

a. Copper carbonate, due to weathering of the metal; esp., the patina adhering to old bronzes. *Hess* b. Copper rust; verdigris; esp., green copper rust adhering to old bronzes. *Standard, 2*

aeschynite

An orthorhombic mineral, $(\text{Ce,Ca,Fe,Th})(\text{Ti,Nb})_2 (\text{O,OH})_6$; radioactive; occurs in black sands and pegmatites.

aethiops mineral

A former name for metacinnabar; isometric HgS .

aetite

a. A nodule consisting of a hard shell of hydrated iron oxide within which yellow iron oxide becomes progressively softer toward the center, which may be hollow. *Fay* b. See: [eaglestone](#)

affinity

In ion exchange, relative strength of attachment of competing ions for anchorage on a resin. *Pryor, 3*

A-frame

a. Two poles or legs supported in an upright position by braces or guys and used as a drill mast. *Long* b. An open structure tapering from a wide base to a narrow load-bearing top. *Nichols, 2*

A-frame headgear

A steel headgear consisting of two heavy plate A-frames, set astride the shaft mouth. They are braced together and carry the heavy girders that support the winding sheaves platform. It is a completely self-supporting and rigid structure that leaves usable space around the shaft collar and includes a guide-tower structure built over the shaft collar. A number of these headgears have been erected in the Republic of South Africa. *Nelson*

African emerald

a. A deceiving name for green fluor; also for green tourmaline. b. An emerald from the Transvaal. It is usually quite yellowish green; often dark and dull. Hardness, 7.5; sp gr, 2.72 to 2.79; refractive index, 1.58 to 1.59; birefringence, 0.007. Syn: [Transvaal emerald](#) c. A term variously used for southern African emeralds (beryl), green tourmaline, and other green gemstones from this region.

afterblast

During an explosion of methane and oxygen, carbon dioxide and steam are formed. When the steam condenses to water a partial vacuum is created, which causes an inrush or what is known as an afterblast. *Cooper*

afterblow

Continued blowing of air through Bessemer converter after flame has dropped, for removal of phosphorus in steel production. *Pryor, 3*

afterbreak

In mine subsidence, a movement from the sides, the material sliding inward, and following the main break, assumed to be at right angles to the plane of the seam. The amount of this movement depends on several factors, such as the dip, depth of seam, and nature of overlying materials. *Lewis*

afterburst

a. A tremor as the ground adjusts itself to the new stress distribution caused by new underground openings. b. In underground mining, a sudden collapse of rock subsequent to a rock burst.

aftercooler

A device for cooling compressed air between the compressor and the mine shaft. By cooling and dehumidifying the air, and thus reducing its volume, the capacity and efficiency of the pipeline are increased. See also: [air-conditioning process](#); [intercooler](#).
Nelson

afterdamp

The mixture of gases that remain in a mine after a mine fire or an explosion of combustible gases. It consists of carbonic acid gas, water vapor (quickly condensed), nitrogen, oxygen, carbon monoxide, and in some cases free hydrogen, but usually consists principally of carbonic acid gas and nitrogen, and is therefore irrespirable. See also: [blackdamp](#); damp. *Fay*

aftergases

Gases produced by mine explosions or mine fires. *Fay*

aftershock

An earthquake that follows a larger earthquake or main shock and originates at or near the focus of the larger earthquake. Generally, major earthquakes are followed by many aftershocks, which decrease in frequency and magnitude with time. Such a series of aftershocks may last many days for small earthquakes or many months for large ones. CF: [foreshock](#). *AGI*

aftersliding

In mine subsidence, an inward movement from the side, resulting in a pull or draw beyond the edges of the workings. *Briggs*

afwillite

A monoclinic mineral, $\text{Ca}_3 \text{Si}_2 \text{O}_4 (\text{OH})_6$; it is formed as portland cement is hydrated under special conditions, and where calcium silicate is autoclaved (as in sand-lime brick manufacture).

agalite

A fine fibrous variety of talc pseudomorphous after enstatite. Syn: [asbestine](#)

agalmatolite

A soft, waxy stone--such as pinite, pyrophyllite, or steatite--of a gray, green, yellow, or brown shade; used by the Chinese to simulate jade for carving small images, miniature pagodas, and similar objects. Syn: [figure stone](#); [pagodite](#); [lardite](#); [lard stone](#).

agardite

A hexagonal mineral, $(RE,Ca)Cu_6(AsO_4)_3(OH)_6 \cdot 3H_2O$; mixite group. Lanthanum, yttrium, or cerium may predominate among the rare earths.

agaric mineral

a. A soft, pulverulent hydrated silicate of magnesium in Tuscany, IT, from which floating bricks can be made. *Fay* b. A light, chalky deposit of calcium carbonate formed in caverns or fissures in limestone. Syn: [rock milk](#)

agate

a. A kind of silica consisting mainly of chalcedony in variegated bands or other patterns; commonly occupying vugs in volcanic and other rocks. *AGI* b. A translucent cryptocrystalline variety of variegated chalcedony commonly mixed or alternating with opal and characterized by colors arranged in alternating stripes or bands, in irregular clouds, or in mosslike forms; occurs in virtually all colors, generally of low intensity, in vugs in volcanic rocks and cavities in some other rocks. CF: [onyx](#). See also: banded agate; chalcedony; clouded agate; moss agate.

agate jasper

An impure variety of agate consisting of jasper with veins of chalcedony. Syn: [jaspagate](#)

agate opal

Opalized agate. *Fay*

agatized wood

A variety of silicified wood which resembles any variety of agate. See: [silicified wood](#)

age

a. The formal geochronologic unit of lowest rank, below epoch, during which the rocks of the corresponding stage were formed. *AGI* b. A term used informally to designate a length of geologic time during which the rocks of any stratigraphic unit were formed. *AGI* c. A division of time of unspecified duration in the history of the Earth, characterized by a dominant or important type of life form; e.g., the age of mammals. *AGI* d. The time during which a particular geologic event or series of events occurred or was marked by special physical conditions; e.g., the Ice Age. *AGI* e. The position of anything in the geologic time scale; e.g., the rocks of Miocene age. It is often expressed in years. See also: [geologic age](#). *AGI*

Agecroft device

A device placed in the rail track to arrest a forward runaway tram. The front axle of a descending tram traveling at normal speed depresses the catch and allows it to drop back in time for the back axle to pass over. Should the tram be traveling at excessive speed, the tail end of the catch arrests the rear axle. *Mason*

agent

a. The manager of a mining property. *Zern* b. On a civil engineering contract, the responsible representative of the contractor, acting for him or her in all matters. *Hammond* c. Before nationalization in Great Britain, the term referred to the chief official of a large coal mine or group of mines under the same ownership. After nationalization, the equivalent term is group manager. *Nelson* d. A chemical added to pulp to produce desired changes in climate of the system. *Pryor, 3*

age ratio

The ratio of daughter to parent isotope upon which the age equation is based. For a valid age determination, (1) the isotope system must have remained closed since solidification, metamorphism, or sedimentation, (2) the decay constant must be known, and (3) the sample must be truly representative of the rock from which it is taken. *AGI*

agglomerate belt flotation

A coarse-fraction concentration method used in milling pebble phosphate in which conditioned feed at 70% to 75% solids is placed on a flat conveyor belt traveling at a rate of about 75 ft/min (22.9 m/min). Water sprayed on the surface of the pulp aerates the pulp, causing agglomerates of phosphate particles to float to the side of the belt for removal. The silica fraction travels the length of the belt and is permitted to flow off the opposite end. Baffles are positioned at appropriate points along the belt to stir the material so that trapped phosphate particles are given an opportunity to float. Concentrate from the first belts or rougher operation is cleaned on a second belt for further silica removal. Tailings from the cleaner belt are recycled to the rougher circuit. *Arbiter*

agglomerate screening

A coarse-fraction concentration method used in milling pebble phosphate that is based on flowing reagentized feed over a submerged sloping, stationary screen. Agglomerated phosphate particles float on top of the screen and are recovered at the lower end. Sand particles pass through the screen and are removed as a tailings fraction. Each screen section is approx. 3 ft (0.9 m) wide by 4 ft (1.2 m) long and treats 2 to 3 st/h (1.8 to 2.7 t/h) of feed. *Arbiter*

agglomerating value

A measure of the binding qualities of coal but restricted to describe the results of coke-button tests in which no inert material is heated with the coal sample. CF: [agglutinating value](#)

agglomeration

a. In beneficiation, a concentration process based on the adhesion of pulp particles to water. Loosely bonded associations of particles and bubbles are formed that are heavier than water; flowing-film gravity concentration is used to separate the agglomerates from nonagglomerated particles. Agglomeration also refers to briquetting, nodulizing, sintering, etc. *Gaudin, 1* b. See: [kerosine flotation](#)

agglutinate

A welded pyroclastic deposit characterized by vitric material binding the pyroclasts, or sintered vitric pyroclasts. Also spelled agglutinite. *AGI*

agglutinating power

See: [caking index](#)

agglutinating value

A measure of the binding qualities of a coal and an indication of its caking or coking characteristics. Applicable with reference to the ability of fused coal to combine with an inert material such as sand. CF: [agglomerating value](#)

agglutinating-value test

A laboratory test of the coking properties of coal, in which a determination is made of the strength of buttons made by coking a mixture of powdered coal and 15 to 30 times its weight of sand.

agglutination

See: [cementation](#)

aggradation

a. The building up of the Earth's surface by deposition; specif., the upbuilding performed by a stream in order to establish or maintain uniformity of grade or slope. See also: [gradation](#). Syn: [upgrading](#) b. A syn. of accretion, as in the development of a beach. The spread or growth of permafrost, under present climatic conditions, due to natural or artificial causes. *AGI*

aggregate

a. A mass or body of rock particles, mineral grains, or a mixture of both. *AGI* b. Any of several hard, inert materials, such as sand, gravel, slag, or crushed stone, mixed with a cement or bituminous material to form concrete, mortar, or plaster, or used alone, as in railroad ballast or graded fill. The term can include rock material used as chemical or metallurgical fluxstone. See also: [chippings](#); [coarse aggregate](#); fine aggregate; lightweight aggregate. *AGI*

aging

A change in the properties of a substance with time. See also: [overaging](#); precipitation hardening. *Nelson*

Agitair flotation machine

Uses air to separate aerophilic and hydrophilic particles. Low-pressure air bubbles lift aerophilic particles to an overflow, leaving hydrophilic particles behind. *Pryor, 3*

agitation dredging

Consists of pumping the discharge directly into the sea and using the tide to carry the fines to deeper water areas. Agitation dredging is employed only during ebb tide in tidal estuaries having swift tidal flows that will disperse the accumulations of silt. *Carson, 2*

agitation ratio

In older type gravity concentrators, such as tables and vanners, the ratio between the average diameter of a mineral particle and the diameter of a gangue particle that travels at equal speed.

agitator

a. A tank in which very finely crushed ore is agitated with leaching solution. Usually accomplished by means of a current of compressed air passing up a central pipe and causing circulation of the contents of the tank. Sometimes called a mixer. *CTD* b. A device used to stir or mix grout or drill mud. Not to be confused with shaker or shale shaker. *Long* c. A device used to bring about a continuous vigorous disturbance in a pulp; frequently used to assist bubble formation. *BS, 5* d. Pac. See: [settler](#)

aglaite

A pseudomorph of spodumene in which the spodumene has been replaced by muscovite either as pinite or as visible plates. Also called pihlrite and cymatolite in the belief that the material was a new mineral. *Hess*

agmatite

Migmatite with appearance of breccia. CF: [contact breccia](#)

agnesite

An early name for bismutite, Cornwall, U.K. *Fay*

agonic line

An isogonic line that connects points of zero magnetic declination. Its position changes according to the secular variation of the Earth's magnetic field. See also: [isogonic line](#)

agreement

The formal document by which the contractor and the authority mutually agree to comply with the requirements of the drawings, specification, schedule, conditions of tendering, and general conditions of contract and the tender. See also: [tender](#); [contract](#). *Nelson*

agricolite

A former name for eulytite.

agricultural geology

The application of geology to agricultural needs, e.g., mineral deposits used as fertilizers or the location of ground water. Syn: [agrogeology](#). *AGI*

agricultural lime

a. Either ground quicklime or hydrated lime whose calcium and magnesium content is capable of neutralizing soil acidity. *ASTM* b. Lime slaked with a minimum amount of water to form calcium hydroxide. *CCD*, 2

agrite

A brown, mottled calcareous stone. *Schaller*

agrogeology

See: [agricultural geology](#)

aguilarite

An orthorhombic mineral, $\text{Ag}_4 \text{SeS}$.

ahlfeldite

A monoclinic mineral, $\text{NiSeO}_3 \cdot 2\text{H}_2\text{O}$; forms a series with cobaltomenite; rose colored; vitreous luster; no cleavage; conchoidal fracture; strongly pleochroic, X rose, Y pale green, Z brown green; from Pacajake, Bolivia. *Am. Mineral.*, 1

A-horizon

In a soil profile, the uppermost zone from which soluble salts and colloids have been leached and in which organic matter has accumulated. See also: [B-horizon](#)

aikinite

a. An orthorhombic mineral, PbCuBiS_3 ; sp gr, 6.1 to 6.8; an ore of lead, copper, and bismuth. Syn: [acicular bismuth](#); [aciculite](#); [needle ore](#); acicular bismuth; aciculite. b. Wolframite pseudomorphous after scheelite.

aimafibrite

See: [hemafibrite](#)

AIME

American Institute of Mining and Metallurgical Engineers. *Statistical Research Bureau*

air

a. The mixture of gases that surrounds the Earth and forms its atmosphere; composed by volume of 21% oxygen and 78% nitrogen; by weight about 23% oxygen and 77% nitrogen. It also contains about 0.03% carbon dioxide, some aqueous vapor, argon, and other gases. *Hartman*, 1 b. The current of atmospheric air circulating through and ventilating the workings of a mine. c. Atmospheric air delivered under compression to bottom of drill hole through the drill stem and used in place of water to clear the drill bit of cuttings and to blow them out of the borehole. *Long* d. Air piped under compression to work areas and used to operate drilling or mining machinery. See also: [air circulation](#)

airafibrite

See: [hemafibrite](#)

air-avid surface

A surface that seems to prefer contact with air to contact with water. A particle (or mineral) of this sort will adhere to an air bubble and float out of a flotation pulp;

otherwise, the particle will not float. Also called water-repellent surface; hydrophobic. CF: [water-avid surface](#). *Newton, 1*

air barrage

The division of an opening in a mine by an airtight wall into two sides; one side is used as an air intake, the other side as a return.

air bell

In froth flotation, the small air pocket inducted or forced into the pulp at depth; e.g., bell and the two-walled semistable bubble after emergence from pulp into froth have different characteristics and gas-to-liquid, area-to-volume relationships, hence the distinction. These bubbles vary in attractive and retaining power for aerophilic grains and are a critical component of the flotation process. Syn: [air bubble](#)

air belt

In a cupola furnace, an annular air space around the furnace, from which air is forced into the furnace. *Henderson*

airblast

a. A term improperly used by some diamond drillers as a syn. for air circulation. See also: [air circulation](#) b. A disturbance in underground workings accompanied by a strong rush of air. The rush of air, at times explosive in force, is caused by the ejection of air from large underground openings, the sudden fall of large masses of rock, the collapse of pillars, slippage along a fault, or a strong current of air pushed outward from the source of an explosion. *Long*

airblasting

A method of blasting in which compressed air at very high pressure is piped to a steel shell in a shot hole and discharged. *BS, 12*

air block

Air trapped in the upper end of an unvented inner tube of a double-tube core barrel, which, when sufficiently compressed, acts like a solid and stops further advance of core into the inner tube. Syn: [air cushion](#). *Long*

airborne electromagnetic prospecting

Electromagnetic surveys carried out with airborne instruments. *Dobrin*

airborne magnetic prospecting

See: [aeromagnetic prospecting](#)

airborne magnetometer

An instrument used to measure variations in the Earth's magnetic field while being transported by an aircraft. See also: [magnetometer](#). *AGI*

air box

a. A rectangular wooden pipe or tube made in lengths of 9 to 15 ft (2.7 to 4.6 m) for ventilating a heading or a sinking shaft. *Fay* b. A box for holding air. *Fay* c. The conduit through which air for heating rooms is supplied to a furnace. *Standard, 2*

air breakers

A method of breaking down coal by the use of high-pressure compressed air. *McAdam, 2*

air brick

A hollow or pierced brick built into a wall to allow the passage of air.

air bridge

A passage through which a ventilating current is conducted over an entry or air course; an overcast. See also: [air crossing](#)

air bubble

See: [air bell](#)

air chamber

A vessel installed on piston pumps to minimize the pulsating discharge of the liquid pumped. The chamber contains air under pressure and is fitted with an opening on its underside into which some of the liquid from the pump is forced upon the delivery stroke of the piston. The air acts as a cushion to lessen the fluctuation of the liquid flow between the suction and delivery strokes of the piston. *Crispin*

air change

a. The quantity of infiltration of ventilation air in cubic meters per second divided by the volume of the room gives the number of so-called air changes during a given interval of

time. Tables of the recommended number of such air changes for various rooms are used for estimating purposes. b. The act of instituting a different pattern of air flow in a mine.

air channels

In a reverberatory furnace, flues under the hearth and fire bridge through which air is forced to avoid overheating. *Henderson*

air circulation

a. A large volume of air, under compression, used in lieu of a liquid as a medium to cool the bit and eject drill cuttings from a borehole. Syn: [air flush](#) b. The general process of moving air around the openings of a mine. See also: [air](#)

air classification

a. In powder metallurgy, the separation of powder into particle-size fractions by means of an airstream of controlled velocity; an application of the principle of elutriation. *ASM, 1*
b. Sorting of finely ground minerals into equal settling fractions by means of air currents. These are usually controlled through cyclones, which deliver a coarse spigot product and a relatively fine vortical overflow. See also: [infrasizer](#) c. A method of separating or sizing granular or powdered materials, such as clay, through deposition in air currents of various speeds. This principle is widely used in continuous pulverizing of dry materials, such as frit, feldspar, limestone, and clay. See also: [air classifier](#); air elutriator. *Enam. Dict.*

air classifier

An appliance for approx. sizing crushed minerals or ores by means of currents of air. See also: [air classification](#); [air elutriator](#). *CTD*

air cleaning

A coal-cleaning method that utilizes air to remove the dust and waste from coal. Air cleaning requires that the coal contain less than 5% of surface moisture as a rule. It is effective only in the coarse sizes (plus 10 to 28 mesh) and is best suited to coals having a sharply defined line between coal and refuse material. Predrying to reduce the moisture content of the coal ahead of the air treatment is not uncommon. It is a less expensive and also a less accurate method of cleaning coal than the wet-cleaning method. *Kentucky*

air compartment

An airtight portion of any shaft, winze, raise, or level used for ventilation. *BS, 8*

air conditioning

The simultaneous control, within prescribed limits, of the quality, quantity, temperature, and humidity of the air in a designated space. It is essentially atmospheric environmental control. Control of only one or two of these properties of the atmosphere does not constitute air conditioning. The definition and correct usage require that the purity, motion, and heat content of the air must all be maintained within the prescribed limits. *Hartman, 2*

air-conditioning process

When conditioning is designed to perform only one or a limited number of functions, then it should be so designated. Air-conditioning processes include dust control, ventilation, dehumidification, cooling, heating, and many others. See also: [aftercooler](#); [air receiver](#); [compressed air](#); duplex compressor; rotary compressor; turbocompressor. *Hartman, 2*

air-cooled blast-furnace slag

The material resulting from solidification of molten blast-furnace slag under atmospheric conditions. Subsequent cooling may be accelerated by application of water to the solidified surface. *ASTM*

air course

a. Ventilating passage underground. *Pryor, 3* b. A passage through which air is circulated, particularly a long passageway driven parallel to the workings to carry the air current. See also: [airway](#)

air coursing

The system of colliery ventilation, introduced about 1760, by which the intake air current was made to traverse all the underground roadways and faces before passing into the upcast shaft. *Nelson*

air creep

Stain formed by air entering at edges of mica sheets and penetrating along cleavage planes. *Skow*

air crossing

A bridge where a return airway passes over (overcast) or under (undercast) an intake airway. It is generally constructed with concrete blocks, structural steel, and/or sheet metal, and is made airtight to prevent intermixing of the two air currents. The mining law requires an air crossing to be so constructed as not to be liable to be damaged in the event

of an explosion. Syn: [air bridge](#); bridge; [overcrossing](#); [overgate](#). See also: [overcast](#); [undercast](#). *Nelson*

air current

a. The flow of air ventilating the workings of a mine. Syn: [airflow](#); air quantity. *BS*, 8 b. A body of air moving continuously in one direction. *Jones*, 1

air cushion

Air trapped in the bottom of a dry borehole by the rapid descent of a tight string of borehole equipment. Syn: [air block](#)

air cyclone

Primarily a vessel for extracting dust from the atmosphere. *Nelson*

air decking

The use of air space or a void within a blast hole between an explosive charge and inert stemming to enhance the shock wave detonation force.

air dome

A cylindrical or bell-shaped container closed at the upper end and attached in an upright position above and to the discharge of a piston-type pump. Air trapped inside the closed cylinder acts as a compressible medium, whose expansion and contraction tends to reduce the severity of the pulsations imparted to the liquid discharged by each stroke of a pump piston. Syn: [bonnet](#); [pressure dome](#). CF: [dome](#). *Long*

air door

A door erected in a roadway to prevent the passage of air. When doors are erected between an intake and a return airway, they may be known as separation doors. Syn: [door](#); [separation door](#); [trapdoor](#). *BS*, 8

Airdox

A system for breaking down coal by which compressed air, generated locally by a portable compressor at 10,000 psi (69.0 MPa), is used in a releasing cylinder, which is placed in a hole drilled in the coal. Thus, slow breaking results, with no flame, in producing a larger percentage of lump coal than is made by using explosives. Its principal advantage is that it may be used with safety in gaseous and dusty mines. See also: [compressed-air blasting](#)

air drain

A passage for the escape of gases from a mold while the molten metal is being poured. *Standard*, 2

air-dried

Said of minerals naturally dried to equilibrium with the prevailing atmosphere. *Pryor*, 3

air-dried basis

An analysis expressed on the basis of a coal sample with moisture content in approximate equilibrium with the surrounding atmosphere. *BS*, 4

air drift

a. An opening driven for ventilation purposes, often inclined and driven in stone. b. A drift connecting a ventilation shaft with the fan.

air drill

a. A small diamond drill driven by either a rotary or a reciprocating-piston air-powered motor; used principally in underground workings. *Long* b. As used by miners, a percussive or rotary-type rock drill driven by compressed air. CF: [air rig](#)

air-dry

a. Dry to such a degree that no further moisture is given up on exposure to air. Most air-dry substances contain moisture that can be expelled by heating them or placing them in a vacuum. *Webster 3rd; Fay* b. Said of timber the moisture content of which is in approximate equilibrium with local atmospheric conditions. *CTD*

air duct

a. Tubing that conducts air, usually from an auxiliary fan, to or from a point as required in the mine. *BS*, 8 b. An air box, canvas pipe, or other air carrier for ventilation. *Hess*

air elutriation

Method of dividing a substance into various particle sizes by means of air currents. *Bennett*

air elutriator

An appliance for producing, by means of currents of air, a series of sized products from a finely crushed mineral (e.g., for the paint or abrasive industries). See also: [air classification](#); [air classifier](#). *CTD*

air endway

A narrow roadway driven in a coal seam parallel and close to a winning headway chiefly for ventilation; it usually acts as a return and is connected at intervals of 10 yd (9 m) or so to the headway by crosscuts.

air-float table

Shaking table in which ore is worked dry, air being blown upward through a porous deck so as to dilate the material. *Pryor, 1*

airflow

See: [air current](#)

airflow-equalizing device

A flow-equalizing device that is fitted to tube breathing apparatus. There are two kinds in general use, one consisting of a flexible, corrugated rubber tube and the other a canvas fabric bag. On inspiration, air is drawn partly from the equalizer, which is reduced in volume, and partly from the tube. On expiration, the equalizer restores itself to its original volume and in doing so draws air through the tube. Thus the air is kept flowing very nearly in a continuous stream, and the wearer, without the aid of bellows or rotary blower, experiences very little resistance to breathing. *Mason*

airflow meter

An instrument that measures and provides readout of the flow of air in a pipe or hose in cubic meters per second.

air flush

See: [air circulation](#)

air flushing

The circulation of air through the drilling apparatus during drilling to cool the bit and to remove the cuttings from the hole. *BS, 8*

airfoil fan

A fan with an airfoil-shaped blade that moves the air in the general direction of the axis about which it rotates. *Strock, 2*

air furnace

Malleable-iron furnace.

air gate

- (a) Mid. An underground roadway used principally for ventilation.
- (b) An air regulator.

airhammer

A tool in which a hammerhead is activated by means of compressed air. The airhammer is called a jackhammer in coal mining and jackleg-hammer in hardrock mining. The tool is used to drill blastholes to grade or take up bottom or to advance a stope. *Crispin*

air heater

An appliance to warm the air as it enters the downcast shaft or intake drift. In countries where the winter is very cold, nearly all mines are equipped with air heaters of the oil-fired, gas-fired, or electric type.

air hoist

- a. Hoisting machinery operated by compressed air. *Fay*
- b. A small portable hoisting machine usually mounted on a column and powered by a compressed air motor. Also called tugger. *Long*

airhole

- a. A small excavation or hole made to improve ventilation by communication with other workings or with the surface. See also: [cundy](#)
- b. A venthole in the upper end of the inner tube of a double-tube core barrel to allow air and/or water entrapped by the advancing core to escape. *Long*
- c. A void, cavity, or flaw in a casting or bit crown. *Long*

air horsepower

The rate at which energy is consumed, in horsepower or kilowatt units, in moving air between two points.

air hp

Abbrev. for air horsepower.

airing

Operation in which air is blown through molten copper in a wire bar or anode furnace. Sulfur is removed as SO, and impurities are slagged off. *Pryor, 3*

air intake

a. The airway or airways through which fresh air is brought into a mine. b. A device for supplying a compressor with clean air at the lowest possible temperature.

air jig

A machine in which the feed is stratified by means of pulsating currents of air and from which the stratified products are separately removed. *BS, 5*

air lancing

a. Removing or cutting away loose material by means of compressed air, using an air lance; airblasting. *Henderson* b. In founding, a cleaning operation, as cleaning sand from molds and castings, using an air lance; airblasting. *Henderson* c. Opening passages for molten materials.

air leakage

a. The short-circuiting of air from intake to return airways (through doors, stoppings, wastes, and old workings) without doing useful work in flowing around the faces. The total air leakage is usually within the range of 35% to 53% of that passing through the surface fan. *Nelson* b. The air that escapes from compressed-air lines by leakage from joints, valves, hoses, etc.

air leg

a. A cylinder operated by compressed air, used for keeping a rock drill pressed into the hole being drilled. *Hammond* b. A device, incorporating a pneumatic cylinder, providing support and thrust for a jackhammer. *BS, 12*

air-leg support

An appliance to eliminate much of the labor when drilling with handheld machines. It consists of a steel cylinder and air-operated piston, the rod of which extends through the top end of the cylinder and supports the drilling machine. The air leg and machine can be operated by one worker. Syn: [pneumatic drill leg](#)

air level

Eng. A level or airway (return airway) of former workings used in subsequent deeper mining operations for ventilation.

air lift

An apparatus used for pumping water from wells either temporarily or for a permanent water supply; for moving corrosive liquids such as sulfuric acid; for unwatering flooded mines; for elevating mill tailings, sands, and slimes in cyanide plants; and for handling the feed to ball mills. In operation, compressed air enters the suction pipe and mixes with the water. As the water and air rise, the air expands and is practically at atmospheric pressure at the top of the discharge pipe. The efficiency of the air lift is calculated on the basis of the foot-pounds of work done in lifting the water, divided by the isothermal work required to compress the air. *Lewis*

air-lift dredge

Dredge in which solids suspended in a fluid are lifted. By injecting air into a submerged pipe beneath the water surface, the density of the fluid column inside the pipe can be lessened, forcing the fluid column to rise in the tubular pipe. Syn: [airlift sampler](#)

airlift sampler

See: [air-lift dredge](#)

air-line lubricator

See: [line oiler](#)

airline respirator

An atmosphere-supplying respirator in which the respirable-gas supply is not designed to be carried by the wearer (formerly called supplied-air respirator). *ANSI*

air lock

a. A casing at the top of an upcast shaft to minimize surface air leakage to the fan. It consists of a large double casing enveloping the whole of the upcast-shaft top and extending into the headgear. Some are fitted with power-operated doors and allow high-speed winding with little leakage. A modern light-alloy structure raised through spring-loaded attachments by the top of the cage on ascending has proved efficient. Syn: [shaft casing](#) b. A system of doors arranged to allow the passage of workers or vehicles without permitting appreciable airflow. *BS, 8*

airman

A worker who constructs brattices. Syn: [brattice worker](#)

air mat

A mat made of porous material, usually canvas, and used to subdivide and distribute air in certain pneumatic-type flotation machines. *Hess*

air mover

A portable compressed-air appliance, which may be used as a blower or exhauster. It converts the compressed air into a large induced volume of moving air. The compressed air is fed through a side inlet and is expanded at a high velocity through an annular orifice. It is useful for emergency ventilation in workings where auxiliary fans cannot be installed. Syn: [injector](#); [static air mover](#). See also: [auxiliary ventilation](#). *Nelson*

air-operated winch

A small, compressed-air drum haulage or hoist used for lifting, dragging, or skidding work in mines. With capacities ranging from 660 to 4,400 lb (300 to 2,000 kg), these winches have powerful piston motors and are capable of continuous operation. They are easy to move from job to job and are used for shaft sinking and moving wagon drills at quarry and opencast operations. *Nelson*

air photograph

See: [aerial photograph](#)

air pit

See: [air shaft](#)

airplane-strand wire rope

A small 7- or 19- wire galvanized strand made from plow steel or crucible-steel wire. *Hunt*

air-power-operated mine door

Mine doors help to keep the air flow in shafts and mine working areas constant. In cases of explosions, doors "give" to relieve the pressure, then close automatically. The doors are mobile and can be set up in any location. They are opened and closed by a compressed-air cylinder and are designed to be used where haulage equipment operates on a trolley wire. *Best, I*

air pressure

a. For rock drills, the air pressure ranges from 70 to 90 psi (480 to 620 kPa), the most economical pressure for such machines being from 90 to 95 psi (620 to 655 kPa), when high drilling speed is attained. *Hammond* b. To operate the percussive tool and to flush the hole of cuttings, surface mounted drills use 690 to 1,725 kPa air pressure. *Cumming*, 2

air-pressure drop

The pressure lost or consumed in overcoming friction along an airway.

air propeller

A rotating set of blades designed to impart momentum to an air mass.

air pump

A pump for exhausting air from a closed space or for compressing air or forcing it through other apparatus. CF: [vacuum pump](#)

air-purifying respirator

A respirator in which ambient air is passed through an air-purifying element that removes the contaminants. Air is passed through the air-purifying element by means of the breathing action or by a blower. *ANSI*

air quantity

The amount of air flowing through a mine or a segment of a mine, in cubic meters per second. Air quantity is the product of the air velocity times the cross-sectional area of the airway. See also: [air current](#). Syn: [air volume](#)

air ramming

A method of forming refractory shapes, furnace hearths, or other furnace parts by means of pneumatic hammers. *Harbison-Walker*

air receiver

A vessel into which compressed air is discharged to be stored until required. See also: [air-conditioning process](#)

air-reduction process

See: [roasting and reaction process](#)

air regulator

An adjustable door installed in permanent air stoppings or in an airway without a stopping to control ventilating current.

air requirements

The quantity of air required by law or practical considerations to maintain adequate ventilation of a mine. This quantity will depend on (1) the length of face room in production, (2) the average distance from the shafts to the faces, (3) the gas emission rate, (4) the depth of the workings, and (5) the volumetric efficiency of the mine ventilation.

See also: [air volume](#); [ventilation planning](#).

air rig

A drill machine powered by an air-driven motor. CF: [air drill](#). *Long*

air rod puller

See: [rod puller](#)

air rotary drilling

Drilling technique that utilizes compressed air to lift the cuttings up the borehole and to cool the bit. Used when possible for environmental monitoring, because no drilling fluids are introduced into the formation. Feasible only in consolidated or semiconsolidated formations. *Driscoll*

air-sand process

See: [Fraser's air-sand process](#)

air seal

A method for the prevention of the escape of warm gases from the entrance or exit of a continuous furnace, or tunnel kiln, by blowing air across the opening. *Dodd*

air separation

In powder metallurgy, the classification of metal powders into particle size ranges by means of a controlled airstream. *Rolfe*

air separator

A machine for the size classification of the fine ceramic powders, such as china clay; the velocity of an air current controls the size of particle classified. *Dodd*

air set

a. The property of a material to develop high strength when dried; e.g., air-setting mortars. *ARI* b. In a material such as a castable refractory, refractory mortar, or plastic refractory, the ability to harden without the application of heat. *AISI*

air shaft

A shaft used wholly or mainly for ventilating mines, for bringing fresh air to places where miners are working, or for exhausting used air. It may be used as an intake (downcast) shaft or a return (upcast) shaft. See also: [downcast](#); upcast. Syn: [air pit](#)

air shooting

In seismic prospecting, a technique of applying a seismic pulse to the ground by detonating explosive charges in the air. *AGI*

air shot

A shot prepared by loading (charging) in such a way that an airspace is purposely left in contact with the explosive for the purpose of lessening its shattering effect. *Fay*

air shrinkage

The volume decrease that a clay undergoes in drying at room temperature.

air-slaked

Slaked by exposure to the air; as lime. *Standard, 2*

air-slaking

Exposure of quicklime to the atmosphere to give slow hydration. *Pryor, 3*

air slit

York. A short heading driven more or less at right angles to and between two headings or levels for ventilation. See also: [stenton](#)

air slug

A mass of air under compression entrapped in the liquid circulated through a borehole drill string or a liquid-piping system. *Long*

air sollar

A compartment or passageway carried beneath the floor of a heading or of an excavation in a coal mine for ventilation. See also: [sollar](#)

air-space ratio

The ratio of a volume of water that can be drained from a saturated soil under the action of force of gravity to a total volume of voids. *ASCE*

air-sparged hydrocyclone

A separator consisting of two concentric right-vertical tubes, a conventional cyclone header at the top, and a froth pedestal at the bottom. The inner tube is a porous-wall tube. The slurry is fed tangentially through the cyclone header to develop a radial swirl flow. Air is sparged through the jacketed, inner porous tube wall and is sheared into small bubbles by the swirl flow. Hydrophobic coal particles in the slurry attach to the air bubbles and report as overflow product. The hydrophilic refuse particles remain wetted and report as underflow product.

air split

The division of the main current of air in a mine into two or more parts. See also: [split](#)

air stack

A chimney formerly used to ventilate a mine.

air stain

Gas trapped beneath mica cleavage surfaces in flattened pockets, tiny bubbles, or groups of closely spaced bubbles. *Skow*

air starter

A starter used on large coal haulers that permits the elimination of all batteries except the 6-V units for the headlights. These starters are operated by compressed air supplied at 100 psi (690 kPa) from a storage tank on the tractor. Trucks can stand idle for 4 or 5 days and there is still enough air in the tanks to start the engines. *Coal Age, 3*

air-stowing machine

The machine used for blowing the stone chippings into the waste area in pneumatic stowing. It consists of a steel paddle wheel revolving in an adjustable casing. Stowing dirt is fed continuously from a hopper to the machine, which in turn blows the material through pipes 5 to 6 in (13 to 15 cm) in diameter into the waste area. See also: [pneumatic stowing](#). *Nelson*

air streak

In mica, a series of air inclusions connected (or nearly connected) to form a relatively long, thin streak. Also known as silver streak. *Skow*

air survey

In mining, a check on ventilation, gas, and dust in a mine. *Pryor, 3*

air-swept ball mill

See: [ball mill](#)

air-swept mill

A tumbling mill used in dry grinding, from which finished material is removed by means of regulated air currents that can be so controlled as to produce a closed circuit. *Pryor, 1*

air swivel

A device similar to a water swivel but designed to conduct air under compression into a rotating drill stem when air instead of a liquid is used as an agent to flush drill cuttings out of a borehole. CF: [water swivel](#)

air table

A shaking table used when water is scarce to effect gravity concentration of sands. Air is blown upward through a porous deck, over which a layer of finely crushed ore passes. The heavy and light minerals stratify and gravitate to separate discharge zones. Syn: [pneumatic table](#). *Pryor, 1*

air-track drill

A heavy drilling machine for quarry or opencast blasting. It has continuous tracks and is operated by independent air motors. It tows its rotary compressor and drills holes 3 in or 4 in (7.6 cm or 10.2 cm) in diameter at any angle, but it is chiefly used for vertical holes up to 80 ft (24.4 m) in depth. *Nelson*

air transport

A method employed in some mines in which material is transported and stowed pneumatically through pipelines. *Stoces*

air trunk

A large pipe or shaft for conducting air, such as for ventilation or to a furnace. *Fay*

air tub

The cylinder on a blowing engine that pumps a blast of wind or air. *Fay*

air turbolamp

A lamp coupled to the compressed air mains, which may be at any pressure between 275 kPa and 700 kPa. It consumes 0.025 m³ /s of free air. The electrical power is produced by a small turboalternator with a six-pole permanent magnet rotor.

air valve

The valve that controls the alternate admission and release of compressed air to each cell of a Baum-type washbox. *BS, 5*

air velocity

The rate of motion of air in a given direction; in mine ventilation it is usually expressed in meters per second. This is usually measured conducting a vane anemometer traverse over a selected cross section, the area of which is also measured.

air vessel

A small air chamber fixed to the pipeline on the discharge side of a reciprocating pump that acts as a cushion to minimize the shock produced by the pulsations of the pump. *Nelson*

airveyor

A device for handling dusty materials, built on the principle of a pneumatic cleaner. The system used is a suction system, whereby the material (soda ash, salt cake, cement, or powdered lime) is drawn from the car through a flexible hose into a vacuum tank designed to recover a large percentage of the dust floating in the air. *Hess*

air-void ratio

The ratio of the volume of air space to the total volume of voids in a soil mass. *ASCE*

air volume

In mining, the quantity (Q) of air flowing in cubic meters per second. It is obtained by multiplying the average velocity (V) in meters per second by the area (A) of the airway in square meters; i.e., $Q = AV$. See also: [air requirements](#); [air quantity](#).

air washer

Air washers make use of water sprays or cooling coils for evaporative and sensible cooling of mine air. Their use has largely been limited to shallow coal mines in the United States, where it is desirable to reduce the dry-bulb temperature of the intake air during the hot summer months to prevent slaking of the roof due to excessive expansion. An air washer is essentially a heat exchanger and is similar to the type of unit employed for heat transfer with refrigeration or evaporative-cooling systems.

air wave

The acoustic-energy pulse transmitted through the air as a result of a pressure (sound) source; e.g., explosion, near-surface seismic shot, or supersonic aircraft. *AGI*

airway

Any underground gallery or passage through which a portion of the ventilation passes; i.e., the air is carried. Syn: [air course](#); wind road. *BCI*

Airy hypothesis

A concept of the mechanism of isostasy, proposed by George Bedell Airy, that postulates an equilibrium of crustal blocks of the same density but of different thickness; thus the topographically higher mountains would be of the same density as other crustal blocks but would have greater mass and deeper roots. CF: [Pratt hypothesis](#)

Ajax

A high-strength, high-density, gelatinous permitted explosive having good water resistance; used for dry and wet conditions both in rock and in the breaking of hard coal. See also: [Polar Ajax](#)

ajkaite

A pale-yellow to dark reddish brown, sulfur-bearing fossil resin found in brown coal. Also spelled ajkite. *AGI*

ajutage

Roman term designating size of water delivery pipes and outlet spouts. Syn: [adjutage](#)

akaganeite

A tetragonal mineral, ferric oxyhydroxide $\beta\text{-FeO}(\text{OH},\text{Cl})$; rust colored; occurs in soils.

akhtenskite

A hexagonal mineral (epsilon- MnO_2), trimorphous with pyrolusite and ramsdellite. See: [pyrolusite](#)

Akins' classifier

Used for separating fine-size solids from coarser solids in a wet pulp; consists of an interrupted-flight screw conveyor operating in an inclined trough.

akrochordite

A monoclinic mineral, $\text{Mn}_4\text{Mg}(\text{AsO}_4)_2 \cdot 4\text{H}_2\text{O}$; forms reddish-brown rounded aggregates.

aksaite

An orthorhombic mineral, $\text{MgB}_6\text{O}_7(\text{OH})_6 \cdot 2\text{H}_2\text{O}$.

alabandite

An isometric mineral, manganese sulfide, MnS ; iron-black; in epithermal vein deposits; an ore of manganese. Formerly called alabandine. Syn: [manganblende](#); [manganese glance](#).

alabaster

A massive form of gypsum; very fine grained; commonly snow-white and translucent but may be delicately shaded or tinted with light-colored tones. Because of its softness, it can be easily carved and polished. Widely used for ornamental purposes. Chemically it is $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$. It is a beautifully banded form of stalagmitic calcite occurring in Algeria and in Egypt. Syn: [oriental alabaster](#); [onyx marble](#). *CMD*

aladzha

Impure ozokerite containing an admixture of country rocks and found in the region of the Caspian Sea. *Tomkeieff*

alamosite

A monoclinic mineral, PbSiO_3 . Syn: [lead silicate](#); lead metasilicate.

alaskite

In the United States, a commonly used term for a granitic rock containing few, if any, dark minerals. The term is used to designate granitoid rocks in which quartz constitutes 20% to 60% of the felsic minerals and in which the ratio of alkali feldspar to total feldspar is greater than 90%; i.e., the equivalent of alkali granite. Alaskite is a commercial source of feldspar near Spruce Pine, NC. CF: [aplogranite](#)

albertite

A dark brown to black asphaltic pyrobitumen with conchoidal fracture occurring as veins 1 to 16 ft (0.3 to 4.9 m) wide in the Albert Shale of Albert County, NB, Can. It is partly soluble in turpentine, but practically insoluble in alcohol. It was earlier called albert coal. *AGI*

albert shale

An early name for albertite. *Tomkeieff*

albite

a. A triclinic mineral, $\text{NaAlSi}_3\text{O}_8$; feldspar group, with up to 10 mol % CaAl replacing NaSi; a member of the plagioclase and the alkali feldspar series; prismatic cleavage; a common rock-forming mineral in granite, intermediate to felsic igneous rocks, low-temperature metamorphic rocks, and hydrothermal cavities and veins; can be used as a glaze in ceramics. b. The pure sodium-feldspar end member in the plagioclase series. Syn: [sodium feldspar](#); [white feldspar](#); [white schorl](#).

albite-epidote-amphibolite facies

The set of metamorphic mineral assemblages (facies) in which basic rocks are represented by hornblende + albite + epidote. Equivalent to Eskola's epidote-amphibolite facies, it is of uncertain status, transitional between the greenschist facies and the amphibolite facies. It is generally believed to be favored by the higher pressures of regional metamorphism. *AGI*

albite porphyrite

See: [albitite](#)

albitite

A porphyritic igneous rock, containing phenocrysts of albite in a groundmass chiefly consisting of albite. Muscovite, garnet, apatite, quartz, and opaque oxides are common accessory minerals. Syn: [albitophyre](#); [albite porphyrite](#). *AGI*

albitization

Introduction of, or replacement by, albite, usually replacing a more calcic plagioclase. *AGI*

albitophyre

See: [albitite](#)

albond

A kaolinitic clay found in Dorsetshire, England. It is used as a low-percentage addition to natural molding sands. *Osborne*

alchemy

The immature chemistry of the Middle Ages, characterized by the pursuit of the transmutation of base metals into gold, and the search for the alkahest and the panacea. *Standard, 2*

alcohol

C_2H_5OH ; made from grain. Not to be confused with methyl hydroxide or methanol. Syn: [ethanol](#)

alexandrine sapphire

Incorrect name for alexandritelike sapphire; also for so-called synthetic alexandrite.

alexandrite effect

The property of some chrysoberyl and other minerals and stones to appear green in sunlight, but red under incandescent illumination.

alexandritelike tourmaline

See: [chameleonite](#)

alexeyevite

A waxlike resin from Kaluga, Russ, which resembles compact turf. Also spelled alexjejevite.

algae

Photosynthetic, almost exclusively aquatic, plants of a large and diverse division (Algae) of the thallophytes, including seaweeds and their fresh-water allies. It ranges in size from simple unicellular forms to giant kelps several meters long, and displays extremely varied life-cycles and physiological processes, with, e.g., different complexes of photosynthetic pigments. Algae range from the Precambrian. An individual plant is called an alga. *AGI*

algal

Of, pertaining to, or composed of algae. *AGI*

algal coal

Coal composed mainly of algal remains, such as Pila, Reinschia, etc. Also called boghead coal. *Tomkeieff; AGI*

algal limestone

A limestone composed largely of the remains of calcium-carbonate-producing algae, or one in which such algae bind together the fragments of other calcium-carbonate-producing forms. *AGI*

algal reef

An organic reef in which algae are or were the principal organisms producing calcium carbonate, e.g., off the coast of Bermuda. The reefs may be up to 10 m high and more than 15 m across. *AGI*

algal stromatolite

See: [stromatolite](#)

algarite

A general term for a bitumen derived from algae. *Tomkeieff*

alga sapropel

Equivalent to peat of the humic coal series. *AGI*

Algerian onyx

See: [oriental alabaster](#)

alginate

Designates the characteristic maceral of boghead coal. In reflected light it is very difficult to recognize the cellular structure of the algae. The reflecting power of the maceral is much weaker than that of vitrinite and is also weaker than that of sporinite in coals of low rank. In transmitted light, alginite sometimes shows structure (of colonies of algae). The color is yellow to orange. Alginite is best recognized by luminescent microscopy; it shows marked luminescence of varying color--silvery blue, green, yellowish brown. The humic constituents either are not luminescent or show a different kind of luminescence to the alginite. Syn: [algite](#). *IHCP*

algite

The constituent petrological unit, or maceral, of algal material present in considerable quantity in algal or boghead coal. See also: [alginate](#). *AGI*

algodonite

a. Arsenide of copper occurring as a white incrustation in the Algodona silver mine, Chile. *CTD* b. An orthorhombic mineral, $Cu_6 As$; pseudo-hexagonal.

Algoman orogeny

Orogeny and accompanying granitic emplacement that affected Precambrian rocks of northern Minnesota and adjacent Ontario about 2.4 billion years ago; it is synonymous with the Kenoran orogeny of the Canadian classification. *AGI*

alidade

a. In mine surveying, a movable arm used to read horizontal angular distances. *Pryor*, 3
b. A device having a level bubble combined with a quarter or a half circle graduated in degrees that is used by drillers to determine the inclination of a drill stem and/or borehole at the collar of the borehole. Also called angle level; angle rule; clinometer; clinometer rule. *Long* c. An instrument used in planetable surveying, consisting of a telescope or sighting device pivoted to swing through a vertical graduated arc atop a vertical stand attached to a steel rule, one edge of which is parallel with the sight line of the telescope. *Long* d. Sometimes incorrectly used as a syn. for transit; theodolite. *Long* e. A rule equipped with simple or telescopic sights, used for determining the directions of objects, specif., a part of a surveying instrument consisting of a telescope or other sighting device, with index and reading or recording accessories. *AGI* f. A surveying instrument used with a planetable for mapping; e.g., peep-sight alidade and telescopic alidade. *AGI*

alien filling

Filling material brought from the surface or from some place other than the mine. *Stoces*

align

a. To position a drill so that its drill stem is centered on a point and parallel to a predetermined angle and compass direction. Also called line in; lineup. *Long* b. To reposition a drill and bring its drill stem over the center and parallel with a newly collared drill hole. *Long*

alignment

a. The planned direction of a tunnel or other roadway driven irrespective of coal seam or orebody structure; the planned direction of longwall panels or face lines. *Nelson* b. Formation or position in line, or, more properly, in a common vertical plane. *Seelye, 2* c. The laying out of the axis of a tunnel by instrumental work. *Stauffer* d. See: [coplaning](#) e. In railway or highway surveying, the ground plan, showing the alignment or direction of the route to be followed, as distinguished from a profile, which shows the vertical element. *Seelye, 2* f. The act of laying out or regulating by line; adjusting to a line.

alinement clamp

A setscrew-equipped, universal-type clamp from one side of which a slotted angle-iron wand, about 18 in (45.7 cm) long, extends outward from a clamping device at 90 degrees . May be made to fit any size drill rod and is used in pairs, leapfrog fashion, to orient successive rods in a specific compass direction as these are lowered into a borehole being surveyed by the acid-bottle method. By this means, the bearing and inclination of a drill hole may be determined in formation or under conditions where a Maas- or other-type magnetic compass cannot be used. *Long*

aliphatic

Of, relating to, or derived from fat; fatty; acyclic. Applied to a large class of organic compounds characterized by an open-chain structure and consisting of the paraffin, olefin, and acetylene hydrocarbons and their derivatives (as the fatty acids). *Webster 3rd*

alipite

A discredited term referring to massive apple-green, hydrated magnesium-nickel silicate similar to genthite.

alisonite

A massive, deep indigo-blue copper-lead sulfide, $\text{Cu}_2\text{S.PbS}$. It contains 53.63% copper and 28.25% lead. Tarnishes quickly. *Hess*

Aliva concrete sprayer

A compressed-air machine for spraying concrete on the roof and the sides of mine roadways. Used in coal mines for the fireproofing of roadways, for reducing air leakages, and for spraying tunnels supported by roof bolts. See also: [guniting](#); [gunitite](#). *Nelson*

alive

Said of coal when it makes a rustling sound as it bursts, cracks, and breaks off while under pressure. The rising of methane from the coal causes a similar sound. CF: [dead](#)

alkali

a. Any strongly basic substance, such as a hydroxide or carbonate of an alkali metal (e.g., sodium, potassium). Plural: alkalis. Adj. alkaline; alkalic. Said of silicate minerals that contain alkali metals but little calcium; e.g., the alkali feldspars. *AGI* b. Any substance having marked basic properties; i.e., being capable of furnishing to its solution or other substances the hydroxyl ion, OH (super-) . *Stokes*

alkali bentonite

A bentonite containing easily exchangeable alkali cations and having original properties that are not permanently destroyed by the action of sulfuric acid, but can be restored by treatment with an alkali salt followed by regulated dialysis. This group includes Wyoming-type bentonite and other similar bentonites. *Davis*

alkalic

a. Said of an igneous rock that contains more alkali metals than is considered average for the group of rocks to which it belongs. *AGI* b. Said of an igneous-rock series that contains more sodium and/or potassium than is required to form feldspar with the available silica. *AGI* c. Said of an igneous-rock series containing less than 51% silica when the weight percentages of CaO and of $K_2O + Na_2O$ are equal. *AGI* d. Said of an igneous rock belonging to the Atlantic suite. Syn: [alkali](#); alkaline. *AGI*

alkalic feldspar

See: [alkali feldspar](#)

alkali earth

One of a group of elements (Group II) forming divalent cations; esp. calcium, strontium, and barium, but also includes beryllium, magnesium, and radium.

alkali feldspar

a. Those feldspars composed of mixtures or crystal solutions of potassium feldspar, KAlSi_3O_8 , and sodium feldspar, $\text{NaAlSi}_3\text{O}_8$, with little or no calcium feldspar, $\text{CaAl}_2\text{Si}_2\text{O}_8$. b. The subgroup of the feldspar group including albite, anorthoclase, microcline, orthoclase, and sanidine. Syn: [alkalic feldspar](#). CF: [plagioclase](#)

alkali flat

A level area or plain in an arid or semiarid region, encrusted with alkali salts that became concentrated by evaporation and poor drainage; a salt flat. See also: [playa](#)

alkali garnet

A general term for members of the sodalite group that are closely related crystallographically and chemically to the true garnets. *English*

alkali granite

a. A coarse-grained, plutonic rock carrying free quartz and alkali feldspar. *CMD* b. A granitoid rock with accessory sodic amphibole or sodic pyroxene.

alkali-lime series

Igneous rocks that contain soda-lime (plagioclase) feldspars. *Hess*

alkali metal

A metal in group IA of the periodic system; namely, lithium, sodium, potassium, rubidium, cesium, and francium. They form strong alkaline hydroxides; hence, the name. Syn: [alkaline metal](#)

alkalimeter

a. An apparatus for measuring the strength or the amount of alkali in a mixture or solution. *Webster 3rd* b. An apparatus for measuring the amount of carbon dioxide (as that liberated from a weighed sample of carbonate-containing material by reaction with acid). *Webster 3rd*

alkaline

Adj. of alkali. See: [alkalic](#)

alkaline-earth bentonite

A bentonite containing easily exchangeable alkaline-earth cations and, either before or after acid treatment, capable of being made to assume properties of an alkali bentonite by treatment with an alkali salt followed by regulated dialysis.

alkaline-earth metal

A metal in group IIA of the periodic system; namely, beryllium, magnesium, calcium, strontium, barium, and radium; so called because the oxides or earths of calcium, strontium, and barium were found by the early chemists to be alkaline in reaction. *ASM, 1*

alkaline metal

See: [alkali metal](#)

alkalinity

The extent to which a material exhibits the property of yielding hydroxyl ions in a water solution. See also: [pH](#)

alkali soil

A saline soil having 15% or more exchangeable sodium.

alkali subbentonite

A bentonite containing easily replaceable alkali bases but having original properties that are destroyed by acid treatment. *Davis*

alkane

A member of the paraffin series, such as methane, ethane, etc. *Pryor, 3*

alkene

A member of the hydrocarbon group series (C_nH_{2n}); e.g., ethylene, propylene. *Pryor, 3*

alkinite

A discredited term referring to a compound of lead, copper, bismuth, and sulfur.

alkyne

One of a group of organic compounds containing a carbon-to-carbon triple bond; e.g., acetylene, allylene. Also spelled alkine. *McGraw-Hill, 1*

allactite

A monoclinic mineral, $Mn_7(AsO_4)_2(OH)_8$; vitreous; resembles the axinites. Also spelled allaktit.

allagite

A heavy dull-red or green altered carbonated rhodonite. Syn: [diaphorite](#). *Fay*

allanite

A monoclinic mineral, $2[(Ca,Y,Ce)_2(Fe,Al)_3O(OH)(Si_2O_7)(SiO_4)]$; epidote group; massive, pitchy, slightly radioactive, and metamict; a minor accessory in felsic igneous rocks and pegmatites. Formerly called orthite; cerine; bucklandite; treanorite. Syn: [yttro-orthite](#)

allargentum

A mineral, $Ag_{1-x}Sb_x$ with $x=0.09$ to 0.16 .

allcharite

Former name for a variety of goethite.

alleghanyite

A monoclinic mineral, $Mn_5(SiO_4)_2(OH)_2$; humite group; dimorphous with ribbeite; in skarns.

allemontite

A mixture of stibarsen, $SbAs$, and arsenic or antimony. Syn: [arsenical antimony](#)

Allen cone

A conical tank used in mineral flotation to separate sand from slime using a float-controlled spigot on peripheral overflow. See also: [cone classifier](#)

Allen-O'Hara furnace

A horizontal, double-hearth furnace for calcining sulfide ores. *Fay*

allevardite

See: [rectorite](#)

alley stone

See: [aluminite](#)

alliaceous

Said of minerals that have an odor of garlic when rubbed, scratched, or heated; e.g., arsenical minerals.

alligator

a. See: [safety clamp](#) b. Any of several types of machines for metalworking, rock crushing, etc., in which work is accomplished by two massive jaws, one or both of which move as, e.g., alligator shears (preferably, lever shears) or an alligator crusher (preferably, lever crusher). *Henderson* c. A prolonged, steel hingelike device by means of which the abutting ends of a flat drive belt can be fastened or laced together. *Long*

all-mine pig

Iron smelted entirely from raw ore. *Standard*, 2

allochem

A collective term introduced by Folk (1959) for one of several varieties of discrete and organized carbonate aggregates that serve as the coarser framework grains in most mechanically deposited limestones, as distinguished from sparry calcite (usually cement) and carbonate-mud matrix (micrite). Important allochems include silt-, sand-, and gravel-size fragments torn up and reworked from the deposit; ooliths; pellets; lumps; and fossils or fossil fragments (carbonate skeletons, shells, etc.). Syn: [allochemical](#)

allochemical

See: [allochem](#)

allochroite

a. A calcium-chromium garnet. *Fay* b. A reddish brown variety of andradite garnet.

allochromatic

a. Descriptive of crystals that exhibit electrical conductivity under the influence of light. *Hess* b. A gem stone with a coloring agent extraneous to its chemical composition. Opposite of idiochromatic. *Hess* c. Color produced by a chromophore that is not essential to mineral composition.

allochromatic mineral

Mineral that would be colorless if chemically pure, but which commonly exhibits a range of colors due to the presence of small quantities of one or more coloring elements. Chief among these elements are those having atomic numbers 22 to 29; namely, titanium, vanadium, chromium, manganese, iron, cobalt, nickel, and copper. Corundum, beryl, spinel, and quartz are examples of allochromatic gemstones. See also: [idiochromatic mineral](#). *Anderson*

allochthon

a. A mass of rock that has been moved from its place of origin by tectonic processes, as in a thrust sheet or nappe. Many allochthonous rocks have been moved so far from their original sites that they differ greatly in facies and structure from those on which they now lie. Ant. autochthon. Syn: [allochthonous](#) b. A mass of redeposited sedimentary materials originating from distant sources. *AGI*

allochthonous

a. Originated by Gumbel and applied to rocks, the dominant constituents of which have not been formed in place. CF: [autochthonous](#). *Holmes, 1* b. Coal formation according to the drift theory. *Nelson* c. Formed or produced elsewhere than in its present place; of foreign origin, or introduced. The term is widely applied; e.g., to coal or peat that originated from plant material transported from its place of growth, or to an allochthon on a low-angle thrust fault. The term is similar in meaning to allogenic, which refers to constituents rather than whole formations. Ant. autochthonous. See also: [allochthon](#)

allochthonous coal

Coal originating from accumulations of plant debris that have been transported from their place of growth and deposited elsewhere. The debris can be differentiated as coming from near or from far, and likewise whether it represents recent (dead or still living) or already fossilized material. Syn: [drift coal](#). *AGI; Tomkeieff*

allochthonous peat

Drift peat of lacustrine character. It is subdivided into Gyttja type and Dry type. *Tomkeieff*

allocklasite

A monoclinic mineral (Co,Fe)AsS ; steel gray; dimorphous with glaucodot. Formerly called alloclase.

allocklastic breccia

See: [volcanic breccia](#)

allogenic

Generated elsewhere; applied to those constituents that came into existence outside of, and previously to, the rock of which they now constitute a part; e.g., the pebbles of a conglomerate. CF: [authigenic](#). *Holmes, 2*

allogonite

See: [herderite](#)

allomeric

Of the same crystalline form but of different chemical composition. Syn: [isomorphous](#)

allomorph

a. Syn: paramorph (obsolete); [pseudomorph](#). *AGI* b. A polymorph or dimorph. Adj. allomorphous.

allomorphism

Changes produced in minerals without gain or loss of components; e.g., the change from kyanite to sillimanite. See also: [paramorphism](#)

allomorphite

Obsolete term for barite, esp., pseudomorphous after anhydrite.

allomorphous

Of the same chemical composition but of different crystalline form. CF: [allomeric](#)

allopalladium

a. A nearly silver-white palladium, found in hexagonal plates in the Harz Mountains, Germany. *Fay* b. Former name for stibiopalladinite. c. Palladium crystallizing in the hexagonal system (as opposed to isometric palladium).

allophane

a. $\text{Al}_2\text{O}_3 \cdot \text{SiO}_2 \cdot n\text{H}_2\text{O}$. A clay mineral composed of hydrated aluminosilicate gel of variable composition; P_2O_5 may be present in appreciable quantity. Syn: [riemannite](#) *McGraw-Hill, 1* b. A mineral gel, amorphous hydrous aluminum silicate; soft; has pale

tints; in soils developed from volcanic glass and ash. It changes from glassy to earthy upon dehydration.

allophanite

An obsolete syn. of allophane. *AGI*

allophanoids

Clays of the allophane, halloysite, and montmorillonite groups. *English*

allothimorph

A constituent of a metamorphic rock which, in the new rock, has not changed its original crystal outlines.

allotriomorphic

See: [xenomorphic](#)

allotriomorphic-granular

See: [xenomorphic](#)

allotropic

Applied by Berzelius to those substances that exist in two or more forms, such as diamond and graphite. See also: [polymorphism](#)

allotropism

See: [allotropy](#)

allotropy

a. The existence of a substance, esp. an element, in two or more different modifications usually in the same phase, such as different crystalline forms of carbon, iron, phosphorus, and sulfur. *Webster 3rd* b. Polymorphism in a chemical element; e.g., isometric and hexagonal carbon (diamond and graphite), monoclinic and orthorhombic sulfur (rosickyite and sulfur). An allotrope is one of the crystal forms. Syn: [allotropism](#)

allowable bearing value

The maximum pressure that can be permitted on foundation soil giving consideration to all pertinent factors, with adequate safety against rupture of the soil mass or movement of

the foundation of such magnitude that the structure is impaired. Also called allowable soil pressure. *ASCE*

allowable pile-bearing load

The maximum load that can be permitted on a pile with adequate safety against movement of such magnitude that the structure is endangered. *ASCE*

allowable stress

If a member is so designed that the maximum stress as calculated for the expected conditions of service is less than some certain value, the member will have a proper margin of security against damage or failure. This certain value is the allowable stress, of the kind, and for the material and condition of service in question. The allowable stress is less than the "damaging stress" because of uncertainty as to the conditions of service, nonuniformity of material, and inaccuracy of stress analysis. The margin between the allowable stress and the damaging stress may be reduced in proportion to the certainty with which the conditions of service are known, the intrinsic reliability of the material, the accuracy with which the stress produced by the loading can be calculated, and the degree to which failure is unattended by danger or loss. CF: [factor of safety](#). Syn: [working stress](#)

alloy

A substance having metallic properties, and composed of two or more chemical elements, of which at least one is a metal. *ASM, 1*

alloyage

The act or process of alloying; specif., in minting, of alloying the precious metals with baser ones to form a harder alloy. *Standard, 2*

alloy sludger

A laborer who salvages sludge from furnace pots for use in recovery of metals. Also called sludger. *DOT*

alloy system

All the alloys that can be made by mixing two metals from a binary alloy system, three metals from a ternary alloy system, and so on. The limits of temperature and composition within which the constituents in a system are stable are represented by the constitutional diagram. *CTD*

alluaukite

a. A monoclinic mineral, $(\text{Na,Ca})\text{Fe}^{+2}(\text{Mn,Fe}^{+2},\text{Fe}^{+3},\text{Mg})_2(\text{PO}_4)_3$; alluaudite group; forms a series with ferroalluaudite; in pegmatites. b. The mineral group alluaudite, caryinite, ferroalluaudite, hagendorfite, maghagendorfite, and varulite.

alluvia

Seldom-used plural of alluvium. *AGI*

alluvial

a. Said of a placer formed by the action of running water, as in a stream channel or alluvial fan; also said of the valuable mineral, e.g., gold or diamond, associated with an alluvial placer. *AGI* b. Pertaining to or composed of alluvium, or deposited by a stream or running water; e.g., an alluvial clay or an alluvial divide. *AGI*

alluvial clay

A clay that has been deposited by water on land, usually in association with rivers or streams. *ACSB, I*

alluvial cone

An alluvial fan with steep slopes; it is generally higher and narrower than a fan, and is composed of coarser and thicker material believed to have been deposited by larger streams. The term is sometimes used synonymously with alluvial fan. CF: [alluvial fan](#)
Syn: debris cone; dry delta; wash. *AGI*

alluvial deposit

See: [alluvium](#)

alluvial fan

A low, outspread, gently sloping mass of loose rock material, shaped in plan view like an open fan or a segment of a cone; deposited by a stream (esp. in a semiarid region) at the place where it issues from a narrow mountain valley upon a plain or broad valley, or where a tributary stream is near or at its junction with the main stream, or wherever a constriction in a valley abruptly ceases or the gradient of the stream suddenly decreases; it is steepest near the mouth of the valley where its apex points upstream, and it slopes gently and convexly outward with gradually decreasing gradient. CF: [alluvial cone](#); [bajada](#). Syn: [fan](#); detrital fan; talus fan; dry delta. *AGI*

alluvial flat

A small alluvial plain bordering a river, on which alluvium is deposited during floods. CF: [alluvial plain](#)

alluvial mining

The exploitation of alluvial deposits by dredging, hydraulic, or drift mining. See also: [placer mining](#)

alluvial ore deposit

See: [placer](#)

alluvial plain

A level or gently sloping tract or a slightly undulating land surface produced by extensive deposition of alluvium, usually adjacent to a river that periodically overflows its banks; it may be situated on a flood plain, a delta, or an alluvial fan. CF: [alluvial flat](#). Syn: wash plain; river plain; bajada. *AGI*

alluvial slope

A surface underlain by alluvium, which slopes down and away from the sides of mountains and merges with a plain or a broad valley floor; an alluvial surface that lacks the distinctive form of an alluvial fan or a bajada. See also: [bajada](#)

alluvial tin

Stream tin, or cassiterite pebbles in the gravel along the courses of valleys and rivers on the bedrock. Generally, the purest tin ore. See: [stream tin](#)

alluvial values

In placer mining, the minerals recoverable from the alluvium. These include cassiterite, gold, diamond, gemstones, zirconia, rutile, monazite, and platinum. *Pryor, 3*

alluviation

a. The deposition or formation of alluvium or alluvial features (such as cones or fans) at places where stream velocity is decreased or streamflow is checked; the process of aggradation or of building up of sediments by a stream along its course, or of covering or filling a surface with alluvium. *AGI* b. A hydraulic effect on solids suspended in a current of water, whereby the coarsest and heaviest particles are the first to settle out, and the finest muds the last, as gradient or velocity of a stream is decreased. *AGI*

alluvion

See: [alluvium](#)

alluvium

a. A general term for clay, silt, sand, gravel, or similar unconsolidated detrital material, deposited during comparatively recent geologic time by a stream or other body of running water, (1) as sediment in the bed of the stream or on its flood plain or delta, (2) as a cone or fan at the base of a mountain slope; esp., such a deposit of fine-grained texture (silt or silty clay) deposited during time of flood. Syn: [alluvial deposit](#); alluvion. *AGI* b. A driller's term for the broken, earthy rock material directly below the soil layer and above the solid, unbroken bed or ledge rock. Etymol: Latin alluvius, from alluere, to wash against. Plural: alluvia; alluviums. *AGI*

almagra

Sp. A deep-red ocher originally from Andalusia, Spain, similar to Indian red. Used as a pigment and in polishing glass and metals. Also spelled almagre. *Standard, 2*

almandine

a. An isometric mineral, $8[\text{Fe}_3^{2+} \text{Al}_2 \text{Si}_3 \text{O}_{12}]$; pyrospilite subgroup of the garnet group, with Fe replaced by Mg, Mn, and Ca; in red to brownish-black dodecahedral and trapezohedral crystals, or massive; Mohs hardness, 7-1/2; occurs in medium-grade metamorphic rock and felsic igneous rocks; used as a gemstone and an abrasive. Formerly called almandite; almandine; almond stone. b. A violet or mauve variety of ruby spinel; a reddish-purple to purplish-red spinel. c. A reddish-purple sapphire (almandine sapphire).

almandine ruby

A violet-colored magnesium spinel. Syn: [ruby spinel](#)

almandite

Former spelling of almandine.

almeria ore

A Spanish hematite. *Osborne*

almond furnace

A furnace in which the slags of litharge left in refining silver are reduced to lead by being heated with charcoal. *Fay*

almond stone

Former name for almandine.

alnoite

A lamprophyre chiefly composed of biotite or phlogopite and melilite as essential minerals, commonly with olivine, calcite, and clinopyroxene. Perovskite, apatite, nepheline, and garnet may be present. Its name (Rosenbusch, 1887) is derived from Alnoe, Sweden. Also spelled allnoeite; alnoeite. *AGI*

Aloxite

Trade name for fused crystalline alumina or artificial corundum used as an quartz and beta quartz. *Hess* b. Adj. Of or relating to one of two or more closely related minerals and specifying a particular physical structure (esp. a polymorphous modification); specif. said of a mineral that is stable at a temperature lower than those of its beta and gamma polymorphs (e.g., "alpha cristobalite" or "alpha -cristobalite," the low-temperature tetragonal phase of cristobalite). Some mineralogists reverse this convention, using alpha for the high-temperature phase (e.g., "alpha carnegieite," the isometric phase of carnegieite stable above 690 degrees C). *AGI* c. In crystallography the angle between the b and c axes.

alpha alumina

A white, anhydrous, nonhygroscopic powder, Al_2O_3 , produced when precipitated $\text{Al}(\text{OH})_3$ is calcined at 1,000 degrees C. It is the natural product of the Bayer process and other processes used (or proposed) to treat bauxite, clay, or other aluminum-bearing materials. *Newton, I*

alpha celsian

A silicate of aluminum and barium, $\text{BaAl}_2\text{Si}_2\text{O}_8$. An artificial feldspar, similar to anorthite, but containing barium instead of calcium. Hexagonal prisms. Uniaxial, negative. *English*

alpha chalcocite

See: [digenite](#)

alpha hyblite

A porcelain-white, hydrous acidic sulfosilicate of thorium with some uranium, iron, and lead; isotropic. An alteration product of thorite. From Hybla, ON, Can. *English*

alpha mercuric sulfide

See: [vermilion](#)

alpha quartz

A quartz polymorph stable below 573 degrees C; a common constituent of crustal rocks.
Syn: [low quartz](#)

alpha zinc sulfide

Colorless when pure; hexagonal; ZnS; mol wt., 97.43; sp gr, 3.98 to 4.1; Mohs hardness, 3.5 to 4.0; luster, resinous; transformation temperature from beta zinc sulfide to alpha zinc sulfide, 1,020+ or -5 degrees C: sublimes at 1,180 degrees C or 1,185 degrees C; melting point, 1,850 degrees C (at 150 atm); insoluble in water and in acetic acid; and very soluble in other acids. Occurs as the brownish-black mineral wurtzite, which is unstable compared with its stable dimorph, the mineral sphalerite (beta zinc sulfide), to which it inverts during alteration and from which it is formed by heating sphalerite to the transformation temperature. Can be crystallized from acid solutions above 250 degrees C. See also: [wurtzite](#); [zinc sulfide](#). CF: [beta zinc sulfide](#). *Handbook of Chemistry and Physics*, 2; *Dana*, 2

alpine

a. Pertaining to, characteristic of, or resembling the European Alps or any lofty mountain or mountain system, esp. one modified by intense glacial erosion. Spelled Alpine when referring specif. to European Alps. *AGI* b. Characteristic or descriptive of the mountainous regions lying between timberline and snowline; said of the climate, flora, relief, ecology, etc. Less strictly, pertaining to high elevations and cold climates. *AGI* c. A general term for topographical and structural features that resemble in grandeur and complexity those of the European Alps, regardless of the age or location of the mountains and features so described. *AGI*

Alpine diamond

See: [pyrite](#)

alquifou

A coarse-grained variety of galena used by potters in preparing a green glaze.

alshedite

A variety of titanite containing yttria; found in Sweden. *Standard*, 2

alstonite

A triclinic mineral, $\text{BaCa}(\text{CO}_3)_2$; pseudo-orthorhombic and trimorphous with barytocalcite and paralstonite. Formerly called bromlite.

altaite

An isometric mineral, PbTe ; in veins with gold, sulfides, and other tellurides.

alteration

Any change in the mineralogic composition of a rock brought about by physical or chemical means, esp. by the action of hydrothermal solutions; also, a secondary, i.e., supergene, change in a rock or mineral. Alteration is sometimes considered as a phase of metamorphism, but is usually distinguished from it because of being milder and more localized than metamorphism is generally thought to be. *AGI*

altered mineral

A mineral that has undergone chemical change by geologic (esp. weathering or hydrothermal) processes.

altered rock

A rock that has undergone changes in its chemical and mineralogic composition since its original formation. *AGI*

altered stone

a. Said of a stone that has undergone chemical and/or mineralogical changes under geologic processes. b. Any stone of which the appearance, esp. the color, has been changed by any artificial means whatsoever. For example, heat is often used to improve or alter color. Such change may be either external or internal. See also: [treated stone](#); [stained stone](#).

alternate pillar and stope

See: [square-set stoping](#)

alternate polarity

Arrangement in magnetic separator whereby ore travels alternately through normal concentration and entropy fields, thus stirring attracted material and shaking out entrained nonmagnetics. *Pryor, 1*

alternating-current ampere

Current that will produce heat at the same rate as a direct-current ampere, when flowing through a given ohmic resistance. *Kentucky*

alto

A term used in the southwestern United States for a bluff, height, or hill. Etymol: Sp., high ground. *AGI*

alum

a. Any hydrous, alkali aluminum sulfate mineral, including kalinite, potassium alum, sodium alum, mendozite, tschermigite, and loncreekite. Syn: [potash alum](#) b. A former name for kalinite and potassium alum. c. Any salts that are double sulfates of aluminum, chromium, iron, or manganese and one of the alkali metals.

alum cake

A product of the action of sulfuric acid on clay, consisting chiefly of silica and aluminum sulfate. *Webster 3rd*

alum earth

An argillaceous rock, commonly a shale, containing marcasite or pyrite which, as it decomposes, forms sulfuric acid that attacks the shale and produces alum. Many such rocks are carbonaceous. See also: [alum shale](#). *Hess*

alumina

An oxide of aluminum, Al_2O_3 ; the mineral corundum; an important constituent of clay minerals, $\text{Al}_2\text{Si}_2\text{O}_5(\text{OH})_4$, determining their suitability for firebrick and furnace linings. Synthetic alumina is used as the feed material in aluminum smelters; it is also used in the preparation of paints called lakes, in dyeing, and in calico printing; in granular form it is used for abrasives and grinding or cutting tools of high tensile strength. Most alumina is made via the Bayer process from hydrated aluminum oxides, as found in bauxite, diaspore, and gibbsite. Aluminum oxide can also be made in an electric furnace by fusing bauxite or corundum. Suitably doped alumina is the feed material for boules of synthetic ruby and sapphire made by the Verneuil flame-fusion process. Fused alumina is crushed and used as an abrasive, a refractory, a heating element for electrical heaters, and as a filtering medium.

aluminate

A compound having the general formula, $MAIO_2$ or $M_3 AlO_3$, in which M indicates a monovalent metal. Mineral aluminates, such as $MgAl_2 O_4$, are termed spinels. *Bennett*

alumina trihydrate

$A_2 O_3 \cdot 3H_2 O$ or $Al(OH)_3$; monoclinic; white; crystalline powder, balls, or granules; sp gr, 2.42; obtained from bauxite and used as a source of aluminum. *CCD, 2; Lee*

aluminite

A monoclinic mineral, $Al_2 (SO_4)(OH)_4 \cdot 7H_2 O$; pseudo-orthorhombic, formerly called websterite. Syn: [alley stone](#); argil.

aluminosilicate refractory

A general term that includes all refractories of the fireclay, sillimanite, mullite, diaspore, and bauxite types. *Dodd*

aluminous abrasive

An abrasive produced by fusing aluminum oxide. *Mersereau, 2*

aluminous ore

Ore in which the gangue consists principally of alumina. *Osborne*

aluminum

A light, silvery-white, ductile metal with high electrical conductivity and good resistance to corrosion. Obtained from bauxite. Symbol, Al. It is the lightest of the metals in general use commercially and is the basis for light alloys used in the construction of modern aircraft and rockets; aluminum coatings are used for telescope mirrors, decorative paper, packages, and toys. The oxide, alumina, occurs naturally as ruby, sapphire, corundum, and emery. *Handbook of Chemistry and Physics, 3*

aluminum detonator

See: Briska detonator.

aluminum silicates

Varying proportions of $Al_2 O_3$ and SiO_2 . Occur naturally in clays. Used in the glass and ceramics industry. *CCD, 2*

alumite

See: [alunite](#)

alumocalcite

A variety of opal with alumina and lime as impurities. *Fay*

alumogel

An amorphous aluminum hydroxide that is a constituent of bauxite. Formerly called cliachite, diasporogelite, and sporogelite.

alum rock

See: [alunite](#)

alum salt

Natural salt from which alum can be made. See also: [halloysite](#); kaolinite. *Sanford*

alum schist

See: [alum shale](#)

alum shale

An argillaceous, often carbonaceous, rock impregnated with alum, originally containing iron sulfide (pyrite, marcasite) which, when decomposed, formed sulfuric acid that reacted with the aluminous and potassic materials of the rock to produce aluminum sulfates. Syn: [alum earth](#); [alum schist](#); [alum slate](#). *AGI*

alum slate

See: [alum shale](#)

alunite

a. A trigonal mineral, $KAl_3(OH)_6(SO_4)_2$; massive or disseminated; in pale tints; formed from sulfuric acid acting on potassium feldspar in volcanic regions (alunization), and around fumaroles. Formerly called alumstone, alum rock, alumite. b. A mineral group including jarosite.

alunitization

Introduction of, or replacement by, alunite. *AGI*

alunogen

A triclinic mineral, $\text{Al}_2 (\text{H}_2 \text{O})_{12} (\text{SO}_4)_3 \cdot 5(\text{H}_2 \text{O})$; in fibrous masses or crusts; white, tinged yellow to reddish, with sharp acid taste; in acid environments filling crevices in coals, slates, gossans, and fumaroles. Syn: [feather alum](#); [hair salt](#).

alvanite

A monoclinic mineral, $(\text{Zn,Ni})\text{Al}_4 (\text{VO}_3)_2 (\text{OH})_{12} \cdot 2\text{H}_2 \text{O}$; forms light-blue-green rosettes in the vanadium deposits of Karatau, Kazakhstan.

alveoli

The lungs can be thought of as two elastic bags containing millions of little distensible air sacs. These air sacs or alveoli are all connected to the air passages, which branch and rebranch like the twigs of a tree. *Hunt*

alvite

A zirconium mineral; a source of hafnium, containing 16% HfO_2 ; tetragonal. Obtained from Alve, Norway. *Kirk; Webster 2nd*

amalgam

a. A naturally occurring alloy of silver with mercury; mercurian silver. It is found in the oxidation zone of silver deposits and as scattered grains in cinnabar ores. Syn: [argental mercury](#). *AGI* b. A general term for alloys of mercury with one or more of the well-known metals (except iron and platinum); esp. an alloy of mercury with gold, containing 40% to 60% gold, and obtained from the plates in a mill treating gold ore. *AGI*

amalgamate

a. To unite (a metal) alloy with mercury. *Standard, 2* b. To form an amalgam with; as, mercury amalgamates gold. *Standard, 2*

amalgamated claims

Eng. Mining claims adjoining one another that have been grouped into one claim for more economical working.

amalgamating barrel

A short, cylindrical vessel or barrel, with solid ends turned to fit bearings, used for amalgamating battery accumulations and other material. See also: [amalgamator](#)

amalgamating table

A sloping wooden table covered with a copper plate on which the mercury is spread in order to amalgamate with the precious metal particles. *CTD*

amalgamation

a. The production of an amalgam or alloy of mercury. b. The process by which mercury is alloyed with some other metal to produce an amalgam. It was used at one time for the extraction of gold and silver from pulverized ores, but has been superseded by the cyanide process. *Barger*

amalgamation process

A process of gold or silver recovery in which the ore, finely divided and suspended in water, is passed over a surface of liquid mercury to form an amalgam that is subjected to fire-refining processes for the recovery of the gold or silver. Syn: [amalgam treatment](#)

amalgamator

An apparatus used in mining for bringing pulverized ore into close contact with mercury to extract free metal from it by amalgamation. See also: [amalgamating barrel](#)

amalgam barrel

A small, cylindrical batching mill used to grind auriferous concentrates gently with mercury. *Pryor, 3*

amalgam pan

A muller mill with a horizontal rotating disk bearing on a fixed plate. Gold-bearing material and mercury flow pulpwise between them. *Pryor, 3*

amalgam plate

A sheet of metal with an adherent film of mercury that seizes gold from flowing pulp. *Pryor, 3*

amalgam retort

The vessel where mercury is distilled from gold or silver amalgam. *Nelson*

amalgam treatment

See: [amalgamation process](#)

amang

A term used in Malaysia for the heavy iron and tungsten minerals (and associated minerals) found with placer cassiterite deposits. *AGI*

amarantite

A triclinic mineral, $\text{Fe}(\text{SO}_4)(\text{OH}) \cdot 3\text{H}_2\text{O}$.

amargosite

The trade name for a bentonite from the Amargosa River, CA. Syn: [montmorillonite](#)

amatrice

a. See: [variscite](#) b. A green gem cut from variscite and its surrounding matrix of gray, reddish, or brownish crystalline quartz or chalcedony.

amause

See: [trass](#)

amazonite

A bright, apple- or blue-green variety of microcline; may be carved for art objects. Syn: [amazonstone](#)

amazonstone

See: [amazonite](#)

amber

a. A mineraloid; amorphous hydrocarbons from resins secreted by trees or shrubs upon injury, derived by oxidation and polymerization of nonvolatile terpenoids; in sedimentary rocks and on beaches, e.g., Baltic Sea. See also: [chemawinite](#) b. A hard, brittle fossil resin, yellow to brown, that takes a fine polish; may contain fossil insects and plant matter. Syn: [succinite](#); bernstein; electrum. See also: [resin](#) c. A group of fossil resins containing considerable succinic acid and having highly variable C:H:O ratios; e.g., almashite, simetite, delatynite, and ambrosine. See also: [copal](#)

Amberine

A local trade name for a yellowish-green variety of chalcedony from Death Valley, CA.
English

amberite

Former spelling of amber.

amber mica

See: [phlogopite](#)

amberoid

A gem material consisting of small fragments of genuine amber artificially united or reconstructed by heat and pressure; may be characterized by an obvious flow structure or a dull spot left by a drop of ether. Also spelled ambroid. Syn: [pressed amber](#)

amber opal

A brownish-yellow variety of opal stained by iron oxide.

ambient

a. The environment surrounding a body but undisturbed or unaffected by it. *Hy* b. Encompassing on all sides; thus, ambient air is the air surrounding. *Strock, 2*

ambrosine

A yellowish to clove-brown amber found in the phosphate beds near Charleston, SC; it may be a modern resin that has been subjected to the action of salt water. Rich in succinic acids. *Fay; Tomkeieff*

amenability

Characteristic reactions of minerals to basic methods of mineral processing, studied in preliminary testwork on unknown ores. *Pryor, 3*

American

Permissible explosive used in coal mines. *Bennett*

American-Belgian furnace

A direct-fired Belgian furnace used in the United States, conforming essentially to the Liege design. *Fay*

American forge

See: [Champlain forge](#)

American jade

a. Nephrite in Wyoming. b. See: [californite](#)

American ruby

A red pyrope garnet in Arizona and New Mexico.

American system

See: [churn drill](#)

American Table of Distances

The quantity-distance table, prepared and approved by the Institute of Makers of Explosives (IME), for storage of explosive materials to determine safe distances from inhabited buildings, public highways, passenger railways, and other stored explosive materials.

amesite

An apple-green silicate mineral belonging to the phyllosilicate group and occurring in foliated hexagonal plates. See also: [magnesium kaolinite](#). *Kirk; Webster 3rd*

amethyst

a. A transparent to translucent, purple to pale-violet variety of quartz common as a semiprecious gemstone. The color results from a hole defect associated with ferric iron substitution for silicon. Syn: [bishop's stone](#) b. A term applied to a deep-purple variety of corundum and to a pale reddish-violet variety of beryl.

amethystine

A color designation meaning violet to purplish, used as in amethystine glass and amethystine sapphire.

amethystine quartz

A phenocrystalline variety of quartz colored purplish or bluish violet by manganese. See also: [lavendine](#)

amethyst point

Amethyst crystal, from a geode, commonly possessing only the six (or possibly three) rhombohedral terminal faces; generally with gradational color, the best at the apex commonly grading to colorless at its base.

amianthinite

See: [asbestos](#)

amianthus

Syn: [asbestos](#). Also spelled amiantus.

amiantoid

a. Having the appearance of asbestos. *Standard, 2* b. An olive-green, coarse, fibrous variety of asbestos. *Standard, 2*

amigo

A stick, tied to the end of a rope, on which workers sit when being raised or lowered in shafts. *Hess*

aminoffite

A tetragonal mineral, $\text{Ca}_2(\text{Be,Al})\text{Si}_2\text{O}_7(\text{OH})\cdot\text{H}_2\text{O}$; in colorless crystals in Sweden.

ammine

One of a group of complex compounds formed by coordination of ammonia molecules with metal ions. *McGraw-Hill, 1*

ammiolite

A red or scarlet earthy substance, probably a mixture of copper antimonate and cinnabar; said to occur in some Chilean ore deposits.

ammite

A 17th and 18th century term for a sedimentary rock now called oolite. Obsolete syn: ammonite.

ammonal

An explosive used mainly for heavy quarry blasts in dry boreholes. It consists of TNT, ammonium nitrate, and powdered aluminum. *Nelson*

ammonia

A colorless, gaseous alkaline compound; NH_3 ; lighter than air; pungent smell and taste. Byproduct of gas and coke production. Used in making fertilizers and explosives.

ammonia dynamite

Dynamite in which part of the nitroglycerin is replaced by ammonium nitrate; used in mining. See also: [extra dynamite](#)

ammonia gelatin

An explosive of the gelatin-dynamite class containing ammonium nitrate. *Webster 3rd*

ammonia gelatin dynamite

See: [gelatin dynamite](#)

ammonia niter

Ammonium nitrate, $\text{NH}_4 \text{NO}_3$; nitrammite. Also spelled ammonia nitre. *Spencer, 4*

ammonia stillman

In the coke products industry, one who extracts ammonia from liquor for use in producing ammonium sulfate by circulating substances through stills and auxiliary equipment. Also called pump-and-still operator; byproducts stillman. *DOT*

ammoniojarosite

A trigonal mineral, $(\text{NH}_4)_3 \text{Fe}_3 (\text{SO}_4)_2 (\text{OH})_6$; alunite group. It occurs in pale yellow lumps of tabular grains on the west side of the Kaibab fault, southern Utah.

ammonium chloride

$\text{NH}_4 \text{Cl}$; isometric; and colorless. When dissolved in water, it is used as an electrolyte for some primary cells. Obtained as a byproduct in gas manufacture. Used as a flux in soldering. Also called sal ammoniac. *Crispin*

ammonium hydroxide

A solution of ammonia in water, $\text{NH}_4 \text{OH}$. *CTD*

ammonium nitrate

Used in explosives and as a fertilizer. NH_4NO_3 ; mol wt, 80.04; colorless. *Bennett*

ammonium nitrate gelignites

These explosives are similar to the straight gelatins except that the main constituent is ammonium nitrate instead of sodium nitrate. Ammonium nitrate is a more active explosive ingredient than sodium nitrate; therefore it can be substituted for nitroglycerin in much larger quantities and still give explosives of high weight strength. The nitroglycerin content is usually 25% to 35%, and the ammonium nitrate content ranges from about 30% to 60%. Ammonium nitrate gelignites are characterized by plastic consistency; high densities of 1.5 to 1.6 g/cm^3 ; medium velocity of detonation of 2,500 m/s; and good fume properties. The ammonium nitrate gelignites are useful all-purpose explosives and are widely used in metal mines, nongassy coal mines, quarries, tunneling, and construction work. Its wide range of strengths enables a suitable grade to be selected for blasting almost every variety of rock from hard to soft. *McAdam, 2*

amoibite

A former named for gersdorffite.

amorphous

a. Said of a mineral or other substance that lacks crystalline structure, or whose internal arrangement is so irregular that there is no characteristic external form. Ant. crystalline. *AGI* b. The state of a solid lacking crystal structure, specif. lacking long-range order. c. A term formerly used to describe a body of rock occurring in a continuous mass, without division into parts. CF: [massive](#)

amorphous coal

A somewhat inaccurate term for a coal in which distinct plant material is not discernible. *Tomkeieff*

amorphous graphite

Very fine-grained, generally sooty graphite from metamorphosed coalbeds. The word amorphous is a misnomer because all graphite is crystalline. The term has also been applied to very fine particles of flake graphite that can be sold only for low-value uses (such as foundry facings), and to fine-grained varieties of Ceylon lump graphite. *AGI*

amorphous metal

Metal in which the regular arrangement of atoms characteristic of the crystalline state has been destroyed. *CTD*

amorphous mineral

A mineral with no definite crystalline structure. *Nelson*

amorphous peat

A type of peat in which the original structure of the plants has been destroyed as the result of decomposition of the cellulose matter. It is heavy, compact, and plastic when wet. See also: [fibrous peat](#). *Tomkeieff*

amorphous phosphorus

See: [phosphorus](#)

amosite

a. A monoclinic mineral in the cummingtonite-grunerite series. *Sinclair, 7* b. A commercial asbestos composed of asbestiform gedrite, grunerite, or anthophyllite of the amphibole group; has typically long fibers.

ampangabeite

A former name for samarskite.

ampelite

An obsolete term for a black carbonaceous or bituminous shale. *AGI*

ampelitis

An ancient name applied to a variety of bituminous earth used as an insecticide sprinkled over vines. *Tomkeieff*

ampere

The practical unit of electric current. The current produced by 1 V acting through a resistance of 1 Omega . *Webster 3rd*

ampere-hour

The quantity of electricity carried past any point of a circuit in 1 h by a steady current of 1 A; 1 A.h equals 3,600 C. *Webster 3rd*

ampere volt

A watt. *Standard, 2*

amphibole

A mineral group; characterized by double chains of silica tetrahedra having the composition $A_{0-1} B_2 Y_5 Z_8 O_{22} (OH,F,Cl)$, where (A=Ca,Na,K,Pb,B), (B=Ca,Fe,Li,Mg,Mn,Na), (Y=Al,Cr,Fe,Mg,Mn,Ti), and (Z=Al,Be,Si,Ti); in the orthorhombic or monoclinic crystal systems, including actinolite, anthophyllite, arfvedsonite, cummingtonite, hornblende, richterite, glaucophane, grunerite, anthophyllite, riebeckite, tremolite, and others. All display a diagnostic prismatic cleavage in two directions parallel to crystal faces and intersecting at angles of about 54 degrees and 124 degrees. Some members may be asbestiform. See also: [pyroxene](#)

amphibole-magnetite rock

A granular, more or less banded rock containing grunerite, other ferruginous silicates, and magnetite; produced by metamorphism of ferruginous cherts, such as taconite and jaspillite.

amphibolide

A general term, for use in the field, to designate any coarse-grained, holocrystalline igneous rock almost entirely composed of amphibole minerals. Syn: [amphibololite](#)

amphibolite

A crystalloblastic rock consisting mainly of amphibole and plagioclase with little or no quartz. As the content of quartz increases, the rock grades into hornblende plagioclase gneiss. CF: [feather amphibolite](#). *AGI*

amphibolite facies

The set of metamorphic mineral assemblages (facies) in which basic rocks are represented by hornblende + plagioclase, the plagioclase being oligoclase-andesine or some more calcic variety. Epidote and almandine are common in amphibolites. The facies is typical of regional dynamothermal metamorphism under moderate to high pressures (in excess of 300 MPa) with temperatures in the range 450 to 700 degrees C. *AGI*

amphibololite

See: [amphibolide](#)

amphigene

See: [leucite](#)

amphoteric

Having both acidic and basic properties. *CTD*

amygdale

See: [amygdule](#)

amygdaloid

An extrusive or intrusive rock containing numerous amygdules. Said of a rock having numerous amygdules. Syn: [amygdaloidal](#); [mandelstone](#). See also: [amygdule](#)

amygdaloidal

a. Said of rocks containing amygdules and of the structure of such rocks; e.g., certain basaltic lava sheets on Keweenaw Point, Lake Superior, which have amygdules filled with native copper, and are important sources of the metal. Syn: [amygdaloid](#); [amygdule](#). *AGI* b. Almond-shaped. *Zern*

amygdaloidal rock

A rock containing amygdules, or the structure of a rock resulting from its presence. *Schieferdecker*

amygdule

A gas cavity or vesicle, in an igneous rock, that is filled with such secondary minerals as calcite, quartz, chalcedony, or a zeolite. The term amygdale is preferred in British usage. Syn: [amygdaloidal](#). See also: [amygdaloid](#)

amyl alcohol

$C_5H_{11}OH$; a frothing agent. *Pryor, 3*

amyl xanthate

A powerful collector agent used in the flotation process. *Pryor, 1*

Anaconda method

A bunch-blasting method in which 6 to 15 fuses, cut to respective lengths 2 in (5.1 cm) longer than required, are tied together near one end by two ravelings of fuse spaced about

5 to 6 in (12.7 to 15.2 cm) apart. A special cutter cuts the fuses off evenly between the two ties, leaving the fuses tied together and offering a smooth face of cut ends. Another bunch is made from the fuses of the remaining holes in the round. By using a short notched fuse as a spitter, the flame is directed against the cut end of one bunch of fuses. As soon as this bunch ignites, it is held close to the face of the second bunch, moving slowly to contact all fuses with the flame from the first bunch. Bunches should be held at least 6 in back from the end to avoid burning the hands. By this method, all the holes of a round are fired in only two groups and by one spitter. *Lewis*

anaerobic

a. Said of an organism (esp. a bacterium) that can live in the absence of free oxygen; also, said of its activities.--n. anaerobe. *AGI* b. Said of conditions that exist only in the absence of free oxygen. CF: [aerobic](#)

analcime

An isometric mineral, $16[\text{Na}(\text{H}_2\text{O})(\text{AlSi}_2\text{O}_6)]$; zeolite group; in white to slightly tinted radiating aggregates or granular masses; a late primary or hydrothermal mineral in mafic igneous rocks, an alkaline lake precipitate, and in silicic tuffs and tuffaceous sandstones. Formerly called analcite.

analcimite

An extrusive or hypabyssal igneous rock consisting mainly of analcime and pyroxene (usually titanaugite). Feldspathoids, plagioclase, and/or olivine may be present. Apatite, sphene, and opaque oxides may be present as accessories. *AGI*

analcimization

Replacement of feldspars or feldspathoids by analcime, usually in igneous rocks during late magmatic or postmagmatic stages. Syn: [analcitization](#). *AGI*

analcitization

See: [analcimization](#)

analog computer

A computer that operates with numbers represented by directly measurable quantities (such as length, voltage, or resistance) in a one-to-one correspondence; a measuring device that operates on continuous variables represented by physical or mathematical analogies between the computer variables and the variables of a given problem to be solved. *AGI*

analogous

a. Corresponding to or resembling something else in some way, as in form, proportion, etc. b. Designating that pole (end) of a pyroelectric crystal to which heating gives a positive charge. CF: [antilogous](#)

analytical chemistry

Study of the qualitative or quantitative composition of materials. *Pryor, 3*

analytic group

A rock-stratigraphic unit formerly classed as a formation but now called a group because subdivisions of the unit are considered to be formations.

analyzer

The part of a polariscope that receives the light after polarization and exhibits its properties. In a petrographic microscope, it is the polarizing mechanism (Nicol prism, Polaroid, etc.) that intersects the light after it has passed through the object under study. See also: [polarizer](#)

anamigmatization

High-temperature, high-pressure remelting of preexisting rock to form migma. CF: [anatexis](#)

anamorphic zone

The zone deep in the Earth's crust in which rock flowage takes place. The term, originated in 1898 by Van Hise, is now little used. CF: [anamorphism](#)

anamorphism

Intense metamorphism in the anamorphic zone in which rock flowage takes place and simple minerals of low density are changed into more complex ones of greater density by silication, decarbonization, dehydration, and deoxidation. The term was originated by Van Hise in 1904. CF: [anamorphic zone](#); [katamorphism](#). *AGI*

anastomosing

a. Pertaining to a network of branching and rejoining fault or vein surfaces or surface traces. *AGI* b. Said of the channel pattern of a braided stream. *AGI*

anatase

A tetragonal mineral, $4[\text{TiO}_2]$; trimorphous with rutile and brookite; brown, greenish-gray, or black; in hydrothermal veins around granite pegmatites, as an alteration of titanium minerals, and as detrital grains. Formerly called octahedrite. See also: [octahedrite](#); titanium dioxide; xanthitane.

anatectic

See: [anatexis](#)

anatexis

Melting of preexisting rock. This term is commonly modified by terms such as intergranular, partial, differential, selective, or complete. Adj. anatectic. CF: [palingenesis](#); [syntexis](#); [anamigmatization](#). *AGI*

anauxite

A clay mineral near kaolinite, but containing excess silica, probably as interlayered sheets. Monoclinic. *AGI; Dana, 4*

Anbauhobel

A rapid plow for use on longwall faces. It is suitable for seams from 2 to 8 ft (0.6 to 3.9 m) thick, with reasonably good roof and floor. The plow travels along the face at a speed of 75 ft/min (22.9 m/min) with a cutting depth from 1-1/2 to 3 in (3.8 to 7.6 cm); the broken coal is loaded by the plow-shaped body onto an armored conveyor. The machine can be operated independently of the face conveyor. See also: [plow-type machine](#); Rehisshakenhobel. *Nelson*

anchaduar

Fillings of old workings in a mine, and said to carry gold of recent deposition. This is a product that deposits in most of the old stopes throughout the mine. In some instances, the whole stope for 20 ft (6.1 m) wide is filled. It is apparently siliceous material with more or less pyrite. *Hess*

anchorage

That portion of any beam or structure designed to resist pulling out or slipping of the beam or structure when subjected to stress. *Nelson*

anchor bolt

a. A bolt with the threaded portion projecting from a structure, generally used to hold the frame of a building secure against wind load or a machine against the forces of vibration.

Also called holding-down bolt; foundation bolt. *Hammond* b. A bolt or other device used to secure a diamond-drill base to a solid foundation. It may or may not be threaded. *Long* c. A lag screw used to anchor the drill base to a platform or sill. *Long*

anchor charge

Means of fastening an explosive charge in a seismic shot hole to allow several charges to be preloaded. At each stage the bottom charges are fired first, the upper charges being held down by anchors. *AGI*

anchor jack

See: [jack](#)

anchor prop

See: [stell prop](#)

ancylite

A mineral, $\text{SrCe}(\text{CO}_3)_2(\text{OH})\cdot\text{H}_2\text{O}$; in pegmatites.

andalusite

An orthorhombic mineral, Al_2SiO_5 ; trimorphous with kyanite and sillimanite; Mohs hardness, 7-1/2; in aluminous shales and slates subjected to high-temperature, low-stress metamorphism; transparent green varieties used as gems. Syn: [cross-stone](#)

andersonite

A trigonal mineral, $\text{Na}_2\text{Ca}(\text{UO}_2)(\text{CO}_3)_3\cdot 6\text{H}_2\text{O}$; bright yellow-green; secondary.

Anderton shearer loader

A widely used cutter loader in which the ordinary jib of the longwall coal cutter is replaced by a shear drum which cuts a web from 16 to 22 in (40.6 to 55.9 cm) depending on its width. The machine travels on an armored conveyor and requires a prop-free front for working. It shears the coal in one direction and the front coal is loaded by a plow deflector, and then returns along the face (without cutting) and loads the remainder of the broken coal. The ordinary Anderton is suitable for coal seams more than 3 ft 6 in (1.1 m) thick. *Nelson*

andesine

A triclinic mineral, $(\text{Na,Ca})[(\text{Si,Al})\text{AlSi}_2\text{O}_8]$, NaSi 50 to 70 mol %, CaAl 50 to 30 mol %; of the plagioclase series of the feldspar group with prismatic cleavage; white to gray; a common rock-forming mineral in andesites, differentiated gabbros, some anorthosites, and as detrital grains.

andesinite

A coarse-grained igneous rock almost entirely composed of andesine. It was named by Turner in 1900. CF: [anorthosite](#). *AGI*

andesite

A dark-colored, fine-grained extrusive rock that, when porphyritic, contains phenocrysts composed primarily of zoned sodic plagioclase (esp. andesine) and one or more of the mafic minerals (e.g., biotite, hornblende, pyroxene), with a groundmass composed generally of the same minerals as the phenocrysts, although the plagioclase may be more sodic, and quartz is generally present; the extrusive equivalent of diorite. Andesite grades into latite with increasing alkali feldspar content, and into dacite with more alkali feldspar and quartz. It was named by Buch in 1826 from the Andes Mountains, South America. *AGI*

andorite

An orthorhombic mineral, $\text{PbAgSb}_3\text{S}_6$. Syn: [sundtite](#)

andradite

An isometric mineral, $8[\text{Ca}_3\text{Fe}_2\text{Si}_3\text{O}_{12}]$; never pure; garnet group; in yellow, green, red, brown, or black dodecahedral and trapezohedral crystals, or may be massive; in calcareous metasediments and placers. Varieties include topazolite, demantoid, melanite, aplome, and bredbergite.

andre

A direction of coal face roughly halfway between the main (bord) and secondary (end) cleavages; on the cross. *Mason*

Andreasen pipette

An instrument used in the determination of the particle size of clays by the sedimentation method. *Dodd*

Andrews' elutriator

A device for particle size analysis. It consists of (1) a feed vessel or tube, (2) a large hydraulic classifier, (3) an intermediate classifier, and (4) a graduated measuring vessel. *Dodd*

andrewsite

An orthorhombic mineral, $(\text{Cu,Fe})\text{Fe}_3(\text{PO}_4)_3(\text{OH})_2$; in bluish-green globules with radial structure.

anemoclastic

Broken off by wind erosion and rounded by wind action.

anemogram

A continuous record of wind speed and direction given by an anemograph. *Hammond*

anemograph

A self-recording anemometer giving a continuous trace of the direction and velocity of surface wind. In the Dines tube anemograph, the wind pressure acts upon the opening of a tube arranged as a vane to face in the direction of the wind. Pressure is transmitted through the tube to a float carrying a pen, the height of which indicates the wind velocity. *Hammond*

anemolite

a. An upturned form of calcite stalactite; its form is supposed to have been caused by air currents. *English* b. A stalactite with one or more changes in its growth axis. Syn: [helictite](#)

anemometer

An instrument for measuring air velocity. It consists of a small fan from 3 to 6 in (7.6 to 15.2 cm) in diameter that is rotated by the air current. By simple gearing, the number of revolutions of the fan is recorded on dials. It is held in the mine airway for the exact number of minutes (N), the instrument being moved steadily over the entire area. The difference between the initial and the final readings on the dials, divided by N, gives the velocity of the air in feet per minute. Instruments are available for velocities from near zero to 6,000 ft/min (1.83 km/min), also with extension and remote control handles. See also: [vane anemometer](#); [self-timing anemometer](#). *Nelson*

aneroid barograph

Consists essentially of an aneroid barometer and a revolving drum. The movement of the evacuated spring can is transmitted and magnified through a system of levers so that it is finally traced by means of a stylo on the graph paper attached to the revolving drum. The drum is rotated by clockwork, and can be of either the 24-h or the 7-day type. The graph paper is usually marked off in hourly intervals, so that a complete record of the atmospheric pressure at any instant may be obtained. These barographs are used extensively in mining and in meteorological offices. *Morris*

aneroid barometer

An instrument for measuring atmospheric pressure, built first by Lucien Vidie in about 1843. Basically, variation in pressure with changes in altitude is determined by the movements of the elastic top of a metallic box from which the air has been partly exhausted. Used generally in measuring altitude. *AGI*

ANFO

a. An explosive material consisting of ammonium nitrate and fuel oil. b. A blasting product, with approx. 94.5% industrial-grade ammonium nitrate and 5.5% No. 2 grade diesel fuel oil for a nearly oxygen-balanced mix; available in bulk form for onsite mixing of the AN and fuel or in 50-lb (23-kg) premixed bags as pourable forms. A heavy ANFO product is comprised of up to 45% to 50% ammonium nitrate emulsion mixed with prilled ANFO to increase the bulk density of ANFO; it has improved strength and provides good water resistance in comparison to ANFO. *SME, 1*

angelellite

A triclinic mineral, $\text{Fe}_4 (\text{AsO}_4)_2 \text{O}_3$; brownish-black, encrusted on andesite in northwestern Argentina.

angle beam

A two-limbed beam used for turning angles in shafts, etc. *Zern*

angle brace

A brace used to prevent mine timbers from riding or leaning; a brace across an interior angle. *Fay*

angle-cut

Drill holes converge, so that a core is blasted out. This leaves an open or relieved cavity or free face for the following shots, which are timed to ensue with a fractional delay.

Pryor, 3

angledozer

- a. A bulldozer whose blade can be turned at an angle to the direction of travel. *Carson, 1*
- b. A power-operated machine fitted with a blade, adjustable in height and angle, used for digging and side casting, and for spreading loose excavated material; used at opencast pits and dumping sites. *Nelson*
- c. A bulldozer with a blade that can be pivoted on a vertical center pin, so as to cast its load to either side. Syn: [angling dozer](#). *Nichols, 1*

angle drilling

See: [inclined drilling](#); inclined borehole.

angle hole

A borehole that is drilled at an angle not perpendicular to the Earth's surface. Syn: [incline hole](#)

angle level

See: [alidade](#)

angle of attack

In mine fan terminology, the angle made by the direction of air approach and the chord of the aerofoil section. *Roberts, 1*

angle of bite

In rolling metals where all the force is transmitted through the rolls, maximum attainable angle between roll radius at the first contact and the roll centers. If the operating angle is less, it is called the contact angle or roll angle. *ASM, 1*

angle of dip

The angle at which strata or mineral deposits are inclined to the horizontal plane. In most localities, earth movements subsequent to the deposition of the strata have caused them to be inclined or tilted. Syn: [dip](#)

angle of draw

- a. In coal mine subsidence, this angle is assumed to bisect the angle between the vertical and the angle of repose of the material and is 20 degrees for flat seams. For dipping seams, the angle of break increases, being 35.8 degrees from the vertical for a 40 degrees dip. The main break occurs over the seam at an angle from the vertical equal to half the dip. *Lewis*
- b. The angle between the limit line and the vertical. CF: [draw](#). *Nelson*

angle of external friction

The angle between the abscissa and the tangent of the curve representing the relationship of shearing resistance to normal stress acting between soil and the surface of another material. *ASCE*

angle of extinction

In polarized-light microscopy, the angle between an extinction direction and a crystallographic direction--e.g., crystal face, cleavage plane--of an anisotropic mineral. An extinction angle of 0 degrees is called "parallel extinction," an angle of 45 degrees "symmetrical extinction," other angles "oblique extinction;" of diagnostic value in mineral identification. Syn: [extinction angle](#)

angle of friction

The angle between the perpendicular to a surface and the resultant force acting on a body resting on the surface, at which the body begins to slide. *Hammond*

angle of inclination

The angle of slope from the horizontal.

angle of nip

In a rock-crushing machine, the maximum angle subtended by its approaching jaws or roll surfaces at which a piece of ore of specified size can be gripped. See also: [nip](#)

angle of obliquity

The angle between the direction of the resultant stress or force acting on a given plane and the normal to that plane. *ASCE*

angle of polarization

a. That angle, the tangent of which is the index of refraction of a reflecting substance. *Fay* b. The angle of reflection from a plane surface at which light is polarized. *Hess*

angle of pull

The angle between the vertical and an inclined plane bounding the area affected by the subsidence beyond the vertical. Applied to slides of earth. *Fay*

angle of reflection

a. The angle that a reflected ray of light, on leaving the exterior or interior surface of an object, such as a transparent stone or crystal, makes with the normal to that surface. b. An erroneous term for the Bragg angle of X-ray diffraction.

angle of repose

See: [angle of rest](#)

angle of rest

The maximum slope at which a heap of any loose or fragmented solid material will stand without sliding or come to rest when poured or dumped in a pile or on a slope. Syn: [angle of repose](#) See also: [natural slope](#)

angle of shear

The angle between the planes of maximum shear, which is bisected by the axis of greatest compression. *Rice, 1*

angle of slide

The slope, measured in degrees of deviation from the horizontal, on which loose or fragmented solid materials will start to slide; it is a slightly greater angle than the angle of rest.

angle of swing

The number of degrees through which the dipper or shovel bucket moves horizontally from the filled position to the dumping position. *Carson, 1*

anglesite

An orthorhombic mineral, $4[\text{PbSO}_4]$; sp gr, 6.2 to 6.4; in the supergene parts of lead-ore veins; a minor ore of lead. Formerly called lead vitriol, lead spar.

angle to the right

Horizontal angle measured clockwise from the preceding line to the following one. *Seelye, 2*

angle trough

A short curved section of a shaker conveyor trough inserted in a trough line to change the angle of direction. Up to 15 degrees of turn, the angle trough does not employ any

means of support other than connection to adjacent troughs. For a greater degree of turn, a fulcrum jack and a swivel device are employed with the trough section. *Jones, 1*

angling

Rope will only coil closely on the drum within the distance between the centers of the pulleys. Spread or diagonal coiling will result outside this distance unless the drum is grooved: this is known as outside angling and with a grooved drum may amount to 1« degrees . After the normal line between the pulley and the drum is passed, the coils attempt to get back to this normal line. This produces friction crushing between the coils and a danger of coils mounting one over the other; this is known as inside angling and should be kept below 2 degrees . The amount of angling for a given distance between the pulleys will depend upon the distance between the headgear pulleys and the drum. Grooving the drum reduces the difficulties associated with angling. Syn: [outside angling](#) *Sinclair, 5*

angling dozer

See: [angledozer](#)

angstrom

a. A unit of linear measurement in the centimeter-gram-second system. It equals 10^{-10} m, 10^{-8} cm, 10^{-4} μ m, or 10^{-1} nm. Such ultramicroscopic distances as the dimensions of atoms, molecules, unit cells, and short wavelengths are expressed in angstroms. *Webster 2nd; Webster 3rd* b. Either of two units of wavelength: (1) 10^{-10} m, called the absolute angstrom; or (2) the wavelength of the red spectrum line of cadmium divided by 6,438.4696, which is called the international angstrom. *Webster 3rd*

angular

Having sharp angles or borders; specif. said of a sedimentary particle showing very little or no evidence of abrasion. *AGI*

angular cutter

A milling cutter on which the cutting face is at an angle with regard to the axis of the cutter. *Crispin*

angularity test

See: [slope test](#)

angular unconformity

An unconformity in which the older underlying strata dip at a different angle (generally steeper) than the younger overlying strata. See also: [disconformity](#)

anhedral

Said of those minerals of igneous rocks that are not bounded by their own crystal faces, but have an imperfect form impressed on them by the adjacent minerals during crystallization. CF: [euhedral](#); [subhedral](#). Syn: [allotriomorphic](#); [xenomorphic](#).

anhydride

a. A compound formed from an acid by removal of water. *McGraw-Hill, 1* b. An oxide of a nonmetallic element or an organic radical, capable of forming an acid by uniting with the elements of water, or of being formed by the abstraction of the water, or of uniting with basic oxides to form salts.

anhydrite

An orthorhombic mineral, CaSO_4 ; massive; primarily in evaporite deposits, hot sulfate volcanic waters, and veins; hydrates to gypsum. Formerly called cube spar.

anhydrock

A sedimentary rock composed chiefly of anhydrite. *AGI*

anhydrous

Said of a substance, e.g., magma or a mineral, that is completely or essentially without water. An anhydrous mineral contains no water in chemical combination. *AGI*

anhydrous ammonia

Purified ammonia gas, NH_3 , liquefied by cold and pressure.

anidiomorphic

See: [xenomorphic](#)

aniline point

An approximate measure of the aromatic content of a mixture of hydrocarbons. It is defined as the lowest temperature at which an oil is completely miscible with an equal volume of aniline. *Francis, 2*

anilite

An orthorhombic mineral, Cu_7S_4 ; alters to a digenitelike crystal solution upon grinding.

animikite

A silver ore consisting of a mixture of sulfides, arsenides, and antimonides, with striking intergrowths and in granular masses; contains nickel and lead. CF: [macfarlanite](#)

anion

a. A negatively charged ion, such as a hydroxide, chloride, or sulfate ion; opposite of cation. *Webster 3rd* b. An atomic particle with a negative charge; one attracted to the anode. CF: [cation](#)

anion exchange capacity

A measure of the ability of a clay to adsorb or exchange anions; usually expressed in milliequivalents or anions per 100 g of dry clay. *ACSG, 2*

anionic collector

A flotation reagent in which the reactive group is acid in character. In these collectors the hydrocarbon group is in the anion. The most common anionic collectors are fatty acids (carboxylic acids). They occur naturally as complex mixtures in which the hydrocarbon chain is saturated or unsaturated. *Fuerstenau*

anionic current

Negative-ion electrical current.

anionic detergent

A detergent in which the anion (negative ion) is the active part. *ASM, 1*

anionic flotation

A flotation process employing anionic collectors. Anionic collectors are those in which the negative ion (anion) is the effective part. Opposite of cationic flotation, which employs cationic, or positive, ion collectors.

anisodesmic

a. An obsolete syn. for heteroangular. b. Said of crystals with unequal dimensions, including those with significant flattening, elongation, or both. Ant. isometric. CF: [equant](#); tabular. c. See: [heteroangular](#) d. Said of crystal structures with chemical bond strengths that are directionally unequal; e.g., micas.

anisometric

a. Having unsymmetrical parts; not isometric; applied to crystals with three unequal axes. *Webster 3rd* b. Of or relating to a rock of granular texture but having mineral constituents of unequal size. *Webster 3rd* c. A textural term applied to granular rocks in which the grains are of different sizes. Obsolete. The term "seriate" expresses the same texture when the crystals vary gradually or in a continuous series. CF: [isodiametric](#); [isometric](#). *Johannsen*

anisotropic

Having physical properties that vary in different directions. Specif. in optical crystallography showing double refraction. Characteristic of all crystalline substances, including minerals, except those belonging in the isometric system, which are isotropic. Opposite of isotropic. *Fay; AGI*

anisotropic fabric

A fabric in which there is preferred orientation of the minerals of which the rock is composed.

anisotropy

a. The property of being anisotropic, or exhibiting properties (such as velocity of light transmission, conductivity of heat or electricity, or compressibility) with different values when measured along axes in different directions. *Webster 3rd* b. The condition of having different properties in different directions as in geologic strata that transmit sound waves with different velocities in the vertical and in the horizontal directions. *AGI* c. Optically descriptive of crystalline materials having light velocities and indices of refraction dependent upon the crystallographic direction of the electric vector (vibration direction) during transmission or reflection; it includes all nonisometric crystals. CF: [uniaxial](#); extinction; isotropy. d. In geostatistics, the situation where a variogram exhibits a longer range (i.e., better correlation) in one direction than in another.

ankerite

A trigonal mineral, $\text{Ca}(\text{Fe}, \text{Mg}, \text{Mn})(\text{CO}_3)_2$; dolomite group; forms series with dolomite and with kutnohorite; associated with iron ores; commonly forms thin veins in some coal seams. CF: [ferroan dolomite](#); cleat spar. See also: [pearl spar](#)

annabergite

A monoclinic mineral, $2[\text{Ni}_3(\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}]$; vivianite group with cobalt replacing nickel toward erythrite; occurs as light-green soft coatings of fine striated crystals, or

earthy; an oxidation product of nickel and cobalt arsenides, the green crusts being a distinctive guide to nickel ores. Formerly called nickel ocher. CF: [nickel bloom](#)

annealed wire rope

A wire rope made from wires that have been softened by annealing. *Zern*

annealing

a. Heating to and holding at a suitable temperature and then cooling at a suitable rate for such purposes as reducing hardness; improving machinability; facilitating cold working; producing a desired microstructure; or obtaining desired mechanical, physical, or other properties. When applied to ferrous alloys, the term "annealing", without qualification, implies full annealing. When applied to nonferrous alloys, annealing implies a heat treatment designed to soften a cold-worked structure by recrystallization or subsequent grain growth or to soften an age-hardened alloy by causing a nearly complete precipitation of the second phase in relatively coarse form. *ASM, 1* b. The variation of the cooling rate at different temperatures of porcelain, glass, and other ceramic ware containing large quantities of vitreous material to prevent defects such as dunting, crazing, cracking, crystallization, etc. c. The process by which glass and certain metals are heated and then slowly cooled to make them more tenacious and less brittle. Important in connection with the manufacture of steel castings, forgings, etc. *Fay* d. The process of heating metal shapes to a red heat or above, prior to cleaning.

annealing color

The hue taken by steel in annealing. *Standard, 2*

annealing oven

A oven for heating and gradually cooling metals or glass to render them less brittle. Also called annealing furnace. *Standard, 2; Fay*

annerodite

A black mixture of samarskite with parallel overgrowths of columbite. Also spelled aanerodite.

annite

A monoclinic mineral, $\text{KFe}_3 \text{AlSi}_3 \text{O}_{10} (\text{OH}, \text{F})_2$; mica group; trioctahedral.

annivite

A variety of tennantite with arsenic partly replaced by bismuth and antimony.

annual labor

Same as assessment work, on mining claims.

annual layer

a. A sedimentary layer deposited or presumed to have been deposited during the course of a year; e.g., a glacial varve. *AGI* b. A dark band (in a salt stock) of formerly disseminated anhydrite crystals that accumulated upon being freed by solution of the enclosing salt. *AGI*

annual value

The annual value of a property is the estimated annual surplus of revenue over expenditure in process of liquidating the mineral reserves. In the usual case, that of a property owned by a company, it is the dividend estimated maintainable annually over the whole computed life, the regular distribution of mining profit. *Truscott*

annular bearing

A ring bearing that carries the radial load of a shaft. If a ball bearing, the balls are held in a race and run on a hard band around the shaft. *Petroleum Age*

annular-drainage pattern

A drainage pattern in which streams follow a roughly circular or concentric path along a belt of weak rock, resembling in plan a ringlike pattern. It is best displayed by streams draining a maturely dissected structural dome or basin where erosion has exposed rimming sedimentary strata of greatly varying degrees of hardness, as in the Red Valley, which nearly encircles the domal structure of the Black Hills, SD. *AGI*

annular kiln

A kiln having compartments. *Standard, 2*

anode

a. The positive pole of an electrolytic cell. *Webster 3rd* b. The terminal at which current enters a primary cell or storage battery; it is positive with respect to the device and negative with respect to the external circuit. *McGraw-Hill, 1* c. The electropositive pole. *AGI* d. The electrode at which electrons leave a device to enter the external circuit; opposite of cathode. See also: [electrode](#) e. The negative terminal of a primary cell or of a storage battery that is delivering current. *Webster 3rd*

anode compartment

In an electrolytic cell, the enclosure formed by a diaphragm around the anodes. *ASM, 1*

anode copper

Specially shaped copper slabs used as anodes in electrolytic refinement, and resulting from the refinement of blister copper in a reverberatory furnace. *ASM, 1*

anode effect

The effect produced by polarization of an anode in the electrolysis of fused salts. It is characterized by a sudden increase in voltage and a corresponding decrease in amperage due to the anode being virtually separated from the electrolyte by a gas film. *ASM, 1*

anode furnace

A copper- or nickel-refining furnace, in which blister copper or impure nickel is refined.

anode metals

Metals used for electroplating. They are as pure as commercially possible, uniform in texture and composition, and have the skin removed by machining. In addition to pure single metals, various alloys are produced in anode form, such as Platers' brass and Spekwite, the latter yielding a white plate harder than nickel. *Brady, 2*

anode mud

A deposit of insoluble residue formed from the dissolution of the anode in commercial electrolysis. Sometimes called anode slime. In copper refining, this slime contains the precious metals that are recovered from it. *ASM, 1; CTD*

anode scrap

Remnants of anode copper retrieved from electrolytic refining of the metal. *Pryor, 3*

anode slime

Metals or metal compounds left at, or falling from, the anode during electrolytic refining. The plural form is often used.

anodic zone

In the electrical self-potential method of geophysical prospecting, if the chemical composition of the soil or subsoil is such as to give electrical polarization, the zone of electropositive potential is the anodic zone. *AGI*

anomaly

a. A departure from the expected or normal. *AGI* b. The difference between an observed value and the corresponding computed value. *AGI* c. A geological feature, esp. in the subsurface, distinguished by geological, geophysical, or geochemical means, which is different from the general surroundings and is often of potential economic value; e.g., a magnetic anomaly. *AGI* d. Any deviation from conformity or regularity. A distinctive local feature in a geophysical, geological, or geochemical survey over a larger area. An area or a restricted portion of a geophysical survey, such as a magnetic survey or a gravity survey, that differs from the rest of the survey in general. The anomaly might be associated with petroleum, natural gas, or mineral deposits, or provide a key to interpreting the underlying geologic structure. Drilling for economic mineral deposits might be conducted in the area of a geophysical anomaly. In seismic usage, anomaly is generally synonymous with subsurface structure or material properties, but it is also used for spurious or unexplainable seismic events or for local deviations of observed signals which cannot be conclusively attributed to a unique cause. See also: [hydrochemical anomaly](#) *AGI* e. A gravity anomaly is the difference between the theoretical calculated gravity and the observed terrestrial gravity. In comparing any set of observed data with a computed theoretical curve, the difference of an observed value and the corresponding computed value, or the observed minus the computed value. Excess observed gravity is a positive anomaly, and a deficiency is a negative anomaly. See also: [Bouguer anomaly](#); free-air anomaly; isostatic anomaly. *AGI* f. A crystallographic anomaly is the lack of agreement between the apparent external symmetry of a crystal and the observed optical properties. *Schieferdecker* g. Any departure from the normal magnetic field of the Earth is a magnetic anomaly. It may be a high or a low, subcircular, ridgelike or valleylike, or linear and dikelike. *AGI*

anorthic

Obsolete syn. for a triclinic crystal system. See also: [triclinic](#)

anorthite

a. A triclinic mineral, $4[\text{CaAl}_2\text{Si}_2\text{O}_8]$; plagioclase series of the feldspar group, with up to 10 mol % NaSi replacing CaAl; white to gray; in ultramafic intrusive igneous bodies and skarns. Syn: [calcium feldspar](#); [calcium plagioclase](#); [calcicase](#); lepolite. b. A pure calcium end member of the plagioclase series.

anorthoclase

A triclinic mineral, $4[(\text{Na},\text{K})\text{AlSi}_3\text{O}_8]$; feldspar group; occurs in tabular crystals with prismatic cleavage; colorless or white; in felsic volcanic rocks. CF: [orthoclase](#)

anorthosite

A plutonic rock composed almost entirely of plagioclase, usually labradorite. It is a monomineralic equivalent of gabbro but lacks monoclinic pyroxene. CF: [andesinite](#)

anorthositization

Introduction of, or replacement by, anorthosite. *AGI*

anoxia

Oxygen deficiency in the blood cell or tissues of the body in such degree as to cause psychological and physiological disturbances. Anoxia may result from a scarcity of oxygen in the air being breathed or from an inability of the body tissues to absorb oxygen under conditions of low ambient pressure. Also called hypoxia. Syn: [oxygen deficiency](#) *Hunt*

anthill

In blast-hole drilling, the cuttings around the hole collar. *Krumlauf*

anthoinite

A triclinic mineral, $WAlO_3(OH)_3$; in tungstic ochers in central Africa and Tasmania.

anthonyite

A monoclinic mineral, $Cu(OH,Cl)_2 \cdot 3H_2O$; lavender colored; from the Centennial Mine in Calumet, MI. CF: [calumetite](#)

anthophyllite

An orthorhombic mineral, $4[(Mg,Fe)_7Si_8O_{22}(OH)_2]$; amphibole group; commonly lamellar or fibrous, green to clove-brown; in schists from metamorphosed ultramafic rocks; a nonspinning grade of asbestos.

anthra

From Greek anthrax, coal; also, a precious stone; combining forms used commonly to denote substances resembling or derived from coal, or fossils found in coal measures. *Standard, 2*

anthracene

Obtained by the distillation of coal tar. Used in the manufacture of dyestuffs. *Crispin*

anthracene oil

A heavy green oil that distills from coal tar above 270 degrees C and is the principal source of anthracene, phenanthrene, and carbozole. *Webster 3rd*

anthracite

a. A hard, black lustrous coal containing a high percentage of fixed carbon and a low percentage of volatile matter. Commonly referred to as hard coal, it is mined in the United States, mainly in eastern Pennsylvania, although in small quantities in other States. *BCI* b. The rank of coal, within the anthracitic class of Classification D 388, such that on the dry and mineral-matter-free basis, the volatile matter content of the coal is greater than 2% but equal to or less than 8% (or the fixed carbon content is equal to or greater than 92% but less than 98%), and the coal is nonagglomerating. *ASTM* c. Coal of the highest metamorphic rank, in which fixed-carbon content is between 92% and 98% (on a dry, mineral-matter-free basis). It is hard and black, and has a semimetallic luster and semiconchoidal fracture. Anthracite ignites with difficulty and burns with a short blue flame, without smoke. Syn: [hard coal](#); [stone coal](#); [kilkenny coal](#). See also: [solid smokeless fuel](#)

anthracite-coal-base carbon refractory

A manufactured refractory comprised substantially of calcined anthracite coal. *ASTM*

anthracite coal sizes

The sizes by which anthracite coal is marketed. The sizes are called broken, egg, stove, chestnut, pea, and buckwheat. Size is graded according to the size of round mesh a piece will pass through.

anthracite duff

In Wales, fine screenings used in making pitch-bonded briquets and for mixing with bituminous coal to be burned in cement kilns, on chain grate stokers, and as powdered fuel. *Hess*

anthracite fines

The product from an anthracite coal-preparation plant, usually below 1/8 in (3.2 mm). See also: [duff](#); [fines](#); [grain](#). *Nelson*

anthracite silt

Minute particles of anthracite too fine to be used in ordinary combustion. *Webster 3rd*

anthracitic

Pertaining to anthracite. *AGI*

anthracology

a. The science of coal. *Tomkeieff* b. Coal petrography, a branch of geology dealing with the physical constitution of coal in much the same way that petrography deals with the mineral composition of rocks. It is concerned with the physical variations in coal that make it possible to classify coal material by type. *AGI*

anthracometer

An instrument for determining the amount of carbon dioxide in a mixture of gases. *Standard, 2*

anthraconite

See: [bituminous limestone](#); stinkstone; swinestone.

anthracosilicosis

Massive fibrosis of the lungs marked by shortness of breath from inhalation of carbon and quartz dusts. Also called miner's phthisis. See also: [anthracosis](#)

anthracosis

A deposition of coal dust within the lungs from inhalation of sooty air. Syn: [blacklung](#); [collier's lung](#). CF: [anthracosilicosis](#) See also: [mining disease](#)

anthrafilt

Anthracite used for filtration purposes. *Jones, 1*

anthrafine

Sizes of anthracite smaller than barley. *Jones, 1*

anthrasilicosis

Variant of anthracosilicosis. *Webster 3rd*

anthraxolite

a. A highly graphitic coal. One specimen contained 97.7% fixed carbon. *AGI* b. Anthracitelike asphaltic material occurring in veins in Precambrian slate of the Sudbury district, ON, Can. *AGI* c. Probably fragmentary coalified wood.

anthraxylon

The vitreous appearing components of coal, which in thin section are shown to have been derived from the woody tissues of plants--such as stems, limbs, branches, twigs, roots, including both wood and cortex--changed and broken up into fragments of greatly varying sizes through biological decomposition and weathering during the peat stage, and later flattened and transformed into coal through the coalification process, but still present as definite units. *AGI*

anthraxylous coal

A bright coal (composed of anthraxylon and attritus in which the translucent cell-wall degradation matter or translucent humic matter predominates) in which the ratio of anthraxylon to attritus is from 3:1 to 1:1. CF: [attrital coal](#)

antibreakage device

A cushioning device to reduce the impact of coal in motion against objects with which it may come into contact, with a view to avoiding fracture of the coal. *BS, 5*

anticlinal

a. Pertaining to an anticline. CF: [synclinal](#) b. Inclining in opposite directions. Having or relating to a fold in which the sides dip from a common line or crest. Of or pertaining to an anticline. The opposite of synclinal. *Webster 3rd* c. The crest of an anticlinal roll may be the apex of a vein. *Fay* d. Said of strata assuming an arch-shaped form. *Gordon*

anticlinal axis

a. The medial line of an upfolded structure, from which the strata dip on either side. b. If a range of hills or a valley is composed of strata that on the two sides dip in opposite directions, the imaginary line that lies between them and toward which the strata on each side rise is called an anticlinal axis. See also: [axis](#)

anticlinal bend

An upwardly convex flexure in which one limb dips gently toward the apex and the other limb dips more steeply away from it. CF: [unicline](#); monocline. *AGI*

anticlinal mountain

A mountain whose geologic structure is that of an anticline. CF: [synclinal mountain](#)

anticlinal valley

A valley that follows an anticlinal axis. The term was used as early as 1862 by C.H. Hitchcock. CF: [synclinal valley](#)

anticline

a. A fold, generally convex upward, whose core contains the stratigraphically older rocks. Ant. syncline. See also: [antiform](#) *AGI* b. Applied to strata that dip in opposite directions from a common ridge or axis, like the roof of a house; the structure is termed an anticline or saddleback. *AGI* c. In this type of fold (anticline) the sides or limbs of the fold typically slope away from the plane of the axis of either side. Every anticlinal axis pitches in two directions; i.e., toward the two ends of the fold. *AGI*

anticlinorium

A series of anticlines and synclines, so grouped that taken together they have the general outline of an arch; opposite of synclinorium. *Webster 3rd*

antiferromagnetic

Spontaneous magnetic orientation of atoms with equal magnetic moments aligned in opposite directions. *Van Vlack*

antiferromagnetism

A state where d electrons are ordered in an antiparallel array, giving materials small positive values for magnetic susceptibility and weak attraction to an external magnetic field. CF: [ferrimagnetism](#); ferromagnetism; superexchange.

antiform

A fold whose limbs close upward in strata for which the stratigraphic sequence is not known. CF: [anticline](#)

antifriction bearing

A bearing consisting of an inner and outer ring, separated by balls or rollers held in position by a cage. *Nichols, 1*

antigorite

A monoclinic mineral, $(\text{Mg,Fe})_3 \text{Si}_2 \text{O}_5 (\text{OH})_4$; kaolinite-serpentine group; polymorphous with clinochrysotile, lizardite, orthochrysotile, parachrysotile; greasy variegated green; used as an ornamental stone. See also: [baltimorite](#)

antilogous

Designating the pole (end) of a pyroelectric crystal that is negative while the crystal is being heated and positive as it cools. CF: [analogous](#)

antimagmatist

See: [transformist](#)

antimonate

a. A salt or ester of antimonic acid; a compound containing the radical SbO_4^{-3} , SbO_3^{-1} , or $\text{Sb}_2\text{O}_7^{-4}$ (diantimonate) in which antimony has a +5 valence. *AGI* b. A salt containing pentavalent antimony and oxygen in the anion. *Webster 3rd* c. A mineral characterized by inclusion of antimony and oxygen; e.g., swedenborgite, $\text{NaBe}_4\text{SbO}_7$.

antimonial arsenic

A native compound of arsenic and antimony of which the antimony forms a comparatively small part. CF: [allemontite](#)

antimonial copper

See: [chalcostibite](#)

antimonial red silver

See: [pyrargyrite](#)

antimonial silver

a. Silver ore or alloys containing variable quantities of antimony. *Bennett* b. See: [dyscrasite](#)

antimonite

a. A salt or ester of antimonious acid or antimonous acid; a compound containing the radical SbO_3^{-3} or SbO_2^{-1} in which antimony has a +3 valence. *AGI* b. See: [stibnite](#)

antimonpearceite

A monoclinic mineral, $(\text{Ag,Cu})_{16}(\text{Sb,As})_2\text{S}_{11}$. CF: [arsenpolybasite](#)

antimony

Metallic antimony is an extremely brittle metal with a flaky, crystalline texture. Symbol, Sb. Sometimes found native, but more frequently as the sulfide, stibnite (Sb_2S_3). Used

in semiconductors, batteries, antifriction alloys, type metal, small arms, tracer bullets, cable sheathing, flame-proofing compounds, paints, ceramics, glass, and pottery. Antimony and many of its products are toxic. *Handbook of Chemistry and Physics*, 3

antimony blende

See: [kermesite](#)

antimony crudum

The name given to the molten, high-grade sulfide that drains away from the gangue residue when stibnite (antimony sulfide) is melted by liquation. *Newton*, 1

antimony glance

See: [stibnite](#)

antimony ocher

Any of several native antimony oxides; e.g., stibiconite, cervantite.

antimony regulus

An impure product of the smelting process; largely antimony sulfide. *Standard*, 2

antimony star

The fernlike marking on the upper surface of the metal antimony when well crystallized. *Fay*

antimony trioxide

See: [valentite](#)

antinode

A point, line, or surface in a standing wave system where some characteristic of the wave field has maximum amplitude. Antinodes, like nodes, may be of several types, such as pressure or velocity. *ASM*, 1

antipathy of minerals

The incompatibility of certain rock-forming minerals, according to the theory of fractional crystallization, results from their being too far apart in a crystallization

sequence to be associated in such quantities as to make up the entire rock. Thus, a rock made up of quartz and calcic plagioclase is unknown among igneous rocks. *Hess*

antiperthite

An intergrowth of a sodic and a potassic feldspar, generally considered to have formed during slow cooling by the unmixing of sodium and potassium ions in an originally homogeneous alkalic feldspar. In an antiperthite, the potassic member (usually orthoclase) forms thin films, lamellae, strings, or irregular veinlets, within the sodic member (usually albite). CF: [perthite](#)

antistatic

Descriptive of materials that normally have high insulating qualities, e.g., rubber hoses and belts that have been rendered conductive to reduce risk of sparks or electric shocks in mines, or other places where there is a fire risk. *Pryor, 3*

antistress mineral

A term suggested for minerals such as cordierite, the feldspars, the pyroxenes, forsterite, and andalusite, whose formation in metamorphosed rocks is believed to be favored by conditions that are not controlled by shearing stress, but by thermal action and by hydrostatic pressure that is probably no more than moderate. CF: [stress mineral](#)

antithetic fault

A fault that dips in the opposite direction from the direction in which the associated sediments dip. Opposite of synthetic fault. Syn: [antithetic shear](#)

antithetic shear

See: [antithetic fault](#)

antitropical ventilation

Ventilation by a current of air traveling in the opposite direction to that of the flow of mineral out of the mine. See also: [ascensional ventilation](#); [descensional ventilation](#); homotropical ventilation. *BS, 8*

antiturbidity overflow system

A system fitted to a drag suction hopper dredge which disperses entrained gases from the overflow in a settling tank and discharges the degassed overflow below the surface. The resulting plume is normally compact and does not appear at the surface. Abbrev., ATOS. *Cruickshank*

antlerite

An orthorhombic mineral, $4[\text{Cu}_3 \text{SO}_4 (\text{OH})_4]$; forms emerald to blackish-green striated crystals or parallel aggregates; may be reniform or massive; in oxidized parts of copper veins; an ore of copper in desert regions. Syn: [vernadskite](#)

AN-TNT slurry

Mixture of ammonium nitrate and trinitrotoluene used as an explosive. *Lewis*

antofagasite

See: [eriochalcite](#)

antozonite

A dark-violet to black semiopaque variety of fluorite that emits a strong odor when crushed; commonly causing nausea among miners, perhaps owing to free fluorine; produced by alpha bombardment, as in the inner bands of halos surrounding uraninite and thorite inclusions.

anvil

a. The stationary serrated jaw piece or plate of a safety clamp, adjustable pipe wrench, or jaw-type rock crusher. Also sometimes incorrectly used as a syn. for drive hammer. Also called anvil block; anvil heel; anvil jaw; heel. *Long* b. An iron block placed between a stamp-mill mortar box and the foundation block; generally used in light mortars and concrete foundations. *Fay* c. In drop forging, the base of the hammer into which the sow block and lower die part are set. *ASM, I* d. A block of steel upon which metal is forged. *ASM, I*

anvil block

A massive block of cast iron placed beneath the anvils of steam and other heavy hammers to absorb vibration. It is often embedded in masonry or concrete. *Crispin*

anvil jaw

See: [anvil](#)

anvil stone

Eng. Blue building stone, forming a bed of irregular anvil-shaped blocks. *Arkell*

anvil vise

A vise with an anvil on one jaw. *Standard, 2*

apartalite

See: [zincite](#)

apatelite

A hydrous ferric sulfate, found in yellow nodules in clay. *Fay*

apatite

a. Any hexagonal or monoclinic pseudo-hexagonal mineral with the general formula $A_5(XO_4)_3(F,Cl,OH)$, where $A = (Ba,Ca,Ce,K,Na,Pb,Sr,Y)$ and $X = (As,C,P,Si,V)$. Syn: [calcium phosphate](#) b. A mineral group fluorapatite, chlorapatite, hydroxylapatite, carbonate-fluorapatite (francolite), and carbonate-hydroxylapatite (dahllite).

apex

a. The highest point of a vein relative to the surface, whether it crops out or not. The concept is used in mining law. See also: [apex law](#) *AGI* b. The tip, summit, or highest point of a landform, as of a mountain; specif. the highest point on an alluvial fan, usually the point where the stream that formed the fan emerged from the mountain or from confining canyon walls. Syn: [culmination](#) c. The highest point of a stratum, as a coalbed. *Standard, 2* d. The top of an anticlinal fold of strata. e. In U.S. mining law, used to designate the highest limit of a vein. *Ballard* f. The top of an inclined haulage plane. See also: [brow](#); [landing](#). *Nelson* g. Point in the center of the face of a concave, noncoring bit. *Long* h. In a classifier or hydrocyclone, the underflow aperture through which the coarser and heavier fraction of the solids in a pulp is discharged in accordance with its minimum cross section. *Pryor, 3*

apex law

a. This law gives the owner of a properly located claim on a vein the right to an indefinite extension on the dip of the vein beyond the vertical planes through the side lines of the claim. In order to secure this right, the owner must lay out the end lines of the claim parallel and of substantial length. A triangular claim would have no apex right and cannot be patented. *Lewis* b. Obsolete mining law allowing the owner of a lode to follow it in depth, regardless of the vertical extension of the legal surface boundaries. *Pryor, 3* c. In U.S. mining law, the individual whose claim contains the apex of a vein may follow and exploit the vein indefinitely along its dip, even if it passes down-dip under adjoining surface property lines. Syn: [law of extralateral rights](#)

aphanesisite

See: [clinoclase](#)

aphanite

Any fine-grained igneous rock whose components are not distinguishable with the unaided eye; a rock having aphanitic texture. CF: [aphanitic](#) Syn: [cryptomere](#); [felsite](#); [felsitoid](#). *AGI*

aphanitic

a. Said of the texture of an igneous rock in which the crystalline components are not distinguishable by the unaided eye; also said of a rock or a groundmass exhibiting such texture. CF: [aphanite](#); [phaneritic](#). Syn: [fine-grained](#) b. A crystalline texture with individual crystals too small to be visible to the unaided eye. Syn: [cryptocrystalline](#)

aphanophyre

A porphyritic igneous rock having a groundmass which the unaided eye cannot distinguish as either crystalline or noncrystalline. *CIPW*

aphothonite

A steel-gray argentiferous variety of tetrahedrite. *Standard, 2*

aphrite

A foliated or scaly white pearly variety of calcite. Syn: [earth foam](#); foam spar. *Standard, 2; Fay*

aphrodite

See: [stevensite](#)

aphyric

Said of the texture of a fine-grained or aphanitic igneous rock that lacks phenocrysts. Also, said of a rock exhibiting such texture. *AGI*

aplanachromatic lens

A lens free from both chromatic aberration and spherical aberration. See also: [achromatic](#)

aplanatic lens

A lens free from spherical aberration. CF: [aberration](#) See also: [aplanachromatic lens](#)

aplite

A light-colored igneous rock characterized by a fine-grained saccharoidal (i.e., aplitic) texture. Aplites may range in composition from granitic to gabbroic, but the term aplite with no modifier is generally understood to mean granitic aplite, consisting essentially of quartz, potassium feldspar, and acid plagioclase. The term, from a Greek word meaning simple, was in use before 1823. Syn: [haplite](#) glass manufacture. *AGI*

aplitic

a. Pertaining to the fine-grained and saccharoidal texture characteristic of aplites. *AGI* b. Said of an igneous rock having such a texture. *AGI*

aplogranite

A light-colored rock of granitic texture consisting essentially of alkali feldspar and quartz, with subordinate biotite; muscovite may be present or absent. CF: [two-mica granite](#); [alaskite](#). *Holmes, 1*

Apocal

A nongelatinous permissible explosive. Used in coal mining. *Bennett*

Apold-Fleissner process

A method of roasting carbonate iron ore in a shaft furnace. The ore sinks continuously down the furnace while a current of hot air or flue gas, with a low carbon dioxide content, is passed through the body of the ore and a current of cold air is passed upward through the lower part of the shaft, this part acting as a cooling chamber for the ore and as a preheating flue for the air, which rapidly oxidizes the ferrous oxide in the upper regions of the furnace. The quantity and temperature of the hot gases and cold air are carefully regulated, so as to keep the carbon dioxide content of the flue gas at a minimum and thereby ensure thorough roasting of the ore at the lowest possible temperature. A furnace roasting 181 to 408 t/d requires about 176,400 to 220,500 kg.cal/t (736 to 923 kg.kJ/t), giving a heat efficiency of 73%. *Osborne*

apomagmatic

Said of a hydrothermal mineral deposit at an intermediate distance from its magmatic source. The term is little used. CF: [telemagmatic](#); cryptomagmatic. *AGI*

apophyllite

A mineral group, $2[\text{KFCa}_4(\text{Si}_8\text{O}_{20})\cdot 8\text{H}_2\text{O}]$ (fluorapophyllite) with F replaced by (OH) (hydroxyapophyllite) and K replaced by Na (natroapophyllite); occurs in square micaceous crystals as secondary minerals in cavities in igneous rocks. Syn: [fisheye stone](#)

apophysis

See: [tongue](#)

aporhyolite

A rhyolite, the groundmass of which was once glassy but has become devitrified.

Appalachian coalfield

The coal-producing area extending from northern Pennsylvania to Alabama, in and adjacent to the Appalachian Mountains.

Appalachian orogeny

a. Late Paleozoic Era diastrophism beginning perhaps in the Late Devonian Period and continuing until the end of the Permian Period. *AGI* b. A period of intense mountain-building movements in the late Paleozoic Era, during which the deposits in the Appalachian and Cordilleran geosynclines were folded to form the Appalachian and Palaeocordilleran mountains. Equivalent to the Armorican and Hercynian movements in Europe. Syn: [Appalachian revolution](#)

Appalachian revolution

See: [Appalachian orogeny](#)

apparent cohesion

a. In soil mechanics, the resistance of particles to being pulled apart, due to the surface tension of the moisture film surrounding each particle. Also called moisture film cohesion. *Hunt* b. Cohesion in granular soils due to capillary forces. See also: [cohesion](#)

apparent density

a. The weight (W) of an object or material divided by its exterior volume (V_e) less the volume of its open pores (V_p). Apparent density = $W/(V_e - V_p)$. *ACSG*, 2 b. Weight per apparent volume. See also: [density](#) *Van Vlack*

apparent dip

The dip of a rock layer as measured in any exposed section, or direction, not at a right angle to the strike. It is a component of, and hence always less than, the true dip. See also: [angle of dip](#); [true dip](#); dip. *Stokes*

apparent movement of a fault

The apparent movement observed in any chance section across a fault is a function of several variables: the attitude of the fault; the attitude of the disrupted strata; the attitude of the surface upon which the fault is observed; and the true movement (net slip) along the fault. *AGI*

apparent plunge

The inclination of a normal projection of lineation in the plane of a vertical cross section. CF: [plunge](#)

apparent porosity

The ratio of the volume of open pore space in a specimen to the exterior volume.

apparent resistivity

The measured electrical resistivity between two points on the Earth's surface, which corresponds to the sensitivity the ground would have if it were homogeneous.

apparent specific gravity

a. Specific gravity of a rock as measured by water displacement, taking into account the effect of sealed pore spaces as well as constituent minerals. See also: [specific gravity](#) b. The ratio of the weight in air of a given volume of the impermeable portion of a permeable material (e.g., the solid matter including its impermeable pores or voids) at a stated temperature to the weight in air of an equal volume of distilled water at a stated temperature. *ASCE* c. This property is determined by the standard method of dividing the weight of a rock by the weight of an equal volume of water. The term apparent specific gravity is used because water cannot penetrate the closed pore spaces inside the rock, and hence the specific gravity measured by water displacement methods includes the effect of internal pore spaces as well as that of the constituent minerals. *Lewis*

apparent superposition

The actual or visible order in which strata lie in any locality. *Standard, 2*

apparent velocity

The velocity with which a seismic-signal wavefront appears to travel along the surface of the Earth. It exceeds the actual velocity if the wave train is not traveling parallel to the surface. *AGI*

apparent volume

True volume plus closed-pore volume. *Van Vlack*

apparent width

The width of a vein or other tabular formation as determined by borehole intercepts. This width will always be greater than the true width if the borehole intersects the vein at any direction other than perpendicular to the surface of the vein. CF: [true width](#)

appliances of transportation

As applied to a coal mine, these include parts of the locomotive, mobile conveyor, and elevator transportation systems for the removal of coal.

Appolt oven

An oven for the manufacture of coke, differing from the Belgian oven in that it is divided into vertical compartments.

appraisal

The estimation or fixing of a money value on anything, such as a gemstone. Differs from valuation and evaluation.

approach distance

The linear distance, in the direction of feed, between the point of initial cutter contact and the point of full cutter contact. *ASM, I*

appropriation

In the mining law, the posting of notice at or near the point where the ledge is exposed; next, the recording of the notice; next, the marking of the boundaries. *Ricketts*

approved permissible flame safety lamp

A flame safety lamp that has been approved for use in gaseous coal mines.

approximate original contour

The surface configuration achieved by backfilling and grading of the mined area so that the reclaimed area, including any terracing or access roads, closely resembles the general surface configuration of the land prior to mining and blends into and complements the drainage pattern of the surrounding terrain, with all highwalls, spoil piles, and coal refuse piles eliminated.

Apricotine

Trade name for yellowish-red, apricot-colored quartz pebbles; may be of gem quality; near Cape May, NJ.

apron

a. A canvas-covered frame set at such an angle in a miner's rocker that the gravel and water in passing over it are carried to the head of the machine. b. An amalgamated copper plate placed below a stamp battery, over which pulp passes. The free gold contained in the pulp is amalgamated by mercury on the plate. c. A broad shallow vat used for evaporating. *Webster 3rd* d. A receptacle or endless belt for conveying material (such as rock) by means of a cableway and trolley. Syn: [traveling apron](#) *Webster 3rd* e. The front gate of a scraper body. *Nichols, 1* f. See: [morainal apron](#)

apron conveyor

a. A series of overlapping metal plates or aprons running in an endless chain for transferring material from one place to another. Often used to feed raw material from a bin. *ACSG, 2* b. A conveyor so contrived as to provide a moving platform on which materials can be carried. Syn: [hinged apron](#)

apron feed

A method of feeding material forward on an articulated platform. *Nelson*

apron feeder

A feeder in which the material is carried on an apron conveyor and in which the rate of feed is adjusted either by varying the depth of material or the speed of the conveyor, or both. See also: [conveyor-type feeder](#) Also called plate-belt feeder; plate feeder. *BS, 5*

apron plate

Sheet of copper or special alloy set in front of a stamp battery and coated with mercury to trap and amalgamate gold. *Pryor, 3*

apron rope

The operating rope for the blade front of a scraper. *Hammond*

apron wall

That part of a panel wall between the windowsill and the support of the panel wall. *ACSG, 1*

apyrous

a. Not changed by extreme heat, e.g., mica; distinguished from refractory. *Standard, 2* b. Noncombustible. *Webster 3rd*

AQ

A letter name specifying the dimensions of bits, core barrels, and drill rods in the A-size and Q-series wireline diamond drilling system having a core diameter of 27 mm and a hole diameter of 48 mm. *Cumming, 2*

aqua ammonia

Ammonia water; esp., a solution of ammonia containing 10% ammonia by weight.

aqua regia

A very corrosive, fuming, yellow liquid made by mixing nitric and hydrochloric acids, usually in the proportion of one part by volume of pure nitric acid with three parts by volume of pure hydrochloric acid. Used in dissolving metals such as gold and platinum and in etching. Syn: [nitrohydrochloric acid](#); [nitromuriatic acid](#).

aquarium test

A test conducted by detonating a standard quantity of explosives under water and measuring both the detonation and gas pressures using transducers; useful for evaluating the relative strengths of various explosives. *Du Pont, 2*

aqueous

a. Of, or pertaining to, water. *AGI* b. Made from, with, or by means of water; e.g., aqueous solutions. *AGI* c. Produced by the action of water; e.g., aqueous sediments. *AGI*

aqueous fusion

Melting in the presence of water, as a magma. *AGI*

aqueous liquor

In the ion-exchange (IX) process, the feed to the exchange columns. In solvent extraction, the aqueous feed containing the metal values to be extracted into the organic phase.

aquiclude

A body of relatively impermeable rock that is capable of absorbing water slowly but does not transmit it rapidly enough to supply a well or spring. CF: [confining bed](#)

aquifer

a. A formation, a group of ions, or a part of a formation that is water bearing. *AGI* b. A stratum or zone below the surface of the Earth capable of producing water, as from a well. *AGI* c. An underground stratum that will yield water in sufficient quantity to be of value as a source of supply. An aquifer is not a stratum that merely contains water, for this would apply to all strata in the ground-water area. An aquifer must yield water. See also: [aquitard](#) *Carson, 1*

aquifer test

In situ procedure, such as single-well (bail test or slug test) and multiple-well pumping tests, used to determine hydraulic properties of an aquifer. *Freeze*

aquifuge

a. Suggested by Bedier, as the opposite of aquifer. *AGI* b. A rock that contains no interconnected openings or interstices and therefore neither absorbs nor transmits water. CF: [confining bed](#) *AGI*

aquitard

Low-permeability bed, in a stratigraphic sequence, of sufficient permeability to allow movement of contaminants, and to be relevant to regional ground-water flow, but of insufficient permeability for the economic production of water. See also: [aquifer](#); [aquiclude](#). CF: [confining bed](#)

aragonite

a. An orthorhombic mineral, $4[\text{CaCO}_3]$; acicular, pyramidal, tabular, reniform, columnar, or stalactitic habit; formed from hot carbonated water in springs, cavities in basalt, or biogenetically in shells and pearls (mother of pearl). Syn: [aragon spar](#) b. The mineral group aragonite, cerussite, strontianite, and witherite.

aragonite sand

Sand-size grains of predominantly aragonite (CaCO_3) found in shallow, tropical waters. Aragonite forms by chemical precipitation in sea water due to the presence of SO_4 ions.

Aragon spar

Former name for aragonite.

aramayoite

A triclinic mineral, $\text{Ag}(\text{Sb,Bi})\text{S}_2$; iron black with perfect cleavage; at Chocaya, Bolivia.

arbitrage

An operation that involves a purchase in one market with the simultaneous sale of an equivalent quantity in another market, (e.g., the London Metal Exchange and the New York Commodity Exchange), and the necessary foreign exchange transaction to protect against any change in the parities between the two currencies involved. *Wolff*

arborescent

Applied to minerals having a treelike form, esp. when fairly massive. If the mineral formation is so thin as to resemble a painting of a tree, it is generally called dendritic. Syn: [dendriform](#); [dendritic](#). *Fay*

arcanite

An orthorhombic mineral, K_2SO_4 .

arc cutter

A device consisting of a bit attached to knuckle-jointed rods used to drill a curved borehole or branched holes from a parent borehole. Syn: [Thompson arc cutter](#)

arc furnace

A furnace in which material is heated either directly by an electric arc between an electrode and the work, or indirectly by an arc between two electrodes adjacent to the material. *ASM, I*

arch

a. A portion of rock left standing at the intersection of a mine wall and roof, to support the roof. b. Curved roof of underground opening. See also: [dome](#) c. A curved structural member used to span openings or recesses; also built flat. Structurally, an arch is a piece or assemblage of pieces so arranged over an opening that the supported load is resolved

into pressures on the side supports and practically normal to their faces. *ACSG, 1* d. A part of a furnace; a crown. *ASTM* e. To heat a pot in a pot arch. *ASTM* f. One of the five chambers of a brick kiln; also, the fire chamber in certain kinds of furnaces and ovens. *Webster 3rd* g. The roof of a reverberatory furnace.

arch blocks

Applied to the wooden voussoirs used in framing a timber support for the tunnel roof, when driving a tunnel on the so-called American system. These blocks are made of plank, superimposed in three or more layers, and a breaking joint. *Stauffer*

Archean

Said of the rocks of the Archeozoic. *AGI*

arched

Corn. Said of the roads in a mine, when built with stones or bricks.

Archeozoic

The earlier part of Precambrian time, corresponding to Archean rocks. Also spelled: Archaeozoic. *AGI*

arch forms

Forms or patterns on which sprung arch bricks are laid to ensure the proper arch contour.

arch girder

A normal H-section steel girder bent to a circular shape. The usual form consists of halves joined together at the crown by bolts and two fishplates. The arch girder is usually splay legged or straight legged in shape, but horseshoe shapes are also in use. See also: [steel support](#); wood stilt. *Nelson*

Archimedes' principle

The statement in fluid mechanics that a fluid buoys up a completely immersed solid so that the apparent weight of the solid is reduced by an amount equal to the weight of the fluid that it displaces. *AGI*

arching

a. Arch. b. Curved support for roofs of openings in mines; constructed archways in masonry. c. The development of peripheral cracks around an excavation due to the

difference in stress between the skin rock and the rock in the stress ring. See also: [V-arching](#) d. The folding of schists, gneisses, or sediments into anticlines. e. The transfer of stress from a yielding part of a soil or rock mass to adjoining less yielding or restrained parts of the mass. *ASCE* f. The fretting away of the periphery of a rock tunnel, usually converting it from a rectangular to a circular or elliptical section. The effect in the back is sometimes referred to as the "natural arch." The putting in of a lining built to an arch shape should not be referred to as arching but as "lining" or "putting in the arch."
Spalding

arching action

The natural process by which a fractured, pulverulent, or plastic material acquires a certain amount of ability to support itself partially through the resolution of the vertical component of its weight into diagonal thrust. *Woodruff*

arching to a weakness

See: [V-arching](#)

arch rib

The main load-bearing member of a ribbed arch. *Hammond*

arch set

Steel assemblies used to support mine workings. *Pryor, 3*

arch structure

See: [abutment](#); pressure arch.

arcose

See: [arkose](#)

arc shear machine

See: [universal machine](#)

arc shooting

A method of refraction seismic prospecting in which the variation of travel time (velocity) with azimuth from a shot point is used to infer geologic structure. The term also applies to a refraction spread placed on a circle or a circular arc with the center at the shot point. *AGI*

Arctic suite

A group of basaltic and associated igneous rocks intermediate in composition between rocks of the Atlantic suite and the Pacific suite. CF: [Atlantic suite](#); [Pacific suite](#). *AGI*

arcwall machine

See: [slabbing machine](#)

arc welding

A group of welding processes wherein coalescence is produced by heating with an electric arc or arcs, with or without the application of pressure and with or without the use of filler metal. *Coal Age, 2*

Ardeer double-cartridge test

See: [sensitivity to propagation](#)

ardennite

a. A yellow to yellowish-brown vanadosilicate of aluminum and manganese that crystallizes in the orthorhombic system. *Fay* b. An orthorhombic mineral, $Mn_4(Al,Mg)_6(SiO_4)_2(Si_3O_{10})[(As,V)O_4](OH)_6$.

areal geology

The branch of geology that pertains to the distribution, position, and form of the areas of the Earth's surface occupied by different types of rock or by different geologic units, and to the making of geologic maps. *Fay*

areal map

A geologic map showing the horizontal area or extent of rock units exposed at the surface. *AGI*

areal pattern

A dispersion pattern resulting from widespread rock alteration. Such patterns may outline the boundaries of a group of deposits and thus limit the area that it is necessary to prospect in detail.

area of airway

In mine ventilation, the cross-sectional area of the entry or duct through which the air flows; expressed in square meters.

area of influence of a well

The area surrounding a well within which the piezometric surface has been lowered when pumping has produced the maximum steady rate of flow. *ASCE*

area of settlement

The surface area affected by subsidence. *Briggs*

arenaceous

Said of a sediment or sedimentary rock consisting wholly or in part of sand-sized fragments, or having a sandy texture or the appearance of sand; pertaining to sand or arenite. Also said of the texture of such a sediment or rock. The term implies no special composition and should not be used as a syn. of siliceous. Syn: [sandy](#)

areng

A Bornean term for a yellowish gravelly earth, sometimes containing diamonds.

arenite

a. A general name for sedimentary rocks composed of sand-sized fragments irrespective of composition; e.g., sandstone, graywacke, arkose, and calcarenite. *AGI* b. A clean sandstone that is well sorted, contains little or no matrix material, and has a relatively simple mineralogic composition; specif. a pure or nearly pure, chemically cemented sandstone containing less than 10% argillaceous matrix and inferred to represent a slowly deposited sediment well-washed by currents.---Etymol: Latin arena, sand. Adj. arenitic. See also: [lutite](#)

Arents tap

An arrangement by which molten lead from the crucible of a shaft furnace is drawn through an inverted siphon into an exterior basin from which it can be ladled without disturbing the furnace. Syn: [siphon tap](#) *Fay*

arfvedsonite

A monoclinic mineral, $\text{Na}_3(\text{Fe}^{+2}, \text{Mg})_4\text{Fe}^{+3}\text{Si}_8\text{O}_{22}(\text{OH})_2$, of the amphibole group; dark green to black; in silica-poor igneous rocks.

Argall furnace

A reverberatory roasting furnace the hearth of which has a reciprocating movement whereby the ore is caused to move forward by the action of rabblers extending across the hearth. *Fay*

Argall tubular furnace

A tubular roasting furnace consisting of four brick-lined steel tubes 30 ft (9.1 m) long nested together inside two steel tires, which revolve upon steel-faced carrying rolls. *Fay*

argental mercury

See: [amalgam](#)

argentate

a. A salt in which silver acts as an acid radical; e.g., ammonium argentate (fulminating silver). *Standard, 2* b. Having a silvery appearance. *CTD*

argention

The act or process of coating or plating with silver. *Standard, 2*

argentiferous

Containing silver.

argentiferous galena

See: [silver lead ore](#)

argentiferous lead

Lead that contains silver. *CMD*

argentine

a. A lamellar variety of calcite with a pearly white luster. b. Silver-coated white metal. *Standard, 2* c. A finely divided tin moss or sponge obtained from a solution of tin by precipitation with zinc. *Standard, 2* d. Adj. pertaining to, containing, or resembling silver; silvery. *AGI*

argentite

An orthorhombic mineral, Ag_2S ; isometric above 180 degrees C; dimorphous with acanthite; massive or as coating; metallic lead-gray; soft, sectile; sp gr, 7.3; in veins with

other silver and sulfide minerals; commonly pseudomorphous after acanthite; an important ore of silver. Syn: [silver glance](#); [vitreous silver](#); [argyrite](#).

argentojarosite

A trigonal mineral, $\text{AgFe}_3 (\text{SO}_4)_2 (\text{OH})_6$; alunite group; yellow to brown-yellow.

argentopyrite

An orthorhombic mineral, $\text{AgFe}_2 \text{S}_3$; dimorphous with sternbergite.

argil

a. Potter's clay; white clay. *Standard, 2* b. See: [aluminite](#)

argillaceous

a. Pertaining to, largely composed of, or containing clay-size particles or clay minerals, such as an argillaceous ore in which the gangue is mainly clay; esp. said of a sediment (such as marl) or a sedimentary rock (such as shale) containing an appreciable amount of clay. Syn: [clayey](#) See also: [argillic](#) b. Pertaining to argillite. *AGI*

argillaceous hematite

A brown to deep-red variety of natural ferric oxide containing an appreciable portion of clay (or sand). Syn: [ironstone clay](#)

argillaceous limestone

A limestone containing an appreciable amount (but less than 50%) of clay; e.g., cement rock. *AGI*

argillaceous ore

Ore in which the gangue is mainly clay. *Osborne*

argillaceous rock

A sedimentary rock composed of clay-grade particles; i.e., composed of minute mineral fragments and crystals less than 0.002 mm in diameter; containing much colloidal-size material. In addition to finely divided detrital matter, argillaceous rocks consist essentially of illite, montmorillonite, kaolinite, gibbsite, and diaspore. *CMD*

argillation

The development of clay minerals by the weathering of aluminum silicates. CF: [kaolinization](#)

argillic

Pertaining to clay or clay minerals; e.g., argillic alteration in which certain minerals of a rock are converted to minerals of the clay group. CF: [argillaceous](#)

argillite

A compact rock, derived either from mudstone (claystone or siltstone), or shale, that has undergone a somewhat higher degree of induration than mudstone or shale but is less clearly laminated and without its fissility, and that lacks the cleavage distinctive of slate. *AGI*

argillization

The replacement or alteration of feldspars to form clay minerals, esp. in wall rocks adjacent to mineral veins. CF: [kaolinization](#)

argon

A colorless, odorless, monatomic, inert gas. Symbol, Ar. Obtained by the fractionation of liquid air. Used in electric light bulbs and in fluorescent tubes. *Handbook of Chemistry and Physics, 3*

argulite

A variety of asphaltic sandstone. *Tomkeieff*

argyrite

Former name for argentite; also called argyrose.

argyrodite

An orthorhombic mineral, $\text{Ag}_8 \text{GeS}_6$; pseudocubic; forms a series with canfieldite.

argyropyrite

A discredited term for a silver-iron sulfide, probably argentopyrite.

argyrose

Former name for argentite.

argyrythrose

Former name for pyrargyrite.

arite

A nickel mineral between nickeline and breithauptite in composition.

arithmetic-mean particle diameter

A measure of the average particle size obtained by summing the products of the size-grade midpoints times the frequency of particles in each class, and dividing by the total frequency. *AGI*

Arizona ruby

A deep-red or ruby-colored variety of pyrope garnet of igneous origin, Southwestern United States.

arizonite

a. A hexagonal mineral, $\text{Fe}_2 \text{Ti}_3 \text{O}_9$; in irregular metallic steel-gray masses in pegmatite veins near Hackberry, AZ. Formerly called pseudorutile. b. A mixture of hematite, rutile, ilmenite, and anatase. *AGI* c. An ore of micaceous iron, silver iodide, gold, iron sulfides, and antimony in a vein in Yavapai County, AZ. *AGI* d. A hypabyssal rock with 80% quartz, 18% alkali feldspar, and accessory mica and apatite in Arizona (not a rock name in the IUGS classification). *AGI*

Arkansas diamond

A diamond from Murfreesboro, AR.

Arkansas stone

A variety of novaculite found in the Ouachita Mountains of western Arkansas. Also, a whetstone made of Arkansas stone. See also: [novaculite](#)

arkansite

A brilliant, iron-black variety of brookite from Magnet Cove, AR. *Fay*

arkose

A feldspar-rich sandstone, typically coarse-grained and pink or reddish, that is composed of angular to subangular grains that may be either poorly or moderately well sorted;

usually derived from the rapid disintegration of granite or granitic rocks, and often closely resembles granite; e.g., the Triassic arkoses of the Eastern United States. Quartz is usually the dominant mineral, with feldspar (chiefly microcline) constituting at least 25%. Cement (silica or calcite) is commonly rare, and matrix material (usually less than 15%) includes clay minerals (esp. kaolinite), mica, and iron oxide; fine-grained rock fragments are often present. Arkose is commonly a current-deposited sandstone of continental origin, occurring as a thick, wedge-shaped mass of limited geographic extent (as in a fault trough or a rapidly subsiding basin); it may be strongly cross-bedded and associated with coarse granite-bearing conglomerate, and it may denote an environment of high relief and vigorous erosion of strongly uplifted granitic rocks in which the feldspar was not subjected to prolonged weathering or transport before burial. Arkose may also occur at the base of a sedimentary series as a thin blanketlike residuum derived from and resting on granitic rock. Etymol: French, probably from Greek *archaios*, ancient, primitive. Syn: [arkosic](#) subarkose. Also spelled *arcose*. *AGI*

arkose quartzite

See: [arkosite](#)

arkosic

Having the character of arkose.

arkosic sandstone

A sandstone with considerable feldspar, such as one containing minerals derived from coarse-grained quartzo-feldspathic rocks (granite, granodiorite, gneiss) or from highly feldspathic sedimentary rocks; specif. a sandstone containing more than 25% feldspar and less than 20% matrix material of clay, sericite, and chlorite. See also: [arkosite](#) *AGI*

arkosite

A quartzite with a notable amount of feldspar. Syn: [arkose quartzite](#) See also: [arkosic sandstone](#)

arm

The inclined member or leg of a set or frame of timber.

armangite

A trigonal mineral, $Mn_{26}As_{18}O_{50}(OH)_4(CO_3)$; black; near Laangban, Sweden.

arm conveyor

A conveyor consisting of an endless belt, or one or more chains, to which are attached projecting arms, or shelves, for handling packages or objects in a vertical or inclined path.

armenite

a. A hexagonal mineral, $\text{BaCa}_2 \text{Al}_6 \text{Si}_9 \text{O}_{30} \cdot 2\text{H}_2 \text{O}$; osumilite group. b. Former name for azurite, Armenian stone.

armor

An outer cable covering that may be either metallic or nonmetallic.

armored apron

An apron in which each pan is provided with a separate wearing plate.

armored cable

A cable that is wrapped with metal, usually steel wires or tapes, primarily for physical protection. See also: [cable](#)

armored flexible conveyor

A heavy, chain-type flexible conveyor capable of being advanced with the face without dismantling. It is designed either to carry a coal cutter or a cutter loader or to guide and hold a plow against the face. It may be advanced by horizontal hydraulic rams that are fixed at about 20-ft (6-m) intervals on the waste side of the conveyor. It is often employed on prop-free-front faces with hand filling, and it has a capacity of about 200 to 300 st/hr. Syn: [Panzer conveyor](#) chain conveyor; face conveyor. *Nelson*

armored relict

An unstable relict enveloped by a crystal or by a reaction shell which reverted its reaction with the other constituents of the rock. See also: [unstable relict](#)

Armstrong air breaker

See: [compressed-air blasting](#)

arnimite

Orthorhombic $\text{Cu}_5 (\text{SO}_4)_2 (\text{OH})_6 \cdot 3\text{H}_2 \text{O}$; perhaps the mineral antlerite.

arochlors

Chlorinated diphenyl materials that are useful as vehicles for pigments used in glass decoration since they volatilize without leaving a carbon residue. Arochlors provide a grinding and dispersing medium for nonaqueous slurries of pigments and ceramic bodies; also, they can be used in combination with waxes to provide moisture-proof coatings. *Lee*

aromatic compound

A compound derived from the hydrocarbon benzene, C_6H_6 , distinguished from that derived from methane, CH_4 . *Standard, 2*

aromatic hydrocarbon

A compound of carbon and hydrogen that contains in its molecular structure a closed and saturated ring of carbon atoms; e.g., benzene, naphthalene, and anthracene. *Hackh*

aromatite

A bituminous stone resembling a fragrant gum resin in color and odor. It was a precious stone in ancient Arabia and Egypt. *AGI*

arquerite

A soft, malleable, silver-rich variety of amalgam containing about 87% silver and 13% mercury; from Coquimbo, Chile.

arrastra

See: [arrastre](#)

arrastre

A circular rock-lined pit in which broken ore is pulverized by stones attached to horizontal poles fastened in a central pillar and dragged around the pit. Also spelled arrastra. *Weed, 2; CTD*

arrested decay

A stage in coal formation when biochemical action ceases. *Tomkeieff*

arrester

a. Any mechanical contrivance or device used to stop or slow up motion. *Crispin* b. Mechanism for the purification of a gas stream that may contain suspended liquids or solids. *Bennett*

arrival dealings

Dealing in ores, concentrates, and metals in transit from source to market. *Pryor, 3*

arrojadite

A monoclinic mineral, $\text{KNa}_4 \text{CaMn}_4 \text{Fe}_{10} \text{Al}(\text{PO}_4)_3 (\text{OH},\text{F})$; dark green, forms a series with dickinsonite.

arrow

A sharp-pointed, thin metal rod about 1 to 2 ft (0.3 to 0.6 m) long with a ring at the other end, used in surveying; a thin metal peg. *Mason*

arroyo

a. A term applied in the arid and semiarid regions of the Southwestern United States to the small, deep, flat-floored channel or gully of an ephemeral stream, usually with vertical or steeply cut banks of unconsolidated material at least 60 cm high; it is usually dry, but may be transformed into a temporary watercourse or short-lived torrent after heavy rainfall. CF: [dry wash](#) b. The small intermittent stream or rivulet that occupies such a channel.---Etymol: Spanish, stream, brook; gutter, watercourse of a street. See also: [wadi](#); [nullah](#). *AGI*

arsenargentite

Possibly a silver arsenide.

arsenate

a. A salt or ester of an arsenic acid; a compound containing one of the three radicals in which arsenic has a +5 valence: ortho-arsenate, AsO_4 ; meta-arsenate, AsO_3 ; pyro-arsenate, $\text{As}_2 \text{O}_7$. b. A mineral characterized by pentavalent arsenic and oxygen; e.g., mimetite $\text{Pb}_5 (\text{AsO}_4)_3 \text{Cl}$. CF: [vanadate](#)

arsenic

A metallic, steel-gray, brittle element. Symbol, As. Found native in realgar and orpiment, and combined with heavy metals. Used in bronzing, pyrotechny, insecticides, and poisons, and as a doping agent in transistors. Gallium arsenide is used as a laser material to convert electricity directly into coherent light. Arsenic and its compounds are poisonous. *Handbook of Chemistry and Physics, 3*

arsenical antimony

See: [allemontite](#)

arsenical nickel

See: [nickeline](#); niccolite.

arsenical pyrite

See: [arsenopyrite](#)

arsenic bloom

See: [arsenolite](#); pharmacolite.

arsenicite

See: [pharmacolite](#)

arsenic trioxide

A white, odorless, tasteless powder; AsO_3 . Used in the manufacture of pigments, glass, and other arsenic compounds, ceramic enamels, and aniline colors; mixed with soda ash for boiler compounds. Syn: [white arsenic](#); [arsenious oxide](#). *CCD*, 2

arsenious oxide

See: [arsenic trioxide](#)

arsenite

A mineral characterized by trivalent antimony and oxygen; e.g., trigonite, $\text{Pb}_3 \text{Mn}(\text{AsO}_3)_2 (\text{AsO}_2 (\text{OH}))$.

arsenobismite

A yellowish-green mineral, $\text{Bi}_2 (\text{AsO}_4)(\text{OH})_3$.

arsenoclasite

An orthorhombic mineral, $\text{Mn}_5 (\text{AsO}_4)_2 (\text{OH})_4$; red, from Laangban, Sweden. Also spelled arsenoklasite.

arsenolamprite

An orthorhombic mineral arsenic; dimorphous with arsenic.

arsenolite

An isometric mineral, As_2O_3 ; dimorphous with claudetite. Syn: [arsenic bloom](#)

arsenopyrite

a. A monoclinic mineral, $8[\text{FeAsS}]$; pseudo-orthorhombic, prismatic, and metallic silver-white to steel gray; the most common arsenic mineral and principal ore of arsenic; occurs in many sulfide ore deposits, particularly those containing lead, silver, and gold. Syn: [mispickel](#); arsenical pyrite; white pyrite; white mundic. b. The mineral group arsenopyrite, glaucodot, gudmundite, osarsite, and ruarsite.

arsenosulvanite

An isometric mineral, $\text{Cu}_3(\text{As},\text{V})\text{S}_4$; forms a series with sulvanite. Syn: [lazarevite](#)

arsenpolybasite

A monoclinic mineral, $(\text{Ag},\text{Cu})_{16}(\text{As},\text{Sb})_2\text{S}_{11}$. Also spelled arsenopolybasite. CF: [antimonpearceite](#)

arsenuranocircite

Syn: [heinrichite](#) It is not clear which name has priority as applied to a natural mineral. See also: [metaheinrichite](#)

arsenuranylite

The orthorhombic mineral, $\text{Ca}(\text{UO}_2)_4(\text{AsO}_4)_2(\text{OH})_4 \cdot 6\text{H}_2\text{O}$; typically orange-red.

arterial road

A main road with secondary roads joining it. *Hammond*

artesian

a. Refers to ground water under sufficient hydrostatic head to rise above the aquifer containing it. *AGI* b. Pertaining to underground water that is confined by impervious rock or other material under sufficient pressure to raise it above the upper level of the saturated rock or other material in which it occurs, if this rock or material is penetrated by wells or natural fissures. Formerly, the term was applied only to water under sufficient pressure to raise it to the surface of the Earth. *Stokes*

artesian aquifer

An aquifer that contains artesian water. *AGI*

artesian basin

A geologic structural feature or a combination of such features in which water is confined under artesian pressure. *AGI*

artesian discharge

The process of discharge from a well by artesian pressure, and also the quantity of water discharged. The artesian pressure is aided by the buoyancy of the natural gas that enters some wells with the water. *Stokes*

artesian leakage

The slow percolation of water from artesian formations into the confining materials of a less permeable but not of a strictly impermeable character. Such percolation causes a reduction in artesian pressure, depending on the relative impermeability of the materials in the confining formations. *AGI*

artesian spring

A spring, the water from which issues under artesian pressure, generally through some fissure or other opening in the confining bed that overlies the aquifer. *AGI*

artesian water

a. Ground water that is under sufficient pressure to rise above the level at which it is encountered by a well, but that does not necessarily rise to or above the surface of the ground. *AGI* b. Ground water that is confined within a permeable bed and that rises under pressure to approx. the height of the intake. If the outlet (well or spring) is appreciably below the height of the intake, the water will flow out under pressure. If even with or above the height of the intake, the water will rise in the well but it will not flow out. *Bateman, 2*

artesian well

a. A well in which the water level rises above the top of the aquifer, whether or not the water flows at the land surface. *AGI* b. Formerly, only applied to a well drilled to a depth where, owing to the structure of the strata, the water pressure was high enough to raise the water to the surface. *Standard, 2* c. Often applied to any deep well, even where pumping is necessary, as in an ordinary driven well. See also: [well](#)

arthurite

a. An apple-green monoclinic mineral, $\text{CuFe}_2 (\text{AsO}_4, \text{PO}_4, \text{SO}_4)_2 (\text{O}, \text{OH})_2 \cdot 4\text{H}_2\text{O}$. b. The mineral group arthurite, earlshannonite, ojuelaite, and whitmoreite.

articulite

See: [itacolumite](#)

artificial aging

Aging above room temperature. See also: [precipitation heat treatment](#) *ASM, 1*

artificial brine

Brine produced from an underground deposit of salt or other soluble rock material in the process of solution mining. CF: [brine](#)

artificial horizon

A device for indicating the horizontal, as a bubble, gyroscope, pendulum, or the flat surface of a liquid. It is sometimes simply called a horizon. Syn: [false horizon](#)

artificial island

An island that is constructed by humans rather than formed by natural means, usually in waters less than 30 m deep. In the mining industry they are commonly used to support the construction of service or ventilation shafts for underground mines extending offshore. *Cruickshank*

artificial liquid fuel

Fuel created by the hydrogenation of coal; the destructive distillation of coal, lignite, or shale at low temperature; and by a recombination of the constituents of water gas in the presence of a suitable catalyst.

artificial refractories

Materials manufactured in electric furnaces and used for special purposes; e.g., zirconium carbide, titanium carbide, and silicon carbide. *Newton, 1*

artinite

A snow-white monoclinic mineral, $\text{Mg}_2 (\text{CO}_3)(\text{OH})_2 \cdot 3\text{H}_2\text{O}$.

asbestiform

Said of a mineral that is fibrous, i.e., like asbestos.

asbestine

a. A silicate of magnesium much used in paint. It serves as an aid in holding paint pigment in solution and in binding paint films together. Also marketed under such names as French chalk and talc. Syn: [agalite](#) *Crispin* b. Of, pertaining to, or having the characteristics of asbestos; incombustible. *Webster 3rd*

asbestos

a. A commercial term applied to silicate minerals that separate readily into thin, strong fibers that are flexible, heat resistant, and chemically inert, thus making them suitable for uses (as in yarn, cloth, paper, paint, brake linings, tiles, insulation, cement, fillers, and filters) where incombustible, nonconducting, or chemically resistant material is required. Since the early 1970's, there have been serious environmental concerns about the potential health hazards of asbestos products, which has resulted in strong environmental regulations. b. Any asbestiform mineral of the serpentine group (chrysotile, best adapted for spinning and the principal variety in commerce) or amphibole group (esp. actinolite, anthophyllite, gedrite, cummingtonite, grunerite, riebeckite, and tremolite). c. A term strictly applied to asbestiform actinolite. Syn: [asbestus](#); amianthus; earth flax; mountain flax; rock wool.

asbestosis

A lung disease caused by breathing asbestos dust. *Harrington*

asbestos minerals

Certain minerals that have a fibrous structure, are heat resistant and chemically inert, possess high electrical insulating qualities, and are of sufficient flexibility to be woven. The two main groups are serpentine and amphiboles. Asbestos proper is actinolite. Chrysotile is fibrous serpentine; amosite is fibrous anthophyllite; crocidolite is fibrous soda-amphibole. Used in fireproof buildings, insulating, paint materials, brake linings, and clutches, and as insulation against heat, electricity, and acid. *Pryor, 3*

asbestos yarn

Yarn consisting of asbestos fiber; asbestos and vegetable fibers; asbestos and vegetable fibers and wire; or asbestos and vegetable fibers with an insert of cotton or other yarn reinforcement. Metallic asbestos yarn is yarn consisting of plain asbestos yarn twisted with brass, copper, or other fine wire. *Hess*

asbestus

See: [asbestos](#)

asbolan

A hexagonal mineral, $(\text{Co,Ni})_{1-y} (\text{MnO}_2)_{2-x} (\text{OH})_{2-2y+2x} \cdot n\text{H}_2\text{O}$; a soft, black, earthy aggregate commonly classed as a variety of "wad," the cobalt content reaching as high as 32% (40% cobalt oxide). Syn: [asbolane](#); [asbolite](#); [black cobalt](#); [cobalt ocher](#); [wad](#).

asbolane

A form of wad; a soft, earthy manganese dioxide, containing up to about 32% cobalt oxide. Sometimes referred to as earthy cobalt. Syn: [asbolite](#); [cobalt ocher](#). See also: [asbolan](#)

asbolite

See: [asbolan](#); [asbolane](#).

ascensional ventilation

A mine ventilation system in which the fresh intake air flows down to the bottom end of the workings and then ascends along the faces to the main return. See also: [descensional ventilation](#); [antitropical ventilation](#); [homotropical ventilation](#).

ascension theory

A theory of hypogene mineral-deposit formation involving mineralizing solutions rising through fissures from magmatic sources in the Earth's interior. CF: [descension theory](#)

ascharite

See: [szaibelyite](#)

aschisite

An igneous rock with the same chemical composition as its parent magma, i.e., undifferentiated. CF: [diaschistic](#)

aschistic

Said of the rock of a minor intrusion that has a composition equivalent to that of the parent magma, i.e., in which there has been no significant differentiation. CF: [diaschistic](#)

ash

a. The inorganic residue after burning, esp. of coal. Ignition generally alters both the weight and the composition of the inorganic matter. See also: [ash yield](#); [extraneous ash](#); [inherent ash](#). *AGI* b. Fine pyroclastic material (under 2.0-mm diameter; under 0.063-mm diameter for fine ash). The term usually refers to the unconsolidated material but sometimes is also used for its consolidated counterpart, tuff. Syn: [dust](#); [volcanic ash](#); [volcanic dust](#); [pumicite](#). *AGI* c. Inorganic residue remaining after ignition of combustible substances, determined by definite prescribed methods. *ASTM*

ashcroftine

A tetragonal mineral, $K_5 Na_5 (Y,Ca)_{12} Si_{28} O_{70} (OH)_2 (CO_3)_8 \cdot 3H_2 O$; occurs in small pink needles at Narsarsuk, Greenland.

ash curve

A graph that shows a relation between the specific gravity of fractions of a coal sample floated in liquids of step-by-step increased density, and the percentage of ash in each such fraction. Syn: [tromp curve](#) *Pryor, 3*

ash drawers

Early name applied to tourmaline because of its polar electrostatic property.

ash error

The difference between the percentage ash of a product of a separation and that shown by the washability curve (based on the reconstituted feed) of a product with the same properties (usually percentage of ash). *BS, 5*

ash fusibility

A measure, in terms of temperature, of fusion of coal ash prepared and tested under standard conditions. *BS, 4*

ash-fusion temperature

The temperature at which a special test cone made from particles of ash obtained from the coal will (1) begin to deform, i.e., soften, or (2) completely deform or fuse into a blob. *Nelson*

ashlar

Rectangular pieces of stone of nonuniform size that are set randomly in a wall. *AGI*

ash-specific gravity curve

The curve obtained from the float-and-sink analysis by plotting the ash contents of successive fractions against specific gravity. *BS*, 5

ashstone

An indurated deposit of fine volcanic ash. *AGI*

ash yield

The percentage of material remaining after a fuel is burned; that portion of a laboratory sample remaining after heating under standard conditions to constant weight; i.e., until all the combustible matter has been burned away. See also: [ash](#); [extraneous ash](#); [inherent ash](#). *Nelson*

asparagolite

See: [asparagus stone](#)

asparagus stone

A yellow-green variety of apatite. Syn: [asparagolite](#)

aspect

a. The gross or overall lithologic or biologic characteristics of a stratigraphic unit as expressed at any particular point. *AGI* b. The angle made by a target with the line joining it to the observation point is known as the aspect of the target. *Hunt*

asperolite

A variety of chrysocolla, containing more than the usual percentage of water.

asphaltic

Pertaining to or containing asphalt; e.g., asphaltic limestone or asphaltic sandstone impregnated with asphalt, or asphaltic sand representing a natural mixture of asphalt with varying proportions of loose sand grains. *AGI*

asphaltic ore

Asphaltlike ore carrying invisible uranium values. *Ballard*

asphaltic rock

Any rock naturally impregnated with asphalt. It is generally sandstone or limestone.

asphaltite

Any one of the naturally occurring black solid bitumens that are soluble in carbon disulfide and fuse above 230 degrees F (110 degrees C). Examples are uintahite, glance pitch, and grahamite. *AGI*

asphalt rock

A porous rock, such as a sandstone or limestone, that is impregnated naturally with asphalt. Syn: [asphalt stone](#); [rock asphalt](#). *AGI*

asphalt stone

See: [asphalt rock](#)

asphyxiate

To suffocate; to choke. *Mason*

aspirating

See: [dedusting](#)

aspirator

An apparatus for moving or collecting gases, liquids, or granular substances by suction. *Webster 3rd*

assay

a. To analyze the proportions of metals in an ore; to test an ore or mineral for composition, purity, weight, or other properties of commercial interest. Syn: [crucible assay](#) b. The test or analysis itself; its results. *AGI*

assay balance

A very sensitive balance used in the assaying of gold, silver, etc., for weighing the beads. It usually has magnifying lenses for reading the graduations. See: [balance](#)

assayer

Person who analyzes ores and alloys, esp. bullion, to determine the value and properties of their precious metals. *DOT*

assay foot

In determining the assay value of an orebody, the multiplication of its assay grade by the number of feet along which the sample was taken. CF: [assay inch](#); [assay value](#). *AGI*

assay grade

The percentage of valuable constituents in an ore, determined from assay. CF: [assay value](#); value. *AGI*

assay inch

In determining the assay value of an orebody, the multiplication of its assay grade by the number of inches along which the sample was taken. CF: [assay foot](#); [assay value](#). *AGI*

assay office

A laboratory for examining ores, usually gold and silver ores, in order to determine their economic value. *Standard, 2*

assay plan

Map of a mine showing the assay, stope, width, etc., of samples taken from positions marked. Used to control grade and quality of ore mined and milled. *Pryor, 3*

assay plan factor

In sampling, a term used to describe the rate that the head value bears to the mine sampling. This percentage figure is useful in reducing any extant or subsequent mine-sampling average to that which in actual production it will likely prove to be. In South Africa this is generally known as the "mine call factor." Syn: [correction factor](#)

assay split

Agreed average value, as between buyer's and seller's assay, used as pricing basis in sale of mineral. *Pryor, 3*

assay ton

A weight of 29.166+ g, used in assaying to represent proportionately the assay value of an ore. Because it bears the same ratio to 1 mg that a ton of 2,000 lb bears to the troy ounce, the weight in milligrams of precious metal obtained from an assay ton of ore equals the number of ounces to the ton. Abbrev. AT. *AGI*

assay value

a. The quantity of an ore's valuable constituents, determined by multiplying its assay grade or percentage of valuable constituents by its dimensions. CF: [assay inch](#); [assay foot](#). The figure for precious metals is generally given in troy ounces per ton of ore, or per assay ton. See also: [assay grade](#); [value](#). AGI b. The monetary value of an orebody, calculated by multiplying the quantity of its valuable constituents by the market price. Syn: [average assay value](#)

assay walls

The outer limits to which an orebody can be profitably mined, the limiting factor being the metal content of the country rock as determined from assays. *Hess*

assembled stone

Any stone constructed of two or more parts of gem materials, whether genuine, synthetic, imitation, or a combination thereof; e.g., a doublet or triplet. Syn: [composite stone](#); [imitation](#).

assembly rod

An external bolt holding a machine together. *Nichols, I*

assessment

See: [assessment work](#)

assessment drilling

Drilling done to fulfill the requirement that a prescribed amount of work be done annually on an unpatented mining claim to retain title. *Long*

assessment labor

Refers to the annual labor required of the locator of a mining claim after discovery (and not to work done before discovery). *Ricketts*

assessment work

The annual work upon an unpatented mining claim on the public domain necessary under U.S. law for the maintenance of the possessory title thereto. This work must be done each year if the claim is to be held without patenting. Syn: [assessment](#); [location work](#). *Lewis*

asset

Property with cash sale value. In mining, the dominant asset is the proved ore reserve. *Pryor, 3*

assigned protection factor

a. The expected workplace level of respiratory protection that would be provided by a properly functioning respirator or a class of respirators to properly fitted and trained users. Abbrev. APF. *ANSI* b. The minimum anticipated protection provided by a properly functioning respirator or class of respirators to a given percentage of properly fitted and trained users. *NIOSH*

assimilation

The incorporation and digestion of solid or fluid foreign material, such as wall rock, in magma. The term implies no specific mechanisms or results. Such a magma, or the rock it produces, may be called hybrid or contaminated. See also: [hybridization](#) Syn: [magmatic assimilation](#); [magmatic dissolution](#). *AGI*

assistant mine foreman

A person employed to assist the mine foreman in the performance of his or her duties and to serve in his or her place, in the absence of the mine foreman.

Assmann psychrometer

A wet-and-dry-bulb hygrometer in which air is drawn over the thermometer bulbs by an integral fan. *BS, 8*

association

See: [rock association](#)

association placer location

A placer location made by an association of persons in one location covering 160 acres (64 ha) is not eight locations covering 20 acres (8 ha) each. It is in law a single location, and as such a single discovery is sufficient to support such a location; the only assessment work required is as for a single claim. *Ricketts*

assured mineral

See: [reserves](#)

astatic

Not taking a fixed or definite position or direction; as an instrument in which a negative restoring force has been applied so as to aid any deflecting force, thereby rendering the instrument more sensitive and/or less stable. *AGI*

astatic gravimeter

A gravity meter or gravimeter constructed so that a high sensitivity is achieved at certain positions of the elements of the system; i.e., equilibrium between a negative restoring force and the force of gravity at such positions. See also: [gravimeter](#)

astatic pendulum

A pendulum having almost no tendency to take a definite position of equilibrium. *AGI*

astatization

The application of a restoring force to a moving element of a physical system in such a manner as to drive the moving element away from its rest position and to aid any deflecting force, so as to increase sensitivity. *AGI*

asteria

Any gemstone that, when cut en cabochon in the correct crystallographic direction, displays a rayed figure (a star) by either reflected or transmitted light; e.g., star sapphire. Syn: [star stone](#) See also: [star sapphire](#)

asteriated

a. Like a star, with rays diverging from a center. b. Said of a mineral, crystal, or gemstone that exhibits asterism; e.g., asteriated beryl. See: [star](#)

asteriated quartz

Quartz having whitish or colored radiations within the crystals. See: [star quartz](#)

asteriated topaz

Asteriated yellow variety of corundum, wrongly called Oriental topaz. *Schaller*

asterism

a. Starlike rays of light observed in some minerals when viewed from certain directions, particularly if the mineral is cut en cabochon. Minerals having this feature are called asteriated or star. Asteriated beryl, chrysoberyl, crocidolite, emerald, quartz, ruby, and sapphire are known. *Hess* b. A starlike effect observed in certain minerals either by

transmitted or by reflected light. *AGI* c. Elongation of Laue X-ray diffraction spots produced by stationary single crystals as a result of internal crystalline deformation. The size of the Laue spot is determined by the solid angle formed by the normals to any set of diffracting planes; this angle increases with increasing crystal deformation, producing progressively elongated (asteriated) spots. Measurements of asterism are used as indicators of deformation in crystals subjected to slow stress or to shock waves. CF: [corundum cat's eye](#)

asthenolith

A body of magma that was formed by melting in response to heat generated by radioactive disintegration. *AGI*

asthenosphere

The layer or shell of the Earth below the lithosphere, which has reduced yield strength, permitting viscous or plastic flow under relatively small stresses; it is a zone in which isostatic adjustments take place, magmas may be generated, and seismic waves are strongly attenuated. It is a part of the upper mantle. Syn: [zone of mobility](#) *AGI*

ASTM coal classification

A system based on proximate analysis in which coals containing less than 31% volatile matter on the mineral-matter-free basis (Parr formula) are classified only on the basis of fixed carbon; i.e., 100% volatile matter. They are divided into five groups: above 98% fixed carbon; 98% to 92% fixed carbon; 92% to 86% fixed carbon; 86% to 78% fixed carbon; and 78% to 69% fixed carbon. The first three of these groups are called anthracites, and the last two are called bituminous coals. The remaining bituminous coals, the subbituminous coals, and the lignites are then classified into groups as determined by the calorific value of the coals containing their natural bed moisture; i.e., the coals as mined but free from any moisture on the surface of the lumps. The classification includes three groups of bituminous coals with moist calorific value from above 14,000 Btu/lb (32.5 MJ/kg) to above 13,000 Btu/lb (30.2 MJ/kg); three groups of subbituminous coals with moist calorific value below 13,000 Btu/lb to below 8,300 Btu/lb (19.3 MJ/kg); and two groups of lignitic coals with moist calorific value below 8,300 Btu/lb. The classification also differentiates between consolidated and unconsolidated lignites and between the weathering characteristics of subbituminous and lignitic coals. See also: [coal classification systems](#)

astochite

A blue to gray-violet variety of amphibole; at Wermland, Sweden. Locally known as blue rhodonite. Syn: [soda richterite](#)

astrakanite

See: blodite.

astridite

An ornamental stone, consisting mainly of chromojadeite. From Manokwari, New Guinea. *English*

astrigent

a. A taste that puckers the mouth; descriptive of certain minerals, such as alum. *Fay* b. Causing contraction, shrinking, or puckering. *Webster 3rd* c. Said of a clay containing an astrigent salt.

astrophyllite

a. A triclinic mineral, $(K,Na)_3 (Fe,Mn)_7 Ti_2 Si_8 O_{24} (O,OH)_7$; forms a series with kupletskite. b. A mineral group.

asymmetrical

a. Without symmetry. b. Said of mineral crystals having no center, plane, or axis of symmetry.

asymmetrical vein

A vein with unlike mineral sequences on either side.

asymmetric class

The class of crystal forms without any symmetry. *Fay*

asymmetric fold

A fold in which one limb dips more steeply than the other. If one limb is overturned, the term "overturned fold" or "overfold" is used. CF: [symmetrical fold](#)

asymmetric unit

The whole group of prototype atoms that, where repeated by the symmetry operations of a space group, generate a crystal structure. CF: [unit cell](#)

atacamite

An orthorhombic mineral, $4[Cu_2 Cl(OH)_3]$; trimorphous with paratacamite and botallackite; grass green, in fine crystal aggregates, fibrous or columnar; a supergene

https://t.me/Geologybooks

mineral in oxidized zones of copper deposits in desert regions; a source of copper. Syn: [remolinite](#)

ataxic

Said of an unstratified mineral deposit. CF: [eutaxic](#)

atelestite

A monoclinic mineral, $\text{Bi}_8 (\text{AsO}_4)_3 \text{O}_5 (\text{OH})_5$; yellow.

at grade

See: [graded](#)

Atkinson

The resistance of a section of roadway in which there is a pressure of 1 lb/ft² (6.9 kPa) throughout the section, when an amount of 1,000 ft³/s (1 kilocusec or 28.3 m³/s) of dry air at 60 degrees F (15.6 degrees C) and 30 in (762 mm) barometer is passing. See also: [Atkinson's friction coefficient](#)

Atkinson's friction coefficient

The measure of the pressure expended per 1,000 ft/min per square foot of surface traversed in order to create motion under the conditions prevailing. It is expressed as pounds per square foot per 1,000 ft/min. See also: [Atkinson](#)

Atlantic suite

One of two large groups of igneous rocks, characterized by alkalic and alkali-calcic rocks. Harker (1909) divided all Tertiary and Holocene igneous rocks of the world into two main groups, the Atlantic suite and the Pacific suite, the former being so named because of the predominance of alkalic and alkali-calcic rocks in the nonorogenic areas of crustal instability around the Atlantic Ocean. Because there is such a wide variety of tectonic environments and associated rock types in the areas of Harker's Atlantic and Pacific suites, the terms are now seldom used to indicate kindred rock types; e.g., Atlantic-type rocks are widespread in the mid-Pacific volcanic islands. CF: [Arctic suite](#); [Mediterranean suite](#). *AGI*

Atlas ore

See: [malachite](#)

Atlas spar

Syn: [satin spar](#)

atmosphere

a. The gaseous envelope surrounding the Earth. The mixture of gases that surrounds the Earth, being held thereto by gravity. It consists by volume of 78% nitrogen, 21% oxygen, 0.9% argon, 0.03% carbon dioxide, and minute quantities of helium, krypton, neon, and xenon. The atmosphere is so compressed by its own weight that half is within 5.5 km of the Earth's surface. *AGI* b. A unit of pressure. A normal atmosphere is equal to the pressure exerted by a vertical column of mercury 760 mm in height at 0 degrees C, and with gravity taken as 980.665 cm/s^2 . It equals 14.66 psi (101 kPa). *AGI* c. In a furnace, the mixture of gases resulting from combustion. d. The kind of air prevailing in any place, as within a kiln during firing. *Kinney*

atmosphere-supplying respirator

A class of respirators that supply a respirable atmosphere, independent of the workplace atmosphere. *ANSI*

atmospheric condenser

A condenser using water at atmospheric pressure. *Strock, 2*

atoll texture

a. A texture sometimes observed in a thin section of a rock, in which a ring of one mineral occurs with another mineral or minerals inside and outside the ring. b. In mineral deposits, the surrounding of one mineral by a ring of one or more other minerals; commonly results from replacement of pyrite by another mineral, with the outermost pyrite unaffected and constituting the "atoll." Syn: [core texture](#)

atom

According to the atomic theory, the smallest particle of an element that can exist either alone or in combination with similar particles of the same element or of a different element. The smallest particle of an element that enters into the composition of a molecule. *Webster 3rd*

atomic charge

Electrical charge density due to gain or loss of one or more electrons. *Pryor, 3*

atomic distance

Distance between two atom centers. *Pryor, 3*

atomic moisture meter

A device to monitor the moisture in coal passing through a preparation plant, by using radiation that is sensitive to hydrogen atoms. The coal is bombarded with neutrons, some of which strike hydrogen atoms and bounce back to a detector tube, thus providing a continuous measure of moisture content. This meter permits the moisture content of coal to be measured instantaneously, continuously, and automatically.

atomic number

The number of protons in the nucleus of an atom. See also: [atomic weight](#)

atomic plane

a. Any one of the layers into which atoms form themselves in an orderly pattern during the growth of a crystal. b. In a crystal, any plane with a regular array of atomic units (atoms, ions, molecules, or radicals); it has potential to diffract X-rays, to parallel a crystal face, or to permit cleavage.

atomic scattering factor

Describes the "efficiency" of X-ray scattering of a given atom in a given direction; equal to the amplitude of the wave scattered by an atom divided by the amplitude of the wave scattered by one electron.

atomic susceptibility

Change in magnetic moment of 1 g.atom on application of magnetic field of unit strength. *Pryor, 3*

atomic volume

a. The space occupied by a quantity of an element as compared with its atomic weight. Obtained by dividing the specific gravity of the element by its atomic weight; also called specific volume. *Standard, 2* b. The volume occupied by 1 g.atom of an element. *CTD*

atomic weight

The average relative weight of the atoms of an element referred to an arbitrary standard of 16.0000 for the atomic weight of oxygen. The atomic weight scale used by chemists takes 16.0000 as the average atomic weight of oxygen atoms as they occur in nature. The scale used by physicists takes 16.00435 as the atomic weight of the most abundant oxygen isotope. Division by the factor 1.000272 converts an atomic weight on the physicists' scale to the corresponding atomic weight on the chemists' scale. See also: [atomic number](#)

atomization

a. In powder metallurgy, the dispersion of a molten metal into particles by a rapidly moving stream of gas or liquid. *ASM, 1* b. A patented process for producing a metallic dust, such as zinc dust. *Fay*

atomized metal powder

Metal powder produced by the dispersion of molten metal by a rapidly moving gas, or liquid stream, or by mechanical dispersion. *ASTM*

atomizer

A spray device for producing a very fine mist for the suppression of airborne dust in mines. It is normally operated by compressed air. Syn: [jet mixer](#); [line oiler](#).

atopite

A yellow or brown variety of romeite containing fluorine. See also: [romeite](#)

attached ground water

That portion of the subsurface water adhering to the pore walls. It is assumed to be equal in quantity to the pellicular water, and it is measured by specific retention. *AGI*

attack rate

Planned rate of ore extraction from mineral deposit. *Pryor, 3*

attapulgit

A light-green, magnesium-rich clay mineral, named from its occurrence at Attapulgis, GA, where it is quarried as fuller's earth. Crystallizes in the monoclinic system. Syn: [palygorskite](#)

attendance signaling system

A signaling system that operates between the surface lamp room and the underground office, indicating the workers in attendance at the beginning of the shift. See also: [self-service system](#)

attenuation

a. A reduction in the amplitude or energy of a signal, such as might be produced by passage through a filter. *AGI* b. A reduction in the amplitude of seismic waves, as

produced by divergence, reflection and scattering, and absorption. *AGI* c. That portion of the decrease in seismic or sonar signal strength with distance that is dependent not on geometrical divergence, but on the physical characteristics of the transmitting medium. CF: [damping](#) *AGI*

Atterberg limits

In a sediment, the water-content boundaries between the semiliquid and plastic states (known as the liquid limit) and between the plastic and semisolid states (known as the plastic limit). See also: [consistency limits](#) *AGI*

Atterberg scale

A proposed particle-size scale or grade scale for the classification of sediments based on a decimal system beginning with 2 mm. The limits of the subclass are obtained by taking the square root of the product of the larger grade limits. The subdivision thus made follows the logarithmic rule. This is the accepted European standard for classification of particle size. *AGI*

Atterberg test

A method for determining the plasticity of clay in terms of the difference between the water content when the clay is just coherent and when it begins to flow as a liquid. *Dodd*

attitude

The relation of some directional feature in a rock to the horizontal plane. The attitude of planar features (bedding, foliations, joints, etc.) is described by the strike and the dip. The attitude of a linear feature (fold axis, lineation, etc.) is described by the strike of the horizontal projection of the linear feature and its plunge. *AGI*

atrital coal

A bright coal (composed of anthraxylon and of attritus in which the translucent cell-wall degradation matter or translucent humic matter predominates) in which the ratio of anthraxylon to attritus is less than 1:3. See also: [anthraxylous coal](#); [attritus](#). *AGI*

attrition

a. The act of wearing and smoothing of rock surfaces by the passage of water charged with sand and gravel, by the passage of sand drifts, the descent of glaciers, etc. *AGI* b. The wear and tear that rock particles in transit undergo through mutual rubbing, grinding, knocking, scraping, and bumping, with resulting comminution in size. CF: [abrasion](#)

attrition mill

a. Mill that grinds abrasively, using rubbing action rather than impact shattering to disintegrate material. *Pryor, 3* b. A disintegrator depending chiefly on impact to reduce the particle size of the charge. Attrition mills are sometimes used in the clay building materials industry to deal with the tailings from the edge-runner mill. *Dodd*

attritious wear

Wear of abrasive grains in grinding such that sharp edges gradually become rounded. A grinding wheel that has undergone such wear usually has a glazed appearance. *ASM, 1*

atritus

a. A composite term for dull gray to nearly black coal components of varying maceral content, unsorted and with fine granular texture, that forms the bulk of some coals or is interlayered with bright bands of anthraxylon in others. It is formed of a tightly compacted mixture of altered vegetal materials, esp. those that were relatively resistant to complete degradation. CF: [atrital coal](#) introduced by R. Thiessen in 1919. *AGI* b. Thin bands of dull coal interlaminated with the bright, glossy coal bands called anthraxylon. Microscopically it consists of intimately mixed, tightly compacted remains of varied morphological form and origin. Atritus is a collective term, not directly comparable with any one of the microlitho types of the Stopes-Heerlen nomenclature but consists of an intimate association of varying proportions of macerals of the vitrinite, exinite, and inertinite groups. It is present in practically all types of coal. In bright-banded coal it is secondary in importance to anthraxylon, but in splint coal it is the dominant component, and nonbanded atrital coals consist entirely of atritus. *IHCP* c. The dull-gray to nearly black, frequently striped portion of material that comprises the bulk of some coals, and the alternating bands of bright anthraxylon in well-banded coals. It was derived from all sorts of comminuted and macerated plant matter, esp. from the plants that were more resistant to complete decomposition. It consists of humic degradation and opaque, charred, resinous, and mineral matter; fats, oils, waxes, cuticles, spores, arid spore exines, and other constituents of the plants forming the coal. *AGI* d. Coal components consisting of a mixture of microscopic fragments of vegetable tissues. It is classified into opaque atritus and transparent atritus. Generally, it corresponds to cull coal or durain. *Tomkeieff*

audiofrequency

Any frequency corresponding to a normal audible sound wave (ranges roughly from 15,000 to 20,000 Hz). *Hunt*

augelite

A monoclinic mineral, $\text{Al}_2(\text{PO}_4)(\text{OH})_3$.

augen

In foliate metamorphic rocks such as schists and gneisses, large lenticular mineral grains or mineral aggregates having the shape of an eye in cross section, in contrast to the shapes of other minerals in the rock. See also: [augen structure](#)

augen gneiss

A general term for a gneissic rock containing augen. See also: [cataclasite](#)

augen schist

A metamorphic rock characterized by recrystallized minerals occurring as augen or lenticles parallel to and alternating with schistose streaks. See also: [mylonite gneiss](#)

augen structure

In some gneissic and schistose metamorphic rocks, a structure consisting of minerals like feldspar, quartz, or garnet that have been squeezed into elliptical or lens-shaped forms resembling eyes (augen), which are commonly enveloped by essentially parallel layers of contrasting constituents such as mica or chlorite. CF: [augen](#); [flaser structure](#). *AGI*

auger

a. A drill for seismic shotholes or geophone holes modeled after the conventional carpenter's screw auger. Hence, any seismic shothole drilling device in which the cuttings are continuously removed mechanically from the bottom of the bore during the drilling operation without the use of fluids. A rotary drilling device used to drill shotholes or geophone holes in which the cuttings are removed by the device itself without the use of fluids. CF: [hand auger](#); [hand boring](#). *AGI* b. Any of various augerlike tools designed for boring holes in wood or for boring into soil and used esp. for such purposes as mining coal, prospecting, drilling for oil or water, and digging postholes. Also, a tool for drilling holes in coal for blasting. *Webster 3rd* c. Drilling using an auger. See also: [coal auger](#); [bucket auger](#); twist drill; horizontal auger. *Long*

auger bits

Hard steel or tungsten-carbide-tipped cutting teeth used in an auger run on a torque bar or in an auger-drill head run on a continuous-flight auger. *Long*

auger boring

The hole and/or the process of drilling a hole using auger equipment. *Long*

auger head

See: [auger mining](#)

auger hole

A hole drilled with power-driven augers. *Williams*

auger mining

A mining method often used by strip-mine operators where the overburden is too thick to be removed economically. Large-diameter, spaced holes are drilled up to 200 ft (61 m) into the coalbed by an auger. Like a bit used for boring holes in wood, this consists of a cutting head with screwlike extensions. As the auger turns, the head breaks the coal and the screw carries it back into the open and dumps it on an elevating conveyor; this, in turn, carries the coal to an overhead bin or loads it directly into a truck. Auger mining is relatively inexpensive, and it is reported to recover 60% to 65% of the coal in the part of the bed where it is used. Syn: [auger head](#)

augite

A monoclinic mineral, $8[(Ca,Na)(Mg,Fe,Al,Ti)(Si,Al)_2 O_6]$; pyroxene group; dark-green to black with prismatic cleavage; a common rock-forming mineral in igneous and metamorphic rocks. Syn: [basaltine](#); fassaite; pyroxene. CF: [pigeonite](#)

augite bronzite

An obsolete term for a pyroxene between enstatite and augite in composition.

augite diorite

A diorite in which augite is a prominent mafic mineral.

augite syenite

A syenite in which augite is a prominent mafic mineral.

auralite

a. Altered iolite. *Standard*, 2 b. Altered cordierite.

aureole

a. A circular or crescentic distribution pattern about the source or origin of a mineral, ore, mineral association, or petrographic feature. It is encountered principally in magnetic and geochemical surveys. CF: [dispersion pattern](#) b. Discoloration of a mineral, viewed in thin section, in the form of a ring. Most haloes of this sort are caused by

radiation damage by alpha particles emitted from uranium- and thorium-bearing mineral inclusions. *AGI* c. A zone surrounding an igneous intrusion, in which the country rock shows the effects of contact metamorphism. Syn: [contact zone](#); metamorphic aureole. *AGI* d. A zone of alteration or other chemical reaction surrounding a mineral in a rock. e. See: [halo](#)

auri-argentiferous

Applied to minerals containing both gold and silver. *Standard, 2*

aurichalcite

An orthorhombic mineral, $4[(Zn,Cu)_5(CO_3)_2(OH)_6]$; forms soft scaly greenish-blue crusts in oxidized zones of copper-zinc ore deposits; a guide to zinc ore.

auricupride

An orthorhombic mineral, Cu_3Au . Syn: [gold cupride](#); [cuproauride](#).

auriferous

Refers to a substance that contains gold, esp. gold-bearing mineral deposits. *AGI*

auriferous pyrite

Iron sulfide, in the form of pyrite, containing gold, probably in solid solution. *CTD*

aurobismuthinite

A doubtful sulfide containing bismuth, gold, and silver; lead-gray in color. It may be a mixture of $(Bi,Au,Ag_2)S$, or possibly of a gold-silver alloy, and bismuthinite, Bi_2S_3 . From Nacozari, Sonora, Mex. *English*

aurosmirid

A silver-white crystal solution of gold and osmium in isometric iridium.

aurostibite

An isometric mineral, $AuSb_2$; pyrite group.

aurous

Of, pertaining to, or containing gold in the univalent state; e.g., aurous chloride ($AuCl$).

austempering

The isothermal transformation of a ferrous alloy at a temperature below that of pearlite formation and above that of martensite formation. Austempering is the isothermal transformation used to form a unique acicular matrix of bainitic ferrite and stable high-carbon austenite in hardenable cast irons. *ASM, 2*

austenite

A solid solution of one or more elements in face-centered cubic iron. Unless otherwise designated (such as nickel austenite), the solute is generally assumed to be carbon. *ASM, 1*

austenitic stainless steel

The so-called 18-8 grades contain from 16% to 26% chromium and 6% to 20% nickel, are not hardenable by heat treatment, and are nonmagnetic in the annealed condition. *Henderson*

austenitizing

Forming austenite by heating a ferrous alloy into the transformation range (partial austenitizing) or above the transformation range (complete austenitizing). *ASM, 1*

austinite

An orthorhombic mineral, $\text{CaZn}(\text{AsO}_4)(\text{OH})$; adelite group; forms a series with conichalcite.

Australian bentonite

Trade name for highly plastic clays from Trida, N.S.W. *New South Wales*

Australian cinnabar

A variety of chrome red.

authigene

A mineral or rock constituent that was formed in place; e.g., a mineral of an igneous rock; the cement of a sedimentary rock if deposited directly from solution; or a mineral resulting from metamorphism. Syn: [authigenic mineral](#)

authigenesis

a. The process by which new minerals form in place within a rock during or after its formation, as by replacement or recrystallization, or by secondary enlargement of quartz overgrowths. *AGI* b. Any process involving crystal growth in situ, i.e., subsequent to the origin of its matrix or surroundings but not a product of transformation or recrystallization, customarily reserved for low-temperature sedimentary environments. Ant. *allogenesis*. Adj. *authigenic*; *authigenous*. Adv. *authigenous*.

authigenetic

See: [authigenic](#)

authigenic

Formed or generated in place; specif. said of rock constituents and minerals that have not been transported or that crystallized locally at the spot where they are now found, and of minerals that came into existence at the same time as, or subsequently to, the formation of the rock of which they constitute a part. The term, as used, often refers to a mineral (such as quartz or feldspar) formed after deposition of the original sediment. Syn: [authigenetic](#) CF: [autochthonous](#)

authigenic mineral

See: [authigene](#)

authorized fuels

In Great Britain, under the regulations made by the Minister (Smoke Control Areas-Authorized Fuels-Regulations, 1956), authorized fuels include coke of all kinds, anthracite, low-volatile steam coals, Phurnacite, Coalite, Rexco, etc., as well as oil, gas, and electricity. *Nelson*

authorized person

An authorized person is either one appointed or permitted by the official designated by State mining laws to be in charge of the operation of the mine or one appointed to perform certain duties incident to generation, transformation, and distribution or use of electricity in the mine. This person shall be familiar with construction and operation of the apparatus and with hazards involved.

autochthon

A body of rocks that remains at its site of origin, where it is rooted to its basement. Although not moved from their original site, autochthonous rocks may be mildly to considerably deformed. CF: [allochthon](#); stationary block. Also spelled autochthone. *AGI*

autochthonous

Formed or produced in the place where now found. Applied to a rock the dominant constituents of which have been formed in situ; e.g., rock salt. CF: [allochthonous](#); [authigenic](#). *Holmes, 1*

autochthonous coal

Coal believed to have been formed from accumulations of plant debris at the place where the plants grew. Two modes of origin are distinguished: terrestrial and aquatic. Also called indigenous coal. See also: [in situ origin theory](#)

autochthonous peat

Peat that formed in place by the gradual accumulation of plant remains in water. It is subdivided into low-moor peat and high-moor peat. *Tomkeieff*

autochthony

An accumulation of plant remains in the place of their growth. The term itself can be distinguished between autochthonous elements of growth (euautochthony) and autochthonous elements of sedimentation (hypautochthony). *IHCP*

autoclastic

Having a broken or brecciated structure, formed in the place where it is found as a result of crushing, dynamic metamorphism, or other mechanical processes; e.g., a fault breccia, or a brecciated dolomite produced by diagenetic shrinkage followed by recementation. CF: [cataclastic](#) *AGI*

autogenous

a. In the dense-media separation process, fluid media partly composed of a mineral species selected from material being treated. *Pryor, 4* b. Selectively sized lumps of material used as grinding media. *Pryor, 4*

autogenous grinding

The secondary grinding of coal or ore by tumbling in a revolving cylinder with no balls or bars taking part in the operation. *Nelson*

autogenous roasting

Roasting in which the heat generated by oxidation of the sulfides is sufficient to propagate the reaction. *Newton, 2*

autohydration

The development of new minerals in an igneous rock by the action of its own magmatic water on already existing magmatic minerals. *Schieferdecker*

autoinjection

See: [autointrusion](#)

autointrusion

a. A process wherein the residual liquid of a differentiating magma is injected into rifts formed in the crystallized fraction at a late stage by deformation of unspecified origin. Syn: [autoinjection](#) b. Sedimentary intrusion of rock material from one part of a bed or set of beds in process of deposition into another part. *AGI*

autolith

a. An inclusion in an igneous rock to which it is genetically related. CF: [xenolith](#) b. In a granitoid rock, an accumulation of iron-magnesium minerals of uncertain origin. It may appear as a round, oval, or elongate segregation or clot. *AGI*

automatic ash analysis

Analysis in which the coal sample passes first to a conditioning unit, which dries and grinds it, then to an X-ray analysis unit. The analysis is based on the difference in the reflection of X-rays by the combustible and noncombustible components of the sample. The reflection is compared photoelectrically with a reference sample. *Nelson*

automatic belt takeup

A device used with certain types of belt conveyors for the taking up or storage of belt during reversible operation. *Jones, 1*

automatic clip

An appliance for attaching and detaching mine trams or cars without manual effort. It is generally attached at inby clipping stations and detached at the shaft bottom. See also: [clip](#); [coupling](#); [haulage clip](#). *Nelson*

automatic clutch

A clutch whose engagement is controlled by centrifugal force, vacuum, or other power without attention by the operator. *Nichols, 1*

automatic coupling

A device that automatically couples cars when they bump together. *Zern*

automatic cyclic winding

A system of automatic winding in which the complete installation operates without human aid and winding continues automatically as long as coal is available at the shaft bottom and is cleared at the bank. Syn: [cyclic winding](#) Ward-Leonard control; manual winding control; semiautomatic control. *Nelson*

automatic dam

See: [boomer](#)

automatic door

a. A mine door operated by pressure of the locomotive wheels on a switch along the rails approaching the doors, which closes the door automatically after the trip has passed. These doors are preferable to regular mine doors. However, they must be carefully maintained to keep them in a safe operating condition. b. A wooden door arranged to close automatically when released, by installing the door with a slight lean in the direction of closing.

automatic doors

Air doors on a haulage road that are automatically operated by a passing vehicle or train of tubs, or other means. *BS, 8*

automatic feed

a. A hydraulic-control system of valves that when once set and without the manual assistance of a drill runner will reduce or increase feed pressure applied to a drill stem as hardness of rock penetrated changes. *Long* b. A pneumatic rock drill equipped with a power-actuated feed mechanism. *Long*

automatic feed sampler

An automatic, timed sampling device used at mill feeds and other plants. *Nelson*

automatic heat-treating machine

See: [Gilman heat-treating machine](#)

automatic pump control

The starting and stopping of a pump by a mechanism actuated by the level of water in the suction well or pump, or by the level or pressure of water in a discharge tank. *BS, 10*

automatic pumping

An arrangement to stop and start a mine pump automatically by means of a float switch. *Nelson*

automatic reclosing relays

Relays used to automatically reclose electrically operated circuit breakers. They limit the duration of power failures in many instances where faults clear themselves quickly. Most reclosing relays attempt to close a breaker three times before locking it out. The time interval between reclosures is predetermined. Lockout means that after the third attempt fails to keep the breaker in, the relay will not function until it is reset manually. Such relays can be designed to operate more than three times before locking out, with the number of reclosures depending on the requirements and design of the system. *Coal Age, 3*

automatic recorder

Appliance for recording the working time of machines such as cutter loaders, conveyors, etc. A vibrating type, fitted on the equipment itself, marks on a chart a straight line when the machine is idle and an oscillating one when working. *Nelson*

automatic sampler

An instrument designed to take samples of mine gases or water at predetermined times or intervals.

automatic sampling

Automatic removal of samples at timed intervals from a passing stream of ore, pulp, or solution. *Pryor, 3*

automatic sprinkler

A water sprinkling device closed by a metallic alloy that melts at a low temperature. In case of fire the alloy melts, releasing a water spray. These devices are used in wood-lined shafts and timbered bottoms, sometimes by legal requirements. *Zern*

automatic winding

This term includes at least three different systems: (1) fully automatic winding in which no driver, banksman, or onsetter is employed; (2) pushbutton automatic winding, similar

to the above except that the operation is started by a pushbutton by the banksman or onsetter; and (3) cyclic winding in which the driver takes off the brakes and throws over the control lever at the beginning of the wind. *Sinclair, 5*

autometamorphism

a. A process of recrystallization of an igneous rock under conditions of falling temperature, attributed to the action of its own volatiles, e.g., serpentinization of peridotite or spilitization of basalt. *AGI* b. The alteration of an igneous rock by its own residual liquors. This process should rather be called deuteritic because it is not considered to be metamorphic. See also: [deuteritic](#)

autometasomatism

Alteration of a recently crystallized igneous rock by its own last water-rich liquid fraction, trapped within the rock, generally by an impermeable chilled border. CF: [autopneumatolysis](#); [autometamorphism](#). *AGI*

automolite

A dark-green to nearly black variety of gahnite. *Schaller*

automorphic

a. Said of the holocrystalline texture of an igneous or metamorphic rock, characterized by crystals bounded by their own rational faces. Also said of a rock with such a texture. The term idiomorphic is more common in U.S. usage. CF: [xenomorphic](#) b. A synonym of euhedral, obsolete in U.S. usage, but generally preferred in European usage. Syn: [automorphic-granular](#); [euhedral](#). *AGI*

automorphic-granular

See: [automorphic](#)

autopneumatolysis

Autometamorphism involving the crystallization of minerals or the alteration of a rock by gaseous emanations originating in the magma or rock itself. CF: [autometasomatism](#)

autospray

A device for controlling dust carried by loaded conveyors. A liquid medium is sprayed on the conveyor load only when moving and not when stationary, or when the belt is running unloaded. The spray control is placed centrally beneath the conveyor belt and a

load causes the belt to deflect and rotate the driving pulley, which causes the controller valve to open. A belt stoppage or no load causes the valve to close. *Nelson*

autostoper

A stopper or light compressed-air rock drill, mounted on an air-leg support that not only supports the drill but also exerts pressure on the drill bit. *Nelson*

autotransformer

A special-type of transformer whose use in mines is limited to apparatus for starting induction motors of the squirrel cage type. The winding is a common one for primary and secondary, and the two circuits are electrically in contact with each other. *Mason*

autotroph

Organism capable of growth exclusively at the expense of inorganic nutrients. See also: [chemolithotroph](#); [photolithotroph](#).

autrometer

a. An automatic multielement-indexing X-ray spectrograph, capable of the qualitative and quantitative determinations of as many as 24 elements in a single sample. Choice of the elements may be made from magnesium through all the heavier elements. The device measures the intensity of an emitted wavelength band from a standard sample and compares it with the intensity of a like band from an unknown sample. These data are presented in the form of a ratio of one intensity to the other. *Nelson* b. An automatic multielement-indexing X-ray spectrograph.

autunite

a. A tetragonal mineral, $2[\text{Ca}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 10-12\text{H}_2\text{O}]$; radioactive; yellow to pale green; fluorescent; forms scaly or foliated aggregates; results from oxidation or hydrothermal alteration of uranium minerals; an ore of uranium. Syn: [calcouranite](#) b. The mineral group autunite, fritzscheite, heinrichite, kahlerite, novacekite, sabugalite, saleeite, sodium autunite, torbernite, troegerite, uranocircite, uranospinite, and zeunerite.

auxiliary

a. Tools or other equipment, such as a pump, drill rods, casing, core barrel, bits, water swivel, safety clamp, etc., required for use with a drill machine to carry on specific drilling operations. *Long* b. A helper or standby engine or unit. CF: [accessory](#)

auxiliary anode

A supplementary anode placed in a position to raise the current density on a certain area of the cathode to get better plate distribution. *ASM, 1*

auxiliary cylinder

A cylinder, operated by compressed air, that is used to assist the main engine of a compressed-air shaker conveyor, esp. where the conveyor cannot develop a sufficient amount of forward acceleration because of grades. The auxiliary cylinder is attached to the conveyor by a driving chain and to a prop by a fixing chain. *Jones, 1*

auxiliary fault

A branch fault. A minor fault ending against a major fault. *AGI*

auxiliary mineral

In Johannsen's classification of igneous rocks, any light-colored, relatively rare mineral, or mineral occurring in small quantities, such as apatite, muscovite, corundum, fluorite, and topaz. *AGI*

auxiliary operations

In metallurgy, diverse operations, such as storing in bins, conveying (by conveyors, feeders, elevators, or pumps), sampling, weighing, reagent feeding, and pulp distribution. *Gaudin, 1*

auxiliary ventilation

A method of supplementing the main ventilating current in a mine by using a small fan to draw air from the main current and force it through canvas or metal pipe to some particular place, such as the ends of drifts, crosscuts, raises, entries, or other workings driven in a mine. See also: [air mover](#); [exhaust ventilation](#); [ventilation tubing](#); forced auxiliary ventilation; overlap auxiliary ventilation; piped air; reversible auxiliary ventilation; two-fan auxiliary ventilation. *Lewis*

available alumina

The theoretical amount of extractable aluminum oxide, Al_2O_3 , present in a bauxite. The amount of alumina in a bauxite that is present in a form that allows it to be extracted by a refining plant.

available energy

That part of the total energy that can be usefully employed. In a perfect engine, that part which is converted to work. *Strock, 2*

available lime

a. Those constituents of a lime that enter into a desired reaction under the conditions of a specific method or process. *ASTM* b. Represents the total free lime (CaO) content in a quicklime or hydrate and is the active constituent of a lime. It provides a mean of evaluating the concentration of lime. *Boynton*

available power

The rate at which a given source would deliver energy to a load having an impedance that is the conjugate of the source impedance is designated as the available power of that source. *Hunt*

available power loss

The available power loss of a transducer connecting an energy source and an energy load is the transmission loss measured by the ratio of the source power to the output power transducer. *Hunt*

available relief

a. The vertical distance between the altitude of the original surface after uplift and the level at which grade is first attained. *AGI* b. The relief that is available for erosion.

available silica

The amount of silica present in a flux that is not slagged by impurities in the flux itself. *Newton, I*

avalanche

A large mass of snow, ice, soil, or rock, or mixtures of these materials, falling, sliding, or flowing very rapidly under the force of gravity. Velocities may sometimes exceed 500 km/hr. *AGI*

avalanche protector

Guardplates that prevent loose material from sliding into contact with the wheels or tracks of a digging machine. *Nichols, I*

aventurine

Alternate spelling of aventurine.

aventurescence

a. A word used to describe the metallic spangled effect seen, in reflected light, in aventurine and aventurine feldspar. A sort of schiller but more scintillating. b. A display of bright or strongly colored reflections from included crystals in some translucent mineral specimens.

aventurine

a. A glass containing opaque sparkling particles of foreign material, which is usually copper or chromic oxide. With copper particles, it is called gold aventurine, and with chromic oxide particles, it is called chrome aventurine or green aventurine. A glass containing gold-colored inclusions. *Webster 3rd; AGI* b. A translucent quartz that is spangled throughout with scales of mica or of some other mineral. Syn: [aventurine quartz](#) c. As an adj., having the brilliant spangled appearance of aventurine. Applied esp. to transparent or translucent quartz or feldspar containing shiny inclusions. *Webster 3rd; AGI* d. A variety of albite with reddish reflections from exsolved hematite in certain planes. See also: [goldstone](#)

aventurine feldspar

Orthoclase, albite, or oligoclase that is more or less transparent, with fiery reflections from enclosed flat mineral particles, which are probably hematite or goethite. Sunstone is aventurine oligoclase. *Hess*

aventurine glass

A glass supersaturated with either iron, chromium, or copper oxide (or a combination of the oxides) that is melted and cooled under controlled conditions to cause the excessive oxides to crystallize, forming platelike crystals or spangles. See also: [goldstone](#)

aventurine quartz

See: [aventurine](#)

average assay value

See: [assay value](#)

average clause

Eng. A clause that, in granting leases of minerals (coal, ironstone, and clay in particular), provides that lessees may, during every year of the term, make up any deficiency in the quantity of coal, etc., stipulated to be worked, so as to balance the dead or minimum rent.

average loading

The average number of tons of a specified material to be carried by a conveyor per hour, based on total operating-shift tonnage. *NEMA*, 2

avicennite

An isometric mineral, $Tl_2 O_3$; black; forms minute crystals.

AW

Letter name specifying the dimensions of bits, core barrels, and drill rods in the A-size and W-group wireline diamond drilling system having a core diameter of 30.1 mm and a hole diameter of 48 mm. Syn: [AX](#) *Cumming*, 2

awaruite

An isometric mineral, $Ni_2 Fe$ to $Ni_3 Fe$. Syn: [native nickel-iron](#)

AX

Letter name specifying the dimensions of core, core barrels, and casing in the A-size and X-series wireline diamond drilling system having a core diameter of 30.1 mm and a hole diameter of 48 mm. The AX designation for coring bits has been replaced by the AW designation. Syn: [AW](#) *Cumming*, 2

axes

a. Crystallographic directions through a crystal; used as lines of reference. *Hurlbut* b. Reference coordinates a, b, c, in crystallography, crystallographic axes. c. Directions of apparent isotropy in anisotropic crystals, optic axes. d. Elements of rotational symmetry, symmetry axes. e. In ellipsoids representing the Fletcher indicatrix of refractive indices, semiaxes represent optic directions. Singular: axis. Also called optic axes.

axial angle

a. The acute angle between the two optic axes of a biaxial crystal. Its symbol is $2V$. *AGI* b. The axial angle in air (symbol $2E$) is the larger angle between the optic axes after being refracted on leaving the crystal. *AGI* c. See: [optic angle](#)

axial compression

In experimental work with cylinders, a compression applied parallel with the cylinder axis. It should be used in an appropriate sense only in the interpretation of deformed rocks. *AGI*

axial element

In crystallography, the ratio of a unit distance along a crystallographic axis and the corresponding angle between axes. Syn: [lattice parameter](#)

axial figure

a. The interference figure that is obtained in convergent light when an optic axis of the mineral being observed in thin section or as a fragment coincides with the axis of the polarizing microscope. When a thin section of a uniaxial mineral that was cut at right angles to an optic axis is examined between crossed nicols (that is, between two polarizers, the polarization planes of which are at right angles to each other) an equal-armed shadowy cross and a series of spectrally colored, circular bands are seen. If the mineral is biaxial, two shadowy parabolic curves called isogyres and opening away from each other in a series of spectrally colored, oval bands appear. *Hess* b. In polarized light microscopy, an interference figure in which an optic axis is centered in the field of view.

axial flow

In pumping or in ventilation, the use of a propeller or impeller to accelerate the load along the axis of the impeller. *Pryor, 3*

axial-flow compressor

A compressor in which air is compressed in a series of stages as it flows axially through a decreasing tubular area. *Pryor, 3*

axial-flow fan

a. A type of mine fan in which the mine air enters along the axis parallel to the shaft and continues in this direction to the point of exhaust. The axial-flow fan may have fixed blades (fixed-pitch fan) or adjustable blades (variable-pitch fan). Two, four, or six aerofoil section blades (like an aircraft wing) are usually employed. Also called a screw fan. CF: [radial-flow fan](#); [mixed-flow fan](#). See also: [contra-rotating axial fan](#); [mine-ventilation fan](#). b. The compressed-air auxiliary fan consists essentially of a single-stage axial-flow fan in which the rotor also forms the rotor of a compressed-air turbine. The exhaust from the turbine is added to the ventilating air. The result is a light and very compact machine, capable of the same duties as the smaller sizes of electric auxiliary fans. *Roberts, 1*

axial line

See: [axis](#)

axial plane

a. A more or less planar surface that intersects a fold in such a manner that the limbs of the fold are symmetrically arranged with reference to it. b. The plane of the optic axes of an optically biaxial crystal. c. A crystallographic plane that includes two crystallographic axes. *AGI* d. Of geologic structures, a plane that intersects the crest of the trough or a fold such that the limbs, or sides, of the fold are more or less symmetrically arrayed with reference to it.

axial-plane cleavage

Cleavage that is closely related to the axial planes of folds in the rock, either being rigidly parallel to the axes, or diverging slightly on each flank (fan cleavage). Most axial-plane cleavage is closely related to the minor folds seen in individual outcrops, but some is merely parallel to the regional fold axes. Most axial-plane cleavage is also slaty cleavage. *AGI*

axial-plane folding

Large-scale secondary folding of preexisting folds, in response to stresses that varied considerably from those that caused the original folding. The axial planes of the original folds are folded. *AGI*

axial-plane foliation

Foliation that developed parallel to the axial plane of a fold and perpendicular to the principal deformational pressure. *AGI*

axial-plane separation

The distance between axial surfaces of adjacent antiforms and synforms where the folds occur in the same layer or surface. *AGI*

axial priming

A system for priming blast agents in which a core of priming material extends through most or all of the blasting agent charge length.

axial ratio

The lengths of crystallographic axes defined in terms of their ratios with, by convention, a set at unity where one axis is unique and b set at unity where all three axes are required.

axial stream

a. The main stream of an intermontane valley, which flows along the lowest part of the valley and parallel to its long dimension, in contradistinction to the streams that flow down the mountains on either side. b. A stream that follows the axis of an anticline or a syncline.

axial trace

The intersection of the axial plane of a fold with the surface of the Earth or any other specified surface.

axinite

a. The mineral group ferroaxinite, magnesioaxinite, manganaxinite, and tinzenite. b. Triclinic borosilicates with the formula $A_3 Al_2 BSi_4 O_{15} (OH)$ where $A = (Ca, Fe, Mg, Mn)$. Syn: [glass schorl](#)

axiolite

A term proposed by Zirkel for a variety of elongated spherulite in which there is an aggregation of minute acicular crystals arranged at right angles to a central axis rather than from a point.

axis

a. The central or dominating region of a mountain chain, or the line that follows the crest of a range and thus indicates the most conspicuous part of the uplift. b. The centerline of a tunnel. *Nichols, 1* c. Intersection of the axial plane of a fold with a particular bed; axial line. d. A straight line about which a body or a three-dimensional figure rotates or may be supposed to rotate; a straight line with respect to which a body, figure, or system of points is either radially or bilaterally symmetrical. *Webster 3rd* e. In crystallography, one of the imaginary lines in a crystal that are used as coordinate of axes of reference in determining the positions and symbols of the crystal planes. CF: [crystallographic axes](#); coordinate system. f. Often used synonymously with anticlinal; thus, the Brady's bend axis for Brady's bend anticlinal. See also: [anticlinal axis](#); [synclinal axis](#). g. The trace of the axial surface of a fold on the fold profile plane (obsolete). h. A line that follows the trend of large landforms, e.g., the crest of a ridge or mountain range, or the bottom or trough of a depression. Plural: axes.

axis of acoustic symmetry

For many transducers, the three-dimensional directivity is such that it may be represented by the surface generated by rotating a two-dimensional directivity pattern about the axis corresponding to the reference bearing of the transducer. This axis may then be described as an axis of acoustic symmetry or as the acoustic axis. *Hy*

axis of symmetry

An imaginary line in a crystal, crystal structure, or crystal lattice, about which it may be rotated to an identical configuration. If identity occurs once during a complete rotation of 360 degrees, the axis is a monad, twice a diad, thrice a triad, four times a tetrad, or six times a hexad. Syn: [symmetry axis](#)

axonometric projection

A method of projection which has the advantage of containing a true plan, and can therefore be set up from drawings already in existence for other purposes. The plan is turned through 45 degrees, vertical lines being drawn from the angles on the plan to show the elevations. See also: [oblique projection](#); [isometric projection](#). *Hammond*

axotomous

In crystallography, having cleavage perpendicular to an axis; said of minerals. *Standard*, 2

axstone

A variety of nephrite jade. Also spelled axestone.

azimuth

Direction of a horizontal line as measured on an imaginary horizontal circle, the horizontal direction reckoned clockwise from the meridian plane of the observer, expressed as the angular distance between the vertical plane passing through the point of observation and the poles of the Earth and the vertical plane passing through the observer and the object under observation. In the basic control surveys of the United States, azimuths are measured clockwise from south, a practice not followed in all countries. CF: [bearing](#)

azorite

A variety of altered zircon. See: [zircon](#)

Aztec stone

a. A greenish variety of smithsonite. b. A green variety of turquoise.

azulinhas

Small cloudy sapphires occurring with diamonds in Brazil.

azurchalcedony

See: [azurlite](#)

azure

See: [lapis lazuli](#); lazurite.

azure malachite

See: [azurmalachite](#)

azure quartz

See: [sapphire quartz](#)

azure spar

See: [azurite](#); lazulite.

azure stone

A term applied to lapis lazuli (lazurite) and to other blue minerals such as lazulite and azurite.

azurite

a. A monoclinic mineral, $2[\text{Cu}_3(\text{OH})_2(\text{CO}_3)_2]$; forms vitreous azure crystals; a supergene mineral in oxidized parts of copper deposits associated with malachite; an ore of copper. Syn: [azure spar](#); [chessylite](#); [blue copper](#); [blue copper ore](#); blue malachite. b. A compact semiprecious stone derived from compact azurite and used as a decorator material. c. A trade name for a sky-blue gem variety of smithsonite.

azurite malachite

See: [azurmalachite](#)

azurlite

Chalcedony colored blue by chrysocolla; and used as a gemstone. Syn: [azurchalcedony](#)

azurmalachite

An intimate mixture or intergrowth of azurite and malachite, commonly massive and concentrically banded; used as an ornamental stone. Syn: [azure malachite](#); [azurite malachite](#).

B

baaken

S. Afr. A boundary mark.

Babcock and Wilcox mill

Dry-grinding mill in which steel balls rotate in a horizontal ring, through which the feed is worked downward. *Pryor, 3*

Babel quartz

A variety of quartz, named for the fancied resemblance of the crystal to the successive tiers of the Tower of Babel. Syn: [Babylonian quartz](#)

Babylonian quartz

See: [Babel quartz](#)

bacalite

a. A variety of amber. *Tomkeieff* b. A variety of quartz in Baja California, Mex.

back

a. A system of joints in coal oblique to the bedding, at an angle of about 35 degrees to 75 degrees. Backs are usually perfectly tight and have polished cheeks which suggest a certain amount of movement. Back may be applied to the principal cleat. See also: [backs](#); [cleat](#). b. The roof or upper part of any underground mining cavity. c. The ore between a level and the surface, or between two levels. See also: [back of ore](#) d. That part of a lode which is nearest the surface relative to any working part of a mine, thus the back of the level or stope is that part of the unstopped lode which is above. See also: [back of lode](#) e. A joint, usually a strike joint, which is perpendicular to the direction of working. f. As applied to an arch, the outer or upper surface. g. The pavilion of a gemstone.

back acter

Front-end equipment fitted to an excavator, comprising a jib with an arm and bucket. Although designed primarily for vertically sided trenching, it is also useful for bulk excavation below track level. *Nelson*

back and underhand stoping milling system

See: [combined overhand and underhand stoping](#)

back arch

A concealed arch carrying the backing or inner part of a wall where the exterior facing material is carried by a lintel. *ACSG, 1*

back balance

- a. A type of self-acting incline in a mine. A balance car is attached to one end of a rope, and a carriage for the mine car is attached to the other end. A loaded car is run on the carriage and is lowered to the foot of the incline, raising the balance car. The balance car in its descent raises the carriage when the carriage is loaded only with an empty car. *Fay*
- b. The means of maintaining tension on a rope transmission or haulage system, consisting of the tension carriage, attached weight, and supporting structure. *Fay*

backblast

See: [backlash](#)

back break

Rock broken beyond the limits of the last row of holes marking the outer boundary in a blast.

back brusher

- a. A ripper engaged in taking down the roof in roadways some distance back from the face. Syn: [second ripping](#)
- b. Back ripper.

back-bye work

General work performed behind the working faces, as opposed to work done at the faces. This is commonly referred to as "outby work."

back casing

Eng. A temporary shaft lining of bricks laid dry, and supported at intervals upon curbs. When the stonehead has been reached, the permanent masonry lining is built upon it inside of the back casing.

backcast stripping

A stripping method using two draglines, one of which strips and casts the overburden while the other recasts a portion of the overburden. *Woodruff*

back coal

Scot. Coal that miners are allowed to carry home.

back coming

Scot. Working away the pillars that are left when mining coal inby. Robbing pillars; back working. See also: [back work](#)

back-end man

A worker who works behind the coal-cutter as it moves along the face. Duties may include cleaning the cuttings from behind the machine and setting props to support the roof or overhang of coal. CF: [coal-cutter team](#)

back entry

The air course parallel to and below an entry or the entry used for secondary purposes in two-entry system of mining. Locally, any entry not having track in it. *BCI*

backfill

a. Waste sand or rock used to support the roof or walls after removal of ore from a stope. *Pryor, 3* b. Sand or dirt placed behind timber, steel, or concrete linings in shafts or tunnels. *Nelson* c. The process of sealing and filling, and/or the material used to seal or fill, a borehole when completed, to prevent its acting as a course along which water may seep or flow into rock formations or mine workings. *Long* d. Material excavated from a site and reused for filling, for example, the use of stones or coarse gravel for filling draining trenches. See also: [fill](#)

back filling

a. Rough masonry built in behind the facing or between two faces; similar material used in filling over the extrados of an arch; also, brickwork used to fill in space between studs in a frame building, sometimes called brick nogging. *ACSG, 1* b. The filling in again of a place from which the rock or ore has been removed. *Ballard*

back-filling system

Filling lower or older workings with the waste from newer workings. See also: [overhand stoping](#); [square-set stoping](#). *Hess*

backfire

a. A fire started to burn against and cut off a spreading fire. *Nichols, 1* b. An explosion in the intake or exhaust passages of an engine. *Nichols, 1*

backfolding

Folding in which the folds are overturned toward the interior of an orogenic belt. In the Alps, the backward folds are overturned toward the south, whereas most of the folds are overturned toward the north. Syn: [backward folding](#)

background

a. The abundance of an element, or any chemical property of a naturally occurring material, in an area in which the concentration is not anomalous. *AGI* b. The slight radioactivity shown by a counter, due to normal radioactivity from cosmic rays, impurities in the counter, and trace amounts of radioactivity in the vicinity.

backhand

In bituminous coal mining, one who assists either the machineman or machine loader to move and set up a coal cutting or loading machine at the working face. *DOT*

backhaul

A line that pulls a drag scraper bucket backward from the dump point to the digging. *Nichols, 2*

backhaul cable

In a cable excavator, the line that pulls the bucket from the dumping point back to the digging. *Nichols, 1*

back heading

a. Eng. The companion place to a main winning. *SMRB* b. See: [back entry](#)

backhoe

The most versatile rig used for trenching. The basic action involves extending its bucket forward with its teeth-armed lip pointing downward and then pulling it back toward the source of power. *Carson, 1*

back holes

In shaft sinking, raising, or drifting, the holes that are shot last.

backing

a. Timbers fixed across the top of a level supported in notches cut in the rock. b. The action of a roof layer of combustible gases flowing uphill against the direction of the ventilation. *BS, 8*

backing deals

Boards from 1 to 4 in (2.5 to 10 cm) thick and of sufficient length to bridge the space between timber or steel sets or between rings in skeleton tubing. Usually, planks 9 to 12 in (23 to 30 cm) in width are used. Round poles, either whole or split, light steel rails, ribbed sheet metal, and reinforced concrete slabs are sometimes used in place of planks. Backing deals tighten the supports against the ground and also prevent the collapse of material between the timber or steel sets or rings. See also: [lagging](#)

backing off

A term used to describe the operation of removing excessive body metal from badly worn bits. *Fraenkel*

backing sand

Reconditioned sand used for supporting the facing sand, and forming the main part of a foundry mold. *Osborne*

backjoint

a. A joint plane more or less parallel to the strike of the cleavage, and frequently vertical. *Zern* b. A rabbet or chase left to receive a permanent slab or other filling. *Webster 3rd*

backlash

a. The return or counterblast, as the recoil or backward suction of the air current, produced after a mine explosion. Also called backblast; suction blast. b. The reentry of air into a fan. c. The violent recoil and whipping movement of the free ends of a rope or wire cable broken under strain. *Long* d. Lost motion, play, or movement in moving parts

such that the driving element (as a gear) can be reversed for some angle or distance before working contact is again made with the secondary element. *ASM, 1*

back leads

Applied to black sand leads on coastlines which are above high-water mark. *Fay*

back mine

Scot. A passage in a mine crosscut toward the dip of the strata. *Standard, 2*

back-off shooting

The firing of small explosive charges for releasing stuck drilling tools in a borehole. The shock of detonation causes the joint to expand and unscrew slightly. All rods above the joint can then be removed from the hole. *Nelson*

back of lode

The portion of a lode lying between a level driven in a lode and the surface. See also: [back](#)

back of ore

The ore between two levels which has to be worked from the lower level. See also: [back](#)

back-out switch

See: [hoist back-out switch](#)

back pressure

a. Resistance transferred from rock into drill stem when bit is being fed at a faster rate than the bit can cut. *Long* b. Pressure applied to the underside of the piston in the hydraulic-feed cylinder to partially support the weight of the drill rods and hence reduce pressure on the bit. *Long* c. Rock pressures affecting the uppermost portion or roof in an underground mine opening. *Long*

back prop

The name given to the raking strut that transfers the load from the timbering of a deep trench to the ground. These struts are provided under every second or third frame according to the type of ground being excavated. *Hammond*

back ripper

See: [back brusher](#)

back rippings

The taking down of a thickness of roof beds in roadways some distance back from the face. The thickness of roof excavated may vary from 1 ft (0.3 m) or so to 6 ft (1.8 m) and more. This work is necessary where there has been a gradual reduction in height, as a result of roof sag, and opening height must be maintained. See also: [second ripping](#)

backrush

The seaward return of the water following the uprush of waves. For any given tide stage, the point of farthest return seaward of the backrush is known as the limit of backrush or limit of backwash. See also: [backwash](#) *AGI*

backs

a. The height of ore available above a given working level. If the orebody has been proved by shaft sinking to a depth of 300 ft (91 m) from the surface, the orebody is said to have 300 ft (91 m) of backs. See also: [back](#) b. A quarryman's term for one set of joints traversing the rock, the other set being known as cutters. *Nelson* c. A system of joints in coal or stratified mineral oblique to the bedding at an angle of 35 degrees to 75 degrees. See also: [slips](#) *BS, 11* d. Slips; used to denote a slip met with first at floor level. Syn: [hugger](#)

backs and cutters

Jointed rock structures, the backs (joints) of which run in lines parallel to the strike of the strata, the cutters (cross joints) crossing them at about right angles. *Standard, 2*

backscatter

The emergence of radiation from that surface of a material through which it entered. Also used to denote the actual backscattered radiation. *NCB*

backshift

a. The afternoon or night shift; any shift that does not fill coal or is not the main coal-production shift. *Mason* b. N. of Eng. The second or middle shift of the day; varies from 9 to 10:30 a.m. until 4:30 to 6 p.m. in different pits. *Trist*

back shot

A shot used for widening an entry; it is placed at some distance from the head of an entry. *Fay*

backsight

a. A sight or bearing on a previously established survey point (other than a closing or check point), taken in a backward direction. *AGI* b. A reading taken on a level rod held in its unchanged position on a survey point of previously determined elevation when the leveling instrument has been moved to a new position. It is used to determine the height of the instrument prior to making a foresight. Syn: [plus sight](#) Abbrev: BS. Ant: foresight. *AGI*

backsight hub

A mark or stake placed at some distance behind the position a drill will occupy in a specific compass direction from the borehole marker for an incline hole to enable the driller to set the drill and drill the borehole in the intended direction. Also called back hub; backsight. See also: [picket](#)

back skin

Newc. A leather covering worn by workers in wet workings.

back slip

A joint in a coal seam that is inclined away from the observer from floor to roof. It would be a face slip from the opposite direction. CF: [face slip](#)

back slope

a. S. Wales. A slope with the stalls branching off and working the seam with back slips along the face. *Nelson* b. In geology, the less sloping side of a ridge. Contrasted with escarpment, or steeper slope; esp., the slope more nearly parallel with the strata. Also called structural plain. *Standard, 2* c. The term is used where the angle of dip of the underlying rocks is somewhat divergent from the angle of the land surface. The slope at the back of a scarp; e.g., the gentler slope of a cuesta or of a fault block. It may be unrelated to the dip of the underlying rocks. Also spelled: backslope. *AGI* d. Syn: [dip slope](#)

back splinting

The working of the top portion of a thick seam that was left as a roof when the bottom portion was worked. The top coal is recovered by working over the goaf or packs of the first working. See also: [back work](#) *Nelson*

backstamp

The maker's name and/or trademark stamped on the back of pottery flatware or under the foot of hollowware. *Dodd*

backstay

A drag or trailer fixed at the back of a haulage train (or set) as a safety device when going uphill. See also: [drag](#) *Mason*

backstone

Eng. Shaly mudstone used for cooking slabs, quarried near Delph, Yorkshire. Also, a bed in the Staffordshire Coal Measures. *Arnell*

back stope

To mine a stope from working below.

back stopes

Overhead stopes; stopes worked by putting in overhead holes and blasting down the ore. *CTD*

backstroke jigging

A process in which strong suction is advocated at all times with the dense-medium process, since none of the bone medium must be allowed to get over into the washed coal. *Mitchell*

backup gear

See: [reverse-feed gear](#)

back vent

Scot. An air course alongside the pillar in wide rooms.

backwardation

The situation when the cash or spot price of a metal is greater than its forward price. A backwardation occurs when a tight nearby situation exists in a metal. The size of the backwardation is determined by differences between supply and demand factors on the nearby positions compared with the same factors on the forward position. There is no official limit to the backwardation. The backwardation is also referred to as the "back." *Wolff*

backward folding

See: [backfolding](#)

backwash

a. In uranium leaching, flushing from below of colloidal slime from ion exchange column after adsorption cycle. The cleaning of sand filters. b. Water or waves thrown back by an obstruction such as a ship, breakwater, cliff, etc. *AGI* c. The return flow of water seaward on a beach after the advance of a wave. See also: [backrush](#)

back work

a. Any kind of operation in a mine not immediately concerned with production or transport; literally work behind the face; repairs to roads. *Mason* b. See: [back coming](#); back splinting.

bacon

Eng. Fibrous carbonate of lime, also known as beef and horseflesh; Isle of Portland. See also: [beef](#)

bacon stone

a. Eng. Calcspars colored with iron oxide, Bristol. *Arkell* b. An old name for a variety of steatite (rock gypsum), alluding to its greasy luster. See also: [speckstone](#)

baculite

A crystallite that appears as a dark rod. *AGI*

bad air

Air vitiated by powder fumes, noxious gases, or respirable dust.

baddeleyite

A monoclinic mineral, ZrO_2 ; may contain some hafnium, titanium, iron, and thorium.

badlands

A region nearly devoid of vegetation where erosion has produced, usually in unconsolidated or poorly cemented clays and silts, a dense and intricate drainage pattern with short steep slopes and sharp crests and pinnacles. Specif., the Badlands of the Dakotas.

bad top

A coal mining term indicating a weak roof. Bad top sometimes develops following a blast. *Kentucky*

baeumlerite

A colorless chloride of potassium and calcium, $KCl.CaCl_2$. Intergrown with halite and tachyhydrite. Orthorhombic. Syn: [chlorocalcite](#)

baff ends

Long wooden edges for adjusting linings in sinking shafts during the operation of fixing the lining. *Zern*

baffle board

A board fitted across a compartment in an ore washer to retain the heavy ore and allow the light material to flow away. *Nelson*

baffle plate

a. A loading plate attached to the frame of a belt conveyor to prevent spillage at any loading point. *Jones, I* b. A tray or partition placed in a tower, a heat exchanger, or other processing equipment to direct or to change the direction of flow of fluids. c. A metal plate used to direct the flames and gas of a furnace to different areas so that all portions of it will be heated; a deflector.

baffler

A partition in a furnace so placed as to aid the convection of heat; a baffle plate. *Fay*

baffle tube

A pipe of sufficient length to lower the temperature of hot gases before the gases enter a furnace. *CTD*

baffle wall

A refractory wall used to deflect gases or flames from the ware and to provide better heat distribution in the furnace structure.

bag

a. A paper container roughly 2.5 to 5 cm in diameter and 20 to 46 cm long, used for placing an inert material, such as sand, clay, etc., into a borehole for stemming or tamping. Also called a tamping bag. b. A long tube fastened at the upper end to a pipe leading from a smelter, and gathered and tied at the lower end. The smoke passes through the cloth, which catches the solids. The bag is periodically untied and the dust is shaken out. See also: [baghouse](#) c. A cavity in coal containing gas or water. See also: [bag of gas](#) *Tomkeieff* d. Flexible pipe or hose. Also called bagging. *Mason* e. S. Staff. A quantity of combustible gases suddenly given off by the coal seam. See also: [bag of foulness](#) f. York. A miner's term for a variety of inferior coal. *Tomkeieff*

bag filter

An apparatus for removing dust from dust-laden air, employing cylinders of closely woven material that permit passage of air but retain solid particles. Syn: [filter](#)

baghouse

Chamber in which exit gases from roasting, smelting, melting, or calcining are filtered through membranes (bags) that arrest solids such as fine particulates. See also: [bag](#)

bag of foulness

N. of Eng. A cavity in a coal seam filled with combustible gases under a high pressure, which, when cut into, are given off with much force. See also: [bag](#)

bag of gas

Eng. A gas-filled cavity found in seams of coal. See also: [bag](#)

bag powder

Originally applied to black powder loaded in bags, but now applied to a number of explosives so packed. The bags are long, cylindrical units about 6 in (15 cm) in diameter and weighing 12-1/2 lb (5.67 kg) apiece. *Carson, I*

bag process

A method of recovering flue dust and also sublimed lead, whereby furnace gases and fumes are passed through bags suspended in a baghouse. The furnace gases thus are filtered, and the particles in suspension collected. *Fay*

bahada

See: [bajada](#)

baikalite

A dark-green variety of diopside containing iron; found near Lake Baikal, Russia.

baikerinite

A thick, tarry hydrocarbon that makes up about one-third of baikerite and from which it may be separated by alcohol. See also: [baikerite](#)

baikerite

a. A waxlike mineral from the vicinity of Lake Baikal, Russia, apparently about 60% ozocerite. *Fay* b. A variety of ozocerite. See also: [baikerinite](#)

bail

a. As used by churn drillers, to remove a liquid from a borehole by use of a tubular container attached to a wire line. See also: [bailer](#) b. The handle on a bucket, cage, or skip by means of which it may be lifted or lowered. *Long* c. A large clevis. *Long* d. To dewater a mine with a skip or bailer. e. As used by the diamond- and rotary-drilling industries, (1) a U-shaped steel rod with the open ends formed into eyes fitting over two lugs projecting from the sides of a water swivel, or (2) a U-shaped steel rod with open ends attached to an open-sided, latch-equipped, circular collar, that fits around a drill rod and under the base of a water swivel. Both types of bails are designed to permit circulation of fluid through the drill rod string while the rods are suspended on the hoist line or while the rods are being raised or lowered a few feet with the hoisting cable. *Long*

bailer

a. A long cylindrical vessel fitted with a bail at the upper end and a flap or tongue valve at the lower extremity. It is used to remove water, sand, and mud-laden or cuttings-laden fluids from a borehole. When fitted with a plunger to which the bailing line is attached, it sucks the liquid in as it is lifted and is then called a sand pump or an American pump. Syn: [bucket](#) b. A metal tank, or skip, with a valve in the bottom, used for dewatering a mine. c. See: [sludger](#); swab. d. In bituminous coal mining, a laborer who scoops water from drainage ditches in a mine with a bucket and empties it into a water car, a ditch flowing to a natural outlet or to a pumping station. Also called water bailer. *DOT* e. A cylindrical steel container with a valve at the bottom for admission of fluid, attached to a wire line and used in cable-tool drilling for recovering and removing water, cuttings, and mud from the bottom of a well. See also: [bail](#); [bailing](#). *AGI*

bailiff

Eng. A name formerly used for manager of a mine.

bailing

a. Removal of the cuttings from a well during cable-tool drilling or of liquid from a well by means of a bailer. *Inst. Petrol.* b. Dewatering a mine. See also: [bailer](#) c. Removing rock dust and other material loosened in the drilling by means of a bucket or ball. *Mersereau, 2*

bajada

a. A broad, continuous alluvial slope or gently inclined detrital surface extending from the base of mountain ranges out into and around an inland basin, formed by the lateral coalescence of a series of alluvial fans, and having an undulating character due to the convexities of the component fans; it occurs most commonly in semiarid and desert regions, as in the Southwestern United States. A bajada is a surface of deposition, as contrasted with a pediment (a surface of erosion that resembles a bajada in surface form), and its top often merges with a pediment. Etymol: Sp., descent, slope. CF: [alluvial slope](#); [alluvial fan](#). Syn: [bahada](#); alluvial plain; piedmont plain. *AGI* b. See: [ladderway](#) c. Sp. Compound alluvial fans. *AGI*

baja de metales

Peru. Lowering of ores from mine to mill.

bajo

Colom. Low-lying alluvial mines that have to be unwatered by artificial means; generally deposits in present riverbeds.

bakerite

A monoclinic mineral, $\text{Ca}_4 \text{B}_4 (\text{BO}_4)_3 (\text{SiO}_4)_3 (\text{OH})_3 \cdot \text{H}_2 \text{O}$; gadolinite group; in white compact nodules resembling marble or unglazed porcelain; in the Mohave Desert, CA.

baking

a. A stage in the heating of a clay when the clay particles have lost plasticity and have formed a moderately hard mass composed of particles adhering together, the mass remaining porous. See also: [vitrifying](#) *Nelson* b. The process of firing shaped clay articles in kilns, in order to give the clay permanent hardness. *CTD* c. Heating to a low temperature in order to remove gases. *ASM, 1* d. The hardening of rock material by heat from magmatic intrusions or lava flows. Prolonged baking leads to contact-metamorphic effects. *AGI*

bal

A Cornish name for a mine; a cluster of mines.

balance

a. The counterpoise or weight attached by cable to the drum of a winding engine to balance the weight of the cage and hoisting cable and thus assist the engine in lifting the load out of the shaft. *Fay* b. An instrument for weighing. *Fay* c. See: [assay balance](#); balance pit. d. A beam device specif. designed and calibrated to determine specific gravity by weighing methods, as in determining the specific gravity of drilling mud. *Long*

balance bob

A counterbalance to take the excess weight of the pitwork, or timber beams, in a shaft; used with the Cornish type of reciprocating pump. *CTD*

balance brow

a. A self-acting inclined plane down which the cars of coal are lowered and the empties elevated upon a carriage or platform. Also called balance plane; back balance. b. Eng. An inclined roadway in which a balance is used to assist the haulage. Also called dilly brow. *SMRB*

balance car

a. In quarrying, a car loaded with iron or stone and connected by means of a steel cable with a channeling machine operating on an inclined track. Its purpose is to counteract the force of gravity and thus enable the channeling machine to operate with equal ease uphill and downhill. b. A small weighted truck mounted upon a short inclined track, and carrying a sheave around which the rope of an endless haulage system passes as it winds off the drum. *Zern*

balanced cutter chain

A cutter chain that has the same number of bottom and top picks. It usually cuts more freely in hard material and is often used for cutting at higher than floor level. See also: [unbalanced cutter chain](#) *Nelson*

balanced direct-rope haulage

A modified form of direct-rope haulage, in which a power-driven reversible pulley (surge pulley) is used instead of a drum. The full trams are hauled up on one end of the rope while the empties go down on the other end. It involves a double track or a bypass midway on the haulage plane. The descent of the empty trams assists in balancing the load being hauled upwards. *Nelson*

balanced draft

Applied to combustion units in which forced and induced drafts are adjusted to give atmospheric pressure in the combustion chamber to avoid the infiltration of unwanted cold air. *Nelson*

balanced hoisting

Arrangement of cages or skips in mine shaft in which the winding drum raises one and at the same time lowers the other, thus reducing power consumption. See also: [balanced winding](#)

balanced ventilation

A system of ventilation in which the districts (each with its separate split) are so arranged with regard to length and resistance, that the use of ventilation regulators is unnecessary. Regulators, although sometimes unavoidable, reduce the efficiency and increase the power required to ventilate the mine. *Nelson*

balanced vibrating conveyor

A vibrating conveyor in which the center of gravity of the complete assembly is held constant by having movement of the trough offset by opposite movement of some other element.

balanced winding

The conventional method of winding in a mine shaft. As the cage containing the loaded cars ascends, the other cage containing the empties descends, and thus the cages and cars are balanced. Balanced winding also implies the use of a balance rope, and thus, ignoring friction, the only load to be hoisted is the coal or mineral. See also: [winding](#); [balanced hoisting](#). *Nelson*

balance pit

Eng. A pit or shaft in which a balance (counterweight) rises and falls. See also: [balance](#)

balance plane

See: [balance brow](#)

balance rope

A steel-wire rope, generally of the same weight per foot as the main winding rope, that is attached to the bottom of the cages, and extends down to form a loop in the shaft bottom

or sump. Its function is to balance out the difference in weight of the upgoing or downgoing main ropes during the wind. See also: [winding](#)

balance sheet

A record showing the present financial obligations and resources of the company, in terms of cost or book value. *Hoover*

balance shot

In coal mining, a shot for which the drill hole is parallel to the face of the coal that is to be broken by it.

balas

See: [balas ruby](#)

balas ruby

A pale rose-red or orange variety of spinel in Badakhshan (Balascia) Province of northern Afghanistan. Syn: [balas](#); [ballas](#); [false ruby](#).

balata belt

A belt with normal multi-ply construction, and in which balata is used to impregnate the plies and provide cover. It cannot be used in high temperatures but possesses a very high resistance to water absorption and is thus well suited for wet conditions. *Nelson*

Balbach process

Electrolytic separation of gold from silver, using the alloy as anode, graphite plate cathodes, and silver nitrate solution as bath. *Bennett*

bald

Without framing; said of a mine timber that has a flat end.

bald-headed anticline

An anticline whose crest has been eroded prior to deposition of an unconformably overlying sedimentary unit. CF: [breached anticline](#) *AGI*

balistite

See: [ballistite](#)

balkstone

a. Eng. A provincial name given to an impure stratified limestone. *Fay* b. Sandstone used for whetstone. Also called balkerstone. *Arkell*

ball

a. A rounded mass of spongy iron, prepared in a puddling furnace; a loup. *Fay* b. A mass of tempered fire clay, used for forming the crucible in crucible-steel production. See also: [ballstone](#)

ball-and-socket reamer

A borehole-reaming device consisting of a bit attached to a ball-and-socket or a knuckle-joint member, that in turn is connected to the drill rods and used in borehole-deviation drilling. Also called arc cutter. *Long*

ball and test

A deep well pump valve in which a ball fits into a seat and prevents the backflow of oil or water. Each standing valve and each traveling valve has a ball and seat. *Hess*

ballas

a. A hard, spherical aggregate of many very small diamond crystals, usually cryptocrystalline, arranged radially and more or less concentrically around a central point. Because of their structure, ballas are classed as industrials that are occasionally used in diamond-drill bits and other diamond tools. See also: [shot bort](#) b. A dense, globular aggregate of minute diamond crystals, having a confused radial or granular structure lacking through-going cleavage planes, giving it a toughness that makes it useful as an "industrial diamond". CF: [bort](#); [carbonado](#). c. A term incorrectly applied to a rounded, single crystal of diamond. d. See: [balas ruby](#)

ballast

a. Broken stone, gravel, water, or other heavy material used to provide weight in a ship or other machine and therefore improve its stability or control its draft. Jettisoned ballast may be found in samples of marine sediments. *AGI* b. Gravel, broken stone, expanded slag, or similar material used as a foundation for roads, esp. that laid in the roadbed of a railroad to provide a firm bed for the ties, distribute the load, and hold the track in line, as well as to facilitate drainage. *AGI*

ballast car

A freight car (as for carrying ballast) that may be unloaded from the side or bottom. *Webster 3rd*

ballast engine

A steam engine used in excavating and for digging and raising stones and gravel for ballast. *Webster 3rd*

ballast shovel

A spoon-pointed iron shovel having a thick body. *Standard, 2*

ball bearing

A friction-reducing device consisting of hard steel balls in a circular race; also applied to some pieces of equipment, such as a swivel-type double-tube core barrel, in diamond drilling using ball bearings as load-bearing members on rotating parts. See also: [bearing](#)

ball burnishing

a. See also: [ball sizing](#) b. Removing burrs and polishing small stampings and small machined parts by tumbling. *ASM, 1*

ball clay

A highly plastic, sometimes refractory clay, commonly characterized by the presence of organic matter, having unfired colors ranging from light buff to various shades of gray, and used as a bonding constituent of ceramic wares; pipe clay. It has high wet and dry strength, long vitrification range, and high firing shrinkage. Ball clay is so named because of the early English practice of rolling the clay into balls weighing 30 to 50 lb (13 to 22 kg) and having diameters of about 10 in (25 cm). *AGI*

ballers

White sand with large spheroidal masses of calciferous sandstone called sand ballers or giants' marbles, some being 3 to 6 ft (approx. 1 to 2 m) in diameter. (Possibly a variant of "bollars," a dialect form of boulders.)

ball grinder

A pulverizer or disintegrator consisting of metal balls enclosed in a rotating cylinder. *Fay*

ball head

See: [ball stamp](#)

balling

a. A process that occurs in the cementite constituent of steels on prolonged annealing at 650 to 700 degrees C. *CTD* b. The operation of forming balls in a puddling furnace.

Syn: [nodulizing](#)

balling formation

Rock or formations that, when drilled, produce cuttings and sludge that tend to collect on, and adhere to, borehole walls and drill-stem equipment in sticky or gummy masses.

CF: [gummy](#); [sticky](#). *Long*

balling furnace

a. A kind of reverberatory furnace used in alkali works. *Fay* b. A furnace in which piles or fagots of wrought iron are placed to be heated preparatory to rolling. *Fay*

balling tool

A tool used in collecting the iron in a puddling furnace into a mass, preparatory to taking it to the hammer or squeezer; a rabble. *Fay*

ball ironstone

a. A sedimentary rock containing large argillaceous nodules of ironstone. *AGI* b. Nodular iron ore.

ballistic mortar test

A laboratory instrument used for measuring the relative weight strength of an explosive material. Also, a test in which a standard weight of explosive is placed within a small borehole fitted with a projectile. The mortar, suspended on a pendulum, recoils upon detonation. The recoil is a measure of the weight strength in percentage (relative to a standard whose value is 100) or pendulum deflection. *Meyer*

ballistite

A smokeless powder consisting essentially of soluble cellulose nitrates and nitroglycerin in approx. equal parts. Syn: [balistite](#) *Webster 3rd*

ball jasper

a. Jasper showing concentric red and yellow bands. b. Jasper occurring in spherical masses.

ball mill

A rotating horizontal cylinder with a diameter almost equal to the length, supported by a frame or shaft, in which nonmetallic materials are ground using various types of grinding media such as quartz pebbles, porcelain balls, etc. Syn: [air-swept ball mill](#); cannonball mill; jar mill.

ball mill grindability test

Crushed particles of a given size range are placed in a ball mill; the reduction in size of particles for a given number of revolutions of the mill is interpreted in terms of a grindability index. *Lewis*

ball milling

A method of grinding and mixing material, with or without liquid, in a rotating cylinder or conical mill partially filled with grinding media such as balls or pebbles. *ASTM*

ball mill method

A grindability method based on the principle that all coals are ground to the same fineness, about that required for pulverized fuels, and then using the relative amounts of energy required for this reduction in size as a measure of grindability. *Mitchell*

Ball-Norton magnetic separator

Dry separator for coarse ore, in which one or two nonmagnetic drums rotate outside a series of fixed magnets alternating in polarity. *Pryor, 3*

balls

a. Common name for nodules, esp. of ironstone. *Arkell* b. In fine grinding, crushing bodies used in a ball mill. Cast or forged iron or steel, or alloy of iron with molybdenum or nickel, are used, mainly spherical; various other shapes are favored locally, e.g., concave.

ball sizing

Sizing and finishing a hole by forcing a ball of suitable size, finish, and hardness through the hole or by using a burnishing bar or broach consisting of a series of spherical bands of gradually increasing size coaxially arranged. Also called ball burnishing, and sometimes ball broaching. *ASM, 1*

ball stamp

A rock-crushing stamp whose stem is the piston rod of a steam cylinder. Syn: [ball head](#)

ballstone

a. An ancient term for ironstone, North Staffordshire, U.K. b. A large crystalline mass of limestone containing coral in position of growth, surrounded by shale and impure bedded limestone. See also: [caballa ball](#) c. A nodule or large rounded lump of rock in a stratified unit; specif. an ironstone nodule in a coal measure. Syn: [ball](#)

ball vein

A stratum in which siderite concretions occur; also, the ore itself. *Hess*

bally seating

Underclay with nodular concretions. *Arkell*

balmaiden

Corn. A woman employed in the mines. *Standard, 2*

balnstone

Eng. Stone in the roof of a coal seam; roof stone. *Arkell*

baltimorite

A grayish-green and silky, fibrous, or splintery variety of serpentine; near Baltimore, MD. See also: [antigorite](#)

banakite

A basaltic rock composed of olivine and clinopyroxene phenocrysts in a groundmass of labradorite with alkali feldspar rims, olivine, clinopyroxene, some leucite, and possibly quartz. Banakite grades into shoshonite with an increase in olivine and clinopyroxene and with less alkali feldspar, and into absarokite with more olivine and clinopyroxene. It was named by Iddings in 1895 from the Bannock (or Robber) Indians. *AGI*

banalsite

An orthorhombic mineral, $\text{BaNa}_2\text{Al}_4\text{Si}_4\text{O}_{16}$; feldspar group.

band

a. Shale or other rock interstratified with coal, e.g., dirt band, sulfur band, etc. b. A thin stratum or lamina of conspicuous lithology or color. A group of such layers is described as being banded. CF: [parting](#) c. Any well-defined and widespread thin rock deposit that is of value in correlation. d. Slate or other rock interstratified with coal, commonly called middle band in Arkansas; also, dirt band, sulfur band, or other band, as the case may be. *Fay* e. Applied to a stratum or lamina conspicuous because it differs in color from adjacent layers; a group of layers displaying color differences is described as being banded. *AGI*

band chain

A steel or invar tape of a minimum length of 100 ft (30.5 m) used for accurate surveying, graduated in feet. See also: [reglette](#) *Hammond*

band conveyor

See: [belt conveyor](#)

banded

The property of rocks having thin and nearly parallel bands of different textures, colors, or minerals. Banded coal has alternating bands of different types. *Johannsen; Pryor, 3*

banded agate

Agate in colors disposed in parallel or subparallel bands, more or less wavy or sinuous. Most agate in the trade is dyed, and bands are of differing tones due to varying capacity to absorb the dye. See also: [agate](#); [onyx](#).

banded coal

a. The common variety of bituminous and subbituminous coal. It consists of a sequence of irregularly alternating layers or lenses of homogeneous black material having a brilliant vitreous luster; grayish-black, less brilliant, striated material usually of silky luster; and generally thinner bands or lenses of soft, powdery, and fibrous particles of mineral charcoal. The difference in luster of the bands is greater in bituminous than in subbituminous coal. Also called bright-banded coal; common-banded coal. b. Coal composed of roughly parallel, dull and bright layers. *BS, 4*

banded differentiate

Any igneous rock made up of bands of differing chemical or mineral composition, usually an alternation of two rock types; a layered intrusion. The structure has been attributed to rhythmic crystal settling during convection.

banded ingredient

One of the four distinctive and visibly differing portions forming the mass of an ordinary bituminous coal that can be recognized and separated macroscopically by hand, and microscopically in thin sections, and that are not, in themselves, chemical entities; i.e., vitrain, clarain, fusain, and durain. See also: [rock type](#)

banded iron formation

Iron formation that shows marked banding, generally of iron-rich minerals and chert or fine-grained quartz. Abbrev: BIF. *AGI*

banded ironstone

A term used in South Africa for iron formation consisting essentially of iron oxides and chert occurring in prominent layers or bands of brown or red and black. This usage of the term ironstone is at variance with that applied in the United States and elsewhere. Syn: [ironstone](#)

banded obsidian

Obsidian with differently colored irregular bands.

banded ore

Ore composed of bands as layers that may be composed of the same minerals differing in color, textures, or proportions, or they may be composed of different minerals. Syn: [banded texture](#)

banded peat

Peat composed of bands of vegetable debris alternating with bands of sapropelic matter. *Tomkeieff*

banded-quartz hematite

See: [itabirite](#)

banded quartz-hematite ore

Braz. In the Itabira Region of Minas Gerais, schistose, specular hematite forming alternate bands with sugary quartz. Some of the beds are auriferous and contain gold-palladium alloys with manganese oxides, native copper, and talc. Writers have given the rocks various names, such as iron-glace schist, jacutinga, quartz itabirite, and bandererez. *Hess*

banded structure

a. An outcrop feature developed in igneous and metamorphic rocks as a result of alternation of layers, stripes, flat lenses, or streaks differing conspicuously in mineral composition and/or texture. *AGI* b. A term applied to veins having distinct layers or bands. This may be due to successive periods of deposition or replacement of some earlier rock. *Fay* c. A structure developed in many igneous and metamorphic rocks owing to layers that differ noticeably in mineral composition or texture. d. A segregated structure of nearly parallel bands aligned in the direction of working. *ASM, I*

banded texture

See: [banded ore](#)

banded vein

A vein made up of layers of different minerals parallel with the walls. Also called ribbon vein. *Fay*

band scale

An arrangement by which colliers are paid an agreed sum for removing a dirt band, in addition to the usual tonnage rate. The payment varies with the thickness of the band. *Nelson*

band wander

In concentration on shaking table, the movement of a segregated band of mineral so that it no longer discharges from the table deck at the desired point and therefore is not correctly collected. See also: [wander](#) *Pryor, I*

bandylite

A tetragonal mineral, $\text{CuB}(\text{OH})_4\text{Cl}$; occurs as dark blue crystals in Chile.

bandy metal

Shale with thin sandstone bands. *Arkell*

bank

a. A large pile of mineral material on the ground surface, as in heap leaching. b. Several like pieces of equipment set close together, as a bank of flotation cells, hydrocyclones, or generators. c. The surface around the mouth of a shaft. *Zern* d. The whole or sometimes only one side or one end of a working place underground. e. A hill or brow. f. A road

along the coal face formed by the coal on one side and the waste or packs on the other; thus, a double-unit face has a right and left bank. g. A generally steeply sloping mass of any earthy or rock material rising above the digging level from which the soil or rock is to be extracted from its natural or blasted position in an open-pit mine or quarry. Syn: [bench face](#) h. Terracelike bench from which ore is obtained in an open-pit mine.

Banka drill

A portable, manually operated system used in prospecting alluvial deposits to depths of 50 ft (15.2 m) or more. Also known as an Empire drill.

bank claim

A mining claim on the bank of a stream.

bank coal

Coal contained in, and sometimes salvaged from, the bank. *BCI*

bank engine

Eng. An engine at the mouth of a mine shaft. *Standard, 2*

banker off

Aust. The worker who attends to taking skips off the cage. *Fay*

banket

a. A general term for a compact, siliceous conglomerate of vein-quartz pebbles about the size of a pigeon's egg, embedded in a quartzitic matrix. The term was originally applied in the Witwatersrand area of South Africa to the mildly metamorphosed gold-bearing conglomerates containing muffin-shaped quartz pebbles and resembling an almond cake made by the Boers. Etymol: Afrikaans, a kind of confectionery. *AGI* b. Originally applied by the Dutch settlers to the gold-bearing conglomerates of the Witwatersrand. It is now used more widely for similar conglomerates and conglomeratic quartzites. *CTD*

bank gravel

Gravel found in natural deposits, usually more or less intermixed with sand, silt, or clay. *AGI*

bank head

a. The upper end of an inclined plane, next to the engine or drum, made nearly level. *Zern*
b. The mouth and immediate environs of a coal mine. *Webster 3rd*

bank height

The vertical height of a bank as measured between its highest point or crest and its toe at the digging level or bench. CF: [berm](#) bench height; digging height.

banking

a. The bringing of a cage to a stop at the rail level (the pit top or bank) and the replacement of loaded mine cars by empty ones and the release of the cage for its return journey.
b. Closing down a blast furnace which is still full of burden.

bank measure

a. The quantity of an excavation measured in place in the bank before being disturbed. *Carson, 1*
b. Volume of soil or rock in its original place in the ground. *Nichols, 2*

bank mining

Surface mining in which the material mined is removed from above the surrounding land surface. *AIME, 2*

bank of cells

A row of flotation cells in line. *Pryor, 4*

bank of ovens

A row of ovens for converting coal into coke. *Fay*

bank protection

Devices for minimizing scour. These include brushwood held in place by wooden pegs, embankments, grass and withy planting, groins, mattresses, revetments, and riprap. *Hammond*

bank pump

An auxiliary pump placed on the bank of a stream or a lake and used to pump water to a distant drill. Also called supply pump. *Long*

bank right

The right to divert water for working a bank claim. *Pryor, 3*

bank slope

The angle, measured in degrees of deviation from the horizontal, at which the earthy or rock material will stand in an excavated, terracelike cut in an open-pit mine or quarry.

Syn: [bench slope](#)

bank slope stability

A slope is subject to the influence of gravity and possible pressure of ground water, which tend to cause sliding or caving. It is also subject to surface erosion from running water, wind, and alternate freezing and thawing, or wetting and drying. Weathering causes changes in particle size and composition. Bank slope stability can be attained by benching, by growth of vegetation, and by artificial protections, such as masonry walls, drainage systems to intercept or remove ground water, and fences to catch rolling pieces. See also: [stability](#)

banksman

The person in charge of the shaft and cage or skip at the surface of a colliery; the person at the surface who operates the signals from the cage or skip to the winding engineman.

See also: [cager](#)

bank water

In placer mining, applied to streams brought to the pit in ditches, not under pressure.

Hess

bankwork

Eng. A system of working coal in South Yorkshire.

bank yards

Yards of soil or rock measured in its original position, before digging. *Nichols, 2*

banos

Mex. Water collected in old mine workings.

banqueria

Bol. In alluvial mining, a thick bed of blocks of granite, schists, and quartz.

bantams

Small pebbles of a banded garnet-quartz rock; usually associated with diamond in the concentrate obtained when washing the diamond-bearing gravels from the Vaal River in the Republic of South Africa. The occurrence of bantams in a gravel deposit is considered a good indicator of diamond. *Chandler*

baotite

A tetragonal mineral, $Ba_4 (Ti,Nb)_8 Si_4 O_{28} Cl$.

bar

a. A placer deposit, generally submerged, in the slack portion of a stream. Also, an accumulation of gravel along the banks of a stream; bar diggings. b. A mass of inferior rock in a workable deposit of granite. *AGI* c. A fault across a coal seam or orebody. *AGI* d. A banded ferruginous rock; specif. jaspilite. *AGI* e. A vein or dike crossing a lode. f. Any band of hard rock crossing a lode. *Arkell* g. A unit of pressure equal to 1,000,000 dyn/cm², 1,000 mb (100 kPa), or 29.53 in (750 mm) of mercury. *Hunt* h. A bank of sand, gravel, or other matter, esp. at the mouth of a river or harbor, often obstructing navigation. *Webster 2nd* i. An offshore ridge or mound of sand, gravel, or other unconsolidated material submerged at least at high tide, esp. at the mouth of a river or estuary, or lying a short distance from, and usually parallel to, the beach. *Hunt* j. A drilling or tamping rod. *Fay* k. A strap or beam used to support the roof between two props or other supports. *Mason* l. A length of steel pipe equipped with a flat cap at one end and a jackscrew on the opposite end by means of which the pipe may be wedged securely in a vertical or horizontal position across an underground workplace to serve as a base on which a small diamond or rock drill may be mounted. Syn: [drifter bar](#); [drill bar](#); [drill column](#). *Long* m. A heavy steel rod with either pointed or flattened ends used as a pry or as a tool by miners to dislodge loose rock in roof or sidewalls of an underground workplace. Syn: [scaling bar](#) n. A piece of material thicker than sheet, long in proportion to its width or thickness, and whose width-thickness ratio is much smaller than that of sheet or plate, as low as unity for squares and rounds. *ASM, 1*

baralyme

A compressed pill consisting of a blended mixture of barium octohydrate and calcium hydroxide. It is used as a carbon dioxide absorbent in rebreathing (diving) systems. *Hunt*

bararite

A hexagonal mineral, $(NH_4)_2 SiF_6$; dimorphous with cryptohalite; occurs over a burning coal seam.

bar-belt conveyor

A conveyor similar to a plate-belt conveyor but in which spaced steel rods arranged transversely are employed in place of the steel plates. *BS, 5*

barbertonite

A hexagonal mineral, $Mg_6 Cr_2 (CO_3)(OH)_{16} \cdot 4H_2O$; manasseite group; rose-pink to violet; dimorphous with stichtite.

barbosalite

A hydrous ferrous ferric phosphate, $Fe^{2+} Fe^{3+}_2 (PO_4)_2 (OH)_2$; occurs as black grains from Brazil. Syn: [ferro-ferri-lazulite](#)

bar channeler

A reciprocating drill mounted on a bar by means of which holes are drilled close together in line by shifting the drill from point to point along the bar. Thereafter, the webs between the holes are removed with a reciprocating chisel-pointed broaching tool that is substituted for the drill. This method of channeling is generally employed in the harder rocks, such as granites. *Hess*

bar coal cutter

A coal cutter in which the cutting member was a projecting rotating bar armed with picks throughout its length. The bar cut a kerf in the seam as the machine traveled along the face. The first patent for a bar machine was taken out in 1856. The cutter is now obsolete. *Nelson*

bar diggings

A term applied in the Western United States to diggings for gold or other precious minerals located on a bar or in the shallows of a stream, and worked when the water is low. See also: [bar mining](#)

bar drill

A small diamond- or other-type rock drill mounted on a bar and used in an underground workplace. Also called bar and used in an underground workbar rig. *Long*

bare

a. To cut coal by hand; to hole by hand. *Mason* b. The uncased portion of borehole. Also called barefoot; blank; naked; open; open hole. See also: [blank hole](#) c. To remove overburden. *Arkell* d. Eng. To strip or cut by the side of a fault, boundary, etc.; to make bare.

barefoot

Said of an oil well without a liner in the oil-bearing rock. See also: [blank hole](#)

bare motor

A motor without a pulley, belt-tightening base, or slide rails. *NEMA*, 2

barequear

Colom. In placer mining, to extract as much of the pay gravel as possible, without method, leaving the overburden untouched.

barequeo

Colom. Extracting the rich ore by crude means.

barequero

Colom. A placer miner who uses crude methods of alluvial washing. A spoiler.

barer

A worker who removes surface soil or overburdens in a quarry. *Arkell*

barfe Saturday

N. of Eng. The Saturday on which wages are not paid.

bar flight conveyor

See: [drag-chain conveyor](#); flight conveyor.

barge loader

In the quarry industry, a laborer who controls the movement of a barge in a river as it is loaded with crushed rock. *DOT*

barges

Scot. Sheets of iron, zinc, or wood, used in wet shafts or workings for diverting the water to one side.

bar grizzly

A series of spaced bars, rails, pipes, or other members used for rough sizing of bulk material passed across it to allow smaller pieces to drop through the spaces. See also: [grizzly](#)

barilla

An impure sodium carbonate and sulfate obtained by burning various species of land or marine plants; soda ash. See also: [copper barilla](#); [coro-coro](#). *Standard*, 2

baring

a. The small coal made in undercutting coal seams. *Webster 3rd* b. A making bare; an uncovering. See also: [strip](#) c. The surface soil and useless strata overlying a seam of coal, clay, ironstone, etc., that have to be removed preparatory to working the mineral. See: [overburden](#)

barite

a. An orthorhombic mineral, $4[\text{BaSO}_4]$; has nearly pseudocubic cleavage; occurs as interpenetrant masses of crystals with sand and clay (desert roses); sp gr, 4.5; in veins or in residual masses on limestone; the principal source of barium. Syn: [barytes](#); [dreelite](#); [heavy spar](#); cawk. b. The mineral group anglesite, barite, and celestine.

barite rosette

See: [petrified rose](#)

barium

A silvery-white, metallic element, belonging to the alkaline earth group. Symbol, Ba. Found chiefly in barite or heavy spar and witherite. All barium compounds that are water or acid soluble are poisonous. Used in paint, X-ray diagnostic work, glassmaking, oilwell drilling fluids, and pyrotechny. *Handbook of Chemistry and Physics*, 3

barium feldspar

See: [paracelsian](#)

Barkhausen effect

Observed result of magnetizing a ferromagnetic substance by means of a slow magnetic field increase. Orientation of domains proceeds in abrupt steps. *Pryor*, 3

barley

A stream size of anthracite known also as buckwheat No. 3, sized on a round punched plate. It passes through 1/4-in (6.4-mm) holes. At some mines, it has to pass over 3/32-in (2.4-mm) holes and at others over 1/16-in (1.6-mm) holes. The American Society of Mechanical Engineers has recommended that with a screen with circular holes, barley shall pass through 3/16-in (4.8-mm) holes and pass over 3/32-in holes. See also: [anthracite coal sizes](#); [bird's-eye](#). *Fay*

bar mining

The mining of river bars, usually between low and high waters, although the stream is sometimes deflected and the bar worked below water level. See also: [bar diggings](#)

barnesite

a. A monoclinic mineral, $(\text{Na,Ca})_2 \text{V}_6 \text{O}_{16} \cdot 3\text{H}_2 \text{O}$. b. Trademark for a rare-earth oxide used in glass polishing.

barograph

A barometer that makes a continuous record of changes in atmospheric pressure. It is usually an aneroid type. See also: [barometer](#) *AGI*

barometer

An instrument that is used to measure atmospheric pressure. It may be either a mercury barometer or an aneroid barometer. See also: [barograph](#) *AGI*

barometric leg

In filtering system, use of a loop more than 30 ft (9.1 m) high between receiving vessel and vacuum pump, to protect latter against carryover of liquid. *Pryor, 3*

barometric leveling

A type of indirect leveling in which differences of elevation are determined from differences of atmospheric pressure observed with altimeters or barometers. *AGI*

barometric pressure

The barometric pressure of the air at any point is that exerted by the weight of the atmosphere above that point. It therefore varies with the elevation of the point above or the depth below sea level. Barometric pressure is measured by the mercury barometer, and is of the order of 30 in (762 mm) of mercury at sea level. *Spalding*

baroque

a. Any pearl of very irregular form. b. A baroque pearl; said of a pearl, or of a tumble-polished gem material, of irregular shape.

barotrauma

A generic term for injury caused by pressure. Although squeeze is a colloquialism, it is an excellent descriptive term for all of the phenomena that occur when a rigid closed space within the body or on its surface fails to equalize with external pressure during descent, or is for some reason vented to lower pressure than that acting at the depth.

Hunt

barranca

A precipice; as used in some parts of Spanish America, a ravine or small canyon. Also spelled barranco.

barrandite

A mineral intermediate between strengite and variscite.

barrel

a. As used in the petroleum industry, a volumetric unit of measurement equivalent to 42 U.S. gal (159.0 L). *AGI* b. The cylindrical part of a pump from which the movement of the piston causes a liquid or gas to be forcibly ejected. Also, the cylindrical part of a hydraulic jack or of a hydraulic-feed mechanism on a diamond drill. *Long* c. The drum of a hoist. *Long* d. A cylindrical container or drum having a capacity of 55 gal (208.2 L). *Long* e. The water passage in a culvert. *Nichols, 1* f. Commonly, although incorrectly, used as a syn. for core barrel. See also: [drum](#)

barrel copper

Pieces of native copper occurring in sizes large enough to be extracted from the gangue, and of sufficient purity to be smelted without mechanical concentration. Syn: [barrel work](#)

barrel of oil

A volumetric unit of measurement equivalent to 42 U.S. gal (159.0 L). *AGI*

barrel washer

A washer comprising a cylinder rotating slowly about an axis that is slightly inclined to the horizontal, and into which the raw coal, with a current of water or of a suspension, is fed near its upper end. The clean coal is carried by the water or suspension to the lower

end of the cylinder over a scroll that conveys the reject to the upper end of the cylinder. *BS, 5*

barrel work

Syn: [barrel copper](#)

barren

a. In leaching ores, said of a chemical solution from which valuable solute has been removed by precipitation, ion exchange, or solvent extraction before reuse. *Pryor, 1* b. Said of rock or vein material containing no minerals of value, or of strata without coal, or containing coal in seams too thin to be workable.

barren ground

Strata containing seams of coal that are not of a workable thickness. In metal mining, ground that does not contain ore. See also: [dead bed](#)

barren hole

See: [blank hole](#)

barren measures

Coal measures without workable seams. *Standard, 2*

barren mine

A mine may be fully developed and yet, owing to the barrenness of the ore, it would be impossible to work it with profit. (Ricketts, 1943)

barren solution

A solution in hydrometallurgical treatment from which all possible valuable constituents have been removed; it is usually recycled back to plant for reuse in process. See also: [cyanide](#)

barricade

a. The process of building a set of barriers to isolate a sufficient quantity of good air to protect mine workers from the asphyxiating gases formed after a fire or explosion. Miners wait behind the barrier until rescued. Used as an alternative to an escape attempt. b. An artificial mound of earth, usually as high as the eaves of a magazine roof, that is erected to deflect the force of an explosion upward and to protect the enclosed building

from flying objects. c. Timber formwork to contain the material during hydraulic flushing in steep ore workings. *Nelson*

barrier

Blocks of coal left between the workings of different mine owners and within those of a particular mine for safety and the reduction of operational costs. It helps to prevent disasters of inundation by water, of explosions, or fire involving an adjacent mine or another part of a mine and to prevent water running from one mine to another or from one section to another of the same mine. See also: [barrier pillar](#) *Mason*

barrier gate

Eng. See: [tailgate](#)

barrier materials

Materials such as lead and concrete that are used for protection from X-rays or gamma rays in radiographic installations. *Osborne*

barrier pillar

a. A solid block or rib of coal, etc., left unworked between two collieries or mines for security against accidents arising from an influx of water. See also: [barrier](#); [pillar](#); [barrier pillar](#). *Zern* b. Any large pillar entirely or relatively unbroken by roadways or airways that is left around a property to protect it against water and squeezes from adjacent property, or to protect the latter property in a similar manner. *Zern* c. Incorrectly used for a similar pillar left to protect a roadway or airway, or group of roadways or airways, or a panel of rooms from a squeeze. *Zern*

barrier system

N. of Eng. An approved method of working a colliery by pillar and stall, where solid ribs or barriers of coal are left in between working places. *Fay*

bar rig

A small diamond or other rock drill designed to be mounted and used on a bar. Also called bar drill. *Long*

barring

The end and side timber bars used for supporting a rectangular shaft. The bars are notched into one another to form a rectangular set of timber. Common sizes are from 9 to 12 in (23 to 30.5 cm) deep and from 3 to 6 in (7.6 to 15.2 cm) thick and may be made

from larch, white pine, or red pine. See also: [cribbing](#); [steel rectangular shaft supports](#).
Nelson

barring down

a. Loosening ore in a bin by means of a bar, so it will flow through the chute. b. Prying off loose rock after blasting to prevent danger of fall. *Pryor, 1*

barrings

A general term for the setting of bars of timber for supporting underground roadways or shafts. *Nelson*

barring scrap

Prying adhering scrap metal from runners, ladles, or skimmers. *Fay*

barro

A Spanish and South American term for clay, loam, marl, or the overburden of alluvial gold deposits.

barroisite

A dark green amphibole intermediate between hornblende and glaucophane. *English*

barrow

a. A wicker basket in which salt is put to drain. *Webster 2nd* b. A box with two handles at one end and a wheel at the other. *Zern* c. A vehicle in which ore, coal, etc., is wheeled; a push cart.

barrowman

In mining, one who pushes shallow-bodied cars (barrows) or wheelbarrows used for transporting coal or ore along underground haulageways that are too low for ordinary mine cars. Also called buggyman. *DOT*

barrowway

a. A level through which coal or ore is wheeled. b. Rails laid between the flat or siding and the coal face. *SMRB*

Barry mining

See: [Nottingham system](#)

barsanovite

See: [eudialyte](#)

bar screen

See: [grizzly](#)

bar timbering

A method of timbering mine roadways by means of horizontal and upright bars. See also: [timber set](#)

bar tin

Solid, commercial tin. *Bennett*

Bartlett table

A three-shelf table driven by an eccentric that gives it a vaning motion. Ore and water are fed on the upper shelf, giving two products, heads and tailings. The latter are retreated on the second shelf, and the tailings go to the third or lower shelf for retreatment. *Liddell*

Barvoys process

A sink-float process in which the medium is a suspension of clay from the raw coal and minus 200- or 300-mesh barite in water, with the volume of the clay usually equal to about twice that of the barite. Barite clay and coal suspensions can be regulated to get effective washing gravities from 1.2 to 1.8. Sizes from run-of-mine to one-eighth inch may be cleaned by this process, which has been widely adopted in Europe. Also known as the Sophia-Jacoba process in German publications. *Mitchell*

barylite

An orthorhombic mineral, $\text{BaBe}_2\text{Si}_2\text{O}_7$; forms hard (6 to 7 on the Mohs scale), colorless crystals; at Laangban, Sweden; Franklin, NJ; and Park County, CO.

barysilite

A white trigonal mineral, $\text{Pb}_8\text{Mn}(\text{Si}_2\text{O}_7)_3$; occurs at Laangban, Sweden, and Franklin, NJ.

barysphere

The interior of the Earth beneath the lithosphere, including both the mantle and the core. However, it is sometimes used to refer only to the core or only to the mantle. Syn: [centrosphere](#)

baryta

Barium oxide; BaO. *AGI*

barytes

See: [barite](#)

barytocalcite

a. A monoclinic mineral, $\text{BaCa}(\text{CO}_3)_2$; trimorphous with alstonite and paralstonite. b. A mixture of calcite and barite.

basal arkose

An arkosic sandstone basal to a sedimentary sequence, resting unconformably on a granitic terrane; the arkosic equivalent of a granitic basal conglomerate. *AGI*

basal cleavage

Mineral cleavage parallel to the basal pinacoid that is normal to the c crystallographic axis. Also called pinacoidal cleavage.

basal conglomerate

A well-sorted, lithologically homogeneous conglomerate that forms the bottom stratigraphic unit of a sedimentary series and that rests on a surface of erosion, thereby marking an unconformity; esp. a coarse-grained beach deposit of an encroaching or transgressive sea. It commonly occurs as a relatively thin, widespread or patchy sheet, interbedded with quartz sandstone. *AGI*

basal pinacoid

A pinacoid of two parallel faces that intersect only the c crystallographic axis. Also called a base. Syn: [basal plane](#)

basal plane

a. A plane perpendicular to the c, or principal, axis in a tetragonal or hexagonal structure. *ASM, 1* b. Syn: [basal pinacoid](#)

basal reef

S. Afr. A gold-bearing reef regarded as the principal carrier of gold in the Orange Free State. It has been associated with the Elsburg series of the central Witwatersrand and occurs below what has become known as the leader reef. *Beerman*

basalt

A general term for dark-colored mafic igneous rocks, commonly extrusive but locally intrusive (e.g., as dikes), composed chiefly of calcic plagioclase and clinopyroxene; the fine-grained equivalent of gabbro. Nepheline, olivine, orthopyroxene, or quartz may be present. Adj. basaltic. CF: [tholeiite](#)

basal thrust plane

The sole fault underlying a series of overthrusts.

basaltic

Pertaining to, made of, or resembling basalt; as, basaltic lava. See also: [basalt](#)

basaltic dome

See: [shield volcano](#)

basaltic hornblende

A variety of hornblende containing ferric (oxidized) iron in basalts and other basic igneous (volcanic) rocks.

basaltic layer

See: [sima](#)

basaltine

See: [augite](#)

basaluminite

A mineral, $\text{Al}_4(\text{SO}_4)(\text{OH})_{10} \cdot 5\text{H}_2\text{O}$; in veinlets lining crevices in ironstone. CF: [felseobanyaite](#)

basanite

a. An extrusive rock composed of calcic plagioclase, augite, olivine, and a feldspathoid (nepheline, leucite, or analcime); essentially, a feldspathoidal olivine basalt. Some basanites have been the source of sapphires or rubies. *AGI* b. A touchstone consisting of flinty jasper or finely crystalline quartzite. Syn: [touchstone](#); [Lydian stone](#). *AGI* c. A black variety of jasper. *AGI*

base

a. As used by drillers, a line of stakes set by an engineer or drill foreman to be used as a guide to line up and point the drill in a specific compass direction. A line in a survey which, being accurately determined in length and position, serves as the origin for computing the distances and relative positions of remote points and objects by triangulation. See also: [base line](#) b. A compound, e.g., lime, ammonia, or caustic alkali, or an alkaloid, capable of reacting with an acid to form a salt either with or without elimination of water. c. Foundation or supporting structure on which a drill is mounted. *Long* d. See: [basal pinacoid](#); base course.

base box

A unit of quantity in the tin plate trade consisting of 112 sheets measuring 14 in by 20 in (35.6 cm by 50.8 cm) or the equivalent in area; consequently 31,360 in² (20.2 m²) of tin plate.

base bullion

Crude lead containing recoverable silver, with or without gold. See also: [work lead](#)

base charge

a. The main explosive charge in the base of a detonator. *Meyer* b. The charge loaded into the bottom of vertical holes in quarrying, usually applicable to 3-in (7.62-cm) diameter holes and larger. *Nelson* c. The detonating component in a detonator, initiated by the priming charge. *BS, 12*

base course

a. A layer of specified or selected material of planned thickness constructed on the subgrade or subbase to serve one or more functions, such as distributing load, providing drainage, minimizing frost action, etc. *ASCE* b. See: [base](#)

base exchange

a. The clay particle with its cations may be regarded as a kind of salt in which the colloidal clay particle is the anion. Certain cations may replace others, making the clay more flocculent. The cation replacement is known as the base exchange. Syn: [ion exchange](#); [cation exchange](#). *AGI* b. The physicochemical process by which one species of ions adsorbed on soil particles is replaced by another species. See also: [zeolite process](#)

base failure

See: [slope failure](#)

base flow

Water entering drainage system from underground sources. *Pryor, 3*

base fracture

In quarrying, used to describe the condition of the base after a blast. It may be a good or bad base fracture. *Streefkerk*

baselevel

a. The lowest level to which a land surface can be eroded by running water. *Mather* b. To reduce by erosion to or toward a baselevel. *Standard, 2*

baseleveled plain

A baseleveled surface is any land surface, however small, that has been brought approx. to a baselevel, either general or local, by the process of gradation. When such a surface has considerable extent, it becomes a baselevel plain. Syn: [peneplain](#)

baselevel plain

A flat, comparatively featureless area or lowland, the elevation of which cannot be materially reduced by the erosive force of running water. *AGI*

base line

a. A line taken as the foundation of operations in trigonometrical and geological surveys. See also: [base](#) b. A surveyed line established with more than usual care, that serves as a reference to which surveys are coordinated and correlated. See also: [base](#) c. The initial measurement in triangulation, being an accurately measured distance constituting one side of one of a series of connected triangles, and used, together with measured angles, in computing the lengths of the other sides. *AGI* d. One of a pair of coordinate axes (the other being the principal meridian) used in the U.S. Public Land Survey system. It

consists of a line extending east and west along the true parallel of latitude passing through the initial point, along which standard township, section, and quarter-section corners are established. *AGI* e. An aeromagnetic profile flown at least twice in opposite directions and at the same level, in order to establish a line of reference of magnetic intensities on which to base an aeromagnetic survey. *AGI* f. The center line of location of a railway or highway; the reference line for the construction of a bridge or other engineering structure. Sometimes spelled: baseline. *AGI*

base map

a. A map on which information may be placed for purposes of comparison or geographical correlation. Base map was at one time applied to a class of maps now known as outline maps. It may be applied to topographic maps, also termed "mother maps," that are used in the construction of many types of maps by the addition of particular data. *AGI* b. A map of any kind showing essential outlines necessary for adequate geographic reference, on which additional or specialized information is plotted for a particular purpose; esp. a topographic map on which geologic information is recorded. *AGI*

basement

In geology, an underlying complex that behaves as a unit mass and does not deform by folding. *AIME, I*

basement complex

A series of rocks generally with complex structure beneath the dominantly sedimentary rocks. In many places, these are igneous and metamorphic rocks of either Early or Late Precambrian, but in some places these may be much younger, as Paleozoic, Mesozoic, or even Cenozoic. See also: [complex](#) Syn: [fundamental complex](#)

basement rock (complex)

a. A name commonly applied to metamorphic or igneous rocks underlying the sedimentary sequence. *AGI* b. Metamorphic and igneous Precambrian rocks. *AGI*

base metal

a. Any of the more common and more chemically active metals, e.g., lead, copper. *AGI* b. The principal metal of an alloy, e.g., the copper in brass. CF: [noble metal](#) c. In plural form, a classification of metals usually considered to be of low value and higher chemical activity when compared with the noble metals (gold, silver, platinum, etc.). This nonspecific term generally refers to the high-volume, low-value metals copper, lead, tin, and zinc. d. The metal base to which a coating or plating is applied. e. The chief constituent of a metal alloy; e.g., brass is a copper-base alloy.

base ore

Ore in which gold is associated with sulfides, as contrasted to free-milling ores, in which the sulfides have been removed by leaching. *Newton, 1*

base plug

A tapered cylinder, generally of wood, placed in a borehole and into which a deflection drive wedge may be driven in a random or oriented position. Syn: [deflecting plug](#); [deflection plug](#). *Long*

base price

There is a minimal market price for each metal below which it cannot fall without putting the average producer out of business; this price has been called the base price. *Hoover*

base rock

a. As used by some drillers, the solid rock immediately underlying the overburden material. *Long* b. As used by drillers in the Midwestern United States, the igneous rock formations underlying the sedimentary rocks. Also called basement; basement rock; pavement. *Long*

base station

An observation point used in geophysical surveys as a reference, to which measurements at additional points can be compared. *AGI*

basic

a. Said of an igneous rock having a relatively low silica content, sometimes delimited arbitrarily as 44% to 51% or 45% to 52% ; e.g., gabbro, basalt. Basic rocks are relatively rich in iron, magnesium, and/or calcium, and thus include most mafic rocks as well as other rocks. Basic is one of four subdivisions of a widely used system for classifying igneous rocks based on their silica content: acidic, intermediate, basic, and ultrabasic. CF: [femic](#) b. Said loosely of dark-colored minerals. CF: [silicic](#); [mafic](#). *AGI* c. Said of a plagioclase that is calcic.

basic bottom and lining

The inner bottom and lining of a melting furnace consisting of materials like crushed burnt dolomite, magnesite, magnesite bricks, or basic slag, that give a basic reaction at the operating temperature. *ASM, 1*

basic flowsheet

A diagram of the various stages in the treatment of the raw coal in a preparation plant, usually either a process flowsheet or an equipment flowsheet. *BS*, 5

basic front

In granitization, an advancing zone enriched in calcium, magnesium, and iron, that is said to represent those elements in the rock being granitized that are in excess of those required to form granite. During granitization, these elements are believed to be displaced and moved through the rock ahead of the granitization front, to form a zone enriched in minerals such as hornblende and pyroxene. Syn: [mafic front](#); magnesium front. *AGI*

basic grade

Used to define steel produced by the basic open-hearth process. *Hammond*

basic lava

Lava poor in silica, generally less than 52% total SiO₂; typically dark and heavy, as basalt.

basic lining

A lining for furnaces, converters, etc., formed of nonsiliceous material, usually limestone, dolomite, lime, magnesia, or ferrous oxide. *Fay*

basic lining process

An improvement of the Bessemer process in which, by the use of a basic lining in the converter and by the addition of basic materials during the blow, it is possible to eliminate phosphorus from the pig iron and keep it out of the steel. *Fay*

basic oxygen process

A steelmaking process in which oxygen is forced at supersonic speed through a retractable water-cooled lance, accelerating the burning off of unwanted elements in a charge of molten iron and scrap. *Encyclopaedia Britannica*

basic price

a. As used by the drilling and mining industries, a guaranteed price to be paid for a specific quantity of materials, or type of service. *Long* b. As applied to the price of metals, it is that figure at which the price is a minimum. See also: [normal price](#)

basic process

A steelmaking process, either Bessemer, open-hearth, or electric, in which the furnace is lined with a basic refractory, a slag rich in lime being formed and phosphorus removed. See also: [acid process](#); dephosphorization. *CTD*

basic refractories

Refractories that consist essentially of magnesia, lime, chrome ore, or forsterite, or mixtures of two or more of these. *Harbison-Walker*

basic refractory lining

A furnace lining, composed of material low in acidic minerals, such as silica, and high in basic minerals, such as lime, chromite, dolomite, magnesite, and magnesia.

basic slag

Slag rich in bases, such as metallic oxides; specif., slag rich in lime, made during the basic Bessemer or basic open-hearth steel processes, and, from the quantity of phosphorus contained in it, valuable as an artificial fertilizer. *Standard, 2*

basic solvent

One that accepts protons from solute. *Pryor, 3*

basic steel

Steel melted in a furnace with a basic bottom and lining and under a slag containing an excess of a basic substance, such as magnesia or lime. *ASM, 1*

basin

a. A natural depression of strata containing a coalbed or other stratified deposit. CF: [depression](#) b. The lowest part of a mine or area of coal lands. *Hudson* c. A general region with an overall history of subsidence and thick sedimentary section. *Wheeler, R.R.*

basin-and-range

Said of a topography, landscape, or physiographic province characterized by a series of tilted fault blocks forming longitudinal, asymmetric ridges or mountains and broad, intervening basins; specif. the Basin and Range physiographic province in the Southwestern United States. See also: [basin range](#)

basining

The bending down or settling of part of the Earth's crust in the form of a basin, as by rock deformation or by solution of underground deposits of salt or gypsum. *AGI*

basin range

A mountain range that owes its elevation and structural form mainly to faulting and tilting of strata and that is flanked by alluvium-filled basins or valleys. Etymol: from the Great Basin, a region in the Southwestern United States characterized by fault-block mountains. See also: [basin-and-range](#)

basis price

The price agreed between the seller and the buyer of an option at which the option can be exercised. This price is also called the "strike price." The price is normally the current market price of the metal. See also: [option](#)

basket

a. A type of single-tube core barrel made from thin-wall tubing with the lower end notched into points, which are intended to pick up a sample of granular or plastic rock material by bending in on striking the bottom of the borehole or a solid layer. Also used as a fishing tool to recover an article lost or dropped into a borehole. Syn: [basket core lifter](#); sawtooth barrel. CF: [calyx](#) b. Wire-mesh strainer in the top of a core barrel to strain out bits of debris, which might clog up the water ports in the core barrelhead.
Long

basket centrifuge

A device for dewatering in which wet coal is thrown by centrifugal force against a perforated containing surface that permits the outward passage of water and retains the coal. *BS, 5*

basket core

A sample of rock or rock material recovered by using a basket tube or core barrel. See also: [basket](#)

basket core lifter

A type of core lifter consisting of several fingerlike springs brazed or riveted to a smooth-surfaced ring having an inside diameter slightly larger than the core size being cut. Also called basket lifter; finger lifter. See also: [basket](#)

basonomelane

A variety of hematite containing titanium oxide. See also: [ilmenite](#)

bass

Eng. A black carbonaceous shale, Yorkshire, Lancashire, South and North Staffordshire. *Nelson*

basset

a. The outcropping edge of a geological stratum. *Webster 3rd* b. The shallow or rise side of a working. c. Coal outcrop. *Pryor, 3* d. An obsolete term for the noun outcrop and the verb to crop out. *AGI*

bassetite

A yellow monoclinic mineral, $\text{Fe}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}$; meta-autunite group.

bastard

a. Said of an inferior or impure rock or mineral, or of an ore deposit that contains a high proportion of noncommercial material. *AGI* b. Said of any metal or ore that gives misleading assays or values. *AGI* c. Said of a vein or other deposit close to and more or less parallel to a main vein or deposit, but thinner, less extensive, or of a lower grade. *AGI*

bastard asbestos

Miners' term for picrolite (antigorite), a mineral associated in places with chrysotile asbestos.

bastard cauk

Inferior barite; Derbyshire lead mines, U.K. *Arkell*

bastard emerald

See: [peridot](#)

bastard freestone

Any inferior or impure rock; the Inferior Oolite, Bath, U.K.

bastard ganister

A silica rock having the superficial appearance of a true ganister but characterized by more interstitial matter, a greater variability of texture, and often an incomplete secondary silicification. *AGI*

bastard quartz

a. See: [bull quartz](#) b. A round or spherical boulder of quartz embedded in soft or decomposed rock. *AGI*

bastard shale

See: [cannel shale](#)

bastite

An olive-green, blackish-green, or brownish variety of serpentine mineral resulting from the alteration of orthorhombic pyroxene (esp. enstatite), occurring as foliated masses in igneous rocks; characterized by a schiller (metallic or pearly) on the chief cleavage face of the pyroxene. Syn: [schiller spar](#)

bastnaesite

Alternate spelling of bastnaesite. See also: [bastnasite](#)

bastnasite

A greasy, wax-yellow to reddish-brown weakly radioactive mineral, $(\text{Ce,La})(\text{CO}_3)\text{F}$, most commonly found in contact zones, less often in pegmatites; found associated with allanite, cerite, tysonite, fluorite, and tornebohmite; hexagonal; obtained from Ryddarhyttan and Finbo, Sweden; Pikes Peak, CO, and Mountain Pass, CA. Syn: [bastnaesite](#)

bastonite

A greenish-brown mica that is closely related to phlogopite. *Standard, 2*

batch

A quantity of material destined for or produced by one operation. *Webster 3rd*

batch charger

A mechanical device for introducing batch to the furnace. Syn: [batch feeder](#)

batch feeder

See: [batch charger](#)

batch furnace

A furnace in which each charge is placed , heated, and withdrawn on completion of work. (Pryor, 1963)

batch grinding

The grinding of a charge of mineral (dry or wet) in a closed ball mill. *Pryor, 3*

batch house

The place where batch materials are received, handled, weighed, and mixed, for delivery to melting units. *ASTM*

batch mill

A grinding mill, usually cylindrical, into which a charge of ore and water is placed and is ground to completion of the required comminution. *Pryor, 3*

batch sintering

Presintering or sintering in such a manner that the products are furnace-treated in individual batches. *Osborne*

batch smelter

Any smelter that operates as a periodic unit, being charged, fired, and discharged according to a predetermined cycle. See also: [smelter](#) *ASTM*

batch test

A laboratory test on a small quantity of mineral under close control. *Pryor, 3*

batch treatment

Treatment of a parcel of material in isolation, as distinct from the treatment of a continuous stream of ore. *Pryor, 1*

bate

a. To enlarge a colliery road by lowering the floor. CF: [bating](#) *Pryor, 3* b. Eng. Cleavage in slates, esp. in the Sheerbate stone. *Arkell* c. Grain, hem, secondway in other rocks. Also spelled bait. *Arkell*

batea

See: [pan](#); gamella.

bate barrel

Leic. After drawing a number of barrels of water out of a sump, the first barrel for which there is not sufficient water to fill it.

bath

a. The molten material in any furnace. *Standard, 2* b. A medium such as water, air, sand, or oil for regulating the temperature of something placed in or on it; also, the vessel containing such a medium. *Webster 3rd*

batholith

A large, generally discordant plutonic mass that has more than 40 sq mi (104 km²) of surface exposure and no known floor. Its formation is believed by most investigators to involve magmatic processes. Also spelled: bathylith. Syn: [abyssolith](#)

batholithic

Pertaining to, originating in, or derived from a batholith.

bathotonic reagent

A substance tending to diminish surface tension. See also: [depressant](#) *Nelson*

bathvillite

An amorphous, opaque, very brittle woody resin; forms fawn-brown porous lumps in torbanite; at Bathville, Scotland.

bathyal

a. Pertaining to the benthonic environment on the continental slope, ranging in depth from 200 to 2,000 m. *AGI* b. Pertaining to the bottom and overlying waters between 100 and 1,000 fathoms (600 to 6,000 ft or 183 to 1,830 m). *AGI* c. Of or pertaining to the deeper parts of the ocean; deep sea. *Webster 3rd*

bathyal zone

In oceanography, the slope from the continental shelf at 100 fathoms (183 m) to the abyssal zone at 1,000 fathoms (1,830 m). Also called bathyal district. *Webster 3rd*

bathyclinograph

In oceanography, an instrument for measuring vertical currents in the deep sea. *Webster 3rd*

bathyconductograph

A device to measure the electrical conductivity of seawater at various depths from a moving ship. Abbrev. bc. *Hy*

bathygram

In oceanography, a record obtained from sonic sounding instruments. *Webster 3rd*

bathylith

See: [batholith](#)

bathymeter

This instrument measures temperature, pressure, and sound velocity to depths up to 7 miles (11.2 km). The device is completely transistorized and uses frequency modulation for telemetering. *Hunt*

bathymetric

a. Relating to the measurement of depths of water in oceans, seas, and lakes. Syn: [bathymetrical](#) b. Relating to the contour of the bottoms of oceans, seas, and lakes. *Webster 3rd* c. Relating to the distribution in depth of marine or lacustrine organisms. *Webster 3rd*

bathymetrical

See: [bathymetric](#)

bathymetric chart

Chart showing depths of water by means of contour lines or by color shading. *Hy*

bathymetric contour

See: [isobath](#)

bathymetry

In oceanography, the measurement of depths of water in oceans, seas, and lakes; also, the information derived from such measurements. *Webster 3rd*

bathorographical

In oceanography, of or relating to ocean depths and mountain heights. *Webster 3rd*

bathypelagic

In oceanography, of, relating to, or living in the deeper waters of the ocean, esp. those several hundred feet below the surface--distinguished from abyssal and pelagic. *Webster 3rd*

bathyscaphe

In oceanography, a navigable submersible ship that is used for deep-sea exploration, has a spherical watertight cabin attached to its underside, and uses gasoline and shot for ballast. *Webster 3rd*

bathysmal

In oceanography, of or relating to the bottom of the deeper parts of the sea, esp. those parts between 100 fathoms (183 m) and 1,000 (1,830 m) fathoms deep. *Webster 3rd*

bathysophical

In oceanography, of or relating to a knowledge of the depths of the sea or of the things found there. *Webster 3rd*

bathysphere

In oceanography, a spherical diving apparatus, made large enough to contain two people and instruments; capable of resisting tremendous pressure, and therefore of descending to great depths; it is used in oceanography for the investigation of deepwater faunas. *CTD*

bathysystem

A coined word for a permanent sea floor installation. *Hunt*

bathythermogram

In oceanography, a record obtained with a bathythermograph. *Webster 3rd*

bathythermograph

An instrument, which may be lowered into the sea from a vessel at anchor or underway, to record temperature as a function of depth. The temperature-sensing device is a Bourdon tube, the depth finder is a bellows system. Accuracy of temperature is + or - 0.1 degrees F (+ or - 0.056 degrees C); depth + or - 10 ft (3.0 m). Abbrev. bt. *Hy*

bathythermosphere

In oceanography, a bathythermograph. *Webster 3rd*

bathyvessel

In oceanography, a ship (as a submarine or bathysphere) designed for exploration of or navigation in water far below the surface of a sea or lake. *Webster 3rd*

bating

Eng. Lowering a drift or road. See also: [bate](#)

batten

a. A strip of wood used for nailing across two other pieces (as to hold them together or to cover a crack). *Webster 3rd* b. A piece of square-sawn converted timber, between 2 in and 4 in (5.1 and 10.2 cm) in thickness and from 5 to 8 in (12.7 to 20.3 cm) in width. Used for flooring or as a support for laths. *CTD* c. A bar fastened across a door, or anything composed of parallel boards to secure them and to add strength and/or reduce warping. *CTD*

batter

a. Recessing or sloping a wall back in successive courses; opposite of corbel. *ACSG, 1*
b. A paste of clay or loam. *Webster 2nd* c. The inward slope from bottom to top of the face of a wall. *Nichols, 1* d. A pile driven at an angle to widen the area of support and to resist thrust. *Nichols, 1*

batter boards

Horizontal boards placed to mark a line and a grade of a proposed building or slope. *Nichols, 1*

battered set

A set of mine timbers in which the posts are inclined.

batter level

An instrument for measuring inclination from the vertical. *Standard*, 2

battery

a. See: [blasting machine](#); exploder. *Nelson* b. A number of similar machines or similar pieces of equipment placed side by side on a single or separate base and by means of common connections as a unit. *Long* c. Mine support in which timbers are placed in groups of 3 to 12 or more. The battery may be strengthened by binding with wire. *Spalding* d. A wooden platform for miners to stand upon while at work, esp. in steeply dipping coal beds. e. A series or row of coke ovens. *Mersereau*, 2 f. A bulkhead or structure of timber for keeping coal in place. *Hess* g. The plank closing the bottom of a coal chute. h. A series of stamps, usually five, operated in one box or mortar, for crushing ores; also, the box in which they are operated. *Hess* i. A stamper mill for pulverizing stone. *Gordon* j. Timbering in which the sticks are placed from foot to hanging wall, touching each other, in a solid mass of 3 to 12 or more. The battery may be further strengthened by binding around with wire. *Spalding* k. In steeply pitching seams, a wooden structure built across the chute to hold back blasted coal. *Korson* l. A number of stamps for crushing and pulverizing ores. *Nelson* m. Section of ore dressing (reduction) plant. *Pryor*, 3 n. A combination of chemically activated accumulators, which, after charging, may be used for a considerable time as a source of direct-current electricity. Also called storage battery. *Long*

battery charging station

See: [locomotive garage](#)

battery of holes

A number of charges, in drill holes, fired simultaneously with an electric current. Also called multiple shot. *Fay*

battery of ovens

A row or group of ovens for making coke from coal.

battery ore

A type of manganese ore, generally a pure crystalline manganese dioxide (pyrolusite or nsutite), that is suitable for use in dry cells. *AGI*

battery starter

In anthracite and bituminous coal mining, one who charges and sets off explosives in large lumps of coal or where these lumps have accumulated and blocked the flow of coal

down chutes from the storage structures (batteries). Also called batteryman; chute tender; starter. *DOT*

battery starting

The use of unconfined explosives to start the flow of coal down a breast or chute in an anthracite mine. *CFR, 4*

baulk

A beam. *Mason*

Baume gravity

Designating or conforming to either of the scales used by the French chemist, Antoine Baume (1728-1804). One scale, which is used with liquids heavier than water, sinks to 0 degrees (B or Be, symbols for Baume) in pure water and to 15 degrees (B or Be) in a 15% salt solution. The other scale, for liquids lighter than water, sinks to 0 degrees (B or Be) in a 10% salt solution and to 10 degrees (B or Be) in pure water. *Webster 2nd*

baumhauerite

A lead- to steel-gray triclinic mineral, $Pb_3 As_4 S_9$.

Baum jig

A washbox in which the pulsating motion is produced by the intermittent admission of compressed air to the surface of the water following a principle introduced by Baum. Also called Baum box; Baum-type washbox. See also: [jig](#)

baum pot

a. A cavity left in roof strata over coal as a result of the dropping downward of a cast of a fossil tree stump after removal of the coal. *AGI* b. Eng. Nodule in the roof of the Halifax hard bed coal. CF: [potlid](#) *Arkell*

Baum washer

See: [Baum jig](#)

bauxite

An off-white, grayish, brown, yellow, or reddish brown rock composed of amorphous or microcrystalline aluminum oxides and oxyhydroxides, mainly gibbsite $Al(OH)_3$, bayerite $Al(OH)_3$, boehmite $AlO(OH)$, and diaspore $AlO(OH)$ admixed with free silica,

silt, iron hydroxides, and esp. clay minerals; a highly aluminous "laterite." It is massive, pisolitic, earthy; occurs as weathered surface deposits after prolonged leaching of silica from aluminous rocks under tropical to subtropical weathering, also transported deposits. Bauxite is the chief ore of aluminum.

bauxite brick

A firebrick composed essentially of hydrated alumina and ferric oxide. Such bricks are used for the lining of furnaces where a neutral material is required. *Osborne*

bauxite cement

A cement made from bauxite and lime in an electric furnace; it hardens rapidly. Sometimes called ciment fondu. *Nelson*

bauxite pneumoconiosis

Found in workers exposed to fumes containing aluminum oxide and minute silica particles arising from smelting bauxite in the manufacture of corundum. Syn: [Shaver's disease](#)

bauxitic

Containing much bauxite; e.g., a bauxitic clay containing 47% to 65% alumina on a calcined basis, or a bauxitic shale abnormally high in alumina and notably low in silica. *AGI*

bauxitic clay

a. A clay consisting of a mixture of bauxitic minerals, such as gibbsite and diaspore, with clay minerals, the former constituting not over 50% of the total. The opposite of this would be an argillaceous bauxite. *ACSB, I* b. A natural mixture of bauxite and clay, containing not less than 47% nor more than 65% alumina on a calcined basis. *Harbison-Walker*

bauxitization

Development of bauxite from primary aluminum silicates (such as feldspars) or from secondary clay minerals under aggressive tropical or subtropical weathering conditions of good surface drainage, such as the dissolving (usually above the water table) of silica, iron compounds, and other constituents from alumina-containing material. *AGI*

bavenite

A white hydrous silicate of aluminum, calcium, and beryllium, $\text{Ca}_4 \text{Be}_2 \text{Al}_2 \text{Si}_9 \text{O}_{26} (\text{OH})_2$; orthorhombic; earthy, radiating fibrous; platy prismatic crystals. From Baveno, Italy; Mesa Grande, CA. *English*

b axis

One of the three crystallographic axes used as reference in crystal description. It is oriented horizontally, right to left. The letter b usually appears in italics. CF: [a axis](#); [c axis](#).

bay

a. An open space in a mine for storage of equipment, conducting repairs, or disposal of waste. b. A recess in the shore or an inlet of a sea or lake between two capes or headlands, not as large as a gulf, but larger than a cove. *Hunt* c. A portion of the sea that penetrates into the interior of the land. It is usually wider in the middle than at the entrance. It may be similar to a gulf, but smaller. *Hunt* d. A portion of the sea partly surrounded by ice. *Hunt* e. The discharge point of a hopper, usually applied to coal or ore hopper rail cars.

bayerite

A dimorph of gibbsite, long known as a synthetic product, now found as a naturally occurring mineral, $\text{Al}(\text{OH})_3$, from Portole, Istria. The naturally occurring bayerite from Fenyoro, Hungary, was found by X-ray study to be gibbsite. *Am. Mineral.*, 1; *Am. Mineral.*, 1

Bayer process

A process for extracting alumina from bauxite ore before the electrolytic reduction of alumina. *ASM*, 1

bayldonite

A monoclinic mineral, $\text{PbCu}_3 (\text{AsO}_4)_2 (\text{OH})_2 \cdot \text{H}_2 \text{O}$; forms minute grass-green to blackish-green mammillary masses; in Cornwall, U.K.

bayleyite

A yellow monoclinic mineral; $\text{Mg}_2 (\text{UO}_2)(\text{CO}_3)_3 \cdot 18\text{H}_2 \text{O}$; radioactive.

bay salt

A coarse-grained variety of common salt obtained by evaporating seawater in shallow bays or pits by the heat of the sun. *Standard*, 2

bazzite

A hexagonal mineral, $\text{Be}_3(\text{Sc,Al})_2\text{Si}_6\text{O}_{18}$; the scandium analog of beryl; blue; at Baveno, Italy; Val Strem, Switzerland; and in central Kazakhstan.

bc-joint

See: [longitudinal joint](#)

b direction

See: [b axis](#)

beach concentrate

A natural accumulation in beach sand of heavy minerals selectively concentrated (by wave, current, or surf action) from the ordinary beach sands in which they were originally present as accessory minerals; esp. a beach placer. See also: [beach placer](#)

beach deposit

Concentrations of mineral formed by the grinding action of natural forces (wind, wave, or frost) and the selective transporting action of tides and winds. *Pryor, 3*

beach drift

The movement of material along the shore by the action of the uprush and backwash of waves breaking at an angle with the shore. Syn: [longshore drift](#)

beach mining

The exploitation of the economic concentrations of the heavy minerals rutile, zircon, monazite, ilmenite, and sometimes gold, which occur in sand dunes, beaches, coastal plains, and deposits located inland from the shoreline. High-grade concentrate is usually obtained from low-grade material by the use of suction dredges and spiral concentrators. *Nelson*

beach ore

See: [beach placer](#)

beach placer

A placer deposit on a present or ancient sea beach. There may be a series of paleo-beach placers owing to changes of shoreline. See also: [black sand](#); [placer](#); [beach concentrate](#).
Syn: [beach ore](#)

beach ridge

A low, essentially continuous mound of beach or beach-and-dune material (sand, gravel, shingle) heaped up by the action of waves and currents on the backshore of a beach beyond the present limit of storm waves or the reach of ordinary tides, and occurring singly or as one of a series of approx. parallel deposits. The ridges are roughly parallel to the shoreline and represent successive positions of an advancing shoreline. *AGI*

bead

a. The globule of precious metal obtained by the cupellation process in assaying. *Webster 3rd* b. In blowpipe analysis of minerals, a drop of a fused material, such as a "borax bead," used as a solvent in color testing for various metals. The addition of a metallic compound to the bead will cause the bead to assume the color that is characteristic of the metal. See also: [blowpiping](#) *AGI*

beads

In ion exchange, sized resin spheres, usually +20 mesh, so constituted as to capture ions from pregnant solutions under stated loading conditions and to relinquish them under other (eluting) conditions. Two types are anionic and cationic. See also: [resin](#)

bead tests

In mineral identification, borax or other flux is fused to a transparent bead by heating in a blowpipe or other flame in a small loop formed from platinum wire. When suitable minerals are flux melted in this bead, characteristic glassy colors are produced in an oxidizing or reducing flame and serve to identify specific chemical elements.

beaker decantation

A method of sizing finely ground, insoluble, homogeneous material or classifying ore particles. A weighed quantity is dispersed in liquid and allowed to settle for a timed period, a liquid fraction then being decanted. The treatment is repeated several times, the settled fraction now representing one size group (if homogeneous) or settled group (if minerals of various densities are present). The decanted fluid is similarly treated for progressively lengthened settling periods. *Pryor, 3*

beam

a. A bar or straight girder used to support a span of roof between two support props or walls. See also: [crossbar](#) b. The walking beam; a bar pivoted in the center, which rocks up and down, actuating the tools in cable-tool drilling or the pumping rods in a well being pumped. *Hess*

beam action

In crushing, seizure of rock slab between approaching jaws so as to present crushing stress above unsupported parts of the rock, thus inducing shear failure rather than failure under compression. *Pryor, 3*

Beaman stadia arc

A specially graduated arc attached to the vertical circle of an alidade or transit to simplify the computation of elevation differences for inclined stadia sights (without the use of vertical angles). The arc is so graduated that each division on the arc is equal to $100 (0.5 \sin 2A)$, where A is the vertical angle. Named after William M. Beaman (1867-1937), U.S. topographic engineer, who designed it in 1904. *AGI*

beam building

A process of rock bolting in flat-lying deposits where the bolts are installed in bedded rock to bind the strata together to act as a single beam capable of supporting itself and thus stabilizing the overlying rock. *Lewis*

beam compass

An instrument for describing large arcs. It consists of a beam of wood or metal carrying two beam heads, adjustable for position along the beam, and serving as the marking points of the compass. Syn: [trammel](#)

beam engine

An early type of vertical steam engine. It operated the Cornish pump. *Nelson*

bean ore

A loose, coarse-grained pisolitic iron ore; limonite occurring in lenticular aggregations. See also: [pea ore](#)

bean rock

Shingle cemented by tufa, Ventnor, U.K.

beans

A cleaned and screened anthracite product 7/8 in by 3/8 in (22.2 mm by 9.5 mm). *Nelson*

bear

a. To bear in; underholing or undermining; driving in at the top or at the side of a working. b. Eng. A calcareous or clay ironstone nodule, Derbyshire. *Arkell* c. The mass of iron, which, as a result of wear of the refractory brickwork or blocks in the hearth bottom of a blast furnace, slowly replaces much of the refractory material in this location. Syn: [salamander](#)

bearer

Eng. A band of hard limestone consisting of numerous stromatoporoids, mainly a ramose species, Wenlock Limestone, Dudley. *Arkell*

bearer bar

One of the bars that support the grate bars in a furnace. *Fay*

bearers

Heavy timbers placed in a shaft at intervals of 30 to 100 ft (9.1 to 30.5 m) to support shaft sets. They are usually put beneath the end plates and dividers, and rest in hitches cut in the wall. Also used to support pumping gear. Syn: [biard](#)

bearing

a. The part of a beam or girder that actually rests on the supports. *CTD* b. Undercutting the coal face by holing. *Nelson* c. The horizontal angle between the meridian (true or magnetic) and any specified direction. The angle is measured from either the north or the south point, as may be required to give a reading of less than 90 degrees, and the proper quadrant is designated by the letter N or S, preceding the angle, and the letter E or W, following it; as, N. 80 degrees E. CF: [azimuth](#) d. The points of support of a beam, shaft, or axle, i.e., bearing points. e. The direction of a mine drivage usually given in terms of the horizontal angle turned off a datum direction, such as the true north and south line. *Nelson* f. In Texas land surveys, a reference point to identify a land corner or a point on a survey line. *Seelye, 2* g. A part in which a shaft or pivot revolves. *Nichols, 1* h. See: [ball bearing](#)

bearing bed

A bed that contains, or is likely to contain, ore minerals; one that is productive as opposed to dead or barren. *Arkell*

bearing capacity

a. The load-per-unit area that the soil or solid rock can support without excessive yield. See also: [foundation investigation](#) b. See also: [ultimate bearing capacity](#)

bearing door

A door so placed as to direct and regulate the amount of air current necessary for the proper ventilation of a district of a mine. See also: [separation door](#)

bearing-in

The depth of an undercut, or holing, from the face of the coal to the end of the undercut. *Fay*

bearing-in shots

Boreholes tending to meet in the body of the rock; intended to unkey the face when charged and fired. *Stauffer*

bearing plate

A plate of the thickness and area required to distribute a given load, such as a plate under a beam flange resting on a wall. If the plate is 2 in (5.1 cm) or more in thickness, it is called a slab. *Crispin*

bearing pressure

The load on a bearing surface divided by the area upon which it rests. *Hammond*

bearing set

In a mine shaft, a specially substantial set of timbers used at intervals to support the linings and ordinary bearers. They are tied into the surrounding rock to give extra strength.

bearing stake

A stake set on a line to indicate the horizontal direction an inclined borehole is to be drilled. *Long*

bearing stratum

The earth formation that has been selected as the most suitable to support a given load. *Hammond*

bearing strength

The maximum bearing load at failure divided by the effective bearing area. In a pinned or riveted joint, the effective area is calculated as the product of the diameter of the hole and the thickness of the bearing member. *ASM, I*

bearsite

A monoclinic mineral, $\text{Be}_2(\text{AsO}_4)(\text{OH}) \cdot 4\text{H}_2\text{O}$.

bears' muck

Eng. Soft, bluish earth. Used by well sinkers in Cambridgeshire and Huntingdonshire.

See also: [caballa ball](#)

beater

A laborer who shovels or dumps asbestos fibers and sprays them with water to prepare them for the beating process that reduces fibers to pulp for making asbestos paper. *DOT*

beater mill

Mill used for impact crushing of easily broken minerals. An armature carrying swinging hammers, plates, or disks hits the falling stream of rock, dashing particles against one another and against the casing of the mill. See: [hammermill](#)

beaverite

A trigonal mineral, $\text{Pb}(\text{Cu,Fe,Al})_3(\text{SO}_4)_2(\text{OH})_6$; canary yellow; in minute plates; in Beaver County, UT.

Becke line

In the "Becke test" a bright line, visible under a microscope under plane polarized light, that separates substances of different indices of refraction.

beckerite

a. A brown resin, occurring with amber. *English* b. A brown variety of retinite having a very high oxygen content (20% to 23%).

Becke test

In polarized-light microscopy, a method or test for determining relative indices of refraction between two adjacent mineral grains or between a mineral grain and its host medium; e.g., Canada balsam, Lakeside cement, an epoxy resin, or an immersion oil of known index of refraction. On defocusing by increasing the working distance between

the microscope stage and the objective lens, the Becke line moves toward the higher index of refraction. CF: [van der Kolk method](#)

Becorit system

An overhead monorail system. See also: [monorail](#)

becquerelite

An orthorhombic mineral, $\text{Ca}(\text{UO}_2)_6 \text{O}_4 (\text{OH})_6 \cdot 8\text{H}_2 \text{O}$, with barium and potassium substitution for calcium; amber-yellow; a radioactive product of uraninite and ianthinite alteration.

bed

a. The smallest distinctive division of a stratified series, marked by a more or less well-defined surface or plane from its neighbors above and below; a layer or stratum. *Fay* b. A deposit, as of ore, parallel to the stratification. *Standard, 2* c. A bed (or beds) is the smallest formal lithostratigraphic unit of sedimentary rocks. The designation of a bed or a unit of beds as a formally named lithostratigraphic unit generally should be limited to certain distinctive beds whose recognition is particularly useful. Coalbeds, oil sands, and other beds of economic importance commonly are named, but such units and their names usually are not a part of formal stratigraphic nomenclature (NACSN, 1983, Art. 26). d. That portion of an outcrop or face of a quarry that occurs between two bedding planes. *Fay* e. The level surface of rock upon which a curb or crib is laid. *Fay* f. All the coal, partings, and seams that lie between a distinct roof and floor. *Hess* g. Perhaps the most common term in geology, meaning layer or stratum. Quarrymen usually mean by beds not the stone beds in the geologist's sense but the partings between them. *Arkell* h. A stockpile, as of ore, concentrates, and fluxes, built up of successive layers so that transverse cutting yields a uniform mixture for furnace feed until the material is all consumed. i. In mineral processing, a heavy layer of selected oversized mineral or metal shot maintained on screen of jig. *Pryor, 3* j. That part of conveyor upon which the load or carrying medium rests or slides while being conveyed. k. In bulk material conveyors, the mass of material being conveyed. l. A base for machinery. *Nichols, 1*

bed claim

Aust. A mining claim lying on the bed of a stream.

bedded

Applied to rocks resulting from consolidated sediments and accordingly exhibiting planes of separation designated bedding planes. *Fay*

bedded deposit

a. A term usually applied to mineral deposits that are found parallel with the stratification of sedimentary rocks and usually of contemporaneous origin. The term is used to describe layerlike deposits of replacement origin. See also: [bedded formation](#) b. Syn: [blanket deposit](#)

bedded formation

A formation that shows successive beds, layers, or strata owing to the manner in which it was formed. See also: [bedded deposit](#)

bedded rock

One of the two subdivisions of competent rock. To be classed as bedded rock, the rock within each bed, in addition to being elastically perfect, isotropic, and homogeneous, must have a bed thickness that is small compared with the roof span, and the bond between beds must be weak. Most sedimentary rocks and some stratified metamorphic rocks fall in this group.

bedding

a. A quarry term for a structure occurring in granite and other crystalline rocks that tend to split in well-defined planes more or less horizontal or parallel to the land surface. Syn: [sheeting](#) *Wheeler, R.R.* b. The storing and mixing of different ores in thin layers in order to blend them more uniformly in reclamation. *AGI* c. The layer of heavy and oversized material placed above the screen in jigging. Also called ragging. *Pryor, 4* d. Pieces of soft metal placed under or around a handset diamond as a cushion or filler. Also called backing; calking. *Long* e. Ground or supports in which pipe is laid. *Nichols, 1* f. The arrangement of a sedimentary rock in beds or layers of varying thickness and character; the general physical and structural character or pattern of the beds and their contacts within a rock mass, such as cross-bedding and graded bedding; a collective term denoting the existence of beds. Also, the structure so produced. The term may be applied to the layered arrangement and structure of an igneous or metamorphic rock. See also: [stratification](#) *AGI* g. The initial filling of a thickener for continuous operation.

bedding cleavage

Cleavage that is parallel to the bedding. *Billings*

bedding down

Formation of layer of valueless and inert rock at points in a new flowline where material will settle from the stream of ore being treated, for example, between bottom of thickener and its rakes. *Pryor, 3*

bedding fault

A fault that is parallel to the bedding. *AGI*

bedding fissility

A term generally restricted to primary foliation parallel to the bedding of sedimentary rocks; i.e., it forms while the sediment is being deposited and compacted. It is the result of the parallelism of the platy materials to the bedding plane, partly because they were deposited that way and partly because they were rotated into this position during compaction. *AGI*

bedding glide

Overthrusting in which a bed, such as a coal seam, is disrupted and thrust laterally along the roof or floor parting, giving a duplication of coal. *Nelson*

bedding joint

a. A thin layer differing in composition with the beds between which it occurs. *Schieferdecker* b. A joint parallel to the bedding planes formed by tectonic processes. *Schieferdecker*

bedding plane

a. In sedimentary or stratified rocks, a surface that separates each layer from those above or below it. It usually records a change in depositional circumstances by grain size, composition, color, or other features. The rock may tend to split or break readily along bedding planes. See also: [plane](#) b. Surface on which rock-forming mineral has been deposited. Syn: [bedding](#) c. A separation or weakness between two layers of rock caused by changes during the building up of the rock-forming material. See also: [bed joint](#)

bedding thrust

A thrust fault that is parallel to the bedding. *Billings*

bede

A miner's pick. *Pryor, 3*

Bedford limestone

One of the finest and best known building stones to be found in the United States. It gets its name from its shipping point, Bedford, IN. *Crispin*

bed joint

a. A horizontal crack or fissure in massive rock. See also: [bedding plane](#) b. One of a set of cracks or fissures parallel with the bedding of a rock. *Webster 3rd* c. A horizontal joint between courses of brick. *ARI* d. The horizontal layer of mortar on (or in) which a masonry unit is laid. *ACSG, 1*

bedrock

a. Solid rock exposed at the surface of the Earth or overlain by unconsolidated material, weathered rock, or soil. b. In Australia, the stratum upon which the wash dirt rests is usually called bedrock. It usually consists of granite or boulder clay (glacial) and, much more rarely, basalt. When the stratum consists of slates or sandstones (Silurian or Ordovician), it is usually called reef rock. *Eng. Min. J., 1* c. A general term for the rock, usually solid, that underlies soil or other unconsolidated, superficial material. A British syn. of the adjectival form is "solid," as in solid geology. See: [stonehead](#) *AGI* d. See: [bottom rock](#); rock base.

bedrock test

A borehole drilled to determine the character of bedrock and the character and depth of overburden overlying such bedrock. Syn: [testing bedrock](#) *Long*

bed separation

The thin cavities formed along bedding planes due to differential lowering of strata over mine workings; e.g., a shale with its greater bending capacity will subside and separate from a higher bed of sandstone. Roof supports are so set as to keep bed separation to a minimum. *Nelson*

bed vein

A vein following the bedding in sedimentary rocks, or a mineralized permeable stratigraphic zone below an impervious bed. CF: [blanket vein](#); manto; sheet ground.

beech coal

Charcoal made from beechwood.

beeches

Scot. Strips of hardwood fastened to pump rods to save them from wear at the collars. *Fay*

beef

A quarry worker's term, used originally in Purbeck, southern England, for thin, flat-lying veins or layers of fibrous calcite, anhydrite, gypsum, halite, or silica, occurring along bedding planes of shale, giving a resemblance to beef. It appears to be due to rapid crystallization in lenticular cavities. See also: [bacon](#)

beehive coke

Coke manufactured in beehive, rectangular, or similar forms of ovens in a horizontal bed, where heat for the coking process is secured by combustion within the oven chamber. *ASTM*

beehive coke oven

A coke oven with a brick bottom, side walls, and a domed roof.

beehive kiln

An intermittent kiln, circular in plan, with fireboxes arranged around the circumference. Such kilns find use in the firing of blue engineering bricks, pipes, some refractory bricks, etc. Syn: [round kiln](#) *Dodd*

Beethoven exploder

A machine for the multishot firing of series-connected detonators in tunneling and quarrying. See also: [exploder](#)

beetle stone

A nodule of coprolitic ironstone, so named from the resemblance of the enclosed coprolite to the body and limbs of a beetle. Syn: [septarium](#) *Fay*

beetling stones

Flat rocks on which clothes were beetled (stamped or pounded).

before breast

A miner's term for that part of the orebody that still lies ahead. See also: [breast](#)

beidellite

A monoclinic mineral, $(\text{Na}, \text{Ca}_{0.5})_{0.3} \text{Al}_2 (\text{Si}, \text{Al})_4 \text{O}_{10} (\text{OH})_2 \cdot n\text{H}_2\text{O}$; smectite group; aluminum rich and poor in magnesium and iron; a common constituent of soils and certain clay deposits (e.g., metabentonite). CF: [montmorillonite](#)

Beien kep gear

An improved type of kep in which the kep shoes are withdrawn without previously raising the cage and thus reducing the decking time. The operation may be automatic, except for cage release, because the arrangement allows the kep shoes to trip without the position of the hand lever being altered. See also: [kep](#)

Beien machine

A pneumatic stowing machine that consists of a paddle wheel with six compartments working inside an adjustable airtight casing. This wheel is driven at a speed of 15 to 30 rpm by means of an air turbine through gearing. Two sizes of Beien machines are used having capacities of 30 yd³ and 60 yd³ (22.9 m³ and 45.9 m³) of stowing material per hour, respectively. The dirt falls from the paddle wheel into the airstream in the pipe underneath the paddle box and passes along 6-in (15.2-cm) diameter pipes to the outlet, where a detachable deflector guides the stream of dirt into the required place in the pack hole. *Mason*

Beilby layer

Flow layer resulting from incipient fusion during polishing of mineral surface, and therefore not characteristic of true crystal structure. *Pryor, I*

Belfast truss

A bowstring design of girder fabricated entirely from timber components. *Hammond*

Belgian coke oven

A rectangular variation of the beehive coke oven. See also: [Belgian oven](#)

Belgian effective temperature

A temperature scale used in Belgium for measuring the environmental comfort in mines. *Roberts, I*

Belgian oven

A rectangular oven with end doors and side flues for the manufacture of coke. See also: [Belgian coke oven](#)

Belgian press

See: [double-roll press](#)

Belgian process

A process (no longer used) to smelt zinc in which roasted zinc ore is mixed with a reducing material, such as coal or coke, placed in cylindrical retorts, and heated in a furnace, such that the escaping zinc vapor is condensed from the open end of the retort.
Fay

Belgian silex

A very hard, tough, more or less cellular quartzite resembling French buhrstone and the most favored natural mill-lining material for most purposes. It is imported in rectangular blocks that are more or less shaped to fit the curve of a mill. *AIME, 1*

Belgian zinc furnace

A furnace in which zinc is reduced and distilled from calcined ores in tubular retorts. These furnaces may be classified as direct fired and gas fired, but there is no sharp division between these systems, which merge into one another by difficultly definable gradations. Each class of furnace may be subdivided into recuperative and nonrecuperative, but heat recuperation in connection with direct firing is rare.

belgite

See: [willemite](#)

belite

a. A constituent of portland cement clinkers. *English* b. A calcium orthosilicate found as a constituent of portland-cement clinkers; specif. larnite. Syn: [felite](#)

belith

Original spelling of belite. *Hey, 1*

Belknap chloride washer process

This coal washer uses a calcium chloride solution of a comparatively low density and depends on mechanically induced upward currents to obtain a separation at the desired specific gravity. It produces a clean, dustless, nonfreezing coal. *Mitchell*

bell

a. A cone-shaped mass of ironstone or other substance in the roof of a coal seam. Bells are dangerous as they tend to collapse suddenly and without warning. See also: [pot bottom](#) b. A gong used as a signal at mine shafts. c. See: [cone](#)

bellan

a. Eng. Dusty lead ore. *Arkell* b. A form of lead poisoning to which miners are subject. Also spelled belland; bellund.

belland

See: [bellan](#)

bell and hopper

See: [cup and cone](#)

bellcrank drive

A device used to drive an auxiliary shaker conveyor without changing the direction of the main conveyor. It consists essentially of two driving arms, placed at right angles to each other and supported at their pivot point by a fulcrum jack. When these driving arms are attached to the main and auxiliary conveyors, the reciprocating motion of the main conveyor is transmitted to the auxiliary conveyor, which can then discharge its load onto the main conveyor. *Jones, I*

belled

Eng. Widened; said of the enlarged portion of a shaft at the landing for running the cars past the shaft, and for caging.

bell holes

A conical cavity in a coal mine roof caused by the falling of a large concretion; or, as of a bell mold.

bellies

Widenings in a vein. See also: [belly](#)

bellingerite

A triclinic mineral, $\text{Cu}_2(\text{IO}_3)_6 \cdot 2\text{H}_2\text{O}$; forms light green or bluish green crystals; at Chuquicamata, Chile.

bellite

a. An explosive consisting of five parts of ammonium nitrate to one of metadinitrobenzene, usually with some potassium nitrate. *Fay* b. A lead chromo-arsenate in delicate velvety, red to orange tufts. *Webster 2nd*

bell jar

See: [jar collar](#)

bell-metal ore

Corn. An early name for tin pyrite (stannite), so called because of its bronze color. See also: [stannite](#)

bell mold

Som. A conical-shaped patch of a mine roof, probably originating with the fossils called sigillaria, or the roots of trees. Syn: [caldron](#) See also: [bell](#); [caldron bottom](#). *Fay*

bellows

a. An instrument with an air chamber and flexible sides used for compressing and/or directing a current of air. *Crispin* b. An expansible metal device containing a fluid that will volatilize at some desired temperature, expand the device, and open or close an opening or a switch; used in controls and steam traps. *Strock, 2*

bell pit mining

Obsolete method of winning coal or bedded iron from shallow deposits, in which mineral was extracted and dragged to a central shaft. *Pryor, 3*

Bell process

See: [Bell's dephosphorizing process](#)

bell screw

An internally threaded bell-shaped iron bar for recovering broken or lost rods in a deep borehole. Syn: [box bell](#); [screw bell](#); [bell tap](#). *Fay*

Bell's dephosphorizing process

The removal of phosphorus from molten pig iron in a puddling furnace lined with iron oxide and fitted with a mechanical rabble to agitate the bath. Red-hot iron ore is added. See also: [Krupp washing process](#) Syn: [Bell process](#)

bell sheave

Aust. A sheave in the shape of a truncated cone used in connection with the main-and-tail system of rope haulage at curves, so as to keep the rope close to the ground. *Fay*

bell socket

See: [bell tap](#); screw bell.

bell tap

A cylindrical fishing tool having an upward-tapered inside surface provided with hardened threads. When slipped over the upper end of lost, cylindrical, downhole drilling equipment and turned, the threaded inside surface of the bell tap cuts into and grips the outside surface of the lost equipment. Also called bell; box bill; die; die collar; die nipple. See also: [bell screw](#); [screw bell](#); [die](#). Syn: [bell socket](#); [outside tap](#). *Long*

bell top

Term used to describe a good roof that has a clear ringing sound. *Kentucky*

bellund

See: [bellan](#)

bell work

a. *Derb.* A system of working an ironstone measure by upward underground excavations around the shafts (raises) in the form of a bell or cone. *Fay* b. A method used in working salt deposits. *Standard, 2*

belly

a. See: [pocket](#) b. A bulge, or mass of ore in a lode. *Fay* c. Widened places in a borehole caused by sloughing of loose material from the borehole sidewalls. See also: [bellies](#)

belly pipe

A flaring-mouthed blast pipe in an iron furnace. *Standard, 2*

Belomorite

Trade name for moonstone from the White Sea. *Spencer, 3*

belonesite

A white, transparent magnesium molybdate, $MgMoO_4$, crystallizing in the tetragonal system. *Fay*

belonite

An elongated or acicular crystallite having rounded or pointed ends. *AGI*

belovite

A hexagonal mineral, $(Sr,Ce,Na,Ca)_5(PO_4)_3(OH)$; apatite group; occurs in pegmatites.

belt

a. See: [link-plate belt](#) b. Can. Regional surface zone along which mines and prospects occur. *Hoffman* c. A continuous strap or band for transmitting power from one wheel to another, or (rarely) to a shaft, by friction. See also: [stitched canvas conveyor belt](#) d. A zone or band of a particular kind of rock strata exposed on the surface. CF: [zone](#) e. An elongated area of mineralization. *AGI*

belt capacity

The load that a belt conveyor is able to carry, depending upon the area of cross section of load on belt and the speed of the belt. *Nelson*

belt cleaner

A device attached to a belt conveyor to clean or remove dirt or coal dust from the belt surface. Rotary bristle brushes are sometimes used, driven either by gearing from the conveyor or by an independent high-speed motor. Another device consists of a short scraper conveyor with rubber-faced scrapers attached at intervals. The scraper belt is driven via a chain drive from the main conveyor drum. *Nelson*

belt conveyor

a. A moving endless belt that rides on rollers and on which materials can be carried. The principal parts of a belt conveyor are (1) a belt to carry the load and transmit the pull, (2) a driving unit, (3) a supporting structure and idler rollers between the terminal drums, and (4) accessories, which include devices for maintaining belt tension and loading and unloading the belt, and equipment for cleaning and protecting the belt. See also: [hatch conveyor](#); [underground mine conveyor](#). *Kentucky; Nelson* b. See: [troughed belt conveyor](#)

belt conveyor structure

The framework for supporting the bottom strand of a belt conveyor. *Nelson*

belt creep

Gentle slip. *Pryor, 3*

belt dressing

A compound used to improve adhesion or flexibility. *Pryor, 3*

belt feeder

Short loop of conveyor belt, or articulated steelplate, used to draw ore at a regulated rate from under a bin or stockpile. *Pryor, 3*

belt flotation

A method sometimes used to recover diamond particles 1 mm or smaller.

belt friction

See: [friction](#)

belt horsepower

That power developed with all auxiliary equipment (such as pump and fans) attached; it is consequently lower than flywheel horsepower. *Carson, 1*

belting

One of the main parts of a belt conveyor. The belting consists of piles of cotton duck impregnated with rubber, with top and bottom covers of rubber. The carrying capacity of the belt will vary, depending on the running speed and the width of the belt. *Sinclair, 5*

belt loader

A machine whose forward motion cuts soil with a plowshare or disk and pushes it to a conveyor belt that elevates it to a dumping point. Syn: [elevating grader](#)

beltman

See: [conveyor man](#)

belt of variables

The belt of marine deposition extending from the coast (high watermark) to a depth of about 100 fathoms (183 m); i.e., corresponding roughly with the continental shelf (in the

wide sense, to include the shore); passing into the mud belt at the inner mud line.
Challinor

belt press

A device for dewatering mineral slurries, esp. waste from coal washing, which consists of a moving belt constructed of relatively open cloth. Belt presses are widely used in the minerals industry.

belt protection device

A device fitted to a belt conveyor to give an alarm or to cause the conveyor to stop in the event of a defect, such as belt slip, breakage, tearing, misalignment, or overload. *BS, 13*

belt slip

The difference in speed between the driving drum and the belt conveyor.

belt table

A table incorporating a belt conveyor so arranged as to provide working space on one or both sides of the belt.

belt tensioning device

A device fitted to a belt conveyor that automatically takes up any slack or stretch in the belting. A gravity takeup device is sometimes fitted immediately behind the driving unit, thus eliminating slack that would otherwise occur. The main disadvantage of gravity takeup is that it gives the belt three entire bends. *Nelson*

belt tripper

A device or mechanism that causes the conveyor belt to pass around pulleys for the purpose of discharging material from it.

belt-type conveyor

A conveyor consisting of an endless belt used to transport material from one place to another.

Belugou imperfection coefficient

In coal testing, a parameter, B, applied to the ash curve: $B = (p_{75} - p_{25})/2(p_{50} - 1)$, where p_X is the specific gravity of particles of which the fraction separated is X percent, $(p_{75} - p_{25})$ is the statistical intermediate or inquantile range, and p_{50} is the effective

density of separation in a process in which a dense medium, vertical current, or jigging action is used. Equation is used to define shape of a Tromp curve. *Pryor, 3*

belyankinite

A mineral, $\text{Ca}_{1-2}(\text{Ti,Zr,Nb})_5\text{O}_{12} \cdot 9\text{H}_2\text{O} (?)$; amorphous, yellowish-brown.

Belynski's reagent

A 1% copper sulfate solution recommended as an etchant for revealing dendritic structures in high-carbon steels. *Osborne*

bementite

a. A light gray or grayish-brown, common manganese mineral, $\text{Mn}^{2+}_8\text{Si}_6\text{O}_{15}(\text{OH})_{10}$. *Kirk* b. An erroneous name for danburite.

ben

a. Scot. Inward; toward the workings; the workman's right to enter the pit. b. The live or productive part of a lode. *Arkell* c. A mountain peak; a word occurring chiefly in the names of many of the highest summits of the mountains of Scotland, as Ben Nevis.

bench

a. A terrace on the side of a river or lake having at one time formed its bank. See also: [bench gravel](#) b. In an underground mine, a long horizontal face or ledge of ore in a stope or working place. *CTD* c. A layer of coal; either a coal seam separated from nearby seams by an intervening noncoaly bed, or one of several layers within a coal seam that may be mined separately from the others. *AGI* d. One of two or more divisions of a coal seam, separated by slate, etc., or simply separated by the process of cutting the coal, one bench or layer being cut before the adjacent one. e. The horizontal step or floor along which coal, ore, stone, or overburden is worked or quarried. See also: [benching](#); [opencast](#). *Nelson* f. A stratum of coal forming a portion of the seam; also, a flat place on a hillside indicating the outcrop of a coal seam. *BCI* g. In tunnel excavation, where a top heading is driven, the bench is the mass of rock left, extending from about the spring line to the bottom of the tunnel. *Stauffer* h. A part of the face of a large excavation that is advanced not as part of the round but as a separate operation. *BS, 12* i. A ledge that, in open-pit mine and quarries, forms a single level of operation above which minerals or waste materials are excavated from a contiguous bank or bench face. The mineral or waste is removed in successive layers, each of which is a bench, several of which may be in operation simultaneously in different parts of, and at different elevations in, an open-pit mine or quarry. CF: [berm](#) j. See: [siege](#)

bench-and-bench

Ark. That plan of mining coal in a room that requires the blasting of the two benches of coal alternately, each a little beyond the other. Syn: [bench working](#)

bench blasting

A mining system used either underground or in surface pits whereby a thick ore or waste zone is removed by blasting a series of successive horizontal layers called benches.

bench claim

A placer claim located on a bench above the present level of a stream. *Hess*

bench coal

A coal seam cut in benches or layers. *Tomkeieff*

bench cut

a. In vertical shaft sinking, blasting of drill holes so as to keep one end of a rectangular opening deep (leading), thus facilitating drainage and removal of blasted rock. *Pryor, 3*
b. Benches in tunnel driving are often drilled from the top with jackhammers. The vertical shotholes are generally spaced 4 ft (1.2 m) apart in both directions, fired by electric delay detonators, one row at a time. When bench shotholes are drilled horizontally with the drifter drills mounted on a bar, the charges are fired in rotation, starting from the upper center. In some cases, a bench may be drilled both vertically and horizontally, particularly where the benches are exceptionally high or when the headroom above the bench is inadequate for handling drill steels long enough to bottom the shotholes to grade. The lifters are drilled by machines mounted on a bar across the bottom of the tunnel, in which case the upper vertical holes will all be fired before the horizontal charges. *Hammond*

bench diggings

River placers not subject to overflows.

benched foundation

Foundation excavated on a sloping stratum of rock, which is cut in steps so that it cannot slide when under load. Syn: [stepped foundation](#) *Hammond*

benches

A name applied to ledges of all kinds of rock that are shaped like steps or terraces. They may be developed either naturally in the ordinary processes of land degradation, faulting, and the like; or by artificial excavation in mines and quarries.

bench face

See: [bank](#)

bench flume

A conduit on a bench, cut on sloping ground. *Seelye, I*

bench gravel

A term applied in Alaska and the Yukon Territory to gravel beds on the side of a valley above the present stream bottom, which represent part of the stream bed when it was at a higher level. See also: [bench](#); bench placer. *AGI*

bench height

The vertical distance from the top of a bench to the floor or to the top of the next lower bench.

benching

a. A method of working small quarries or opencast pits in steps or benches, in which rows of blasting holes are drilled parallel to the free face. The benching method has certain dangers since the quarrymen must work on ledges at some height. It is possible to work benches up to 30 ft (9.1 m) high using tripod or wagon drills. See also: [bottom benching](#); top benching. *Nelson* b. The breaking up of a bottom layer of coal with steel wedges in cases where holing is done above the floor. *Nelson* c. Ches. The lower portion of the rock salt bed worked in one operation. *Fay* d. See: [bench](#)

benching iron

An item of surveying equipment, comprising a triangular steel plate with pointed studs at the corners. These studs are driven into the ground in the desired position. The plate is used either as a temporary bench mark or as a change point in running a line of levels. *Hammond*

bench mark

a. A relatively permanent metal tablet or other mark firmly embedded in a fixed and enduring natural or artificial object, indicating a precisely determined elevation above or below a standard datum (usually sea level); it bears identifying information and is used as a reference in topographic surveys and tidal observations. It is often an embossed and stamped disk of bronze or aluminum alloy, about 3.75 in (9.5 cm) in diameter, with an attached shank about 3 in (7.6 cm) in length, and may be cemented in natural bedrock, in a massive concrete post set flush with the ground, or in the masonry of a substantial

building. Abbrev: BM. *AGI* b. A well-defined, permanently fixed point in space, used as a reference from which measurements of any sort (such as of elevation) may be made. *AGI*

bench of timbers

A term used to describe the header when it is complete with legs. Syn: [set](#)

bench placer

A bench gravel that is mined as a placer. Syn: [bench gravel](#); river-bar placer; terrace placer. *AGI*

bench scrap

The scrap mica resulting from rifting and trimming hand-cobbed mica. *Skow*

bench slope

See: [bank slope](#)

bench working

The system of working one or more seams or beds of mineral by open working or stripping in stages or steps. Syn: [bench-and-bench](#)

benchy

Forming frequent benches; said of a lode. *Standard, 2*

Bendelari jig

A jig fitted with a flexible rubber diaphragm that is worked by an eccentric motion, thus producing a jiggling cycle (pulsion suction). See also: [jig](#)

bending stress

The stress produced in the outer fibers of a rope by bending over a sheave or drum. *Zern*

bend pulley

An idler pulley that is used solely for the purpose of changing the direction of travel of the belt other than at the terminals of the conveyor. *NEMA, 2*

bend radius

The inside radius of a bent section. *ASM, 1*

bends

Caisson disease, brought on by too sudden return to normal pressure after working in a pressurized shaft or tunnel. *Pryor, 3*

bend shaft

A shaft that supports a bend wheel or pulley.

bend tangent

A tangent point where a bending arc ceases or changes. *ASM, 1*

bend test

A test for determining relative ductility of metal that is to be formed, usually sheet, strip, plate, or wire, and for determining soundness and toughness of metal. The specimen is usually bent over a specified diameter through a specified angle for a specified number of cycles. *ASM, 1*

bend wheel

A wheel used to interrupt and change the normal path of travel of the conveying or driving medium. Most generally used to effect a change in direction of conveyor travel from inclined to horizontal or a similar change.

beneficiate

To improve the grade by removing associated impurities; to upgrade.

beneficiation

a. The dressing or processing of coal or ores for the purpose of (1) regulating the size of a desired product, (2) removing unwanted constituents, and (3) improving the quality, purity, or assay grade of a desired product. b. Concentration or other preparation of coal or ores for smelting by drying, flotation, or magnetic separation. c. Improvement of the grade of coal or ores by milling, flotation, sintering, gravity concentration, or other processes.

Bengal amethyst

An archaic trade name for purple sapphire.

benitoite

A hexagonal mineral, $2[\text{BaTiSi}_3\text{O}_9]$; occurs in double pyramids; colorless, white, or blue, resembling sapphire; in veins in serpentine schist.

benjaminite

A monoclinic mineral, $(\text{Ag,Cu})_3(\text{Bi,Pb})_7\text{S}_{12}$.

benstonite

A trigonal mineral, $(\text{Ba,Sr})_6(\text{Ca,Mn})_6\text{Mg}(\text{CO}_3)_{13}$; shows flat, simple rhombohedral crystals and cleavage; fluoresces yellow or red; in veins with calcite.

bent

a. In tunnel timbering, two posts and a roof timber. *Nichols, I* b. A transverse structure consisting of legs, bracing, and feet used for the purpose of supporting a gallery or conveyor frame at a fixed elevation.

Benthic Division

A primary division of the sea that includes all of the ocean floor. The Benthic Division is subdivided into the Littoral System (the ocean floor lying in water depths ranging from the high watermark to a depth of 200 m or the edge of the continental shelf), and the Deep-Sea System (ocean floor lying in water deeper than 200 m). The systems are further subdivided into the Eulittoral Zone (0 to 50 m), Sublittoral Zone (50 to 200 m), Archibenthic Zone (200 to 1,000 m), and the Abyssal-Benthic Zone (1,000 m and greater). *Hy*

benthonic

a. Refers to the bottom of a body of standing water. *AGI* b. Pertaining to benthos; also, said of that environment. Syn: [demersal](#) *AGI*

benthos

All plants and animals living on the ocean bottom. *Hy*

bentonite

A montmorillonite-type clay formed by the alteration of volcanic ash. It varies in composition and is usually highly colloidal and plastic. Swelling bentonite is so named because of its capacity to absorb large amounts of water accompanied by an enormous increase in volume. Occurs in thin deposits in the Cretaceous and Tertiary rocks of the

Western United States. It is used for making refractory linings, water softening, decolorizing oils, thickening drilling muds, and preparing fine grouting fluids. As a mud flush, bentonite is used at a concentration of about 3 lb/ft³ (48.1 kg/m³) of water. Syn: [Denver mud](#); volcanic clay. See also: [clay](#)

bentonitic clay

Bentonite.

bent sieve

A stationary screen constructed in the form of an arc of a circle and arranged as a chute over which the clean coal from a cyclone washer passes to the orthodox rinsing screen. In the United States, the bent screen is used in magnetite recovery from cyclone washers. *Nelson*

benzenol

See: [phenol](#)

benzol indicator

A portable instrument designed specif. for measuring low concentrations of benzol, which are potentially dangerous to the health of personnel. *Best, I*

beraunite

A monoclinic mineral, $\text{Fe}^{2+} \text{Fe}^{3+}_5 (\text{PO}_4)_4 (\text{OH})_5 \cdot 4\text{H}_2\text{O}$; a secondary mineral in iron deposits; an alteration product of primary phosphates in pegmatites.

berdan

A circular, revolving, inclined iron pan in which concentrates are ground with mercury and water by an iron ball. *Gordon*

Berek compensator

In polarized-light microscopy, an optical device of variable compensation for analysis of birefringence. CF: [accessory plate](#)

bergalite

A pitchy black dike rock containing small phenocrysts of haueyne, apatite, perovskite, melilite, and magnetite in a groundmass of the same minerals with nepheline, biotite, and brown interstitial glass; from Kaiserstuhl, Oberbergen, Baden, Germany. Syn: [bergalith](#)

bergalith

See: [bergalite](#)

bergbutter

Various salts, commonly halotrichite. *Hey, 1*

bergenite

Occurs naturally at Bergen an der Trieb, Saxony, with other uranium minerals; named from locality, the older name being rejected as implying a barian phosphuranylite rather than the barium analogue. Syn. for barium-phosphuranylite. *Hey, 2*

Berglof process

A method of direct reduction of iron ore. The reduction of the ore was carried out in interchangeable containers. The ore was heated to the reduction temperature in one container, and then this container was moved into the reducing zone. *Osborne*

berkeleyite

See: [lazulite](#)

berkelium

The element having the atomic number 97, the discovery of which was announced by Thompson, Ghiorso, and Seaborg in 1950. They produced an isotope of 4.5 h half-life, berkelium 243, by helium ion bombardment of americium 241. Symbol, Bk; valences, 3 and 4; and the mass number of the most stable isotope, 249. *Handbook of Chemistry and Physics, 2*

Berlin blue

In optical mineralogy, an anomalous interference color of the first order; e.g., some epidotes.

Berlin iron

A soft iron containing phosphorus, which makes very fine smooth castings and is used for ornaments and jewelry. *Standard, 2*

berm

a. A horizontal shelf or ledge built into the embankment or sloping wall of an open pit or quarry to break the continuity of an otherwise long slope and to strengthen its stability or to catch and arrest slide material. A berm may be used as a haulage road or serve as a bench above which material is excavated from a bank or bench face. CF: [bench](#) b. The space left between the upper edge of a cut and the toe of an embankment. *Seelye, 1* c. An artificial ridge of earth. *Nichols, 2* d. Terraces that originate from the interruption of an erosion cycle with rejuvenation of a stream in the mature stage of its development and renewed dissection, leaving remnants of the earlier valley floor above flood level. *AGI* e. A nearly horizontal portion of the beach or backshore formed by the deposit of material by wave action. Some beaches have no berms; others have one or several. See also: [bank height](#)

bermanite

A monoclinic mineral, $Mn^{2+} Mn^{3+}_2 (PO_4)_2 (OH)_2 \cdot 4H_2O$; in pegmatites.

berm interval

Vertical distance from crest of berm to its underlying toe, as in a bank or bench.

bernardinite

Originally described by Stillman as fossil resin, but later shown by Stanley-Brown to be a fungus impregnated by resinous material. *Tomkeieff*

bernstein

a. A fossil resin found in and in association with lignite beds of Eocene age. Commonly occurring in many European localities, and is esp. abundant in areas bordering the Baltic coast. See also: [amber](#) b. German name for amber. *Tomkeieff*

berthierine

A monoclinic mineral, $(Fe^{2+}, Fe^{3+}, Mg)_{2-2D_3} (Si, Al)_2 O_5 (OH)_4$ of the kaolinite-serpentine group; dark steel-gray; in low-temperature vein deposits. Syn: [martourite](#)

berthonite

A discredited name for bournonite.

bertrandite

An orthorhombic mineral, $4[Be_4 Si_2 O_7 (OH)_2]$; colorless to clear pale yellow and shows heart-shaped twins; in pegmatites; a source of beryllium. See also: [beryllium disilicate](#)

Bertrand lens

A removable lens in the tube of a polarized-light microscope used to converge light to form an interference figure.

Bertrand process

A heavy-fluid coal cleaning process that utilizes a calcium chloride solution as separating medium and is applicable only to deslimed feed. It differs from the Lessing process in that the raw coal is introduced into the system countercurrent fashion, from water to separating solution, the purified coal and the waste being withdrawn in a similarly countercurrent fashion. Coal containing less than 1% ash is said to be obtained by this process. *Gaudin, 1*

beryl

A hexagonal mineral, $\text{Be}_3 \text{Al}_2 \text{Si}_6 \text{O}_{18}$; green, blue-green, and other pale tints; in granite pegmatites, mica schists, and an accessory mineral in felsic igneous rocks; the chief source of beryllium. Transparent and colored gem varieties include emerald, aquamarine, morganite, heliodor, golden beryl, bixbite, and vorobievite.

beryllides

A group of intermetallic compounds of potential interest as special ceramics. Cell dimensions and types of structure have been reported for the beryllides of titanium, vanadium, chromium, zirconium, niobium, molybdenum, hafnium, and tantalum. *Dodd*

berylliosis

An occupational disease caused by the inhalation of fumes liberated during the reduction of beryllium. Beryllium is thought to play the principal role, aggravated by fluorine, and to affect all organs, particularly the larger protective glands, rather than the respiratory apparatus alone. *Hess*

beryllite

A hydrous silicate of beryllium, $\text{Be}_3 \text{SiO}_4 (\text{OH})_2 \cdot \text{H}_2 \text{O}$, as an alteration product of epididymite. *Spencer, 5*

beryllium

An element belonging to the alkaline earth metals. Symbol, Be. Beryl and bertrandite are the most important commercial sources of the element and its compounds. Aquamarine and emerald are the precious forms of beryl. Used in nonsparking tools, high-speed aircraft, missiles, spacecraft, communications satellites, and X-ray lithography for

microminiature integrated circuits, as well as in nuclear reactors and computers. Beryllium and its salts are toxic.

beryllium aluminate

BeAl_2O_4 ; mol wt, 126.97; orthorhombic; sp gr, 3.76; source of beryllium. Syn: [chrysoberyl](#)

beryllium carbide

Be_2C ; decomposes above 2,950 degrees C. Used as a moderator in nuclear application. Molecular weight, 30.04; yellow; hexagonal; and sp gr, 1.90 at 15 degrees C. *Lee; Bennett*

beryllium disilicate

$\text{Be}_4\text{Si}_2\text{O}_7(\text{OH})_2$; mol wt, 238.23; orthorhombic; sp gr, 2.6. Syn: [bertrandite](#)

beryllium nitride

Be_3N_2 ; molecular weight, 55.05; colorless; isometric; and melting point, 2,200 + or - 100 degrees C. *Bennett*

beryllium oxide

A white powder; hexagonal; BeO . Used in the preparation of beryllium compounds and in ceramics and refractories. Melting point, 2,570 degrees C; and sp gr, 3.02. Bodies high in BeO have extremely high thermal conductivity (in the range of metals) and also possess high mechanical strength. Used in nuclear reactors because of its refractoriness, high thermal conductivity, and ability to act as a moderator for fast neutrons, reducing them to thermal speeds. Beryllia ceramics are used for electronic components and for crucibles for melting uranium and thorium. Syn: [bromellite](#)

beryllonite

A monoclinic mineral, NaBePO_4 ; colorless or yellow; forms transparent, topazlike pseudo-orthorhombic crystals.

berylloid

In crystallography, the dihexagonal bipyramid, common in crystals of beryl.

berylscope

See: [emerald glass](#)

beryl preferential stain process

A quick, simple method for determining the amount of beryl in a mineral sample. The samples are placed in a hot solution of sodium hydroxide, which etches the beryl grains in the sample; they then are stained an intense blue with another reagent to enable counting under a microscope.

berzelianite

An isometric mineral, Cu_2Se ; silver-white in fresh break; sp gr, 6.7. ; dimorphous with bellidoite.

berzeliite

An isometric mineral, $(\text{Ca},\text{Na})_3(\text{Mg},\text{Mn})_2(\text{AsO}_4)_3$; commonly massive; bright yellow to orange-yellow. Syn: [pyrroarsenite](#)

Bessemer

Any product of the Bessemer process, such as Bessemer steel, iron, etc.; named from Henry Bessemer, who patented the process in 1855; used also attributively as Bessemer converter, flame, or method. *Standard, 2*

Bessemer afterblow

In the basic Bessemer process of steelmaking, the continuation of the blowing cycle after the oxidation of the silicon, manganese, and carbon content of the charge is complete, and during which the phosphorus and sulfur contents of the charge are reduced.

Henderson

Bessemer blow

In the Bessemer process of steelmaking, the period of the blowing cycle during which the oxidation of the silicon, manganese, and carbon content of the charge takes place.

Henderson

Bessemer converter

A pear-shaped steel shell lined with a refractory material containing a number of holes or ports in the bottom or side through which air is blown through the molten pig iron charge. The converter is mounted on trunnions about which it may be tilted to charge or tap. Molten pig iron is charged into the converter, and air is blown through the molten metal to oxidize the impurities, thus making steel. *Henderson*

Bessemer iron ore

See: [Bessemer ore](#)

Bessemer matte

In the extraction of copper from sulfide ores, the liquid that remains in the converter at the end of the blow. It is essentially molten nickel sulfide or a solution of copper and nickel sulfides. *Newton, 1*

Bessemer ore

An iron ore containing very little phosphorus (generally less than 0.045%). Named for suitability in the Bessemer process of steelmaking. Syn: [Bessemer iron ore](#)

Bessemer pig iron

Pig iron with sufficiently low phosphorus (0.100% maximum) to be suitable for use in the Bessemer process. *ASM, 1*

Bessemer process

A method, historically important but no longer in use, in which molten pig iron is charged in a Bessemer converter and air is blown through the molten metal to oxidize the impurities, thus making steel. This process is no longer in use.

beta

In crystallography, the angle between the a and c axes. CF: alpha; gamma.

beta chalcocite

See: [chalcocite](#)

betafite

An isometric mineral, $(Ca,Na,U)_2(Ti,Nb,Ta)_2O_6(OH)$; pyrochlore group; forms a series with pyrochlore; name assigned to members of the series having uranium greater than 15%; radioactive; in granitic pegmatites. CF: [uranpyrochlore](#)

beta particle

An elementary particle emitted from a nucleus during radioactive decay. It has a single electrical charge and a mass equal to 1/1837 that of a proton. A negatively charged beta particle is physically identical to an electron. If the beta particle is positively charged, it is called a positron. *Lyman*

beta quartz

Quartz formed at a temperature between 573 degrees C and 870 degrees C. The commonest examples are the bipyramidal quartz crystals found as phenocrysts in quartz porphyries. *Hess*

beta ray

A ray of electrons emitted during the spontaneous disintegration of certain atomic nuclei. *ASM, 1*

beta tin

Metallic tin in its common, massive form. *Bennett*

betatron

A doughnut-shaped accelerator in which electrons are accelerated by a changing magnetic field. *Lyman*

beta zinc sulfide

Colorless when pure; isometric; ZnS; mol wt, 97.43; sp gr, 4.102 at 25 degrees C, and ranges from 3.90 to 4.11; Mohs hardness, 3.5 to 4.0; luster, resinous to adamantine; transformation temperature to alpha zinc sulfide, 1,020+ or -5 degrees C; sublimes at 1,180 degrees C or 1,185 degrees C; melting point, 1,850 degrees C (at 150 atm or 15.2 MPa); insoluble in water; and very soluble in acids. Occurs as the mineral sphalerite, which is nearly colorless, white, yellow, red, green, brown, and black; has perfect dodecahedral cleavage; and is soluble in hydrochloric acid. Sphalerite is the principal ore of zinc, a source of cadmium, and a source of sulfur for manufacturing sulfur dioxide, sulfuric acid, and other sulfur compounds. Also called sphalerite; zinc blende; zincblende; blende; black jack. See also: [sphalerite](#); [zinc sulfide](#). CF: [alpha zinc sulfide](#) *CCD, 2; Handbook of Chemistry and Physics, 2; Dana, 2*

betehtinit

See: [betekhtinite](#)

betekhtinite

Orthorhombic needles, $\text{Cu}_{10}(\text{Fe,Pb})\text{S}_6$, in ores from Mansfeld, Germany. Syn: [betehtinit](#)

Bethell's process

A process for creosoting timber (such as track sleepers) to extend its useful life. The timber is first dried, then placed in a cylinder and subjected to partial vacuum, and finally impregnated with creosote under pressure. See also: [open-tank method](#); [timber preservation](#). *Nelson*

between-laboratory tolerance

The maximum acceptable difference between the means of two determinations carried out by two different laboratories on representative samples taken from the same bulk sample after the last stage of the reduction process. *BS, 1*

beudantite

a. A trigonal mineral, $\text{PbFe}^{3+}_3(\text{AsO}_4)_2(\text{SO}_4)(\text{OH})_6$; crystallizes in green to black rhombohedra. b. A mineral group.

bevel cut

Any style of cutting with a large table joined to the girdle by one, or possibly two, bevels and a pavilion that may be step cut, brilliant cut, or any style. Used mostly for opaque stones and intaglios. Bevel-cut shapes include round, square, rectangular, oblong, oval, pendeloque, navette, heart, diamond, horseshoe, shield, pentagon, and hexagonal shapes. The style is used predominantly for less valuable gems. Syn: [table cut](#)

bevel gear

a. A cone-shaped gear encircling the drive rod in a diamond-drill swivel head, which meshes with a matching gear attached to the drive shaft from the drill motor. By means of these gears, the drill-string equipment can be made to rotate. Syn: [miter gear](#) b. Any gear, the teeth of which are inclined to the shaft axis of the gear. *Long* c. A gearwheel that transmits power between two shafts that meet at an angle. If at a right angle and the wheel is of the same size, it is called a miter gear. *Crispin*

beyerite

A tetragonal mineral, $(\text{Ca,Pb})\text{Bi}_2(\text{CO}_3)_2\text{O}_2$; forms minute tetragonal crystals and earthy masses; a secondary bismuth mineral.

B.H. bit

a. A noncoring or blasthole bit. *Long* b. A CDDA standard-size noncoring bit having a set outside diameter of 1 in (2.54 cm). Normally referred to as a 1-in B.H. bit. *Long*

B-horizon

The layer of a soil profile in which material leached from the overlying A-horizon is accumulated. Syn: [zone of accumulation](#); zone of illuviation. See also: [A-horizon](#)

biard

See: [bearers](#)

biat

Eng. A timber stay or beam in a shaft. See also: [bearer](#) byat.

biaxial

The optical character of crystals belonging to the orthorhombic, monoclinic, and triclinic systems, which exhibit double refraction, but have two directions of single refraction and isotropy, i.e., two optic axes. CF: [uniaxial](#)

biaxial stone

A mineral that has crystallized in the orthorhombic, monoclinic, or triclinic system and hence has two optic axes. CF: [uniaxial stone](#)

bicable

An aerial ropeway using stationary track ropes along which carriers are hauled by an endless haulage rope. See also: [aerial ropeway](#) *Nelson*

bicylindroconical drum

A winding drum with a cylindrical middle portion and two conical outer portions; used sometimes where the weight of the winding rope is large compared with the coal or mineral load. The heavily loaded upgoing rope winds on the small diameter, while the downgoing rope winds off the large diameter. The effect is to compensate for the heavy torques due to rope unbalance and acceleration. See also: [cylindroconical drum](#); winding drum. *Nelson*

bieberite

A monoclinic mineral, $\text{CoSO}_4 \cdot 7\text{H}_2\text{O}$; melanterite group; flesh-red to rose-red; esp. in crusts and stalactites. Syn: [cobalt vitriol](#)

bifurcating feeder

One that separates objects moving in a single lane and delivers them to two lanes of movement.

Big Coal D

Nongelatinous permissible explosive; used in coal mining. *Bennett*

bigging

N. of Eng. A built-up pillar of stone or other debris in a working place or heading to support the roof; e.g., "bigging the gob" means building a pack in a worked-out place.

big-stone bit

Bits set with diamonds as large or larger than eight stones per carat in size. *Long*

bikitaite

A monoclinic and triclinic mineral, $\text{LiAlSi}_2\text{O}_6 \cdot \text{H}_2\text{O}$; may be in zeolite group; colorless or white; in granular aggregates with eucryptite in lithia pegmatites.

bilateral transducer

A transducer capable of transmission in either direction between its terminations. Syn: [reversible transducer](#)

Bilharz table

A side-bump table having a surface made of a plane, endless, traveling belt. The Corning, Luhrig, and Stein tables are similar. *Liddell*

bilinite

A monoclinic mineral, $\text{Fe}^{2+}\text{Fe}^{3+}_2(\text{SO}_4)_4 \cdot 22\text{H}_2\text{O}$; hallotrichite group; white to yellowish; in radially fibrous masses.

billy

Aust. A name used in the Clermont district of Queensland for a bed of quartzite that caps the coal measures.

billy coal

Staff. Miners' term for a thin, unworkable coal seam occurring above or below a workable seam. *Tomkeieff*

bimagmatic

Generic term for porphyritic rocks in which the minerals occur in two generations. *AGI*

bin

A container for storing material.

binary alloy

An alloy containing two component elements. *ASM, 1*

binary cycle

A cycle in which two different media are employed, one superimposed on and augmenting the cycle of the other. *Strock, 2*

binary explosive

An explosive based on two ingredients, such as nitromethane and ammonium nitrate, which are shipped and stored separately and mixed at the blast site to form an explosive mixture.

binary granite

Two-mica granite.

binary system

A chemical system containing two components, e.g., the MgO-SiO₂ system. *AGI*

bind

a. Shale or mudstone occurring in coal measures. Obsolete. *BS, 11* b. To prevent normal operation of drill-string equipment in a borehole, such as by constriction or friction created by swelling or caving ground, settlement or balling of cuttings, an obstruction, or an offset or crooked hole, or as the result of insufficient clearance cut by use of undergage bits or reaming shells. *Long* c. To cause to cohere; to give consistency to by means of an agent, such as by drilling mud in a loose, sandy, or fragmented formation. *Long* d. A British coal miner's term for any fine-grained, well-laminated rock (such as shale, clay, or mudstone, but not sandstone) associated with coal. See also: [blaes](#)

binder

a. A substance used to produce cohesion in loose aggregate, as the crushed stones in a macadam road. b. A material added to coal or iron ore during the process of briquetting or pelletizing to facilitate adhesion between the particles. c. Corn. Beds of grit in shale,

slate, or clay. d. Streak of impurity in a coal seam, usually difficult to remove. e. The material that produces or promotes consolidation in loosely aggregated sediments; e.g., a mineral cement that is precipitated in the pore spaces between grains and that holds them together, or a primary clay matrix that fills the interstices between grains. *AGI* f. Soil binder. *AGI* g. A term used in Ireland for a bed of sand in shale, slate, or clay. *AGI* h. A coal miner's term used in Pembrokeshire, England, for shale. *AGI*

binderless briquetting

The briquetting of coal by the application of pressure without the addition of a binder. *BS*, 5

bindheimite

An isometric mineral, $Pb_2 Sb_2 O_6 (O,OH)$; stibiconite group; yellow to reddish-brown; in the oxidation zone of lead-antimony ore deposits.

binding bolt

See: [anchor bolt](#)

bin feeder

A worker who rods or bars ore that sticks as it passes through the bin door. *Fay*

bing

To put coal in wagons or in stacks at the surface. *Fay*

bin gate

A device for complete shutoff or control of gravity-impelled flow of materials from a bin, bunker, hopper, or other container. Syn: [bucket gate](#); [bunker gate](#). See also: [regulating gate](#)

Bingham model

One of many rheological models of material behavior. Rheology is the study of change in form and the flow of matter, embracing elasticity, viscosity, and plasticity. A Bingham material is elastic until the yield point is reached; flow occurs beyond the yield point. *SME*, 1

bing hole

Derb. A hole or chute through which ore is thrown.

bing ore

The purest lead ore and with the largest crystals of galena. *Hess*

bing place

Derb. The place where ore is stored for smelting.

binnite

A silver-bearing variety of tennantite.

bioassay

A determination of the concentration of a substance in biological fluids and tissue by analysis of urine, feces, blood, bone, tissue, etc. *ANSI*

biochemical deposit

A precipitated deposit resulting directly or indirectly from vital activities of an organism, such as bacterial iron ore or coralline limestone.

biochemical prospecting

a. See: [biogeochemical prospecting](#) b. Prospecting by means of vegetation. The root systems of trees are actually powerful sampling mechanisms that represent samples of solutions from a large volume of earth. Much of the mineral content from these solutions is found in the leaves. Analysis of leaves may serve as a guide to prospectors. *Lewis*

bioclastic

Said of rocks consisting of fragmental organic remains.

biogenic

Said of a rock resulting from the physiological activities of organisms, e.g., a coral reef.

biogeochemical anomaly

An area where the vegetation contains an abnormally high concentration of metals. *Hawkes, 2*

biogeochemical prospecting

Geochemical exploration based on the chemical analysis of systematically sampled plants in a region, to detect biological concentrations of elements that might reflect hidden orebodies. The trace-element content of one or more plant organs is most often measured. Syn: [biochemical prospecting](#) *AGI*

biogeochemistry

A branch of geochemistry that deals with the effects of life processes on the distribution and fixation of chemical elements in the biosphere. *AGI*

bioherm

A moundlike or circumscribed mass of rock built up by sedentary organisms such as corals, mollusks, and algae. CF: [biostrome](#)

bioleaching

The catalytic action of bacteria, such as *Thiobacillus ferrooxidans* and *Thiobacillus thiooxidans* to accelerate chemical oxidation reactions by as much as 10^6 times those of chemical reactions alone; esp. useful in leaching copper and uranium systems. *SME, 1*

biolite

a. A group name for minerals formed by biologic action. *AGI* b. See: [biolith](#) c. An old term for a concretion formed through the action of living organisms. *AGI*

biolith

A rock of organic origin; a biogenic rock.

bioluminescence

The emission of visible light by living organisms. *Hy*

biomechanical deposit

A deposit due to the detrital accumulation of organic material, as in the cases of limestones and coal. *AGI*

bionomics

See: [ecology](#)

biopelite

See: [black shale](#)

biophile

a. An element that is required by or found in the bodies of living organisms. The list of such elements includes carbon, hydrogen, oxygen, nitrogen, phosphorus, sulfur, chlorine, iodine, bromine, calcium, magnesium, potassium, sodium, vanadium, iron, manganese, and copper. All may belong also to the chalcophile or lithophile groups. *Hess* b. Said of those elements that are the most typical in organisms and organic material. *AGI* c. Said of those elements that are concentrated in and by living plants and animals. *AGI*

bioreactor

A tank equipped for temperature, pH, and reagent control used to employ bacteria to oxidize or reduce ores of gold and other metals and render them amenable for metal extraction by leaching.

biosphere

a. All the area occupied or favorable for occupation by living organisms. It includes parts of the lithosphere, hydrosphere, and atmosphere. *AGI* b. All living organisms of the Earth and its atmosphere. *AGI*

biostrome

A bedded, blanketlike mass of rock composed mainly of the remains of sedentary organisms; an organic layer, such as a bed of shells or corals, or even a coal seam. CF: [bioherm](#)

biotite

a. A monoclinic mineral, $K_2 Mg_6 (Si_6 Al_2 O_{20})(OH,F)_2$; mica group, with Fe^{2+} replacing Mg and Fe^{3+} replacing Al; in masses with perfect basal cleavage; dark brown, dark green, black; a common rock-forming mineral in crystalline rocks, either as an original crystal in igneous rocks or as a metamorphic product in gneisses and schists; a detrital constituent of sedimentary rocks. b. A general term to designate all ferromagnesian micas. Syn: [black mica](#); dark mica; magnesia mica. See also: [iron mica](#)

biotite gneiss

A gneiss in which biotite is the prominent dark mineral.

biotitite

A jet black igneous rock consisting essentially of biotite. Near Libby, MT, such a rock has been altered to vermiculite by hot waters. *Johannsen*

Biot number

The heat-transfer ratio hr/k , where h is the heat-transfer coefficient, r is the distance from the point or plane under consideration to the surface, and k is the thermal conductivity. The Biot number is a useful criterion in assessing thermal-shock resistance. *Dodd*

bipolar electrode

An electrode that is not mechanically connected to a power supply but is placed in an electrolyte, between the anode and the cathode, such that the part nearer the anode becomes cathodic and the part nearer the cathode becomes anodic. Syn: [intermediate electrode](#)

bipyramid

A closed crystal form consisting of a positive and negative pyramid. CF: [pyramid](#)

bird

A geophysical measuring device such as a magnetometer, plus the housing in which it is towed behind an aircraft. *AGI*

bird's-eye

a. Mixed screened anthracite passing a 1/2-in (12.7-mm) screen, but retained on a 1/8-in (3.2-mm) screen. May be subdivided into buckwheat, rice, and barley. See also: [anthracite coal sizes](#); [barley](#); bird's-eye coal. *CTD* b. Eng. Applied to various rocks with small spots, in some places to a concretionary slate, and in Guernsey to a spotted variety of diorite or gabbro. *Arkell*

bird's-eye coal

Sometimes applied to anthracite coal when very small fractures are numerous and freshly broken surfaces display rounded or oval eyelike forms, many of which have convex surfaces. See also: [anthracite coal sizes](#); [bird's-eye](#). *AGI*

bird's-eye limestone

A very fine-grained limestone containing spots or tubes of crystalline calcite.

bird's-eye porphyry

A name given by prospectors and miners to a fine-grained igneous rock having small phenocrysts, particularly if they are quartz, from a fancied resemblance to birds' eyes.
Hess

bird's-eye slate

A quarryman's term for slate containing abundant deformed or squeezed concretions.
Holmes, 2

Bird solid-bowl centrifuge

A fine-coal dewatering machine that consists of a tank or truncated conical shell, which is revolved at the desired speed by means of a drive sheave. A screw conveyor rotates inside the cone or bowl at a slightly lower speed in the same direction of rotation. The feed entrance, in the center of the large end of the truncated cone, is high enough to allow formation of a pool of slurry. Adjustable effluent-discharge parts are so located in the large end of the bowl that the level of liquid is maintained at the desired height. The solids are steadily moved forward by the screw conveyor as fast as they are deposited, being carried above the level of the pool for an interval before leaving the bowl. Discharge of both solids and effluent is continuous.

birefracting

See: [birefringent](#)

birefractive

See: [birefringent](#)

birefringence

a. The numerical difference between the refractive indices of a mineral. This difference results in a display of interference colors when thin sections or small fragments of anisotropic minerals are viewed between crossed polars. Isometric minerals and amorphous materials are isotropic and have the same refractive index in every direction; they have no birefringence and show no interference colors. See also: [colors](#) b. The property of anisotropic crystals to split a beam of light into two polarized rays that traverse the crystal at different velocities as they pass through it and produce characteristic optical effects that are recognizable with the proper instruments or, in some cases (e.g., calcite), by the eye alone. Syn: [double refraction](#) CF: [transmitted light](#)

birefringent

Said of a crystalline substance that displays birefringence; such materials have more than one index of refraction. Syn: [birefractive](#); birefracting.

birne

See: [boule](#)

birnessite

A monoclinic mineral, $\text{Na}_4 \text{Mn}_{14} \text{O}_{27} \cdot 9\text{H}_2 \text{O}$; black or dark-brown, named for Birness, Scotland.

Birtley coal picker

An electric picker that distinguishes between good coal and slate by their different electrical conductivities. It is said to be more accurate than the human slate picker, who, when fatigued, may fail to remove all the impure material. *Mitchell*

Birtley contraflow separator

A pneumatic table for dry cleaning coal. It consists of perforated deck plates arranged in a series of lateral steps with a longitudinal inclination. A centrifugal fan provides a constant upward blast of air through the deck. The usual layering takes place, the refuse sinking to the deck plates. The capacity of the table ranges from 6 st/h per foot (17.8 t/h/m) of width for sizes 1-1/2 to 2 in (3.8 to 5.1 cm), down to 2 st/h/ft (5.9 t/h/m) for fines below 1/16 in. They are built in any width up to a maximum of about 8 ft (2.4 m). *Nelson*

bischofite

A monoclinic mineral, $\text{MgCl}_2 \cdot 6\text{H}_2 \text{O}$.

biscuit

a. Unglazed ceramic ware that has been fired in a biscuit or bisque oven or film. b. A small cake of primary metal, such as uranium, made from uranium tetrafluoride and magnesium in a bomb reduction. *ASM, 1*

bishop's stone

See: [amethyst](#)

bisilicate

In metallurgy, a slag with a silicate degree of 2. *Newton, 2*

bismite

A straw-yellow monoclinic mineral, Bi_2O_3 ; earthy to powdery; in oxidized parts of bismuth ores. Syn: [bismuth ocher](#)

bismoclite

A tetragonal mineral, BiOCl .

bismuth

A white crystalline, brittle metal with a pinkish tinge. Symbol, Bi. The most important ores are bismuthinite or bismuth glance (Bi_2S_3) and bismite (Bi_2O_3). Also obtained as a byproduct in refining lead, copper, tin, silver, and gold ores. Forms low-melting alloys that are used in fire detection and extinguishing systems; used as a catalyst for making acrylic fibers and as a carrier for fuel in atomic reactors; extensively used in cosmetics and in medicine. *Handbook of Chemistry and Physics*, 3

bismuth blende

See: [eulytite](#)

bismuth glance

See: [bismuthinite](#)

bismuth gold

A pinkish-white native alloy of bismuth and gold, approx. Au_2Bi ; contains 65.5% gold. See: [maldonite](#)

bismuthine

See: [bismuthinite](#)

bismuthinite

An orthorhombic mineral, $4[\text{Bi}_2\text{S}_3]$; metallic; lead-gray to tin-white with an iridescent tarnish; commonly associated with other ore minerals; a source of bismuth. Syn: [bismuth glance](#); [bismuthine](#).

bismuth ocher

See: [bismite](#)

bismuth selenide

Bi_2Se_3 ; black; orthorhombic; and melting point, 706 degrees C. Of some interest for thermoelectric applications. Also called bismuth triselenide. *Lee*

bismuth spar

See: [bismutite](#)

bismuth telluride

$\text{Bi}_2\text{Te}_2\text{S}$; hexagonal rhombohedral; gray; and a thermoelectric material. Because it loses its semiconducting properties above 100 degrees C, it is of value chiefly in cooling devices. Also called bismuth tritelluride. Syn: [tetradymite](#)

bismutite

A tetragonal mineral, $\text{Bi}_2(\text{CO}_3)_2\text{O}_2$; earthy or amorphous. Syn: [bismuth spar](#)

bismutotantalite

An orthorhombic mineral, $\text{Bi}(\text{Ta},\text{Nb})\text{O}_4$.

bisphenoid

In crystallography, a form apparently consisting of two sphenoids placed together symmetrically. CF: [disphenoid](#)

bit

Any device that may be attached to, or is, an integral part of a drill string and is used as a cutting tool to bore into or penetrate rock or other materials by utilizing power applied to the bit percussively or by rotation. See also: [detachable bit](#); [drag bit](#). *Long*

bit blank

A steel bit in which diamonds or other cutting media may be inset by hand peening or attached by a mechanical process such as casting, sintering, or brazing. Syn: [bit shank](#); [blank](#); [blank bit](#); [body](#); shank. *Long*

bit clearance

a. Technically, the difference between the outside diameter of a set bit and the outside set diameter of the reaming shell. Loosely, the term is used to denote the clearing action of a bit, which is a function of the waterways and the mode in which the diamonds or other cutting media are set in the cutting face of the bit, and also the difference between the

outside set diameter of a bit and the outside diameter of the bit shank. *Long* b.
Incorrectly and loosely used as a syn. for diamond exposure. See also: [diamond exposure](#)

bit contour

The configuration of the crown or cutting face of a bit as seen in cross section. *Long*

bit core

The central, removable, and replaceable portion or pilot of a noncoring or other type of bit. CF: [core](#)

bit count

See: [diamond count](#)

bit crown

See: [crown](#)

bit-crown metal

See: [diamond matrix](#)

bit die

See: [bit mold](#)

bit disc

A bit with two or more rolling discs that do the cutting. Used in rotary drilling through certain formations. *Porter*

bit drag

A bit with serrated teeth used in rotary drilling. *Hess*

bit face

That part of the bit crown that comes in contact with the bottom of a borehole. It does not include that part of the bit crown that contacts the walls of the borehole. *Long*

bit feed

See: [feed rate](#)

bit life

The average number of feet of borehole a bit may be expected to drill in a specific type of rock under normal operating or specified conditions. *Long*

bit load

The weight or pressure applied to a bit in drilling operations, expressed as the number of pounds or tons of weight applied. Syn: [bit pressure](#); bit weight; drilling pressure; drilling weight; drill pressure; load. *Long*

bit matrix

See: [diamond matrix](#)

bit mold

A steel, carbon, or ceramic die in which the shape of a bit crown is incised and provided with pips, grooves, or holes in which diamonds are set and held by suction or an adhesive. Filling the die with a matrix alloy by a casting or a powder metal-sintering process affixes the shank to a diamond-inset bit crown having a shape conforming to that incised in the die. Syn: [bit die](#); [crown die](#); [crown mold](#). *Long*

bit performance

The achievement of a bit as gaged by the overall cost of using a specific bit per a unit measure of borehole drilled, or by the total number of feet of borehole drilled per bit. *Long*

bit pressure

See: [bit load](#)

bit reaming shell

Obsolete name for reaming shell. *Long*

bit ring

a. See: [setting ring](#) b. Obsolete name for core bit. *Long*

bit shank

a. The threaded part of a bit. *Long* b. Sometimes incorrectly used as a syn. for bit blank. *Long*

bitter lake

A salt lake whose waters contain in solution a high content of sodium sulfate and lesser amounts of the carbonates and chlorides ordinarily found in salt lakes; a lake whose water has a bitter taste. Examples include Carson Lake, NV, and the Great Bitter Lake in Egypt. *AGI*

bittern

a. The bitter liquid remaining after seawater has been concentrated by evaporation until most of the sodium chloride has crystallized out. *AGI* b. A natural solution, in an evaporite basin, that resembles a saltworks liquor, esp. in its high magnesium content. *AGI*

bitter salt

See: [epsomite](#)

bitter spar

a. A pure, crystalline dolomite that consists of 1 part or equivalent of calcium carbonate and 1 part of magnesium carbonate. Syn: [pearl spar](#) *Fay* b. See: [dolomite](#)

bit thrust

The hydraulic pressure applied to a drill bit when drilling, as shown in pounds per square inch by the pressure gages on the hydraulic-feed cylinders of a diamond drill or the total pressure in pounds as calculated by multiplying the recorded hydraulic pressure by the square-inch area of the piston in the hydraulic-feed cylinder. Syn: [drilling thrust](#) *Long*

bitumen

a. A general name for various solid and semisolid hydrocarbons. In 1912, the term was used by the American Society for Testing and Materials to include all those hydrocarbons that are soluble in carbon disulfide, whether gases, easily mobile liquids, viscous liquids, or solids. b. A generic term applied to natural flammable substances of variable color, hardness, and volatility, composed principally of a mixture of hydrocarbons substantially free from oxygenated bodies. Bitumens are sometimes associated with mineral matter, the nonmineral constituents being fusible and largely soluble in carbon disulfide, yielding water-insoluble sulfonation products. Petroleums, asphalts, natural mineral waxes, and asphaltites are all considered bitumens. *AGI*

bitumen cable

A cable notable for its resistance to moisture, but not suitable for high temperatures. The wires are tinned to prevent reaction with the sulfur in the bitumen. Outside the bitumen are layers of tape and jute, and one or two layers of steel armoring; outside each layer of steel armoring are layers of serving compound. *Mason*

bitumenite

Cannel coal from Torbane, Scotland. See also: [torbanite](#) bituminite.

bitumen lapideum

An old name for mineral coal. *Tomkeieff*

bituminiferous

Yielding or containing bitumen. *Standard, 2*

Bituminite

High explosive used in mines. *Bennett*

bituminous

a. Containing bitumen. b. Pertaining to bituminous coal. *AGI* c. Having the odor of bitumen; often applied to minerals. d. Yielding volatile bituminous matter on heating (for example, bituminous coal). *AGI* e. Containing much organic, or at least carbonaceous, matter, mostly in the form of the tarry hydrocarbons, which are usually described as bitumen.

bituminous coal

a. Coal that ranks between subbituminous coal and anthracite and that contains more than 14% volatile matter (on a dry, ash-free basis) and has a calorific value of more than 11,500 Btu/lb (26.7 MJ/kg) (moist, mineral-matter-free) or more than 10,500 Btu/lb (24.4 MJ/kg) if agglomerating (ASTM). It is dark brown to black in color and burns with a smoky flame. Bituminous coal is the most abundant rank of coal; much is Carboniferous in age. CF: [medium-volatile bituminous coal](#); low volatile bituminous coal. Syn: [soft coal](#) b. A coal that is high in carbonaceous matter, having between 15% and 50% volatile matter. Soft coal. *BCI* c. A general term descriptive of coal other than anthracite and low-volatile coal on the one hand and lignite on the other. *BS, 11* d. A coal with a relatively high proportion of gaseous constituents; dark brown to black in color and burns with a smoky luminous flame. The coke yield ranges from 50% to 90%. The term does not imply that bitumen or mineral pitch is present. See also: [coking coal](#)

bituminous grout

A mixture of bituminous material and fine sand that will flow into place without mechanical manipulation when heated. *ASTM*

bituminous limestone

A dark, dense limestone containing abundant organic matter, believed to have accumulated under stagnant conditions and emitting a fetid odor when freshly broken or vigorously rubbed; e.g., the Bone Spring Limestone of Permian age in west Texas. Syn: [stinkstone](#); [anthraconite](#). See also: [swinestone](#)

bituminous ores

Iron ores in which the gangue consists principally of coaly matter; e.g., black band ironstone. *Osborne*

bituminous rock

Natural or rock asphalt, but the term is sometimes used to describe a rock in which the percentage of impregnation is comparatively low. *Nelson*

bituminous shale

A shale containing bituminous material; coaly shale. CF: [oil shale](#)

bit wall

That portion of the bit between the crown and the shank of the bit. *Long*

bit weight

a. Total weight, in carats, of the diamonds set in a diamond bit. *Long* b. Weight or load applied to a diamond bit during a drilling operation. See also: [bit load](#)

bityite

A monoclinic mineral, $\text{CaLiAl}_2(\text{AlBeSi}_2\text{O}_{10})(\text{OH})_2$; mica group; perfect basal cleavage.

bivalent

a. Having a valence of 2. *Webster 3rd* b. Having two valences; e.g., cobalt has two forms, with valences of 2 and 3, respectively. *Handbook of Chemistry and Physics, 2*

bixbite

A red variety of beryl; in the Wah Wah and Topaz Mountains of Utah.

bixbite

An isometric mineral, $(\text{Mn,Fe})_2\text{O}_3$; forms black cubes. Formerly called partridgeite and sitaparite.

black alkali

An old term for an alkali soil whose sodium tends to disperse organic matter and give a black color. CF: [white alkali](#)

black amber

A name given to jet that is found with amber. It becomes faintly electric when rubbed. See also: [jet](#); [stantienite](#).

black andradite garnet

See: [melanite](#)

black ash

a. Any of various dark-colored products obtained in industrial processes. *Webster 3rd* b. A black mass containing chiefly soda in the form of sodium carbonate and usually also sodium sulfide with some carbon, and produced esp. for recovery of its soda content by concentrating and burning black liquor in rotary furnaces. *Webster 3rd*

blackband

a. A dark, earthy variety of the mineral siderite, occurring mixed with clay, sand, and considerable carbonaceous matter, and frequently associated with coal. Syn: [blackband ore](#) b. A thin layer (up to 10 cm in thickness) of blackband interbedded with clays or shales in blackband ironstone. *AGI* c. See: [blackband ironstone](#)

blackband ironstone

A dark variety of clay ironstone containing sufficient carbonaceous matter (10% to 20%) to make it self-calcining (without the addition of extra fuel). Syn: [blackband](#)

blackband ore

See: [blackband](#)

black bat

A piece of bituminous shale embedded in the rock immediately over the coal measure and liable to fall of its own weight when the coal beneath it has been removed. CF: [kettle bottom](#)

black body

As applied to heat radiation, this term signifies that the surface in question emits radiant energy at each wavelength at the maximum rate possible for the temperature of the surface and, at the same time, absorbs all incident radiation. Only when a surface is a black body can its temperature be measured accurately by means of an optical pyrometer. *Dodd*

black box

A separate and self-contained electronic unit or element of an electronic device which can be treated as a single package. *NCB*

black chalk

A bluish-black carbonaceous clay, shale, or slate, used as a pigment or crayon. *AGI*

black cobalt

See: [asbolan](#)

black concentrate

The mixture of amalgam gold and magnetite obtained from behind the riffles in a gold sluice. *CTD*

black copper

A name given to the impure metallic copper produced in blast furnaces running on oxide ores or roasted sulfide material; an alloy of copper with one or more other metals generally containing several percent of iron, commonly lead, and many other impurities; also contains 1% to 3% sulfur. See also: [tenorite](#)

black copper ore

An earthy, black, massive, or scaly form of copper oxide, CuO. See also: [melanconite](#); [tenorite](#). *Hess*

black coral

An intense black to dark brown coral used in beads, bracelets, art objects, etc.

black cotton

In India, soil from 6 to 10 ft (1.8 to 3.0 m) in thickness overlying the coal measures, which, in dry weather, shrinks and produces mud cracks.

blackdamp

Generally applied to carbon dioxide. Strictly speaking, a mixture of nitrogen and carbon dioxide. The average blackdamp contains 10% to 15% carbon dioxide and 85% to 90% nitrogen. It is formed by mine fires and the explosion of combustible gases in mines, and hence forms a part of the afterdamp. An atmosphere depleted of oxygen rather than containing an excess of carbon dioxide. Being heavier than air, it is always found in a layer along the floor of a mine. It extinguishes light and suffocates its victims. Hence, it is sometimes known as chokedamp. See also: [afterdamp](#); damp. *Fay; Korson*

black diamond

a. A variety of crystalline carbon, related to diamond, but showing no crystal form. Highly prized as an abrasive because of its hardness. Occurs only in Brazil. Syn: [carbonado](#) b. A term frequently applied to coal. c. A black gem diamond. d. Dense black hematite that takes a polish like metal.

black flux

A reducing flux composed of powdered carbon and alkali-metal carbonate. *Webster 3rd*

black garnet

See: [andradite](#)

black gold

a. A slang American term referring to crude oil. b. Syn: [Maldonite](#) c. Placer gold coated with a black or dark-brown substance (such as a film of manganese oxide) so that the yellow color is not visible until the coating is removed. *AGI*

black granite

A commercial term for crystalline rock that when polished is dark gray to black. It may be a diabase, diorite, or gabbro. *AGI*

black gunpowder

A mixture of potassium nitrate (saltpeter), sulfur, and charcoal in varying proportions. A typical composition is 70% to 75% saltpeter, 10% to 14% sulfur, and 14% to 16%

charcoal. It is designated according to grain size: mealed; superfine grain (FFG); fine grain (FG); large or coarse grain (LG); large grain for rifles (RLG); and mammoth. Syn: [black powder](#)

black hematite

See: [psilomelane](#)

black iron

Malleable iron, untinned; distinguished from tinned or white iron. *Standard, 2*

black iron ore

See: [magnetite](#)

blackjack

a. A thin stratum of coal interbedded with layers of slate; a slaty coal with a high ash content. *AGI* b. A syn. of sphalerite, esp. a dark variety. See also: [sphalerite](#) *AGI*

black lead

a. An obsolete name for graphite, still used in naming lead pencils, which are really made of graphite. Syn: [plumbago](#) b. Graphite, in impure crystalline form. *Pryor, 3* c. Used for coating patterns and the faces of cast-iron chilling molds. *Crispin*

blacklead ore

An early name for the black variety of cerussite. *Fay*

black light

a. A prospector's and miner's term for ultraviolet light, used in exploration and evaluation to detect mineral fluorescence. *AGI* b. An instrument, usually portable, that produces ultraviolet light for this purpose. See also: [lamp](#)

black liquor

The alkaline spent liquor from the digesters in the manufacture of sulfate or soda wood pulp.

black liquor recovery furnaces

Smelting or recovery furnaces in which evaporated black liquor is burned to a molten chemical smelt.

blacklung

See: [anthracosis](#)

black magnetic rouge

A polishing material consisting of 99% Fe₃ O₄ . See also: [black rouge](#)

black manganese

a. See: [hausmannite](#) b. A term applied to dark-colored manganese minerals; e.g., pyrolusite, hausmannite, and psilomelane.

black metal

A black shale associated with coal measures. *AGI*

black mica

See: [biotite](#)

black muck

Lanc. A dark-brown powdery substance, consisting of silica, alumina, and iron; found in iron mines.

black mud

A mud formed in lagoons, sounds, or bays, in which there is poor circulation or weak tides. The color is black because of iron sulfides and organic matter. *AGI*

black ocher

See: [wad](#); bog manganese.

black opal

Precious opal with play of color (commonly red or green) displayed against a dark gray (rarely black) body color; e.g., the fine Australian blue opal with flame-colored flashes.

black ore

a. Eng. Partly decomposed pyrite containing copper. *Fay* b. In uranium mining, the term may mean ore containing a high proportion of pitchblende, uraninite, coffinite, or vanoxite. c. Cumb. A variety of hematite in hard pieces, some kidney shaped, reaching the size of one's hand, in a moderately soft, dark-red, brown, or nearly black mass of smit clay and manganese oxide, the whole having a most confused appearance.

black oxide of manganese

See: [pyrolusite](#)

black pigment

Lampblack obtained by burning common coal tar. *Fay*

black powder

A deflagrating or low-explosive granular compound of sulfur, charcoal, and an alkali nitrate, usually potassium or sodium nitrate. Syn: [black gunpowder](#)

black roast

In fluidization roasting (fluosolids process), the conversion of iron sulfide to magnetite. *Pryor, 3*

black rouge

A precipitated black magnetic iron oxide. Used mainly in plate printing inks and in paints, but has small abrasive applications. See also: [black magnetic rouge](#)

black sand

a. An alluvial or beach sand consisting predominantly of grains of heavy, dark minerals or rocks (e.g., magnetite, rutile, garnet, or basaltic glass), concentrated chiefly by wave, current, or surf action. It may yield valuable minerals. See also: [beach placer](#) b. An asphaltic sand. *AGI*

black shale

a. A dark, thinly laminated carbonaceous shale, exceptionally rich in organic matter (5% or more carbon content) and sulfide (esp. iron sulfide, usually pyrite), and often containing unusual concentrations of certain trace elements (U, V, Cu, Ni). It is formed by partial anaerobic decay of buried organic matter in a quiet-water, reducing environment (such as in a stagnant marine basin) characterized by restricted circulation and very slow deposition of clastic material. Fossil organisms are preserved as a graphitic or carbonaceous film or as pyrite replacements. Syn: [biopelite](#) b. Usually a very

thin-bedded shale, rich in sulfides (esp. pyrite, which may have replaced fossils) and rich in organic material, deposited under barred basin conditions causing anaerobic accumulation. *AGI* c. Generally, a fine-grained, finely laminated carbonaceous shale, sometimes cannelloid, often found as a roof to a coal, or in place of a coal, resting on a fire clay. Syn: [black metal](#)

black silver

See: [stephanite](#)

black smoker

A hydrothermal vent at the crest of an oceanic ridge; e.g., the East Pacific Rise at the mouth of the Gulf of California. Waters blackened by sulfide precipitates jet out at 1 to 5 m/s at temperatures of at least 350 degrees C. The term refers to uprushing black turbulent suspension. CF: [white smoker](#)

black telluride

See: [nagyagite](#)

black tellurium

a. A rare gray metallic mineral, a sulfotelluride of gold and lead with some antimony. *CTD* b. See: [nagyagite](#)

black tin

Eng. Dressed tin ore ready to be smelted; from Cornwall. See also: [cassiterite](#)

black wad

An early name for several minerals, including graphite and the softer manganese oxides.

bladder pump

A positive displacement pump in which compressed air is forced down an input column to squeeze a water-filled bladder, thereby forcing water up a discharge column to the ground surface. The bladder refills by gravity flow at the end of each lifting cycle, because the bladder unit is below the static water level. See: positive displacement pump.

blade

a. The shape of a solid, as one in which the ratios of breadth to length and thickness to breadth are each less than 2:3. b. Having the appearance of blades, e.g., flat crystals strongly elongated in one direction.

bladed

Decidedly elongated and flattened; descriptive of some minerals. *Fay*

bladed structure

Consisting of individual minerals flattened like a knife blade. *Hess*

blade mill

Trommel washer with lifting blades, which aid in disintegration and scrubbing of passing feed. *Pryor, 3*

blaes

a. A Scottish term for a gray-blue carbonaceous shale that weathers to a crumbly mass and eventually to a soft clay. See also: [bind](#) b. A Scottish term for a hard, joint-free sandstone. Syn: [blaize](#) *AGI*

Blair process

An improved form of the Chenot process for making sponge iron by heating crushed iron oxide and coal in retorts.

Blaisdell excavator

An apparatus for automatically discharging a sand tank having a central bottom opening. It consists of a central vertical shaft carrying four arms fitted with round plow disks. Sand is plowed toward a central opening and discharged on a conveyor belt. Syn: [Blaisdell vat excavator](#) *Liddell; Fay*

Blaisdell loading machinery

An apparatus for loading sand tanks. It consists of a rapidly revolving disk with curved radial vanes. The disk is hung on a shaft in the tank center, and the sand dropped on the disk is distributed over the entire tank area. *Liddell*

Blaisdell vat excavator

See: [Blaisdell excavator](#)

blaize

See: [blaes](#)

Blake breaker

A jaw breaker or particular kind of jaw crusher. *Nelson*

Blake furnace

A furnace, the hearth of which consists of terraces rising from the outer edge to the center. The hearth is circular and revolves when in operation. *Fay*

blakeite

a. Anhydrous ferric tellurite as reddish-brown microcrystalline (cubic?) crusts from Goldfield, NV. *Spencer, 3* b. Titanozirconate of thorium, uranium, calcium, iron, etc., described as zirkelite from Ceylon [now Sri Lanka], but differing in chemical composition and also apparently in crystalline form from the original zirkelite from Brazil. *Spencer, 4*

Blake jaw crusher

The original crusher of jaw type. A crusher with one fixed jaw plate and one pivoted at the top so as to give the greatest movement on the smallest lump. Motion is imparted to the lower end of the crushing jaw by toggle joint operated by eccentric. This machine, or some modification of it, is used for reducing run-of-mine ore or coal to a size small enough to be taken by the next crusher in the series during the first stage of crushing. *Liddell; Newton, 1*

Blake Morscher separator

See: [electrostatic separator](#)

blank

a. An interval in a borehole from which core was not recovered or was lost, or in which no minerals of value were encountered. *Long* b. See: [bit blank](#) c. In powder metallurgy, a pressed, presintered, or fully sintered compact, usually in the unfinished condition and requiring cutting, machining, or some other operation to produce the final shape. *ASM, 1* d. A quartz plate with approx., or exactly, the correct edge dimensions, but not yet finished to final thickness (frequency). Ordinarily applied to pieces of quartz that are in the process of being machine lapped or that are diced out, but not yet lapped. *Am. Mineral., 2*

blank bit

See: [bit blank](#)

blanket

a. A textile material used in ore treatment plants for catching coarse free gold and some associated minerals; e.g., pyrite. The blanket is taken up periodically and washed in a tub to remove the gold concentrate, from which the gold is recovered by amalgamation. CF: [tabular](#) b. See: [blanket deposit](#); blanket vein. c. Soil or broken rock left or placed over a blast to confine or direct throw of fragments. *Nichols, I* d. A thin, widespread sedimentary body whose width-thickness ratio is greater than 1,000:1 and may be as great as 50,000:1. Syn: [sheet](#) *AGI*

blanket deposit

a. A horizontal, tabular orebody; manto; bedded vein. *AGI* b. A sedimentary deposit of great areal extent and relatively uniform thickness; esp. a blanket sand and associated limestones. See also: [blanket](#); [blanket vein](#). *AGI*

blanket feed

A method for charging batch designed to produce an even distribution of batch across the width of the furnace. *ASTM*

blanketing

a. The material caught upon the blankets used in concentrating gold-bearing sands or slimes; also the process involved. b. Can. Staking but not recording claims. *Hoffman*

blanket sand

A blanket deposit of sand or sandstone of unusually wide distribution, typically an orthoquartzitic sandstone deposited by a transgressive sea advancing for a considerable distance over a stable shelf area; e.g., the St. Peter Sandstone of the East-Central United States. Syn: [sheet sand](#); blanket sandstone. *AGI*

blanket sandstone

See: [blanket sand](#)

blanket shooting

Applied to a method of blasting on a face not exceeding 30 ft or 35 ft (9.1 m or 10.7 m) in height. It involves leaving at the quarry face a mass of shattered rock several feet in

thickness that serves as a buffer, preventing the rock from being thrown far from its source, and also rendering the shot more effective. Syn: [buffer shooting](#); shooting against the bank. *Fay*

blanket sluice

A sluice in which coarse blankets are laid to catch the fine but heavy particles of gold, amalgam, etc., in the slime passing over them. The blankets are removed and washed from time to time to obtain the precious metal. *Fay*

blanket strake

A trough over which gold pulp flows. It is lined with a blanket for catching coarse gold and associated minerals. See also: [strake](#) *Nelson*

blanket vein

A horizontal or sheet deposit. See also: [blanket](#); [blanket deposit](#). CF: [bed vein](#)

blanket washer

In ore dressing, smelting, and refining, one who cleans flannel blankets over which a mixture of finely ground gold ore and cyanide solution from Chilean mills is passed to collect free particles of gold not dissolved by the cyanide. *DOT*

blank hole

a. A borehole in which no minerals or other substances of value were penetrated. Syn: [barren hole](#); [dry hole](#). *Long* b. The uncased portion of a borehole. Syn: [bare](#); [barefoot](#); [naked](#). *Long*

blankoff

To line a specific portion of a borehole with casing or pipe for the purpose of supporting the sidewalls or to prevent ingress of unwanted liquids or gas. Syn: [case](#); case off CF: [seal off](#)

blank pipe

Unperforated pipe or casing set in a borehole. *Long*

blank reaming shell

A reaming shell in which no reaming diamonds or other cutting media are inset on the outside surface. *Long*

Blanton cam

A device used for locking the cam on the camshaft in a stamp mill. *Fay*

Blasjo cut

This is a cut with a single V where all the holes on one side are parallel and meet the holes from the other side at an angle that may be as low as 30 degrees. *Langefors*

blast

a. The ignition of a heavy explosive charge. Syn: [shot](#) b. A miner's term for compressed air underground. *Nelson* c. Scot. A fall of water in the downcast shaft to produce or quicken ventilation. d. A suffix signifying a texture formed entirely by metamorphism. *AGI* e. The operation of increasing the diamond exposure on a bit face by removing some of the matrix metal through the abrasive action of grains of sand carried in a high-pressure stream of air. Also called sandblast. *Long* f. An increase in firing temperature of a kiln immediately before ending the firing operation. g. The period during which a blast furnace is in blast; i.e., in operation.

blast coupling

The degree to which an explosive fills the borehole. Bulk-loaded explosives are completely coupled. Untamped cartridges are decoupled. *Dick, 2*

blast draft

The draft produced by a blower, as by blowing in air beneath a fire or drawing out the gases from above it. A forced draft. *Fay*

blaster

a. A device for detonating an explosive charge. *AGI* b. One who sets off blasts in a mine or quarry. A shot firer. Syn: [shooter](#) c. See: [blasting unit](#)

blast furnace

A shaft furnace in which solid fuel is burned with an airblast to smelt ore in a continuous operation.

blast furnace dust

A dust recovered from blast furnace gases, some of which is valuable for its potash content. *Hess*

blast furnace gas

A low-grade producer gas, made by the partial combustion of the coke used in the furnace and modified by the partial reduction of iron ore. The gas contains more carbon dioxide and less hydrogen than normal producer gas made from coke and has a lower calorific value. *Francis, 2*

blast-furnace slag

The nonmetallic product, consisting essentially of silicates and aluminosilicates of lime and of other bases, that is developed simultaneously with iron in a blast furnace. Syn: [slag](#)

blast hearth

A hearth in connection with which a blast is used, as in reducing lead ore. *Fay*

blasthole

A hole drilled in a material to be blasted, for the purpose of containing an explosive charge.

blasthole charger

A portable unit consisting of a prilled explosive reserve tank feeding into an air-activated loading tube. The equipment should be grounded to guard against buildup of static electricity and possible accidental explosive detonation. The blasthole charger permits rapid loading of prilled explosives into blastholes drilled in any direction.

blasthole drill

Any rotary, percussive, fusion-piercing, churn, or other type of drilling machine used to produce holes in which an explosive charge is placed. Syn: [shothole drill](#)

blasthole driller

See: [churn-drill operator](#)

blasting agent

An explosive material that meets prescribed criteria for insensitivity to initiation. It is a material or mixture consisting of fuel and oxidizer used in blasting, but not otherwise defined as an explosive. The finished mixture used for shipment or transportation cannot be detonated by a No. 8 test detonator cap when unconfined.

blasting barrel

A piece of iron pipe, usually about 1/2 in (1.3 cm) in diameter, used to provide a smooth passageway through the stemming for the miner's squib. It is recovered after each blast and used until destroyed. *Fay*

blasting cap

a. A detonator containing an ignition explosive mixture, a primary initiating charge, and a high-explosive base charge, encapsulated in an aluminum or copper shell. Caps are initiated either electrically or nonelectrically. See also: [waterproof electric blasting cap](#) b. A small sensitive charge placed in the larger explosive charge by which the larger charge is detonated. See also: [electric detonator](#) *BCI*

blasting cartridge

A cartridge containing an explosive to be used in blasting. *Fay*

blasting circuit

A shotfiring cord together with connecting wires and electric blasting caps used in preparation for the firing of a blast in mines, quarries, and tunnels.

blasting compounds

Explosive substances used in mining and quarrying. *Hess*

blasting cord

See: [shot-firing blasting cord](#)

blasting curtain

A screen erected to prevent damage to equipment and supports in the vicinity of the blasting point. See also: [curtain](#); [shot-firing curtain](#). Syn: [blasting cord](#)

blasting fuse

a. A slow-burning fuse used in blasting operations. *Standard, 2* b. A fine core of gunpowder enclosed in the center of jute, yarn, etc., for igniting an explosive charge in a shothole. See also: [safety fuse](#) *Nelson*

blasting galvanometer

An instrument that provides a simple means for testing electric blasting circuits, enabling the blaster to locate breaks, short circuits, or faulty connections before an attempt is made to fire the shot. With its use, misfires may be prevented to a great extent. To test a circuit, one wire should be placed on one terminal of the instrument and the other wire on the other terminal. If the needle is not deflected, it indicates that the circuit is broken; if it is an electric blasting cap that is being tested, this should be discarded. *Pit and Quarry*

blasting gelatin

A high explosive, consisting of nitroglycerin and nitrocotton. It is a strong explosive, and a rubberlike, elastic substance, unaffected by water. Taken as a standard of explosive power. CF: [dynamite](#) *Fay; BS, 12*

blasting hole well driller

See: [churn-drill operator](#)

blasting log

A written record of information about a specific blast as may be required by law or regulations. *Atlas*

blasting machine

A portable dynamo that generates enough electric current to detonate electric blasting caps when the machine rack bar or handle is given a quick, downward push. Syn: [battery](#) M.E. 6 exploder. *Long*

blasting mat

A mat of woven steel wire, rope, scrap tires, or other suitable material or construction to cover blastholes for the purpose of preventing flying rock missiles. *Meyer*

blasting needle

A pointed instrument for piercing the wad or tamp of a charge of explosive, to permit introducing a blasting fuse. *Standard, 2*

blasting off the solid

Blasting the working face in a coal mine without providing a second free face by cutting or shearing before blasting. *CFR, 4*

blasting oil

See: [nitroglycerin](#)

blasting reflection mechanism

See: [reflection mechanism](#)

blasting supplies

A term used to include electric blasting caps, ordinary blasting caps, fuse, blasting machines, galvanometers, rheostats, etc., in fact, everything used in blasting, except explosives. CF: [blowing tools](#) *Fay*

blasting switch

A switch used to connect a power source to a blasting circuit. It is sometimes used to short-circuit the leading wires as a safeguard against premature blasts.

blasting timer

An instrument that utilizes a powerline as a source of electrical current and that closes the circuits of successive blasting caps with a delay time interval. The timer provides for the circuits of 15 charges and affords positive control of the duration of intervals.

Streefkerk

blasting tube

A tube of explosives, as nitroglycerin, for blasting. *Standard, 2*

blasting unit

A portable device including a battery or a hand-operated generator designed to supply electric energy for firing explosive charges in mines, quarries, and tunnels. Syn: [blaster](#); [exploder](#); [shot-firing unit](#). See also: [single-shot blasting unit](#); [multiple-shot blasting unit](#).

blasting vibrations

The energy from a blast that manifests itself in earthborne vibrations that are transmitted through the Earth away from the immediate blast site. Syn: [ground vibrations](#)

blast nozzle

A fixed- or variable-sized outlet of a blast pipe. *Fay*

blastogranitic

A relict texture in a metamorphic rock in which remnants of the original granitic texture remain. *AGI*

blastophitic

Said of a relict texture in a metamorphic rock in which traces of an original ophitic texture remain. *AGI*

blastoporphyritic

Said of a relict texture in a metamorphic rock in which traces of an original porphyritic texture remain. *AGI*

blast pattern

The array of drilled holes on the surface or underground to be loaded and detonated in sequence; a pattern is indicated by the distance between holes in a row (spacing) and between rows (burden).

blast roasting

Roasting conducted in a Dwight-Lloyd machine, in which roasting is accompanied by sintering. The charge is placed in small boxes and ignited; air is then drawn through to burn off sulfur. Syn: [Carmichel-Bradford process](#)

blast site

The area where explosive material is handled during the loading and detonation of blast holes; in surface blasting, it includes 50 ft (15.2 m) in all directions from perimeter holes; underground, it includes 15 ft (4.6 m) of solid rib. *Atlas*

bleaching clay

A clay or earth that, either in its natural state or after chemical activation, has the capacity for adsorbing or removing coloring matter or grease from liquids (esp. oils). Syn: [bleaching earth](#)

bleaching earth

See: [bleaching clay](#)

bleb

A small, usually rounded inclusion of one mineral in another; e.g., blebs of olivine poikilitically enclosed in pyroxene.

https://t.me/Geologybooks

bled ingot

In steelmaking, an ingot that has lost its molten center while cooling. *Standard, 2*

bleeder

a. A connection located at a low place in an air line or gas line, or container, so that by means of a small valve the condensed water or other liquid can be drained or bled off from the line or container without discharging the air or gas. *Long* b. A fine-adjustment valve (needle valve) connected to the bottom end of a hydraulic feed cylinder in the swivel head of a diamond drill. By means of the bleeder, the speed at which the hydraulic piston travels can be minutely controlled. *Long* c. A pipe on top of an iron blast furnace through which gas escapes.

bleeder entries

Widely used for draining methane in coal mines in the United States where the room-and-pillar method is employed. They are panel entries driven on a perimeter of a block of coal being mined and maintained as exhaust airways to remove methane promptly from the working faces to prevent buildup of high concentrations either at the face or in the main intake airways. They are maintained, after mining is completed, in preference to sealing the completed workings. *Hartman, 1*

bleeder pipe

A pipe inserted in a seal to relieve gas pressure from a sealed area.

bleeding

a. The process of giving off oil or gas from pore spaces or fractures; it can be observed in drill cores. *AGI* b. The exudation of small amounts of water from coal or a stratum of some other rock. *AGI*

bleeding surface

Any face, such as the walls of a well or borehole or the sides of a fracture, that traverses a reservoir rock or aquifer, permitting the stored liquid or gas to seep (or to bleed) into the opening. *AGI*

bleed off

A coal mining term used when feeders or blowers act as the means by which gas is "bled off" or dissipated to the adjoining strata or to the surface. *Kentucky*

blende

a. Without specific qualification, it means zincblende or the sulfide of zinc (sphalerite), which has the luster and often the color of common resin and yields a white streak and powder. The darker varieties are called blackjack by English miners. Other minerals having this luster are also called blendes, such as antimony blende, ruby blende, pitchblende, and hornblende. Sphalerite (blende) is often found in brown shining crystals, hence its name among German miners, from the word blenden, meaning to dazzle. *Fay* b. A miners' term for sphalerite. c. Various minerals, chiefly metal sulfides, with bright or resinous but nonmetallic luster, e.g., zinc blende (sphalerite), antimony blende (kermesite), bismuth blende (eulytite), cadmium blende (greenockite), pitchblende (uraninite), hornblende.

blended unconformity

An unconformity having no distinct surface of separation or sharp contact, as at an erosion surface that was originally covered by a thick residual soil, which graded downward into the underlying rocks and was partly incorporated in the overlying rocks; e.g., a nonconformity between granite and overlying basal arkosic sediments derived as a product of its disintegration. Syn: [graded unconformity](#)

blending

Mixing in predetermined and controlled quantities to give a uniform product. *BS, 5*

blending conveyor

A conveyor running beneath a line of ore bins or stockpiles, and so set that each bin or stockpile can deliver onto the conveyor at a controllable rate from individual feeders. Syn: [paddle-type mixing conveyor](#); screw-type mixing conveyor. *Pryor, 3*

blind

a. To drill with the circulation medium (water or drill mud) escaping into the sidewalls of the borehole and not overflowing the collar of the drill hole. *Long* b. An underground opening not connected with other workings nearby and at about the same elevation. *Long* c. Said of a mineral deposit that does not crop out. The term is more appropriate for a deposit that terminates below the surface than for one that is simply hidden by unconsolidated surficial debris. Syn: [blind vein](#)

blind apex

The near-surface end of a mineral deposit, e.g., the upper end of a seam or vein that is truncated by an unconformity. Syn: [buried outcrop](#) *AGI*

blind bit

See: [noncoring bit](#)

blind borehole process

In the underground gasification of coal, a borehole is drilled to a blind end having no outside connection. A tube of smaller diameter is inserted nearly the full length through which air is passed to supply a gasification reaction at the far end of the hole. The hot gases return around the outside of the tube. See also: [underground gasification](#) *Nelson*

blind drift

A horizontal passage, in a mine, not yet connected with the other workings. See also: [blind level](#)

blinde

See: [blende](#)

blind header

A concealed brick header in the interior of a wall, not showing on the faces. *ACSG, 1*

blind hole

A borehole in which the circulating medium carrying the cuttings does not return to the surface. *Long*

blinding

a. In leaching, reduced permeability of ion-exchange resins due to adherent slimes. In sieving, blocking of screen apertures by particles. *Pryor, 3* b. A matting of, or stoppage by, fine materials during screening that interferes with or blinds the screen mesh. c. Compacting soil immediately over a tile drain to reduce its tendency to move into the tile. *Nichols, 1*

blind joint

In apparently massive rock that is being quarried, a plane of potential fracture along which the rock may break during excavation. *AGI*

blind lead

A vein having no outcrop. See also: [blind lode](#); [blind vein](#); [lead](#).

blind level

a. One not yet holed through to connect with other passages. Syn: [blind drift](#) b. A cul-de-sac or dead end. *Pryor, 3* c. A level for drainage, having a shaft at either end, and acting as an inverted siphon.

blind lode

A lode showing no surface outcrop, and one that cannot be found by any surface indications. See also: [blind lead](#); [blind vein](#).

blind road

Mid. Any underground roadway not in use, having stoppings placed across it. Syn: [blind way](#)

blind roaster

A muffle furnace for roasting ore out of contact with the products of combustion. *Standard, 2*

blind seams

Incipient joints.

blind shaft

A sublevel shaft, connected to the main (daylight to depth) shaft by a transfer station. A winze. *Pryor, 3*

blind shearing

Scot. A side cutting without undercutting.

blind vein

A vein that does not continue to the surface. See also: [blind](#); blind lode; blind lead. *Fay*

blind way

See: [blind road](#)

blind zone

See: [shadow zone](#)

blip

Echo trace on radar or sonar indicator screen. *Hy*

Bliss sandstone

Massive, compact, fine-textured, fossiliferous gray sandstone ranging from almost white to brown. It may be either Cambrian or Ordovician, or both, at any given locality. It represents a period of slow intermittent deposition of sandy material. Found in New Mexico and in Texas. *Hess*

blister

a. In quarrying, an unconfined charge of explosive used to bring down dangerous ground that cannot be made safe by barring and that is too inaccessible to bore. *South Australia*
b. A protrusion, more or less circular in plan, extending downward into a coal seam. It represents the filling of a streambed pothole worn into the upper surface of the coal-forming material. *AGI*
c. Copper as a smelter product before it is refined. *Hoffman*
d. A defect in metal, on or near the surface, resulting from the expansion of gas in a subsurface zone. Very small blisters are called pinheads or pepper blisters. *ASM, I*

blister bar

A wrought-iron bar impregnated with carbon by heating in charcoal. Used in making crucible steel. *CTD*

blister copper

An impure intermediate product in the refining of copper, produced by blowing copper matte in a converter. *ASM, I*

blistered copper ore

A reniform variety of chalcopyrite. *Fay*

blister steel

Raw steel that has been cooled very slowly and that has a blistered appearance. The blisters are formed by gas escaping from within the metal. *Camm*

blister wax

See: [blower wax](#)

bloating phenomena

The expansion of certain nonmetallic materials by heating until the exterior of the particle or shape becomes sufficiently pyroplastic or melted to entrap gases generated on the interior by the decomposition of gas-producing components.

block

a. A division of a mine, usually bounded by workings but sometimes by survey lines or other arbitrary limits. b. A short piece of timber placed between the mine roof and the cap of a timber set and directly over the cap support. A wedge driven between the roof and the timber holds the set in place. See also: [blocking and wedging](#) c. A pillar or mass of ore exposed by underground workings. See also: [blocking out](#) d. Portion of an orebody blocked out by drives, raises, or winzes, so that it is completely surrounded by passages and forms a rectangular panel. If its character, volume, and assay grade are thus established beyond reasonable doubt, it ranks as proved ore in the mine's assets. *Pryor*, 3 e. The wedging of core or core fragments or the impaction of cuttings inside a bit or core barrel, which prevents further entry of core into the core barrel, thereby producing a condition wherein drilling must be discontinued and the core barrel pulled and emptied to forestall loss of core through grinding or the serious damage of the bit or core barrel. See also: [core block](#); [plug](#). *Long* f. An obstruction in a borehole. *Long* g. See: [sheave](#)

block caving

A general term that refers to a mass mining system where the extraction of the ore depends largely on the action of gravity. By removing a thin horizontal layer at the mining level of the ore column, using standard mining methods, the vertical support of the ore column above is removed and the ore then caves by gravity. As broken ore is removed from the mining level of the ore column, the ore above continues to break and cave by gravity. The term "block caving" probably originated in the porphyry copper mines, where the area to be mined was divided into rectangular blocks that were mined in a checkerboard sequence with all the ore in a block being removed before an adjacent block was mined. This sequence of mining is no longer widely used. Today most mines use a panel system, mining the panels sequentially or by establishing a large production area and gradually moving it forward as the first area caved becomes exhausted. The term "block caving" is used for all types of gravity caving methods. There are three major systems of block caving, and they are differentiated by the type of production equipment used. (1) The first system based on the original block cave system is the grizzly or gravity system and is a full gravity system wherein the ore from the drawpoints flows directly to the transfer raises after sizing at the grizzly and then is gravity loaded into ore cars. (2) The second system is the slusher system, which uses slusher scrapers for the main production unit. (3) The last system is the rubber-tired system, which uses load-haul-dump (LHD) units for the main production unit. Block caving has the lowest cost of all mine exploitation systems, with the exception of open pit mining or in situ recovery. See also: [top slicing](#)

block caving into chutes

See: [chute caving](#)

block claim

Aust. A square mining claim whose boundaries are marked out by posts.

block diagram

A plane figure representing a block of the Earth's crust (depicting geologic and topographic features) in a three-dimensional perspective, showing a surface area on top and including one or more (generally two) vertical cross sections. The top of the block gives a bird's-eye view of the ground surface, and its sides give the underlying geologic structure. *AGI*

blocked-out ore

a. Ore, the amount, content, and minability of which have been proven by development work or by drilling developed ore. Syn: [developed reserve](#) *AGI* b. A body of ore exposed, explored, and sampled for valuation purposes on all four sides of the panel formed by driving, winzing, and raising. *Pryor, 3* c. See: [reserves](#)

block faulting

A type of normal faulting in which the crust is divided into structural or fault blocks of different elevations and orientations. It is the process by which block mountains are formed. *AGI*

block field

A thin accumulation of usually angular blocks, lying on bedrock without a cliff or ledge above as apparent source. Block fields occur on high mountain slopes above the tree line. Syn: [felsenmeer](#)

block hole

a. A small hole drilled into a rock or boulder into which an anchor bolt or a small charge of explosive may be placed. *Long* b. Used by drillers, miners, and quarry workers for a method of breaking undesirably large blocks of stone or boulders by the discharge of an explosive loaded into shallow holes drilled into the blocks or boulders. *Long* c. A relief hole designed to remove part of the burden from a subsequent shot; used in coal mining.

blockholer

A person whose duty it is to break up and reduce to safe and convenient size, by blasting or otherwise, any large blocks or pieces of rock that have been blown down by the miners. *Fay*

block hole shot

See: [pop shot](#)

blockholing

The breaking of boulders by loading and firing small explosive charges in small-diameter drilled holes.

blocking

In a crusher, obstruction of the crushing zone by clayey material or by rock that refuses to break down and pass to discharge. Syn: [packing](#)

blocking and wedging

A method of holding mine timber sets in place. Blocks of wood are set on the caps directly over the post supports and have a grain of block parallel with the top of the cap; wedges are driven tightly between the blocks and the roof. See also: [block](#)

blocking out

a. Exposing an orebody by means of development openings, on at least three sides, in preparation for continuous extraction; the opening of a deep lead deposit. See also: [block](#)
b. As applied to coal reserves, acquiring coal and mining rights in contiguous areas to form a continuous area and in a desirable shape for planned future mining. c. Aust. Laying or staking out gold-bearing gravel deposits in square blocks in order to facilitate systematic washing. d. In economic geology, delimitation of an orebody on three sides in order to develop it, i.e., to make estimates of its tonnage and quality. The part so prepared is an ore block. *AGI*

block kriging

Estimating the value of a block from a set of nearby sample values using kriging.

blockmaking

Applied to the various processes involved in roofing slate manufacture, which include drilling and wedging, cutting, sawing, etc. *AIME, I*

block mica

Mica with a minimum thickness of 0.007 in (0.18 mm) and a minimum usable area of 1 in² (6.45 cm²), full trimmed unless otherwise specified. *Skow*

block mountain

A mountain that is formed by block faulting. The term is not applied to mountains that are formed by thrust faulting. Syn: [fault-block mountain](#) *AGI*

block movement

A general failure of the hanging wall. In the gold mines of South Africa and the Michigan copper mines, block movements have been experienced. *Nelson*

block off

a. To fill and seal undesirable openings, fissures, or caving zones in a borehole by cementation or by lining the borehole with pipe or casing. Also called blank off; case off; seal off. *Long* b. To secure a mine opening against the flow or escape of gas, air, or liquid by erecting rock, concrete, steel, wood, or cloth barriers. *Long* c. To erect barriers to prevent workers from entering unsafe areas in underground workings. *Long*

block out

To delineate the area in which a desirable mineral occurs by systematic core drilling or by underground openings. *Long*

block riffles

These consist of timber blocks, 8 to 12 in (20.3 to 30.5 cm) square, set in transverse rows in a sluiceway; they are arranged so that in contiguous rows the joints are staggered to prevent the development of longitudinal cracks. It is usual to separate adjacent rows by means of a strip of ordinary riffle scantling. *Griffith*

block structure

Used in quarrying to describe granite that has three sets of joints occurring at right angles to each other. *Streefkerk*

block system

a. A pillar mining system in which a series of entries, panel entries, rooms, and crosscuts are driven to divide the coal into blocks of approx. equal size, which are then extracted on retreat. Development openings are most commonly driven between 15 ft and 20 ft (4.6 m and 6.1 m) wide. Pillars are most commonly 40 to 60 ft (12.2 to 18.3 m) wide and

from 60 to 100 ft (18.3 to 30.5 m) long. *Woodruff* b. A system of control in which a number of units, for example, powered supports, are operated as a group. *NCB*

block system of stoping and filling

See: [overhand stoping](#); Brown panel system.

block-tin lining

Copper vessels are lined or coated with tin by the application of molten tin upon clean copper with the aid of fluxing. *CCD, 2*

blocky rock

Rock ore that breaks into large blocks. *Sandstrom*

bloedite

A monoclinic mineral, $\text{Na}_2 \text{Mg}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O}$. Also spelled bloedite, blodite. Formerly called astrakhanite. Syn: [astrakanite](#); [magnesium blodite](#).

Bloman tube breathing apparatus

This differs from the smoke helmet in that there is neither helmet nor bellows. Fresh air is passed to the wearer through a corrugated reinforced rubber tube by means of a rotary blower. A mouthpiece having an inhalation valve, an exhalation valve, and a noseclip takes the place of the helmet. It is held in position by straps attached to a head harness. The mouthpiece can be replaced by a full-face mask. This apparatus is fitted with an equalizing device that enables the wearer to continue breathing comfortably, even should the rotary blower stop. *Mason*

blomstrandine

See: [priorite](#)

bloodstone

a. A variety of chalcedony or jasper, dark green in color, interspersed with small red spots. Used as a gem. Also called heliotrope. CF: [plasma](#) *Sanford* b. A red variety of quartz.

blooey line

A pipe or flexible tube conducting cuttings-laden air or gas from the collar of a borehole to a point far enough removed from the drill rig to keep the air around the drill dust free. *Long*

bloom

a. A mineral that is frequently found as an efflorescence, cobalt bloom, for example. Syn: [efflorescence](#) b. To form an efflorescence; as, salts with which alkali soils are impregnated bloom out on the surface of the Earth in dry weather following rain or irrigation. *Webster 2nd* c. The fluorescence of petroleum or its products. *Webster 3rd* d. A semifinished hot-rolled product, rectangular in cross section, produced on a blooming mill. For iron and steel, the width is not more than twice the thickness, and the cross-sectional area is usually not less than 36 in² (232 cm²). Iron and steel blooms are sometimes made by forging. *ASM, 1* e. A surface film resulting from attack by the atmosphere or from the deposition of smoke or other vapors. *ASTM* f. A lump or mass of molten glass. *Webster 2nd*

bloomer

See: [blooming mill](#)

bloomery

A forge for making wrought iron, usually direct from the ore. Syn: [cinder plate](#); [Meritt plate](#). *Fay*

blooming mill

The mill or equipment used in reducing steel ingots to blooms. *ASM, 1*

blow

a. A sudden escape of gas from coal or associated strata into mine workings. See also: [outburst](#) b. A large outcrop of ore, commonly of low grade. *Nelson* c. To lift: said of a floor that lifts owing to pressure from gas or strata. *Mason* d. In blasting, a shot that blows part of the unfired explosive out of the hole. See also: [blown-out shot](#) e. To fire shots. *Mason*

blow count

The number of blows that must be delivered by a specific-weight, freely falling drive hammer dropping a specific distance to force a drive sampler a unit distance into a soil material. *Long*

blower

a. A fan employed in forcing air either into a mine or into one portion of a mine. A portable blower, also known as a tubing blower or room blower, is used in ventilating small dead-end places like rooms and entries or gangways. *Jones, 1* b. The sudden emission of combustible gases from the coal seam or surrounding rock. Blowers vary considerably in violence and magnitude from small emissions that make a hissing noise to severe outbursts. *Nelson* c. Eng. A worker who blasts or fires shots in a mine, or who drills the holes and charges them, ready for firing. *Fay*

blower fan

A fan to direct part of an air circuit through a tubing to a particular working face. See also: [mine ventilation auxiliary fan](#)

blower system

A system in which the pressure-generating source is located at the entrance and raises the pressure of the air above atmospheric. *Hartman, 2*

blower wax

A pale yellow, soft variety of ozocerite that is squeezed out of the veins under the influence of pressure of the surrounding rocks. Syn: [blister wax](#)

blowhole

a. A minute crater formed on the surface of thick lava flows. *Fay* b. A hole in a casting or a weld caused by gas entrapped during solidification. See also: [gas evolution](#)

blow in

To put a blast furnace in operation. Syn: [blowing in](#)

blowing

a. Oxidation of molten metal or matte in a converter or other smelting furnace, in order to remove carbon and sulfur and to convert impurities to slag. b. The bursting of pots from too rapid heating. *ACSG, 2*

blowing engine

An engine for forcing air into blast furnaces under pressure, commonly about 1 psi (6.9 kPa). *Weed, 2*

blowing in

Starting a blast furnace. Syn: [blow in](#)

blowing on taphole

Blowing air through the hole at casting, to clean the hearth of iron and cinder. *Fay*

blowing road

S. Staff. An intake, or fresh-air road in a mine.

blowing tools

A small set of blasting implements. CF: [blasting supplies](#) *Standard, 2; Fay*

blowing-up furnace

A furnace used for sintering ore and for the volatilization of lead and zinc. *Fay*

blowing ventilation

Mine ventilation in which the air flows from the fan at the portal toward the working face.

blown metal

Pig iron purified by blowing air through it.

blown-out shot

A shot that dissipates the explosive force by blowing out the stemming instead of breaking down the coal. It may be caused by insufficient stemming, overcharging with explosive, or a burden that is too much for the charge to dislodge. See also: [gun](#); [blow](#). Syn: [cannon shot](#); gunned shot. *Nelson*

blowout

a. A large mineralized outcrop beneath which the vein is smaller, e.g., a great mass of quartz that conceals a vein only a few feet wide. b. A shot or blast that goes off like a gun and does not shatter the rock; a windy shot. c. A large outcrop beneath which the vein is smaller is called a blowout. (slang) *Fay* d. The high-pressure, sometimes violent, and uncontrolled ejection of water, gas, or oil from a borehole. *Long* e. Used by prospectors and miners for any surface exposure of strongly altered discolored rock associated, or thought to be associated, with a mineral deposit. *AGI* f. Used by miners and prospectors for a large, more or less isolated, usually barren quartz outcrop. Known in Australia as blow. *Hess* g. To put a blast furnace out of blast, by ceasing to charge

fresh materials, and continuing the blast until the contents of the furnace have been smelted. *Fay* h. To smelt the iron-bearing materials in the furnace, adding domestic coke so that the stockline is about normal. *Camp* i. A general term for a small saucer-, cup-, or trough-shaped hollow or depression formed by wind erosion on a preexisting dune or other sand deposit, esp. in an area of shifting sand or loose soil, or where protective vegetation is disturbed or destroyed; the adjoining accumulation of sand derived from the depression, where recognizable, is commonly included. Some blowouts may be many kilometers in diameter. *AGI*

blowout shot

An improperly placed or overcharged shot of black blasting powder in coal (where used), frequently results in a mine explosion. *von Bernewitz*

blowover

a. Sand blown by onshore winds across a barrier and deposited on its landward side or as a veneer in the lagoon; e.g., along the Gulf Coast of Texas. CF: [washover](#) b. The process of forming a blowover. *AGI*

blowpipe reaction

a. The decomposition of a compound or mineral when heated by the blowpipe, resulting in some characteristic reaction, as a coloring of the flame or a colored crust on a piece of charcoal. *Standard, 2* b. A method of analysis in mineralogy. *Fay*

blowpiping

a. A rapid method for the determination of the approximate composition of minerals and ores. Blowpipe tests are merely qualitative; i.e., they indicate the presence of the different constituents, but not the proportions. A blowpipe consists of a plain brass tube capable of producing a flame of intense heat that may be either oxidizing or reducing. Illuminating gas from a Bunsen burner is the fuel commonly used. The color, nature, and smell of the encrustations suggest the nature of the elements present. See also: [bead](#); [borax bead test](#). *Nelson* b. The use of a bent tube with a condensation trap and a small hole to direct one's concentrated breath into a small flame from a gas or alcohol lamp to produce intense heat in both oxidizing and reducing flames for the purpose of soldering metals or of performing qualitative analyses on powdered mineral samples. See also: [oxidizing flame](#); [reducing flame](#).

blowup

a. Eng. An explosion of combustible gases in a mine. b. To allow atmospheric air access to certain places in coal mines, so as to generate heat, and ultimately to cause gob fires.

blue annealing

Heating hot-rolled ferrous sheet in an open furnace to a temperature within the transformation range, and then cooling it in air in order to soften the metal. The formation of a bluish oxide on the surface is incidental. *ASM, I*

blue asbestos

A name for crocidolite, the asbestiform variety of riebeckite.

blue band

A thin, persistent bed of bluish clay that is found near the base of the No. 6 coal throughout the Illinois-Indiana basin.

blue-black ore

Corvusite, extremely high-grade vanadium ore with blue-black color. *Ballard*

blue brittleness

Brittleness exhibited by some steels after being heated to some temperature within the range of 300 to 650 degrees F (149 to 343 degrees C), particularly if the steel is worked at the elevated temperature. *ASM, I*

blue cap

The characteristic blue halo, or tip, of the flame of a safety lamp when combustible gases are present in the air. See also: [top](#); [cap](#).

blue chalcedony

See: [sapphirine](#)

blue chalcocite

See: [digenite](#)

blue copper

See: [azurite](#); covellite.

blue copper ore

See: [azurite](#)

blue earth

See: [blue ground](#)

blue gold

a. A gold-iron alloy containing 25% to 33.3% iron. *Camm* b. A bluish colloidal solution of gold prepared by reducing a solution of gold chloride with hydrazine hydrate. *Camm*

blue granite

See: [larvikite](#)

blue ground

Unoxidized slate-blue or blue-green kimberlite, usually a breccia (as in the diamond pipes of South Africa) that is found below the surficial oxidized zone of yellow ground. CF: [hardebank](#) *AGI*

blue iron earth

See: [vivianite](#)

blue ironstone

A bluish iron-bearing mineral; specif: crocidolite and vivianite.

blue lead

a. A term for metallic lead in the lead industry to distinguish it from lead compounds with color designations, such as white lead, orange lead, and red lead. See also: [lead](#) b. A synonym of galena, esp. a compact variety with a bluish-gray color. Syn: [galena](#); [blue lead ore](#). *AGI* c. A bluish, gold-bearing lead or gravel deposit found in Tertiary river channels of the Sierra Nevada, CA. Pronounced "blue leed." *AGI*

blue lead ore

An old name for a compact variety of galena with a bluish-gray color. Pron: led.

blue malachite

An erroneous name for azurite.

blue metal

A term used in England for a hard bluish-gray shale or mudstone lying at the base of a coalbed and often containing pyrite. *AGI*

blue mud

a. An ocean-bottom deposit containing up to 75% terrigenous materials of dimensions below 0.03 mm. The depth range occurrence is about 750 to 16,800 ft (229 to 5,120 m). Colors range from reddish to brownish at the surface, but beneath the surface, the colors of the wet muds are gray to blue. *AGI* b. A common variety of deep-sea mud having a bluish-gray color due to presence of organic matter and finely divided iron sulfides. Calcium carbonate is present in amounts up to 35%. *AGI*

blue needles

Applied in the grading of quartz crystals to needlelike imperfections, often definitely oriented, which show up with a bluish-white color under the carbon arc. The color is due to the selective scattering of blue light by the minute imperfections. *Am. Mineral.*, 2

blue ocher

See: [vivianite](#)

blue powder

A mixture of finely divided and partly oxidized metallic zinc formed by the condensation of zinc vapor into droplets; also, any similar zinc byproduct (such as dross, skimmings, or sweepings). *Webster 3rd*

blue quartz

See: [sapphire quartz](#)

blue-rock phosphate

The hard, bluish-gray, Ordovician bedded phosphates of central Tennessee.

blue room

The first room in a baghouse. *Fay*

blue schorl

a. Blue tourmaline. *Fay* b. The earliest name for anatase (octahedrite).

blue spar

See: [lazulite](#)

bluestone

a. A commercial name for a building or paving stone of bluish-gray color; specif. a dense, tough, fine-grained, dark blue-gray or slate-gray feldspathic sandstone that splits easily into thin, smooth slabs and that is extensively quarried near the Hudson River in New York State for use as flagstone. The color is due to the presence of fine black and dark-green minerals, chiefly hornblende and chlorite. The term is applied locally to other rocks, such as dark-blue shale and blue limestone. CF: [flagstone](#) AGI b. A miners' term for chalcantite. c. A term applied locally to rocks such as dark-blue shale, blue limestone, and bluish metabasalt (greenstone). d. A highly argillaceous sandstone, of even texture and bedding, formed in a lagoon or lake near the mouth of a stream.

blue tops

Grade stakes whose tops indicate finish grade level. *Nichols, 1*

blue vitriol

See: [chalcantite](#)

blue-white diamond

A diamond that appears blue or bluish in transmitted white light or against a white background; it reflects white light when viewed edge up at right angles to the table. *Hess*

bluntin

Derb. A dark tough vein filling that dulls the drills readily.

Blyth elutriator

Laboratory apparatus in which mineral particles suspended in water are syphoned through vertical tubes of increasing cross section, the fraction failing to rise under determined conditions of upward flow reporting as a subsieve fraction. *Pryor, 3*

BM

See: [bench mark](#)

B.M.A.G.A. apparatus

Used in the United States for obtaining additional information on the yields of coke, tar, and gas that can be expected in high-temperature practice. This is a vertical cylinder of

mild steel holding up to 2 hundredweight (91 kg) of coal and operated at temperatures up to 1,000 degrees C. *Francis, 2*

board

See: [bord](#)

board-and-pillar

See: [pillar-and-breast](#)

board-and-wall

See: [pillar-and-breast](#)

board coal

Eng. Coal having a fibrous or woody appearance. *Fay*

board gates

York. Headings driven in pairs generally to the rise, out of which banks or stalls are opened and worked. *Hess*

board of trade unit

The work done when a rate of working of 1 kW is maintained for 1 h. The British unit of electrical energy; kilowatt-hour. Abbrev: B.O.T. unit. *Nelson*

board run

The amount of undercutting that can be done at one setting of a coal mining machine, usually about 5 ft (1.5 m), without moving forward the board upon which the machine works. *Fay*

boart

See: [bort](#)

boartz

See: [bort](#)

boat

A gold dredge.

bobbin

a. Aust. A catch placed between the rails of the upline of an incline to stop any runaway trucks. It consists of a bent iron bar, pivoted in such a manner that the downhill end is slightly heavier than the uphill end, which is capable of being depressed by an upcoming truck, but rises above the level of the truck axle as soon as the truck is past. Syn: [monkey](#); monkey chock. *Fay* b. A spool or reel. *Fay*

bocca

A volcanic crater or vent. *Standard, 2*

body

a. An orebody, or pocket of mineral deposit. *Zern* b. See: [bit blank](#) c. The fluidity of a drilling mud expressed in the number of seconds in which a given quantity of mud flows through a given aperture, such as the aperture in a Marsh funnel. *Long* d. The term used to indicate the viscosity or fluidity of a lubricating oil; e.g., a heavy-body oil is thick and viscous and a light-body oil is thin and fluid. *Long* e. The load-carrying part of a truck or scraper. *Nichols, 1* f. The fatty, inflammable property that makes a coal combustible; e.g., bituminous coal has morebody than anthracite. *AGI*

boggildite

A fluoride, $\text{Sr}_2 \text{Na}_2 \text{Al}_2 (\text{PO}_4)_9$, from the Greenland cryolite deposit. *Spencer, 5*

boghead cannel

Cannel coal rich in algal remains. See also: [torbanite](#) *Tomkeieff*

boghead cannel shale

A coaly shale rich in fatty or waxy algae. *AGI*

boghead coal

a. A variety of bituminous or subbituminous coal resembling cannel coal in appearance and behavior during combustion. It is characterized by a high percentage of algal remains and volatile matter. Upon distillation it gives exceptionally high yields of tar and oil. See also: [cannel coal](#); torbanite; kerosine shale. b. A nonbanded coal with the translucent attritus consisting predominately of algae, and having less than 5% anthraxylon. *AGI*

bogheadite

See: [torbanite](#)

bogie

a. A rail truck or trolley of low height, used for carrying timber or machine parts underground, or for conveying the dirt hopped from a sinking pit to the dirt heap. It may also be used as a wagon spotter. See also: [timber trolley](#) b. A weighted truck run foremost or next to the rope in a train or trip. c. A two-axle driving unit in a truck. Also called tandem drive unit; tandem. *Nichols, 1* d. Also spelled bogey; bogy. e. York. A small truck or trolley upon which a bucket is carried from the shaft to the spoil bank.

bog iron

a. A general term for a soft, spongy, and porous deposit of impure hydrous iron oxides formed in bogs, marshes, swamps, peat mosses, and shallow lakes by precipitation from iron-bearing waters and by the oxidizing action of algae, iron bacteria, or the atmosphere; a bog ore composed principally of limonite that is commonly impregnated with plant debris, clay, and clastic material. It is a poor-quality iron ore, in tubular, pisolitic, nodular, concretionary, or thinly layered bodies, or in irregular aggregates, in level sandy soils, and esp. abundant in the glaciated northern regions of North America and Europe (Scandinavia). Syn: [limnite](#); [morass ore](#); [meadow ore](#); [marsh ore](#); [lake ore](#); [swamp ore](#). CF: [goethite](#) b. A term commonly applied to a loose, porous, earthy form of "limonite" occurring in wet ground. Syn: [bog ore](#)

bog iron ore

a. Loose, porous form of limonite occurring in wet ground, often mixed with vegetable matter, $\text{Fe}_2\text{O}_3 \cdot n\text{H}_2\text{O}$. *Pryor, 3* b. A deposit of hydrated iron oxides found in swamps and peat mosses. See also: [iron ore](#); [lake ore](#). CF: [limnite](#); [limonite](#). Syn: [marsh ore](#); [meadow ore](#). *Schieferdecker*

bog lime

See: [marl](#)

bog manganese

a. See: [earthy manganese](#); wad. *Fay* b. A bog ore consisting chiefly of hydrous manganese oxides; specif. wad formed in bogs or marshes by the action of minute plants.

bog-mine ore

See: [bog ore](#)

bog mine ore

See: [bog ore](#)

bog muck

A vernacular name for peat. *Tomkeieff*

bog oak

Oak immersed in peat bogs, semifossilized and blackened to resemble ebony by iron from the water combining with the tannin of the oak. *CMD*

bog ore

a. A spongy variety of hydrated oxide of iron and limonite. Found in layers and lumps on level sandy soils that have been covered with swamp or bog. Includes bog iron ore, bog manganese ore, and bog lime, a calcareous deposit of similar origin. See also: [brown iron ore](#) b. A poorly stratified accumulation of earthy metallic-mineral substances, mainly oxyhydroxides, formed in bogs, marshes, swamps, and other low-lying moist places, by direct chemical precipitation from surface or near-surface percolating waters; specif. "bog iron" and "bog manganese". CF: [lake ore](#)

bog peat

Peat consisting mainly of mosses. *Francis, 2*

Bohemian garnet

Yellowish-red gem variety of the garnet pyrope; occurs very commonly in the Mittelgebirge, Czech Republic. See also: [pyrope](#)

Bohemian ruby

A jeweler's name for rose quartz when cut as a gem. *Fay*

boehmite

An orthorhombic mineral, aluminum oxyhydroxide [γ -AlO(OH)]; grayish, brownish, or reddish, in some bauxites and laterites; an ore of aluminum, dimorphous with diaspore. Also spelled boehmite.

bohr magneton

The net magnetic moment arising from electron spins. *Van Vlack*

boiler burner unit

A boiler designed esp. for gas or oil and sold integrally with the burner. *Strock, 2*

boiler circulating pump

A pump, usually of the single-stage, single-entry, overhung type, that must have low suction loss and high-temperature features since it draws water directly from the boiler drums at high saturation pressure and temperature. *Sinclair, 4*

boiling furnace

A water-jacketed reverberatory furnace for decarbonizing iron by a process in which the carbonic oxide escapes with an appearance of boiling. *Standard, 2*

boiling point

a. The temperature at which a liquid begins to boil or to be converted into vapor by bubbles forming within its mass. It varies with pressure. *Standard, 2* b. The temperature at which a cooling gas becomes a liquid. *Hurlbut*

boilum

Hard calcareous or siliceous nodules of irregular shape, found in the shales and underclays of the Coal Measures. See also: [boylom](#) *Arkell*

bolar

See: [bole](#)

bole

Any of several varieties of compact earthy clay (impure halloysite), usually red, yellow, or brown because of the presence of iron oxide, and consisting essentially of hydrous silicates of aluminum or less often of magnesium. It is a waxy decomposition product of basaltic rocks, having the variable composition of lateritic clays. Syn: [bolar](#)

boleite

A deep blue pseudoisometric hydrous oxychloride of lead, copper, and silver from Boleo, Lower California. A tetragonal form of percyllite. *Fay*

Boliden gravimeter

An electrical stable gravimeter with a moving system suspended on a pair of bowed springs. The moving system carries electrical condenser plates at each end, one to measure the position of the moving system, the other to apply a balancing force to bring the system to a fixed position. Syn: [Lindblad-Malmquist gravimeter](#)

Bolognan stone

See: [Bologna stone](#)

Bologna spar

See: [Bologna stone](#)

Bologna stone

A nodular, concretionary, or round variety of barite, composed of radiating fibers; phosphorescent when calcined with charcoal. Syn: Bolognian stone; [Bolognan stone](#); [Bologna spar](#).

bolognian stone

See: [Bologna stone](#)

bolson

a. A term applied in the desert regions of the Southwestern United States to an extensive flat alluvium-floored basin or depression, into which drainage from the surrounding mountains flows toward a playa or central depression; a basin with internal drainage. Syn: [playa basin](#) *AGI* b. A temporary lake, usually saline, formed in a bolson. *AGI* c. Mex. A pocket of ore. Etymol: Sp., bolson, large purse.

Bolsover experiment

Applied to a method of working by single panels. Single 100-yd (91-m) panels are advanced, leaving 100-yd-wide coal pillars between them. The pillars are then worked on the retreat after the advancing faces have reached a limit line. *Nelson*

bolt

A rod used in roof bolting. See also: [slot-and-wedge bolt](#); wedge-and-sleeve bolt. *Nelson*

bolthole

S. Staff. A short narrow opening made to connect the main workings with the airhead or ventilating drift of a coal mine. Also called bolt.

bolt-hole brush

A special round brush used to remove porcelain enamel bisque from in and around small openings in the ware. See also: [brush](#)

bolting

Separation of particles of different sizes by means of vibrating sieves. *Bennett*

bolting silk

a. In oceanography, a silk cloth of very fine and regular mesh, used in the construction of tow nets for the smaller members of the surface fauna. *CTD* b. Also used to cover a lap for polishing rock and mineral specimens for microscopic examination.

Bolton's reagent

An etching reagent for cast iron that contains picric acid, nitric acid, and water. (Osborne, 1956)

boltwoodite

A monoclinic mineral, $\text{HK}(\text{UO}_2)\text{SiO}_4 \cdot 1-1/2\text{H}_2\text{O}$; analogous to sklodowskite, having potassium in place of magnesium; radioactive; yellow.

bolus alba

See: [kaolin](#)

bomb

a. A more or less rounded mass of lava from a few inches to several feet in diameter, generally vesicular, at least inside, thrown from the throat of a volcano during an explosive eruption. b. An ellipsoidal, discoidal, or irregularly rounded mass of lava ejected at a high temperature during a volcanic eruption. Bombs range upwards in size from the largest lapilli. They are characterized by a well-defined crust and are often cellular or even hollow internally. *Holmes, 2* c. A missile containing an explosive, as dynamite. d. A heavy-walled reaction vessel or autoclave. Used to carry out reactions at high pressure and high temperature. *Hurlbut*

bomb calorimeter

A strong steel vessel used for determining the heat produced during combustion; used, for example, for determining the calorific value of a fuel. *Nelson*

bonanza

a. A rich body of ore or a rich part of a deposit; a mine is in bonanza when it is operating profitably. Also, discontinuous locally rich ore deposits, esp. epithermal ones. Etymol: Sp., prosperity, success. *AGI* b. In miners' phrase, good luck, or a body of rich ore. c. Part of a precious mineral deposit that is esp. rich. *Bateman, 2*

bonattite

A monoclinic mineral, $\text{CuSO}_4 \cdot 3\text{H}_2\text{O}$; blue; partly dehydrated from chalcanthite.

bond and lease

An agreement between a mine owner and tributor that gives the latter the option of buying the mine before the lease expires. *Nelson*

Bond and Wang theory

A theory of crushing and grinding; the energy (h) required for crushing varies inversely as the modulus of elasticity (E) and specific gravity (S), and directly as the square of the compressive strength (C) and as the approximate reduction ration (n). The energy in horsepower hours required to crush a short ton of material is given by the following equation, in which all quantities are in feet per second units: $h = [0.001748C^2 / SE] [(n + 2) (n - 1) / n]$. The theory is due to F. C. Bond and J. T. Wang. *Dodd*

Bondaroy's yellow

An antimony yellow developed by Fourgeroux de Bondaroy in 1766: 12 parts white lead; 3 parts potassium antimonate; 1 part alum; 1 part sal ammoniac. *Dodd*

bond clay

A clay that, because of its plasticity, serves to bond relatively nonplastic materials in the fabrication of ceramic or other molded products (green bond). Also, a clay that, on firing to furnace or vitrification temperature, bonds adjacent ceramic materials that vitrify at a still higher temperature (fired bond). *AGI*

bonded refractories

Refractories in which the constituents are held together by a suitable bonding material, as distinguished from fused refractories. *Henderson*

bonder

a. A brick that is half as wide again as a standard square (rectangular or arch); such bricks are sometimes used to begin or end a course of bonded brickwork. *Dodd* b. In mining, one who welds copper connections in place between the joints of track rails, used for trolley locomotives, to complete the electrical circuit between the sections of rails. Syn: [bondman](#)

bondman

See: [bonder](#)

Bond's third theory

In crushing, the total work useful in breakage that has been applied to a stated weight of homogeneous broken material is invariably proportioned to the square root of the diameter of the product particles. Syn: [work index](#)

bone

a. A hard coallike substance high in noncombustible mineral matter; often found above or below, or in partings between, layers of relatively pure coal. *Hess* b. In the anthracite-coal trade, a carbonaceous shale containing approx. 40% to 60% of noncombustible materials. Syn: [bone coal](#); [bony coal](#). *Hess* c. A tough, fine-grained, gray, white, or reddish quartz. *Hess* d. A layer of hard, impure coal which sometimes grades uniformly into the adjacent softer coal and sometimes is sharply separated from it. Bone is usually a mixture of clay shale particles with the coal, the clay particles being well distributed. *Kentucky*

bone ash

The white porous residue containing chiefly tribasic calcium phosphate from bones calcined in air and used esp. in making cupels, pottery, and glass and in cleaning jewelry; also, synthetic tribasic calcium phosphate used similarly. *Webster 3rd*

bone bed

Applied to strata or layers that contain innumerable fragments of fossil bones, scales, teeth, coprolites, and other organic remains. *Fay*

bone coal

a. Coal with a high ash content, almost rock. See also: [bone](#) Syn: [true middlings](#) b. Coal that has a high ash content. It is hard and compact. Syn: [bony coal](#) c. Argillaceous partings in coal, sometimes called slate. *AGI*

bone phosphate

The calcium phosphate of bones and of phosphatic rocks, such as found in North Carolina; so called in commerce. See also: [phosphorite](#) *Standard, 2*

bone phosphate of lime

Tricalcium phosphate, $\text{Ca}_3(\text{PO}_4)_2$. The phosphate content of phosphorite may be expressed as percentage of bone phosphate of lime. Abbrev: BPL. *AGI*

bone turquoise

See: [odontolite](#)

bonnet

a. A covering over a mine cage, which serves as a roof to shield it from objects falling down the shaft, thereby protecting the riders. Syn: [cage cover](#) b. A cap piece for an upright timber. *Zern* c. The metal casing of a miner's flame safety lamp, with openings at the top and a hook for carrying the lamp. The bonnet protects the inner gauze from damage and from the impact of high-velocity air. See also: [safety lamp](#) d. Syn: [air dome](#) e. The cap over the end of a pipe. *Strock, 1*

bony

Coal containing slaty material in its composition. *Korson*

bony coal

See: [bone](#)

bonze

Undressed or untreated lead ore. *Nelson*

boobey

Som. A box holding 6 to 8 hundredweight of coal in which waste rock is sent to the surface. *Fay*

book clay

Clay deposited in thin, leaflike laminae. Syn: [leaf clay](#)

booked mica

Lumps of mica in which laminae have not been separated into thin sheets. *Pryor, 3*

book mica

Crystals of crude mica obtained from a mine in various shapes and sizes. Also called book. Syn: [mine-run mica](#)

book structure

The alternation of ore with gangue, usually quartz, in parallel sheets. CF: [ribbon](#)

boom

a. A spar or beam projecting out over the drill floor from the tripod or derrick, by means of which heavy drill tools and equipment may be moved and safely handled. *Long* b. A long, adjustable steel arm on a drill jumbo on which drifter or other types of pneumatic drills are mounted. *Long* c. A cantilevered or overhanging member or structure that supports or contains the component parts of a conveyor. It may be fixed, hinged, or pivoted. d. A pipe fixed across the last supports in a tunnel face to anchor the tail sheave of a scraper loader installation. *Nelson* e. In a revolving shovel, a beam hinged to the deck front, supported by cables. *Nichols, I* f. Any beam attached to lifting or excavating equipment. See also: [dragline](#) g. Any heavy beam that is hinged at one end and carries a weight-lifting device at the other. *Nichols, I*

boom cat

See: [stripping-shovel operator](#)

boom conveyor

Any type of conveyor mounted on a boom.

boom ditch

a. The ditch from the dam used in booming. b. A slight channel cut down a declivity into which is let a sudden head of water to cut to the bedrock and prospect from the apex of any underlying lode.

boomer

a. In placer mining, an automatic gate in a dam that holds the water until the reservoir is filled, then opens automatically and allows the escape of such a volume of water that the soil and upper gravel of the placer are washed away. When the reservoir is emptied the gate closes and the operation is repeated. On a smaller scale it may be used to furnish water periodically for sluicing. Syn: [automatic dam](#); [flop gate](#). *Hess* b. A sonar transducer, used in the exploration of bottom substrata. *Hy* c. Originally, an oilfield worker who migrated from one boom field to another; now, commonly, a member of a

drill crew who works one job a short time, quits, and moves on to another locality to seek employment. Also called drifter. *Long* d. A combination ratchet and lever device used to tighten a chain or line about a loaded truck or wagon to hold the load in place.

Long

boomerang sediment corer

This free-instrument-type device can be dropped over the side of a moving ship, where it will sink rapidly to the ocean floor, take a core of sediment, release ballast, and automatically return to the surface for retrieval. *Hunt*

booming

The accumulation and sudden discharge of a quantity of water (in placer mining, where water is scarce). In California, the contrivances for collecting and discharging water are termed "self-shooters," an idea suggested by the sudden and violent manner in which the water makes its escape. In booming, snowmelt or water from small or ephemeral streams is collected behind a dam with a discharge gate. Placer ore is placed below the dam and when the water is released, the ore is washed through sluice boxes, ground sluices, etc., in one large surge. The dam discharge gate is closed to again begin collecting water for the next cycle. Syn: [hushing](#)

boom man

In bituminous coal mining, one who manipulates the controls of a loading boom (conveyor) to regulate the height of the loading end of a boom, thus controlling the flow of coal from shaking screens or picking tables into railroad cars at the tippie. Also called boom operator; loader headman. *DOT*

boort

See: [bort](#)

boose

a. Eng. Lead ore that separates easily from its matrix and does not have to be buddled, Durham, Yorkshire, and Derbyshire. Hooson defines it as veinstuff and ore mixed. Syn: [booze](#); [bowse](#). *Arkell* b. Derb. Gangue rock mixed with ore. See also: [bouse](#)

booster

An explosive of special character used in small quantities to improve the performance of another explosive, the latter forming the major portion of the charge. *Nelson*

booster conveyor

Any type of powered conveyor used to regain elevation lost in gravity roller or wheel conveyor lines. Syn: [humper](#)

booster drive

An auxiliary drive at an intermediate point along a conveyor.

booster fan

A fan installed in an underground opening. A booster fan can be used as the main mine fan but is more commonly used to improve or augment the ventilation in a segment of the mine. Booster fans are illegal in U.S. coal mines but are used in metal mines and coal mines in other countries. *Hartman, 2*

booster pump

a. A pump used to increase the pressure of fluids, such as to increase the pressure of water delivered to a drill when the source pressure is too low to be used for drilling operations. *Long* b. A pump that operates in the discharge line of another pump, either to increase pressure or to restore pressure lost by friction in the line or by lift. *Nichols, 1*

booster station

In long-distance pumping of liquids or mineral slurries, an intermediate pump station. *Pryor, 3*

boot

a. A projecting portion of a reinforced concrete beam, acting as a corbel to support the facing material, such as brick or stone; the lower end of a bucket elevator. *Hammond* b. A leather or tin joint connecting the blast main with the tuyere or nozzle in a bloomery. c. A suspended enclosure in the nose of a tank protecting a portion of the surface and serving as a gathering opening. *ASTM* d. The bottom of a bucket elevator, which receives feed for delivery into an elevating bucket. *Pryor, 3*

boothite

A monoclinic mineral, $\text{CuSO}_4 \cdot 7\text{H}_2\text{O}$; melanterite group; of a lighter blue than chalcantite, from which it differs in its larger proportion of water.

booting

The ejection of balled drill cuttings from the collar in long, tubelike masses. *Long*

bootleg

a. The part of a drilled blasthole that remains when the force of the explosion does not break the rock completely to the bottom of the hole. See also: [socket](#) b. See: [trespass](#)

bootlegger

One engaged in coal bootlegging. Applies to the worker in bootleg holes as well as the worker who cleans the coal in a small, impermanent breaker, and the trucker who conveys the coal to market. Bootleggers call themselves independent miners. *Korson*

bootlegging

The mining and/or selling of coal produced from coal owned by others and without permission or knowledge of the owner.

booze

See: [boose](#)

boracite

An orthorhombic mineral, $8[\text{Mg}_6 \text{B}_{14} \text{O}_{26} \text{Cl}_2]$; isometric above 265 degrees C in hard, glassy, cubic and octahedral crystals; strongly pyroelectric; in evaporites, a source of boron.

Borascu

Borate ore. *Bennett*

borate

A salt or ester of boric acid; a compound containing the radical BO_3^{3-} . CF: [nitrate](#); [carbonate](#). *AGI*

borax

A monoclinic mineral, $4[\text{Na}_2 \text{B}_4 \text{O}_5 (\text{OH})_4 \cdot 8\text{H}_2 \text{O}]$; soft; deposited by evaporation from alkaline lakes, playas, hot springs, and as surface efflorescence or crystals embedded in lacustrine mud. A source of boron. Syn: [tincal](#) See also: [octahedral borax](#)

borax bead

In blowpipe analysis, a drop of borax that when fused with a small quantity of a metallic oxide will show the characteristic color of the element; e.g., a blue borax bead indicates the presence of cobalt. *Standard, 2*

borax bead test

A chemical test to disclose the presence of certain metals in a sample. A clear glassy bead of borax fused in a wire loop will react chemically with the salts of certain metals and yield colors that help to identify the metal; e.g., manganese compounds produce a violet bead, cobalt produces a deep blue, etc. See also: [blowpiping](#)

bord

a. Newc. A passage or breast, driven up the slope of the coal from the gangway, and hence across the grain of the coal. A bord 4 yd (3.7 m) or more wide is called a wide bord, and one less than 4 yd in width is called a narrow bord. Also spelled board. b. A side gallery parallel with the main road or drift. *Standard*, 2 c. A road with solid coal sides. *Mason* d. A narrow coal drivage in the pillar-and-stall method of working. *Nelson* e. A joint in a coal seam. See also: [cleat](#) f. Eng. A road driven at right angles to the main cleavage planes of the coal. *SMRB*

bord-and-pillar

A method of working coal seams. First bords are driven, leaving supporting pillars of coal between. Next, cross drives connect the bords, leaving supporting coal as rectangular pillars. Finally, the pillars are mined (extracted, won, robbed) and the roof is allowed to cave in. The bordroom is the space from which bord coal has been removed. Syn: [bord-and-wall](#); stoop-and-room. See also: [breast-and-pillar](#); [stret](#); Warwickshire method. *Pryor*, 3

bord-and-pillar method

A system of mining in which the distinguishing feature is the winning of less than 50% coal on the first working. It is more an extension of the development work than mining. The second working is similar in principle to top slicing. The remainder of the coal is won by a retreating system, the cover being caved after each unit has been worked. The term bord-and-pillar is not used to any great extent in American mining literature, but has a place in English literature. Various names have been applied to this method, such as checkerboard system, Brown panel system, following up the whole with the broken, Lancashire bord-and-pillar system, modified room-and-pillar working, narrow working, North Staffordshire method, rearer method of working inclined seams, rock-chute mining, room system, room system with caving, Warwickshire method of working contiguous seams, wide or square work, and pillar-and-breast. *Fay*

bord-and-pillar working

N. of Eng. A system of mining in which interlacing roadways are driven at right angles into the seam, leaving small square or rectangular pillars of coal of from 30 to 50 yd (27

to 46 m) side length, which are then wholly or partly extracted by a small group. Syn: [tub-and-stall](#); [bord-and-wall](#). See also: [room-and-pillar](#)

bord-and-wall

See: [bord-and-pillar](#); bord-and-pillar working.

bord cleat

Eng. The main cleavage planes or joints in a coalbed. *SMRB*

bord course

Aust. A direction at right angles to the main cleat or facing; i.e., the length of a bord.

bord drivage

A coal drivage in the pillar-and-stall method of working. *Nelson*

border facies

The marginal portion of an igneous intrusion, which differs in texture and composition from the main body of the intrusion, possibly because of more rapid cooling or assimilation of material from the country rock. *AGI*

bord gate

a. A main gate leading and at right angles to a bord face. *TIME* b. York. A heading driven generally to the rise, out of which stalls are opened and worked.

bordroom

a. A heading driven parallel to the natural joints. *Fay* b. The space excavated in driving a bord. Used in connection with the ridding of the fallen stone in old bords when driving roads across them in pillar working; thus, "ridding across the old bordroom." *Zern* c. Eng. The width across an old bord. *Fay*

bordroom man

A repairer who cleans and erects supports in old workings in the bord-and-pillar method of coal mining. *Nelson*

bords and longwork

York. A system of working coal. First, the main levels are started on both sides of the shaft and carried toward the boundary. Second, the bord gates are worked in pairs to the rise and continued as far as the boundary, or to within a short distance of a range of upper levels and other bord gates. Lastly, the whole of the pillars and remaining coal are worked out downhill to within a few yards of the levels, and ultimately, all the coal between the levels is removed. *Fay*

bordways

Eng. The direction of a place or a face being taken at right angles to the main cleavage planes of a seam. *SMRB*

bordways course

The direction at right angles to the main cleavage planes. In some mining districts it is termed "on face." *Zern*

bore

a. A tunnel, esp. while being excavated. b. A circular hole made by boring. *Long*

borehole

a. A hole with a drill, auger, or other tools for exploring strata in search of minerals, for water supply, for blasting purposes, for proving the position of old workings and faults, and for releasing accumulations of gas or water. b. A circular hole made by boring; esp. a deep hole of small diameter, such as an oil well or a water well. Also called well bore. See also: [hole](#)

borehole bottom charge

Explosives loaded in the hole bottom at a weight or density in excess of the main charge in order to fragment difficult to break rock or to break an excessive toe burden.

borehole cable

Cable designed for vertical suspension in a borehole or shaft and used for power circuits in the mines. (A borehole cable in mining may also be a cable containing signal, telephone, or control circuits.)

borehole casing

A steel pipe lining used in a borehole, particularly when passing through loose, running ground. Flush-jointed casing that is smooth inside and outside may be either screwed or welded. *Nelson*

borehole deformation gage

A device for measuring the change in diameter of a hole.

borehole log

A record, made by the driller or geologist, of the rocks penetrated in the borehole. In the laboratory, a more detailed log is prepared giving particulars relating to lithology, paleontology, water analysis, etc. See also: [electric log](#); [well log](#). *Nelson*

borehole logging

The determination of the physical, electrical, and radioactive properties of the rocks traversed by a borehole. *BS, 9*

borehole mining

The extraction of minerals in the liquid or gaseous state from the Earth's crust by means of boreholes and suction pumps. Boreholes are used for mining petroleum, and for the extraction of liquid solutions of salt, sulfur, etc. See also: [well](#)

borehole pressure

The pressure that the hot gases of detonation exert on the borehole wall. It is primarily a function of the density of the explosive and the heat of explosion. Syn: [gas pressure](#)

borehole pump

a. Any pump that can be suspended in a borehole; usually a centrifugal pump suspended in a borehole by its pipe range and driven by a shaft inside the pipe. *BS, 10* b. A centrifugal pump, electrically driven, and designed in the form of a vertical narrow chamber. It may be used to provide water, for dewatering purposes, or for borehole mining. See also: [sinking pump](#) submersible pump. *Nelson*

borehole samples

The samples of the rocks obtained during boring. The diamond and shot drill yield cores, while percussive drills yield sludge and chippings, which are examined to determine the nature of the rocks passed through. Borehole samples may also be required during site investigations. See also: [exploratory drilling](#); [soil core](#). *Nelson*

borehole sealing

The complete filling of a borehole with cement to prevent the entry of water into mine workings. *Nelson*

borehole spacing

The distance between boreholes drilled for exploration or sampling purposes. With bedded minerals, the holes may be positioned at the intersection points of coordinates or at the corners of equilateral triangles with sides from 30 to 200 m apart. The spacing is closer with patchy deposits. With metallic ores following belts across country, the holes are spaced along lines crossing the orebody in order to yield cross sections of the ore at definite intervals. In the case of known and semiproved coalfields, boreholes at 1/2- to 1-km intervals may suffice. *Nelson*

borehole survey

a. The process of determining the course of, and the target point reached by, a borehole, using one of several different azimuth and dip recording apparatuses small enough to be lowered into a borehole; also, the record of the information thereby obtained. Also called drillhole survey; directional survey. *Long* b. The process of determining the mineralogical, structural, or physical characteristics of the formations penetrated by a borehole using geophysical logging apparatus small enough to be lowered into a borehole; also, the record of the information thereby obtained. *Long* c. See: [well log](#)

borehole surveying

Instrumental tests to determine the amount and direction of deflection of a borehole from vertical and horizontal planes. The instrument is lowered into the hole and tested at intervals of depth. The data obtained may be used to construct a scale model showing the actual course taken by the hole. *Nelson*

bore meal

a. Eng. Mud or fine cuttings from a borehole. b. In rock drilling, the sludge from a borehole. *Pryor, 3*

borer

A tool such as a drill used for boring.

bore rod

Term used primarily by soil and foundation testing engineers for the equipment customarily called a drill rod by drillers and miners. *Long*

borides

A group of special ceramic materials. Typical properties are great hardness and mechanical strength, high melting point, low electrical resistivity, and high thermal

conductivity; impact resistance is low, but thermal-shock resistance is generally good. *Dodd*

boring

a. The cutting or drilling of a hole for blasting, water infusion, exploration, or water or combustible gases drainage. See also: [percussive boring](#); [rotary boring](#). b. The drilling of deep holes for the exploitation or exploration of oilfields. The term "drilling" is used similarly in connection with metalliferous deposits. *CTD*

boring bar

a. A rod, made in various lengths, usually with a single chisel cutting edge, for hand drilling in rock. The blows are given by a sledge hammer. *Nelson* b. A revolving or stationary bar carrying one or more cutters or drills for boring. *Fay*

boring log

See: [drill log](#)

borings

Used by the soil and foundation testing profession as a syn. for boreholes and/or the materials removed from a borehole. CF: [cuttings](#); [sample](#). *Long*

bornite

An isometric mineral, $1[\text{Cu}_5\text{FeS}_4]$; metallic; brownish bronze tarnishing to iridescent blue and purple; brittle; massive; in hypogene and contact metamorphic deposits and mafic rocks; a valuable source of copper. Syn: [erubescite](#); [variegated copper ore](#); [peacock ore](#); horseflesh ore; poikilit; purple copper ore; variegated ore.

boron

The element is not found free in nature, but occurs as orthoboric acid in volcanic spring waters and as borates in borax and colemanite. The most important source of boron is the mineral rasorite, also known as kernite. Symbol, B. Amorphous boron is used in pyrotechnic flares and in rockets as an igniter; the most important compound, boric acid or boracic acid, is used as an antiseptic; borax is used as a cleansing flux in welding and as a water softener. The isotope boron-10 is used in nuclear reactors; the nitride has lubricating properties similar to those of graphite; and the hydrides have been studied for use as rocket fuels. *Handbook of Chemistry and Physics, 3*

boronatrocite

See: [ulexite](#)

boron carbide

Probably not a true compound, but instead a solution of varying amounts of carbon in a slightly distorted boron lattice; symbol, BC; black; hexagonal rhombohedral crystals; ranking next to diamond in hardness, 9.3 on the Mohs scale; and melting point, 2,350 degrees C. Used in powder form as an abrasive and in molded form as an abrasion resister. Syn: [tetraboron carbide](#)

boronitrocalcite

A former name for ulexite.

boron nitride

White; symbol, BN; hexagonal rhombohedral, crystals or powder; the powder has a Mohs hardness of 2; sublimes at about 3,000 degrees C; anisotropic; some properties vary according to the method of preparation and the crystal form. Used as a refractory; a high-temperature lubricant, as in glass molds; in furnace insulation; and in molten-metal pump parts. *CCD, 2; Handbook of Chemistry and Physics, 2*

boron phosphate

Symbol, BPO; sp gr, 2.81; vaporizes at 1,400 degrees C; related structurally to high cristobalite. It has been used as a constituent of a ceramic body that fires to a translucent porcelain at 1,000 degrees C. *Dodd*

boron phosphide

Symbol, BP; melting point, greater than 2,000 degrees C, but readily oxidizes, which limits its potential use. *Dodd*

boron silicides

See: [silicon borides](#)

borrow material

Soil or sediment removed from a site for use in construction, such as sandy sediment dredged and pumped to restore an eroded beach, or clay taken to build a levee or dike. *Army Corps of Eng.*

borrow pit

a. The source of material taken from some location near an embankment where there is insufficient excavated material nearby on the job to form the embankment. Borrow-pit excavation is therefore a special classification, usually bid upon as a special item in contracts. It frequently involves the cost of land or a royalty for material taken from the land where the borrow pit is located; it also often requires the construction of a suitable road to the pit. This type of excavation therefore usually runs higher in cost than ordinary excavation. *Hess* b. An excavated area where borrow has been obtained. *AGI*

bort

a. Diamond material unsuitable for gems because of its shape, size, or color and because of flaws or inclusions. It also occurs in finely crystalline aggregates and is usually crushed into finer material. Syn: [boart](#); [bortz](#); [boort](#); [boartz](#); [borts](#); [bowr](#). See also: [shot bort](#) b. Inferior, coarsely crystalline diamonds, many of which contain black carbon or other minerals; used for core drilling, cutting, and polishing hard materials. c. Formerly used to mean the Brazilian carbonado or black diamond. *Hess* d. Industrial diamond. *ASM, I* e. Very hard, flawed or discolored diamonds used in drilling and glass cutting. *Gordon* f. S. Afr. Rounded forms of diamond with rough exterior and radiated or confused crystalline structure, but hardness equal to that of diamond. *Beerman* g. Originally the term was used as a name for all crystalline diamonds not usable as gems; later it was used to designate those diamonds not usable as gems or toolstones. Currently the term is applied to low-grade industrial diamonds suitable only for use in a fragmented form. h. A granular to very finely crystalline aggregate consisting of imperfectly crystallized diamonds or of fragments produced in cutting diamonds. It often occurs as spherical forms, with no distinct cleavage, and having a radial fibrous structure. *AGI* i. A diamond of the lowest quality, so flawed, imperfectly crystallized, or off-color that it is suitable only for crushing into abrasive powders for industrial purposes (as for saws and drill bits); an industrial diamond. Originally, any crystalline diamond (and later, any diamond) not usable as a gem. *AGI* j. A term formerly used as a syn. of carbonado. CF: [ballas](#) Syn: [magnetic bort](#)

bort bit

See: [diamond bit](#)

borts

See: [bort](#)

bort-set bit

See: [diamond bit](#)

bortz

See: [bort](#)

bosh

a. The section of a blast furnace extending upward from the tuyeres to the plane of maximum diameter. *ASM, 1* b. A lining of quartz that builds up during the smelting of copper ores and thus decreases the diameter of the furnace at the tuyeres. *ASM, 1* c. A trough in which bloomery tools (or in copper smelting, hot ingots) are cooled. *Fay*

bosh jacket

A water jacket used for cooling the walls of a shaft furnace. *Fay*

bosh tank

A water tank that receives newly cast copper shapes for rapid cooling. *Pryor, 3*

boss

a. Arkansas. A coal mine employee not under the jurisdiction of the miner's union. *Fay*
b. A protuberant and often dome-shaped mass of igneous rock congealed beneath the surface of the Earth and laid bare by erosion. *Webster 3rd* c. An igneous intrusion that is less than 40 mi² (104 km²) in surface exposure and is roughly circular in plan. CF: [stock](#)
AGI

bossing

Scot. The holing or undercutting of a thick seam, as of limestone, the height of the undercutting being sufficient for a person to work in.

Boss process

Modification of the pan-amalgamation process; ore slurry flows continuously through a series of pans and settling tanks. *Bennett*

bostonite

A light-colored hypabyssal rock, characterized by bostonitic texture and composed chiefly of alkali feldspar; a fine-grained trachyte with few or no mafic components. The name is derived from Boston, MA, for no clear reason. Not recommended usage. *AGI*

bostonitic

Said of the texture of bostonite, in which microlites of rough irregular feldspar tend to form clusters of divergent laths within a trachytoid groundmass. *AGI*

bostrichites

An early name for prehnite.

botallackite

A monoclinic mineral, $\text{Cu}_2 \text{Cl}(\text{OH})_3$; trimorphous with atacamite and paratacamite.

botanical anomaly

A local increase above the normal variation in the chemical composition, distribution, ecological assemblage, or morphology of plants, indicating the possible presence of an ore deposit or anthropomorphic contamination. See also: [geobotanical prospecting](#)

botanical prospecting

Prospecting in which differences in plant growth or plant family serve as a clue to the presence of metals beneath barren rock or a covering of sand and gravel. *Pearl*

botryogen

A monoclinic mineral, $\text{MgFe}^{3+}(\text{SO}_4)_2(\text{OH}) \cdot 7\text{H}_2\text{O}$; reniform, botryoidal, or globular; hyacinth-red to orange; in secondary sulfate deposits capping sulfide ore deposits. Syn: [red iron vitriol](#)

botryoid

A form in the shape of a bunch of grapes. Syn: [clusterite](#) botryoidal.

botryoidal

Having the form of a bunch of grapes. Said of minerals, e.g., hematite with a surface of spherical shapes; also said of a crystalline aggregate in which the spherical shapes are composed of radiating crystals. CF: [colloform](#); [colloid minerals](#); [reniform](#).

botryolite

A radiated, columnar variety of datolite with a botryoidal surface. *Standard, 2*

bottom

a. The floor or footwall of an underground mine. b. The landing of a shaft or slope. c. See: [gutter](#) d. To complete a borehole. e. To construct the bottom of or for; said specif. of underdraining a level. *Standard, 2* f. To strike bedrock or clay when sinking a shaft. *Standard, 2* g. The landing at the bottom of the shaft or slope. *Fay* h. The lowest point

of mining operations. *Fay* i. To underrun (as a gold deposit that is to be worked by the hydraulic method) with a level for drainage. *Webster 3rd* j. Surface in a borehole parallel to the face of a drill bit. *Long* k. A mass of impure metal formed below the matte, in matting metal ores. l. The footwall of a metalliferous deposit. *Nelson* m. Barren bedrock. *Nelson* n. The rock formation below the alluvium on which the gold or tin wash dirt is met. *Gordon* o. In gemstones, the pavilion. p. Pennsylvania. The stratum, rock, or floor on which a coal seam lies. *Standard, 2* q. To break the material and throw it clear from the bottom or toe of the borehole. r. To place a drill bit in contact with the bottom of a borehole. s. Surface in a borehole parallel to the face of a drill bit. t. In metal-melting furnaces, this is usually the hearth or crucible. See also: [bottoming](#)

bottom bed

Eng. Universally applied to the lowest bed in a quarry. Also used in Southeast England for the basal bed of the Tertiary, whether Thanet sand or Reading beds, resting on an eroded surface of the Chalk.

bottom belt conveyor

A belt conveyor that carries the coal or ore on the lower strand; often used where height is limited. *Nelson*

bottom benching

The method by which the bench is removed from below as with a power shovel. See also: [benching](#)

bottom bounce

Technique by which sonar impulses are reflected off the ocean bottom one or more times before reaching the target. Also refers to diving. *Hy*

bottom break

The break or crack that separates a block of stone from a quarry floor. *Hess*

bottom canch

In leveling an underground roadway, a part taken out below a bed. See also: [canch](#)

bottom coal

Coal below the undercut; it may or may not be removed.

bottom cut

a. A machine cut made in the bottom or floor of a seam before shot firing. See also: [cutting horizon](#); [middle cut](#); [top cut](#). *Nelson* b. A drill hole pattern. See also: [drag cut](#) c. In drilling and blasting a tunnel, the lower of two converging lines of horizontally spaced holes. Upper line is draw cut. When blasted simultaneously, a wedge of rock is removed. *Pryor, 3*

bottom cutter

A dinter; a coal cutter for making floor cuts. *Nelson*

bottom diameter

The diameter of a circle tangent to the seating curve at the bottom of the tooth gap of a roller chain sprocket. Equal to the pitch diameter minus the chain-roller diameter. *Jackson, 1*

bottom-discharge bucket conveyor

A conveyor for carrying bulk materials in a horizontal path consisting of an endless chain to which roller-supported, cam-operated, bottom-discharge conveyor buckets are attached continuously.

bottom-discharge conveyor bucket

A vessel generally rectangular or square in plan and having a bottom consisting of an undercut gate.

bottom-dump car

See: [mine car](#)

bottom-dump scraper

A carrying scraper that dumps or ejects its load over the cutting edge. *Nichols, 1*

bottom-dump semitrailers

Suitable for transporting free-flowing materials over a reasonably level haul route that permits a high travel speed. They can be used where the maximum flotation of a large single tire is required and where dumping in windrows over a wide area is practical. See also: [bottom dump truck](#) *Carson, 1*

bottom dump truck

A trailer or semitrailer that dumps bulk material by opening doors in the floor of the body. Also called dump wagon. See also: [bottom-dump semitrailers](#)

bottomed

a. A completed borehole, or the point at which drilling operations in a borehole are discontinued. *Long* b. Said of shafts and slopes on being driven to completion when reaching base of coal seam.

bottom-emptying skip

A skip equipped with a bottom discharge gate. *Sinclair, 5*

bottom equipment

a. The tools or equipment attached to the lower end of a drill string and normally used at or near the bottom of a borehole. Also, the nondrilling equipment placed and operated at or near the bottom of a borehole, such as a pump unit or strainer. *Long* b. Mine equipment used solely for work at the mine bottom, such as rotary dump and switch motor (if used to spot cars in rotary dump).

bottom filler

A worker who fills a barrow with ore, coke, or stone, weighs it, and then places it on the cage or elevator to be hoisted to the top of the furnace. *Fay*

bottom gate

The gate road at the lower end of an inclined coal face. See also: [main gate](#); [tailgate](#); [top gate](#). *Nelson*

bottom heading

a. Method of excavating tunnels, drifts, or other mine openings. The bottom heading, which may be either driven in successive stages or holed through, is subsequently enlarged by excavating the top section. *Fraenkel* b. Overhand bench.

bottom hole

A point at, or near, the bottom of a borehole. *Long*

bottom-hole pressure

a. The load, expressed in pounds or tons, applied to a bit or other cutting tool while drilling. *Long* b. The pressure, expressed in pounds per square inch, produced at the

bottom of a borehole by the weight of the column of circulation or other liquid in a borehole. *Long* c. The pressure, expressed in pounds per square inch, exerted by gas or liquids ejected from the rocks at or near the bottom of a drill hole. *Long* d. Pressure measured in a well opposite the producing formation. If the well is flowing, the flowing bottom-hole pressure will be obtained; if the well is not producing and has not been producing for a sufficient time, the pressure will be the fully built-up, or static, bottom-hole pressure. CF: [ground pressure](#)

bottom-hole temperature

The temperature of the fluid at or near the bottom of a borehole; significantly lower than the temperature of the formation if borehole fluids have been circulated recently or are being produced with expansion into the well bore. *Long*

bottoming

The downward pinching-out or termination of an orebody, either structurally or by economic grade. See also: [bottom](#)

bottom lift

a. The lowest or deepest lift or level of a mine. *Zern* b. The deepest columns of a pump. *Zern* c. The deepest lift of a mining pump, or the lowest pump. *Fay*

bottom loading belt

A bottom belt conveyor. *Nelson*

bottom maker

A laborer who relines bottoms of ingot soaking pits with coke dust to retard formation of oxide scale on hot ingots. *DOT*

bottom pillar

A large block of solid coal left unworked around the shaft. See also: [shaft pillar](#)

bottom-pour ingot assembly

One comprising hot tops, wood blocks, ingot mold, mold stool, lateral outlet bricks, lateral bricks, king brick, fountain bricks, funnel brick, and suitable metal supporting devices.

bottom-pour ladle

A ladle poured through a refractory nozzle in the bottom.

bottom rock

See: [bedrock](#)

bottoms

a. Used in connection with the Orford process for separating nickel and copper as sulfides. When the mixed sulfides are fused with sodium sulfide, the nickel sulfide separates to the bottom. See also: [tile copper](#) *CTD* b. The material drawn off from the bottom of a tower or still. Any residue accumulating in the bottom of a process vessel.

bottom sample

A sample obtained by collecting a portion of material on the bottom of a container or pipeline. *Bennett*

bottom sampler

One of various types of apparatus capable of piercing the sea bottom and retaining a sample of the deposit when brought to the surface. *CTD*

bottom sheets

The steel plates forming the bottom of an oil still or a steam boiler. *Hess*

bottom subsidence

See: [subsidence](#)

bott plug

A clay ball used for stopping the taphole in a cupola furnace. *Mersereau, 2*

bott stick

A long stick used for inserting the bott plug into the taphole to stop the flow of metal. *Mersereau, 2*

boudin

a. One of a series of elongate, sausage-shaped segments occurring in boudinage structure, either separate or joined by pinched connections, and having barrel-shaped

cross sections. *AGI* b. A term applied loosely, without regard to shape or origin, to any tectonic inclusion. Etymol: French, bag; blood sausage. *AGI*

boudinage

A structure common in strongly deformed sedimentary and metamorphic rocks, in which an original continuous competent layer or bed between less competent layers has been stretched, thinned, and broken at regular intervals into bodies resembling boudins or sausages, elongated parallel to the fold axes. See also: [pull-apart structure](#)

Bouguer anomaly

A gravity anomaly calculated after corrections for latitude, elevation, and terrain. Pron: boo-gay. See also: [anomaly](#); [Bouguer correction](#). *AGI*

Bouguer correction

A correction made to gravity data for the attraction of the rock between the station and the datum elevation (commonly sea level); or, if the station is below the datum elevation, for the rock missing between station and datum. The Bouguer correction is $0.01276 p h$ mgal/ft, or $0.04185 p h$ mgal/m, where p is the specific gravity of the intervening rock and h is the difference in elevation between station and datum. See also: [Bouguer anomaly](#)

Bouguer gravity

Gravity values after latitude, elevation, and Bouguer corrections have been applied. Used in the gravitational method of geophysical prospecting. *Nelson*

Bouguer reduction

The correction made in a gravity survey to take account of the altitude of the station and the rock between the station and sea level. *AGI*

boulangerite

A monoclinic mineral, $Pb_5 Sb_4 S_{11}$; metallic; bluish-gray; massive.

boulder

a. A detached rock mass larger than a cobble, having a diameter greater than 10 in (25.4 cm) or 8 phi units, or about the size of a volleyball, being somewhat rounded or otherwise distinctively shaped by abrasion in the course of transport; the largest rock fragment recognized by sedimentologists. In Great Britain, the limiting size of 8 in (20.3

cm) has been used. *AGI* b. See: [boulder stone](#) c. A general term for any rock that is too heavy to be lifted readily by hand. Also spelled boulder. *AGI*

boulder blasting

a. The breaking down of large stones at quarries by small explosive charges. See also: [secondary blasting](#) b. Secondary blasting of rocks too big to be moved conveniently in the mine's transport system. *Pryor, 3*

boulder buster

An explosive used to break rock fragments by blockholing or mudcapping methods. *Long*

boulder clay

a. The stiff, hard, and usually unstratified clay of the drift or glacial period that contains boulders scattered through it. Also called till; hardpan; drift clay; drift. See also: [till](#); [moraine](#). *Fay* b. Glacial drift that has not been subjected to the sorting action of water and therefore contains mixed particles ranging from boulders to clay sizes. *ASCE*

boulder flat

A level tract covered with boulders. *AGI*

boulder gravel

An unconsolidated deposit consisting mainly of boulders. *AGI*

boulder motion

A surface quarry worked only in detached masses of rock overlying the solid rock; sometimes contracted to motion. *Standard, 2*

boulder quarry

A quarry in which the joints are numerous and irregular, so that the stone has been broken naturally into comparatively small blocks. A local term applied to certain marble quarries in the region of Knoxville, TN, where erosion has formed many large cavities and cracks, between which the rock stands up as pinnacles. The cavities are now filled with clay. *Fay*

boulder stone

An obsolete term for any large rock mass lying on the surface of the ground or embedded in the soil, differing from the country rock of the region, such as an erratic. Syn: [boulder](#)

boule

A fused mass of synthetic material up to 5 cm long, pear or carrot-shaped, particularly as produced by the Verneuil or Crochralshi processes in the production of synthetic sapphire, ruby, spinel, or rutile. Etymol: Fr. "ball." Syn: [birne](#)

boulet

A small ovoid; an egg-shaped briquette. *BS, 5*

bounce

a. A sudden spalling off of the sides of ribs and pillars due to excessive pressure; a bump. *Zern* b. The rapid up-and-down reciprocating motion induced in a drill string by rod vibration, drill string wrap-up, excessive volume or pressure of circulation media, or the running of a bit on and over small, loose materials on the bottom of a drill hole. *Long*

bounce cast

Casts of short grooves (up to 5 cm) widest and deepest in middle and fading out at both ends; presumably formed by objects grazing against bottom and rebounding. See also: [impact cast](#) *Pettijohn, 1*

bound

Corn. An area taken up for tin mining; a tin bound. *Standard, 2*

boundary

a. A line between areas of the Earth's surface occupied by rocks or formations of different type and age; esp. used in connection with geologic mapping; also, a line between two formations or cartographic units on a geologic map. b. The limit, border, or termination of a coal or mineral take; a line along which workings must stop in the vicinity of a fault or old waterlogged workings. Also called march. *Nelson*

boundary fault

A major fault with a considerable displacement. A number of collieries and coalfields are limited along one side by such a fault. *Nelson*

boundary films

Films of one constituent of an alloy surrounding the crystals of another constituent. *CTD*

boundary map

A map created for the purpose of delineating a boundary line and the adjacent territory. *AGI*

boundary pillar

A pillar left in mines between adjoining properties.

bound gravel

A hard, lenticular, cemented mass of sand and gravel occurring in the region of the water table; it is often mistaken for bedrock. *AGI*

Bourdon tube

Pressure gage, made from elliptical curved tube, which straightens somewhat under pressure, and is made to move a measuring needle over a dial. *Pryor, 3*

bournonite

An orthorhombic mineral, $4[\text{PbCuSbS}_3]$; shows wheel-shaped twin crystals; a source of lead, copper, and antimony. Syn: [wheel ore](#); cogwheel ore; endellinite; endellionite; berthsonite.

bouse

N. of Eng. Ore mixed with veinstone; second-class ore that must undergo further preparation before going to the smelter. See also: [boose](#)

bouse team

N. of Eng. The place where bouse is deposited outside a mine, ready to be dressed or prepared for the smelter.

bout

Derb. A method of measuring lead ore. *Nelson*

bouteillenstein

A peculiar green and very pure glass, found as rolled pebbles. Also called bottle stone; pseudochrysolite--the latter from its resemblance to olivine. It is not solely a rock, as it may be prehistoric slag or glass. See also: [moldavite](#)

boutgate

a. Scot. A road by which the miners can reach the surface. b. A passage around a shaft at a landing. c. A traveling road from one seam to another.

bouton

a. Scot. A mass of roof consisting of stone or shale. b. Scot. A projecting stone in a shaft or underground road.

bowenite

a. A hard, compact, greenish-white to yellowish-green serpentine once thought to be nephrite jade; translucent; massive, fine-grained; consists of a dense feltlike aggregate of colorless antigorite fibers with patches of magnesite, flakes of talc, and grains of chromite. Syn: [bowenite jade](#) b. N.Z. Serpentine rock (serpentinite). Syn: [tangiwai](#); [tangiwaite](#); tangawaite.

bowenite jade

See: [bowenite](#)

Bowen's reaction series

See: [reaction series](#)

bowk

a. S. Staff. A small wooden box in which iron ore is hauled underground. Syn: [hudge](#) b. Aust. An iron bucket used for raising rock, etc., while sinking. Syn: [hudge](#) the coal beneath. d. Bucket; kibble; hoppit, as used in sinking. *Mason* e. A large iron barrel used for men's tools and debris when sinking a shaft. *CTD* f. The noise made by the escape of gas under pressure.

bowl

a. The bucket or body of a carrying scraper. *Nichols, 1* b. The moldboard or blade of a dozer. *Nichols, 1* c. Stationary part of a Symons crusher, which surrounds the cone (the grating member). *Pryor, 3* d. See: [spider](#)

bowl classifier

A hydraulic classifier similar to a thickener, but differs in that the current carries the fine material into the overflow; used to make separations at very fine particle size.

boulder

See: [boulder](#)

bowlingite

See: [saponite](#)

bowl scraper

A steel bowl hung within a fabricated steel frame, running on four or two wheels. Its bottom edge digs into the ground, the bowl being filled as it is drawn forward by a tractor; soil is ejected at the dump by a tailgate, moved by wire ropes or hydraulically. Towed scrapers transport soil, in addition to spreading and leveling it. See also: [wheel scraper](#) *Hammond*

bowr

See: [bort](#)

bowse

See: [boose](#)

box

a. A unit in a sluice for washing gravel; a sluicebox. Syn: [box condenser](#) b. A dump body. *Nichols, I* c. To place core samples in a lidded, traylike, partitioned container for safekeeping after they have been removed from the core barrel; also, the container in which core samples are placed after they have been removed from a core barrel. Also called corebox; core tray. *Long* d. To drill boreholes at the four corners of a square area at equal distances from a centrally located and already completed borehole. *Long*

box barrow

A large wheelbarrow with upright sides. *Webster 2nd*

box bell

See: [bell screw](#)

box canyon

a. A narrow gorge or canyon containing a stream following a zigzag course, characterized by high, steep rock walls and typically closed upstream with a similar wall, giving the impression as viewed from its bottom of being surrounded or boxed in by almost-vertical walls. *AGI* b. A steep-walled canyon heading against a cliff; a dead-end canyon. Syn: [cajon](#)

boxcar loader

a. Any of several types of conveyors adapted by portable or hinged mounting for use in loading bulk materials into boxcars. Some types operate at high speeds and throw the materials to the ends of the car. See also: [idler disk](#) b. In anthracite and bituminous coal mining, one who loads coal into railroad boxcars by mechanical shovel or conveyor loader. Syn: [thrower belt](#); [car loader](#); [loader engineer](#); [loader runner](#). See also: [portable conveyor](#)

box check

A ventilation control consisting of a stopping or a curtain with a hole, through which a conveyor can pass. The box check serves as a ventilation regulator in a belt haulage entry. See also: [boxes](#); [conveyor airlock](#). *MSHA, 1*

box condenser

See: [box](#)

box cut

The initial cut driven in a property, where no open side exists; this results in a highwall on both sides of the cut. *Austin*

box-cut method

A method of opencast mining of coal where the dip of the seam is relatively steep. A boxlike excavation is made to the dip, or at an angle to it, and the coal seam is worked to the right and left. See also: [strike working](#)

box-cut spoil

That spoil created from the initial excavation of a pit or pits which is placed upon the surface of adjacent lands. The term does not include spoil from subsequent excavations, which is placed in previously excavated pits.

boxes

a. Pennsylvania. Wooden partitions for conducting the ventilation from place to place. See also: [box check](#) b. More or less hollow cuboidal limonitic concretions. *Arkell* c. Eng. Pebbles of hard brown sandstone at the base of the Red and Coralline Crags in East Anglia, containing remains of a fossil; so called by the Suffolk phosphate diggers. *Arkell*

box filling

The use of metal trays, instead of shovels, for hand-filling coal into trams. The collier scooped the lumpy coal into the box and discarded the small material, which had little market value. The use of a box was compulsory at many collieries until several decades ago. See also: [fork-filled](#); [loading pan](#). *Nelson*

box groove

A closed groove between two rolls, formed by a collar on one roll and fitting between collars on another. *Fay*

box heading

A heading driven through very loose ground with close timbering. *Nelson*

boxing

A method of securing shafts solely by slabs and wooden pegs. *Zern*

box loader

In the quarry industry, one who loads broken rock into a large box, placed on a small truck running on a narrow gauge track, to be hoisted out of the quarry pit. Syn: [grouter](#); [rock loader](#). *DOT*

box scraper

See: [scraper](#)

box sluice

An open wooden channel or flume for conveying placer sand. The gold or heavy minerals settle at the bottom. The method is cleaner and requires less water than ground sluicing. *Nelson*

box tap

See: [bell tap](#)

box timbering

Use of rectangular close frame for lining shafts or drives. See also: [plank timbering](#)

boxwork

A network of intersecting blades or plates of limonite or other iron oxide, deposited in cavities and along fracture planes from which sulfides have been dissolved by processes associated with the oxidation and leaching of sulfide ores, esp. porphyry copper deposits. *AGI*

boydite

Local name for probertite. *English*

boylom

Staff. A bluish iron ore. See also: [boilum](#)

Boylston's reagent

A 5% solution of nitric acid in absolute ethyl or methyl alcohol, used for the general etching of normal carbon steels. Syn: [nital](#)

BPL

Bone phosphate of lime. *AGI*

BQ

Letter name specifying the dimensions of bits, core barrels, and drill rods in the B-size and Q-group wireline diamond drilling system having a core diameter of 36.5 mm and a hole diameter of 60 mm. *Cumming, 2*

brace

A platform or landing at the top of a shaft. The upper brace is the platform built in the headgear above the shaft collar. *Nelson*

brace head

A cross handle attached at the top of a column of drill rods by means of which the rods and attached bit are turned after each drop in chop-and-wash operations while sinking a borehole through overburden. Also called brace key. *Long*

brachy axis

The shorter lateral axis in the crystals of the orthorhombic, monoclinic, and triclinic systems. *Webster 3rd*

brachypinacoid

a. A pinacoid parallel to the vertical axis and the brachydiagonal. *Standard, 2* b. The pinacoid 010 intersecting the brachy-axis in orthorhombic and triclinic systems (obsolete). CF: [pinacoid](#)

brachytypous

In crystallography, comparatively short. *Standard, 2*

bracing

a. Diagonal or horizontal members used to prevent swaying of structures, i.e., conveyor-supporting structures. b. Eng. See also: [lacing](#)

brackebuschite

A monoclinic mineral, $Pb_2 (Mn,Fe)(VO_4)_2 \cdot H_2O$.

Brackelsberg process

A process by which fine ores are moistened with water to which a binding medium is added, and the wet mass, without any heating, is rotated in a drum until it forms into spherical lumps of varying size. The moisture is then dried out by evaporation, and the product remains in the form of hard, very porous balls of ore, which are of great reducibility as compared with sintered ore or briquettes. *Osborne*

bracket

A platform over a shaft entrance. *Standard, 2*

brackish water

Water in which salinity values range from approx. 0.50 to 17.00 parts per thousand. *Hy*

Bradford breaker

A machine that combines coal crushing and screening. It consists of a revolving cylindrical screen 8 to 14 ft (2.4 to 4.3 m) in diameter and 13 to 22 ft (4.0 to 6.7 m) in length. It breaks the coal by gravity impact. On reaching the desired size, the coal is

discharged through the plates. It can deal with run-of-mine coal up to 12 in (30.5 cm) at a rate of 500 to 600 st/h (454 to 544 t/h), to give a product size of below 1-1/2 in (3.8 cm); other sizes can be produced, depending on the screen plates used. See also: [screen](#)

bradleyite

A monoclinic mineral, $\text{Na}_3 \text{Mg}(\text{PO}_4)(\text{CO}_3)$; in very fine grains in saline oil shale in Wyoming.

bradyseism

A long-continued, extremely slow vertical instability of the crust, as in the volcanic district west of Naples, Italy, where the Phlegraean bradyseism has involved up-and-down movements between 6 m below sea level and 6 m above over more than 2,000 yr (Casertano). Etymol: Greek "bradys" (slow) + "seismos" (earthquake). *AGI*

brae

Insufficiently charred wood, as in charcoal burning. *Standard, 2*

Bragg angle

The angle, θ , at which X-rays diffract in crystalline materials. It satisfies the relationship $n \lambda = 2 d \sin \theta$, where d is the distance between diffraction planes of atomic particles in a crystal structure, λ is the wavelength of the X-rays, and n is the order of diffraction when a crystal is placed in an X-ray beam.

Bragg indices

The index numbers assigned to a diffracted X-ray beam. They have the same values as Miller indices but are written without closures. Diffraction order may be factored into Bragg indices, e.g., 111, 222, 333... represent $n = 1, 2, 3...$ for diffraction from atomic planes parallel to 111. CF: [Miller indices](#)

braggite

A tetragonal mineral (Pt,Pd,Ni)S : steel gray, minute grains in concentrates from the Bushveld norite of the Transvaal, South Africa. A source of platinum and palladium.

braided stream

A stream that divides into an interlacing or tangled network of several small branching and reuniting shallow channels separated from each other by branch islands or channel bars, resembling in plan the strands of a complex braid. Such an anastomosing stream is

generally believed to indicate an inability to carry all of its load, such as an overloaded and aggrading stream flowing in a wide channel on a flood plain. *AGI*

brake

a. A device (as a block or band applied to the rim of a wheel) to arrest the motion of a vehicle, a machine, or other mechanism and usually employing some form of friction. *Webster 3rd* b. A device, either hand- or power-operated, for applying resistance to the drum or pulley and thus controlling the movement of mine cars or cages. A common form is a brakeshoe, lined with friction material, which is applied to the surface of a wheel or drum, and thus retards or even stops its movement. See also: [winder brake](#) *Nelson* c. Eng. A stout, wooden lever to which boring rods are attached. It is worked by one or more people. d. N. Staff. To lower trams on dips by means of a wheel and rope.

brakedrum

A rotating cylinder with a machined inner or outer surface upon which a brake band or brakeshoe presses. *Nichols, 1*

brake incline

a. An incline in which the full trucks descend by gravity and pull up the empty ones. See also: [gravity haulage](#) b. Gravity plane. *Pryor, 3*

brakeman

a. Person who attends to a brake or brakes, as on a railroad car. *Standard, 2* b. Eng. The person in charge of a winding (hoisting) engine for a mine. "Brakeman" is usually used in the United States; "brakesman" is the British usage. The person in charge of hoisting engines, esp. in the United States, is usually called a hoisting engineer. *Fay* c. In mining, a laborer who rides on trains or trips of cars hauled by locomotive or hoisting cable or chain, and assists in their transportation to surface or shaft bottom for hoisting; operates or throws switches; couples and uncouples cars, or attaches and detaches cars to and from the cable; opens and closes ventilation doors in mines; directs movement of the train by signaling motorman. May be designated according to type of hauling machine, such as dinkey operator helper. Also called brake holder, car rider, conductor, dukey rider, gang rider, motorman helper, nipper, patcher, rider, rope conductor, rope rider, set rider, snapper, tailend rider, trailer, train conductor, trainman, transfer car helper, trip rider, tub rider. Syn: [conductor](#)

brake sieve

A jigger operated by a hand lever. *Fay*

brake wheel

a. A hand wheel for operating a brake, as on a vehicle. *Webster 2nd* b. A wheel or pulley on which a friction brake acts. *Webster 2nd* c. A heavy wheel provided with cams for controlling the movement of a triphammer. *Webster 2nd*

braking distance

The distance the haulage unit (i.e., train) will travel after the application of the brakes, depending on the speed, the weight of locomotive and train, and the gradient. *Sinclair, 5*

brammallite

A micaceous mineral differing from illite because it contains soda in excess of potash. Found in crevices in coal measure shales from Llandebie, South Wales. Syn: [sodium illite](#)

brances

See: [brasses](#)

branch

a. An underground road or heading driven in coal measures; also, a roadway turned from a level, etc. Syn: [branch hole](#) b. A small vein departing from the main lode. CF: [main hole](#)

branch fault

A minor fault that branches from a larger fault. *Stokes*

branch headings

Headings that are turned off the main level at intervals for development purposes. They may proceed to the rise or dip and are adopted in longwall and pillar methods of working. See also: [opening out](#)

branch hole

See: [branch](#)

branchite

A variety of hydrocarbon found in lignite. According to Hintz it is identical with hartite. *Tomkeieff*

brandisite

Clintonite found as monoclinic hexagonal-shaped prisms in metamorphosed limestone.

brannerite

A monoclinic mineral, $(U,Ca,Y,Ce)(Ti,Fe)_2 O_6$; radioactive; commonly metamict; in placers of the Stanley Basin, UT.

brashings

Brittle shale (the coal miner's "slate") interbedded with thin coalbeds; also, the roof of the Pittsburgh coal in western Maryland. See also: [rashings](#)

brasque

A paste made by mixing powdered charcoal, coal, or coke with clay, molasses, tar, or other suitable substance. Used for lining hearths, crucibles, etc. Syn: [steep](#)

brasqued crucible

A crucible lined with charcoal or lampblack, and used for the reduction of oxides of metals to the metallic state. The crucible is prepared by ramming it full of lampblack or charcoal, and then excavating a portion of its contents and polishing the lining with a burnisher. *Fay*

brass balls

Nodular pyrite. *Fay*

brasses

Mineral impurities in coal, of yellow metallic appearance, consisting mainly of iron sulfides. Syn: [brances](#); [brassy](#). *BS, 4*

brassfounder's disease

A disease affecting the general system, characterized by chronic poisoning from inhalation of metallic fumes, with symptoms like those of malarial fever. *Standard, 2*

brass furnace

One of two kinds of furnaces for the making and founding of brass: (1) a reverberatory furnace for producing large quantities of the alloy, or (2) a crucible furnace for producing small quantities. *Fay*

brass ore

a. An early name for a mixture of sphalerite and chalcopyrite. *Hess* b. An old name for aurichalcite.

brassyn

See: [brasses](#)

brassy top

Aust. The top part of the Greta coal seam, in which there are large quantities of sulfide of iron.

brattice

a. Ventilating partition, usually of coated fabric, used to direct air to various faces to remove gas and dust. b. A board or plank lining, or other partition, in any mine passage to confine the air and force it into the working places. Its object is to keep the intake air from finding its way by a short route into the return airway. Temporary brattices are often made of cloth. Also spelled braddish; brettice; brettis; brattish. See also: [brattice cloth](#) c. An airtight partition in a mine shaft to separate intake from return air. See also: [screen](#) d. Used as jumpers for removing gas from a roof cavity. *Nelson* e. To provide with a brattice for separation or support; often used with up. Syn: [brattice up](#)

brattice cloth

a. Fire-resistant fabric, usually coated, used to erect a brattice. b. A heavy canvas, often covered with some waterproofing material, for temporarily forcing the air into the face of a breast or heading; also used in place of doors on gangways; then known as "sheets." Syn: [brettice cloth](#)

brattice man

In mining, a worker who builds doors, stoppings and curtains (ventilation walls or partitions in active workplaces) of burlap, canvas, and wood. Also called airman; braddisher; braddish man; canvasman; doorman; ventilation man. *DOT*

brattice road

A road through the goaf supported by chocks or timber packs.

brattice sheeting

A curtain or screen of flexible material used to direct or control the flow of ventilating air. See also: [brattice cloth](#); [sheets](#). *BS*, 8

brattice up

See: [brattice](#)

brattice worker

See: [airman](#)

brattish

See: [brattice](#)

braunite

A tetragonal mineral, $\text{Mn}^{2+} \text{Mn}^{3+}_6 \text{SiO}_{12}$; brittle; may contain appreciable iron.

braunkohle

Ger. See: [brown coal](#)

bravaisite

A former name for a micaceous clay later shown to be a mixture of montmorillonite and illite.

Bravais lattice

One of 14 ways points may be arrayed periodically in space such that each point is in an identical point environment. Every crystal structure has associated with it a Bravais lattice. Syn: [space lattice](#); crystal lattice. CF: [direct lattice](#); [space group](#).

Bravais law

See: [Bravais rule](#)

Bravais-Miller indices

See: [Miller-Bravais indices](#)

Bravais rule

The most prominent faces of a crystal are those parallel to internal planes having the greatest density of lattice points. Syn: [Bravais law](#)

bravoite

A nickeloan variety of pyrite.

braze

To solder with brass or other hard alloys. *Nichols, 1*

brazilianite

A monoclinic mineral, $\text{NaAl}_3(\text{PO}_4)_2(\text{OH})_4$; yellow-green; also spelled brasilianite, brasilianita.

Brazilian pebble

A colorless transparent quartz, such as is used for optical purposes. *Fay*

Brazilian test

A method for the determination of the tensile strength of rock, concrete, ceramic, or other material by applying a load vertically at the highest point of a test cylinder or disk (the axis of which is horizontal), which is itself supported on a horizontal plane. The method was first used in Brazil for testing concrete rollers on which an old church was being moved to a new site. *Dodd*

brazilite

a. A mixture of baddeleyite, zircon, and altered zircon. b. A fibrous variety of baddeleyite. c. An oil shale.

Brazil twin

A type of twin found in quartz in which the two crystalline individuals are of opposite kinds, one being right-handed, the other left-handed, with a face of the trigonal prism of the second order as twinning plane. Since one is not derivable from the other by any rotation, there is no twinning axis. *Hess*

brazing

a. Joining metals by flowing a thin layer (capillary thickness) of nonferrous filler metal into the space between them. Bonding results from the intimate contact produced by the dissolution of a small amount of base metal in the molten filler metal, without fusion of the base metal. Sometimes the filler metal is put in place as a thin solid sheet or as a clad layer, and the composite is heated as in furnace brazing. *ASM, 1* b. In joining metals, the term "brazing" is used where the temperature exceeds some arbitrary value, such as 800 degrees F (427 degrees C); the term "soldering" is used for temperatures lower than the arbitrary value. *ASM, 1*

breach

a. An opening made by breaking down a portion of a solid body, as a wall, a dike, or a riverbank; a break; a gap. b. The face of a level or drift. c. A large cave hole caused by undermining.

breached anticline

An anticline whose crest has been deeply eroded, so that it is flanked by inward-facing erosional scarps. CF: [bald-headed anticline](#)

breaching

The breaking through of a bar. *Schieferdecker*

breadth

N. Staff. A set of coal pillars formed by rearer workings. *Nelson*

break

a. A plane of discontinuity in the coal seam such as a slip, fracture, joint, or cleat. The surfaces are in contact or slightly separated. See also: [break detector](#) b. A fracture or crack in the roof beds as a result of mining operations. See also: [breaks](#); [induced fracture](#). *Nelson* c. To separate core from solid rock at the bottom of a borehole by a tensional pull applied to the drill string. *Long* d. In mineral processing, optimum mesh of grind (m.o.g.), the practical size range to which ore is reduced before concentration. Not synonymous with liberation mesh. *Pryor, 3* e. In drilling, to unscrew, as rods, casing, drill pipe, etc. *Long*

breakage

a. Voluntary or involuntary division of a solid. *BS, 5* b. Small material produced by involuntary breakage during mechanical handling or processing. *BS, 5*

breakage clause

Eng. A clause inserted in some mining leases providing for an abatement of royalty or allowance on weight for certain weight of small coal or breakage sent out in every ton of large coal, for example, 120 lb (54.5 kg) in every collier's ton of 2,640 lb (1,200 kg).

breakage of coal

See: [degradation](#)

breakaway chain

A chain that holds a tractor and a towed unit together if the regular fastening opens or breaks. Syn: [safety chain](#)

breakback

The fractures caused by the shattering of a solid rock ledge back of the drill holes in which the charge is placed. *Fay*

break detector

A scraper capable of detecting breaks in a shothole. See also: [break](#); stemmer. *Nelson*

breakdown

Of an emulsion, the reunion of the finely dispersed particles and their separation from the medium in which they form an emulsion. Syn: [hoedown](#) *CTD*

breakdown voltage

The voltage at which an insulator or dielectric ruptures; or the voltage at which ionization and conduction begin in a gas or vapor. *Hunt*

breaker capacity

The ability of a switch, in a particular situation, to clear safely the heaviest fault current that can flow; it depends upon the amount of power available in the system, size of cables, transformers, etc. CF: [breaking capacity](#)

breaker props

Props, or props and cribs, set to break the roof off at a prearranged line during retreat mining, or when blasting down roof.

breakers

The row of drill holes above the mining holes in a tunnel face. *Stauffer*

breaker zone

See: [surf zone](#)

breakes

Eng. Fissures in old coal workings. See also: [break](#)

break-even point

a. Production level at which total cost equals revenue. *Pryor, 3* b. Value or selling price of ore, metal, or mined material that just balances total cost of operations; conversely, maximum unit costs above which there is no profit at given market values.

break-in

To start drilling operations with a new bit by rotating the bit slowly under a light load for a short time before full speed and load are applied to the bit. *Long*

breaking

Size reduction of large particles. Also called cracking. *BS, 5*

breaking capacity

The capacity of a switch, circuit breaker, or other similar device to break an electric circuit under certain specified conditions. CF: [breaker capacity](#)

breaking-down rolls

A rolling mill unit used for breaking-down operations; a rolling mill used for reducing sectional dimensions, mainly thickness--of ingots, billets, and other rough, semifinished products--as a preliminary step to subsequent rolling operations. *Henderson*

breaking ground

a. The breaking and loosening of rock as a preparatory step to its loading and removal. See also: [excavation](#) b. Attrition of an ore deposit by hand, explosive, or mechanical breaking methods to reduce it to pieces of ore suitable for transport and treatment. *Pryor, 3*

breaking in

N. of Eng. See: [hewing](#)

breaking-in shot

a. The first borehole fired in "blasting off the solid" to provide a space into which material from subsequent shots may be thrown. Also called opening shot; buster shot. *Fay* b. In blasting a solid face, the first hole or group of holes of a round to be fired simultaneously. See also: [burn cut](#)

breaking lag

As applied to an electric blasting cap, the time elapsing between the bridge wire receiving the firing impulse and the breaking of the circuit. *Fraenkel*

breaking point

In rock crushers, a deliberate weak link that yields if excessive strain is developed. May be a scarfed toggle, weak cap bolts on a pitman, a shearpin in drive, or a clutch designed to fail at a given load. *Pryor, 3*

breaking prop

Arkansas. One of a row of props of sufficient strength to cause the rock above the coal to break and so limit the area of top brought down by a brushing shot.

breakings

Inferior ores arranged ready for crushing. *Nelson*

breaking stress

See: [fracture stress](#)

break in lode

A fault.

break line

a. The line in which the roof of a coal mine is expected to break. b. The line of complete extraction of coal. c. A line roughly following the rear edges of the pillars that are being drawn or mined. See also: [rib line](#)

break-making

Providing a crack indication by striking small slits in the longitudinal direction of a row of drill holes in quarries.

breakout

a. To pull drill rods or casings from a borehole and unscrew them at points where they are joined by threaded couplings to form lengths that can be stacked in the drill tripod or derrick. *Long* b. An accidental flow of metal through a hole in a furnace lining.

breakrow

A row of timbers erected for the purpose of breaking the roof in pillar mining. *Hess*

breakthrough

a. A passage cut through a pillar to allow the ventilating current to pass from one room to another. Larger than a doghole. Also called room crosscut. Syn: [cut-through](#); [crosscut](#).
b. The point at which a drill bit leaves the rock and enters either a natural or a constructed opening. *Long*
c. An opening made, either accidentally or deliberately, between two underground workings. *Long*
d. In an ion-exchange column used in leaching, the arrival of traces of uranium in the final column during the loading (adsorption) cycle. *Pryor, 3*
e. See: [stenton](#)

break thrust

A thrust fault that cuts across one limb of a fold. *AGI*

breakup

a. Eng. An excavation commenced from the bottom of a tunnel heading and carried upward, so as to form two interior working faces.
b. Mid. To cut away and remove the floor of an entry or other opening.

breakup value

On exhaustion of an ore deposit or cessation of an exploitation, the value of its onsite buildings, equipment, stockpiles, untouched remnants of ore concentrates, etc.; in foundations of plant; and any other assets still having value apart from their original use. *Pryor, 3*

breakwater

An offshore structure (such as a mole, wall, or jetty) that, by breaking the force of the waves, protects a harbor, anchorage, beach, or shore area. *AGI*

breast

a. In a coal mine, a chamber driven in the seam from the gangway, for the extraction of coal; the face of a working.
b. In Italy, a stall in a steep seam from 12 to 18 yd (11 to 16.5 m) wide. The stalls are carried one above another from the lowest level to the rise.
c. Leic. To take down or get a buttock (face) of coal end on.
d. The end, in unmined rock, of an underground excavation, sometimes called the face; the vertical end surface of a block. See also: [before breast](#)
e. A place where anthracite coal is mined; in the soft coal regions, it is called a room. *BCI*
f. The face of a working.
g. That part of the

bedplate that is back of the crossheads in engines of the Corliss type. h. The side of the hearth containing the taphole in a blast furnace; the rammed material in which the taphole is installed in a cupola.

breast-and-pillar

Pennsylvania. A system of working anthracite coal by bords 10 yd (9.1 m) in width, with narrow pillars 5 yd (4.6 m) wide between them, holed through at certain intervals. The breasts are worked from the dip to the rise. See also: [bord-and-pillar](#)

breast auger

An auger supported by a breastplate against a miner's body. Used for drilling holes in soft coal. *Fay*

breast board

a. Planking placed between the last set of timbers and the face of a gangway or heading which is in quicksand or loose ground. b. The timber or boards placed horizontally across the face of an excavation, or heading, to prevent the inflow of gravel or other loose or flowing material. *Stauffer*

breast bore

Scot. A borehole put in parallel with the seam, that is made and kept in advance of a working place for the purpose of ascertaining the position of old works, tapping water, letting off gas, etc. *Fay*

breast coal

The face of the middle or main layer of coal in a composite seam. *Nelson*

breast drill

A small, portable hand drill customarily used by handsetters to drill the holes in bit blanks in which diamonds are to be set. The upper end of the drill is provided with a plate against which the breast of the operator is pressed to force the bit into the work. CF: [brace](#)

breaster

In tunnel blasting, holes that parallel the tunnel alignment drilled between the cut and the perimeter holes.

breast eye

Lanc. Opening leading from a working face to the surface. *Hess*

breast hole

In driving a tunnel, a hole blasted after the bottom cut. *Pryor, 3*

breasting

a. N. Staff. A short leading stall, worked at right angles to, and forming the face of, the main level. b. A wide heading or level. c. Eng. Taking ore from the face or head of a drift. d. In drift mining, breaking down the gravel underground, and retreating towards the crosscut from which the drifts were driven. *von Bernewitz* e. Cumb. A place driven to open out a longwall face. *SMRB*

breast machine

A machine used for undercutting coal in which the main frame and carriage are held stationary by roof jacks while the cutter frame advances into the kerf during the cutting operation. Since cuts do not exceed 44 in (1.1 m) along the face, it is necessary to relocate the machine several times before the entire face can be cut. *Jones, 1*

breastplate

A slightly curved iron plate fastened to the end of a coal auger to enable a miner to press the auger forward using body pressure.

breast stoping

A method of stoping employed on veins where the dip is not sufficient for the broken ore to be removed by gravity. The ore remains close to the working face and must be loaded into cars at that point. See also: [overhand stoping](#)

breast timber

A leaning brace from the floor of an excavation to a wall support. *Nichols, 1*

breast wall

A wall designed to withstand the force of a natural bank of earth, such as of timber used to support the face of a tunnel. Syn: [jamb wall](#) *AGI*

breathing

Alternate expansion and contraction of air in breaks that allows fresh oxygen to be drawn in and oxidation to proceed. *Sinclair, 1*

breathing apparatus

a. A filter self-rescuer (FSR) is a respiratory protective device that filters ambient air of carbon monoxide, converting it to carbon dioxide. Exhaled air is vented back to ambient. Also called a gas mask. Duration of protection is limited, usually, by water contamination of the chemical bed. Used for escape from underground mines in the event of a fire or explosion. Requirement specified in 30 CFR 75.1714-2(e)(2).

Apparatus must be certified as providing at least one hour of respiratory protection. Apparatus available in the United States are the Draeger 910 and the MSA W-65, both certified for one hour. b. A self-contained self-rescuer (SCSR) is a respiratory protective device that provides breathing gas independent of the ambient atmosphere, containing its own oxygen source. Also called an oxygen self-rescuer. Air is exchanged between the user's lungs and a breathing bag. Oxygen consumed by the user is replaced by the apparatus from its oxygen source, stored either in chemical or compressed form. Carbon dioxide produced by the user is removed by a chemical absorbent in the apparatus breathing circuit. Duration of protection is determined by both quantity of stored oxygen and carbon dioxide absorption capacity. SCSRs differ from rescue breathing apparatus in that the breathing bag is not protected by a rigid cover in order to reduce size and weight. Used for escape from underground mines in the event of a fire or explosion.

Requirement specified in 30 CFR 75.1714. Apparatus must be certified as providing at least one hour of respiratory protection. Apparatus available in the United States are the CSE SR-100, the Draeger OXY K plus, the MSA Portal-Pack, the Ocenco EBA 6.5, all certified for one hour. c. A rescue breathing apparatus (RBA) is a respiratory protective device that provides breathing gas independent of the ambient atmosphere, containing its own oxygen source. Air is exchanged between the user's lungs and a breathing bag.

Oxygen consumed by the user is replaced by the apparatus from its oxygen source, stored in compressed form in most apparatus. Carbon dioxide produced by the user is removed by a chemical absorbent in the apparatus breathing circuit. Duration of protection is determined by both quantity of stored oxygen and carbon dioxide absorption capacity. RBAs differ from self-contained self-rescuers in that the breathing bag is protected by a rigid cover in order to prevent accidental puncture or tear. Used for entry into underground mines after a fire or explosion in order to reestablish the ventilation system, rescue trapped miners, and put out fires. Requirement specified in 30 CFR 49.1. Apparatus must be certified as providing at least two hours of respiratory protection. Apparatus available in the United States are the Biomarine BioPak 240 and the Draeger BG-174A, both certified for four hours.

breathing cave

a. A cave in which air is alternately blown out and sucked in at the entrance.

Schieferdecker b. A narrow part in a passage through which air blows. *Schieferdecker*

breccia

A coarse-grained clastic rock, composed of angular broken rock fragments held together by a mineral cement or in a fine-grained matrix; it differs from conglomerate in that the fragments have sharp edges and unworn corners. Breccia may originate as a result of talus accumulation, explosive igneous processes, collapse of rock material, or faulting. Etymol: Italian, broken stones, rubble. Syn: [rubblerock](#) brecciated. CF: [conglomerate](#); [loose ground](#). *AGI*

brecciated

Converted into, characterized by, or resembling a breccia; esp. said of a rock structure marked by an accumulation of angular fragments, or of an ore texture showing mineral fragments without notable rounding. *AGI*

bredigite

An orthorhombic mineral, $\text{Ca}_7 \text{Mg}(\text{SiO}_4)_4$; pseudo-hexagonal. CF: [larnite](#)

breeching

Mid. Drawing loaded trams downhill underground. Syn: [britching](#)

breese

See: [breeze](#)

breeze

a. Coke of small size; the undersize remaining after separating the smallest size of graded coke. Also spelled breese. *BS*, 3 b. The dust from coke or coal. *Mersereau*, 2 c. An indefinite term that usually means clinker, but that may refer to coke breeze. *Taylor* d. Scot. Fine or slack coal.

breeze concrete

A concrete made of 3 parts coke breeze, 1 part sand, and 1 part portland cement. It has poor fire-resisting qualities but it is cheap and nails can be driven into it. *Nelson*

breeze oven

a. An oven for the manufacture of small coke. *Fay* b. A furnace designed to consume breeze or coal dust. *Fay*

breithauptite

Nickel antimonide, NiSb. See also: [niccolite](#)

brenston

See: [brimstone](#)

Breton pan

Large steel mortar in which a heavy steel pestle rolls. Once used in grinding and amalgamation of gold ores. *Pryor, 3*

brettice cloth

A variation of brattice cloth. See also: [brattice cloth](#)

brettis way

Derb. A road in a coal mine, supported by brattices built on each side after the coal has been worked out. See also: [brattice](#)

breunnerite

A ferroan variety of magnesite used in the manufacture of magnesia bricks.

brewsterite

A monoclinic mineral, $(\text{Sr}, \text{Ba}, \text{Ca})\text{Al}_2 \text{Si}_6 \text{O}_{16} \cdot 5\text{H}_2 \text{O}$; zeolite group.

brewsterlinite

Liquid plus vapor CO_2 in cavities in minerals; e.g., quartz, topaz, and chrysoberyl. The meniscus vanishes under the warmth of the hand.

Brewster's law

a. The index of refraction of a crystalline substance is equal to the tangent of its angle of polarization. *Pryor, 3* b. In optics, where light is reflected from a smooth, transparent, nonconducting surface, it is plane polarized parallel to the reflecting surface. The angle of incidence for maximum polarization is that angle whose tangent is the index of refraction of the reflecting substance. This angle is also called the "Brewster angle."

brick clay

An impure clay, containing iron and other ingredients. In industry the term is applied to any clay, loam, or earth suitable for the manufacture of bricks or coarse pottery. Syn:

[brick earth](#)

brick coal

Eng. Small, dirty coal suitable for brick kilns and similar purposes. *Fay*

brick earth

Earth, clay, or loam suitable for making bricks; specif. a fine-grained brownish deposit consisting of quartz and flint sand mixed with ferruginous clay; found on river terraces as a result of reworking by water of windblown material, such as that overlying the gravels on certain terraces of the Thames River in England. Syn: [brick clay](#)

brick fuel

In Wales, patent fuel. See also: [briquette](#)

bricking

The walling or casing of a shaft.

bricking curb

A curb set in a circular shaft to support the brick walling. See also: [curb](#)

bricking scaffold

A staging or platform suspended in a sinking shaft on which masons stand when building brick walling. Syn: [walling scaffold](#)

brick walling

A permanent support for circular shafts. On reaching the rockhead, a firm ledge is prepared to receive the first bricking curb or ring. The curb is fixed correctly with reference to the centerline of the shaft. The bricks are then built upwards from the curb, the space behind being firmly packed to the rock sides with bricks and mortar. Concrete is replacing brickwork as a shaft lining. See also: [lining](#); [permanent shaft support](#).

Nelson

bridal

Staff. A contrivance used in coal mining to prevent cars from overturning upon steep inclined planes having a rise of 1 ft in 3 ft or 4 ft (1 m in 3 m or 4 m). *Hess*

bride cake

A black, highly carbonaceous slickensided shale with Carbonicola shells, in the Adwalton stone or Flockton thick coal; also, dirty smudgy coal in the roof of the Stanley Main in the Snyderdale-don Pedro area. Syn: [bright cake](#)

bridge

a. A rock fragment, cavings, or other obstruction that lodges (either accidentally or intentionally) part way down in a drill hole (such as in an oil well). *AGI* b. Debris that plugs a borehole at a point above the bottom. Between the underside of the bridge and the bottom of the drill hole, the borehole is free of debris. *Long* c. To deliberately plug a borehole at a point some distance above its bottom. *Long* d. To form a bridge in a drill hole. *AGI* e. In a cave, a solutional remnant of rock that spans a passage from wall to wall. *AGI* f. A device to measure the resistance of a wire or other conductor forming a part of an electric circuit. g. A piece of timber held above the cap of a set by blocks and used to facilitate the driving of spiling in soft or running ground. h. Refers to the overburden used for spanning the natural gap between the highwall and the spoil, when such is required to establish a temporary machine surface standing area closer to the disposal area than that provided by the virgin ground. *AGI* i. In an electric blasting cap, the wire that is heated by electric current so as to ignite the charge. *Nichols, 1* j. Sometimes, the shunt connection between the cap wires. *Nichols, 1* k. A plankway or elevator used in ironworking to convey fuel or ore to the mouth of a furnace. *Webster 3rd* l. A refractory bar, or member, or fire clay placed across the surface of the batch in a tank furnace near the working end to hold back the scum, or gall. *Mersereau, 2* m. The structure formed by the end walls of the adjacent melter and refiner compartments of a tank and the covers spanning the gap between the end walls. *ASTM* n. See: [air crossing](#)

bridge break

The time that elapses between the application of current and the fusion of the bridge wire when using instantaneous blasting caps. *Streefkerk*

bridge conveyor

A conveyor that is supported at one end by a loading unit and at the other end in such a way as to permit changes in the position of either end without interrupting the operation of the loading unit. *NEMA, 2*

bridged

A borehole plugged by debris lodged at some point above the bottom of a hole. The hole may be bridged deliberately by introducing foreign material into the hole or accidentally by rock fragments sloughing off the sidewalls of the borehole. *Long*

bridge over

Collapse of a well bore around the drill stem. *Williams*

bridge the hole

Deliberate plugging of a borehole at a point some distance above the bottom by introduction of some type of foreign material or a plug. See also: [bridge](#)

bridge tramway

Consists of two steel bridge trusses braced together so as to form between them a runway on which a bucket-carrying trolley runs. *Pit and Quarry*

bridge wall

A low separating wall, usually made of firebrick, in a furnace. *Webster 3rd*

bridgewire

A resistance wire connecting the ends of the leg wire inside an electric detonator and which is embedded in the ignition charge of the detonator.

bridging

a. In crushing practice, the obstruction of the receiving opening by two or more pieces wedged together, each of which could easily pass through. *Nelson* b. Formation of arches of keyed or jammed particles across the direction of flow (of rock through apertures or of small particles through filter pores). *Pryor, 3* c. Arching of the charge across the shaft in a blast furnace or cupola. d. Premature solidification of metal across a mold section before the metal below or beyond solidifies. *ASM, 1* e. Solidification of slag within the cupola at or just above the tuyeres. *ASM, 1* f. Welding or mechanical locking of the charge in a downfeed melting or smelting furnace. *ASM, 1* g. Closing of a section of a drill hole by loose blocks of rock or by squeezing of plastic shale, etc.

Bridgman sampler

A mechanical device that automatically selects two samples as the ore passes through.

bridle bar

See: [bridle rod](#)

bridle cable

An anchor cable that is at right angles to the line of pull. *Nichols, 1*

bridle chain

a. One of the chains used for supporting a cage from the winding rope. *Nelson* b. One of the safety chains used to support the cage if the shackle should break or to protect a train of cars on a slope should the shackle or drawbar fail. *Fay*

bridle hitch

A connection between a bridle cable and a cable or sheave block. *Nichols, 1*

bridle rod

A steel tie bar used to join the ends of two point rails to hold them to gage in the proper position. Syn: [bridle bar](#)

brier

N. of Eng. A beam or girder fixed across a shaft top.

Briggs clinophone

An instrument used in measuring borehole deviation which transmits electrical signals, communicating to the surface the position of a plumb bob fitted with a needle relative to four electrodes arranged N., S., E., and W.--the needle and electrodes being immersed in the electrolyte. Signals are matched with a similar arrangement of needle and electrodes at the surface, and the needle then indicates the deviation and the direction of deviation. *Sinclair, 2*

Briggs equalizer

This consists of a head harness, mouthpiece, and noseclip, corrugated breathing tube, Briggs equalizing device, 120 ft (36.58 m) of reinforced air tubes, and a strainer and spike. It has neither bellows nor rotary blower but depends entirely on the action of the equalizer for comfortable respiration. The resistance to breathing is so low that reasonably hard work can be done by the wearer over a period of 2 h or more. The air supply tube is attached to the waist by a strong leather body belt. *Mason*

bright attritus

A field term to denote the degree of luster of attrital coal compared with the brilliant luster of associated vitrain. CF: [dull attritus](#) *AGI*

bright cake

See: [bride cake](#)

bright coal

a. A type of banded coal defined microscopically as consisting of more than 5% of anthraxylon and less than 20% of opaque matter; banded coal in which translucent matter predominates. Bright coal corresponds to the microlithotypes vitrite and clarite and in part to duroclarite and vitrinerite. CF: [dull coal](#) b. The constituent of banded coal that is of a jet black, pitchy appearance, more compact than dull coal, and breaking with a conchoidal fracture when viewed macroscopically, and that in thin section always shows preserved cell structure of woody plant tissue, either of stem, branch, or root. Same as anthraxylon. *AGI* c. A coal composed of anthraxylon and attritus, in which the translucent cell-wall degradation matter or translucent humic matter predominates. *AGI* d. A type of banded coal containing from 100% to 81% pure bright ingredients (vitrain, clarain, and fusain), the remainder consisting of clarodurain and durain. *AGI*

bright head

a. York. A smooth parting or joint in coal; a plane of cleavage. b. The principal cleat in coal. *Arkell*

brightness

The candlepower of a light source divided by the area of the source, and expressed in candles per square inch or candles per square foot.

brightness meter

Visual-type portable photometer operated by visual comparison of brightness. So named because it can be calibrated to indicate the photometric brightness of the object viewed in the sighting telescope. *Roberts, 2*

brights

a. Coal that reflects a large part of incident light, either in a definite beam or by scattering. Two kinds of bright coal are distinguished: vitrain, which reflects an incident beam in a definite direction and consequently appears light or dark according to whether the beam is or is not reflected into the eye; and clarain, which scatters the light and shows a silky luster at whatever angle it is viewed. *Tomkeieff* b. A commercial term for the larger sizes of bright coal. *BS, 4*

bright sulfur

Crude sulfur free of discoloring impurities and bright yellow in color. *USBM, 7*

brimstone

A common name for sulfur. Syn: [brenston](#)

brine

a. Water saturated or strongly impregnated with common salt. b. Sea water containing a higher concentration of dissolved salt than that of the ordinary ocean. CF: [artificial brine](#)

brine field

A section of land under which quantities of rock salt or natural brine of usable strength have been discovered and a well, or any number of wells, has been bored for raising the brine. *Kaufmann*

Brinell hardness test

A test for determining the hardness of a material by forcing a hard steel or carbide ball of specified diameter into it under a specified load. The result is expressed as the Brinell hardness number, which is the value obtained by dividing the applied load in kilograms by the surface area of the resulting impression in square millimeters. CF: [Vickers hardness test](#)

Brinell hardness tester

a. In heat treating, one who determines the hardness of pieces of metal by the Brinell hardness test. Also called Brinell operator. *DOT* b. The machine or instrument used to determine hardness.

brine pit

A salt well, or an opening at the mouth of a salt spring, from which water is taken to be evaporated for making salt. *AGI*

brine well

A cased drill hole penetrating a salt formation through which water is introduced and brine pumped to the surface.

bring in

Can. Develop a mine from prospect stage. *Hoffman*

briquette

A block of compressed coal dust, used as fuel; also, a slab or block of artificial stone.
Syn: [brick fuel](#); [coalette](#); [eggette](#). Also called boulet; carbonet. Also spelled briquet. See also: [solid smokeless fuel](#) *Standard, 2*

briquetting

A process by which coke breeze, coal dust, iron ore, or any other pulverized mineral is bound together into briquettes, under pressure, with or without a binding agent such as asphalt, and thus made conveniently available for further processing or for commercial markets.

Briska detonator

An aluminum tube containing a main charge of tetryl (tetranitromethylaniline). On top of this are initiating charges of lead azide and lead styphnate, which are more sensitive than the tetryl. A safety fuse fitted into an open space at the top is used to set off the detonator. Syn: aluminum detonator. (Higham, 1951)

Britannia cell

In mineral processing, a pneumatic flotation cell 7 to 9 ft (2.1 to 2.7 m) deep. See also: [southwestern cell](#)

britching

Scot. See: [breeching](#)

British equivalent temperature

See: [equivalent temperature](#)

British thermal unit

Heat needed to raise 1 lb (0.45 kg) of water 1 degrees F (5/9 degrees C) (equal to 252 cal or 1,054 J). Symbol, Btu. CF: [heat unit](#) *Pryor, 3*

brittle material

A nonductile material that fails catastrophically under dynamic loading conditions. Ceramics are an example of a class of brittle materials. *Hunt*

brittle mica

Group of micas having brittle laminae. Chief member is chloritoid, a basic silicate of aluminum, iron, and magnesium, $\text{Fe}^{2+}, \text{Mg}, \text{Mn})_2 \text{Al}_4 \text{Si}_2 \text{O}_{10} (\text{OH})_4$. See also: [mica](#); margarite. *Pryor, 3*

brittleness

a. Of minerals, proneness to fracture under low stress. A quality affecting behavior during comminution of ore, whereby one species fractures more readily than others in the material being crushed. See also: [toughness](#) b. The quality of a material that leads to crack propagation without appreciable plastic deformation. *ASM, 1*

brittle silver ore

See: [stephanite](#)

broach

a. To restore the diameter of a borehole by reaming. *Long* b. To break down the walls between two contiguous drill holes. *Long* c. A sharp-pointed chisel, used for rough dressing stone. *Webster 2nd* d. The perpendicular grooves machined into the bit mold in which inside and outside gage stones are set. *Long*

broaching

a. Trimming or straightening a mine working. b. A method of rock excavation employed where it is important that the adjacent rock formation should not be shattered by explosive. A line of closely spaced holes is drilled along the required line of breakage. The rock between the holes is knocked out with a broach and removed with the aid of wedges. See also: [channeler](#) c. Removing metal stock from a workpiece with a broach. *ASM, 1*

broaching bit

A tool used to restore the dimensions of a borehole that has been contracted by the swelling of the marl or clay walls; also used to break down the intervening rock between two contiguous drill holes. A reamer. *Fay*

broad coke oven

A special design of oven, used mainly for coking certain grades of coal.

broadgate

Eng. A main working.

broad lode

Where two or more mining claims longitudinally bisect or divide the apex of a vein, the senior claim takes the entire width of the vein on its dip, if it is in other respects so located as to give the right to pursue the vein downward outside of the sideline. In other words, a broad lode bisected by the division sidelines between two mining claims belongs to the claim having the prior location. The term lode has become extensively used in the classification of ore deposits that are not comprehended by the definition of a vein. Such an occurrence is called a broad lode or zone. See also: [broad vein](#)

broadside shooting

A type of refraction seismic shooting used to determine the structure across the strike. The broadside lines are ordinarily laid out in conjunction with the standard-type profiles that run along the strike. The shot points and detector spreads are laid out along parallel lines, which are generally across the strike. The distance between each line of shots and the receiving line is chosen so that it will always be greater than the double offset distance for the refractor being followed. Generally the distance should be only slightly greater so that the primary refracted event will be received as a second arrival. When this spacing is used, the refracting point associated with the shot will be very close to that associated with the detector, and each delay time will be approx. half the intercept time. A single depth point (based on half the intercept time) is then plotted midway between shot and receiver. All depth points are thus placed along the "control lines" that are located halfway between the shooting line and the receiving line. *Dobrin*

broadstone

A paving slab, so called because it is raised broad and thin from the quarries, not more than 2 to 3 in (5.08 to 7.62 cm) thick.

broad vein

Where a broad vein apexes so that the boundary line between two claims splits the apex, the extralateral rights go to the senior locator, who takes the entire width of the vein on the dip; i.e., a broad lode that is bisected by the division side line between two mining claims belongs to the claim having the prior location. See also: [broad lode](#)

brochantite

A monoclinic mineral, $\text{Cu}_4(\text{SO}_4)(\text{OH})_6$; has one good cleavage; occurs in the oxidation zone of copper sulfide deposits; a source of copper. Formerly called blanchardite, kamarezite. Syn: [waringtonite](#)

brockite

A hexagonal mineral, $(\text{Ca,Th,Ce})(\text{PO}_4) \cdot \text{H}_2\text{O}$; rhabdophane group.

broeggerite

A thorian variety of uraninite. Also spelled broggerite.

broggite

a. A variety of asphalt from Peru. *Tomkeieff* b. A variety of anthraxolite. *Crosby*

broil

An old Cornish mining term referring to a collection of loose rock fragments usually discolored by oxidation, and indicating the presence of a mineral vein beneath the outcrop or gossan. Also spelled bryle; broyl.

broken charge

A charge of explosive in a drill hole divided into two or more parts that are separated by stemming. *Fay*

broken coal

In anthracite only; coal that is small enough to pass through a 3-3/8- to 4-in (8.57- to 10.16-cm) square aperture, but too large to pass through a 2-3/4-in or 2-1/2-in (6.99-cm or 6.35-cm) mesh. Smaller than steamboat, and larger than egg coal. See also: [anthracite coal sizes](#)

broken ground

a. A shattered rock formation or a formation crisscrossed with numerous, closely spaced, uncemented joints and cracks. CF: [loose ground](#); [breccia](#). *Long* b. Rock or mineral formations fragmented by blasting with explosives, such as the broken material in a shrinkage stope. Syn: [broken rock](#) *Long*

broken rock

See: [broken ground](#)

brokens

a. Eng. The removal or extraction of pillars previously formed in bord and pillar working. In Durham and Northumberland, the terms robbery and robbing pillars imply incomplete extraction of the pillars. *SMRB* b. Robbery. c. Robbing pillars.

broken stone

- a. A diamond that has been shattered in use, or lost a portion of its size by cleaving. *Long*
- b. See: [crushed stone](#)

broken working

The working away or removal of blocks or pillars of coal formed by whole workings.
See also: [working the broken](#)

bromargyrite

An isometric mineral, $4[\text{AgBr}]$; yellow, in surface oxidation deposits of silver ores in arid climates. Formerly called bromyrite. CF: [iodargyrite](#)

bromellite

A beryllium oxide with dihexagonal-pyramidal crystals from Langban, Sweden. See: [beryllium oxide](#)

bromine

A member of the halogen group of elements and the only liquid nonmetallic element. A heavy, reddish-brown liquid that volatilizes readily at room temperature to a poisonous, red vapor with a strong disagreeable odor. Symbol, Br. Obtained from natural brines from wells; little bromine is extracted today from seawater. Used in antiknock gasoline, fumigants, flameproofing agents, water purification compounds, dyes, medicinals, and sanitizers. *Handbook of Chemistry and Physics, 3*

bromite

An alternate spelling of bromyrite. See also: [bromargyrite](#)

bromlite

A former name for alstonite.

bromocyanide process

Recovering values from refractory or special gold ores, in which cyanogen bromide (CNBr), or a chemical mixture forming it, is used for treating the ore. *Bennett*

bromoform

A colorless, heavy liquid; CHBr_3 ; odor and taste similar to those of chloroform; sp gr, 2.8887. Used in mineralogic analysis and in assaying. CF: [methylene iodide](#); [Clerici solution](#); [Sonstadt solution](#). Syn: [methenyl tribromide](#); [tribromomethane](#). *CCD, 2*

bromyrite

A former name for bromargyrite.

brongniardite

A lead-silver sulfantimonide with 26.2% silver, some of which is apparently diaphorite and some canfieldite. Also spelled brongniartite.

bronze

An alloy composed mainly of copper and tin. Various other elements may be added in small amounts for certain specific purposes. A number of copper alloys are referred to as bronzes, although they contain no tin. The American Society for Testing and Materials has classified all copper-based alloys on a basis of composition ranges of the principal alloying elements. *Henderson*

bronze mica

See: [phlogopite](#)

bronzite

a. A mineral consisting of a ferriferous variety of enstatite, often having a luster like that of bronze; $(\text{Mg}, \text{Fe}^{+2})_2 \text{Si}_2 \text{O}_6$; orthorhombic. *Webster 3rd; Dana, 4* b. It is often used as a prefix to the names of rocks containing the mineral. Rocks of the gabbro family are the most common ones having the prefix. *Fay* c. A name for an orthopyroxene between enstatite and hypersthene in composition; brown or green; commonly has a bronzelike or pearly metallic luster.

bronzitite

A pyroxenite composed almost entirely of bronzite. *AGI*

brood

a. Impurities as extracted with ore. *Nelson* b. Corn. The heavier kinds of waste in tin and copper ores. A mixture of tin and copper ore.

Brookfield viscometer

An electrically operated, rotating-cylinder viscometer in which the drag is recorded directly on a dial; it has been used in the testing of vitreous-enamel slips. *Dodd*

brookite

An orthorhombic mineral, $8[\text{TiO}_2]$; trimorphous with anatase and rutile; a common accessory mineral in igneous and metamorphic rocks, and placers. See: [titanium dioxide](#)

brooming

The crushing and spreading of the head of a timber pile not fitted with a driving band when driven into hard ground. *Hammond*

brouse

Derb. A sort of coarse stopping, made of small boughs of trees, and placed in back of shaft timbers to prevent rock from falling.

brow

a. Lanc. An underground roadway leading to a working place, driven either to the rise or to the dip. b. A low place in the roof of a mine, giving insufficient headroom. c. A fault plane. *Arkell* d. Top of a mine shaft. Also called pit brow. *Pryor*, 3 e. The projecting upper part or margin of a steep slope just below the crest; the edge of the top of a hill or mountain, or the place at which a gentle slope becomes abrupt. See also: [apex](#)

brow bar

Mid. A massive curb or beam of timber fixed in the wall of the shaft across the top of an inset or station. Also called browpiece.

brow bin

An ore bin made by cutting away the floor of the station close to the shaft. *Higham*

Brown agitator

See: [Pachuca tank](#)

brown clay

a. York. Hessle boulder clay. *Arkell* b. See: [red clay](#)

brown coal

a. A low-rank coal which is brown or brownish-black, but rarely black. It commonly retains the structures of the original wood. It is high in moisture, low in heat value, and checks badly upon drying. *AGI* b. A light-brown to seal-brown substance intermediate between peat and bituminous coal; usually regarded as a variety of lignite, other varieties being darker or black. It may be distinguished from peat by three rough criteria: (1) many tissues and fibers can be recognized in peat, but only a few fibers or none in brown coal; (2) water can be squeezed out of fresh peat by manual pressure, but not from brown coal; and (3) peat can be cut, but brown coal cannot. Actually, there is no sharp distinction between peat and coal. Some have attempted to assign it a higher rank by defining lignite as containing at least 20% water, brown coal between 10% and 20% water, and bituminous coal less than 10% water. *Hess* c. A type of low-rank coal intermediate between bituminous coal and peat, and comparatively high in water content. In English-speaking countries, the terms "brown coal" and "lignite" are synonymous; in Germany and other parts of Europe, brown coal is restricted to megascopically compact structural varieties, and lignite is restricted to individual pieces of wood enclosed in brown coal. It may be subdivided into low-grade brown coal, consisting of visible vegetable remains, and high-grade brown coal, a compact, homogeneous, and tough rock. Syn: [braunkohle](#) *Tomkeieff* d. Coal of the lowest rank, soft and friable, and having a high inherent moisture content. *BS, 4* e. Unconsolidated lignitic coal having less than 8,300 Btu (8.76 MJ), (moist, mineral-matter-free).

brown-coal gel

See: [dopplerite](#)

brown gummite

See: [clarkeite](#)

brown hematite

A misnomer; the mineral bearing this name is limonite, a hydrous mixture of minerals, whereas true hematite is an anhydrous oxide mineral. Syn: [limonite](#); [brown iron ore](#). CF: [red hematite](#)

Brown horseshoe furnace

An annular turret-type furnace for calcining sulfide ores. *Fay*

brown iron ore

a. Its approximate formula is $2\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$, equivalent to about 59.8% iron. Probably a mixture of hydrous oxides. See also: [bog ore](#) b. See: [limonite](#); brown hematite.

brown ironstone clay

See: [limonite](#)

brown matter

Brown matter is found in varying amounts in the attrital matter of all splint and semisplint coals; it is occasionally present in the attritus of bright coals. It consists of cell-wall degradation matter and the contents of cells, which in thin sections are brown and semitranslucent. The term has no exact equivalent in the Stopes-Heerlen nomenclature. Constituents with a reflectance between that of vitrinite and fusinite may correspond in part to brown matter. Some brown matter is identical with semifusinite and massive micrinite. *IHCP*

brown mica

See: [phlogopite](#)

brown millerite

See: [celite](#)

brownmillerite

A mineral, $\text{Ca}_2(\text{Al,Fe})_2\text{O}_5$; a constituent of Portland cement. Syn: [celite](#)

Brown muffle furnace

A mechanically raked, roasting, straight-line-type furnace with a series of longitudinal combustion flues placed under the hearth. *Fay*

brown ocher

See: [limonite](#)

Brown-O'Hara furnace

A long, horizontal, double-hearth furnace for the treatment of lead ores. *Fay*

Brown panel system

a. See: [pillar-and-breast](#) b. Coal mining by long rooms opened on the upper side of the gangway. The breasts are usually 5 to 12 yd (4.6 to 11.0 m) wide and are separated by pillars (solid walls of coal broken by crossheadings for ventilation) 5 to 12 yd thick. The pillars are robbed by mining from them until the roof comes down and prevents further working. Syn: [block system of stoping and filling](#)

brown rock

Tenn. Dark brown to black phosphorite resulting from the weathering of phosphatic limestone. See also: [phosphorite](#)

brown spar

Any light-colored crystalline carbonate mineral that is colored brown by the presence of iron; e.g., ankerite, dolomite, magnesite, or siderite. *AGI*

brownstone

A brown or reddish-brown sandstone with grains generally coated with iron oxide; specif. a dark, reddish-brown, ferruginous quartz sandstone of Triassic age.

Brown tank

A cylindrical tank or vat, tall in proportion to its diameter, with the bottom ending in a 60 degrees cone. Within the tank is a hollow column extending from the bottom to within about 8 in (20.32 cm) from the top. The apparatus works on the airlift principle, the aerated pulp in the tube flowing upward and discharging at the top, while more pulp flows in at the bottom to take its place. Syn: [Brown agitator](#); [Pachuca tank](#). *Liddell*

brown tongs

A long-handled, plierlike device similar to a certain type of blacksmith tongs used to handle wash or drill rods in place of a safety clamp in shallow borehole drilling. Also called adjustable pipe tongs; extension tongs; lowering tongs. *Long*

brown umber

A brown earthy variety of limonite. See also: [limonite](#)

browpiece

A heavy, upright timber used for underpinning in opening a station for a level in a mine. See also: [brow bar](#)

browse

Ore imperfectly smelted, mixed with cinder and clay. *Fay*

brow-up

Lanc. An inclined roadway driven to the rise. Also called brow; up-brow.

brucite

a. A trigonal mineral, $Mg(OH)_2$; brucite group; perfect basal cleavage; an alteration product of periclase in contact-metamorphosed limestone; a magnesia refractory raw material. b. The mineral group amakinite, brucite, pyrochroite, and theophrastite.

Bruckner cylinder

Pac. A form of revolving roasting furnace. See also: [Bruckner furnace](#) *Fay*

Bruckner furnace

Horizontal cylindrical furnace revolving on end trunnions. See also: [Bruckner cylinder](#)

brulee

A Canadian term used to describe a windfall of dead trees and brush. Syn: [slash](#)

Brunauer, Emmett, and Teller method

A procedure for the determination of the total surface area of a powder or of a porous solid by measurement of the volume of gas (usually N_2) adsorbed on the surface of a known weight of the sample. The mathematical basis of the method was developed by S. Brunauer, P. H. Emmett, and E. Teller--hence the usual name, B.E.T. method. *Dodd*

Brunton compass

A compact pocket instrument that consists of an ordinary compass, folding open sights, a mirror, and a rectangular spirit-level clinometer, which can be used in the hand or on a staff or light rod for reading horizontal and vertical angles, for leveling, and for reading the magnetic bearing of a line. It is used in sketching mine workings, and in preliminary topographic and geologic surveys on the surface, e.g., in determining elevations, stratigraphic thickness, and strike and dip. Syn: [pocket transit](#)

Brunton sampler

A mechanical sampling device that automatically selects 1/625 part of the ore passing through the sampler, by means of an oscillating deflector placed in a falling stream of the ore. *Fay; Pryor, 3*

brush

a. To remove rock from the roof or floor of an opening to increase the height of working (coal mines). See also: [brushing](#) b. In a coal mine, a road through the goaf, gob, or worked-out areas packed with waste. *CTD* c. To clean up fine coal from the floor. *CTD*

d. Forest of Dean. A rich brown hematite. e. Mixed load of large and small coal into a colliery tub. *Pryor, 3* f. Mid. To mix gas with air in a mine by buffeting it with a jacket. g. To rip; to enlarge. h. To remove bisque in a definite pattern by means of a brush. See also: [bolt-hole brush](#)

brush cleaner

A device consisting of bristles set in a suitable backing used for cleaning a conveyor belt. It is usually of the rotary type.

brush discharge

In high-intensity electrical fields, discharge from sharp points along a conductor. Electricity concentrates at these points and charges ambient molecules of air, which are then repelled, carrying away charge. The phenomenon is exploited in mineral processing in high-tension separation. *Pryor, 3*

brush hook

A short, stout, heavy hooked blade with a sharpened iron edge, attached to an axe handle; typically used by surveyors for cutting brush. *AGI*

brushing

a. Scot. That part of the roof or floor of a seam removed to form roadways. b. Digging up the bottom or taking down the top of an entry or room, where the seam of coal is too thin or shallow for the purpose of admitting cars. See also: [brush](#) c. Cutting or blasting down the roof of a coal seam. *Arkell* d. Ripping; normally enlarging a road by taking down the roof, but extended to sides and floor as well. Also called canch. *Mason* e. Removal of dry enamel by brushing through a stencil or along an edge to produce a design or edging. *Bryant*

brushing bed

Scot. The stratum brushed or rippled. See also: [brush](#)

brushing shot

a. A charge fired in the air of a mine to blow out obnoxious gases or to start an air current. b. A shot so placed as to remove a portion of the roof to increase the height of a haulageway. See also: [brush](#)

brushite

A monoclinic mineral, $\text{CaHPO}_4 \cdot 2\text{H}_2\text{O}$; generally massive or in slender crystals. Syn: [metabrushite](#)

brush rake

A rake blade having a high top and light construction. *Nichols, 1*

brush treatment

A method of treating mine timber in which the timber is painted with a preservative or is merely dipped into a tank of preservative. Preservatives used are creosote, zinc chloride, sodium fluoride, and other chemicals. See also: [timber preservation](#)

bruskin

Mid. Lump of coal weighing about 1 lb.

bryle

See: [broil](#)

bubble chamber

A device that marks the paths of charged particles by photographing the train of bubbles they produce as they move through certain superheated liquids. See also: [cloud chamber](#); [spark chamber](#). *Lyman*

bubble pickup

Method of testing small grains of minerals to ascertain their response to flotation collector agents. A bubble of air is pressed down on particles under water, and then raised and examined to find whether it has lifted any grains. This is often done by using a single bubble device for determining fundamental aspects of the mineral-bubble interaction.

bubble pipe

Tube inserted in pulp at regulated depth, through which compressed air is gently bubbled. The air pressure indicates the pulp density and provides a means of control. *Pryor, 4*

bubble pulse

A pulsation attributable to the bubble produced by a seismic charge fired in deep water. The bubble pulsates several times with a period proportional to the cube root of the charge, each oscillation producing an identical unwanted seismic effect. *AGI*

bubbles

Air introduced near the bottom of a flotation cell containing pulped ore forms coursing bubbles, which rise through the liquid and emerge as mineralized bubbles forming a semistable froth column. This depends for its continuity partly on the surface-active reagents borne by the mineral in the air-water interphase of each bubble and partly on the aid of frothing reagents. *Pryor, 1*

bucaramangite

A resin resembling amber but insoluble in alcohol and yielding no succinic acid. *Fay*

Buchner funnel

A porcelain filter shaped to support filter paper on a flat perforated disk. *Pryor, 3*

buck

a. A large quartz reef in which there is little or no gold. See also: [bull quartz](#) b. To push coal down a chute toward a mine car. *Zern* c. To break up or pulverize, as to buck ore samples. *Webster 3rd* d. To bring or carry, as to buck water. *Webster 3rd*

bucker helper

One who breaks ore.

bucket

a. See: [bailer](#); calyx. b. Tubular container equipped with auger or other-type cutting edges used to make borings in earthy or soft formation by rotary methods. *Long* c. An open-top can, equipped with a bail, used to hoist broken rock or water and to lower supplies and equipment to workers in a mine shaft or other underground opening. *Long* d. One of the conveying units on a bucket conveyor that lifts the material from a boot or bin when passing over the lower sprocket and is dumped on passing over the upper sprocket. The bucket is often made of perforated metal so that water entrapped will pass through the perforations and back to the boot. *Zern* e. A part of an excavator that digs, lifts, and carries dirt. *Nichols, 1* f. The dipper or scoop at the end of the arm of a bucket dredge. *Webster 3rd*

bucket auger

A short helical auger incorporating a steel tube to help hold the cuttings on the auger during withdrawal from the drill hole. See also: [auger](#) *Long*

bucket conveyor

A conveyor consisting of a continuous line of buckets attached by pivots to two endless roller chains running on tracks and driven by sprockets. The buckets are so pivoted that they remain in an upright position at all times except when tilted into a dumping position by a cam or other device placed at any required position on the track. See also: [bucket elevator](#); gravity-discharge conveyor elevator; pivoted-bucket conveyor. *BS, 5*

bucket dredge

A dredge having two pontoons, between which passes a chain of digging buckets. These buckets excavate material at the bottom of the pond (paddock) in which the dredge floats, and deposit it in concentrating devices on the decks. *Pryor, 3*

bucket drill

Originally developed as an aid in making excavations for cesspools and septic tanks; now used mostly in drilling holes for concrete piers on construction jobs. Also called bucket drilling.

bucket elevator

a. An appliance for elevating material, consisting of steel buckets fastened to an endless belt or chain. It is usually set at steep angles, around 70 degrees. The load is picked up by discharge from a chute or by a dredging action in a boot. Its best application is in a plant where space is restricted and the size of the material is less than 2 in (5.1 cm). Syn: [chain elevator](#) b. See also: [centrifugal discharge bucket elevator](#); continuous-bucket elevator; double-leg bucket elevator; elevator; gravity-discharge conveyor elevator; internal-discharge bucket elevator; positive-discharge bucket elevator; pivoted-bucket conveyor; grit collector.

bucket elevator belt

A belt fabricated for bucket elevator use, to which an elevator bucket is attached.

bucket factor

See: [fill factor](#)

bucket gate

See: [bin gate](#)

bucket-ladder dredge

a. A dredge with a digging mechanism consisting of a ladderlike truss on the periphery of which is attached an endless chain that rides on sprocket wheels and on which buckets are attached. b. A mechanical dredge that uses a chain of heavy buckets rotating over the dredging arm or ladder to excavate and lift material to the dredging platform. Syn: [bucket-line dredge](#); [ladder-bucket dredge](#). See also: [dredger](#)

bucket-ladder excavator

A mechanical excavator working on the same principle as a bucket-ladder dredge, but adapted for use on land. See also: [trench excavator](#) *CTD*

bucket lift

The discharge pipe of a lifting pump in a mine. *Standard, 2*

bucket line

An endless line of digging buckets on a dredger or on a bucket elevator. *Pryor, 3*

bucket-line dredge

See: [bucket-ladder dredge](#)

bucket loader

a. A form of portable, self-feeding, inclined bucket elevator for loading bulk materials into cars, trucks, or other conveyors. See also: [bucket elevator](#); [portable conveyor](#). b. A machine having a digging and gathering rotor and a set of chain-mounted buckets to elevate the material to a dumping point. *Nichols, 1*

bucket pump

a. An iron or wooden receptacle for hoisting ore, or for raising rock in shaft sinking. *Fay*
b. A reciprocating lift pump formerly much used in shafts and sinkings. *Nelson*

bucket rig

See: [rotary bucket drill](#)

bucket sheave

A pulley attached to a shovel bucket, through which the hoist or drag cable is reeved. *Nichols, 2*

bucket temperature

The surface temperature of the sea as measured by a bucket thermometer or by immersing a surface thermometer in a freshly drawn bucket of water. *Hunt*

bucket thermometer

A water-temperature thermometer provided with an insulated container around the bulb. It is lowered into the sea on a line until it has had time to reach the temperature of the surface water, then withdrawn and read. The insulated water surrounding the bulb preserves the temperature reading and is available as a salinity sample. *Hunt*

bucket tripper

A device that tilts or turns the buckets of a pivoted bucket conveyor, causing them to discharge. It may be fixed or movable.

bucket-wheel dredge

An hydraulic cutter dredge that uses a bucket wheel excavator in place of the traditional rotary cutter. The bucket wheel is characterized by its high cutting torque in both directions and by a positive feed of the excavated material into the mouth of the dredge pipe. *Cruickshank*

bucket-wheel excavator

A continuous digging machine originally designed and used in large-scale stripping and mining of brown coal deposits in eastern Germany. Its digging mechanism is essentially a boom on which is mounted a rotating vertical wheel having buckets on its periphery. As the rotating wheel is pressed into the material to be dug, the buckets cut, gather, and discharge the material onto a conveyor belt where it is moved to the mined materials transport system.

bucking hammer

A rectangular piece of cast iron 5 to 6 in (12.7 to 15.24 cm) across, usually rounded fore and aft with an eye on the back and with a wooden handle; used for grinding ore on a cast-iron bucking board. *Hess*

bucking iron

An iron plate on which ore is ground by hand by means of a bucking hammer. Used extensively for the final reduction of ore samples for assaying. See also: [muller](#)

bucklandite

a. A black variety of epidote containing iron and having nearly symmetrical crystals. b. A former name for allanite.

buckle

a. A bend in a piece of drill-stem equipment induced by excessive feed pressure. *Long* b. Deformation of component members of a drill derrick, tripod, or mast, caused by attempting to hoist too heavy a load or by applying excessive strain when pulling on stuck casing, etc. *Long*

buckling length

The length of drill rod that will withstand flexure or bending when subjected to a specific feed pressure or compressional load. *Long*

buckling load

The maximum load that can be imposed on a string of drill rods, casing, or pipe, or on a drill tripod, derrick, or mast without the string buckling; also, a part being bent or buckled. *Long*

buck quartz

See: [bull quartz](#)

buck reef

A barren vein. *Hess*

buckshot cinder

Cinder from an iron blast furnace, containing grains of iron. *Fay*

buck up

a. To screw two threaded members, such as drill rods, together tightly. *Long* b. To shore up with lagging; to brace. *Long*

buckwheat

Coal size designation, used for anthracite only. Buckwheat is divided into four sizes: No. 1, or buckwheat; No. 2, or rice; No. 3, or barley; No. 4, or barley No. 2 or silt (sometimes also called culm or slush). Buckwheat No. 1 passes through a 1/2-in (12.7-mm) woven wire screen and over a 5/16-in (7.9-mm) woven wire screen, and through a 9/16-in (14.3-mm) round punched plate and over a 3/8-in (9.5-mm) round punched plate.

The American Institute of Mechanical Engineers has recommended that buckwheat No. 1 shall pass through 9/16-in holes and over 5/16-in holes, a screen with circular holes being used. See also: [anthracite coal sizes](#)

buddle

a. Circular arrangement in which finely divided ore, in water, is delivered from a central point and flows gently to the perimeter. The heaviest and coarsest particles settle, while the lightest overflow. Several variants include concave buddle, with peripheral feed and central discharge; and continuous buddles, as differentiated from those that are periodically stopped and cleaned up. *Pryor, 3* b. To separate ore from slime or stamp work by means of a buddle. *Standard, 2*

Buddy

A shortwall coal cutter designed for light duty on longwall power-loaded faces and for subsidiary developments. *Mason*

buddy system

In scuba diving, divers with few exceptions should work in pairs. This is probably the greatest single aid toward scuba safety, esp. under unfavorable conditions. The divers should remain in sight of each other. In poor visibility, they should use a buddy line 6 to 10 ft (1.8 to 3.0 m) long. *Hunt*

buffer

a. A pile of blasted rock left against or near a face to improve fragmentation and reduce scattering from the next blast. *Nichols, 1* b. A substance whose purpose is to maintain a constant hydrogen-ion concentration in water solutions, even when acid or alkalis are added. *ASM, 1*

buffer shooting

See: [blanket shooting](#)

bug

a. A bullet or go-devil. See also: [bullet](#) b. Syn. for vug and bug hole (slang). *Long*

bug dust

a. The fine coal or other material resulting from a boring or cutting of a drill, a mining machine, or even a pick. b. Fine, dry, dustlike particles of rock ejected from a borehole by a current of pressurized air when compressed air, instead of a liquid, is used as a

cuttings removal agent. Syn: [cuttings](#) *Long* c. Fine coal or rock material resulting from dry boring, drilling, or the use of other cutting machines in underground work places. *Long*

bug dusting

Removing bug dust from an undercut. *BCI*

buggied

Pennsylvania. Said of coal moved underground in a small car. *Hess*

buggy

a. A four-wheeled steel car used for hauling coal to and from chutes. b. A mine car of small dimensions, sometimes used in thin beds. *Hudson* c. Slang for a shuttle car. *BCI* d. See: [bug dust](#)

bug hole

See: [vug](#)

bug light

Slang for a miner's electric cap lamp. *BCI*

buhrmill

a. A stone disk mill, with an upper horizontal disk rotating above a fixed lower one. Grist is fed centrally and discharged peripherally. Stones are dressed periodically, channels being cut to facilitate passage. Also applied to other rubbing mills; e.g., conical porcelain or steel ones in which a grooved cone rotates in a close fit in a fixed casing. Also spelled: burrmill. *Pryor, 3* b. A stone mill, consisting of one stationary stone and one revolving stone, for grinding pigment pastes. *Bennett*

buhrstone

a. A siliceous rock suitable for use as millstones; e.g., an open-textured, porous but tough, fine-grained sandstone, or a silicified fossiliferous limestone. In some sandstones, the cement is calcareous. Syn: [millstone](#) b. A millstone cut from buhrstone. Also spelled burrstone; burstone. Syn: [burr](#)

buhrstone mill

A grinding mill with two horizontal circular stones, one revolving upon the other, such as in an old-fashioned grain mill. *Mersereau, 2*

building stone

A general, nongeneric term for any rock suitable for use in construction. Whether igneous, metamorphic, or sedimentary, a building stone is chosen for its properties of durability, attractiveness, and economy. See also: [dimension stone](#)

bulk

Brist. Run-of-mine coal in large quantities.

bulk density

a. The weight of an object or material divided by its volume, including the volume of its pore spaces; specif. the weight per unit volume of a soil mass that has been oven-dried to a constant weight at 105 degrees C. CF: [apparent density](#) b. The ratio of the weight of a collection of discrete particles to the volume that it occupies. *BS, 5* c. The weight of a material, on being compacted in a defined way, per unit volume (including voids). *Taylor* d. The weight per unit volume of any material, including water; the weight in pounds per cubic foot (kg/m^3). See also: [apparent density](#); density; loading weight. *Nelson*

bulk explosives

Explosives not individually packaged in a form usable in the field. Includes ammonium nitrate-fuel oil, slurries, water gels, and other similar blasting agents; often loaded directly into blast holes from a bulk delivery truck. *Federal Mine Safety*

bulkhead

a. A watertight dam containing some form of door or removable plate. See also: [dam](#) b. A tight partition of wood, rock, and mud or concrete in mines for protection against gas, fire, and water. c. A masonry diaphragm built across a subaqueous tunnel, where compressed air is used as a precaution, and to prevent the flooding of an entire tunnel in case of an accident. It is usually kept some distance in the rear of the working face and is provided with two air locks; one of them is an emergency lock near the roof. *Stauffer* d. A stone, steel, wood, or concrete wall-like structure primarily designed to resist earth or water pressure, such as a retaining wall holding back the ground from sliding into a channel, or a partition preventing water from entering a working area in a mine. *AGI* e. A timber chock in metal mines. *Nelson* f. The end of a flume, whence water is carried in iron pipes to hydraulic workings. g. A solid crib used to support a very heavy roof. See also: [cog](#); [chock](#). h. A panel of brick of lesser cross-sectional thickness built into a wall for ease of replacement or for entrance to the walled chamber. *ANSI*

bulking

a. The increase in volume of a material due to manipulation. Rock bulks upon being excavated; damp sand bulks if loosely deposited, such as by dumping, because the apparent cohesion prevents movement of the soil particles to form a reduced volume. *ASCE* b. The difference in volume of a given mass of sand or other fine material in moist and dry conditions; it is expressed as a percentage of the volume in a dry condition. *Taylor*

bulking agent

Chemically inert materials for increasing the volume of a composition; e.g., clay. Also called a filler. *Bennett*

bulk mining

A method of mining in which large quantities of low-grade ore are mined without attempt to segregate the high-grade portions. CF: [selective mining](#)

bulk mix

A mass of explosive material prepared for use in bulk form without packaging. *Atlas*

bulk modulus

The number that expresses a material's resistance to elastic changes in volume; e.g., the number of pounds per square inch necessary to cause a specified change in volume. See also: [modulus of elasticity](#); modulus of rigidity. *Leet, I*

bulk modulus of elasticity

The ratio of a tensile or compressive stress, triaxial and equal in all directions (e.g., hydrostatic pressure), to the relative change it produces in volume. *Roark*

bulk oil flotation

a. A flotation process in which large amounts of oil are used. b. In this process the separation of mineral from gangue is accomplished by virtue of the fact that minerals of metallic luster, such as sulfides, or hydrocarbons, such as coal and graphite, are wetted preferentially by oil in the presence of water and consequently pass into the interface between oil and water, while gangue or rock is wetted by water and remains in the medium. See also: [flotation](#)

bulk oil separation

A concentration process based on selective wetting of minerals by oil in the presence of water and in the absence of air. *Kirk*

bulk pit excavation

Primarily excavation of considerable length as well as of substantial volume or bulk that must be hauled from the site of operations. Also called enbankment digging. *Carson, I*

bulk sample

One of the large samples of a few hundredweight or more taken at regular, though widely spaced, intervals. In the case of coal, a car load may be taken at intervals for size analysis and dirt content. *Nelson*

bulk sampling

The taking of large samples, which may consist of large-diameter drill core, the contents of a trench or mine working, or a car or train load of ore material, for metallurgical testing in mine evaluation. *Peters*

bulk specific gravity

Ratio of the weight in air of a given volume of permeable material (including both permeable and impermeable voids normal to the material) at a stated temperature to the weight in air of an equal volume of distilled water at a stated temperature. Also called specific mass gravity. *ASCE*

bulk strength

The strength per unit volume of an explosive calculated from its weight strength and density. See also: [cartridge strength](#); absolute bulk strength.

bulk volume

A term used relative to the density and volume of a porous solid, such as a refractory brick. It is defined as the volume of the solid material plus the volume of the sealed and open pores present. *Dodd*

bulk wide-area excavation

In this kind of excavation, there is complete access to the site from many directions, and the excavation banks can be sloped flatly on two or more sides. Usually shallower in depth than bulk pit excavations but larger in area. CF: [bulk pit excavation](#)

bull

a. An iron rod used in ramming clay to line a shothole. See also: [clay iron](#) b. Aust. See: [drag](#); backstay. c. N.S.W. To enlarge the bottom of a drilled hole to increase the explosive charge. *New South Wales*

Bullard Dunn Process

Electrolytic method of descaling iron and steel and coating the surface with a protective layer of tin. *Pryor, 3*

bull clam

A bulldozer fitted with a curved bowl hinged to the top of the front of the blade. *Nichols, 1*

bulldog

a. A type of drill-rod-foot safety clamp built somewhat like a spider and slips, but differing by having the slips or movable jaws attached to, and actuated by, a foot-operated lever. *Long* b. A general term applied to rod and/or casing safety clamps having both fixed and movable serrated jaws that contact and securely grip the rods or casing. *Long* c. A fishing tool consisting of a steel body, tapered at the top, on which slide two or more wedge-shaped, serrated-face segments. Lowered into a tubular piece of lost equipment, such as casing, the serrated segments are pushed upward toward the narrow part of the body; when the tool is raised, the segments are forced outward, securely gripping the lost equipment. Also called bulldog spear; casing dog; casing spear. *Long* d. To pull or move a drill machine or auxiliary equipment by means of a block and tackle or by power derived from a rope used on the drill cathead or hoist drum. Also called cat; snake. *Long*

bulldoze

a. To level or excavate an earth surface by means of a heavy, adjustable steel blade attached to the front end of a tractor or a wheeled vehicle. *Long* b. To reduce broken rock by the use of explosives to a size handy for raising to the surface. See also: [adobe charge](#); [mudcap](#); secondary blasting.

bulldozer

a. In nonmetal mining, a laborer who breaks up large stones with a sledge hammer or pneumatic drill so they will pass through grizzly (grating) in a limestone mine. *DOT* b. A horizontal machine, usually mechanical, having two bull gears with eccentric pins, two connecting links to a ram, and dies to perform bending, forming, and punching of narrow plate and bars. *ASM, 1* c. A cleaning blade that follows the wheel or ladder of a ditching machine. *Nichols, 1* d. A tractor on the front end of which is mounted a vertically curved steel blade held at a fixed distance by arms secured on a pivot or shaft

near the horizontal center of the tractor. The blade can be lowered or tilted vertically by cables or hydraulic rams. It is a highly versatile piece of earth excavating and moving equipment esp. useful in land clearing and leveling work, in stripping topsoil, in road and ramp building, and in floor or bench cleanup and gathering operations. Also called dozer.

bulled hole

A quarry blasting hole, the bottom of which has been enlarged or chambered to receive a heavy explosive charge. See also: [chambering](#) *Nelson*

bullet

a. A small, lustrous, nearly spherical industrial diamond. *Long* b. A conical-nosed, cylindrical weight, attached to a wire rope or line, either notched or seated to engage and attach itself to the upper end of the inner tube of a wire-line core barrel or other retrievable or retractable device placed in a borehole. Syn: [bug](#); [go-devil](#); [overshot](#). *Long* c. A bullet-shaped weight or small explosive charge dropped to explode a charge of nitroglycerin placed in a borehole. *Long*

bull gear

a. A toothed driving wheel that is the largest or strongest in the mechanism. *Nichols, I*
b. A gear or sprocket that is much larger than the others in the same power train. *Nichols, I*

Bullgrader

Trade name for an International (formerly Bucyrus-Erie) angling bulldozer. *Nichols, I*

bullies

Fragments of country rock enclosed in a mineral vein. *Arkell*

bulling

The firing of explosive charges in the cracks of loosened rock. The clay stemming is forced around the charge by a bulling bar. See also: [bulled hole](#)

bulling shovel

A triangular, sharp-pointed shovel used in ore dressing. Also called vanning shovel. *Fay*

bullion

a. A concretion found in some types of coal; composed of carbonate or silica stained by brown humic derivatives; often a well-preserved plant structure forms the nucleus. Also called coal ball. *AGI* b. Lanc. Nodule of clay ironstone, pyrite, shale, etc., that generally enclose a fossil. c. Refined gold or silver, uncoined, in the shape of bars, ingots, or comparable masses. *ASM, 1*

bullion bar

Refined gold or silver in the form of bars of convenient sizes and weights for handling and storage. *Henderson*

bullion content

Bullion (gold or silver) weight in a parcel of mineral or metal changing hands. The major value is that of the carrier (e.g., argentiferous lead), but payment is made both for this and for the precious metal. *Pryor, 3*

bull ladle

Usually the largest ladle in a foundry.

bull mica

Large clusters of diversely oriented and partially intergrown crystals of muscovite with a little interstitial albite and quartz. *Skow*

bullnose bit

A noncoring bit having a convex, half-hemispherical-shaped crown or face. Also called wedge bit; wedge reaming bit; wedging bit. See also: [plug bit](#)

bull pup

A worthless mining claim.

bull quartz

White massive quartz, essentially free of accessory minerals and valueless as ore. Syn: [bastard quartz](#); [buck quartz](#). *AGI*

bull's-eye

A nodule of pyrite in roofing slate.

bull's-eye tuyere

A tuyere discharging in the center of a hemispherical plate. *Standard, 2*

bull shaker

A shaking chute where large coal from the dump is cleaned by hand. *Zern*

bull wheel

a. The large winding drum on which the drill cable or bull rope of a churn or cable-tool drill is wound. *Long* b. Large sheave at the top of the mineshaft headframe over which the cage- or skip-hoist rope passes. *Long* c. An underground sheave wheel; particularly, the wheel around which the tail rope is passed beyond each terminal of a tail-rope haulage system. d. The pulley that rotates the camshaft of a stamp battery. *Nelson*

bully

A developing heading driven to the dip, usually the full dip of the coal seam; worked by rope haulage. *Nelson*

bullying

See: [springing](#)

bumboat

A small boat equipped with a hoist and used for handling dredge lines and anchors. *Nichols, 1*

bump

a. Any dull, hollow sound produced in a coal seam or associated strata as a result of mining operations. See also: [outburst](#); [crump](#); [rock bump](#); rock burst. *Nelson* b. Sudden failure of the floor or walls of a mine opening, generally accompanied by a loud report and a sharp shock or jar. *Long* c. An earth tremor occasioned by a rock failure, when that failure causes no damage to the workings. *Spalding* d. A noise caused by a break in the roof underground. *Mason* e. The actual movement due to the roof break. *Mason* f. A sudden floor uplift due to a break in the floor. *Mason* g. In coal mining, shock due to the movement of coal, floor, or roof strata, with sufficient violence to be heard and to shake the workings. *Pryor, 3* h. Rebound caused by a sudden release of tension on the drill stem when a core breaks or snaps free of the bottom of the borehole. *Long* i. A sharp, upward blow applied to the drivepipe, casing, or drill stem with a drive hammer. *Long*

bumper

a. A worker who pushes loaded cars or cans into a station for the hooker and removes the empties. *Hess* b. A device used to loosen the tools when drilling is carried on without jars. *Porter* c. A fender for lessening the jar caused by the collision of cars or other moving equipment. *Jones, 1* d. See: [catch](#) e. A machine used for packing molding sand in a flask by repeated jarring or jolting. *ASM, 1*

bumper block

An impeding device at dumping locations where there is a hazard of vehicle overtravel. *Federal Mine Safety*

bumper post

Barrier of heavy steel construction anchored at a track ending to stop rolling railroad cars and prevent their being thrown off center or derailed. *Best, 1*

bumping table

See: [shaking table](#)

bumping trough

An appliance for handling broken rock in flat mine stopes. A sheet-steel trough is hung from chains and arrested at one end of its swing by a bump stop, so that the ore slides forward. *Pryor, 3*

bumps

Sudden, violent expulsion of coal from one or more pillars, accompanied by loud reports and earth tremors. Bumps occur in coal mines where a strong, thick, massive sandstone roof rests directly on the coal with no cushioning layer of shale between. The breaking of this strong roof as the seam is mined causes violent bumps and the crushing and bursting of pillars left for support. There are two distinctive types of bumps: (1) pressure bumps, which appear to be due to the unit loading of a pillar being too great for its bearing strength, and where the coal roof and floor are strong, the pillar is ruptured suddenly and with violence; and (2) shock bumps, which are thought to be due to the breaking of thick, massive, rigid strata somewhere above the coalbed, which causes a great hammerlike blow to be given to the immediate roof, which it transmits as a shock wave to the coal pillar or pillars. *Kentucky; Lewis*

bunched seismometers

Group of seismometers located at short intervals at the same seismometer station and electrically interconnected. Syn: [multiple seismometers](#) *Schieferdecker*

bunchy

a. An orebody containing small scattered masses of bunches of ore. *Weed, 2* b. A mine that is sometimes rich and at other times poor. *Hess*

bund

Any artificial embankment used to control the flow of water in a river or on irrigated land. The term is applied extensively in India to large low dams and dikes and also to the small ridges between rice fields. Also, an embanked causeway or thoroughfare along a river or the sea. *AGI*

bunker

A vessel for the storage of materials; the lowermost portion is usually constructed in the form of a hopper. Also called bin. See also: [surge bunker](#); [underground bunker](#). *BS, 5*

bunker coal

Applied to coal consumed by ocean steamers, tugs, ferryboats, or other steam watercraft. Also called bunkers. *Fay*

bunker conveyor

A high-capacity conveyor that takes peaks of production from another conveyor and retains and/or discharges the material when production drops. Such a conveyor may be laid under or alongside a trunk belt near its discharge end. The floor of the bunker comprises a slow-moving steel plate conveyor operated by hydraulic or other power. A movable plow plate, situated over the trunk belt, diverts the material sideways into the bunker conveyor. See also: [underground bunker](#)

bunker gate

See: [bin gate](#)

bunkering capacity

The capacity of anything. It may be expressed as a tonnage or as so many hours of normal production. Bunkering capacity may be provided at the surface and at critical points underground. *Nelson*

bunney

a. A mass of ore not lying in a regular vein. Also spelled bunny, bonny, bonney. *Nelson*
b. Corn. An isolated body of ore. *Hess*

bunny

See: [bunney](#)

bunsenite

A pistachio-green isometric mineral, NiO, of the periclase group.

Bunsen photometer

A visual photometer in which a simple mirror system enables both sides of the test plate, consisting of a screen of opaque-white paper on which is a grease spot, to be viewed at the same time. That portion of the screen on which the grease lies is translucent to light, so that there is a difference in brightness between the grease spot and the surrounding ungreased paper. When comparing sources, one on either side of the photometric bench, the point of balance is such that, as seen in the mirror, both sides of the screen show equality of contrast between the grease spot and its white surroundings. *Roberts, 2*

bunton

a. A steel or timber element in the lining of a rectangular shaft. Buntons may be 6 in by 5 in or 6 in (15.2 cm by 12.7 cm or 15.2 cm) square and extend across the shaft at intervals of 4 ft to 8 ft (1.2 m to 2.4 m). They serve to reinforce the barring and also carry the cage guides. Rolled steel joists are now generally used as buntons. See also: [divider](#); wallplate. *Nelson* b. A timber placed horizontally across a shaft. It serves to brace the wallplates of the shaft lining and also, by means of planks nailed to them, to form separate compartments for hoisting or ladderways.

bunton racking

Timber pieces used in the support of rectangular shafts. See also: [wallplate](#)

buoyant weight

The apparent weight of a string of drill tools suspended in a liquid-filled borehole. The apparent weight is the weight of the drill string in air less the weight of the liquid displaced by the drill string when suspended in a liquid-filled borehole. *Long*

buratite

An aurichalcite containing calcium monoxide, probably as a mechanical admixture. *Weed, 1*

burbankite

A hexagonal mineral, $(\text{Na,Ca})_3 (\text{Sr,Ba,Ce})_3 (\text{CO}_3)_5$.

burden

a. The distance from the borehole and the nearest free face or distance between boreholes measured perpendicular to the spacing (usually perpendicular to the free face). b. All types of rock or earthy materials overlying bedrock. See also: [cover](#); [mantle](#); [overburden](#). *Long* c. Valueless material overlying ore, esp. that removed by stripping. Frequently called overburden. *Webster 2nd* d. The resistance that an explosive charge must overcome in breaking the rock adjacent to a drill hole in mining. *Webster 3rd* e. The tonnage or cubic yards of rock, ore, or coal that an explosive charge is expected to break. *Nelson* f. The distance between the charge and the free face of the material to be blasted. *Fay* g. See: [line of least resistance](#) h. The charge of a blast furnace exclusive of the fuel; also, the ratio of the ore to the total charge.

burdening the furnace

Determining the proper proportions of ore, coke, and limestone for a blast furnace charge. *Mersereau, 2*

burgee

Small coal suitable for furnaces or engines. *Arnell*

Burgers vector

In crystal structures, dislocations locally alter coordination polyhedra with the result that regular polyhedra several atomic diameters distant are offset from their regular positions. The Burgers vector is a measure of that offset, being normal to edge dislocations and parallel to screw dislocations.

buried hill

A hill of resistant older rock over which later sediments were deposited. The overlying sedimentary beds have the form of an anticline as the result of original dip, unequal compaction, etc. The term was first applied to the underlying beds of the Healdton Field, OK. *AGI*

buried outcrop

See: [blind apex](#)

buried placer

a. Old placer deposit that has been buried beneath a lava flow or other strata. b. See: [deep lead](#)

burkeite

An orthorhombic mineral, $\text{Na}_6(\text{CO}_3)(\text{SO}_4)_2$; in small flat crystals, twins, and nodules; at Searles Lake, CA. Syn: [teepleite](#)

burl

An oolith or nodule in fireclay. It may have a high content of alumina or iron oxide. *AGI*

Burleigh

A miner's term for any heavy two-person drill. The Burleigh was the first successful machine rock drill. *Hess*

burley clay

A clay containing burls; specif. a diaspoire-bearing clay in Missouri, usually averaging 45% to 65% alumina. See also: [diaspoire clay](#) *AGI*

burn

a. To permit a bit to become overheated in use. *Long* b. To calcine. *Long* c. To pulverize with very heavy explosive charges. *Nichols, I*

burn cut

Type of parallel hole or holes cut for tunnel blasting; centrally located and not containing explosives. Outer loaded holes are designed to break the cut.

burned

Said of slate or other impurity that adheres tightly to coal. Similarly, coal is said to be "burned to the roof" when it is hard to separate the roof rock from the coal. *Fay*

burned bit

As a result of high-speed, excessive pressure, and poor water circulation, sufficient heat may be generated at the bottom of a borehole to cause a diamond crown to soften, resulting in displacement of diamonds and a ruined bit. *Nelson*

burned cut

A cut made in the face of a heading for which three or four holes are drilled normal to the face and in a triangle or square, 12 to 18 in (30.48 to 45.72 cm) on a side, with another hole in the center. One, two, or three holes are loaded and shot; the others relieve the pressure and induce breaking. A cavity is formed to which other shots in the face readily break. Used for esp. tough ground. Also called Michigan cut; woodchuck cut. *Hess*

burned lime

Calcium oxide (quicklime) formed from limestone, or other forms of calcium carbonate, which has been calcined at high temperature to drive off the carbon dioxide. See also:

[burnt lime](#)

burn in

a. To run a bit with too little coolant until the heat generated by the bit fuses the cuttings, core, bit, and the bottom of the borehole. *Long* b. To deliberately run a bit with reduced amount of coolant until the core is jammed inside the bit. *Long*

burning house

A furnace in which sulfide ores are calcined to form gaseous SO_2 and leave the metal oxide, or in the case of noble metals, the metal itself.

burning oil

A common name for kerosine.

burning out

A loose term, usually used to describe the wearing away of furnace linings without a known reason.

burno man

A laborer who gets ore ready for a mechanical shovel or a hand shoveler. *Hess*

burnout

A situation encountered in coal seams, usually near the outcrop, where the coal has undergone combustion and burned. Initiation sources could include lightning, forest fires, etc.

burn out

To salvage diamonds from a used bit by dissolving the matrix alloy with an acid or by use of an electrolytic process. *Long*

Burnside boring machine

This machine has been specially developed for boring in all types of ground, and incorporates a very important feature, that of controlling the water immediately if it is tapped. In boring, the hole is first prepared for the reception of a special rubber ring, two iron plates, and two wedges. When these are properly adjusted, the rubber washer is compressed and powerfully gripped on the sides of the borehole to effect a sound and reliable joint. If during boring operations water should rush out and the bore rods cannot be withdrawn, the two handwheels are screwed in; this presses india-rubber plugs onto the bore rods and effects a watertight joint. *Mason*

burnt alum

Alum that has been dried at 200 degrees C, and powdered; $\text{AlNH}_4(\text{SO}_4)_2$ or $\text{AlK}(\text{SO}_4)_2$. A caustic. Syn: [dried alum](#); [exsiccated alum](#).

burnt iron

a. Iron which by long exposure to heat has suffered a change of structure and become brittle. It can be restored by careful forging at welding heat. *Fay* b. In the Bessemer and open-hearth processes, iron that has been exposed to oxidation until all of its carbon is gone, and an oxide of iron has been formed in the mass. *Fay*

burnt lime

Calcitic lime, CaO , or dolomitic lime, CaO.MgO . See also: [burned lime](#)

burnt metal

Metal that has become oxidized by overheating, and so is rendered useless for engineering purposes. *CTD*

burnt stone

a. An antique carnelian, such as is sometimes found in ancient ruins and has apparently been acted on by fire. *Fay* b. A gemstone with color changed by heating; e.g., amethyst, which changes from purple to clear; or tiger-eye, which changes from yellowish-brown to reddish brown. Syn: [heat-treated stone](#) See also: [heated stone](#)

burr

a. A term used in England for a rough or hard stone, such as a compact siliceous sandstone esp. hard to drill. Also spelled bur. *AGI* b. A knob, boss, nodule, or other hard mass of siliceous rock in a softer rock; a hard lump of ore in a softer vein. *AGI* c. See: [burrstone](#)

burr rock

An aggregate of muscovite books and quartz. *Skow*

burrstone

See: [burrstone](#)

burst

An explosive breaking of coal or rock in a mine due to pressure. In coal mines bursts may or may not be accompanied by a copious discharge of methane, carbon dioxide, or coal dust. Also called outburst; bounce; bump. See also: [rock burst](#)

burster

a. A hydraulic mechanism that, when inserted into a large-diameter shothole, breaks down the strata by means of pistons operating transversely. *BS, I2* b. Scot. A shot in a coal seam that has not been sheared or undercut. Equivalent to "shot off the solid." Also called bursting shot.

bursting

The phenomenon sometimes exhibited by refractories containing chrome ore, when exposed to iron oxide at high temperature, of having the exposed face swell and grow until it breaks away from the brick mass. *ARI*

bursting charge

A small charge of fine powder placed in contact with a charge of coarse powder to ensure the ignition of the latter. *Fay*

bursting time

The time between the application of an electric current and the setting off of an explosive charge. In seismic prospecting, it may be necessary to take into account the maximum difference in time lag between the bursting of the earliest and latest detonators in a series. In a series firing current of over 1 A direct current, the maximum difference with submarine seismic detonators is always less than 1 ms. *Nelson*

Burt filter

A stationary, intermittent filter in which the leaves are suspended vertically in a cylindrical vessel set on a considerable incline. The leaves are therefore ellipses. The slime cake is discharged by introducing air and water into the interior of the leaf. There is also a Burt filter of the continuous-rotating-drum type. *Liddell*

burton

Any of several arrangements of hoisting tackle; usually one with a single and a double block. *Webster 3rd*

Bushveld Complex

A great intrusive igneous body in the Transvaal, South Africa, that has undergone remarkable magmatic differentiation. It is by far the largest layered intrusion known. The Bushveld is the leading source of chromite. *AGI*

Buss table

Shaking table for treatment of ore sands, comprising a deck supported by a Ferraris truss moved by eccentric. *Pryor, 3*

bustamite

A triclinic mineral, $(\text{Mn,Ca})\text{Si}_3\text{O}_9$.

buster shot

See: [breaking-in shot](#)

bus wire

Expendable heavy-gage bare copper wire used to connect detonators or series of detonators in parallel in underground blasting.

but

Scot. Outward; toward the shaft; outbye.

butane

a. A flammable gaseous hydrocarbon, commonly bottled for use as fuel. b. A gaseous flammable paraffin hydrocarbon, C_4H_{10} , occurring in either of two isometric forms: n-

butane, $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_3$; or isobutane, $\text{CH}_3\text{CH}(\text{CH}_3)_2$. The butanes occur in petroleum and natural gas. *AGI*

butane flame methanometer

An instrument giving a continuous record of the methane concentration in mine air. It uses a small flame burning butane in a gauze-protected enclosure. Instead of observing the cap, thermocouples are used to show the increased temperature above the flame, and the resulting signal is displayed on a recording milliammeter. The instrument runs for at least a week and is accurate to about 0.05% methane. See also: [methane tester type S](#)

Butchart table

A shaking table, toggle-actuated, with its deck supported in slipper bearings, and carrying curved riffles. *Pryor, 3*

butlerite

Arg. A monoclinic mineral occurring as oriented intergrowths with parabutlerite. A hydrous sulfate of iron. *Am. Mineral., 1*

buetschliite

A trigonal mineral, $\text{K}_2\text{Ca}(\text{CO}_3)_2$; dimorphous with fairchildite. Also spelled buetschliite.

butt

a. Opposite of face, coal exposed at right angles to the face, and in contrast to the face, generally having a rough surface. Also called end in Scotland. *BCI* b. The butt of a slate quarry is where the overlying rock comes in contact with an inclined stratum of slate rock.

butt cleat

The minor cleat system, or jointing, in a coal seam, usually at right angles to the face cleat. Syn: [end cleat](#) *AGI*

butte

a. A conspicuous hill or small mountain with relatively steep slopes or precipitous cliffs, often capped with a resistant layer of rock, and representing an erosion remnant carved from flat-lying rocks. The summit is smaller in extent than that of a mesa; many buttes in the arid and semiarid regions of the Western United States result from the wastage of mesas. Syn: [mesa-butte](#) b. An isolated hill having steep sides and a craggy, rounded,

pointed, or otherwise irregular summit; e.g., a volcanic cone (such as Mount Shasta, CA, formerly known as Shasta Butte) or a volcanic butte. Etymol: French, knoll, hillock, inconspicuous rounded hill; rising ground. Pron: bewt. *AGI*

butt entry

a. An entry driven at right angles to the butt. *BCI* b. The gallery driven at right angles with the butt cleat. An end-on entry. c. A gallery driven parallel with the main cleat of the coal seam. See also: [entry](#)

butterball

A clear-yellow, rounded segregation of very pure carnotite found in the soft sandstone of Temple Rock, San Rafael Swell, UT. *AGI*

Butters and Mein distributor

A turbo distributor that spreads sand evenly around a circular leaching tank in gold cyanidation. *Pryor, 3*

buttgenbackite

A hexagonal mineral, $\text{Cu}_{19} \text{Cl}_4 (\text{NO}_3)_2 (\text{OH})_{32} \cdot 2\text{H}_2 \text{O}$.

butt heading

See: [butt entry](#)

butt joint

a. A joint between two abutting members lying approx. in the same plane. A welded butt joint may contain a variety of grooves. *ASM, 1* b. See: [butt cleat](#)

buttock

a. A corner formed by two coal faces more or less at right angles, such as the end of a working face; the fast side; any short piece of coal approx. at right angles to the face; a rib; the rib side. See also: [rib](#) *Mason* b. Eng. That portion of a working face of coal, next to be taken down. *Fay* c. The rib of coal exposed at one or both ends of a longwall face, to enable a cutter loader to commence its run; the coal removed by a cutter loader. See also: [stable](#); [web](#). *Nelson* d. Coal that has been undercut and is ready to be broken. *Pryor, 3*

button

a. A globule of metal remaining in an assaying crucible or cupel after fusion has been completed. *ASM, 1* b. That part of a weld that tears out in the destructive testing of spot-seam or projection-welded specimens. *ASM, 1* c. Globule of lead formed during fire assay of gold or silver ore. *Pryor, 3*

button balance

A small, very delicate balance used for weighing assay buttons.

button fusion test

See: [button test](#)

button rope conveyor

See: [rope and button conveyor](#)

button test

A test designed to determine relative fusibility of frit or powder. So called because the completed specimens resemble buttons.

butt shot

In coal mining, a charge placed so that the face or burden is nearly parallel with the borehole.

butt side

The side of the working face of a coalbed in which the joints or cleats are least pronounced, as distinguished from the face side in which the joints are most pronounced. *Hess*

butt weld

A weld made between two abutting unscarfed ends or edges without overlapping. Both the pin- and box-thread portions of petroleum drill pipe generally are butt-welded electrically to upset end tubing to form a complete section of drill pipe or rod. *Long*

butt-welded tube

A tube made by drawing mild steel strip through a bell, so that the strip is coiled into a tube, the edges being then pressed together and welded. *CTD*

butyl rubber

Synthetic material, copolymer of butadiene and isobutane. *Pryor, 3*

Buxton test

One of a set of tests carried out in a gallery at the Safety in Mines Research Station at Buxton, England. The tests are made to determine the likelihood or limits at which an explosive will ignite gas or coal dust, before it can be placed on the official permitted list. See also: [permitted explosive](#)

BW

Letter name specifying the dimensions of bits, core barrels, and drill rods in the B-size and W-group wireline diamond drilling system having a core diameter of 42 mm and a hole diameter of 60 mm. Syn: [BX](#) *Cumming, 2*

BX

Letter name specifying the dimensions of core, core barrels, and casing in the B-size and X-series wireline diamond drilling system having a core diameter of 42 mm and a hole diameter of 60 mm. The BX designation for coring bits has been replaced by the BW designation. Syn: [BW](#) *Cumming, 2*

bye water

See: [bank water](#)

bypass

a. A short passage used to get by or around a place it is not advisable to cross; e.g., a mine shaft. Also spelled byepass. b. To pass to the side of an obstruction in a borehole by deflecting the hole. Syn: [drill by](#) c. An alternative path, in a duct or pipe, for a fluid to flow from one point to another, with the direction determined by the opening or closing of valves or dampers in the main line as well as in the bypass. *Strock, 2* d. An arrangement of screens and chutes, or of piping, allowing material to be passed around a given part of a flow line. Much used to avoid feeding fine ore through a relatively coarse crusher, thus reducing load, wear, and chance of blockage. *Pryor, 3* e. A small passage to permit equalization of the pressure on the two sides of a large valve so that it may be readily opened or closed.

bypit

Scot. A pit nearer the outcrop than the engine pit; an air pit.

byproduct

A secondary or additional product; e.g., gallium is commercially recovered from the processing of bauxite to alumina. See also: [coproduct](#)

byproduct oven

A coke oven consisting of a series of long, narrow chambers arranged in rows, and heated by flues in which are burned a portion of the combustible gases generated by the coking of the coal. All of the volatile products are saved and collected as ammonia, tar, gas, etc. *Fay*

byproducts of coal

The products obtained from coal by destructive distillation and other processes. *Cooper*

byssolite

An olive-green asbestiform variety of tremolite-actinolite. The term is used in the gem trade for a variety of quartz-containing, greenish, fibrous inclusions of actinolite or asbestos.

bystroemite

a. A tetragonal mineral, MgSb_2O_6 . b. A former name for a monoclinic polymorph of pyrrhotite. Also spelled bystromite.

bytownite

A triclinic mineral, $(\text{Ca},\text{Na})[\text{Al},\text{Si}]\text{AlSi}_2\text{O}_8$ having 90 to 70 mol % Ca and 10 to 30 mol % Na; of the plagioclase series of the feldspar group; prismatic cleavage; white to gray; forms phenocrysts in some basalts and layered mafic-ultramafic intrusions

by-wash

A channel or spillway designed to carry surplus water from a dam, reservoir, or aqueduct in order to prevent overflow. *AGI*

C

cab

A compartment for the driver in a mine locomotive, continuous mining machine, shuttler car, scoop, etc. All coal mine locomotives in excess of 10 st (9 t) weight must have a cab at each end or an adequate center cab. *Nelson*

caballa ball

Eng. Ironstone nodule worked for iron in the Weald. Also called bulls. See also: [ballstone](#); [bears' muck](#); [mare ball](#). *Arnell*

caballing

An increase in density occurring when the contents of two pipes carrying water with different temperature and salinity characteristics, but having the same density, are mixed; the resulting fluid mixture is slightly more dense than either of the two original types. *Hy*

cab guard

On a dump truck, a heavy metal shield extending up from the front wall of the body and forward over the cab. *Nichols, 1*

cable

a. A heavy multiple-strand steel rope used in cable-tool drilling as the line between the tools and the walking beam. Syn: [drilling cable](#) *AGI* b. A term used loosely to signify a wire line. See also: [wire line](#) *AGI* c. A fiber cable consists of three hawsers laid up left-handed. See also: [wire rope](#); [cable-laid rope](#). *Zern* d. A ropelike, usually stranded assembly of electrical conductors or of groups of two or more conductors insulated from each other but laid up together usually by being twisted around a central core, the whole usually heavily insulated by outside wrappings; specif., a submarine cable. *Webster 3rd* e. A steel rope for hoisting or for aerial trams. *Fay* f. A flexible rope composed of many steel wires or hemp fibers in groups, first twisted to form strands, several of which are again twisted together to form a rope. Also called wire cable; wire line; wire rope; steel cable. See also: [wire-line cable](#) g. See: [armored cable](#); electric cable. h. A single concentration of steel wire intended for prestressing. *Taylor* i. A nautical unit of horizontal distance, equal to 600 ft (100 fathoms; 182.9 m) and approx. 0.1 nmi (0.18 km). *Hunt*

cable belt conveyor

A conveyor using steel wire ropes to take the tensile pull, which in a conventional conveyor is taken by the belt. Two-stranded steel ropes, one on either side of the conveyor, are used for this purpose. The belt sits on and is supported across the two ropes by means of rubber shoe forms along the belt edges. These belts can be of long lengths, high capacities, and high lifts. *Nelson*

cable bolt

A device or method for reinforcing ground prior to mining. The basic cable bolt support consists of a high-strength cable installed in a borehole 4.12 to 6.35 cm in diameter and grouted with cement. Syn: [cable tendon](#); cable dowel. *Schmuck*

cable bolting

Complex electrical plugs and sockets used throughout a mine distribution system to connect mobile machinery to trailing cables, to connect cables with one another, and to connect cables to power centers, switchhouses, and substations. *SME, 1*

cable control unit

A high-speed tractor winch having one to three drums under separate control. Used to operate bulldozers and towed equipment. *Nichols, 1*

cable dowel

See: [cable bolt](#)

cable drill

a. A heavy drilling rig in which a rope is used for suspending the tools in the borehole. See also: [churn drill](#) b. A churn or percussion drill rig, consisting of a tower (derrick), wire rope for moving tools vertically, a power unit, and a reciprocating device. It drills holes of up to 10 in (25.4 cm) in diameter vertically to considerable depths. *Pryor, 3*

cable excavator

A long-range, cable-operated machine that works between a head mast and an anchor. *Nichols, 1*

cable hook

A round hook with a wide beveled face. *Nichols, 1*

cable-laid rope

a. A compound-laid rope consisting of several ropes or several layers of strands laid together into one rope, as, for instance, 6 by 6 by 7. *Hunt* b. A rope in which both the fibers forming the strands and the strands themselves are twisted to the left. *Long* c. Wire cable made of several ropes twisted together; strands of hawser-laid rope, twisted right-handed together without limitation as to the number of strands or direction of twist. A fiber cable-laid rope is composed of three strands of hawser-laid rope, twisted right-handed. *Zern*

cable railway

An inclined track up and down which wagons travel fixed at equal intervals to an endless steel wire rope, either above or below the wagons. *Hammond*

cable reel

A drum on which conductor cable is wound, including one or more collector rings and associated brushes, by means of which an electric circuit is made between the stationary winding on the locomotive or other mining device and the trailing cable that is wound on the drum. The drum may be driven by an electric motor, by a hydraulic motor, or mechanically from an axle on the machine.

cable-reel locomotive

A face or gathering locomotive driven by a power cable connected to trolley wires. The cable winds on a reel attached to the locomotive. *Nelson*

cable-screw conveyor

A one-way or closed-circuit conveyor powered by a flexible, torque-transmitting cable of which helical (screw) threads are an integral part. Loads or load carriers engage the thread and advance a distance equal to one pitch each revolution of the cable screw.

cable selvage belt

A conveyor belt in which the carrying section is composed of rubber and fabric with attached intermittent transverse metal supports having both ends supported by cables. The cables transmit the driving force, and the center portion functions as the load-supporting medium.

cable shield

A metallic shield consisting of nonmagnetic material applied over the insulation of the individual conductors or conductor assembly. *USBM, 2*

cable splice kit

A short piece of tubing or a specially formed band of metal generally used without solder in joining ends of portable cables for mining equipment.

cable system

One of the well-known drilling systems, sometimes designated as the American or rope system. The drilling is performed by a heavy string of tools suspended from a flexible

manila or steel cable to which a reciprocating motion is imparted by an oscillating "walking beam" through the suspension rope or cable. See also: [churn drill](#)

cable-system drill

See: [churn drill](#)

cable tendon

See: [cable bolt](#)

cable-tool cuttings

The rock fragments and sludge produced in drilling a borehole with a churn drill. *Long*

cable-tool dresser

See: [tooldresser](#)

cable-tool drill

See: [churn drill](#); percussion drill.

cable-tool drilling

A method of drilling, now largely replaced by rotary drilling, in which the rock at the bottom of the hole is broken up by a steel bit with a blunt, chisel-shaped cutting edge. The bit is at the bottom of a heavy string of steel tools suspended on a cable that is activated by a walking beam, the bit chipping the rock by regularly repeated blows. The method is adapted to drilling water wells and relatively shallow oil wells. *AGI*

cable tools

The bits and other bottom-hole tools and equipment used to drill boreholes by percussive action, using a rope, instead of rods, to connect the drilling bit with the machine on the surface. See also: [churn drill](#) *Long*

cableway

A system in which the carriers are supported by a cable and are not detached from the operating span. The travel of the carriers is wholly within the span. See also: [aerial cableway](#)

cableway excavator

A slackline cableway used for excavating a restricted area. *Hammond*

cableway transporter

A transporter crane on which the track for the carrier is a steel wire rope. *Hammond*

cabochon

a. An unfaceted cut gemstone of domed or convex form. The top is smoothly polished; the back, or base, is usually flat or slightly convex, may be concave, and is commonly unpolished. The girdle outline may be round, oval, square, or any other shape. b. The style of cutting such a gem. c. A polished but uncut gem. See also: [en cabochon](#)

cabrerite

A hydrous arsenate of nickel, cobalt, and magnesium; possibly magnesian annabergite.

cachalong

See: [cacholong](#)

cache

Fr. The place where provisions, safety or rescue equipment, ammunition, etc., are cached or hidden by trappers, miners, or prospectors, in unsettled regions. *Fay*

cacholong

An opaque or feebly translucent, bluish-white, pale-yellowish, or reddish variety of common opal containing a little alumina. Syn: [cachalong](#); pearl opal.

cacoxenite

An orthorhombic mineral, $(\text{Fe,Al})_{25}(\text{PO}_4)_{17}\text{O}_6(\text{OH})_{12}\cdot 75\text{H}_2\text{O}$.

cactus grab

A digging and unloading attachment hung from a crane or excavator. It consists of a split and hinged bucket fitted with curved jaws or teeth which dig into the loose rock while the bucket is being dropped and contract to lift the load while it is being raised. It is used increasingly for mechanical mucking in shaft sinkings. See also: [hoppit](#) *Nelson*

cadacryst

See: [xenocryst](#)

cadastral control

A system of established monuments whose positions are accurately determined and are used in all correlated cadastral surveys. *Seelye, 2*

cadastral map

A large-scale map showing the boundaries of subdivisions of land, usually with the directions and lengths thereof and the areas of individual tracts, compiled for the purpose of describing and recording ownership. It may also show culture, drainage, and other features relating to use of the land. *AGI*

cadastral survey

Survey relating to land boundaries and subdivisions, made to create or to define the limitations of a title, and to determine a unit suitable for transfer. Includes surveys involving retracements for the identification, and resurveys for the restoration, of property lines. (The term "cadastral" is practically obsolete; may be found in older historical records; current usage is "land survey" or "property survey.") *Seelye, 2*

cadger

A little pocket oilcan for miners. *Fay*

cadmia

a. An impure zinc oxide that forms on the walls of furnaces in the smelting of ores containing zinc. See also: [furnace cadmium](#) *Standard, 2* b. The chemical compound CdO. c. See: [calamine](#)

cadmium

A soft, bluish-white metal, similar in many respects to zinc, copper, and lead ores. Almost all cadmium is obtained as a byproduct in the treatment of these ores. Symbol, Cd. Used in electroplating, in solder, for batteries, as a barrier to control atomic fission, and in TV tubes. Cadmium and solutions of its compounds are toxic. *Handbook of Chemistry and Physics, 3*

cadmium blend

The mineral greenockite, CdS . Also called cadmium ocher.

cadmium columbate

$\text{Cd}_2 \text{Nb}_2 \text{O}_7$ is an antiferroelectric and has low losses at high frequency. Syn: [cadmium niobate](#)

cadmium niobate

$\text{Cd}_2 \text{Nb}_2 \text{O}_7$; a ferroelectric compound of potential value as a special electroceramic; the Curie temperature is -103 degrees C. See also: [cadmium columbate](#)

cadmium ocher

The mineral greenockite; used as a pigment. *Standard, 2*

cadmosellite

A hexagonal mineral, CdSe; wurtzite structure; resinous to adamantine; black; perfect cleavage; forms fine xenomorphic disseminations cementing sandstone. Also spelled kadmoselite.

cafemic

Said of an igneous rock or magma that contains calcium, iron, and magnesium. Etymol: a mnemonic term derived from calcium + ferric (or ferrous) + magnesium + ic. *AGI*

cage

A vertically moving enclosed platform used in a mine shaft for the conveyance of workers and materials, usually designed to take one or two cars per deck and may be single or multidecked.

cage bar

Safety device that holds doors shut or keeps trams in position. *Pryor, 3*

cage chain

See: [bridle chain](#)

cage cover

See: [bonnet](#)

cage guide

Conductor made of wood, iron or steel, or wire rope; used to guide the cages in the shaft and to prevent them from swinging and colliding with each other while in motion. See also: [guides](#); [fixed guides](#); [rope guide](#). *Nelson*

cage mill

Also known as a disintegrator; used for secondary crushing of stone and gravel, and for reduction of slag, fertilizers, etc. *Pit and Quarry*

cager

a. One who directs station operations and movement of cages used to raise and lower workers, mine cars, and supplies between various levels and surface; works at the top of a shaft or at an intermediate level inside a mine. Also called cageman; cage tender; shaft headman; skip tender. See also: [banksman](#); [hitcher](#); [top cager](#); onsetter. *DOT* b. A power-operated ram for pushing mine cars into or out of cages at the pit top or pit bottom. *Nelson* c. One who supervises weighing and the sequence of sending up components of a furnace charge, keeps tally of the number of charges, and signals to the top filler when it is time to hoist. *Fay*

cager coupler

In bituminous coal mining, one who works with a cager, coupling and uncoupling cars at a shaft station. *DOT*

cage seat

Scaffolding, sometimes fitted with strong springs, to take the shock, and on which the cage rests when reaching the pit bottom or other landing. *Fay*

cage sheet

Short prop or catch on which a cage stands during caging or changing cars. *Zern*

cage shoe

One of the fittings bolted to the side of a cage to engage the rigid guides in a shaft. Usually there are two for each guide, one at the top and one at the bottom of the cage. The shoes are usually about 1 ft (0.3 m) long and shaped to fit closely around about three-quarters of the guide, with sufficient clearance for free movement but not sufficient to allow the shoe to come off the guide. *Nelson*

cage stop

Equipment fitted on the cage floor to hold the car in position while traveling in the shaft. Spring- or rubber-mounted stops are commonly used. See also: [kep](#)

cagutte

A baguette; an oblong cut diamond. *Hess*

cahnite

A tetragonal mineral, $\text{Ca}_2\text{B}(\text{AsO}_4)(\text{OH})_4$; forms white sphenoidal crystals.

Cainozoic

See: [Cenozoic](#)

cairn

An artificial mound of rocks, stones, or masonry, usually conical or pyramidal, used in surveying to aid in the identification of a point or boundary. *AGI*

cairngorm

Smoky-yellow or brown varieties of quartz, the coloring matter probably due to some organic compound; named from Cairngorm in the Scottish Grampians; the more attractively colored varieties are used as semiprecious gem stones. Also called smoky quartz, smokestone. *CTD*

caisson drill

In sampling placer deposits, a caisson drill is driven by a combination of rotational impact and the weight of the drilling equipment. *SME, 1*

caisson sinking

A method of sinking a shaft through wet clay, sand, or mud down to firm strata. Cast-iron tubing, attached ring by ring on the surface, is gradually lowered as the shaft is excavated. There is a special airtight working chamber at the bottom of the lining. A cutting shoe at the lower end of the tubing helps it to penetrate the soft ground. The caisson method is obsolescent, being replaced by the freezing method, etc. See also: [concrete caisson sinking](#) *Nelson*

cajon

a. See: [box canyon](#) b. A defile leading up to a mountain pass; also, the pass itself. Etymol: Spanish cajon, large box. The term is used in the Southwestern United States. *AGI*

cake

a. The solid residue left in a filter press or on a vacuum filter after the solution has been drawn off. b. Solidified drill sludge. *Long* c. That portion of a drilling mud adhering to the walls of a borehole. Syn: [wall cake](#) d. See: [cake of gold](#); mud cake. e. To form in a mass such as when ore sinters together in roasting, or coal cakes together in coking.

cake copper

Copper cast in a round, cake-shaped mass. See also: [tough cake](#) *Hess*

caked dust

Dust particles with sufficient cohesion that a light stroke with a brush or a light airblast, such as from the mouth, will not cause the dust to be dispersed.

cake of gold

Gold formed into a compact mass (though not melted) by distillation of mercury from amalgam. Also called sponge gold. Syn: [cake](#)

cake thickness

The measure of the thickness of the filter cake deposited against a porous medium. Cake thickness and water loss constitute the determining factors of filtration qualities.

caking coal

Coal that softens and agglomerates on heating and after volatile matter has been driven off at high temperatures; produces a hard gray cellular mass of coke. All caking coals are not good coking coals. See also: [coking coal](#)

caking index

A laboratory method of indicating the degree of caking, coking, or binding together of a coal when a sample is heated in a prescribed manner. Syn: [agglutinating power](#)

calabashing

Panning tin gravels in a half-calabash gourd. Used in prospecting and alluvial mining in primitive conditions. *Pryor, 3*

calaite

See: [turquoise](#)

calamanco

N. of Eng. Red or mottled Paleozoic marls and shales. Also called calaminker. See also: [symon](#)

calamine

a. A commercial, mining, and metallurgical term for the oxidized ores of zinc (including silicates and carbonates), as distinguished from the sulfide ores of zinc. Syn: [cadmia](#) *AGI*
b. A former name for hemimorphite. c. In Great Britain, a name used for smithsonite. See also: [smithsonite](#) d. A former name for hydrozincite. e. A special kind of so-called galvanized iron. Also spelled kalamín. Syn: [galmei](#)

calamine stone

Eng. A carbonate of zinc; smithsonite. *Fay*

calamine violet

An indicator plant which grows only on zinc-rich soils in the zinc districts of Central and Western Europe. *Hawkes, 2*

calamite

An asparagus-green variety of tremolite. *Standard, 2*

calaverite

A monoclinic mineral, $2[\text{AuTe}_2]$; brittle: commonly contains silver; sp gr, 9.35; an important source of gold.

calc

Prefix meaning containing calcium carbonate.

calc-alkalic

a. Said of a series of igneous rocks in which the weight percentage of silica is between 56 and 61 when the weight percentages of CaO and of $\text{K}_2\text{O} + \text{Na}_2\text{O}$ are equal. *AGI* b. Said of an igneous rock containing plagioclase feldspar. *AGI*

calcarenite

A limestone consisting predominantly (more than 50%) of recycled calcite particles of sand size; a consolidated calcareous sand. CF: [calcareous sandstone](#)

calcareous

Said of a substance that contains calcium carbonate. When applied to a rock name, it implies that as much as 50% of the rock is calcium carbonate. *AGI*

calcareous crust

An indurated soil horizon cemented with calcium carbonate; caliche. *AGI*

calcareous dolomite

A carbonate rock containing 50% to 90% dolomite. (Leighton & Pendexter, 1962) CF: [calclitic dolomite](#)

calcareous dust

Limestone, quicklime, hydrated lime, and cement dusts fall in this class. These dusts are more or less soluble in the body fluids, and are eventually absorbed. *Pit and Quarry*

calcareous ooze

A deep-sea pelagic sediment containing at least 30% calcareous skeletal remains; e.g., pteropod ooze. CF: [siliceous ooze](#)

calcareous ore

Ore in which the gangue consists mainly of carbonate of lime. *Osborne*

calcareous peat

See: [eutrophic peat](#)

calcareous rock

See: [carbonate rock](#)

calcareous sandstone

a. A sandstone cemented with calcite. *AGI* b. A sandstone containing appreciable calcium carbonate, but in which clastic quartz is present in excess of 50%. CF: [calcareous sinter](#)

calcareous sinter

See: [travertine](#)

calcareous spar

Coarsely crystalline calcium carbonate. See also: [calcite](#)

calcareous tufa

See: [tufa](#)

calcarinate

Adj. Designates the calcium carbonate cement of a sedimentary rock. *AGI*

calc-dolomite

Rock consisting of both calcite and dolomite crystals. *AGI*

calce

Native calcium oxide, CaO, found on Mount Vesuvius, Italy. It formed from limestone enveloped in lava and altered by the heat of the lava. *Hess*

calcedony

See: [chalcedony](#)

calc-flinta

A fine-grained calc-silicate rock of flinty appearance formed by thermal metamorphism of a calcareous mudstone, possibly with some accompanying pneumatolytic action. See also: [calc-silicate hornfels](#)

calcian

See: [calcic](#)

calciborite

Calcium borate, CaB_2O_4 , monoclinic. White radial aggregates in drill cores from limestone skarn, from the Ural Mountains. Named from the composition. See also: [frolovite](#)

calcic

Said of minerals and igneous rocks containing a relatively high proportion of calcium; the proportion required to warrant use of the term depends on circumstances. Said of a series of igneous rocks in which the weight percentage of silica is greater than 61 when the weight percentages of CaO and of $\text{K}_2\text{O} + \text{Na}_2\text{O}$ are equal. Syn: [calcian](#)

calciclaste

See: [anorthite](#)

calcifiable

Capable of being calcined or reduced to a friable state by the action of fire. *Fay*

calcination

a. The heating of a substance to its temperature of dissociation; e.g., of limestone to CaO and CO_2 or of gypsum to lose its water of crystallization. *AGI* b. Heating ores, concentrates, precipitates, or residues to decompose carbonates, hydrates, or other compounds. CF: [roasting](#) *ASM, 1; Newton, 1* c. Heating metals at high temperatures to convert them into their oxides. *Nelson*

calcine

a. Ore or concentrate after treatment by calcination or roasting and ready for smelting. *CTD* b. By heating, to expel volatile matter as carbon dioxide, water, or sulfur, with or without oxidation; to roast; to burn (said of limestone in making lime). *Fay*

calcined gypsum

Gypsum partially dehydrated by means of heat, having the approximate chemical formula, $\text{CaSO}_4 \cdot x\text{H}_2\text{O}$.

calciner

See: [calcining furnace](#)

calcining

a. Roasting of ore in oxidizing atmosphere, usually to expel sulfur or carbon dioxide. If sulfur removal is carried to practical completion, the operation is termed sweet roasting; if CO₂ is virtually removed, dead roasting. *Pryor, 3* b. Reducing to powder by heating. *Mersereau, 2*

calcining furnace

A furnace or kiln in which ores or metallurgical products are calcined. Syn: [calciner](#)

calcioborite

An orthorhombic mineral, CaB₂O₄; in white radial aggregates in drill cores from limestone skarn in the Urals, Russia.

calciocelstite

A variety of celestite containing calcium. *Standard, 2*

calcioferrite

A monoclinic mineral, Ca₄Fe(Fe,Al)₄(PO₄)₆(OH)₄·13H₂O; occurs in scales and nodules.

calciornotite

See: [tyuyamunite](#)

calciovolborthite

An orthorhombic mineral, CaCu(VO₄)(OH); adelite group; moderately radioactive; in the Colorado Plateau in sandstone associated with carnotite and tyuyamunite, or in the oxidized zone of deposits containing vanadium minerals.

calciphyre

See: [calc-silicate marble](#)

calcisiltite

A limestone consisting predominantly of detrital calcite particles of silt size; a consolidated calcareous silt. *AGI*

calcite

a. A trigonal mineral, $4[\text{CaCO}_3]$; has prolific crystal habits, rhombohedral cleavage; defines hardness 3 on the Mohs scale; effervesces readily in dilute hydrochloric acid; a common and widely distributed rock-forming, authigenic, biogenic, and vein mineral; raw material for Portland cement, agricultural lime, flux for ore reduction, dimension stone, and concrete aggregate; the major mineral in limestone, marble, chalk, spongy tufa, cave deposits, and carbonatite; a cementing mineral in many clastic sedimentary rocks; a minor mineral in some silicate igneous and metamorphic rocks. Coarsely crystalline varieties are called nailhead spar, dogtooth spar (acute scalenohedra), and Iceland spar (optical-grade crystals). Abbrev.: Cc. CF: [dolomite](#) calcspar. b. The mineral group calcite, gaspeite, magnesite, otavite, rhodochrosite, siderite, smithsonite, and sphaerocobaltite

calcite limestone

A limestone containing not more than 5% of magnesium carbonate.

calcite marble

A crystalline variety of limestone containing not more than 5% of magnesium carbonate.

calcitic dolomite

A dolomite rock in which calcite is conspicuous, but the mineral dolomite is more abundant; specif. a dolomite rock containing 10% to 50% calcite and 50% to 90% dolomite, or a dolomite rock whose Ca/Mg ratio ranges from 2.0 to 3.5. CF: [dolomitic limestone](#)

calcitite

A rock composed of calcite; e.g., limestone.

calcitization

a. The act or process of forming calcite, such as by alteration of aragonite. *AGI* b. The alteration of existing rocks to limestone, due to the replacement of mineral particles by calcite; e.g., of dolomite in dolomite rocks or of feldspar and quartz in sandstones. *AGI*

calcitrant

Refractory; said of certain ores. *Fay*

calcium

A metallic element of the alkaline-earth group; never found in nature uncombined, occurs abundantly as limestone (CaCO_3), gypsum ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$), and fluorite (CaF_2).

Symbol, Ca. Used as a reducing agent, deoxidizer, desulfurizer, or decarburizer for alloys; as quicklime (CaO), it is the great cheap base of the chemical industry with countless uses. *Handbook of Chemistry and Physics*, 3

calcium autunite

Artificially prepared autunite in which calcium can be replaced by Na, K, Ba, Mn, Cu, Ni, Co, and Mg. Syn: [autunite](#)

calcium carbide

CaC₂ ; produced commercially by heating quicklime and carbon together in an electric furnace. Used for the generation of acetylene and for making calcium cyanamide.

calcium carbonate

a. White powder or colorless crystals; CaCO₃ . One of the most stable, common, and widely dispersed of materials. It occurs in nature as aragonite, calcite, chalk, limestone, lithographic stone, marble, marl, and travertine. Referred to as whiting, it has many uses in ceramics to introduce calcium oxide (CaO). Also used as a separator in glass firing. *CCD*, 2; *Lee*; *Kinney* b. Calcium carbonate (molecular weight, 100.09) crystallizes in two crystal systems: hexagonal rhombohedral or hexagonal as calcite, and orthorhombic as aragonite. Hexagonal calcium carbonate (calcite) is colorless, white, yellowish, or rarely pale gray, red, green, blue, or violet; sp gr, 2.710 (at 18 degrees C); Mohs hardness, 3; melting point, 1,339 degrees C (at 1,025 atm); decomposes at 898.6 degrees C; and soluble in water, in acids, and in ammonium chloride solution. Orthorhombic calcium carbonate (aragonite) is colorless, white, yellow, reddish, bluish, or black; sp gr, 2.93, ranging from 2.85 to 2.94; Mohs hardness, 3.5 to 4.0; transforms to calcite at 520 degrees C; decomposes at 825 degrees C; and soluble in water, in acids, and in ammonium chloride solution. *Handbook of Chemistry and Physics*, 2 c. Source of quicklime and of calcium metal.

calcium chloride process

A method used to consolidate floor dust in mine roadways in which calcium chloride is applied with a wetting agent.

calcium feldspar

See: [anorthite](#)

calcium mica

See: [margarite](#)

calcium minerals

Naturally abundant and widely exploited in industry. Main useful ores are calcite, dolomite, anhydrite, and gypsum. Apatite is mined for phosphorus; fluorite for fluorides; and colemanite and ulexite for boron. *Pryor, 3*

calcium montmorillonite

An artificially prepared clay mineral with calcium in place of magnesium. *Spencer, 2*

calcium phosphate

See: [apatite](#)

calcium plagioclase

See: [anorthite](#)

calcouranite

See: [autunite](#)

calcrete

- a. Conglomerate consisting of surficial sand and gravel cemented into a hard mass by calcium carbonate precipitated from solution and redeposited through the agency of infiltrating waters, or deposited by the escape of carbon dioxide from vadose water. *AGI*
- b. A calcareous duricrust; caliche. Etymol: "cal"careous + con"crete." CF: [silcrete](#); [ferricrete](#). *AGI*

calc-sapropel

A deposit composed of sapropel (dominant) and remains of calcareous algae. *Tomkeieff*

calc-schist

A metamorphosed argillaceous limestone with a schistose structure produced by parallelism of platy minerals. *AGI*

calc-silicate hornfels

A fine-grained metamorphic rock containing a high percentage of calc-silicate minerals. See also: [calc-flinta](#); [hornfels](#); [limurite](#); [skarn](#); tactite.

calc-silicate marble

A marble in which calcium silicate and/or magnesium silicate minerals are conspicuous.
Syn: [calciphyre](#)

calc-silicate rock

A metamorphic rock consisting mainly of calcium-bearing silicates, such as diopside and wollastonite, and formed by metamorphism of impure limestone or dolomite; associated with skarn-type mineral deposits. Syn: [lime-silicate rock](#)

calc-sinter

See: [travertine](#)

calcspar

Coarsely crystalline calcite. Also spelled: calc-spar. See also: [calcite](#)

calc-tufa

See: [tufa](#)

calcurmolite

A secondary mineral, $\text{Ca}(\text{UO}_2)_3(\text{MoO}_4)_3(\text{OH})_2 \cdot 11\text{H}_2\text{O}$.

Caldecott cone

A conical tank used to settle and discharge as a continuous underflow the relatively coarse sand from an overflowing stream of mineral pulp. See also: [cone classifier](#); [Callow cone](#). *Pryor, 3*

caldera

A large, basin-shaped volcanic depression, more or less circular, the diameter of which is many times greater than that of the included vent or vents, no matter what the steepness of the walls or the form of the floor may be. CF: [crater](#)

calderite

An isometric mineral, $(\text{Mn,Ca})(\text{Fe,Al})_2(\text{SiO}_4)_3$; the dark reddish-brown manganese-iron end member of the garnet group.

caldron

See: [bell mold](#); caldron bottom; kettle bottom.

caldron bottom

a. Mud-filled prostrate trunk of sigillaria in the roof of certain coal seams. The trunk is a separate mass of rock, with a film of coal around it. It is liable to collapse without any warning sound. Also called horseback. Syn: [caldron](#); [kettle bottom](#). See also: [pot](#) b. Eng. A cone-shaped mass with slippery surfaces found in the roof of some seams. It sometimes comprises a ring of coal around a core of material differing slightly from the ordinary roof. CF: [pot bottom](#) called pothole. *SMRB*

caledonite

An orthorhombic mineral, $Pb_5 Cu_2 (CO_3)_3 (SO_4)_3 (OH)_6$; green (not to be confused with celadonite).

calf reel

The churn-drill winch used for handling casing and for odd jobs. Also called casing reel. *Nichols, 1*

caliche

a. A term applied broadly in the Southwestern United States (esp. Arizona) to a reddish-brown to buff or white calcareous material of secondary accumulation; commonly found in layers on or near the surface of stony soils of arid and semiarid regions, but also occurring as a subsoil deposit in subhumid climates. It is composed largely of crusts of soluble calcium salts in addition to such materials as gravel, sand, silt, and clay. It is called hardpan, calcareous duricrust, or calcrete in some localities, and kankar in parts of India. Syn: [calcareous crust](#); tepetate. ---Etymol: American Spanish, from a Spanish word for almost any porous material (such as gravel) cemented by calcium carbonate. *AGI* b. Gravel, rock, soil, or alluvium cemented with soluble salts of sodium in the nitrate deposits of the Atacama Desert of northern Chile and Peru; it contains sodium nitrate (14% to 25%), potassium nitrate (2% to 3%), sodium iodate (up to 1%) sodium chloride, sodium sulfate, and sodium borate, mixed with brecciated clayey and sandy material in beds up to 2 m thick. *AGI* c. A term used in various geographic areas for a thin layer of clayey soil capping a gold vein (Peru); whitish clay in the selvage of veins (Chile); feldspar, white clay, or a compact transition limestone (Mexico); a mineral vein recently discovered, or a bank composed of clay, sand, and gravel in placer mining (Colombia). The term has been extended by some authors to quartzite and kaolinite. *AGI*

caliente

Mex. Silver ore, generally colored with some iron sulfate, the result of weathering. *Hess*

California poppy

A local indicator plant for copper in Arizona, observed over the outcrop of the San Manuel copper deposit. Here the distribution of this species is confined to copper-rich soil, and its population density is closely proportional to the copper content of the soil.

Hawkes, 2

California-type drag head

A device for sand dredging; the drag has a hinged afterbody that adjusts to the angle of the drag arm, which may vary with the depth of water. *Scheffaur*

California-type dredge

A single-lift dredge with stacker. Buckets, which are closely spaced, deliver to a trommel. The oversize is piled behind the dredge by a conveyor (stacker). Undersize is washed on gold-saving tables on the deck; tailings discharge astern through sluices.

californite

a. A compact, massive, translucent to opaque variety of vesuvianite; typically dark-green, olive-green, or grass-green, commonly mottled with white or gray, closely resembling jade; an ornamental stone. Principal sources are Fresno, Siskiyou, and Tulare Counties, CA. Syn: [American jade](#) b. A white variety of grossular garnet from Fresno County, CA.

caliper

a. An instrument used to measure precisely the thickness or diameter of objects or the distance between two surfaces, etc. *Long* b. An instrument used in conjunction with a microlog which, when lowered down a borehole, measures and records the internal diameter throughout its depth. *BS, 9* c. An instrument consisting of a graduated beam and at right angles to it a fixed arm and a movable arm which slides along the beam to measure the diameter of logs and trees. *Webster 3rd*

caliper brake

Brake in which two brakeshoes are curved to the brake path and anchored near the centerline of the drum. *Sinclair, 5*

caliper log

A well log that shows the variations with depth in the diameter of an uncased borehole. It is produced by spring-activated arms that measure the varying widths of the hole as the device is drawn upward. Syn: [section-gage log](#)

calite

a. A heat-resistant alloy of aluminum, nickel, and iron. *Hess* b. Iron or steel treated by calorizing. *Hess*

calk

a. To drive tarred oakum into the seams between planks and fill with pitch. *Fay* b. Limestone or chalk; also spelled caulk. *Arkell* c. A variety of barite. *Hey, 1* d. Topeen and draw metal toward and around a diamond being hand-wet in a malleable-steel bit blank. Also called peen. Syn: [peeler](#) e. To wick. *Long*

calkinsite

An orthorhombic mineral, $(\text{Ce,La})_2(\text{CO}_3)_3 \cdot 4\text{H}_2\text{O}$; pale yellow; a source of rare-earth elements.

callaganite

A monoclinic mineral, $\text{Cu}_2\text{Mg}_2(\text{CO}_3)(\text{OH})_6 \cdot 2\text{H}_2\text{O}$; azure-blue.

callainite

An apple- to emerald-green, massive, waxlike phosphate, possibly a mixture of wavellite and turquoise.

callis

Lanc. A shaly coal. *Nelson*

Callon's rule

A rule stating that when a pillar has to be left in an inclined seam for the support of a shaft or of a surface structure, a greater width should be left on the rise side of the shaft or structure than on the dip side. *Briggs*

Callow cone

A conical free-settling tank. Pulp is fed centrally; the finer solid fraction overflows peripherally, and the coarser fraction is withdrawn at a controlled rate via the apex at the cone's bottom. See also: [Caldecott cone](#); [cone classifier](#). *Pryor, 3*

Callow flotation cell

An early form of pneumatic flotation cell, still in limited use. Air is blown in at the bottom of the tank at low pressure, through a porous septum such as a blanket, and

mineralized froth overflows along the sides while the tailings progress to the discharge end. *Pryor, 3*

Callow screen

A continuous belt formed of fine screen wire travels horizontally between two drums. Pulp, fed from above, flows through together with the finer solids, while coarser material is discharged as the screen passes over the end drum. *Pryor, 3*

calomel

A tetragonal mineral, $2[\text{Hg}_2 \text{Cl}_2]$; a secondary alteration of mercury-bearing minerals. Syn: [calomelite](#); [calomelano](#); horn quicksilver; mercurial horn ore.

calomelano

See: [calomel](#)

calomel electrode

Half-cell used to measure electromotive force; potential being that of mercury and mercurous chloride in contact with saturated solution of potassium chloride. Used in pH measurement. *Pryor, 3*

calomelite

See: [calomel](#)

calorescence

The phenomenon of glowing when a substance is stimulated by heat rays that lie beyond the red end of the visible spectrum. See also: [thermoluminescence](#)

calorie

The gram calorie (or small calorie) is the quantity of heat required to raise the temperature of 1 g of water from 15 to 16 degrees C. The mean calorie is one-hundredth part of the heat required to raise 1 g of water from 0 to 100 degrees C. CF: [heat unit](#)

calorific intensity

The temperature of a fuel attained by its combustion. *Newton, 1*

calorific power

The quantity of heat liberated when a unit weight or a unit volume of a fuel is completely burned. *Newton, 1*

calorific value

See: [gross calorific value](#); net calorific value.

calorimeter

Any apparatus for measuring the quantity of heat generated in a body or emitted by it, such as by observing the quantity of a solid liquefied or of a liquid vaporized under given conditions. Used in determining specific heat; latent heat; the heat of chemical combinations; etc. *Standard, 2*

calorimeter room

A place at the surface of a mine where drained combustible gases are monitored or their heat content is ascertained. *BS, 8*

calorizing

A process of rendering the surface of steel or iron resistant to oxidation by spraying the surface with aluminum and heating to a temperature of 800 to 1,000 degrees C. *CTD*

calumetite

An orthorhombic mineral, $\text{Cu}(\text{OH},\text{Cl})_2 \cdot 2\text{H}_2\text{O}$; in azure-blue spherules and sheaves of scales having good basal cleavage; at the Calumet Mine, Calumet, MI. Named from the locality. CF: [anthonyite](#)

calx

The friable residue (as a metal oxide) left when a mineral or metal has been subjected to calcination or roasting; e.g., lime from calcium carbonate. *Webster 3rd*

calyx

a. A steel tube attached to the upper end of a core barrel and having the same outside diameter as the core barrel. The upper end is open except for two web members running from the inside of the tube to a ring encircling the drill rod. The calyx serves as a guide rod and also as a bucket to catch cuttings that are too heavy to be flushed out of the borehole by the circulation fluid. Syn: [bucket](#); [sludge barrel](#); [sludge bucket](#). *Long* b. Syn: [shot drill](#) c. A pipe or tube equipped with a sawtooth cutting edge, sometimes used to obtain a core sample of a formation being drilled. CF: [basket](#) *Long* d. In well drilling, a long cylindrical vessel that guides an annular toothed bit. Its action is like that of a

diamond drill. A toothed cutter takes the place of a diamond crown and is rotated by hollow flushing rods with a strong constant flow of water. A core is cut, preserved in a core barrel, and brought to the surface. The drills are made large enough so that the holes are used as shafts. *Hess* e. See: [sediment tube](#)

calyx boring

a. The process of drilling with a shot drill. *Long* b. The hole or core produced by this process. *Long*

calyx drill

A rotary core drill that uses hardened steel shot for cutting rock, which will drill holes from diamond-drill size up to 6 ft (1.8 m) or more in diameter. Drilling is slow and expensive, and holes cannot be drilled more than 35 degrees off the vertical, as the shot tends to collect on the lower side of the hole. Also called shot drill. See also: [core drill](#)
Lewis

camber

A beam, bar, or girder bent like a bow, with the hump towards the strata. *Mason*

Cambrian

The oldest of the systems into which the Paleozoic stratified rocks are divided; also, the corresponding oldest period of the Paleozoic era. *Fay*

camel back

A miner's term sometimes applied to such structures as bells, pots, kettle bottoms, or other rock masses that tend to fall easily from a mine roof. See also: [pot bottom](#); [tortoise](#).
AGI

camera lucida

Mirror or prism attached to the eyepiece of a microscope, enabling an observer to sketch the object displayed. *Pryor, 3*

Cammett table

A side-jerk concentrating table similar to the Wilfley table. *Hess*

camouflage

The substitution for a common element in a crystal lattice by a trace element of the same valence. CF: [admittance](#); [capture](#). *AGI*

camouflet

a. A cavity formed in a borehole by the detonation of an explosive charge placed in it. Also called chamber. See also: [spring](#); [socket](#). *Long* b. A quarry blasting hole enlarged by chambering. *Nelson*

campaign

a. The period during which a furnace is continuously in operation. *Fay* b. The working life of a tank or other melting unit between major cold repairs. *ASTM*

camptonite

A lamprophyre, similar in composition to nepheline diorite, being composed essentially of plagioclase (usually labradorite) and brown hornblende (usually barkevikite). *AGI*

campylite

A yellowish to brown variety of mimetite crystallizing in barrel-shaped forms. A source of lead. See also: [mimetite](#)

camshaft

In stamp milling, a strong horizontal revolving shaft to which a number of cams are attached in such a manner that no two of them strike the tappets at the same instant, thus distributing the weight to be lifted. *Fay*

cam stick

In stamp battery crushing, a square-sectioned wooden stick greased on the underside and leather-lined above; it is inserted between cam and tappet. *Pryor, 3*

can

a. A term used in the tristate zinc and lead district for a bucket used in hoisting. A "can" ranges in capacity from 1,200 to 1,400 lb (544 to 635 kg). *Jackson, 3* b. In a nuclear reactor, the container in which fuel rods are sealed to protect the fuel from corrosion and prevent gaseous diffusion products from escaping into the coolant. *Hammond*

canada

a. A term used in the Western United States for a ravine, glen, or narrow valley, smaller and less steep-sided than a canyon, such as the V-shaped valley of a dry river bed; a dale or open valley between mountains. *AGI* b. A term used in the Western United States for a small stream; a creek. Etymol: Spanish cana, cane, reed. *AGI*

Canadian asbestos

See: [chrysotile](#)

Canadian shield

The vast region of Precambrian rocks having an areal extent of 2 million square miles (5.2 million km²) in eastern Canada. *CTD*

canal

a. An artificial watercourse cut through a land area for use in navigation, irrigation, etc. *Hunt* b. That part of a tank leading from the relatively wide fining area to the machine. *ASTM* c. See: [chute](#); ditch.

canal ray

See: [positive ray](#)

Canamin clay

A clay consisting mainly of colloidal aluminum silicate from British Columbia, Canada. *CCD, 2*

canary

a. Bird traditionally used for the detection of unsafe carbon monoxide or low oxygen levels in early coal mines. b. Term used for modern, handheld, electronic air quality monitors, which replaced the use of canary birds. c. Yellow diamond. *Schaller*

canary ore

A yellow, earthy argentiferous lead ore, generally pyromorphite, bismuthinite, or massicot, more or less impure. *Fay*

canary stone

A yellow variety of carnelian.

canch

a. A part of a bed of stone worked by quarrying. b. Eng. Roof or floor removed to make height and side removed to make width. If above the seam, it is called a top canch; if below the seam, a bottom canch. A canch on a roadway close to the face is called a face canch; a canch on a roadway outbye is called a back canch. Also called brushing; ripping. *SMRB* c. The face of the roof ripping in a roadway. It follows that the canch is continually being excavated and advanced. See also: [ripping face support](#)

canche

A trench with sloping sides and a very narrow bottom. *Zern*

cancrinite

a. A hexagonal mineral, $\text{Na}_6 \text{Ca}_2 \text{Al}_6 \text{Si}_6 \text{O}_{24} (\text{CO}_3)_2$. b. The mineral group afghanite, cancrinite, davyne, franzinite, guiseppettite, liottite, microsommite, sacrofanite, vishnevite, and wenkite(?).

candite

See: [ceylonite](#)

candle coal

See: [cannel coal](#); kennel coal.

candlepower

a. The illuminating power of a standard sperm candle. Used as a measure for other illuminants. *Crispin* b. The luminous flux emitted by a source of light per unit solid angle in a given direction. It is expressed in terms of the international candle and new candle. *CTD*

canel

See: [cannel coal](#)

canfieldite

a. This name was first given to an isometric silver sulfogermanate, believed to be a new species, but later proved to be identical with argyrodite. The name was then withdrawn and transferred to (b). *English* b. An orthorhombic mineral, $\text{Ag}_8 \text{SnS}_6$; black; forms a series with argyrodite.

Canfield's reagent

An etchant, used for revealing phosphorus segregation in iron and steel, containing 1.5 g cupric chloride, 5 g nickel nitrate, and 6 g ferric chloride, in 12 mL hot water. *Osborne*

canga

- a. Braz. A tough, well-consolidated rock consisting essentially of hard blocks and fragments of the rocks of an iron formation, cemented with limonite. Where these fragments are plentiful and are derived from the hard ore outcrops, canga forms a valuable ore, which may run as high as 68% iron. Generally it is phosphoric, but there are considerable areas in which the phosphorus is below the Bessemer limit. CF: [itabirite](#)
- b. A ferruginous laterite developed from any iron-bearing rock, commonly basalt or gabbro; e.g., as used in Sierra Leone, canga is equivalent to lateritic iron ore. *AGI*

can hoisting system

A method of hoisting in shallow lead-zinc mines in areas of the United States. Instead of the conventional engine house, operation is controlled at the top of the shaft. The onsetter below hooks the can on, then signals by a lamp attached to the wrist of the hoister sitting above. The can is hoisted, swinging free. At the surface a tail rope is snapped to the underside, a deflection plate is swung into place, and the can is lowered. It capsizes and discharges its load to the surge bin. The empty can is then again hoisted, freed of its tail rope, and wound down the shaft, where it is replaced by a full can. *Pryor, 3*

canister

- a. A hopper-shaped truck, from which coal is discharged into coke ovens. *Fay*
- b. A container with a filter, sorbent, or catalyst, or combination of these items, which removes specific contaminants from the air passed through the container. Also called cartridge. *ANSI*

cank

- a. York. A completely cemented, compact, and fine-grained sandstone, or any fine-grained rock that is hard to drill.
- b. A hard, dark gray massive rock consisting largely of ankerite, found in some Coal Measures marine beds. *BS, 11*

canker

- a. Eng. The ochreous sediment in mine waters, being bicarbonate of iron precipitated by the action of the air. *Fay*
- b. Rust; verdigris, or copper rust. *Webster 2nd*

cannel

See: [cannel coal](#)

cannel coal

a. Term used for sapropelic coal containing spores, in contrast to sapropelic coal containing algae, which is termed boghead coal. Viewed microscopically, cannel coal shows no stratification. It is generally dull and has a more or less pronounced waxy luster. It is very compact and fractures conchoidally. There are transitions between cannel coal and boghead coal, and it is not possible always to distinguish macroscopically between them. Such a distinction can, however, be easily made with a microscope, except in high-rank coals. In American nomenclature, cannel coal must contain less than 5% anthraxylon. Cannel coal occurs in layers or lenses up to several centimeters in thickness. Thin seams consisting entirely of cannel coal are known. It occurs widely but in limited amounts. Syn: [gayet](#) See also: [sapropelic coal](#); [spore coal](#); [boghead coal](#). *IHCP* b. A variety of bituminous or subbituminous coal of uniform and compact fine-grained texture with a general absence of banded structure. It is dark gray to black in color, has a greasy luster, and is noticeably of conchoidal or shell-like fracture. It is noncaking, yields a high percentage of volatile matter, ignites easily, and burns with a luminous smoky flame. Syn: [canel](#); [cannel](#); [candle coal](#); [kennel coal](#).

cannel shale

a. A shale in which the mineral and the organic matter are approx. in equal proportions. *Tomkeieff* b. A black shale formed by the accumulation of sapropels accompanied by a considerable quantity of inorganic material, chiefly silt and clay. Syn: [bastard shale](#)

cannes marble

Same as griotte marble; a reddish marble with white spots formed by fossil shells (goniatites). *Hess*

cannonball mill

A mill for grinding tough materials by attrition, using cannonballs in a rotating drum or chamber. See also: [ball mill](#)

cannon shot

See: [blown-out shot](#)

canny

Corn. Applied to lodes containing calcium carbonate and fluorspar.

canon

See: [canyon](#)

cansa

Hydrated Brazilian hematite ore resulting from the weathering of itabirite. *Osborne*

cantilever

A lever-type beam that is held down at one end, is supported near the middle, and supports a load on the other end. *Nichols, 1*

cantilever crane

A transporter crane with one or both ends overhanging. *Hammond*

cantilever grizzly

Grizzly fixed at one end only, the discharge end being overhung and free to vibrate. This vibration of the bar is caused by the impact of the material. The disadvantage of the ordinary bar grizzly is clogging due to the retarding effect of the cross rods. This has been overcome in the cantilever grizzly by eliminating the tie rods except at the head end, where they are essential. The absence of these rods below the point of support also aids in preventing clogging because it permits the bars to vibrate in a horizontal plane, which keeps the material from wedging. *Pit and Quarry*

cantonite

A covellite that occurs in cubes with cubic cleavage and is probably pseudomorphous after chalcopyrite that had replaced galena; from the Canton Mine, Georgia. *Hess*

canvas

Usually applied to brattice cloth, which is a heavy canvas of cotton, hemp, or flax, frequently fireproofed. *Jones, 1*

canvas door

A simple square frame of about 2-in by 2-in (5.1-cm by 5.1-cm) pieces tied with diagonal strips and covered with brattice; used for deflecting air currents at inby points where the pressure is low. *Nelson*

canvas table

Inclined rectangular table covered with canvas. The pulp, to which clear water is added if necessary, is evenly distributed across the upper margin. As it flows down, the concentrates settle in the corrugations of the canvas. After the meshes are filled, the pulp

feed is stopped, the remaining quartz is washed off with clear water, and finally the concentrates are removed (by hose or brooms). *Liddell*

canyon

a. A long, deep, relatively narrow steep-sided valley confined between lofty and precipitous walls in a plateau or mountainous area, often with a stream at the bottom; similar to, but larger than, a gorge. It is characteristic of an arid or semiarid area (such as the Western United States) where stream downcutting greatly exceeds weathering; e.g., the Grand Canyon. *AGI* b. Any valley in a region where canyons abound. Etymol: anglicized form of American Spanish canon. CF: [canada](#) c. A precipitous valley; a gorge. Also spelled canon. d. Mex. A mine-level drift or gallery.

cap

a. A detonator or blasting cap. *Nelson* b. To seal, plug, or cover a borehole. *Long* c. The roof or top piece in a three-piece timber set used for tunnel support. *Nichols, 1* d. A piece of plank or timber placed on top of a prop, stull, or post. *Long* e. The horizontal member of a set of timber used as a roadway support. *Nelson* f. Another name for crown. *ASTM* g. Barren rock and/or soil covering an ore deposit. See also: [cap rock](#) *Long* h. Overburden consisting of unconsolidated material overlying or covering bedrock. Also called cover; mantle. Syn: [top](#) i. See: [blue cap](#)

capacitance

a. The capacity to store electrical energy; measured in farads, microfarads, or micro-microfarads. *Hunt* b. In flotation, a property expressible by the ratio of the time integral of the flow rate of material or electric charge to or from a storage, divided by the related potential change. *Fuerstenau*

capacitive control

An alternative to inductive control is to employ a capacitor in series with the choke and therefore to obtain a leading power factor for the circuit. The current in a capacitive circuit is less affected by changes in voltage than that in an inductive circuit. Therefore, should there be a sudden drop in mains voltage, the capacitively controlled lamp is less likely to be extinguished than the inductively controlled lamp. *Roberts, 2*

capacitor

An electric appliance or an adjustable electric appliance used in circuit with a motor to adjust the power factor. *Pryor, 3; Kentucky*

capacitor-discharge blasting machine

A blasting machine in which electrical energy, stored in a capacitor, is discharged into a blasting circuit containing electric detonators.

capacity

a. As applied to mines, smelters, and refineries, the maximum quantity of product that can be produced in a period of time on a normally sustainable long-term operating rate--based on the physical equipment of the plant, and given acceptable routine operating procedures involving labor, energy, materials, and maintenance. b. As applied to diamond and rotary drills, the load that the hoisting and braking mechanism of a diamond or rotary drill is capable of handling on a single line, expressed in feet or meters as the depth to which the drill can operate with different size bits. *Long* c. In ore dressing, the capacity of a screen is the measure of the amount of material that can be screened in a given time, and is typically measured in tons per square foot per hour per millimeter of aperture. *Newton, 1*

capacity factor

a. The ratio between the breaking strength of a winding rope and the load suspended on it (excluding the weight of the rope itself). *Nelson* b. A method of assessing the size of a rope. The capacity factor of the rope is the static factor of safety of the rope at the capping; i.e., the breaking strength of the rope divided by the weight of the loaded cage or skip and the suspension gear comprising the chains, or equivalent equipment, and a detaching hook. *Sinclair, 5*

capacity load

The maximum load that can be carried safely. *Crispin*

capacity of the market

As applied to mining, the ability of the market to buy, esp. with regard to the quantity that can be placed in the market, and to the prices that can be obtained. *Stoces*

cap crimper

A mechanical device for crimping the metallic shell of a fuse detonator or igniter cord connector securely to a section of inserted safety fuse. See also: [crimper](#)

Cape blue

Crocidolite asbestos found near Prieska, South Africa. See also: [crocidolite](#)

cape diamond

A diamond with a yellowish tinge. *Pryor*, 3

capel

- a. A wall of a lode; so called by Cornish miners, primarily where the country rock adjacent to the lode has been more or less altered by the same mineralizing agencies through which the lode was formed. Syn: [carrack](#); cappel; [capping](#). See also: [capel lode](#)
- b. A fitting at the end of the winding rope to enable the bridle chains of the cage to be connected by a pin through the clevis.

capel lode

Corn. A lode composed of hard unpromising feldspar containing minute particles of chlorite. See also: [capel](#)

Cape ruby

Brilliantly red garnet, gem stone. Other varieties are carbuncle and Bohemian garnet. CF: [pyrope](#)

capillarity

- a. The action by which a fluid, such as water, is drawn up (or depressed) in small interstices or tubes as a result of surface tension. Syn: [capillary action](#)
- b. The state of being capillary. *AGI*
- c. A phenomenon observable when making borehole inclination surveys by the acid-etch method, wherein the upper surface of the acid curves upward, forming a concave surface. When the acid bottle is in a vertical or horizontal position, the concave surface is symmetrical, and the resultant etch plane is horizontal. When the bottle is tilted, the concave surface is asymmetric; the resultant etch plane is not horizontal, and the angle so indicated is always greater than the true inclination of the borehole. A capillarity correction is applied. See also: [etch angle](#); capillarity correction. *Long*
- d. The action by which the surface of a liquid, where it is in contact with a solid, is elevated or depressed depending upon the relative attraction of the molecules of the liquid for each other and for those of the solid. Esp. observable in capillary tubes, where it determines the elevation or depression of the liquid above or below the level of the liquid in which the tube is dipped. *Webster 3rd*

capillarity correction

The deduction of a specific angular value from the apparent angle, as indicated by the plane of the etch line in an acid-survey bottle, to correct for capillarity effects and thereby determine the true inclination angle of a borehole. Proper values to be deducted from the apparent angles read on acid bottles differing in size may be determined by referring to charts, graphs, or tables prepared for that purpose. See also: [capillarity](#); [capillarity-correction chart](#). *Long*

capillarity-correction chart

A chart, graph, or table from which the amount of capillarity correction may be ascertained and applied to an angle reading taken from an acid-etch line in an acid bottle of specific size to determine the true angle of inclination of a borehole surveyed by the acid-etch method. Also called correction chart; test-correction chart. See also: [capillarity correction](#)

capillary

a. The action by which the surface of a liquid is elevated at the point at which it is in contact with a solid (such as in a lamp wick). See also: [capillarity](#) b. Resembling a hair; fine, minute, slender; esp., having a very small or thin bore usually permitting capillary. *Webster 3rd* c. Said of a mineral that forms hairlike or threadlike crystals, e.g., millerite. Syn: [filiform](#); [moss](#); [wire](#); [wiry](#). d. Said of tubes or interstices with such small openings that they can retain fluids by capillarity.

capillary action

See: [capillarity](#)

capillary attraction

The adhesive force between a liquid and a solid in capillarity. *AGI*

capillary movement

The rise of subsoil water above the water table through the channels connecting the pores in the soil. *Nelson*

capillary pyrite

See: [millerite](#)

capillary water

a. Water held in, or moving through, small interstices or tubes by capillarity. The term is considered obsolete. Syn: [water of capillarity](#) *AGI* b. Water of the capillary fringe. *AGI*

capital expenditure

The amount of money required for the purchase of the right to mine a deposit, for its preliminary development, for the purchase of adequate equipment and plant to operate it, and for working capital. *Hoover*

capital scrap

Scrap from redundant manufactured goods and equipment, collected and processed by merchants. See also: [process scrap](#)

capitan limestone

Massive white limestone found in New Mexico and Texas. *Hess*

cap lamp

The term generally applied to the lamp on a miner's safety hat or cap. Used for illumination only. See also: [safety lamp](#); miner's electric cap lamp. *BCI*

caple

Corn. A hard rock lining tin lodes. See also: [capel](#)

cap light

a. Dry-cell type. A self-contained light that permits free use of the hands and may be suitable for gaseous or explosive atmospheres. The headlamp, with focusing lens and bulb, is strapped to the head or hat, and the dry cell battery unit can be clipped to the belt. To prevent explosion, the bulb-socket ejects the bulb automatically in case of breakage. *Best, 1* b. Wet-cell type. With rechargeable, wet-cell cap lights, the battery is worn on the belt, and the light unit, which is attached to the cap or head, contains bulbs filled with krypton gas. The head light contains either two separate bulbs or a single bulb with two filaments in parallel, thus assuring the wearer of a constant source of light in the event that one bulb or one filament burns out. *Best, 1*

Cappeau furnace

A modification of the Ropp furnace for calcining sulfide ore. *Fay*

capped fuse

A length of safety fuse to which a blasting cap has been attached.

capped primer

A package or cartridge of cap-sensitive explosive which is specifically designed to transmit detonation to other explosives and which contains a detonator.

capped quartz

A variety of quartz containing thin layers of clay. *Fay*

cappel; capping

See: [capel](#)

cappelenite

A trigonal mineral, $Ba(Y,Ce)_6 Si_3 B_6 O_{24} F_2$: weakly radioactive; occurs in veins in syenite associated with wohlerite, rosenbuschite, catapleiite, orangite, lavenite, elaeolite, and sodalite.

cap piece

a. A piece of wood usually 24 to 36 in (60.96 to 91.44 cm) long, 6 to 8 in (15.24 to 20.32 cm) wide, and 2 to 6 in (5.08 to 15.24 cm) thick, that is fitted over a straight post or timber to afford more bearing surface for the support. All single posts, or timbers including safety posts, should be covered with a cap piece to provide additional bearing surface. *Kentucky* b. Arkansas. Usually a piece of wood split from a log. *Fay*

capping

a. Syn: [overburden](#) b. The overburden or rock deposit overlying a body of mineral or ore. *Nelson* c. See: [gossan](#) d. The preparation of capped fuses. *Nelson; Lewis* e. The process of sealing or covering a borehole and/or the material or device so used. f. The separation of a block of stone along the bedding plane. g. The attachment at the end of a winding rope. See also: [continental gland-type capping](#); interlocking wedge-type capping; white-metal cappel; capel. *Sinclair, 5* h. The fixing of a shackle or a swivel to the end of a hoisting rope. *CTD* i. The operation of fastening steel rope to a winding cage. *Pryor, 3* j. The name given to a method by which the spouting flow of a liquid or gas from a borehole may be stopped or restricted; also, the mechanism attached to borehole collar piping and so used. *Long*

capping station

A special room or building used solely for the preparation of capped fuses. *Nelson*

cap rock

a. Barren vein matter, or a pinch in a vein, supposed to overlie ore. Syn: [cap](#) b. A hard layer of rock, usually sandstone, a short distance above a coal seam. c. A disklike plate over part of or all of the top of most salt domes in the Gulf Coast States and in Germany. It is composed of anhydrite, gypsum, limestone, and sometimes sulfur. *AGI* d. A comparatively impervious stratum immediately overlying an oil- or gas-bearing rock.

AGI e. Eng. The cap rock of the alum shale, Estuarine sandstones on the Yorkshire coast. *Arkell*

capsal

See: [capstan](#)

cap sensitivity

The sensitivity of an explosive to initiation by a detonator. An explosive material is considered to be cap sensitive if it detonates with a No. 8 strength test detonator. *Atlas*

cap set

A term used in square-set mining methods to designate a set of timber using caps as posts, resulting in a set of timber shorter than the normal set.

cap shot

A light shot of explosive placed on the top of a piece of shale that is too large to handle, in order to break it. *BCI*

cap sill

The upper horizontal beam in the timber framing of a bridge, viaduct, etc. *Fay*

capstan

a. A spoollike drum mounted on a vertical axis used for heave hoisting or pulling. It is operated by steam, electric power, or hand pushes or pulls against bars inserted in sockets provided in the upper flange or head. *Long* b. Sometimes used as a syn. for cathead. *Long*

captive mine

Aust. A mine that produces coal or mineral for use by the same company. *Nelson*

captive tonnage

The quantity of mineral product from a mine produced solely for use by the parent company or subsidiary.

capture

In a crystal structure, the substitution of a trace element for a major element of lower valence; e.g., Ba^{+2} for K^{+} . Captured trace elements generally have a higher concentration relative to the major element in the mineral than in the fluid from which it crystallized. CF: [admittance](#); [camouflage](#). *AGI*

car

a. A wheeled vehicle used for the conveyance of coal or ore along the gangways or haulage roads of a mine. Also called mine car; tramcar; tub; wagon; mine wagon. *Zern; Fay* b. A wheeled carrier that receives and supports the load to be conveyed. Generally attached to a chain, belt, cable, linkage, or other propelling medium. See also: [tray](#)

caracolite

A monoclinic mineral, $Na_3 Pb_2 (SO_4)_3 Cl$; pseudo-hexagonal; forms crystalline incrustations.

Carapella's reagent

An etchant consisting of 5 g of ferric chloride dissolved in 96 mL of ethyl alcohol to which has been added 2 mL of hydrochloric acid; used in etching nonferrous metals and manganese steels. *Osborne*

carat

a. A unit of weight for diamonds, pearls, and other gems; formerly equal to 3-1/6 troy grains (205 mg). The international metric carat (abbreviated M.C.) of 200 mg was made the standard in the United States in 1913, as it was the standard in Belgium, Denmark, Great Britain, France, Germany, Japan, the Netherlands, and Sweden. A carat grain is 1/4 carat. Syn: [international metric carat](#) CF: [point](#) b. Employed to distinguish the fineness of a gold alloy, and meaning 1/24 part. Pure gold is 24-carat gold. Goldsmiths' standard is 22 carats fine; it contains 22 parts of gold, 1 part of copper, and 1 part of silver. *Fay*

caratage

See: [carat weight](#)

carat count

The number of near-equal-size diamonds having a total weight of 1 carat or 200 mg; hence, 40 small diamonds weighing 1 carat would be called 40-count diamonds, or 8 diamonds weighing 1 carat would be called 8-count diamonds. *Long*

carat-goods

Diamonds averaging about 1 carat each in weight. *Long*

carat loss

Amount of diamond material lost or worn away by use in a drill bit, expressed in carats. *Long*

carat weight

Total weight of diamonds set in a drill bit, expressed in carats. Also called caratage. *Long*

carbakerite

Any coal microlithotype containing 20% to 60% by volume of carbonate minerals (calcite, siderite, dolomite, and ankerite). *AGI*

carbargilite

Any coal microlithotype containing 20% to 60% by volume of clay minerals, mica, and in lesser proportions, quartz.

carbide

a. A commercial term for calcium carbide formerly used in miner's lamps. *Fay* b. The carbide compound of tungsten. *Long* c. The bit-crown matrices and shaped pieces formed by the pressure molding and sintering of a mixture of powdered tungsten carbide and other binder metals, such as cobalt, copper, iron, and nickel. See also: [cemented carbide](#); [sintered carbide](#). *Long* d. A compound of carbon with one or more metallic elements. *ASM, I*

carbide insert

Shaped piece of a hard metal compound, sometimes inset with diamonds, formed by the pressure molding and sintering of a mixture of powdered tungsten carbide and other binder metals, such as iron, copper, cobalt, or nickel. Inset into holes, slots, or grooves in bits, reaming shells, or core barrels, the hard metal pieces become cutting points or wear-resistant surfaces. Also called carbide slug. *Long*

carbide lamp

A lamp that is charged with calcium carbide and water and burns the acetylene generated. Syn: [acetylene lamp](#)

carbide miner

A push-button mining machine with a potential range of 1,000 ft (304.8 m) into a seam from the highwall, a maximum production of some 600 st (544 t) per shift, and a recovery of 65% to 75% of the coal within the reach of the machine. This unit is a continuous miner working controlled from outside the seam of coal. The operator can control both the vertical and horizontal direction of the cutting heads as shown on an oscilloscope screen. As the cutting head advances into the coal seam, it drags a series of conveyor sections behind it, which in turn deposit the coal into a truck. *Krumlauf*

carbides

Compounds of carbon with iron and other elements in steel; e.g., Fe_3C (cementite), $\text{Fe}_4\text{W}_2\text{C}$, and Cr_4C_2 . *CTD*

carbide slug

See: [carbide insert](#)

carbide tool

A cutting tool--made of tungsten carbide, titanium carbide, tantalum carbide, or combinations of them, in a matrix of cobalt or nickel--having sufficient wear resistance and heat resistance to permit high machining speeds. *ASM, I*

Carbite

Trade name for an explosive. *Hess*

carbo-

A combining form meaning carbon, as in carbohydrate.

carbo

A Latin name for charcoal, later transferred to fossil coal. *Tomkeieff*

Carbo

Clay-bonded silicon carbide; used as refractory. *Bennett*

carbocher

A variety of hydrocarbon containing about 8% rare earths and found enclosed in a mineral kondrikite. From the Khibine Peninsula, Russia. *Tomkeieff*

carbodynamite

A form of dynamite in which fine charcoal is used as the absorbent. *Webster 2nd*

carbohumín

An amorphous carbonaceous substance, a product of decomposition of plants and impregnating plant remains, which undergo transformation into coal. It is assumed to be present in coal in the form of structureless jelly. Syn: [jelly](#); [fundamental jelly](#); [fundamental substance](#); [gelose](#); jelly; vegetable jelly. *Tomkeieff*

carbolic

a. Of, pertaining to, or derived from carbon and oil; of or pertaining to coal-tar oil. *Standard, 2* b. Of or pertaining to carbolic acid. *Hess*

carbolic acid

White; crystalline; deliquescent; C_6H_5OH ; a burning taste; and an odor resembling that of creosote. Contained in the heavy oil of coal tar, from which it is distilled at between 165 degrees C and 190 degrees C. It is a caustic poison. Antidotes are epsom salts, alcohol, and heat. See also: [phenol](#)

carbolite

A byproduct in iron smelting, consisting of calcium-aluminum silicon carbide; used as a substitute for calcium carbide. *Standard, 2*

carbon

a. A nonmetallic element, found free in nature in three allotropic forms: amorphous, graphite, and diamond. A fourth form, known as "white" carbon, is now thought to exist. Symbol, C. Graphite is one of the softest known materials, while diamond is the hardest. Occurs as a constituent of coal, petroleum, natural gas, and all organic compounds. The isotope, carbon 14, is radioactive and is used as a tracer in biological and organic chemical research. *Handbook of Chemistry and Physics, 3* b. Rand term for thucolite in blanket ore. *Pryor, 3* c. A gray-to-black, opaque, tough, hard cryptocrystalline aggregate of diamond crystals occurring in irregular shapes and sizes. It is classed as an industrial diamond and formerly was used extensively as a cutting-medium inset in diamond-drill bits. More recently, only occasionally used in diamond bits and other tools. Also called black diamond; carbonado. See also: [diamond](#)

carbon-14

A radioactive isotope of carbon having the atomic weight of 14, produced by collisions between neutrons and atmospheric nitrogen. It is useful in determining the age of

carbonaceous material younger than 30,000 years old. See also: [carbon](#); [carbon-14 dating](#).

carbon-14 dating

A method of determining an age in years by measuring the concentration of carbon-14 remaining in an organic material, usually formerly living matter, but also water, bicarbonate, etc. The method is based on the assumption that assimilation of carbon-14 ceased abruptly on the death of an organism and that it thereafter remained a closed system. The method is useful in determining ages in the range of 500 to 30,000 years or 40,000 years, although it may be extended to 70,000 years by using special techniques involving controlled enrichment of the sample in carbon-14. Syn: [radiocarbon dating](#); carbon dating. *AGI*

carbonaceous

a. Coaly, containing carbon or coal, esp. shale or other rock containing small particles of carbon distributed throughout the whole mass. *Fay* b. Carbonaceous sediments include original organic tissues and subsequently produced derivatives of which the composition is organic chemically. *AGI*

carbonado

Cryptocrystalline diamond; compact, tough, opaque, dark-gray to black, cleavage absent; generally in rounded masses, also in angular broken fragments. Principal source is Bahia, Brazil, but also found elsewhere in South America and Africa. Syn: [black diamond](#); [carbon diamond](#). CF: [ballas](#)

carbonado bit

See: [carbon bit](#)

carbon adsorption

Recovery of dissolved soluble constituents onto activated carbon due to some form of chemical sorption at the active sites. Carbon adsorption is particularly useful for removing gold and silver from cyanide leach solutions or dissolved organics from process solutions. *Van Zyl*

carbonate

a. A compound containing the acid radical CO_3 of carbonic acid. Bases react with carbonic acid to form carbonates. CF: [carbonate](#) *CTD* b. A mineral compound characterized by a fundamental anionic structure of $(\text{CO}_3)^{2-}$. Calcite and aragonite, CaCO_3 , are examples of carbonates. CF: [borate](#); [nitrate](#). *AGI* c. A sediment formed by

the organic or inorganic precipitation from aqueous solution of carbonates of calcium, magnesium, or iron; e.g., limestone and dolomite. See also: [carbonate rock](#) d. Ores containing a considerable proportion of metal carbonates. *Fay* e. Salts of carbonic acid, H_2CO_3 . *Henderson*

carbonate-fluorapatite

See: [dehrnite](#)

carbonate hardness

Hardness of water, expressed as $CaCO_3$, that is equivalent to the carbonate and bicarbonate alkalinity. When the total alkalinity, expressed as $CaCO_3$, equals or exceeds the total hardness, all the hardness is carbonate. It can be removed by boiling and hence is sometimes called temporary hardness, although this syn. is becoming obsolete. Syn: [hardness](#)

carbonate leach

a. Metallurgical process for dissolution of metal values by means of a sodium carbonate solution. Used on high-lime ores. *Ballard* b. Dissolution of uranium with an aqueous solution of sodium carbonate in the presence of sufficient oxygen to render uranium hexavalent. *Pryor, I* c. Tungsten autoclave dissolution.

carbonate mineral

A mineral formed by the combination of the radical $(CO_3)^{2-}$ with cations; e.g., calcite, $CaCO_3$.

carbonate of barium

See: [witherite](#)

carbonate of calcium

See: [calcite](#)

carbonate of strontium

See: [strontianite](#)

carbonate rock

A rock, such as limestone, dolomite, or carbonatite, that consists chiefly of carbonate minerals; specif. a sedimentary rock composed of more than 50% by weight of carbonate minerals. Syn: [calcareous rock](#)

carbonate sand

A sand derived predominantly from carbonate material such as corals, mollusc shells, algae, etc. *Cruickshank*

carbonation

a. A process of chemical weathering involving the transformation of minerals containing calcium, magnesium, potassium, sodium, and iron into carbonates or bicarbonates of these metals by carbon dioxide contained in water (i.e., a weak carbonic-acid solution). Syn: [carbonatization](#) *AGI* b. Introduction of carbon dioxide into a fluid. *AGI*

carbonatite

A carbonate rock of apparent magmatic origin, generally associated with kimberlites and alkalic rocks. Carbonatites have been variously explained as derived from magmatic melt, solid flow, hydrothermal solution, and gaseous transfer. *AGI*

carbonatization

a. Introduction of, or replacement by, carbonates. *AGI* b. See: [carbonation](#)

carbon bit

A diamond bit in which the cutting medium is inset carbon. *Long*

carbon brick

Brick usually made from crushed coke and bonded with pitch or tar.

carbon dating

See: [carbon-14 dating](#)

carbon diamond

See: [carbonado](#)

carbon dioxide

a. Heavy, colorless; irrespirable gas; CO₂ ; it extinguishes a flame. It is formed in mine explosions and in mine fires and forms part of the afterdamp. b. Product of complete combustion of carbon fuels. Transported in liquid form in steel cylinders. Used in gaseous form as a fire extinguisher and in solid form as dry ice. *Crispin*

carbon dioxide blasting

A method of blasting coal that has been undercut, topcut, or sheared. Into one end of a seamless high-grade molybdenum-steel cylinder 2 to 3 in (5.08 to 7.62 cm) in diameter and 36 to 60 in (91.44 to 152.4 cm) long is put a cartridge containing a mixture of potassium perchlorate and charcoal with an electric match. The other end is sealed by a metal disk weaker than the shell and held in place by a cap that has holes at about 45 degrees to the axis of the cylinder. The cylinder is filled with liquid carbon dioxide at a pressure of 1,000 psi (6.9 MPa) and inserted in a borehole with the cap holes pointing outward. The heating mixture is lit and raises the gas pressure so that the disk is sheared; the carbon dioxide escaping through the angular holes tends to hold the cylinder in place, and break and push the coal forward. If the gas pressure is not enough to break the coal, the cylinder, if not properly set, will be blown from the borehole. The cylinder can be used over and over. It is claimed that a greater portion of lump coal is obtained than with ordinary explosives. Some smelters loosen slag in the same way. *Hess*

carbon-hydrogen ratio

A method of classifying coals by determining the ratio that exists between the carbon and hydrogen present in them. Thus, if a given coal contains 80% carbon and 5% hydrogen, the C/H ratio would be 80:5, or 16. Bituminous coals have a C/H ratio between 14 and 17, and most anthracites have a ratio between 24 and 29. Abbreviation: C/H ratio. See also: [anthracite](#) *Nelson*

Carboniferous

The Mississippian and Pennsylvanian periods combined, ranging from about 345 million years to about 280 million years ago; also, the corresponding systems of rocks. In European usage, the Carboniferous is considered as a single period and is divided into upper and lower parts. The Permian is sometimes included. *AGI*

carbonification

Carbonification is the process by which the vegetable substances of peat were transformed in the partial absence of air and under the influence of temperature and pressure throughout geological time into lignite and subsequently into coal. See also: [coalification](#)

carbon-in-leach process

A process step wherein granular activated carbon particles much larger than the ground ore particles are introduced into the ore pulp. Cyanide leaching and precious metals adsorption onto the activated carbon occur simultaneously. The loaded activated carbon is mechanically screened to separate it from the barren ore pulp and processed to remove the precious metals and prepare it for reuse. *SME, 1*

carbon-in-pulp leaching

A precious metals leaching technique in which granular activated carbon particles much larger than the ground ore particles are added to the cyanidation pulp after the precious metals have been solubilized. The activated carbon and pulp are agitated together to enable the solubilized precious metals to become adsorbed onto the activated carbon. The loaded activated carbon is mechanically screened to separate it from the barren ore pulp and processed to remove the precious metals and prepare it for reuse. *SME, 1*

carbonite

a. A native coke, occurring at the Edgehill Mines, near Richmond, VA; it is more compact than artificial coke and some varieties afford bitumen. *Fay* b. Coal altered by an igneous intrusion. Syn: [cokeite](#) c. Fossil coal. *Tomkeieff* d. Very brittle, black variety of bitumen, infusible and insoluble in organic solvents, containing about 85% carbon and 6% hydrogen. *Tomkeieff* e. A permissible explosive. *Fay*

carbonitriding

Introducing carbon and nitrogen into a solid ferrous alloy above AC_1 in an atmosphere that contains suitable gases such as hydrocarbons, carbon monoxide, and ammonia. The carbonitrided alloy is usually quench-hardened. *ASM, 1*

carbonization

a. In the process of coalification, the accumulation of residual carbon by the changes in organic matter and decomposition products. See also: [coalification](#) b. The accumulation of carbon by the slow, underwater decay of organic matter. *AGI* c. The conversion into carbon of a carbonaceous substance such as coal by driving off the other components, either by heat under laboratory conditions or by natural processes. *AGI*

carbonizing

The reduction of a substance to carbon by subjecting it to intense heat in a closed vessel. *Crispin*

carbon monoxide

Colorless; odorless; very toxic gas; CO; burns to carbon dioxide with a blue flame. Formed as a product of the incomplete combustion of carbon (such as in water gas and producer gas; in the exhaust gases from internal-combustion engines, such as automotive; and in the gases from the detonation of explosives). Used chiefly in the synthesis of carbonyls (such as nickel carbonyl in the refining of nickel), phosgene, and many organic compounds (such as hydrocarbons for fuels, methanol and higher alcohols, aldehydes, and formates). This gas is formed during mine fires and after explosions.

carbon monoxide poisoning

In diving, this type of accident usually occurs as a result of contamination of the diver's air supply by exhaust gases from an internal-combustion engine. *Hunt*

Carbon oil

Trade name for kerosine.

carbon steel

Steel containing carbon up to about 2% and only residual quantities of other elements except those added for deoxidation, with silicon usually limited to 0.60% and manganese to about 1.65%. Also called plain carbon steel; ordinary steel; straight carbon steel. *ASM, I*

carbon trash

Carbon remains of plant life found in sedimentary strata and often associated with uranium and red-bed copper mineralization.

carbopyrite

Any coal microlithotype containing 5% to 20% by volume of iron disulfide (pyrite and marcasite). *AGI*

Carborundum

Trade name for green, often iridescent, artificial carbon silicide, CSi. Hexagonal-rhombohedral plates. It is produced in an electric furnace and used as an abrasive and as a refractory material. Is useful for sharpening tools. Identical with moissanite. See also: [moissanite](#) *Webster 2nd; English*

carboxylic acid method

In flotation, a method for treatment of various oxygen ores using carboxylic acids as collectors with gangue depressants to float base-metal minerals from associated impurities. The process is suitable for processing apatite (phosphate), carbonates or oxides of lead, copper, or zinc; somewhat less useful with other lead minerals and with hemimorphite; and unsuitable for chrysocolla.

carbozite

A black liquid, made from a bituminous ore, used for the protection of steel surfaces during transport and storage. This fluid dries rapidly to a hard gloss, which is resistant to acids, alkalis, moisture, sea air, and temperatures up to 200 degrees C. *Osborne*

carburan

a. A hydrocarbon related to, or identical with, thucholite, the ash of which contains uranium, lead, and iron. *Tomkeieff* b. A variety of anthraxolite, from pegmatites of Karelia, former U.S.S.R. *Crosby*

carbureted hydrogen

An odorless, flammable gas, CH_4 . Known in coal mines as combustible gases or gas. See also: [methane](#)

carburization

The process of imparting carbon, such as in making cement steel. *Fay*

carburizing

Hard-surfacing of steel by heating above the critical temperature in an inert atmosphere with a source of carbon (e.g., cyanide salts), thus forming a cementite casing above a tough core (which has already been machined). *Pryor, 3*

carburizing flame

A gas flame that will introduce carbon into some heated metals such as during a gas welding operation. A carburizing flame is a reducing flame, but a reducing flame is not necessarily a carburizing flame. *ASM, 1*

carcass

The tension-carrying portion of a conveyor belt. It may be composed of multiple plies of fabric or cord, and simple layers of cord or steel cable, bonded together with rubber.

car chalker

In bituminous coal mining, a laborer who chalks on a car the number of rooms or working places from which coal is obtained in order that a production record of all parts of a mine can be maintained. *DOT*

card concentrator

A table made of two planes having a flexible joint between them dividing the table into two nearly equal triangles, forming a diagonal line along which concentrates separate from the tailings. *Liddell*

cardinal point

a. One of the four principal "points" of a compass. *AGI* b. A change in the speed of the ropes on a winding drum, which occurs at certain definite intervals during the winding cycle. *Sinclair, 5*

Cardox

Trade name for an explosive device used principally in coal mining. See also: [carbon dioxide blasting](#)

cardoxide

A baked mixture of caustic soda and lime, used in the container or regenerator of self-contained mine-rescue or oxygen-breathing apparatus to absorb the exhaled carbon dioxide. It has an advantage over straight caustic soda in that it does not cake, liquefy, or solidify when used. *Lewis*

Cardox-plant operator

In bituminous coal mining, one who recharges steel shells (tubes) known by the trade name Cardox with metal shearing disks, electrical firing elements, and liquid carbon dioxide to prepare them for blasting coal. *DOT*

Cardox shell

Steel shell used in carbon dioxide blasting.

car dropper

See: [car runner](#)

card table

A shaking table with a grooved deck instead of nailed-on riffles. Used in gravity concentration of sands. *Pryor, 3*

card tender

In the asbestos products industry, one who tends a carding machine that cleans asbestos, cotton, or other fibers; arranges fibers parallel; and transforms them from a roll or lap into a ropelike untwisted strand of cotton (sliver). Also called allye tender; card feeder; card hand; card operator; winder. *DOT*

car dump

See: [tipple](#)

car dumper

a. A mechanical device for tilting a railroad hopper or gondola car over sidewise and emptying its contents. *Fay* b. A person who unloads cars by upending or overturning them.

card weight pipe

A term used to designate standard or full weight pipe, which is the Briggs standard thickness of pipe. *Strock, 1*

car filler

See: [mucker](#)

car haul

A pusher chain conveyor used for moving small cars, such as mine cars, along a track. A form of tow conveyor.

caries texture

In ore microscopy, a replacement pattern in which the younger mineral forms a series of scallop-shaped incursions into the host mineral, which resemble filled dental cavities. *AGI*

carinate fold

In geology, an isoclinal fold. See also: [isocline](#)

Carinthian process

A metallurgical method for treating lead ore, the characteristics of which are the smallness of the charge; the slow roasting, so that for every part of lead sulfide one part of sulfate and at least two parts of oxide are formed; the low temperature at which all of the operations are carried on; and the aim to extract all the lead in the reverberatory. The hearth is inclined toward the flue, and the lead is collected outside the furnace. Syn: [Corinthian process](#)

car loader

See: [loader](#); chute loader; boxcar loader; loading conveyor.

Carlsbad twin

A twinned crystal in which the twinning axis is the c axis, the operation is a rotation of 180 degrees, and the contact surface is parallel to the side pinacoid; common in the alkali feldspars. Also spelled Karlsbad twin. *AGI*

carman

A worker who handles mine or railroad cars at a mine. May be designated according to job, such as brakeman; car cleaner; car pincher; car runner; pusher. Also called car handler. *DOT*

Carmichel-Bradford process

See: [blast roasting](#)

carminite

A carmine to tile-red lead-iron-arsenate, perhaps $Pb_3 As_2 O_8 \cdot 10FeAsO_4$. Found in clusters of fine needles; also in spheroidal forms. *Fay*

carn

See: [cairn](#)

carnallite

An orthorhombic mineral, $KMgCl_3 \cdot 6H_2O$; milk-white to reddish; a saline residue.

carnallite plant operator

In ore dressing, smelting, and refining, one who makes carnallite flux used in magnesium refining--by weighing carnallite ingredients according to formula and mixing

them thoroughly, using a shovel. The mixture is then melted in a furnace crucible and poured into cooling pans. *DOT*

carnegieite

A triclinic and isometric compound, NaAlSiO_4 ; a high-temperature polymorph of nepheline.

carnelian

A translucent pale to deep- or orange-red variety of chalcedony containing iron impurities. CF: [sard](#)

carneol

See: [carnelian](#)

car nipper

See: [car runner](#)

carnotite

A monoclinic mineral $2[\text{K}_2 (\text{UO}_2)_2 (\text{VO}_4)_2 \cdot 3\text{H}_2\text{O}]$; bright yellow to lemon- and greenish-yellow; strongly radioactive; commonly occurs mixed with tyuyamunite; widespread in Colorado, Utah, New Mexico, and Arizona; occurs chiefly in crossbedded sandstones of Triassic or Jurassic age, either disseminated or as relatively pure masses around petrified or carbonized vegetal matter. Secondary in origin, having been formed from the action of meteoritic waters on preexisting uranium minerals; a source of uranium and radium. Syn: [yellow ore](#)

carpholite

An orthorhombic mineral, $\text{MnAl}_2 \text{Si}_2 \text{O}_6 (\text{OH})_4$; in yellow laths elongated in the c direction with prismatic cleavage at 68.5 degrees .

car pincher

In anthracite, bituminous, and metal mining, a laborer who moves railroad cars into position directly under loading chutes at a breaker or tippie, inserting a pinch bar under the car wheels and bearing down or pulling up on it to force the car forward. Also called car shifter; car spotter; railroad-car shifter; spotter. *DOT*

carrack

Eng. See: [capel](#)

Carrara marble

Any of the marbles quarried near Carrara, Italy. The prevailing colors are white to bluish, or white with blue veins; a fine grade of statuary marble is included.

car retarder

a. An appliance for reducing or controlling the speed of mine cars. *Nelson* b. A car retarder consists of a brakeshoe located along the track. On an electrical impulse, it is forced against both sides of the car wheels by compressed air. Control can be manual or automatic. Used to control the speed of railroad cars in industrial yards. *Best, 1*

carriage

a. A term used with shaker conveyor supports. Carriages may be designated as ball-frame, wheel, or roller carriages, depending on their construction. The carriage may or may not be attached solidly to the conveyor troughs. See also: [slope cage](#) b. See: [cage](#) c. A sliding or rolling base or supporting frame. *Nichols, 1*

carriage mounting

One or more rock drills mounted on a wheeled frame; used in tunneling. *Pryor, 3*

Carribel explosive

A permitted explosive of medium strength, which can be used in wet boreholes provided its immersion time does not exceed 2 to 3 h. Can be used for coal and ripping shots in conjunction with short-delay detonators. *Nelson*

carrier

a. A rotating or sliding mounting or case. *Nichols, 1* b. Container traveling on an aerial ropeway. *Pryor, 3*

carrollite

An isometric mineral, $\text{Cu}(\text{Co},\text{Ni})_2\text{S}_4$; linnaeite group. Formerly called sychnodymite.

carrousel conveyor

A continuous platform or series of spaced platforms that move in a circular horizontal path.

car runner

In anthracite and bituminous coal mining, a laborer who runs cars down inclined haulageways from working places to switches or sidings at the shaft or along main haulageways. A runner may be designated according to material hauled, such as culm runner or rock car runner. Syn: [car dropper](#); [car nipper](#); dropper; [load dropper](#); [runner](#). *DOT*

carry

a. Scot. The thickness of roof rock taken down in working a seam. b. The thickness of seam that can be conveniently taken down at one working.

carryall

A self-loading carrier device with a scraperlike, retractable bottom; usually self-propelled and used esp. for excavating and hauling unconsolidated or crushed rock and earthy materials. See also: [scraper](#)

Carryall

Trade name for a LeTourneau-Westinghouse scraper.

carryall scraper

See: [carryall](#)

carrying belt

The belt on which coal or ore is transported to the discharge point. The carrying belt is the upper strand except in the case of a bottom belt conveyor. See also: [carrying run](#)

carrying gate

Derb. The main haulage road in a mine.

carrying idler

a. In belt conveyors, one of the belt idlers upon which the load-carrying portion of belting is supported. b. In live roller conveyors, the roll upon which the load is supported while being conveyed.

carrying roller

The conveyor roll upon which the conveyor belt or the object being transported is supported.

carrying run

That portion of a conveyor in or on which material is conveyed. See also: [carrying belt](#)

car slide

The ramped loading platform for a scraper loader. *Nelson*

car spotter

A term used for the small hoist employed to haul a trip of empty cars under the loading end of a gathering conveyor or elevator. Also called tigger. See also: [car pincher](#)

car stop

A contrivance to arrest the movement of a mine car. *Nelson*

cartographic

Of or pertaining to a map. A cartographic unit in geology is a rock or a group of rocks that is shown on a geologic map by a single color or pattern.

cartography

The art of map or chart construction, and the science on which it is based. It includes the whole series of map-making operations, from the actual surveying of the ground to the final printing of the map. *AGI*

cartology

A graphic method of coal-seam correlation, involving the mapping and drawing of both vertical and horizontal sections. *AGI*

carton

A lightweight inner container for explosive materials, usually encased in a substantial shipping container called a case. *Atlas*

cartridge

a. An individual closed shell, bag, or tube of circular cross section containing explosive material. *Atlas* b. A cylindrical, waterproof, paper shell, filled with high explosive and

closed at both ends, that is used in blasting. c. A cylindrical, waterproof, paper shell filled with cement or other material used in plugging or sealing cavities or cavey ground encountered in drilling a borehole. See also: [plug](#) d. Cylinder--about 4 in (10 cm) long and 2-1/2 in (6.4 cm) in diameter--of highly compressed caustic lime made with a groove along the side, used in breaking down coal. e. A single pellet of explosive, which may be 4 oz or 8 oz (113.4 g or 226.8 g). *Nelson*

cartridge count

The number of cartridges in a standard case, which typically contains about 50 lb (22.7 kg) of explosive material.

cartridge fuse

A fuse enclosed in an insulating tube in order to confine the arc when the fuse blows. *Crispin*

cartridge punch

A wooden, plastic, or non-sparking metallic device used to punch an opening in an explosive cartridge to accept a detonator or a section of detonating cord. *Atlas*

cartridge strength

A rating that compares a given volume of explosive with an equivalent volume of straight nitroglycerin dynamite, expressed as a percentage. Syn: [bulk strength](#)

car-type conveyor

A series of cars attached to and propelled by an endless chain or other linkage running on a horizontal or slight incline.

car whacker

See: [mine-car repairman](#)

Casagrande liquid limit apparatus

An appliance to determine the liquid limit of a soil. It consists of a brass dish, handle, and cam mounted on a hard rubber base. The dish falls through a distance of 1 cm per rotation. A sample of soil 1 cm thick is placed in the dish with a groove 11 mm wide at the top and 2 mm at the bottom. The number of jars required to cause the 2-mm gap to close along 1/2 in (12.7 mm) is recorded. *Nelson*

cascade coal dryer

A thermal process for drying fine coal. An example of this type is the Conreur dryer. Coal entering the top of the drying tower is carried down by a series of rollers, being permeated by an ascending stream of hot air. Fixed baffles direct the air to facilitate mingling. The very finest particles may have to be recovered by dry filters or wet scrubbers. The dryer treats coal with a top size ranging from 1/4 to 2 in (0.64 to 5.08 cm). See also: [fluidized bed dryer](#); [thermal drying](#). *Nelson*

cascade control

Externally impressed signal series that connects several controllers or resetting devices in series. *Pryor, 3*

cascade flotation cell

Elementary type of flotation cell in which air is entrained by a plunging cascade of pulp; mineralized bubbles are removed farther downstream. *Pryor, 3*

cascade upgrading

See: [countercurrent decantation](#)

cascading

Movement of crop load in a ball mill rotating at such a speed that the balls breaking free at the top of the rising load roll quietly down to the toe of the charge. With increased peripheral speed, motion changes to turbulent cataracting and, still faster, to avalanching when the upper layer of crushing bodies breaks clear and falls freely to the top of the crop load. *Pryor, 3*

casadite

A sodic minette containing biotite, olivine, and augite phenocrysts in a groundmass composed almost entirely of alkali feldspar. Principally a dike rock. *AGI*

case

a. A small fissure, admitting water into the mine workings. b. One of the frames, of four pieces of plank each, placed side by side to form a continuous lining in galleries run in loose earth. *Webster 2nd* c. To line a borehole with steel tubing, such as casing or pipe. Syn: [case in](#) d. In a ferrous alloy, the outer portion that has been made harder than the inner portion, or core, by casehardening. *ASM, 1*

cased

A borehole lined with some form of steel tubing, such as casing or pipe. See also: [case off](#)

cased off

See: [case off](#)

casehardening

a. The geological process by which the surface of a porous rock, esp. a sandstone or a tuff, is coated by a cement or a desert varnish; formed by the evaporation of a mineral-bearing solution. *AGI* b. Hardening a ferrous alloy so that the outer portion, or case, is made substantially harder than the inner portion, or core. Typical processes used for casehardening are carburizing, cyaniding, carbonitriding, nitriding, induction hardening, and flame hardening. *ASM, I*

case in

See: [case](#)

case liner

A plastic or paper barrier used to prevent the escape of explosive materials from a case. *Atlas*

case off

To line a borehole with some form of steel tubing to prevent entry of broken rock materials, gas, or liquids into the borehole. Also called blank off; case. See also: [blankoff](#)

cash

Som. Soft shale or bind in coal mines.

casing

a. Special steel tubing welded or screwed together and lowered into a borehole to prevent entry of loose rock, gas, or liquid into the borehole, to prevent loss of circulation liquid into porous, cavernous, or crevassed ground, and to support the sides of a borehole. See also: [tubing](#); flush-joint casing. *Long* b. The large-diameter pipe cemented in the hole, such as surface casing, protective casing, and production casing. *Wheeler, R.R.* c. Process of inserting casing in a borehole. *Long* d. A structure of wood, metal, or other material that completely encloses the elevating or conveying machinery elements to support them; to afford safety protection; to protect from the weather; to confine dust, gases, or fumes arising from the material being conveyed; or to form a part of the

conveyor in the same manner as a trough. e. A zone of material altered by vein action and lying between the unaltered country rock and the vein. f. A term applied to thin slabs of sandstone that split out between closely spaced joints. g. The steel lining of a circular shaft. See also: [conduit](#)

casing catcher

A safety device equipped with slips or dogs to catch and grip casing if it is dropped while being lowered into or lifted from a borehole. Also miscalled tubing catcher; tubing hanger. *Long*

casing clamp

A mechanical device designed to facilitate the hoisting or suspension of casing in a borehole. Made by forming a half circle in a heavy steel bar. When bolted together, in pairs, the bars fit around the outside and tightly grip the casing. The size of the clamp is determined by the outside diameter of the casing to be handled. See also: [pipe clamp](#)
Long

casing dog

a. A lifting device consisting of one or more serrated sliding wedges working inside a cone-shaped collar. Used to grip and hold casing while it is being raised or lowered into a borehole. See also: [bulldog](#); dog. *Long* b. A fishing tool. *Long*

casing float

A rubber-ball-type check valve, generally placed near the bottom of a long string of casing. Its use reduces the load imposed on the hoisting mechanism in lowering casing into a wet borehole. Also called casing valve; float valve. *Long*

casing off

Process of inserting a line of casing into a borehole. See also: [case](#); case off. *Long*

casing point

In borehole drilling, the depth to which the casing is entered. *Pryor, 3*

casing pressure

The pressure built up in the casing when closed at the top of the well. It is usually measured by placing a pressure gage on one of the side outlets on the casing head. *Porter*

Cassel brown

A brown earthy substance found in peat and lignite beds and used as a pigment; originally found near Cassel, Germany. Cologne brown or Cologne earth is a similar substance originally found near Cologne, Germany. *Hess*

cassiterite

A tetragonal mineral, $4[\text{SnO}_2]$; rutile group; adamantine; reddish brown to black; forms prismatic crystals, or massive concentric fibrous structure (wood tin); sp gr, 7.03; occurs in veins associated with granite and granite pegmatite, or placers (stream tin); a source of tin. Syn: [tin stone](#); [tin spar](#); [tin ore](#); [black tin](#).

cast

a. Secondary rock or mineral material that fills a cavity formed by the decay or dissolution of some or all of the original hard material. CF: [mold](#) b. A sedimentary structure representing the infilling of an original mark or depression made on top of a soft bed and preserved as a solid form on the underside of the overlying and more durable stratum; e.g., a flute cast or a load cast. Syn: [counterpart](#)

castable

A refractory mix containing heat-resistant, hydraulic setting cement. A refractory concrete. *AISI*

castable refractory

a. A refractory aggregate that will develop structural strength by hydraulic set after having been tempered with water and compacted. *ARI* b. A mixture of a heat-resistant aggregate and a heat-resistant hydraulic cement; for use, it is mixed with water and rammed or poured into place. *Harbison-Walker*

cast-after-cast

Corn. The throwing up of ore from one platform to another successively. See also: [shamble](#)

castanite

A former name for hohmannite, $\text{Fe}^{+3}_2(\text{SO}_4)_2(\text{OH})_2 \cdot 7\text{H}_2\text{O}$.

cast bit

A drill bit in which the diamond-set crown is formed on a bit blank by pouring molten metal into a prepared mold. Also called cast-set bit; cast-metal bit. *Long*

cast booster

A cast, extruded or pressed, solid high explosive used to detonate less sensitive explosive materials. *Atlas*

casthouse

A building in which pigs or ingots are cast. *Fay*

castillite

An impure variety of bornite, containing zinc, lead, and silver sulfides. *Fay*

casting

a. An object at or near finished shape obtained by solidification of a substance in a mold. *ASM, 1* b. Pouring molten metal into a mold to produce an object of desired shape. *ASM, 1* c. A process of shaping glass by pouring hot glass into molds or onto tables or molds. See also: [teemer](#) d. A process for forming ceramic ware by introducing a body slip into a porous mold that absorbs sufficient water (or other liquid) from the slip to produce a semirigid article. *ASTM*

casting machine

A series of iron molds on an endless-belt conveyor to receive and cast molten pig iron into form as it comes from a furnace. *Mersereau, 2*

casting over

a. A quarryman's term for an operation consisting of making a cut with a steam shovel, which, instead of loading the material on cars, moves it to one side, forming a long ridge. b. The operation of reestablishing benches that have been covered or caved, and also cutting up a high bank into one or more smaller banks. *Lewis*

casting pit

The space in a foundry in which molds are placed and castings are made. In the Bessemer and open-hearth steelworks, it is the space utilized for casting the molten steel into cast iron ingot molds. *Fay*

castings

One of several terms (and/or letter symbols) commonly used to designate low-quality drill diamonds. *Long*

casting shrinkage

a. Liquid shrinkage--the reduction in volume of liquid metal as it cools to the liquidus. *ASM, 1* b. Solidification shrinkage--the reduction in volume of metal from the beginning to ending of solidification. *ASM, 1* c. Solid shrinkage--the reduction in volume of metal from the solidus to room temperature. *ASM, 1* d. Total shrinkage--the sum of the shrinkage in definitions a, b, and c above. *ASM, 1*

casting strain

Strain in a casting caused by casting stresses that develop as the casting cools. *ASM, 1*

casting stress

Stress set in a casting because of geometry and casting shrinkage. *ASM, 1*

casting wheel

A large turntable with molds mounted on the outer edge. Used primarily in the base metal industries for cast ingots, anodes, etc.

casting-wheel operator

In ore beneficiation, smelting, and refining, one who operates a large rotating casting wheel to pour molten, nonferrous metal, such as copper or lead, into molds mounted on the edge of the wheel. *DOT*

cast iron

Iron containing carbon in excess of its solubility in the austenite that exists in the alloy at the eutectic temperature. For the various forms--gray cast iron, white cast iron, malleable cast iron, and nodular cast iron--the word "cast" is often left out, resulting in the terms gray iron, white iron, malleable iron, and nodular iron, respectively. *ASM, 1*

castor

See: [castorite](#)

castor amine

An oil. Used in ore flotation as a selective collector and in rustproofing metal surfaces. *Bennett*

castorite

a. A natural, colorless silicate of lithium and aluminum. *Bennett* b. A transparent variety of petalite. Syn: [castor](#)

cast primer

a. A cast unit of explosive commonly used to initiate detonation in a blasting agent. *Dick, 2* b. A cast unit of explosive, usually pentolite or composition B; commonly used to initiate detonation in a blasting agent.

cast steel

Steel as cast; i.e., not shaped by mechanical working. Originally applied to steel made by the crucible process as distinguished from that made by cementation of wrought iron. *CTD*

cata-

A prefix to indicate that the rock belongs to the deepest zone of metamorphism, which is characterized by very high temperature, hydrostatic pressure, and relatively low shearing stress. CF: [epi-](#); [meta-](#); [meso-](#). Syn: [kata-](#)

cataclasis

Rock deformation accomplished by fracture and rotation of mineral grains or aggregates without chemical reconstitution. *AGI*

cataclasite

A cataclastic rock that has been formed by shattering (or cataclasis), which has been less extreme than in mylonite. See also: [augen gneiss](#); crush breccia; mylonite; mylonite gneiss.

cataclastic

a. Pertaining to the structure produced in a rock by the action of severe mechanical stress during dynamic metamorphism; characteristic features include the bending, breaking, and granulation of the minerals. Also said of the rocks exhibiting such structures. See also: [mortar structure](#) *AGI* b. Pertaining to clastic rocks, the fragments of which have been produced by the fracture of preexisting rocks by Earth stresses; e.g., crush breccia. Syn: [kataclastic](#)

cataclysm

a. Any geologic event that produces sudden and extensive changes in the Earth's surface; e.g., an exceptionally violent earthquake. Syn: [cataclysmic](#); [cataclysmal](#). *AGI* b. Any violent, overwhelming flood that spreads over the land; a deluge. *AGI*

cataclysmal

See: [cataclysm](#)

cataclysmic

See: [cataclysm](#)

catalysis

Acceleration or deceleration of a chemical reaction produced by a substance that is unchanged by the reaction.

catalyst

A substance capable of changing the rate of a reaction without itself undergoing any net change. *AGI*

catalytic methanometer

A combustible-gases detector depending upon the combustion or oxidation of methane at heated filaments. Usually the gas is drawn through the apparatus by a rubber suction bulb, and the filaments are heated by a battery in the instrument. A version of this principle is the resistance methanometer. *Nelson*

catalytic oxidation

A process that converts the incompletely burned hydrocarbons present in fuel exhaust into harmless gases. It involves burning up the fuel remnants with the aid of catalysts--chemical agents, such as platinum and palladium, that speed up reactions without being consumed themselves.

cataphoresis

Movement of charged particles in a fluid medium in response to an electric field. Metallic hydroxides and other positive sols migrate to the cathode and negatives ones to the anode. See also: [electrophoresis](#) *Pryor, 3*

catapleiite

A hexagonal mineral, $\text{Na}_2 \text{ZrSi}_3 \text{O}_9 \cdot 2\text{H}_2 \text{O}$; yellow to yellow-brown; forms thin, tabular hexagonal prisms.

catarinite

An obsolete term for an iron meteorite remarkable for a high proportion of nickel.

catastrophe

In geology, a sudden, violent change in the physical conditions of the Earth's surface; a cataclysm. *Standard*, 2

catch

a. Projection in a mine shaft that arrests a cage, skip, or other reciprocating system in the event of fracture or overwind. *Pryor*, 3 b. One of the catches or rests placed on shaft timbers, to hold the cage when it is brought to rest at the top, bottom, or any intermediate landing. See also: [chair](#); [dog](#); [wing](#); [rests](#). *Fay* c. In coal work, a device for holding trams in a cage when hoisting. See also: [jack catch](#) d. One of the stops fitted on a cage to prevent cars from running off. *Fay*

catcher

See: [core lifter](#)

catch gear

An appliance fixed in the headgear to limit the drop of a cage after an overwind. The upward speed and momentum of the loaded cage (after its release from the rope) may be such that its subsequent drop is so severe as to fracture the suspension gear, resulting in the cage falling down the shaft. The amount of drop is limited by the catch gear, which consists of a series of catches suspended from beams supported on hydropneumatic buffers to reduce the impact shock. The cage is released by raising it slightly and retracting the catches. See also: [detaching hook](#); [overwind](#). *Nelson*

catchment area

a. The recharge area and all areas that contribute water to it. *AGI* b. An area paved or otherwise waterproofed to provide a water supply for a storage reservoir. See also: [drainage basin](#) *AGI*

catch pit

a. In mineral processing, a sump in a mill to which the floor slopes gently, and into which all spillage gravitates or is hosed either for return by pumping to its place in the

flowline or for periodical removal. Also called catch sump. *Pryor*, 3 b. See: [sump](#); tailing pit.

catch point

a. One of a set of spring-loaded points in an upgrade railway line that close behind a rising train. If any rolling stock breaks away it is then automatically diverted to a siding. *Pryor*, 3 b. Position of intersection of a road cut or fell with natural ground; usually marked with a stake.

catch prop

Prop erected in the face to act as a temporary support until permanent supports are brought forward. Also called watch prop; safety prop. *Nelson*; *CTD*

catch scaffold

Eng. A platform in a shaft a few feet beneath a working scaffold; to be used in case of accident.

catchwater drain

A surface drain to intercept and collect the flow of water from adjoining land, so as to prevent it from reaching a road or mine sidings. See also: [subsoil drainage](#)

cat claw

A miner's term applied locally in Illinois to a bed of marcasite from 2 to 6 in (5.08 to 15.24 cm) thick that sometimes occurs between the "clod" roof of a coal seam and the more stratified shale above. The lower surface of the marcasite bed is characterized by very irregular protuberances extending downward 1 to 3 in (2.54 to 7.62 cm) into the clod. Also called cat. *AGI*

cat dirt

a. Derb. A hard fireclay. b. Derb. Coal mixed with pyrite.

catear

Sp. To search for new mines; to prospect. *Hess*

catenary suspension

The overhead suspension of contact wire for electric traction by vertical links of different lengths connected to a catenary wire above it. The contact wire will thus be maintained at a constant height. *Hammond*

caterpillar

An endless chain of plates that functions as a wheel for heavy vehicles. See also: [crawler track](#)

caterpillar chain

A short endless chain on which dogs or teeth are spaced to mesh with and move or be moved by a conveyor chain.

caterpillar chain dog

A dog or tooth attached to a "caterpillar chain" to provide the driving contact with the conveyor chain.

caterpillar drive

A drive equipped with a "caterpillar chain" that engages and propels the "conveyor chain."

catfaced block

In New York and Pennsylvania, a bluestone quarryman's term for a mass of waste situated between two closely spaced open joints.

cathead sheave

A sheave set on the topmost part of a pile frame. *Hammond*

cathode

The electrode where electrons enter, or current leaves, an operating system, such as a battery, an electrolytic cell, an X-ray tube, or a vacuum tube. In the first of these, the cathode is positive; in the other three, negative. In a battery or electrolytic cell, it is the electrode where reduction occurs. Opposite of anode. See also: [electrode](#) *ASM, 1*

cathode compartment

In an electrolytic cell, the enclosure formed by a diaphragm around the cathode. *ASM, 1*

cathode copper

Electrolytically refined copper that has been deposited on the cathode of an electrolytic bath of acidified copper sulfate solution. Such copper is usually remelted in a furnace before being marketed as electrolytic copper. *Camm*

cathode efficiency

Current efficiency at a cathode. *ASM, 1*

cathode film

The portion of a solution in immediate contact with the cathode during electrolysis. *ASM, 1*

cathodic corrosion

Corrosion of the cathodic member of a galvanic couple resulting from the flow of current.

cathole

A local term used in southern Michigan for a shallow boggy depression less than 1 acre (0.4 ha) in extent, esp. one formed by a glacier in a till plain. *AGI*

catholyte

The electrolyte adjacent to the cathode in an electrolytic cell. *ASM, 1*

cation

a. An ion having a positive charge. *Hurlbut* b. Any positive ion; named for its attraction to the cathode or negative terminal of an electrolytic cell. CF: [anion](#)

cation exchange

The displacement of a cation bound to a site on the surface of a solid, such as in silica-alumina clay-mineral packets, by a cation in solution. Syn: [base exchange](#)

cationic collector

In flotation, an amine or related organic compound capable of producing positively charged hydrocarbon-bearing ions (hence the name cationic collector) for the purpose of floating miscellaneous minerals, including silicates. *Gaudin, 2*

cationic detergent

A detergent in which the cation is the active part. *ASM, 1*

cationic reagent

In flotation, a surface-active substance that has the active constituent in the positive ion. Used to flocculate and to collect minerals that are not flocculated by the reagents, such as oleic acid or soaps, in which the surface-active ingredient is the negative ion. Reagents used are chiefly the quaternary ammonium compounds; e.g., cetyl trimethyl ammonium bromide. *CCD, 2*

catlinite

A hard red clay found in southwestern Minnesota, formerly used by the Dakota Native Americans for making tobacco pipes. Named after George Catlin (1796-1872), American painter. Syn: [pipestone](#)

catogene

Pertaining to sedimentary rocks, signifying that they were formed by deposition from above, as of suspended material. *AGI*

cat run

A low passage that requires crawling to traverse it. Syn: [crawlway](#) *AGI*

cat's-eye

a. Any gemstone that, when cut en cabochon, exhibits under a single strong point source of light a narrow, well-defined chatoyant band or streak that moves across the summit of the gemstone, shifts from side to side as it is turned, and resembles a slit pupil of the eye of a cat. Internal reflection of light from parallel inclusions of tiny fibrous crystals or from long parallel cavities or tubes causes the cat's-eye. *AGI* b. Alternate term for tiger's-eye, the silicified form of crocidolite asbestos; sometimes polished and used as ornaments. c. A greenish gem variety of chrysoberyl that exhibits chatoyancy. Syn: [cymophane](#); [oriental cat's-eye](#). d. A variety of minutely fibrous, grayish-green quartz (chalcedony) that exhibits an opalescent play of light. Syn: [occidental cat's-eye](#) e. A yellowish-brown silicified variety of crocidolite. CF: [tiger's-eye](#) The term used alone properly applies only to (c).

catskinner

Operator of a crawler tractor. *Nichols, 1*

Cattermole Process

An early flotation process (1903) based on adhesion of sulfide minerals to oil. Mineral oil or fatty acid agglomerated heavy minerals into floccules, which were separated by classification from overflowing gangue. *Pryor, 1*

catty

a. Any of various units of weight used in China and southeast Asia varying around 1-1/3 lb or 600 g; also, a Chinese unit according to a standard set up in 1929 equal to 1.1023 lb or 500 g. *Webster 3rd* b. A gold weight that equals 2.9818 troy pounds (1.1129 kg). *Fay*

catwalk

A pathway, usually of wood or metal, that gives access to parts of large machines. *Nichols, 1*

cawk

See: [cawk](#)

cauldron

An inclusive term for all volcanic subsidence structures regardless of shape or size, depth of erosion, or connection with the surface. The term thus includes cauldron subsidences, in the classical sense, and collapse calderas. See also: [caldera](#)

cauldron subsidence

The sinking of part of the roof of an intrusion within a closed system of peripheral faults into which magma has penetrated, often to form ring dikes. See also: [subsidence](#)

cauliflowering

The tendency of coal to swell and open out when heated, thus exposing a surface out of all proportion to the size of the original coal. See also: [swelling number](#)

caunche

In coal mining, removal of part of the roof or floor to increase the height of a roadway. Also spelled canch. *Pryor, 3*

caustic

Capable of destroying the texture of anything or eating away its substance by chemical action; burning; corrosive. *Webster 3rd*

caustic ammonia

Gaseous or dissolved ammonia. *Standard, 2*

caustic embrittlement

Effect on metal of immersion in caustic alkaline solutions. *Pryor, 3*

caustic soda

Sodium hydroxide, NaOH; deliquescent; a soapy feel; its solution in water is strongly alkaline. The molten caustic dissolves such materials as enamels, sand, or glass, which contain a high percentage of silica.

caustobiolite

A general name for a fossil combustible substance. Syn: [caustolith](#) *Tomkeieff*

caustobiolith

This term designates a rock with a fairly high content of organic carbon compounds or even pure carbon where the latter is, like the carbon compounds, of organic origin. *IHCP*

caustolith

A rock that has the property of combustibility (Grabau). It is usually of organic origin (e.g., coal and peat), but inorganic deposits (e.g., sulfur, asphalt, and graphite) also occur. See also: [caustobiolite](#) *AGI*

caustophytolith

A caustobiolith formed by the direct accumulation of vegetal matter; e.g., peat, lignite, and coal. *AGI*

cave

a. Fragmented rock materials, derived from the sidewalls of a borehole, that obstruct the hole or hinder drilling progress. b. To allow a mine roof to fall without retarding supports or waste packs. c. A falling in of the roof strata, sometimes extending to the surface and causing a depression therein. Also called cave-in. d. The partial or complete failure of borehole sidewalls or mine workings. *Long* e. Collapse of an unstable bank. *Nichols, 2* f. A natural cavity, recess, chamber, or series of chambers and galleries beneath the surface of the Earth, within a mountain, a ledge or rocks, etc.; sometimes a similar cavity artificially excavated. See also: [cavity](#)

caved stope

There are two distinct types of caved stopes. In the first, the ore is broken by caving induced by undercutting a block of ore. In the second, the ore itself is removed by excavating a series of horizontal or inclined slices, while the overlying capping is allowed to cave and fill the space occupied previously by the ore. The first type comprises the caving methods of mining, while the second comprises the top-slicing method.

cave hole

A depression at the surface, caused by a fall of the roof in a mine. *Fay*

cave-in

Collapse of the walls or roof of a mine excavation. *Pryor, 3*

cave-in-heave

The partial or complete collapse of the walls of a borehole. *Brantly, 1*

cave line

A linear area in by the last solid ground, in a longwall-type mine, where the roof or back caves behind the retreating excavation. *Federal Mine Safety*

cave marble

See: [cave onyx](#)

cave onyx

A compact banded deposit of calcite or aragonite found in caves, capable of taking a high polish and resembling true onyx in appearance. See also: [dripstone](#); [onyx marble](#); [travertine](#). Syn: [cave marble](#) *AGI*

caver

a. Eng. A thief who steals ore or coal at a mine. *Standard, 2* b. The officer appointed to guard a mine. *Standard, 2* c. A person whose hobby is exploring caves. Also called a spelunker. *Schieferdecker*

cavernous

Said of an area or geologic formation, such as limestone, that contains caverns, or caves.
Said of the texture of a volcanic rock that is coarsely porous or cellular. *AGI*

cavil

a. To draw lots at stated periods--by miners to determine the places in which they will work for the following period. *Fay* b. A type of heavy sledge with one blunt and one pointed end. Used for rough shaping stone at a quarry. *Crispin*

caving

a. A stoping method in which ore is broken by induced caving. This may be achieved by (1) block caving, including caving to main levels and caving to chutes or branched raises; or (2) sublevel caving. See also: [stope](#) b. In coal mining, the practice of encouraging the roof over the waste to collapse freely so that it fills the waste area, thereby avoiding the need to pack. In metal mining, caving implies the dropping of the overburden as part of the system of mining. See also: [block caving](#); [sublevel caving](#); top slicing. *Nelson* c. The failure and sloughing in of sidewalls of boreholes, mine workings, or excavations. *Long* d. Fall of rock underground. See also: [cavings](#)

caving by raising

See: [chute caving](#)

caving ground

Rock formations that will not stand in the walls of an underground opening without support, such as that offered by cementation, casing, or timber. *Long*

caving hole

A borehole in which fragments of the material making up the walls of the hole slough so much that the borehole cannot be kept open without the use of casing or cementation. *Long*

cavings

Fragments of borehole wall-rock material that fall into a borehole, sometimes blocking the hole, and which must be washed or drilled out before the borehole can be deepened. See also: [caving](#)

caving system

a. A method of mining in which the support of a great block of ore is removed, allowed to cave or fall, and in falling to be broken sufficiently to be handled; the overlying strata

subside as the ore is withdrawn. There are several varieties of the system. See also: [block caving](#); [fall](#); top slicing and cover caving; top slicing combined with ore caving. b. Longwall coal mining in which excavated space (gob) is left to collapse. See also: [sublevel](#)

caving the back

See: [block caving](#)

cavitation

The formation and instantaneous collapse of innumerable tiny voids or cavities within a liquid subjected to rapid and intense pressure changes. Cavitation produced by ultrasonic radiation is sometimes used to give violent localized agitation. That caused by severe turbulent flow often leads to cavitation damage. *ASM, 1*

cavitation noise

The noise produced in a liquid by the collapse of bubbles that have been created by cavitation. *Hy*

cavity

a. A natural underground opening or void, which may be small or large. See also: [cave](#); [vug](#). *Long* b. The bubble formed by a projectile at water entry. *Hy* c. A void in a bit caused by a bubble of gas entrapped in the matrix material during the manufacturing process. *Long*

cavity-filling deposit

A deposition of minerals in a cavity or rock opening. *Bateman, 2*

cawk

a. Eng. Sulfate of barium heavy spar. See also: [barite](#) b. Scot. Chalk; limestone. Also spelled cauk. *Fay*

caxas

Walls of a vein; chest. *Hess*

c axis

a. In crystallography, a symmetrically unique reference vector, oriented vertically by convention. In the monoclinic system, the second setting orients the c axis at the

nonorthogonal angle beta to the unique b axis, the diad. In the triclinic system, all axes are unique with the c axis designated by convention. CF: [a axis](#); [b axis](#). b. One of three orthogonal reference axes, a, b, and c that are used in structural geology. c. To help describe the geometry of a fabric that possesses monoclinic symmetry, the c axis lies in the unique symmetry plane at right angles to a prominent fabric plane; thus in many tectonites the c axis is normal to the schistosity. d. In a kinematic sense, to describe a deformation plan that possesses monoclinic symmetry, such as a progressive shear. Here the c axis lies in the unique symmetry plane and normal to the movement plane. In a progressive simple shear, the c axis lies normal to the shear plane. Syn: [c direction](#)

c direction

See: [c axis](#)

C-D principle

The convergence-divergence principle used in the Frenkel mixer. *Dodd*

Ceag Montlucon gas detector

This nonautomatic detector has the appearance of a mine official's electric hand lamp. It indicates on an illuminated scale percentages of methane from 0 to 3 in steps of 0.1. When a test for combustible gases is to be made, the projecting front piece is turned part of a revolution; this extinguishes the main light and lights up the illuminated scale. A sample of air is flushed into the detector by means of a small aspirator (or hand pump), the button switch at the side is operated, and the percentage of combustible gases, if any, is indicated on the illuminated scale. *Cooper*

cedarite

See: [chemawinite](#)

ceiling concentration

The concentration of an airborne substance that shall not be exceeded during any part of the working exposure. *ANSI*

celadonite

The mineral monoclinic $K(Mg,Fe)(Fe,Al)Si_4O_{10}(OH)_2$; mica group; soft; green or gray-green; earthy; generally occurs in cavities in basaltic rocks. Formerly called kmaite. Syn: [svitalskite](#) CF: [glauconite](#)

celestine

An orthorhombic mineral, $4[\text{SrSO}_4]$; barite group; disseminated through limestone and sandstone; a source of strontium. Also called celestite.

celestite

See: [celestine](#)

celite

A constituent of Portland cement clinkers. Also spelled celith. See also: [brown millerite](#)

cell

a. A compartment in a flotation machine. *Hess* b. A single element of an electric battery, either primary or secondary. *Crispin* c. Battery unit consisting of two electrodes separately contacting an electrolyte so that there is a potential difference between them. *Bennett* d. See: [galvanic cell](#); local cell.

cellar

Excavated area under a drill-derrick floor to provide headroom for casing and pipe connections required at the collar of a borehole, or to serve as a covered sump. See also: [cave](#)

cell feed

The material supplied to the cell in the electrolytic production of metals. *ASM, I*

cell texture

A network along grain boundaries, which may originate by segregation or exsolution. A similar texture may form by the replacement of organic forms, esp. cell walls, by ore minerals. *Schieferdecker*

cellular

Said of the texture of a rock (e.g., a cellular dolomite) characterized by openings or cavities, which may or may not be connected. Although there are no specific size limitations, the term is usually applied to cavities larger than pores and smaller than caverns. The syn. vesicular is preferred when describing igneous rocks. CF: [porous](#); [cavernous](#); vesicular. *AGI*

cellular cofferdam

A cofferdam, with a double wall, consisting of steel sheet piling arranged in intercepting rings about 50 ft (15 m) in diameter. The space between the lines of piling is filled with sand. *Hammond*

cellulose

A polymeric carbohydrate composed of glucose units, formula $(C_6 H_{10} O_5)_x$, making it the most abundant carbohydrate, and with lignin, an important constituent of plant materials, from which coal is formed. *AGI*

cellulose nitrate

See: [nitrocellulose](#)

celsian

A rare monoclinic mineral, $BaAl_2 Si_2 O_8$; feldspar group; the barium analog of anorthite; dimorphous with paracelsian.

Celsius

a. Designation of the degree on the International Practical Temperature Scale; also used for the name of the scale, as "Celsius Temperature Scale." Formerly (prior to 1948) called "Centigrade." The Celsius temperature scale is related to the International Kelvin Temperature Scale by the equation $T_C = T_K - 273.16$. *ASTM* b. Symbol, C. Graduated to a scale of 100; of or pertaining to such a scale. On the centigrade thermometer the freezing point of water is 0 degrees (C) and its boiling point is 100 degrees (C). If any degree on the centigrade scale, either above or below 0 degrees C, is multiplied by 1.8, the result will be, in either case, the number of degrees above or below 32 degrees F, or the freezing point of Fahrenheit. *Standard, 2*

cement

a. A manufactured gray powder which when mixed with water makes a plastic mass that will set or harden. It is combined with aggregate to make concrete. Nearly all of today's production is portland cement. See also: [cement rock](#) b. To place cement in a borehole to seal off caves or fissures or to fill cavities or caverns encountered in drilling. c. Mineral material, usually chemically precipitated, that occurs in the spaces among the individual grains of a consolidated sedimentary rock, thereby binding the grains together as a rigid, coherent mass; it may be derived from the sediment or its entrapped waters, or it may be brought in by solution from outside sources. The most common cements are silica (quartz, opal, chalcedony), carbonates (calcite, dolomite, siderite), and various iron oxides. Others include clay minerals, barite, gypsum, anhydrite, and pyrite. Detrital clay minerals and other fine clastic particles may also serve as cements. *AGI* d. A term used in gold-mining regions to describe various consolidated, fragmental aggregates, such as

breccia, conglomerate, and the like, that are auriferous. e. A finely divided metal obtained by precipitation. The word in this sense is generally used in combination, such as, cement copper, cement gold, or cement silver. *Standard, 2*

cementation

a. The diagenetic process by which coarse clastic sediments become lithified or consolidated into hard, compact rocks, usually through deposition or precipitation of minerals in the spaces among the individual grains of the sediment. It may occur simultaneously with sedimentation or at a later time. Cementation may occur by secondary enlargement. Syn: [agglutination](#) b. Filling cavities or plugging a drill hole with cement or other material to stop loss of water or entrance of unwanted liquids, gas, or fragmented rock materials. Also called dental work. c. The process by which loose sediments or sands are consolidated into hard rock by injection of chemical solutions, thin cement slurries, or self-hardening plastic. Also called cementing. *Long* d. The introduction of one or more elements into the outer portion of a metal object by means of diffusion at high temperature. *ASM, 1* e. The precipitation of a more noble metal from solution by the introduction of a less noble metal. f. Usually, the process of raising the carbon content of steel by heating in a carbonaceous medium. Generally, any process in which the surface of a metal is impregnated by another substance. Also called casehardening; carburization; carbonization. *CTD*

cementation sinking

A method of shaft sinking through water-bearing strata by injecting chemicals or liquid cement into the ground. A number of small-diameter boreholes are put down around the shaft--and about 80 ft (24 m) ahead of the shaft bottom--through which cement is forced by means of pumps. The cement, when set, seals the fissures and thus prevents water inflows during sinking. The method is most successful in strong fissured strata and least successful in loose alluvial deposits. See also: [grouting](#); precementation process. *Nelson*

cementation steel

Steel made by a process in which bars of wrought iron are packed into a sealed furnace together with charcoal. The resulting material is blister steel. Syn: [cement steel](#)

cementation water

Water containing dissolved copper or iron sulfates or other metal compounds. *Stoces*

cement clinker

Portland cement as it comes from the kiln.

cement copper

Copper precipitated by iron from copper sulfate in mine water. *Bateman, 2*

cement deposit

Cambrian conglomerate occupying supposedly old beaches or channels. It is gold-bearing in the Black Hills, SD.

cemented carbide

Generally, a mixture of powdered tungsten carbide and cobalt, subjected to pressure and heat to produce bit crowns, small plates, cubes, or cylinders of material having a much greater hardness than steel. Mixtures also may contain small amounts of titanium, columbium, or tantalum carbide. Cobalt may be replaced by powdered nickel. Also called sintered carbide. See also: [carbide insert](#); [sintered carbide](#). *Long*

cemented carbide tool

A tool made from pulverized carbides and fused into a hard tip for heavy-duty or high-speed cutting of metals. *Crispin*

cement gold

Gold precipitated in fine particles from solution by a more active metal. *Fay*

cement grout

A pumpable thin slurry consisting primarily of a mixture of cement, sand, and water; injected into rock formations through boreholes as a sealant. Also called grout; grouting; cement grouting. *Long*

cement gun

A mechanical device for the application of cement, in the form of gunite, to the walls or roofs of mine openings or building walls. Also called gunite gun. *Long*

cementite

a. Identical with cohenite, a meteoritic material. *Hey, 1* b. An orthorhombic FeC_3 that occurs as a phase in steel and changes composition in the presence of manganese or other carbide-forming metals. See: [cohenite](#)

cementitious

Having the property of or acting like cement, such as certain limestones and tuffs when used in the surfacing of roads. *AGI*

cement-modified soil

The addition of small quantities of cement (1% to 2%) to fine-grained soils to reduce the liquid limit, plasticity index, and water-absorption tendency. The effect of the cement is to bring individual soil particles into aggregations, thus artificially adjusting the grading of the soil. See also: [soil stabilization](#)

cement mortar

Made from four (or less) parts of sand, one of cement, and adequate water. *Nelson*

cement plug

Hardened cement material filling a portion of a borehole. *Long*

cement rock

a. Any rock that is capable of furnishing cement when properly treated. *Fay* b. Scot. Argillaceous limestone-magnesian. See also: [hydraulic limestone](#)

cement silver

Silver precipitated from solution, usually by copper. *Fay*

cement slurry

A pourable or pumpable mixture of water, cement, and fine sand-- having the consistency of a thick liquidlike heavy cream. *Long*

cement stabilization

The addition of cement to a soil, which acts as a binding agent and produces a weak form of concrete called soil cement. The quantity of cement to be added depends upon the type of soil. Cement can be used with most types of soil, providing the clay fraction is reasonably small and other specified impurities are not present. A small percentage of lime is usually added. With very poor soils, cement stabilization may be uneconomical or impracticable. See also: [soil stabilization](#) *Nelson*

cement steel

See: [cementation steel](#)

cement valve

A ball, flapper, or clack-type valve placed at the bottom of a string of casing, through which cement is pumped. When pumping ceases, the valve closes and prevents return of cement into the casing. *Long*

Cenozoic

An era of geologic time, from the beginning of the Tertiary period to the present. (Some authors do not include the Quaternary, considering it a separate era.) The Cenozoic is considered to have begun about 65 million years ago. Also spelled: Cainozoic; Kainozoic. *AGI*

center

A temporary timber framework upon which the masonry of an arch of reinforced masonry lintel is supported until it becomes self-supporting. See also: [centers](#)

center adjustment

In surveying, a system that allows accurate final centering of the theodolite above (or below) its station by sliding the whole instrument on its stand (tribrach). Important with short sights where small centering errors could introduce serious inaccuracy. *Pryor, 3*

center brick

A special, hollow, refractory shape used at the base of the guide tubes in the bottom pouring of molten steel. The center brick has a hole in its upper face, and this is connected via the hollow center of the brick to holes in the faces (often six in number). The center brick distributes molten steel from the trumpet assembly to the lines of runner bricks. It is also sometimes known as a crown brick or spider. *Dodd*

center constant

In air velocity determination, the ratio of the mean velocity to the velocity measured at the center. This ratio is found to be dependent upon the Reynolds number. See also: [Reynolds number](#)

center core method

A method of tunneling whereby the center is left to the last for excavation. *Sandstrom*

center country

Aust. The rock between the limbs of a saddle reef.

center drilling

Drilling a conical hole (pit) in one end of a workpiece. *ASM, 1*

centering of shaft

The fixing of the center spot of a proposed shaft at the site selected and the maintenance of the shaft sinking along this plumb line during its entire depth. See also: [plumbing](#)

center-latch elevator and links

See: [elevator](#)

centerline

a. A line marked on the roof of a mine roadway, or a plumbline, for controlling the direction in which the roadway is driven. b. In U.S. public land surveys, the line connecting opposite quarter-section or sixteenth-section corners. *AGI*

centerman

In anthracite and bituminous coal mining, one who locates the centerline of underground openings in a mine, such as entries, rooms, and haulageways, so that the miners can drive the openings in a straight line without calling the mine surveyor. *DOT*

center of gravity

a. The center of mass of a cut or a fill. *Nichols, 1* b. That point in a body or system of bodies through which the resultant attraction of gravity acts when the body or system is in any position; that point from which the body can be suspended or poised in equilibrium in any position. *AGI*

center of mass

a. The point that represents the mean position of the matter in a body. *Webster 3rd* b. The point in a body through which acts the resultant resisting force due to the body's inertia when it is accelerated. Coincident with the center of gravity. *CTD* c. In a cut or a fill, a cross section line that divides its bulk into halves. *Nichols, 1* d. Also called center of inertia.

center of shear

See: [torsional center](#)

center of symmetry

In crystallography, an element of symmetry such that, for each and every lattice point, asymmetric unit, or crystal plane, there is another equidistant in the opposite direction. It is represented by i or by 1 . Adj. centric or centrosymmetric. Syn: [inversion](#)

center of torsion

See: [torsional center](#)

center of twist

See: [torsional center](#)

center prop

Eng. A prop set temporarily under the center of a plank to support it before props are set at the ends of the plank. Syn: [middle prop](#) *SMRB*

centers

a. Framed supports, usually arch shaped, upon which are placed the lagging boards used, in building an arch, for supporting the roof of a tunnel. See also: [center](#) b. Linear distance between coal-mine entries or crosscuts.

center shot

A shot in the center of the face of a room or entry. Also called center cut. *Fay*

center spinning

A method of casting molten metal, in which the molds are spun and centrifugal force helps to fill them. *Pryor, 3*

center-trace time

One of two approaches used in plotting seismic reflection data on time cross sections. Center-trace times are the times picked on the two traces from the respective detector groups nearest the shot and on opposite sides. The average of the two times for each reflection is plotted at the shot-point position. The points thus plotted for adjacent shot points are connected by straight lines. CF: [trace-by-trace plotting](#)

centigrade

See: [Celsius](#)

centipoise

The one-hundredth part of a poise, an absolute unit of fluid viscosity. Viscosity of drill-mud fluid is sometimes expressed in centipoise or millipascal-second units. See also: [poise](#)

central breaker

A breaker where the coal from a number of mines in a district is prepared. Central breakers, representing the last word in mining technology, make it economical for operators to abandon many local breakers. *Korson*

centralizer

A device that lines up a drill steel or string between the mast and the hole. *Nichols, 1*

centrifugal brake

A safety device on a mine hoist drum that applies a brake if the drum speed exceeds the set limit. *Pryor, 3*

centrifugal casting

Casting molten metals in a rapidly revolving mold.

centrifugal clutch

Consists of a driving hub having one or more weighted sections fitted with friction lining on the outer radial surfaces that contact a driven hub having a flange covering that portion of the driving hub containing the radial elements. Upon starting, the radial elements of the driving hub have no appreciable drag, but upon accelerating to the operating speed the force produced by the centrifugal action increases rapidly as the square of the speed and the elements grip the driven element, thereby causing it to speed up to the required speed of the driving hub. *Pit and Quarry*

centrifugal discharge bucket elevator

A type of bucket elevator using centrifugal discharge elevator buckets suitably spaced to permit the free discharge of bulk materials. See also: [bucket elevator](#); [centrifugal discharge elevator bucket](#).

centrifugal discharge elevator bucket

A bucket designed to scoop material from the boot of an elevator and discharge by reason of the combined effect of centrifugal force and gravity.

centrifugal fan

a. A type of fan often used in mines and ventilation activities in which an impeller, generally consisting of numerous blades, discharges the air radially into an expanding scroll casing while imparting an increase in pressure to the air. *Hartman, 2* b. See: [radial-flow fan](#)

centrifugal filter

See: [filter](#)

centrifugal pump

a. A form of pump in which water is drawn through the eye of a rotating impeller and discharged from its periphery into a chamber containing a series of passages of gradually increasing cross section. The kinetic energy given to the water by its centrifugal discharge is thus largely converted to pressure energy. CF: [duplex pump](#) b. See: [turbine pump](#)

centrifugal replacement

Mineral replacement in which the host mineral is replaced from its center outward. CF: [centripetal replacement](#)

centrifugal separation

a. The separation of different particles by centrifugal action as used in cyclone separators and centrifuges. b. The use of centrifugal force to increase the apparent density of finely divided particles so as to accelerate their movement with respect to ambient fluid. *Pryor, 3* c. Accelerated settlement of finely divided particles from pulp, removal of moisture, or classification into relatively coarse and fine fractions by centrifuging. Performed on a laboratory scale in small batches and commercially in a hydrocyclone or centrifugal classifier. See also: [cyclone](#); [cyclone washer](#). *Pryor, 3*

centrifugal ventilation

A mine ventilation system in which the air is led through a shaft in the middle of the field into the mine and out again at the periphery of the mining field. *Stoces*

centrifuge

a. A centrifugal device for dewatering, usually conical or bowl-shaped, in which the containing surface is imperforated. The greater density of the solid particles causes them to collect preferentially in contact with the inside of the containing surface where they are discharged mechanically; the water usually overflows from a position nearer to the axis. *BS, 5* b. A rotating device for separating liquids of different specific gravities or for separating suspended colloidal particles, such as clay particles in an aqueous

suspension, according to particle-size fractions, by centrifugal force. Colloidal particles that cannot be deposited from suspension by gravity can be deposited by centrifugal force in a supercentrifuge. See also: [cyclone](#)

centrifuging

Dewatering of clean coal or refuse with the aid of centrifugal force. See also: [centrifugal separation](#)

centripetal drainage

Drainage more or less radially inward toward a center. *Stokes*

centripetal pump

A pump with a rotating mechanism that gathers a fluid at or near the circumference of radial tubes and discharges it at the axis. *Standard, 2*

centripetal replacement

Mineral replacement in which the host mineral is replaced from its periphery inward. CF: [centrifugal replacement](#)

centroclinal

Said of strata and structures that dip toward a common center. Ant: quaquaversal. CF: [periclinal](#)

centrocline

An equidimensional basin characteristic of cratonic areas, in which the strata dip to a central low point. The term is little used in the United States. CF: pericline. Ant. quaquaversal. See also: centroclinal. (AGI, 1987)

centrosphere

See: [barysphere](#); core of the Earth.

centrosymmetrical

Having a center of symmetry. Centrosymmetric crystal structures cannot exhibit pyroelectricity or piezoelectricity.

ceramet

Substance formed of a mixture of metal and ceramic, to give the requisite conductivity to the latter. *CTD*

ceramic

a. As a singular or plural noun, any of a class of inorganic, nonmetallic products that are subjected to a high temperature during manufacture or use. *ACSG, 2* b. As an adj., of or pertaining to (1) ceramic--that is, inorganic or nonmetallic as opposed to organic or metallic; (2) products manufactured from inorganic nonmetallic substances, which are subjected to a high temperature during manufacture or use; (3) the manufacture or use of such articles or materials, such as ceramic process or ceramic science. *ACSG, 2*

ceramic cone

See: [pyrometric cone](#)

cerargyrite

A former name for chlorargyrite, AgCl. Also spelled kerargyrite.

cerhomilite

Borosilicate of calcium, beryllium, iron, thorium, and rare earths. *Hey, 1*

cerianite

An isometric mineral (Ce,Th)O₂ ; forms minute greenish-yellow grains; named for its relationship to thorianite and uraninite.

cerite

A trigonal mineral, (Ce,Ca)₁₀ (SiO₄)₆ (OH,F)₅; generally brown, massive.

cerium

One of the most abundant of the rare earth metals. Symbol, Ce. The minerals monazite and bastnasite are presently its two most important sources. It is used in the manufacture of pyrophoric alloy. The oxide is a constituent of incandescent gas mantles and is emerging as a catalyst in self-cleaning ovens. The sulfate is used as an oxidizing agent in quantitative analysis. Other cerium compounds are used in the manufacture of glass, as a polishing agent, and in carbon-arc lighting, petroleum refining, and metallurgical and nuclear applications. *Handbook of Chemistry and Physics, 3*

cermet

A material or body consisting of ceramic particles bonded with a metal. According to the American Society for Testing and Materials, the ceramic phase must be present in 15% or more of the body. A ceramic foam or porous ceramic is not a cermet because the bonding of the ceramic structure is not dependent on or due to the metal. *Hunt*

cerolite

See: [kerolite](#)

cerro

A term used in the Southwestern United States for a hill, esp. a craggy or rocky eminence of moderate height. Etymol: Spanish. *AGI*

certified

a. A certified employee is one who has been granted a State certificate of competency for a given job. *BCI* b. Evaluated and listed as permissible by the National Institute for Occupational Safety and Health or the Mine Safety and Health Administration. *ANSI*

Certified Blaster

A blaster certified by a government agency to prepare, execute, and supervise blasting. *Atlas*

cerulene

a. A trade name for a form of calcium carbonate colored green and blue by malachite or azurite, and used as a gemstone. From Bimbowrie, south Australia. *English* b. A term used less correctly for a blue variety of satin spar.

ceruleofibrite

A former name for connellite. Also spelled caeruleofibrite.

cerussite

An orthorhombic mineral, $4[\text{PbCO}_3]$; aragonite group; adamantine; sp gr, 6.55; in oxidized and carbonated parts of lead-ore veins; a source of lead. Syn: [white ore](#); [white lead ore](#); [lead carbonate](#); [lead spar](#).

cervantite

An orthorhombic mineral, $\text{Sb}^{3+} \text{Sb}^5 \text{O}_4$; may be confused with stibiconite.

cesium

A silvery white, soft and ductile alkaline element, of the rare-earth metals. Symbol, Cs. Occurs in lepidolite and pollucite. Reacts explosively with cold water. Because of its great affinity for oxygen, the metal is used as a "getter" in electron tubes and as a catalyst in the hydrogenation of certain organic compounds; it has recently found application in ion propulsion systems. *Handbook of Chemistry and Physics, 3*

cetane number

An indication of diesel fuel ignition quality. The cetane number of a fuel is the percentage by volume of cetane in a mixture of cetane and alpha-methylnaphthalene, which matches the unknown fuel in ignition quality. American diesel oil usually ranges from 30 to 60 cetane. *Nichols, 1*

ceylanite

Original spelling of ceylonite. See also: [ceylonite](#)

Ceylonese peridot

The trade name for a yellowish-green variety of tourmaline, approaching olivine in color; used as a semiprecious gemstone. Syn: [peridot of Ceylon](#)

ceylonite

A dark-green, brown, or black variety of spinel containing iron. Syn: [pleonaste](#); [candite](#); [ceylanite](#); [zeylanite](#).

C-frame

An angling bulldozer lift and push frame. *Nichols, 1*

chabazite

A trigonal mineral, $1[\text{Ca}_2(\text{Al}_4\text{Si}_8\text{O}_{24}) \cdot 13\text{H}_2\text{O}]$; zeolite group; pseudocubic cleavage; occurs in cavities in basalts and hydrothermal veins and as alteration of silicic vitreous tuffs in alkaline saline lake deposits.

chadacryst

See: [xenocryst](#)

chain

a. A measuring instrument that consists of 100 links joined together by rings and is used in surveying. See also: [Gunter's chain](#) *Webster 3rd* b. A unit of length prescribed by law for the survey of U.S. public lands and equal to 66 ft (20.12 m) or 4 rods. It is a convenient length for land measurement because 10 square chains equal 1 acre (0.4 ha). *AGI*

chain block

A combination of sheaves over which chains are arranged in the same manner as the rope in a block and tackle. Also called chain hoist. *Long*

chain brow way

An underground inclined plane worked by an endless chain.

chain bucket dredger

A dredger with a bucket ladder. *Hammond*

chain bucket loader

A mobile loader that uses a series of small buckets on a roller chain to elevate spoil to the dumping point. Also called bucket loader. *Nichols, 1*

chain casing

See: [chain guard](#)

chain coal cutter

A coal cutter that cuts a groove in the coal by an endless chain traveling around a flat plate called a jib. The chain consists of a number of pick boxes. Each box holds a cutter pick fastened into the box by a set screw or similar device. The coal cutter pulls itself along the face by means of a rope at a speed ranging from 7 in/min (17.8 cm/min) to 5 ft/min (1.5 m/min) or more. The chain travels around the jib at a speed ranging from 320 to 650 ft/min (97.6 to 198.2 m/min). The cut in the coal ranges from 3-1/2 to 7-1/2 in (8.9 to 19.1 cm) high and up to 8-1/2 ft (2.59 m) in length. See also: [coal-cutter pick](#)

chain conveyor

a. A conveyor comprising one or two endless linked chains with crossbars or flights at intervals to move the coal or mineral. The loaded side of the conveyor runs in a metal trough, while the empty side returns along guides underneath. The material is transported on the conveyor partly by riding on the chain and flights and partly by being scraped along in the trough. The chain conveyor is widely used in coal mines, and capacities

range up to 100 st/h (90.7 t/h) with lengths of about 100 yd (91 m). See also: [armored flexible conveyor](#) b. See: [drag-chain conveyor](#)

chain driller

See: [chain-machine operator](#)

chain-driven belt

A conveyor similar in design to those driven by ropes, the essential difference being that the tension is taken by chains, either under or alongside the carrying belt. *Nelson*

chain elevator

See: [bucket elevator](#)

chain feeder

See: [conveyor-type feeder](#)

chain-feeder operator

See: [mill feeder](#)

chain guard

An open guard of sheet metal, expanded metal, or similar construction around a chain drive. *Jackson, 1*

chain hoist

a. A block and tackle in which chain is used instead of rope. *Crispin* b. See: [chain block](#)

chain lacing

The arrangement of block positions in a cutter chain so that bits inserted in these blocks will occupy certain positions while cutting. *Jones, 1*

chain machine

Coal-cutting machine that cuts coal with a series of steel bits set in an endless chain moved continuously in one direction either by an electric or a compressed-air motor. These machines may be divided into four classes, known as breast machines, shortwall machines, longwall machines, and overcutting machines. *Kiser*

chain-machine operator

In bituminous coal mining, one who operates a chain-driven machine to undercut coal preparatory to blasting it loose from the working face with explosives. Also called chain driller. *DOT*

chain pillar

A pillar left to protect the gangway and airway, and extending parallel to these passages.

chain pitch

For a roller chain, the distance in inches between the centers of adjacent joint members. For a silent chain, the distance in inches between the centers of the holes in a link plate. *Jackson, 1*

chain road

Main underground haulage road through which tubs are hauled by an endless chain. *Pryor, 3*

chain-selvage belt

A belt in which the carrying section may be made up of rubber or fabric, woven metal, or other material and along each edge of which is fastened an endless chain with a suitable attachment. The chains carry the driving tension. The center part functions only as a loading supporting medium.

chain silicate

Silicate mineral with silica tetrahedra linked by shared oxygens into infinite one-dimensional chains. Single chains characterize pyroxenes; double chains characterize amphiboles; and wider chains grade toward sheet structures.

chain structure

A structure or texture found in a number of chromite occurrences, consisting of a series of connected chromite crystals somewhat resembling a chain. *Schieferdecker*

chain surveying

The simplest method of surveying, which has the advantage that the equipment required is inexpensive and hard wearing. It is the ideal method for small areas and has been employed successfully for large surveys. Nevertheless, it has definite limitations when applied to surveys of enclosed or built-up areas. *Mason*

chain takeup

An idler sprocket, or similar device, mounted on an adjustable bracket to adjust the slack in a chain drive. See: [takeup](#)

chain tension

The actual force existing at any point in a conveyor chain.

chain-type conveyor

A conveyor using a driven endless chain or chains, equipped with flights that operate in a trough and move material along the trough.

chainwall

a. A method of mining coal in which the roof is supported by pillars of coal between which the coal is mined away. *Standard, 2* b. Scot. A system of working by means of wide rooms and long, narrow pillars, sometimes called "room and rance." c. Scot. A long, narrow strip of mineral left unworked; e.g., along the low side of a level.

chain width

For a roller chain, the distance between the link plates of a roller link. This is not the overall width of the chain. For a silent chain, the width over the working-link plates of the chain, exclusive of pinheads, washers, or other fastening devices. *Jackson, 1*

chair

a. Movable support for a cage, arranged to hold it at the landing when desired. See also: [catch](#); [dog](#); [rests](#). *Fay* b. Projection that can be set into a guide so that the skip or cage descending in the mine shaft is brought to rest at the correct level. *Pryor, 3* c. A cast-iron support bolted to a timber or concrete railway sleeper used to hold a bullhead rail in position. *Hammond*

chalcantite

a. A triclinic mineral $2[\text{CuSO}_4 \cdot 5\text{H}_2\text{O}]$; azure blue; metallic taste; occurs in the oxidized supergene zone above copper sulfides in arid regions; a minor ore of copper. Syn: [blue vitriol](#); copper sulfate; copper chalcantite; copper vitriol; bluestone; cyanosite. b. The mineral group chalcantite, jokokuite, pentahydrate, and siderotil.

chalcedonite

Fibrous quartz with a negative elongation. See also: [chalcedony](#) *Hess*

chalcedony

a. A fine-grained or cryptocrystalline variety of quartz; commonly microscopically fibrous; translucent or semitransparent, with a nearly waxlike luster; has lower density and indices of refraction than ordinary quartz. Chalcedony is the material of much chert, flint, and jasper; commonly an aqueous deposit filling or lining cavities in rocks. In the gem trade, the name refers specif. to the light blue-gray or common variety of chalcedony. Varieties include carnelian, sard, chrysoprase, prase, plasma, bloodstone, onyx, and sardonyx. See also: [agate](#) Syn: calcedony, chalcedonite; [white agate](#). b. A general name for crystalline silica that forms concretionary masses with radial-fibrous and concentric structure and that is optically negative (unlike true quartz). c. A trade name for a natural blue onyx.

chalchuite

A blue or green variety of turquoise.

chalco-

(prefix) A combining form meaning copper.

chalcoalumite

A monoclinic mineral, $\text{CuAl}_4(\text{SO}_4)(\text{OH})_{12} \cdot 3\text{H}_2\text{O}$.

chalcocite

A monoclinic mineral, $96[\text{Cu}_2\text{S}]$; pseudohexagonal, metallic gray-black with blue to green tarnish; sp gr, 5.5 to 5.8; a secondary vein mineral; an important source of copper. Syn: [redruthite](#); [copper glance](#); chalcosine; beta chalcocite; vitreous copper; vitreous copper ore.

chalcocyanite

An orthorhombic mineral, CuSO_4 ; white; it becomes blue upon hydration, thus formerly called hydrocyanite.

chalcodite

See: [stilpnomelane](#)

chalcogene

Said of ore deposits, such as those of copper, connected with a phase of mountain building and plutonism.

chalcolite

See: [torbernite](#)

chalcomenite

An orthorhombic mineral, $\text{CuSeO}_3 \cdot 2\text{H}_2\text{O}$; dimorphous with clinochalcomenite.

chalcomiklite

See: [bornite](#)

chalcophanite

A trigonal mineral, $(\text{Zn,Fe,Mn})\text{Mn}_4\text{O}_7 \cdot 3\text{H}_2\text{O}$. Formerly called hydrofranklinite.

chalcophile

Said of an element tending to concentrate in sulfide minerals and ores. Such elements have intermediate electrode potentials and are soluble in iron monosulfide. Examples are S, Se, As, Fe, Pb, Zn, Cd, Cu, and Ag. CF: [lithophile](#)

chalcophyllite

A trigonal mineral, $\text{Cu}_{18}\text{Al}_2(\text{AsO}_4)_3(\text{SO}_4)_3(\text{OH})_{27} \cdot 33\text{H}_2\text{O}$; green; forms tabular crystals and foliated masses.

chalcopyrite

a. A tetragonal mineral, CuFeS_2 ; brass-yellow with bluish tarnish; massive; softer than pyrite; occurs in late magmatic hydrothermal veins and secondary enrichment zones; the most important source of copper. Syn: [copper pyrite](#); [cupriferous pyrite](#); [yellow copper ore](#); [yellow ore](#); yellow pyrite; yellow copper. b. The mineral group chalcopyrite, eskebornite, gallite, and roquesite.

chalcopyrrhotite

A former name for cubanite.

chalcosiderite

A triclinic mineral, $\text{CuFe}_6(\text{PO}_4)_4(\text{OH})_8 \cdot 4\text{H}_2\text{O}$; turquoise group; occurs in sheaflike crystalline incrustations; forms a series with turquoise.

chalcosine

See: [chalcocite](#)

chalcostibite

A lead-gray copper-antimony sulfide, CuSbS_2 . Also called wolfsbergite. Syn: [rosite](#); [antimonial copper](#). *Fay*

chalcotrichite

A capillary variety of cuprite in fine, slender interlacing fibrous crystals. Syn: [cuprite](#); [plush copper ore](#); [hair copper](#).

chalk

A soft, earthy, fine-textured, usually white to light-gray or buff limestone of marine origin. It consists almost wholly (90% to 99%) of calcite, formed mainly by shallow-water accumulation of calcareous remains of floating microorganisms (chiefly foraminifers) and of comminuted remains of calcareous algae, set in a structureless matrix of very finely crystalline calcite. The rock is porous, somewhat friable, and only slightly coherent. *AGI*

chalk rock

Any soft, milky-colored rock resembling white chalk, such as talc, calcareous tufa, diatomaceous shale, volcanic tuff, or white limestone. *AGI*

chalky chert

A commonly dull or earthy, soft to hard, sometimes finely porous chert of essentially uniform composition, having an uneven or rough fracture surface, and resembling chalk. Syn: [dead chert](#) Obsolete syn: cotton chert. CF: [granular chert](#)

challenge feeder

Ore feeder used with stamp batteries to regulate the rate of entry of ore to a mortar box. A horizontal plate is turned by linkages operated when the central stamp falls below a prefixed point; it then draws ore from feeding bin. *Pryor, 3*

chalmersite

A former name for cubanite.

chalybite

See: [siderite](#)

chamber

a. A miner's working place, sometimes referred to as a room or breast. *Hudson* b. A large irregular or rounded body of ore, occurring alone or as an expansion of a vein. c. A body of ore with definite boundaries, apparently filling a preexisting cavern. d. A powder-storage room in a mine. e. To enlarge the bottom of a drill hole by the use of explosives, so that a sufficient blasting charge may be loaded for the final shot. Syn: [spring](#) f. A space or gallery excavated in a quarry or underground mine to receive a large explosive charge. See also: [heading blast](#)

chamber-and-pillar

See: [breast-and-pillar](#)

chamber-and-pillar system

A modification of sublevel stoping by which a series of sublevels are successively caved. See also: [sublevel stoping](#)

chamber blast

A large-scale blast in which explosives in bulk are placed in excavated subterranean chambers. Also called coyote blast; gopher-hole blast. *Webster 2nd*

chambered lode

A portion of the wall of a lode that is fissured and filled with ore. See also: [chamber](#)

chambered vein

a. A vein in which the walls, particularly the hanging wall, are irregular and brecciated, owing to the formation of the vein under low pressure at shallow depth. See also: [chambered lode](#) b. Stockwork.

chambering

a. The process of enlarging a portion of a blast hole (usually the bottom) by firing a series of small explosive charges. It can also be done by mechanical or thermal methods. b. The enlarging of the bottom of a quarry blasting hole by the repeated firing of small explosive charges. The enlarged hole or chamber is then loaded with the proper explosive charge, stemmed, and fired to break down the quarry face. See also: [concentrated charge](#) c. A borehole in which portions of the sidewalls are breaking away and forming cavities or small chambers. *Long*

chambersite

An orthorhombic mineral, $Mn_3 B_7 O_{13} Cl$; the manganese analogue of boracite; occurs in brines.

chambers without filling

See: [sublevel stoping](#)

chameleonite

A rare variety of tourmaline, olive green in daylight, changing to brownish-red in most artificial light. Syn: [alexandritelike tourmaline](#)

chamfer

To bevel or slope an edge or corner. Also spelled chanfer.

chamoisite

See: [chamosite](#)

chamosite

A monoclinic mineral, $2[(Fe^{2+}, Mg, Fe^{3+})_5 Al(Si_3 Al)O_{10}(OH, O)_8]$; chlorite group; a constituent of oolitic iron ores and sedimentary ironstones. Also spelled chamoisite.

chamotte

The refractory portion of a mixture used in the manufacture of firebrick, composed of calcined clay or of reground bricks. *Standard, 2*

Champlain forge

A forge for the direct production of wrought iron, generally used in the United States instead of the Catalan forge, from which it differs in using only finely crushed ore and in working continuously. Syn: [American forge](#)

chance

a. In coal mining, the opportunity a shot has to break the coal. *Fay* b. The opportunity to put in a shot in a good position. *Fay*

Chance cone

See: [cone classifier](#)

Chance sand-flotation process

A dense-media process in which coal is separated from refuse in an artificial dense medium of sand suspended in water. The specific gravity of this medium is such that the merchantable coal floats while the refuse sinks to the bottom, the separation being analogous to that of a float-and-sink separation with a heavy liquidlike zinc chloride. Named after Thomas M. Chance, U.S. mining engineer. *Mitchell*

changehouse

A special building at a mine where workers may wash themselves or change from street to work clothes and vice versa. Also called changing house; dry; dryhouse. CF: [doghouse](#)

changing bronze

The process of changing tuyeres, plates, monkey, etc., at blast furnaces. *Fay*

changing house

See: [changehouse](#)

changkol

Malay. A heavy Chinese hoe with an eye in which the handle fits; used in cutting soft rock and earth and for stirring gravel in sluice boxes, etc. *Hess*

channeler

a. A powerful quarrying machine capable of cutting slots in stone at any angle. It is used for cutting dimension stone off the quarry face without explosives. See also: [broaching](#) *Nelson* b. A machine that cuts a deep groove in rock, ordinarily to free dimension stone from the mass, or to make a smooth side for a canal or other excavation in rock. Cutting is accomplished by a group of reciprocating chisel-pointed bars, operated by steam or compressed air while the machine carrying them travels back and forth on a track. Ordinarily used only in the softer rocks, such as limestone, soapstone, or slate. Also called track channeler; bar channeler. *Hess*

channeling

a. In ion-exchange, fixed-bed work, development of passages in a resin column through which the liquors flow preferentially so that the resin is unequally loaded. *Pryor, 3* b. In cyanide sand leaching, cracks in the sand bed through which cyanide solution runs without proper percolating contact with a mass of particles. *Pryor, 3* c. The action of a blast furnace in opening up irregular openings for the blast.

channeling machine

See: [channeler](#)

channeling-machine operator

a. In bituminous coal mining, one who operates a coal-cutting machine to cut channels (a few inches wide) in coal, after the overlying ground has been removed, to partly detach coal in blocks so that it may be broken loose more easily by blasting. Also called channeler-machine operator; channel-machine operator. *DOT* b. In the quarry industry, one who sets up and operates a track-mounted machine that cuts (drills) vertical channels (a few inches wide) in quarystone in which wedges are driven to crack off a block from the mass. Also called channeler-machine operator; channeler runner; channel-machine operator; channel-machine runner. *DOT*

channel man

In ore dressing, smelting, and refining, one who installs new channel irons to form a supporting framework for a continuous anode. *DOT*

channel sample

Material from a level groove cut across an ore exposure to obtain a true cross section of it. Syn: [groove sample](#); [strip sample](#). *Pryor, 3*

channel sampling

See: [trench sampling](#)

channel sand

A sand or a sandstone deposited in a stream bed, or some other channel eroded into the underlying rock; it frequently contains oil, gold, or other valuable minerals.

channel slide rail

One of a pair of rails used in a method of temporary rail-track advance at a tunnel face. The rails comprise a pair of specially made channels with ramp ends. They fit over the rail section in use and are pushed forward periodically as a power loader clears the rock ahead. The permanent track is extended as space becomes available. *Nelson*

channel terrace

A contour ridge, built of soil moved from its uphill side, that serves to divert surface water from a field. *Nichols, 1*

channelway

An opening or passage in a rock through which mineral-bearing solutions or gases may move. *AGI*

chap

a. Scot. A customary and rough mode of judging, by sound, of the thickness of coal between two working places, by knocking with a hammer on the solid coal. *Fay* b. To examine the face of the coal, etc., for the sake of safety, by knocking on it lightly. *Fay* c. Scot. A blow, rap, knock, or stroke. See also: [chapping](#); [sounding](#). *Webster 3rd*

chapeau de fer

A French term for gossan or iron hat.

chapelet

a. A machine for raising water, or for dredging, by buckets of an endless chain passing between two rotating sprocket wheels. *Standard, 2* b. A chain pump having buttons or disks at intervals along its chain; paternoster pump. *Standard, 2* c. A device for holding the end of heavy work, such as a cannon, in a turning lathe. *Standard, 2*

Chapman-Jouget plane

In a detonating explosive column, the plane that defines the rear boundary of the primary reaction zone. The plane is the point within the reaction at which all thermodynamic properties of temperature, pressure, energy, gas, volume, and density are measured and calculated. Syn: [C-J plane](#)

Chapman process

A method of gold recovery in which cyanidation dissolves the metal from an ore pulp and the aurocyanide is simultaneously absorbed by activated carbon. This last is then retrieved by froth flotation. *Pryor, 1*

Chapman shield

A pair of vertical plates of sheet iron or steel arranged with a ladle between them, which can be moved longitudinally along the front of a furnace; it is mainly used to protect laborers from furnace heat. *Fay*

chapping

Rough guess of distance separating two approaching drives underground made by knocking with a heavy hammer. See also: [chap](#)

chapra

A term used in Bihar, India, for a kind of hoe used in mines for scraping waste debris into pans for carrying or loading cars. *Hess*

char

The solid carbonaceous residue that results from incomplete combustion of organic material. It can be burned for heat, or, if pure, processed for production of activated carbon for use as a filtering medium. See also: [coke](#)

characteristic ash curve

The curve obtained from the results of a float-and-sink analysis showing, for any yield of floats (sinks), the ash content of the highest density (lowest density) fraction passing into these floats (sinks), the yield being plotted on the ordinate and the ash content on the abscissa. *BS, 5*

characteristic curve

In general, a curve that defines one or more of the characteristics or properties of a piece of machinery, such as a fan, pump, motor, etc. See also: [mine-ventilation fan characteristics](#)

characteristic impedance

a. Of an explosive, the amount of energy transferred to a given rock is a linear function of the product of density and rate of detonation. *Leet, 2* b. For rock, density times velocity of longitudinal waves in the rock. *Leet, 2*

characteristic radiation

High-intensity, single-wavelength X-rays, characteristic of the element emitting the rays, that appear in addition to the continuous white radiation whenever the voltage of an X-ray tube is increased beyond a critical value. *ASM, 1*

characterizing accessory mineral

See: [varietal mineral](#)

charcoal blacking

Charcoal used in pulverized form as dry blacking or in suspension with clay as a black wash; either dusted or coated on the surface of molds to improve the surface. *Osborne*

charcoal iron

Sulfur-free pig iron made in a charcoal furnace; it has higher quality, higher density, and closer structure than other iron. *Bennett*

charcoal tinfoil

Tinfoil with a relatively heavy coating of tin (higher than the coke tinfoil grades). *Bennett*

charge

a. The liquid and solid materials fed into a furnace for its operation or prepared for further processing. *ASM, 1* b. The explosive loaded into a borehole for blasting; also, any unit of an explosive, such as a charge of nitroglycerin or a charge of detonating composition in a blasting cap. *Fay* c. To put an explosive into a hole, to arrange the fuse or squib, and to tamp it. CF: [load](#)

charged hole

Hole to be blasted that contains explosive material and a detonator; for blasting operations under the jurisdiction of the Mine Safety and Health Administration (MSHA), charged holes must be detonated within 72 h of charging unless prior approval has been obtained from MSHA (CFR 30, 1988 - 56.6094).

charge limit

For an explosion, the maximum weight of charge that can be fired without causing an ignition in gallery tests. *McAdam, 2*

chargeman

a. A stallman. *Nelson* b. A laborer who moves a mixture of concentrate, slag, and fluxing ingredients through a hopper into charge pipes opening into a reverberatory furnace where smelting takes place, using an air-pressure hose. Also called feeder. *DOT*

charger

a. A remotely controlled device for moving single wagons at a mine surface over a short distance. The device runs on a narrow-gauge track alongside the main rails and uses a pair of roller arms, which extend to engage on either side of a wagon wheel. Propelled by a guided chain engaging a power-drive chain wheel, the charger can position a wagon

exactly where required. *Nelson* b. In the iron and steel industry, one who loads steel ingots into a furnace for heating, withdraws white-hot ingots from the furnace, and positions them on the bed of a mill for rolling, using a traveling electric charging machine. *DOT* c. See: [lidman](#)

charge weigher

In ore dressing, smelting, and refining, one who weighs out specified amounts of coke, limestone, and copper-bearing scrap materials to make furnace charges for recovery of copper from plant refuse. *DOT*

charging

a. The loading of a borehole with explosives. *Fay* b. The arranging of a fuse or squib, and the tamping of the hole with stemming material. *Jones, I* c. Feeding raw material into an apparatus, such as a furnace, for treatment or conversion. *Bennett*

charging box

A box in which ore, scrap, pig iron, fluxes, etc., are conveyed to a furnace by means of a charging machine. *Fay*

charging machine

A machine for delivering coal, ore, or metals to a furnace, gas retort, coke oven, or other reactor. *Fay*

charging peel

A long arm or extension attached to a charging machine for conveying and dumping scrap into an open-hearth furnace. *Mersereau, 2*

charging person

A laborer who charges an electric-arc furnace with metals, alloys, and other materials. Also called furnace feeder. See also: [furnace charger](#) *DOT*

charging rack

A device used for holding batteries for mining lamps and for connecting them to a power supply while the batteries are being recharged.

charging scale

A scale for weighing the various materials used in a blast furnace. *Fay*

chark

a. To burn to charcoal or coke. *Webster 3rd* b. Charcoal; coke; cinder. *Webster 3rd*

charred peat

Peat artificially dried at a temperature that causes partial decomposition. *Bennett*

chart

A base map conveying information about something other than the purely geographic; also, a special-purpose map; esp. one designed for purposes of navigation, such as a hydrographic chart or a bathymetric chart. *AGI*

chart datum

The plane to which soundings on a chart are referred, usually low water. *Hy*

chaser

An edge wheel revolving in a trough for crushing asbestos mineral, without destroying the fiber, and for fine crushing of ore.

chaser mill

a. This type of mill usually consists of a cylindrical steel tank that is lined with wooden blocks laid with the end grain up. The rollers are usually wooden--with a speed of 15 to 30 rpm. b. Occasionally synonymous with an edge-runner mill. *Dodd*

chasing

Following a vein by its range or direction.

chasing the vein

Derb. Following a vein along the surface by means of cast holes or prospect pits.

chasm

A yawning hollow or rent, as in the Earth's surface; any wide and deep gap; a cleft; fissure. See also: [abyss](#)

chasovrite

A variety of clay mineral (glinite) from the Chasovyar deposit in the Ukraine. *Spencer, 6*

chat

The finely crushed gangue remaining after the extraction of lead and zinc minerals in the Tri-State District of Missouri, Kansas, and Oklahoma. The term is derived from chert.

See also: [chats](#)

chatoyance

See: [chatoyancy](#)

chatoyancy

An optical phenomenon, possessed by certain minerals in reflected light, in which a movable wavy or silky sheen is concentrated in a narrow band of light that changes its position as a mineral is turned. It results from the reflection of light from minute, parallel fibers, cavities or tubes, or needlelike inclusions within the mineral. The effect may be seen on a cabochon-cut gemstone, either distinct and well defined (such as the narrow, light-colored streak in a fine chrysoberyl cat's-eye) or less distinct (such as in the usual tourmaline or beryl cat's-eye). Syn: [chatoyance](#)

chatoyant

a. Having a luster resembling the changing luster of the eye of a cat as seen at night. See also: [cat's-eye](#) b. adj. Said of a mineral or gemstone possessing chatoyancy or having a changeable luster or color marked by a narrow band of light. c. A chatoyant gem.

chatroller

An ore-crushing machine, consisting of a pair of cast-iron rollers, for grinding roasted ore. *Fay*

chats

a. Northumb. Small pieces of stone with ore. *Fay* b. Eng. A low grade of lead ore. Also, middlings that are to be crushed and subjected to further treatment. The mineral and rocks mixed together that must be crushed and cleaned before being sold as mineral. Chats are not the same as tailings, as the latter are not thrown aside to keep for future milling. *Fay* c. See: [chat](#) d. Eng. Bowse when broken up on the knockstone ready for the hotchin tubs; Yorkshire lead mines. *Arkell* e. A quarrying term for cherty rock used as an abrasive.

chatter

a. Rapid vibrations caused by overfeeding a bit and/or by drill rods rubbing against the sidewalls of a borehole. *Long* b. In grinding, a vibration of the tool, wheel, or workpiece

producing a wavy surface on the work. *ASM, 1* c. The finish produced by such vibrations during grinding. *ASM, 1*

chattermark

A spiral or flutelike, round-topped ridge, sometimes seen on the outside surface of a drill core. *Long*

check

- a. Applied to slit canvas or brattice cloth placed across a passage to prevent the flow of air while still permitting the passage of personnel and equipment. See also: [check curtain](#)
- b. A brass disk with a miner's lamp number punched on it that a person exchanges for a lamp at the lamp room every time the person enters or leaves the mine. *Nelson*

check battery

A battery to close the lower part of a chute acting as a check to the flow of coal, and as a stopping to keep air in the breasts.

check board

A board usually posted at the entrance to a mine or to a section of a mine on which (1) miners hang their identification checks to show whether they are in or out, or (2) the miners' loading checks are hung.

checkboarding

To divide property in a manner so that two parties acquire title to alternating and equal-size square sections of land. *Long*

check curtain

- a. See: [curtain](#)
- b. Ventilation control consisting of jute or nylon material fastened to the roof and placed across an entry or a crosscut. It is used to direct the air to the working place, yet allow the passage of equipment and persons. *MSHA, 1*

check dam

A dam that divides a drainageway into two sections with reduced slopes. *Nichols, 1*

checker arch

One of the firebrick supports built of arch brick or keys to support the checker work on the second, third, or fourth pass of hot-blast stoves. *Fay*

checkerboard drilling

See: [checkerboarded](#)

checkerboarded

An area in which boreholes have been placed at the intersections of equally spaced parallel lines laid out on a square grid or checkerboard pattern. *Long*

checkerboard system

See: [bord-and-pillar method](#)

checking

Temporarily reducing the temperature or the volume of the air blast on a blast furnace. *Fay*

checkout

Scot. The meeting of the roof and floor, the coal seam being thereby cut off; to pinch out.

check screen

See: [oversize control screen](#)

checksheet

A sheet on which are printed illustrations of various drilling equipment assemblies with the component items shown in their relative operating positions; used as a guide in making up a list of the units necessary to do various routine drilling jobs. *Long*

check survey

A survey made to confirm the positions of established survey stations in a mine. *BS, 7*

check viewer

In bituminous coal mining, one who inspects and checks portions of a mine that have been leased to workers to see that the terms of lease, such as mining within specified limits, safety precautions, and production rate, are duly observed. *DOT*

checkweigher

In mining, one who checks, in the interest of miners, the weighing of coal in mine cars or other containers by the company weighmaster. The person estimates the amount of slate, dirt, rock, and other foreign matter in the coal and sees that only authorized deductions are made. Also called check-docking boss; check measurer; checkweighman; justiceman. *DOT; Fay*

checkweighman

See: [checkweigher](#)

checking

The removal of the side or sides of a roadway to increase its width. *TIME*

checks

a. The sides or walls of a vein. *Fay* b. Extensions of the sides of the eye of a hammer or pick. *Fay* c. The refractory sidewalls of the ports of a fuel-fired furnace. *Dodd*

chelate compound

The compound formed by the combination of a chelating agent and a metal ion. *ASM, I*

chelating agent

A substance that contains two or more electron donor groups and will combine with a metal ion so that one or more rings are formed. *ASM, I*

chelation

The reaction between a metallic ion and a complexing agent, generally organic, with the formation of a ring structure and the effective removal of the metallic ion from the system. It is significant in chemical weathering. *AGI*

cheleutite

a. A ferruginous, nickeliferous, and slightly cupriferous smaltite. See also: [smaltite](#) b. A copper-bearing variety of smaltite.

Chelsea color filter

An effective dichromatic color filter transmitting light of only two wavelength regions--one in the deep red, the other in the yellow green. Useful for discriminating between emerald and its imitations and for detecting synthetic spinels and pastes colored blue with cobalt. *Anderson*

chemawinite

A pale-yellow to dark-brown variety of retinite (amber) in decayed wood at Cedar Lake, MB, Canada. Syn: [cedarite](#)

chemechol

A method of breaking down coal similar to Hydrox and applied on the same lines as air shooting. *Nelson*

chemical adsorption

Surface adherence, accompanied by the formation of primary bonds. *Van Vlack*

chemical affinity

a. The force that binds atoms together in molecules. *CTD* b. The tendency of one substance to form a chemical compound with another. *Hess*

chemical analysis

A method of determining the composition of a material employing chemical techniques by which the various elements are quantitatively separated.

chemical brick

See: [chemical stoneware](#)

chemical-clay grout

A typical grout of this class used in Great Britain is bentonite-sodium silicate, in which the silicate is used to render irreversible the thixotropic nature of the bentonite suspension. The gel is stronger than pure bentonite and is permanent, in that local vibration cannot cause it to liquefy again. Setting time can be controlled by adjustment of the chemical content. *Nelson*

chemical combination

Change in which permanent alteration of properties occurs, accompanied by intake or release of energy. Reaction is governed by laws of mass conservation, definite and multiple proportions, equivalence, and volumetric reaction. *Pryor, 3*

chemical composition

The weight percent of the elements (generally expressed as certain oxide molecules) in a rock. *AGI*

chemical constitution of coal

The elements or component parts of coal. These are determined by chemical analyses that may be performed in different ways. An ultimate analysis provides exact information as to the percentages of the various elements (such as carbon, oxygen, and hydrogen) present in the coal. Another method is by proximate analysis, which determines the relative percentages of carbon, moisture, volatile matter (such as gas and tar), sulfur, and ash. *Nelson*

chemical denudation

The processes in which the salts or the soluble minerals in the Earth are dissolved by water and carried to the sea. *Bennett*

chemical deposition

The precipitation or plating-out of a metal from a solution of its salts through the introduction of another metal or a reagent into the solution. *ASM, 1*

chemical engineering

Developing, building, and operating plants in which materials are chemically worked up to desired end products. *Pryor, 3*

chemical equilibrium

A state of balance between two opposing chemical reactions. The amount of any substance being built up is exactly counterbalanced by the amount being used up in the other reaction, so that concentrations of all participating substances remain constant. *AGI*

chemical erosion

See: [corrosion](#)

chemical extraction

Term taking the place of hydrometallurgy; embraces leaching (acid, alkaline, and pressure), ion exchange, solvation precipitation, and calcination. See also: [leaching](#)

chemical lead

Lead of more than 99.9% purity, with traces of copper and silver, as originally obtained from the ore; used for manufacturing storage battery plates and chemical piping. *Bennett*

chemical limestone

A limestone formed by direct chemical precipitation or by consolidation of calcareous ooze. *AGI*

chemically precipitated metal powder

Powder produced by the reduction of a metal from a solution of its salts either by the addition of another metal higher in the electromotive series or by other reducing agents. *ASTM*

chemical mineralogy

The investigation of the chemical composition of minerals and its variation, the processes of mineral formation, and the changes minerals undergo when acted upon chemically. CF: [physical mineralogy](#); crystallogeny.

chemical rock

A sedimentary rock composed primarily of material formed directly by precipitation from solution or colloidal suspension (such as by evaporation) or by the deposition of insoluble precipitates (such as by mixing solutions of two soluble salts); e.g., gypsum, rock salt, chert, or tufa. It generally has a crystalline texture. CF: [detrital rock](#) *AGI*

chemical sediment

See: [chemical rock](#)

chemical soil consolidation

A process for sinking through loose, heavily watered ground. A gel-forming chemical is injected into the loose material that is eventually consolidated. The time delay in the gel formation can be controlled by chemical means, and the rate of injection at waterlike viscosity is rapid. See also: [bentonite](#); [silicatization process](#). *Nelson*

chemical stoneware

A clay pottery product that is widely employed to resist acids and alkalis. It is used for utensils, pipes, stopcocks, pumps, etc.; sp gr, 2.2; hardness, scleroscope 100. Stoneware is made from special clays free from lime and iron, low in sand content, with low temperatures, and having sufficient plasticity to permit turning on a potter's wheel. Syn: [chemical brick](#)

chemical water treatment

A method of treating hard water by adding selected chemical substances that break down the offending impurities, the residue being passed on in solution in harmless or less harmful form, driven off as a gas, or precipitated for subsequent retention in an incorporated filter. The general reagents are lime or soda or a combination of both with or without the addition of zeolites or colloids. *Nelson*

chemical weathering

The process of weathering by which chemical reactions (hydrolysis, hydration, oxidation, carbonation, ion exchange, and solution) transform rocks and minerals into new chemical combinations that are stable under conditions prevailing at or near the Earth's surface; e.g., the alteration of orthoclase to kaolinite. CF: [mechanical weathering](#)
Syn: [decomposition](#)

chemihydrometry

Determination of flow rate and channels taken by water by the introduction of suitable chemicals upstream and measurement of dilution. (Radiotracers and fluorescein are also used for tracing flow direction.) *Pryor, 3*

chemiluminescence

Luminosity caused by chemical changes in a substance. *Standard, 2*

chemisorption

Irreversible sorption, an adsorbate being held as a product of chemical reaction with an absorbent. Activation energy is relatively high. *Pryor, 3*

chemist

A person versed in chemistry. One whose business is to make chemical examinations or investigations, or one who is engaged in the operations of applied chemistry.

chemolithotroph

Autotrophic microorganism that derives energy to do metabolic work from the oxidation of inorganic compounds and assimilate carbon as CO_2 , HCO_3^- , or CO_3^{2-} ; e.g., *Thiobacillus ferrooxidans*, a bacterium that oxidizes ferrous iron to ferric iron for energy. See also: [autotroph](#)

chempure tin

Purest commercially available tin; 99.9% tin. *Bennett*

chenevixite

A monoclinic mineral, $\text{Cu}_2\text{Fe}_2(\text{AsO}_4)_2(\text{OH})_4 \cdot \text{H}_2\text{O}$; earthy to opaline; associated with olivenite in copper deposits.

Chenot process

The process of making iron sponge from ore mixed with coal dust and heated in vertical cylindrical retorts. *Fay*

cheralite

A monoclinic mineral, $(\text{Ca,Ce,Th})(\text{P,Si})\text{O}_4$; monazite group; an intermediate member of a crystal-solution series between CePO_4 (monazite) and $\text{CaTh}(\text{PO}_4)_2$ (a synthetic compound).

cheremchite

A variety of sapropelic coal composed of a mixture of structureless humic sapropel and algal remains. Also spelled tscheremchite. *Tomkeieff*

cherry picker

a. A fishing tool in the modified form of a horn socket. The lower end or mouth is cut away on one side and resembles a scoop; because of its shape, the device, as it is turned, works around and behind an object that has become partly embedded in the wall of a borehole, thus engaging it where a regular horn socket would fail. *Long* b. A small hoist to facilitate car changing near the loader in a tunnel. An empty car is either lifted above the track (to allow a loaded car to pass beneath) or swung to one side free of the track. See also: [double-track portable switch](#) particularly for handling large cars. *Nelson* c. In tunneling, a small traveling crane spanning tracks that transfers an empty car to a parallel track so that a loaded one can be drawn from the advancing end. *Pryor, 3* d. A small derrick made up of a sheave on an A-frame, a winch and winch line, and a hook. Usually mounted on a truck. *Nichols, 2*

cherry-red heat

A common term used on the color scale, generally given as about 1,382 degrees F (750 degrees C).

chert

A hard, dense, dull to semivitreous, microcrystalline or cryptocrystalline sedimentary rock, consisting dominantly of interlocking crystals of quartz less than about 30 μm in diameter; it may contain amorphous silica (opal). It sometimes contains impurities such as calcite, iron oxide, and the remains of siliceous and other organisms. It has a tough, splintery to conchoidal fracture, and may be white or variously colored. Chert occurs principally as nodular or concretionary nodules in limestone and dolomites, and less commonly as layered deposits (bedded chert); it may be an original organic or inorganic precipitate or a replacement product. The term "flint" is essentially synonymous, although it has been used for the dark variety of chert. See also: [jasper](#); [silexite](#). *AGI*

chertification

A type of silicification in which fine-grained quartz or chalcedony is introduced into limestones, such as in the Tri-State mining district of the Mississippi Valley. *AGI*

chervetite

A monoclinic mineral, $\text{Pb}_2\text{V}_2\text{O}_7$; occurs in small crystals at the Mounana uranium mine, Gabon.

chessy copper

See: [chessylite](#)

chessylite

A term commonly used for azurite. Syn: [chessy copper](#) See also: [azurite](#)

chesterite

Microcline feldspar found in Chester County, PA.

chestnut coal

a. In anthracite only, coal small enough to pass through a square mesh of 1 to 1-1/8 in (2.54 to 2.86 cm), but too large to pass through a mesh of 5/8 in or 1/2 in (1.59 cm or 1.27 cm). Known as No. 5 coal. b. Arkansas. Coal that passes through a 2-in (5.1-cm) round hole and over a 1-in (2.5-cm) round hole. See also: [anthracite coal sizes](#)

chevee

A flat gem having a polished concave depression. CF: [cuvette](#)

chevron crossbedding

Crossbedding that dips in different directions in superimposed beds, forming a chevron pattern. Also called herringbone crossbedding; zigzag crossbedding. *Pettijohn, 1*

chevron drain

A rubble-filled trench system in the slope of a railway cutting, laid out in herringbone fashion and leading surface water into buttress drains arranged along the line of steepest slope. *Hammond*

chevron fold

A fold with a sharp angular hinge and planar limbs of equal length. Syn: [zigzag fold](#)

chews

Scot. Coal loaded with a screening shovel; middling-sized pieces of coal.
Syn: chows.

chiastolite

An opaque variety of andalusite containing black carbonaceous impurities arranged in a regular manner so that a section normal to the longer axis of the crystal shows a black Maltese cross. It has long been used for amulets, charms, and other inexpensive novelty jewelry. Syn: [cross-stone](#); crucite; macle.

chiastolite slate

A rock formed by contact metamorphism of carbonaceous shale, characterized by prominent cleavage or schistosity and the presence of conspicuous chiastolite crystals in a fine-grained groundmass. *AGI*

chickenfeed

An Alaskan term for fine gravel 1/2 in (1.27 cm) or less in diameter.

Chiddy Assay

Cupellation assay, for gold content of barren cyanide solution. The gold (and silver) is precipitated together with metallic lead as sponge on aluminum. This metal is cupeled, and the gold prill is weighed. *Pryor, 3*

chigura

A timber used in making a crib.

childrenite

A monoclinic mineral, $\text{FeAl}(\text{PO}_4)(\text{OH})_2 \cdot \text{H}_2\text{O}$; forms a series with eosphorite.

Chilean lapis

A pale- to light-blue lapis lazuli from Chile. See: [lazurite](#); lapis matrix.

Chilean mill

A mill having vertical rollers running in a circular enclosure with a stone or iron base or die. There are two classes: (1) those in which the rollers gyrate around a central axis, rolling upon the die as they go (the true Chile mill), and (2) those in which the enclosure or pan revolves, and the rollers, placed on a fixed axis, are in turn revolved by the pan. It was formerly used as a coarse grinder, but is now used for fine grinding. *Liddell*

chileite

An earthy, secondary lead, zinc, and copper vanadate; occurs near Arqueros, Chile; related to psittacinite. See also: [mottramite](#)

chilenite

An amorphous mixture(?) containing silver and bismuth.

Chile saltpeter

A former name for nitratine.

chill

a. A metal insert imbedded in the surface of a sand mold or core or placed in a mold cavity to increase the cooling rate at that point. *ASM, 1* b. White iron occurring on a gray iron casting, such as the chill in a wedge test. *ASM, 1* c. To harden by suddenly cooling. *Gordon* d. *Derb.* To test the roof with a tool or bar to determine its safety. *Fay*

chill casting

Pouring molten metal into molds so made that it comes into contact at desired places with metal; cooling is thus accelerated, and special hardness is imparted. *Pryor, 3*

chill crystal

Small crystal formed by the rapid freezing of molten metal when it comes into contact with the surface of a cold metal mold. *CTD*

chilled casting

A casting made by contacting it with something that will rapidly conduct the heat from it, such as a cool iron mold, or by sudden cooling by exposure to air or water. *Fay*

chilled contact

That part of a mass of igneous rock, near its contact with older rocks, that is finer grained than the rest of the mass, because it cooled more rapidly. *AGI*

chilled dynamite

The condition of dynamite when subjected to a low temperature not sufficient to congeal it, but which seriously affects the strength of the dynamite. *Fay*

chilled shot

In hard-rock boring with an adamantite or Calyx drill, chilled iron or steel pellets that are driven by the drill bit and do the actual abrasive cutting. *Pryor, 3*

chilled-shot drill

See: [shot drill](#)

chilled-shot drilling

A method of rotary drilling in which chilled steel shot is used as the cutting medium. *BS, 9*

chimney

a. An ore shoot or pipe. See also: [chute](#) b. A term used for limestone pinnacles bounding zinc ore deposits. c. A vertical or nearly vertical staple shaft between a lower and an upper coal seam. d. An orebody that is roughly circular or elliptical in horizontal cross section, but may have great vertical extent. *Nelson* e. A restricted section in a lode; rising steeply and unusually rich. See also: [pipe](#) f. A cylindrical vent for volcanic rock. *Standard, 2*

chimney effect

See: [stack effect](#)

chimney rock

a. A column of rock standing above its surroundings, such as an igneous rock filling a pipe-shaped vent. b. Gulf States. A local name for any rock soft enough when quarried to be cut or sawn readily and refractory enough for domestic chimneys, which may harden on exposure to the air; e.g., some limestone, siliceous bauxite clay, or soapstone. *Hess*

chimney work

Mid. A system of working beds of clay ironstone in patches 10 to 30 yd (9.1 to 27.4 m) square and 18 to 20 ft (5.5 to 6.1 m) thick. The bottom beds are first worked out; then miners work the higher ones by standing upon the fallen debris. CF: [overhand stoping](#)

china clay

A commercial term for kaolin obtained from china-clay rock after washing, and suitable for use in the manufacture of chinaware. *AGI*

china-clay rock

a. Cornwall stone. b. Granite in its most kaolinized form, in which the feldspar is transformed into kaolinite and the rock is so soft that it is readily broken in the fingers. *Arkell*

chinaman chute

Mine opening over the haulage level through which ore from the stope above is drawn to waiting trucks as planking is removed. Usually, an opening between stulls below the shrinkage stope. *Pryor, 3*

Chinaman pebble

N.Z. A pebble or boulder made from a conglomerate of quartz pebbles cemented by chalcedony. Jaspilite, quartz, and Chinaman pebbles are found in many places. *Hess*

China metal

a. York. Shale baked to a hard, white, coarse, porcellaneous substance. *Arkell* b. Porcelain.

china stone

a. Partially kaolinized granite containing quartz, kaolin, and sometimes mica and fluorite. It is harder than china-clay rock and is used as a glaze in the manufacture of china. Syn: [petuntze](#) *AGI* b. A fine-grained, compact carboniferous mudstone or limestone found in England and Wales. *AGI*

chingle

a. Scot. A gravel free from dirt. See also: [shingle](#) b. That portion of a coal seam stowed away in the goaves to help support the mine roof.

chiolite

A tetragonal mineral, $\text{Na}_5 \text{Al}_3 \text{F}_{14}$; massive; granular; occurs with cryolite.

chip

a. Small fragment of a diamond, usually thin and tabular in shape. *Long* b. To break small fragments from the surface of a diamond or other material. *Long* c. Small, angular, and generally flat pieces of rock or other materials. *Long* d. An imperfection due to breakage of a small fragment out of an otherwise regular surface. *ASTM* e. A small fragment from a crystal; specif. a diamond chip. *AGI* f. A piece of rock to be cut into a thin section for microscopic examination.

chip blasting

Shallow blasting of ledge rock. *Nichols, I*

chip breaker

a. A notch or groove in the face of a tool parallel to the cutting edge, to break the continuity of the chips. *ASM, I* b. A step formed by an adjustable component clamped to the face of a cutting tool. *ASM, I*

chipped

a. When referring to the character of diamond wear, it denotes loss of diamond due to chips and fragments having been broken away from the body of the diamond. *Long* b. A surface pitted by loss of material in the form of chips. *Long*

chipping

a. Loosening of shallow rock by light blasting or airhammers. *Nichols, I* b. The process of handsetting diamond fragments in a bit. *Nichols, I*

chippings

Crushed angular stone fragments ranging from 1/8 to 1 in (0.32 to 2.54 cm) in size. See also: [aggregate](#)

chip sample

A regular series of ore chips or rock chips taken either in a continuous line across an exposure or at uniformly spaced intervals. *AGI*

chip sampling

a. The taking of small pieces of ore or coal, with a small pick, along a line or at random, across the width of a face exposure. The samples are usually taken daily and often confined to exploration. Reasonable care is taken to chip a weight of material that corresponds to the length of sample line. See also: [bulk sample](#) b. A variant of channel sampling, in which, owing to extreme hardness of rock, shape of deposit, or other working difficulty, a true channel sample cannot be taken. Often used in preliminary prospecting. *Pryor, 3*

chirality

Symmetrical handedness. A mirror or center of symmetry changes the chirality of asymmetric units. CF: [improper](#)

chiropterite

Bat guano.

chisel

a. A tool of great variety whose cutting principle is that of the wedge. *Crispin* b. The steel cutting tool used in percussive boring. It ranges from 6 to 12 in (15.2 to 30.5 cm) in length with variously shaped bits to suit the nature of the ground. The chisel is made to strike a series of blows at the bottom of a borehole. Water or mud is circulated to convert the chippings into sludge and to keep the chisel cool. *Nelson*

chisel bit

a. See: [chopping bit](#) b. A percussive-type, rock-cutting bit having a single, chisel-shaped cutting edge extending across the diameter and through the center point of the bit face. Also called chisel-edge bit; chisel-point; Swedish bit. *Long*

chisel draft

The dressed edge of a stone, which serves as a guide in cutting the rest.

chiver

See: [shiver](#)

chkalovite

An orthorhombic mineral, $\text{Na}_2 \text{BeSi}_2 \text{O}_6$; occurs on the Kola Peninsula, Russia.

chloanthite

An arsenic-deficient variety of nickel-skutterudite. Also spelled cloanthite. Syn: [white nickel ore](#)

chloraluminite

A trigonal mineral, $\text{AlCl}_3 \cdot 6\text{H}_2 \text{O}$; occurs in acid fumaroles on Mt. Vesuvius, Italy.

chlorapatite

A monoclinic mineral, $\text{Ca}_5 (\text{PO}_4)_3 \text{Cl}$; apatite group.

chlorargyrite

An isometric mineral, $4[\text{AgCl}]$; sectile; forms waxy white, yellow, or pearl-gray incrustations, darkening to violet on exposure to light; a supergene mineral occurring in silver veins; an important source of silver. Formerly called cerargyrite. Syn: [horn silver](#)
CF: [iodargyrite](#)

chloraustrolite

A mottled green variety of pumpellyite used as a semiprecious stone; forms grains, small nodules, or a radial, fibrous structure in geodes in mafic igneous rocks; resembles prehnite; occurs in the Lake Superior region (esp. on Isle Royale).

chlorate explosive

Explosive with a potassium chlorate base, such as the French cheddite, which contains about 80% potassium chlorate and 5% castor oil, with dinitrotoluene constituting nearly all the remainder. Chlorate explosives are characterized by a hot flame on detonation.

Lewis

chlorate powder

A substitute for blackpowder in which potassium chlorate is used in place of potassium nitrate.

chloride

a. A miner's or prospector's term for an ore containing silver chloride. *AGI* b. A compound of chlorine with another element or radical. A salt or ester of hydrochloric acid. *Crispin*

chloriding

Mining thin veins. *Statistical Research Bureau*

chloridization

An ore treatment using chlorine to produce a metal chloride. *Pryor, 3*

chloridize

To convert into chloride; applied to the roasting of silver ores with salt, preparatory to amalgamation.

chloridizing roasting

The roasting of sulfide ores and concentrates, mixed with sodium chloride, to convert the sulfides to chlorides. *CTD*

chlorination process

The process in which auriferous ores are first roasted to oxidize the base metals; then saturated with chlorine gas; and finally treated with water, which removes the soluble chloride of gold, to be subsequently precipitated and melted into bars. *Fay*

chlorinator

A machine for feeding either liquid or gaseous chlorine to a stream of water.

chlorine

A common nonmetallic halogen element, found in the combined state only, chiefly with sodium as common salt (NaCl). Symbol, Cl. A greenish-yellow irritating toxic gas with a disagreeable odor; a respiratory irritant. Used for producing safe drinking water, paper products, dyestuffs, textiles, petroleum products, medicines, antiseptics, insecticides, foodstuffs, solvents, paints, plastics, and many other consumer products. *Handbook of Chemistry and Physics, 3*

chlorinity

a. The total amount in grams of chlorine, iodine, and bromine contained in 1 kg of seawater, assuming that the bromine and iodine have been replaced by chlorine. *Hy* b. The number giving the chlorinity in grams per kilogram of seawater sample is identical with the number, giving the mass in grams of atomic weight silver just necessary to precipitate the halogens in 0.3285233 kg of the seawater sample. *Hy*

chlorite

a. The mineral group chamosite, clinochlore, cookeite, gonyerite, nimite, orthochamosite, pennantite, and sudoite. b. Chlorites are associated with and resemble micas (the tabular crystals of chlorites cleave into small, thin flakes or scales that are flexible, but not elastic like those of micas); they may also be considered as clay minerals when very fine grained. Chlorites are widely distributed, esp. in low-grade metamorphic rocks, or as alteration products of ferromagnesian minerals.

chlorite schist

A schist in which the main constituent, chlorite, imparts a schistosity by parallel arrangement of its flakes. Quartz, epidote, magnetite, and garnet may be accessories, the last two often as conspicuous porphyroblasts. *AGI*

chlorite slate

A schistose or slaty rock composed largely of chlorite.

chloritic sand

A sand colored green by sand-size chlorite grains.

chloritic schist

A schist containing chlorite.

chloritization

The replacement by, conversion into, or introduction of chlorite.

chloritoid

A monoclinic or triclinic mineral, $(\text{Fe,Mg,Mn})_2 \text{Al}_4 \text{Si}_2 \text{O}_{10} (\text{OH})_4$; dull green to gray-black; occurs in masses of brittle folia in metamorphosed argillaceous sedimentary rocks. It is related to the brittle micas.

chlormanganokalite

A trigonal mineral, $\text{K}_4 \text{MnCl}_6$; occurs in yellow rhombohedra.

chlorocalcite

See: [baeumlerite](#)

chloromelanite

a. A dark green, nearly black variety of jadeite. *Fay* b. A crystal solution of roughly equal amounts of diopside, jadeite, and acmite.

chloropal

a. A former name for nontronite. b. A greenish variety of common opal from Silesia, Poland.

chlorophaeite

A mineral closely related to chlorite in composition and found in the groundmass of tholeiitic basalts where it occupies interstices between feldspar laths, forms pseudomorphs after olivine, or occurs in veinlets and amygdules. The fresh mineral is pale green, but when weathered, it may be dark green, brown, or red. *AGI*

chlorophane

A variety of fluorite that exhibits bright-green phosphorescent light if heated. Also called cobra stone.

chlorophoenicite

A monoclinic mineral, $(\text{Mn,Mg})_3 \text{Zn}_2 (\text{AsO}_4)(\text{OH},\text{O})_6$; occurs in elongated gray-green crystals at Franklin, NJ.

chlorosis

The yellowing of the leaves of plants, sometimes caused by a deficiency of iron necessary in the formation of chlorophyll. Has been useful as a guide to ore since nickel, copper, cobalt, chromium, zinc, and manganese are all antagonistic to iron in plant metabolism. Also may indicate where such toxins have been added to soil by industrial or other human activity.

chlorosity

The number expressing chlorinity as grams per liter. Obtained by multiplying the chlorinity of a sample by its density at 20 degrees C. *Hy*

chlorospinel

A grass-green variety of spinel containing copper.

chlorothionite

An orthorhombic mineral, $K_2 Cu(SO_4)Cl_2$; occurs in bright-blue crystalline crusts on lava, an alteration product at Mt. Vesuvius, Italy.

chlorotile

A green orthorhombic hydrated arsenate of copper. CF: [mixite](#)

chloroxiphite

A monoclinic mineral, $Pb_3 CuCl_2 (OH)_2 O_2$; dull-olive or pistachio green.

chlorutahlite

See: [utahlite](#)

chock

a. A square pillar for supporting the roof; constructed of prop timber laid up in alternate cross-layers, in log-cabin style, the center being filled with waste. Sometimes called crib. See also: [cog](#); hydraulic chock. b. Type of longwall-mining roof support. c. One of two blocks of hardwood placed across or between rails to prevent tubs, cars, or wagons from running down an incline.

chock and block

Newc. Tightly filled up.

chock block

Piece of wood, square or rectangular in cross section, usually made of oak, ash, or other hardwood. Also used to denote a shaped piece of wood provided with a handle and designed for placing between the rails to hold back a tub or set of tubs. *TIME*

chock hole

A small depression dug in the earth in which a wheel of a truck-mounted drill rig is set to prevent the drill from moving. *Long*

chocking

The supporting of undercut coal with short wedges or chocks. *CTD*

chog

An English term for chocks, or blocks spiked into the corner of a shaft to form a bearing for the side-walling piece, or the blocks used in headings to separate the cap and poling board. See also: [collaring](#) *Stauffer*

choke

a. In crushing practice, a stoppage of the downward flow in a rock-crushing chamber. See also: [choke point](#) b. A point in a cave or at the base of a pitch blocked by the influx of clay, sand, gravel, or similar material. *AGI*

choke crushing

A recrushing of fine ore due to the fact that the broken material cannot exit a machine before it is again crushed. CF: [free crushing](#)

chokedamp

a. A mine atmosphere that causes choking or suffocation due to insufficient oxygen. As applied to "air" that causes choking, does not mean any single gas or combination of gases. *Fay* b. A name sometimes given in England to carbon dioxide. See also: [blackdamp](#); damp. *Fay*

choke fed

In comminution, rolls are choke fed when fed all of the material that they will take. The product of choke-fed rolls is never so uniform as when free feeding is used. Choke feeding is used only on feed of diameter about 1/4 in (0.6 cm) or less. CF: [free fed](#)

choke feed

A feeding arrangement in which the potential rate of supplying material at the feed point exceeds the rate at which the conveyor will remove material.

choke feeding

As deliberately used in roll crushing of ore, feed at a rate greater than can be discharged at the set of the machine, so that the rolls are sprung apart, the angle of nip is increased, and the product contains oversize. *Pryor, 3*

choke point

Bottleneck of any crusher. *Pryor, 3*

choker

A chain or cable so fastened that it tightens on its load as it is pulled. *Nichols, 2*

choking

Stoppage of flow, due to obstructed discharge, sticky material, packed and compacted fines, or bad control. *Pryor, 3*

chondrodite

A monoclinic mineral, $(\text{Mg,Fe})_5 (\text{SiO}_4)_2 (\text{F,OH})_2$; humite group; commonly occurs in contact-metamorphosed dolomites. Also spelled condrodite.

chonolith

An intrusive mass that is so irregular in form and its relationship to the invaded formations is so obscure that it cannot be designated a dike, sill, or laccolith.

chop

a. To break up and drill through boulders, other rock, or lost core encountered in sinking a drivepipe or casing through overburden. It is done by impact produced by lifting and dropping a chopping-bit-tipped string of drill rods. b. Som. A local term for fault.

chop ahead

To break up boulders and other rock material below the bottom of casing or drivepipe by using a chopping bit attached to drill rods. See also: [chop](#)

chop feeder

A feeder in which a power-operated, swinging quadrant gate delivers material at a predetermined rate. The action is similar to a reciprocating plate feeder.

chopping

A term used to describe the digging action of a dragline when excavation takes place with the bucket heel above the line of the cutting lip. This term is usually used when referring to an operating method in which the dragline bucket excavates above the line of the fairlead and fills above tub level. *Austin*

chopping bit

A steel, chisel-shaped cutting-edged bit designed to be coupled to a string of drill rods and used to fragment, by impact, boulders, hardpan, and lost core in a borehole. Also

called chisel bit; chisel-edge bit; chisel-point bit; long-shank chopping bit. CF: [cross-chopping bit](#) *Long*

chordal effect

The effect produced by the chain joint centers being forced to follow arcs instead of chords of a sprocket pitch circle. *Jackson, 1*

chordal pitch

The length of one side of the polygon formed by the lines between the joint centers as a chain is wrapped on a sprocket. It is a chord of the sprocket pitch circle and is equal to the chain pitch. *Jackson, 1*

chorismite

A general term for a group of mixed rocks, which are the result of the injection of the crystallization products of intruding magmas into, and/or the mixture of such material with, the enclosing rocks, sedimentary or metamorphic. There are several varieties. The term is not widely used. CF: [migmatite](#)

chows

See: chews.

C/H ratio

See: [carbon-hydrogen ratio](#)

chrismatite

A butyraceous, greenish-yellow to wax-yellow hydrocarbon from Wettin, Saxony, Germany. It has a specific gravity of less than 1 and is soft at 55 to 60 degrees C. *Fay*

Christiansen effect

In optical mineralogy, a dispersion phenomenon in which the boundary of a mineral grain (Becke line) immersed in a liquid of the same index of refraction appears blue on one side and red to orange on the other. See also: [dispersion](#)

christobalite

See: [cristobalite](#)

chromate

A salt or ester of chromic acid; a compound containing the radical $(\text{CrO}_4)^{2-}$. *AGI*

chromatic aberration

In microscope lenses, the splitting of white light to form two images, one red and the other blue. See also: [aberration](#)

chromatic color

A hue, as distinguished from white, black, or any tone of gray. Opposite of achromatic color.

chromatite

A tetragonal mineral, CaCrO_4 ; forms finely crystalline citron-yellow crusts from clefts in limestones.

chromatograph

An instrument for analyzing gases and vapors from liquids with boiling points up to 300 degrees C. The gas chromatograph often arranges the molecules of a gas in increasing size, and as each group emerges from the column, a detector measures the quantity of each. Since all the molecules of one type emerge after the same time interval, it is possible to identify quickly the constituents present. *Nelson*

chromatographic analysis

Separation of components of mixture into zones, one or more of which can be identified by color, etc.: (1) by adsorption column, adsorbing from solute in a tube packed with cellulose, alumina, lime, etc.; (2) by electrochromatography, passing electricity across a column or paper strip down which solvent mixture is flowing, causing migration to the side of a flow line; (3) by electrophoresis, using electric current to aid migration; and (4) by paper partition, separation into bands as suitable solvent flows past a drop of solution, which contains compounds (qualitative and quantitative analysis). *Pryor, 3*

chromatography

A chemical process of separating closely related compounds by permitting a solution of them to filter through an absorbent so that the different compounds become absorbed in separate colored layers comprising a chromatogram. *Hunt*

chrome

A term commonly used to indicate ore of chromium, consisting esp. of the mineral chromite or chromium-bearing minerals, such as chrome mica or chrome diopside. *AGI*

chrome antigorite

A variety of antigorite containing some chromium.

chrome brick

A refractory brick manufactured substantially or entirely of chrome ore. *ASTM*

chrome chert

A variety of chert that has replaced the silicate minerals of a chromite peridotite, the more resistant chromite grains remaining unaltered in the siliceous matrix. *Holmes, 2*

chrome diopside

a. A variety of diopside. Dark-green specimens are seldom either transparent or cut as gems. b. A bright emerald-green variety of diopside containing a small amount of Cr_2O_3 .

chrome garnet

See: [uvarovite](#)

chrome idocrase

An emerald-green variety of vesuvianite containing chromium; occurs at Black Lake, Quebec, Canada; and Ekaterinburg, Ural Mountains, Russia. Syn: [chrome vesuvian](#)

chrome iron ore

See: [chromite](#)

chrome mica

See: [fuchsite](#)

chrome ocher

A chromiferous clay; specif. a bright-green clay material containing 2% to 10.5% Cr_2O_3 .

chrome refractory

Refractory consisting essentially of refractory-grade chrome ore bonded chemically or by burning. Chrome refractories are nearly chemically neutral, but may react with strong acids or bases. *Henderson*

chrome spinel

Another name for the mineral picotite, a member of the spinel group. See: [chromian spinel](#)

chrome tourmaline

A variety of tourmaline found in the Ural Mountains, Russia, and Maryland.

chrome vesuvian

See: [chrome idocrase](#)

chromian spinel

A variety of spinel containing chromium, $(\text{Mg,Fe})(\text{Al,Cr})_2 \text{O}_4$. Formerly called picotite. See: [chrome spinel](#)

chromic iron

See: [chromite](#)

chromite

An isometric mineral, $8[\text{FeCr}_2 \text{O}_4]$; spinel group; dimorphous with donathite; forms crystal-solution series with magnesiochromite in the chromite series of the spinel group, and with hercynite; rarely occurs as a pure end member. End-member chromite contains 68% $\text{Cr}_2 \text{O}_3$, but natural minerals do not commonly exceed 50%. Occurs in metallic black octahedral crystals; weakly to moderately ferrimagnetic; an accessory in, or layers in, mafic and ultramafic rocks; also in black sands, the major source of chromium. Syn: [chrome iron ore](#)

chromitite

a. A rock composed chiefly of the mineral chromite. *AGI* b. A mixture of chromite with magnetite or hematite. *AGI*

chromium

An isometric mineral, Cr; rare; occurs in contact zones between ultramafic rocks and marble.

chromium garnet

See: [uvarovite](#)

chromography

In mineral identification, a polished section is placed in contact with photographic paper, a current is passed, and ions migrating to the paper are developed so as to produce a color print suitable for microscrutiny. It resembles sulfur printing.

chromowulfenite

A red variety of wulfenite, containing some chromium. *Fay*

chronograph

An apparatus for electrically recording explosion phenomena with a continuous time record. *Rice, 2*

chronolith

See: [time-stratigraphic unit](#)

chronolithologic unit

Time-rock unit. See also: [time-stratigraphic unit](#)

chronostratic unit

See: [time-stratigraphic unit](#)

chronostratigraphic unit

See: [time-stratigraphic unit](#)

chrysoberyl

An orthorhombic mineral, BeAl_2O_4 ; vitreous; green, brown, yellow, or red (alexandrite variety appears emerald green in sunlight, but red by incandescent light); occurs in granites, granite pegmatites, schists, and alluvial deposits; a gemstone. Gem varieties: alexandrite, chrysopal, cymophane, and golden beryl. Known as cat's-eye when it has chatoyancy. Syn: [cymophane](#) chrysopal.

chrysocolla

A monoclinic mineral, $(\text{Cu,Al})_2 \text{H}_2 \text{Si}_2 \text{O}_5 (\text{OH})_4 \cdot n\text{H}_2 \text{O}$; cryptocrystalline or amorphous; soft; bluish green to emerald green; forms incrustations and thin seams in oxidized parts of copper-mineral veins; a source of copper and an ornamental stone.

chrysocolla quartz

A translucent chalcedony colored by chrysocolla.

chrysolite

A yellowish-green, sometimes brownish or reddish, iron-magnesium silicate. A common mineral in basalt and diorite. When used as a gem, it is called peridot. The name has at various times been applied to topaz, prehnite, and apatite, but is now used only to mean olivine. See also: [olivine](#) *Fay; Hess*

chrysolite cat's-eye

Chrysoberyl cat's-eye.

chrysolithus

A pale yellowish-green variety of beryl. *Schaller*

chrysopal

a. A translucent variety of common opal colored apple green by the presence of nickel.
b. See: [chrysoberyl](#) c. A gemstone trade name for opalescent chrysolite (olivine). See also: [prasopal](#)

chrysoprase

a. An apple-green or pale yellowish-green variety of chalcedony containing nickel and valued as a gem. See also: [green chalcedony](#) b. A misleading name used in the gem trade for a green-dyed chalcedony having a much darker color than natural chrysoprase.

chrysotile

A monoclinic mineral (clinochrysotile), or orthorhombic mineral (orthochrysotile, parachrysotile), $[\text{Mg}_6 (\text{OH})_8 \text{Si}_4 \text{O}_{10}]$; serpentine group; forms soft, silky white, yellow, green, or gray flexible fibers as veins in altered ultramafic rocks; the chief asbestos minerals. (Not to be confused with chrysolite.) Syn: [Canadian asbestos](#); [serpentine asbestos](#).

chrysotile asbestos

A fibrous variety of serpentine.

chuck

The part of a diamond or rotary drill that grips and holds the drill rods or kelly and by means of which longitudinal and/or rotational movements are transmitted to the drill rods or kelly. See also: [three-jaw chuck](#) *Long*

chuck block

In stamp milling, the wooden block or board that is attached to the bottom of the screen so as to raise the depth of the issue and act as a false lip to the mortar. *Fay*

chucker-on

A device for automatic rerailling of tubs or cars. Also called ramp; rerailer. *Mason*

chuckie stone

One of the pebbles or cobbles of sedimentary rock or of igneous rock occurring as an inclusion in a coalbed. One explanation for their occurrence is that they were attached to roots of floating trees rafted into the swamp during periods of high water. *AGI*

chuco

Caliche deposit in Chile composed mainly of sodium sulfate.

chudobaite

A triclinic mineral, $(\text{Mg,Zn})_5 \text{H}_2 (\text{AsO}_4)_4 \cdot 10\text{H}_2 \text{O}$.

chukhrovite

An isometric mineral, $\text{Ca}_3 (\text{Ce,Y})\text{Al}_2 (\text{SO}_4)_3 \cdot 10\text{H}_2 \text{O}$; a rare-earth mineral in the Kara-Oba molybdenite deposit, central Kazakhstan, and the Clara Mine, Oberwolfach, Germany.

chungkol

Malaysia. Heavy hoe used to stir and loosen a bed when sluicing alluvial tin gravels. *Pryor, 3*

chunked-up

Built up with large lumps of coal to increase the capacity of the car. Also called built-up.

chunker I

In bituminous coal mining, a laborer who hand loads large lumps of coal into cars at working places in a mine. *DOT*

chunker II

In bituminous coal mining, a laborer who arranges large lumps of coal uniformly on flatcars as they are loaded at the mine surface. *DOT*

churchillite

See: [mendipite](#)

churchite

A monoclinic mineral, $\text{YPO}_4 \cdot 2\text{H}_2\text{O}$. Formerly called weinschenkite.

churn

A long iron rod used to hand bore shotholes in soft material, such as coal. *Pryor, 3*

churn drill

a. Portable drilling equipment, usually mounted on four wheels and driven by steam-, diesel-, electric-, or gasoline-powered engines or motors. The drilling is performed by a heavy string of tools tipped with a blunt-edge chisel bit suspended from a flexible manila or steel cable, to which a reciprocating motion is imparted by its suspension from an oscillating beam or sheave, causing the bit to be raised and dropped, thus striking successive blows by means of which the rock is chipped and pulverized and the borehole deepened; also, the act or process of drilling a hole with a churn drill. Also called American system drill; blasthole drill; cable drill; cable-system drill; churn-drill rig; rope-system drill; shothole drill; spudder; spud drill; wet drill. See also: [percussion drill](#) Syn: [cable-tool drill](#) b. A long iron bar with a cutting end of steel, used in quarrying, and worked by raising and letting it fall. When worked by blows of a hammer or sledge, it is called a jumper or jump drill.

churn-drill operator

In mining and in the quarry industry, one who drills holes with a churn (cable) drill in rock and overlying ground of open-pit mines or quarries to obtain samples, or to provide holes in which explosives are detonated to break up a solid mass. Syn: [blasthole driller](#); blasting hole well driller. *DOT*

churn-drill rig

See: [churn drill](#)

churn shot drill

A boring rig that combines both churn and shot drillings. The churn drill is used for rapid penetration in barren ground where no core is required. The shot drill is used for taking cores along important rock formations. *Nelson*

chute

a. A channel or shaft underground, or an inclined trough aboveground, through which ore falls or is shot by gravity from a higher to a lower level. Also spelled shoot. b. A crosscut connecting a gangway with a heading. c. A ditch or inclined timber through which the overflow water or mud from a borehole is conducted from the collar of the hole to the sump. The chute may be fitted with baffles and screens to cause the cuttings to settle before reaching the sump. Syn: [canal](#); [ditch](#). *Long* d. A body of ore, usually of elongated form, extending downward within a vein (ore shoot). See also: [chimney](#); [shoot](#). e. A trough operated mechanically in loading coal underground. Syn: [rock chute](#) f. A string of rich ore in a lode (used instead of shoot). *Nelson* g. Stockpile withdrawing system, such as a belt conveyor. *Pryor, 3* h. A metal trough in a breaker, along which the coal slides by gravity. *Hudson* i. A steep, three-sided steel tray for the passage of coal or ore from a conveyor into mine cars. It is designed to minimize degradation and spillage of materials. See also: [loading chute](#) j. Ore pass connecting a stope with the haulage level. *Pryor, 3* k. A high-velocity conduit for conveying to a lower level. Syn: [course of ore](#)

chute boss

In coal mining, a foreperson who supervises the loading and drawing of coal into and out of chutes, esp. where coal is mined from inclined beds. *DOT*

chute caving

The method involves both overhand stoping and ore caving. A chamber is started as an overhand stope from the head of a chute and is extended up until the back weakens sufficiently to cave. The orebody is worked from the top down in thick slices, each slice being, however, attacked from the bottom and the working extending from the floor of the slice up to an intermediate point. The cover follows down upon the caved ore. Also called caving by raising; block caving into chutes.

chute checker

In metal mining, one who keeps a record of the amount of ore drawn from each raise or chute in an orebody being mined by the caving method (lower part of orebody is mined and developed with a system of chutes so that the remaining ore that sloughs, or caves, from lack of support can be drawn off). Also called tallyman. *DOT*

chute drawer

See: [chute loader](#)

chute loader

a. In metal and nonmetal mining, a laborer who loads ore or rock into mine cars underground by opening and closing chute gates. Also called chute drawer; chute man; chute puller; chute trammer; chute tapper. *DOT* b. In the quarry industry, one who loads crushed rock from bins into trucks or railroad cars by opening and closing the chute or bin gates by hand or by means of a lever. Also called car loader. *DOT*

chute operator

In the quarry industry, a laborer who loads barges with crushed rock by operating a hand winch to lower a chute through which crushed rock flows from a bin. *DOT*

chute system

A method of mining by which ore is broken from the surface downward into chutes and removed through passageways below. See also: [glory-hole system](#)

chute trammer

See: [chute loader](#)

cienea

A marshy area where the ground is wet because of the presence of seepage or springs, often with standing water and abundant vegetation. The term is commonly applied in arid regions such as the Southwestern United States. Etymol: Spanish cienega, marsh, bog, miry place. *AGI*

ciment fondu

A slow-setting, rapid-hardening cement containing 40% lime, 40% alumina, 10% silica, and 10% impurities; used in cementing drill holes. Sometimes called bauxite cement.

cimolite

A white, grayish, or reddish hydrosilicate of aluminum; soft and claylike or chalklike in appearance. *Fay*

cinder

a. A loose volcanic fragment that may range from 4 to 32 mm in diameter. Such fragments are usually glassy or vesicular. *Stokes* b. A small (1- to 4-cm), commonly vesicular, fragment of lava projected from an erupting volcano; coarser than volcanic ash but smaller than a volcanic bomb. c. A juvenile vitric pyroclastic fragment that falls to the ground in an essentially solid condition. d. Slag, particularly from an iron blast furnace. e. A scale thrown off in forging metal. CF: [lapilli](#)

cinder block

A block closing the front of a blast furnace and containing the cinder notch. *Webster 3rd*

cinder breakout

The slag within a furnace escaping through the brickwork; caused by erosion, corrosion, or softening of brick by heat. *Fay*

cinder coal

a. Coal that has been cindered by heat from an igneous intrusion. Many coal seams have been affected in this way in Scotland and in Durham, England. See also: [metamorphism](#)
b. Aust. A very inferior natural coke, little better than ash. See also: [natural coke](#)

cinder cooler

In a blast furnace, a watercooled casting, usually of copper, that is pressed into the cinder notch. *Henderson*

cinder fall

The dam over which the slag from the cinder notch of a furnace flows. *Fay*

cinder notch

The furnace hole, about 1.5 to 2 m above the iron notch and 1 m below the tuyeres, through which slag is flushed two to three times between casts. See also: [cinder tap](#)

cinder pig

Pig iron made from a charge containing a considerable proportion of slag from puddling or reheating furnaces. *CTD*

cinder pit

Large pit filled with water into which molten cinder is run and granulated at cast or flush. *Fay*

cinder plate

See: [bloomery](#)

cinder runner

A trough carrying slag from a skimmer or cinder notch to a pit or ladle. See also: [cinder notch](#)

cinder tap

The hole through which cinder is tapped from a furnace. Also called Lurmann front. *Fay*

cinder tub

A shallow iron truck with movable sides into which the slag of a furnace flows from the cinder runner. *Fay*

cinnabar

A trigonal mineral, $3[\text{HgS}]$; trimorphous with hypercinnabar and metacinnabar; forms brilliant red acicular crystals and red to brownish-red or gray masses; soft; sp gr, 8.1; occurs in impregnations and vein fillings near recent volcanic rocks and hot springs, alluvial deposits; the chief source of mercury. Syn: [cinnabarite](#) See also: [vermillion](#); [vermilion](#).

cinnabarite

See: [cinnabar](#)

cinnabar matrix

A term applicable to various varieties of minerals containing numerous inclusions of cinnabar but esp. to a Mexican variety of jasper.

cinnamite

See: [cinnamon stone](#)

cinnamon stone

a. Grossularite, a lime garnet. See also: [essonite](#); [hessonite](#); [hyacinth](#). *Hess; Dana, 4 b.*
See: [grossular](#)

cipolino

A European term for a marble rich in silicate minerals and characterized by layers rich in micaceous minerals. *Holmes, 1*

CIPW classification

See: [norm system](#)

CIPW system

See: [norm system](#)

circle

a. In the central United States, a nearly circular lead and zinc deposit developed in clayey chert breccias in old sinkholes in Paleozoic limestone or in dolomite (broken ground). *Schieferdecker* b. In a grader, the rotary table that supports the blade and regulates its angle. *Nichols, 1*

circle cutting drill

a. A pneumatic drill carried on rotating arms. Used to cut grindstones and pulpstones from a quarry. *AIME, 1* b. See: [ditcher](#)

circle haul

In strip mining, a haulage system in which the empty units enter the mine over one lateral and leave, loaded, over the lateral nearest the tippie. This system is utilized where laterals are built into the mine from the main road, whether outside the outcrop or on the high-wall side of the mine workings. This system reduces the haul on the coal surface to a minimum, except where there are only two laterals, one at each end of the workings.

circle reverse

The mechanism that changes the angle of a grader blade. *Nichols, 1*

circle spout

Eng. A trough or gutter around the inside of a shaft to catch the water running down the sides; a garland.

circuit breaker

These differ from straight overcurrent relays in that they are primarily used for ground protection. They are designed to measure fault current in one or two sections. Whether faults will cause flow in one or two directions is determined by system conditions. The

two-directional relay is used on transmission lines where ground-fault currents flow in either direction. These relays provide directional as well as overcurrent protection. Other directional relays provide phase protection.

circuits

Circular galleries made at different levels in a mine that enable empty trucks to be pushed out of the cage on one side while full ones are pushed in on the other side, thus ensuring a more rapid journey of the cage. Circuits also aid air circulation. Syn: [roundabouts](#)

circuit tester

See: [blasting galvanometer](#)

circular arch

A roadway support consisting of an H-section girder of circular form and usually made in three parts. The joints are secured by fishplates and bolts. This type of steel arch is useful for withstanding pressures from roof, sides, and floor. With close lagging between the rings, the finished roadway resembles a tube. See also: [steel arch](#)

circular bin discharger

A revolving cone with feeder fingers around the base periphery connected at the apex through a universal joint to a revolving arch breaker arm.

circular cutting drill

See: [ditcher](#)

circular grading table

See: [rotary sorting table](#)

circular picking table

An apparatus used for the same purpose as a picking belt and consisting of a flat horizontal rotating annular plate. See also: [picking belt](#) BS, 5

circular shaft

A shaft excavated as a cylinder. The circular shaft is equally strong at all points; convenient for concrete lining and tubbing, both of which can be made relatively watertight; and offers the least resistance to airflow. *Nelson*

circular slip

A type of landslide that may occur in embankments or cuttings in clay or homogeneous earth. See: [slip surface of failure](#)

circular tunnel kiln

The same as a straight tunnel kiln, except that it has a movable, circular platform instead of cars.

circulating fluid

Fluid pumped into a borehole through the drill stem, the flow of which cools the bit, washes away the cuttings from the bit, and transports the cuttings out of the borehole. See also: [reverse circulation](#) circulation fluid; circulation medium; drill fluid; drilling fluid. *Long*

circulating head

A casing-to-drill-rod coupling. When attached to the top of the casing, it is used during the process of pumping cement slurries or circulating water through the casing, forcing the fluid to flow out of the casing into the drill hole between the outside of the casing and the walls of the borehole. Also called stuffing box; tight head. *Long*

circulating load

a. In mineral processing, use of a closed circuit to check mineral issuing from a specific treatment and to return to the head of the treatment those particles that do not satisfy the maintained conditions for release to the next stage of treatment. *Pryor, 3* b. In ore dressing, oversize material returned to a ball mill for further grinding. *Newton, 1*

circulating medium

Medium in circulation in or outside a separating bath, at or about the specific gravity of that in the separating bath. *BS, 5*

circulating pump

a. A pump (usually centrifugal) used to circulate water through the condenser of a steamplant. *Nelson* b. A pump used to circulate water in a coal washer or ore concentration plant. *Nelson* c. A pump used to circulate mud or water through a drilling column. Also called slush pump. Syn: [mud pump](#)

circulating scrap

Scrap arising at steelworks and foundries during the manufacture of finished iron and steel or of castings; consists of the sheared-off ends of rolled and other worked products, rejected material, etc. See also: [capital scrap](#)

circulating water

The water in the water circuit of a preparation plant. *BS, 5*

circulation

a. The passing of any liquid or gas from the surface to the end of the drill string and back to the surface in the process of drilling a borehole. *Long* b. The movement of air currents through mine openings. *Long* c. In rotary drilling, the process of pumping mud-laden or other fluid down the drill pipe, through the drilling bit, and upward to the surface through the annulus between the drill-hole walls and the drill pipe. *AGI*

circulation fluid

The fluid pumped through and to the end of the drill string and back to the surface in the process of drilling a borehole. CF: [drilling mud](#) *Long*

circulation loss

The result of drilling or circulation fluid escaping into one or more formations by way of crevices or porous media. *Brantly, 1*

circulation medium

See: [circulating medium](#)

circulation of air

The controlled flow of air to and from the faces to secure adequate ventilation of all workings and traveling roads. See also: [dadding](#) *Nelson*

circulation velocity

The speed, generally expressed in lineal feet per second, at which a fluid or gas travels upward in a borehole after passing the face of the bit. *Long*

circulation volume

The amount of liquid or gas circulated through the drill-string equipment in drilling a borehole. The amount of liquid circulated is expressed in gallons (or liters) per minute,

and the amount of a gas, as air, is expressed in cubic feet (or cubic meters) per minute. *Long*

circumferentor

A surveyor's compass with diametral projecting arms each carrying a vertical slit sight. *Webster 3rd*

cistern

a. A settling tank for liquid slag, pulp, etc. b. An artificial reservoir or tank for holding water. *AGI*

citation

Issued by regulatory representatives alleging a specific condition or practice that violates mining, maritime, construction, environmental, or general industry standards. *NSC, I*

citrine

Not the true topaz of mineralogists, but a yellow variety of quartz, which closely resembles topaz in color though not in other physical characters; it is of much less value than true topaz. Known under a variety of geographical names such as Bohemian topaz, Indian topaz, Madagascar topaz, Madeira topaz, and Spanish topaz. Brazilian topaz is the true mineral. Also called quartz topaz. See also: [Scotch topaz](#); [false topaz](#); smoky quartz. *CMD*

C-J detonation

A detonation characterized by the equivalence of the detonation velocity to the velocity of sound in the burned gas plus the velocity of flow of the burned gases. *Van Dolah*

C-J plane

See: [Chapman-Jouget plane](#)

clack

a. A valve part. The hinged, lidlike part of a check, clack, or pump valve. Also called check; flap. See also: [flapper](#) b. A clack or pump valve. *Long*

clack seat

The rim or seat on which the hinged lid or flapper of a clack valve closes. *Long*

clack valve

A valve having a lidlike piece hinged on one side within a chamber that permits the flow of a fluid or gas to proceed in one direction only. Usually, the check valve on the pickup end of a drill-pump suction hose is a clack-type valve. Also called chock valve; flap valve; flapper valve; foot valve. *Long*

clad metal

A composite metal containing two or three layers that have been bonded together. The bonding may have been accomplished by corolling, welding, casting, heavy chemical deposition, or heavy electroplating. *ASM, 1*

claggy

a. Newc. Adhesive. When coal is tightly joined to the roof, the mine is said to have a claggy top. Also spelled cladgy. *Fay* b. Newc. Muddy or clayey dirt. *Pryor, 3*

claim

a. The portion of mining ground held under the Federal and local laws by one claimant or association, by virtue of one location and record. Lode claims, maximum size 600 ft by 1,500 ft (182.9 m by 457.3 m). Placer claims 600 ft by 1,320 ft (182.9 m by 402.4 m). A claim is sometimes called a location. See also: [title](#); [mining claim](#). b. S. Afr. Land on a mining field to which a miner is legally entitled. A Transvaal claim has an area of 64,025 ft² (5,947.9 m² or 60,000 Cape square feet). It is about 155 ft (47.3 m) along the strike of the reef, and 413 ft (125.9 m) across the line, or along the dip of the reef. An area of 1.44 claims is equal to a South African morgen. In Cape feet, the claim is 150 ft by 400 ft (46.2 m by 122.0 m). Mining maps are often designed in squares of 1,000 Cape feet by 1,000 Cape feet (304.9 m by 304.9 m), which, therefore, contain about 16 claims measured horizontally. *Beerman* c. In Australia, a claim is defined as the portion of Crown land that any person or number of persons shall lawfully have taken possession of and be entitled to occupy for mining purposes. No land comprised in any mining lease can be considered to be a claim. A claim is marked out by fixing in the ground posts at each angle of the claim, and it need not be surveyed. A miner is required to hold a miner's right before legally marking out or working a claim. *Nelson*

claimant

In the Federal mining law, means locator. *Ricketts*

claim jumping

The location of a mining claim on supposedly excess ground within the staked boundaries of an existing location on the theory that the law governing the manner of making the original location has not been complied with. *Ricketts*

claims held in common

The phrase "held in common" means a claim whereof there are more owners of a claim than one; the use of the words "claims held in common," on which work done upon one of such claims shall be sufficient, means that there must be more than one claim so held, to make a case where work upon one of them shall answer the statutory requirements as to all of them. *Ricketts*

claim system

A system used mainly in the United States that grew up in the early days of mining in the Western United States following the gold rush of 1849, as an outgrowth of the desire of a prospector to develop a mineral deposit discovered on the public lands and to have the claim confirmed by law. The mining laws of the United States are based on this system, whereas most other mining countries follow the concession system. CF: [concession system](#)

clam

a. A clip; a haulage clip; an appliance for attaching mine cars to a rope. See also: [clip](#) b. A clamshell bucket. *Nichols, 1* c. To mud-in the door of a kiln. *ACSG, 2*

clammings

Entrance to an oven. *Noke*

clamshell

A twin-jawed bucket without teeth; usually hung from the boom of a crane that can be either crawler or wheel mounted. The bucket is dropped in the open position onto the material to be excavated or handled. It is then closed, encompassing material between the two hinged halves.

clamshell loader

A grab-type loader activated by cables. Used in mucking operations. *Lewis*

clan

A compositional category for classifying igneous rocks; e.g., the rhyolite-granite clan. A clan may be defined either by mineralogical or by chemical composition. Clans are subdivided into families. *AGI*

clap-me-down

In inclined shaft timbering, a joint in which the end pieces are checked into the cap and sill for a distance of approx. 1 in (2.5 cm), with a bevel on the inner side. *Higham*

clapotis

The wave pattern established when waves are reflected by a barrier so that the crests and troughs occur alternately in the same places with water particle motion limited to vertical movement, while a quarter wavelength away the particle motion is horizontal (back and forth). This is a standing wave phenomenon. *Hy*

clarain

A coal lithotype characterized macroscopically by semibright, silky luster and sheetlike, irregular fracture. It is distinguished from vitrain by containing fine intercalations of a duller lithotype, durain. Its characteristic microlithotype is clarite. CF: [clarite](#); [fusain](#); [vitrain](#). *AGI*

clarification

a. The cleaning of dirty or turbid liquids by the removal of suspended and colloidal matter. See also: [recirculation of water](#) b. The concentration and removal of solids from circulating water to reduce the suspended solids to a minimum. *BS, 5*

clarifier

A centrifuge, settling tank, or other device for separating suspended solid matter from a liquid. *Hess*

clarifying tank

A tank for clarifying cyanide or other solutions; frequently provided with a filtering layer of sand, cotton waste, matting, etc. *Fay*

clarinite

a. The major maceral or micropetrological constituent of clarain. It is a heterogeneous material that is generally translucent in thin section, and in which there may be intercalated lenticels of such other ingredients, such as xylinite, fusinite, resinite,

suberinite, periblanite, collinite, and ulminite. *AGI* b. Strictly, not a maceral, but may be used for repetitive description. *Tomkeieff*

clarite

A coal microlithotype that contains a combination of vitrinite and exinite totalling at least 95%. The proportions of these two macerals may vary widely, but each must be greater than the proportion of inertinite, and neither must exceed 95%. Distinction may be made between spore clarite, cuticular clarite, and resinous clarite. Clarite is widely distributed and very common, particularly in clarain-type coals and occurs in fairly thick bands. CF: [clarain](#)

clarke

The average abundance of an element in the crust of the Earth. CF: [clarke of concentration](#)

clarkeite

A mineral, $(\text{Na,Ca,Pb})_2 \text{U}_2 (\text{O,OH})_7$; strongly radioactive; metamict; massive; dense; forms as an alteration product of uraninite. Syn: [brown gummite](#)

clarke of concentration

The concentration of an element in a mineral or rock relative to its crustal abundance. The term is applied to specific as well as average occurrences. CF: [clarke](#)

Clark riffler

A sample-reducing device that splits a batch sample of ground ore into two equal streams as it falls across an assembly of deflecting chutes. *Pryor, 3*

clarodurain

A rock-type coal consisting of the maceral vitrinite (tellenite or collinite) and large quantities of other macerals, mainly micrinite and exinite. Micrinite and exinite are present in larger quantities than vitrinite. Syn: [clarodurite](#)

clarodurite

The term clarodurain was introduced by G.H. Cady in 1942, and in the modified form, clarodurite was adopted by the Nomenclature Subcommittee of the International Committee for Coal Petrology in 1956 to designate the microlithotype with maceral composition between that of clarite and durite, but closer to durite than to clarite. It

occurs in fairly thick bands; is widely distributed; and, like duroclarite, is a common constituent of most humic coal. Syn: [clarodurain](#)

clarofusain

A rock-type coal consisting of the macerals fusinite and vitrinite and may contain all other macerals. Fusinite is present in a larger quantity than in fusoclarain. CF: [fusoclarain](#)

clarovitrain

A rock-type coal consisting of the maceral vitrinite (collinite or telinite) with smaller amounts of other macerals. CF: [vitroclarain](#) *AGI*

clasolite

See: [clastic rock](#)

class

A division of igneous rocks based on the relative proportions of the silicic (siliceous and aluminous minerals, quartz, feldspars, and feldspathoids) and femic (ferromagnesian minerals, pyroxene, amphibole, etc.) standard normative minerals as calculated from chemical analyses. *Holmes, 2*

Class 1.1 explosive

Explosive that has a mass explosion hazard or one that will affect almost the entire load instantaneously; previously designated by the U.S. Department of Transportation as a Class A explosive and including, but not limited to, dynamite, nitroglycerin, lead azide, blasting caps and detonating primers.

Class 1.2 explosive

Explosive that has a projection hazard but not a mass explosion hazard; previously designated by the U.S. Department of Transportation as a Class A or B explosive.

Class 1.3 explosive

Explosive that has a fire hazard and either a minor blast hazard or a minor projection hazard or both, but not a mass explosion hazard; previously designated by the U.S. Department of Transportation as a Class B explosive and defined as possessing a flammable hazard, such as, but not limited to, propellant explosives, photographic flash powders, and some special fireworks.

Class 1.4 explosive

Explosive that presents a minor explosive hazard, and explosive effects are confined to the package; no projection of fragments of appreciable size or range is to be expected. An external fire must not cause virtually an instantaneous explosion of almost the entire contents of the package; previously designated by the U.S. Department of Transportation as a Class C explosive and defined as containing Class A or Class B explosives, or both, as components but in restricted quantities.

Class 1.5 explosive

Very insensitive explosive that has a mass explosive hazard but is so insensitive that there is very little probability of initiation or of transition from burning to detonating under normal conditions of transport; large quantities, however, have a higher probability of detonation subsequent to burning; previously designated by the U.S. Department of Transportation as a blasting agent.

Class 5.1 substance

A material that yields oxygen and causes or enhances the combustion of other materials; previously designated by the U.S. Department of Transportation as an oxidizer.

classical washout

A belt of barren ground or thin coal produced by the erosion of a seam by rivers that flowed during or soon after the deposition of the coal. These erosion channels are now filled with sandy sediment. See also: [rock roll](#)

classification

a. The process of separating particles of various sizes, densities, and shapes by allowing them to settle in a fluid. *Mitchell* b. Grading of particles too small to be screened in accordance with their size, shape, and density by control of their settling rate through a fluid medium (water, slurry, or air). *Pryor, 3* c. The evaluation and segregation of trimmed sheet mica according to grades and qualities. *Skow* d. In powder metallurgy, separation of a powder into fractions according to particle size. *ASM, 1*

classification of crystals

Of 32 crystal classes (based on 32 point groups, the possible combinations of symmetry elements intersecting at a point) assigned to 7 crystal systems, only 11 are found in common minerals. Each system may be described in terms of three noncoplanar vectors (crystallographic axes) that are generally nonorthogonal as well. Although mineral assignment to a crystal system may require only examination of external crystal morphology, assignment of crystal class commonly requires X-ray diffraction analysis.

The crystal systems are triclinic, monoclinic, orthorhombic, tetragonal, trigonal, hexagonal, and isometric. See also: [crystallographic axes](#); [crystal systems](#).

classification of minerals

Each mineral species is a unique, naturally occurring combination of chemical composition and crystal system; e.g., graphite is hexagonal carbon and diamond is isometric carbon, and halite is isometric sodium chloride. (a) Thus, minerals may be classified according to their crystal system. (b) Minerals may be classified chemically according to Dana as (1) native elements and alloys; (2) sulfides, selenides, tellurides, arsenides, and antimonides; (3) sulfosalts, sulfarsenides, sulfantimonides, and sulfobismuthides; (4) halides; (5) oxides; (6) oxygen salts, carbonates, silicates, borates, etc.; (7) salts of organic acids; and (8) hydrocarbon compounds. Silicates are subdivided according to the structural arrangements of their $(\text{SiO}_4)^{4-}$ tetrahedral groups and the number of corner oxygen ions shared between them (degree of polymerism). (c) Additionally, minerals may be classified into isostructural groups; e.g., spinel group, garnet group, mica group, pyroxene group, and zeolite group. (Structural classification is not entirely congruent with chemical classification, since some structural groups may contain more than one chemical group; e.g., the apatite group has mainly phosphates, but some arsenates, vanadates, and silicates have the apatite structure.) (d) Rutley classifies minerals according to group in accordance with the periodic table as regards dominant economic constituents. (e) Optically, minerals are classified as opaque (metallic luster) and nonopaque (transmit light in thin section). (f) Economically, minerals are classified as metallics if they are the source of metal from ores and nonmetallics if their products are not metals. See also: [classification of crystals](#)

classified sand fill

Mechanically separated sand or the sand portion of mill tails used as backfill in underground openings. Usually conveyed hydraulically. Also spelled classified sandfill. See also: [backfill](#); [sand fill](#); [classifier](#).

classifier

a. A machine or device for separating the constituents of a material according to relative sizes and densities, thus facilitating concentration and treatment. Classifiers may be hydraulic or surface-current box classifiers (spitzkasten). *Webster 3rd* b. The term classifier is used in particular where an upward current of water is used to remove fine particles from coarser material. See also: [centrifugal separation](#) c. In mineral beneficiation, the classifier is a device that takes the ball-mill discharge and separates it into two portions--the finished product, which is ground as fine as desired, and oversize material. See also: [undersize](#)

classifier dredge

A dredge in which the gravel goes from the trommel to a classifier and then to jigs.
Lewis

classing

Sorting ore according to its quality. *Gordon*

clastic

Consisting of fragments of minerals, rocks, or organic structures that have been moved individually from their places of origin. Syn: [detrital](#); fragmental. *AGI*

clastic deformation

A process of metamorphism that involves the fracture, rupture, and rolling out of rock and mineral particles. In some instances, the crystal structure may be preserved, but the orientation of the fragments becomes confused. In other instances, the rock may be thoroughly pulverized. *Stokes*

clastic dike

A tabular body of clastic material transecting the bedding of a sedimentary formation, representing extraneous material that has invaded the containing formation along a crack, either from below or from above. See also: [sandstone dike](#); [pebble dike](#).

clastic rock

A consolidated sedimentary rock composed principally of broken fragments that are derived from preexisting rocks (of any origin) or from the solid products formed during chemical weathering of such rocks, and that have been transported mechanically to their places of deposition; e.g., a sandstone, conglomerate, or shale; or a limestone consisting of particles derived from a preexisting limestone. Syn: [fragmental rock](#); [clasolite](#). *AGI*

clathrate

A texture found chiefly in leucite rocks, in which the leucite crystals are surrounded by tangential augite crystals in such a way as to suggest a net or a section of a sponge, the felted mass of augite prisms representing the threads or walls, and the clear, round leucite crystals, the holes. *Schieferdecker*

claudetite

A monoclinic mineral, As_2O_3 ; dimorphous with arsenolite.

clauncher

a. Eng. A tool for cleaning blast holes. Also called clanger. *Fay* b. Derb. A piece of stone that has a joint in back of it, which becomes loose and falls when a tunnel has been driven past it. *Fay*

clausthalite

An isometric mineral, PbSe ; forms a crystal-solution series with galena, which it resembles. Syn: [lead selenide](#)

clay

An extremely fine-grained natural earthy material composed primarily of hydrous aluminum silicates. It may be a mixture of clay minerals and small amounts of nonclay materials or it may be predominantly one clay mineral. The type is determined by the predominant clay mineral. Clay is plastic when sufficiently pulverized and wetted, rigid when dry, and vitreous when fired to a sufficiently high temperature. See also: [clay mineral](#); fireclay; bentonite. *ASTM*

clay back

A back slip in a coal seam containing a clayey deposit. See also: [back slip](#)

clay band

A light-colored, argillaceous layer in clay ironstone. Also spelled clayband. *AGI*

clay barrel

See: [triple-tube core barrel](#)

clay bit

A mud auger; a mud bit; also, a bit designed for use on a clay barrel. See also: [clay-boring bit](#)

clay book tile

Structural clay tile with tongue and groove edges resembling a book in shape. *Hess*

clay-boring bit

A special coring bit used to split inner-tube core barrels. The thickness of the bit face is reduced and the inside shoulder is not inset with diamonds to allow a sharp-edged inner barrel to extend through and project a short distance beyond the face of the bit. Also called clay bit; mud bit. *Long*

clay course

A clay seam or clay gouge found along the sides of some veins.

claycrete

Weathered argillaceous material forming a layer immediately overlying bedrock. *AGI*

clay cutter

Cutting ring at the entry to a pipe feeding into a suction cutter dredge. Set of cutting blades in dredge trommel used to break clay brought up by dredge buckets. *Pryor, 3*

clay dauber

One who seals kiln doors before burning and kiln fireboxes after burning and assists other workers in knocking out doors and in unsealing fireboxes after cooling. Also called dauber; plaster man. *DOT*

clayey

See: [argillaceous](#)

clayey soil

A soil in which clay is the basic constituent. The clay contributes to strength by cohesion, but detracts from stability by volume change and by plastic flow under load. *Nelson*

clay gall

a. Mud curl or cylinder formed by drying and cracking of thin layers of coherent mud; commonly rolled or blown into sand and buried; flattened upon wetting forming a lenticular bleb of clay or shale. *Pettijohn, 1* b. Eng. Clay gall pellet of clay or mudstone, often ocherous, sometimes hollow, found esp. in false-bedded oolitic limestones such as forest marble. *Arkell*

clay gouge

a. A clayey deposit in a fault zone. See also: [fault gouge](#) b. A thin seam of clay separating masses of ore, or separating ore from country rock. See also: [gouge](#)

clay gun

Equipment used to fire a ball of fire clay into the tap hole of a blast furnace. See also: [mud gun](#)

clay hole

See: [clay pocket](#)

claying

Lining a borehole with clay, to keep explosives dry. *Fay*

claying bar

A rod or tool for lining a newly made coal shot hole with clay to seal up any breaks in the walls of the hole. The hole is filled with clay to about one-third of its length. The claying bar is driven in by hammer to the limit and rotated by a tommy bar in the eyelet at the outer end of the bar. See also: [clay iron](#); [bull](#); [scraper and break detector](#). *Nelson*

clay iron

An iron rod used for ramming clay into wet drill holes. See also: [bull](#); claying bar. *Fay*

clay ironstone

a. A compact hard, dark, gray or brown, fine-grained sedimentary rock consisting of a mixture of argillaceous material (up to 30%) and iron carbonate (siderite), occurring in layers of nodules or concretions or as relatively continuous irregular thin beds, and usually associated with carbonaceous strata, esp. overlying a coal seam in the coal measures of the United States or Great Britain; a clayey iron carbonate, or an impure siderite ore occurring admixed with clays. The term has also been applied to an argillaceous rock containing iron oxide (such as hematite or limonite). See also: [blackband ironstone](#) b. A sideritic concretion or nodule occurring in clay ironstone and other argillaceous rocks, often displaying septarian structure. *AGI* c. See: [ironstone](#); iron clay.

clay loam

a. A fine-textured soil that breaks into clods or lumps that are hard when dry. When the moist soil is pinched between the thumb and finger, it will form a thin ribbon that will break readily, barely sustaining its own weight. The moist soil is plastic and will form a cast that will bear much handling. When kneaded in the hand, it does not crumble readily but tends to work into a heavy compact mass. *Stokes* b. A soil containing 27% to 40% clay, 20% to 45% sand, and the remainder silt. *AGI*

clay maker

One who blends and mixes various clays, as shipped from a mine, into a thin, semiliquid form by operating a blunger (mixing machine). Also called blunger machine operator; clay mixer; clay washer; slip maker; slip mixer; wet mixer. *DOT*

clay marl

A chalky clay, or a marl in which clay largely predominates.

clay mineral

a. A colloidal-size, crystalline, hydroxyl silicate having a crystal structure of the two-layer (7 Aa) type (kaolinite), or of the three-layer (14 Aa) type (smectite), in which layers of silicon and aluminum ions have tetrahedral coordination with respect to oxygen, while layers of aluminum, ferrous and ferric iron, magnesium, chromium, lithium, manganese, and other cations have octahedral coordination with respect to oxygen and to hydroxyl ions. Exchangeable cations may attach to the silicate layers in an amount determined by the excess negative charge within the composite layers. These cations commonly are calcium and sodium, but may also be potassium, magnesium, hydronium, aluminum, or others. The most common clay minerals belong to the kaolinite, smectite, attapulgite, and illite (hydromica) groups. Mixed-layer clay minerals are either randomly or regularly interstratified intergrowths of two or more clay minerals. See also: [clay](#) b. Any mineral found in the clay fraction (less than 4 μ m) of a soil or sediment; e.g., rock flour comminuted by glacial grinding. c. Any kandite mineral of the kaolinite-serpentine group.

claypan

a. A playa formed by deflation of alluvial topsoils in a desert, in which water collects after a rain. *AGI* b. A term used in Australia for a shallow depression containing clayey and silty sediment, and having a hard, sun-baked surface. *AGI* c. See: [hardpan](#)

clay parting

a. Clayey material bound between a vein and its wall. Also called casing; parting. *Fay* b. Seams of hardened carbonaceous clay between or in beds of coal. *Hess*

claypit

a. A sump in which a drilling mud is mixed and stored. *Long* b. A pit or sump in which the return fluid from a borehole is collected and stored for recirculation. *Long* c. A pit where clay is dug.

clay pocket

A clay-filled cavity in rock; a mass of clay in rock or gravel. Syn: [clay hole](#)

clay rock

See: [claystone](#)

clay sapropel

Clay deposit containing sapropel. *Tomkeieff*

clay shale

a. A consolidated sediment consisting of no more than 10% sand and having a silt to clay ratio of less than 1:2 (Folk, 1954, p. 350); a fissile claystone. *AGI* b. A shale that consists chiefly of clayey material and that becomes clay on weathering. *AGI*

clay size

Said of that portion of soil or sediment that is finer than 2 to 5 μ m.

clay slate

a. A low-grade, essentially unreconstituted slate, as distinguished from the more micaceous varieties that border on phyllite. *AGI* b. A slate derived from an argillaceous rock, such as shale, rather than from volcanic ash; a metamorphosed clay, with cleavage developed by shearing or pressure, as distinguished from mica slate. *AGI*

clay stains

Yellowish-brown or rust-colored films from deposits of clay minerals. *Skow*

claystone

a. A term applicable to indurated clay in the same sense as sandstone is applicable to indurated or cemented sand. Syn: [clay rock](#) See also: [mudstone](#); [siltstone](#). b. One of the concretionary masses of clay frequently found in alluvial deposits, in the form of flat rounded disks either simple or variously united so as to give rise to curious shapes.

clay temperer

See: [wet-pan operator](#)

clay vein

A body of clay, usually roughly tabular in form like an ore vein, that fills a crevice in a coal seam. It is believed to have originated where the pressure was high enough to force

clay from the roof or floor into small fissures and in many instances, to alter and to enlarge them. Also called horseback. *AGI*

clay wash

a. A deposit of clay transported and deposited by water. b. The agitation of an oil with fuller's earth or some other clay to improve the color or odor of the oil. *Porter* c. A thin emulsion of clay and water, sometimes used to strengthen the face of a mold. *Freeman* d. Clay thinned with water and used for coating gagers and flasks. *Crispin*

clay washer

See: [clay maker](#)

clean

a. Free from combustible gases or other noxious gases. b. A coal seam free from dirt partings. c. A diamond or other gem stone free from interior flaws. *Hess* d. A borehole free of cave or other obstructing material. *Long* e. A mineral virtually free of undesirable nonore or waste rock material. *Long* f. Free of foreign material. In reference to sand or gravel, it means lack of binder *Nichols, I*

Clean Air Act

U.S. law: 42 USC Sections 7401-7428 (1979) and resulting regulations in 40 CFR51, administered by USEPA. Its objective is to reduce atmospheric pollution to acceptable limits. Inter alia, it empowers local authorities to declare smoke control areas in which the emission of any smoke from chimneys will constitute an offense. The act became part of Great Britain's national legislation in July 1956, although its main provisions did not become effective until June 1, 1958. See also: [coal smoke](#); smoke. *Nelson*

clean cutting

A rock formation, the cuttings of which do not tend to mud up on the face of a diamond or other bit. *Long*

clean cuttings

a. Rock cuttings that do not ball or adhere to the walls of a borehole. *Long* b. Rock cuttings not contaminated by cave material or drill-mud ingredients. *Long*

cleaned coal

Coal produced by a mechanical cleaning process (wet or dry). *BS, 5*

cleaner

Scot. A scraper for cleaning out a shothole. *Fay*

cleaner cell

Secondary cell for the retreatment of the concentrate from a primary cell. Syn: [recleaner cell](#)

clean hole

A borehole free of cave or other obstructing material. *Long*

cleaning

a. A general term for the methods and processes of separating dirt from coal or gangue from mineral. See also: [coal-preparation plant](#); [roughing](#). *Nelson* b. The retreatment of the rough flotation concentrate to improve its quality. *Pryor, 4*

cleaning plant

See: [coal washer](#); preparation plant.

cleanout

a. To remove cave or other obstructing material from a borehole. *Long* b. A port or opening provided in the body or base of a machine or other mechanism through which accumulated debris may be removed. *Long*

cleanout auger

See: [cleanout jet auger](#)

cleanout jet auger

An auger equipped with water-jet orifices designed to clean out collected material inside a driven pipe or casing before taking soil samples from strata below the bottom of the casing. Also called cleanout auger; M.P.F.M. jet auger. *Long*

cleanup

a. The operation of collecting all the valuable product of a given period of operation in a stamp mill, or in a hydraulic or placer mine. b. The valuable material resulting from a cleanup. c. To load all the coal a miner has broken. d. The cleanup of sluices in placer mining is a similar process that occurs daily or more often. The gold, tin, or other

concentrate is shoveled out for further treatment. *Nelson* e. To police and tidy up a drill rig and the surrounding area. *Long*

cleanup barrel

A barrel used to batch grind and then amalgamate gold-bearing concentrates and residues. *Pryor, 3*

clear

a. Translucent diamond with few visible spots or flaws. *Long* b. Water that has not been recirculated in drilling and hence is free of drill cuttings and sludge. Also applied to return water when it contains little or no entrained cuttings or sludge. *Long* c. A safe working place. *Long* d. Transparent, such as in clear quartz, clear glass.

clearance

a. The space between the top or side of a car and the mine roof or wall. *Fay* b. Technically, the annular space between downhole drill-string equipment, such as bits, core barrels, casing, etc., and the walls of the borehole with the downhole equipment centered in the hole. Loosely, the term is commonly and incorrectly used as a syn. for exposure. See also: [exposure](#); inside clearance. *Long* c. The amount of open space around a drill or piece of mining equipment in an underground workplace. *Long*

clearance space

A space in pumps of the piston and ram types, usually quite small, between the cylinder end and the piston at the end of its stroke. The height to which water can be raised on the suction side is influenced by the volume of this space. *Mason*

clear clay

A clay such as kaolin that is free from organic matter and so does not give rise to bubbles if used in a vitreous enamel; such clays are used in enamels when good gloss and clear colors are required. *Dodd*

clearer

A reservoir (in saltmaking) into which brine is conveyed. *Fay*

clearing

The removal of all standing growth, whether bushes or trees. *Carson, 1*

clearing and grubbing

Removal of tree stumps before excavation starts on a construction site. *Hammond*

clearing hole

A hole drilled to a slightly larger diameter than the bolt passing through it. The clearance for black bolts is normally 1/16 in (1.6 mm). *Hammond*

clear mica

Transparent muscovite without stains and with a smooth surface in reflected light.

clear span

The clear unobstructed distance between the inner extremities of the two supports of a beam. This dimension is always less than the effective span. See also: [effective span](#)

cleat

a. Term applied to systems of joints, cleavage planes, or planes of weakness found in coal seams along which the coal fractures. See also: [facing](#); [face cleat](#); [bord](#); [butt cleat](#). Also spelled cleet. b. Main joint in a coal seam along which it breaks most easily. Runs in two directions, along and across the seam. *Pryor, 3* c. Joints in coal more or less normal to the bedding planes. *BS, 11* d. An attachment fastened to a conveying medium to help propel material along the path of travel.

cleat spar

York. Crystalline mineral matter, often ankerite, occurring in the cleat cracks of coal. *Arkell*

cleavage

a. The breaking of a mineral along its crystallographic planes, thus reflecting crystal structure. CF: [parting](#) b. The property or tendency of a rock to split along secondary, aligned fractures or other closely spaced planes or textures, produced by deformation or metamorphism. *AGI* c. In quarrying, the cleavage of rocks is often called the rift. *Nelson*

cleavage banding

A compositional banding that is parallel to the cleavage rather than to the bedding. It results from the mechanical movement of incompetent material, such as argillaceous rocks, into the cleavage planes in a more competent rock, such as sandstone. Ordinarily, the argillaceous bands are only a few millimeters thick. See also: [segregation banding](#)

cleavage plane

The plane along which cleavage takes place. *Fay*

cleavages

As used by the diamond-cutting and diamond-bit-setting industries, the more or less flat diamond fragments produced by splitting a crystalline diamond along the octahedral plane. Such fragments are used primarily as a material from which special-shaped, diamond-pointed cutting tools are produced. See also: [melee](#)

cleave

To split a crystalline substance, such as a diamond, along a cleavage plane. *Long*

cleavelandite

A white, lamellar, or leaflike variety of albite, having an almost pure Ab content and commonly forming fan-shaped aggregates of tabular crystals that show mosaic development and appear as though bent; formed as a late-stage mineral in pegmatites, replacing other minerals. Also spelled clevelandite.

cleaving

Splitting a crystal along a cleavage plane. *Hess*

cleaving way

Corn. A direction parallel to the bedding planes of a rock. CF: [roughway](#); quartering way. *Fay*

cleek

a. Scot. To load cages at the shaft bottom or at midworkings. b. Scot. See: [haulage clip](#)

cleft

An abrupt chasm, cut, breach, or other sharp opening, such as a craggy fissure in a rock, a wave-cut gully in a cliff, a trench on the ocean bottom, a notch in the rim of a volcanic crater, or a narrow recess in a cave floor. Obsolete syn: clift. *AGI*

Clerici solution

A molecular mixture of thallium malonate and thallium formate. Used as a heavy solution for the separation of minerals. The solution has a maximum density of 4.25 g/cm³ at 20 degrees C. It is prepared by adding formic acid to one of two equal quantities of thallium carbonate, and adding malonic acid to the other until each is neutralized. The

two solutions are then mixed, filtered, and evaporated until almandite floats. CF: [Sonstadt solution](#); [Klein solution](#); [bromoform](#); [methylene iodide](#). *Hess*

cleveite

A variety of uraninite containing a large percentage of UO_3 ; also rich in helium. Contains about 10% of the yttrium earths. *Fay*

clevis

a. In coal mining, a spring hook or snap hook used to attach the hoisting rope to the bucket. Also called clivvy. *Pryor, 3* b. A U-shaped iron hook used with an iron pin for connecting ropes to the drawbars of cars or, when used with iron links, for coupling cars together. Also used as a connecting link between chains or lines or to hang a sheave in a drill tripod or derrick. *Jones, 1; Long*

cliachite

a. A ferruginous bauxite from Cliache, Dalmatia, Croatia. *English* b. Colloidal aluminum hydroxide occurring as one of the constituents of bauxite. Also spelled kliachite. See also: [laterite](#); [sporogelite](#). Syn: [alumogel](#)

cliff

a. Wales. Shale that is laminated, splitting easily along the planes of deposition. Also called clift. b. The strata of rocks above or between coal seams. *Standard, 2*

clift

a. Obsolete var. of cleft. See: [cleft](#) b. Dialectal var. of cliff. *AGI* c. A term used in southern Wales for various kinds of shale, esp. a strong, usually silty, mudstone. *AGI*

climate

In froth flotation, the prevailing balance of chemical energy reached by the reacting electrical, physical, and chemical forces. *Pryor, 1*

climb

The tendency of an inclined diamond-drill hole to follow an upward-curving, increasingly flat course; also, the tendency of a diamond or other rotary-type bit to drill a hole curved in the updip direction when holes are drilled in alternating hard- and soft-layer rock having bedding planes that cross the borehole at an angle other than 90 degrees to the face of the bit. *Long*

clink

One of the internal cracks formed in steel by differential expansion of surface and interior during heating. The tendency for clinks to occur increases with the hardness and mass of the metal, and with the rate of heating. *CTD*

clinker

a. Fused or partly fused coal ash, a byproduct of combustion. CF: [core](#) *ACSG*, 2 b. Coal that has been altered by an igneous intrusion. See also: [natural coke](#) c. Partially fused intermediate product in the manufacture of portland cement.

clinkstone

An older term for a feldspathic rock, usually fissile; it is sonorous when struck with a hammer. Also spelled klinkstone. See also: [phonolite](#) *AGI*

clino

A prefix to the name of a mineral species or group to indicate monoclinic symmetry as opposed to "ortho" indicating orthorhombic symmetry. See the root mineral name.

clinoamphibole

a. A group name for amphiboles crystallizing in the monoclinic system. b. Any monoclinic mineral of the amphibole group; e.g., hornblende, cummingtonite, grunerite, tremolite, actinolite, riebeckite, glaucophane, and arfvedsonite. CF: [orthoamphibole](#)

clinoaugite

A collective name for the monoclinic pyroxenes. See also: [clinopyroxene](#) *English*

clinoaxis

The inclined crystallographic axis in the monoclinic system, designated a or b in the first setting and a or c in the second. Most mineralogists use the second setting and designate the clinoaxis a.

clinocllore

A monoclinic mineral, $2[(\text{Mg,Fe})_5 \text{Al}(\text{Si}_3 \text{Al})_4 \text{O}_{10} (\text{OH})_8]$; chlorite group; occurs in greenschists.

clinochrysotile

Monoclinic and orthorhombic forms of chrysotile, as determined by X-rays. See also: [chrysotile](#)

clinoclase

A monoclinic mineral, $\text{Cu}_3(\text{AsO}_4)(\text{OH})_3$; formerly called clinoclasite. Syn: [aphanosite](#)

clinoclasite

Former name for clinoclase.

clinodome

An open crystal form of four sides parallel to the clinoaxis a in the monoclinic system. CF: [dome](#); [orthodome](#).

clinoenstenite

A name for the pyroxene series clinoenstatite and clinohypersthene. CF: [enstenite](#)

clinoferrosilite

A monoclinic mineral, $\text{Fe}_2\text{Si}_2\text{O}_6$; pyroxene group; contains up to 15% $\text{Mg}_2\text{Si}_2\text{O}_6$ toward clinohypersthene; dimorphic with ferrosilite.

clinograph

An instrument for making a borehole survey; i.e., to determine if, and in what direction, a borehole has deviated off the true vertical plane. See also: [crooked hole](#)

clinoguarinite

a. Cesaro's name for a monoclinic form of guarinite. See also: [orthoguarinite](#) b. A former name for hiortdahlite.

clinohedrite

a. Breithaupt's name for tetrahedrite. *English* b. A monoclinic mineral, $\text{CaZnSiO}_4 \cdot \text{H}_2\text{O}$; forms colorless to white or amethystine clinohedral crystals.

clinohypersthene

An intermediate member in the series clinoenstatite-clinoferrosilite in the pyroxene group.

clinometer

Any of various instruments used for measuring angles of slope, elevation, or inclination (esp. the dip of a geologic stratum or the slope of an embankment); e.g., a simple hand-held device consisting of a tube with a cross hair, a graduated vertical arc, and an attached spirit level so mounted that the inclination of the line of sight can be read on the circular scale by centering the level bubble at the instant of observation. A clinometer is usually combined with a compass (e.g., the Brunton compass). Syn: [inclinometer](#); [plain clinometer](#). CF: [drift indicator](#)

clinophone

An exceptionally accurate instrument for borehole surveying, designed particularly for use with the freezing and cementation methods of shaft sinking; capable of giving the slope of a borehole to within 1 min of arc. *Hammond*

clinoptilolite

A monoclinic mineral, $(\text{Na,K,Ca})_2 \text{Al}_3 (\text{Al,Si})_2 \text{Si}_{13} \text{O}_{36} \cdot 12\text{H}_2 \text{O}$; of the zeolite group.

clinopyroxene

A group name for monoclinic pyroxenes. Abbrev. cpx. Syn: [monopyroxene](#) CF: [orthopyroxene](#)

clinostrengite

A discredited name for phosphosiderite, a dimorph of strengite.

clinoungemachite

A monoclinic mineral, sodium potassium iron sulfate; possibly dimorphous with ungemachite.

clinozoisite

An epidote having the composition of zoisite, $\text{Ca}_2 \text{Al}_3 (\text{SiO}_4)_3 (\text{OH})$; monoclinic; crystals striated. *Dana, 4*

clintonite

a. A monoclinic mineral, $\text{Ca}(\text{Mg,Al})_3 (\text{Al}_3 \text{Si})\text{O}_{10} (\text{OH})_2$; mica group. Syn: [seyberite](#); [xanthophyllite](#). b. A group name for the brittle micas.

Clinton ore

A red, fossiliferous sedimentary iron ore; e.g., the Clinton Formation (Middle Silurian) or correlative rocks of the east-central United States, containing lenticular or oolitic grains of hematite. It supplies the ironworks at Birmingham, AL. See also: [fossil ore](#); [flaxseed ore](#). *AGI*

clip

Connector between an underground tub, car, truck, or tram, and endless rope haulage. A clip pulley has a broad rim into which studs are set, to grip links of a haulage chain. See also: [haulage clip](#); [automatic clip](#); coupling; clam. *Pryor, 3*

clip method

The clip method of making wire rope attachments is widely used. Drop-forged clips of either the U-bolt or the double-saddle type are recommended. When clips of the correct size are properly applied, the method uses about 80% of the rope strength.

clod

a. Eng. Deposits interstratified with coal; Yorkshire and Midland Counties. *Nelson* b. A hard earthy clay on the roof of a working place in a coal seam; often a fireclay. *CTD* c. A miner's term applied to a soft, weak, or loosely consolidated shale (or to a hard, earthy clay), esp. one found in close association with coal or immediately overlying a coal seam. It is so called because it falls away in lumps when worked. An artificially formed aggregate of soil particles. *AGI* d. A clod of dirt, of greater or less diameter, thin at the edges and increasing in thickness to the middle. See also: [kettle bottom](#) e. An artificially formed aggregate of soil particles.

clog

a. Mid. A short piece of timber about 3 in by 6 in by 24 in (7.6 cm by 15.2 cm by 61.0 cm) fixed between the roof and a prop. *Fay* b. A flat wedge over a post. See also: [lid](#) c. To obstruct, hinder, or choke up; e.g., the stoppage of flow through a pipe by an accumulation of foreign matter, or the filling up of the grooves in a file when operating on a soft metal. *Crispin* d. Eng. Rock filling a fault. *Arkell*

close-connected

Applied to dredges in which the buckets are each connected to the one in front without any intermediate link. *Fay*

closed circuit

a. A water circuit designed so that the only water added is that necessary to replace the loss of water on the products. *BS, 5* b. A system in which coal passes from comminution

to a sorting device that returns oversize for further treatment and releases undersize from the closed circuit.

closed-circuit grinding

A size-reduction process in which the ground material is removed either by screening or by a classifier, the oversize being returned to the grinding unit. Typical examples are a dry pan with screens, dry milling in an air-swept ball mill, and wet milling in a ball mill with a classifier. See also: [circulating load](#)

closed-circuit operation

Retention and retreatment of ore in part of flow a line until it satisfies criteria for release. Used in comminution to reduce overgrinding by passing intermediate particles repeatedly through grinding systems, classifying the product and returning oversize. Used in concentration (e.g., rougher-scavenger-cleaner flotation) to retain a selected fraction of ore in circuit for retreatment (a middling), until it is either upgraded to rank as concentrate or sufficiently denuded of value to be rejected as tailing. *Pryor, I*

closed-circuit television

System in which television cameras relay pictures of conditions at important points in a plant, thereby aiding workers to watch inaccessible places and exercise extended control.

closed contour

A contour line that forms a closed loop and does not intersect the edge of the map area on which it is drawn; e.g., a depression contour indicating a closed depression, or a normal contour indicating a hilltop. *AGI*

closed fault

A fault in which the two walls are in contact. CF: [open fault](#) *AGI*

closed frame

A mine support frame used esp. in inclined shafts where protection from rock pressure is needed on all sides. This completely closed set is provided at the bottom with a sill. The joint is usually effected by tenons, so that when the pressure is exerted in a downward direction the timbers interlock. *Stoces*

closed joint

A joint found in rocks that causes a plane of weakness known variously as a rift or gain. This largely determines the shape of the blocks that may be extracted from a quarry. Also called incipient joint. Syn: [gain](#)

closed-spiral auger

A soil-sampling auger made by spirally twisting a flat steel ribbon to form a tubelike, hollow-center, corkscrewlike device. *Long*

closed top

See: [cup and cone](#)

closed traverse

a. A surveying traverse whose accuracy can be checked by the fact that, when it is closed, the angles should add up to 360 degrees, and which ends at its starting point. *Hammond* b. A surveying traverse that starts and terminates upon the same station or upon a station of known position. CF: [open traverse](#)

closed-water circuit

The separation of solids from a washery slurry so that the water can be returned to the plant and used continuously. *Nelson*

close goods

a. Pure stones, of desirable shapes. b. Highest class of South African diamonds, as sorted at Kimberly.

close-jointed

Applied to rocks in which the joints are very close together. *Fay*

close-joints cleavage

See: [slip cleavage](#)

close nipple

A nipple, the length of which is about twice the length of a standard pipe thread and without any shoulder. See also: [nipple](#)

close prospecting

Detailed analysis of a proven placer deposit that should determine: (1) the volumetric measurements of both overburden and gravel; (2) the estimation of the gold or other mineral contents; (3) the average value of the area in pence, cents, carats, or other unit per unit of volume; and (4) all possible information regarding the nature of the overburden and gravel--i.e., whether it is clayey, free wash, etc.--as well as of the bedrock. *Griffith*

close-ranged

Screened or classified between close maximum and minimum limits of size or settlement. *Pryor, 4*

close sheathing

Consists of planks placed side by side along a continuous frame. Its use is to prevent local crumbling of less compacted soils. Since crevices can exist between planks, it should not be used with fine silts or liquid soils, which can seep through these cracks. CF: [skeleton sheathing](#); tight sheathing. *Carson, 1*

close sizing

a. In screening, choice of sieve sizes that are fairly close in mesh size to restrict size range of each fraction of the material separated. b. Sizing with screens.

close timbering

The setting of timber sets and lagging very close together when shaft sinking or tunneling through very loose ground or crushed coal in thick seams. See also: [cribbing](#); [forepoling](#). *Nelson*

closing error

When calculating or plotting the distances, angles, or coordinates of a closed traverse or one connecting two accurately located points, the discrepancy between starting and finishing point. This error is adjusted in proportion to the magnitude of the angles and distances involved, if it is below a tolerable limit. See also: [error of closure](#)

closing rope

Operating rope for opening and closing a grab. *Hammond*

closterite

Dense, laminated, brownish-red algal coal found in Irkutsk, Russia. It consists of an accumulation of spheroidal algal colonies of different sizes, among which are

disseminated great numbers of desmid algae, belonging to the living genus, *Closterium*. *Tomkeieff*

closure

a. A closed anticlinal structure. b. The difference in the relative position of the bottom and the collar of a borehole expressed in horizontal distance in a specific compass direction. *Long* c. The relative inward movement of the two walls of a stope. d. A cumulative measure of the various individual errors in survey measurements; the amount by which a series of survey measurements fails to yield a theoretical or previously determined value for a survey quantity. *AGI* e. Used in structural geology, esp. in connection with potential oil structures, to designate the vertical distance between the highest point of an anticlinal structure of an anticlinal structure or fold and the lowest contour that closes around the structure. It is an approximate measure of the capacity of a structural trap for oil and/or gas. *Stokes* f. A portion of brick to close, when required, the end of a course as distinguished from a half brick. See: [closure](#)

closure meter

An instrument for indicating the amount of closure that has taken place. Wall closure in mines is measured by this instrument. Also called sag meter. *Spalding; Spalding*

clot

A group of ferromagnesian minerals in igneous rock, from a few inches to a foot or more in size, commonly drawn out longitudinally, that may be a segregation or an altered xenolith. *AGI*

clothing

Eng. Brattice constructed of a coarse, specially prepared canvas. *Fay*

clotting

The sintering or semifusion of ores during roasting. *Fay*

cloud chamber

A device that displays the tracks of charged atomic particles. It is a glass-walled chamber filled with a supersaturated vapor. When charged particles pass through the chamber, they leave a cloudlike track much like the condensation trail of a plane. This track permits scientists to see the paths of these particles and study their motion and interaction. See also: [bubble chamber](#); [spark chamber](#). *Lyman*

clouded agate

Chalcedony with irregular or indistinct patches of color. See also: [agate](#)

cloudy chalcedony

Chalcedony with dark, cloudy spots in a light-gray transparent base. *Schaller*

cloudy stain

In mica, a cloudlike effect that occurs in various colors. *Skow*

cloustonite

Scot. A mineral related to asphalt, occurring in patches in blue limestone and in blue flags at Inganess, Orkney. It is soluble in benzol and at a red heat gives off a large amount of illuminating gas. *Fay*

clump

a. A bend in a roadway or passage in a coal seam. *CTD* b. A large fall of roof. *CTD* c. A tough fireclay. *CTD*

clustered carbide

See: [interspersed carbide](#)

clusterite

See: [botryoid](#)

cluster mill

A rolling mill in which each of the two working rolls of small diameter is supported by two or more backup rolls. *ASM, I*

CM

Strata containing coalbeds, particularly those of the Pennsylvanian Period. Used as a proper name for a stratigraphic unit more or less equivalent to the Pennsylvanian Period. Abbrev. of Coal Measures. *AGI*

CMI centrifuge

A fine-coal dewatering machine consisting of two rotating elements, an outside conical screen frame, and an inside solid cone, which carries spiral hindrance flights. By a slight difference in the number of teeth in the gears, the screen element moves slightly faster,

in the same direction, than the solid cone. Material enters the machine from the top and falls on the solid cone where centrifugal force throws it against the screen. It slides down the screen until it meets the upper end of the hindrance flights, and, in doing so, the water begins to pass through the screen. The flights spiral downward, and, as the screen moves slowly around them in the direction of the downward pitch, the solids gradually find their way to the bottom of the screen basket and the zone of maximum centrifugal force, tending to remove all of the water. See also: [dewatering](#)

coagulation

a. The binding of individual particles to form flocs or agglomerates and thus increase their rate of settlement in water or other liquid. See also: [flocculation](#) b. The coalescence of fine particles to form larger particles.

coagulator

A soluble substance, such as lime, which, when added to a suspension of very fine solid particles in water, causes these particles to adhere in clusters that will settle easily. Used to assist in reclaiming water used in flotation. *Hess*

coal

A readily combustible rock containing more than 50% by weight and more than 70% by volume of carbonaceous material, including inherent moisture; formed from compaction and induration of variously altered plant remains similar to those in peat. Differences in the kinds of plant materials (type), in degree of metamorphism (rank), and in the range of impurity (grade) are characteristic of coal and are used in classification. Syn: [black diamond](#)

coal analysis

The determination, by chemical methods, of the proportionate amounts of various constituents of coal. Two kinds of coal analyses are ordinarily made: (1) proximate analysis, which divides the coal into moisture (water), volatile matter, fixed carbon, and ash. Percentage of sulfur and heat value in Btus per pound or kilogram, each obtained by separate determination, are usually reported with the real proximate analysis; and (2) ultimate analysis, which determines the percentages of the chemical elements carbon, hydrogen, oxygen, nitrogen, and sulfur. Other elements that may be present are considered impurities and are reported as ash.

coal ash

Noncombustible matter in coal.

coal auger

A special type of continuous miner. It consists essentially of a large diameter screw drill that cuts, transports, and loads coal onto vehicles or conveyors. The coal auger is used for (1) winning opencast coal without stripping overburden; (2) pillar-and-stall mining; and (3) extraction of pillars or percentage of pillars that would otherwise be uneconomic to work. See also: [auger](#); [twist drill](#); [mole mining](#). *Nelson*

coal ball

Nodules of spheroidal, lenticular, or irregular shape containing petrified plant remains and in some cases animal remains. They vary in size from about 1 to 40 cm or more; occasional specimens weigh more than 1 ton. Infrequently, an entire seam in a restricted area consists largely of coal balls. Coal balls consist mainly of calcareous, dolomitic, sideritic, pyritic, or siliceous material surrounding or impregnating plant and animal remains. They occur in brown coals (mainly sideritic balls) as well as in coals of higher rank generally lying within a coal seam but occasionally in the roof. Calcareous, dolomitic, and pyritic coal balls are commonly found in seams having marine strata in the roof. The distribution in seams is variable. They may occur in a broad zone running through a coalbed or be distributed irregularly in nests. Syn: [torf dolomite](#)

coal bank

An exposed seam of coal. *Craigie*

coal barrier

A protective pillar of coal. See also: [barrier pillar](#)

coal basin

a. Depression in older rock formations in which coal-bearing strata have been deposited. See also: [concealed coalfield](#); [exposed coalfield](#). b. A coalfield with a basinal structure; e.g., the Carboniferous Coal Measures of England. *AGI*

coal blasting

There are two methods of breaking coal with explosives, namely, blasting cut coal, which is the method most commonly used, and blasting off the solid, or grunching. *McAdam, 2*

coalbreaker

a. A building containing the machinery for breaking coal with toothed rolls, sizing it with sieves, and cleaning it for market. b. A machine for breaking coal.

coal briquette

Coal made more suitable for burning by a process that forms it into a regular square- or oval-shaped piece. *Bennett*

coal briquetting

See: [briquette](#)

coal bump

Sudden outburst of coal and rock that occurs when stresses in a coal pillar, left for support in underground workings, cause the pillar to rupture without warning, sending coal and rock flying with explosive force.

coal burster

An appliance for loosening coal by means of high-pressure water and oil. It consists of a round, stainless steel bar with small telescopic rams acting on a steel liner in a shot hole. The bar is connected to a hand- or power-operated pump placed near the face. The high-pressure liquid from the pump causes the rams and liner to exert a pressure sufficient to loosen or break down the coal. It is a safe method of coal breaking without the use of explosives. It has not, however, made the progress originally anticipated. See also: [water infusion](#) Syn: [hydraulic cartridge](#)

coal car

A car used in hauling coal in or from a mine. *Craigie*

coal cart

A cart for carrying coal. *Craigie*

coal chute

A trough or spout down which coal slides from a bin or pocket to a locomotive tender, or to vessels, carts, or cars. *Fay*

coal claim

A piece of land having, or thought to have, valuable coal deposits on it and legally claimed by one seeking to own it. *Mathews*

coal classification

The grouping of coals according to certain qualities or properties, such as coal type, rank, carbon-hydrogen ratio, and volatile matter. See also: [high-volatile coals](#)

coal classification systems

One system classifies coal by the content of volatile matter: with 10% volatile, anthracite; between 10% and 13% lean coal, semianthracite or dry-steam coal; 14% to 20%, variously designated; 20% to 30%, fat or coking coal. Other systems classify by calorific value, and caking and/or coking property. Post-World War II classifications include (1) volatile matter, (2) caking properties on rapid heating, and (3) coking properties. See also: [ASTM coal classification](#)

coal clay

Clay found under a coalbed, usually a fireclay. See also: [underclay](#)

coal cleaning

The sorting, picking, screening, washing, pneumatic separation, and mixing of coal sizes for the market.

coal cleaning equipment

Equipment used to remove impurities -- such as slate, sulfur, pyrite, shale, fire clay, gravel, and bone -- from coal.

coal cleaning plant

A plant where raw or run-of-mine coal is washed, graded, and treated to remove impurities and to reduce ash content. Syn: [washery](#) *Pryor, 3*

coal clearing

The loading of broken coal at the face into conveyors or mine cars. The clearing shift is the coal-loading shift or stint. Usually the miner has a measured task or stint (stent). *Nelson; Pryor, 3*

coal conglomerate

A conglomerate made of fragments of coal. *Tomkeieff*

coal constituent classification

In the United States it is generally agreed that the maceral concept of the nomenclature Stopes-Heerlen System fails to comprehend the effect of the stage of coalification on the nature of coal constituents. W. Spackman's interpretation of the maceral concept incorporates the ideas of variable coalification in suggesting a skeletal framework upon which a systematic classification can be built. The maceral concept, as interpreted by

Spackman, implements the classification of the products of coalification. In this scheme, macerals possessing similar chemical and physical properties are assembled into maceral groups that can, in turn, be characterized by a comparatively restricted set of properties. Maceral groups possessing similar characteristics can be classified into maceral suites. Syn: [Spackman system](#)

coal cutter

a. The longwall coal cutter is a power-operated machine that draws itself by rope haulage along the face, usually cutting out a thin strip of coal from the bottom of the seam, in preparation for shot firing and loading or a cutter loader. The bar and disk machines are obsolescent and the chain coal cutter is now almost universal. *Nelson* b. See: [machineman](#)

coal-cutter pick

One of the cutting points attached to a cutter chain for making a groove in a coal seam. The picks are made from quality carbon steel or a hard alloy steel and tipped with fused tungsten carbide, sintered tungsten carbide, or other hard-wearing material. The advent of the coal-cutter pick tipped with tungsten carbide on a heat-treated, alloy-steel shank has resulted in marked improvements in drilling and a reduction in cutting delays. See also: [chain coal cutter](#); [double-ended pick](#); [duckbill pick](#); tungsten carbide bit. *Nelson*

coal-cutter team

The miners in charge of a coal cutter. A cutting team varies from two to five with two to three about average. The leading worker is normally stationed in front of the machine and is in charge of the controls, and an assistant follows behind. See also: [machineman](#) *Nelson*

coal-cutting machine

A machine powered by compressed air or electricity that drives a cutting chain or other device so as to undercut or overcut a seam, or to remove a layer of shale. Percussive cutters are used to bore holes or to make vertical cuts (nicking, shearing); disk, bar, and chain cutters carry small picks that undercut the seam as the machine travels. *Pryor, 3*

coal-cutting machine operator

See: [machineman](#)

coal digging

A place where coal is dug. *Craigie*

coal drill

Usually an electric rotary drill of a light, compact design. Aluminum and its alloys usually are used to reduce weight. Where dust is a hazard, wet drilling is employed. With a 1-hp (745.7-W) electric drill, speeds up to 6 ft/min (1.83 m/min) are possible. Light percussive drills, operated by compressed air, and hand-operated drills are also employed. See also: [electric coal drill](#)

coal driller

In coal mining, a worker who uses a hand or power drill to drill holes into the working face of the coal into which explosives are charged and set off to blast down the coal.
DOT

coal dryer

A plant or vessel in which water or moisture is removed from fine coal. Artificial drying of fine coal is not often employed. Fine coal is removed from wash water by dewatering classifiers or by vacuum filtration. See also: [dryer](#); [thermal drying](#). *Nelson*

coal dust

a. The general name for coal particles of small size. In experimental mine testing, particles that will not pass through a 20-mesh screen-- 1/32-in-square (0.8-mm-square) openings--are not considered as coal dust. *Rice, 2* b. In 1964, a series of laboratory tests were made with a spark source on aluminum powder and cornstarch (both dusts presenting a more severe explosion hazard than coal dust). It was found that particles passing a U.S. Standard No. 40 sieve (particles less than 0.016 in or 0.4 mm) contributed to an explosion in the laboratory bomb. The 0.016-in particle diameter was recommended as the definition for dust in surface industry. Thus, two definitions of dust exist. For coal mines, dust consists of particles passing a U.S. Standard No. 20 sieve (particles less than 850 μ m), and for surface industries, dust consists of particles passing a No. 40 sieve (particles less than 425 μ m). The use of two definitions is not incongruous since the potential igniting sources in a coal mine can be much more severe than those in surface industries. *MSHA, 1* c. The dust produced by the breakage and crushing of coal underground and at coal preparation plants. It is usually intermixed with a varying proportion of stone dust. Coal dust in mines presents two main dangers: explosion hazard and pneumoconiosis hazard. The explosibility of a coal dust cloud depends upon its fineness, purity, and volatile content. The dust particles believed to be harmful from the pneumoconiosis aspect are those of 5 μ m and under. In mines, the most common explosive dust encountered is bituminous coal dust. The U.S. Bureau of Mines has established that coal dust in the absence of gas can explode and that explosions can occur in any shape of mine opening. See also: [dust-free conditions](#)

coal-dust explosion

A mine explosion caused by the ignition of fine coal dust. It is considered that an explosion involving coal dust alone is relatively rare. It demands the simultaneous formation of a flammable dust cloud and the means of ignition within it. The flame and force of a combustible gases explosion are the common basic causes of a coal-dust explosion. The advancing wave of the explosion stirs up the dust on the roadways and thus feeds the flame with the fuel for propagation. See also: [colliery explosion](#); [gas explosion](#); [stone-dust barrier](#). *Nelson*

coal-dust index

Percentage of fines and dust passing the 0.0117-in (0.30-mm) mesh or 48-mesh. *Bennett*

coal elevator

A building in which coal is raised and stored preparatory to loading on cars, ships, etc. *Mathews*

coalesced copper

Massive copper made from ground, brittle, cathode copper by briquetting and sintering in a reducing atmosphere at high temperatures with pressure. *ASM, 1*

coalette

See: [briquette](#)

coal face

a. The mining face from which coal is extracted by longwall, room, or narrow-stall system. See also: [face](#) b. A working place in a colliery where coal is hewn, won, got, or gotten from the exposed face of a seam by face workers. *Pryor, 3*

coalfield

a. An area of country, the underlying rocks of which contain workable coal seams. The distribution of coalfields was largely determined by folding movements and subsequent denudation. The original coal areas were clearly larger than the present coalfields. See also: [coal basin](#); [field](#). *Nelson* b. A region in which coal deposits of known or possible economic value occur. *AGI*

coal flotation

See: [flotation](#); froth flotation.

coal formation

a. A stratigraphic coal-bearing unit in coal measures. b. A stratum in which coal predominates. *Craigie*

coal fuel ratio

The content of fixed carbon divided by the content of volatile matter is called the fuel ratio. According to their fuel ratios, coals have been classified as anthracite, at least 10; semianthracite, 6 to 10; semibituminous, 3 to 6; and bituminous, 3 or less.

coal-hoisting engineer

In coal mining, one who operates a hoist for raising coal to the surface where separate shafts or compartments are used for handling coal and people. *DOT*

coalification

Those processes involved in the genetic and metamorphic history of coalbeds. The plant materials that form coal may be present in vitrified or fusinized form. Materials contributing to coal differ in their response to diagenetic and metamorphic agencies, and the three essential processes of coalification are called incorporation, vitrification, and fusinization. See also: [incorporation](#); [carbonification](#). Syn: [incarbonization](#)

coalify

To change vegetal matter into coal. *Hess*

coaling

a. The making of charcoal. *Craigie* b. The process of supplying or taking coal for use, as in coaling a steamer, etc.

coal interface detector

See: [coal interface sensor](#)

coal interface sensor

Any device that indicates the boundary between the coal and the surrounding strata either at the roof or the floor. Aids the machine operator or control system controls in positioning the coal-cutting head. *Mowrey*

Coalite

A trade name for a smokeless fuel produced by carbonizing coal at a temperature of about 600 degrees C. It has a calorific value of about 13,000 Btu/lb (30.2 MJ/kg) and is used for domestic purposes. Also called semicoke. See also: [coking coal](#)

Coalite process

See: [Parker process](#)

coal land

Land of the public domain that contains coalbeds.

coal lateral

A railroad that parallels a coal road. *Mathews*

coal lead

Thin vein of coal in a fault zone. Coal leads may indicate the direction of a displaced seam. See also: [drag](#)

coal liquefaction

The conversion of coal into liquid hydrocarbons and related compounds by hydrogenation at elevated temperatures and pressures. In essence, this involves putting pulverized bituminous coal into an oily paste, which is treated with hydrogen gas under appropriate conditions of temperature and pressure to form the liquid molecules of carbon and hydrogen that constitute oil. Also called coal hydrogenation. Syn: [hydrogenation of coal](#)

coal measures

a. A succession of sedimentary rocks (or measures) ranging in thickness from a meter or so to a few thousand meters, and consisting of claystones, shales, siltstones, sandstones, conglomerates, and limestones, with interstratified beds of coal. *AGI* b. A group of coal seams. *AGI*

Coal Measures

A stratigraphic term used in Europe (esp. in Great Britain) for Upper Carboniferous, or for the sequence of rocks (typically, but not necessarily, coal-bearing) occurring in the upper part of the Carboniferous System. It is broadly synchronous with the Pennsylvanian of North America. *AGI*

coal-measures unit

Coal-measures unit strata disclose a rough repetition or cycle of different kinds of rock in the same regular manner. Broadly, the cycle of strata upward is coal, shale, sandstone, and coal. This sequence is sometimes referred to as a unit. See also: [cyclothem](#)

coal mine

Any and all parts of the property of a mining plant, on the surface or underground, that contribute, directly or indirectly, under one management to the mining or handling of coal. In addition to the underground roadways, staple shafts, and workings, a coal mine includes all surface land in use, buildings, structures and works, preparation plants, etc. A colliery. See also: [mine](#)

coal mine explosion

The burning of gas and/or dust with evidence of violence from rapid expansion of gases. *USBM, 4*

coal mine ignition

The burning of gas and/or dust without evidence of violence from expansion of gases. *USBM, 4*

coal miner

One employed in the mining of coal.

coal mine regulations

National, State, and local laws, or enforceable rules that govern coal mining.

coal mining

The industry that supplies coal and its various byproducts. *Nelson*

coal mining examinations

The examinations held in respective coal mining States which must be passed by every person who wishes to become a mine foreman, assistant mine foreman, mine examiner, or electrician. A candidate for a certificate may submit himself or herself for a written and oral examination before a Mining Qualifications Board. Holders of approved degrees or diplomas usually need less mining experience to qualify for first-class certification.

coal mining explosives

The statutory requirements regarding the use of explosives in coal mines are very stringent. In gaseous mines only permissible (or permitted) explosives are allowed. See also: [explosive](#)

coal mining methods

The methods of working coal seams have been gradually evolved and progressively improved or modified as knowledge and experience were gained and power machines became available. Over the years, a very large number of methods of mining coal have been developed to suit the seam and local conditions, and they may be split, broadly, into longwall, and pillar methods of working. See also: [stowing method](#)

coal oil

Crude oil obtained by the destructive distillation of bituminous coal.

coal patch

A small settlement near a coal mine.

coal penetrometer

An instrument to assess the strength of a coal seam, its relative workability, and the influence of roof pressure. It consists of a steel rod of sectional area $1/4 \text{ in}^2$ (1.6 cm^2) that is pushed into the coal, normal to the coal face, under the action of a light hydraulic ram. The ram is braced against lightweight props erected at the face. When in position, the penetrometer gives a graph of load against penetration at a particular point. Readings are taken at a number of points laterally and vertically along the face, and these can be correlated with the performance of plow-type machines. Thus, the probable performance of a machine in a seam can be estimated without the need for costly trials. Syn: [penetrometer](#)

coalpit

Eng. A place where coal is dug. A coal mine.

coal planer

A type of continuous coaling machine developed in Germany esp. for longwall mining. It consists of a heavy steel plow with cutting knives, with power equipment to drag it back and forth across a coal face. A parallel conveyor receives and carries away the coal as the planer digs it from the face.

coal plant

A fossil plant found in coalbeds or contributing its substance to the formation of coalbeds. Any plant species, the residue of which has entered into the composition of coal under natural geological conditions. *Fay*

coal plow

a. A cutter loader with knives to slice the coal off the face. *Nelson* b. This device carries steel blades that shear or plane off coal to a limited depth and plow it onto the face conveyor. The plow is hauled backward and forward along the coal face by steel ropes or chains operated by winches in the gate roads, and it planes off a thickness of 11.8 in (30 cm) to a height one-third to one-half the seam thickness each time. The coal is conveyed along the face by a double-chain conveyor with double-ended drive; the conveyor sections are articulated to allow for bends in its tracks and are moved bodily forward at each passage of the plow, either by compressed-air jacks or by means of a torpedo or trailer attached by rope to the plow and an auxiliary drum on the winches. Its uses are limited to softer coal seams, or to suitably prepared coal. Also called kohlenhobel. *Mason*

coal pocket

a. A structure, bunker, or bin for the storage of coal. *Fay* b. An arrangement of bins to load trucks or railcars by gravity.

coal preparation

The various physical and mechanical processes in which raw coal is dedusted, graded, and treated by dry methods (rarely) or water methods, using dense-media separation (sink-float), jigs, tables, and flotation. The objective is the removal of free dirt, sulfur, and other undesirable constituents.

coal-preparation plant

a. A facility where raw coal is sized and prepared for loadout. In the United States, plant capacities vary from 500 to 2,500 st/h (454 to 2,268 t/h). See also: [cleaning](#); [dense-medium washer](#); [gravity concentration](#); screen; washery. *Nelson* b. A facility or collection of facilities that include associated support facilities and consist of, but are not limited to: loading facilities; storage and stockpile facilities; sheds, shops, and other buildings; settling basins and impoundments, coal processing and other waste disposal areas; roads, railroads, and other transport facilities. Exempted from the meaning of coal-preparation plant is an operation that a) loads coal; b) does not separate coal from its impurities; and c) is not located at or near the mine site.

coal-preparation process

The process adopted for cleaning and sizing coal for the market. Specialists select the best process for any particular run-of-mine coal. Many conflicting factors must be weighed. The cost of a detailed investigation is well repaid in higher recoveries, in flexibility, and in ease of operation and maintenance. *Nelson*

coal-preparation shift

On mechanized longwall faces, the shift during which coal-cutting, boring, and shot-firing operations are performed. *Mason*

coal-processing waste

Earth materials that are combustible, physically unstable, or acid- or toxic-forming, which are wasted or otherwise separated from product coal. They are slurried or otherwise transported from coal-preparation plants, after physical or chemical processing, cleaning, or concentrating of coal.

coal rank

Classification according to degree of metamorphism or progressive alteration, in the natural series from lignite to anthracite; higher rank coal is classified according to fixed carbon on a dry basis; lower rank coal according to Btus on a moist basis. *Bennett*

coal rash

Very impure coal containing much argillaceous material, fusain, etc. *AGI*

coal room

a. Scot. A working face in stope-and-room workings. *Fay* b. The open area between pillars where the coal has been removed.

coal sampling

The standard method used by the U.S. Bureau of Mines samplers is as follows: A space of 5 ft (1.52 m) in width should be cleared of dirt and powder from top to bottom of the seam being sampled. Down the center of this cleared space, a zone 1 ft (0.3 m) wide is cut to a depth of at least 1 in (2.54 cm) in order to get perfectly clean coal. A cut is then made up the center of this zone to a depth of 2 in (5.2 cm) and a width of 6 in (15.2 cm); or, if the coal is soft, to a depth of 3 in (7.6 cm) and a width of 4 in (10.2 cm). Approx. 5 to 6 lb (2.3 to 2.7 kg) of coal will be obtained for each foot (0.3 m) of thickness of the seam. This should include all bony coal included in the mining operation and exclude all slate or partings, which are thrown out during the operation. The sample obtained should be collected on a waterproof cloth 6 ft by 7 ft (1.83 m by 2.13 m) and then screened, the lumps being broken in a mortar, and all passed through a 1/2-in (12.7-mm) screen. Any

impurities, such as slate or pyrite, are crushed to 1/4 in (6.4 mm) or finer and thoroughly mixed with the coal. The coarser materials should be evenly distributed, the sample being then quartered, remixed, and requartered. When the mixing is complete, the sample should be placed in a can with the capacity of 3 lb (1.35 kg) and the top screwed on and sealed with adhesive tape. The can should be labeled with the name of the collector, the location, the date, and any other information necessary for the analysis. See also: [channel sample](#); [sampling](#). *Kentucky*

coal seam

A bed or stratum of coal. *Craigie*

coal-seam correlation

The identification of a coal seam; the linking up or matching of a seam exposed in different parts of a mine or coalfield. A coal seam may be correlated by lithology, by fossils, by chemical composition, or by its spore content. Coal-seam correlation is very important in exploration and in penetrating faults. See also: [correlation](#)

coal-sensing probe

An obsolete, nucleonic coal-sensing instrument that can measure the thickness of coal left on the roof or floor of a seam after the passage of a mining machine. The principle used is the measurement of the density of the strata underlying the machine by a gamma-ray backscattering unit. Gamma rays from a radioactive source are scattered in all directions by the atomic particles in the coal and rock. The amount of scattered radiation eventually reaching the Geiger counter is, approx., inversely proportional to the density of the scattering medium; i.e., more radiation will come back from coal than from rock. Thus, as the amount of coal between the source and the underlying rock changes, so the amount reaching the Geiger counter and the counting unit (the ratemeter) will change, and consequently the output of the meter can be calibrated in terms of the thickness of the floor coal. This instrument has been replaced by a natural-gamma coal thickness sensor. See also: [manless face](#) *Nelson*

coal separator

A machine that separates coal from associated impurities in run-of-mine material. See also: [coal-preparation plant](#)

coal slime

A slurry containing particles of such size range that 50% or more (by weight) will pass a 200-mesh sieve (or finer).

coal sludge

A slurry that has been partly dewatered by sedimentation, usually to a dilution that will permit further dewatering by mechanical means.

coal slurry

Finely crushed coal mixed with sufficient water to form a fluid. To use coal slurry pumped through a pipeline as fuel, expensive drying and dewatering pretreatment has been necessary. Recent tests indicate that coal slurry can be fired in a cyclone furnace as it is received from a pipeline; i.e., a coal and water mixture. See also: [slurry Nelson](#)

coal smoke

A suspension of very fine particles in air. A coal that breaks down easily when heated gives off its volatile matter very easily and perhaps more quickly than the available draft can supply the air for combustion, with the result that dark smoke containing much unburnt or partly burnt material is given off--a loss of fuel energy. See also: [smoke Nelson](#)

Coal special

Explosive; used in mines. *Bennett*

coal split

See: [split seam](#)

coal spragger

a. In bituminous coal mining, one who sets short wooden props in a slanting position (sprags) under the upper or overhead section of a bed of coal to hold that section up while the lower section is being mined, or wedges heavy slanting props (sprags) against the coal to prevent it from flying when broken down by blasting. *DOT* b. One who places short pointed wooden sprags between the spokes of a mine car wheel to stop the car.

coal stripper

In bituminous coal mining, a general term applied to a worker who is engaged in mining coal in a strip mine, one in which the coal is close enough to the Earth's surface to permit the use of power shovels in stripping back the ground and loading the coal into large cars or trucks. Usually designated according to particular jobs. *DOT*

coal substance

Coal excluding its mineral matter and moisture. *BS, 4*

coal tar

Tar obtained by the destructive distillation of bituminous coal, usually in coke ovens or in retorts, and consisting of numerous constituents (such as benzene, xylenes, naphthalene, pyridine, quinoline, phenol, cresols, light oil, and creosote) that may be obtained by distillation. *Webster 3rd*

coal-tar oil

Oil obtained by the distillation of coal tar. Oils are classified into light and heavy oils. A light oil is one having a specific gravity less than 1.000 and contains the coal-tar naphthas. Heavy oils sink in water and contain such compounds as creosote, anthracene, anthracene oil, etc. *Porter*

coal-tar pitch

A dark-brown to black residuum from the distillation of coal tar, ranging from a sticky mass to a brittle solid, depending on the degree of distillation. Most coal-tar pitch melts between 60 degrees C and 70 degrees C. *Hess*

coal testing

Evaluating coals by methods other than chemical, such as determining the relative values of different coals as fuels by burning them under controlled conditions in furnaces, or determining their gas- and coke-producing properties by testing in a retort. The term coal testing is frequently erroneously used, esp. in coal marketing, for coal analysis.

coal thickness sensor

Any measurement instrument that is designed to measure the thickness of the coal remaining on the mine roof or floor after coal is removed by mining.

coal tipple

See: [tipple](#)

coal type

a. A variety of coal, such as common banded coal, cannel coal, algal coal, and splint coal. The distinguishing characteristics of each type of coal arise from the differences in the kind of plant material that produced it. *AGI* b. A coal, particularly a bituminous coal, contains dissimilar bands or layers that are believed to have been formed mainly from selected portions of the plant material forming the seam. These bands, which have been given the terms vitrain, clarain, durain, and fusain, are the different types of coal in that seam. See also: [vitrain](#); [clarain](#); [durain](#); [fusain](#). *Nelson*

coal washer

A place where mined coal is treated by sink-float methods or by froth flotation to remove ash, shale, sulfur, and other unwanted products. The resulting clean coal product is graded to size and regulated for maximum ash content. Also called cleaning plant; preparation plant.

coal wheeler

In the iron and steel industry, a laborer who shovels coal into a wheelbarrow and pushes it to a furnace. *DOT*

coal workings

A coal mine with its appurtenances; a colliery. Coal works. *Standard, 2; Fay*

coalyard

A place where coal is stored. *Craigie*

coarse aggregate

The portion of an aggregate retained on the No. 4 sieve, consisting of particles with diameters greater than 4.76 mm. CF: [aggregate](#); fine aggregate. *AGI*

coarse gold

Gold in large grains, as distinguished from gold dust. Also called coarse quartz gold.

coarse-grained

Applied to rocks composed of large grains; used mainly in a relative sense, but an average size greater than 5 mm in diameter has been suggested. CF: [medium-grained](#); [fine-grained](#). *Stokes*

coarse-grained soil

A soil in which gravel and sand predominate. Coarse-grained soils are those least affected by moisture-content changes as most surface rain, etc., becomes gravitational water. *Nelson*

coarse jig

A jig used to handle the larger sizes and heavier grades of ore or metal. *Weed, 2*

coarse metal

An iron-and-copper matte containing sulfur; a product of copper smelting in a reverberatory furnace. *Standard, 2*

coarse roll

A large roll for the preliminary crushing of large pieces of ore, rock, or coal. Used in stage crushing.

coarse sand

a. A geologic term for a sand particle having a diameter in the range of 0.5 to 1 mm (1 to 0 phi units). Also, a loose aggregate of sand consisting of coarse sand particles. See also: [sand](#) b. An engineering term for a sand particle having a diameter in the range of 2 mm (retained on U.S. standard sieve No. 10) to 4.76 mm (passing U.S. standard sieve No. 4). *AGI*

coaxial cable

Electrical cable with inner conducting wire covered by alternating layers of insulating and conducting material. *Pryor, 3*

cob

a. Corn. To break ore with hammers so as to sort out the valuable portion. b. Derb. A small solid pillar of coal left as a support for the roof.

coba

Uncemented sand or gravel underlying the nitrate (caliche) deposits of Chile. See also: [congela](#)

cobalt

A tough, lustrous, nickel-white or silvery-gray, metallic element. Symbol, Co. Occurs in the minerals cobaltite, smaltite, and erythrite; often associated with nickel, silver, lead, copper, and iron ores, from which it is most frequently obtained as a byproduct. Its alloys have unusual magnetic strength and are used for high-speed, heavy-duty, high-temperature cutting tools, and for dies, in jet turbines and gas turbine generators. Its salts are used in porcelain, glass, pottery, tiles, and enamels to produce brilliant blue colors. *Handbook of Chemistry and Physics, 3*

cobalt bloom

Hydrated arsenate, $\text{Co}_3 (\text{AsO}_4)_2 \cdot 2\text{H}_2\text{O}$. See also: [erythrite](#)

cobalt-bonded

Particles of a refractory material, such as powdered tungsten carbide, cemented together with cobalt to form a metallike mixture. *Long*

cobalt glance

See: [cobaltite](#)

cobaltiferous wad

An impure hydrated oxide of manganese containing up to 30% cobalt; a source of cobalt in Zaire.

cobaltite

a. An orthorhombic mineral, $4[\text{CoAsS}]$; pseudocubic; metallic; occurs in high-temperature vein deposits associated with smaltite and in metamorphic rocks; an important source of cobalt. Syn: [cobalt glance](#); [white cobalt](#); gray cobalt. b. The mineral group cobaltite, gersdorffite, hollingworthite, irarsite, platarsite, tolovkite, ullmannite, and willyamite.

cobalt lollingite

See also: [safflorite](#)

cobalt melanterite

See: [bieberite](#)

cobalt-nickel pyrite

a. A name applied by Vernadsky to a steel-gray member of the pyrite group containing 11.7% to 17.5% nickel and 6.6% to 10.6% $(\text{Fe}, \text{Ni}, \text{Co})\text{S}_2$; small, pyritohedral crystals; isometric. Probably a mixture of siegenite and pyrite. From Musen, Westphalia, Germany. *English* b. As applied by Henglein, a syn. for hengleinite. See also: [hengleinite](#)

cobaltoadamite

A pale rose-red to carmine variety of adamite in which cobalt replaces some of the zinc. *English*

cobaltocalcite

a. Replaces the generally accepted name sphaerocobaltite for rhombohedral CoCO_3 . Not the cobaltocalcite of F. Millosevich, 1910, a red cobaltiferous variety of calcite. *Spencer*, 4 b. A former name for sphaerocobaltite.

cobalt ocher

See: [erythrite](#); asbolan; asbolane.

cobaltosphaerosiderite

A peach-blossom-red rhombohedral variety of siderite with moderate substitution of cobalt for iron. Also spelled cobaltospharosiderite.

cobalt pentlandite

An isometric mineral, Co_9S_8 ; pentlandite group.

cobalt pyrites

a. See: [linnaeite](#) b. Cobaltiferous pyrite containing up to 14% cobalt; an ore of cobalt in Zambia.

cobalt-rich crust

An authigenic deposit of iron-manganese oxides enriched with cobalt. These crusts may contain potentially commercial quantities of manganese (20% to 30%), copper, nickel, and cobalt (less than 3% combined), but are primarily evaluated on the basis of their cobalt content. They are found as encrustations on exposed rocky seabeds on island slopes, seamounts, or submerged plateaus in water depths between 800 m and 2,400 m. The crusts may be up to 40 cm thick, but are more commonly 3 to 5 cm. They often occur in association with platinum and phosphorite.

cobalt skutterudite

The pure end member, CoAs_3 , of the skutterudite series. Syn: [skutterudite](#)

cobalt vitriol

See: [bieberite](#); rose vitriol.

cobbed ore

Eng. Ore broken from veinstone by means of a small hammer.

cobbing

a. The separation, generally with a handheld hammer, of worthless minerals from desired minerals in a mining operation; e.g., quartz from feldspar. Syn: [hand cobbing](#); [piking](#). *AGI* b. Rubble, such as from furnace bottoms, impregnated with copper. *Standard, 2*

cobbing board

A flat piece of wood used in cobbing. *Fay*

cobbing hammer

A special chisel type of hammer used to separate the mineral in a lump from the gangue in the hand-picking of ores. *Nelson*

cobble

a. A usually rounded or semirounded rock fragment between 3 to 12 in (76 to 305 mm) in diameter; large than a pebble and smaller than a boulder, rounded or otherwise abraded in the course of aqueous, eolian, or glacial transport. Syn: [cobblestone](#) b. Eng. Small lump coal. See also: [cob coal](#)

cobble riffle

A sluice with a cobble-paved bottom used in placer mining. *Nelson*

cobbles

A graded size of anthracite below large coal--about 5 in (12 cm). *Nelson*

cobblestone

a. A naturally rounded, usually waterworn stone suitable for use in paving a street or in other construction. Syn: [cobble](#); [roundstone](#). *AGI* b. A consolidated sedimentary rock consisting of cobble-size particles. *AGI*

cobbling

Eng. Cleaning the haulage road of coal that has fallen off the trams.

cob coal

A large round piece of coal.

Coblentzian

Upper Lower Devonian. *AGI*

cobra stone

See: [chlorophane](#)

cocarde ore

See: [cockade ore](#)

cocinerite

a. A mixture of chalcocite and silver. b. A silver-gray copper silver sulfide found at Ramos, Mexico; perhaps a variety of stromeyerite.

cockade ore

a. An open-space vein filling in which the ore and gangue minerals are deposited in successive comblike crusts around rock fragments; e.g., around vein breccia fragments. Syn: [cocarde ore](#); [sphere ore](#). See also: [ring ore](#) b. Cockscomb pyrite; a form of marcasite.

cockade structure

The form taken by cockade ore.

cocker

To set supports in herringbone fashion. *Mason*

cockering

Herringbone supports. A method of support by which a center support of beams or bars running longitudinally along the roof of a road is supported systematically by slanted struts or props with their feet spragged in the side of the road, the whole looking like a herringbone. *Mason*

cockermeg

Temporary support for the coal face. A short crosspiece is held to it by two slanting props, one hitched in the floor, the other in the roof. *Pryor, 3*

cockers

See: [cockermeg](#)

cockersprag

See: [cockermege](#)

cockle

a. Corn. Schorl or black tourmaline. *Fay* b. Any mineral occurring in dark, long crystals, esp. schorl. *Webster 2nd* c. Eng. A black, thready mineral, seeming to be a fibrous talc; occurs in Cornish tin mines. *Arkell* d. Eng. An ironstone nodule. *Arkell* e. Cornish name for hard siliceous rocks. *Arkell*

cocko

A piece of slate or bony. *Korson*

cockscomb pyrite

See: [marcasite](#)

cockscomb pyrites

A crestlike variety of marcasite. See also: [marcasite](#) *Webster 3rd*

cocoa mat

A fabric of wood fibers used to distribute water evenly over a smooth surface. *Nichols, I*

codorous ore

A highly siliceous hematite containing only a trace of phosphorus, but high in potash. *Osborne*

coefficient of absolute viscosity

See: [coefficient of viscosity](#)

coefficient of acidity

A ratio, calculated from the normative molecular proportions of the constituents of a rock or slag; e.g., number of atoms of oxygen in SiO_2 / number of atoms of oxygen in the basic oxides.

coefficient of compressibility

The decrease in volume per unit volume produced by a unit change of pressure. *Webster 2nd*

coefficient of elasticity

See: [modulus of elasticity](#)

coefficient of friction

a. A numerical expression of the relationship between pressure and the resistance force of friction. b. A quantity used to calculate the head loss in a fluid or air. The loss is a function of surface roughness, wetted perimeter, and velocity of the fluid or gas.

coefficient of heat transmission

The quantity of heat transmitted from fluid to fluid per unit of time per unit of surface area through a material or arrangement of materials under a unit temperature differential between fluids. Commonly used for building materials. Syn: [heat transmission coefficient](#)

coefficient of permeability

The rate of flow of water under laminar flow conditions through a unit cross-sectional area of a porous medium under a unit hydraulic gradient and a standard temperature, usually 20 degrees C. See also: [permeability](#)

coefficient of rigidity

See: [modulus of rigidity](#)

coefficient of thermal diffusion

A thermal property of matter with the dimensions of area per unit time; it corresponds to the thermal conductivity divided by the product of density and heat capacity. *AGI*

coefficient of traction

Represents the percentage of the total engine power that can be converted into forward motion by means of the friction between tire and track. *Carson, 1*

coefficient of velocity

The rate of transformation of a unit mass during a chemical reaction. *Pryor, 3*

coefficient of viscosity

a. The shearing force per unit area required to maintain a unit difference in velocity between two parallel layers of fluid a unit distance apart. Syn: [coefficient of absolute viscosity](#) b. The ratio of the shear stress in a substance to the rate of shear strain. See also: [viscosity](#)

coeruleolactite

A triclinic mineral, $(\text{Ca,Cu})\text{Al}_6(\text{PO}_4)_4(\text{OH})_8 \cdot 4\text{H}_2\text{O}$; turquoise group; occurs in white to pale-blue fibrous crusts.

coesite

A monoclinic mineral, SiO_2 ; polymorphous with cristobalite, quartz, tridymite, and stishovite; insoluble in hydrogen fluoride.

coffee shale

Drillers' term in the Appalachian basin for well cuttings of dark-colored shale chips mixed with light-colored mud. *AGI*

coffer

a. A rectangular plank frame, used in timbering levels. Also spelled cofer. b. A floating dock; a caisson. *Standard, 2*

cofferdam

a. A set of temporary walls designed to keep soil and/or water from entering an excavation. *Nichols, 1* b. A method of shaft sinking through saturated sand or mud near the surface. A cofferdam is an enclosure, open to the air, that keeps water out of the shaft area to allow excavation to proceed. The enclosing wall is constructed by driving down strips of steel with interlocking edges or concrete piles, reinforced with steel. In general, cofferdams are used only for short lengths and where piles can be driven into an impervious deposit, so that normal pumping will keep the shaft sufficiently dry for working. See also: [drop shaft](#); [piling](#). *Nelson*

coffering

A method of shaft sinking through loose, watery, or running ground. It consists in lining the shaft with a thick wall, made of brick and cement or brick and hydraulic lime with puddled clay in all cavities. Used for keeping back surface water but the method is now somewhat obsolete. *Nelson*

coffin

a. Corn. An old, open-mine working, in which the ore is cast up from platform to platform. See also: [goffan](#) b. A heavily shielded shipping cask for spent fuel elements. Some coffins weigh as much as 75 st (68 t). *Lyman*

coffinite

A naturally occurring uranium mineral, $U(SiO_4)_{1-x}(OH)_{4x}$; sp gr, 5.1; luster adamantine; color black; commonly fine-grained and mixed with organic matter and other minerals. Found in Colorado, Utah, Wyoming, and Arizona. An important ore of uranium in some mines on the Colorado plateau. *CCD, 2*

cog

a. Straight timbers set in a large bunch. They should be firmly set and as close together as possible. Sometimes 12 to 20 are set at one location. Under conditions where single straight posts will not suffice to control the top, and yet cribs are not needed, the use of cogs may be advantageous. May also be called a battery. See also: [pigsty](#); [cogging](#). *Kentucky* b. A crib made of notched timbers built up like a log house. A chock, cob, corncob, or crib. If the timbers are squared instead of notched, the structure is called a nog. It is ordinarily filled with waste, and rocks are put between the timbers. See also: [chock](#) c. A rock intrusion. *Fay* d. To consolidate ingots or shape them by hammering or rolling. *Hess* e. An inserted tooth as in a cogwheel. Gears are often improperly referred to as cogwheels. *Crispin*

cogging

a. The operation of rolling or forging an ingot to reduce it to a bloom or billet. *CTD* b. The propping of the roof in longwall stalls. Also spelled coggin. See also: [cog](#)

cogging mill

A blooming mill, usually consisting of a two-high reversing mill with two rolls, 0.6 to 1.2 m in diameter, between which a hot ingot is reduced to blooms or slabs. *Osborne*

coggle

A rounded, waterworn stone, esp. of the size suitable for paving; a cobble; also called cogglestone. Same as cobblestone.

cognate fissure

One fissure of a system of fissures that originated at the same time from the same causes as other fissures in the same system. Cognate may similarly apply to fractures and joints. *Stokes*

cognate inclusion

See: [autolith](#)

cognate xenolith

See: [autolith](#)

cogwheel ore

A miners' name for bournonite. Same as wheel ore. *Dana, 4*

cohenite

a. An orthorhombic mineral, $(\text{Fe,Ni,Co})_3\text{C}$; an accessory in iron meteorites. b. An iron carbide phase in steel. See also: [cementite](#)

cohesion

Property of like mineral grains that enables them to cling together in opposition to forces tending to separate them. CF: [adhesion](#) *Hess*

cohesionless soil

a. A soil that when unconfined has little or no strength when air-dried, and that has little or no cohesion when submerged. *ASCE* b. A frictional soil, such as sand, gravel, or clean silt. *Nelson*

cohesive soil

a. A soil that when unconfined has considerable strength when air-dried, and that has significant cohesion when submerged. *ASCE* b. A sticky clay or clayey silt as opposed to sand. *Nelson*

coil load

The total amount of heat, in British thermal units per hour, that must be removed from the air by the cooling coils.

coining

a. A closed-die squeezing operation, usually performed cold, in which all surfaces of the work are confined or restrained, resulting in a well-defined imprint of the die upon the work. *ASM, 1* b. A restriking operation used to sharpen or change an existing radius or profile. *ASM, 1* c. In powder metallurgy, the final pressing of a sintered compact to

obtain a definite surface configuration. (Not to be confused with repressing or sizing.)
ASM, 1

coinstone bed

Cement stone band. Stone suitable for coinstones, quoinstones, and cornerstones, used in building. *Arkell*

coke

a. Bituminous coal from which the volatile constituents have been driven off by heat, so that the fixed carbon and the ash are fused together. Commonly artificial, but natural coke is also known; e.g., where a dike has intersected a bituminous coalbed and has converted the bordering coal to natural coke. *Sanford* b. A derogatory syn. for carbon; carbonado; black diamond. See also: [char](#)

coke breeze

The fine screenings from crushed coke or from coke as taken from the ovens, of a size varied in local practice but usually passing a 1/2-in (12.7-mm) or 3/4-in (19.0-mm) screen opening. *ASTM*

coke coal

a. N. of Eng. Carbonized or partially burnt coal found on the sides of dikes. See also: [natural coke](#) b. Coal altered by an igneous intrusion. *Arkell*

coke drawer

In the coke products industry, a laborer who removes coke from beehive ovens by hand.
DOT

coke dust

Coal dust that has been coked by the heat of an explosion and has assumed different forms under different conditions; usually found either near the origin of the explosion or in a room or wide place where the velocity of the explosion is low and there is insufficient oxygen for complete combustion of the coal dust. The volatile matter of coal dust seems to burn first and, if the coal is a coking coal, coke is formed of one kind or another, depending on the position, temperature, size of the dust, and velocity of the explosion. Also called coked dust. *Rice, 2*

coke iron

Iron made in a furnace using coke as fuel. *Webster 3rd*

cokeite

Coal altered by an igneous intrusion. Syn: [carbonite](#) See also: [natural coke](#)

coke mill

A mill used in the foundry for the grinding of coke for the production of blacking.
Osborne

coke oven

A chamber of brick or other heat-resistant material in which coal is destructively distilled. Coke ovens are of two principal types: (1) beehive ovens, which were originally built round with a spherical top like an old-fashioned beehive. They had an opening in the top and various small openings for draft at the base. The ovens were developed into banks (rows) of joining cubicles; coke in long columnar pieces is characteristic and is still known as beehive coke. Tar, gas, and other byproducts are lost. (2) Byproduct ovens, which were built in rectangular form with the front and back removable, but so arranged that they may be luted to practical gastightness and all byproducts gaseous at the high temperatures may be pumped out. *Hess*

coke person

In the foundry industry, a laborer who unloads, stores, and conveys coke within the foundry. *DOT*

coke tower

A high tower or condenser filled with coke. Used in the manufacture of hydrogen chloride gas to give a large surface for the union of a falling spray of water with the rising hydrochloric acid gas. *Fay*

coking coal

Coal that can be converted into useful coke that must be strong enough to withstand handling. There is no direct relation between the elementary composition of coal and coking quality, but generally coals with 80% to 90% carbon on a dry, ash-free basis are most satisfactory. See also: [caking coal](#); [bituminous coal](#); [Coalite](#). *AGI*

coking stoker

A mechanical stoker or device for firing a furnace that allows the coal to coke before feeding it to the grate, thus burning the fuel with little or no smoke. *Fay*

colander shovel

An open wirework shovel used for taking salt crystals from an evaporating brine. *Fay*

cold bed

A platform in a rolling mill on which cold bars are stored. *Fay*

cold blast

Air forced into a furnace (e.g., cupola) without being previously heated. See also: [Gayley process](#)

cold-cracking

Cracks in cold, or nearly cold, metal, due to excessive internal stress caused by contraction. Formation of cracks may be caused by the mold being too hard or the design of a casting being unsuitable. *Hammond*

cold-draw

To draw (as metal) while cold or without the application of heat. *Webster 3rd*

cold-drawing

The process of reducing the cross-sectional diameter of tubes or wire by drawing through successively smaller dies without previously heating the material, thereby increasing its tensile strength. Steel wire for prestressing is made by this process. *Hammond*

cold-extractable metal

See: [readily extractable metal](#)

cold galvanizing

Application of powdered zinc, in suspension in an organic solvent, to iron articles. On evaporation of the solvent an adherent coating of zinc remains. *Pryor, 3*

cold noser

See: [wildcatter](#)

cold-nosing

Running an unhoused drill in cold weather. *Long*

cold-roll

To roll (metal) without applying heat. *Webster 3rd*

cold-rolled

Said of metal that has been rolled at a temperature close to atmospheric. The cold rolling of metal sheets results in a smooth surface finish. *CTD*

cold saw

A saw for cutting cold metal. *Mersereau, 2*

cold shot

A portion of the surface of an ingot or casting showing premature solidification caused by a splash of metal during pouring. *ASM, 1*

cold soldering

Soldering in which two pieces are joined without heat (as by means of a copper amalgam). *Webster 3rd*

cold working

Shaping of metals at ordinary temperatures; cold-drawing, rolling, stamping. Within limits, in treatment of iron, copper, aluminum, induces work hardening, thus increasing strength. If carried too far, brittleness results. Metal that is brittle when cold is termed cold-short. *Pryor, 3*

cold zone

The preheating zone of a rotary cement kiln.

colemanite

A natural hydrated calcium borate, $\text{Ca}_2 \text{B}_6 \text{O}_{11} \cdot 5\text{H}_2 \text{O}$; white or colorless; white streak; vitreous to dull luster; Mohs hardness, 4 to 4.5; sp gr, 2.26 to 2.48; found in California. One of the raw materials in the United States for boric acid, sodium borate, etc. *CCD, 2*

Cole reagent

Solution of 10 g stannous chloride, 95 mL water, 5 mL HCl, and 10 g pyrogallol. Viscose silk impregnated with this turns red to violet in solution containing gold. *Pryor, 3*

collain

a. A subvariety of euvitrain. It consists of redeposited ulmin compounds precipitated from solution and observable microscopically. *AGI* b. Approved by the Heerlen Congress of 1935 as applicable to vitrain in which plant structure is not visible. Adopted as collite, spelled collit in German but retaining the ain ending in English and French usage. CF: [ulmain](#)

collapse

Complete cave-in of walls of a borehole or mine workings. *Long*

collapse breccia

A breccia formed by the collapse of rock overlying an opening, as by foundering of the roof of a cave or of the roof of country rock above an intrusion; e.g., a solution breccia. Syn: [founder breccia](#)

collapsing strength

The load expressed in pounds or tons, which, if exceeded, results in the collapse of a structure, such as a drill tripod, derrick, or A-frame. *Long*

collar

a. In a mine shaft, the first wood frame of the shaft; sometimes used in reference to the mouth or portal of the tunnel. *BCI* b. Supporting framework at top of shaft from which linings may be hung. *Pryor, 1* c. The junction of a mine shaft and the surface. *Nelson* d. The beginning point of a shaft or drill hole, the surface. *Ballard* e. The mouth of a mine shaft. f. The bar, or crosspiece, in a framed timber set. *Stauffer* g. The term applied to the timbering or concrete around the mouth or top of a shaft. *Lewis* h. Scot. A frame to guide pump rods; the fastening of pipes in a shaft. i. The mouth or opening of a borehole or the process of starting to drill a borehole. *Long* j. A pipe coupling or sleeve. *Long* k. See: [friction head](#) l. A sliding ring mounted on a shaft so that it does not revolve with it. Used in clutches and transmissions. *Nichols, 1*

collar distance

The distance from the top of the powder column to the collar of the blasthole, usually filled with stemming. *Dick, 2*

collared

A started hole drilled sufficiently deep to confine the drill bit and prevent slippage of the bit from normal position.

collar in

The act or process of beginning a borehole. *Long*

collaring

a. The process of beginning the drilling of a borehole, or the excavation of a mine shaft. *Long* b. Eng. Timber framing for supporting pump trees in a shaft. See also: [chog](#) c. The term used to indicate that metal passing through a rolling mill follows one of the rolls so as to encircle it. *CTD*

collaring a hole

The formation of the front end of a drill hole, or the collar, which is the preliminary step in drilling to cause the drill bit to engage in the rock. *Fraenkel*

collaring bit

A fishtail-, spudding-, or other-type bit used exclusively for beginning a borehole. *Long*

collars

In rolling mills, the sections of larger diameter separating the grooves in rolls used for the production of rectangular sections. *CTD*

collar structure

A heavy wooden frame erected at the mouth of a rectangular shaft to provide a solid support for the timber sets. A more permanent structure consists of a concrete wall extending from two to eight sets in depth. On this concrete mass is bolted the bearer timbers that support the top heavy set or collar set. The term also applies to the heavy concrete ring at the mouth of a circular concrete-lined shaft. Syn: [shaft collar](#) *Nelson*

collbranite

See: [ludwigite](#)

collecting agent

A reagent added to a pulp to bring about adherence between solid particles and air bubbles. *BS*, 5

collective subsidence

That condition in sedimentation in which the particles and flocs are sufficiently close together to retard the coarse fast-settling particles while the slow-settling ones are entrapped and carried down with the mass. *Mitchell*

collector

A heteropolar compound containing a hydrogen-carbon group and an ionized group, chosen for ability to adsorb selectively in a froth flotation process and render adsorbing surfaces relatively hydrophobic. A promoter. *Pryor, 4*

collier

a. Strictly speaking, a person who mines coal with a pick, though commonly applied to anyone who works in or about a colliery. Also called hewer; stallman. b. A steam or sailing vessel carrying a cargo of coal. c. A coal merchant or dealer in coal.

Collier

Explosive; used in mines. *Bennett*

collier's lung

See: [anthracosis](#)

colliery

a. An entire coal mining plant, generally used in connection with anthracite mining, but sometimes used to designate the mine, shops, and preparation plant of a bituminous operation. *BCI* b. A coal mine. *Pryor, 3* c. A ship, or ships, used in the coal trade. *Standard, 2*

colliery bailiff

Derb. The superintendent of the colliery. *Fay*

colliery consumption

That part of the coal output at a colliery that is used for steam generation and other purposes connected with the working of the colliery itself. *Nelson*

colliery explosion

An explosion in the workings or roadways of a colliery as a result of the ignition of combustible gases or coal dust or a mixture of both. See also: [coal-dust explosion](#); [methane](#); [stone-dust barrier](#). *Nelson*

colliery plan

Gr. Brit. A map of the mine workings, and sections of the shafts and seams being worked, which the colliery manager must keep at the pithead office in accordance with the Surveyors and Plans Regulations, 1956, of the Act. *Nelson*

colligative properties

These are properties only of solutions and include vapor pressure, freezing point, boiling point, and osmotic pressure changes that occur with changes in the characteristics of the solution. Seawater does not follow the general rules of solutions, but departures are proportional. *Hy*

collimating mark

See: [fiducial mark](#)

collimation

a. Alignment axially of parts of an optical system. Collimation error is due to the line of sight of a survey instrument not coinciding with traversing gear, scales, or leveling devices. The collimation line is the line of sight, passing through the intersection of the crosshairs of the reticule. The collimation method is the height-of-instrument method of leveling whereby fore-and-aft readings are made on a leveling staff by an instrument placed intermediately so that the rise or fall between the fore station and the back station is shown by a change in the staff reading. See also: [rise and fall](#) b. Conversion of a divergent beam of energy or particles into a parallel beam. *ASM, I*

collimation line

The line of sight of a surveying instrument that passes through the intersection of the cross hairs in the reticule. *Hammond*

collinite

A maceral of coal within the vitrinite group, consisting of homogeneous jellified and precipitated plant material, lacking cell structure and of middle-range reflectance under normal reflected-light microscopy. See also: [vitrinite](#)

collinsite

A triclinic mineral, $\text{Ca}_2(\text{Mg,Fe})(\text{PO}_4)_2 \cdot 2\text{H}_2\text{O}$; fairfieldite group; forms fibrous nodules.

collision blasting

Blasting in which different sections of the rocks are blasted out against each other. *Langefors*

collision waves

Two waves that are propagated in opposite directions through the burned gases, and originating at the point where two explosion waves meet.

collite

Another name for euvitrain. See also: [collain](#)

colloform

Said of the rounded, finely banded kidneylike mineral texture formed by ultra-fine-grained rhythmic precipitation once thought to denote deposition of colloids. CF: [botryoidal](#); [reniform](#). *AGI*

colloid

A substance composed of extremely small particles, ranging from 0.2 to 0.005 μm , which when mixed with a liquid will not settle, but remain permanently suspended; the colloidal suspension thus formed has properties that are quite different from those of the simple, solid-liquid mixture or a solution.

colloidal clay

A clay, such as bentonite, which, when mixed with water, forms a gelatinous-like liquid. *Long*

colloidal fuel

A mixture of finely pulverized coal and fuel oil, which remains homogeneous in storage. It has a high calorific value and is used in oil-fired boilers as a substitute for fuel oil alone. *Nelson*

colloidal mud

A drilling mud in which the gelatinous constituents, such as bentonite, will remain in suspension in water for a long time. *Long*

colloidal particles

Particles so small that their surface activity has an appreciable influence on the properties of its aggregate. *ASCE*

colloidal sulfur

Amorphous sulfur in a finely divided condition. Prepared by the action of dilute sulfuric acid on sodium thiosulfate or by the reaction of hydrogen sulfide and sulfurous acid. Also prepared by mixing equivalent solutions of hydrogen sulfide and sulfur dioxide. Forms a clear yellow solution containing very minute suspended particles of sulfur; the addition of alum immediately precipitates the sulfur. Also called milk of sulfur. *Cooper*

colloid mill

Grinding appliance such as two disks set close and rotating rapidly in opposite directions, so as to shear or emulsify material passed between them. *Pryor, 1*

colloid minerals

Minerals deposited as gradually hardening gelatinous or flocculent masses instead of assuming crystalline form; may apply to some deposits of malachite, hematite, and psilomelane. CF: [botryoidal](#); [reniform](#).

collophane

Generic designation for massive, amorphous, cryptocrystalline to fine-grained apatite or phosphate that constitutes the bulk of phosphate rock and fossil bone; not a true mineral species; analogous to the terms limonite and bauxite. Syn: [collophanite](#)

collophanite

See: [collophane](#)

Collum washer

Mineral jig with a quick down stroke and retarded return of its plunger. *Pryor, 3*

Colmol mining machine

A machine in which the coal is hewed from the solid by 10 rotating chipping heads in 2 rows of 5, each with the lower row in advance of the upper. Each head consists of a bit supplemented by widely spaced teeth, each tooth being stepped back to the outside of the head. The circular kerfs made by the heads overlap, and as the machine moves forward, the effect is to break the coal ahead of the teeth into the free spaces, thereby minimizing the production of fines. *Mason*

Cologne umber

An earthy black or brown lignite used as a pigment. Etymol. source near Cologne, Germany. *Tomkeieff*

colombotantalite

A noncommittal term for members of the columbite-tantalite series.

color

a. A trace of metallic gold found in a prospector's pan after a sample of soil or of gravel has been panned out. Prospectors say, e.g., the dirt gave so many colors to the panful. b. The shade or tint of the soil or rock that indicates ores; e.g., gossan coloration. c. Color is an important property used in megascopic and microscopic determination of minerals. It depends on the selective absorption or reflection of certain wavelengths of light by the mineral during transmission or reflection. The color of metallic (or metal-bearing) minerals is a fairly constant property, whereas that of nonmetallic minerals is generally less so owing to the pigmentation effect of minor impurities. The color of a massive mineral is commonly different from that of its powder or streak. d. The Munsell notation has come into wide use for the designation of colors of rocks and soils. In this system, a color is specified by the three variables of hue (dominant spectral color), value (brilliance), and chroma (saturation or purity), and written in the order and form: hue-value-chroma.

coloradoite

An isometric mineral, HgTe ; sphalerite group.

Colorado lapis lazuli

Dark blue lapis lazuli (lazurite) from the Sawatch Range, CO.

Colorado ruby

An incorrect name for the fiery-red garnet (pyrope) crystals obtained from Colorado.
CMD

Colorado topaz

True topaz of a brownish-yellow color obtained in Colorado, but quartz similarly colored is sometimes sold under the same name. *CTD*

colored slates

Cambrian and Ordovician slates quarried in the vicinity of Granville, Washington County, NY. Colors include red, purple, green, and black. The slates are much used in decorative flooring.

color grade

The grade or classification into which a gem is placed by examination of its color in comparison to the color of other gems of the same variety.

colorimeter

An instrument for measuring and comparing the intensity of color of a compound for quantitative chemical analysis, usually based on the relationship between concentration of a chemical solution and the amount of absorption of certain characteristic colors of light. *AGI*

colorimetric determination

An analytical procedure based on measurement, or comparison with standards, or color naturally present in samples or developed therein by the addition of reagents.

color index

In petrology, esp. in the classification of igneous rocks, a number that represents the percent, by volume, of dark-colored (i.e., mafic) minerals in a rock. According to this index, rocks may be divided into leucocratic (color index, 0 to 30), mesocratic (color index, 30 to 60), and melanocratic (color index, 60 to 100). Syn: [color ratio](#)

colorless

Devoid of any color, as is pure water, a pane of ordinary window glass, or a fine diamond; therefore distinctly different from white, as in milk or white jade. As only transparent objects can be colorless, and no opaque object can be colorless, such terms as white sapphire and white topaz are misnomers. Rock crystal is a colorless variety of quartz; milky quartz is a white variety.

color ratio

See: [color index](#)

colors

a. The specks of gold seen after the successful operation of a gold pan, when finely crushed ore has been panned to remove the bulk of light minerals. The residual heavy fraction is then scanned for visual evidence of gold by the prospector. *Pryor, 3* b. In optical mineralogy, the colors of doubly refracting substances as seen in doubly polarized light (crossed polars). See also: [birefringence](#)

colrake

A shovel used to stir lead ores during washing. *Fay*

columbite

a. The mineral group ferrocolumbite, magnocolumbite, and manganocolumbite. b. Standing alone it generally refers to ferrocolumbite, an orthorhombic mineral, FeNb_2O_6 , in granites and pegmatites; an ore of niobium. Syn: [niobite](#); [dianite](#); [greenlandite](#). CF: [magnocolumbite](#)

columbium

See: [niobium](#)

column

a. A round pillar set vertically or horizontally in a heading to support a machine drill. b. The rising main or length of pipe conveying water from a mine to the surface. c. See: [motive column](#) d. A solid core cut from a borehole. e. The drill-circulation liquid confined within a borehole. f. In borehole casing, a row of casing sections screwed together and forming a whole.

columnar

a. Composed of columnlike individuals. *Schieferdecker* b. A mineral with a form obscurely resembling prisms, e.g., hornblende. See also: [prismatic](#) c. In columns produced by shrinkage joints, as in columnar basalt.

columnar charge

a. A charge of explosives in a blast hole in the form of a long continuous unbroken column. b. A continuous charge in a quarry borehole. CF: [deck charge](#) BS, 12

columnar crystals

Elongated crystals that grew at right angles to a surface. *CMD*

columnar jointing

Parallel, prismatic columns, polygonal in cross section, in basaltic flows and sometimes in other extrusive and intrusive rocks. It is formed as the result of contraction during cooling. Syn: [columnar structure](#) *AGI*

columnar section

A geologic illustration that shows in a graphic manner, and by use of conventional symbols for different rock types, the successive rock units that occur throughout a given area or at a specific locality. It may be accompanied by a very brief description of

lithology and by appropriate brief notations indicating the thickness, age, and classification of the rocks. See also: [geologic column](#)

columnar structure

a. A mineral fabric consisting of slender crystals of prismatic cross section, as in some amphiboles. b. See: [columnar jointing](#) c. Columns, 9 to 14 cm in diameter and 1 to 1.4 m in length, found in some calcareous shales or argillaceous limestones; oval to polygonal in section. Columns are perpendicular to bedding. Possibly a desiccation structure. *Pettijohn, 1*

column flotation

a. A pneumatic flotation process with a counter-current flow of rising bubbles against settling ore within the flotation cell. Typically, the cell height is much greater than the cross section of the cell. The feed slurry is input above the midpoint of the column and water sprays are used at the top of the froth column to remove entrained hydrophilic particles from the froth. *Kelly* b. Flotation carried out in a column machine utilizing countercurrent flow of air bubbles from the bottom and solid reagent-conditioned material from the top, such that tailings are withdrawn at the column bottom and the concentrate is collected over the column lip. There is no mechanical agitation. *SME, 1*

column height

The length of each portion of a blast hole filled with explosive materials. *Atlas*

column leaching

Simulation of in-situ leaching through the use of a long narrow column in which ore sample and solution are in contact for measuring the effects of typical variables encountered in actual in-situ leach mining. *SME, 1*

column load

A single continuous charge. *Carson, 1*

column of mud

See: [mud column](#)

column of ore

A deposit of ore in a lode having a small lateral, but considerable vertical extent. An older term for ore shoot.

column pipe

The large cast-iron (or wooden) pipe through which the water is conveyed from the mine pumps to the surface. Syn: [mounting pipe](#); [rising main](#).

colusite

a. A variety of tetrahedrite containing 3.21% tin, from Japan. *Spencer, 4* b. An isometric mineral, $\text{Cu}_{26} \text{V}_2 (\text{As}, \text{Sn}, \text{Sb})_6 \text{S}_{32}$; in bronze-colored tetrahedra, from Butte, MT.

comagmatic

Said of igneous rocks that have a common set of chemical and mineralogic features, and thus are regarded as having been derived from a common parent magma. See also: [consanguinity](#) *AGI*

comagmatic region

An area in which the igneous rocks are of the same general geologic age, have certain distinguishing characteristics in common, and are regarded as comagmatic. Syn: [petrographic province](#)

comb

In a fissure that has been filled by successive deposits of minerals on the walls, the place where two sets of layers thus deposited approach most nearly or meet, closing the fissure and exhibiting either a drusy central cavity or an interlocking of crystals. See also: [comb texture](#)

comb dung

See: [comedown](#)

combed structure

In its simplest form this structure consists of a fissure lined with crystals on each side, having their bases on the walls and their apexes directed toward the center. In some cases the fissure is thus altogether filled up with two sets of crystals meeting in the center.

combeite

A trigonal mineral, $\text{Na}_2 \text{Ca}_2 \text{Si}_3 \text{O}_9$; in nephelinite at Kivu, Republic of the Congo.

combination drill

A drill equipped for cable-tool and/or diamond-drilling operations, or for a cable-tool and/or rotary drilling operations. Syn: [combination rig](#) *Long*

combination electric locomotive

A mine locomotive that can operate as a trolley locomotive or as a battery locomotive. While operating on a battery, it can be used, under certain conditions, at the coal face. Also it may be used on the main haulage trolley system where, due to higher voltage, higher speeds are possible. *Nelson*

combination longwall

See: [longwall](#)

combination process

Method for extracting alumina from high-silica bauxites, in which the bauxite is first subjected to a Bayer process caustic leach. The resulting red mud, containing sodium aluminum silicate, is sintered with limestone plus soda ash and then leached with water to recover alumina and soda.

combination rig

a. A rig comprising a complete cable-tool outfit and a complete rotary outfit. *Porter* b. See: [combination drill](#)

combination sampler

A universal-type soil-sampling device in which some of the constructional features of two or more special-use samplers are combined. *Long*

combination stoping

See: [combined overhand and underhand stoping](#)

combined carbon

The part of the total carbon in steel or cast iron that is present as other than free carbon. *ASM, 1*

combined moisture

Moisture in coal that cannot be removed by ordinary drying. CF: [free moisture](#)

combined overhand and underhand stoping

This term signifies the workings of a block simultaneously from the bottom to its top and from the top to the bottom. The modifications are distinguished by the support used, as open stopes, stull-supported stopes, or pillar-supported stopes. Also known as combined stopes; combination stoping; overhand stoping and milling system. Syn: [back and underhand stoping milling system](#); [combination stoping](#).

combined shrinkage stoping and caving

In this method, the orebody is worked from the top down in successive layers of much greater thickness than in top slicing. The mass of ore is weakened by a series of shrinkage stopes, which are extended up between the ribs, pillars, or blocks, which are subsequently caved. The intervening blocks are under cut and caved as in block caving. The caver follows the caved ore. Also called overhand stoping with shrinkage and simultaneous caving.

combined side and longwall stoping

See: [overhand stoping](#)

combined stresses

Any state of stress that cannot be represented by a single component of stress; i.e., one that is more complicated than simple tension, compression, or shear. *ASM, 1*

combined top slicing and shrinkage stoping

In this method, the orebody is worked from the top down in successive slices. In the working of each slice, the unit is worked as a shrinkage stope. The broken ore serves to give lateral support to the sides of the unit and also serves as a working platform from which the back is reached. After working a unit, the cover is caved. No timber mat is used. Also known as the Kimberley method.

combined twinning

A rare type of twinning in quartz in which there appears to be a 180 degrees rotation around c with reflection over (1120) or over (0001). The crystal axes are parallel, but the polarity of the a axis is not reversed in the twinned parts.

comb texture

A texture in which individual crystals have their long axis perpendicular to the walls of a vein. See also: [comb](#)

combustibility

An assessment of the speed of combustion of a coal under specified conditions. *BS, 4*

combustible

Capable of undergoing combustion or of burning. Used esp. for materials that catch fire and burn when subjected to fire. CF: [flammable](#) *Webster 3rd*

combustible gases

See: [firedamp](#)

combustible gases cap

A small cap that forms over the flame of a safety lamp when sufficient combustible gases (methane) are present. *CTD*

combustible gases drainage

The collection of combustible gases from coal measures strata, generally into pipes, with or without the use of suction. See also: [methane drainage](#)

combustible gases fringe

The zone of contact between the goaf gases and the ventilation air current at the face. *Roberts, 1*

combustible gases layer

A sheetlike accumulation of combustible gases under the roof of a mine roadway where the ventilation is too sluggish to dilute and remove the gas. Although the term is new, the hazard existed since the earliest days of coal mining. A combustible gases layer may be specified as one in which the gas is 5% or over and of a length greater than the width of the road in which it occurs. See: [pocket of gas](#) See also: [stratification of methane](#)

combustible shale

See: [tasmanite](#)

combustion

The action or operation of burning; the continuous combination of a substance with certain elements, such as oxygen or chlorine; e.g., accompanied by the generation of light and heat. See also: [ignition temperature](#)

combustion arch

A flat or curved refractory roof over a furnace to promote combustion by reflection of heat. *AISI*

combustion engineer

An engineer with practical training and knowledge of all kinds of fuels and their combustion characteristics. In general, the engineer lacks the technical qualifications of the fuel technologist. *Nelson*

combustion method

A method for the quantitative determination of certain elements (such as carbon, hydrogen, and nitrogen) in organic compounds by combustion. *Webster 3rd*

comedown

Softish stone occurring in the roof of a coal seam; it easily falls when coal is removed. Syn: [comb dung](#)

comendite

A sodic rhyolite containing alkalic amphibole and/or pyroxene.

come out

To withdraw or hoist the drill string or tools from a borehole. *Long*

come water

The constant or regular flow of water in a mine proceeding from old workings or from water-bearing rocks.

comfort air conditioning

Air conditioning that controls the atmosphere that human beings breathe. *Hartman, 2*

coming up to grass

Eng. Common terms used by miners for the word basset, or outcrop. Also coming up today.

Comleyan

Lower Cambrian. *AGI*

commercial deposit

A deposit of oil, gas, or other minerals in sufficient quantity for production in paying quantities. *Williams*

commercial explosives

Explosives designed, produced, and used for commercial or industrial applications rather than for military purposes. *Meyer*

commercial granite

A general term for a decorative building stone that is hard and crystalline. It may be a granite, gneiss, syenite, monzonite, granodiorite, anorthosite, or larvikite. See also: [black granite](#) *AGI*

commercially disposable coal

A statistical term referring to saleable coal, less colliery consumption and coal supplied to employees. *BS, 4*

commercial marble

A crystalline rock composed predominantly of one or more of the following minerals: calcite, dolomite, or serpentine, and capable of being polished.

commercial mine

A mine operated to supply purchasers in general as contrasted with a captive mine. *Zern*

commercial ore

Can. Mineralized material currently profitable at prevailing prices. *Hoffman*

commercial quantity

A quantity of oil, gas, or other minerals sufficient for production in paying quantities. *Williams*

commercial quarry

a. Term that includes quarries for aggregate and quarries for the production of limestone for industrial and agricultural purposes. *Streefkerk* b. Not owned or controlled by consumer. Contrasted with a captive quarry.

commercial sampling of coal

Procedures intended to produce an accuracy such that if a large number of samples are taken from a single lot of coal, 95 out of 100 test results will be within + or - 10% of the average of these samples. *Mitchell*

comminution

a. The gradual diminution of a substance to a fine powder or dust by crushing, grinding, or rubbing; specif., the reduction of a rock to progressively smaller particles by weathering, erosion, or tectonic movements. *AGI* b. The breaking, crushing, or grinding by mechanical means of stone, coal, or ore, for direct use or further processing. Syn: [pulverization](#); trituration. *AGI*

common banded coal

See: [banded coal](#)

common feldspar

See: [orthoclase](#)

common ion effect

Change in concentration of an ion in a saturated solution through addition of another electrolyte that yields an ion in common with the solid substance present in excess. The ion product remains constant, but with the increase of concentration of one ion that of the other diminishes correspondingly. Since the solution is already saturated, precipitation occurs, the effect being a reversal of the process of ionization. *Pryor, 3*

common lead

Lead (Pb) having four isotopes (mass numbers 204, 206, 207, and 208) in the proportions generally obtained by analyzing lead from rocks and lead minerals that are associated with little or no radioactive material; commonly considered to be the lead present at the time of the Earth's formation, as distinguished from lead produced later by radioactive decay. *AGI*

common mica

See: [muscovite](#)

common opal

Opal without play of color. Most varieties are of no gemological interest or importance; others because of their color or markings are set in jewelry. CF: [precious opal](#)

common pyrite

See: [pyrite](#)

common salt

A colorless or white crystalline compound consisting of sodium chloride NaCl, occurring abundantly in nature as a solid mineral (halite), or in solution (constituting about 2.6% of seawater), or as a sedimentary deposit (such as in salt domes and beds or as a crust around the margin of a salt lake). See also: [halite](#); [rock salt](#); salt.

commutated current

Electric current of constant strength of which the direction of flow is reversed at constant intervals of time. *Schieferdecker*

compacted yards

Measurement of soil or rock after it has been placed and compacted in a fill. *Nichols, I*

compaction curve

The curve showing the relationship between the density (dry unit weight) and the water content of a soil for a given compactive effort. Syn: [moisture-density curve](#)

compaction equipment

Machines, such as rollers, to expel air from a soil mass and so achieve a high density. Smooth-wheel rollers are best for gravels, sands, and gravels-and-clay soils with reasonably high moisture contents. Pneumatic-tired rollers are best for clays with reasonably high moisture content, and sheepfoot rollers are the best for clays with low moisture content. See also: [superficial compaction](#)

compaction test

A laboratory compacting procedure to determine the optimum water content at which a soil can be compacted so as to yield the maximum density (dry unit weight). The method involves placing (in a specified manner) a soil sample at a known water content in a mold of given dimensions, subjecting it to a compactive effort of controlled magnitude, and determining the resulting unit weight (ASCE, 1958, term 74). The procedure is repeated for various water contents sufficient to establish a relation between water content and unit weight. The maximum dry density for a given compactive effort will

usually produce a sample whose saturated strength is near maximum. Syn: [moisture-density test](#)

compact rock

A rock so closely grained that no component particles or crystals can be recognized by the eye. *Nelson*

company account

Drilling done by a company on its property using its own equipment operated by personnel working for the company. *Long*

comparator

a. In photographic mapping, a device for measuring accurately the two rectangular coordinates of the image of a point on a photograph. *Seelye, 2* b. An apparatus facilitating comparison of test material with known standard, or with other substances. A comparator microscope has a duplicate optical system, so that the observer sees two fields simultaneously (one with each eye). The Lovibond comparator has colored disks that can be matched against colored liquids to give approximate pH value, etc., using the same principle as with a set of pH color tubes in a more permanent and compact style. *Pryor, 3*

comparator tintometer

Instrument in which color of test solution is compared with that of reference cell or tinted glass slide. Also called colorimeter. *Pryor, 3*

comparison prism

A small, right-angled prism placed in a front of a portion of the slit of a spectroscope or a spectrograph for the purpose of reflecting light from a second source of light into the collimator, so that two spectra may be viewed simultaneously. *CTD*

compartment

a. A space or division in a shaft formed by cross buntons. The main compartments in a winding shaft are two for cages or skips. See also: [rectangular shaft](#) b. One section or unit in a coal- or mineral-treatment plant. *Nelson*

compass

a. An instrument or device for indicating horizontal reference directions relative to the Earth by means of a magnetic needle or group of needles; specif. magnetic compass.

Also, a nonmagnetic device that serves the same purpose; e.g., a gyrocompass. *AGI* b. A simple instrument for describing circles, transferring measurements, or subdividing distances; usually consisting of two pointed, hinged legs (one of which generally having a pen or pencil point) joined at the top by a pivot. *AGI* c. A Maas or other compass device formerly used in borehole-survey work. *Long*

compass deflection

- a. The difference, expressed in degrees, between the direction a magnetic compass needle points and true or astronomical north. This is termed magnetic declination. *Long*
- b. Differences, expressed in degrees, between magnetic north directions and the direction a magnetic compass points, owing to local magnetic interferences. This is termed magnetic deviation. *Long*

compass direction

Direction as indicated by a compass without any allowances for compass error. The direction indicated by a magnetic compass may differ by a considerable amount from the true direction referred to a meridian of the Earth. *Hunt*

compass points

The four principal points of the compass--north, east, south, and west--are called the cardinal points. Midway between the cardinal points are the intercardinal points--northeast, southeast, southwest, and northwest. Midway between each cardinal and intercardinal point is a point with a name formed by combining that of the cardinal and intercardinal point, the former being placed first, as north-northeast, east-northeast, and so forth. Midway between the points already indicated are points bearing the name of the nearest cardinal or intercardinal point followed by the word "by" and the name of the cardinal point in the direction in which it lies, as north by east, northeast by north, and so forth. In all, there are 32 points separated by intervals of 11-1/4 degrees. Each of these intervals is subdivided into quarter points. *Hunt*

compensating error

Random error equally likely to be plus or minus, and if of small dimensions, reasonably likely to be compensated by further errors. In contrast, systematic or biased errors all fall on the same side of correct measurement and may therefore accumulate and produce serious discrepancies. *Pryor, 3*

compensating rope

Balance weight ropes having direct connection with hoisting ropes. *Hammond*

compensation method

A procedure for determining the voltage difference between two points in the ground by balancing against a voltage that is adjusted in phase and amplitude to effect the compensation. See also: [compensator](#)

compensator

An instrument to determine the voltage difference between two points in the ground by the compensation method. Syn: [accessory plate](#)

competence

The ability of a current of water or wind to transport detritus, in terms of particle size rather than amount, measured as the diameter of the largest particle transported. It depends on velocity: a small, but swift stream, e.g., may have greater competence than a larger but slower-moving stream. Adj: competent. *AGI*

competent

a. Strata or rock structure combining sufficient firmness and flexibility to transmit pressure and, by flexure under thrust, to lift a superincumbent load. *Standard, 2* b. Streams able to transport debris of a given size. *Standard, 2* c. Rock formations in which no artificial support is needed to maintain a cave-free borehole. *Long* d. Rock capable of withstanding an applied load under given conditions without falling or collapsing. See also: [incompetent](#)

competent bed

a. A rock formation that, because of massiveness or inherent strength, is able to lift not only its own weight but also that of the overlying rock. *AGI* b. A bed that has a physical characteristic such that it responds to tectonic forces by folding and faulting, rather than by crushing and flowing. A competent bed is relatively strong, an incompetent bed, relatively weak. See also: [incompetent bed](#)

competent rock

a. Rock that, because of its physical and geological characteristics, is capable of sustaining openings without structural support, except pillars and walls left during mining. b. Rock formations in which no artificial support is needed to maintain a cave-free borehole. *Long* c. Rock capable of withstanding an applied load under given conditions without falling or collapsing. *Long*

complement

See: [rock fracture](#)

complementary dikes

Associated dikes (or other minor intrusions) composed of different, but related rocks, regarded respectively as leucocratic and melanocratic differentiation products from a common magma; e.g., aplite and lamprophyre; bostonite and camptonite. *Holmes, 2*

complementary forms

In crystallography, two forms combined geometrically to produce a form having higher symmetry; e.g., two equally developed rhombohedra of quartz resembling a hexagonal bipyramid.

complete combustion

Occurs when the products of combustion leaving the furnace or appliance do not contain any gaseous combustible matter. *Nelson*

complex

a. A large-scale field association or assemblage of different rocks of any age or origin, having structural relations so intricately involved or otherwise complicated that the rocks cannot be readily differentiated in mapping, e.g., a volcanic complex. See also: [igneous complex](#); basement complex. *AGI* b. A unit that consists of a mixture of rocks of two or more genetic classes, i.e., igneous, sedimentary, or metamorphic, with or without highly complicated structure; example: Franciscan Complex. *AGI* c. Said of an ore that carries several metals difficult to extract. *von Bernewitz* d. An assemblage of rocks of any age or origin that has been folded together, intricately mixed, involved, or otherwise complicated. *Stokes*

complex crystals

Those having many crystal forms and faces.

complex fold

A fold that is cross-folded; i.e., a fold, the axial line of which is folded.

complex ore

a. An ore containing two or more metals, as lead-zinc ore. Many complex ores are difficult or costly to treat, e.g., gold ore with arsenic or antimony minerals, or ore composed almost entirely of several sulfide minerals. b. An ore containing several metals. *Bateman, 2* c. Ores named for two or more valuable metals such as lead-zinc ores, gold-silver ores, etc. *Newton, 1* d. This term has no precise meaning. It generally signifies an ore that is difficult or costly to treat because of the presence of unusual

minerals, e.g., a gold ore with arsenic and antimony minerals, or an ore containing two or more metals, or ore composed almost wholly of several sulfide minerals. *Nelson*

complex pegmatite

A pegmatite body characterized by pneumatolytic-hydrothermal replacement and rare minerals. *Schieferdecker*

complicated pneumoconiosis

A condition superimposed on simple pneumoconiosis by the effect of tuberculosis lesions. *Nelson*

component of coal

Layers or bands that are petrographic entities, recognizable visually as bands or layers of coal that have distinctive physical appearance and characteristic microstructural features from coal to coal. *IHCP*

composite dike

A dike formed by two or more intrusions of different compositions into the same fissure.

composite explosives

Explosives that contain a mechanical mixture of substances that consume and give off oxygen with one or several simple explosives. They can be regarded as mixed explosives with an addition of one or more simple explosives as sensitizers, which makes for easier initiation of the mixture and gives greater assurance of complete transformation. *Fraenkel*

composite fold

See: [compound fold](#)

composite gneiss

a. A banded rock resulting from intimate penetration of magma (usually granite) into adjacent rocks. See also: [injection gneiss](#); [migmatite](#). b. Gneiss that is constituted of materials of at least two different phases. CF: [venite](#); [veined gneiss](#). *AGI*

composite intrusion

Any igneous intrusion that is composed of two or more injections of different chemical and mineralogical composition. CF: [multiple intrusion](#)

composite map

A map on which several levels of a mine are shown on a single sheet. Horizontal projection of data from different elevations. *McKinstry*

composite materials

Structural materials of metal alloys or plastics with built-in strengthening agents that may be in the form of filaments, foils, or flakes of a strong material. *Hunt*

composite sampling scheme

One in which different parts, or stages, of the sample are reached by differing methods. *Pryor, 3*

composite sill

A sill composed of two or more intrusions having different chemical and mineralogical compositions.

composite stone

See: [assembled stone](#)

composite stones

A comprehensive term that includes doublets, triplets, etc., in which a stone consists of two or more parts either of the same or of different materials cemented or otherwise joined together. *Anderson*

composite vein

A large fracture zone, up to many tens of feet in width, consisting of parallel ore-filled fissures and converging diagonals, the walls and the intervening country rock of which have undergone some replacement.

Composition B

A mixture of RDX and TNT that, when cast, has a density of 1.65 g/cm^3 and a velocity of 25,000 ft/s (7.6 km/s). It is useful as a primer for blasting agents. *Meyer*

composition of forces

If two or more forces acting on a body can be replaced by a single force the forces are said to have been compounded. This is known as composition of forces. *Morris*

composition surface

A planar or irregular surface by which parts of a twin crystal are united, not necessarily parallel to a crystal face.

compound compression

In compound compression, the work of compression is divided into two or more stages or cylinders. In two-stage compression, air is compressed in the first or low-pressure cylinder to a certain point, then forced into an intercooler where it is cooled to approx. its original temperature, then passes into the second or high-pressure cylinder, in which it is compressed to the final or delivery pressure. The ratio of compression in each cylinder of a two-stage compressor is equal to the square root of the overall ratio of compression, i.e., the square root of the final absolute pressure divided by the absolute atmospheric pressure. In three-stage work, the ratio of compression in each cylinder is the cube root of the overall ratio of compression. Also called stage compression. *Lewis*

compound cradle

An apparatus comprising three tiers of blanket tables, a shaking table, and a mercury riffle for catching gold. *Fay*

compound dredger

A type of dredger combining the suction or suction cutter apparatus with a bucket ladder. *CTD*

compound fault

A series of closely spaced parallel or nearly parallel faults. *CTD*

compound fold

A fold upon which minor folds with similar axis have developed. Syn: [composite fold](#)

compound lode

See: [compound vein](#)

compound shaft

A shaft in which the upper stage is often a vertical shaft, while the lower stage, or stages, may be inclined and driven in the deposit. In this type of shaft, underground winding engines are installed to deal with the lower stages, with transfer points and ore bins at the junction of two stages. *Sinclair, 5*

compound twins

In crystallography, individual crystals of one group united according to different laws. *Standard, 2*

compound vein

a. A vein or lode consisting of a number of parallel fissures united by cross fissures, usually diagonally. b. A vein composed of several minerals. Syn: [compound lode](#)

compound ventilation

a. An arrangement of a number of major ventilation systems serving various large working areas and served by more than two shafts and their associated fans, but integrated to form one ventilation system. Usually adopted in large combined mines. See also: [radial ventilation](#) *BS, 8* b. Ventilation by means of a number of splits, which is now normal practice. See also: [ventilation](#)

compressed air

Air compressed in volume and transmitted through pipes for use as motive power for underground machines. Compressed air is costly to transmit long distances, but has certain advantages, namely, it cools the air at the working face and is relatively safe in gassy mines. See also: [air-conditioning process](#)

compressed-air blasting

A method originated in the United States for breaking down coal by compressed air. Air at a pressure of 10,000 to 12,000 psi (69 to 83 MPa) is conveyed in a steel pipe to a tube- or shell-inserted shothole. The air is admitted by opening a shooting valve and is released in the hole by the rupture of a shear pin or disk. The sudden expansion of the air in the confined hole breaks down the coal. Syn: [Armstrong air breaker](#) See also: [Airdox](#)

compressed-air-driven lamps

These lamps are self-contained units and comprise a strong alloy casing within which are a compressed-air turbine and a small alternating-current generator with stationary windings and revolving field magnets. The air enters the casing at one side, passes through a filter and then through a reducing valve that maintains a constant pressure of 40 psi (276 kPa) on the turbine blades. The air escaping from the turbine is used to scavenge the inside of the lamp and remove any combustible gases that might have entered when the lamp was not in use. It is finally discharged through a series of holes of such a size that the pressure inside the lamp casing is 2 to 3 psi (14 to 21 kPa) above atmospheric. Should this pressure be lost due to the lamp glass being broken, the light is

extinguished automatically by a spring-loaded diaphragm, which short-circuits the generator unless held open by the excess pressure. Also called air turbolamp. *Mason*

compressed-air locomotive

A mine locomotive driven by compressed air. It is very safe and is much used in gassy mines in Europe. The air is brought down by pipeline from the surface to a charging station near the pit bottom. See also: [locomotive haulage](#)

compressed-air turbines

Turbines used for driving coal cutters, belt conveyors, and similar duties. They are not so efficient in their use of the air as piston engines, but possess the merits of extreme simplicity and robustness, and therefore are preferred for coal face use. *Mason*

compressed pellets

Blasting powders manufactured in cartridge form for use in small diameter shotholes. These pellets are particularly useful for horizontal shotholes. *McAdam, 2*

compression

A system of forces or stresses that tends to decrease the volume or to shorten a substance, or the change of volume produced by such a system of forces. *AGI*

compressional wave

- a. A traveling disturbance in an elastic medium characterized by volume changes (and hence density changes) and by particle motion in the direction of travel of the wave. *AGI*
- b. A longitudinal wave (as a sound wave) propagated by the elastic compression of the medium. Syn: [irrotational wave](#); [pressure wave](#); P wave. *Webster 3rd*

compression ratio

The ratio of the volume of space above a piston at the bottom of its stroke to the volume above the piston at the top of its stroke. *Nichols, 1*

compression subsidence

That condition in sedimentation in which the flocs or particles are conceived to be in close contact, further subsidence occurring as a direct effect of compression resulting in the elimination of water from the flocs and interstitial spaces. The settling velocity decreases with time of settling. *Mitchell*

compression zone

The surface area affected by compressive strain. CF: [neutral zone](#); tension zone. *Nelson*

compressive strength

a. The maximum compressive stress that can be applied to a material, such as a rock, under given conditions, before failure occurs. *AGI* b. The load per unit area at which an unconfined prismatic or cylindrical specimen of soil will fail in a simple compression test. Syn: [unconfined compressive strength](#)

compressive stress

A stress that tends to push together the material on sides of a real or imaginary plane. CF: [tensile stress](#)

compressor

a. A machine, steam or electrically driven, for compressing air for power purposes. Small air compressors may be compound steam and double-stage air. Large compressors may be triple-expansion steam and three-stage air and are always used with condensers. *Nelson* b. Any kind of reciprocating, rotary, or centrifugal pump for raising the pressure of a gas. *CTD* c. A machine that compresses air. *Nichols, I*

comptonite

An opaque variety of thompsonite from the Lake Superior region.

computer

a. An automatic electronic device capable of accepting information, applying prescribed processes to it, and supplying the results of these processes. The term is generally used for any type of computer. See also: [analog computer](#) b. In seismic prospecting, one who with one or two assistants, carries on the routine work of transforming the "wiggly lines" on the reflection records into the form in which they are finally used. Where corrected record sections are prepared, he or she must compute the corrections and must assemble the other information to be fed into the playback so that it will turn out properly corrected records. In addition to handling corrections, the computer must mark the records, read and plot times, and otherwise maintain the flow of data. Such individuals are not used in processing modern digital seismic data. *Dobrin*

computer-assisted mining

The process of controlling single or multiple mining machines in which sensors and computers are used to replace or enhance manual control of all or portions of the formerly manually controlled machine operations.

comstockite

A mineral, $(\text{Mg,Cu,Zn})\text{SO}_4 \cdot 5\text{H}_2\text{O}$, containing 5.60% ZnO, 9.40% MgO, 9.00% CuO, and 39.07% H_2O ; from the Comstock Lode, NV. Syn: [zinc-magnesia chalcantite](#)

concave bit

A tungsten carbide drill bit for percussive boring. The cutting edge is concave, while in the conventional type the edge is convex. The new bit remains sharper for a longer period before regrinding becomes necessary and gives a higher penetration speed. Also called saddleback tip. See also: [plug bit](#)

concave crown

See: [concave bit](#)

concealed coalfield

A coalfield that is totally buried beneath newer deposits, usually Permian and Trias strata, which repose unconformably on the coal measures in the basin. A good example of a concealed coalfield is that of Kent, in southeast England. See also: [coal basin](#); [exposed coalfield](#). *Nelson*

concentrate

The clean product recovered in froth flotation.

concentrated charge

a. The heavy explosive charge loaded into the enlarged chamber at the bottom of a quarry blasthole. See also: [chambering](#) b. Means that the height of the charge is small compared with the burden that can be given quantitatively. *Langefors*

concentrating plant

See: [concentrator](#)

concentrating table

A device consisting of a riffled deck, usually inclined in two directions to the horizontal, to which a differential reciprocating motion in a substantially horizontal direction is imparted; the material to be separated is fed in a stream of water, the heavy particles collect between the riffles and are there conveyed in the direction of the reciprocating motion while the lighter particles are borne by the current of water over the riffles, to be discharged laterally from the table. *BS, 5*

concentration

a. The ratio of the dry weight of sediment to the weight of water sediment mixture of which it is part. Sediment concentration is commonly expressed in parts per million (ppm). b. Separation and accumulation of economic minerals from gangue. See also: [ore dressing](#); [preparation](#). *Bateman, 2*

concentration cell

An electrolytic cell, the electromotive force of which is due to difference in concentration of the electrolyte or active metal at the anode and the cathode. *Osborne*

concentration criterion

The ratio between the density in a liquid of two minerals that are to be separated (M_h and M_l being the heavy and light one, respectively); $C = M_h - 1/M_l$, where water (sp gr, 1) is the liquid. This ratio indicates the grain size above which separation by gravity methods should be commercially practicable. Above 2.5 fine sands (down to below 200 mesh) can be tailed. At 1.75 the lower limit is 100 mesh; at 1.5 about 10 mesh, and at 1.25 only gravel sizes can be treated. *Pryor, 1*

concentration of output

Essentially, to secure the maximum output of coal from the minimum length of face with due regard to safety and development. To measure the degree of concentration at a colliery the following data are collected: (1) the total length of coalface; (2) the total length of main haulage roads; and (3) the total output. In general, the greater the dispersion of the workings, the greater the manpower employed and the higher the costs of production. See also: [face concentration](#); [geographical concentration](#); overall concentration. *Nelson*

concentration ratio

Weight or tonnage ratio (K) of the weight of feed (F) to the weight of concentration (C) produced: $K = F/C$, for a two-product treatment. *Pryor, 3*

concentration table

A table on which a stream of finely-crushed ore and water flows downward; the heavier metallic minerals lag behind and flow off in a separate compartment. *Weed, 2*

concentrator

a. A plant where ore is separated into values (concentrates) and rejects (tails). An appliance in such a plant, e.g., flotation cell, jig, electromagnet, shaking table. Also

called mill; reduction works; cleaning plant. Syn: [concentrating plant](#) b. An apparatus in which, by the aid of water, air, and/or gravity, mechanical concentration of ores is performed. A concentration plant. *Fay* c. A general term for a worker, who tends concentrating tables, vanners, and other types of equipment used to separate valuable minerals from waste material. *DOT*

concentric fold

See: [parallel fold](#); similar fold.

concentric mine cable

See: [portable concentric mine cable](#)

concentric pattern

Diamonds set in bit face in concentric circles so that a slight uncut ridge of rock is left between stones set in adjacent circles. CF: [eccentric pattern](#)

concentric weathering

See: [spheroidal weathering](#)

concession

See: [concession system](#)

concession system

Under this system the state or the private owner has the right to grant concessions or leases to mine operators at discretion and subject to certain general restrictions. It had its origin in the ancient regalian doctrine that all mineral wealth was the prerogative of the crown or the feudatory lord and applies in almost every mining country in the world, except the United States. Syn: [concession](#) See also: [take](#)

conchilite

A bowl-shaped body of limonite or goethite growing in an inverted position on mineralized bedrock and resembling the shell of an oyster or clam coated with a rusty deposit. It is roughly oval or circular in plan, with a smooth or irregular and scalloped outline; it ranges from 2.5 cm to 1 m in diameter and from 2 to 7.5 cm in height. *AGI*

conchoidal

Said of a type of mineral or rock fracture that gives a smoothly curved surface. It is a characteristic habit of quartz and of obsidian. Etymol: like the curve of a conch (seashell). *AGI*

conchoidal fracture

A fracture with smooth, curved surfaces, typically slightly concave, showing concentric undulations resembling the lines of growth of a shell. It is well displayed in quartz, obsidian, and flint, and to a lesser extent in anthracite.

concordant

a. Said of intrusive igneous bodies, the contacts of which are parallel to the bedding or foliation of the country rock. CF: [discordant](#) *Billings* b. Structurally conformable; said of strata displaying parallelism of bedding or structure. The term may be used where a hiatus cannot be recognized, but cannot be dismissed. *AGI* c. Said of radiometric ages, determined by more than one method, that are in agreement within the analytical precision for the determining methods; or of radiometric ages given by coexisting minerals, determined by the same method, that are in agreement. *AGI*

concrete

An intimate mixture of an aggregate, water, and portland cement, which will harden to a rocklike mass.

concrete caisson sinking

A shaft-sinking method sometimes used through soft ground down to bedrock. It is similar to caisson sinking, except that reinforced concrete rings are used and an airtight working chamber is not adopted. *Nelson*

concrete plug

A thick layer of reinforced concrete placed in the bottom of a shaft after it has been sunk to the desired depth and permanently lined. The plug resists floor lifting and provides a clean, smooth sump. *Nelson*

concrete shaft lining

See: [permanent shaft support](#); shaft wall.

concrete vibrator

Machine that helps the aggregate to consolidate with minimum interstitial porosity. Gives greater strength as less water is incorporated in the mix, and as consolidation is better than with punning. *Pryor, 3*

concretion

a. A hard, compact mass or aggregate of mineral matter, normally subspherical, but commonly oblate, disk-shaped, or irregular with odd or fantastic outlines; formed by precipitation from aqueous solution about a nucleus or center, such as a leaf, shell, bone, or fossil, in the pores of a sedimentary or fragmental volcanic rock, and usually of a composition widely different from that of the rock in which it is found and from which it is rather sharply separated. It represents a concentration of some minor constituent of the enclosing rock or of cementing material, such as silica (chert), calcite, dolomite, iron oxide, pyrite, or gypsum, and it ranges in size from a small pelletlike object to a great spheroidal body as much as 3 m in diameter. Most concretions were formed during diagenesis, and many (esp. in limestone and shale) shortly after sediment deposition. CF: [nodule](#) b. A collective term applied loosely to various primary and secondary mineral segregations of diverse origin, including irregular nodules, spherulites, crystalline aggregates, geodes, septaria, and related bodies. Not recommended usage. *AGI*

concretionary

Characterized by, consisting of, or producing concretions; e.g., a concretionary ironstone composed of iron carbonate with clay and calcite, or a zonal concretionary texture (of an ore) characterized by concentric shells of slightly varying properties due to variation during growth. *AGI*

concretionary and nodular

Minerals, usually monomineralic aggregates, which are found in detached masses, the forms being sometimes spherical, sometimes irregular, e.g., flint. *Nelson*

concussion

Shock or sharp airwaves caused by an explosion or heavy blow. *Nichols, 1*

concussion table

An inclined table, which is agitated by a series of shocks, while operating like a buddle. It may be made self-discharging and continuous by substituting for the table an endless rubber cloth, which is slowly moving against the current of water, as in the Frue vanner. Also called a percussion table. *Fay*

condensation

The process by which a vapor becomes a liquid or solid; the opposite of evaporation.
AGI

condenser

a. An apparatus used for condensing vapors obtained during distillation; it consists of a condenser tube, either freely exposed to air or contained in a jacket in which water circulates. *CTD* b. An accumulator of electrical energy. Also called capacitor. *Crispin*

condenser-discharge blasting machine

A blasting machine that uses batteries or magnets to energize one or more condensers (capacitors) whose stored energy is released into a blasting circuit, to initiate detonators.
Dick, 2

condenser maker

In ore dressing, smelting, and refining, one who operates an automatic machine in which fireclay condensers are made. *DOT*

condenser operator

In ore dressing, smelting, and refining, one who recovers magnesium particles from dust-bearing gas, using shock-chilling condensers and other dust-collecting apparatus. Also called dust operator. *DOT*

condensing lens

A lens for producing convergent light.

condie

See: [waste](#)

conditioned sinter

A name given to sinter with lime additions. *Nelson*

conditioner

An apparatus in which conditioning takes place. *BS, 5*

conditioners

Those substances added to the pulp to selectively treat coal or waste surfaces prior to flotation.

conditioning

Stage of froth-flotation process in which the surfaces of the coal or associated impurities present in a pulp are treated with appropriate chemicals to influence their reaction when the pulp is aerated. *Pryor, 4*

condition the hole

To circulate a higher-than-normal volume of drill fluid while slowly rotating and lowering the drill string from a point a few feet above the bottom to the bottom of the borehole to wash away obstructing materials before resuming coring operations. *Long*

conductance

The quantity of heat transmitted per unit time from a unit of surface to an opposite unit of surface of material under a unit temperature differential between the surfaces. *Strock, 2*

conductor

- a. Guides of rope or of rigid construction to guide the cages or skips in the shaft. *Mason*
- b. A relatively short length of pipe driven through the unconsolidated zone of top soil as the first step in collaring a borehole. Also called stand pipe. *Long*
- c. See: [brakeman](#)

conductor-cable locomotive

An electric locomotive having a cable on a reel and connected both with the locomotive motor and the trolley wire in the entry, so that the locomotive may be driven into an unwired room. *Zern*

conduit

- a. An airway. *Zern*
- b. Pipe or casing placed in a borehole. See also: [casing](#); [drivepipe](#). *Long*

conduit hole

A flat or nearly horizontal hole drilled for blasting a thin piece in the bottom of a level. *Zern*

cone

a. A conical hill or mountain, as an alluvial cone or a volcanic cone. b. A device used on top of blast furnaces to enable charge to be put in without permitting gas to escape. Syn: [bell](#) c. The conical part of a gas flame next to the orifice of the tip. *ASM, 1* d. The conical hill or conical mountain built by an active volcano. Explosive volcanoes build their cones from debris, ranging in size from dust to huge blocks, thrown out from the vent and have steep slopes approaching or exceeding the angle of repose. Quieter volcanoes that pour out lava have much gentler slopes. *Hess* e. A three-sided pyramid made of unfired ceramic materials whose composition is such that when heated at a controlled rate they will deform and fuse at a known temperature. It is placed inside a kiln or furnace with ceramic ware to indicate the temperature of the kiln and the fired condition of the ware. See also: [pyrometric cone](#) f. A solid with a circle for a base and with a convex surface that tapers uniformly to a vertex. *Jones, 1* g. Geometric pattern of the rock plug or stickup left in the bottom of a borehole drilled by a concave bit. *Long* h. Beveled coupling device on a small diamond drill or percussion rock drill used to attach it to a drill column. *Long*

cone classifier

a. A cone-shaped hydraulic or free-settling classifier. b. A conical sheet-steel vessel--usually a 60 degrees cone with its point at the bottom--through which water, clear or weighted, flows upward. Ore, coal, or other mineral matter is fed in at the top. The current carries the smaller particles or those of lowest specific gravity over the rim while the others settle. See also: [Callow cone](#); [Caldecott cone](#); Allen cone; Menzies cone separator; Jeffrey-Robinson cone. Syn: [Chance cone](#); [cone system](#).

cone crusher

A machine for reducing the size of materials by means of a truncated cone revolving on its vertical axis within an outer chamber, the annular space between the outer chamber and cone being tapered. See also: [gyratory breaker](#)

cone cut

A cut in which a number of central holes are drilled toward a focal point and, when fired, break out a conical section of strata. *BS, 12*

cone-face bit

See: [concave bit](#)

cone-in-cone structure

a. A secondary structure occurring in marls, limestones, ironstones, coals, etc. It is a succession of small cones of approx. the same size one within another and sharing a common axis. *Holmes, 2* b. Coal exhibiting a peculiar fibrous structure passing into a

singular toothed arrangement of the particles is called cone-in-cone coal or crystallized coal. Syn: [crystallized coal](#)

Conemaughian

Upper Middle Pennsylvanian. *AGI*

cone of depression

The depression, approx. conical in shape, that is produced in a water table or in the piezometric surface by pumping or artesian flow. The shape of the depression is because of the fact that the water must flow through progressively smaller cross sections as it nears the well, and hence the hydraulic gradient must be steeper. See also: [water table](#)

cone penetration test

A soil penetration test in which a steel cone of standard shape and size is pushed into the soil and the force required to advance the cone at a predetermined, usually slow and constant rate, or for a specified distance, or in some designs the penetration resulting from various loads, is recorded. *AGI*

cone penetrator

A 30 degrees to 60 degrees cone having a basal diameter approx. the same size as an a-size diamond-drill rod used to determine the force required to thrust the cone downward into silty or fine to medium-coarse sands, and hence to obtain information that a foundation or soils engineer may use to calculate some of the load-bearing capabilities of such formations. Syn: [cone penetrometer](#)

cone penetrometer

A cone penetrator equipped with a device that will register the pressure required to drive the cone downward into the formation being tested. Syn: [cone penetrator](#); [penetrometer](#).
Long

cone rock bit

A rotary drill, with two hardened knurled cones that cut the rock as they roll. Syn: [roller bit](#)

cone settler

Conical vessel fed centrally with fine ore pulp. "Undersize" is discharged through a flexible pipe (gooseneck), which permits variation of hydrostatic pressure. This apex

discharge is thick and carries the larger sized particles. The peripheral top overflow is thin and carries the finer fraction of the solids. *Pryor, 3*

cone sheet

A curved dike or sheet that is part of a concentric set of such forms that dip inward. *Billings*

cone system

A method of separating impurities from coal in a metallic cone containing a mixture of sand and water with a specific gravity higher than that of coal and lower than the impurities. The coal floats, and the impurities sink. See also: [cone classifier](#)

Conewangoan

Upper Upper Devonian. *AGI*

confined detonation velocity

The detonation velocity of an explosive or blasting agent under confinement, such as in a borehole. *Dick, 2*

confined groundwater

Artesian water.

confined space

An enclosed space that has the following characteristics: its primary function is something other than human occupancy; it has restricted entry and exit; and it may contain potential or known hazards. Examples of confined spaces include, but are not limited to, tanks, silos, vessels, pits, sewers, pipelines, tank cars, boilers, septic tanks, and utility vaults. Tanks and other structures under construction may not be considered confined spaces until completely closed. Restricted entry and exit means physical impediment of the body, e.g., use of the hands or contortion of the body to enter into or exit from the confined space. *ANSI*

confining bed

a. A watertight bed above or below a stratum containing artesian water. *Fay* b. An impervious stratum above and/or below an aquifer. *BS, 10* c. A body of impermeable or distinctly less permeable material stratigraphically adjacent to one or more aquifers. CF: [aquitard](#); aquifuge; aquiclude. *AGI*

confluent

Said of a stream, glacier, vein, or other geologic feature that combines or meets with another like feature to form one stream, glacier, vein, etc. *AGI*

conformability

The quality, state, or condition of being conformable, such as the relationship of conformable strata. *AGI*

conformable

Successive beds or strata are conformable when they lie one upon another in unbroken and parallel order and no disturbance or denudation took place at the locality while they were being deposited. If one set of beds rests upon the eroded or the upturned edges of another, showing a change of conditions or a break between the formations of the two sets of rocks, they are unconformable. CF: [unconformable](#)

conformal map projection

A map projection on which the shape of any small area of the surface mapped is preserved unchanged. *AGI*

congela

A term used in Chile for coba with a high salt content. See also: [coba](#) *AGI*

congelation temperature

a. The freezing point. b. The temperature at which an oil becomes a solid or is reduced to a standard pasty state.

conglomerate

A coarse-grained clastic sedimentary rock, composed of rounded to subangular fragments larger than 2 mm in diameter (granules, pebbles, cobbles, boulders) set in a fine-grained matrix of sand or silt, and commonly cemented by calcium carbonate, iron oxide, silica, or hardened clay; the consolidated equivalent of gravel. The rock or mineral fragments may be of varied composition and range widely in size, and are usually rounded and smoothed from transportation by water or from wave action. CF: [breccia](#)

conglomerate mudstone

See: [paraconglomerate](#)

conglomerite

A conglomerate that has reached the same state of induration as a quartzite.

congo bort

Congos used industrially as bort. See also: [bort](#)

congo diamond

See: [congos](#)

congo rounds

Spherical- or near-spherical-shaped congos. See also: [congos](#) *Long*

congos

a. Originally and commonly used as a name for a variety of diamonds found in the Republic of the Congo diamond district in Africa and more recently as a descriptive term applied to all diamonds having the appearance and characteristics of those produced in the Republic of the Congo. Congos are white to gray-green and yellow, drusy-surfaced, opaque to somewhat translucent diamonds, having shapes corresponding to the many forms characteristic of the isometric (cubic) crystal system. At one time, congos were considered fit only for use in fragmented form, but a considerable number are now used as tool stone and drill diamonds. Syn: [congo diamond](#) b. Sometimes designates drill diamonds ranging from one to eight stones per carat in size. *Long*

congruent

a. In crystallography, any motif that may generate another by rotation or translation, but with no change in chirality. b. In phase equilibria, the melting of a crystalline compound to a liquid of the same composition. CF: [incongruent melting](#)

congruent forms

In crystallography, two forms that may each be derived from the other by rotation about an axis of symmetry. *Fay*

congruent melting

A geologic or metallurgical process in which a binary compound melts at a certain concentration to a liquid of its own composition. CF: [incongruent melting](#)

conical

Cone-shaped. In mineralogy, usually an elongated cone as are most icicles.

conical drum

A winding drum, cone-shaped at each end, for balancing the load upon the engine during winding operations. See also: [winding drum](#) loaded upgoing rope winds on the small diameter while the lightly loaded downgoing rope winds off the large diameter of the cone. *Nelson*

conical head gyratory crusher

Gyratory-type crusher used for secondary reduction and identified by the shape of its breaking head. The large included angle of the breaking-head surfaces greatly increases the ratio of discharge to feed area; a large ratio permits crushed materials to separate to prevent power-consuming clogging and packing. The crusher's higher gyrating speed and large discharge area make it eminently suitable for fine crushing at a high capacity. *Pit and Quarry*

conical mill

See: [Hardinge mill](#)

conical refraction

The refraction of a ray of light at certain points of double-refracting crystals, so that on emerging from the crystal it widens from an apex into a hollow cone (external conical refraction), or on entering diverges into a cone and issues as a hollow cylinder (internal conical refraction). *Standard, 2*

conichalcite

An orthorhombic mineral, $\text{CaCu}(\text{AsO}_4)(\text{OH})$; adelite group; forms series with austinite, with calciovolborthite, and with cobaltoaustinite; formerly called higginsite.

coning

Method of obtaining true sample from a pile of ore by forming a cone with the material flattening the cone, and removing shovelfuls successively onto four separate heaps of which two are rejected. If there is sufficient material the two opposite quadrants are rejected and the remaining two are combined, reconed, and requartered. As the process is repeated and the pile shrinks, it must be crushed to a smaller size to permit accurate blending of the various sized particles during mixing. Syn: [upconing](#); quartering. *Pryor, 3*

coning and quartering

A method of sample reduction. Syn: [quartering](#)

conjugated veins

Two sets of related veins that dip in different directions.

conjugate fault system

A system of two intersecting sets of parallel faults.

conjugate impedance

Two impedances having resistive components that are equal and reactive components that are equal in magnitude but opposite in sign are known as conjugate impedances.

Hunt

conjugate joint systems

Sets of intersecting joints that are sometimes perpendicular or rectilinear, and often mineralized to form vein systems. Joint patterns such as these are believed to be the result of compressive stresses that were relieved by joint formation rather than the formation of a single fissure. *Lewis*

Conkling magnetic separator

A conveying belt that passes under magnets, below which belts run at right angles to the line of travel of the main belt. The magnetic particles (tramp iron) are lifted up against these crossbelts and are thus removed. *Liddell*

Conklin process

A dense-media coal cleaning process in which the separating medium consists of minus 200-mesh magnetite (sp gr, 5.2) in water in the desired proportions (4.4 parts of water to 1 part of magnetite provides an effective specific gravity of about 1.9). This process has the advantage that the medium requires little agitation to keep it in suspension and is easily removed from the clean coal and refuse. *Mitchell*

connate

a. Originating at the same time as adjacent material; esp. pertaining to waters and volatile materials (such as carbon dioxide) entrapped in sediments at the time the deposits were laid down. *AGI* b. Said of fluids derived from the same magma. *AGI*

connate water

Water entrapped in the interstices of a sedimentary rock at the time of its deposition. CF: [interstitial water](#); [formation water](#). *AGI*

connecting frame

A device similar to a guide frame for shaker conveyors, but with provision for insertion of the puller rod. A connecting frame can be inserted between any two standard trough sections to serve as a substitute for a connecting trough on single-arm electric or air devices. *Jones, 1*

connecting trough

A shaker conveyor trough of standard length to which special lugs or plates have been attached to provide a means of connecting the trough to the driving arms of the conveyor drive unit. All motion of the conveyor is transmitted through the connecting trough. The term drive trough is frequently used for this special type of trough. *Jones, 1*

connecting trough support

The means of supporting connecting troughs where they pass over the drive unit. The support is attached to the drive unit frame and is designed to allow the connecting trough freedom of movement in the direction of the panline. Supports may be of the ball frame, wheel, rolled, or rocker arm types. *Jones, 1*

connecting wire

Wire used to extend the firing line or leg wires in an electric blasting circuit. *Atlas*

connellite

A hexagonal mineral, $\text{Cu}_{19} \text{Cl}_4 (\text{SO}_4)(\text{OH})_{32} \cdot 3\text{H}_2 \text{O}$; having SO_4 replaced by NO_3 toward buttgenschickite; deep blue; formerly known as footeite.

conode

Isothermal construction line between two equilibrated phases. See also: [tie line](#)

conoscope

A polarizing microscope using convergent light with the Bertrand lens inserted, used to test the interference figures of crystals. CF: [orthoscope](#)

Conrad counterflush coring system

A system, the notable feature of which is the provision of a reversed mud flush circulation that permits uninterrupted core recovery in the rotary system of drilling. *Sinclair, 2*

Conrad machine

Mechanized pit digger used in checking of alluvial boring. Five-foot-long (1.52-m-long) sections of tubing 24 in (61 cm) in internal diameter are worked into the ground from their mounting on a tractor, the spoil being at the same time removed by means of a bucket or grab. In suitable ground 50 ft (15.2 m) or more depth has been reached. *Pryor, 3*

consanguineous

a. Said of a natural group of sediments or sedimentary rocks related to one another by origin; e.g., a consanguineous association (such as flysch, molasse, or paralic sediments) interrelated by common ancestry, environment, and evolution. Syn: [consanguinity](#) b. See: [comagmatic](#)

consanguineous association

Natural group of sediments or of rocks of related origin. *AGI*

consanguinity

The genetic relationship that exists between igneous rocks that are presumably derived from the same parent magma. Such rocks are closely associated in space and time and commonly have similar geologic occurrence and chemical and mineralogic characteristics. Adj. consanguineous. See also: [comagmatic](#)

consertal

A syn. of sutured, preferred in European usage, but obsolescent in American usage. *AGI*

conservation

Conserving, preserving, guarding, or protecting; keeping in a safe or entire state; using in an effective manner or holding for necessary uses, as mineral resources. *Hess*

conservative properties

Those properties of the ocean, such as salinity, the concentrations of which are not affected by the presence or activity of living organisms, but which are affected only by diffusion and advection. *Hy*

conset jig

Jig developed for Mesabi iron ores in which vertical movement of water is produced by low-pressure inflation and deflation of rubber tubes just below screens. See also: [jig](#)

consistency

a. The degree of solidity or fluidity of bituminous materials. b. The relative ease with which a soil can be deformed. *ASCE* c. A property of a material determined by the complete flow force relation. *ASTM* d. The properties of a slip that control its draining, flowing, and spraying behavior. *ASTM* e. Percentage of solids in pulp. *Pryor, 3* f. Fluidity. *Pryor, 3*

consistency limits

The liquid limit, plastic limit, and shrinkage limit. These all apply to the water content of a clay, each in a certain state as defined by British Standard 1377. See also: [Atterberg limits](#)

consolidated deposits

In geology, any or all of the processes whereby loose, soft, or liquid earth materials become firm and coherent. *Stokes*

consolidated sediment

A sediment that has been converted into rock by compaction, deposition of cement in pore spaces, or by physical and chemical changes in the constituents.

consolidation

a. Any process whereby loosely aggregated, soft, or liquid earth materials become firm and coherent rock; specif. the solidification of a magma to form an igneous rock, or the lithification of loose sediments to form a sedimentary rock. *AGI* b. The gradual reduction in volume and increase in density of a soil mass in response to increased load or effective compressive stress; e.g., the squeezing of fluids from pore spaces. See also: [lithification](#) *AGI*

consolidation hole

Borehole into which chemical solutions or grout are injected to cement or consolidate fragmental rock material. CF: [grout hole](#)

consolidation settlement

The gradual settlement of loaded clay. *Nelson*

consolidation test

A test in which an undisturbed sample of clay measuring 6 cm in diameter and 2 cm thick is confined laterally in a metal ring and compressed between two porous plates that are kept saturated with water. A load is applied and the clay consolidates, the excess pore water escaping through the porous stones. After each increment of load is applied, it is allowed to remain on the sample until equilibrium is established, and a consolidation curve showing the deformation with time is obtained for each increment. *Nelson*

consolidation trickling

During closing of bed or particles in the suction half of jigging cycle, interstitial burrowing down of fastest moving small particles before the mass of particles becomes too compact for movement. *Pryor, 3*

constantan

A group of copper-nickel alloys containing 45% to 60% copper with minor amounts of iron and manganese, and characterized by relatively constant electrical resistivity irrespective of temperature; used in resistors and thermocouples. *ASM, 1*

constant error

A systematic error that is the same in both magnitude and sign throughout a given series of observations (the observational conditions remaining unchanged) and that tends to have the same effect upon all the observations of the series or part thereof under consideration; e.g., the index error of a precision instrument. *AGI*

constant-weight feeder

a. An automatic device that maintains a constant rate of feed of ore from the bin or stockpile to the grinding circuit. It is controlled by tilt due to the weight of ore on a balanced length of the belt conveyor; by electrically vibrated chute; by pusher gear; by timed delivery from automatically loaded hoppers. *Pryor, 3* b. A feeder intended to deliver a certain weight per unit of time. *ACSG, 2*

constituent of attritus

Constituents are the petrographic entities of the attritus that are recognizable in thin sections only by the microscope. The following constituents may be distinguished in coals: translucent humic degradation matter; brown or semitranslucent matter; opaque matter (granular, massive); resins and resinous matter; spores and pollen; cuticles and cuticular matter; algae and algae matter. *IHCP*

constitutional change

Transformation of a constituent in an alloy; e.g., austenite into pearlite. *Pryor, 3*

constitutional water

Water molecules completely bound into a hydrated crystal, e.g., in gypsum, $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$.

constitution diagram

A graphical representation of the temperature and composition limits of phase fields in an alloy system as they actually exist under the specific conditions of heating or cooling (synonymous with phase diagram). A constitution diagram may be an equilibrium diagram, an approximation to an equilibrium diagram, or a representation of metastable conditions or phases. CF: [equilibrium diagram](#)

constructed wetland

A man-made marsh that is designed to be slow-draining so that specific species will flourish, primarily to replace natural wetlands that have been drained and filled prior to development. In mining, some constructed wetlands are designed to fix metals and other contaminants, primarily by the reduction of metal sulfates to sulfides, or the formation of oxides or carbonates. When the term is also applied to systems constructed without plants, they consist of buried substrates through which the contaminated water is passed under low oxygen or reducing conditions.

constructive possession

That possession that the law annexes to the legal title or ownership of property, when there is a right to the immediate actual possession of such property, but no actual possession. *Ricketts*

consulting engineer

A specialist employed in an advisory capacity. Normally, this person does not manage or direct any operation, and is at the service of the board rather than of the company's administrative and executive staff. *Pryor, 3*

consulting mining engineer

A highly qualified mining engineer with a wide background of experience in this particular field. The engineer may be asked by a client or company to examine a property and prepare a report and evaluation or to give advice or expert evidence in cases of alleged subsidence damage. *Nelson*

consumable electrode-arc melting

A method of arc melting in which the electrode itself serves to supply the metal; this method is commonly employed for melting titanium and zirconium. *Newton, 1*

consume

To use up; to expend; to waste; as in the chemical and mechanical loss of mercury in amalgamation.

consumption charge

That portion of a utility charge based on energy actually consumed, as distinguished from the demand charge. *Strock, 2*

contact

a. A plane or irregular surface between two types or ages of rock. *AGI* b. The surface of delimitation between a vein and its wall, or country rock.

contact angle

The angle across the water phase of an air-water-mineral system, used to measure effect of surface conditioning. *Pryor, 4*

contact bed

In geology, a bed lying next to or in contact with a formation of different character. *Fay*

contact breccia

A breccia around an igneous intrusion, caused by wall-rock fragmentation and consisting of both intrusive material and wall rock; intrusion breccia. CF: [agmatite](#)

contact deposit

A mineral deposit between two unlike rocks. The term is usually applied to an orebody at the contact between a sedimentary rock and an igneous rock. See also: [contact vein](#)

contact erosion valley

A valley that has been eroded along a zone of weakness at the contact between two different kinds of rock, as between two different sedimentary formations, between igneous and sedimentary rocks, along a fault, or along an upturned unconformity.

contact goniometer

A protractor for measuring the angles between adjacent crystal faces. See also: [goniometer](#); [reflection goniometer](#). *Fay*

contact line

The line of intersection of a contact surface with the surface of an exposure or with the surface of bedrock covered by mantle rock; it may be exposed or concealed.

contact logging

In this type log, provision is made for electrodes to be pressed firmly against the borehole wall. By doing this, current flowing from the electrodes to the wall of the borehole no longer has to traverse the mud. The path from the electrodes through the mud filter cake that sheaths permeable beds is also reduced to a minimum. The electrode spacing of contact logging devices is very small by comparison with the spacings used in conventional logging devices. Consequently, contact logging devices see very much more detail in the beds they pass through. *Wyllie*

contact logging device

A device that consists of a spring bow very analogous to a section gage. On one arm of the bow is a rubber pad shaped to fit the curvature of the hole. In this pad, slightly recessed, are three electrodes of about diameter 1/2 in (1.3 cm) and located at 1-in (2.54-cm) intervals. These three electrodes are used to record two resistivity curves. One curve is a three-electrode type with a spacing of 1-1/2 in (3.8 cm), and the second is a two-electrode type with a spacing of 2 in. *Wyllie*

contact-metamorphic

Adj. of contact metamorphism.

contact metamorphic

Applied to rocks and/or minerals that have originated through the process of contact metamorphism. *AGI*

contact metamorphism

A process taking place in rocks at or near their contact with a body of igneous rock. Metamorphic changes are effected by the heat and materials emanating from the magma and by some deformation connected with the emplacement of the igneous mass. CF: [thermal metamorphism](#); metamorphic aureole. Approx. syn: pyrometasomatism. Adj: contact-metamorphic. See also: [exomorphism](#); [endomorphism](#). *AGI*

contact-metasomatic deposit

A deposit formed by high-temperature magmatic emanations along an igneous contact. *Bateman, 2*

contact metasomatism

A mass change in the composition of rocks in contact with an invading magma, from which fluid constituents are carried out to combine with some of the country-rock constituents to form a new suite of minerals. *AGI*

contact mineral

A mineral formed by contact metamorphism.

contact process

A process for making sulfuric acid. Sulfur dioxide gas (obtained by burning pyrite) is purified by electrical precipitation, and is passed over a catalytic agent to form sulfur trioxide that combined with water produces sulfuric acid. *CTD*

contact reef

S. Afr. This term generally denotes the Ventersdorp contact reef, a gold-bearing conglomerate beneath the Ventersdorp lavas and frequently overlying mineralized horizons of the Witwatersrand system. *Beerman*

contact resistance

The resistance observed between a grounded electrode and the ground, or between an electrode and a rock specimen. *AGI*

contact rocks

Rocks produced by contact metasomatism. They include both the border rocks of the intrusion and metamorphosed or recrystallized portions of the intruded rocks, esp. limestone. See also: [skarn](#); [tactite](#).

contact shoe

Collector shoe, which maintains contact between the conducting wire or rail and the electric vehicle being powered. *Pryor, 3*

contact twin

a. The simplest type of twin, in which two portions of a crystal appear to have been united along a common plane after one portion has been rotated 180 degrees relative to the other portion. The plane of contact (plane of union or the composition face) may or may not be the twinning plane. Syn: [juxtaposition twin](#) b. A twinned crystal wherein the individual twins meet at a surface. CF: [interpenetration twin](#); penetration twin.

contact vein

A contact deposit in vein form. See also: [contact deposit](#)

contact zone

See: [aureole](#)

container winding

This winding system makes use of a coal receptacle on small rollers that fits closely in the cage. During the previous wind, it is filled near the shaft, and similarly it is emptied very quickly at the surface and returned to the pit bottom on the next wind. *Sinclair, 3*

contaminant

a. See: [impurity](#) b. A harmful, irritating, or nuisance airborne material.

contamination

Process whereby the chemical composition of a magma is altered as a result of the assimilation of inclusions or country rock. See also: [hybridization](#); [dilution](#). *AGI*

contango

The situation when the price of a metal for forward or future delivery is greater than the cash or spot price of the metal. Contangos occur when the metal is in plentiful supply. The size of the contango does not normally exceed the cost of financing, insuring, and storing the metal over the future delivery period. *Wolff*

contemporaneous

Formed or existing at the same time. Said of lava flows interbedded in a single time-stratigraphic unit, and generally of any feature or facies that develops during the formation of the enclosing rocks. *AGI*

contemporaneous deformation

https://t.me/Geologybooks

Deformation that takes place in sediments during or immediately following their deposition. Includes many varieties of soft-sediment deformation, such as small-scale slumps, crumpling and brecciation, but in some areas features of large dimensions. *AGI*

contiguous

Adjoining, touching, or connected throughout, as in a group of mining claims.

contiguous claims

Mining claims that have a side or end line in common. *Lewis*

contiguous limonite

Limonite in the gangue around and adjoining a cavity or a group of cavities formerly occupied by iron-bearing sulfide.

continental alluvium

Alluvium produced by the erosion of a highland area and deposited by a network of rivers to form an extensive plain. *AGI*

continental basin

A closed structural depression of regional extent in the interior of a continent.

continental deposit

A sedimentary deposit laid down on land or in bodies of water not directly connected with the ocean, as opposed to a marine deposit; a glacial, fluvial, lacustrine, or eolian deposit formed in a nonmarine environment. See also: [terrestrial deposit](#)

continental gland-type capping

A wire-rope capping method in which a rope-clamping device is used instead of a capping. The end of the rope is turned back upon itself over grooved block with a suitable radius, and the short end of the rope is clamped on to the main rope above the block. *Sinclair, 5*

continental margin

a. The zone separating the emergent continents from the deep sea bottom. It generally consists of the continental shelf, the continental slope, and the continental rise. *AGI* b. The submerged prolongation of the land mass of the coastal state, consisting of the seabed and subsoil of the shelf, the slope, and the rise.

continental nucleus

See: [shield](#)

continental plate

Lithosphere underlying a continent that is part of a tectonic plate. *AGI*

continental platform

The platformlike mass of a continent that stands above the surrounding oceanic basins. Syn. for continental shelf. *AGI*

continental rise

The submarine surface beyond the base of the continental slope, generally having a gradient of less than 1:1,000, occurring at depths from 4,500 to 17,000 ft (1.37 to 5.18 km), and leading down to abyssal plains. *AGI*

continental sediment

See: [continental deposit](#)

continental shelf

a. The gently sloping tread around a continent, extending from the low-water line to the depth of approx. 100 fathoms (183 m), at which depth there is a marked increase of slope toward the great depths. *Schieferdecker* b. The gently sloping, shallowly submerged marginal zone of the continents extending from the shore to an abrupt increase in bottom inclination. The greatest average depth is less than 60 ft (18.3 m), and the width ranges from very narrow to more than 200 mi (322 km). *AGI* c. An area of a coastal State comprising the seabed and subsoil of the submarine areas that extend beyond its territorial sea throughout the natural prolongation of its land territory to the outer edge of the continental margin, or to a distance of 200 nmi (370 km) from the baselines from which the breadth of the territorial sea is measured where the outer edge of the continental shelf does not extend up to that distance. See also: [outer continental shelf](#)

continental shield

See: [shield](#)

continental slope

a. The declivity from the offshore border of the continental shelf at depths of approx. 100 fathoms (600 ft or 183 m) to oceanic depths. It is characterized by a marked increase in

gradient. *AGI* b. Continuously sloping portion of the continental margin with gradient of more than 1:40, beginning at the outer edge of the continental shelf and bounded on the outside by a rather abrupt decrease in slope where the continental rise begins at depths ranging from about 4,500 to 10,000 ft (1.4 to 3.0 km). Formerly considered to extend to the abyssal plains. *AGI*

continental terrace

The sediment and rock mass underlying the coastal plain, the continental shelf, and the continental slope. *AGI*

continuity

The concept that where there is no change of state, seawater is incompressible and the liquid matter is neither created nor destroyed. If there is any vertical contraction in a volume of fluid, therefore, there must be a horizontal expansion, so that the original volume is maintained. This is accomplished by motion resulting in changes of the shape of the original parcel of water. *Hy*

continuous azimuth method

A method of traversing by which the azimuth of the survey lines is obtained from the instrument. *BS, 7*

continuous-bucket elevator

This type of elevator has the buckets so shaped and attached to the chain or belt that the back of each serves as a discharge chute for the one immediately succeeding it. Syn: [bucket elevator](#)

continuous-bucket excavator

An excavator consisting of a series of buckets attached to a continuous chain, guided by two or more ladders. The buckets are drawn against the bank face, taking a cut of constant depth, while simultaneously the machine moves slowly along the ground on a bench above or below the bank; often used in opencast mining in soft deposits. *Nelson*

continuous casting

A casting technique in which an ingot, billet, tube, or other shape is continuously solidified while it is being poured, so that its length is not determined by mold dimensions. *ASM, 1*

continuous charge

A charge of explosive that occupies the entire drill hole, except for the space at the top required for stemming. *Fay*

continuous coal cutter

A coal mining machine of the type that cuts the face of the coal without being withdrawn from the cut. *Fay*

continuous coring

A borehole-drilling technique whereby the cuttings-removal agent is countercirculated through an inside flush-coupled-type drill string to deliver both the cuttings and core produced to a tray or container at the surface. *Long*

continuous cutters

Coal-cutting machines such as the shortwall cutter, longwall cutter, and overcutting machines. They are known as continuous cutters because a continuous cut can be made the full width of the face without stopping these machines, while machines of the intermittent variety must be frequently reset. *Kiser*

continuous deformation

Deformation accomplished by flowage of rocks rather than by rupture.

continuous drier

A drier in which the wet material moves through the drying cycle in an uninterrupted flow pattern in contrast to a batch drier. *ACSG, 2*

continuous driving

In this operation, the same personnel do the drilling, blasting, and mucking while working continuously round after round. They can in this way--except for the time for ventilation--be at work during the whole shift. Continuous driving is used when the advance per round is low and the mucking or the drilling and blasting do not need more than a part of the shift. *Langefors*

continuous extraction

Extraction (leaching) of solids by liquid that cycles continuously countercurrent to the material it is depleting of the sought value (e.g., gold in cyanide process), the pregnant liquid at a certain stage being stripped of value and returned as barren solution. *Pryor, 1*

continuous filter

<https://t.me/Geologybooks>

See: [Oliver filter](#)

continuous-flight auger

A drill rod with continuous helical fluting, which acts as a screw conveyor to remove cuttings produced by an auger drill head. Also called auger. *Long*

continuous flow respirator

An atmosphere-supplying respirator that provides a continuous flow of respirable gas to the respiratory inlet covering. *ANSI*

continuous furnace

Said of a process in which the charge enters at one end, moves through continuously, and is discharged at the other end. Syn: [furnace](#) *CTD*

continuous haulage

A process that is designed to move the mined product (usually coal) from a continuous mining machine to a mine belt conveyor system as a continuous flow. One end of the continuous haulage system (the outby end) always remains positioned so that it discharges onto the mine belt; the other end (inby end) is free to move as the mining machine advances so as to be able to receive the product from the machine's conveyor discharge.

continuous mill

A rolling mill consisting of a number of stands of synchronized rolls (in tandem) in which metal undergoes successive reductions as it passes through the various stands. *ASM, 1*

continuous miner

A mining machine designed to remove coal from the face and to load that coal into cars or conveyors without the use of cutting machines, drills, or explosives. See also: [Goodman miner](#); [Marietta miner](#). *Jones, 1*

continuous mining

Mining in which the continuous mining machine cuts or rips coal from the face and loads it onto conveyors or into shuttle cars in a continuous operation. Thus, the drilling and shooting operations are eliminated, along with the necessity for working several headings in order to have available a heading in which loading can be in progress at all times. See also: [conventional machine mining](#); [plow-type machine](#). *Woodruff*

continuous profiling

A seismic method of shooting in which seismometer stations are placed uniformly along the length of a line and shot from holes also spaced along the line so that each hole records seismic-ray paths identical geometrically with those from immediately adjacent holes, so that events may be carried continuously by equal-time comparisons. CF: [correlation shooting](#)

continuous reaction series

A reaction series in which early-formed crystals in a magma react with later liquids without abrupt phase changes; e.g., the plagioclase feldspars form a continuous reaction series. CF: [discontinuous reaction series](#)

continuous recording

In geophysics, the process of making uninterrupted records or observations over selected periods of time. *AGI*

continuous ropeway

An aerial ropeway that operates on the same principle as the endless rope haulage. The loaded buckets are hauled by an endless rope in one direction and the empty buckets travel back on the return rope alongside. *Nelson*

continuous sampling

Taking a sample from each unit so that increments are taken at regular intervals whenever the coal or coke is handled at the point of sampling. *BS, 2*

continuous sintering

Presintering, or sintering, in such manner that the objects are advanced through the furnace at a fixed rate by manual or mechanical means. Syn: [stoking](#)

continuous smelter

Any smelter that is fed constantly and that discharges frit in a continuous stream. The passage of the material through the smelter is generally effected by gravitational flow. *Enam. Dict.*

continuous spectrum

a. The band of all wavelengths in the electromagnetic spectrum (the rainbow colors, red, orange, yellow, green, blue, and violet), merging one into the other, produced by all

incandescent solids. *Anderson* b. The spectrum of a wave, the components of which are continuously distributed over a frequency range. *Hunt*

continuous stream conveyor

See: [en masse conveyor](#)

continuous vertical retort

A type of gas retort in which coal is continuously charged into the top of the retort, coke is extracted from the bottom, and town gas is drawn off. Continuous vertical retorts are also used in the zinc industry. The charge of briquetted coke and roasted concentrate is continuously added through the top and zinc vapor is drawn off and condensed.

contortion

a. The intricate folding, bending, or twisting-together of laminated sediments on a considerable scale, the laminae being drawn out or compressed in such a manner as to suggest kneading more than simple folding; esp. intraformational contortion. Also, the state of being contorted. *AGI* b. A structure produced by contortion. *AGI*

contour

a. An imaginary line, or a line on a map or chart, that connects points of equal value, e.g., elevation of the land surface above or below some reference value or datum plane, generally sea level. Contours are commonly used to depict topographic or structural surfaces; they can also readily show the laterally variable properties of sediments or any other phenomenon that can be quantified. CF: [structure contour](#) Syn: [contour line](#) b. The outline or configuration of a surface feature seen two-dimensionally, e.g., the contour of a mountain pass or a coastline. *AGI* c. A line drawn through points of equal elevation on any surface. It is the intersection of a horizontal plane with the surface. *Rice, I* d. A line or a surface at all points of which a certain quantity, otherwise variable, has the same value (as lines of equal elevation on the ground or isothermal surfaces in a heat-conducting solid). *Webster 3rd* e. As a verb, to construct (as a road) in conformity to a contour. To provide (as a map) with contours (contour lines). To draw or to plot a contour. *Webster 3rd* f. The profile or cross-sectional outline of a bit face. *Long*

contour diagram

a. A type of petrofabric diagram prepared by the contouring of a point diagram. Its purpose is to obtain easier visualization of the results of the petrofabric study. *AGI* b. An equal-area projection of structural data in which the poles have been contoured according to their density per unit area on the projection. *AGI*

contour gradient

A line marked on the ground surface at a given constant slope. *Hammond*

contour interval

a. The difference in elevation between two adjacent contour lines. *AGI* b. The difference in value between two adjacent contours; e.g., the vertical distance between the elevations represented by two successive contour lines on a topographic map. It is generally a regular unit chosen according to the range of values being contoured. Syn: [interval](#) *AGI*

contour line

See: [contour](#)

contour map

a. A map showing by contours (or contour lines) topographic, or structural, or thickness, or facies differences in the area mapped. *AGI* b. A map that portrays surface configuration by means of contour lines; esp. a topographic map that shows surface relief by means of contour lines drawn at regular intervals above mean sea level, or a structure-contour map that shows the configuration of a specified rock surface underground and the inferred configuration of that surface where it has been removed by erosion. *AGI*

contour mining

Surface mining that progresses in a narrow zone following the outcrop of a coal seam in mountainous terrain, and the overburden, removed to gain access to the mineral commodity, is immediately placed in the previously mined area, such that reclamation is carried out contemporaneously with extraction. *SME, 1*

contour plan

A plan drawn to a suitable scale showing surface contours or calculated contours of coal seams to be developed. These plans are important during the planning stage of a project. See also: [interpolation of contours](#) *Nelson*

contour race

A watercourse following the contour of the country.

contraband

In coal mining, a term meaning cigars, cigarettes, pipes, and other contrivances for smoking, matches, and mechanical lighters. It is a violation of safety regulations to take

contraband below ground or to have contraband in one's possession below ground.
Nelson

contract

a. A bargain or agreement voluntarily made upon good consideration, between two or more persons capable of contracting to do, or forbearing to do, some lawful act. *Hoover*
b. In mining, applies to an agreement between operator and worker to pay the latter so much per foot for excavating drift or stope. These people are known as contract miners and are usually skilled workers. They work harder than people on wages due to the incentive of higher earnings. *Weed, 2*
c. Agreement between contractor and employing company to construct, erect, install, and operate specified works under agreed conditions. A cost-plus contract is one in which the contractor undertakes a comprehensive activity, part of which may be subcontracted (or let out). A unit contract is one in which company awards a restricted part of the job to the contractor. See also: [agreement](#)

contraction cavities

The bulk of the contraction that accompanies the solidification of metals is concentrated in the feeder heads and risers, from which molten metal flows to compensate for contraction in the casting of ingot proper. *CTD*

contraction vein

A vein formed by the filling of a fissure caused by contraction resulting from the drying or cooling of the surrounding rock.

contract loader

In bituminous coal mining, one who is paid a certain rate per ton of car of coal mined, and employs one or more loaders whom the loader pays out of personal earnings. *DOT*

contract miner

a. In anthracite and bituminous coal mining, one who operates electric or compressed-air machines to drill holes into the working face of coal or rock for blasting, and shovels coal into cars after blasting. A contract miner is usually engaged in production work, i.e., the mining of coal only, and is paid on a tonnage basis. In anthracite regions, the miner is paid the wage rate of a consideration mine when encountering obstructions of rock or slate that prevent earning an amount in excess of a fixed or specified rate per day. Also called contract driller; contract drilling-machine operator; contract contractor. *DOT*
b. In metal mining, one who drills, blasts, and loads ore or rock into cars in a mine. Is usually engaged in production work, i.e., the mining of ore only, and is paid on a contract basis (so much per ton, cubic yard, or cars of ore produced). *DOT*

contractor

a. The person who signs a contract to do certain specified work at a certain rate of payment. In mining, the contractor is an experienced miner or hard-heading miner. He or she employs other people and the work may proceed on a three-shift basis. *Nelson* b. S. Afr. Mine worker undertaking special tasks on a contractual basis such as shaft sinking, development blasting, etc. *Beerman*

contract person

See: [contract miner](#)

contract work

Work that is outside the scope of the mine price list and is performed on the basis of an agreement between a miner and the mine manager. The agreement may be only verbal and renewable weekly or monthly. Payment is made according to performance. In development work, the contract rate is usually per yard advance. There may be bonus payments for good work or for extra performance. See also: [piecework](#)

conragradation

Stream aggradation caused by an obstruction. Syn: [dam gradation](#)

contra-rotating axial fan

A modification of the axial-flow fan. It consists of two impellers with aerofoil shaped blades that rotate in opposite directions. The drive is by means of a single motor through differential gears, or two separate motors, one for each impeller. They are placed in the airstream and act as streamlined hubs. These fans are available for auxiliary ventilation in mines. See also: [axial-flow fan](#)

contributory negligence

In mining, means that the law imposes upon every person the duty of using ordinary care for his or her own protection against injury. It is not synonymous with assumption of risk. *Ricketts*

control

a. The dimensional data used to establish the position, elevations, scale, and orientation of the detail of a map and that are responsible for the interpretations placed on a map. *AGI* b. A section or reach of an open channel in which natural or artificial conditions make the water level above it a stable index of discharge. It may be either complete (i.e., water-surface elevation above the control is completely independent of downstream

water-level fluctuations) or partial; it may also shift. *AGI* c. That waterway cross section that is the bottleneck for a given flow and determines the energy head required to produce the flow. In an open channel, it is the point at which flow is at critical depth; in a closed conduit, it is the point at which hydrostatic pressure and cross-sectional area of flow are definitely fixed, except where the flow is limited at some other point by a hydrostatic pressure equal to the greatest vacuum that can be maintained unbroken at that point. *AGI* d. Any of the factors determining the nature of geologic formations at a given place. *Webster 3rd* e. In geology, the background and the quantity of data that are responsible for the interpretation placed on a map or a cross section. *AGI* f. An attempt to guide a borehole to follow a predetermined course through the use of wedges or by manipulation of the drill string. *Long*

control assay

An assay made by an umpire to determine the basis on which a purchaser is to pay the seller for ore. See also: [umpire](#)

control chart

Graph showing, horizontally, the operating norm and also the upper and lower control limits within which deviations must be held. Should these values exceed the permitted variance, special steps must be taken to locate and correct the upsetting factor or factors. *Pryor, 3*

controlled blasting

Techniques used to control overbreak and produce a competent final excavation wall. See also: [line drilling](#); [smooth blasting](#); cushion blasting. Syn: [presplitting](#)

controlled caving

A mining method utilizing the advantages of longwalls, but at the same time without filling. In this method, the working room in front of the working face is protected by close lines of props and cribs, which are portable and easily taken to pieces. As the face proceeds, the cribs are shifted as well as the props with the face, leaving the mined-out room to cave. This method is also called mining with self-filling. *Stoces*

controlled cooling

Cooling from an elevated temperature in a predetermined manner to avoid hardening, cracking, or internal damage, or to produce a desired microstructure. This cooling usually follows a hot-forming operation. *ASM, 1*

controlled footage

The specified maximum number of feet of borehole a single diamond- or other-type bit may be allowed to drill in a specific-type rock, as predetermined by the drill supervisor. *Long*

controlled gravity conveyor

See: [controlled velocity roller conveyor](#)

controlled mosaic

A mosaic in which aerial photographs or images have been adjusted, oriented, and scaled to horizontal ground control to provide an accurate representation with respect to distances and distortions. It is usually assembled from photographs that have been corrected for tilt and for variations in flight altitude. See also: [mosaic](#)

controlled release

A paradigm of mine waste management (based upon the eventual oxidation of exposed sulfidic rock and mine wastes) that states that a slow release of contamination over time may be superior to complete containment. *Connolly*

controlled splitting

When airways are arranged in parallel and a prescribed quantity of air is made to flow through each branch. CF: [natural splitting](#) *Hartman, 2*

controlled velocity roller conveyor

A roller conveyor having means to control the velocity of the objects being conveyed. Syn: [controlled gravity conveyor](#) See also: [roller conveyor](#)

controller

Any mechanical or electrical device that is part of or added to a machine or device for automatic regulation or control.

controlling rate

That at which the key machine in a series arranged for continuous ore processing is set to work. The control function may be for quantity passing per time, ratio of size reduction from feed to discharge, or for a necessary physical or chemical change of state of solid or liquid phase of the process. *Pryor, 3*

controlling system

In flotation, that portion of an automatic feedback control system that compares functions of a controlled variable and a command and adjusts a manipulated variable as a function of the difference. It includes the reference input elements, summing point, forward and final controlling elements, and feedback elements. *Fuerstenau*

control man

Person who maintains depth and composition of cryolite bath in aluminum reduction pots within limits favorable to efficient aluminum production. *DOT*

control on fracture

In quarrying, control on fracture is based on the experimental determination of the type and the grade of explosive, the loading ratio, and the pattern of boreholes. *Streefkerk*

control point

Any station in a horizontal and/or vertical control system that is identified on a photograph and used for correlating the data shown on that photograph. *AGI*

control samples

In any continuous process, samples taken often enough (whether by hand or mechanically) so that the operation process may be guided by the samples and weights of the materials involved. *Newton, 2*

convection

a. A process of mass movement of portions of any fluid medium (liquid or gas) in a gravitational field as a consequence of different temperatures in the medium and hence different densities. The process thus moves both the medium and the heat, and the term convection is used to signify either or both. b. In hydrothermal systems, the flow of water around and through heated zones adjacent to plutons in response to thermal gradients and controlled by porosity-permeability, salinity, fluid viscosity, and allied factors. The flow is generally down along the periphery, toward the system at depth, and upward along and through its central portions, possibly completing more than one loop. *AGI*

convection current

a. A thermally produced fluid flow. b. A closed circulation of material sometimes developed during convection. Convection currents normally develop in pairs; each pair is called a convection cell. *Leet, 1*

conventional machine mining

A system of mining established for many years in British coal mines. The longwall face is undercut, blasted, and loaded by hand to a face conveyor. The conveyor is then moved forward ready for the next day, the packs are built and the back props withdrawn. Such faces still produce about 60% of the total output and is known as conventional machine mining. It has the disadvantage that there are limits to production because it is cyclic mining, e.g., it involves separate operations as enumerated above. See also: [turnover](#); [continuous mining](#). *Nelson*

conventional mining

The cycle of operations that includes cutting the coal, drilling the shot holes, charging and shooting the holes, loading the broken coal, and installing roof support. Also known as cyclic mining. *Woodruff*

conventional mud

A drilling fluid containing essentially clay and water. *Brantly, 1*

convergence

a. The gradual decrease in the vertical distance or interval between two specified rock units or geologic horizons as a result of the thinning of intervening strata; e.g., the reduction in thickness of sedimentary beds (as measured in a given direction and at right angles to the bedding planes), caused by variable rates of deposition or by unconformable relationship. *AGI* b. Loss of height when a coal seam is extracted on a longwall face, as the roof lowers and the floor lifts. Convergence is an important factor in thin-seam mining. c. Applied to the diminishing interval between geologic horizons. In some instances, this is due to an unconformable relationship and in other instances to variable rates of deposition. *AGI* d. The line of demarcation between turbid river water and clear lake water, which denotes a downstream movement of water on the lake bottom and an upstream movement of water at the surface. *AGI* e. In refraction phenomena, the decreasing of the distance between orthogonals in the direction of wave travel. This denotes an area of increasing wave height and energy concentration. *AGI* f. In paleontology, resemblance that cannot be attributed to a direct relationship or to genetic affinity. *AGI* g. In oceanography, an area or zone in which the water sinks slowly downward from the ocean surface. *Schieferdecker*

convergence map

See: [isochore map](#)

convergence recorder

An appliance for measuring changes in vertical height, usually at the coalface. It consists of a telescopic strut between the roof and floor and carries a pen that records the movement on a clockwork-driven chart. See also: romometer. (Nelson, 1965)

convergent light

In optical microscopy, a condensing lens causes light to converge at a point within a sample to display optical interference patterns or to enhance the Becke line.

conversion burners

Fuel-burning devices (usually oil or gas) intended for installation in a wide variety of boilers or furnaces. *Strock, 2*

conversion factor

A number facilitating statement of units of one system in corresponding values in another system. *Pryor, 3*

converter

A furnace in which air is blown through a bath of molten metal or matte, oxidizing the impurities and maintaining the temperature through the heat produced by the oxidation reaction. Also used in converting copper matte. *ASM, 1; Fay*

converter foreperson

A person who supervises workers engaged in converting copper matte to blister copper and directs activities concerned with charging converter, blowing charge, pouring of slag and copper, casting of blister copper, and removal of castings. *DOT*

converter plant

A plant that incorporates into its structure an insoluble element from the soil, and later, when the plant decays, returns that element to the soil in a soluble form. *AGI*

converter skimmer

In ore dressing, smelting, and refining, one who makes blister copper (high-grade crude copper) by oxidizing iron and sulfur impurities in copper matte, using a converter. *DOT*

converting

The process of removing impurities from molten metal or metallic compounds by blowing air through the liquid. The impurities are changed either to gaseous compounds, which are removed by volatilization, or to liquids which are removed as slags. *Kirk*

Convertol process

A German process that cleans the coal and also reduces the moisture content to about 10%. Heavy oil is added to a coal slurry containing 50% to 60% water. On mixing, the coal particles become coated with oil and hence resistant to water, whereas the shale particles remain uncoated and easily wetted. By high-speed centrifuging the coal-oil mixture is retained in the centrifuge while the shale particles pass out with the water. The process is not as efficient as froth flotation. *Nelson*

conveyor

a. A mechanical contrivance generally electrically driven, which extends from a receiving point to a discharge point and conveys, transports, or transfers material between those points. b. The apparatus, belt, chain, or shaker, which, in conveyor mining, moves coal from the rooms and entries to a discharge point or to the surface. "Mother conveyors" are the conveyors that receive the coal from several unit conveyors in rooms or entries. See also: [underground mine conveyor](#); transport; armored flexible conveyor; gate conveyor; shaker conveyor; trunk conveyor. *BCI*

conveyor airlock

A ventilation stopping or separation door through which a conveyor has to run. It consists of at least two well-built partitions, each with some form of airlock designed to pass the belt and yet to reduce to a minimum the leakage of air and the raising of dust. An airlock chute is sometimes used. See also: [box check](#)

conveyor chain

A chain used in the conveying medium of conveyors.

conveyor creep

The downward slippage of a conveyor on an inclined face. With powered supports, this movement is likely to cause ram damage. Anchor stations are necessary to arrest conveyor creep. See also: [stell prop](#)

conveyor dryer

An appliance in which the coal or ore is moved through a chamber containing hot gases on a perforated plate or a heavy mesh, stainless-steel continuous belt. *Nelson*

conveyor elevator

A conveyor that follows a path, part of which is substantially horizontal or on a slope less than the angle of slide of the material and part of which is substantially vertical or on a slope steeper than the angle of slide.

conveyor emergency switch

A specif. designed cable operated emergency stop switch for use with conveyors or conveying systems that are used with a pull cord running alongside or above the conveyor so that it may be reached from any point along the conveyor. Persons falling against or on top of the conveyor will pull on the cord and deactivate the conveyor movement. *Best, 2*

conveyor face

A longwall face on which the coal is loaded direct onto a face conveyor. The coal may be loaded by hand or mechanically. The face conveyor delivers its load of coal into tubs or cars or onto a gate conveyor. *Nelson*

conveyor-feeder operator

See: [mill feeder](#)

conveyor loader

a. Conveyor that at its extremity has a digging head that moves with the conveyor and works its way under the coal, which, by the unequal shaking of the conveyor, is carried back to the car. Also called shaking-conveyor loader. *Zern* b. One who loads on a conveyor. See also: [loader](#)

conveyor man

a. Person who sets up and tends chain, belt, or shaker (reciprocating) conveyors to transport coal or metal ore about a tippie at the surface from working the working face in a mine. Also called loading-boom operator. *DOT* b. In the quarry industry, a person who tends an endless conveyor belt used to transport rock from the crusher to storage bins. Syn: [beltman](#) *DOT*

conveyor-operator tripper

See: [tripper man](#)

conveyor shaker type

A conveyor designed to transport material along a line of troughs by means of a reciprocating or shaking motion. See also: [shaker conveyor](#)

conveyor shifter

A member of a team responsible for advancing the face conveyor as the coal is worked away. In many modern layouts, the armored conveyor is pushed forward by hydraulic rams. *Nelson*

conveyor track

The path, parallel to the face, occupied by a longwall conveyor. The track is advanced every turnover. Syn: [track](#)

conveyor-tripper operator

See: [tripper man](#)

conveyor-type feeder

Any conveyor, such as apron, belt, chain, flight, pan, oscillating, screw, or vibrating, adapted for feeder service. See also: [apron feeder](#)

cookeite

A monoclinic mineral, $\text{LiAl}_4(\text{Si}_3\text{Al})\text{O}_{10}(\text{OH})_8$; chlorite group.

cooler arch

An opening of truncated-cone shape in the tuyere breast of furnace. The tuyere cooler is placed in it. *Fay*

coolers

Coolers in which atmospheric air is blown by a fan, through a nest of pipes, into a tower or chamber in which it comes into intimate contact with fine particles of water from atomizing nozzles. By the evaporation of some of this water the air rapidly becomes saturated at the wet-bulb temperature, the remaining water running off at the same temperature. This water is collected and pumped back through the nest of pipes, thereby cooling the air before it enters the spray chamber. The entering air then has a lower dry-bulb temperature than the atmosphere and, since its moisture content is unaltered, the wet-bulb is lower also. *Spalding*

cooling agent

A chemical added to an explosive during manufacture to suppress or inhibit the flame produced in blasting. *BS, 12*

cooling floor

A floor upon which hot ore is placed for the purpose of cooling.

cooling load

The total amount of sensible and latent heat to be removed from a space to maintain desired conditions. For mines in operation, it is possible to measure the actual amount of heat generated in underground openings by observing temperature changes in a known weight flow rate of mine air. For projected mines and extensions of operating mines, the amount of heat produced must be calculated, knowing which of the sources of underground heat is operative. *Hartman, 2*

cooling power

The rate at which air will remove heat from a body and may be measured dry or wet. The cooling power of air, as determined by the kata thermometer, is one of the basic environmental standards. *Hartman, 2*

coontail ore

Banded ore consisting mainly of fluorite and sphalerite in alternate light- and dark-colored layers; occurs in the Cave-in-Rock district of southern Illinois.

cooperite

A tetragonal mineral, (Pt,Pd,Ni)S ; sp gr, 9; in ultramafic rocks, such as the Bushveld, Transvaal, South Africa; an ore of platinum and palladium.

Cooper's lines

An anastomosing meshwork of minute curved and branching lines produced in rock by shearing under pressure. *Goldman*

coordinate

Any one of a set of numbers designating linear and/or angular quantities that specify the position of a point on a line, in space, or on a given plane or other surface in relation to a given reference system; e.g., latitude and longitude are coordinates of a point on the Earth's surface. The term is usually used in the plural, esp. to designate the particular kind of reference system (such as spherical coordinates, plane coordinates, and polar coordinates). *AGI*

coordinate system

Crystallographers customarily use a right-handed system with the z axis oriented positive upward, the y axis positive to the right, and the x axis positive toward the viewer. CF: [axis](#); [crystallographic axes](#).

coorongite

a. Elastic, bituminous substances derived from algae. *Schieferdecker* b. A boghead coal in the peat stage. See also: [elaterite](#) *Stutzer*

coose

Lean; said of ores. *Hess*

copal

An inclusive term for a wide variety of hard, brittle, semitransparent, yellowish to red fossil resins from various tropical trees (e.g., *Copifaera* and *Agathis*), being nearly insoluble in the ordinary solvents and resembling amber in appearance; e.g., Congo copal and kauri. Copal also occurs as modern resinous exudations. Syn: [gum copal](#) See also: [amber](#)

copaline

See: [copalite](#)

copalite

An oxygenated hydrocarbon resembling copal from the blue clay of Highgate, near London, England. Syn: [copaline](#); [fossil copal](#).

Copaux-Kawecki fluoride process

A process for converting beryl to beryllium oxide by sintering a mixture of beryl, soda ash, sodium silicofluoride, and sodium ferric fluoride, leaching with hot water, and adding caustic soda to precipitate beryllium hydroxide, which is calcined to beryllia. *USBM, 7*

cope

a. *Derb.* To contract to mine lead ore by the dish, load, or other measure. *Fay* b. An exchange of working places between miners. Also spelled *coup*. *Zern* c. *Derb.* A duty or royalty paid to the lord or owner of a mine. *Fay* d. *Eng.* A superficial deposit covering

or coating the substrata. A cold, stiff, and wet clay. *Arkell* e. The upper or topmost section of a flask, mold, or pattern. *ASM, 1*

copel

An alloy containing 55% copper and 45% nickel; used for thermocouples. *Newton, 1; Newton, 2*

coper

Derb. One who contracts to mine lead ore at a fixed rate; a miner.

copi

A name for gypsum, generally in weathered state.

copiapite

a. A triclinic mineral, $\text{Fe}^{2+} \text{Fe}^{3+}_4 (\text{SO}_4)_6 (\text{OH})_2 \cdot 20\text{H}_2\text{O}$; Syn: [ferrocopiapite](#); yellow copperas; ihleite; knoxvillite. b. The mineral group aluminocopiapite, calciocopiapite, copiapite, cuprocopiapite, ferricopiapite, magnesiocopiapite, and zincocopiapite. Syn: [ihleite](#)

coping

a. Cutting and trimming marble or other stone by use of a grinding wheel. b. The top or cover of a wall usually made sloping to shed water. c. In quarrying, the process of cutting one slab into two without regard to the finish of the edges. *AIME, 1* d. The material or units used to form a cap or finish on top of a wall, pier, or pilaster to protect the masonry below from the penetration of water from above. *ACSG, 1* e. Shaping stone or other hard nonmetallic material by use of a grinding wheel. *ACSG, 2*

coping machine

A machine consisting of a gearing and a carborundum wheel for cutting and trimming marble slabs. *Fay*

coplaning

The process of moving the head of a theodolite laterally until its vertical axis lies in the produced vertical plane common to two plumbines. Syn: [alignment](#)

coppel

See: [cupel](#)

copper

a. A reddish metallic element that takes on a bright metallic luster and is malleable, ductile, and a good conductor of heat and electricity. Symbol, Cu. Occasionally occurs native, and is found in many minerals such as cuprite, malachite, azurite, chalcopyrite, and bornite. Its alloys, brass and bronze, are very important; U.S. coins are now copper alloys. Its oxides and sulfates are used as an agricultural poison and as an algicide in water purification. *Handbook of Chemistry and Physics*, 3 b. An isometric native metal Cu; metallic, red, soft, ductile and malleable; sp gr, 8.9; in oxidized zones of copper deposits, formerly a major source of native copper; the only native metal to occur abundantly in large masses; commonly occurs in dendritic clusters or mossy aggregates, sheets, or in plates filling narrow cracks or fissures. See also: [native copper](#)

copperas

See: [melanterite](#); copiapite; goslarite; coquimbite.

copperasine

A sulfate of iron and copper resulting from the decomposition of copper pyrites. *Standard*, 2

copperas stone

Syn. for pyrite, from which copperas is often made. *Fay*

copper barilla

Bol. Native copper in granular form mixed with sand. See also: [coro-coro](#); barilla. *Fay*

copper bottoms

A metallic product of very indefinite composition, made (usually) in reverberatory furnaces by smelting rich cupriferous substances without sufficient sulfur to quite satisfy the copper present. *Fay*

copper chalcantite

See: [chalcantite](#)

copper compress operator

A laborer who compresses copper scrap into bales for use in charging refining furnaces, by operating a hydraulic ram. *DOT*

copper direct-firing process

A metallurgical process for recovering copper from low-grade complex ores in which a mixture of the ore and a small quantity of salt and coke are heated, and the oxides or sulfides reduce to metal that migrates or segregates in the form of thin films or flakes. These are later recovered by conventional flotation procedures.

copper flower

Any one of several indicator plants that serve as guides when prospecting for copper ores.

copper glance

See: [chalcocite](#)

copperheads

Copper-colored spots--generally in a first coat on iron and not easily covered with a second coat. Copperheads are spots of excessive oxidation with red iron oxide producing the color. *Bryant*

copper ingots

Notched bars of commercial copper used for casting purposes. The notches are provided for convenience in breaking the bars. *Mersereau, 2*

copperization

Impregnation with copper, or with some compound containing copper.

copper mica

A miners' name for chalcophyllite. *Weed, 1*

copper nickel

See: [niccolite](#); nickeline.

copper-ore germ

A mixture of various copper minerals, such as green malachite, green or blue chrysocolla, blue azurite, and red cuprite. *Schaller*

copper pitch

A jet black to brownish pitchlike material carrying from 12.12% to 84.22% CuO and found in the oxidized zone. It has a conchoidal fracture, and where it occurs in large enough pieces may resemble obsidian or anthracite coal. It apparently may be a mixture of the hydrous oxides of copper and iron, oxide and carbonate of copper, oxide and silicate of copper, or more or less hydrated oxides of copper and manganese. All the varieties may have more or less chalcedony mixed with them. *Hess*

copper precipitate

Impure copper that has been precipitated from copper-bearing solutions; it may contain iron and arsenic; cement copper. *Camm*

copper-precipitation drum operator

In ore dressing, smelting, and refining, one who precipitates copper from mine water by tumbling mine water and shredded steel cans in a revolving drum. *DOT*

copper pyrite

See: [chalcopyrite](#)

copper rain

Minute globules thrown up from the surface of molten copper, when it contains but little suboxide. *Fay*

copper segregation process

The process involves heating oxidized copper ore with a reducing agent and a halide salt at about 700 degrees C to produce metallic copper, which may then be recovered by ammonia leaching or by flotation with conventional copper sulfide collectors. *Rampack*

copper slate

Slate impregnated with copper minerals. *Fay*

copper smoke

The gases from the calcination of copper sulfide ore. The gases contain sulfur dioxide, SO₂. *Fay; Hess*

copper suboxide

See: [cuprite](#)

copper sulfate

See: [chalcanthite](#); copper sulfate pentahydrate.

copper sulfate pentahydrate

$\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$; blue; triclinic; loses $5\text{H}_2\text{O}$ at 150 degrees C; white when dehydrated; slowly effloresces in air. Used in ore flotation and as a source of copper. *CCD, 2; Handbook of Chemistry and Physics, 2; Lee*

copper sulfide

a. A source of copper. b. See: [covellite](#); cupric sulfide; indigo copper. CF: [digenite](#)

copper titanate

CuTiO_3 . Sometimes added in quantities up to 2% to BaTiO_3 to increase the fired density. *Dodd*

copper uranite

See: [uranite](#); torbernite.

copper vitriol

See: [chalcanthite](#)

coppite

a. A niobium-containing mineral used as raw material in the production of ferroniobium. *Osborne* b. A variety of tetrahedrite. *Hey, 1*

coprecipitation

The carrying down by a precipitate of substances that are normally soluble under the condition of precipitation. *AGI*

coproduct

One of two commodities that must be produced to make a mine economic; both influence output. A byproduct is produced in association with a main product or with coproducts. See also: [byproduct](#)

coprolite

Petrified excrement.

coquimbite

A trigonal mineral, $\text{Fe}_2 (\text{SO}_4)_3 \cdot 9\text{H}_2 \text{O}$; dimorphous with paracoquimbite. Syn: [white copperas](#)

coquina

A detrital limestone composed wholly or chiefly of mechanically sorted fossil debris that experienced abrasion and transport before reaching the depositional site and that is weakly to moderately cemented, but not completely indurated; esp. a porous light-colored limestone made up of loosely aggregated shells and shell fragments, such as the relatively recent deposits occurring in Florida and used for roadbeds and construction. *AGI*

coquinoid limestone

A limestone consisting of coarse, unsorted, and often unbroken shelly materials that have accumulated in place without subsequent transportation or agitation, and generally having a fine-grained matrix. It is autochthonous, unlike the allochthonous coquina. *AGI*

coracite

An alteration product of uraninite partly changed to gummite. Syn: [uraninite](#)

coral

A general name for any of a large group of bottom-dwelling, sessile, marine invertebrate organisms (polyps) that belong to the class Anthozoa (phylum Coelenterata), are common in warm intertropical modern seas and abundant in the fossil record in all periods later than the Cambrian, produce external skeletons of calcium carbonate, and exist as solitary individuals or grow in colonies. *AGI*

coralgal

Said of a firm carbonate rock formed by an intergrowth of frame-building corals and algae (esp. coralline algae). The material so formed is an excellent sediment binder in a coral reef. *AGI*

coral limestone

A limestone consisting of the calcareous skeletons of corals, often containing fragments of other organisms and often cemented by calcium carbonate. *AGI*

coralline

a. Pertaining to, composed of, or having the form of a coral, as coralline limestone. b. Any organism that resembles a coral in forming a massive calcareous skeleton or base, such as certain algae or stromatoporoids. *AGI*

coral mud and sand

Marine deposits formed around coral islands and coasts bordered by coral reefs, containing abundant fragments of corals. Near the reefs the particle sizes are relatively coarse and the deposit is described as coral sand; farther out, the particles become gradually smaller until the material is a coral mud. *Holmes, 2*

coral ore

A curved, lamellar variety of liver-colored cinnabar from Idria, Austria. *Standard, 2*

coral rag

A well-cemented, rubbly limestone composed largely of broken and rolled fragments of coral-reef deposits; e.g., the Coral Rag of the Jurassic, used locally in Great Britain as a building stone. *AGI*

coral reef

a. A coral-algal or coral-dominated organic reef; a mound or ridge of in-place coral colonies and accumulated skeletal fragments, carbonate sand, and limestone resulting from organic secretion of calcium carbonate that lithifies colonies and sands. A coral reef is built up around a potentially wave- and surf-resistant framework, esp. of coral colonies, but often including many algae; the framework may constitute less than half of the reef volume. Coral reefs occur today throughout the tropics, wherever the temperature is suitable (generally above about 18 degrees C, a winter minimum). *AGI* b. A popular term for an organic reef of any type. *AGI*

coral sand

Sand-size particles formed from coral fragments. See also: [coral mud and sand](#)

coral zone

The depth of the sea at which corals thrive. *Fay*

Cordaites

A plant group, which is now extinct, that includes the Coniferales (pines and firs) and the Cycadales (cycads). The Cordaites were tall, slender trees that often attained heights of 100 ft (30.5 m). For a considerable height above the ground, the trunk was devoid of branches. The long, straplike leaves now form matted masses among the Coal Measure fossil plants. *Nelson*

cord-belt conveyor

A rubber belt consisting of spaced cotton duck cords embedded in the rubber and protected at the top by a breaker strip with thick rubber cover. The bottom of the belt contains one or two plies of heavy duct, to give transverse strength. See also: [nylon belt](#)

cordierite

An orthorhombic mineral, $Mg_2 Al_4 Si_5 O_{18}$; Mohs hardness, 7 to 7.5; an accessory in peraluminous granite, schist, and gneiss; a gem material called saphir d'eau, water sapphire, dichroite, and iolite. Syn: [polychroite](#)

cordierite norite

Metamorphosed norite containing cordierite. *Holmes, 2*

cordillera

a. A comprehensive term for an extensive series or broad assemblage of more or less parallel ranges, systems, and chains of mountains, the component parts having various trends but the mass itself having one general direction; esp. the great mountain region of western North America from the eastern face of the Rocky Mountains to the Pacific Ocean, or the parallel chains of the Andes in South America; a mountain province. *AGI*
b. An individual mountain chain with closely connected, distinct summits resembling the strands of a rope or the links of a chain; e.g., one of the parallel chains of the Rocky Mountains. *AGI*
c. A term also used in South America for an individual mountain range. Etymol: Spanish, chain or range of mountains, from Latin chorda, cord. *AGI*

Cordiric process

The refining of lead by conducting steam through it, while molten, to oxidize certain metallic impurities. *Fay*

cordite

An explosive compound consisting of cellulose nitrate and a restrainer, such as vaseline, used chiefly as a propellant. *Standard, 2*

cord of ore

About 7 tons, but measured by wagonloads, and not by weight. The expression "cord" is a term used in some parts of Colorado and applied only to low-grade ore; the smelting ore is reckoned by the ton.

Cordtex

A detonating fuse suitable for opencast and quarry mining. It consists of an explosive core of pentaerythritol tetranitrate (PETN) contained within plastic covering. It has an average velocity of detonation of 21,350 ft/s (6,500 m/s). This is practically instantaneous. Cordtex detonating fuse is initiated by electric or a No. 6 plain detonator attached to its side with an adhesive tape. *Nelson*

Cordtex relay

A new device to achieve short-interval delay firing with Cordtex. A relay is an aluminum tube with a delay device, and is inserted in a line of Cordtex where required. The relays are made with two delays, 15 ms and 20 ms, respectively. *Nelson*

corduroy

A ribbed and napped textile material used for recovering coarse gold or other heavy metal or mineral from a stream of sand passing over it. A corduroy blanket is replaced about every 4 hours for washing to remove the gold. *Nelson*

corduroy spar

See: [graphic granite](#)

corduroy texture

Bands of coarse-grained quartz and albite or microcline in rock. *Hess*

cordylite

A hexagonal mineral, $\text{Ba}(\text{Ce,La})_2(\text{CO}_3)_3\text{F}_2$; rare; in pegmatites in nepheline syenites.

Core

(a) A cylindrical section of rock, usually 5 to 10 cm in diameter and up to several meters in length, taken as a sample of the interval penetrated by a core bit and brought to the surface for geologic examination and / or laboratory analysis. To obtain a core in drilling. (AGI, 1987)

(b) The central part of the Earth below a depth of about 1,800 mi (2,900 km), probably consisting of iron-nickel alloy. (AGI, 1987)

- (c) A hard, unburned central part of a piece of coal or limestone. CF: clinker. Also, an unburned or an overburned piece of limestone in hydrated lime. (Webster 3rd, 1966)
- (d) A cone or V-shaped mass of rock that is first blasted out in driving a tunnel.
- (e) The central part of an anticlinal structure, or of a domal structure, or of mountains having a folded or a completely crumpled structure. (Webster 3rd, 1966)
- (f) drill core. CF: clinker; bit core.

core analysis

a. The characteristics of the minerals contained in a specific section of a core sample as determined petrographically, by metallurgical treatments and/or by chemical or cupelling methods. Also called core assay; core values. *Long* b. As used by the petroleum industry, a study of a core sample to determine its water and oil content, porosity, permeability, etc. *Long*

Coreau detonant

Detonating fuse used in blasting. Syn: [Cordtex](#)

core barrel

a. A hollow cylinder attached to a specially designed bit and which is used to obtain and to preserve a continuous section, or core, of the rocks penetrated in drilling. *AGI* b. A tube inside a drill pipe and which is supported by a bit to receive the core, in core boring. *Webster 3rd*

core bit

a. A hollow, cylindrical boring bit for cutting a core in rock drilling or in boring unconsolidated earth material. It is the cutting end of a core drill. b. A hollow, cylindrical drill bit for cutting a core of rock in a drill hole; the cutting end of a core drill. Syn: [coring bit](#)

core block

An obstruction inside a bit, reaming shell, or core barrel consisting of impacted core fragments or drill cuttings, which prevents entry of core into the core barrel. See also: [block](#)

core boring

As used by soil- and foundation-testing engineers, a syn. for core; cuttings; drill sludge. *Long*

core box

a. The wooden, metal, or cardboard box divided into narrow parallel sections, used to store the cores at the surface as they are extracted from a core barrel or corer. *AGI* b. The box in which the core, or mass of sand producing any hollow part of a casting, is made. *Fay*

core breaker

a. See: [core lifter](#) b. A sharp-cornered pluglike device inside an annular-shaped bit, which breaks up any core produced into pieces small enough to be washed out of the borehole as cuttings. *Long*

core catcher

a. Sievelike tray or device on or in which the core is ejected continuously from the upper end of a drill string, and is caught and held when core is recovered by counterflow or reverse-flow continuous core-drilling techniques. *Long* b. See: [core lifter](#) c. A steel spring fitted at the lower end of a soil sampler to keep the sample from dropping out. *Nelson* d. In deep boring, a ring of steel of wedge form cut into vertical stripes that encircles and rides on the core when drilling, but wedges the core in the core barrel when drilling ceases and the rods are lifted. *Nelson*

cored ammonium nitrate dynamite

The dynamites of this class come in cartridges 4 in (10.2 cm) and up in diameter and in weight strengths from 20% to 70%. Their water resistance is considered good (the gelatin core being responsible for this), but their fume characteristics are rated as poor. Besides providing increased water resistance, these explosives tend to exhibit the higher velocities characteristic of gelatin explosives (10,500 ft/s, 15,000 ft/s, and 17,000 ft/s) (3,200 m/s, 4,600 m/s, and 5,200 m/s), rather than the low and medium velocities characteristic of other straight ammonia dynamite. In addition, the gelatin core assures propagation of detonation through the entire explosives column. Gelatin cored ammonia dynamites also are very useful when an operator wishes to practice alternate velocity loading to attain a more effective one-two punch in conjunction with the use of short period or millisecond delay, electric blasting caps. *Pit and Quarry*

cored hole

a. A borehole put down by a core drill. *Nelson* b. A cast hole cored with a dry-sand core instead of delivering as a hole directly from the pattern. In general, the term is applied to any hole in a casting that is not bored or drilled in the shop. *Crispin*

core dressing

A solution used to form clear skin at surface of core. *Pryor, 3*

core drill

a. A rotary drilling rig that cuts and brings to the surface a core from the drill hole. It is equipped with a core bit and a core barrel. *AGI* b. A lightweight, usually mobile drill that uses tubing instead of drill pipe and that can core down from the grass roots. *AGI* c. A mechanism designed to rotate and cause an annular-shaped rock-cutting bit to penetrate rock formations, produce cylindrical cores of the formations penetrated, and lift such cores to the surface, where they may be collected and examined. See also: [calyx drill](#); [diamond drill](#); rotary drill; shot drill. *Long* d. The act or process of producing a cylindrical core of rock, using a core-drilling machine and equipment. *Long* e. A lightweight, usually mobile drilling machine equipped with a hollow core bit and a core barrel that by rotation cuts out and recovers a rock core sample. *AGI* f. A drill that removes a cylindrical core from the drill hole. *Webster 3rd*

core drilling

a. The process of obtaining cylindrical rock samples by means of annular-shaped rock-cutting bits rotated by a borehole-drilling machine. *Long* b. Drilling with a hollow bit and a core barrel to obtain a rock core.

core-drill sampling

The act or process of obtaining cylindrical samples of rock in the form of a core. *Long*

core dryer

A form in foundry work that serves to retain the shape of a core while it is being baked. *Crispin*

core extractor

a. A special tool that works like a screw or hydraulic jack, used to push core out of a core barrel. Also called core plunger; core pusher. *Long* b. A fishing tool designed to recover core dropped from a core barrel and resting on the bottom of a borehole. Also called basket; core basket; core fisher; core grabber; core picker. *Long*

core grouting

Material used in and/or the act or process of injecting small fragments of rock or coarse sand into a core barrel to wedge the core inside the barrel when no core lifter is used, as when using straightwall bits or drilling with a shot drill. *Long*

core hole

A boring by a diamond drill or other machine that is made for the purpose of obtaining core samples. *AGI*

core intersection

The point in a borehole where an ore vein or body is encountered, as shown by the core; also, the width or thickness of the orebody, as shown by the core. Also called core interval. *Long*

core interval

See: [core intersection](#)

core jam

See: [core block](#)

core library

A structure in which boxed cores from numerous recorded localities are stored and kept available for inspection and study. *Long*

core lifter

A spring clip at the base of the core barrel that grips the core, enabling it to be broken off and brought out of the hole. Also called core clip; core gripper; core spring; ring lifter; split-ring lifter. Syn: [catcher](#); core breaker; core catcher; spring lifter; spring core lifter; lifter. *BS, 9*

core load

The explosive core of detonating cord, expressed as the number of grains of explosive per foot or grams per meter. *Atlas*

core loss

The portion of rock cored but not recovered. CF: [core recovery](#) *Long*

core of the Earth

a. The dense central part of the Earth, below a depth of about 1,800 mi (2,900 km). Syn: [centrosphere](#) b. The Earth is believed to consist of the following: inner core, solid, 860 mi (1,384 km) radius; outer core, liquid, 1,300 mi (2,092 km) thick; mantle, solid, 1,800 mi (2,897 km) thick; and crust, solid, 622 mi (1,001 km) thick. *Hunt*

core orientation

a. The act or process of using information obtained from magnetic polarity or other measurements of a piece of core in an attempt to determine the downhole bearing of the structural features of the rock formation as displayed in the core. *Long* b. To place a piece of core in the same relative plane as it occupied below the surface. See also: [true dip](#)

core plug

A cylinder containing chemically treated sand and used for stemming shotholes in coal mines. *Nelson*

core rack

a. A framework built to support several tiers of core boxes. *Long* b. Grooved or partitioned tray, supported on legs or sawhorses, on which core is placed when removed from a core barrel for inspection or temporary storage before being placed in boxes. *Long*

core recovery

a. The proportion of the drilled rock column recovered as core in core drilling. The amount withdrawn generally is expressed as a percentage of the theoretical total in general terms, as excellent, good, fair, or poor. CF: [core loss](#) b. The amount of the drilled rock withdrawn as core in core drilling, generally expressed as a percentage of the total length of the interval cored. *AGI*

core run

Technically, the distance cored per round trip, which is expressed in number of feet or in relative terms, as short or long. Core blocks may occur before the core barrel is filled; the barrel then is short of being full, resulting in a short core run. Loosely, the amount of core recovered per round trip. *Long*

core sample

One or several pieces of whole or split parts of core selected as a sample for analysis or assay. *Long*

core sand

Silica sand to which a binding material has been added to obtain good cohesion and porosity after drying for the purpose of making cores. *Osborne*

core saw

A machine capable of rotating at high speed, equipped with a thin metal disk having diamonds inset in its edge. Used somewhat like a bench saw to cut core longitudinally into sections. CF: [core splitter](#); diamond-saw splitter. *Long*

core shack

A roofed and enclosed structure in which core-filled boxes are stored. Also called core house; core shanty. *Long*

core sludge

The slurry produced during abrasion by the cutting bit, or through fracture and grinding of part of the sample during this process. *Pryor, 3*

core splitter

Tool employing a chisel to split core longitudinally in half, rarely in quarter, sections. One-half usually is assayed, and the other half is retained and stored. Term also may be applied to a diamond saw used for the same purpose. See also: [core saw](#)

core test

A hole drilled with a core drill, usually for the purpose of securing geologic information and sometimes with the purpose of investigating geologic structure. *AGI*

core texture

See: [atoll texture](#)

core-type spiral chute

A spiral chute having a center core or column about which it is fabricated, with the core serving as the inside guard.

core values

Used in a general sense as a syn. for core analysis; core assay. In a strict sense, the term should not be used to designate the mineral content of the core sample unless the valuable mineral is gold, silver, platinum, etc. *Long*

core velocity

The zone of maximum air velocity in a mine roadway, usually at or near the center of the road. *Nelson*

core wall

In a battery wall, those courses of brick, none of which are directly exposed on either side. *AISI*

core wash

- a. The portion of the core lost through erosive action of the drill circulation fluid. *Long*
- b. The act or process of erosion of core by washing action of the drill circulation fluid. *Long*

coring

A variable composition between the center and surface of a unit of structure (such as a dendrite, grain, or carbide particle) resulting from nonequilibrium growth that occurs over a range of temperature. *ASM, I*

coring bit

See: [core bit](#)

coring tool

A tool that is used when a core is required. In drilling, where speed is the aim, cores are not made. When, however, an important bed or horizon is approached, and detailed geological information is required, the coring bit is inserted and core drilling commenced. Also called corer. *Nelson*

Corinthian process

See: [Carinthian process](#)

cork fossil

A variety of amphibole or hornblende, resembling cork; the lightest of all minerals. *Fay*

corkscrew

- a. A device resembling a corkscrew, used as a fishing tool. *Long*
- b. A borehole following a spiraled course. *Long*
- c. A cylindrical surface, such as the outer surface of a piece of spirally grooved core. Also called fluted core. *Long*

corkscrew core

See: [fluted core](#)

corncob

See: [taper bit](#)

cornelian

A translucent red variety of chalcedony. Also spelled carnelian. *CMD*

corneous manganese

a. See: [photicite](#) b. A carbonated variety of rhodonite.

corner

a. A point on a tract of land at which two or more surveyed boundary lines meet; e.g., a township corner. *AGI* b. A term that is often incorrectly used to denote the physical station, or monument, erected to mark the corner. *AGI*

corner-fastened tray conveyor

See: [suspended tray conveyor](#)

corner-hung tray conveyor

See: [suspended tray conveyor](#)

corner racking

Square or triangular strips of pinewood fixed vertically down each corner of a rectangular shaft to secure and stiffen the timber sets. *Nelson*

corners

In Wales, bands of clay ironstone.

cornetite

An orthorhombic mineral, $\text{Cu}_3(\text{PO}_4)(\text{OH})_3$; occurs in peacock-blue minute crystals and encrustations in Katanga, Zaire, and Bwana M'Kubwa, Zambia.

Corning table

See: [Bilharz table](#)

Cornish diamond

Eng. A quartz crystal from Cornwall. *Webster 3rd*

Cornish engine

See: [Cornish pump](#)

Cornish mining ton

The weight equal to 21 hundredweight of 112 lb each, or 2,352 lb (1,066.87 kg). *Webster 2nd*

Cornish pump

A single-acting engine in which the power for pumping operations was transmitted through the action of a cumbersome beam. Syn: [Cornish engine](#)

Cornish rolls

A geared pair of horizontal cylinders, one fixed in a frame and the other held by strong springs. The distance apart is adjusted by distance pieces of shims. Used for grinding. *Pryor, 3*

Cornish stone

A variety of china stone composed of feldspar, mica, and quartz and used as a bond in the manufacture of pottery. Syn: [Cornwall stone](#) CF: [china stone](#)

cornubianite

A hornfels formed by contact metamorphism, and consisting of micas, quartz, and feldspar. CF: [leptynolite](#) Cornwall, England. *AGI*

cornubite

A triclinic mineral, $\text{Cu}_5(\text{AsO}_4)_2(\text{OH})_4$; dehydrated from cornwallite.

cornuite

a. A yellow, gelatinous substance, apparently in albumen with 97% water; found in fissures in diatomite deposit of Luneburger Heide, Hanover, Germany. It may be an

organic matter derived from the diatoms or a fungus. *Tomkeieff* b. A blue, green, hydrous copper silicate; glassy. The colloidal phase of chrysocolla. *English*

cornwallite

A monoclinic mineral, $\text{Cu}_5 (\text{AsO}_4)_2 (\text{OH})_4 \cdot \text{H}_2 \text{O}$; emerald-green; dehydrates to cornubite.

Cornwall stone

See: [Cornish stone](#)

coro-coro

A dressed product of copper works in South America, consisting of grains of native copper mixed with pyrite, chalcopyrite, mispickel, and earthy minerals. See also: [copper barilla](#); barilla.

Coromant cut

A new drill hole pattern in which two overlapping holes of diameter about 2-1/4 in (5.7 cm) are drilled in the tunnel center and left uncharged. These holes form a slot roughly 4 in by 2 in (10.2 cm by 5.1 cm) to which the easers can break. All the holes in the round are parallel and in line with the tunnel. Short-delay detonators are used for the easer holes and 1/2-s delays for the rest of the round. A pull of 10 ft (3.0 m) per round has been obtained in strong rock with 10.5-ft (3.2-m) holes. Explosive consumption for the easer holes is about 0.2 lb/ft (0.3 kg/m) of hole. *Nelson*

corona

a. A microscopic zone of minerals, usually arranged radially around another mineral. The term has been applied to reaction rims, corrosion rims, and originally crystallized minerals. *AGI* b. A Spanish term meaning crown. Sometimes used in the Southwestern United States as a syn. for diamond bit. *Long* c. Rim of alteration product surrounding an earlier formed crystal, commonly the result of reaction with a cooling magma. Syn: [kelyphitic rim](#); [kelyphite](#); [reaction border](#); [kelyphytic rim](#). See also: [reaction rim](#)

coronadite

A monoclinic mineral, $\text{Pb}(\text{Mn}^{4+}, \text{Mn}^{2+})_8 \text{O}_{16}$; cryptomelane group; pseudotetragonal; at the Coronado vein, Clifton-Morenci district, AZ.

coronite

A rock containing mineral grains surrounded by coronas. *AGI*

corrasion

a. A process of erosion whereby rocks and soil are mechanically removed or worn away by the abrasive action of solid materials moved along by wind, waves, running water, glaciers, or gravity. Syn: [abrasion](#); [attrition](#). *AGI* b. A term formerly used as a syn. of corrosion, or as including the work of corrosion. *AGI*

corrected effective temperature

The scales of effective temperature take into consideration the temperature, humidity, and speed of the air. The effects of radiant heat can be included in an assessment of effective temperature by using the globe thermometer temperature instead of the dry-bulb temperature in those cases when the reading of the globe thermometer is higher than the dry-bulb temperature. In such cases, the result is described as the corrected effective temperature. *Roberts, 1*

correcting wedge

A deflection wedge used to deflect a crooked borehole back into its intended course. See also: [deflecting wedge](#)

correction chart

A chart, graph, or table giving the true angle of the inclination of a borehole for specific apparent angles as read from the etch line in a specific-size acid bottle. See also: [capillarity-correction chart](#) *Long*

correction factor

See: [assay plan factor](#)

correction line

See: [standard parallel](#)

correctly placed material

a. Material correctly included in the products of a sizing or density separation. *BS, 5* b. In cleaning, the material of specific gravity lower than the separation density that has been included in the low-density product, or material of specific gravity higher than the separation density that has been included in the high-density product. *BS, 5*

correlate

a. To show correspondence in character and stratigraphic position between such geologic phenomena as formations or fossil faunas of two or more separated areas. Adj. belonging to the same stratigraphic position or level. *AGI* b. To establish a definite stratigraphic relationship between strata that are separated by distance or by geologic disturbance; e.g., to find which coalbeds in one coalfield or part thereof correspond with (or are the same as) those of another coalfield. c. To plot or to arrange two surveys, the surveys of two mines, or the underground and the surface, on the same base line or to a common meridian. *Mason*

correlation

a. The determination of the equivalence in geologic age and/or stratigraphic position of two formations or other stratigraphic units in separated areas; or, more broadly, the determination of the contemporaneity of events in the geologic histories of two areas. Fossils constitute the chief evidence in problems of such correlation. See also: [lithologic correlation](#) b. The identification of a phase of a seismic record as representing the same phase on another record, thus relating reflections from the same stratigraphic sequence or refractions from the same marker. *AGI*

correlation shooting

A seismic shooting method in which isolated profiles are shot and correlated to obtain relative structural positions of the horizons mapped. CF: [continuous profiling](#)

corrensite

A clay mineral having 1:1 regular interstratification of trioctahedral chlorite with either trioctahedral vermiculite or trioctahedral smectite.

corridor system

See: [methane drainage](#)

corrode

a. To eat away by degrees as if by gnawing. *Webster 3rd* b. To wear away or to diminish by gradually separating or destroying small particles or converting into an easily disintegrated substance; esp., to eat away or to diminish by acid or alkali reaction or by chemical alteration. *Webster 3rd*

corroded crystal

A phenocryst that after crystallization is more or less reabsorbed or attacked by the magma, or a crystal in a vein or a pegmatite that is partly dissolved by later solutions. The process is probably much the same in all three instances. *Hess*

corroding lead

Lead of purity exceeding 99.94% , suitable for the production of white lead. *CTD*

corrosion

a. A process of erosion whereby rocks and soil are removed or worn away by natural chemical processes, esp. by the solvent action of running water, but also by other reactions such as hydrolysis, hydration, carbonation, and oxidation. Syn: [chemical erosion](#) b. A term formerly used interchangeably with corrosion for the erosion of land or rock, including both mechanical and chemical processes. The mechanical part is now properly restricted to corrosion and the chemical to corrosion. Verb: corrode. *AGI* c. See: [magmatic corrosion](#); abrasion. See also: [attrition](#)

corrosion border

One of a series of borders of one or more secondary minerals around an original crystal, representing the modification of a phenocryst due to the corrosive action of its magma. CF: [reaction rim](#) resorption border. *AGI*

corrosion potential

The steady-state irreversible potential of a metal or alloy in a constant corrosive environment. *Schlain*

corrosion rate

The rate that a metal or alloy is removed because of corrosion. This may be expressed in terms of loss in weight or loss of thickness in a given period of time. (Corrosion rates in terms of thickness change refer to the loss of metal from one side only.) *Hunt*

corrosion surface

A pitted, irregular bedding surface found only in certain carbonate sediments, characterized by a black manganiferous stain, and presumed to result from cessation of lime deposition and from submarine solution or resorption of some of the previously deposited materials. Syn: [corrosion zone](#)

corrosion zone

See: [corrosion surface](#); corrosion border.

corrugated

Where on a small scale, beds are much wrinkled, folded, or crumpled, they are said to be corrugated. On a larger scale, they are said to be contorted.

corrugated friction socket

A fishing tool. *Long*

corrugated trough

A trough with corrugations formed into the bottom to assist coal travel on steep grades or under wet conditions. *Jones, I*

cortex

In coal, that part of the axis of a vascular plant that surrounds the central cylinder and is separated from the cylinder by the endodermis, and limited on the outside by the epidermis.

corundolite

A rock consisting of corundum and iron oxides. See also: [emery rock](#)

corundophilite

An iron-bearing variety of clinchlore.

corundum

A trigonal mineral, Al_2O_3 ; hematite group; forms hexagonal prisms with basal and rhombohedral parting; red (ruby), blue (sapphire), green (oriental emerald), reddish-brown, white, or gray; defines 9 on the Mohs hardness scale; in nepheline syenite pegmatites and placer deposits. Emery is granular corundum mixed with magnetite and spinel. Synthetic corundum made from bauxite together with other manufactured abrasives have largely replaced natural materials.

corundum cat's eye

Corundum showing a bluish, reddish, or yellowish reflection of light, or lighter shade, than the stone itself. CF: [asterism](#); [star ruby](#); star sapphire.

corvusite

A monoclinic mineral, $(\text{Na,K,Ca,Mg})_2(\text{V}^{5+}, \text{V}^{4+})_8\text{O}_{26} \cdot 6-10\text{H}_2\text{O}$; weakly radioactive; associated with carnotite in Colorado and Utah; a source of vanadium. Syn: [blue-black ore](#)

cosalite

An orthorhombic mineral, $Pb_2 Bi_2 S_5$; a source of bismuth.

cosedimentation

Contemporaneous deposition. *AGI*

cosmochemistry

The study of the origin, distribution, and abundance of elements in the universe. *AGI*

costean

a. A trench cut across the conjectured line of outcrop of a seam or orebody to expose the full width. *Nelson* b. The channel eroded by a flow of water to expose mineral deposits during prospecting work. *Nelson* c. In prospecting, to dig shallow pits or trenches designed to expose bedrock. Etymol: Cornish. *AGI*

costeaning

a. The removal of soil and subsoil by a rushing of water, to expose rock formations in prospecting for reefs or lodes. *CTD* b. Proving an ore deposit or vein by trenching across its outcrop at approx. right angles. *Weed, 2* c. Tracing a lode by pits sunk through overburden to underlying rock. *Pryor, 3*

costean pit

Corn. A pit sunk to bedrock in prospecting. *Standard, 2*

cotectic line

A special case of the boundary line, in ternary systems, along which one of the two crystalline phases present reacts with the liquid, upon decreasing the temperature, to form the other crystalline phase. Syn: [reaction curve](#); [reaction line](#). *AGI*

cotectic surface

A curved surface in a quaternary system, representing the intersection of two primary phase volumes, one or both of which are solid solution series. It is the bivariant equivalent of the univariant cotectic line in ternary systems. *AGI*

cotter

Eng. To mat together; to entangle. Frequently applied to a hard, crossgrained, tough stone or coal, as cotted coal.

cotterite

A variety of quartz having a peculiar metallic pearly luster. *Standard, 2*

cotton ball

See: [ulexite](#)

cotton chert

An obsolete syn. of chalky chert.

cotton rock

a. A term used in Missouri for a soft, fine-grained, siliceous, white to slightly gray or buff magnesian limestone having a chalky or porous appearance suggestive of cotton. *AGI* b. The white or light-colored decomposed exterior surrounding the dense black interior of a chert nodule. *AGI*

cotton stone

A variety of mesolite. See also: [mesolite](#); [cotton rock](#). *Fay*

Cottrell meter

This instrument applies the veiling brightness method of producing threshold conditions. When in use the sighting telescope is directed toward some critical detail of the visual task and the veiling brightness is adjusted until it matches the background. The gradient filter is then turned until the target detail is at threshold visibility. *Roberts, 2*

Cottrell operator

In ore dressing, smelting, and refining, one who recovers magnesium dust particles remaining in magnesium gas after processing, using a battery of Cottrell electrical precipitators. Also called agglomerator operator; dust operator. *DOT*

Cottrell precipitator

An electrostatic device whereby negatively charged dust or fume particles are attracted to a positively charged wire electrode enclosed in a flue, the walls of which act as the other electrode. Widely used for treating sulfuric acid mist, cement mill dust, power-plant fly ash, metallurgical fumes, etc. *CCD, 2*

cotunnite

An orthorhombic mineral, PbCl_2 ; soft; acicular crystals.

coulee

a. A term applied in the Western United States to a small stream, often intermittent. Also, the bed of such a stream when dry. *AGI* b. A term applied in the Northwestern United States to a dry or intermittent stream valley, gulch, or wash of considerable extent; esp. a long, steep-walled, trenchlike gorge or valley representing an abandoned overflow channel that temporarily carried meltwater from an ice sheet, e.g., the Grand Coulee (formerly occupied by the Columbia River) in Washington State. *AGI* c. A small valley or a low-lying area. Etymol: French coulee, flow or rush of a torrent. Pron: koo-lee. Syn: [coulie](#) d. A tongue-like mass of debris moved by solifluction (Monkhouse, 1965, p. 81). *AGI* e. A flow of viscous lava that has a blocky, steep-fronted form. Also spelled: coulee. *AGI*

coulee lake

A lake produced by the damming of a water course by lava. *AGI*

coulie

See: [coulee](#)

coulomb attraction

The attraction between ions of opposite electric charges. *AGI*

coulomb damping

a. The dissipation of energy that occurs when a particle in a vibrating system is resisted by a force whose magnitude is a constant independent of displacement and velocity, and whose direction is opposite to the direction of the velocity of the particle. Also called dry friction damping. *Hunt* b. See: [specific damping capacity](#)

coulsonite

An isometric mineral, $\text{Fe}^{2+} \text{V}^{3+}_2 \text{O}_4$; spinel group; a source of vanadium; formerly called vanado-magnetite.

Coulter counter

A high-speed device for particle size analysis designed by W.H. Coulter and now made by Coulter Electronics, Inc., Chicago. A suspension of the particles flows through a

small aperture having an immersed electrode on either side with particle concentration such that the particles traverse the aperture substantially one at a time. Each particle, as it passes, displaces electrolyte within the aperture, momentarily changing the resistance between the electrodes and producing a voltage pulse of magnitude proportional to practical volume. The resultant series of pulses is electronically amplified, scaled, and counted. *Dodd*

counter

a. A gangway driven obliquely upwards on a coal seam from the main gangway until it cuts off the faces of the workings, and then continues parallel with the main gangway. The oblique portion is called run. b. A crossvein. c. An instrument for the detection of uranium and thorium. *Nelson* d. A term used for any device that registers radioactive events, i.e., alpha counter, beta counter, Geiger-Mueller counter, scintillation counter. The term is correctly used only for devices that actually register number of events, but is often erroneously applied to count rate meters that register events per unit time. e. An apparatus for recording the number of strokes made by a pump, an engine, or other machinery.

counterboring

Drilling or boring a flatbottomed hole, often concentric with other holes. Syn: [counterflush boring](#); [reversed flush boring](#). *ASM, 1*

counter chute

A chute through which the coal from counter-gangway workings is lowered to the gangway below. *Fay*

counter coal

Coal worked from breasts or bords to the rise of a counter gangway. *Fay*

countercurrent

Arrangement in which ore, or pulp, proceeds in one direction and is progressively stripped of part of its contained mineral, while the enriched fraction thus produced moves in the opposite direction, the results being central feed, with discharge of high-grade concentrate at one end of the process and low-grade or barren tailing at the other. *Pryor, 3*

countercurrent braking

Braking accomplished by reversing the motor connections, at the same time inserting appropriate resistance in the rotor circuit to adjust the negative torque to the desired

value. With this method, complete control of deceleration is obtained, even to a dead stop. Its greatest disadvantage is that it is expensive in current consumption. It is unsuitable for winders sited at depth, owing to the heat given out. *Spalding*

countercurrent decantation

The clarification of washery water and the concentration of tailings by the use of several thickeners in series. The water flows in the opposite direction from the solids. The final products are slurry that is removed as fluid mud and clear water that is reused in the circuit. May be broader than just thickener. Syn: [cascade upgrading](#)

countercurrent principle

A means of maintaining the chemical potential at a uniform level during a reaction. *Newton, 1; Newton, 2*

counterflow

In a heat exchanger, where the fluid absorbing heat and the fluid losing heat are so directed that lower and higher temperature of the one is adjacent to the lower and higher temperature of the other, respectively. Ordinarily, the one fluid is flowing in the opposite direction from the other, hence the term. *Strock, 2*

counterflush boring

See: [counterboring](#)

counter gangway

A gangway driven obliquely across the workings to a higher level, or a gangway driven between two lifts and sending its coal down to the gangway below through a chute. *Fay*

counterhead

Mid. An underground heading driven parallel to another, and used as the return air course.

counterpart

See: [cast](#)

countersink

In a twist drill, the tapered and relieved cutting portion situated between the pilot drill and the body. *Osborne*

countervein

A cross vein running at approx. right angles to the main orebody.

countess

Slate, size 20 in by 10 in (50.8 cm by 25.4 cm); a duchess is 24 in by 12 in (61.0 cm by 30.5 cm), and a princess is 24 in by 14 in (61.0 cm by 35.6 cm). Terms descriptive of slate trimmed for roofing. *Pryor, 3*

counting assay

Approximate method of analysis, where particles of value and gangue are similar in shape and size, and their proportions can be assessed by inspection, probably under a low-powered microscope. *Pryor, 3*

country bank

Arkansas. A small mine supplying coal for local use only.

country rock

The rock enclosing or traversed by a mineral deposit. Originally a miners' term, it is somewhat less specific than host rock. Syn: [wall rock](#) *AGI*

County of Durham system

A combination of the panel and room-and-pillar method of mining. See also: [room-and-pillar](#)

coupled wave

A type of surface wave that is continuously generated by another wave that has the same phase velocity. Syn: [C-wave](#)

couplet

Genetically related paired sedimentary laminae, generally occurring in repeating series, as varves, but applied to laminated nonglacial shales, evaporites, and other sediments as well. *AGI*

coupling

a. A device for connecting tubs or mine cars to form a set or journey. See also: [automatic clip](#); clip; [shackle](#). *Nelson* b. A connector for drill rods, casing, or pipe with identical box or pin threads at either end. *Long*

coup plate

In coal mining, steel plate on which tubs are turned from one set of rails to another. *Pryor, 3*

course

a. To conduct the ventilation backward and forward through the workings, by means of properly arranged stoppings and regulators. *Fay* b. A seam of coal. *Fay* c. To ventilate a number of faces in series. *BS, 8* d. An unproductive vein as opposed to a lode. e. The horizontal direction of a geologic structure. Syn: [course of ore](#); strike. *Webster 3rd*

coursed ventilation

Mine ventilation by the same air current, i.e., without splitting of air. *Nelson*

course of ore

a. A horizontal shoot. An older term. *Nelson* b. See: [chute](#); course.

course of vein

The strike of a vein; direction of the horizontal line on which it cuts the country rock.

course stacking

The method of shovel operation in which no ground is hauled away. The shovel simply stacks the ground on the opposite side from the working cut, or it may turn entirely around, dumping the spoil on a bank behind. *Lewis*

coursing

The control of ventilation in mines, as by doors, brattices, and stoppings. *Standard, 2*

coursing bubble

One rising freely through the cell during froth flotation. *Pryor, 4*

courthouse

A method used by companies for checking the amount of refuse in coal. The refuse is picked daily from a few cars of run-of-mine coal, and when the amount of refuse is considered unreasonable, it is shown to the miner and the laborers. They may be suspended from work if the amount and size of refuse is too high. *Mitchell*

courthouse inspector

In bituminous coal mining, one who examines mine cars of coal for impurities, such as slate, rock, and dirt, by the courthouse system (selecting cars at random for examination). Rejects, on basis of inspection, any group or lot of cars containing too much impurity. *DOT*

courtzilite

A form of asphaltum allied to gilsonite. *Fay*

cousin Jack

Cornish miner, usually far from home, important to U.S. mining. *Pryor, 3*

covariance

A statistical measure of the correlation between two variables. In geostatistics, covariance is usually treated as the simple inverse of the variogram, computed as the overall sample variance minus the variogram value. These covariance values, rather than variogram values, are actually used in kriging matrix equations for greater computational efficiency.

covelline

See: [covellite](#)

covellite

A hexagonal mineral, CuS ; metallic indigo blue with iridescent tarnish; soft; a supergene mineral in copper deposits; a source of copper. Syn: [blue copper](#); [covelline](#); [indigo copper](#). See also: [copper sulfide](#)

cover

a. The sedimentary accumulation over the crystalline basement. See also: [cover mass](#) b. The vertical distance between any position in strata and the surface or any other position used as a reference. See: [surface](#) c. The pattern or number of drill holes (pilot holes) deemed adequate to detect water-bearing fissures or structures in advance of mine

workings. Syn: [pilot-hole cover](#) d. Total thickness of material overlying mine workings or an orebody. See also: [burden](#); [mantle](#); [cover rock](#). CF: [rock cover](#)

cover brick

Common term for arch brick used to line soaking-pit covers.

cover gap

The area in advance of mine workings not adequately probed by pilot holes to detect the presence of water-bearing fissures or structures. *Long*

cover hole

One of a group of boreholes drilled in advance of mine workings to probe for and detect water-bearing fissures or structures. *Long*

cover line

The point at which the overburden meets the coal. *BCI*

cover load

The load due to the weight of the superincumbent rock. *Issacson*

cover mass

The material overlying the plane of an angular unconformity. See also: [cover](#)

cover rock

See: [cover](#)

cover stress

The stress induced by the cover load only and which is uninfluenced by the proximity of any excavations. *Issacson*

cover work

Lumps of copper too large to pass the screen, which accumulate in the bottom of the mortar of the stamp. *Fay*

cow

York. The finest crushed lead ore. Also called coe. *Arnell*

Cowper-Siemens stove

A hot-blast stove of firebrick on the regenerative principle. *Fay*

cowshut

Gray marl. Syn: [cushat marl](#)

cow sucker

A cylindrical heavy piece of iron attached to a cable or wire line, making it descend rapidly into a borehole when the cable or line is not attached to a string of drilling tools or equipment. Also called bug; bullet; go-devil. *Long*

coyote hole

A small tunnel driven horizontally into the rock at right angles to the face of the quarry. It has two or more crosscuts driven from it parallel to the face. It is in the ends of these crosscuts that the explosive charge is generally placed, and the remaining space in the tunnel is filled up with rock, sand, timbers, or concrete, to act as stemming or tamping. Same as gopher hole.

coyote-hole blasting

See: [coyote shooting](#)

coyote shooting

A method of blasting using a number of relatively large concentrated charges of explosives placed in one or more small tunnels driven in a rock formation. Syn: [coyote-hole blasting](#)

C.P. Hemborn dust extractor

A dust trap in which the clean air flows inwards around the outside of the drill rods, and the dust and chippings are extracted in the airstream passing through the hollow rods. It includes a drum-type dust container with filter units. The appliance requires special rods and bits. See also: [dust trap](#)

cpx

Abbrev. for clinopyroxenes. CF: [opx](#)

crab locomotive

A trolley locomotive fitted with a crab or winch for hauling mine cars from workings where a trolley wire is not installed. *Nelson*

crab operator

In bituminous coal mining, one who maintains and operates a crab (electric motor equipped with a drum and haulage cable mounted on a small truck) to pull loaded mine cars from working places to haulageways in the mine. *DOT*

crab winch

An iron machine consisting of two triangular uprights between which are two axles, one above the other. These machines are frequently used in connection with pumping gear where mine shafts are not deep. Also called crab. *Fay*

crackle breccia

An incipient breccia having fragments parted by planes of rupture but showing little or no displacement. It is commonly a chemical deposit. *AGI*

crackled texture

A concentric texture of ore minerals in which minute cracks have developed by shrinkage during crystallization of the original colloid.

cracks of gas

Puffs or explosions of gas in blast furnaces. *Fay*

crack wax

A dark-colored variety of ozokerite showing a granular fracture. *Tomkeieff*

cradle

a. A wooden box, longer than wide provided with a movable slide and hopper and mounted on two rockers, for washing gold-bearing earths. Also known as rocker cradle.
b. The part of a car dumper in which the car rests when it is dumped. c. The balance platform for the cage at the bottom of some shafts. *Mason* d. Device by means of which a small diamond or percussive-type drill may be attached to a drill column or arm. Also called saddle. *Long* e. The trough-shaped metal support for a mounted pneumatic drill. *CTD* f. To wash, as gold-bearing gravel in a mining-cradle. *Standard, 2* g. Mounting for a rock drill. *Pryor, 3*

cradle dump

A tippel that dumps cars with a rocking motion. *Fay*

Craelius drilling machine

A small, fairly light boring machine for shallow exploratory borings underground. It drills in any direction (downwards, upwards, horizontally, or obliquely) to depths of from 200 to 1,000 m, but usually only 50 m. It uses coring or solid bits, with or without flushing and can be driven either by hand, any oil engine, compressed air, or electricity. *Stoces*

crag

a. A steep precipitous point or eminence of rock, esp. one projecting from the side of a mountain. Syn: [craig](#) b. An obsolete term for a sharp, rough, detached, or projecting fragment of rock. *AGI*

craig

See: [crag](#)

cramp

a. A contrivance for holding parts of a frame in place during construction. It usually consists of a steel bar along which slide two brackets between which the work is fixed, one of the brackets being pegged into a hole in the bar while the other is adjustable for position by means of a screw. *CTD* b. A locking bar of incorrodible metal used to bind together adjacent stones in a course, and having bent ends, one of which is fastened into each stone. Also called a cramp iron. *CTD*

crampon

An appliance for holding stones or other heavy objects that are to be hoisted by crane. It consists of a pair of bars hinged together like scissors, the points of which are bent inwards for gripping the load, while the handles are connected by short lengths of chain to a common hoist ring. *CTD*

crandall

a. A stonecutters' hammer for dressing ashlar. Its head is made up of pointed steel bars of square section wedged in a slot in the end of the iron handle. *Standard, 2* b. To dress stone with a crandall. *Standard, 2*

crandallite

a. A trigonal mineral, $\text{CaAl}_3(\text{PO}_4)_2(\text{OH})_5 \cdot \text{H}_2\text{O}$; forms compact to cleavable or fibrous masses; formerly called kalkwavellite. b. The crandallite mineral group of trigonal phosphates and arsenates: arsenocrandallite, arsenoflorencite-(Ce), arsenogorceixite, arsenogoyazite, crandallite, dussertite, eylettersite, florencite-(Ce), florencite-(La), florencite-(Nd), gorceixite, goyazite, lusungite, philipsbornite, plumbogummite, waylandite, and zairite.

crane boom

A long, light boom, usually of lattice construction. *Nichols, 1*

crane ladle

A pot or ladle supported by a chain from a crane; used for pouring molten metals into molds. *Fay*

crane rope

Wire rope consisting of 6 strands of 37 wires around a hemp center. *Hunt*

crate dam

A dam built of crates filled with stone.

crater

a. A typically bowl-shaped or saucer-shaped pit or depression, generally of considerable size and with steep inner slopes, formed on a surface or in the ground by the explosive release of chemical or kinetic energy; e.g., an impact crater or an explosion crater. *AGI*
b. A basinlike, rimmed structure that is usually at the summit of a volcanic cone. It may be formed by collapse, by an explosive eruption, or by the gradual accumulation of pyroclastic material into a surrounding rim. CF: [caldera](#)
c. The formation of a large funnel-shaped cavity at the top of a well, resulting from a blowout or occasionally from caving. *Brantly, 1*
d. In blasting, the funnel of rupture, which in bad rock may have very steep sides and a relatively small volume of broken rock. Syn: [lunar crater](#)

crater cuts

These cuts consist of one or several fully charged holes in which blasting is carried out towards the face of the tunnel, i.e., toward a free surface at right angles to the holes. These represent in principle a completely new type of cut and make use of the crater effect that is obtained in blasting a single hole at a free rock surface. The possibility of a uniform enlargement can be counted on. This means that if the scale is enlarged so that the diameter and depth of hole and length of the charge are all doubled, e.g., a crater of

double the depth will be obtained. The number of holes can be increased instead of increasing the diameter of the holes. *Langefors*

crater theory

Crater theory defines an optimum burden or distance to a free face at which a spherical explosive charge is buried and produces the greatest volume of broken and excavatable rock. This distance is unique based on rock type and explosive type. The theory also defines the critical depth or spherical charge buried depth at which surface disturbance is barely detectable, resulting in slight surface mounding and minor cracking.

cratogene

See: [shield](#)

cratogenic

Of or pertaining to a craton.

craton

A part of the Earth's crust that has attained stability, and has been little deformed for a prolonged period. The term is now restricted to the extensive central areas of the continents. *AGI*

craunch

A piece of a vein left uncut as a support. *Arkell*

crawler

One of a pair of an endless chain of plates driven by sprockets and used instead of wheels, by certain power shovels, tractors, bulldozers, drilling machines, etc., as a means of propulsion. Also any machine mounted on such tracks.

crawler track

An endless chain of plates used instead of wheels by certain power shovels, continuous miners, etc. *Nelson*

crawlway

A low passageway that only permits the passage of a person by crawling. Syn: [cat run](#)

cream

A rusty impure meerschaum. *Fay*

creams

Sometimes designates a very high-quality drill diamond. *Long*

crednerite

A monoclinic mineral, CuMnO_2 .

creedite

A monoclinic mineral, $\text{Ca}_3 \text{Al}_2 (\text{SO}_4)(\text{F},\text{OH})_{10} \cdot 2\text{H}_2 \text{O}$.

creek claim

A claim that includes the bed of a creek. Under the statute of Oregon, a tract of land 100 yd (91.5 m) square, one side of which abuts on a creek or rather extends to the middle of the stream.

creek placers

Placers in, adjacent to, and at the level of small streams.

creek right

The privilege of diverting water for the purpose of working a creek claim. Syn: [river right](#)

creep

a. The slow and imperceptible movement of finely broken up rock material from higher to lower levels, usually due to alternate freezing and thawing, wetting and drying, or other causes. Also the material that has moved. CF: [crown-in](#) b. Slow deformation of a material that results from long application of a stress. Part of the creep is a permanent deformation, while part of the deformation is elastic and the specimen can recover. CF: [thrust](#) *AGI* c. See: [drag](#) d. A very slow gradual movement of the drill-hoist drum when the brake is worn or not securely set. See also: [heave](#)

creeper

An endless chain, with projecting bars at intervals that catch the car axles and haul them up an inclined plane. Creepers are used on the surface and around the pit bottom. They are also used on relatively flat roadways to retard or propel the cars as required. *Nelson*

https://t.me/Geologybooks

creeping

Eng. The settling or natural subsidence of the surface caused by extensive underground mining.

creep limit

The maximum stress that a material can withstand without observable creep. *AGI*

creep recovery

The gradual recovery of elastic strain when stress is released. Syn: [elastic aftereffect](#)

creep strength

The load per unit area leading to a specified steady creep strain rate at a given temperature. *AGI*

creeshy

Scot. Smooth-faced nodules of shale or bind found occasionally in the roof of some coal seams. Also called greasy blaes. *Nelson*

creeshy clods

Peat which on drying breaks into irregular clods that burn with a clear bright flame like a lump of tallow or grease. *Tomkeieff*

crenitic

Said of mineral veins that have been deposited by springs. Etymol: Greek for spring. Obsolete.

crenulation

Small-scale folding (wavelength of a few millimeters) that occurs chiefly in metamorphic rocks. CF: [plication](#)

creolite

a. Red-and-white banded jasper from Shasta or San Bernadino County, CA. b. A silicified rhyolite from Baja California.

creosote

As used in wood preservation, a distillate of coal tar produced by high-temperature carbonization of bituminous coal; it consists principally of liquid and solid aromatic hydrocarbons, and contains appreciable quantities of tar acids and tar bases; it is heavier than water; and has a continuous boiling range of at least 125 degrees C beginning at about 200 degrees C. Also called creosote oil; creosote distillate.

crept pillars

Eng. Pillars of coal that have passed through the various stages of creep. *Fay*

crest

a. The highest point on a given stratum in an anticline. See also: [crestal plane](#); [culmination](#). *AGI* b. See: [crestline](#)

crestal plane

The plane formed by joining the crests of all beds in an anticline. See also: [crest](#)

crestline

In an anticline, the line connecting the highest points on the same bed in an infinite number of cross sections. See also: [crest](#)

cretylic

Mixture of cresol isomers. Frother and froth stabilizing agent in flotation process. Emulsion stabilizer. *Pryor, I*

Cretaceous

a. Applied to the third and final period of the Mesozoic Era. Extensive marine chalk beds were deposited during this period. b. Of the nature of chalk or relating to chalk. *Fay* c. System of strata deposited in the Cretaceous Period. *Fay*

crevasse

a. A wide breach or crack in the bank of a river or canal; esp. one in a natural levee or an artificial bank of the lower Mississippi River. Etymol: American French. *AGI* b. A wide, deep break or fissure in the Earth after an earthquake. *AGI* c. A fissure in the surface of a glacier or icefall. *AGI*

crevice

a. A shallow fissure in the bedrock under a gold placer in which small but highly concentrated deposits of gold may be found. b. The fissure containing a vein. As employed in the Colorado mining statute relative to a discovery shaft, a crevice is a mineral-bearing vein. An older term.

crevicing

Collecting gold that is in the crevices of a rock.

crew loader

In bituminous coal mining, one of a crew of loaders who shovels coal, blasting from working face, onto a conveyor that transports it from the underground working place to a point where it is loaded into mine cars. *DOT*

crib

A construction of timbering made by piling logs or beams horizontally one above another, and spiking or chaining them together, each layer being at right angles to those above and below it. See also: [curb](#)

cribbing

a. The construction of cribs, or timbers laid at right angles to each other, sometimes filled with earth, as a roof support or as a support for machinery. *BCI* b. The close setting of timber supports when shaft sinking through loose ground. The timber is usually square or rectangular and practically no ground is exposed. The method is also used for constructing ore chutes. See also: [barring](#); [close timbering](#); [forepoling](#). *Nelson* c. A method of timbering used primarily to rectify a mistake of removing too great a percentage of the coal on the advance, and has the effect of replacing part of the coal. Some are made by using timbers in pigpen style; first laying timbers one way then placing other timbers across the first. This is continued until the area between the bottom and the roof is filled and wedged tight. Others are made by laying a layer of timbers first in one direction, then another layer across at right angles to the bottom layer. Space between the timbers in a layer varies according to requirements. The hollow type are generally filled with gob. Syn: [penning](#)

cribble

A sieve.

cribs

Segments of oak to encircle the shaft. *Peel*

crichtonite

a. A trigonal mineral, $(\text{Sr},\text{La},\text{Ce},\text{Y})(\text{Ti},\text{Fe},\text{Mn})_{21}\text{O}_{38}$; formerly misidentified as a variety of ilmenite. b. The mineral group crichtonite, davidite, landauite, loeveringite, and senaite.

crick

See: [loose](#)

cricks

a. Som. See: [clay gall](#) b. Vertical joints affecting only the lower strata in a quarry. *Arkell*
c. Joints in slate with an inclination opposite to the dip of the rock. *Arkell*

crimp

a. The flattening made by a crimper near the mouth of a blasting cap for holding the fuse in place. b. To fix a detonator on blasting fuse by squeezing it with special pliers. *Pryor*, 3

crimper

A tool specially made for fastening a cap to a fuse. See also: [cap crimper](#)

crimson night stone

a. Purple fluorite from Idaho. *Schaller* b. A variety of purple fluorite from Utah.

crinkle

A small fold, usually a fraction of an inch in wavelength. *AGI*

crinkled stone

A diamond with a shallowish, wavy, or rough surface.

crinoidal limestone

A marine limestone composed largely of fossil crinoid remains, such as plates, disks, stems, or columns.

crispite

A former name for the sagenite variety of quartz.

crystalalite

A mineral: SiO_2 . It is a high-temperature polymorph of quartz and tridymite, and occurs as white octahedrons in the cavities of the fine-grained groundmasses of acidic volcanic rocks. Cristobalite is stable only above 1470 degrees C; it has a tetragonal structure (alpha-cristobalite) at low temperatures and an isometric structure (beta-cristobalite) at higher temperatures. CF: [tridymite](#)

crystalrahamite

Grahamite, a mineral asphalt, from the Cristo Mine, Huasteca, Mexico.

critical angle

a. See: [stalling angle](#) b. The least angle of incidence at which there is total reflection when an optic, acoustic, or electromagnetic wave passes from one medium to another medium that is less refractive. CF: [total reflection](#) c. The angle at which a ray of light in passing from a dense medium, such as a gemstone, into a rarer medium, such as air, is refracted at 90 degrees to the normal. Any rays reaching the interface at angles greater than the critical angle are unable to pass into the rarer medium and are totally reflected. d. The angle of incidence at which refracted light just grazes the surface of contact between two different media. e. The angle of refraction r for which $\sin r = 1/n$, where n is the refractive index of a transparent material. CF: [law of refraction](#)

critical area

In prospecting work, an area found to be favorable from geological age and structural considerations. Syn: [favorable locality](#)

critical area of extraction

The area of coal required to be worked to cause a surface point to suffer all the subsidence possible from the extraction of a given seam. See also: [subcritical area of extraction](#)

critical current

As applied to electric blasting caps, the minimum current that can be employed to fire detonators connected in series so that the chance of a misfire will be less than 1 in 100,000. *Fraenkel*

critical damping

The point at which the damping constant and the undamped frequency of a seismometer or seismograph are equal. After deflection, the moving mass approaches rest position without overswing and the motion is said to be aperiodic. See also: [damping](#)

critical density

The density of a substance at its critical temperature and under its critical pressure; that density of a saturated, granular material below which, under rapid deformation, it will lose strength and above which it will gain strength. *AGI*

critical diameter

a. For any explosive, the minimum diameter for propagation of a stable detonation. Critical diameter is affected by confinement, temperature, and pressure on the explosive. *Dick, 2* b. The minimum explosive diameter which produces the propagation of a detonation wave at a stable velocity. It is affected by conditions of confinement, temperature and pressure on the explosive.

critical distance

In refraction seismic work, that distance at which the direct wave in an upper medium is matched in arrival time by that of the refracted wave from the medium below having greater velocity. *AGI*

critical height

The maximum height at which a vertical or sloped bank of soil will stand unsupported under a given set of conditions (ASCE, 1958). *AGI*

critical minerals

a. Minerals essential to the national defense, the procurement of which in war, while difficult, is less serious than those of strategic minerals because they can be either domestically produced or obtained in more adequate quantities or have a lesser degree of essentiality, and for which some degree of conservation and distribution control is necessary. See also: [strategic minerals](#); [essential mineral](#). *Hess* b. Minerals or mineral associations that are stable only under the conditions of one given metamorphic facies and will change upon change of facies. For example, in Eskola's greenschist facies, sericite and chlorite, albite and epidote are critical mineral associations because these combinations cannot persist out of the field of the greenschist facies, although any one of the individual minerals may be found in more than one facies. *Schieferdecker*

critical point

A point representing a set of conditions (pressure, temperature, composition) at which two phases become physically indistinguishable; in a system of one component, the temperature and pressure at which a liquid and its vapor become identical in all properties. Syn: [decalescence point](#)

critical pressure

a. The maximum feed pressure that can be applied to a diamond bit without damaging the bit or core barrel. CF: [total critical load](#) b. The minimum load, in pounds per effective diamond cutting point in a bit face, at which the diamonds cut the rock. Below this load, the diamonds slide on the rock surface without penetrating the rock, and the diamonds polish, become dull, and are rendered unfit for further use in that particular ground unless reset. *Long* c. The pressure required to condense a gas at the critical temperature, above which, regardless of pressure, the gas cannot be liquefied. *AGI*

critical slope

The maximum angle with the horizontal at which a sloped bank of soil or given height of soil will stand unsupported. Syn: [angle of repose](#); angle of rest. *ASCE*

critical temperature

a. The temperature of a system at its critical point; for a one-component system; that temperature above which a substance can exist only in the gaseous state, no matter what pressure is exerted. See also: [temperature](#) b. Transformation temperature. c. The temperature at which a change takes place in the physical form of a substance; e.g., the change of diamond to the amorphous form of carbon begins at a temperature of 1,800 degrees F (982 degrees C) in the presence of oxygen. *Long* d. Synonymous for critical point if the pressure is constant. *ASM, I* e. The temperature above which the vapor phase cannot be condensed to liquid by an increase in pressure. See also: [temperature](#)

critical velocity

a. Reynolds' critical velocity is that at which fluid flow changes from laminar to turbulent, and where friction ceases to be proportional to the first power of the velocity and becomes proportional to a higher power. *Seelye, I* b. Kennedy's critical velocity is that of fluid flow in open channels that will neither deposit nor pick up silt. *Seelye, I* c. Belanger's critical velocity is that condition of fluid flow in open channels for which the velocity head equals one-half the mean depth. *Seelye, I*

critical void ratio

The void ratio corresponding to the critical density. *ASCE*

crocidolite

An asbestiform variety of riebeckite; forms lavender-blue, indigo-blue, or leek-green silky fibers and massive and earthy forms; suited for spinning and weaving. Also spelled krokitolit. Syn: [blue asbestos](#); [Cape blue](#).

crocidolite quartz

See: [tiger's-eye](#)

crocoisite

See: [crocoite](#)

crocoite

A monoclinic mineral, PbCrO_4 ; bright-red, yellowish-red, or orange. Syn: [red lead ore](#); [crocoisite](#).

crocus

A term used in the Milford, NH, quarries to denote gneiss or any other rock in contact with granite.

crocus martis

A name used for impure red ferric oxide pigments and polishing powders, usually produced by heating iron sulfate containing calcium sulfate, lime, or other inert filler. Also sometimes applied more generally to other impure oxides of red or yellow color. *CCD, 2*

crocus of antimony

Brownish-yellow; mainly sodium or potassium thioantimonite; $\text{Na}_3 \text{SbS}_3$ or $\text{K}_3 \text{SbS}_3$. Obtained as a slag in refining antimony. *Webster 3rd*

cronstedtite

A monoclinic or trigonal mineral, $\text{Fe}^{2+}_2 \text{Fe}^{3+} (\text{SiFe}^{3+}) \text{O}_5 (\text{OH})_4$; kaolinite-serpentine group; in low-temperature hydrothermal veins.

crook

A self-acting apparatus for running the hedges (boxes on runners) on inclines in step coalbeds.

crooked hole

A borehole that has deviated beyond the allowable limit from the vertical or from its intended course. *AGI*

crookesite

A tetragonal mineral, $\text{Cu}_7(\text{Tl,Ag})\text{Se}_4$; massive or compact.

crop

a. The outcrop of a lode; or the coal of poor quality at the outcropping of a seam. See also: [outcrop](#) b. Deprecated syn. of outcrop. --v. To appear at the surface of the ground; to outcrop. *AGI*

crop coal

a. Coal of inferior quality near the surface. CF: [exposed coalfield](#) *Fay* b. The coal next to the roof in a seam. *Nelson*

crop fall

A caving in of the surface at the outcrop of the bed; caused by mining operations. Applied also to falls occurring at points not on the outcrop of the bed. Synonymous with day fall. *Fay*

cropline

A line following the outcrop. *Austin*

crop load

The mixture of crushing bodies, ore particles, and water being tumbled in the ball mill.

cropping

a. Coal cutting beyond the normal cutting plane. *Mason* b. Portions of a vein or other rock formation exposed at the surface. *Fay* c. See: [outcrop](#) d. The operation of cutting off the end or ends of an ingot to remove the pipe and other defects. *CTD*

cropping coal

The leaving of a small thickness of coal at the bottom of the seam in a working place, usually in back water. The coal so left is termed "cropper coal." *Zern*

crop tin

The chief portion of tin ore separated from waste in the principal dressing beneficiation operation.

cross

See: [crosscut](#)

crossarm

a. The top member of a drill derrick of H-frame from which the sheave wheel is suspended. *Long* b. Horizontal bar fitted between two drill columns on which a small diamond or other type rock drill can be mounted. *Long*

cross assimilation

The simultaneous exchange of material from magma to wall rock and vice versa, tending to develop the same phases in both.

crossbar

The horizontal roof member of a timber set on mine roadways, or a flat supported by props on the face. See also: [beam](#)

cross-bedded

Having minor beds or laminae inclined to the main planes of stratification, e.g., cross-bedded sandstone.

crossbedding

a. The quality or state of being crossbedded. A crossbedded structure. *Webster 3rd* b. Lamination, in sedimentary rocks, confined to single beds and inclined to the general stratification. Caused by swift local currents, deltas, or swirling wind gusts, and esp. characteristic of sandstones, both aqueous and eolian. Syn: [cross lamination](#) c. Crossbedding is generally truncated by the overlying stratum. However, at the base of the crossbedded formation, the crossbedding is not truncated, but it approaches the contact with the underlying stratum in a broad tangential curve. *Forrester* d. The arrangement of laminations of strata transverse or oblique to the main planes of stratification of the strata concerned; inclined, often lenticular, beds between the main bedding planes. It is found only in granular sediments. *AGI* e. Syn: [inclined bedding](#) only in profiles at right angles to the current direction. *AGI*

cross-bladed chisel bit

Syn. for cross chopping bit. *Long*

cross-chopping bit

Bit with cutting edges made by two chisel edges crossing at right angles with the intersection of chisel edges at the center of the bit face. Used to chop (by impact) lost core or other obstructions in a borehole. Also called cross bit; cross-bladed chisel bit; cruciform bit. *Long*

cross conveyor

Any conveyor used for transporting ore or waste from one room or working place through a crosscut to an adjacent room or working place. Used principally where the cross conveyor receives ore or waste from a conveyor and delivers it to another conveyor or a car. *Jones, I*

crosscut

a. A small passageway driven at right angles to the main entry to connect it with a parallel entry or air course. b. A tunnel driven at an angle to the dip of the strata to connect different seams or workings. *Nelson* c. A crosscut may be a coal drivage. See also: [pillar-and-stall](#) *Nelson* d. An underground passage directed across an orebody to test its width and value or from a shaft to reach the orebody. See also: [level crosscut](#); cross. *Nelson* e. A horizontal opening driven across the course of a vein or in general across the direction of the main workings. A connection from a shaft to a vein. Syn: [cut-through](#) f. In room-and-pillar mining, the piercing of the pillars at more or less regular intervals for the purpose of haulage and ventilation. Syn: [breakthrough](#) g. In general, any drift driven across between any two openings for any mining purpose. h. A borehole directed so as to cut through a rock strata or ore vein essentially at right angles to the dip and strike of the rock strata, a vein, or a related structure. *Long* i. See: [stenton](#)

crossed belt

A driving belt that has a twist between the driving and the driven pulleys causing a reversal of direction. *Crispin*

crossed nicols

a. In optical mineralogy, an anisotropic crystal is interposed between the nicol prisms to observe its optical interference effects. The petrographic microscope is normally used with nicol prisms (or equivalent polarizing devices) in the crossed position. *AGI* b. Nicols is often capitalized (crossed Nicols). Two nicol prisms placed one in front of the other, or one below the other, and so oriented that their transmission planes for plane-polarized light are at right angles with the result that light transmitted by one is stopped by the other unless modified by some intervening body. *Webster 3rd* c. In polarized-light microscopy, the arrangement where the permitted electric vectors of the two nicol prisms are at right angles. See also: [crossed polars](#)

crossed polars

A common standard configuration used in polarized-light microscopy with the substage polarizing filter (polarizer) permitting plane polarized light with its electric vector in an east-west direction and the above-stage polarizing filter (analyzer) permitting plane polarized light with its electric vector in a north-south direction. Under these conditions all light is absorbed by the two polars. Introduction of any anisotropic transparent material into the light path repolarizes light between the polars so as to generate interference colors and other effects visible in the microscope ocular. See also: [crossed nicols](#)

crossed twinning

Repeated or polysynthetic twinning according to two twin laws with twin planes angled to one another and with twin domains so intimate that they appear overlapping in thin section; most notable in the feldspar and feldspathoid minerals, esp. microcline. Syn: [quadrille twinning](#); gridiron twinning; cross-hatched twinning.

cross entry

a. An entry or set of entries, turned from main entries, from which room entries are turned. *Federal Mine Safety* b. A horizontal gallery driven at an angle or at right angles to a main entry. *Nelson*

cross face

A coal face having a general direction between end and bord line. *TIME*

cross fault

A fault that strikes diagonally or perpendicularly to the strike of the faulted strata. *AGI*

cross fiber

Veins of fibrous minerals, esp. asbestos, in which the fibers are at right angles to the walls of the vein. CF: [slip fiber](#)

cross frog

A frog adapted for railroad tracks that cross at right angles. *Webster 2nd*

crossgate

a. A gate road driven at an angle off the main gate in longwall mining, to form new intermediate gates or new faces inside a disturbance. Well-sited crossgates result in

reduction of inby conveyors and in roadway maintenance. *Nelson* b. Eng. See: [crossheading](#) c. York. Short headings driven on the strike end at right angles to the main gates or roads. *Fay*

cross gateway

Aust. A road, through the goaf, that branches from the main gateway.

cross-hatched twinning

See: [crossed twinning](#)

crosshead

a. A runner or framework that runs on guides, placed a few feet above the sinking bucket to prevent it from swinging too violently. *Fay* b. A beam or rod stretching across the top of something; specifi., the bar at the end of a piston rod of a steam engine, which slides on the ways or guides fixed to the engine frame and connects the piston rod with the connecting rod. *Fay*

crosshead guide

A guide for making the crosshead of an engine move in a parallel line with the cylinder axis. *Standard*, 2

crossheading

a. A passage driven for ventilation from the airway to the gangway, or from one breast through the pillar to the adjoining working. Also called cross hole; cross gateway; headway. *Fay* b. One driven from one drift or level across to another to improve ventilation. *Pryor*, 3 c. A heading driven at an angle off the main level to cut off stalls or intermediate headings, and form new ones on the face side of the heading. Also called oblique heading; cutting-off road. *Nelson* d. Eng. A road in longwall working to cut off the gateways. Syn. for crossgate; slope. Also called crossbow; crossend. *SMRB*

crossite

A monoclinic mineral, $\text{Na}_2(\text{Mg,Fe})_3(\text{Al,Fe})_2\text{Si}_8\text{O}_{22}(\text{OH})_2$; amphibole group with $\text{Fe}^{3+}/(\text{Fe}^{3+} + \text{Al}) = 0.3-0.7$. CF: [glaucophane](#)

cross joint

a. A joint in an igneous rock oriented more or less perpendicular to the flow lines. Syn: [tension joint](#) b. A joint in sedimentary rocks that crosses more prominent joints at approximate right angles. *AGI*

cross-joint fan

In igneous rock, a fanlike pattern of cross joints that follow the arching of the flow lineation. *AGI*

cross lamination

a. The structure commonly present in granular sedimentary rocks that consists of tabular, irregularly lenticular, or wedge-shaped bodies lying essentially parallel to the general stratification and which themselves show a pronounced laminated structure in which the laminae are steeply inclined to the general bedding. Syn: [inclined bedding](#); [crossbedding](#); false bedding. *AGI* b. An arrangement of laminations, transverse to the planes of stratification of the strata concerned. They generally end abruptly at the top, but in general tend to become more or less parallel to the bedding planes below. *AGI* c. Cross-stratification with foresets less than 1 cm thick. *Pettijohn, 1*

cross-linking agent

The final ingredient added to a water gel or slurry, causing it to change from a liquid to a gel. *Dick, 2*

cross measure

A heading driven horizontally or nearly so, through or across inclined strata.

cross-measure borehole

A borehole drilled at an angle through the rock strata generally for the purpose of combustible gases drainage. *BS, 8*

cross-measure borehole system

See: [methane drainage](#)

cross-measure drift

a. A development drift driven across the strata from the surface to intersect and work coal seams. *Nelson* b. A development heading driven from a level in one coal seam to intersect and work upper or lower seams. *Nelson*

cross measure tunnel

A roadway or airway driven across pitching measures on, or nearly on, a level to reach a bed of coal or other objective, or to drain off water. *Zern*

crossover

A track device that permits rail traffic to cross over another track which heads in a different direction on the same level. Signal lights are activated to avoid collision on the crossover.

cross-pit conveyors

Conveyor structure crossing the benches of open pit mines to reduce the haul distance across the pit in terrace mining operations. *SME, 1*

cross poling

Short poling boards placed horizontally to cover the gap between runners in excavation trench timbering. See also: [runner](#)

cross section

a. A diagram or drawing that shows features transected by a given plane; specif. a vertical section drawn at right angles to the longer axis of a geologic feature, such as the trend of an orebody. *AGI* b. An actual exposure or cut that shows transected geologic features.--Adj: cross-sectional. Also spelled: cross-section. *AGI* c. A profile portraying an interpretation of a vertical section of the Earth explored by geophysical and/or geological methods. d. A horizontal grid system laid out on the ground for determining contours, quantities of earthwork, etc., by means of elevations of the grid points. *Seelye, 2*

cross-sectional area

The area of a surface cut by a plane passing through the body and perpendicular to the long axis of the body if one exists. If not, any such area cut by a plane.

cross-sectional method

An ore reserve estimation method in which assay and other data are projected to predetermined planes and the areas of influence of the assay data are determined mainly by judgment. This method is helpful not only for ore reserve computations, but also to mine planning. *Krumlauf*

cross spread

a. A seismic spread that makes a large angle to the line of traverse; it is used to determine the component of dip perpendicular to that line. *AGI* b. A seismic spread that is laid out in the pattern of a cross. *AGI*

cross-spur

A vein of quartz that crosses a lode.

cross-stone

See: [andalusite](#); staurolite; chiastolite; harmotome.

cross stoping

See: [overhand stoping](#)

cross-stratification

a. The minor laminations are oblique to the plane of the main stratum that they help to compose. See also: [crossbedding](#) b. The arrangement of layers at one or more angles to the dip of the formation. A cross-stratified unit is one with layers deposited at an angle to the original dip of the formation. Many investigators have used crossbedding and cross lamination as synonymous for cross-stratification, but it is proposed to restrict the terms crossbedding and cross lamination to a quantitative meaning depending on the thickness of the individual layers or cross strata. *Stokes*

crosstie

A timber or metal sill placed transversely under the rails of a railroad, tramway, or mine-car track. *Fay*

cross validation

A technique for testing the validity of a variogram model by kriging each sampled location with all of the other samples in the search neighborhood, and comparing the estimates with the true sample values. Interpretation of results, however, can often be difficult. Unusually large differences between estimated and true values may indicate the presence of "spatial outliers," or points that do not seem to belong with their surroundings.

crowd

a. The process of forcing a bucket into the digging, or the mechanism that does the forcing. Used chiefly in reference to machines that dig by pushing away from themselves. *Nichols, 2* b. Used by some drillers as a syn. for overfeed. CF: [overload](#) *Long* c. As used by handsetters, the uneven calking of a diamond resulting in its being pinched or forced out of its intended position in a bit. *Long* d. To place or set diamonds too closely together in the crown of a bit. *Long*

crowding

In power shovel nomenclature, crowding is the thrusting of the dipper stick forward over the shipper shaft; retracting is the reverse of crowding. *Carson, 1*

crowding battle

In froth flotation, a slanted board used to direct the rising mineralized froth toward the overflow lip of the cell. *Pryor, 3*

Crowe process

The treatment of pregnant cyanide solution to remove air before the gold is precipitated with zinc dust. Also called Merrill-Crowe process.

crowfoot

a. A tool with a sideclaw, for grasping and recovering broken rods in deep boreholes. b. Irregular or zigzag markings found in Tennessee marble. Also called stylolite. *AGI*

crown

a. The curved roof of a tunnel. *Nichols, 1* b. As used by the drilling and bit-setting industries in the United States, the portion of the bit inset or impregnated with diamonds formed by casting or pressure-molding and sintering processes; hence the steel bit blank to which the crown is attached is not considered part of the crown. Syn: [bit crown](#) c. A timber crossbar up to 16 ft (5 m) long, supported by two heavy legs, or uprights, one at each end. Crowns may be set at 3-ft (1-m) intervals; sometimes a roof bolt is put up through the center of the crown. *Nelson* d. The topmost part of a drill tripod, derrick, or mast. *Long* e. The part of a furnace forming the top or roof. f. The top or highest part of a mountain or an igneous intrusion; the summit. *AGI* g. The practically undisturbed material still in place and adjacent to the highest parts of the scarp along which a landslide moved. *AGI*

crown block

A pulley, set of pulleys, or sheaves at the top of a drill derrick on and over which the hoist and/or other lines run. Also called crown pulley; crown wheel. *Long*

crown die

See: [bit mold](#)

crown-in

In mining, a falling of the mine roof or a heave of the mine floor due to the pressure of overlying strata. CF: [creep](#)

crowning

The heaving or lifting of the floor beds along a roadway to form a ridge or crown along the centerline. *Nelson*

crown life

See: [bit life](#)

crown mold

See: [bit mold](#)

crown pillar

An ore pillar at the top of an open stope left for wall support and protection from wall sloughing above.

crown tree

A piece of timber set on props to support the mine roof. *Zern*

crown wheel

a. A wheel driven by a pinion, notably in the drive of a ball mill. Largest wheel of any reduction gear. *Pryor, 3* b. Syn: [crown block](#)

croystone

A variety of finely crystallized barite. *Standard, 2*

crucible

The hearth of a blast cupola, or open hearth furnace; a refractory vessel for melting or calcining metals, ores, etc.

crucible assay

See: [assay](#); lead button.

crucible clays

Ball clays that are relatively refractory; used in producing crucibles that will withstand high temperatures. *CCD, 2*

crucible steel

Steel made by melting blister bar, wrought iron, charcoal, and ferroalloys in crucibles that hold about 100 lb (45 kg). This was the first process to produce steel in a molten condition, hence the product called cast steel. Mainly used for the manufacture of tool steels, but now largely replaced by the electric-furnace process. *CTD*

crucible swelling number

The number that defines, by reference to a series of standard profiles, the size and shape of the residue produced when a standard weight of coal is heated under standard conditions. *BS, 1*

cruciform bit

a. See: [cross-chopping bit](#) b. Percussive rock drill bit having four chisel-shaped cutting edges in the form of a cross on the face of the bit. Also called cross bit. *Long*

crucite

a. See: [chiastolite](#); cross-stone. b. Pseudomorph of hematite or limonite after arsenopyrite.

crud

A solid-stabilized emulsion that tends to collect at the aqueous/organic interface in the settler of a solvent extraction circuit. *Kordosky*

crude

A substance in its natural unprocessed state. Crude ore or crude oil, for example. In a natural state; not cooked or prepared by fire or heat; not altered or prepared for use by any process; not refined. Syn. for raw; crude oil. *Webster 3rd*

crude anthracene

Solid product containing anthracene. Obtained on cooling the coal-tar distillate collected above 270 degrees C. *Bennett*

crude asbestos

Hand selected cross-vein material of longest fibres in native or unfiberized form. It comes in chunks and must be mechanically processed to develop the usefulness of the fibre. *Arbiter*

crude mica

The crude crystals or books as extracted from the mine. *Skow*

crude ore

The unconcentrated ore as it leaves the mine.

crude-ore bin

A bin in which ore is dumped as it comes from the mine.

crude sulfur

Elemental sulfur that is 99.0% to 99.9% pure and is free from arsenic, selenium, and tellurium. *USBM, 7*

crudy asbestos

Refers to asbestos that has been only partially milled, so that the fiber has not been fluffed but only separated from the rock. Most of the asbestos is still in the form of bundles of fibers like spicules. *AIME, 1*

crump

Ground movement, perhaps violent, due to failure under stress of ground surrounding underground workings usually in coal, so named because of sound produced. See also: [bump](#)

crush

a. A species of fault in coal. *Fay* b. Breakage of supports of underground workings under roof pressure. *Pryor, 3*

crushability

The relative ease of crushing a sample under standard conditions. *BS, 5*

crush belt

A belt of intensely crushed rock.

crush border

A microscopic, granular metamorphic structure sometimes characterizing adjacent feldspar particles in granite due to their having been crushed together during or subsequent to crystallization. *AGI*

crush breccia

A breccia formed essentially in situ by cataclasis, esp. along a fault. See also: [cataclasite](#); [crush conglomerate](#). CF: [tectonic breccia](#)

crush bursts

Rockbursts in which there is actual failure at the face accompanied by movement of the walls. *Higham*

crush conglomerate

a. A conglomerate produced by the crushing of rock strata in the shearing often accompanying folding. *Standard, 2* b. Similar to a fault breccia, except the fragments are more rounded in a crush conglomerate. *AGI* c. See: [tectonic conglomerate](#); pseudoconglomerate; crush breccia.

crushed gravel

The product resulting from the artificial crushing of gravel with substantially all fragments having at least one face resulting from fracture.

crushed stone

a. The product resulting from the artificial crushing of rocks, boulders, or large cobblestones, substantially all faces of which have resulted from the crushing operation. *ASTM* b. Term applied to irregular fragments of rock crushed or ground to smaller sizes after quarrying. Syn: [broken stone](#)

crushed vein

A mineralized zone or belt of crushed material. The crushing was caused by folding, faulting, or shearing. *Fay*

crusher

A machine for crushing rock or other materials. Among the various types of crushers are the ball-mill, gyratory-crusher, Hadsel mill, hammer mill, jaw crusher, rod mill, rolls, stamp mill, and tube mill. *Fay; Hess*

crusher feeder

In quarry industry, one who feeds broken rock into crusher after it is dumped from trucks or cars, by pushing it down a chute with a shovel or bar, or by pushing it directly into crusher from a platform. Also called crusher loader; crusher laborer; stone breaker; trap person. *DOT*

crusher man

a. In the mineral and nonmineral industry, including coal, quarry products, mineral and nonmineral ores, a person who operates a machine that crushes rock or other material and regulates the flow of such material into and from the crusher to the next point of processing or use. See also: [crusher](#); [crusher feeder](#); [crushing](#). b. In quarrying, a person who operates crusher through which broken quarry rock is run to break it into crushed stone for construction work. *DOT*

crusher rock

a. Term used in quarrying to describe the weathered overlying rock that occurs at most quarry operations and which is sold for use as road base. b. The total unscreened product of a stone crusher. *Shell*

crusher rolls

Steel or chilled iron roller with parallel horizontal axis and peripheries at a fixed distance apart so that rocks, coal, or other substances of greater thickness cannot pass between without crushing. Rolls may be toothed or ribbed, but for rock, including ores, the surfaces are usually smooth. *Hess*

crusher-run stone

Rock that has been broken in a mechanical crusher and has not been subjected to any subsequent screening process. *Taylor*

crusher setting

The distance between roll faces or plates in a crusher. In the case of jaw and roll crushers, the setting controls the maximum size, and to some extent the grading of the product produced. The best setting is usually that which produces 10% to 15% of oversize pieces, which are fed back for recrushing. Gyratory breakers do not permit any marked variation in the setting or in the size of the product. *Nelson*

crusher stower

A machine that crushes ripping stone in headings and projects it through a pipe into gate side packs. It may also be used for filling old roadways or roof cavities. See also: [pneumatic stowing](#)

crush gate

A gate in a development face designed to be abandoned with a view to localizing the crush effect consequent on the winning of the coal immediately above or immediately below the development face. *TIME*

crushing

Size reduction into relatively coarse particles by stamps, crushers, or rolls. See also: [comminution](#)

crushing bort

Diamond material with radial or confused crystal structure lacking distinct cleavage forms. Color is faintly milky to grayish or dark and is suitable only for crushing into grit powder or dust. The Bakwanga Mine, Republic of the Congo, is the principal source of this material. Diamond fragments from cutting establishments or recovered from waste are frequently classed as crushing bort. *Chandler*

crushing bortz

See: [bort](#)

crushing cycle

The sequence of operations in crushing a material, including, e.g., the screening of the primary product and the recirculation of the screen overflow. *BS*, 5

crushing machine

A machine constructed to pulverize or crush stone and other hard and brittle materials; a stone crusher. *Fay*

crushing mill

See: [stamp mill](#); crusher.

crushing roll

A machine consisting of two heavy rolls between which ore, coal, or other mineral is crushed. Sometimes the rolls are toothed or ribbed, but for ore their surface is generally smooth. See also: [roll](#)

crushing strength

a. The resistance that a rock offers to vertical pressure placed upon it. It is measured by applying graduated pressure to a cube, 1 in (2.54 cm) square, of the rock tested. A crushing strength of 4,000 lb means that a cubic inch of the rock withstands pressure to 4,000 lb (111 kg/cm³) before crushing. The crushing strength is greater with shorter prisms and less with longer prisms. *Fay* b. The pressure or load at which a material fails in compression; used for comparing the strength of walling and lining materials, such as concrete, masonry, stone, packs, etc. *Nelson* c. The maximum load per unit area, applied at a specified rate, that a material will withstand before it fails. Typical ranges of value for some ceramic materials are fireclay and silica refractories, 2,000 to 5,000 psi (13.8 to 34.4 MPa); common building bricks, 2,000 to 6,000 psi (13.8 to 41.4 MPa); engineering bricks, class A, above 10,000 psi (69.0 MPa); sintered alumina, above 50,000 psi (344 MPa). *Dodd*

crushing test

a. A test of the suitability of stone to be used for roads or building purposes; a cylindrical specimen of the stone, of diameter 1 in (2.54 cm) and 1 in long, is subjected to axial compression in a testing machine. Syn: [unconfined compression test](#) b. A radial compressive test applied to tubing, sintered-metal bearings, or other similar products for determining radial crushing strength (maximum load in compression). *ASM, I* c. An axial compressive test for determining quality of tubing, such as soundness of weld in welded tubing. *ASM, I*

crush line

A line along which rocks under great compression yield, usually with the production of schistosity.

crush movement

Compression, thrust, or lateral movement tending to develop shattered zones in rocks. *Fay*

crush plane

A plane defining zones of shattering that result from lateral thrust. *Fay*

crush zone

A zone of faulting and brecciation in rocks. *Fay*

crust

a. The outermost layer or shell of the Earth, defined according to various criteria, including seismic velocity, density and composition; that part of the Earth above the Mohorovicic discontinuity, made up of the sial, or the sial and the sima. It represents less than 0.1% of the Earth's total volume. CF: [tectonosphere](#) b. A laminated, commonly crinkled deposit of algal dust, filamentous or bladed algae, or clots (from slightly arched forms to bulbous cabbagelike heads) of algae, formed on rocks, fossils, or other particulate matter by accretion, aggregation, or flocculation. *AGI*

crustal abundance

See: [clarke](#)

crustal plate

A portion of the Earth's crust that moves as a relatively rigid unit with respect to adjacent crustal plates that collectively cover the outermost part of the solid Earth. *AGI*

crustification

a. The layering of crusts of different minerals deposited successively on the walls of a cavity. b. Suggested for those deposits of minerals and ores that are in layers or crusts and which, therefore, have been deposited from solution.

crustified banding

A structure of vein fillings resulting from a succession, often a rhythmic deposition, of crusts of unlike minerals on the walls of an open space.

crustified vein

A vein filled with a succession of crusts of ore and gangue material.

crut

A short heading excavated into the face of a coal seam; a heading or drift across the strata, or from one deposit to another. Syn: [tunnel](#) *Nelson*

crutt

N. Staff.; Som. A road or heading driven in coal measures, turned from a level, etc.

Cryderman loader

A clamshell-type loader activated by hydraulic cylinders operated from a traveling base suspended on the stage. Used in shaft sinking operations. *Lewis*

cryogenic switching elements

In information processing, logical switching information processing elements that utilize the variability of the transition to superconductivity as a function of magnetic field strength. *Hunt*

cryolite

A monoclinic mineral, $\text{Na}_3 \text{AlF}_6$; waxy colorless to white (disappears in water owing to low refractive index); soft; in veinlike cleavable masses in granite at Ivigtut, Greenland. Syn: [Greenland spar](#); ice stone.

cryolithionite

An isometric mineral, $\text{Na}_3 \text{Li}_3 \text{Al}_2 \text{F}_{12}$; forms large colorless rhombic dodecahedra; at Ivigtut, Greenland, and the Ural Mountains, Russia.

cryology

a. In the United States, the study of refrigeration. *AGI* b. In Europe, a syn. for glaciology. See: [glaciology](#) c. The study of ice and snow. *AGI* d. The study of sea ice. *AGI*

cryoluminescence

The low-temperature increase of weak luminescence, or its development in normally nonfluorescent material. *AGI*

cryopedology

The study of the processes of intensive frost action and the occurrence of frozen ground, esp. permafrost, including the civil-engineering methods used to overcome or minimize the difficulties involved. *AGI*

cryosphere

The part of the Earth's surface that is perennially frozen; the zone of the Earth where ice and frozen ground are formed. *AGI*

cryoturbation

Frost action, including frost heaving.

crypthydrous

Refers to vegetable accumulations laid down on a wet substratum in contrast to those deposited under water. CF: [phenhydrous](#)

cryptoclastic

Said of a rock of compact texture, composed of extremely small, fragmental particles that are barely visible under a microscope.

cryptocrystalline

a. Said of the texture of a rock consisting of crystals that are too small to be recognized and separately distinguished even under the ordinary microscope (although crystallinity may be shown by use of the electron microscope); indistinctly crystalline, as evidenced by a confused aggregate effect under polarized light. Also, said of a rock with such a texture. Syn: [microaphanitic](#); [microcryptocrystalline](#); [microcrystalline](#); microfelsitic. CF: [dubiocrystalline](#) b. Said of a rock or rock texture of a crystalline rock in which the crystals are too small to be recognized megascopically. This usage is not recommended until crystallinity can be established by polarized-light microscopy or X-ray diffraction. Syn: [aphanitic](#) c. Descriptive of a crystalline texture of a carbonate sedimentary rock having discrete crystals with maximum diameters variously set at 1 μ m, 4 μ m, and 10 μ m.

cryptoexplosion structure

A nongenetic, descriptive term for a roughly circular structure formed by the sudden, explosive release of energy and exhibiting intense, often localized rock deformation with no obvious relation to volcanic or tectonic activity. Many cryptoexplosion structures are believed to be the result of impact of meteorites of asteroidal dimensions; others may have been produced by volcanic activity. The term largely replaces the earlier term cryptovolcanic structure. *AGI*

cryptographic

a. Denoting a texture of rocks so fine that the individual constituents cannot be distinguished under a microscope. Usually the result of a cryptocrystalline intergrowth of quartz and feldspar. See also: [cryptocrystalline](#) b. Having a graphic texture of intergrowths too small to be resolved with a light microscope.

cryptohalite

An isometric mineral, $(\text{NH}_4)_2 \text{SiF}_6$; dimorphous with bararite.

cryptohydrous

The conditions under which coal was formed. Decay under water in swamps. *Tomkeieff*

cryptomagmatic

Said of a hydrothermal mineral deposit without demonstrable relationship to igneous processes. The term is little used. CF: [apomagmatic](#); telemagmatic. *AGI*

cryptomelane

a. A monoclinic mineral, $K(Mn^{4+}, Mn^{2+})_8 O_{16}$; pseudotetragonal. CF: [psilomelane](#) b. The mineral group coronadite, cryptomelane, hollandite, manjiroite, and priderite.

cryptomere

See: [aphanite](#)

cryptomerous

a. A very fine crystalline texture. *Stokes* b. Of or pertaining to cryptomere. *Johannsen*

cryptoperthite

Extremely fine-grained perthite with submicroscopic lamellae (1 to 5 μ m) detectable only by X-ray diffraction or electron microscopy. The K-rich host may be sanidine, orthoclase, or microcline; the Na-rich phase may be albite or analbite. CF: [perthite](#); [microperthite](#).

cryptovolcanic structure

A circular structure lacking evidence of shock metamorphism or of meteorite impact and therefore presumed to be of igneous origin, but lacking exposed igneous rocks or obvious volcanic features; a rock structure produced by concealed volcanic activity. Preferred term: cryptoexplosion structure. *AGI*

Cryptozoic

a. Eon of hidden life. Syn. of Precambrian. *AGI* b. That part of geologic time represented by rocks in which evidence of life is only slight and of primitive forms. CF: [Phanerozoic](#)

crystal

a. A regular polyhedral form, bounded by planes, which is assumed by a chemical element or compound, under the action of its intermolecular forces, which passing, under

suitable conditions, from the state of a liquid or gas to that of a solid. A crystal is characterized first by its definite internal molecular structure and second, by its external form. *Fay* b. The regular polyhedral form, bounded by plane surfaces, which is the outward expression of a periodic or regularly repeating internal arrangement of atoms. See also: [crystal face](#) c. A body formed by the solidification under favorable conditions of a chemical element, a compound, or an isomorphous mixture and having a regularly repeating internal arrangement of its atoms; esp. such a body that has natural external plane faces as a result of the internal structure. *Webster 3rd* d. Quartz that is transparent or nearly so and that is either colorless or only slightly tinged. Also a piece of this material. Also called rock crystal. *Webster 3rd* e. A colorless transparent diamond. *Webster 3rd* f. As an adj., consisting of or resembling crystal. Syn. for crystalline; clear; transparent. Relating to or using a crystal. *Webster 3rd* g. A regular polyhedron exhibited by a chemical element or compound where its atomic particles assume a periodic array under suitable physical and chemical conditions. The external form is a low-energy response to the symmetry of the internal forces with each face parallel to a high-density plane of atomic particles. h. Any solid material with a periodic internal structure. Syn: [crystalline](#) i. Glass of superior quality and high density and luster (resulting from inclusion of lead salts in old objects), commonly with ornamental cutting, e.g., flint glass. j. An adj. referring to material properties, e.g., crystal structure (for internal periodicity), crystal solution (as between end members of a mineral series).

crystal aggregate

A number of crystals grown together so that each crystal in the group is large enough to be seen by the unaided eye and each crystal is more or less perfect. In gemmology, it differs from a crystalline aggregate, as a homogenous gem stone can be cut only from an individual crystal of a crystal aggregate. Syn: [crystal group](#)

crystal axes

Imaginary lines passing through a crystal in important symmetry directions, intersecting in the origin at the center of the crystal. The axes are usually three in number, and they are chosen to act as a frame of reference by means of which the relative positions of the crystal faces can be described. *Anderson*

crystal axis

a. A reference axis used for the description of the vectorial properties of a crystal. There are generally three noncoplanar axes, chosen parallel to the edges of the unit cell of the crystal structure so as to be parallel to symmetry directions if possible. *AGI* b. One of three minimal noncoplanar reference lines used to describe the vectorial properties of crystalline materials. Syn: [crystallographic axis](#) c. A line parallel to the intersections of crystal faces. Syn: [zone axis](#) d. A line about which crystal symmetry appears distributed. Syn: [symmetry axis](#) e. A line about which a part of a crystal appears to have rotated in a fashion not permitted by the symmetry group of the crystal. Syn: [twin axis](#)

crystal bar

Hafnium and zirconium produced by the van Arkel and de Boer process. *Thomas*

crystal casts

Fillings of a cavity left by solution or sublimation of a crystal embedded in a fine-grained sediment. *Pettijohn, 1*

crystal chemistry

The study of the relations among chemical composition, internal structure, and the physical properties of crystalline matter. *AGI*

crystal class

a. One of the 32 crystallographically possible combinations or groups of symmetry operations that leave one point, or origin, fixed. *AGI* b. All minerals having the symmetry of one of the 32 point groups belong to the same crystal class. CF: [point group](#)

crystal defect

Any deviation from perfect periodicity in a crystal structure. Some defects depend on temperature, mainly point defects; others depend on the specific history of the crystal. The presence of defects alters the physical properties of crystals. CF: [Frenkel defect](#); [point defect](#); line defect; volume defect.

crystal defects

Irregularities in a lattice structure that affect resistance to crushing. Microdefects are due to irregular distribution of ions. Macrodefects are incipient strain areas or discontinuities in an otherwise regular lattice. Mosaic defects are orderly blocks of regular lattice that are packed together to form a larger and imperfect particle. *Pryor, 3*

crystal diamagnetism

The abnormal ratio of magnetization to the magnetizing force responsible for it, as observed in some crystals, such as those of bismuth. *Hess*

crystal face

a. One of the several flat or plane exterior surfaces of a crystal. See also: [crystal](#) b. A planar surface developed on a crystal during its growth. Crystal faces tend to parallel planes of high lattice-point density (Bravais' law) with the result that they make rational

intercepts with the crystallographic axes and may be assigned rational indices, e.g., (hkl).
CF: [Miller indices](#)

crystal flotation

The floating of lighter-weight crystals in a body of magma. CF: [crystal settling](#)

crystal form

a. The form or shape in which crystals occur; the cube, the octahedron, and others. b. All crystal faces related by the symmetry elements of the point group of the crystal structure belong to the same crystal form. Crystal forms are designated by the indices of the unit face enclosed in braces, e.g., hkl . Forms are closed if they singly enclose a volume and open if two or more forms are required. The terms "prism," "pyramid," "cube," "octahedron," and "tetrahedron" refer to crystal forms. A crystal form is ideal when all faces are the same size. Syn: [crystalline form](#)

crystal fractionation

Magmatic differentiation resulting from the floating or settling, under gravity, of mineral crystals as they form. CF: [fractional crystallization](#) *AGI*

crystal group

See: [crystal aggregate](#)

crystal growth

The study of conditions for growing crystals experimentally, esp. in the control of chemical and physical properties and in application to the growth history of natural crystals. Also the microchemical and isotopic study of crystals for the physical and chemical constraints on their formation.

crystal habit

The forms typically appearing on specimens of a mineral species or group, rarely all the forms permitted by its point group. Crystal habits range from highly diverse, e.g., calcite, to almost never showing crystal faces, e.g., turquoise. In addition to describing mineral habits with form names, e.g., prismatic, pyramidal, or tetrahedral, other names for appearances are used, e.g., fibrous, columnar, platy, or botryoidal. Intergrowths are given by specific description. *Pryor, 3*

crystal indices

a. Numbers or other representations that indicate the inclination of a crystal face to the crystal axes. b. Numbers based on the rational intercepts of crystal faces with crystallographic axes. The Miller index is the reciprocal of a face's axial intercepts. Indices of crystal faces are enclosed in parentheses (hkl), crystal forms in braces hkl, crystal directions in brackets [hkl], and Bragg indices with no closure hkl. For crystals with hexagonal and trigonal symmetry, Miller-Bravais indices (hkil) may be used although the added intercept and index number are redundant ($h+k+i=0$). Not all mineralogists follow this usage. CF: [Miller indices](#)

crystal lattice

a. The regular and repeated three-dimensional arrangement of atoms that distinguishes crystalline solids from all other states of matter. Essentially the regularity displayed by a crystal lattice is that of a three-dimensional mesh that divides space into identical parallelepipeds. Imagine a number of identical atoms placed at the intersections of such a mesh; then we have what is known as a simple lattice (synonymous with Bravais lattice). *AGI* b. A periodic array of points in three dimensions such that each point is in an identical point environment. Fourteen possible lattices that are used to describe the structural patterns are found in all crystalline materials by assigning an asymmetric unit to each lattice point. Syn: [Bravais lattice](#); [space lattice](#); [direct lattice](#); translation lattice. CF: [reciprocal lattice](#)

crystalliferous

Producing or bearing crystals. *Webster 3rd*

crystalliform

Having a crystalline form. *Standard, 2*

crystalline

a. Made of crystal. *Webster 3rd* b. Resembling a crystal; clear, transparent, pure. *AGI* c. Pertaining to or having the nature of a crystal, or formed by crystallization; specif. having a crystal structure or a regular arrangement of atoms in a space lattice. Ant: amorphous. Said of a mineral particle of any size, having the internal structure of a crystal, but lacking well-developed crystal faces or an external form that reflects the internal structure. *AGI* d. Said of a rock consisting wholly of crystals or fragments of crystals; esp. said of an igneous rock developed through cooling from a molten state and containing no glass, or of a metamorphic rock that has undergone recrystallization as a result of temperature and pressure changes. The term may also be applied to certain sedimentary rocks (such as quartzite, some limestones, evaporites) composed entirely of contiguous crystals. *AGI* e. Said of the texture of a crystalline rock characterized by closely fitting or interlocking particles (many having crystal faces and boundaries) that have developed in the rock by simultaneous growth. A crystalline rock. Term is usually

used in the plural; e.g., the Precambrian crystalline. This usage is not recommended. *AGI*
f. Referring to a homogeneous solid material that has long-range periodic order of its atomic constituents. Crystalline materials distinctly diffract X-rays. g. Referring to a rock composed of crystalline minerals, e.g., granite. h. Referring to the texture of a rock composed of contiguous mineral crystals with or without crystal faces. i. Referring to underlying rock with coarse texture as opposed to overlying noncrystalline or finely crystalline rock, e.g., Precambrian crystalline basement.

crystalline aggregate

An aggregate of crystalline intergrowths, such as granite, that does not show well-defined crystal forms.

crystalline flake graphite

See: [flake graphite](#)

crystalline form

a. The external geometrical shape of a crystal. *CMD* b. See: [crystal form](#)

crystalline grains

Minute crystals or crystalline particles which compose a granular crystalline aggregate. Distinguished from minute fiberlike crystals which compose fibrous crystalline aggregates.

crystalline granular texture

A primary texture due to crystallization from an aqueous medium, as in rock salt (halite), gypsum, and anhydrite.

crystalline limestone

a. A metamorphosed limestone; a marble formed by recrystallization of limestone as a result of metamorphism. *AGI* b. A calcarenite with crystalline calcite cement formed in optical continuity with crystalline fossil fragments by diagenesis. *AGI* c. A limestone formed of abundant calcite crystals as a result of diagenesis; specif. a limestone in which calcite crystals larger than 20 μ m in diameter are the predominant components. Examples include the crinoidal limestones whose fragments have been enlarged by growth of calcite. CF: [marble](#)

crystalline quartz

A term used to distinguish all the varieties of quartz which are not cryptocrystalline, such as rock crystal, amethyst, citrine, cairngorm, rose quartz, tiger eye, etc.

crystalline rock

a. An inexact, but convenient term designating an igneous or metamorphic rock, as opposed to a sedimentary rock. *AGI* b. A rock consisting wholly of relatively large mineral grains, e.g., a plutonic rock, an igneous rock lacking glassy material, or a metamorphic rock. *AGI* c. The term has also been applied to sedimentary rocks, e.g., some limestones, that are composed of coarsely crystalline grains or exhibit a texture formed by partial or complete recrystallization. *AGI*

crystalline structure

See: [crystal structure](#)

crystalline tonstein

This type of tonstein contains vermicular, prismatic, or tabular kaolinite crystals and may be either light or dark in color according to the proportion of contained carbonaceous matter. Occasionally granular kaolinite may also be recognized. The crystals lie embedded in either a finely crystalline or cryptocrystalline kaolinite groundmass. *IHCP*

crystallinity

a. The degree to which a rock (esp. an igneous rock) is crystalline (holocrystalline, hypocrySTALLINE, etc.). *AGI* b. The degree to which the crystalline character of an igneous rock is developed (e.g., macrocrystalline, microcrystalline, or cryptocrystalline) or is apparent (e.g., phaneritic or aphanitic). *AGI*

crystallite

a. A broad term applied to a minute body of unknown mineralogic composition, or crystal form that does not polarize light. Crystallites represent the initial stage of crystallization of a magma or of a glass. Syn: [crystallitic](#) b. Very small crystals in a mass or matrix. c. A nucleus from which a crystal may grow. d. Minute spots of double refraction in a glassy matrix.

crystallitic

Of, pertaining to, or formed of, crystallites.

crystallization

a. The process through which crystalline phases separate from a fluid, a viscous, or a dispersed state (gas, liquid solution, or rigid solution). *Holmes, 1* b. The process of crystallizing. A form of body resulting from crystallizing. *Webster 3rd* c. Formation of crystalline phases during the cooling of a melt or precipitation from a solution.

crystallization differentiation

The progressive change in composition of the liquid fraction of a magma as a result of the crystallization of mineral phases that differ in composition from the magma. *AGI*

crystallization interval

a. The interval of temperature (or less frequently pressure) between the formation of the first crystal and the disappearance of the last drop of liquid from a magma on cooling. It usually excludes the late-stage aqueous fluids. *AGI* b. When referring to a given mineral, the range or the ranges of temperatures over which that particular phase is in equilibrium with liquid. In the case of equilibria along reaction lines or reaction surfaces, crystallization intervals, as thus defined, include temperature ranges in which certain solid phases are actually decreasing in amount with decrease in temperature. Syn: [freezing interval](#)

crystallization nucleus

A small particle of any kind around which crystals begin to form when a substance crystallizes.

crystallization systems

a. The 32 possible crystal groups, distinguished from one another by their symmetry, are classified under 6 systems, each characterized by the relative lengths and inclinations of the assumed crystallographic axes. These are isometric, tetragonal, hexagonal, orthorhombic, monoclinic, and triclinic. *Fay* b. See: [crystal systems](#)

crystallize

a. To cause to form crystals or to assume crystalline form; esp. to cause to assume perfect or large crystals. To cause to take a fixed and definite form. To become converted into crystals. To solidify by crystallizing. To deposit crystals. To become fixed and definite in form. *Webster 3rd* b. Any process by which matter becomes crystalline from a noncrystalline state. Also spelled "crystalize."

crystallized coal

See: [cone-in-cone structure](#)

crystallizing force

a. The potentiality, or the expansive force, by which a mineral tends to develop its own crystal form against the resistance of the surrounding solid mass. This may be a differential force that causes the crystal to grow preferentially and more rapidly in one crystallographic direction than in another. b. Expulsion of foreign constituent from a growing crystal by diffusion or mechanical displacement. c. Expansion resulting from a crystal phase that is less dense than its noncrystalline melt phase, e.g., freezing water splitting rock or bursting pipes.

crystalloblast

A crystal of a mineral produced entirely by metamorphic processes. See also: [idioblast](#); [xenoblast](#). Adj: crystalloblastic. *AGI*

crystalloblastesis

Deformation by metamorphic recrystallization. *Knopf*

crystalloblastic

a. Pertaining to a crystalloblast. *AGI* b. Said of a crystalline texture produced by metamorphic recrystallization under conditions of high viscosity and directed pressure, in contrast to igneous rock textures that are the result of successive crystallization of minerals under conditions of relatively low viscosity and nearly uniform pressure (Becke, 1903). CF: [homeoblastic](#); [heteroblastic](#). *AGI* c. A metamorphic texture wherein one or more mineral species grows substantially larger than the rock matrix, e.g., garnet schist. CF: [porphyroblastic](#); [granoblastic](#). d. A crystalline texture owed to metamorphic recrystallization. A characteristic of this texture is that the essential constituents are simultaneous crystallizations and are not found in sequence, so that each may be found as inclusions in all the others.

crystalloblastic series

An arrangement of metamorphic minerals in order of decreasing form energy, so that crystals of any of the listed minerals tend to assume idioblastic outlines at surfaces of contact with simultaneously developed crystals of all minerals occupying lower positions in the series. *AGI*

crystallochemical element

An element essential to the composition and the structure of a mineral. *AGI*

crystallogenesis

The production or formation of crystals. Adj: crystallogenic.

crystallogeny

a. The science and the theory of the production of crystals. *Standard*, 2 b. That branch of materials science that deals with the formation or growth of crystals. CF: [chemical mineralogy](#); [experimental mineralogy](#); phase equilibria.

crystallogram

A record, photographic or electronic, of crystal structure obtained by means of X-ray diffraction. CF: [Laue diagram](#); [Laue photograph](#); powder pattern.

crystallographic axes

a. Three axes intersecting at right angles, the vertical one being the x axis and the two horizontal ones the y and z. The position of a crystal face is defined by the ratio of its intercepts with these axes. *Pryor*, 3 b. The three noncoplanar reference vectors used to describe crystal properties. Depending upon the crystal system, these axes are not necessarily orthogonal nor of equal length, with angle alpha between axes b and c, beta between a and c, and gamma between a and b. Axes of equal length are labeled a. Where one axis is unique (hexad, tetrad, triad, or monad), convention sets it vertical and labels it c. A unique diad may be labelled c (first crystallographic setting) or b (second setting, preferred by mineralogists). By convention positive b is plotted to the right and positive a toward the observer. Some crystal classes with a unique triad may be referred to a set of three nonorthogonal axes of equal length at internal angle alpha, i.e., rhombohedral coordinates a_r . In the case of a unique triad or hexad, a fourth redundant axis a_3 may be added for convenience. CF: [axis](#); [coordinate system](#); crystal systems; fold.

crystallographic axis

See: [crystal axis](#)

crystallographic direction

a. Refers to directions in the various crystal systems that correspond with the growth of the mineral and often with the direction of one of the faces of the original crystal itself. b. Vectors referred to as crystallographic axes. Because of crystalline periodicity, significant directions within a crystal are determined by the rational intercepts with the crystallographic axes and may be rendered in terms of Miller indices enclosed in brackets, e.g., [hkl] or [hkil].

crystallographic planes

a. Any set of parallel and equally spaced planes that may be supposed to pass through the centers of atoms in crystals. As every plane must pass through atomic centers and no centers must be situated between planes, the distance between successive planes in a set depends on their direction in relation to the arrangement of atomic centers. *CTD* b. Those planes that make rational intercepts with crystallographic axes and that may be noted by their intercept reciprocals, the Miller indices enclosed in parentheses, i.e., (hkl) or (hkil). Such planes may represent crystal faces, cleavage planes, twin planes, lattice points, or planes of atomic particles in a crystal structure.

crystallographic system

a. Any of the major units of crystal classification, embracing one or more symmetry classes. *CTD* b. See: [crystal system](#); holohedral.

crystallographic texture

A texture of mineral deposits formed by replacement or exsolution, in which the distribution and form of the inclusions are controlled by the crystallography of the host mineral. *AGI*

crystallography

a. The study of crystals, including their growth, structure, physical properties, and classification by form. *AGI* b. The science of the geometry of crystals and crystalline materials that results from symmetry generated by the periodicity of their atomic particles. See also: [symmetry](#)

crystalloid

a. Having some or all of the properties of a crystal. b. A microscopic crystal that, when examined under a microscope, polarizes light but has no crystal outline or readily determinable optical properties. CF: [crystallite](#); [microlite](#). *AGI*

crystallogology

The science of crystals and crystalline materials. It embraces crystallography and crystallogeny.

crystallo luminescence

The emission of light by a substance during its crystallization. *AGI*

crystallothraumatic

A descriptive term applied to igneous rocks with an orbicular texture in which early phenocrysts form the nuclei of the orbicules (Eskola, 1938). CF: [isothraumatic](#); [heterothraumatic](#); [homeothraumatic](#). *AGI*

crystal material

Any substance possessing crystal structure but no definite geometric form visible to the unaided eye. Also known as crystalline material.

crystal mush

Partially crystallized magma; an aggregate of solid crystals lubricated by compressed water vapor. *AGI*

crystal optics

a. The science that treats of the transmission of light in crystals. *Fay* b. The study and characterization of the optical properties of crystalline materials. Because each mineral species is a unique combination of chemistry and crystal symmetry, use of optical properties of minerals, both opaque and transparent, for their characterization and identification is a well-developed art.

crystal pattern

A space lattice of a crystal structure. See also: [space lattice](#) *Hackh*

crystal recovery

The recovery of the original properties in a crystal that has been distorted by stress resulting from continued relief from stress, heating, or decrease in the speed of deformation. *Knopf*

crystal rectifier

A point contact between a metal and a crystal (such as copper and galena), or between two crystals (such as zincite and bornite). It has marked unidirectional conductivity. *CTD*

crystals

a. Trade term for fourth-grade diamonds; colorless diamonds. *Hess* b. Atomic structures with long-range order. (Euhedral surfaces are not required.) *Van Vlack* c. Geometrical forms of planar faces assumed by minerals and other crystalline materials when grown under appropriate conditions. d. Australian syn. for drill diamonds.

crystal sandstone

a. A sandstone in which the quartz grains have been enlarged by deposition of silica so that the grains show regenerated crystal facets and sometimes nearly perfect quartz euhedra. Crystal sandstones of this nature sparkle in bright sunlight. *AGI* b. A sandstone in which calcite has been deposited in the pores in large patches or units having a single crystallographic orientation, resulting in a poikiloblastic or luster-mottling effect. In some rare sandstones with incomplete cementation, the carbonate occurs as sand-filled scalenohedra of calcite--sand crystals. See also: [sand crystal](#) *AGI*

crystal sedimentation

See: [crystal settling](#)

crystal settling

In a magma, the sinking of crystals because of their greater density, sometimes aided by magmatic convection. It results in crystal accumulation, which develops layering. CF: [crystal flotation](#) Syn: [crystal sedimentation](#)

crystal solution

The replacement of one chemical element by others in a crystal structure without changing its symmetry. Syn: [solid solution](#)

crystal sorting

The separation, by any process, of crystals from a magma, or of one crystal phase from another during crystallization of the magma. *AGI*

crystal spectrometer

An X-ray spectrometer employing a crystal grating. *Webster 3rd*

crystal structure

a. The periodic or repeated arrangement of atoms in a crystal. *AGI* b. The arrangement in most pure metals may be imitated by packing spheres, and the same applies to many of the constituents of alloys. *CTD* c. The periodic array of atomic particles as represented by their symmetrical disposition. Syn: [crystalline structure](#)

crystal system

See: [crystallographic system](#)

crystal systems

a. A classification of crystals based on the intercepts made on the crystallographic axes by certain crystal faces (or bounding planes). Syn: [crystallization systems](#) *CMD* b. The six main symmetry groups into which all crystals, whether natural or artificial, can be classified. See also: [symmetry](#) c. The classification of point groups (and their associated crystal classes) and space lattices into seven (or six) symmetry systems; e.g., isometric (three equal orthogonal crystal axes), hexagonal (a unique hexad), trigonal (a unique triad), tetragonal (a unique tetrad), orthorhombic (three orthogonal diads), monoclinic (one diad inclined to an axial plane), and triclinic (no symmetry higher than a center) systems. An alternative classification of six systems assigns hexagonal and rhombohedral divisions to the hexagonal system with a different assignment of point groups having unique triads and hexads. CF: [tetragonal](#)

crystal tuff

An indurated deposit of volcanic ash dominantly composed of intratelluric crystals and crystal fragments. CF: [tuff](#); [crystal-vitric tuff](#); lithic tuff; vitric tuff.

crystal-vitric tuff

A tuff that consists of fragments of crystals and volcanic glass. CF: [crystal tuff](#); [vitric tuff](#). *AGI*

crystobalite

Crystal modification of quartz, which is formed by heating clay silica bodies at temperatures above 1,100 degrees C. Heating increases the thermal expansion and decreases the danger of crazing. *Rosenthal*

C.S. jar collar

A thick-wall steel collar, the inside surface of which is tapered to fit two serrated-face taper sleeves. The assembly may be fitted at any point over a casing or pipe and serves as a drive collar in sinking casing or pipe by driving and chopping. Also called self-tightening jar collar; self-tightening jar coupling; Simmons jar block, Simmons jar collar. *Long*

C.T. Nozzle

Trade name; a refractory nozzle for steel pouring designed to give a constant teeming rate (therefore, the name). The nozzle consists of an outer fireclay shell and a refractory insert of different composition. Strictly speaking, the term refers to a particular type of insert developed for the teeming of free cutting steels. *Dodd*

cubanite

An orthorhombic mineral, CuFe_2S_3 ; dimorphous with isocubanite. Formerly called chalmersite.

cubbyhole

A niche cut in the rib or wall of an underground mine for the storage of explosives or detonators.

cube

a. Scot. A ventilating furnace in a mine. b. A relatively rare crystal form of diamond having six equal-area faces at right angles to each other. *Long* c. A rectangular prism having squares for its ends and faces. *Jones, 2* d. A crystal form of six equivalent (not necessarily square) and mutually perpendicular faces, with indices of 100. *AGI* e. A hexahedron, a crystal form of the isometric system consisting of six mutually orthogonal planar faces. Conditions of growth may yield crystal faces that are not perfectly square, but are at mutual right angles. f. A diamond in cube form. g. Dice, e.g., pyrite cubes known locally as devil's dice. h. Pseudocubic forms, e.g., quartz rhombohedra with faces at near right angles, tetragonal prisms capped by a basal pinacoid, orthorhombic prisms or domes terminated by a pinacoid, or three orthorhombic pinacoids of nearly equal areas.

cube ore

Eng. An arsenate of iron, $\text{KFe}_4(\text{AsO}_4)_3(\text{OH})_4 \cdot 6-7\text{H}_2\text{O}$, of an olive-green to yellowish-brown color, and occurring commonly in cubes with the copper ores of Cornwall. Syn: [pharmacosiderite](#)

cube powder

Gunpowder made in large cubical grains and burning more slowly than the small or irregular grains. *Fay*

cubic

a. Having the form of a cube, as a cubic crystal; or referring to directions parallel to the faces of a cube, as cubic cleavage. See also: [cubic system](#) b. Crystal cleavage with three planes at mutual right angles. c. An alternate name for the isometric crystal system. See also: [isometric](#) d. In crystal structures, a cation coordination of six equidistant anions.

cubic cleavage

a. Equally good cleavage in three mutually perpendicular directions. *Fay* b. Mineral cleavage parallel to the faces of a cube, e.g., in galena or halite.

cubic foot per minute

A standard capacity or performance measurement for compressors. *Nichols, I*

cubicite

A cubic zeolite; analcime. Also spelled cubizite.

cubic packing

The loosest manner of systematic arrangement of uniform solid spheres in a clastic sediment or crystal lattice, characterized by a unit cell that is a cube whose eight corners are the centers of the spheres involved. An aggregate with cubic packing has the maximum porosity (47.64%). *AGI*

cubic plane

Any plane normal to one of the crystallographic axes in the isometric system having Miller indices 100 .

cubic system

The crystal system that has the highest degree of symmetry; it embraces such forms as the cube and the octahedron. See also: [cubic](#)

cubo-octahedron

a. A crystal form that has faces of both the cube and the dodecahedron. b. The combined isometric form of a cube modified by an octahedron or an octahedron modified by a cube.

cuckoo shots

Subsidiary shots in the roof of a longwall working, between the coal face and the waste, or in any waste. *Nelson*

cuddy brae

Scot. An inclined roadway, worked in the same manner as a self-acting incline.

cuesta

a. A hill or ridge with a gentle slope on one side and a steep slope on the other; specif. an asymmetric ridge (as in the Southwestern United States) with one face (dip slope) long and gentle and conforming with the dip of the resistant bed or beds that form it, and the opposite face (scarp slope) steep or even cliff like and formed by the outcrop of the resistant rocks, the formation of the ridge being controlled by the differential erosion of the gently inclined strata. *AGI* b. A ridge or belt of low hills between lowlands in a region of gently dipping sedimentary rocks (as on a coastal plain), having a gentle slope conforming with the dip of the rocks and a relatively steep slope descending abruptly from its crest.---Etymol: Spanish, flank or slope of a hill; hill, mount, sloping ground. CF: [hogback](#); [wold](#); [scarp](#); [escarpment](#). *AGI*

cueva

Sp. A cave or grotto.

culasse

The part of a brilliant-cut stone below the girdle.

culet

a. The small lower terminus of a brilliant-cut gem. It is parallel to the table. *Standard*, 2
b. The small facet that is polished parallel to the girdle plane across what would otherwise be the sharp point or ridge that terminates the pavilion of a diamond or other gemstone. Its principal function is to reduce the possibility of damage to the gemstone. Also spelled collet.

culm

a. A vernacular term variously applied, according to the locality, to carbonaceous shale, or to fissile varieties of anthracite coal. *Rice*, 1 b. English Anthracite; a kind of coal, of indifferent quality, burning with a small flame, and emitting a disagreeable odor. c. Anthracite fines that will pass through a screen with 1/8-in holes. *Nelson* d. In anthracite terminology, the waste accumulation of coal, bone, and rock from old dry breakers. *Mitchell* e. In bituminous coal preparation, culm corresponds to slurry or slime, depending upon the size distribution of the suspended solids. *Mitchell* f. Kolm. *AGI* g. The anthracite contained in the series of shales and sandstones of North Devon, England, known as the Culm Measures. *AGI* h. Coal dust or fine-grained waste from anthracite mines. Syn: [kulm](#) *AGI*

culm bank

The deposit on the surface of culm usually kept separate from deposits of larger pieces of slate and rock. Also called culm dump. *Hudson*

culmiferous

Containing culm as coal. *Standard, 2*

culmination

The highest point of a structural feature, e.g., of a dome or anticlinal crest. The axis of an anticline may have several culminations that are separated by saddles. See also: [crest](#)

culture tube

See: [acid-etch tube](#)

cumengite

a. Same as volgerite. *English* b. A tetragonal mineral, $Pb_{21} Cu_{20} Cl_{42} (OH)_{40}$. Also spelled cumengeite.

cummingtonite

A monoclinic mineral, $(Fe,Mg)_7 Si_8 O_{22} (OH)_2$; amphibole group; has $Mg/(Mg + Fe^{2+}) = 0.30$ to 0.69 ; prismatic cleavage; may be asbestiform; in amphibolites and dacites; fibrous varieties (amosite, magnesium rich, and montasite, iron rich) are used as asbestos.

cumulate

An igneous rock formed by the accumulation of crystals that settle out from a magma by the action of gravity; examples include layered igneous deposits such as the Bushveld complex in South Africa and the Stillwater complex in Montana. Syn: [accumulative rock](#)

cumulative float curve

The curve obtained from the result of a float and sink analysis by plotting the cumulative yield at each specific gravity against the mean ash of the total floats at that specific gravity. *BS, 5*

cumulative plot

Graphic representation of cumulative curve results of screen analysis, in which the cumulative percentage of weight is plotted against the screen aperture, usually both to logarithmic scale. *Pryor, 3*

cumulative sink curve

The curve obtained from the results of a float and sink analysis by plotting the cumulative yield of sinks at each specific gravity against the mean ash of the total sinks at that specific gravity. *BS*, 5

cumulophyric

Said of the texture of a porphyritic igneous rock in which the phenocrysts, not necessarily of the same mineral, are clustered in irregular groups; also said of a rock exhibiting such texture. Syn: [glomeroporphyritic](#)

cundy

a. Scot. The spaces from which coal has been worked out, partly filled with dirt and rubbish between the packs. See also: [openset](#); [goaf](#). *Fay* b. Aust. The passage under a roadway into which an endless rope passes out of the way at the end of its track. Also called conduct. A variation of conduit. *Fay* c. Any small passageway made to improve ventilation or facilitate movement of materials. It is generally made through a pack or along the rib side of a longwall face. See also: [airhole](#)

cup and cone

A machine for charging a shaft furnace, consisting of an iron hopper with a large central opening, which is closed by a cone or bell pulled up into it from below. In the annular space around this cone, the ore, fuel, etc., are placed, then the cone is lowered to drop the materials into the furnace, after which it is again raised to close the hole. Syn: [bell and hopper](#); [closed top](#). *Fay*

cupel

a. A small bone-ash cup used in gold or silver assaying with lead. b. The hearth of a small furnace used in refining metals.

cupellation

a. The process of assaying for precious metals with a cupel. b. Oxidation of molten lead containing gold and silver to produce lead oxide, thereby separating the precious metals from the base metal.

cupeller

One who refines gold and silver in a type of reverberatory furnace known as a cupel. *DOT*

cupferron

A colorless crystalline salt, $C_6H_5N(NO)ONH_4$, that is a precipitant for copper and iron from solutions and is also used in the analysis of other metals, esp. of the uranium group. Used for separating iron and copper from other metals. Precipitates iron quantitatively from strongly acid solutions.

cupola

a. A cylindrical vertical furnace for melting metal, esp. gray iron, by having the charge come in contact with the hot fuel, usually metallurgical coke. *ASM, 1* b. A dome-shaped projection of the igneous rock of a batholith. Many stocks are cupolas on batholiths. CF: [roof pendant](#)

cupola furnace

A shaft furnace used in melting pig iron (with or without iron or steel scrap) for iron castings. Metal, coke, and flux (if used) are charged at the top, and air is blown in near the bottom. *CTD*

cupreous manganese

See: [lampadite](#)

cupric sulfide

See: [copper sulfide](#)

cupriferous

Yielding or containing copper. *Standard, 2*

cupriferous pyrite

See: [chalcopyrite](#)

cuprite

An isometric mineral, Cu_2O ; red (crimson, scarlet, vermillion, brownish-red); sp gr, 6.1; in oxidized parts of copper veins; an important source of copper. Also called ruby copper; ruby copper ore. Syn: [red copper ore](#); [red copper oxide](#); [red glassy copper ore](#); red oxide of copper; octahedral copper; cuprous oxide; copper suboxide. See also: [chalcotrichite](#); [plush copper ore](#).

cuproapatite

A variety of apatite from Chile containing copper. *Standard, 2*

cuproauride

A former name for auricupride. Syn: [gold cupride](#)

cuprocalcite

A mixture of cuprite and calcite(?).

cuprocopiapite

A triclinic mineral, $\text{CuFe}_4 (\text{SO}_4)_6 (\text{OH})_2 \cdot 20\text{H}_2\text{O}$; copiapite group.

cuprodescloizite

A former name for mottramite.

cuprojarosite

A variety of melanterite containing copper (4.40% CuO) and magnesium (4.29% MgO). Also spelled kuprojarosit. See also: [jarosite](#) *Spencer, 1*

cuprokirovite

A magnesian cuprian variety of melanterite.

cupromagnesite

A monoclinic copper magnesium sulfate in bluish-green crusts at Mt. Vesuvius, Italy; of doubtful validity.

cupromontmorillonite

Interpretation of the Russian name medmontite. See also: [medmontite](#) *Spencer, 4*

cuproplumbite

A former name for bayldonite.

cuprorivaite

A tetragonal mineral, $\text{CaCuSi}_4\text{O}_{10}$; in small blue grains at Mt. Vesuvius, Italy.

cuprosklodowskite

A triclinic mineral, $(\text{H}_3\text{O})_2\text{Cu}(\text{UO}_2)_2(\text{SiO}_4)_2 \cdot 2\text{H}_2\text{O}$; strongly radioactive; greenish-yellow or grass-green; a secondary mineral resulting from alteration of pitchblende associated with other uranium minerals.

cuprous oxide

See: [cuprite](#)

curb

a. A timber frame, circular or square, wedged in a shaft to make a foundation for walling or tubbing, or to support, with or without other timbering, the walls of the shaft. b. The heavy frame or sill at the top of a shaft. c. In tunnel construction, a ring of brickwork or of cast iron, at the base of the shaft, surmounting a circular orifice in the roof of the tunnel. A drum curb is a flat ring of cast iron for supporting the brickwork having the same diameter externally as the shaft of brickwork. Temporary curbs of oak are also used. *Fay* d. An iron border to the incorporating bed of a gunpowder mill. *Webster 3rd* e. An iron casing in which to ram-load molds for casting. *Webster 2nd* f. The walls of a chamber in which sulfuric acid is manufactured. *Webster 3rd* g. A wood, cast-iron, or reinforced concrete ring, made in segments, forming a foundation for a masonry or cast-iron circular shaft lining. The curb is set on a firm ledge of rock notched into the periphery of the shaft. It may be removed at a later stage. Syn: [wedging curb](#); bricking curb; crib; walling curb. See also: [foundation curb](#); water ring. *Nelson* h. A socket of wrought iron or steel for attaching a ring hook or swivel to the end of a rope used for mine hoisting or haulage. *CTD* i. A coaming around the mouth of a well or shaft. See also: [binder](#) *Hess* j. A shaft support ring for walling or tubbing. *Mason*

curb tubbing

Eng. A solid wood lining of a shaft. Syn: [curb](#)

curie

A unit of measurement of radioactivity, defined as the amount of a radionuclide in which the decay rate is 37 billion disintegrations per second, which is approx. equal to the decay rate of 1 g of pure radium. *AGI*

Curie point

The temperature at which there is a transition in a substance from one phase to another of markedly different magnetic properties. Specif., the temperature at which there is a transition between the ferromagnetic and paramagnetic phases. *Webster 3rd*

Curie's law

The susceptibility of a paramagnetic substance is inversely proportional to the absolute temperature. A law of magnetism that has been replaced by the Curie-Weiss law. *Webster 3rd*

Curie temperature

The temperature of magnetic transformation below which a metal or alloy is magnetic and above which it is paramagnetic. *ASM, 1*

curite

An orthorhombic mineral, $Pb_2 U_5 O_{17} \cdot 4H_2 O$; radioactive; orange-red; an alteration product of uraninite.

curlstone

Shrop. Ironstone exhibiting cone-in-cone formation.

curly coal

A folded and distorted oil shale.

curly stone

Shrop. Shale belonging to the coal formation, which on exposure to the air hardens and assumes a peculiar form, sometimes called cone-upon-cone. Also called curlstone. *Arkell*

current

a. The part of a fluid body esp. as air or water, that is moving continuously in a definite direction, often with a velocity much swifter than the average, or in which the progress of the fluid is principally concentrated. *AGI* b. A horizontal movement or continuous flow of water in a given direction with a more or less uniform velocity, producing a perceptible mass transport, set in motion by winds, waves, gravity, or differences in temperature and density, and of a permanent or seasonal nature, esp. an ocean current. *AGI* c. The velocity of flow of a fluid in a stream. *AGI* d. The swiftest part of a stream. *Webster 3rd* e. A tidal or a nontidal movement, often horizontal, of lake or ocean water. Syn: [drift](#) f. Condition of flowing. Flow marked by force or strength. Syn: [flow](#); flux. *Webster 3rd*

current bedding

Any bedding or bedding structure produced by current action; specif. cross-bedding resulting from water or air currents of variable direction. See also: [false bedding](#)

current density

The current per unit area perpendicular to the direction of current flow. *AGI*

current electrode

a. A piece of metal connected to a cable that, when buried in the earth in a shallow hole or lowered into a well, provides enough contact to permit the passage of substantial electrical current into the surrounding earth. *AGI* b. A metal contact with the ground used to facilitate current flow through the ground. *AGI*

current leakage

Portion of the firing current bypassing part of the blasting circuit through unintended paths. *Atlas*

current leakage tester

See: [earth fault tester](#)

current-limiting device

An electric or electromechanical device that limits current amplitude; duration of current flow; or total energy of the current delivered to an electric blasting circuit. *Atlas*

current meter

a. Any one of numerous instruments for measuring the speed alone, or both speed and direction, of flowing water, as in a stream or the ocean; it is usually activated by a wheel equipped with a set of revolving vanes or cups whose rate of turning is proportional to the velocity of the current. *AGI* b. An instrument, as a galvanometer, for measuring the strength of an electric current. *Standard, 2*

current rose

A graphical representation of currents, usually by 1 degree quadrangles, using arrows of different lengths for the cardinal and intercardinal compass points to show resultant drift and frequency of set for a given period of time. *Hy*

curry pit

Leic. A hole sunk from an upper to a lower portion of a thick seam of coal through which the return air passes from the stalls to the airway. *Fay*

cursing in work

Can. False affidavit of assessment work on mining claims. *Hoffman*

curtain

- a. A sheet of brattice cloth hung across an entry in such a way as to prevent the passage of an air current but not to hinder the passage of mules or mine cars. In coal mines, curtains are used to deflect the air from the entries into the working rooms and to hold the air along the faces. They are usually made of a number of overlapping strips of heavy curtain material, that should be of fireproof or fire-resistant material. Syn: [check curtain](#)
b. Also called cover. *Long* c. A thin sheet of dripstone hanging from the ceiling or projecting from the wall of a cave. *Schieferdecker* d. A rock formation that connects two neighboring bastions. *AGI* e. One of a series of steps cut in a valley side and exaggerated by cultivation. *AGI*

curtain hole

See: [cover hole](#)

curtisite

- a. A crystalline hydrocarbon, found in a form of greenish deposits from a hot spring in California. *Tomkeieff* b. A former name for idrialite.

curvature of gravity

A vector quantity calculated from torsion-balance data indicating the shape of the equipotential surface. It points in the direction of the longer radius of curvature. *AGI*

curved jib

A chain coal cutter jib with the outer end bent upward or downward through 90 degrees. Thus, the machine can make a horizontal and also a vertical cut in one operation. Curved jibs make coal preparation easier, but their use is limited because of the excessive strain and wear on the cutter chain. See also: [turret jib](#); multicut chain. *Nelson*

cusec

A unit of waterflow or airflow that equals 1 ft³/s (0.028 m³/s). *Nelson*

cushat marl

See: [cowshut](#)

cushion

A course of some compressible substance, such as soft wood, inserted between more rigid material. In mine support, it can be placed between the footwall or the hanging wall and the concrete, or internally in the support. *Spalding*

cushion blasting

A method of blasting in which an airspace is left between the explosive charge and the stemming, or in which the shothole is of substantially larger diameter than the cartridge. See also: [controlled blasting](#) *BS, 12*

cushion cut

A style of faceting gems in which the finished gem is roughly rectangular in outline but with gently outward curving sides and rounded corners. *Sinkankas*

cushion firing

See: [water-ampul stemming](#)

custom mill

A mill that depends on purchased ores mostly or entirely for processing rather than on its own organizational source.

custom ore

Ore bought by a mill or smelter, or treated for customers. *Hess*

custom plant

A mill, concentrator, or smelter that purchases ore or partly processed mineral for treatment in terms of an appropriate contract, priced on tonnage, complexity of operation, permissible losses, and specification of feed, product, and (perhaps) lost tailings. *Pryor, 3*

custom smelter

a. A smelter which buys ores or treats them for customers. *Hess* b. A smelter which depends for its intake mostly on concentrate purchased from independent mines and on scrap metal, rather than its own captive mine sources. *Wolff*

cut

a. An arrangement of holes used in underground mining and tunnel blasting to provide a free face to which the remainder of the round can break. Also, the opening created by the

cut hole. b. To intersect a vein or working. c. To shear one side of an entry or crosscut by digging out the coal from floor to roof with a pick. See also: [undercut](#) d. Eng. In Somerset, a staple or drop pit. e. Eng. The depth to which a drill hole is put in for blasting. f. A term applied where the cutting machine has cut under the coal. g. The drill-hole pattern for firing a round of shots in a tunnel or sinking shaft, e.g., the burn cut. *Nelson* h. A machine cut in a coal seam; e.g., floor cut. *Nelson* i. See: [stint](#); sump. j. An excavation, generally applied to surface mining; to make an incision in a block of coal; in underground mining, that part of the face of coal that has been undercut. *BCI* k. In mining, when used in conjunction with shaft and drift, a surface opening in the ground intersecting a vein. *Ricketts* l. Depth to which material is to be excavated (cut) to bring the surface to a predetermined grade; the difference in elevation of a surface point and a point on the proposed subgrade vertically below it. *Seelye*, 2 m. To excavate coal. n. To drive to or across a lode. *Gordon* o. The groups of holes fired first in a round to provide additional free faces for the succeeding shots. *BS*, 12 p. To lower an existing grade. *Nichols*, 1

cut-and-fill stoping

A stoping method in which the ore is excavated by successive flat or inclined slices, working upward from the level, as in shrinkage stoping. However, after each slice is blasted down, all broken ore is removed, and the stope is filled with waste up to within a few feet of the back before the next slice is taken out, just enough room being left between the top of the waste pile and the back of the stope to provide working space. The term cut-and-fill stoping implies a definite and characteristic sequence of operations: (1) breaking a slice of ore from the back; (2) removing the broken ore; and (3) introducing filling. See also: [underhand longwall](#)

cut-chain brae

Scot. An incline on which cut chains are used.

cut holes

a. The first hole or group of holes fired in a drift or tunnel face. Also known as the cut portion of the blasting round. *Lewis* b. In tunneling, easers so drilled and fired as to break out a leading wedge-shaped hole and thus enable the later holes in the complete round of shots to act more effectively. See also: [trimmers](#); [drill-hole pattern](#). *Pryor*, 3

cutinite

a. A variety of exinite. The micropetrologic constituent, or maceral, of cuticular material. CF: [sporinite](#) b. Maceral of the exinite group consisting of plant cuticle. CF: [resinite](#)

cutinite coal

This type of coal consists of more than 50% of cuticle, the fragments of which occur embedded in gelito-collinite, fusinito-collinite, and collinite of fusinitic nature. In addition to cuticle, spores, resin bodies, and fragments of finely fusinized and gelified tissue are present. Leaf parenchyme and stem tissue, bordered by cuticle, may also be seen. Hand specimens of this type of coal are grayish-black, matt or semimatt, finely striated, or sometimes even banded. The coal breaks angularly and generally has high ash. Cutinite coal occurs as thin bands in seams of different geological age, and its use is largely determined by the other forms of coal with which it is associated. *IHCP*

cutoff

a. In firing a round of shots, a misfire due to severance of fuse owing to rock shear as adjacent charge explodes. *Pryor, 3* b. A quarryer's term for the direction along which granite must be channeled, because it will not split. Same as hardway. c. CF: [cutoff entry](#) d. The number of feet a bit may be used in a particular type of rock (as specified by the drill foreman). *Long* e. An impermeable wall, collar, or other structure placed beneath the base or within the abutments of a dam to prevent or reduce losses by seepage along a construction interface or through porous or fractured strata. It may be made of concrete, compacted clay, interlocking sheet piling, or grout injected along a line of holes. *AGI* f. A boundary, oriented normal to bedding planes, that marks the areal limit of a specific stratigraphic unit where the unit is not defined by erosion, pinchout, faulting, or other obvious means. Cutoffs are applicable to map, cross-sectional, and three-dimensional views, and are in effect specialized facies boundaries. *AGI* g. Minimum percentage of mineral or metal in an ore that can be mined profitably. *Long* h. A device for cutting off; as a mechanism for shutting off the admission of a working fluid (as steam) to an engine cylinder. *Webster 3rd* i. The point in the stroke of the piston of a steam engine at which the entrance of live steam is stopped by the closure of the inlet valve. *Long*

cutoff entry

An entry driven to intersect another and furnish a more convenient outlet for the coal. CF: [cutoff](#)

cutoff grade

The lowest grade of mineralized material that qualifies as ore in a given deposit; rock of the lowest assay included in an ore estimate.

cutoff hole

Missed hole resulting from the failure of a blasting cap to detonate owing to the breaking of a fuse or conductor or to some other similar cause. *Fraenkel*

cutoff shot

A shot in a delay round in which the charge has been wholly or partially exposed to the atmosphere by reason of the detonation of an earlier shot in the round. *BS, 12*

cutout

a. Opening made in a mine working in which a drill or other equipment may be placed so as not to interfere with other mining operations. *Long* b. The act or process of removing diamonds from a used or dull bit by dissolving the crown metal by corrosive action of an acid or electrolytic dissolution. Also, the diamonds recovered or salvaged by such means. *Long* c. A mass of shale, siltstone, or sandstone filling an erosional channel cut into a coal seam. CF: [low](#); [roll](#); [washout](#). Syn: [horseback](#); [want](#). *AGI*

cut point

The value of a property (e.g., density or size) at which a separation into two fractions is desired or achieved. *BS, 5*

cut shot

a. A shot designed to bring down coal that has been sheared or opened on one side. *Fay*
b. A shot that initially breaks ground to provide a free face for subsequent shots. *BS, 12*

cut stone

a. Originally, an artificially broken and shaped carbon; now generally, a faceted diamond or other precious or semiprecious gemstone used as an ornament. Syn: [gem](#) b. Structural unit for limestone that consists of blocks that are cut to specified dimensions and surface tooled. *AIME, 1*

cuttable

Diamond material suitable for cutting into gems. *Chandler*

cutter

a. A joint in a rock that is parallel to the dip of the strata. *CTD* b. A crack in a crystal that destroys or lessens its value as a lapidary's stone. c. On a hydraulic dredge, a set of revolving blades at the end of the suction line. d. Closed or inconspicuous seams along which rock may separate or break easily. e. Any coal-cutting or rock-cutting machine; or the person operating it. f. A solution crevice in limestone underlying Tennessee residual phosphate deposits. *AGI* g. See: [underreamer lug](#)

cutter bar

That part of a chain mining machine that supports the cutting chain and extends under the coal; the bar provides the track for the cutting chain. *Fay; BCI*

cutter chain

The endless chain carrying picks that travels around the jib of a chain coal cutter at a speed varying from 320 to 650 ft/min (97.6 to 198.2 m/min). See also: [coal-cutter pick](#)

cutter dredge

In alluvial mining, one that loosens the alluvium by means of a cutting ring, at the end of a suction pipe through which the products are pumped up for treatment. *Pryor, 3*

cutterhead pipeline dredge

A hydraulic dredge in which the suction action is augmented by a rotating propeller that operates at the point of suction. The cutterhead performs two functions: it cuts into and loosens compacted soils and soft rock such as coral, and it increases dredge capacity by channeling the soils into the end of the suction pipe. The efficiency of a dredge is based on its capacity to handle soils rather than water, and the cutterhead serves to maintain an optimum ratio of about 1 ft³ (0.028 m³) of soil handled per 5 ft³ (0.14 m³) of water. *Carson, 1*

cutter loader

A longwall machine that cuts and loads the coal onto a conveyor as it travels across the face. See also: [loader](#)

cutter plow

A plow-type cutter loader developed for use in hard coal seams. It has four horizontal stepped precutting blades, which make a precut from 8 to 12 in (20.3 to 30.5 cm), to weaken the coal immediately in front of the machine. It can be single or double ended, and is hauled along the face by winches. The coal is loaded onto a panzer conveyor, which is advanced behind the machine by compressed air rams. See also: [plow](#) *Nelson*

cut-through

A passage cut through the coal, connecting two parallel entries. See also: [crosscut](#); [breakthrough](#); [jack hole](#). *Rice, 1*

cutting

a. The opening made by shearing or cutting. b. Low-grade ore or refuse obtained from beneficiating ore. c. The operation of making openings across a coal seam as by

channeling, or beneath a coal seam as by undercutting. d. Excavating. *Nichols, 1* e. Lowering a grade. *Nichols, 1* f. Eng. The end or side of a stall next to the solid coal where the coal is cut with a pick in a vertical line to facilitate breaking down; channeling. g. N. of Eng. The operation of undercutting coal with a mechanical cutter. The machine, which runs on electricity, employs two cutterpersons. *Trist*

cutting chain

The sprocket chain that carries the steel points used for undermining the coal with chain mining machines. *Fay*

cutting down

a. The trimming of shaft walls to increase their sectional area. *Zern* b. Removing roughness or irregularities of a metal surface by abrasive action. *ASM, 1*

cutting edge

a. The point or edge of a diamond or other material set in a bit that comes in contact with and cuts, chips, or abrades the rock. Also called cutting point. CF: [cutting stones](#) b. That part of a bit in actual contact with rock during drilling operations. *Long* c. The leading edge of a lathe tool where a line of contact is made with the work during machining. CF: [cutter](#)

cutting face

That part of a bit containing the cutting points, excluding the points inset as reamers. *Long*

cutting fluid

A fluid, usually a liquid, used in metal cutting to improve finish, tool life, or dimensional accuracy. On being flowed over a tool and a workpiece, the fluid reduces friction, heat generated, and tool wear, and prevents galling. It conducts heat away from the point of generation and also serves to wash chips away. *ASM, 1*

cutting grain

The direction along a plane on which a diamond can be most easily abraded. *Long*

cutting horizon

The position in a coal seam in which a horizontal machine cut is made. The normal cutting horizon is along the bottom of the seam. See also: [bottom cut](#)

cutting machine

A power-driven machine used to undercut or shear the coal to facilitate its removal from the face. *BCI*

cutting motor

The motor in a cutting machine that provides power for the operation of the cutting chain. *Jones, I*

cuttings

a. The particles of rock produced in a borehole by the abrasive or percussive action of a drill bit; excess material caused by the rubbing of core against core or core against steel; erosive effect of the circulating liquid; or cavings from the borehole. Also called drill cuttings; drillings; sludge. CF: [borings](#) b. The fragmental rock samples broken or torn from the rock penetrated during the course of drilling. *AGI* c. Eng. See: [holings](#) d. See: [bug dust](#)

cutting sand

Composed of sharp, solid quartz grains and used as abrasive for sawing stone; usually ungraded and about equivalent to a No. 1 sandblasting sand. *AIME, I*

cutting speed

a. The linear or peripheral speed of relative motion between a tool and a workpiece in the principal direction of cutting. *ASM, I* b. See: [feed rate](#)

cutting stones

Diamonds set in a bit face having points or edges that will be in contact with, and will cut or abrade, the rock when drilling. CF: [cutting edge](#); gage stone. *Long*

cutting wheel

A cutting disk, the edge of which is impregnated with an abrasive, such as diamond dust or aloxite. It is rotated at high speed in a coolant and used to cut rock specimens into suitable thin sections for microscopic inspection in transmitted light with a polarized-light microscope or, after polishing, with a reflected-light (ore) microscope.

cutty clay

Plastic clay formerly used in England for making tobacco pipes; "pipe clay." *AGI*

cuvette

A large-scale basin in which sedimentation has occurred or is taking place, as distinguished from a tectonic basin due to folding of preexisting rocks; e.g., the Anglo-Parisian cuvette of Southeast England and Northeast France, in which Cenozoic rocks accumulated and were later folded into several distinct but smaller basins, such as the London Basin and the Paris Basin. Etymol: French, small tub or vat. Sometimes misspelled curvette. *AGI*

Cuylen conveyor

A single-chain conveyor with an open side to facilitate power loading. *Sinclair, 5*

Cuyuna

The name of an iron range in Minnesota. It is composed of the syllables, "Cuy" and "Una," the former being a contraction of the given name of Cuyler Adams, who was active in the early development of that territory, and the last syllable being the name of his dog "Una."

C-wave

See: [coupled wave](#)

cyanamide

White; crystalline; NH_2CN . Formed variously by the action of cyanogen chloride on ammonia. *Standard, 2*

cyanicide

Any substance present in a pulp that attacks or destroys the cyanide salt being used to dissolve precious metals. *Pryor, 1*

cyanidation

A process of extracting gold and silver as cyanide slimes from their ores by treatment with dilute solutions of potassium cyanide or sodium cyanide. The slimes are subsequently fused and cast into ingots or bullion. *Henderson*

cyanidation vat

A large tank, with a filter bottom, in which sands are treated with sodium cyanide solution to dissolve out gold. *CTD*

cyanide

Usually refers to cyanide solution in circulation in a mill treating gold or silver ores. The stock or solution is of two main types: barren, from which all possible value has been extracted, and pregs or pregnant, which is charged with gold or silver and awaits their removal. *Pryor, 4*

cyanide hardening

Introducing carbon and nitrogen into the surface of a steel alloy by heating in a bath of molten sodium cyanide and usually followed by quench hardening.

cyanide man

In ore dressing, smelting, and refining, a person who tends equipment in which finely ground gold or silver ore is treated with a cyanide solution to separate free gold or silver from the gangue (waste material). *DOT*

cyanide mill

See: [cyanide process](#)

cyanide process

A process for the extraction of gold from finely crushed ores, concentrates, and tailings by means of cyanide of potassium or sodium used in dilute solutions. The gold is dissolved by the solution and subsequently deposited upon metallic zinc or other materials. Syn: [cyanide mill](#) *Fay*

cyanide pulp

The mixture obtained by grinding crude gold and silver ore and dissolving the precious-metal content in a sodium-cyanide solution. *CCD, 2*

cyanide slime

Precious metal in the form of finely divided particles precipitated from a cyanide solution used in its extraction from ore. *ASM, 1*

cyaniding

The process of treating finely ground gold and silver ores with a weak solution of sodium or potassium cyanide, which readily dissolves these metals. The precious metals are then obtained by precipitation from solution with zinc, or by adsorption on activated carbon. *CTD*

cyanite

A former spelling of kyanite.

cyanochalcite

A phosphoriferous variety of chrysocolla from Nijni Tagilks, Perm, Russia.

cyanochroite

A monoclinic mineral, $K_2 Cu(SO_4)_2 \cdot 6H_2O$; picomerite group; a clear-blue alteration product from Mt. Vesuvius, Italy.

cyanogen

a. A univalent radical; present in hydrogen cyanide and in other simple and complex cyanides (as ferricyanides). *Webster 3rd* b. Colorless, flammable, poisonous gas; $(CN)_2$. It has an odor like that of peach leaves, is variously formed (as by heating mercuric cyanide), and polymerizes readily. *Webster 3rd*

cyanosite

A former name for chalcanthite. Also spelled cyanose.

cyanotrichite

An orthorhombic mineral, $Cu_4 Al_2 (SO_4)(OH)_{12} \cdot 2H_2O$; sky-blue to smalt-blue; minutely crystalline or spheroidal. Formerly called lettsomite. Syn: [velvet copper ore](#)

cycle of denudation

Cycle of erosion. *AGI*

cycle of erosion

The complete series of changes or stages through which a landmass passes from the inception of erosion on a newly uplifted or exposed surface through its dissection into mountains and valleys to the final stage when it is worn down to the level of the sea or to some other base level. The cycle is usually subdivided into youthful, mature, and old-age stages. One type or many types of erosion may be involved, and the landforms produced and destroyed depend to a large extent on the climate, geographic situation, and geologic structure of the landmass. Syn: [cycle of denudation](#); [geographic cycle](#); [geomorphic cycle](#). *Stokes*

cycle of operations

In mining operations, such as tunnel driving, shaft sinking, and coal winning, there are certain tasks that must be repeated in cyclic fashion. In tunnel driving, they are (1) drilling the round; (2) charging and firing; (3) loading; and (4) supporting and track extension. This cycle of operations is time analyzed to achieve maximum efficiency and speed. *Nelson*

cycle of sedimentation

a. A sequence of related processes and conditions, repeated in the same order, that is recorded in a sedimentary deposit. *AGI* b. The deposition of sediments in a basin between the beginnings of two successive marine transgressions, comprising the deposits formed initially on dry land, followed by shallow-water and then deep-water deposits that in turn gradually change to shallow-water and then dry-land type during a marine regression. *AGI* c. See: [cyclothem](#); sedimentary cycle.

cycle skipping

An instrumental phenomenon occurring in acoustic velocity logs. It consists of intervals where the velocity recorded drops sharply to very low values, and equally sharply, returns to a normal scale figure. Such a log is spiky. *Wyllie*

cycle time

The time required for the dipper of a mechanical shovel to push through the bank and fill, swing to the haul unit, unload, and swing back to the digging position. Cycle time is established under standard conditions of a 90 degrees angle of swing and with an optimum depth of cut. *Carson, 1*

cyclic

Adj. of cycle; recurrent rather than secular. *AGI*

cyclic mining

A mining system in which each shift has a specific task to complete on the conveyor face. If the task on any shift is not completed in time, the following shifts are disorganized. In general, the face is machine cut during the night shift; shot-firing and hand-filling of the coal occupy the day shift; and the afternoon shift is responsible for moving the conveyor and roof supports to the new line of face. See also: [conventional machine mining](#); [conventional mining](#). *Nelson*

cyclic surge

In classification, periodic upset of correct separating density of pulp, resulting in wrong release of oversize material from the closed grinding circuit. *Pryor, 3*

cyclic test

In batch tests of small quantities of ore during development of a method of concentration, the retention of selected fractions (usually middlings) for admixture with fresh samples. Used to study effect of recycling minerals or solutions, which they may have contaminated; also, to observe effects of increased concentration of such compounds on the process as a whole. See also: [locked test](#)

cyclic twin

Repeated twinning of three or more individual crystals according to the same twin law but with the twin axes or twin planes not parallel, commonly resulting in threefold, fourfold, fivefold, sixfold, or eightfold twins, which, if equally developed, display geometrical symmetry not found in single crystals, e.g., chrysoberyl, rutile. CF: [repeated twinning](#); polysynthetic twinning.

cyclic twinning

The repeated twinning of three or more individuals according to the same twin law but with the twinning axes not parallel. Often simulates a higher order of symmetry than that of the untwinned crystal. CF: [polysynthetic twinning](#)

cyclic winding

See: [automatic cyclic winding](#)

cyclone

a. The conical-shaped apparatus used in dust collecting operations and fine grinding applications. In principle, the cyclone varies the speed of air, which determines whether a given particle will drop through force of specific gravity or be carried through friction of the air. *Enam. Dict.* b. A classifying (or concentrating) separator into which pulp is fed, so as to take a circular path. Coarser and heavier fractions of solids report at apex of long cone while finer particles overflow from central vortex. Also called hydrocyclone. See also: [cyclone washer](#); centrifugal separation; centrifuge. *Pryor, 4*

cyclone angle

Included angle of conical section of hydrocyclone. *Pryor, 3*

cyclone classifier

A device for classification by centrifugal means of fine particles suspended in water, whereby the coarser grains collect at and are discharged from the apex of the vessel,

while the finer particles are eliminated with the bulk of the water at the discharge orifice. *BS, 5*

cyclone dust collector

An apparatus for the separation by centrifugal means of fine particles suspended in air or gas. *BS, 5*

cyclone furnace

A forced circulation heat treatment furnace designed to operate at a maximum temperature of 760 degrees C, which is either gas fired or electrically heated. The gas circulates at the rate of 0.89 m/s. *Osborne*

cyclone overflow

A finer classified fraction, which leaves via the vortex finder of a hydrocyclone. *Pryor, 3*

cyclone separator

A funnel-shaped device for removing material from an airstream by centrifugal force. *ASM, 1*

cyclone size

Diameter of cylindrical section of hydrocyclone. Also diameter of inlet orifice if round. Dimensions or area in given inches or square inches if opening is rectangular. *Pryor, 3*

cyclone underflow

A coarser sized fraction, which leaves via apex aperture of hydrocyclone. *Pryor, 3*

cyclone washer

Cyclone washing of small coal originates from the Netherlands. Clean separation is effected with the aid of centrifugal force. The heavier shale particles move to the wall of the cyclone and are eventually discharged at the bottom while the lighter coal particles are swept toward the central vortex and are discharged through an outlet at the top. The washer may be used for cleaning coal up to 3/4 in (1.9 cm). The coal is normally deslimed at about 0.5 mm before cleaning. The separating medium is water and ground magnetite, the bulk of which is recovered and returned to the circuit. A 20-in (50.8-cm) cyclone has a feed capacity of about 50 t/h of coal sized between 1/2 in (12.7 mm) and 1/2 mm. See also: [centrifugal separation](#); [cyclone](#). *Nelson*

cyclosteel

Steel produced by blowing iron-ore powder into a hot gas. *CTD*

cyclothem

A series of beds deposited during a single sedimentary cycle of the type that prevailed during the Pennsylvanian period. The cyclothem, which ideally consists of 10 members (in western Illinois, the fifth member is a coal layer), indicates an unstable coastal environment in which marine submergence and emergence occurred. A cyclothem ranks as a formation in the scale of stratigraphic nomenclature. Syn: [coal-measures unit](#)

cyclotron

A particle accelerator in which charged particles receive repeated synchronized accelerations by electrical fields as the particles spiral outward from their source. The particles are kept in the spiral by a powerful magnet. *Lyman*

cylinder cuts

In cylinder cuts the blasting is performed toward an empty hole in such a way that, as the charges in the first, second, and subsequent holes detonate, the broken rock is thrown out of the cut. The opening is successively and uniformly (cylindrically) enlarged in its entire length. *Langefors*

cylindrical drum

See: [parallel drum](#)

cylindrical land

Land having zero relief. *ASM, 1*

cylindrical mill

See: [tube mill](#)

cylindrical structure

A vertical structure in sandstone, a few centimeters to several decimeters in diameter and several decimeters in length, with a structureless interior, attributed to a rising water column or a spring channel. Syn: [sandstone pipe](#)

cylindrite

A triclinic mineral, $Pb_4 FeSn_4 Sb_2 S_{16}$; forms cylinders that separate under pressure into distinct shells or folia, or is massive; at Poopo, Bolivia.

cylindroconical drum

A combination of a cone and a cylinder. The ascending rope is wound on the smaller diameter of the cone; as the engine reaches full speed after the period of acceleration, the rope is wound on the larger cylindrical part. For deep shafts the rope is wound back on itself for the last part of the hoisting period, thus reducing the width of the drum. See also: [bicylindroconical drum](#)

cymoid loop

The splitting of a vein along its dip or strike into two branches, both of which curve away from the general trend and then unite to resume a direction parallel to but not in line with the original trend. See also: [cymoid structure](#)

cymoid structure

A vein, or a vein-shaped structure, shaped like a reverse curve. See also: [cymoid loop](#)

cymophane

See: [cat's-eye](#); chrysoberyl.

cymrite

A monoclinic mineral, $\text{BaAl}_2\text{Si}_2(\text{O},\text{OH})_8 \cdot \text{H}_2\text{O}$; pseudohexagonal; at the Benalt manganese mine, Wales. Named from Cymru, the Welsh name for Wales.

cyprine

A variety of vesuvianite or idocrase, of a blue tint, which is supposedly due to copper.
Fay

cypritic steel

A steel containing approx. 15% chromium and 9% copper; claimed to be resistant to corrosion in the atmosphere and to tap water, but its corrosion-resistant properties are inferior to the conventional austenitic chromium-nickel steels of the 18-8 type. *Osborne*

cyrilovite

A tetragonal mineral, $\text{NaFe}_3(\text{PO}_4)_2(\text{OH})_4 \cdot 2\text{H}_2\text{O}$; in pegmatite at Cyrilov, Moravia, Czech Republic.

cyrtolite

A variety of zircon.

Czochralski's reagent

An etchant for iron or steel, consisting of a solution of 10% to 20% ammonium persulfate in water. *Osborne*

Czochralski technique

A method of growing single crystals of refractory oxides, and of other compounds, by pulling from the pure melt; the compound must melt congruently. *Dodd*

D

dachiardite

A monoclinic mineral, $(Ca, Na_2, K_2)_5 Al_{10} Si_{38} O_{96} \cdot 25H_2 O$; zeolite group; in a pegmatite at San Piero, Elba, Italy.

dacite

A fine-grained extrusive rock with the same general composition as andesite, but having a less calcic plagioclase and more quartz; according to many, it is the extrusive equivalent of granodiorite. Syn: [quartz andesite](#) ancient Roman province of Dacia (now part of Romania). *AGI*

dacker

Eng. Insufficient ventilation of a mine; dead air.

dactylitic

A term applied to a rock texture produced by a symplectic intergrowth, in which one mineral is penetrated by fingerlike projections from another mineral; also, said of a rock exhibiting such texture. See also: [dactylotype intergrowth](#); [symplectic](#). *AGI*

dactylotype

A textural term applied by Shand in 1906 to the intergrowth of sodalite with orthoclase in borolanite and its associates. The sodalite is altered to pinitic mica and appears in threadlike or vermicular aggregates closely packed in a matrix of orthoclase. *Holmes, 2*

dactylotype intergrowth

a. A mineral intergrowth in which thin successive layers resemble a fingerprint pattern, as in some orthoclase-nepheline intergrowths. *Hess* b. A symplectic intergrowth in which fingerlike projections of one mineral penetrate another. See also: [dactylitic](#)

dad

N. of Eng. In coal mining, to mix (combustible gases) with atmospheric air to such an extent that the mixture is incapable of exploding. Also called dash. See also: [dashing](#)

dadding

The circulation, control, and utilization of air produced by the fan to ventilate the mine workings. See also: [circulation of air](#) *Nelson*

Daelen mill

An early type of universal rolling mill provided with both vertical and horizontal rolls so that a part could be rolled on all sides in one operation. *Osborne*

Daeves's reagent

An etchant used to distinguish carbides in chromium steels and tungstides in high-speed steels. The solution contains 20 g of potassium ferricyanide and 10 g of potassium hydroxide in 100 mL of water. *Osborne*

dahlite

A resinous, yellowish-white carbonate-apatite mineral or association sometimes occurring as concretionary spherulites. Now called carbonate-hydroxylapatite. *AGI*

Dahlstrom's Formula

Classification through the hydrocyclone. *Pryor, 3*

dakeite

See: [schroekingite](#)

dalles

a. The rapids in a deep, narrow stream confined between the rock walls of a canyon or gorge; e.g., The Dalles of the Columbia River where it flows over columnar basalt. *AGI*
b. A steep-sided part of a stream channel, near the dalles proper, marked by clefts, ravines, or gorges; e.g., along the Wisconsin River, WI.---Etymol: French plural of dalle, gutter. Syn: [dells](#)

Dalton's law

In a mixture of gases, the total pressure is equal to the sum of the pressures that the gases would exert separately. See also: [partial pressure](#)

dalyite

A triclinic mineral, $K_2 ZrSi_6 O_{15}$; at Ascension Island in the Atlantic Ocean.

dam

a. A barrier to keep foul air or water, from mine workings. See also: [stopping](#); [bulkhead](#). *Fay* b. An airtight barrier to isolate underground workings that are on fire. *CTD* c. The wall of refractory material, forming the front of the forehearth of a blast furnace, that is built on the inside of a supporting iron plate (dam plate). Iron is tapped through a hole in the dam, and cinder through a notch in the top of the dam. See also: [Lurmann front](#)

dam gradation

See: [contragradation](#)

damkjernite

A hypabyssal rock composed of phenocrysts of biotite and titanite in a fine-grained groundmass of pyroxene, biotite, perovskite, and magnetite, with interstitial nepheline, microcline, and calcite. The name, given by Broegger in 1921, is for the locality Damkjern (or Damtjern), Fen complex, Norway. Also spelled: damtjernite. *AGI*

damp

Any mine gas, or mixture of gases, particularly those deficient in oxygen. Damp is probably derived from the German dampf, meaning a fog or vapor. See also: [afterdamp](#); [blackdamp](#); [chokedamp](#); [combustible gases](#); [firedamp](#); stinkdamp; white damp. *Nelson*

damping

a. In seismology, a resistance, contrary to friction, independent of the nature of the contacting surface. Being proportional to the speed of motion, it diminishes with the latter to nothing. *Schieferdecker* b. A force opposing vibration, damping acts to decrease the amplitudes of successive free vibrations. Damping may result from internal friction within the system, from air resistance, or from mechanical or magnetic absorbers. CF: [attenuation](#) c. The loss of amplitude of an oscillation, owing to absorption. See also: [critical damping](#); [damping factor](#). *AGI*

damping constant

In damped seismographs, this term is by definition equal to one-half the ratio of the damping resistance (force per unit velocity) to the moving mass. It has the dimensions of a frequency. *AGI*

damping down

In pyrometallurgy, reduction of air supply to a furnace, to lower temperature or reduce working rate. *Pryor, 3*

damping factor

The ratio of the observed damping to that required for critical damping. See also: [damping](#)

damping ratio

a. The damping ratio for a system with viscous damping is the ratio of the actual damping coefficient to the critical damping coefficient. *Hunt* b. The ratio of two equiphase peak amplitudes within one period of a damped seismograph or seismometer. The ratio is always greater than unity since the greater amplitude is divided by the succeeding amplitude. *AGI*

dam plate

In a blast furnace, the cast-iron plate that supports the dam or dam stone in front. *Fay*

damp sheet

S. Staff. A large sheet placed as a curtain or partition across a gate road to stop and turn an air current.

dampy

Mid. Mine air mixed with so much carbonic acid gas as to cause the lights to burn badly or to go out.

damsite testing

Boreholes drilled to determine petrological and structural features of the rock or overburden materials at or near the area on which the foundations of a dam will rest. *Long*

dam stone

The wall of firebrick or stone enclosing the front of the hearth in a blast furnace. *Fay*

dan

a. Mid. A tub or barrel, sometimes with and sometimes without wheels, in which mine water is conveyed along underground roadways to the sump or raised to the surface. b. A small box or sledge for carrying coal or waste in a mine.

danaite

A cobaltian variety of arsenopyrite.

danalite

An isometric mineral, $\text{Fe}_4 \text{Be}_3 (\text{SiO}_4)_3 \text{S}$; vitreoresinous; forms series with genthelvite and helvite.

danburite

An orthorhombic mineral, $\text{CaB}_2 \text{Si}_2 \text{O}_8$; resembles topaz in habit, appearance, and properties; in marbles, low-temperature veins, and placers.

Danian

Lowermost Paleocene or uppermost Cretaceous. *AGI*

Daniell cell

A primary cell, with a constant electromotive force of about 1.1 V, having as its electrodes: (1) copper in a copper sulfate solution, and (2) zinc in dilute sulfuric acid or zinc sulfate--the two solutions being separated by a porous partition. *Webster 3rd*

Danish flint pebbles

Pebbles for grinding media, of superior hardness, toughness, and uniformity, found on the shores of Greenland. *AIME, 1*

danks' puddler

A revolving mechanical puddler. See also: [puddling](#)

dannemorite

A monoclinic mineral, $\text{Mn}_2 (\text{Fe}^{2+}, \text{Mg})_5 \text{Si}_8 \text{O}_{22} (\text{OH})_2$; amphibole group; has $\text{Fe}^{2+} / (\text{Mg} + \text{Fe}^{2+}) = 0.5$ to 1.0; columnar or fibrous; at Dannemora, Sweden.

d'Ansite

An isometric mineral, $\text{Na}_{21} \text{Mg}(\text{SO}_4)_{10} \text{Cl}_3$.

dant

a. Soft sooty coal found in face and back slips or cleats; fine slack coal. *CTD* b. To reduce, as a metal, to a lower temper. *Standard, 2*

daourite

A pink variety of elbaite.

dap

a. A notch cut in a timber to receive another timber. *Zern* b. See: [legs](#)

daphnite

A magnesian variety of chamosite.

darapskite

A monoclinic mineral, $\text{Na}_3 (\text{SO}_4)(\text{NO}_3) \cdot \text{H}_2 \text{O}$.

Darby process

A method of carburizing open hearth steel that consists of treating the molten steel with carbon in the form of charcoal, graphite, or coke. *Osborne*

darg

a. A specified day's work, usually at the coal face. See also: [stint](#) *Nelson* b. A task, or a fixed quantity of coal, agreed to be produced per shift for a certain price. *CTD* c. Scot. To work by the day. *Fay* d. A north German name for meadow or moor peat buried under clay. *Tomkeieff* e. Peat formed from marine vegetation. *Holmes, 2*

dark ground

Indirect illumination of stage of microscope, causing objects to be brightly displayed by oblique rays against a dark background. *Pryor, 3*

dark mica

See: [biotite](#)

dark mineral

Any one of a group of rock-forming minerals that are dark-colored in thin section, e.g., biotite, hornblende, augite. *AGI*

dark red silver ore

See: [pyrargyrite](#)

dark ruby silver

See: [pyrargyrite](#)

dark sulfur

Crude, dark-colored sulfur containing up to 1% oil or carbonaceous material.

darlingite

A variety of lydian stone from Victoria, Australia. *English*

dashing

Eng. Increasing the amount of air in mines to prevent explosions of mine gases. See also: [dad](#)

dashkesanite

A chlorine-rich variety of hastingsite.

dashpot

a. An appliance for damping out vibration. It consists of a piston attached to the object to be damped and fitting loosely in a cylinder of oil. See also: [hydrabrake retarder](#) b. A similar device for closing the valves in a Corliss engine, actuated by atmospheric pressure or by a contained spring. *Webster 2nd*

dasymeter

An instrument for testing the density of gases. It consists of a thin glass globe, which is weighed in the gas or gases under observation, and then in an atmosphere of known density. *Osborne*

dating

Age determination of naturally occurring substances or relicts by any of a variety of methods based on the amount of change, happening at a constant measurable rate, in a

component. The changes may be chemical, or induced or spontaneous nuclear, and may take place over a period of time. *AGI*

datolite

A monoclinic mineral, $\text{CaBSiO}_4(\text{OH})$; gadolinite group; in cracks and cavities in diabase or basalt; may be used as a minor gem. Also spelled datholite. Syn: [humboldtite](#); [dystome spar](#).

datum

a. The top or bottom of a bed of rock, or any other surface, on which structure contours are drawn. *AGI* b. Sea-level datum.--Pl: datums. *AGI* c. Any numerical or geometric quantity or value that serves as a base or reference for other quantities or values; any fixed or assumed position or element (such as a point, line, or surface) in relation to which others are determined, such as a level surface to which depths or heights are referred in leveling. Pl: datums; the plural data is used for a group of statistical or inclusive references, such as geographic data for a list of latitudes and longitudes. See also: [datum plane](#); [geoid](#). *AGI*

datum level

Any level surface, such as mean sea level, used as a reference from which elevations are reckoned; a datum plane. *AGI*

datum plane

a. A horizontal plane used as a reference from which to reckon heights or depths. *Hunt*
b. A permanently established horizontal plane, surface, or level to which soundings, ground elevations, water-surface elevations, and tidal data are referred; e.g., mean sea level is a common datum plane used in topographic mapping. Syn: [datum level](#); [reference level](#); [reference plane](#). See also: [datum](#)

datum water level

a. The level at which water is first struck in a shaft sunk on a reef or gutter. *Zern* b. Ground or surface water level used as a reference for all other measurements.

dauberite

See: [zippeite](#)

daugh

a. Scot. The floor of a coal seam or where holing is done. *Nelson* b. Underclay; soft fireclay. *Arkell*

daughter element

The element formed when a radioactive element undergoes radioactive decay. The latter is called the parent. The daughter may or may not be radioactive. *CCD, 2*

Dauphine diamond

Rock crystal variety of quartz.

Dauphine law

The law governing a twinning observed in the hexagonal system commonly shown by quartz in which two righthand or two lefthand crystals interpenetrate after one has revolved 180 degrees about the twinning axis. *Hess*

Dauphine twinning

Transformation twinning about the [0001] direction with an irregular contact surface in quartz. Syn: [electrical twinning](#)

D'Autriche Method

A method of geometrically determining the detonation velocity of an explosive material by using a lead witness plate and detonating cord ignited by the test explosive. *Meyer*

Dautriche test

See: [velocity of detonation](#)

davidite

A trigonal mineral, $(La,Ce)(Y,U,Fe)(Ti,Fe)_{20}(O,OH)_{38}$; crichtonite group; radioactive; metamict; in high-temperature hydrothermal veins, pegmatites, and mafic igneous rocks; occurs in all stages of intergrowth and exsolution with ilmenite and hematite, and is an ore of uranium. Syn: [ferutile](#)

davidsonite

A greenish-yellow variety of beryl.

Davis bit

See: [Davis cutter bit](#)

Davis calyx drill

A rotary drill similar to the diamond core drill except that the annular groove is cut either by a steel chisel or by a plain hollow rod using chilled shot. When the core is of sufficient length to be withdrawn, some grit is added to the mud flush, which becomes wedged tightly between the core and base of the barrel. When the rods are raised the core is broken off and brought to the surface. *Nelson*

Davis cutter bit

An annular-shaped, sawtoothlike bit used on shot drills to cut core in soft formations in which shot is ineffective as a cutting medium. Syn: [Davis bit](#)

Davis furnace

A long, one-hearth reverberatory furnace, heated by lateral fireplaces for roasting sulfide ore. *Fay*

Davis magnetic tester

An instrument for testing the magnetic content of ores and for checking the efficiency of wet magnetic separators recovering magnetite and ferrosilicon in heavy-media processes. *Nelson*

davisonite

A mixture of crandallite and an apatite. Syn: [dennisonite](#)

Davis wheel

A railway tire consisting of a soft plate and boss, and a wear-resistant tread of water-toughened manganese steel, cast integrally within. *Osborne*

davreuxite

A monoclinic mineral, $\text{MnAl}_6\text{Si}_4\text{O}_{17}(\text{OH})_2$.

Davy lamp

A safety lamp invented by Sir Humphrey Davy in 1815 for the protection of coal miners. Its safety feature consisted of a fine-wire gauze enclosing the flame to keep it from coming in contact with mine gas. See also: [flame safety lamp](#); safety lamp. *Fay*

davyne

A hexagonal mineral, $(\text{Na,Ca,K})_8 \text{Al}_6 \text{Si}_6 \text{O}_{24} (\text{Cl,SO}_4, \text{CO}_3)_2$; cancrinite group; vitreous to pearly. Also spelled davina.

dawsonite

An orthorhombic mineral, $\text{NaAl}(\text{CO}_3)(\text{OH})_2$; white; forms thin incrustations of radiating bladed crystals.

day

a. A term used to signify the surface; e.g., driven to day, meaning to daylight, therefore to the surface. b. Wales. The surface of the ground over a mine. c. In mining, generally a period of 8 h for work on the three-shift system, or 24 h if referring to the output or to machinery. *CTD*

day box

See: [powder chest](#)

day coal

The topmost stratum of coal; so called from its being nearest to daylight. *Standard, 2*

daylight

a. When an underground mine working meets the surface it is said to daylight. *Long* b. The maximum clear distance between the pressing surfaces of a hydraulic press with the surfaces in their usable open position. Where a bolster is supplied, it shall be considered the pressing surface. *ASM, 1*

dc (direct chill) casting

A continuous method of making ingots or billets for sheet or extrusion by pouring the metal into a short mold. The base of the mold is a platform that is gradually lowered while the metal solidifies, the frozen shell of metal acting as a retainer for the liquid metal below the wall of the mold. The ingot is usually cooled by the impingement of water directly on the mold or on the walls of the solid metal as it is lowered. The length of the ingot is limited by the depth to which the platform can be lowered; therefore, it is often called semicontinuous casting. *ASM, 1*

deactivation

In froth flotation, treatment of one or more species of mineral particles to reduce their tendency to float.

dead

a. Said of a mine, vein, or piece of ground that is unproductive. b. Said of coal that is under no pressure, does not warp and burst, and makes no sound. CF: [alive](#) c. In economic geology, said of an economically valueless area, in contrast to a quick area or ore; barren ground. *AGI*

dead air

a. Stagnant air. *BS, 8* b. The air of a mine when it contains carbonic acid gas (blackdamp), or when ventilation is sluggish. *Fay*

dead band

In flotation, the range through which an input can be varied without initiating response. *Fuerstenau*

dead bed

Unproductive stratum or vein as opposed to bearing or quick bed. Syn: [dead vein](#)

dead-burned

a. The state of a basic refractory material resulting from a heat treatment that yields a product resistant to atmospheric hydration or recombination with carbon dioxide. *ASTM*
b. Completely calcined. *AISI*

dead-burned dolomite

A refractory product, CaO.MgO, produced by calcination of dolomite or dolomitic limestone. *AGI*

dead-burned magnesia

A sintered product consisting mainly of magnesia in the form of dense, weather-stable refractory granules.

dead burnt

Calcination of limestone, dolomite, or magnesite to the point where associated clay vitrifies and reduces slaking quality. *Pryor, 1*

dead chert

See: [chalky chert](#)

dead end

a. An entry, gangway, level, or other mine passage extending beyond the mine workings into solid coal or ore; a stub. Syn: [stub entry](#) b. Underground passageway either blocked or not holed through. *Pryor, 3* c. The unworked end of a drift or working. *Hess* d. An unventilated underground mine passage extending some distance beyond other mine workings into solid rock. *Long* e. A term used in coal mining for the termination of all electric wiring (except cables to equipment) outby the last crosscut where ample ventilation will reduce the possibility of an electric arc causing an explosion. *Kentucky* f. The end of a drilling line or cable made fast to some stationary part of the drill rig or to a deadman. *Long*

dead ground

a. Rock in a mine that, although producing no ore, requires removal in order to get to productive ground. b. In mining subsidence, ground that has settled and no further movement is expected. *Nelson* c. Portions of ore deposit too low in value to repay exploitation. CF: [barren ground](#)

deadhead

a. To return to the commencement of a cut without excavating; usually for the commencement of a new cut after completion of its predecessor. *Austin* b. An extra length given to a cast object, as a cannon, to put pressure on the molten metal below so that dross and gases may rise into it; a sullage piece; a sinking head. *Standard, 2* c. That part of a casting filling up the ingate; a sprue. *Standard, 2* d. Can. Logs forced into the bottom of a waterway during timber drives. *Hoffman*

deadheading

Traveling without load, except from the dumping area to the loading point. *Nichols, 1*

dead hole

a. One that extends into solid coal beyond the part that can be broken by the maximum safe charge of explosive. *Zern* b. A shothole so placed that its width at the point (toe), measured at right angles to the drill hole, is so great that the heel is not strong enough to at least balance the resistance at the point (toe). *Zern* c. A shallow hole in an iron casting. *Standard, 2*

deadline

a. A row of marked empty powder kegs or other danger signal placed by the fireboss to warn miners not to enter workings containing gas. *Fay* b. The part of a block-and-tackle cable from the traveling block to the deadline anchor. *Long*

deadline anchor

The fixed point on a drill rig or deadman to which a deadline of a block and tackle is attached. *Long*

dead load

The downward pressure on a structure caused by gravity only, such as the weight of a long string of drill rods suspended from the sheave in a drill derrick. Syn: [static load](#)

dead lode

A lode not containing valuable minerals in paying quantity. *Fay*

deadman

a. A wooden block used to guard the mouth of a mine against runaway cars. *Fay* b. A buried log, timber, concrete block, or the like serving as an anchor to which a pulling line can be attached. *Long*

dead pressing

Desensitizing of an explosive, caused by excessive pressure or high density.

dead quartz

Quartz carrying no valuable mineral.

dead rent

Of a mineral lease, the rent that must be paid whether or not minerals are being extracted. *Pryor, 3*

dead roast

a. A roasting process for complete elimination of sulfur or other volatiles. Syn: [sweet roast](#) b. In fluidization roasting, restriction of entering air to permit oxidation of sulfides, while not allowing process to proceed to any marked degree of sulfate roasting. *Pryor, 3*

dead roasting

Sulfide ores are dead roasted when all the sulfur possible to drive off by roasting has been eliminated. *Weed, 2*

dead rock

The material removed in the opening of a mine that is of no value for milling purposes. Waste rock.

dead soft

The state of metal that has been fully annealed. *Light Metal Age*

dead steel

a. Fully killed steel, which sinks quietly in the ingot mold during solidification. b. Steel that fails to respond to heat treatment because it has been worked at excessively high temperatures; e.g., 1,300 to 1,350 degrees C. *Osborne*

dead time

In flotation, the interval of time between initiation of an input and the start of the resulting response. It may be qualified as effective if extended to the start of the buildup time, theoretical if the dead band is negligible, and apparent if it includes the time spent with an appreciable dead band. *Fuerstenau*

dead true

A core barrel or drill rod that does not oscillate or vibrate when rotated at high speed is said to be dead true. *Long*

dead vein

See: [dead bed](#)

dead veins

Veins barren of economic minerals.

deadweight

a. The weight of a vehicle or carrier itself as distinguished from carried or live load. *Crispin* b. The difference, in tons, between a ship's displacement at load draft and light draft. It comprises cargo, bunkers, stores, fresh water, etc. *CTD*

dead work

a. Work that is not directly productive--the removal of rock, debris, or other material that is not directly productive of coal--though it may be necessary for exploration and future production. Unfinished work. See also: [stonework](#) b. Unproductive or stone work; the handling of stone or dirt as a preliminary step to winning and working the coal seam. The aim is to keep the dead work per yard of face or ton of coal to the minimum practicable figure. See also: [unproductive development](#) c. Any kind of miner's work other than actual coal getting and transport. *Mason* d. Exploratory or preparatory work, such as cleaning falls of roof, removing rock, etc., during which little or no coal is secured. *Hudson* e. The development of a mine when no ore is being raised. *Gordon* f. Work done by a contractor not provided for in the yardage or tonnage contract rates. *Mason* g. S. Afr. Necessary work to reach and exploit the valuable portions of the mine. Shaft sinking, crosscutting, driving of levels, etc., belong to dead work. *Beerman*

dead zone

That part of the mined strata that has completely settled down after subsidence. *Briggs*

dealer

An operator on the stock exchange who buys and sells on his or her own account and who makes a profit from differences in prices rather than from commissions. *Hoover*

debacle

a. A breakup on a river, esp. on the great rivers of the former U.S.S.R. and of North America. *AGI* b. The rush of water, broken ice, and debris in a stream immediately following a breakup. Syn: [ice run](#) c. Any sudden, violent, destructive flood, deluge, or rush of water that breaks down opposing barriers and sweeps before it debris of all kinds.---Etymol: French debacle. *AGI*

Deblanchol rotary furnace

A cylindrical refractory-lined shell, provided with a gas flue leading to a recuperator at one end, and a fuel and air port at the other. Air for combustion is preheated in the recuperator, and oil firing is adopted. The furnace may be used for melting gray iron and nonferrous metals. *Osborne*

debris

Any surficial accumulation of loose material detached from rock masses by chemical and mechanical means, as by decay and disintegration. It consists of rock fragments, soil material, and sometimes organic matter. The term is often used synonymously with detritus, although debris has a broader connotation. Etymol: French debris. Pl: debris. Syn: [rock waste](#) *AGI*

debris bag

A dirt-filled bag used for pack walls and chocks. See also: [sandbag](#) *Nelson*

debris cone

See: [alluvial cone](#)

debris deposits

Refuse from hydraulic mining operations, tailings.

decalescence

A phenomenon associated with the transformation of alpha iron to gamma iron on the heating (superheating) of iron or steel, revealed by the darkening of the metal surface owing to the sudden decrease in temperature caused by the fast absorption of the latent heat of transformation. Syn: [point of decalcescence](#)

decalescence point

See: [critical point](#)

decantation

The settlement of a solid from a liquid, and removal of the clear liquid.

decanter

a. An apparatus for sorting and classifying tailings from gold-washing operations. b. A vessel used to decant or to receive decanted liquids. *Webster 3rd*

decarbonation

The process of driving off carbon dioxide from a carbonate mineral, e.g., magesite, $MgCO_3$, to form periclase, MgO .

decarburization

The loss of carbon from the surface of a ferrous alloy as a result of heating in a medium that reacts with the carbon at the surface. *ASM, I*

decay

The general disaggregation of rocks; it includes the effects of both the chemical and mechanical agents of weathering with, however, a stress on the chemical effects. *Stokes*

decay distance

The distance between an area of wave generation and a point of passage of the resulting waves outside the area. *Hy*

dechenite

Natural PbV_2O_6 ; not established as a valid mineral species.

decibar

The pressure exerted per square centimeter by a column of sea water 1 m tall is approx. 1 decibar. The depth in meters and the pressure in decibars, therefore, are expressed by nearly the same numerical value. *Hy*

decibel

The unit for measuring sound intensity. *Crispin*

decision function

Rule made to control a specific sampling investigation, which defines the point at which no further observations are to be made, and the nature of the decision that is to be agreed upon. In a series of sampling operations, each successive decision function depends on those that have preceded it. *Pryor, 3*

deck

a. One of the separate compartments or platforms into which a cage is divided to hold cars. See also: [multideck cage](#) b. The surface of a concentrating table. *Nelson* c. The refractory top of a car used in a tunnel kiln or bogie kiln. *Dodd*

deck charge

a. A charge that is divided into several separate components along a quarry borehole. CF: [columnar charge](#) b. A charge separated by stemming. *Carson, 1*

decke

See: [nappe](#)

decking

a. The operation of changing the tubs on a cage at top and bottom of a shaft. Also called caging. *Fay* b. Separating charges of explosives by inert material and placing a primer in each charge. *Nichols, 1*

decking level

The level at which a cage comes to rest at the pit head and pit bottom for unloading and loading mine cars. *Nelson*

deck load

A charge of dynamite spaced well apart in a borehole and fired by separate primers or by a detonating cord. *Nichols, 1*

deck loading

A method of loading blast holes in which the explosive charges, called decks or deck charges, in the same hole are separated by stemming, air cushion, or a plug. *Atlas*

deck screens

Two or more screens, usually of the vibrating type, placed one above the other for successive processing of the same run of material. *Nichols, 1*

declaratory statement

In practical mining operations, a term applied to the statutory certificate of location, and a certificate or statement of the location, containing a description of the mining claim, verified by the oath of the locator, performing, when recorded, a permanent function. It is the beginning of the locator's paper title, is the first muniment of such title, and is constructive notice to all the world. *Ricketts*

declared efficiency

The efficiency assigned by the maker under certain specified conditions. *Nelson*

declination

a. The horizontal angle in any given location between true north and magnetic north; it is one of the magnetic elements. Syn: [variation](#); magnetic variation. *AGI* b. Angular elevation of a star above celestial equator when truly north of observer. *Pryor, 3* c. Angular deviation of magnetic compass from true north, observed in conditions where no local deviation affects it. *Pryor, 3* d. The angular change in the course of a borehole induced by deflection techniques, usually expressed in degrees. *Long* e. Sometimes a syn. for inclination. See also: [inclination](#)

declination maps

Maps on which isogonic lines are shown. *Mason*

declining conveyor

A conveyor transporting down a slope. See also: [retarding conveyor](#)

decollement

Detachment structure of strata owing to deformation, resulting in independent styles of deformation in the rocks above and below. It is associated with folding and with overthrusting. Etymol: French, unsticking, detachment. CF: [disharmonic folding](#) AGI

decomposing furnace

A furnace used in the conversion of common salt into sulfate of soda, aided by the action of sulfuric acid.

decomposition

See: [chemical weathering](#)

decompression

The process of reducing high air pressure gradually enough so as not to injure people who have been working in it. *Nichols, I*

decompression illness

A condition among underwater workers and mine rescue teams that is caused by ascending too quickly from deep dives.

decompression sickness

See: [aeroembolism](#)

decorative stone

a. A term sometimes used alternately with ornamental stone. b. Natural material used as architectural trimmings in columns, fireplaces, and store fronts; may be set in silver- or gold-filled jewelry, as curio stones; e.g., malachite and marble. CF: [gemstone](#)

decoupling

A method for decreasing the ground motion generated by an underground explosion. The method involves the firing of the explosive in the center of an underground cavity so that the surrounding medium is not in close proximity to the explosive. *Lyman*

decrepitate

a. To roast or calcine (as salt) so as to cause crackling or until crackling stops. *Webster 3rd* b. A mineral is said to decrepitate when it flies to pieces with a crackling noise on being heated. *Hess*

decrepitation

a. Method of differential disintegration of closely sized mineral, part of which explodes and is separable by finer screening. *Pryor, 3* b. The breaking up with a crackling noise of mineral substances upon exposure to heat, as when rock salt is thrown into fire. c. An obsolete method of tunneling, called fire setting.

decussate texture

A microtexture in metamorphosed rocks, in which axes of contiguous crystals lie in diverse, crisscross directions that are not random but rather are part of a definite mechanical expedient for minimizing internal stress. It is most noticeable in rocks composed largely of minerals with a flaky or columnar habit. *AGI*

dedolomitization

a. A process resulting from metamorphism, wherein part or all of the magnesium in a dolomite or dolomitic limestone is used for the formation of magnesium oxides, hydroxides, and silicates (e.g., brucite, forsterite) and resulting in an enrichment in calcite. *AGI* b. Diagenetic or weathering processes wherein dolomite is replaced by calcite.

dedusting

A cleaning process in which dust and other fine impurities are removed. Dedusting is accomplished both by pneumatic means and by dry screening. Syn: [aspirating](#)

deenergize

To disconnect any circuit or device from the source of power. *NCB*

deep

a. Workings below the level of the pit bottom or main levels extending therefrom. b. Forest of Dean; Lanc. A vein, seam, mine, or bed of coal or ironstone. c. Term used to designate ocean bottom depressions of great depth, usually deeper than 6,000 m. *Hy*

deep cell count

A method for examining the mineral particle content of drilling water. In this method, a glass cell is filled with the water, a little acid is added, and the sample is placed under a microscope. Dark ground illumination is used, which shows up the suspended particles. The number of these is counted, and this number, multiplied by a factor, gives the number of particles per cubic centimeter. *Higham*

deep coal

Eng. Coal seams lying at a depth of 1,800 ft (549 m) or more below the surface. *Fay*

deep drawing

The process of cold working or drawing a sheet of strip metal, by means of dies, into shapes involving considerable plastic distortion of the metal; e.g., automobile mudguards, electrical fittings, etc. *CTD*

deep hole

In continuous wire-line core drilling, a term applied to boreholes 3,000 ft (915 m) or more in depth.

deep-hole blasting

Blasting a quarry or opencast face by using small- or medium-diameter holes drilled from top to bottom of the face. *Nelson*

deep lead

Alluvial deposit of gold or tin stone buried below a considerable thickness of soil or rock. CF: [lead](#)

deep level

a. Trans. The first mining properties developed from the surface were stopped from trespassing beyond their side lines projected downward. The next mine on the dip of the lode became known as the "deep-level" mine or "deep." b. S. Afr. The distinction of deep level and ultradeep level is a vague one, and has changed with the times. Ultradeep is now a mining level at a vertical depth of 9,000 ft (2.7 km) and over. *Beerman*

deep mining

The exploitation of coal or mineral deposits by underground mining methods. "Deep" is often interpreted as meaning 5,000 ft (1.5 km) or more, where stresses are high enough to cause sloughing of development openings, not to mention walls and faces in stopes. However, tectonic horizontal stresses are greater than gravitational force in many areas. Hence deep conditions can exist at lesser depths. Indeed, severe rock bursting caused the closure of a Canadian mine operating at depths of 500 to 700 ft (152 to 213 m). Also, rocks with low strength will produce deep failure patterns at modest depths, e.g., in Saskatchewan potash mines. *Nelson*

deep placer

A sandy or gravelly bed or bottom of an ancient stream covered by lava.

deep scattering layer

Applied to widespread strata in the ocean that scatter or return vertically directed sound as in echo depth sounding. These layers, which are evidently of biological origin, are located at depths ranging from 150 to 200 fathoms (274 to 366 m) during the day, with most of them migrating to or near the surface during the night. Abbrev: dsl. *Hy*

deep seated

See: [plutonic](#)

deep-seated deposit

An ore deposit formed at an estimated depth of 12,000 ft (3.66 km) or more, at temperatures ranging from 300 to 575 degrees C; e.g., the tin deposits of Cornwall, England. The deposits are commonly tubular or veinlike in form, though some are irregular in shape. *Lewis*

deep-sea terrace

The benchlike feature bordering an elevation of the deep-sea floor at depths greater than 300 fathoms (1,800 ft or 549 m). *Schieferdecker*

deepside

The working of 5 to 10 yd (4.6 to 9.1 m) of the coal seam on the dip side of an advance gate. It gives some protection from crush along the rib side and also accommodates dirt from the gate instead of conveying it to the surface. See also: [self-stowing gate](#)

deep sinker

Aust. A tall drinking glass; also the drink it contains, so called in fanciful allusion to the shaft of a mine.

deep well

A borehole put down through an upper impervious bed into a lower pervious one, from which a supply of water is obtained. See also: [well](#) *Nelson*

deep-well pump

a. Any kind of pump delivering from a well, shaft, or borehole. *BS, 10* b. An electrically driven pump located at the low point in the mine to discharge the water accumulation to the surface. c. Consists of a series of centrifugal pump impellers mounted on a single rotating shaft. The casings are termed bowls and the impellers are of the axial or mixed-flow type. Available in capacities ranging from 25 to 10,000 gal/min (94.6 to 37,854 L/min). It can be used in wells from 25 to 800 ft (7.6 to 244 m) in depth and from 6 to 24 in (15.2 to 61 cm) in diameter. *Carson, 1*

deep-well turbine

A simple type of vertical centrifugal pump having one or more stages or bowls, which are supported from the motor head on the surface by means of screwed or flanged column pipe sections, each usually 10 ft (3 m) long. The line shafting from the motor to the impellers is sectional to correspond with the column section, and may operate in a sectional extra-heavy enclosing tube if oil is used as a lubricant, or may be exposed to the water when the pump is built to be water-lubricated. *Pit and Quarry*

deep winding

a. Broadly, shaft winding from depths of about 3,000 ft (915 m) and deeper (coal mining). In the case of shafts deeper than about 5,000 ft or 1.52 km (gold and metal mining), two-stage hoisting may be used. See also: [winding](#) b. Hoisting from depths below 5,000 ft in one lift. *Spalding* c. Deep hoisting.

Deerparkian

Middle Lower Devonian. *AGI*

deficient coal

Ark. Coal more difficult to mine than the standard, and for which the miners are paid an extra price. *Fay*

deflagrate

To burn; burst into flame; specif., to burn rapidly with a sudden evolution of flame and vapor.

deflagrating mixture

An explosively combustible mixture, as one containing niter. *Standard, 2*

deflagration

An explosive reaction such as a rapid combustion that moves through an explosive material at a velocity less than the speed of sound in the material. *Atlas*

deflation

The removal of loose dry particles by the wind, as along a sand-dune coast or in a desert; a form of wind erosion. *AGI*

deflecting plug

a. See: [base plug](#) b. Sometimes used by petroleum drillers as a syn. for deflecting wedge. *Long*

deflecting wedge

A class of devices intentionally placed in a borehole to change its course. All such devices are basically long, tapered, concave metal plugs that can be set at a predetermined point and bearing in a borehole to deflect or change its course. Also called correcting wedge, deflecting plug, deflection wedge, Hall-Rowe wedge, spade-end wedge, Thompson wedge. See also: [correcting wedge](#); wedge. *Long*

deflection

A change in the intended course of a borehole produced intentionally or unintentionally by various conditions encountered in the drill hole or by the operational characteristics of the drilling equipment used. Syn: [deviation](#)

deflection angle

a. The angular change in the course of a borehole produced accidentally or intentionally. *Long* b. A vertical angle, measured in the vertical plane containing the flight line, by which the datum of any model in a stereotriangulated strip departs from the datum of the preceding model. *AGI* c. A horizontal angle measured from the forward prolongation of the preceding line to the following line; the angle between one survey line and the extension of another survey line that meets it. A deflection angle to the right is positive; one to the left is negative. *AGI*

deflection bit

A taper bit, generally a bullnose type, used to drill down past the deflecting wedge when deflecting a borehole. *Long*

deflection dial

The load-indicating gage on a penetrometer, which is a soil-testing device used to determine some of the load-bearing characteristics of silt and sandy soils. See also: [cone penetrator](#)

deflection plug

See: [base plug](#)

deflection point

Point of deflection on a refraction time-versus-distance graph separating two segments that correspond to different wave paths. *Schieferdecker*

deflection wedge

A wedge-shaped tool inserted in a borehole to direct the bit along a prescribed course. Also called whipstock (undesirable usage). See also: [deflecting wedge](#)

deflectometer

An instrument for gaging any deflections of a structure. *Hammond*

deflector

A device across the path of a conveyor placed at the correct angle to deflect objects or discharge bulk material. Also called a plow.

deflector sheet

A sheet of brattice or other material erected in a roadway or face to remove a combustible gases layer. It is usually set at an angle of about 45 degrees from the horizontal and inclined in the direction of airflow. See also: [pocket of gas](#)

deflector-wedge ring

An annular steel ring attached to the upper end of a deflecting wedge, having a slightly smaller diameter than that of the borehole in which the wedge is inserted, serving as a stabilizing ring to hold and center the wedge in the borehole. Also called rose ring. *Long*

deflocculant

a. Any organic or inorganic material that is used as an electrolyte to disperse nonmetallic or metallic particles in a liquid, (i.e., basic materials such as calgonate, sodium silicate, soda ash, etc., are used as deflocculants in clay slips). b. A basic material such as sodium carbonate or sodium silicate, used to deflocculate. Syn: [deflocculating agent](#)

deflocculate

a. To disperse a clay suspension so that it has little tendency to settle and has a low viscosity. *ACSG*, 2 b. To break up from a flocculated state; to convert into very fine particles. CF: [peptize](#)

deflocculating

a. The thinning of the consistency of a slip by adding a suitable electrolyte. *ASTM* b. The process of making clay slips or suspension using electrolytes or deflocculants.

deflocculating agent

An agent that prevents fine soil particles or clay particles in suspension from coalescing to form flocs. Syn: [deflocculant](#); [dispersing agent](#). *ASCE*

deflocculation

A state of colloidal suspension in which the individual particles are separate from one another, this condition being maintained by the attraction of the particles for the dispersing medium (for example, hydration) or by the assumption of like electrical charges by the particles, thus resulting in their mutual repulsion, or both. It is generally possible to deflocculate a gel to such an extent that it loses its gel strength entirely, thus becoming a Newtonian fluid, in which case it is known as a sol. The relative contribution of hydration and electrostatic repulsion to the deflocculation of a suspension accounts in large measure for the wide variation in viscosities and gel strengths of suspensions partially flocculated by different means; as, e.g., a partial flocculation of drilling fluid by cement on one hand, and by salt water on the other. Some suspensions can be deflocculated repeatedly by mechanical agitation alone, thus giving a reversible gel-sol, sol-gel transformation known as thixotropy. *Brantly*, 1

deformation

a. A general term for the process of folding, faulting, shearing, compression, or extension of the rocks as a result of various Earth forces. *AGI* b. See: [strain](#)

deformation bands

Parts of a crystal that have rotated differently during deformation to produce bands of varied orientation within individual grains. *ASM, 1*

deformed crossbedding

Crossbedding with foresets overturned or buckled in the down current direction, usually prior to deposition of the overlying bed. Foreset dip angle may also be altered by subsequent tectonic folding. *Pettijohn, 1*

deformed crystal

A crystal bent or twisted out of its normal shape, so that the angle between its crystal faces may differ widely from those on the regular form. See also: [distorted crystal](#)

defrother

An agent, e.g., butanol, that destroys or inhibits froth. *Pryor, 1*

degasification

Progressive loss of gases in a substance leading to the formation of a more condensed product. Applied primarily to the formation of solid bitumens from liquid bitumens, but also used in connection with coal formation. *Tomkeieff*

degasifier

A substance that can be added to molten metal to remove soluble gases that might otherwise be occluded or entrapped in the metal during solidification. *ASM, 1*

degassing

a. Removing gases from liquids or solids. *ASM, 1* b. In pyrometallurgy, addition of deoxidants (phosphorus, aluminum, silicon, etc.) to remove hydrogen from molten metals before casting. *Pryor, 3*

degassing equipment

a. The equipment for extracting gas from an oil-well drilling fluid. The presence of gas reduces the density of the fluid. *Nelson* b. The pumps and equipment used in methane drainage. *Nelson*

degaussing

Method of demagnetization in which a substance is passed through a coil that carries alternating current of progressively diminishing strength. *Pryor, 3*

degradation

a. The general lowering of the surface of the land by erosion, esp. by the removal of material through the action of flowing water. b. Breakage of coal incidental to mining, handling, transport, or storage. c. The excessive crushing of coal during cutting, loading, and transportation. All face machines cause degradation, and this has become a problem at collieries where the market calls for the larger sizes. The degradation of a coking coal is of lesser importance. See also: [gradation](#); [fragmentation](#). CF: [aggradation](#) Syn: [breakage of coal](#)

degradation screens

Screens used for removing the small sizes, caused by breakage in handling, from sized coal just before it is loaded for shipment. Degradation screening is usually necessary where a sized coal is picked, mechanically cleaned, stored, conveyed, or otherwise handled so that breakage occurs after it is sized on the main screens. This applies particularly to domestic coal, which should reach the consumer in as attractive condition as possible. *Mitchell*

degraded illite

Illite that has lost much of its potassium as the result of prolonged leaching. *AGI*

degreasing

Removal of oil and grease films from metal surfaces before electroplating, galvanizing, or enameling. *Pryor, 3*

degreasing machine

An electrically driven machine including high-pressure pump and special cleaning solution for removing grease and oil from underground mine machines as a prevention of mine fires.

degree of compaction

The degree of compaction of a soil sample. *Hammond*

degree of consolidation

The ratio, expressed as a percentage, of the amount of consolidation at a given time within a soil mass, to the total amount of consolidation obtainable under a given stress condition. *ASCE*

degree of liberation

In mineral dressing, the degree of liberation of a certain mineral or phase is the percentage of that mineral or phase occurring as free particles in relation to the total of that mineral occurring in the free and locked forms. *Gaudin, 1*

degree of locking

In mineral dressing, the degree of locking of a mineral is the percentage occurring in locked particles in relation to the total occurring in the free and locked forms. *Gaudin, 1*

degree of packing

Of an explosive, the loading weight per unit of nominal volume, which is always known. Its unit is kilogram per cubic decimeter. The degree of packing defined in this way is 6% greater than the density of the explosive in the drill hole. *Langefors*

degree of saturation

a. The percentage of the volume of water-filled voids to the total volume of voids in a soil. *Nelson* b. Ratio of weights of water vapor in air at given conditions and at saturation, with temperature constant. Specific humidities are usually employed. Measured in percent. *Hartman, 1*

degree of size reduction

Ratio of the surface areas or sizes of the broken or crushed material to those of the feed material. *BS, 5*

degree of sorting

a. The measure for the spread of grain-size distribution. *Schieferdecker* b. A measure of the spread or range of variation of the particle-size distribution in a sediment. It is defined statistically as the extent to which the particles are dispersed on either side of the average; the wider the spread, the poorer the sorting. It may be expressed by sigma phi. *AGI*

degrees Kelvin

Absolute temperature on the centigrade scale, or degrees C plus 273.16. *Strock, 2*

degrees Rankine

Absolute temperature on the Fahrenheit scale, or degrees F plus 459.6. *Strock, 2*

Dehottay process

A variation of the freezing method of shaft sinking, in which liquid carbon dioxide is pumped into the ground instead of brine. See also: [Oetling freezing method](#)

dehrnite

A hydrous phosphate of calcium, sodium, and potassium; hexagonal; crystalline crusts and minute crystals; grayish- to greenish-white. The mineral from Dehrn, Nassau, Germany, is richer in sodium, conforming nearly to the formula $7\text{CaO} \cdot \text{Na}_2\text{O} \cdot 2\text{P}_2\text{O}_5 \cdot \text{H}_2\text{O}$, whereas the mineral found near Fairfield, UT is described as $14\text{CaO} \cdot 2(\text{Na},\text{K})_2\text{O} \cdot 4\text{P}_2\text{O}_5 \cdot 3(\text{H}_2\text{O},\text{CO}_2)$. *English*

dehumidification

The process of removing moisture from mine air to increase its cooling capacity--an important factor in environmental health and comfort in deep mining. See also: [dry kata cooling power](#); [effective temperature](#). *Hartman, 2*

dehydrate

a. To render free from water. *Webster 3rd* b. The process of driving water from a hydrated mineral, e.g., gypsum, $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$, to anhydrite, CaSO_4 .

dehydrated

Freed from water or lacking water.

dehydrated stone

One from which the normal water content has been evaporated, usually by natural processes.

dehydrator

A device or material that will remove water from a substance. See also: [dryer](#)

de-ionization

Removal of ions from solution by chemical means. Syn: [demineralization](#) *ASM, 1*

Deister table

Proprietary type of shaking table used in mineral processing. *Pryor, 3*

delaflossite

A trigonal mineral, CuFeO_2 ; in the oxidized zone of copper deposits.

delatorreite

Former name for todorokite.

delatynite

A variety of amber rich in carbon, low in succinic acid, and lacking sulfur, at Delatyn in the Carpathian Mountains.

delawarite

An aventurine feldspar from Delaware County, PA.; a pearly orthoclase. Syn: [lennilite](#)

delay

A distinct pause of predetermined time between detonation or initiation pulses, to permit the firing of explosive charges separately. *Atlas*

delay action

In blasting, firing of a round of shots in planned sequence so that cut or relief holes are blown first. Delay-action electric detonators have largely replaced safety fuses for this purpose, successive shots being separated by milliseconds. *Pryor, 3*

delay blasting

The practice of initiating individual explosive decks, boreholes, or rows of boreholes at predetermined time intervals using delay detonators, as compared to instantaneous blasting where all holes are fired essentially simultaneously. *Atlas*

delay detonator

An electric or nonelectric detonator used to introduce a predetermined time lapse between the application of a firing signal and detonation. *Dick, 2*

delayed filling

Filling in which the mined-out rooms are filled later, generally on a large scale and when the neighboring sections are already being mined. *Stoces*

delayed pillar extraction

A pillar method of working in which the coal pillars are not extracted until the whole workings have been driven to the boundary. It is sometimes adopted when a seam a short distance above is worked simultaneously. Delayed pillar working increases the difficulty of ventilation, and the amount of deadwork is increased because of the crushing of coal pillars. *Nelson*

delayed quench

One in which the material is not quenched immediately on coming from the solution heat-treat furnace. This allows precipitation to proceed to a point at which mechanical properties and corrosion resistance are lowered. *Light Metal Age*

delay electric blasting cap

An electric blasting cap with a delay element between the priming and detonating composition to permit firing of explosive charges in sequence with but one application of the electric current. It detonates about 1 to 2 s after the electric current has passed through the bridge. It is made in two kinds, first and second delay, and is used in connection with regular, waterproof, or submarine electric blasting caps for blasting in tunnels, shafts, etc., where it is desirable to have charges fired in succession without the necessity of the blaster returning between shots. *Fay*

delay element

An explosive train component consisting of a primer, a delay column, and a relay transfer charge assembled in a single housing to provide a controlled time delay. *Meyer*

delay firing

The firing of several shots in sequence, at designed intervals of time, usually by means of delay detonators, detonating relays, or sequence switches. *BS, 12*

delay interval

The nominal period between the firing of successive delay detonators in a series of shots. *BS, 12*

delay period

A designation given to a delay detonator to show its relative or absolute delay time in a given series.

delay rental

A payment, commonly made annually on a per acre basis, to validate a lease in lieu of drilling. *Wheeler, R.R.*

delay series

A series or sequence of delay detonators designed to satisfy specific blasting requirements. There are basically two types; millisecond (MS) and long period (LP).
Atlas

delay tag

A tag, band, or marker on a delay detonator that denotes the delay series, delay period and/or delay time of the detonator. They are often color coded for convenience.

delay time

In seismic refraction work, the additional time required to traverse any raypath over the time that would be required to traverse the horizontal component at the highest velocity encountered on the raypath, as it refers to either the source or receiver end of the trajectory. Syn: [intercept time](#)

delessite

A magnesian variety of chamosite.

delfman

Eng. A miner or worker in a stone quarry.

delhayelite

An orthorhombic mineral, $(\text{Na,K})_{10} \text{Ca}_5 \text{Al}_6 \text{Si}_{32} \text{O}_{80} (\text{Cl}_2, \text{F}_2, \text{SO}_4)_3 \cdot 18\text{H}_2\text{O}$; forms in laths in a melilite nephelinite lava at Mt. Shaheru, Kivu Province, Congo.

deliquescent

Capable of becoming liquid by the absorption of moisture from the air; e.g., calcium chloride crystals. *Standard, 2*

delivery column

See: [rising main](#)

delivery date

https://t.me/Geologybooks

The date on which a metal has to be delivered to fulfill the contract terms. Also called prompt date. *Wolff*

delivery drift

A drift or adit connected to a shaft from a point on the surface at a lower level than the shaft top and used as an outlet into which mine pumps discharge, so reducing the height through which the water must be lifted. Syn: [jackhead](#)

delivery gate

Eng. A road into which a face conveyor delivers the coal. *SMRB*

delivery table

a. A conveyor that transports material from the discharge of a machine. b. A table onto which a chute discharges.

dellenite

a. An extrusive rock between rhyolite and dacite in composition, and, broadly, the extrusive equivalent of granodiorite. *Webster 2nd; Fay* b. See: [plagioclase rhyolite](#) c. A rhyodacite from Dellen Lake, Sweden.

dells

See: [dalles](#)

delorenzite

See: [tanteuxenite](#)

delphs

York. The working places in ironstone quarries. *Nelson*

Delprat method

See: [overhand stoping](#)

delrioite

A monoclinic mineral, $\text{CaSrV}_2\text{O}_6(\text{OH})_2 \cdot 3\text{H}_2\text{O}$; pale yellow-green microcrystalline efflorescence on sandstone occurring in Montrose County, CO.

delta iron

The polymorphic form of iron stable between 1,403 degrees F (762 degrees C) and the melting point (about 1,532 degrees F or 833 degrees C). The space lattice is the same as that of alpha iron and different from that of gamma iron. *CTD*

deltaite

A mixture of crandallite and hydroxylapatite

deluge water system

A method of fire control in which water is sprayed or sprinkled in sufficient volume to overwhelm the fire and put it out. *Federal Mine Safety*

Demag cappel

A rope cappel used in Koepe winding, particularly in Germany. The rope is led along the side of the eye and secured by a hinged retaining arm lined with rubber, and then turned around the eye and held in position by pressure exerted by knee-action links. *Nelson*

Demag drag-belt shuttle conveyor

Consists of a single length of belting, half the length of a double unit face, which is shuttled backward and forward along the face by means of low-type winches at each end of the face, interlocked and fitted with limit switches. The coal is plowed off the belt at the loader gate onto the gate conveyor. *Sinclair, 5*

demagnetize

To disperse, by means of a suitable magnetic field, solids in a dense medium that have flocculated magnetically.

demand respirator

An atmosphere-supplying respirator that admits respirable gas to the facepiece only when a negative pressure is created inside the facepiece by inhalation. *ANSI*

demantoid

A transparent, green variety of andradite, having a brilliant luster and used as a gem. Also called Uralian emerald. *Dana, 4*

demersal

See: [benthonic](#)

demidovite

A phosphoriferous variety of chrysocolla from Tagilsk, Perm, Russia.

demineralization

a. Water softening by use of zeolites or resins to remove cations. *Pryor, 3* b. See: [de-ionization](#)

demonstrated resources

A term for the sum of measured resources plus indicated resources. *USGS, 2*

dempy

A mine or part of a mine that is prone to outbursts and accumulations of noxious gases. *Nelson*

demulsification

Breakdown into separate phases of a relatively stable emulsion, by such means as flocculation with a surface-active agent or removal of an emulsifying agent. *Pryor, 3*

demurrage

The detention of a vessel, railroad car, or other vehicle beyond an allotted time and for which a fee is usually charged.

dendriform

Resembling a tree, descriptive of some minerals. Syn: [arborescent](#); dendritic.

dendrite

Any mineral forming branching moss-, fern-, or treelike patterns, e.g., some native silver and gold. Syn: [dendrolite](#)

dendritic

Said of a mineral that has crystallized in a branching pattern. Syn: [arborescent](#); [dendriform](#).

dendritic and arborescent

A mineral in treelike or mosslike forms; e.g., manganese oxide. *Nelson*

dendritic drainage

The pattern of stream drainage in a region underlain by horizontally bedded rock, in which the valleys extend in many directions without systematic arrangement and have a dendritic (treelike) arrangement.

dendritic markings

a. Superficial dendrites on rock surfaces, joint faces, or other fractures, e.g., manganese oxyhydroxides on rock fracture surfaces. b. Inclusion of a dendrite in another rock or mineral, e.g., chlorite in silica to form moss agate.

dendrolite

See: [dendrite](#)

Denison core barrel

See: [Denison sampler](#)

Denison sampler

A large-size, swivel-type double-tube core barrel designed for soil-testing work to obtain relatively undisturbed corelike samples of soft rock and/or soil formations. The inner tube is provided with a thin wall liner and a finger- or basket-type core lifter or core-retaining device. Also called Denison core barrel. *Long*

denningite

A tetragonal mineral, $(\text{Mn,Zn})\text{Te}_2\text{O}_5$; colorless to pale green; forms tetragonal plates and platy masses; at Sonora, Mexico.

dennisonite

A former name for davisonite. See: [davisonite](#)

dense

a. Said of a fine-grained, aphanitic igneous rock whose particles average less than 0.05 to 0.1 mm in diameter, or whose texture is so fine that the individual particles cannot be recognized by the unaided eye. *AGI* b. Said of a rock whose constituent grains are crowded close together. The rock may be fine or coarse grained. *AGI* c. Said of a rock or mineral possessing a relatively high specific gravity. *AGI*

dense graded aggregate

Graded mineral aggregate which contains a sufficient number of very small particles to reduce the void spaces in the compacted aggregates to a minimum. *API, 1*

dense liquid

A homogeneous liquid or solution of specific gravity greater than that of water (e.g., zinc chloride and calcium chloride) that can be used in industry or in the laboratory to divide coal or other minerals into two fractions of different specific gravities.

dense-media separation

a. Heavy-media separation, or sink float. Separation of sinking heavy from light floating mineral particles in fluid of intermediate density. Abbreviation: DMS. See also: [heavy-media separation](#) b. Separation of relatively light (floats) and heavy (sinks) particles, by immersion in a bath of intermediate density. This is the dense or heavy media, a finely ground slurry of appropriate heavy material in water. Barite, magnetite ferrosilicon, and galena are in principal use.

dense medium

A fluid formed by the artificial suspension in water of heavy particles (e.g., magnetite, barite, and shale) that can be used in industry or in the laboratory to divide coal into fractions of different specific gravities. *BS, 5*

dense-medium jigging

This method involves two essential features: (1) the circulation in the jig of a middling of approx. 3/16 in (4.8 mm) or smaller in size, with sp gr, 1.7 to 2.0--which fills the interstices of the jig bed and in effect converts the jig into a float-and-sink machine; and (2) the use of a suction stroke to hold the medium in the bed and prevent its washing over with the coal. *Mitchell*

dense-medium process

A process for the washing of coal, in which the desired separation is effected in a dense medium. *BS, 5*

dense-medium recovery

The collection, for reuse, of medium solids from dilute medium, usually understood to include the removal, in whole or in part, of contaminating fine coal and clay. Syn: [medium-solids recovery](#)

dense-medium washer

A machine for cleaning coal and other materials that uses a dense fluid in which the coal floats and shale sinks. The fluid consists of water intimately mixed with sand (or finely ground magnetite or even shale) and agitated to maintain its consistency. The fluid has an effective specific gravity of 1.3 to 1.9. In general, coal from about 8 in (20.3 cm) down to 1 in (2.54 cm) is washed by dense medium, below 1 in by Baum washer, and below 0.75 mm (where cleaning is necessary) by froth flotation. Magnetite as the dense medium solid is preferred as it can be easily recovered by magnetic separators and also the upper limit of the specific gravity is higher (up to 2.0). See also: [coal-preparation plant](#); [washery](#). *Nelson*

dense noncrystalline tonstein

This type of tonstein consists almost entirely of fine-grained kaolin groundmass, showing weak aggregate polarization, containing isolated corroded crystals of kaolinite. Such bands are commonly more than 100 mm thick and light in color. *IHCP*

densimeter

An apparatus used to determine the relative density, or specific gravity, of a dense media.

densiscope

An apparatus to obtain the specific gravity of pearls as an indication, but not proof, of genuineness (cultured pearls tend to be denser).

densitometer

An instrument for the measurement of the density of an image produced by light, X-rays, gamma rays, etc., on a photographic plate; used in some dust-sampling instruments. *Nelson*

density

a. The mass of a substance per unit volume. *Webster 3rd* b. The quality or state of being dense; closeness of texture or consistency. *Webster 3rd* c. The distribution of a quantity (as mass, electricity, or energy) per unit usually of space (as area, length, or volume). *Webster 3rd* d. The ratio of the mass of any volume of a substance to the mass of an equal volume of a standard substance; water is used as the standard substance. *Long* e. Having the quality of being dense, hard, or compact. *Long* f. Weight of a substance in grams per cubic centimeter (at specified temperature when close accuracy is needed). For liquids and solids, it equals specific gravity. Density fluids are heavy liquids used in float-sink tests. Of a particle, the true density is its mass (m) divided by volume (v)

excluding pores; its apparent density is its mass divided by volume (m/v) including open but excluding closed pores. Of a mass of particles (powder), the apparent density is mass divided by volume (m/v); the bulk density mass divided by volume (m/v) under stated freely poured conditions; and the tap density mass divided by volume (m/v) after vibrating or tapping under stated conditions. See also: [apparent density](#); bulk density. *Pryor, 3* g. Mass per unit volume. CF: [specific gravity](#) h. Although density is defined as mass per unit volume, the term is frequently used in place of unit weight in the field of soil mechanics. See also: [unit weight](#)

density contrast

The difference in density of a valuable mineral and the host rock. *Lewis*

density current

A current caused by differences in densities, for example, an excess of evaporation, cooling, or dilution in a restricted basin or an open sea. *Schieferdecker*

density logger

An instrument for direct measurement of formation densities in boreholes. This tool furnishes a log of backscattered gamma radiation, which is a simple function of formation density. *Dobrin*

density of dust cloud

The number of ounces of coal dust per cubic foot (or grams per cubic meter) of space, suspended in the air or gases in a specified zone. *Rice, 2*

density of gases

The vapor density of a gas, or its density relative to hydrogen, is the number of times a volume of the gas is heavier than the same volume of hydrogen, the volume of both gases being at the same temperature and pressure. *Cooper*

density of seams

a. An indication of the spacing of seams in the strata; the seam density is said to be high if the seams are close together, or low if they are widely separated. *BS, 7* b. The ratio of the sum of the thickness of a number of adjacent seams to the thickness of an arbitrarily chosen sequence of strata. *BS, 7*

density ratio

In powder metallurgy, the ratio of the determined density of a compact to the absolute density of metal of the same composition, usually expressed as a percentage. *ASM, 1*

dental excavation

A controlled blasting technique used to minimize damage, in which the blasting of small, specially designed rounds over partial faces is used in extremely sensitive situations. *SME, 1*

dental work

The act or process of filling cracks, crevices, or caverns encountered in drilling a borehole with cement or grout; also, the cracks, etc., so filled. *Long*

denudation

The sum of the processes that result in the wearing down of the surface of the Earth, including wear by running water, solution, and wind action.

Denver cell

A flotation cell of the subaeration type. Design modifications include receded-disk, conical-disk, and multibladed impellers, low-pressure air attachments, and special froth withdrawal arrangements.

Denver jig

Pulsion-suction diaphragm jig for fine material, in which makeup (hydraulic) water is admitted through a rotary valve adjustable as to the portion of jiggling cycle over which controlled addition is made. Used in coal preparation for the removal of pyritic sulfur from thickener underflow material prior to its treatment by froth flotation. See also: [jig](#)

Denver mud

See: [bentonite](#)

deoxidation

The process of extracting the oxygen content of a dissolved oxide, or of removing dissolved oxygen, with the aid of a reducing agent. *Henderson*

deoxidize

To remove oxygen by chemical reaction, generally with carbon. *Mersereau, 2*

deoxidized copper

Copper from which cuprous oxide has been removed by adding a deoxidizer, such as phosphorus, to the molten bath. *ASM, 1*

deoxidizer

A substance that can be added to molten metal to remove either free or combined oxygen. *ASM, 1*

deoxidizing

a. The removal of oxygen from molten metals by use of suitable deoxidizers. *ASM, 1* b. Sometimes refers to the removal of undesirable elements other than oxygen by the introduction of elements or compounds that readily react with them. *ASM, 1* c. In metal finishing, the removal of oxide films from metal surfaces by chemical or electrochemical reaction. *ASM, 1*

dependent shot

A charge of explosives in a borehole that depends for its effect upon the result of one or more previously fired shots.

dephosphorization

Elimination of phosphorus from steel, in basic steelmaking processes. Accomplished by forming a slag rich in lime. See also: [acid process](#); basic process; Bessemer process; open-hearth process. *CTD*

dephosphorizing

Removal of part or all of residual phosphorus from steel in basic smelting. *Pryor, 3*

depleted fuel

See: [spent fuel](#)

depletion

The act of emptying, reducing, or exhausting, as the depletion of natural resources. In mining, specif. said of ore reserves. See also: [economic depletion](#)

depletion allowance

A proportion of income derived from mining or oil production that is considered to be a return of capital not subject to income tax. *AGI*

depocenter

An area or site of maximum deposition; the thickest part of any specified stratigraphic unit in a depositional basin. *AGI*

deposit

a. Anything laid down. Formerly applied only to matter left by the agency of water, but now includes mineral matter in any form that is precipitated by chemical or other agent, as the ores in veins. b. Mineral deposit or ore deposit is used to designate a natural occurrence of a useful mineral, or an ore, in sufficient extent and degree of concentration to invite exploitation. c. Earth material of any type, either consolidated or unconsolidated, that has accumulated by some natural process or agent. The term originally applied to material left by water, but it has been broadened to include matter accumulated by wind, ice, volcanoes, and other agents. CF: [sediment](#) d. An informal term for an accumulation of ore or other valuable earth material of any origin. *AGI* e. Verb. To lay down or let drop by a natural process; to become precipitated. *AGI*

deposition

a. The process of natural accumulation of rock material thrown down or collected in strata by water, wind, or volcanic action; also, the material thus deposited. Opposite of denudation. *Standard, 2* b. The precipitation of mineral matter from solution, as the deposition of agate, vein quartz, etc. *Fay*

deposit type

A class representing all the recognized mineral deposits that are defined by physical and genetic factors that can be consistently differentiated from those of other classes or deposit types. *Barton*

depressant

In the froth flotation process, a reagent that reacts with a particle surface to render it less prone to stay in the froth, thus causing it to wet down as a tailing product. Depressants act by complexing elements at surface lattices of minerals that might carry a charge attractive to conditioning agents; by destroying collector coating; by surface modification of particles. See also: [bathotonic reagent](#); surface activity. *Pryor, 3*

depressed water level

The lowest level of ground water during drainage or pumping. *BS, 10*

depression

a. Any relatively sunken part of the Earth's surface; esp. a low-lying area surrounded by higher ground and having no natural outlet for surface drainage, as an interior basin or a karstic sinkhole. *AGI* b. A structurally low area in the crust, produced by negative movements that sink or downthrust the rocks. CF: [basin](#); [uplift](#). *AGI*

depression contour

A closed contour, inside of which the ground or geologic structure is at a lower elevation than that outside, and distinguished on a map from other contour lines by hachures marked on the downslope or downdip side. *AGI*

depressor

A substance (usually inorganic) that inhibits flotation of the mineral. CF: [activator](#)

depth

S. Afr. The word alone generally denotes vertical depth below the surface. In the case of incline shafts and boreholes, it may mean the distance reached from the beginning of the shaft or hole, the borehole depth, or inclined depth. *Beerman*

depth contour

See: [isobath](#)

depth indicator

A dial or other appliance on a winding apparatus that indicates to the person in charge the position of the cage in the shaft. The indicator must be in addition to any mark on the rope or drum. See also: [visual indicator](#)

depth marker

A small metal tag or wooden block placed in the core box at the bottom of the core recovered from each run, on which is marked the depth at which the core was cut in the borehole. *Long*

depth of cut

The thickness of material removed from the workpiece in a single pass. *ASM, I*

depth of focus

Depth of an earthquake or explosion below the Earth's surface. *Schieferdecker*

depth of soil exploration

Soil sampling is usually carried down to include all deposits likely to have a bearing on the stability of mine structures. Shear tests are made in each bed below the foundation to a depth of at least 1 - 1/2 times the breadth of the foundations. See also: [site investigation](#)

depth of stratum

The vertical distance from the surface of the Earth to a stratum. *AGI*

depth per bit

The length of borehole that can be drilled with a steel bit until it must be resharpened. *Streefkerk*

depth point

In seismic work, a position at which a depth determination of a mapped horizon has been calculated. *AGI*

deputy

a. An underground official in a mine of coal, stratified ironstone, shale, or fire clay, with statutory responsibility for the safe and proper working of a district of the mine. Also called examiner; fireman (undesirable usage). See also: [fireman](#) b. Within limits, the deputy is also in charge of the workers in the district. *Nelson* c. Eng. In Northumberland and Durham, the person who sets timbers or props in a coal mine is sometimes called a deputy. *Nelson* d. N. of Eng. A junior official responsible for safety precautions and mining operations in a face district. *Trist* e. N. of Eng. A person who fixes and withdraws the timber supporting the roof of a mine, attends to the safety of the roof and sides, builds stopping, puts up bratticing, and looks after the safety of the miners. *Fay* f. Eng. In the Midland coalfield, an underground official who looks after the general safety of a certain number of stalls (rooms) or of a district, the deputy does not set timber but verifies that it is properly done. *Fay* g. A mine boss. *Fay*

deputy surveyor

A person appointed by the Surveyor General of the United States to make proper surveys of lode or placer mining claims, prior to the issuing of a patent. *Fay*

derail

A safety device for derailing mine cars, usually installed on grades to protect miners working below. See also: [drop log](#)

derailing drag

See: [backstay](#)

derail unit

This device locks to rails to derail cars. Wedge construction eliminates spiking. It protects workers in railroads and mines against wild cars, switching cars, or sudden car movement. Some types are equipped with a warning flag. *Best, 1*

derbylite

A monoclinic mineral, $(\text{Fe,Ti})_7 \text{SbO}_{13} (\text{OH})$; forms minute prismatic crystals or twins.

Derbyshire spar

Fluorite, found abundantly in Derbyshire, England. See also: [fluorspar](#) Syn: [Derby spar](#)

Derby spar

A popular name for fluorite in Derbyshire, England. Syn: [Derbyshire spar](#)

derbystone

An amethyst-colored variety of fluorite.

derivative rock

A rock composed of materials derived from the weathering of older rocks; a sedimentary rock, or a rock formed of material that has not been in a state of fusion immediately before its accumulation. *AGI*

derivative structure

Representation of crystal structures in terms of a master structure, e.g., feldspar as derivative of coesite with aluminum replacing tetrahedral silicon and charge balance maintained by intertetrahedral alkali and alkali-earth ions.

derived fossil

A fossil that is not native to the rock in which it is found, e.g., a fossil found as a pebble in a conglomerate.

derived fuel

A fuel obtained from a raw fuel by some process of preparation for use, for example, coke, charcoal, benzene, and gasoline. *Nelson*

dermatitis

A skin disease caused by the application of dust or liquids. In coal mining, the dusts may be coal or stone dust and the liquids may be mine waters, oil or grease, perspiration and acids or alkalis. The majority of cases occur in deep and hot mines having high wet-bulb temperatures. *Mason*

derrick

a. The framed wood or steel tower placed over a borehole to support the drilling tools for hoisting and pulling drill rods, casing, or pipe. Sometimes incorrectly called a tower. *Long* b. The framework over a borehole, used primarily to allow lengths of drill rod to be added to the drilling column. *BS, 9* c. A three- (or more) legged framework for supporting drill rods and tackle in deep boring; a temporary three-legged headframe, or headgear, for a shaft. *Mason*

derrick crane

A crane in which the top of the post is supported by fixed stays in the rear and the jib is pivoted like the boom of a derrick. See also: [derricking jib crane](#)

derricking jib crane

A jib crane in which the inclination of the jib, and hence the radius of action, can be varied by shortening or lengthening the tie ropes between the post and the jib. *CTD*

derrick rope

The rope used for supporting and hoisting the boom on jib cranes and excavators. *Hammond*

desalting

Any process for making potable water from sea water or other saline waters. Distillation is the oldest method. Others involve electro dialysis, freezing, extraction, and ion exchange. Also called desalination.

descensional ventilation

A ventilation system in which the downcast air is conducted to the top end of the workings (in inclined workings) and it then flows downhill from level to level. In deep mines, the system helps to keep the faces cool. See also: [ascensional ventilation](#); [homotropical ventilation](#); antitropical ventilation.

descension theory

A theory of formation of supergene mineral deposits involving the descent from above of mineral-bearing solutions. The theory originated with the Neptunian school of thought of the 18th century, which postulated an aqueous origin for all rocks. CF: [ascension theory](#)

descloizite

a. An orthorhombic mineral, $4[\text{PbZn}(\text{VO}_4)(\text{OH})]$ having Zn replaced by Cu toward mottramite; greasy; varicolored; in oxidized zones of ore deposits; a source of vanadium. Syn: [vanadite](#) b. The mineral group arsenodescloizite, cechite, descloizite, mottramite, and pyrobelonite.

descriptive gemology

The classification, composition, properties, trade grades, sources, and the methods of recovery, fashioning, and use of gem minerals and gem materials and their substitutes. See also: [gemology](#)

descriptive mineralogy

That branch of mineralogy devoted to the description of the physical and chemical properties of minerals. *Fay*

deseaming

Removal by chipping of surface blemishes from ingots or blooms. *Pryor, 3*

desert crust

a. A hard layer, containing calcium carbonate, gypsum, or other binding matter, exposed at the surface in a desert region. *AGI* b. Desert varnish. *AGI* c. Desert pavement. *AGI*

desert glass

See: [obsidian](#); moldavite.

desert lands

All lands exclusive of timber lands and mineral lands that will not, without irrigation, produce some agricultural crop. *Ricketts*

desert pavement

A natural residual concentration of wind-polished pebbles, boulders, and other rock fragments, mantling a desert surface where wind action and sheetwash have removed all smaller particles, and usually protecting the underlying finer-grained material from further deflation. The fragments commonly are cemented by mineral matter. Syn: [desert crust](#) See also: [lag gravel](#)

desert rat

In the Western United States, a prospector, esp. one who works and lives in the desert, or who has spent much time in arid regions. The name is derived from a small rodent common throughout much of the Great Basin and Southwestern United States. *Fay*

desert rose

A radially symmetrical group of crystals with a fancied resemblance to a rose, formed in sand, soft sandstone, or clay. These crystals are commonly calcite, less commonly barite, gypsum, or celestine.

desert varnish

A thin dark shiny film or coating, composed of iron oxide accompanied by traces of manganese oxide and silica, formed on the surfaces of pebbles, boulders, and other rock fragments in desert regions after long exposure, as well as on ledges and other rock outcrops. It is believed to be caused by exudation of mineralized solutions from within and deposition by evaporation on the surface. See also: [patina](#)

desiccant

A substance having an affinity for water. Used for drying purposes. *Bennett*

desiccate

To dry; to remove moisture; to preserve by drying. *Webster 3rd*

desiccation

A drying out, as in loss of water from sediments, or evaporation from water bodies in arid regions, producing evaporites.

desiccation crack

See: [mud crack](#)

desiccator

A short glass jar fitted with an airtight cover and containing some desiccating substance (as calcium chloride), above which is placed the material to be dried or to be protected from moisture. *Webster 3rd*

design

A type of diamond-drill fitting that, when standardized, has specific dimensions and thread characteristics establishing interchangeability of parts made by different manufacturers, and size by specific dimension of the set core-bit inside diameter. Design characteristics supplement the group characteristics that provide for integration of ranges. The design characteristics of drill fittings are established by the second letter in two-letter names and by the third letter in three-letter names. Letters denoting design may establish interchangeability of all parts, as in the M-design core barrel, or only of certain parts, as in the X-design core barrel. CF: [group](#); [range](#). *Long*

designated size

The particle size at which it is desired to separate a feed by a sizing operation. *BS, 5*

designed borehole deflection

The turning of a borehole along a different course at depth. This may be achieved, but not without difficulty. The cutting bit is guided upon its new course by the curved surface of a deflecting wedge that is positioned with the aid of a modified Oehman instrument. In petroleum drilling, much use is made of holes that are deflected at a predetermined depth. The technique is known as whipstocking. *Nelson*

design horsepower

The specified horsepower multiplied by a service factor. It is the value used to select the chain size for a chain drive. *Jackson, 1*

desilication

The removal of silica from a rock or magma by the breakdown of silicates and the resultant freeing of silica, or by reaction between a body of magma and the surrounding wall rock. *AGI*

desiliconizing

A practice of jetting oxygen into pig iron before it is charged into the steel furnace; this oxidizes and removes most of the silicon. *Newton, 1*

desilverization

The process of removing silver (and gold) from lead after softening. See also: [Parkes process](#); [Pattinson process](#). *CTD*

desliming

The removal of slimes from coal or a mixture of coal and water, however accomplished. *BS, 5*

desliming screen

A screen used for the removal of slimes from larger particles, usually with the aid of water sprays. *BS, 5*

deslurrying

Fines removal by wet methods. *BS, 5*

desmine

A former name for stilbite.

desmite

The amorphous groundmass, which is transparent in thin sections, binding together the constituents of bituminous coal of high grade. Applies to the transparent variety of residuum found in high-grade coals. *Tomkeieff*

desmosite

A banded adinole. *AGI*

desorption

The reverse process of adsorption whereby adsorbed matter is removed from the adsorbent. The term is also used as the reverse process of absorption.

destinezite

See: [diabandite](#)

destressed area

a. In strata control, a term used to describe an area where the force is much less than would be expected after considering the depth and type of strata. CF: [overstressed area](#) *Mason* b. A region of low stress behind the walls of a stoped-out region. *Issacson*

destressing

In deep mining, relief of pressure concentrations induced by mining or caused by geological factors. Performed by drilling and blasting to loosen the zones of peak stress. The peak load surrounding the excavation walls is thus transferred deeper into the undisturbed rock, and a protective barrier is formed. *Pryor, 3*

destructive distillation

The distillation of solid substances accompanied by their decomposition. The destructive distillation of coal results in the production of coke, tar products, ammonia, gas, etc. *CTD*

destructive testing

Testing methods, the use of which destroy or impair the part or product insofar as its intended use is concerned, but which give proof or an indication of the strength or quality of similar or duplicate parts or products. Such tests involve the subjection of the test piece to various influences, of destructive magnitude, such as impact, stress, pressure, cyclic movement, etc. See also: [nondestructive testing](#) *Henderson*

desulfurization of steel

The removal of a high proportion of sulfur from steel by injection of calcium or magnesium. *Nelson*

desulfurize

To free from sulfur; to remove the sulfur from an ore or mineral by some suitable process, as by roasting.

detachable bit

A drilling bit that is threaded or tapered and is removable from the drill steel; not formed as an integral part of the drill steel. The all-steel bit can be resharpened, but the tungsten carbide insert type may be nonresharpenable. Also known as rip bit or knockoff bit. See also: [bit](#); hot miller.

detached head pulley

See: [head pulley](#)

detaching hook

An appliance that releases automatically the winding rope from the cage should an overwind occur. See also: [wedge guide](#)

detachment

See: [decollement](#)

detail drawing

A large-scale drawing showing all small parts, details, dimensions, etc. *Nichols, 1*

detailed soil survey

The final soil tests at site as guided by the general soil survey. The tests may be performed in situ by mobile laboratory units, or the samples are sent to the nearest soils laboratory. See also: [general soil survey](#); preliminary soil survey. *Nelson*

detaline system

A nonelectric system of initiating blasting caps in which the energy is transmitted through the circuit by means of a low-energy detonating cord. *Dick, 2*

detector

a. See: [magnetic detector](#) b. See: [seismometer](#) c. The component of a remote-sensing system that converts electromagnetic radiation into a signal that can be recorded. See also: [pickup](#) Syn: [radiation detector](#) d. See: [sensor](#)

determinative gemology

The science of differentiating (1) between the various gemstones, (2) between gemstones and their substitutes, and (3) among such substitutes. See also: [gemology](#)

determinative mineralogy

That branch of mineralogy that comprises the measurement of the nature, composition, and classification of minerals by means of physical tests (e.g., density, hardness), chemical analyses both qualitative and quantitative, spectrochemical analyses including both absorption and emission spectra, electron probe microanalyses, autoradiography, thermal analyses, optical tests in both transmitted and reflected light, electron microscopy, diffraction of X-rays or electrons, and crystallographic analyses.

detinning

Treatment by chlorination of tinbearing scrap for recovery of tin as its chloride. *Pryor, 3*

detonate

To cause to explode by the application of sudden force. *Standard, 2*

detonating cord

A flexible cord made of wound hemp or jute threads covered with plastic containing a center core of high explosive (PETN) and used to initiate other explosives.

detonating fuse

A fuse consisting of high explosive that fires the charge without the assistance of any other detonator. It consists of a high-explosive core of pentaerythritol tetranitrate (PETN) enclosed in tape and wrapped with textile countering yarns. Usually, this fuse is then reinforced or completely enclosed in a strong waterproof plastic outer cover. The finished external diameter is normally about 0.2 in (5 mm). Primacord is the best known brand. See also: [Cordtex](#); [safety fuse](#). *Fay; McAdam, 2; Nichols, 1; Nelson*

detonating gas

A gaseous mixture that explodes violently on ignition (as two volumes of hydrogen with one volume of oxygen, forming water). *Webster 2nd*

detonating powder

Any powder or solid substance that when heated or struck explodes with violence and a loud report. *Webster 2nd*

detonating primer

A name applied for transportation purposes to a device consisting of a detonator and an additional charge of explosives, assembled as a unit.

detonating rate

The velocity with which the explosion wave travels through the column of charge. *Streefkerk*

detonating relays

A device for obtaining short-delay blasting in conjunction with the detonating fuse. It consists essentially of two open-ended delay detonators coupled together with flexible neoprene tubing. *McAdam, 2*

detonating tube

A eudiometer for making explosions. *Webster 2nd*

detonation

a. An explosive decomposition or explosive combustion reaction that moves through the reactant(s) at greater than the speed of sound in the reactant(s) to produce (1) shock waves and (2) significant overpressure, regardless of confinement. b. An extremely rapid explosion; the firing of an explosive charge by fuse or electric detonator. *Nelson* c. The action of converting the chemicals in an explosive charge to gases at a high pressure, by means of a self-propagating shock wave passing through the charge. *BS, 12*

detonation pressure

The pressure produced in the reaction zone of a detonating explosive and is a function of explosive density and detonation velocity.

detonation traps

Devices that prevent a detonation initiated in one part of a system from propagating to another. *Van Dolah*

detonation velocity

a. The velocity at which a detonation progresses through an explosive. b. See: [velocity of detonation](#)

detonator

A device for producing detonation in a high-explosive charge, and initiated by a safety fuse or by electricity. Syn: [percussion cap](#) See also: [blasting cap](#); [electric detonator](#). *BS, 12*

detonator case

A container for carrying detonators in mines. It is so constructed that, when closed, a detonator or the leads of a detonator cannot come into contact with either the metal of the case or any metal outside the case. *Nelson*

detrital

Pertaining to or formed from detritus; said esp. of rocks, minerals, and sediments. See also: [clastic](#)

detrital deposits

Placer or detrital deposits are composed of minerals that have been released by weathering and later have been transported, sorted, and collected by natural agencies into valuable deposits. Such minerals are usually of high specific gravity and are resistant to abrasion and weathering. Examples are gold, diamonds, platinum, tin (cassiterite), monazite, magnetite, and ilmenite, these last two being the common constituents of black sand. *Lewis*

detrital fan

See: [alluvial fan](#)

detrital mineral

Any mineral grain resulting from mechanical disintegration of parent rock; esp. a heavy mineral found in a sediment or weathered and transported from a vein or lode and found in a placer or alluvial deposit. *AGI*

detrital rock

A rock composed primarily of particles or fragments detached from preexisting rocks either by erosion or by weathering; specif. a sedimentary rock having more than 50% detrital material. CF: [chemical rock](#)

detritus

A collective term for loose rock and mineral material that is worn off or removed by mechanical means, as by disintegration or abrasion; esp. fragmental material, such as sand, silt, and clay, derived from older rocks and moved from its place of origin. CF: [debris](#)

deuteric

Referring to reactions between primary magmatic minerals and the water-rich solutions that separate from the same body of magma at a late stage in its cooling history. Syn: [epimagmatic](#) See also: [autometamorphism](#)

deuteromorphic

A general term applied to crystals whose shapes have been acquired or modified by mechanical or chemical processes acting on the original forms. *AGI*

De-Vecchis process

A method for the smelting of pyrites that entails the roasting and magnetic concentration of the raw material followed by reduction in a rotary kiln or electric furnace. The product may be briquetted and reduced in the blast furnace, but is better smelted in an electric furnace. *Osborne*

develop

a. To open a mine and ore; more or less, to search, prospect, explore. *von Bernewitz* b. To traverse a mineralized body horizontally by drives and vertically by shafts or winzes to prove its extent. *CTD* c. To open up orebodies by shaft sinking, tunneling, or drifting. *Ballard*

developed ore

See: [developed reserve](#)

developed reserve

Ore that has been exposed on three sides and for which tonnage and quality estimates have been made; ore essentially ready for mining. CF: [proved reserve](#) assured mineral. *AGI*

development

a. The preparation of a mining property or area so that an orebody can be analyzed and its tonnage and quality estimated. Development is an intermediate stage between exploration and mining. *AGI* b. To open up a coal seam or orebody as by sinking shafts and driving drifts, as well as installing the requisite equipment. *Nelson* c. Work of driving openings to and in a proved orebody to prepare it for mining and transporting the ore. *Lewis* d. The amount of ore in a mine developed or exposed on at least three sides. *CTD* e. S. Afr. The work done in a mine to open up the paying ground or roof and, in particular, to form drives or haulages around blocks of ore, which are then included under developed ore reserves. *Beerman* f. A geologic term, applied to those progressive changes in fossil genera and species that have followed one another during the deposition of the strata of the Earth. g. In construction of a water well, the removal of fine-grained material adjacent to a drill hole, enabling water to enter the hole more freely. *AGI* h. Exploitation of ground water. *AGI*

development drift

a. A main tunnel driven from the surface, or from a point underground, to gain access to coal or ore for exploitation purposes. *Nelson* b. Slant.

development drilling

Delineation of the size, mineral content, and disposition of an orebody by drilling boreholes. *Long*

development drivages

The shafts, tunnels, laterals, crosscuts, and staple pits to prove and render accessible the coal or ore to be extracted. See also: [productive development](#); [unproductive development](#). *Nelson*

development engineer

In bituminous coal mining, one who operates a hoist to raise and lower workers, rock, and supplies during development work (sinking shafts and driving horizontal underground passages prior to the actual mining of coal from a seam). *DOT*

development miner

See: [miner](#)

development plan

A plan showing the proposed development of the mine workings, and kept for operational purposes. *BS, 7*

development rock

S. Afr. The rock broken during development work in payable ground, which contains both valuable and barren rock and is, therefore, included in the tonnage sent to the reduction plant of a mine. *Beerman*

development sampling

Sampling for the establishment of reserves and conducted primarily upon the exposures along the development drivages. See also: [reserve](#) *Nelson*

development work

Work undertaken to open up orebodies as distinguished from the work of actual ore extraction. Sometimes development work is distinguished from exploratory work on the one hand and from stope preparation on the other. *AGI*

Devereaux agitator

An upthrust propeller, stirring pulp vigorously in a cylindrical tank, used in leach agitation of minerals. *Pryor, 1*

deviate

To change the course of a borehole. CF: [walk](#); [wander](#). *Long*

deviating

Syn. for deflecting. *Long*

deviation

a. The departure of a drilled hole from being straight. The hole may be either vertical or inclined, and the departure may be in any direction. Deviation may be intentional, as in directional drilling, or undesirable. Syn: [deflection](#) b. In more general use, the angle of departure of a well bore from the vertical, without reference to direction. *AGI* c. The distance, measured in a horizontal plane, between two surveyed points in a borehole or between the collar and any point below the collar in a borehole. Also called dislocation; throw. *Long*

devilline

A monoclinic mineral, $\text{CaCu}_4(\text{SO}_4)_2(\text{OH})_6 \cdot 3\text{H}_2\text{O}$; emerald-green to verdigris-green. Formerly called devillite; herregrundite; lyellite; urvolgyite.

devillite

See: [devilline](#)

devil's dice

Cubes of fully or partially oxidized and hydrated pseudomorphs of pyrite in alluvial workings.

devil's dough

A hard, gray-white siliceous rock. *Arkell*

devitrification

a. Deferred crystallization, which, in glassy igneous rocks, converts obsidians and pitchstones into dull cryptocrystalline rocks (commonly called felsites) consisting of minute grains of quartz and feldspar. Such devitrified glasses reveal their originally vitreous nature by traces of perlitic and spherulitic textures. b. The process by which

glassy rocks break down into definite minerals, which are commonly minute, chiefly quartz and feldspar. c. Any change from a glassy state to a crystalline state after solidification. d. In ceramics, a surface defect manifested by loss of gloss as a result of crystallization.

devitrify

To destroy the glasslike character of volcanic glasses by changing from the vitreous state to the crystalline state.

devolatilization

Progressive loss of volatiles by the substance undergoing coalification process. *Tomkeieff*

Devonian

The fourth period, in order of decreasing age, of the periods making up the Paleozoic era. It followed the Silurian period and was succeeded by the Mississippian period. Also, the system of strata deposited at that time. Sometimes called the Age of Fishes. *Fay*

De Vooy's process

The sink-float or dense-media process used for coal cleaning. The separating fluid is a clay-barite water pulp. *Pryor, 3*

dewater

To remove water from a mine; an expression used in the industry in place of the more technically correct word, unwater. *Hudson*

dewatering

a. The removal of water from a drowned shaft or waterlogged workings by pumping or drainage as a safety measure or as a preliminary step to resumption of development in the area. CF: [unwatering](#) b. The draining of an aquifer when adjacent wells or mine workings are pumped. c. The mechanical separation of a mixture of coal and water into two parts, one which is relatively coal-free, the other relatively water-free, with respect to the original mixture. *Mitchell* d. The mechanical separation of solid matter from water in which it is dispersed, by such equipment as thickeners, classifiers, hydrocyclones, filters, and centrifuges. Coarser coal sizes may be dewatered by slotted screens or perforated bucket elevators. e. The process in which solid material, either submerged or containing liquid, is conveyed or elevated in a manner that allows the liquid to drain off while the solid material is in transit.

dewatering classifier

A settling tank for clarifying washer circulating water or for concentrating gold slimes before cyaniding. The tank may have a continuously working rake that moves the sludge toward the outlet pipe in the bottom. See also: [dryer](#)

dewatering elevator

Similar to the continuous bucket elevator, it is often used in sand and gravel plants where the dredge line discharges to a sump. The dewatering elevator digs the material from the sump, allowing the water to drain out through perforations in the backs of the buckets while being elevated, and discharges to the plant for further processing. *Pit and Quarry*

dewatering screen

A screen used for the separation of water from solids. *BS, 5*

deweylite

A mixture of a disordered clinochrysotile or lizardite with a talclike mineral.

dewindtite

An orthorhombic mineral, $Pb_3(UO_2)_6H_2(PO_4)_4O_4 \cdot 12H_2O$; strongly radioactive; canary yellow; associated with torbernite and other secondary uranium minerals.

dewpoint

The temperature to which air must be cooled, at constant pressure and constant water vapor content, in order for saturation to occur. Since the pressure of the water vapor content of the air becomes the saturation pressure, the dewpoint may also be defined as the temperature at which the saturation pressure is the same as the existing vapor pressure. Also called saturation point. *AGI*

dewpoint hygrometer

An instrument for determining the dewpoint; a type of hygrometer. *Hunt*

dextral fault

See: [right-lateral fault](#)

dextrin

A carbohydrate, $C_6H_{18}O_5$, hydrolyzed from starch by dilute acids. Used in flotation as depressant. *Pryor, 1*

d'Huart reagent

An etching reagent that reveals not only the macrostructure and faults, such as piping, segregation, particularly sulfur and phosphorus, and cracks, but also slip lines in mild steel that has been stressed beyond its elastic limit. Composition is 100 mL of distilled water, 100 mL of concentrated hydrochloric acid, and 40 g of crystallized chromic acid, 16 g of anhydrous nickel chloride. *Osborne*

diabandite

A ferroan variety of clinchlore. Syn: [destinezite](#)

diabase

In the United States, an intrusive rock whose main components are labradorite and pyroxene and that is characterized by ophitic texture. As originally applied by Brongniart in 1807, the term corresponded to what is now recognized as diorite. The word has come to mean a pre-Tertiary basalt in Germany, a decomposed basalt in England, and a dike-rock with ophitic texture in the United States and Canada (Johannsen, 1939). CF: [trap](#)
Syn: [dolerite](#)

diabasic

Composed of or resembling diabase. *AGI*

diablastic

Pertaining to a texture in metamorphic rock that consists of intricately intergrown and interpenetrating constituents, usually with rodlike shapes. *AGI*

diachronism

The transgression, across time planes or biozones, by a rock unit whose age differs from place to place; the state or condition of being diachronous. *AGI*

diachronous

Said of a rock unit that is of varying age in different areas or that cuts across time planes or biozones; e.g., said of a sedimentary formation related to a narrow depositional environment, such as a marine sand that was formed during an advance or recession of a shoreline and becomes younger in the direction in which the sea was moving. Syn: [time-transgressive](#)

diad

An axial rotation of 180 degrees . Syn: [twofold](#)

diadochite

A hydrated ferric phosphate and sulfate mineral, brown or yellowish in color. *Fay*

diagenesis

Any change occurring within a sediment after its deposition and during and after its lithification, exclusive of weathering. It includes such processes as compaction, cementation, replacement, and crystallization, under normal surficial conditions of pressure and temperature.

diagenetic deposits

Deposits consisting dominantly of minerals crystallized out of sea water, such as manganese nodules. *Hunt*

diagnostic mineral

a. A mineral, such as olivine or quartz, whose presence in an igneous rock indicates whether the rock is undersaturated or oversaturated. There are also diagnostic minerals in sedimentary and metamorphic rocks. Syn: [symptomatic mineral](#) b. A mineral whose presence permits certain deductions pertaining to a geologic history of a rock or sediment.

diagonal fault

See: [oblique fault](#)

diagonal joints

a. Joints diagonal to the strike of the cleavage. *Zern* b. In igneous rocks, joints that occur at 45 degrees to the flow lines and are caused by shear. *Lewis*

diagonal-slip fault

See: [oblique-slip fault](#)

dial

a. A compass used for surface and underground surveying. It is fitted with sights, spirit levels, and a vernier, and mounted on a tripod. Syn: [mining dial](#) b. Corn. To make a mine survey. *Pryor, 3*

dialing

a. The process of running an underground traverse with a mining dial. Also spelled: dialling. *CTD* b. Surveying, usually magnetic, using miner's dial. *Pryor, 1*

diallage

A dark green or bronze-colored monoclinic pyroxene, which in addition to the prismatic cleavages has others parallel to the vertical pinacoids. Mohs hardness, 4; sp gr, 3.2 to 3.35. Used also as a prefix to many rocks containing the mineral. See also: [pyroxene](#) *AGI; Webster 3rd; Fay*

dialogite

A former name for rhodochrosite.

dialysis

A method of separating compounds in solution or suspension by their differing rates of diffusion through a semipermeable membrane, some colloidal particles not moving through at all, some moving slowly, and others diffusing quite readily. CF: [osmosis](#) See also: [electrodialysis](#)

diamagnetic

Having a small, negative magnetic susceptibility. All materials that do not show paramagnetism or magnetic order are diamagnetic. Typical diamagnetic minerals are quartz and feldspar. CF: [paramagnetic](#) *AGI*

diamagnetism

The property of certain substances by virtue of which they are repelled from both poles of a magnet and tend to set with the longer axis across the lines of magnetic force. CF: [ferrimagnetism](#); [paramagnetism](#). *Standard, 2*

diamantiferous

See: [diamondiferous](#)

diametric rectifier circuit

A circuit that employs two or more rectifying elements with a conducting period of 180 electrical degrees, plus the commutating angle. *Coal Age, 1*

diamond

a. An isometric mineral, a form of carbon, C ; crystallizes in octahedra, dodecahedra, or cubes, commonly with curved edges and striated faces; rarely twinned; has octahedral cleavage and conchoidal fracture. Fresh cleavages have adamantine luster, but crystal faces are commonly greasy; colorless when pure but pale tints to black (bort) with impurities. The hardest natural substance, it defines 10 on the Mohs hardness scale and 15 on the Povarennykh scale, but ranges from 42 to 46 on a linearized Mohs scale. Its high refractive index ($n = 2.42$) and strong dispersion give fire to faceted gems. Diamond occurs in kimberlite pipes and dikes, also in river and beach placers. See also: [congos](#) b. A crystalline material resembling diamond such as rock crystal (quartz) locally known as "Bristol diamond," "Herkimer diamond," "Lemont diamond," "Lake George diamond," or "Arkansas diamond." See also: [industrial diamonds](#); [manmade diamond](#). c. A pointed wooden or iron arrangement placed between rails, just before a curve or switch, where tram cars are liable to be derailed, to force them to remain on the rails. *Fay*

diamond ballas

An important industrial variety of diamond. The stones are spherical masses of minute diamond crystals arranged more or less radially. They have no well-defined cleavage planes and thus have great resistance to abrasion. While the term, ballas, was first applied to such stones from Brazil, diamonds of similar structure known as Cape and African ballas are found. In color, ballas ranges from white to varying shades of black. While Cape and African ballas are not as hard as the Brazilian, they include some fine and unusual stones. Production is small. Rarely, if ever, used for diamond drilling but very valuable for diamond tools. *Cumming, 1*

diamond bit

A rotary drilling bit studded with bort-type diamonds. Also called boart bit; boart-set bit. Syn: [bort bit](#); [bort-set bit](#). *AGI; Long*

diamond boring

Precision boring with a shaped diamond (but not with other tool materials). *ASM, 1*

diamond chip

A thin, tabular chip of an uncut diamond crystal, weighing less than 0.75 carat. *AGI*

diamond chisel

A cutting chisel having a diamond or V-shaped point. *Fay*

diamond cleavage

The plane along which a diamond crystal can be split easily. The four planes paralleling the faces of an octahedron are those generally referred to as the cleavage planes, or diamond cleavage. All crystalline diamonds are more or less brittle and will be fractured by a sufficiently violent blow, but the irregular surface of a fracture cannot be mistaken for the brilliant flat surface produced by cleaving. The carbon has no cleavage, and in ballas cleavage is absent or very poorly defined. *Long*

diamond cleaving

The act or process of splitting diamonds into smaller pieces, which may be more readily used as tool points, gems, or drill diamonds. *Long*

diamond concentration

The ratio of the area of a single-layer bit face covered by the inset diamonds or, in an impregnated bit, the bulk proportion of the crown occupied by diamonds. *Long*

diamond content

The number of carats of diamonds inset in the crown of a diamond bit. Also called stone content; stone weight. *Long*

diamond core drill

A rotary-type drill machine using equipment and tools designed to recover rock samples in the form of cylindrical cores from rocks penetrated by boreholes. See also: [core drill](#); [diamond drill](#). *Long*

diamond coring

The act or process of obtaining a core sample of rock material using a diamond-inset annular bit as the cutting tool. This tubular bit and attached core barrel are rotated at a speed under controlled pressure by means of hollow steel, flush-jointed rods through which water is pumped to cool the bit and remove rock cuttings. With the advance of the bit, a cylindrical core of rock passes up into the core barrel, where it is held by a core lifter or other device. *Long; Cumming, 1*

diamond count

a. The number of diamonds set in the crown of a specific diamond bit. Also called bit count; stone count. *Long* b. Sometimes incorrectly used to indicate the average size of the diamonds inset in a specific bit. See also: [carat count](#)

diamond crown

The cutting bit in diamond drilling. It consists of a steel shell containing small cavities in its face and edges into which black diamonds are set. In some types of crown the diamonds can be removed and reset for further use. Grooves, called waterways, are usually provided in the face of the crown to allow the passage of the drilling fluid. For surface-set bits in diamond drilling, it is recommended that 2 to 20 stones per carat should be used in soft ground (such as shale); 10 to 80 stones per carat in medium ground (such as sandstone); and 20 to 150 stones per carat in hard ground (such as granite). See also: [burned bit](#)

diamond cubic

With respect to atomic arrangements, similar to the diamond in having the two face-centered cubic arrangements of atom centers either of which is displaced with respect to the other by one-fourth of the diagonal of the unit cube. *Henderson*

diamond cutter

a. An individual skilled in the art of shaping diamonds as gems. *Long* b. A tool in which a single diamond, shaped as a cutting point, is inset. *Long*

diamond cutting

One of the three processes by which diamonds are prepared for use as ornaments or in the arts, the others being diamond cleaving and diamond polishing. *Fay*

diamond drill

a. A drilling machine with a rotating, hollow, diamond-studded bit that cuts a circular channel around a core, which can be recovered to provide a more or less continuous and complete columnar sample of the rock penetrated. *AGI; Long* b. Diamond drilling, a common method of prospecting for mineral deposits. Also called adamantite drill; diamond core drill; rotary drill. See also: [core drill](#); [hydraulic circulating system](#). *AGI; Long*

diamond-driller helper

One who assists in the erection and operation of a core drill that bores into rock, earth, and other minerals to obtain core samples. Also called core-driller helper; core-drill-

operator helper; diamond-point-drill-operator helper; drill-runner helper; shot-core-drill-operator helper; test-borer helper; test-hole-driller helper; wash-driller helper. *DOT*

diamond drilling

The act or process of drilling boreholes using bits inset with diamonds as the rock-cutting tool. The bits are rotated by various types and sizes of mechanisms motivated by steam, internal-combustion, hydraulic, compressed-air, or electric engines or motors. A common method of prospecting for mineral deposits. See also: [diamond drill](#)

diamond-drill sample

The core brought to the surface in the core barrel. The cuttings in the uprising drilling fluid will also provide sampling material. Syn: [core recovery](#)

diamond dust

a. Finely fragmented or powdered diamonds used as a cutting, grinding, and polishing abrasive or medium. b. A diamond powder produced in the cutting of gems.

diamond exposure

The proportional mass of a diamond protruding beyond the surface of a matrix metal in which the diamond is inset. CF: [bit clearance](#) Syn: [stone exposure](#)

diamond grade

The worth of a diamond as based on an individual sorter's interpretation of somewhat arbitrary standards of color, presence of flaws, soundness, and shape. *Long*

diamondiferous

Any substance containing diamonds, generally applied to rock or alluvial material containing diamonds, but may also refer to diamond-impregnated substances, such as the crown of a diamond-impregnated drill bit.

diamond impregnated

Having diamonds distributed throughout a matrix. *Long*

diamond life

The amount of cutting a diamond will accomplish before being completely worn away by abrasion. In bits, diamond life usually is expressed in the number of feet drilled in a

specific rock before the inset diamonds become too dulled to continue cutting or are lost by rollout or completely worn away by abrasion. *Long*

diamond matrix

a. A metal or metal alloy forming the material in which the diamonds inset in a bit crown are embedded. Also called bit-crown metal; bit-crown matrix; bit matrix; crown metal; matrix. *Long* b. The rock material in which diamonds are formed naturally and occur, such as in kimberlite. *Long*

diamond needle

A small-diameter hollow metal tube attached to a flexible rubber tube through which air is pulled by a suction or vacuum pump. The suction created at the tip of the metal tube enables a bit setter to pick up and place a small diamond in a bit mold with greater facility than with tweezers. Called a needle because the metal tube generally is made by using a discarded hypodermic needle. Also called diamond pickup needle; diamond pickup tube; diamond pipe. *Long*

diamond pipe

a. Term used for an occurrence of kimberlite in volcanic pipes large enough and sufficiently diamondiferous to be minable. The size and shape of these pipes depend on the position of the planes of structural weakness in the country rock through which the molten kimberlite passed. They may be columnar, tabular, or irregular in shape, and where mining is deep enough the diamond pipe is found to decrease in area and assume a dikelike habit. *Chandler* b. See: [diamond needle](#)

diamond powder

See: [diamond dust](#)

diamond pressure

The proportional amount of the total feed pressure applied to a diamond bit theoretically borne by an individual diamond inset in the face of the bit. Also called pressure per diamond; pressure per stone; stone pressure. *Long*

diamond-pyramid hardness test

An indentation hardness test employing a 136 degrees diamond-pyramid indenter and variable loads enabling the use of one hardness scale for all ranges of hardness from very soft lead to tungsten carbide. See also: [Vickers hardness test](#)

diamond saw

A circular metal disk having diamonds or diamond dust inset in its cutting or peripheral edge. Employed to cut rocks and other brittle substances. See also: [diamond wheel](#)

diamond-saw splitter

See: [core saw](#)

diamond scale

Instrument on which diamonds are weighed with weight units calibrated in carats; scales vary from a folding 50-carat-capacity type, small enough to fit in a coat pocket when closed, to those large enough to weigh several thousand carats at one time. *Long*

diamond scrap

As used in the diamond-drilling industry; broken diamonds and diamond fragments deemed unfit for reuse in a diamond bit. In other industries using diamond-pointed tools, any piece of diamond salvaged from a tool and deemed unfit for reuse in the same kind of tool. *Long*

diamond screen

A perforated metal or wirecloth sieve used to sort diamonds or fragments of diamonds according to size. *Long*

diamond-set bit

A rock-boring or rock-cutting tool, the cutting points of which are inset diamonds. *Long*

diamond-set inserts

Small, shaped metallic slugs inset with diamonds designed to be brazed or welded into slots or depressions machined in a metal bit or reaming-shell blank. *Long*

diamond-set ring

A powdered metal-alloy band encircling a reaming shell in which diamonds are inset mechanically. *Long*

diamond spar

Syn: [corundum](#)

diamonds per carat

The number of relatively equal size diamonds having a total weight of 1 carat. Also called stone per carat. *Long*

diamond tin

Large bright crystals of cassiterite. *Fay*

diamond-tooth saw

A circular saw for cutting stone with points of the teeth made of pieces of diamonds. *Mersereau, 2*

diamond washer

An apparatus used for washing diamondiferous gravel.

diamond wheel

a. A grinding wheel in which crushed and sized industrial diamonds are held in a resinoid, metal, or vitrified bond. *ASM, 1* b. See: [diamond saw](#)

dianite

See: [columbite](#)

diaphaneity

a. The quality or state of being diaphanous. Specif., the ability of a mineral to transmit light. CF: [transparent](#); [semitransparent](#); [translucent](#); opaque. *Webster 3rd; Fay* b. Degrees of transparency of minerals. CF: [transparent](#); [translucent](#); opaque. c. See: [transparency](#)

diaphanous

Allowing light to show or to shine through. *Webster 3rd*

diaphorite

a. See: [allagite](#) b. A monoclinic mineral, $Pb_2 Ag_3 Sb_3 S_8$.

diaphragm

A porous or permeable membrane separating anode and cathode compartments of an electrolytic cell from each other or from an intermediate compartment. *ASM, 1*

diaphragm jig

In the gravity concentration of minerals, a jig with a flexible diaphragm used to pulse water. The Bendelari, Pan-American, Denver, and Conset are examples. *Pryor, 1*

diaphragm pump

A positive displacement pump used for lifting small quantities of water and discharging them under low heads. It has a plunger arm operating either on an eccentric shaft or a rocker arm thrusting on a rubber diaphragm stretched over a cylinder. As the diaphragm is depressed, the water and air in the cylinder are forced out through the discharge side of the pump. As the diaphragm is lifted, a vacuum is created in the cylinder, and water is forced in. *Carson, 1*

diaphragm-type washbox

A washbox in which the pulsating motion is produced by the reciprocating movement of a diaphragm. *BS, 5*

diaphthoresis

See: [retrograde metamorphism](#)

diaphthorite

A crystalline rock in which minerals characteristic of a lower metamorphic grade have developed by retrograde metamorphism at the expense of minerals peculiar to a higher metamorphic grade. *AGI*

diapir

A dome or anticlinal fold in which the overlying rocks have been ruptured by the squeezing-out of plastic core material. Diapirs in sedimentary strata usually contain cores of salt or shale; igneous intrusions may also show diapiric structure.

diapir fold

An anticline in which a mobile core, such as salt, has ruptured the more brittle overlying rock. Syn: [piercement dome](#); [piercement fold](#).

diaschistic

Said of the rock of a minor intrusion that consists of a differentiate, i.e., its composition is not the same as that of the parent magma. CF: [aschisite](#); [aschistic](#). *AGI*

diaspore

An orthorhombic mineral, $\text{AlO}(\text{OH})$; white, colorless, or pale tints; in bauxite and emery deposits; a source of aluminum. Formerly spelled diasporite. Syn: [kayselite](#)

diaspore clay

A high-alumina refractory clay consisting essentially of the mineral diaspore. It has been interpreted as a desilication product of associated flint clay and other kaolinitic materials. Commercial diaspore of first-grade quality contains more than 68% alumina. See also: [burley clay](#)

diasporogelite

A colloidal form of aluminum hydroxide in bauxite. Syn: [sporogelite](#); cliachite. *English*

diastem

A relatively short interruption in sedimentation, involving only a brief interval of time, with little or no erosion before deposition is resumed; a paraconformity of very small time value. *AGI*

diasterism

Asterism seen by transmitted light. See also: [asterism](#); [epiasterism](#).

diastrophism

The processes of deformation in the Earth's crust that produce its continents and ocean basins, plateaus and mountains, and major folds and faults. Syn: [tectonism](#)

diathermanous

a. Transmitting infrared radiation. *Webster 3rd* b. Allowing the free passage of the rays of heat as a transparent body allows free passage of light. *Standard, 2*

diatom

A microscopic unicellular plant with an envelope (frustule) or outer skeleton of hydrated silica, close to opal in composition, and usually in two parts. Diatoms inhabit both fresh water and salt water, and in places their frustules form masses of diatomaceous earth or shale hundreds of feet thick.

diatomaceous

Composed of or containing diatoms or their siliceous remains. *AGI*

diatomaceous earth

See: [diatomite](#)

diatomite

A light-colored soft friable siliceous sedimentary rock, consisting chiefly of opaline frustules of the diatom, a unicellular aquatic plant related to the algae. Some deposits are of lake origin, but the largest are marine. Owing to its high surface area, high absorptive capacity, and relative chemical stability, diatomite has a number of uses, esp. as a filter aid and as an extender in paint, rubber, and plastics. The term is generally reserved for deposits of actual or potential commercial value. Syn: [diatomaceous earth](#); [kieselguhr](#); [guhr](#); [tripoli](#). Obsolete syn: infusorial earth; tripoli-powder. See also: [tripolite](#) *AGI*

diatom ooze

A deep-sea deposit, resembling flour when dry, largely composed of the frustules of diatoms and containing a small but variable proportion of calcareous organisms and mineral particles. *Holmes, 2*

diatomous

Having a single distinct diagonal cleavage; applied to certain crystals. *Standard, 2*

diatom saprokol

A saprokol containing a large amount of diatoms. *Tomkeieff*

diatrema

A breccia-filled volcanic pipe that was formed by a gaseous explosion. *AGI*

dibutyl carbinol

2-methyl-1-butanol; a frother used in the flotation process. *Pryor, 1*

dice mineral

A Wisconsin term for small cubic galena. *Fay*

dicey clay

Any clay or mudstone with a cuboidal fracture, as in the Kimmeridge clay. *Arkell*

dichroic colors

A term loosely used to refer to either the two colors observable in a dichroic stone or the three colors in a trichroic stone. Syn: [twin colors](#)

dichroism

a. Pleochroism of a crystal, which is indicated by two different colors or two shades of the same color. In plane-polarized light, dichroic minerals change color upon rotation. CF: [trichroism](#); [pleochroism](#). b. Color change owing to change in the spectrum of illumination; e.g., alexandrite, which is green in sunlight but red by tungsten incandescent light. See also: [chrysoberyl](#) c. The property of some surfaces to reflect light of one color while transmitting light of another.

dichroite

A former name for iron-rich cordierite that may have been the navigation stone of the Vikings; reveals maximum light polarization in the southern sky.

dichromate

A salt containing the divalent $(\text{Cr}_2 \text{O}_7)^{2-}$ radical.

dichroscope

a. An instrument designed to detect two of the different colors emerging from pleochroic (that is, dichroic or trichroic) minerals. Contains a rhomb of Iceland spar and a lense system in a short tube, and exhibits the two colors side by side. See also: [dichroic colors](#)
b. An instrument to detect two colors transmitted by pleochroic minerals and display them side-by-side.

dickensonite

A monoclinic mineral, $(\text{K,Ba})(\text{Na,Ca})_5 (\text{Mn,Fe,Mg})_{14} \text{Al}(\text{PO}_4)_{12} (\text{OH,F})_2$; forms a series with arrojadite.

dickinsonite

A green, hydrous phosphate mineral, chiefly of manganese, iron, and sodium. *Fay*

dickite

A monoclinic mineral, $\text{Al}_2 \text{Si}_2 \text{O}_5 (\text{OH})_4$; kaolinite-serpentine group; polymorphous with halloysite, kaolinite, and nacrite, each having a different stacking order of identical layers (polytypy); commonly in hydrothermal veins.

diclinic

A crystal having two of the three axes inclined to the third and perpendicular to each other. *Standard, 2*

didymium

a. The name applied to commercial mixtures of rare-earth elements obtained from monazite sand by extraction followed by the elimination of cerium and thorium from the mixture. The name is used like that of an element in naming mixed oxides and salts. The approximate composition of didymium from monazite, expressed as rare-earth oxides, is 46% lanthana, La_2O_3 ; 10% praseodymia, Pr_6O_{11} ; 32% neodymia, Nd_2O_3 ; 5% samaria, Sm_2O_3 ; 0.4% yttrium earth oxides; 1% ceria, CeO_2 ; 3% gadolinia, Gd_2O_3 ; and 2% others. The mineral bastnaesite could also be a source of didymium mixtures. *CCD, 2* b. The name didymium has also been applied to mixtures of the elements praseodymium and neodymium because such mixtures were once thought to be an element; it was assigned the symbol, Di. *CCD, 2*

didymolite

A former name for a plagioclase mineral.

die

a. See: [bell tap](#) b. A piece of hard iron, placed in a mortar to receive the blow of a stamp or in a pan to receive the friction of a muller as ore is crushed between the die and the stamp or muller. *Fay*

die-casting alloys

Alloys that are suitable for die casting and that can be relied on for accuracy and resistance to corrosion when cast. Aluminum-, copper-, tin-, zinc-, and lead-base alloys are those generally used. *CTD*

die collar

See: [bell tap](#)

dielectric

a. A material that offers relatively high resistance to the passage of an electric current but through which magnetic or electrostatic lines of force may pass. Most insulating materials, for example, air, porcelain, mica, and glass, are dielectrics; and a perfect vacuum would constitute a perfect dielectric. *NCB* b. An insulator. A term applied to the insulating material between the plates of a capacitor. *Hunt*

dielectric constant

The numerical expressions of the resistance to the passage of an electric current between two charged poles. It is the ratio of the attraction of two oppositely charged poles as measured in a vacuum to their attraction in a substance. The dielectric constant, which corresponds to permeability in magnetic materials, is a measure of the polarizability of a material in an electric field. This property determines the effective capacitance of a rock material and consequently its static response to any applied electric field, either direct or alternating. The dielectric constant of a vacuum is unity. *Hess; Dobrin*

dielectric heating

A method of high-frequency heating in which the object to be heated, which must be nonconducting, is placed in a high-frequency alternating field where it is heated by the continually reversed polarization of the molecules. Applied in the foundry for drying sand cores. *Osborne*

dielectric separation

Method of ore treatment based on differences between dielectric constants of minerals suspended in an intermediate nonconducting fluid, when subjected to electric fields. Of limited use in laboratory work. *Pryor, I*

dielectric strength

The maximum potential gradient that a dielectric material can withstand without rupture. *Lowenheim*

dienerite

An isometric mineral, Ni_3As ; in gray-white cubes at Radstadt, Salzburg, Austria.

die nipple

See: [bell tap](#)

diesel hammer

A pile driving drophammer operated by a type of diesel engine. *Hammond*

dieseling

In a compressor, explosions of mixtures of air and lubricating oil in the compression chambers or other parts of the air system. *Nichols, I*

diesel particulate matter

a. Exhaust material, excluding water, that results from the incomplete combustion of fuel and lubricating oil in a diesel engine. The particulates collected on a filter after dilution of the exhaust with ambient air, are carbonaceous solid chain aggregates with adsorbed or condensed organic compounds. *SME, 1* b. The fumes (solid condensation particles) and adsorbed gases that are emitted from a diesel engine as a result of the combustion of diesel fuel. Abbrev. DPM. DPM is a complex mixture of chemical compounds, composed of nonvolatile carbon, hundreds of thousands of different adsorbed or condensed hydrocarbons, sulfates, and trace quantities of metallic compounds. DPM is of special concern because it is almost entirely respirable, with 90% of the particles, by mass, having an equivalent aerodynamic diameter of less than 1.0 μm . This means that the particles can penetrate to the deepest regions of the lungs and, if retained, cause or contribute to the development of lung disease. Of equal concern is the ability of DPM to adsorb other chemical substances, such as (1) potentially mutagenic or carcinogenic polynuclear aromatic hydrocarbons (PAHs); (2) gases, such as sulfur dioxide and nitrogen dioxide; and (3) sulfuric and nitric acids. DPM carries these substances into the lungs, where they may be removed and transported by body fluids to other organs, where they may cause damage.

diesel rig

Any drill machine powered by a diesel engine. *Long*

diesel truck

In opencast mining, a powerful and robust diesel-engined vehicle carrying from a few to more than 100 cubic yards of earth or rock. Also used in trackless transport in tristate mines. *Pryor, 3*

die steels

Steels of plain-carbon or alloy types; they must be of high quality, which is usually attained by special methods of processing. Essentially, they are steels used in making tools for cutting, machining, shearing, stamping, punching, and chipping. *USBM, 5*

Dietert tester

An apparatus for the direct reading of a Brinell hardness after impression without the aid of magnification or conversion tables. *Osborne*

dietzite

A monoclinic mineral, $\text{Ca}_2(\text{IO}_3)_2(\text{CrO}_4)$; dark golden-yellow; forms prismatic, tabular, fibrous, or columnar crystals; at Atacama, Peru.

difference in gage of drill bits

The difference in diameter of the bits when passing from one length (change) of drill steel to the next longer one of a set. *Fraenkel*

difference of potential

The difference in electrical pressure existing between any two points in an electrical system or between any point of such a system and the Earth. Determined by a voltmeter. *Fay*

differential compaction

The uneven settling of homogeneous earth material under the influence of gravity (as where thick sediments in depressions settle more rapidly than thinner sediments on hilltops) or by differing degrees of compactability of sediments (as where clay loses more interstitial water and comes to occupy less volume than sand). *AGI*

differential curvature

A quantity represented by the acceleration due to gravity times the difference in the curvatures in the two principal planes; i.e., $g(1/p_1 - 1/p_2)$ where p_1 and p_2 are the radii of curvature of the two principal planes. *AGI*

differential erosion

Erosion that occurs at irregular or varying rates, caused by the differences in the resistance and hardness of surface materials; softer and weaker rocks are rapidly worn away, whereas harder and more resistant rocks remain to form ridges, hills, or mountains. *AGI*

differential fault

See: [scissor fault](#)

differential grinding

Application of comminution in such a way as to accentuate differences in grindability between the various mineral species in the ore. Therefore, in suitable cases, the relatively tough mineral particles remain coarse while the more friable ones are finely ground. *Pryor, I*

differential pressure flowmeter

An instrument for measuring water and water-ore slurries in ore dressing and coal dressing processes.

differential pumping engine

A compound direct-acting pumping engine, generally of the horizontal class. *Fay*

differential settlement

Nonuniform settlement; the uneven lowering of different parts of an engineering structure, often resulting in damage to the structure. See also: [settlement](#)

differential thermal analysis

a. A method of analyzing a variety of minerals, esp. clays and other aluminiferous minerals. The method is based upon the fact that the application of heat to many minerals causes certain chemical and physical changes and is reflected in endothermic and exothermic reactions. By comparing the changes in temperature of a mineral heated at a definite rate with that of a thermally inert substance (alumina, for example) heated under the same conditions, a curve or pattern is obtained that is characteristic of the particular mineral under examination. *Henderson* b. Thermal analysis carried out by uniformly heating or cooling a sample that undergoes chemical and physical changes, while simultaneously heating or cooling in identical fashion a reference material that undergoes no changes. The temperature difference between the sample and the reference material is measured as a function of the temperature of the reference material. Abbrev: DTA. *AGI*

differential weathering

Weathering that occurs at different rates, as a result of variations in composition and resistance of a rock or differences in intensity of weathering, and usually resulting in an uneven surface where more resistant material protrudes above softer or less resistant parts. Syn: [selective weathering](#)

differentiate

A rock formed as a result of magmatic differentiation. *AGI*

differentiated

Said of an igneous intrusion in which there is more than one rock type, owing to differentiation. *AGI*

differentiation

See: [magmatic differentiation](#)

diffraction

The cooperative scattering of any electromagnetic radiation where it encounters an obstacle, esp. the edge of an obstacle, resulting in constructive and destructive interference. Also, a single event resulting from constructive interference. See also: [optical diffraction](#); X-ray diffraction. Syn: [wave diffraction](#)

diffraction grating

An optical device having equidistant fine lines (on the order of wavelengths of visible light) scribed on glass for transmission, or on metal for reflection diffraction, of monochromatic light.

diffraction pattern

a. Diffracted X-rays recorded on film, giving a means of identification of a powder. b. A record of diffracted X-rays on film or paper showing angles of diffraction of monochromatic radiation; used for characterization or identification of a crystalline substance. CF: [Laue photograph](#)

diffuser

a. The inner shell and water passages of a centrifugal pump. *Nichols, I* b. See: [evase](#)

diffuser chamber

A chamber in a turbine pump consisting of a number of fixed blades. On leaving the impeller, the water is guided outward by these blades with the minimum of eddying and swirling. See also: [turbine pump](#)

diffusion of gases

The property that all gases possess of mixing with each other. *Nelson*

diffusivity

The relative rate of flow per unit area of a particular constituent of a mixture divided by the gradient of composition, temperature, or other property considered to be causing the diffusion.

dig

a. To mine coal; applied to bituminous workings. See also: [gouge](#) b. To excavate; make a passage into or through, or remove by taking away material. c. Crushed strata. *Nelson*

dig-down pit

A pit that is below the surrounding area on all sides. Also called sunken pit. *Nichols, 1*

digenite

An isometric mineral, Cu_9S_5 ; blue to black; in veins with chalcocite; a source of copper. Syn: [blue chalcocite](#); [alpha chalcocite](#). CF: [copper sulfide](#)

digger

a. One that digs in the ground, as a miner or a tool for digging. *Webster 3rd* b. A worker who is paid by the ton for coal produced; a miner in the stricter sense. Originally the digger mined or undermined the coal; now the term is applied to the worker who merely shoots out the coal. *Fay* c. A machine for removing coal from the bed of streams, the coal having washed down from collieries of culm banks above. *Zern*

digger edges

The formed serrated edges of the buckets used for digging purposes on a bucket loader.

digger tools

The formed tools interspaced with the buckets of a bucket loader to aid in digging action.

digging

Mining operations in coal or other minerals.

digging bit

According to English drillers, a noncoring bit usually similar to a steel drag or mud bit. *Long*

digging cycle

Complete set of operations a machine performs before repeating them. *Nichols, 2*

digging height

See: [bank height](#)

digging line

On a shovel, the cable that forces the bucket into the soil. Called crowd in a dipper shovel, drag in a pull shovel, and dragline and closing line in a clamshell. *Nichols, 1*

digging resistance

The resistance that must be overcome to dig a formation. This resistance is made up largely of hardness, coarseness, friction, adhesion, cohesion, and weight. *Nichols, 3*

diggings

Applicable to all mineral deposits and mining camps, but as used in the United States it is usually applied to placer mining only. See also: [bar diggings](#)

digital map

A map using data in a software format so that the maps have the characteristic of layered features on an overlay generated by computer-aided drafting and design to plot these features. *SME, 1*

dihedral

Having two sides, as a figure; having two faces, as a crystal. *Fay*

dihydrate

See: [pseudomalachite](#)

dike

a. An earthen embankment, as around a drill sump or tank, or to impound a body of water or mill tailing. b. A tabular igneous intrusion that cuts across the bedding or foliation of the country rock. Also spelled: dyke. CF: [sill](#); [sheet](#). See also: [dikelet](#)

dikelet

A small dike. There is no agreement on specific size distinctions. *AGI*

dike ridge

A wall-like ridge created when erosion removes softer material from along the sides of a dike.

dike rock

The intrusive rock comprising a dike. *AGI*

dike set

A group of parallel dikes. CF: [dike swarm](#)

dike swarm

A group of dikes, which may be in radial, parallel, or en echelon arrangement. Their relationship with the parent plutonic body may not be directly observable. CF: [dike set](#)

dilatancy

An increase in the bulk volume of a granular mass during deformation, caused by a change from close-packed structure to open-packed structure, accompanied by an increase in the pore volume. The latter is accompanied by rotation of grains, microfracturing, and grain boundary slippage. *AGI*

dilatational wave

See: [P wave](#); compressional wave.

dilation

Deformation by a change in volume but not shape. Also spelled: dilatation. *AGI*

dilational transformation

A phase transformation requiring change in coordination about a cation, e.g., quartz with silica tetrahedra to stishovite with silica octahedra. CF: [reconstructive transformation](#); [displacive transformation](#); rotational transformation.

dilation vein

A mineral deposit in a vein space formed by bulging of the walls, contrasted with veins formed by wall-rock replacement. *AGI*

diligence

The attention and care legally required of a person (for example a claim holder) while that person has temporary possession of a property. With regards to mining claims, the courts have said that due diligence requires that "the exploration for minerals should be made within a reasonable time" and that, "The failure to make such exploration within a reasonable time, and to make it with such thoroughness and certainty as to determine the existence of mineral or oil, would be fatal to the agreement (claim)". Legal requirements

for "diligence" may include annual improvements to the claim and the filing of reports and notices. *Webster 3rd*

dillenburgite

An impure variety of chrysocolla containing copper carbonate.

dilly rider

In bituminous coal mining, a laborer who rides and attends a dilly (light wagon, truck, or water cart) used to haul coal or water underground or at the surface of a mine, loading, unloading, and cleaning it. *DOT*

diluent

a. That which dilutes or makes more fluid; a fluid that weakens the strength or consistency of another fluid upon mixing. *Fay* b. Waste rock in ore. *Hess* c. In solvent extraction, the inert liquid used to dissolve the extractant. *Newton, 1*

dilute medium

Medium of specific gravity below that in the separating bath and usually occurring as a result of spraying the bath products for the removal of adhering medium solids. *BS, 5*

dilution

The contamination of ore with barren wall rock in stoping. The assay of the ore after mining is frequently 10% lower than when sampled in place. See also: [contamination](#)

dimensional rated capacity

The weight of a specified material per foot of belt length that a belt conveyor will transport. *NEMA, 2*

dimension stone

Any rock suitable for construction purposes, as distinguished from crushed stone or aggregate.

dimetric system

Same as tetragonal system.

dimorphism

The property of a chemical compound to crystallize in either of two different crystal structures, e.g., CaCO_3 as trigonal calcite and as orthorhombic aragonite. Noun: dimorph. Adj: dimorphic. CF: [trimorphism](#); [polymorphism](#).

dimorphite

An orthorhombic mineral, As_4S_3 ; orange-yellow; a volcanic product closely related to orpiment.

dingot

An oversized derby (possibly a ton or more) of a metal produced in a bomb reaction, such as uranium from uranium tetrafluoride and magnesium. The term ingot for these metals is reserved for massive nits produced in vacuum melting and casting. See also: [biscuit](#)

Ding's magnetic separator

In its earlier form, a mineral separator to which the material was fed by a vibrating conveyor and passed through successive zones of magnetic influence. The zones were covered by the rims of rotating disks, which became magnetized, carried the particles having magnetic susceptibility out of the fields, were demagnetized, and dropped the concentrate beyond the edge of the belt. Now made with rollers having an induced magnetism; dried, finely crushed ore passed over the rollers in a thin stream from which particles attracted by the magnet are drawn out. *Hess; Liddell*

dinite

A yellowish hydrocarbon having a low melting temperature; in lignite.

dinkey

A small locomotive used to move cars in and about mines and quarries. *Fay*

dint

To cut into the floor of a roadway to obtain more headroom. *Fraenkel*

dioctahedral

Said of layered silicates having two-thirds of the voids in the octahedral layer filled, generally with trivalent cations. CF: [trioctahedral](#)

diopside

A monoclinic mineral, $\text{CaMgSi}_2\text{O}_6$; pyroxene group; white to light green; in metamorphic rocks, esp. contact metamorphosed limestones; where transparent, a semiprecious gemstone. Symbol: Di or di. See also: [malacolite](#)

diopase

A trigonal mineral, $\text{CuSiO}_2(\text{OH})_2$; emerald green; in the oxidized zones of copper deposits; a source of copper. Also called emerald copper, Zaire emerald.

diorite

A group of plutonic rocks intermediate in composition between acidic and basic, characteristically composed of dark-colored amphibole (esp. hornblende), acid plagioclase (oligoclase, andesine), pyroxene, and sometimes a small amount of quartz; also, any rock in that group; the approximate intrusive equivalent of andesite. Diorite grades into monzonite with an increase in the alkali feldspar content. Etymol: Greek diorizein, to distinguish, in reference to the fact that the characteristic mineral, hornblende, is usually identifiable megascopically. CF: [dolerite](#); [gabbro](#). See also: [diabase](#)

dioxide ore

A term that has been used somewhat in the Western United States for manganese ore. *Hess*

dip

a. The angle at which a bed, stratum, or vein is inclined from the horizontal, measured perpendicular to the strike and in the vertical plane. See also: [pitch](#); [hade](#); [angle of dip](#); [apparent dip](#). CF: [plunge](#) *Lewis* b. To be inclined or dip at an angle. c. The angle of a slope, vein, rock stratum, or borehole is measured from the horizontal plane downward. *Long* d. The direction of the true or steepest inclination. *Mason* e. The lower workings of a mine. *Hudson* f. The slope of layers of soil or rock. *Nichols, I* g. A dip entry, dip room, etc. A heading driven to the full rise in steep mines. *Fay* h. In terrestrial magnetism, the angle formed by the lines of total magnetic force and the horizontal plane at the Earth's surface; reckoned positive if downward. See also: [apparent dip](#); [full dip](#). *Hy* i. In mines, the increase in depth of a moored mine case, due to current force against the case and cable. *Hy*

dip calculation

Any of a number of methods of converting observed seismic arrival time values to the dip of a reflector; most commonly the conversion of ΔT values to dip values by a conversion factor based upon the geometry of the seismic array and approximate seismic propagational velocity. *AGI*

dip compass

An instrument to measure magnetic intensity by means of a magnetic needle fixed to swing in a vertical plane so that it can readily be deflected downward by magnetic materials. Used to explore for subsurface deposits containing magnetic materials. May also be called dip needle, dipping compass, dipping needle, doodle bug magnetometer.
Long

dip-corrected map

A map that shows stratified formations in their original position before movement.

dip cut

In cutting out blocks of stone, the cut that follows a line at right angles to the strike.

dip entry

An entry driven downhill so that water will stand at the face. If it is driven directly down a steep dip it becomes a slope. See also: [entry](#); slope.

dip equator

See: [acclinic line](#)

dip face

A face proceeding toward the dip of the seam. *Briggs*

dip fault

A fault that strikes approx. perpendicular to the strike of the bedding or cleavage. CF: [oblique fault](#); [strike fault](#). *Billings*

diphead

A drift inclined along the dip of a coal seam. *Webster 3rd*

diphead level

a. A mine level connecting an engine shaft with the rooms or chambers. *Standard, 2* b. The main level, drift, or slope.

dip joint

A joint that strikes approx. perpendicularly to the strike of the bedding or cleavage.
Billings

dip meter

a. An instrument used to record the amount and direction of the dip of strata exposed in the sides of a borehole. *BS, 9* b. See: [dipmeter](#)

dipmeter

A dipmeter measures both the amount and direction of dip by readings taken in the borehole and can be operated by using either self-potential or resistivity measurements.
Sinclair, 3

dip needle

An obsolete type of magnetometer used for mapping high-amplitude magnetic anomalies. It consists of a magnetized needle pivoted to rotate freely in a vertical plane, with an adjustable weight on the south side of the magnet. See also: [Hotchkiss superdip](#)

dipole

a. Coordinate valence link between two atoms. *Pryor, 3* b. Electrical symmetry of a molecule. When a molecule is formed by sharing two electrons between a donor atom and an acceptor, it is more positive at the donor end and more negative at the acceptor end, and has a dipole moment of the order of 10^{-18} electrostatic unit. Dipole moment is also the couple required to maintain the dipole at right angles to an electrical or magnetic field of unit intensity. *Pryor, 3*

dipole moment

Product of the dipole charge and the dipole length. *Van Vlack*

dippa

Corn. A small pit sunk on a lode to catch water; a pit sunk on a bunch ore.

dipper

a. A digging bucket rigidly attached to a stick or arm on an excavating machine; also the machine itself. b. N. of Eng. A downthrow, or a fault.

dipper dredge

A dredge in which the material excavated is lifted by a single bucket on the end of an arm, in the same manner as in the ordinary steam shovel. *Fay*

dipper dredger

A dredger consisting of a single large bucket at the end of a long arm, swung in a vertical plane by gearing. The bucket capacity may be up to about 12 cubic yards. See also: [dredger](#)

dipper factor

See: [fill factor](#)

dipper stick

a. The straight shaft that connects the digging bucket with the boom on an excavating machine or power shovel. *Nichols, 2* b. Standard revolving dipper shovel. *Nichols, 2*

dipping needle

A needle, consisting of a steel magnet, similar to that in a miners' dial, but pivoted at the center so as to be free to rotate vertically. It is used to locate the presence of shallow deposits of magnetic ores. The magnetometer has now replaced the dipping needle for large-scale prospecting work. Syn: [dip compass](#) *Nelson; Long*

dipping weight

See: [pickup](#)

dip reading

An angular measurement taken in an inclined borehole by using one of several types of borehole-surveying devices or techniques. *Long*

dip separation

The distance or separation of formerly adjacent beds on either side of a fault surface, measured along the dip of the fault. CF: [dip slip](#) *AGI*

dip shift

In a fault, the shift or relative displacement of the rock units parallel to the dip of the fault, but outside the fault zone itself. CF: [dip slip](#); strike shift. *AGI*

dip shooting

A system of seismic surveying in which the primary concern is determining the dip and position of reflecting interfaces rather than in tracing such interfaces continuously. *AGI*

dip slip

In a fault, the component of the movement or slip that is parallel to the dip of the fault. CF: [dip separation](#); [strike slip](#); [oblique slip](#); total displacement; dip shift. *AGI*

dip-slip fault

A fault on which the movement is parallel to the dip of the fault. CF: [strike-slip fault](#)

dip slope

A landform developed in regions of gently inclined strata, particularly where hard and soft strata are interbedded. A long, gentle sloping surface that parallels the dip of the bedding planes of the strata below ground. See also: [back slope](#)

dip split

A current of intake air directed into or down a dip.

dip switch

a. A slant or piece of track connecting the back entry or air course of a dipping coal seam with the main entry or gangway. *Fay* b. Circuit board component that consists of several switches used to alter circuit performance.

dip test

As used in the diamond-drilling industry, an angular measurement of the inclination of a borehole taken with a clinometer. See also: [acid-dip survey](#)

dip throw

The component of the slip measured parallel with the dip of the strata. *Fay*

dip valley

A valley trending in the direction of the general dip of the rock layers of a region.

dip workings

a. The workings on the lower side of the level or gate road in an inclined seam. Dip workings may present water problems and require pumping. Also called deep workings.

Nelson b. Underhand excavations in which miner works downward and lifts spoil to removal point. Not self-draining. *Pryor, 3*

dipyramid

A closed form consisting of orthorhombic, trigonal, tetragonal, or hexagonal positive and negative pyramids. Syn: [bipyramid](#) CF: [bipyramid](#); pyramid.

dipyre

A variety of scapolite having marialite:meionite between 3:1 and 3:2. Syn: [mizzonite](#); [dipyrite](#).

dipyrite

See: [dipyre](#); pyrrhotite.

direct-acting controller

One in which an increasing measured value in the input signal produces an increasing controller output, and vice versa. *Pryor, 3*

direct-acting haulage

See: [direct-rope haulage](#)

direct-arc furnace

One in which an arc is struck between an electrode and the material charged into the furnace. *Pryor, 3*

direct attack

A method of effecting extinction of mine fires using water or the effluent of chemical fire extinguishers. When a mine fire is readily accessible to the firefighting personnel, extinction of it may be achieved by direct application of some substance that will cool down the hot mass below its ignition temperature, or, in the case of oils, will arrest the volatilization process by sealing or emulsifying the oil surface. *Mason*

direct firing

a. The combustion of coal effected by burning directly on a grate. *Fay* b. A method of firing wherein the products of combustion come in contact with the ware. *ACSB, 2*

direct flushing

Flushing in which the water rises along the rod on its outer side; i.e., between the walls of the borehole and the rod, and with such a velocity that the broken rock fragments are carried up by this water current. *Stoces*

direct haulage

The system in which an engine with a single drum and rope draws loaded trucks up an incline. The empties run downhill dragging the rope after them. *CTD*

direct initiation

The placing of the detonator in the last cartridge to be inserted in the shothole with the active end of the detonator pointing inward. This position tends to minimize the risk of gas ignition. See also: [inverse initiation](#)

direction

a. Angle to the right (clockwise) from an arbitrary zero direction. Used chiefly in triangulation. *Seelye, 2* b. See: [trend](#)

directional drilling

a. The art of drilling a borehole wherein the course of the hole is planned before drilling. Such holes are usually drilled with rotary equipment and are useful in drilling divergent tests from one location, tests that otherwise might be inaccessible, as controls for fire and wild wells, etc. *AGI* b. Drilling in which the course of a borehole is controlled by deflection wedges or other means. The technique of directional drilling is used (1) to deflect a deviated borehole back onto course and (2) to deflect a borehole off course, either to bypass an obstruction in the hole or to take a second core. Syn: [slant drilling](#)

directional solidification

The solidification of molten metal in a casting in such a manner that feed metal is always available for the portion just solidifying. *ASM, 1*

directional work

See: [directional drilling](#)

direction-finding methods

Electromagnetic exploration methods in which one determines the direction of the magnetic field associated with the currents. *Schieferdecker*

direction indicator

Any one of a number of geophysical devices used to determine the deviation of a borehole from vertical. *AGI*

direction of dip

See: [line of dip](#)

direction of strata

a. The strike or line of bearing. b. The direction of the line formed by the intersection of the individual stratum with the horizontal plane. The direction of this line is customarily referred to north. See also: [strike](#)

direction of tilt

a. The azimuth of the principal plane of an aerial photograph. *AGI* b. The direction of the principal line on a photograph. *AGI*

directivity index

A measure of the directional properties of a transducer. It is the ratio in decibels of the average intensity of response over the whole sphere surrounding the projector or hydrophone to the intensity or response on the acoustic axis. *Hy*

direct labor

A method of carrying out mining works in which the owners, Board, or Authority, carry out the scheme by employing labor and purchasing the necessary equipment. The method is in contrast to work entrusted to outside contractors for performance at a fixed sum. *Nelson*

direct lattice

A symmetrical array of points in direct space; used when comparison is made with the direct lattice. Syn: [Bravais lattice](#); [crystal lattice](#).

direct oxidation

The reaction of metals with dry gases, leading to the formation of oxides or other compounds on the surface; it does not occur to a pronounced extent except at elevated temperature. *CTD*

direct plot

In a graph of particle distribution (screen analysis), a plot in which the abscissa shows the size and the ordinate shows the percentage of sample of that size. *Pryor, 1*

direct raw-water cooling system

A cooling system in which water, received from a constantly available supply, such as a well or water system, is passed directly over the cooling surfaces of the rectifier and discharged. *Coal Age, 1*

direct-reading capillary chart

A graduated scale printed on transparent paper, which, when used in the prescribed manner, enables one to determine the true angle a borehole is inclined from readings taken directly on the etch plane in an acid bottle. This eliminates the need for a protractor or goniometer and for a capillarity-correction chart. *Long*

direct-rope haulage

a. A system of incline haulage, comprising one rope and one drum. The engine hauls up the journey of loaded cars, then the empties are connected to the rope and returned to the bottom by gravity. See also: [balanced direct-rope haulage](#) haulage. *Nelson* b. Haulage in which a loaded truck is pulled up the slope by a hoist while an empty one descends, perhaps passing halfway on a loop of single track. Also called brake incline; engine plane. *Pryor, 3*

direct shipping ore

See: [natural ore](#)

Dirigem

A copyrighted trade name for green synthetic spinel.

dirt band

A thin stratum of shale or other inorganic rock material in a coal seam. Syn: [shale band](#); [dirt bed](#); [dirt parting](#); [stone band](#). *AGI*

dirt bed

a. Eng. A thin stratum of soft, earthy material interbedded with coal seams. Syn: [dirt band](#) b. Old soil in which trees, fragments of timber, and numerous plants are found. *Fay*

dirt bing

Scot. A debris heap; a waste heap.

dirt parting

See: [dirt band](#)

dirt scraper

A road scraper or a grading shovel, used in leveling or grading ground. *Fay*

dirt slip

See: [clay vein](#)

dirty coal

Scot. A coal seam with thick partings of blaes or fireclay; a very ashy coal.

disability glare

The glare resulting in reduced visual performance and visibility caused by the action of stray light, which enters the eye and scatters within. It causes a "veiling luminescence" over the retina, which, in turn, has the effect of reducing the perceived contrast of the objects being viewed. CF: [discomfort glare](#)

discard

a. The material extracted from the raw coal and finally thrown away. Also called dirt; stone. *BS, 5* b. The portion of an ingot cropped off to remove the pipe and other defects. Also called crop. *CTD*

discharge

a. The production or output from crushing or processing machines, such as ball mills, or thickeners. b. The outflow from a pump, drill hole, piping system, or other mechanism. c. The quantity of water, silt, or other mobile substances passing along a conduit per unit of time; rate of flow in cubic feet per second, gallons per day, etc. d. The rate of flow at a given moment, expressed as volume per unit of time. *AGI*

discharge chute

A chute used to receive and direct material or objects from a conveyor.

discharge head

The sum of static and dynamic head. The vertical distance between intake and free delivery of pump is static head. Allowance for friction, power loss, propeller slip, and issuing velocity is made for calculating the overall discharge head. *Pryor, 3*

discharge station

A place where bulk materials are removed from a conveyor.

discomfort glare

A sensation of annoyance, or in extreme cases pain, caused by high or nonuniform distribution of brightness in the field of view. Discomfort glare is a measure of discomfort or annoyance only. CF: [disability glare](#)

disconformity

An unconformity in which the bedding planes above and below are essentially parallel, indicating a considerable interval of erosion (or sometimes of nondeposition), and usually marked by a visible and irregular or uneven erosion surface of appreciable relief. The term formerly included what is now known as paraconformity. Syn: [parallel unconformity](#); nonangular unconformity. See also: [angular unconformity](#)

discontinuity

a. An abrupt change in the physical properties of adjacent materials in the Earth's interior. *Mather* b. Any interruption in the normal physical structure or configuration of a part, such as cracks, laps, seams, inclusions, or porosity. A discontinuity may or may not affect the usefulness of a part. *ASM, 1*

discontinuity lattice

See: [lattice](#)

discontinuous deformation

Deformation of rocks accomplished by rupture rather than by flowage.

discontinuous reaction series

A reaction series in which early-formed crystals react with later liquid by means of abrupt phase changes; e.g., the minerals olivine, pyroxene, amphibole, and biotite form a discontinuous reaction series. CF: [continuous reaction series](#)

discordance

A lack of parallelism between contiguous strata, e.g., angular unconformity. *Standard, 2; Fay*

discordant

a. Said of a contact between an igneous intrusion and the country rock that is not parallel to the foliation or bedding planes of the latter. *AGI* b. Structurally unconformable; said of strata lacking conformity or parallelism of bedding or structure. CF: [concordant](#) Syn: [unconformable](#)

discordant bedding

See: [crossbedding](#)

discovery

a. In mining, the term may be defined as knowledge of the presence of the valuable minerals within the lines of the location or in such proximity thereto as to justify a reasonable belief in their existence. But in all cases there must be a discovery of mineral, in both lode and placer claims, as distinguished from mere indications of mineral. In other words, in a lode location there must be such a discovery of mineral as gives reasonable evidence of the fact either that there is a vein or lode of rock in place carrying the valuable mineral; or, if it be claimed as placer ground, that it is valuable for such mining. *Ricketts* b. Pac. The first finding of the mineral deposit in place upon a mining claim. A discovery is necessary before the location can be held by a valid title. The opening in which it is made is called discovery shaft, discovery tunnel, etc. The finding of mineral in place as distinguished from float rock constitutes discovery. See also: [mine](#)

discovery claim

A claim containing the original discovery of exploitable mineral deposits in a given locale, which may lead to claims being made on adjoining areas. *AGI*

discovery vein

The original mineral deposit on which a mining claim is based. CF: [secondary vein](#); [discovery claim](#). *AGI*

discretization

In kriging, the process of approximating the area of a block by a finite array of points.

disequilibrium assemblage

An association of minerals not in thermodynamic equilibrium. *AGI*

dish

a. See: [pan](#); gold pan. b. The landowner's part of the ore. *Fay* c. Gold-bearing gravel or other material found by panning.

disharmonic fold

A fold that varies noticeably in profile form in the various layers through which it passes. Ant: harmonic fold. *AGI*

disharmonic folding

Folding in which there is an abrupt change in fold profile when passing from one folded surface or layer to another. It is characteristic of rock layers that have significant contrasts in viscosity. An associated structure is decollement. Ant: harmonic folding. CF: [decollement](#) *AGI*

disintegrate

a. To break up by the action of chemical and/or mechanical forces. *AGI* b. To separate or decompose into fragments; to break up; hence, to destroy the wholeness, unity, or identity. *Ballard*

disintegration

The breaking up and crumbling away of a rock, caused by the action of moisture, heat, frost, air, and the internal chemical reaction of the component parts of rocks when acted upon by these surface influences. See also: [mechanical weathering](#); [chemical weathering](#). CF: [putrefaction](#)

disintegrator

a. A mill for comminuting materials to a fine dry powder such as by impact breaker. *Nelson* b. A machine for reducing by means of impact the particle size of the coal or pitch binder, or both. Also called beater. CF: [impact mill](#); hammermill. *BS, 5*

disk

See: [tappet](#)

disk-and-cup feeder

A reagent dispenser used in the flotation process. Cups, mounted around the periphery of a slowly rotating disk driven by a fractional horsepower motor, dip into a reservoir of

reagent and upon rising deliver a closely controlled quantity to the process, usually to conditioners. *Pryor, 3*

disk coal cutter

A coal cutter whose cutting unit consists of a disk or wheel, armed at its periphery with cutters. The first disk machine, with detachable picks, was patented in 1861. The disk coal cutter is obsolescent. *Nelson*

disk fan

An axial-flow fan with a series of blades formed by cutting and bending flat sheets or plates. When rotated, the disk imparts to the air a motion along the axis of the fan shaft. *Strock, 2*

disk feeder

A feeder consisting of a rotating horizontal metal disk under the opening of a bin such that the rate of turning or opening of the gate governs the quantity delivered. Also called rotary table feeder, rotary feed table. See also: [plate feeder](#)

disk filter

A continuous dewatering filter in which the membrane (filter cloth) is stretched on segments of a disk. These disks rotate through a tank of slurry. The vacuum inside the disk draws the liquid through the cloth to discharge; the solids forming a cake on the filter cloth are lifted clear of the slurry tank and separately discharged, by application of air pressure behind the filter cloth. *Pryor, 3*

disk grizzly

See: [grizzly](#)

disk mill

A laboratory grinding mill with two circular plates almost parallel, of which one is fixed while the other rotates. Ore fed centrally between the plates is ground and discharged peripherally. The disk breaker (obsolescent) had two saucer-shaped disks working in similar fashion. *Pryor, 3*

dislocation

a. Displacement. *AGI* b. The shifting of the relative position of a boulder in a borehole or of the rock on either side of a crack or fissure cutting across a borehole. *Long* c. The offset in a borehole. Also called deviation; throw. *Long* d. A general term to describe a

break in the strata, for example, a fault. A washout is a disturbance but not a dislocation. *Nelson* e. The displacement of rocks on opposite sides of fracture. *Pryor*, 3 f. In metallurgy, the structural defect in metal or crystal produced by distortion. *Pryor*, 3 g. A linear crystal defect. *Van Vlack*

disorder

A state where different ions are distributed randomly in identical structural positions. See also: [long-range order](#) CF: [crystal defect](#); [volume defect](#).

dispatcher

a. An employee who controls or keeps track of the traffic on haulageways and informs workers when to move trains or locomotives. *BCI* b. See: [motor boss](#) c. A person or electronic device that routes haulage trucks to shovels or directs trucks from shovels to one of several destinations: ore pass, crusher, or spoil embankment.

dispatching system

A system employing radio, telephones, and/or signals (audible or visual) for orderly and efficient control of the movements of trains of cars in mines.

dispersant

See: [dispersing agent](#)

dispersed element

An element that is generally too rare and unconcentrated to become an essential constituent of a mineral, and that therefore occurs principally as a substituent of the more abundant elements. *AGI*

dispersed pattern

In geochemical prospecting, a pattern or the distribution of the metal content of soil, rock, water, or vegetation. *AGI*

disperse medium

Homogeneous phase (gas, liquid, or solid) through which particles are dispersed to form a relatively stable sol. Mainly descriptive of colloidal dispersion. See also: [disperse system](#)

disperse system

A two-phase system consisting of a dispersion medium and a dispersed phase; a dispersion. *Webster 3rd*

dispersibility of dust

The ease with which dust is raised into suspension. *Sinclair, 1*

dispersing agent

a. A material that increases the stability of a suspension of particles in a liquid medium by deflocculation of the primary particles. Syn: [deflocculating agent](#) b. Dispersant, deflocculating, or peptizing agent. One that acts to prevent adherence of particles suspended in fluid, and delays sedimentation. *Pryor, 3* c. Reagents added to flotation circuits to prevent flocculation, esp. of objectionable colloidal slimes. Sodium silicate is frequently added for this purpose, and there is some indication that it has value in coal froth flotation where a high percentage of clay slimes is present. *Mitchell*

dispersion

a. The fairly permanent suspension of finely divided but undissolved particles in a fluid. *API, 1* b. The creation of a dispersion by deflocculation. *BS, 5* c. The separation of polychromatic light (e.g., white light; sunlight) into its component wavelengths. d. The degree of inequality of refractive index and refraction of light of various colors. Syn: [refractive index](#) e. Change in the angle between optic axes in biaxial crystals due to change in refractive indices with change in wavelength of light. f. Change in the orientation of optical directions with respect to crystallographic directions in monoclinic or triclinic minerals. See also: [index of refraction](#); [optic axis](#). g. Distortion of the shape of a seismic-wave train because of variation of velocity with frequency. h. Advance or recession of peaks and troughs from the beginning of the seismic wave as it travels. i. Breaking down or separation of soil aggregates into single grains.

dispersion halo

A region surrounding an ore deposit in which the ore-metal concentration is intermediate between that of the ore and that of the country rock. *AGI*

dispersion pattern

The pattern of distribution of chemical elements, esp. trace elements, in the wall rocks of an orebody or in the surface materials surrounding it. CF: [aureole](#); [halo](#). *AGI*

dispersoid

A body dispersed in a liquid.

disphenoid

a. In crystallography, a solid bounded by eight isosceles triangles. *Standard*, 2 b. A closed crystal form of four faces, each an isosceles triangle and derived from a bipyramid by suppressing alternate faces. It differs from a tetrahedron, the four faces of which are equilateral triangles, by lower symmetry. See also: [sphenoid](#)

displaced seam

A coal seam that has been dislocated by a fault. *Nelson*

displacement

a. The lateral movement of a point, usually at the surface, during subsidence. *Nelson* b. The volume displaced by the net area of the piston multiplied by the length of the stroke. *Lewis* c. Sometimes used as a syn. for offset deflection; deviation; dislocation; throw. *Long* d. A general term for the change in position of any point on one side of a fault plane relative to any corresponding point on the opposite side of the fault plane. *Ballard* e. The capacity of an air compressor, usually expressed in cubic feet of air per minute. *Long* f. The word displacement should receive no technical meaning, but is reserved for general use; it may be applied to a relative movement of the two sides of the fault, measured in any direction, when that direction is specified; for instance, the displacement of a stratum along a drift in a mine would be the distance between the two sections of the stratum measured along the drift. The word dislocation will also be most useful in a general sense. *Fay* g. The volume of liquid delivered by a single stroke of a pump piston. *Long* h. Any shift in the position of an image on a photograph that does not alter the perspective characteristics of the photograph. It may be caused by the relief of the objects photographed, the tilt of the photograph, changes of scale, or atmospheric refraction. CF: [distortion](#) i. A general term for the relative movement of the two sides of a fault, measured in any chosen direction; also, the specific amount of such movement. Syn: [dislocation](#)

displacement pump

One in which compressed air or steam, applied in pulses, drives out water entering the pump chamber between pulses, a nonreturn valve preventing reverse flow. *Pryor*, 3

displacement-type float

A device for measuring the liquid level in sumps or vessels. It consists of a float, whose vertical height is greater than the level range being measured and whose weight is such that it would sink in the fluid if not supported. It is placed in a float chamber and supported in such a way that as the liquid level rises around the displacer float it creates a buoyant force equal to the weight of the liquid displaced. This force is measured, and

since it is proportional to level, the force measurement becomes a level measurement. The device is used on sumps containing high-gravity slurries. *Nelson*

displacive transformation

A change in crystal symmetry as a result of changes in bond length or bond angles (as contrasted to reconstructive transformations). The short-range order is unchanged; the long-range order is changed. CF: [dilatational transformation](#); [reconstructive transformation](#); rotational transformation. *Van Vlack*

disposable respirator

A respirator for which maintenance is not intended and that is designed to be discarded after excessive resistance, sorbent exhaustion, physical damage, or end-of-service-life renders it unsuitable for use. Examples of this type of respirator are a disposable half-mask respirator or a disposable escape-only self-contained breathing apparatus. *ANSI*

disrupted seam

A coal seam intersected by a fault or where its continuity is excessively broken. *Nelson*

disruptive

Applied to that kind of force exerted by an explosive that tends to shatter the rock into fragments. *Fay*

disseminated

Said of a mineral deposit (esp. of metals) in which the desired minerals occur as scattered particles in the rock, but in sufficient quantity to make the deposit an ore. Some disseminated deposits are very large. CF: [impregnated](#)

disseminated crystals

Crystals that are found not attached to the mother rock, sometimes with well-developed faces and doubly terminated.

disseminated deposit

A type of mineral deposit in which the minerals occur as small particles or veinlets scattered through the country rock. *Nelson*

dissociation constant

The equilibrium constant for a dissociation reaction, defined as the product of activities of the products of dissociation divided by the activity of the original substance. When used for ionization reactions, it is called an ionization constant; when it refers to a very slightly soluble compound, it is called a solubility product. *AGI*

dissolution

a. The act or process of dissolving or breaking up, as a separation into component parts. *Webster 3rd* b. The taking up of a substance by a liquid with the formation of a homogeneous solution. *CTD*

dissue

Corn. To break the rock from the walls of a rich lode in order to move the ore without taking with it much gangue. *Standard, 2*

distance blocks

Wooden blocks placed in between the main spears and the side pump rods by which the proper distance between them is adjusted. *Fay*

distance lag

In flotation, a delay attributable to the transport of material or the finite rate of propagation of a signal or condition. Syn: [velocity lag](#) *Fuerstenau*

distaxy

A mineral overgrowth not in crystallographic continuity with its core or nucleus. CF: [epitaxy](#); [syntaxy](#).

disthene

A former name for kyanite.

disthenite

A metamorphic rock composed almost entirely of kyanite (disthene) and some quartz, often associated with magnetiferous quartzite and amphibolite. *AGI*

distillation

a. The process of decomposition whereby the original chitinous material of certain fossils has lost its nitrogen, oxygen, and hydrogen, and is now represented by a film of carbonaceous material. Syn. for carbonization. *AGI* b. The process of heating a

substance to the temperature at which it is converted to a vapor, then cooling the vapor, and thus restoring it to the liquid state. See also: [destructive distillation](#); fractional distillation. *Shell* c. A process of evaporation and recondensation used for separating liquids into various fractions according to their boiling points or boiling ranges. *CTD*

distillation furnace

A reverberatory heating furnace in which the charge is contained in a closed vessel and does not come in contact with the flame. *Fay*

distinctive mineral

See: [varietal mineral](#)

distorted crystal

A crystal whose faces have developed unequally, some being larger than others. Some distorted crystal forms are drawn out or shortened, but the angle between the faces remains the same. See also: [deformed crystal](#)

distortion

a. The change in shape and size of a land area on a map due to the flattening of the curved Earth surface to fit a plane. Distortion is inevitable and is controlled in the development of a projection to produce the characteristics of equal area, conformality, or equidistance. *AGI* b. Any shift in the position of an image on a photograph that alters the perspective characteristics of the photograph. It may be caused by lens aberration, differential shrinkage of film or paper, or motion of the film or camera. CF: [displacement](#)

distortional wave

See: [shear wave](#); S wave; transverse wave; secondary wave.

distributing magazine

A place or building, either near the mine entrance or underground, in which explosives are stored for current use. Only one day's supply should be kept at such points. The main supply of explosives is kept in a magazine generally a safe distance from the mine or any mine buildings. *Kentucky*

distribution curve

See: [partition curve](#); Tromp distribution curve.

distribution factor

See: [partition factor](#)

distributive fault

See: [step fault](#)

distributive province

The environment embracing all rocks that contribute to the formation of a contemporaneous sedimentary deposit, including the agents responsible for their distribution. CF: [provenance](#)

distributor box

Box that receives feed from launder, pipe, or pump and splits it into parallel mill circuits. Box attached to deck of shaking table, which receives sands and distributes them along top of deck at feed end. *Pryor, 3*

district

a. In the States and Territories of the United States west of the Missouri River (prior to 1880), a vaguely bounded and temporary division and organization made by the inhabitants of a mining region. b. A limited area of underground workings. *Nelson* c. A coal mine is generally divided into sections or districts for purposes of ventilation and daily supervision. *Nelson* d. An underground section of a coal mine served by its own roads and ventilation ways; a section of a coal mine. *CTD*

disturbance

A term used by some geologists for a minor orogeny, e.g., the Palisades disturbance. Schuchert (1924) used revolution for a major orogeny at the end of an era, and disturbance for an orogeny within an era; this usage is obsolete. *AGI*

disturbed area

An area where vegetation, topsoil, or overburden is removed or upon which topsoil, spoil, coal processing waste, underground development waste, or noncoal waste is placed by surface coal mining operations. Those areas are classified as disturbed until reclamation is complete and the performance bond or other assurance of performance is released.

disused workings

Workings that are no longer in operation but that are not classified as abandoned. *BS*, 7

ditch

a. A drainage course in a mine. *BCI* b. An artificial channel to convey water for use in mining. CF: [flume](#) c. The drainage gutter along gangways and openings in anthracite mines. d. In rotary drilling, a trough carrying mud to a screen. *Nichols, 1* e. The artificial course or trough in which the drill circulation fluid is conducted from the collar of the borehole to the sump. To dump and discard contents of a bailer, without taking a sample, into a ditch leading away from the collar of a borehole. Syn: [canal](#); [chute](#); [ditch](#). CF: [trench](#) *Long*

ditch drain

A gutter excavated in the floor of a gangway or airway to carry the water to the sump, or out to the surface.

ditcher

a. A mobile tracked machine fitted with an endless chain of buckets used for shallow vertically sided trenching. *Nelson* b. A drill mounted on a frame that rotates about a central axis. It is used to cut circular trenches for the production of large grindstones. Also called circle cutting drill. *Fay*

ditching

The digging or making of a ditch by the use of explosives. See also: [propagated blast](#)

ditching dynamite

A nitroglycerin type explosive esp. designed to propagate sympathetically from hole to hole in ditch blasting.

ditch water

The stale or stagnant water collected in a ditch.

ditch wiring

The method of connecting electric blasting caps in such a way that the two free ends can be connected at one end of the line of holes. *Fay*

dithiocarbamate

A flotation collector agent of the general formula $X_2 N.CS.SM$, X being hydrogen, aryl, or alkyl radical. *Pryor, 3*

dithionate process

A process for extracting manganese from low-grade oxide ores. The manganese ore is leached with dilute sulfur dioxide gas in the presence of calcium dithionate solution, the manganese being recovered from solution by precipitation with slaked lime and then nodulized or sintered. *Osborne*

dithiophosphates

In mineral processing, flotation collector agents, marketed as Aerofloats by the American Cyanamid Co.

dithizone

Diphenylthiocarbazone. Used in geochemical prospecting to detect traces of certain metals. *Pryor, 3*

diurnal fluctuations

Variations occurring within a 24-h period and related to the rotation of the earth. *Hy*

diurnal inequality

a. The departure easterly or westerly from the mean value of the declination for the day. *Mason* b. In tides, the difference in height and/or time of the two high waters or of the two low waters of each day; also, the difference in velocity of either of the two flood currents or of the two ebb currents of each day. *Hy*

diurnal variation

a. The daily variation in the earth's magnetic field. *AGI* b. In tides, having a period or cycle of approx. 1 lunar day (24.84 solar hours). The tides and tidal currents are said to be diurnal when a single flood and single ebb occur each lunar day. *Hy*

diver

Small plummet, so adjusted as to density that by rising or falling it can be used to show whether specific gravity of pulp is above or below a desired control point. If pulp is opaque, diver can initiate magnetic signal, or in a pulp containing magnetic material can carry radioactive marking material. *Pryor, 3*

diversion valve

A valve that permits flow to be directed into any one of two or more pipes. *Nichols, 1*

diversity factor

The ratio of the sum of the individual maximum loads during a period to the simultaneous maximum loads of all the same units during the same period. Always unity or more. *Strock, 2*

divided cell

A cell containing a diaphragm or other means for physically separating the anolyte and catholyte. *Lowenheim*

divider

Cross-steel or timber piece in a circular or rectangular shaft. Such pieces serve to divide the shaft into compartments and may also carry the cage guides, etc. See also: [bunton](#)

diviner

Dowser. *AGI*

diving bell

A watertight, bell-shaped steel chamber that can be lowered to or raised from a freshwater or seawater bed by a crane. It is open at the bottom and filled with compressed air, so that persons can prepare foundations and undertake similar construction work underwater. *Hammond*

divining

A method of searching for water or minerals by holding a hazel fork (or other device) in the hands, and the free end is said to bend downward when a discovery is made. In the Middle Ages, the divining rod was closely associated with the mine surveying profession. The water diviner has not succeeded when submitted to impartial scientific tests. *Nelson*

divining rod

Traditionally, a forked wooden stick, cut from a willow or other water-loving plant, used in dowsing. It supposedly dips downward sharply when held over a body of ground water or a mineral deposit, thus revealing the presence of these substances. Syn: [witching stick](#); [wiggle stick](#); dowsing rod; twig. CF: [water witch](#); [waterfinder](#). *AGI*

divisional plane

A general term that includes joints, cleavage, faults, bedding planes, and other surfaces of separation. *AGI*

division method

One of three recognized methods for determining the average velocity of airflow in a mine roadway by anemometer. This is the precise method of determining the mean velocity of the air current. CF: [single-spot method](#); traversing method.

dixanthogen

A breakdown product of xanthate collectors (flotation agents) with some residual value for that purpose. *Pryor, 3*

dixenite

A trigonal mineral, $\text{CuMn}_{14}\text{Fe}(\text{AsO}_3)_5(\text{SiO}_4)_2(\text{AsO}_4)(\text{OH})_6$; forms nearly black aggregates of thin folia; at Laangban, Sweden.

djalmaite

A former name for uranmicrolite. See also: [microlite](#)

djurleite

A monoclinic mineral, $\text{Cu}_{31}\text{S}_{16}$; X-ray pattern is similar to, but distinct from, chalcocite.

D.L.T. reagents

Condensation products of ethanolamine and higher fatty acids, used as flotation agents (collectors). *Pryor, 3*

dneprovskite

See: [wood tin](#)

dobie man

See: [blaster](#)

Dobson prop

A hydraulic prop that is basically a self-contained hydraulic jack with an integral pump unit built into the prop. It is designed to yield at 25 st (22.7 t) and has a setting load of 6 st (5.4 t). *Nelson*

Dobson support system

A self-advancing support for use on long-wall faces. One unit embodies three props. The front prop, which is attached to the face conveyor, carries two roof bars side by side that give cantilever support over the conveyor track. The two rear props are mounted on a common floor bar and carry a single roof bar that passes between the two front bars. The front prop is attached to the rear structure only by the advancing ram within the box structure of the floor bar. *Nelson*

docket

A pay ticket containing particulars of shifts worked, coal filled, yardage driven, and other work done, including the total wages less deductions. *Nelson*

doctor

a. To treat a poor-quality carbon with substances such as oil, wax, gutta-percha, solder, gum, or resin, to camouflage its defects, hence changing its appearance to make it look like a better grade stone. Also called dope. *Long* b. A makeshift, temporary repair. *Long* c. As used in the mining industry, to salt. *Long*

Dodd buddle

A round table resembling in operation a Wilfley table, and also like the Pinder concentrator except that it is convex instead of concave. The table does not revolve but has a peripheral jerking motion imparted to it circumferentially by means of a toggle movement. *Liddell*

dodecahedral cleavage

In isometric minerals, a cleavage parallel to the faces of a rhombic dodecahedron 110, e.g., sphalerite.

dodecahedron

a. An isometric form composed of 12 equal rhombic faces, each parallel to 1 axis and intersecting the other 2 axes at equal distances, specif. named the rhombic dodecahedron. See also: [pyritohedron](#) b. Any solid with 12 symmetrically equivalent faces, e.g. deltoid; pyritohedron. c. The isometric form 110, the rhombic dodecahedron. d. Brazilian diamonds with the dodecahedral form, also called Brazilian stone.

dodecant

Each 12th of crystal space defined by a trigonal or hexagonal c axis and its orthogonal three coplanar a axes. CF: [octant](#)

Dodge crusher

Similar to the Blake crusher, except the movable jaw is hinged at the bottom. Therefore the discharge opening is fixed, giving a more uniform product than the Blake with its discharge opening varying every stroke. This type of jaw crusher gives the greatest movement on the largest lump. *Liddell*

Dodge pulverizer

A hexagonal barrel revolving on a horizontal axis, containing perforated die plates and screens. Pulverizing is done by steel balls inside the barrel. *Liddell*

dog

a. An iron bar, spiked at the ends, with which timbers are held together and steadied. b. A short, heavy iron bar, used as a drag behind a car or trip of cars when ascending a slope to prevent them running back down the slope in case of an accident; a drag. c. See: [casing dog](#) d. A trigger that limits the advance of a traversing table. *ACSG, 2* e. Any of various devices for holding, gripping, or fastening something. See also: [chair](#); [dog](#); [catch](#); [wing](#). *Webster 3rd* f. A drag for the wheel of a vehicle. *Webster 3rd* g. A device attached to the workpiece by means of which the work is revolved. *ACSG, 2*

dog-and-chain

An iron lever with a chain attached by which props are withdrawn. *Fay*

dogger

a. A large, irregular nodule, usually of clay ironstone, sometimes containing fossils, found in a sedimentary rock, as in the Jurassic rocks of Yorkshire, England. *AGI* b. An English term for any large, lumpy mass of sandstone longer than it is broad, with steep rounded sides. *AGI*

doghole

A small opening from one place in a coal mine to another; smaller than a breakthrough. Syn: [monkey hole](#)

doghole mine

Name applied to small coal mines that employ fewer than 15 miners. The so-called dogholes are most numerous in Kentucky, but there are many in Virginia and West Virginia.

dogholes

See: [doghole mine](#)

dog hook

a. A strong hook or wrench for separating iron boring rods. *Fay* b. An iron bar with a bent prong used in handling logs. *Fay*

doghouse

a. The structure enclosing the drill platform and machine. *Long* b. A small shelter in which members of a drill crew change clothing. CF: [changehouse](#) c. See: [forechamber](#) d. Any enclosure or small chamber in a mine used for storage or resting.

dog iron

A short bar of iron with both ends pointed and bent down so as to hold together two pieces of wood into which the points are driven; or one end may be bent down and pointed, while the other is formed into an eye, so that if the point be driven into a log, the other end may be used to haul on. *Zern*

dogleg

a. An abrupt angular change in course or direction, as of a borehole or in a survey traverse. Also, a deflected borehole, survey course, or anything with an abrupt change in direction resembling the hind leg of a dog. *AGI* b. An abrupt bend or kink in a wire rope or cable. *Long* c. An abrupt bend in a path, piping system, or road. *Long*

dogleg severity

Same as deflection angle; hole curvature. *Long*

dogs

a. Eng. In the plural; bits of wood at the bottom of an air door. *Fay* b. See also: [dog](#)

dog spike

A spike generally used to fasten rails to the sleepers when laying track. Their length should be 1/2 in (1.27 cm) less than the depth of the sleeper into which they are being pounded. *Sinclair, 5*

dog-tooth spar

Calcite with sharp scalenohedral termination.

dogtooth spar

Calcite in acute scalenohedral crystals facing like dogs' teeth into an open cavity or vein.

See also: [scalenohedron](#)

doit

Eng. Foulness, or damp air. *Fay*

dole

A division of a parcel of ore. Also spelled dol. *Fay*

dolerite

a. In the United States, a syn. of diabase. *AGI* b. In British usage, the preferred term for what is called diabase in the United States. Etymol: Greek doleros, "deceitful," in reference to the fine-grained character of the rock that makes it difficult to identify megascopically. CF: [diorite](#); [trap](#). Syn: [whin](#)

doleritic

a. Of or pertaining to dolerite. See also: [ophitic](#) b. A preferred syn. of ophitic in European usage. *AGI*

dolerophanite

A monoclinic mineral, $\text{Cu}_2(\text{SO}_4)\text{O}$; brown; reported at Mt. Vesuvius. Also spelled dolerophane.

dolina

See: [doline](#)

doline

A syn. of sinkhole. Also spelled: dolina. Etymol: German transliteration from Slovene "dolina," "valley." *AGI*

dollie

See: [dolly](#)

dolly

a. A trucklike platform, with an attached roller, used in shifting heavy loads. b. A counterbalance weight sometimes used in a hoisting shaft. *Nelson* c. To break up quartz with a piece of wood shod with iron, in order to be able to wash out the gold. *Fay* d. A tool used to sharpen drills. *Stauffer* e. See: [car](#) concentrate the ore by the tossing and packing process. See also: [dolly tub](#)

dolly tub

A large wooden tub used for the final washing of valuable minerals separated by water concentration in ore dressing. See also: [tossing](#); dolly. *CTD*

dolly wheels

Pairs of wheels used to support rods of a Cornish pump working on a slope. *Pryor*, 3

doloma

Calcined dolomite, that is a mixture of the oxides CaO and MgO. *Dodd*

dolomite

a. A trigonal mineral, $[\text{CaMg}(\text{CO}_3)_2]$; forms saddle-shaped rhombohedra having rhombohedral cleavage; white to pale tints; in large beds as dolostone and dolomitic marble, also in veins and in serpentinite; a source of magnesium and dimension stone. Syn: [bitter spar](#); [pearl spar](#); magnesian spar; rhomb spar. b. The mineral group ankerite, dolomite, kutnohorite, minrecordite, and norsethite. c. A carbonate sedimentary rock consisting of more than 50% to 90% mineral dolomite, depending upon classifier, or having a Ca:Mg ratio in the range 1.5 to 1.7, or having an MgO equivalent of 19.5% to 21.6%, or having a magnesium-carbonate equivalent of 41.0% to 45.4%. Dolomite beds are associated and interbedded with limestone, commonly representing postdepositional replacement of limestone. Syn: [dolostone](#); dolomite rock.

dolomite limestone

See: [dolomitic limestone](#)

dolomite marble

A crystalline variety of limestone, containing in excess of 40% of magnesium carbonate as the dolomite constituent.

dolomite rock

See: [dolomite](#)

dolomitic

a. Dolomite-bearing, or containing dolomite; esp. said of a rock that contains 5% to 50% of the mineral dolomite in the form of cement and/or grains or crystals. *AGI* b. Containing magnesium; e.g., dolomitic lime containing 30% to 50% magnesium. *AGI*

dolomitic limestone

a. A limestone that has been incompletely dolomitized. *AGI* b. A limestone in which the mineral dolomite is conspicuous, but less abundant than calcite. Syn: [dolomite limestone](#) CF: [magnesian limestone](#)

dolomitization

The process by which limestone is wholly or partly converted to dolomite rock or dolomitic limestone by the replacement of the original calcium carbonate (calcite) by magnesium carbonate (mineral dolomite), usually through the action of magnesium-bearing water (seawater or percolating meteoric water). It can occur penecontemporaneously or shortly after deposition of the limestone, or during lithification at a later period. Syn: [dolomitization](#)

dolomitization

See: [dolomitization](#)

doloresite

A monoclinic mineral, $H_8 V_6 O_{16}$; an alteration product of montroseite in sandstone from the Colorado Plateau; named for the Dolores River, CO.

dolostone

A term applied by some petrologists to rock consisting primarily of the mineral dolomite. Syn: [dolomite](#)

dolphin

A fixed mooring in the open sea formed of a number of piles, or a guide for ships entering a narrow harbor mouth. *Hammond*

domain

a. A substructure in a ferromagnetic material within which all of the elementary magnets (electron spins) are held aligned in one direction by interatomic forces; if isolated, a domain would be a saturated permanent magnet. *ASM, 1* b. A region within a grain of

magnetically ordered mineral, within which the spontaneous magnetization has a constant value characteristic of the mineral composition and temperature. Syn: [magnetic domain](#)

dome

a. Roof of a furnace that is roughly hemispherical in shape. b. The steam chamber of a boiler. CF: [air dome](#) c. An uplift or anticlinal structure, either circular or elliptical in outline, in which the rocks dip gently away in all directions. A dome may be small, such as a Gulf Coast salt dome, or many kilometers in diameter. Domes include diapirs, volcanic domes, and cratonic uplifts. Type structure: Nashville Dome, TN. See also: [pericline](#); [arch](#); [salt dome](#). Syn: [dome structure](#); [structural dome](#); [quaquaversal fold](#). Less-preferred syn: swell. CF: [basin](#) d. A general term for any smoothly rounded landform or rock mass, such as a rock-capped mountain summit, that roughly resembles the dome of a building; e.g., the rounded granite peaks of Yosemite, CA. The term is also applied to broadly up-arched regions, such as the English Lake District or the Black Hills of South Dakota. *AGI* e. A large magmatic or migmatitic intrusion whose surface is convex upward and whose sides slope away at low but gradually increasing angles. Intrusive igneous domes include laccoliths and batholiths; the term is used when the evidence as to the character of the lower parts of the intrusion is insufficient to allow more specific identification. *AGI* f. An open crystal form of four parallel faces that intersect the c axis and one other; incorrectly called a horizontal prism. Adj. domatic. g. A symmetrical structural uplift having an approx. circular outline in plan view, and in which the uplifted beds dip outward more or less equally in all directions from the center, which is both the highest point of the structure and locally of the uplifted beds. h. A mountain having a smoothly rounded summit of rock that resembles the cupola or dome on a building. *AGI* i. An open crystal form consisting of two parallel faces that truncate the intersections of two sets of pinacoids and are astride a symmetry plane.

domestic coal

a. Coal for use around colliery in miners' houses or for local sale. *Zern* b. Sized coal for use in houses. See also: [house coal](#) c. Coal used in country of origin; not for foreign consumption. *Zern*

domestic sampling

Routine sampling by mine officials for systematic control of mining operations. See also: [development sampling](#)

dome structure

See: [dome](#)

dome theory

A theory that strata movements caused by underground excavations were limited by a kind of dome that had for its base the area of excavation, and that the movements diminished as they extended upward from the center of the area. See also: [harmless depth theory](#); [normal theory](#). *Nelson*

domeykite

An isometric mineral, Cu_3As ; forms reniform and botryoidal masses and disseminated grains. See also: [white copper](#)

dominant vitrain

A field term to denote, in accordance with an arbitrary scale established for use in describing banded coal, a frequency of occurrence of vitrain bands comprising more than 60% of the total coal layer. CF: [abundant vitrain](#); [moderate vitrain](#); [sparse vitrain](#). *AGI*

donarite

An explosive consisting of 70% ammonium nitrate, 25% trinitrotoluol, and 5% nitroglycerin. *Hackh*

donbassite

A possible mineral species in the chlorite group.

donkey engineer

In anthracite and bituminous coal mining, a general term for the attendant of a small auxiliary engine, powered by steam or compressed air, used to drive pumps to drain sumps (pits in which excess water is collected) or supply water to boilers, or to operate a hoist for a shallow shaft. Also called donkey runner. *DOT*

donkey hoist

A small auxiliary hoisting drum and engine operated by steam, by compressed air, and sometimes by an electric motor or an internal-combustion engine. *Long*

donkey pump

Any of several kinds of combined pump and steam engine. It may be operated independently of the engine; used to supply water to a boiler, drain sumps, etc.

donkey runner

See: [donkey engineer](#)

donor

An exploding charge producing an impulse that impinges upon an explosive acceptor charge. *Meyer*

doodlebug

a. The essential treatment plant of a small dredge set on a pontoon. There is usually a hopper into which the dragline dumps its spoil and which may have a grizzly arrangement, according to the nature of the gravel. A water supply washes the contents of the hopper into a revolving screen, feeding the fines over riffled tables and rejecting the stones and oversize by means of a stacker. This treatment plant or washing unit can be floated in the excavation dug by a dragline and is the ideal unit to install when small-scale operations are to be carried out below water level or where it is not necessary to use dry opencast paddock methods. *Harrison* b. Any one of a large number of unscientific devices with which it is claimed water, mineral, and oil deposits can be located. *AGI* c. A popular term for any of various kinds of geophysical prospecting equipment.

dook

a. Scot. A mine or roadway driven to the dip, usually the main road. See also: [slope](#) b. Som. An underground inclined plane.

door

A hinged or sliding frame or piece of wood, metal, stone or other material, generally rectangular, used for closing or opening an entrance or exit. Doors are placed in air passages of mines to prevent the ventilating current from taking a short cut to the upcast shaft, and to direct the current to the working face. See also: [air door](#); ventilation doors. *Standard, 2*

door boy

See: [trapper](#)

doorheads

Scot. The roof or top of the workings at a shaft.

door tender

One whose duty it is to open and close a mine door before and after the passage of a train of mine cars; a trapper. *Zern*

door trapper

See: [door tender](#)

door-type sampler

A soil-sampling tube or barrel equipped with an auger-type cutting shoe and made to be rotated to obtain samples of sand, gravel, and other granular material. The body of the sampler is essentially a tube in which a small opening or window is machined and equipped with a covering, which can be latched shut while the sample is being taken. When the sampler is removed from the ground, the latch is released and the sample removed through the door or window. Syn: [window-type sample](#)

dope

a. Individual, dry, nonexplosive ingredients that comprise a portion of an explosive formulation. b. Absorbent material, as sawdust, infusorial earth, mica, etc., used in certain manufacturing processes, as in making dynamite. *Webster 2nd* c. Heavy grease or other material used to protect or lubricate drill rods and/or open gears, chain and sprockets, etc. Also called gunk; rod dope; rod grease. *Long* d. To apply a lubricant to drill rods, rod couplings, open gears, etc. *Long* e. To doctor a drill diamond. See also: [doctor](#) f. A rubberlike compound applied to granite surfaces before inscriptions are cut in the granite. *AIME, 1* g. A viscous liquid put on pipe threads to make a tight joint. *Nichols, 1* h. Slang for mold lubricant. *ASTM*

Doppler

A self-contained electronic system that makes use of Doppler's principle of frequency shift of waves emanating from a moving source. In this system, a pulsed or continuous wave is sent diagonally downward fore and aft, forward and backward, and the frequencies are compared in order to obtain the true ground speed. The heading is obtained from a special magnetic compass and is maintained by a directional gyro used as an integrating device. The distance thus determined has a precision better than one part in a thousand, which is sufficient for most geophysical surveys. *Dobrin*

dopplerite

a. A black gelatinous matter in peat and soft brown coal consisting of humic acids or their salts; has a detrimental effect on briquettes and coke. Syn: [torf-dopplerit](#); [trof-dopplerit](#); [Weichbraunkohlen-dopplerit](#); peat gel; brown-coal gel. b. A gel in peat composed of ulmins derived from plant carbohydrates by bacterial destruction of proteins. c. An asphalt found in New Zealand and parts of Siberia.

dopplerite sapropel

A variety of sapropel that contains much humic acid. *Tomkeieff*

dore

Gold and silver bullion that remains in a cupelling furnace after the lead has been oxidized and skimmed off. Syn: [dore bullion](#)

dore bullion

See: [dore](#)

dore metal

See: [dore silver](#)

dore silver

Crude silver containing a small amount of gold, obtained after removing lead in a cupelling furnace. Syn: [dore bullion](#); [dore metal](#).

dornick

a. A piece of rock of approx. fist size. b. A boulder of iron ore.

Dorr mill

A tube mill designed for operation as a closed-circuit wet-grinding unit. See also: [tube mill](#)

Dorr rake classifier

A mechanical classifier consisting of an inclined settling tank and a rake-type conveying agitating mechanism. Feed introduced at the low end of the tank flows over a distributing apron toward the high end of the tank. The heavier materials of sand size settle into the rake zone and are raked up the slope and out the tank; slime and finer sands are carried over the rear wall in suspension. *Taggart, 2*

Dosco miner

A heavy, crawler-tracked, 200-hp (149-kW) cutter loader designed for longwall faces in seams over 4-1/2 ft (1.37 m) thick, and takes a buttock 5 ft (1.52 m) wide. The maximum cutting height is 7-1/2 ft (2.29 m). Dimensions: length 17-3/4 ft (5.41 m), width 4-1/2 ft (1.37 m), and height 3-3/4 ft (1.14 m). The cutterhead consists of seven cutter chains mounted side by side and can be moved up and down radially to cut the coal from roof to floor. It delivers the coal onto the face conveyor by a short cross conveyor. Capacity is

more than 400 st (363 t) per machine and more than 4 st (3.63 t) output per worker per shift. *Nelson*

dose

a. A special charge used in a blast furnace, designed to cure furnace troubles. *Fay* b. The amount of ionizing radiation energy absorbed per unit mass of irradiated material at a specific location, such as a part of the human body. Measured in reps, rems, and rads. *Lyman*

dot chart

a. A graphic aid used in the correction of station gravity for terrain effect, or for computing gravity effects of irregular masses. It can also be used in magnetic interpretation. *AGI* b. A transparent graph-type chart used in the calculation of the gravity effects of various structures. The dots on the chart represent unit areas. *AGI*

double

In rotary drilling, two pieces of drill rod left fastened together during raising and lowering. Also called couple; couplet. *Nichols, I*

double

A. One of several terms (or letter symbols) used to designate medium-quality drill diamonds. *Long*

double-acting pump

Scot. A pump that discharges at both forward and backward stroke.

double-acting ram

See: [two-way ram](#)

double-action press

A press handling two operations each revolution. It carries two rams, one inside the other, so actuated that one motion immediately follows the other. *Crispin*

double-action pump

A pump whose water cylinders are equipped with intake and discharge valves at each end; hence liquid is delivered by the pump on both the forward and the backward strokes of the pump piston. *Long*

double bank

a. To take up a claim parallel with and adjoining another claim containing an auriferous vein or deposit. *Fay* b. Working with double sets or relays of persons. *Fay*

double block

a. A pair of multiple-sheave blocks reeved with rope or lines; a block and tackle. *Long*
b. Two pulleys or small sheaves mounted on a single shaft within a frame or shell. *Long*

double-burned

Burned at a high temperature. This does not mean two firings. *AISI*

double-burned dolomite

a. Dolomite, with additions of oxides of iron, burned at a high temperature. This does not mean two firings. *ARI* b. Clinkered dolomite. *AISI*

double core barrel

A core barrel with an inner tube to hold the core. The inner tube does not rotate during drilling, thereby giving a better core recovery. Syn: [double-tube core barrel](#)

double crib

Eng. Two crib sets are placed back to back to form a two-compartment crib-lined raise. This technique is employed in weak ground in place of a double compartment separated by only a single dividing member.

double-cut sprocket

For double-pitch roller chains, a sprocket having two sets of effective teeth. Tooth spaces for the second set are located midway between those of the first set. *Jackson, I*

double-deck gangway

A method of silling or working out 10 ft (3 m) or so above the haulage level and forming a double-deck gangway. Chutes are constructed at intervals for ore transfer into mine cars. *Nelson*

double-double unit conveyor

A longwall conveyor layout in which the center or main gate serves two double units, one on each side. The gate belts from each double unit deliver the coal onto cross-gate

belts, which in turn deliver to the main gate conveyor and then by trunk conveyor or cars to the pit bottom. *Nelson*

double drum

Hoisting device having two cable spools or drums rotating in opposite directions. *Long*

double-drum hoist

A hoist with two drums that can be driven separately or together by a clutch. See also: [main-and-tail haulage](#)

double-duo mill

Has two pairs of rolls, mounted in one stand, one pair of rolls being higher than, and in advance of the other. *Osborne*

double-ended

A term applied to any cutter loader that can cut both ways on a longwall face without turning at each end. This requires cutting units at both ends of the machine and duplication of other essential parts. *Nelson*

double-ended pick

A diamond-shaped coal-cutter pick that is held in a special holder and chain. Both ends of the pick are used and then discarded. The type is used widely in the United States. See also: [coal-cutter pick](#)

double-engine plane

Loads are raised or lowered on a slope by a stationary engine and wire rope, as in an inclined shaft. There is a double track, or three rails and turnout; the descending trip assists the engine to raise the ascending trip, thus eliminating dead load, except rope. *Peele*

double entry

a. A pair of entries in flat or gently dipping coal so laid out that rooms can be driven from both entries; twin entries. See also: [entry](#) *Fay* b. A system of ventilation by which the air current is brought into the rooms through one entry and out through a parallel entry or air course. *Fay* c. See: [main entry](#)

double-entry room-and-pillar mining

See: [room-and-pillar](#)

double-entry zone test

A test in which coal dust is placed in each of two connected parallel entries. *Rice, 2*

doubleheader

Applied to quarry equipment consisting of two independent channeling machines on a single truck, operated by one person.

double headings

The driving of two coal headings, parallel and side by side, for development purposes. Usually a pillar 10 to 20 yd (9.14 to 18.29 m) wide is left between them. Formerly it was the practice at many coal mines to drive only one heading from which the stalls were turned off right and left. Two headings simplify ventilation and provide a second egress in an emergency. *Nelson*

double helical bag conveyor

Closely spaced parallel tubes with right- and left-hand rounded helical threads rotating in opposite directions, on which bags or other objects are carried while being conveyed. Syn: [helical bag conveyor](#)

double-inlet fan

A centrifugal fan in which air enters the impeller on both sides. Also called double-width fan. *BS, 8*

double jack

a. A two-hand heavy hammer, usually weighing about 10 lb (4.54 kg). CF: [single jack](#) b. A double or twin-screw drill column. *Long*

double jigback

An aerial ropeway in which two parallel track ropes are used, each carrying a carriage. *Nelson*

double-leg bucket elevator

A type of bucket elevator having the carrying and return runs enclosed in separate casings between the head and boot. See also: [bucket elevator](#)

double leg en masse conveyor

A conveyor or elevator in which the carrying and return runs are operated in separated parallel and adjacent casings.

double load

A charge in a borehole separated by a quantity of inert material for the purpose of distributing the effect, or for preventing part of the charge blowing out at a seam or fissure, in which case the inert material is placed so as to include the seam. *Fay*

double packing

A form of strip packing that removes the localized high roof pressure from the vicinity of a roadway into a region in the goaf. It consists of two parallel packs adjacent to, and on each side of, the roadway, with the packs immediately at the roadsides built of such a width as to offer less resistance than wider and stronger packs (called buttress packs) more remote from the roadway. The principle of double packing was developed by D.W. Phillips in Great Britain. See also: [gate side pack](#); [strip packing](#); yield-pillar system. CF: [single packing](#)

double parting

A bypass for mine cars. See also: [junction](#)

double-pitch roller chain

A roller chain having double the pitch of a standard roller chain, but otherwise having standard pins, bushings, and rollers. *Jackson, 1*

double-pulley-drive conveyor

A conveyor in which power is transmitted to the belt by two pulleys. *NEMA, 2*

double-refracting spar

See: [Iceland spar](#)

double refraction

Refraction shown by certain crystals that split the incident ray into two refracted rays, polarized in perpendicular planes. See also: [birefringence](#)

double-roll breaker

a. A coalbreaker that relies on the impact of special teeth for the bulk of reducing, rather than on the compression between the rolls. An important feature is adjustment, which may be made during operation. The machines are flexible enough to produce top size ranging from 6 to 14 in (15.4 to 35.56 cm). *Mitchell* b. See: [double-roll crusher](#)

double-roll crusher

A machine for breaking down ore, rock, or coal and to discharge the crushed material below. See also: [spring-roll crusher](#); roll crusher; single-roll crusher. *Nelson*

double-roll press

A press in which pressure is applied by the mating of one or more pairs of indented rolls of equal diameter, revolving in opposite directions. Syn: [Belgian press](#)

double-room system

See: [room-and-pillar](#)

double-round nose

The cross-sectional view of the cutting face portion of a coring bit when its profile is a full half circle, the radius of which is one-half the wall thickness or kerf of the bit face. CF: [single-round nose](#) *Long*

double setting

A leveling procedure whereby observations are duplicated by resetting the instrument to detect errors of measurement immediately. Also called dual setting. *BS, 7*

double-shift places

At collieries where there is only one recognized coal-winning shift in 24 h, it is a general practice to have double shifts (and sometimes treble) of workers in development headings that require a speedy advance. *Nelson*

double-spaced neutron log

This method employs two neutron logging tools with different spacings between the source and the detector or two detectors in the same tool at different spacings. The spacings usually differ by 6 to 10 in (15.24 to 25.4 cm). The long-spaced log is run slowly and with a large time constant so that its statistical variation is not excessive, for the counting rate is much lower than that of the regular-spaced log. This technique has proved to be a potent technique for discriminating gas sands from oil sands in Venezuela. *Wyllie*

double spiral cut

A cylindrical drill-round cut whose spiral hole pattern gives the widest opening and permits opposite holes to be ignited successfully. This gives the best cleaning of the opening and safety in the advance is increased, since one section of the double spiral can give breakage irrespective of the other. *Langefors*

double stall

An earlier system of working thick seams in South Wales. Two narrow stalls are turned off the heading and after advancing some 8 to 12 yd (7.32 to 10.97 m) (so as to leave a pillar of coal next to the heading) are connected and the coal between them worked as a single face. Double stalls are intermediate between pillar-and-stall and longwall. *Nelson*

doublet

An assembled gem substitute composed of two pieces of material fused or cemented together. If both parts are of the species being imitated, it is a genuine doublet; if one part, it is a semigenuine doublet; if it contains no parts of the species being imitated, it is a false doublet; or if no part is a mineral, it is an imitation doublet. CF: [triplet](#)

double-track portable switch

A tub-changing arrangement for a tunnel face. The double-track loop is superimposed on the tunnel track and equipped with ramps, clamps, and spring switches so arranged that the loaded cars take one track outward while the empties take the other track inward. Syn: [portable shunt](#) *Nelson*

double-trolley system

A system of electric traction where, instead of the running rails, a second insulated contact wire is used for the return or negative current. *CTD*

double-tube core barrel

A double-tube core barrel having the upper end of the inner tube coupled to the core-barrel head by means of an antifriction device, such as a roller or ball bearing; hence, the inner tube tends to remain stationary when the outer tube, which is rigidly coupled to the core-barrel head, is rotated. *Long*

double-unit conveyor

A longwall conveyor layout from 200 to 280 yd (183 to 256 m) long, developed between two tailgates with a main gate in the center of the face. The main gate conveyor is served

by two face conveyors and may act as an intake or a return airway. The tailgates may serve as supply roads. See also: [double-double unit conveyor](#); [main gate](#). *Nelson*

double wedge cut

A drill-hole pattern consisting of a shallow wedge within an outer wedge, which is often used to obtain deep pull in hard rock. See also: [wedge cut](#)

double wicket

A method of working in which rooms are driven from adjacent headings to meet at their extremities. *Zern*

double working

N. of Eng. Two hewers (miners) working together in the same heading. Syn: [hewing double](#)

doubly plunging fold

A fold that plunges in opposite directions from a central point. In a doubly plunging anticline, the plunge is away from this point; in a doubly plunging syncline, the plunge is toward this point. *Billings*

doubly refractive

Causing double refraction. See also: [birefringent](#)

dough

Alternate spelling of daugh.

doughnut

The cylinder of coal formed by a coal auger. *Nelson*

Douglas furnace

A horizontal, revolving cylindrical furnace having a central flue. *Fay*

Douglas process

See: [Hunt and Douglas process](#)

douk

Eng. A soft dark clay found in veins. Probably derived from the Saxon *deagan*, meaning to knead or mix with water. Syn: [dowk](#)

dousing

See: [dowsing](#)

dousing rod

Commonly used by drillers as a name applied to a wooden wand, rod, forked tree limb, or twig (usually witch hazel) supposedly useful in locating formations bearing water, oil, or mineral. Also called divining rod; doodlebug; dowsing rod. *Long*

doverite

See: [synchysite](#)

Dow cell

The Dow electrolytic cell is a steel shell about 16 ft (4.88 m) long, 5 ft (1.52 m) wide, and 6 ft (1.83 m) deep. The electrolyte contains about 60% NaCl, 15% CaCl₂, and 25% MgCl₂; it is maintained at a temperature of 700 to 750 degrees C by controlled firing underneath the cell. *Newton, I*

dowk

See: [douk](#)

downbuckle

See: [tectogene](#)

downcast

a. The shaft through which the fresh air is drawn or forced into the mine; the intake. See also: [air shaft](#); [intake](#). *Fay* b. That side of a fault on which the strata have been displaced downward in relation to the upthrow or upcast side. *CTD*

downcast shaft

The shaft down which the fresh air enters the mine or workings. See also: [upcast shaft](#)

downcomer

A pipe to conduct something downward, such as: (1) a pipe for leading the hot gases from the top of a blast furnace downward to the dust collectors and flue system, and (2) a tube larger in diameter than the water tubes in some water-tube boilers for conducting water from each top drum to a bottom drum under the influence of thermal circulation. *Webster 3rd*

downdip

Parallel to or in general direction of the dip of a bed, rock stratum, or vein. *Long*

downdraft

A downward current of air or other gas (as in a mine shaft, kiln, or carburetor). Syn: [downcast](#)

downdrift

In a mine drift, the direction of predominant water movement.

downhole

- a. A borehole drilled at any angle inclined downward in a direction below the horizon.
- b. adj. In a borehole; e.g., downhole equipment.--adv. Deeper; e.g., to perforate downhole. *AGI*

downline

A line of detonating cord or plastic tubing in a blast hole that transmits the detonation from the trunkline or surface delay system down the hole to the primer.

downslope

The land surface between the projected outcrop of the lowest coalbed being mined along each highwall and a valley floor.

downspouts

Lanc. Pipes fixed down the side of a shaft for conducting water from one level or sump to another.

downstream face

The dry side of a dam. *Nichols, 1*

down-the-hole drill

A percussive or hammer drill in which the bit-driven mechanism is located immediately behind the drill bit and is small enough in diameter to permit it to enter and follow the bit down into the hole drilled.

down-the-hole extensometer

A device used to measure differential strains in a drill hole.

downthrow

a. The downthrown side of a fault. *AGI* b. The amount of downward vertical displacement of a fault. CF: [upthrow](#); heave. *AGI*

downthrow fault

A fault that displaces the strata downward relative to the workings approaching it. It would be an upthrow fault to workings on the opposite side.

downthrow side

The lower side of a fault.

Downtonian

Uppermost Silurian or lowermost Devonian. *AGI*

downward continuation

a. Interpretation method in which the values of a component of the magnetic field at lower levels are computed from the values at the surface. *Schieferdecker* b. The process of determining, from values measured at one level, the value of a potential (e.g., gravitational) field at a lower level. *AGI*

downward course

In mining, the course of the vein from the surface downward. Also called course downward.

downward enrichment

See: [supergene enrichment](#)

downward percolation

See: [sand leaching](#)

Dow process

A process for the production of magnesium by electrolysis of molten magnesium chloride. *ASM, 1*

dowsing

The practice of locating ground water, mineral deposits, or other objects by means of a divining rod or a pendulum. A dowser may claim also to be able to diagnose diseases, determine the sex of unborn babies, etc. Syn: [dousing](#); [water witching](#). CF: [rhabdomancy](#)

dowsing rod

See: [divining rod](#)

Dowson gas

A mixture of producer gas and water gas obtained by passing steam and air over heated coal or coke in a Dowson producer.

Dowson producer

A furnace used for the manufacture of producer gas. *Fay*

Dowty hydraulic tub retarder

A retarder that consists of lengths of steel channel with attached rubbing strips that operate on the face of the wheels above center. The action is controlled by a hydraulic cylinder containing opposed pistons. The hydraulic pressure is supplied from an accumulator in which pressure is maintained by means of a 5-hp (3.7-kW) electric motor-driven pump that is sufficient for 10 retarder unit. *Mason*

Dowty prop

A prop that is in effect a self-contained hydraulic jack consisting of two tubes, the upper one telescoping into the lower. The upper (or inner) tube acts both as a reservoir for the oil and as a container for the pump, yield valve, and other accessories. *Nelson*

Dowty roofmaster

A self-contained, oil-operated steel support for use on a mechanized long-wall face. It has support frames constructed of rigid roof and floor members supported by yielding hydraulic props. Two- and three-prop units are connected alternately to the armored conveyor by means of jacks mounted in the floor members, to carry long and short cantilever roof beams, respectively. See also: [self-advancing supports](#)

dozer

Abbrev. for bulldozer; shovel dozer. See also: [bulldozer](#) *Nichols, 2*

dozer shovel

A tractor equipped with a front-mounted bucket that can be used for pushing, digging, and truckloading. *Nelson*

dozzle

See: core.

D.P. reagents

Flotation reagents made by DuPont are D.P. 243, a 50% aqueous paste of lorolamine (lorol being a mixture of primary straight-chain alcohols) and D.P.Q., lauryl trimethyl ammonium bromide. Others include D.P.Q.B., D.P.C., D.P.N., and D.P.L.A. *Pryor, 3*

dradge

Corn. The inferior portions of ore separated from the best ore by cobbing. *Fay*

draft

A survey line in a traverse. Syn: [leg](#)

draft engine

Corn. An engine used for pumping.

draft gage

An instrument used to measure the small pressure differentials below atmospheric; e.g., an inclined manometer to measure the pressure difference between a flue and the atmosphere for combustion control. *ACSG, 2*

draft hole

An opening through which air is supplied to a furnace. *Fay*

draftsman

In petroleum production, one who specializes in drawing subsurface contours in rock formations from the data obtained by a geophysical prospecting party. The draftsman

plots maps and diagrams from computations based on recordings of seismograph, gravimeter, magnetometer, and other petroleum prospecting instruments, and from prospecting and surveying field notes. *DOT*

drag

a. The frictional resistance offered to a current of air or water; resistance created by friction. *Fay* b. Fragments of ore torn from a lode by a fault. Such fragments are scattered along the line of the fault and are usually inclosed within crushed or brecciated pieces of the rock traversed by that fault. c. The flexuring of strata associated with faults. In a normal fault, the coal seam often bends upward on the downthrow side and downward on the upthrow side. Thus, drag is an indication of direction of displacement of the beds. Also called terminal curvature. See also: [coal lead](#) *Nelson* d. In an inclined stope, the weight of the arch block is resolved into two components, one at right angles to the dip, which tends to close the opening, and one parallel to the dip, which tends to produce movement of the hanging wall with respect to the footwall. This movement is known as drag, or creep. Syn: [creep](#) e. See also: [drag ore](#) f. An appliance to be attached to the rear of a loaded train of cars to prevent the cars from running down the incline or grade in case the cable should break. See also: [backstay](#) g. The uptilted or downtilted curve in rock beds or strata adjacent to a fault. *Long* h. The force exerted by a flowing fluid on an object in or adjacent to the flow. *AGI* i. The bending of strata on either side of a fault, caused by the friction of the moving blocks along the fault surface; also, the bends or distortions so formed. CF: [bull](#)

drag angle

The angle at which the leading surface of a cutting plane or point meets the surface to be cut. If less than 90 degrees, the angle is said to be negative; if over 90 degrees, it is called a positive rake or drag angle. CF: [rake](#)

drag bit

a. A noncoring or full-hole boring bit that scrapes its way through strata that must not be too hard. It may be a two-, three-, or four-bladed pattern with various curves and cutaways. The drilling fluid passes down through the hollow drill stem to the cutting point. See also: [roller bit](#) b. Various kinds of rigid steel bits provided with fixed (as contrasted to the movable or rolling cutting points of a roller bit) and sometimes replaceable cutting points, which are rotated to drill boreholes in soft to medium-hard rock formations. See also: [bit](#); [fishtail bit](#); [mud bit](#). *Long*

drag bolt

A coupling pin. *Standard, 2*

drag brake

On a revolving shovel, the brake that stops and holds the drag (digging) drum. *Nichols, 2*

drag breccia

Fragments of rock in the brecciated zone of a fault. *Long*

drag bucket

A bucket widely used in sampling sea-floor rock deposits in all depths up to and exceeding 30,000 ft (9.1 km). See also: [drag dredging](#) *Mero*

drag cable

In a dragline or hoe, the line that pulls the bucket toward the shovel. *Nichols, 1*

drag-chain conveyor

A type of conveyor having one or more endless chains that drag bulk materials in a trough. See also: [chain conveyor](#); [drag conveyor](#); portable drag conveyor. Syn: [bar flight conveyor](#)

drag classifier

Inclined trough that receives ore pulp, and classifies it into settling solids and relatively fine pulp overflow. The settled material is continuously dragged up slope and out by a continuous belt, perhaps provided with transverse scrapers. *Pryor, 3*

drag conveyor

A conveyor in which an endless chain, having wide links carrying projections or wings, is dragged through a trough into which the material to be conveyed is fed; it is used for loose material. See also: [chain conveyor](#)

drag cut

a. A cut on which groups of holes are drilled at increasing heights above floor level and at increasing angles from the free face. The shots are fired to break out successive wedges of strata across the width of the face. *BS, 12* b. A drill-hole pattern widely used in high-speed drilling. The cut holes are inclined downward to cut a wedge along the floor, the other holes being drilled to break to the cut holes. Also called horizontal cut. *Nelson* c. A cut in which the cut holes are angled in the vertical plane toward a parting in order to breakout the ground along the parting. Drag cut rounds are suitable for small drifts 6 to 7 ft (1.83 to 2.13 m) wide or where shallow pulls are sufficient, but the drag cut does not find much application in large-scale drifting practice. See also: [bottom cut](#) *McAdam, 2*

drag dip

Local change of attitude as a result of drag near a fault.

drag dredging

A method in which the bucket is lowered to the sea floor and dragged over the ocean floor for some distance in order to collect samples. Dredge and trawl hauls normally can only give a rough indication of heavy or light concentrations of the minerals within an area. *Mero*

drag engineer

See: [slope engineer](#)

drag fold

A minor fold, usually one of a series, formed in an incompetent bed lying between more competent beds, produced by movement of the competent beds in opposite directions relative to one another. Drag folds may also develop beneath a thrust sheet. They are usually a centimeter to a few meters in size. *AGI*

drag head

The underwater end of a hydraulic dredging system that comes in contact with bottom sediments and through which a dredge pump recovers a slurry of water and sediment. *Padan*

dragline

A type of excavating equipment that casts a rope-hung bucket a considerable distance; collects the dug material by pulling the bucket toward itself on the ground with a second rope; elevates the bucket; and dumps the material on a spoil bank, in a hopper, or on a pile. See also: [boom](#); [excavator](#).

dragline boom

A crane boom used with a drag bucket. *Carson, 1*

dragline dredge

An excavation system involving a digging bucket, cable, and boom, which permits the recovery of sediments and rocks from trenches, canals, and pits that contain or are covered by water.

dragline engineer

See: [slope engineer](#)

dragline excavator

A mechanical excavating appliance consisting of a steel scoop bucket that is suspended from a movable jib; after biting into the material to be excavated, it is dragged toward the machine by means of a wire rope. *CTD*

dragline scraper

An apparatus for moving soil, gravel, or other loose material. It ordinarily consists of a scraper attached to an endless cable or belt operated by a drum or sprocket wheel, and can be drawn back and forth by the operator at the drum.

drag loader

See: [dragman](#)

dragman

One who operates a scraper loading machine, known as a drag, to load ore into cars or chutes. Also called drag loader; drag operator. *DOT*

dragon

S. Staff. A barrel in which water is raised from a shallow shaft.

dragonite

A rounded quartz pebble representing a quartz crystal that has lost its brilliancy and angular form; in gravels, once believed to be a fabulous stone obtained from the head of a flying dragon.

dragon's skin

Miner's term for part of a fossil tree trunk, such as *Lepidodendron* or *Sigillaria*, with a leaf-scar pattern suggesting scales.

drag operator

See: [dragman](#)

drag ore

Crushed and broken fragments of rock or ore torn from an orebody and contained in and along a fault zone. See also: [trail of a fault](#) Syn: [drag](#)

drag-out loss

Misplacement of relatively fine material due to its adherence to a coarser fraction being settled and dragged out in mechanical classification or heavy-media separation. *Pryor, 3*

drag rake

See: [negative rake](#)

drags

Steel bars with a hook at one end and prongs at the other, which are inserted in the drawbar at the rear of the tub ascending an incline so as to prevent it running back. *Mason*

drag scraper

a. A digging and transporting device consisting of a bottomless bucket working between a mast and an anchor. *Nichols, 1* b. A towed bottomless scraper used for land leveling. Called leveling drag scraper to distinguish from cable type. *Nichols, 1*

dragshovel

A shovel equipped with a jack boom, a live boom, a hinged stick, and a rigidly attached bucket, that digs by pulling toward itself. Also called hoe; backhoe; pullshovel. *Nichols, 1*

dragstaff

A pole projecting backward and downward from a vehicle, to prevent it from running backward. See also: [backstay](#); [drag](#). *Fay*

drag-stone mill

A mill in which ores are ground by means of a heavy stone dragged around on a circular or annular stone bed. See also: [arrastre](#) *Webster 3rd*

drag tank

See: [dredging sump](#)

drain

A conduit or open ditch for carrying off surplus ground or surface water. Closed drains are usually buried. *Seelye, 1*

drainage

The manner of gravity flow of water or the process of channelization, for removal at a point remote from a mining operation. See also: [drain tunnel](#); [water hoist](#). *Nelson*

drainage basin

a. The area from which water is carried off by a drainage system; a watershed or a catchment area. *Seelye, 1* b. See: [basin](#)

drainage head

a. The furthest or highest spot in a drainage area. *Nichols, 1* b. Difference in elevation between two points in an area to be drained.

drainage level

See: [water level](#)

drainage trench

A channel cut alongside a mine roadway to provide for drainage and enable the proper ballasting of the rail track. The trench may be lined with precast concrete sections to a carefully laid gradient. *Nelson*

drainage tunnel

See: [drain tunnel](#)

drained shear test

A shear test on a clay sample after completed consolidation under normal load, carried out in drained conditions. The strengths given by drained tests are higher than those from undrained tests. *Nelson*

drain hole

a. A borehole drilled into a water-bearing formation or mine workings through which the water can be withdrawn or drained. *Long* b. Any hole provided in the base covering or housing on a machine through which oil or liquids can be withdrawn. *Long*

drainman

A laborer who regulates flow of tailings, through flumes or pipes (mixture of waste materials and water resulting from treatment of ore for recovery of valuable minerals) in back filling (filling of working places from which all ore has been mined) in such manner that water will be drawn off and the sand left for filling purposes. *DOT*

drain tunnel

A tunnel constructed for disposing of mine water. Long tunnels have been driven in some mining districts for the purpose of passing under the lower workings of several mines and tapping the water for the entire group. Where topographic features permit, a drain tunnel--more properly called an adit--may also be driven to serve a single mine. The chief advantages of a drain tunnel lie in saving the cost of pumping and eliminating the danger of the mine being flooded through failure of the pumps. Also called drainage tunnel. CF: [drainage](#)

dranyam

A new cutter loader devised by Maynard Davies and developed at the Central Engineering Establishment of the National Coal Board of Great Britain. A shearer drum is carried on a vertical shaft in contrast to the horizontal shaft in the Anderson shearer. *Nelson*

draper washer

Vertical-current separator (obsolete) used to separate shale from coal. *Pryor, 3*

draping

Warping in the beds overlying a reef, as a result of differential compaction.

draft

a. S. Staff. The quantity of coal hoisted in a given time. b. The pressure required to supply air to a furnace and to remove the flue gases from the furnaces. Natural draft is produced by a chimney, while artificial draft is produced by fans and is controlled by the speed of the fans, by variation in the pitch of the fan blades, or by dampers. *Francis, 2*

dravite

A trigonal mineral, $3[\text{NaMg}_3 \text{Al}_6 (\text{OH},\text{F})_4 (\text{BO}_3)_3 \text{Si}_6 \text{O}_{18}]$; tourmaline group; forms series with schorl and with elbaite; in triangular or hexagonal prisms; pyroelectric and piezoelectric; in metamorphic and metasomatic lime-rich rocks; slices are used to measure transient blast pressures.

draw

a. The horizontal distance on the surface ahead of an underground coal face over which the rocks are influenced by subsidence. See also: [angle of draw](#) b. The break in strata from a coal face to the surface; the angle between this break and the vertical. *Mason* c. To remove broken ore by gravity from stopes, chambers, or ore bins by aid of chutes or conveyors. *Pryor, 3* d. To mine out or rob the pillars in a mine, after the rooms are worked out. e. To pull bit-bank metal toward a diamond by peening and calking when handsetting a diamond bit. *Long* f. See: [pull](#) g. The effect of creep upon the pillars of a mine. *Fay* h. To raise ore, coal, rock, etc., to the surface; to hoist. *Fay* i. To transport by hand; to put; to tram. *Mason* j. To allow ore to run from working places and stopes through a chute into trucks. *CTD* k. To withdraw timber props from overhanging coal, so that it falls ready for collection. *CTD*

drawability

A measure of the workability of a metal subject to a drawing process. This term is usually expressed to indicate a metal's ability to be deep-drawn. *ASM, 1*

draw a charge

Remove explosives. *Zern*

draw bead

a. A bead or offset used for controlling metal flow. *ASM, 1* b. Riblike projections on draw rings or hold-down surfaces for controlling metal flow. *ASM, 1*

drawcut

a. In underground blasting, cut holes that are inclined upward. *Lewis* b. In rock blasting, bottom cut. *Pryor, 3* c. See: [drag cut](#)

drawer

a. Scot. A man or boy who takes ore or rock from the working face to the shaft, or terminus of the horse or haulage road. One who pushes trams or drives a horse underground. *Fay* b. Derb. A man who hoists ore or rock by means of a windlass, or otherwise, from a shaft. *Fay* c. Putter; trammer; wagoner; a person who moves tubs either manually or with a machine. *Mason*

draw firing

Removal of the load from a furnace for a short time, prior to the completion of burning, to equalize heating of all areas. Also called draw burning. *Bryant*

drawgear

The term includes drawbars, chains, shackles, detaching hooks, etc., used in haulage, winding, and hoisting. *Nelson*

draw hole

An aperture in a battery through which the coal or ore is drawn. *Fay*

drawing

a. Recovering the timbers, chocks, etc., from the goaves. This work is commonly performed with the use of the dog and chain. *Fay* b. Knocking away the sprags from beneath the coal after holing. *Fay* c. Raising coal through a shaft or slope. *Fay* d. In hydraulic mining, throwing the water beyond the dirt to be removed and causing it to flow toward the giant. CF: [goosing](#) e. Removing or pulling out the crown bars in a tunnel. *Stauffer* f. The movement of tubs. *Pryor, 3* g. Forming recessed parts by forcing the plastic flow of metal in dies. *ASM, 1* h. Reducing the cross section of wire or tubing by pulling it through a die. *ASM, 1* i. A misnomer for tempering. *ASM, 1* j. Continuous forming of sheet, tube or fibrous glass from molten glass. *Van Vlack*

drawing an entry

Removing the last of the coal from an entry. *Fay*

drawing down

Reduction of cross section of steel by forging. *Pryor, 3*

drawing lift

The lowest lift of a Cornish pump, or that lift in which the water rises by suction (atmospheric pressure to the point where it is forced upward by the plunger). Also called drawlift.

drawing small

When a winding rope, from the effects of wear and tear, has become less in diameter or in thickness from that cause, it is said to be "drawing small." *Fay*

drawing timber

The removal of timbers and supports from abandoned or worked out mine areas. This work is highly specialized and should be attempted only by the most experienced persons. Generally, timbers are pulled by a timber puller that permits the operator to be under a safe roof while doing this work. In some cases, where so much weight is resting

on the timber that it cannot be removed safely, it must be shot out by use of explosives, and the roof allowed to fall. See also: [sylvester](#) *Kentucky*

draw kiln

Scot. A limekiln in which the process of calcination is carried on continuously, the raw limestone and fuel being put in at the top and the lime withdrawn at the bottom. *Fay*

drawman

See: [grizzly worker](#)

drawn

The condition in which an entry or room is left after all the coal has been removed. See also: [rob](#)

drawn clay

Clay that is shrunk or decreased in volume by burning. *Fay*

drawn tube

A tube produced by drawing a tube bloom through a die. *Light Metal Age*

drawpoint

a. A spot where gravity fed ore from a higher level is loaded into hauling units. *Nichols, I*
b. Heavy chisel cut across the face of a bit blank a short distance from a diamond to serve as a starting point for calking the metal toward and around a diamond being handset. *Long*

draw slate

A soft slate, shale, or rock approx. 2 in (5.08 cm) to 2 ft (0.61 m) in thickness, above the coal, and which falls with the coal or soon after the coal is removed. *Fay*

draw works

In rotary drilling, that part of the equipment functioning as a hoist to raise or lower drill pipe and in some types, to transmit power to the rotary table. See also: [hoist](#)

dredge

a. Large floating machine used in underwater excavation for developing and maintaining water depths in canals, rivers, and harbors; raising the level of lowland areas and improving drainage; constructing dams and dikes; removing overburden from submerged orebodies prior to openpit mining; or recovering subaqueous deposits having commercial value. CF: [grab sampler](#) b. See: [dradge](#) c. Very fine mineral matter held in suspension in water. d. A type of bag net used for investigating the fauna of the sea bottom. *CTD* e. In dry process enameling: (1) the application of dry, powdered frit to hot ware by sifting; and (2) the sieve used to apply powdered porcelain enamel frit to the ware. Also called dredging. *ASTM* f. Any of various machines equipped with scooping or suction devices used in deepening harbors and waterways and in underwater mining. *Webster 2nd*

dredge claims

The bed of an unnavigable river is open to location and patent as public land, when the opposite banks thereof have not passed into private ownership. Proprietors bordering on such streams, unless restricted by the terms of their grant from the government, hold to the center of the stream, notwithstanding the running of meander lines on the banks thereof, as the true boundary of the land is the thread of the stream. *Ricketts*

dredgemaster

In metal mining, a person who supervises and operates a dredge that is used to mine metal-bearing sands or gravels (gold, tin, or platinum) at the bottom of lakes, rivers, and streams. Also called dredgeman. *DOT*

dredge pump

A heavy-duty-type centrifuged pump with chrome-carbide or manganese steel liners. In silts or rounded sand grains their life is often a matter of months, but where sharp-grained sands or large gravel sizes are being handled, casing and impeller lives may be figured in hours. *Carson, 2*

dredger

a. A vessel specially equipped for dredging. See also: [bucket-ladder dredge](#); [dipper dredger](#); [grab dredger](#); sand-pump dredger; suction-cutter dredge. *CTD* b. Person who dredges. *Webster 3rd* c. A dredging machine. *Webster 3rd*

dredger excavator

An excavator working on the same principle as the bucket-ladder dredger but designed to work on land. *CTD*

dredge sump

N. of Eng. A small reservoir at the bottom of a shaft, in which the water collects and deposits any sediments or debris. See also: [settling pit](#) *Fay*

dredging

Removing solid matter from the bottom of an area covered by water.

dredging conveyor

A scraper partially immersed in a vessel containing liquid used for removing any solids that may settle therein. *BS, 5*

dredging sump

A tank, forming part of the water circuit, in which slurry or small coal settles and is removed continuously by means of a scraper chain or scraper buckets. Also called drag tank; sludge sump. *BS, 5*

dredging tube

The large tube of a dredging machine that operates by suction. *Standard, 2*

dredging well

The opening through a dredging vessel in which the bucket ladders work. See also: [bucket-ladder dredge](#)

dreelite

See: [barite](#)

dress

a. To resharpen and restore to size the worn teeth on a roller or diamond bit. See also: [face](#) b. To restore a tool to its original shape and sharpness by forging or grinding. *Crispin* c. To clean ore by breaking off fragments of the gangue from the valuable mineral. See also: [ore dressing](#) d. To shape dimension stone.

dressing

a. A general term for the processes of milling and concentration of ores. Syn: [ore dressing](#) b. The shaping of dimension stone. c. Separating rock from lumps of coal by chipping with a hammer or similar means. d. Can. Developing claims to take them out of wildcat class. *Hoffman*

dressing a mine

A method of fraud carried out by a representative of the seller, by systematically mining out all the low-grade or barren spots in the vein, leaving only the high-grade spots exposed. *Hoover*

dribble

Material that adheres to the conveying medium and, being carried beyond the discharge point, drops off along the return run.

dribbling

In underground excavation, fall of small stone and debris from roof, warning that a heavy fall may be imminent. *Pryor, 3*

dried alum

See: [burnt alum](#)

drier

A device used for removing water from damp material by evaporation, supplemented usually with forced circulation of air.

drier man

In salt production, one who tends operations of rotary driers through which crushed salt is run to drive off contained moisture prior to grinding, examining the salt discharged from the driers to see that evaporation of moisture is complete. *DOT*

dries

Seams in the rock, which are usually invisible in the freshly quarried material, but which may open up in cutting or on exposure to the weather. See also: [dry](#)

drif

See: [drift](#)

drift

a. An entry, generally on the slope of a hill, usually driven horizontally into a coal seam. Syn: [surface](#) b. The deviation of a borehole from its intended direction or target. CF: [walk](#) c. A general term, used esp. in Great Britain, for all surficial, unconsolidated rock

debris transported from one place and deposited in another, and distinguished from solid bedrock; e.g., specif. for glacial deposits. Any surface movement of loose incoherent material by the wind; accumulated in a mass or piled up in heaps by the action of wind or water. See also: [fill](#) d. Apparent offset of aerial photographs with respect to the true flight line, caused by the displacement of the aircraft owing to cross winds, and by failure to orient the camera to compensate for the angle between the flight line and the direction of the aircraft's heading. The photograph edges remain parallel to the intended flight line, but the aircraft itself drifts farther and farther from that line. *AGI* e. A time variation common to nearly all sensitive gravimeters, due to slow changes occurring in the springs or mountings of the instrumental systems; this variation is corrected by repeated observations at a base station and in other ways. *AGI* f. A horizontal opening in or near an orebody and parallel to the course of the vein or the long dimension of the orebody. *Beerman* g. A passageway driven in the coal from the surface, usually above drainage, following the inclination of the bed. *Hudson* h. Forest of Dean. A hard shale. i. To make a drift; to drive. *Webster 3rd* j. A horizontal gallery in mining and civil engineering driven from one underground working place to another and parallel to the strike of the ore. It is usually of a relatively small cross section. Larger sections are usually called tunnels. *Fraenkel* k. A heading driven obliquely through a coal seam. *CTD* l. A heading in a coal mine for exploration or ventilation. *CTD* m. An inclined haulage road to the surface. *CTD* n. In oil well surveying, the angle from a drill hole to the vertical. See also: [inclination](#) o. A flat piece of steel of tapering width used to remove taper shank drills and other tools from their holders. *ASM, I* p. A tapered rod used to force mismatched holes in line for riveting or bolting. Sometimes called a driftpin. *ASM, I* q. A gradual change in a reference that is supposed to remain constant. An instrument such as a gravimeter may show drift as a result of elastic aging, long-term creep, hysteresis, or other factors. *AGI* r. A general term applied to all rock material (clay, silt, sand, gravel, boulders) transported by a glacier and deposited directly by or from the ice, or by running water emanating from a glacier. Drift includes unstratified material (till) that forms moraines, and stratified deposits that form outwash plains, eskers, kames, varves, glaciofluvial sediments, etc. The term is generally applied to Pleistocene glacial deposits in areas (as large parts of North America and Europe) that no longer contain glaciers. The term drift was introduced by Murchison in 1839 for material, then called diluvium, that he regarded as having drifted in marine currents and accumulated under the sea in comparatively recent times; this material is now known to be a product of glacial activity. CF: [glacial drift](#) s. One of the wide, slower movements of surface oceanic circulation under the influence of, and subject to diversion or reversal by, prevailing winds; e.g., the easterly drift of the North Pacific. Syn: [drift current](#) ocean currents and wind stress. The speed of an ocean current or ice floe, usually given in nautical miles per day or in knots. Sometimes used as a short form of littoral drift. See: [current](#) t. In South Africa, a ford in a river. The term is used in many parts of Africa to indicate a ford or a sudden dip in a road over which water may flow at times. Syn: [drif](#)

drift and pillar

N. Staff. A system of working coal similar to the room and pillar system. *Fay*

drift angle

The angular deviation of a borehole from vertical and/or its intended course. See also: [deflection angle](#)

drift angle buildup

The rate of the increase in the drift angle that is generally expressed as the number of degrees increase for a specific drilled footage; e.g., 2 degrees per 100 ft (30.5 m). *Long*

driftbolt

a. A bolt for driving out other bolts or pins. *Webster 3rd* b. A metal rod, for securing timbers, resembling a spike but with or without point or head. *Webster 3rd*

drift coal

See: [allochthonous coal](#)

drift coalfields

Coalfields formed by forests on higher ground being carried away by floods into lakes. *Mason*

drift copper

Native copper transported from its source by a glacier. *AGI*

drift current

See: [drift](#)

drift curve

Graph of a series of gravity values read at the same station at different times and plotted in terms of instrument reading versus time. *AGI*

drift driller

In metal mining, one who operates a heavy, mounted, compressed-air, rock-drilling machine in driving drifts (horizontal passages running parallel to the vein opened up to facilitate mining of the ore). *DOT*

drifted

a. A borehole, the course of which has deviated or departed from the intended direction or did not reach its intended target. *Long* b. Inward-bulged casing that has been straightened by the use of a drift. See also: [drift](#) c. A horizontal underground passage parallel to or along a vein or related structure. *Long*

drift epoch

See: [glacial epoch](#)

drifter

a. An air-driven, percussive rock drill; also called leyner; liner. *Long* b. A drill crewman, miner, or laborer who travels from place to place, only working a short period of time at each place. CF: [boomer](#) *Long* c. A person skilled in the use of air-driven, percussive rock drills and other processes utilized in excavating horizontal underground passages or tunnels. *Long* d. An excavator of mine drifts. *Webster 3rd*

drifter bar

See: [bar](#); drill column.

drifter drill

The heaviest form of hammer drill made in various sizes depending upon the severity of the work to be done. The heaviest type weighs more than 200 lb (91 kg) and is used for holes up to 20 ft (6.1 m) in depth. Must be mounted on a column or bar. *Lewis*

drift frame

See: [square set](#)

drift indicator

Various types of mechanical or photographic devices used to determine the compass bearing and inclination of the course of a borehole. CF: [clinometer](#)

driftman

In bituminous coal mining, one who is engaged in driving a drift, a horizontal passageway underground following the coal vein in a mine. *DOT*

driftmeter

An instrument for determining the inclination of a drill pipe from the vertical and the depth of measurement. *AGI*

drift mine

- a. A placer or gravel deposit worked by underground mining methods. *Webster 3rd* b. A mine that opens into a horizontal or practically level seam of coal. This type of mine is generally the easiest to open as the mine opening enters into the coal outcrop. *Kentucky* c. One opened by a drift. *Pryor, 3*

drift mining

- a. A term applied to working alluvial deposits by underground methods of mining. The paystreak, varying from 2 to 8 ft (0.6 to 2.4 m), sometimes greater, is reached through an adit or a shallow shaft. Wheelbarrows or small cars may be used for transporting the gravel to a sluice on the surface. If relatively large, the deposit is removed in a system of regular cuts or slices taken across the paystreak, working generally in a retreating fashion from the inner limit of the gravel. Drift mining is more expensive than sluicing or hydraulicking; consequently it is used only in rich ground. See also: [placer mining](#) b. The working of relatively shallow coal seams by drifts from the surface. The drifts are generally inclined and may be driven in rock or in a seam. Drift mining may be viewed as intermediate between opencast coal mining and shaft or deep mining. See also: [development drift](#); surface drift. *Nelson*

drift peat

A peat deposit associated with or embedded in glacial drift. *Fay*

drift salt

Fluffy, flaky salt particles due to wind and wave action, which produce a mist over the surface of solar salt ponds. The mist contains minute particles of salt, which are driven to the lee shore and deposited as a scale. *Kaufmann*

drift set

A strong timber set in a drift that may form the anchorage for the timber sets of the stope above. *Nelson*

drift slicing

Side slicing as a method of stoping massive deposit. Alternative to top slicing. *Pryor, 3*

drift stope

The excavation of the development drift together with the stope in overhand stoping. Employed in cases where the hanging wall is strong. *Nelson*

drift stoping

See: [sublevel stoping](#)

drift theory

That theory of the origin of coal that holds that the plant matter constituting coal was washed from its original place of growth and deposited in another locality where coalification then came about. See also: [allochthonous coal](#)

drikold

See: [dry ice](#)

drill

a. Any cutting tool or form of apparatus using energy in any one of several forms to produce a circular hole in rock, metal, wood, or other material. See also: [calyx drill](#); [churn drill](#); [core drill](#); [diamond drill](#); rock drill; rotary drill; shot drill. *Long* b. To make a circular hole with a drill or cutting tool. *Long*

drillability

a. The relative speed at which a material may be penetrated by a drill bit. High drillability denotes easy penetration at a fast rate. *Long* b. The specific value of the drilling properties of a rock expressed in terms of the drilling rate under certain technical conditions. *Fraenkel*

drill ahead

a. To sink a borehole into solid or unconsolidated rock material, such as overburden or glacial till, to a considerable depth below the bottom of the casing or drivepipe. *Long* b. To restart or resume drilling operation. *Long* c. To drill boreholes in advance of mine workings to explore for or locate old mine workings or a water-bearing formation. *Long*

drill bar

A drill column that is set horizontally instead of vertically in an underground workplace. See also: [bar](#); [drill column](#). *Long*

drill base

Metal or wood framework on which a drilling machine is mounted. *Long*

drill bit

a. One of a number of different types of detachable cutting tools used to cut circular holes in rock, wood, metal, etc. Also called drill crown in Africa and England. *Long* b. Any device at the lower end of a drill stem, used as a cutting or boring tool in drilling a hole; the cutting edge of a drill. CF: [core bit](#)

drill boom

An adjustable arm projecting from a drill carriage to carry a drill and hold it in position. *BS, 12*

drill bort

See: [drill diamond](#)

drill by

See: [bypass](#)

drill cable

In a strict sense, the term should only be used to designate the heavy rope or cable used as the connecting link between the drill stem and the walking beam on a churn drill. However, the term now is commonly used to signify any cable or wire rope used in hoisting drill rods, casing, and other borehole-drilling equipment used with a drill machine, such as a calyx drill, diamond drill, etc. Also called drilling line; drill line. *Long*

drill capacity

The lineal feet of drill rod of a specified size that a hoist on a diamond or rotary drill can lift or that the associated brake is capable of holding on a single line; also sometimes used to designate the size of a drill machine, based on the depth to which it is capable of drilling. See also: [lifting capacity](#)

drill carriage

A movable platform, stage, or frame that incorporates several rock drills and usually travels on the tunnel track; used for heavy drilling work in large tunnels. See also: [drill frame](#)

drill collar

A length of extra heavy wall drill rod or pipe connected to a drill string directly above the core barrel or bit, the weight of which is used to impose the major part of the load required to make the bit cut properly. A drill collar is usually of nearly the same outside

diameter as the bit or core barrel on which it is used. Not to be confused with guide rod.
Long

drill column

A length of steel pipe equipped with a flat cap at one end and a jackscrew on the opposite end by means of which the pipe can be wedged securely in a vertical or horizontal position across an underground opening to serve as a base on which to mount a small diamond or rock drill. Syn: [drifter bar](#); drill bar; drill stem. See also: [bar](#)

drill core

A solid, cylindrical sample of rock produced by an annular drill bit, generally rotatively driven but sometimes cut by percussive methods. Syn: [core](#)

drill cradle

The metal channel on which a heavy drill is fed forward as drilling proceeds. *BS, 12*

drill cuttings

See: [well cuttings](#); cuttings; sludge.

drill diamond

Industrial diamond used in diamond-drill bits and reaming shells for coring, cutting, or reaming rock. Drill diamonds usually contain obvious imperfections and inclusions, although the finer grades approach toolstones in quality. Also called drill bort; drilling bort; drilling diamond; drilling. CF: [toolstone](#)

driller

a. A person who has acquired enough knowledge and skill to operate and assume the responsibility of operating a drill machine. Also called drill runner; runner; tool pusher. Syn: [drillman](#) *Long* b. The person in charge of the rig and crew during one tour and who handles the drilling controls. *Brantly, 2* c. A drilling machine. *Standard, 2* d. Can. Property being diamond drilled as compared to one undergoing underground development. *Hoffman* e. N. of Eng. Uses an electric or pneumatic twist drill to make shotholes in the coal. Shotholes in the gateway caunches are usually put on by the stoneman. *Trist*

driller's log

A description of the borehole based on the daily logs from the driller.

drill extractor

Tool for retrieving broken piece of drill from borehole. *Pryor, 3*

drill feed

The mechanism for advancing the drill bit during boring. *Nelson*

drill fittings

Devices, parts, and pieces of equipment used downhole in drilling a borehole. Also called downhole equipment. *Long*

drill frame

A drill mounting often made at the mine to suit the tunnel requirements. It usually comprises two girders strapped together to form a replica of the tunnel shape but smaller in size. The structure is mounted on wheels and provision is made for clamping the drills to various parts of the frame according to the drill-hole pattern in use. It contains a central opening to allow the passage of the loading machine, cars, or conveyor. *Nelson*

drill gage

The width across the cutting bit or diameter of the drilled hole. With tungsten-carbide bits it is possible to drill long holes without the loss of gage. *Nelson*

drill hole

a. A hole in rock or coal made with an auger or a drill. b. Technically, a circular hole drilled by forces applied percussively; loosely and commonly, the name applies to a circular hole drilled in any manner. *Long* c. Used by diamond drillers as a syn. for borehole. CF: [borehole](#) *Long*

drill-hole counting

When the results of a survey indicate a possible ore deposit, test holes may be drilled and a special adaptation of a scintillation counter, called a drill-hole counter, may be lowered in a hole in an attempt to locate, outline, and assay an orebody. The drill-hole counter can distinguish between formations by their radiation intensity. *Dobrin*

drill-hole pattern

The number, position, depth, and angle of the shot holes forming the complete round in the face of a tunnel or sinking pit. A good drill-hole pattern will ensure the maximum

possible pull and the fragmentation for easy loading without excessive scatter of material. See also: [cut holes](#) *Nelson*

drill-hole record

A description of the borehole based on the daily logs from the driller and the samples and the report of the geologist. *Nelson*

drill-hole returns

The circulation fluid and entrained cuttings overflowing the collar when drilling a borehole. *Long*

drill-hole survey

See: [borehole survey](#)

drilling

a. The act or process of making a circular hole with a drill. See also: [drill](#) b. The operation of tunneling or stoping, whether with a compressed-air rock drill, a jackhammer, or a drifter. *CTD* c. Use of a compressed-air rock drill to prepare rock for blasting. *Pryor, 3* d. The operation of making deep holes with a drill for prospecting, exploration, or valuation. *Pryor, 3*

drilling bit

The cutting device at the lower end of cable drilling tools or rotary drill pipe, the function of which is to accomplish the actual boring or cutting. *AGI*

drilling cable

See: [cable](#)

drilling column

The column of drill rods to the end of which the bit is attached. *BS, 9*

drilling conditioning period

Time spent in circulating a higher-than-normal volume of fluid through the drilling string while slowly rotating and lowering the string from the last few feet above to the bottom of a borehole to wash away any obstructing material before resuming coring operations. *Long*

drilling jig

a. A device very accurately made of cast or wrought iron that becomes a guide for the drilling of holes. The work is fastened in the jig, and the drill is guided through holes drilled in the face of the jig itself. The use of a jig makes interchangeable work easily obtainable. *Crispin* b. A portable drilling machine worked by hand. *Fay*

drilling life

See: [bit life](#)

drilling machine

A hand-operated, or power-driven machine for boring shot holes or boreholes, in coal, ore, mineral, or rock. See also: [drifter drill](#); percussive drill; rotary drill; rotary-percussive drill. *Nelson*

drilling mud

A suspension, generally aqueous, used in rotary drilling and pumped down through the drill pipe to seal off porous zones and to counterbalance the pressure of oil and gas; consists of various substances in a finely divided state among which bentonite and barite are most common. Oil may be used as a base of water. CF: [circulation fluid](#); [mud-laden fluid](#). *AGI*

drilling pattern

The relation of drilled holes to each other and any free faces as part of the blast design.

drilling platform

Auxiliary equipment for drilling at heights above head level. The drilling platform is generally assembled and dismantled for each series of drilling operations. *Fraenkel*

drilling pressure

See: [bit load](#)

drilling rate

a. The depth of penetration achieved per unit of time with a given type of rock drill, bit diameter, air pressure, etc. See also: [penetration rate](#) *Fraenkel* b. The overall rate of advancement of the borehole. *BS, 9*

drilling rig

A general term for the derrick, power supply, draw works, and other surface equipment necessary in rotary or cable-tool drilling. See also: [rig](#)

drillings

a. See: [drill diamond](#) b. Incorrectly used as a syn. for cuttings. *Long* c. Sometimes designates drill diamonds ranging from 4 to 23 stones per carat in size. *Long*

drilling thrust

See: [bit thrust](#)

drilling time

a. In rotary drilling, the time required for the bit to penetrate a specified thickness (usually 1 ft or 0.3 m) of rock. The rate is dependent on many factors. *AGI* b. The elapsed time, excluding periods when not actually drilling, required to drill a well. *AGI*

drilling up

Preliminary digging out the clay in the taphole of a furnace. This is done usually by hand, air, or electric drill. *Fay*

drilling weight

Also called drilled weight. See: [bit load](#)

drill log

The record of the events and the type and characteristics of the formations penetrated in drilling a corehole. Syn: [boring log](#) CF: [log](#)

drillman

See: [driller](#)

drill mounting

An appliance to provide a feed pressure and a support for the drilling machine usually in tunnels. Four main types of drill mountings are in use, namely, the post, the air leg, the drill frame, and the drill carriage. *Nelson*

drill output

The volume of rock (in tons) corresponding to the footage drilled per hour. *Streefkerk*

drill pattern

The placement of a number of boreholes in accordance to a predetermined geometric arrangement. *Long*

drill pressure

Also called drilling pressure. See: [bit load](#)

drill rate

a. The number of feet of borehole drilled in a specified interval of time; e.g., drilling rate was 80 ft/d (24.4 m/d). *Long* b. Price, expressed in dollars, per foot of borehole completed in accordance with terms specified in a drill contract. Syn: [feed rate](#) *Long*

drill rig

A drill machine complete with all tools and accessory equipment needed to drill boreholes.

drill-rod bit

A noncoring bit designed to be coupled to a reaming shell threaded to couple directly on a drill rod instead of a core barrel. *Long*

drill runner

a. The tunnel miner who normally handles the rock drills for blasting purposes. *Nelson*
b. See: [driller](#)

drill sampling

a. A method of sampling a deposit by means of a drill or borehole. The boreholes may be spaced at the corners of squares or triangles at distances according to the nature and extent of the deposit. See also: [exploratory drilling](#) b. The sampling of gravel deposits or extensive low-grade ore deposits by use of drills. *Hoover*

drill sharpening machines

Machines for sharpening detachable bits and for making shanks. *Lewis*

drill sludge

See: [cuttings](#)

drill speed

May be used by drillers as a syn. for drill bit revolutions per minute; drill rate; feed rate; feed ratio; feed speed; rate of penetration. *Long*

drill-split longwalling

The act of mining tabular ores 2 to 5 m thick using a drill-split tool. *Lombardi*

drill-split narrow-vein mining

The act of mining narrow veins down to 0.6 m using a drill-split tool on a carriage that is independently mobile and remote-controlled. *Lombardi*

drill-split tool

A device that combines a drill and a splitter, which is a unique tool designed to apply radial and axial loads to a rock mass, into a single tool that drills and splits rock in recurring cycles. *Lombardi*

drill steel

a. A round or hexagonal steel rod for boring in coal, ore, or rock. It consists of shank, shaft, and bit. It forms an important part of jackhammers and drifters. *Nelson* b. Hollow steel connecting a percussion drill with the bit. *Nichols, I* c. See: [stem](#)

drill-steel set

A series of integral drill-steel sizes consisting of starter and follower bits, necessary for drilling a hole to a certain depth. The length increment is usually determined by the wear of the bit and the feed length of the feeding device. *Fraenkel*

drill stem

a. In standard drilling, a cylindrical bar of steel or iron screwed onto the cable tool bit to give it weight. *AGI* b. In rotary drilling, a string of steel pipe screwed together and extending from the rig floor to the drill collar and bit at the bottom of the hole. The drill pipe transmits the rotating motion from the rotary table to the bit and conducts the drilling mud from the surface to the bottom of the hole. See also: [drill string](#)

drill-stem test

A procedure for determining the potential productivity of an oil or gas reservoir by measuring reservoir pressures and flow capacities while the drill pipe is still in the hole, the well is still full of drilling mud, and usually the well is uncased. The tool consists of

a packer to isolate the section to be tested and a chamber to collect a sample of fluid. If the formation pressure is sufficient, fluid flows into the tester. Abbrev: DST. *AGI*

drill string

The assemblage of drill rods, core barrel and bit or drill rods, drill collars, and bit in a borehole, which is connected to and rotated by the drill machine on the surface at the collar of the borehole. Also called drill stem. See also: [string](#)

drill thrust

See: [bit load](#)

drip feeder

a. Oil reservoir set to discharge lubricant at steady rate in drops per minute. *Pryor, 3* b. Reagent feeder sometimes used in flotation process to meter chemicals into pulp. *Pryor, 3*

dripping fault

A fault down which small quantities of water seep into mine workings. A dripping fault is a hazard, as mining operations may loosen or open it and cause an inrush of water. *Nelson*

dripstone

A general term for any cave deposit of calcite or other mineral formed by dripping water, including stalactites and stalagmites. See also: [cave onyx](#); [dropstone](#).

drivage

A general term for a roadway, heading, or tunnel in course of construction. It may be horizontal or inclined but not vertical. *Nelson*

drive

a. To excavate horizontally, or at an inclination, as in a drift, adit, or entry. Distinguished from sinking and raising. b. A tunnel or level in or parallel to and near a mineralized lode or vein, as distinct from a crosscut, which only gives access normal to the lode. *Pryor, 3* c. An underground passage for exploration, development, or working of an orebody. *Nelson* d. To advance or sink drive pipe or casing through overburden or broken rock formation by chopping, washing, or hammering with a drive hammer or by a combination of all three procedures. *Long*

drive collar

See: [pipe drivehead](#)

drivehead

a. The driving mechanism for a conveyor. The expressions head-end drive, intermediate drive, and tail-end drive, indicate the position of the drivehead or heads. *Nelson* b. A heavy iron cap or angular coupling fitted to top of pipe or casing to receive and protect the casing from the blow delivered by a drive block when casing or pipe is driven through overburden or other material. Also called drive cap; driving cap. Syn: [pipe drivehead](#); [drive collar](#). *Long* c. The swivel head of a diamond- or rotary-drill machine. *Long*

drivepipe

a. A thick-walled outside-coupled pipe, fitted at its lower end with a sharp steel shoe. It may be driven through overburden or other material by repeated pile-driverlike blows delivered to the upper end of the pipe by a heavy drive block. *Long* b. Casing pipe driven into deep drill hole to hold back water or prevent caving. In shallow drilling of alluvials, bottom pipe of string that may be battered down. Drivehead and drive shoe are also used in this work. *Pryor, 3* c. Pipe driven short distance into dumps or unconsolidated ground to obtain samples. See also: [conduit](#)

drivepipe ring

a. A heavy sleevelike device attached to a drill floor to steady and guide the pipe or casing being driven. *Long* b. A device for holding the drivepipe while being pulled from well. *Fay*

drive sample

A dry sample of soft rock material, such as clay, soil, sand, etc., obtained by forcing, without rotation, a short, tubular device into the formation being sampled by hydraulic pressure or the piledriver action of a drive hammer. *Long*

drive sampler

A short tubelike device designed to be forced, without rotation, into soft rock or rock material, such as clay, sand, or gravel, by hydraulic pressure or the piledriver action of a drive hammer to procure samples of material in as nearly an undisturbed state as possible. CF: [piston sampler](#)

drive sampling

The act or process of obtaining dry samples of soft rock material by forcing, without rotation, a tubular device into the material being sampled by pressure generated hydraulically, mechanically, or by the piledriver action of a drive hammer. *Long*

drive shaft

a. Main driving shaft on which the drive and conveyor sprocket wheels or pulleys are mounted. This shaft is connected to the drive unit through a coupling, sprocket wheel, gear, or other form of mechanical power transmission. b. A shaft used to support the end of a conveyor screw in a trough end and as a driving connection between a conveyor screw and the power transmitting medium.

drive unit

The mechanism that imparts the reciprocating motion to a shaker conveyor trough line. The term is frequently shortened to drive, such as shaker drive, uphill drive, etc. *Jones, 1*

drive wedge

A metal wedge, driven into a wooden or soft-metal base plug in a borehole, that acts as a fixed point on which and by means of which a deflection wedge may be set and oriented. *Long*

driving

a. Extending excavations horizontally or near the horizontal plane. CF: [sinking](#); [raising](#). *Nelson* b. The making of a tunnel or level (a drive) in a mineralized lode or vein, as distinct from making one in country rock (crosscutting). *CTD* c. Breaking down coal with wedges and hammers. *CTD* d. A long narrow underground excavation or heading. *Fay* e. Eng. In the Bristol coalfield, a heading driven through rock. *Fay*

driving cap

Steel cap placed above line of casing pipes of drill hole to protect threaded top of pipe while driving them deeper. Driving shoe gives protection to the bottom pipe of line. *Pryor, 3*

driving head

The driving mechanism of a belt conveyor. It consists of an electric motor or compressed-air turbine connected through a train of reduction gearing to the drum or drums. Motion is imparted to the belt by the frictional grip between it and the drums. *Sinclair, 5*

driving on line

The keeping of a heading or breast accurately on a given course by means of a compass or transit. Also, called driving on sights.

drop

a. Granulated material obtained by pouring melted material into water. *Standard, 2* b. In the roof of a coal seam, a funnel-shaped downward intrusion of sedimentary rock, usually sandstone. See also: [stone intrusion](#) *AGI* c. The vertical displacement in a downthrow fault; the amount by which the seam is lower on the other side of the fault. *CTD* d. In an air lift, the distance the water level sinks below the static head during pumping. *Lewis* e. The small downward descent of the upper section of a drill rod, casing, or pipe into a lower like section when the threads of the box- and pin-threaded parts match, so that upper and lower sections may be screwed together without cross-threading. *Long* f. The sudden descent of a bit that occurs when a bit encounters a cavity or cuts through a hard rock and enters a very soft rock. *Long* g. To lower drill-string equipment into a borehole. *Long* h. To lower the cage to receive or discharge the car when a cage of more than one deck is used. *Fay* i. To allow the upper lift of a seam of coal to fall or drop down. *Fay* j. To lose equipment in a borehole. *Long*

drop ball

A method of breaking oversize stones left after quarry blasting. The balls weigh from 30 hundredweight (1,360 kg) to 2 st (1.8 t) (many use old cones from gyratory breakers) and are dropped from a crane on to the oversize stone. The drop height varies from about 20 to 33 ft (6.1 to 10.1 m). The method is economical and avoids secondary blasting. *Nelson*

drop-bottom cage

A cage so designed that the middle section of the floor drops a few inches when the cage is lifted from the keps. The mine car is thus kept stationary and secure. *Nelson*

drop-bottom car

A mine car so constructed that all the haulage motor has to do is to pull the loaded trip across the dump. A trigger trips the flaps in the bottom of the car, allowing the coal to drop out, and a second one closes the flaps as the car leaves the dump. See also: [mine car](#)

drop box

Placed at intervals along tailings line to compensate for slope in excess of that required to keep the pulp moving gently through its launders or pipes. *Pryor, 1*

drop cut

The initial cut made in the floor of an open pit or quarry for the purpose of developing a bench at a level below the floor.

drop doors

Hinged doors at the bottom of a cupola furnace, which drop down to allow the furnace to be cleaned. *Mersereau, 2*

drophammer

a. A forging hammer that depends on gravity for its force. *ASM, 1* b. A pile driving hammer that is lifted by a cable and obtains striking power by falling freely. *Nichols, 1*

drop log

A timber that in an emergency can be dropped by a remote control across a mine track at the top or bottom of an incline to derail cars.

drop on

Portable rail crossing used to transfer wagons from one track to another. *Hammond*

dropped core

Pieces of core not picked up or those pieces that slip out of the core barrel as the barrel is withdrawn from the borehole. *Long*

dropper

a. A branch vein pointing downwards. See also: [leader](#) b. A spar dropping into the lode. *Zern* c. See: [feeder](#) d. A branch leaving a vein on the footwall side. *Zern* e. See: [car runner](#); car dropper.

dropping pillars and top coal

Aust. The second working, consisting of drawing the pillars, and in thick seams breaking down the upper portion of the seam that was left temporarily in position. *Fay*

dropping stones

See: [stalagmite](#)

drop pit

A shaft in a mine, in which coal is lowered by a brake wheel.

drops

Drops of 12 in (30.5 cm) or more in a line of sluices that are formed by allowing the discharge end of one box to rest on the head of the succeeding sluice, instead of telescoping into it. This method ensures a drop of 12 in or more (depending on the depth of the sluice box) at the end of each sluice, which usually is sufficient to disintegrate fairly stiff clay. *Griffith*

drop shaft

A monkey shaft down which earth and other matter are lowered by means of a drop (that is, a kind of pulley with brake attached); the empty bucket is brought up as the full one is lowered. See also: [cofferdam](#)

drop-shaft method

This sinking system consists in the use of a cutting shoe on the bottom of a shaft lining that is being continually augmented as the shoe descends, the material inside the lining being excavated. *Sinclair, 2*

drop sheet

N. of Eng. A door, made of canvas, by which the ventilating current is regulated and directed through the workings. See also: [curtain](#) *Fay*

drop staple

Eng. An interior shaft, connecting an upper and lower seam, through which coal is raised or lowered. *Fay*

dropstone

a. An oversized clast in laminated sediment that depresses the underlying laminae and may be covered by "draped" laminae. Most dropstones originate through "ice-rafting"; other sources are floating tree roots and kelp holdfasts. b. A stalagmatitic variety of calcite. CF: [dripstone](#)

drop sulfur

Granulated material obtained by pouring the melted material into water. *Standard, 2*

drop warwicks

Steel joists hinged to a substantial cross joist in the roof that are held up by a stirrup during normal running. If a tram runs away down the incline, the stirrup is disengaged by

means of a wire operated from the top of the incline; one end of the hinged joist falls into the rail track and arrests the runaway. *Mason*

drop ways

Openings connecting parallel passages that lie at different levels. *AGI*

drop weights

A method of breaking oversize stones after primary blasting at a quarry. See also: [drop ball](#)

dross

a. The scum that forms on the surface of molten metals largely because of oxidation, but sometimes because of the rising of impurities to the surface, and which contains metal and metal oxides. *ASM, 1* b. Small coal that is inferior or worthless and often mixed with dirt. *Nelson* c. Refuse or impurity formed in melted metal. A zinc-iron alloy forming in a bath of molten zinc while galvanizing iron. *Standard, 2*

dross bin

Pile of refuse from a washer. *Zern*

drowned

Flooded; said of mines underwater.

drowned level

a. A level that is underwater. See also: [blind level](#) b. Part of a drainage drift that, being below both discharge and entry levels, is constantly full of water. Also called inverted siphon. *BS, 10*

drowned waste

Old workings full of water.

Drucker-Prager criterion

A soil and rock failure criterion, which accounts for the general effect of all three principle stresses by using the invariant of the stress tensor. Use is limited to numerical formulations, such as finite element analysis. *Desai*

druid stone

One of the large sandstone blocks formerly scattered on the English chalk downs and used in Stonehenge and other Druid temples and circles. Syn: [sarsen stone](#)

drum

a. The large cylinder or cone on which the rope is coiled when hoisting a load up a shaft. *CTD* b. A metal cask, for shipment of material, having a liquid capacity of 55 gal (208 L). See also: [barrel](#) c. In a conical mill, the cylindrical central section. *Pryor*, 3 d. A general term for a roller around which a belt conveyor is lapped. It may be a driving, jib, loop, tension, or holding-down drum. *Nelson* e. The spoollike part of a hoisting mechanism on which the cable or wire line is wound. *Long* f. A cylindrical or polygonal rim type of wheel around which cable, chain, belt, or other linkage may be wrapped. A drum may be driven or driving. The face may be smooth, grooved, fluted, or flanged.

drum counterweight rope

Balance rope direct from drum drive. *Hammond*

drum curb

See: [curb](#)

drum feeder

See: [roll feeder](#)

drum filter

Cylindrical drum, which rotates slowly through trough-shaped bath, fed continuously with thickened ore pulp.

drum horn

Wrought-iron arms or spokes projecting beyond the surface or periphery of a flat-rope drum, between which the ropes coil or lap. See also: [spider](#) *Fay*

drumman

See: [slope engineer](#)

drumming

The process of sounding the roof of a mine to discover whether rock is loose. *Fay*

drummy

a. Loose coal or rock that produces a hollow, loose, open, weak, or dangerous sound when tapped with any hard substance to test condition of strata; said esp. of a mine roof. *Fay; BCI* b. The sound elicited when bad (loose) roof is tested by striking with a bar. *Hudson*

drum pulley

A pulley wheel used in place of a drum. See also: [Koepe system](#) *Fay*

drum rings

Cast-iron wheels, with projections, to which are bolted the staves or laggings forming the surface for the hoisting cable to wind upon. The outside rings are flanged, to prevent the cable from slipping off the drum. *Fay*

drum runner

See: [incline man](#)

drum separator

A slowly rotating cylindrical vessel that separates run-of-mine coal into clean coal, middlings, and refuse. It consists of different and adjustable specific gravities. The low gravity medium in one compartment separates a primary float product (clean coal), the sink material being lifted and sluiced into the second compartment where middlings and true sinks (stone) are separated. *Nelson*

drum shaft

See: [caisson sinking](#)

druse

a. An irregular cavity or opening in a vein or rock, having its interior surface or walls lined (encrusted) with small projecting crystals usually of the same minerals as those of the enclosing rock, and sometimes filled with water; e.g., a small solution cavity, a steam hole in lava, or a lithophysa in volcanic glass. CF: [geode](#); [miarolitic cavity](#); [vug](#). *AGI* b. A mineral surface covered with small projecting crystals; specif. the crust or coating of crystals lining a druse in a rock, such as sparry calcite filling pore spaces in a limestone. Etymol: German. Adj: drusy. *AGI*

drusy

a. Pertaining to a druse, or containing many druses. CF: [miarolitic](#) *AGI* b. Pertaining to an insoluble residue or encrustation, esp. of quartz crystals; e.g., a drusy oolite covered with subhedral quartz. *AGI*

dry

a. Miner's changehouse, usually equipped with baths, lockup cubicles, and means of drying wet clothing. *Pryor, 3* b. A borehole in which no water is encountered or a borehole drilled without the use of water or other liquid as a circulation medium. Also called dry hole; duster. *Long* c. A borehole that did not encounter a mineral-, oil-, or gas-producing formation. Also called blank hole; dry hole; duster. *Long*

dry air

Air with no water vapor. *Strock, 2*

dry ash-free basis

An analysis expressed on the basis of a coal sample from which the total moisture and the ash have in theory been removed. *BS, 4*

dry assay

Any type of assay procedure that does not involve liquid as a means of separation. CF: [wet assay](#)

dry block

The intentional act or process of running a core bit without circulating a drill fluid until the cuttings at and inside the bit wedge the core solidly inside the bit. Also called dry blocking. *Long*

dry blower

See: [dry washer](#)

dry blowing

A process sometimes used where water is scarce. The separation of free gold from the accompanying finely divided material is effected by the use of air currents. See also: [dry cleaning](#)

dry bone

See: [dry-bone ore](#)

dry-bone ore

a. An earthy, friable, honeycombed variety of smithsonite in veins or beds in stratified calcareous rocks accompanying sulfides of zinc, iron, and lead. b. A variety of hemimorphite. Syn: [dry bone](#)

dry bulb temperature

Temperature indicated by a conventional dry thermometer; a measure of the sensible heat content of air. *Hartman, 2*

drycleaned coal

Coal from which impurities have been removed mechanically without the use of liquid media. *BS, 4*

dry cleaning

The cleaning of coal or ore by air currents as opposed to wet cleaning by water currents. Appliances for the dry cleaning of coal were first introduced about 1850 and since that date a variety of methods have been developed. See also: [Kirkup table](#)

drycleaning table

An apparatus in which drycleaning is achieved by the application of air currents and agitation to a layer of feed of controlled depth on the table surface. See also: [Kirkup table](#)

dry copper

Underpoled copper from which oxygen has been insufficiently removed when refining, so that it is undesirably brittle when worked cold or hot. *Pryor, 3*

dry cyaniding

See: [carbonitriding](#)

dry delta

See: [alluvial cone](#); alluvial fan.

dry density

The weight of a unit volume of a dry sample of soil, after the latter has been heated at a temperature of 103 degrees C. *Hammond*

dry density/moisture ratio

The relationship between the density of a sample of soil in a dry state and its moisture content for a given degree of compaction. Such relationship can be determined from a curve that will reveal the optimum moisture content. *Hammond*

dry diggings

a. Placers not subject to overflow. b. Placer mines or other mining districts where water is not available. *Standard, 2*

dry distillation

See: [destructive distillation](#); pyrolysis.

dry drilling

Drilling operations in which the cuttings are lifted away from the bit and transported out of a borehole by a strong current of air or gas instead of a fluid. CF: [dry running](#)

dry ductor

Compressed-air drill that traps and removes drilling dust instead of sludging it with added water. *Pryor, 3*

dryer

An apparatus for drying coal. Dryers are of various types, such as revolving kilns, flash, and fluidized bed. See also: [coal dryer](#); dehydrator.

dry fatigue

A condition often appearing in wire rope and often caused by shock loads in winding. These shock loads are produced by picking up the cage from the pit bottom with slack chains or by lifting heavy pithead gates or covers. *Sinclair, 5*

dry galvanizing

A process in which steel is fluxed in hot ammonium chloride and subsequently dried by hot air before being passed through a bath of molten zinc. *Hammond*

dry grinding

Any process of reducing particle size without the liquid medium. See also: [grinding](#)

dry hole

A drill hole in which no water is used for drilling, as a hole driven upward. See also: [blank hole](#)

dryhouse

See: [changehouse](#)

dry ice

Solid carbon dioxide.

dry ice test

A test for detecting glass imitations; if a crystalline substance such as a gem mineral is placed on a piece of dry ice (solid CO₂), a squeaking noise can be heard. This is not true of noncrystalline substances such as glass or plastic.

dry joint

Positive separation at the plane of contact between adjacent structural components to allow relative movement arising from differences in temperature or shrinkage. *Hammond*

dry kata cooling power

A measure of the rate of heat loss from the bulb of the kata thermometer. Although the cooling power as obtained by this instrument is not a measure of the capacity of an atmosphere to cool the human body, nevertheless, it is useful for comparing different atmospheres and provides a convenient index of the comfort condition of a working place in a mine. Experience indicates that a face will be reasonably comfortable for working if the dry kata cooling power is above 7 on the kata thermometer and the air velocity above 1 m/s. See also: [dehumidification](#); [effective temperature](#). *Nelson*

dry lake

See: [playa](#)

dry milling

The comminution of materials in a suitable mill without the presence of a liquid, either by rods, balls, or pebbles, or autogenously, by the material itself; used if the subsequent process is a dry process.

dry mineral matter free basis

An analysis expressed on the basis of a coal sample from which the total moisture and the mineral matter have in theory been removed. *BS, 4*

dry mining

a. In dry mining every effort is made to prevent the ventilating air picking up moisture, and throughout the ventilation circuit there is a wide gap between wet- and dry-bulb temperatures. Dry-bulb temperatures are therefore comparatively high. *Spalding* b. Refers to the reasonably dry footing required for the equipment. Dry stripping and placer mining with standard earthmoving heavy equipment depends on good footing for the equipment and short hauls to keep costs in line. Syn: [dry diggings](#)

dry ore

Said of lead or copper ore that contains precious metals (gold and silver) but insufficient lead or copper to be smelted without the addition of richer ore. See also: [natural ore](#)

dry placer

Gold-bearing alluvial deposit found in arid regions. In some deposits the gold is in the cementing material that binds the gravel together. Because of the lack of water, various machines have been devised for the dry washing of these deposits; such machines commonly include some form of pulverizer and jigs or tables that use compressed air instead of water in their operation. Also called desert placer. *Lewis*

dry process

a. A method of treating ores by heat as in smelting; used in opposition to wet process, where the ore is brought into solution before extraction of the metal. See also: [wet process](#) b. The process of making Portland cement in which the raw materials are ground and burned dry. *Mersereau, 2* c. Process whereby dry powdered enameling materials are applied to a preheated surface. *Van Vlack* d. The method of preparation of a ceramic body wherein the constituents are blended dry, following which liquid may be added as required for subsequent processing. *ASTM*

dry puddling

A process of decarbonization on a siliceous hearth in which the conversion is effected rather by the flame than by the reaction of solid or fused materials. As the amount of carbon diminishes, the mass becomes fusible and begins to coagulate (come to nature), after which it is worked together into lumps (puddle balls, lumps) and removed from the furnace to be hammered (shingled) or squeezed in the squeezer, which presses out the cinder, etc., and compacts the mass at welding heat, preparatory to rolling. Silicon and phosphorus are also largely removed by puddling, passing into the cinder. See also: [puddling](#)

dry rotary drilling

See: [dry drilling](#)

dry running

To unknowingly or knowingly drill with a bit when the flow of the coolant and cuttings-removal fluid past the bit has been inadvertently or deliberately cut off. CF: [dry drilling](#)

dry sample

A sample obtained by drilling procedures in which water or other fluid is not circulated through the drill string and sampling device; hence the in situ characteristics of the sample have not been altered by being mixed with water or other fluid. CF: [drive sample](#)

dry sampler

Various auger and/or tubular devices designed to obtain unwetted samples of soft rock material, such as clay, sand, soil, etc., by drilling procedures wherein water or other fluid is not circulated during the operation. *Long*

dry sand

a. A stratum of dry sand or sandstone encountered in well drilling. A nonproductive sandstone in oilfields. *Fay* b. Green sand dried in an oven to remove moisture and strengthen it (a dried-sand mold is a mold of green sand that is treated as above). *Freeman*

dry screening

The screening of solid materials of different sizes without the aid of water. *BS, 5*

dry separation

a. The elimination of the small pieces of shale, pyrite, etc., from coal by a blast of air directed upon the screened coal. See also: [wind method](#) b. See: [dedusting](#)

dry sweating

A process by which impure blister copper is exposed to long oxidizing heating below fusion point. *Standard, 2*

dry unit weight

The weight of soil solids per unit of total volume of soil mass. Also called unit dry weight. See also: [unit weight](#)

dry wall stone

Thin-bedded limestone or sandstone suitable only for mortarless (dry) fencing or retaining walls.

dry wash

A wash that carries water only at infrequent intervals and for short periods, as after a heavy rainfall. CF: [arroyo](#)

dry washer

a. A machine for extracting gold from dry gravel. It consists of a frame in which there is a rectangular bellows made of canvas; the upper part of the bellows is made by a plane set at an angle of about 20 degrees, across which are riffles. On the top of the machine is a screen on which gravel is shoveled. The screened gravel falls to a riffled plane from which it feeds to the riffles on the bellows. The screen and upper riffles are shaken by an eccentric worked with a crank, and the same crank actuates the bellows, which blow the dust from the gravel passing over the riffles. The gold is caught behind the riffles. Only gravel in which no moisture can be seen can be worked successfully by a dry washer. Hess

b. A person who operates a dry washer. Syn: [dry blower](#)

dry well

A deep hole, covered and usually lined or filled with rocks, that holds drainage water until it soaks into the ground. *Nichols, 1*

dual-drive conveyor

A conveyor having a belt drive mechanism in which the conveyor belt is in contact with two drive pulleys, each of which is driven by a separate motor. *NEMA, 2*

dual haulage

In strip mining, the use of two types of haulage at the same mine for transporting coal from the face to the preparation plant. Usually, coal is transported from the loading shovel to a transfer station by motorized units, and rail haulage is used to haul the coal from this point to the preparation plant. *Toenges*

dualin

A variety of dynamite consisting of four to five parts nitroglycerin, three parts sawdust, and two parts potassium nitrate. *Webster 2nd*

dubiocrystalline

See: [cryptocrystalline](#)

duchess

Slate size of 24 in by 12 in (61.0 cm by 30.5 cm). *Pryor, 3*

duck

A fabric material, usually of woven cotton but of synthetic fibers also, used to construct conveyor belts and filter cloths. *Pryor, 3*

duckbill

The name given to a shaking-type combination loading and conveying device, so named from the shape of its loading end and which generally receives its motion from the shaking conveyor to which it is attached. *BCI*

duckbill loader

See: [shaker-shovel loader](#)

duckbill operator

In bituminous coal mining, one who operates a small power shovel that has a round-nosed scoop, called a duckbill, to load coal into cars in a mine. *DOT*

duckbill pick

A duckbill-shaped coal-cutter pick that is forged by the roller type of machine from dies and is the type largely used today. The machine shaping of the pick ensures uniformity. It gives a constant clearance as the point wears down and is particularly suitable for fused-carbide tipping. *Nelson*

duckfoot

A pipe bend at the bottom of a shaft column or rising main fitted with a horizontal base sufficiently strong for the weight of the rising main to rest upon it. Also called duckfoot bend. *BS, 10*

duckfoot bend

See: [duckfoot](#)

duck machine

An arrangement of two boxes, one working within the other, for forcing air into mines. *Zern*

duck's-nest tuyere

A tuyere having a cupped outlet. *Standard, 2*

ducktownite

An intimate mixture of pyrite and chalcocite or the matrix of a blackish copper ore containing grains of pyrite, Tennessee.

ducon

Abbrev. for dust concentrator, which is a device used to collect dry cuttings ejected from a borehole in which air or gas is used as a circulation medium. *Long*

duct

A pipe or tubing used for auxiliary ventilation in a mine. Generally constructed of coated fabric, metal, or fiberglass.

duct fan

An axial-flow fan mounted in, or intended for mounting in, a section of duct. See also: [tube-axial fan](#); [vane-axial fan](#); mine ventilation auxiliary fan.

ductile

a. Said of certain metals and other substances that readily deform plastically. b. Said of a rock that is able to sustain, under a given set of conditions, 5% to 10% deformation before fracturing or faulting. *AGI* c. In mineralogy, capable of considerable deformation, esp. stretching, without breaking; said of several native metals and occasionally said of some tellurides and sulfides. *AGI* d. Pertaining to a substance that readily deforms plastically. *AGI* e. Capable of being permanently drawn out without breaking; such as, a ductile metal. *Webster 3rd*

ductile cast iron

High-carbon ferrous product containing spheroidal graphite. *Bennett*

ductile crack propagation

Slow crack propagation that is accompanied by noticeable plastic deformation and requires energy to be supplied from outside the body. *ASM, I*

ductility

The ability of a material to deform plastically without fracturing.

ducting

Sections of air duct. See also: [ventilation tubing](#)

dudgeonite

A calcian variety of annabergite, $(\text{Ni,Ca})_3 (\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$, in which about one-third of the nickel is replaced by calcium; Pibble Mine, Scotland.

due

The amount of royalty or ore payable to the lord of the manor or owner of the soil. *Fay*

duff

a. Fine dry coal (usually anthracite) obtained from a coal-preparation plant. The size range is 3/16 to 0 in (4.8 to 0 mm). See also: [gum](#); slack. *Nelson* b. Smalls, usually with an upper size limit of 3/8 in (9.5 mm). *BS, 4* c. Term used among British miners for a fine mixture of coal and rock. *Tomkeieff* d. Aust. The fine coal left after separating the lumps; very fine screenings; dust. e. Coal dust and other unsaleable small coal produced in anthracite mines. See also: [anthracite fines](#)

duffer

Aust. An unproductive claim or mine. *Hess*

Duff furnace

A furnace used for the manufacture of producer gas. *Fay*

dufrenite

A monoclinic mineral, $\text{Fe}^{2+} \text{Fe}^{3+}_4 (\text{PO}_4)_3 (\text{OH})_5 \cdot 2\text{H}_2\text{O}$; forms green botryoidal crusts commonly associated with limonite in gossans. Syn: [kraurite](#); green iron ore.

dufrenoysite

A monoclinic mineral, $Pb_2 As_2 S_5$; sp gr, 5.6; in crystalline dolomite in the Binnental, Switzerland.

duftite

An orthorhombic mineral, $PbCu(AsO_4)(OH)$; adelite group; sp gr, 6.4; at Tsumeb, Namibia.

duin

A gold-washing dish used in Jashpur, India.

dukeway

Som. A method of hoisting coal on an incline from the working face to the pit bottom by a rope attached to the winding engine at surface in such a way that while the cage is going up, the empty trams are running down the incline, and as the cage descends the loaded cars are brought up to the shaft.

dull

a. Brist. Slack ventilation; insufficient air in a mine. b. As applied to the degree of luster of minerals, means those minerals in which there is a total absence of luster, as chalk or kaolin.

dull attritus

A field term denoting the degree of luster of attrital coal as it compares to the brilliant luster of vitrain associated in the same locality. CF: [bright attritus](#)

dull-banded coal

Coal consisting of vitrain and durain with more or less minor clarain and minor fusain. *AGI*

dull coal

a. Any coal that absorbs the greater part of incident light instead of reflecting it. Stopes recognizes two kinds of dull coal--durain and fusain. *Tomkeieff* b. The constituent of banded coal macroscopically somewhat grayish in color, of a dull appearance, less compact than bright coal, and breaking with a rather irregular fracture. It consists mainly of two kinds of material; thin black bands interlayered by a lighter colored granular-appearing matter. Microscopically, it consists of smaller anthraxylon constituents together with a few other constituents, such as cuticles and barklike constituents embedded in a general matrix, the attritus. *AGI* c. A variety of banded coal containing

from 20% to 0% of pure, bright ingredients (vitrain, clarain, and fusain), the remainder consisting of clarodurain and durain. *AGI*

dulong

A Malayan term for hardwood pan shaped like a section of the surface of a sphere and used as a miner's pan in prospecting, sample washing, and manual concentration of cassiterite. See also: [pan](#)

dumb barge

A barge similar to a hopper barge, frequently used to take dredged material from a dredger to the dumping ground. *Hammond*

dumb'd

Choked or clogged, as a grate or sieve in which the ore is beneficiated. *Fay*

dumb drift

a. A passage leading from an airway to a point in a shaft some distance above an inset to allow the ventilating current to bypass a station where skips or cages are loaded. *BS, 8* b. A roadway driven through the waste in longwall mining to provide packing material. *Nelson*

dumb furnace

A ventilating furnace in which the foul flammable air from remote parts of the mine enters the upcast higher up than the hot gases from the fire. *Webster 2nd*

dumb screen

A chute in which there are no meshes or bars for separating the coal, and down which the run-of-mine coal passes from the tubs direct to the railway wagon. It is used in small mines where the coal is sold as loaded underground or at mines where the coal is conveyed by wagon to a central coal-preparation plant. *Nelson*

dummy

a. A short piece of core or core-size cylinder of rubber or other material placed in the core lifter in an empty core barrel to guide the first part of a newly cut core into the core lifter. Syn: [guide core](#) b. A cathode, usually corrugated to give variable current densities, which is plated at low current densities to remove preferentially impurities from a plating solution. *ASM, 1* c. A substitute cathode that is used during adjustment of operating conditions. *ASM, 1*

dummy elevator

A second elevator for boosting tailings to higher stacking levels.

dummy gate

N. of Eng. A small gate made on the face between the mother gate and tailgate for the purpose of getting stone to make strip packs for roof support (when goaf roof is supported and not allowed to cave). *Trist*

dummy locator

One whose name is used by a locator to secure for the latter's benefit a greater area of mineral land than is allowed by law to be appropriated by a single person, and any location made in pursuance of such a scheme or device is without legal support and void. *Ricketts*

dummy maker

In bituminous coal mining, a laborer who fills paper cartridges (cylinders) with clay, adobe, or rock dust, used for stemming (tamping clay or other material on top of explosives) drill holes in the working face to be blasted down. *DOT*

dumontite

A monoclinic mineral, $Pb_2(UO_2)_3O_2(PO_4)_2 \cdot 5H_2O$; yellow; secondary; radioactive.

dumortierite

An orthorhombic mineral, $Al_7(BO_3)(SiO_4)_3O_3$; fibrous or radiating; Mohs hardness, 7 to 8-1/2; in schists, gneisses, and pegmatite dikes.

dumortierite quartz

A massive, blue, violet-blue, or blue-black, opaque variety of quartz colored by intergrown crystals of dumortierite.

Dumoulin process

A method whereby copper is deposited on a rotating mandrel and later stripped off as a long strip, which is then drawn into wire without recasting. *Liddell*

dump

a. A pile or heap of ore, coal, or waste at a mine. b. The point where a face conveyor discharges its coal into mine cars. *Nelson* c. The tippie by which the cars are dumped. CF: [tipple](#) d. The fall available for disposal of refuse at the mouth of a mine.

dump bailer

A bailer used in borehole-cementation work, provided with a valving device that empties the contents of the bailer (cement) at the bottom of a borehole. Also called liquid dump bailer. *Long*

dumpcart

A cart having a body that can be tilted or a bottom opening downward for emptying the contents without handling. *Webster 3rd*

dumped fill

Excavated material transported and dumped in a heap, generally to preestablished lines and grades. Should be kept free of tree stumps, organic matter, trash, and sod if any future use of the filled area is contemplated. *Carson, 1*

dump equipment

One of many conveyances that carry and then dump rock or ore. Generally trucks in surface mining and shuttle cars in underground mining. *SME, 1*

dumper

A wheeled car with an elevated turntable on which is a track. A mine car run on the upper, horizontally revolving track can be dumped sidewise or endwise. Also called hurdy gurdy. *Zern*

dump hook

A chain grabhook having a lever attachment for releasing it. *Webster 3rd*

dump house

The building where the loaded mine cars are emptied into the chutes. *Fay*

dumping bucket

A lifting bucket with a tilt or drop bottom. *Standard, 2*

dumping wagon

See: [dumper](#)

dump leaching

Term applied to dissolving and recovering minerals from subore-grade materials from a mine dump. The dump is irrigated with water, sometimes acidified, which percolates into and through the dump, and runoff from the bottom of the dump is collected and mineral in solution is recovered by a chemical reaction. Commonly used to recover gold and copper. See also: [heap leaching](#)

dumpling

A mass of ground left undisturbed until the final stages of excavation, when it is removed. In the intermediate stages it may be used as a support for timbering to the excavations. *Hammond*

dump motorman

In bituminous coal mining, one who operates a mine locomotive (motor) to haul cars of dirt, rock, slate, or other refuse to the dump at the surface of an underground mine. Also called dirt-dump engineer; refuse engineer. *DOT*

dump room

Space available for disposing of waste from a mine.

dump skip

A skip with an attachment that dumps the load automatically. *Fay*

dump wagon

A large-capacity side-, bottom-, or end-discharge wagon (or skip) on tired wheels or crawler tracks; usually tractor towed. *Nelson*

dundasite

An orthorhombic mineral, $\text{PbAl}_2(\text{CO}_3)_2(\text{OH})_4 \cdot \text{H}_2\text{O}$; secondary; in aggregate tufts of minute, radiating needles.

dunite

Peridotite in which the mafic mineral is almost entirely olivine, with accessory chromite almost always present. Named by Hochstetter in 1864 from Dun Mountain, New Zealand. *AGI*

Dunkard series

Continental strata, including thin coal seams, similar to the Pennsylvanian, but of Permian age, occurring in North America. Strata of the same age are marine in Kansas, but include marginal red beds with gypsum, and thick salt deposits were formed later in the Kansas Basin. *CTD*

duns

A term used in SW England for a shale or massive clay associated with coal. *AGI*

dunstone

a. A term used near Matlock, England, for a hard granular yellowish or cream-colored magnesian limestone. *AGI* b. A term used in Wales for a hard fireclay or underclay, and in England for a shale. *AGI*

Duobel

Trademark for high-velocity permissible explosives furnished in seven grades based upon velocity and cartridge count; poor water resistance. Used for mining coal where lump coal is not a factor. *CCD, 2*

duoflex checker system

A checker arrangement for hot-blast stoves. The gas used is only partially cleaned and may contain from 0.5 to 1.5 g of dust per cubic meter of gas. The top zone of the checkers is formed of straight-walled vertical passages, and the middle zone of vertical passages in each of which two opposite walls are continuously curved and the other two are straight, while the bottom zone is formed of vertical passages in each of which all four walls are continuously curved. *Osborne*

duplex breaker

A breaker having more than one crushing chamber.

duplex channeler

A type of channeling machine that cuts two channels simultaneously.

duplex compressor

Two compressors, side by side, and made in the combination of simple steam and simple air cylinder, simple steam and compound air cylinders, or compound steam and compound air cylinders. See also: [air-conditioning process](#)

duplexing (duplex process)

Any two-furnace melting or refining process. *ASM, 1*

duplex pick

A coal-cutter pick that allows a cut to be made in either direction without turning the pick. It is drop forged with a tip of fused tungsten carbide. *Nelson*

duplex pump

A positive displacement pump with two water or liquid cylinders side by side and geared so that the piston strokes in the cylinders alternate. Such a pump may be either single or double action, depending on the number and placement of intake and discharge valves on the cylinder and may be designed so as to deliver a low volume of liquid at high pressures. CF: [centrifugal pump](#); [triplex pump](#). *Long*

duplex pump

Displacement pump for handling pulps. Two cylinders are so geared that one piston falls while other rises. Can lift small tonnages to good heights. *Pryor, 3*

duplex steel

Steel produced by first refining it in a Bessemer converter and afterward completing the process in an open-hearth furnace. *Mersereau, 2*

duplex Talbot process

A combination of the duplex and the Talbot continuous process. Molten steel from the Bessemer converter, already freed of its carbon, silicon, and manganese contents, is charged into the Talbot furnace. As this molten steel is poured through the oxidized slag, the phosphorus is removed almost immediately. Sometimes pig iron is poured in afterwards, which raises the carbon content of the bath and aids in its deoxidation. A portion of the heat can usually be tapped about an hour after this addition. *Osborne*

duplex wire

Two insulated-copper leading wires wrapped together with paraffined cotton covering. *Fay*

duplicate sampling

The placing of alternate samples of coal or ore in different containers that are then analyzed separately. Each container thus holds a representative subsample taken at intervals throughout the sampling intervals or period. *Nelson*

Dupont process

A heavy-liquid minerals separation process in which organic liquids of high specific gravity, known as parting liquids, are used. With sp gr 1.00 to 2.96 and very low viscosities, they serve ideally for the medium in the sink-and-float separation of solid materials. This process is used to clean run-of-mine anthracite, refuse banks, or mixtures of the two. The sizes of anthracite coal that can be cleaned are No. 1 buckwheat, and larger. This includes sizes up through broken. See also: [parting liquid](#) *Mitchell*

durability

a. The capacity of a gem to withstand abrasion, impact, and chemical alteration. b. The rate of deterioration of foundry sand due to dehydration of its contained clay.

durain

The term was introduced by M.C. Stopes in 1919 to designate the macroscopically recognizable dull bands in coals. Bands of durain are characterized by their gray to brownish-black color and rough surface with dull or faintly greasy luster; reflection is diffuse; they are markedly less fissured than bands of vitrain, and generally show granular fracture. In humic coals, durain occurs in bands up to many centimeters in thickness. Widely distributed, but with exceptions not abundant. CF: [fusain](#); [vitrain](#). See also: [atritus](#); [hards](#). *IHCP*

durangite

A monoclinic mineral, $\text{NaAl}(\text{AsO}_4)\text{F}$; occurs with cassiterite at the Barranca tin mine, Durango, Mexico.

duricrust

A general term for a hard crust on the surface of, or layer in the upper horizons of, a soil in a semiarid climate. It is formed by the accumulation of soluble minerals deposited by mineral-bearing waters that move upward by capillary action and evaporate during the dry season. See also: [ferricrete](#); [silcrete](#); [calcrete](#); [caliche](#). Etymol: Latin durus, hard, + crust. CF: [hardpan](#)

durionizing

A process of electrodepositing hard chromium on the wearing surfaces of parts as a protection against wear by friction. *Osborne*

durite

a. Term for the microlithotype consisting principally of the following groups of macerals: inertinite (micrinite, fusinite, semifusinite, and sclerotinite) and exinite, particularly sporinite. Durite contains at least 95% inertinite and exinite. The proportions of these two groups of macerals may vary widely, but each must be greater than the proportions of vitrinite and neither must exceed 95%. Durite E and durite I connote durites rich in exinite and inertinite, respectively. It is found in many coals, in fairly thick bands, principally in durains and the duller type of clarain, generally common. *IHCP* b. A coal microlithotype that contains a combination of inertinite and exinite totalling at least 95%, and containing more of each than of vitrinite. CF: [durain](#)

duroclarain

A rock-type coal consisting of the maceral vitrinite (telinite or collinite) and large quantities of other macerals, mainly micrinite and exinite. Micrinite is present in lesser quantities than is true with clarodurain. CF: [clarodurain](#)

duroclarite

a. This term was introduced in 1956 by the Nomenclature Subcommittee of the International Committee for Coal Petrology to designate the microlithotype with maceral composition between those of clarite and durite but closer to clarite than durite. Further specification is that the proportion of vitrinite must exceed that of inertinite. It occurs in fairly thick bands, and is widely distributed and, like clarodurite, is a common constituent of most humic coals. The technological properties of duroclarite are intermediate between those of clarite and durite, but because of the predominance of vitrinite over inertinite they resemble those of clarite more closely than those of durite. *IHCP* b. Coal microlithotype intermediate between clarite and durite; vitrinite, exinite, and inertinite each exceed 5% and the last is less abundant than vitrinite. *AGI* c. A coal microlithotype containing at least 5% each of vitrinite, exinite, and inertinite, with more vitrinite than inertinite and exinite. It is a variety of trimacerite, intermediate in composition between clarite and durite, but closer to clarite. CF: [clarodurite](#)

durovitrain

Vitrain with minute inclusions of durain. CF: [vitrodurain](#)

Durville process

A casting process that involves rigid attachment of the mold in an inverted position above the crucible. The melt is poured by tilting the entire assembly, causing the metal to flow along a connecting launder and down the side of the mold. *ASM, I*

dussertite

A trigonal mineral, $\text{BaFe}_3(\text{AsO}_4)_2(\text{OH})_5$; crandallite group; forms green to yellow-green rosettes or crusts.

dust

See: [ash](#)

dust barrier

See: [stone-dust barrier](#)

dust catcher

a. A device attached to the collar of a borehole to catch or collect dry, dustlike rock particles produced in dry-drilling a borehole. CF: [ducon](#) *Long* b. Any device in which dust is collected or extracted from furnaces, gases, etc.

dust chamber

a. An enclosed flue or chamber filled with deflectors, in which the products of combustion from an ore-roasting furnace are passed, the heavier and more valuable portion settling in the dust chamber and the volatile portions passing out through the chimney or other escape. *Fay* b. Room air system, flue or dust extractor, where larger particles can drop out of stream of gas and be periodically removed. Used in conjunction with cyclones, electrostatic precipitators, and bag filters. *Pryor, 3*

dust cloud

Coal or other dust particles carried in suspension in the air by currents and eddies. *Rice, 2*

dust cloud flammability

The flammability of a coal-dust cloud is its ability to promote spreading flames away from the source of ignition. *Sinclair, 1*

dust collection

Removal from atmosphere of mill or from transfer points where dust is thrown up. Partially closed ventilating systems are used, which incorporate bag filters, Cottrells, cyclones, washing chambers, and spray towers. *Pryor, 3*

dust collector

a. A device used on a roof bolting machine while in operation for separating solid particles from air and accumulating them in a form convenient for handling. b. Device used to collect dust produced in percussion rock drilling, this device has an exhaustor operated with compressed air from the available air system. Air laden with dust and cutting is drawn from the boreholes through the bit holes, the hollow drill steel, the adapter, and the suction hose into a filter. The filtered air is excavated with the spent compressed air through an exhaust port, and dust and cuttings settle in a removable storage tank.

dust consolidation

The binding of coal dust on roadway surfaces to prevent it becoming airborne by any disturbance. One method is to spread calcium chloride over the dust so that it absorbs water and forms a pasty cake that does not rise into suspension when workers travel on the roadway. See also: [stone dust](#)

dust counter

A portable apparatus (as the Koltze tube, an impinger, etc.) used to measure dust concentration in a mine or mill, as a health precaution. *Pryor, 3*

dust explosion

An explosion which consists of a sudden pressure rise caused by the very rapid combustion of airborne dust. Ignition of suspensions of combustible dusts can occur in the following ways: (1) initiation by flame or spark, (2) propagation by a gas explosion or blasting, and (3) spontaneous combustion. Little is known about the last-named mechanism, which is relatively rare in mines. The most frequent causes of major coal mine explosions in the United States today are electric arcs, open flames, and explosives. See also: [coal-dust explosion](#)

dust extraction

The removal of solid particles suspended in gas or ambient air. *BS, 5*

dust extractor

An appliance to collect or precipitate suspended dust. Dust extraction is often necessary at coal-preparation plants, loading stations, and also underground. The appliance may be a cyclone, fabric filter, spray tower, scrubber, or an electrostatic separator. See also: [dust precipitator](#); dust trap. *Nelson*

dust firing

The burning of coal dust in the laboratory of the furnace. *Fay*

dust-free conditions

In Great Britain, the arbitrary standards laid down by the National Coal Board in 1949 as representing comparative dust-free conditions in coal mines. These are as follows: stone dust, 450 particles/cm³ (size range, 0.5 to 5.0 μ m); anthracite, 650 particles/cm³ (size range, 1 to 5 μ m); and coal, 850 particles/cm³ (size range, 1 to 5 μ m). *Nelson*

dust gold

Pieces of gold under 2 to 3 pennyweights (3.1 to 4.7 g); very fine gold.

dust hopper

A hopper placed underneath the scraper, rapping roller, or other belt cleaner, to collect the dust and dirt as it is removed from the belt; any tank or vessel to receive and retain dust. *Nelson*

dusting loss

a. Shortfall in expected weight of sands or finely ground materials due to wind action or loss when transported in open trucks. *Pryor, 3* b. In laboratory sampling, the loss of part of a sample undergoing test, through leakage of particles into the atmosphere. *Pryor, 4*

dust-laying oil

Crude oils, heavy asphalt oils, tars, solutions of petroleum asphalt in gas oils, liquid asphalt, and emulsions of oils and water, used for laying dust on roads. *Fay*

dustless zone

A section of the mine entry from which dust has been removed as completely as possible by scraping or sweeping, aided by a compressed-air blast. *Rice, 2*

dustman

One who dumps the dust catcher or loads the dust at blast furnaces. *Fay*

dustpan dredge

A dredge containing a suction head that is pulled over the underwater ground much as a dustpan would be. About 8 in (20 cm) high, the dustpan may be from 20 to 40 ft (3.6 to 7.1 m) long and is supplied with jets along its face to stir up the bottom surface. *Carson, 2*

dust plan

A plan kept with the book in which stone-dust samples are recorded. It shows the sampling zones in each roadway, distinguished by color, letter, number, or mark, and identified with that roadway. *Nelson*

dustplate

A vertical iron plate, supporting the slag runner of an iron blast furnace. *Fay*

dust precipitator

On a large scale, sinter plant gas may be cleaned by precipitators with very high efficiencies. The dust is precipitated in a dry state, suitable for pelletizing and feeding back onto the sinter strand. See also: [thermal precipitator](#)

dustproofing

A surface treatment, as with oil or calcium chloride solution, to prevent or reduce the dustiness of coal in handling. *BS, 5*

dust sampling

The taking of air samples to assess their degree of dustiness, either on a mass basis or on particle count in a known volume of air. Numerous instruments have been developed for this purpose. Dust sampling is also necessary to assess the efficiency of stone dusting. See also: [sampling instrument](#); [konimeter](#); [size selector](#); thermal precipitator; tyndallometer.

dust-sampling impinger

A portable instrument for collecting dust samples so that corrective measures can be taken for dust control and the prevention of respiratory diseases. Dust-laden air is impinged in sampling flasks by manual, compressed air, or electrical suction devices. Dust counts are made from the collected air at laboratories with microscopes and counting cells. *Best, 1*

dust suppression

The prevention or reduction of the dispersion of dust into the air, for example, by water sprays. *BS, 5*

dust-suppression jib

A coal-cutter jib designed to conduct water through ducts, or other arrangement, to the back of the kerf, to suppress dust and reduce the gas-ignition hazard. See also: [whale-type jib](#)

dust-suppression person

A person employed in coal mines to apply measures to allay coal dust on mine roadways and along the coal faces. The worker also may be in charge of dust suppression in rock drivages. See also: [rock dust](#) *Nelson*

dust-suppression system

With this system, dust can be suppressed before it becomes airborne. A series of nozzles discharge a chemical compound in a fine spray to materially reduce the amount of water or other liquids necessary to saturate fly ash and eliminate dust. The compound also aids in the diffusion of the liquid dust suppressant, allowing it to penetrate deeper into the material. This system can be used at any point in the handling of bulk materials, wherever dust is a hazard. *Best, I*

dust trap

An appliance for the dry collection of dust during drilling in rock. The rock chippings, dust, and air are sucked from the borehole through a rubber hose to a drum-type container with filters. The drum is discharged and the filters renewed periodically. In some of the newer types, the dust is extracted through the hollow drill rods. See also: [C](#) *Nelson*

dust wetting agent

Chemical compounds that aid in the control of dry dusts such as coal and silica to help prevent explosions and respiratory injury to workers. These compounds are of two types. One type is used in a dry state and controls dust by absorbing moisture from the air. The second type is an agent for increasing the wetting effectiveness of water by breaking the surface tension and permitting the water-compound mixture to thoroughly cover the treated area. *Best, I*

Dutch drop

A haulage term for flying switch. *Fay*

Dutch State Mines Process

A sink-float process used principally for coal cleaning. The process uses a water suspension of loess (a natural claylike material) in special trough-type separators provided with a clean coal weir and a reject drag conveyor. *Kirk*

dutch twill

A type of wire cloth weave; a weave in which the first shute wire crosses over the first and second warp wires, under the third and fourth warp wires, and the second shute wire crosses under the first warp wire, over the second and third warp wires, under the fourth and fifth, etc. *Henderson*

duttonite

A monoclinic mineral, $\text{VO}(\text{OH})_2$; forms minute pale-brown scales as an alteration of montroseite in sandstone on the Colorado Plateau.

duty of giants

The amount of gravel that can be moved by a water cannon, or giant, in a 24-h day by a specified flow of water. The duty of giants varies considerably with local conditions, such as the height of the gravel banks, the nature of the gravel bedrock, head of water obtainable, size of jet, etc. *Griffith*

duty of the miner's inch

The number of cubic yards of gravel that can be broken down and sent through the sluice by 1 miner's inch of water for 24 h. It depends upon the height of the bank, the character of the gravel and the bedrock, the grade of the bedrock, the type of sluice, and the pressure of the water. In well-rounded gravel without large stones, the duty of the miner's inch is from 4.5 to 6 yd^3 (3.3 to 4.6 m^3) of gravel for 24 h. Under less favorable conditions, the duty may range from 2.8 to 4.6 yd^3 (2.1 to 3.5 m^3) for 24 h. See also: [miner's inch](#) *Lewis*

duxite

An opaque, dark-brown variety of retinite containing about 0.5% sulfur in lignite at Dux, Bohemia, Czech Republic; is similar to muckite, walchowite, and neudorfite.

dwarf Brinell tester

A portable ball hardness tester in which the load is applied by means of a vise or lever. It carries a special lens for measuring the impression's diameter and from which the Brinell hardness value can be read directly. *Osborne*

Dwight-Lloyd machine

Sintering machine in which feed moves continuously on articulated grates pulled along by chains in belt-conveyor fashion. Controlled combustion on these grates causes the minerals to sinter. *Pryor, 3*

Dwight-Lloyd process

Blast roasting in which air currents are drawn downward through the ore mass. *Bennett*

Dwight-Lloyd roaster

A multihearthed circular furnace, through which horizontal rabblers revolve and move the feed across each hearth, so that it falls peripherally to the one below and then works inward to central discharge for next hearth below. Rising heat and air provide the roasting conditions. *Pryor, 3*

dycrasite

An orthorhombic mineral, Ag_3Sb ; metallic silver-white, commonly tarnished; sp gr, 9.74; in veins with galena, native silver, and silver sulfosalts; an ore of silver.

dyed stones

Minerals artificially dyed to improve their color or to imitate a more valuable stone; they usually fade or discolor and may include chalcedony, turquoise, jadeite, opal, serpentine, and alabaster.

dye line print

A contact print that has largely replaced the blueprints. *Pryor, 3*

dyke

The British spelling of dike.

dynamic braking

A method of retarding an electric winder or haulage, in which a direct current is injected into the alternating-current winder motor stator during the deceleration period; the motor then acts as an alternator, and the negative load of the winding cycle is absorbed as electric power and wasted as heat in the controller. See also: [electric braking](#) *Nelson*

dynamic damping

Usually found in seismographs or seismometers where damping of motion is desired that is in proportion to the velocity of the moving mass. *AGI*

dynamic geology

A general term for the branch of geology that deals with the causes and processes of geologic phenomena; physical geology. *AGI*

dynamic head

The head of fluid that would statically produce the pressure of a given moving fluid.

Syn: [velocity head](#)

dynamic load

a. An alternating or variable load. *Osborne* b. See: [live load](#)

dynamic metamorphism

The total of the processes and effects of orogenic movements and differential stresses in producing new rocks from old, with marked structural and mineralogical changes due to crushing and shearing at low temperatures and extensive recrystallization at higher temperatures. It may involve large areas of the Earth's crust, i.e., be regional in character. CF: [dynamothermal metamorphism](#); [regional metamorphism](#). Syn: [dynamometamorphism](#)

dynamic method

See: [modulus of elasticity](#)

dynamic penetration test

See: [penetration test](#)

dynamic positioning

Maintenance of a drill ship's position through the use of outboard engines on opposite sides of the vessel. The position is maintained by automatic centering in a circle of sonar reflectors placed around the drilling target, either on the bottom or suspended by taut wire buoys. Several drilling ships are now equipped with this facility. *Mining*

dynamic viscosity

See: [viscosity coefficient](#)

dynamite

a. An industrial explosive that is detonated by blasting caps. The principal explosive ingredient is nitroglycerin. Diethyleneglycol dinitrate, which is also explosive, is often added as a freezing-point depressant. A dope, such as wood pulp, and an antacid, such as calcium carbonate, are also essential. See also: [blasting gelatin](#) such as ammonium nitrate, and fuels, such as vegetable fiber, are usually added. b. A general term for detonable explosives in which the principal constituent, nitroglycerin, is contained

within an absorbent substance. "Detonable" is a significant part of the definition since there are compositions that contain significant amounts of nitroglycerin but that are not detonable and are not considered to be dynamite.

dynamo exploder

A powerful exploder usually operated by a vertical rack, which, on a downward movement, drives an armature. At the end of the stroke of the rack bar an internal short-circuiting device opens and the current generated by the rapidly revolving armature passes into the shot-firing circuit. See also: [blasting machine](#); [exploder](#). *Nelson*

dynamogranite

Augen gneiss containing much microcline and orthoclase.

dynamometamorphism

Dynamic metamorphism.

dynamometer

Appliance used in engineering to measure power as output, input, or transitional. *Pryor*, 3

Dynamon

A permissible explosive of the ammonium nitrate group. *Stoces*

dynamothermal metamorphism

A common type of metamorphism involving the effects of directed pressures and shearing stress as well as a wide range of confining pressures and temperatures. It is related both geographically and genetically to large orogenic belts, and hence is regional in character. CF: [regional metamorphism](#); [dynamic metamorphism](#). *AGI*

Dynobel No. 2

A high-strength, low-density permitted explosive; no water resistance. It is used for coal blasting in a machine-cut seam of medium hardness in dry conditions. *Nelson*

dyscrasite

A natural antimonide of silver, Ag_3Sb ; color and streak, silver-white; luster, metallic; usually tarnished; Mohs hardness, 3.5 to 4; sp gr, 9.74; found in Germany, France, and Canada. An ore of silver. Syn: [antimonial silver](#)

dyscrystalline

See: [microcrystalline](#)

dysluite

A brown variety of gahnite containing manganese and iron in Massachusetts and New Jersey.

dysprosia

See: [dysprosium oxide](#)

dysprosium oxide

A rare-earth oxide; white; $Dy_2 O_3$; isometric; sp gr, 7.81 (at 27 degrees C); and melting point, 2,340+ or -10 degrees C. Used as a nuclear-reactor control-rod component and a neutron-density indicator. Syn: [dysprosia](#)

dystome spar

See: [datolite](#)

dystomic

Having an imperfect fracture or cleavage. *Fay*

dzhalindite

An isometric mineral, $In(OH)_3$; an alteration of indite; associated with cassiterite ores.

dzhezkazganite

Possibly an amorphous lead rhenium sulfide found in the Dzhezkazgab copper ores, Kazakhstan.

E

eaglestone

A concretionary nodule of clay ironstone about the size of a walnut that the ancients believed an eagle takes to her nest to facilitate egg-laying. Syn: [aetite](#)

ear

The inlet or intake of a fan. *Fay*

earlandite

A mineral, $\text{Ca}_3 (\text{C}_6 \text{H}_5 \text{O}_7)_2 \cdot 4\text{H}_2 \text{O}$; forms as fine-grained nodules in sediments under the Weddell Sea off the Atlantic coast of Antarctica.

earth amber

a. Amber that is mined rather than from the sea. Also called earth stone. b. Amber with its surface deteriorated in luster, transparency, and color.

earth auger

a. A hand-boring tool for testing clays, soils, or shallow deposits. See also: [auger](#) b. A dry-sampling device consisting of a helical-fluted rod encased by a cylindrical tube. The fluted rod is equipped with cutting edges, and the cuttings collect and are retained within the tube. *Long*

earth balsam

A variety of asphalt. *Tomkeieff*

earth borer

An auger for boring into the ground, working in a cylindrical box to retain the cut earth until the tool is withdrawn. *Standard, 2*

earth current

A light electric current apparently traversing the Earth's surface but that in reality exists in a wire grounded at both ends, due to small potential differences between the two points at which the wire is grounded. Syn: [telluric current](#)

earth dam

A dam constructed of earth material (such as gravel, broken weathered rock, sand, silt, or soil). It has a core of clay or other impervious material and a rock facing of riprap to protect against wave erosion. *AGI*

earth drill

An auger. *Nichols, 1*

earthed

Applied to conductors, connected to the general mass of earth in such a manner as will ensure at all times an immediate discharge of electrical energy without danger. *Nelson*

earthed system

Electrically, one with one neutral point or pole connected to earth. *Pryor, 3*

earth fault

Electrical short circuit from live conductor to earth. *Pryor, 3*

earth fault lockout system

An electrical system whereby a circuit is monitored to prevent application or restoration of supply if an earth fault exists. *BS, 13*

earth fault meter

An instrument for measuring the insulation fault at low voltage without polarization. This instrument is more informative in checking detonators in loaded holes than the insulation meter. *Langefors*

earth fault protection

A system of protection designed to cause the supply to a circuit or system to be interrupted when the leakage current to earth exceeds a predetermined value. Also called earth leakage protection. *BS, 13*

earth fault tester

An apparatus used to prevent or reduce current leakage to the ground when blasting in conducting orebodies, in wet shale or clay, and in underwater blasting, esp. in salt water. The apparatus has no battery and can be used when loading the hole to check if the conducting wires have become damaged during this operation. Syn: [current leakage tester](#)

earth flax

An early name for fine silky asbestos. See also: [amianthus](#)

earthflow

A mass-movement landform and process characterized by downslope translation of soil and weathered rock over a discrete basal shear surface (landslide) within well-defined lateral boundaries. Little or no rotation of the slide mass occurs during displacement. Earthflows grade into mudflows with increasing fluidity. Also spelled: earth flow. *AGI*

earth foam

A soft or earthy variety of calcite. See: [aphrite](#)

earthing a conductor

Establishing an electrical connection between a conductor and the earth. An important safeguard in electrical installations. *Nelson*

earthing system

An electrical system in which all the conductors are earthed. *Nelson*

earth leakage protection

A protective system that operates as a result of leakage of current from electrical machines to earth. For electrical apparatus in mines, the usual method of leakage protection is known as the core balance system. This depends for its action on the balance of the currents in three phases. When a fault occurs, the balance is disturbed and the resulting magnetic effect in the transformer core induces a current in the secondary circuit, so energizing the tripping coil and operating the tripping mechanism on the circuit breaker. It may be operated by a leakage current as low as 5% of the full load current of the circuit. *Nelson*

earth pillar

See: [hoodoo](#); pillar.

earthquake

a. A local trembling, shaking, undulating, or sudden shock of the surface of the earth, sometimes accompanied by fissuring or by permanent change of level. Earthquakes are most common in volcanic regions, but often occur elsewhere. Syn: [temblor](#) b. Groups of elastic waves propagating in the earth, setup by a transient disturbance of the elastic equilibrium of a portion of the earth. *AGI*

Earth's crust

See: [crust](#)

Earth shell

See: [shell](#)

earth slide

Downslope movement of part of an earth embankment sufficient to break up blocks and pulverize the material so that it moves in a somewhat fluid manner. CF: [earth slump](#)

earth slope

The angle of superficial slope naturally assumed by rock debris, earthy detritus, etc., when piled up in mounds or ridges. *Standard, 2*

earth slump

Downslope movement of part of an earth embankment in blocklike masses without other apparent deformation. CF: [earth slide](#)

earth stone

A term that may be applied to mined amber to distinguish it from sea amber. CF: [earth amber](#)

earth wave

An obsolete syn. of seismic wave. *AGI*

earth wax

See: [ozocerite](#)

earthy

a. Consisting of minute particles loosely aggregated; claylike, dull. b. In mineralogy, roughish to the touch, dull and lusterless. Porous aggregates of a mineral, such as the clays, scatter incident light so completely that they seem to be without luster and are described as dull or earthy. c. Composed of or resembling earth or soil; e.g., an "earthy limestone" containing argillaceous material and characterized by high porosity, loosely aggregated particles, and close association with chalk. d. Said of a type of fracture similar to that of a hard clay.

earthy breccia

A breccia in which rubble, sand, and silt plus clay each constitute more than 10% of the rock. *AGI*

earthy fracture

A fracture resembling that of a lump of hard clay.

earthy lead ore

An earthy variety of cerussite.

earthy manganese

See: [wad](#); bog manganese.

easement

a. In surveying, an easement curve is a transitional curve. *Pryor, 3* b. An incorporeal right existing distinct from the ownership of the soil, consisting of a liberty, privilege, or use of another's land without profit or compensation; a right-of-way. *Fay*

easer

One of a number of holes surrounding a cut and fired immediately after it. *BS, 12*

easer holes

Holes drilled around the cut to enlarge the cut area so that the trimmers may break out the ground to the required dimensions. The positioning and number of the easer holes will depend upon the pattern of the cut shots. *McAdam, 2*

Eastman survey instrument

A particular make of mechanical and photographic borehole-drift indicators; the single-shot models are small enough to be used in EX diamond-drill holes. See also: [drift indicator](#)

easy way

Scot. Easiest plane of splitting in granite, Aberdeenshire. CF: [hard way](#)

eat out

a. N. of Eng. To turn a heading or holing to one side in order to mine the coal on the other side of a fault without altering the level course of the heading. *Fay* b. Said of a

seam when the district or working place reaches a fault, or the boundary of old workings, or any other barren part of a mine. *CTD*

ebb channel

Tidal channel in which the ebb currents are stronger than the flood currents.
Schieferdecker

ebb current

The movement of the tidal current away from shore or down a tidal stream.
Schieferdecker

ebuliscopes

Instrument for observing liquids' boiling point, esp. for determining a mixture's strength by the temperature at which it boils. *Osborne*

eccentric bit

A modified form of chisel used in drilling, in which one end of the cutting edge is extended further from the center of the bit than the other.

eccentric pattern

A mode of arranging diamonds set in the face of a bit in such a manner as to have rows of diamonds forming eccentric circles so that the path cut by each diamond slightly overlaps that of the adjacent stones. CF: [concentric pattern](#)

ecdemite

A tetragonal mineral, $Pb_6 As_2 O_7 Cl_4$.

echelon cell

Wedge-shaped glass cell used in absorption spectrography. *Pryor, 3*

echelon pattern

A delay pattern that causes the true burden, at the time of detonation, to be formed at an oblique angle from the original free face.

echogram

https://t.me/Geologybooks

A graphic recording of various sonic devices that shows ocean bottom profiles and delineates the bedding planes and dissimilar rock contacts to a depth of 1,500 ft (457 m) into the sediments. *Mero*

echo sounder

In oceanography, a sounding apparatus using echo delay, for determining automatically the depth of sea beneath a ship. *CTD*

eckermannite

A monoclinic mineral, $\text{Na}_3(\text{Mg,Fe})_4\text{AlSi}_8\text{O}_{22}(\text{OH})_2$; amphibole group with $\text{Mg}/(\text{Mg} + \text{Fe}^{2+}) = 0.5$ to 1.0 and $\text{Fe}^{3+}/(\text{Fe}^{3+} + \text{Al}) = 0$ to 0.5; fibrous; in nepheline syenites; an asbestos mineral.

eclogite

A coarse-grained, deep-seated ultramafic rock, consisting essentially of garnet (almandine-pyrope) and pyroxene (omphacite). Rutile, kyanite, and quartz are typically present.

ecology

The study of the relationships between organisms and their environment, including the study of communities, patterns of life, natural cycles, relationships of organisms to each other, biogeography, and population changes. Adj: ecologic; ecological. Syn: [bionomics](#)

economic coal reserves

The reserves in coal seams that are believed to be workable with regard to thickness and depth. In most cases, a maximum depth of about 4,000 ft (1.2 km) is taken, and a minimum thickness of about 2 ft (0.6 m). The minimum economic thickness varies according to quality and workability. See also: [thin seam](#)

economic depletion

The reduction in the value of a mineral deposit as the minerals reserves. See also: [depletion](#)

economic geology

The study and analysis of geologic bodies and materials that can be utilized profitably by humans, including fuels, metals, nonmetallic minerals, and water; the application of geologic knowledge and theory to the search for and the understanding of mineral deposits. *AGI*

economizer

An arrangement to preheat the feedwater before it enters the steam boiler. The water flows through a bank of tubes placed across the flue gases as they leave the boiler.

Nelson

ecosystem

A dynamic community of biological organisms, including humans, and the physical environment with which they interact. *SME, 1*

eddy

A circular movement of water. Eddies may be formed where currents pass obstructions or between two adjacent currents flowing counter to each other. *Hy*

eddy-current brake

Arrangement by which internal currents are induced in a mass of metal as it moves relative to a magnetic field. *Pryor, 3*

eddy-current testing

A nondestructive testing method in which eddy-current flow is induced in the test object. Changes in the flow caused by variations in the object are reflected into a nearby coil or coils for subsequent analysis by suitable instrumentation and techniques. *ASM, 1*

edelfall

A German term for a shoot of precious-metal ore.

edelforsite

See: [aedelforsite](#)

edelite

See: [prehnite](#)

edenite

A monoclinic mineral, $\text{NaCa}_2(\text{Mg,Fe})_5\text{Si}_7\text{AlO}_{22}(\text{OH})_2$; amphibole group with $\text{Mg}/(\text{Mg} + \text{Fe}^{2+}) = 0.5$ to 1.0 ; named for the type locality, Eden, NY.

edge dislocation

In a crystal, a row of atoms or ions marking the edge of a crystallographic plane extending only part way. CF: [line defect](#)

edge seam mining

The working of steeply inclined coal seams, many features of which are comparable to metal mining. See also: [stope](#)

edgewise conglomerate

A conglomerate exhibiting edgewise structure; e.g., an intraformational conglomerate containing elongated calcareous pebbles that are transverse to the bedding. See also: [edgewise structure](#)

edgewise structure

A primary sedimentary structure characterized by an arrangement of flat, tabular, or disk-shaped fragments whose long axes are set at varying steep angles to the bedding. It may be due to running water or to sliding or slumping soon after deposition. See also: [edgewise conglomerate](#) *AGI*

edinite

See: [prase](#); mother-of-pearl.

edisonite

a. Titanic acid, rutile, occurring in golden-brown, orthorhombic crystals. *Fay* b. An early name for rutile.

eduction pipe

The exhaust pipe from the low-pressure cylinder to the condenser. *Fay*

Edwards roaster

Furnace with series of horizontal stepped hearths each equipped with stirring rabbles. Used to sweet-roast or desulfurize pyritic concentrates, notably gold-bearing sulfides. Moist-to-wet feed progresses step by downward step, meeting hot gases produced toward discharge end from burning pyrite. *Pryor, 3*

effective belt tension

That portion of the total tension in a conveyor belt effective in actually moving the loaded belt. It is often referred to as horsepower pull. Effective tension is the difference between tight side tension and slack side tension.

effective breaking force

A product of the weight, strength and the degree of packing, calculated per volume of a given drill hole. *Langefors*

effective diameter

a. The size of an excavation within its stress ring; it includes not only the actual hole in the rock but the destressed loose and semiloose rock that surrounds it. *Spalding* b. Particle diameter corresponding to 10% finer on the grain-size curve. Also called effective size. *ASCE*

effective grounding

In mining, effective grounding means that the path to ground from circuits, equipment, or conductor enclosures is permanent and continuous and has carrying capacity ample to conduct safely any currents liable to be imposed upon it. The path to ground associated with high-voltage alternating-current systems will have impedance low enough to limit potential above ground to a maximum of 100 V during the flow of ground fault current and to facilitate operation of the circuit protective devices. On low-voltage systems the sustained voltage above ground, appearing on the frames of power utilizing equipment during existence of a ground fault, will not be greater than 35 V; except when ground circuit check systems requiring higher voltage are used, a maximum of 100 V for a duration of 0.2 s is permissible. When bonded or mechanically connected track is available, such track is considered the grounding medium for direct current equipment only.

effective permeability

A measure of the ability of a rock to transmit a given fluid when the rock contains more than one fluid. *Inst. Petrol.*

effective piece weight

The weighted average weight of the pieces of sink material as found by separating a given coal product at any required specific gravity. Syn: [piece weight](#)

effective pillar area

The area of solid coal within the fractured and crushed edges of the pillar. *Nelson*

effective porosity

a. The ratio of the volume of liquid that a given mass of saturated rock or soil will yield by gravity to the volume of that mass. *AGI* b. The property of rock or soil containing intercommunicating interstices, expressed as a percent of bulk volume occupied by such interstices. *AGI* c. The ratio of the volume of the voids of a soil mass that can be drained by gravity to the total volume of the mass. *ASCE*

effective screen aperture

The cut point (equal errors or partition size) at which a screening process operates in dividing the material treated into two size fractions. *BS, 5*

effective screening area

Total area of the apertures expressed as a percentage of the useful area of a screen. Syn: [open area](#)

effective span

The distance between the centers of support, or the clear distance between supports plus the effective depth of the beam or slab, the lesser value being taken. *Taylor*

effective teeth

The number of sprocket teeth that engage the chain rollers during one revolution of the sprocket. Applies to sprockets for double-pitch roller chains. *Jackson, 1*

effective temperature

A measure of warmth that is often employed to assess the health and comfort conditions of mine workings, which are a function of dry- and wet-bulb temperatures and air velocity. See also: [dehumidification](#); dry kata cooling power. *Nelson*

effective unit weight

The unit weight of a soil that, when multiplied by the height of the overlying column of soil, yields the effective pressure due to the weight of the overburden. See also: [unit weight](#)

efficiency engineer

A technical officer who examines processes, methods, and operations in a mine, mill, or smelter, and connecting links, with a view to their improvement of maintenance at an agreed operating standard.

efficiency of a rectifier

The ratio of the power output to the total power input. *Coal Age, 1*

efficiency of screening

The weight of underflow (excluding oversize) expressed as a percentage of the total weight of material below the reference size in the feed. *BS, 5*

efficiency of separation

In coal washing this may be expressed as: Efficiency, percent = Actual yield of clean coal X 100 / Theoretical yield at the ash content of the clean coal. The efficiency of separation thus expresses as a percentage, that proportion of the float coal obtained by float-and-sink analysis that will be recovered in practice by a particular washer. The theoretical yield is derived by plotting the cumulative yield of the reconstituted feed coal against the appropriate cumulative ash content and reading off the yield corresponding to the ash content of the clean coal actually obtained. See also: [washery](#)

efficiency of sizing

The weight of material correctly placed above or below the reference size, expressed as a percentage of the weight of corresponding material in the feed. *BS, 5*

efficient airway size

For a given air quantity, the efficient airway size is that size for which the combined capital and operating cost is minimal. *Hartman, 2*

efficient structure

A structure in which the load-bearing members are arranged in such a way that the weights and forces are transmitted to the foundations by the cheapest means consistent with safety and permanency. *Nelson*

efflorescence

a. A whitish fluffy or crystalline powder, produced as a surface encrustation on a rock or soil in an arid region by evaporation of water brought to the surface by capillary action or by loss of water of crystallization on exposure to the air. It may consist of one or several minerals, commonly soluble salts such as gypsum, calcite, natron, and halite. Syn: [bloom](#) b. The process by which an efflorescent salt or crust is formed. *AGI*

efflorescent

In mineralogy, forming an incrustation or deposit of grains or powder that resembles lichens or dried leaves; not uncommonly due to loss of water of crystallization. *Fay*

effluent

A liquid, solid, or gaseous product, frequently waste, discharged or emerging from a process.

effusion

- a. The property of gases that allows them to pass through porous bodies; i.e., the flow of gases through larger holes than those to which diffusion is strictly applicable. *Osborne*
- b. The emission of relatively fluid lava onto the Earth's surface; also, the rock so formed. CF: [extrusion](#)

effusive

See: [extrusive](#)

efydd

A Welsh term for copper.

egg coal

- a. A particular size of anthracite coal that passes through 3-1/4-in to 3-in (8.26-cm to 7.62-cm) round holes and over 2-1/16-in (5.24-cm) round holes. See also: [anthracite coal sizes](#)
- b. A particular size of bituminous coal that passes through 4-in (10.2-cm) round holes and over 1-1/2-in (3.81-cm) round holes (sizes are not uniform but vary with the coalfield). *Jones, 1*

eggette

See: [briquette](#)

eggstone

See: [oolite](#)

eglestonite

An isometric mineral, $\text{Hg}_6 \text{Cl}_3 \text{O}(\text{OH})$ or $\text{Hg}_4 \text{Cl}_2 \text{O}$; forms brownish-yellow (darkening to black on exposure) dodecahedra with montroydite, calomel, and other mercury minerals at New Idria, CA, and Terlingua, TX.

eguei#1.ite

A monoclinic(?) material, $\text{CaFe}_{14}(\text{PO}_4)_{10}(\text{OH})_{14} \cdot 21\text{H}_2\text{O}$ (?) ; forms yellowish-brown nodules with fibrous lamellar structure embedded in clay with trona and thernardite in the Eguei#1. region of Chad and Sudan. (Not yet adequately described for a mineral species.)

Egyptian alabaster

Banded calcite from near Thebes, Egypt. See also: [onyx marble](#)

Egyptian emerald

Emeralds from the ancient Egyptian mines of Jabal Sukayt and Jabal Zab-rah east of Aswan, in mica schist and talc schist.

Egyptian jasper

a. A banded jasper found as pebbles scattered over the surface of the Egyptian desert chiefly between Cairo and the Red Sea; used as a broochstone and for other ornamental purposes. Syn: [Egyptian pebble](#) b. Any jasper in which the colors run in zones.

Egyptian pebble

See: [Egyptian jasper](#)

Egyptian peridot

Term properly applied only to peridot (olivine) from St. John's Island in the Red Sea.

Ehrhardt powder

Any of a series of explosive mixtures containing potassium chlorate, together with tannin, powdered nutgalls, or cream of tartar. Used for blasting, shells, etc. *Fay*

Eichhorn-Liebig furnace

A handworked muffle furnace. *Fay*

eightling

A multiple twin consisting of eight individuals. CF: [cyclic twin](#); trilling; fourling; fiveling.

Eimco drill jumbo

Drills or drifters mounted on a horizontal drill bar supported by the rocker shovel of an Eimco loader.

eisener hut

Ger. Name for iron hat or gossan.

eisenwolframite

See: [ferberite](#)

eisinwolframite

See: [ferberite](#)

eitelite

A trigonal mineral, $\text{Na}_2 \text{Mg}(\text{CO}_3)_2$; associated with trona, nahcolite, or in places searlesite, from oil-well cores in northeastern Utah.

ekanite

A tetragonal mineral, $\text{ThCa}_2 \text{Si}_8 \text{O}_{20}$; radioactive; metamict; from the gem pits of Eheliyagoda, Raknapura district, Sri Lanka; as fine crystals at the Mont St. Hilare Quarry, PQ, Canada.

ela

A term in Sri Lanka for a drain, as around a gem pit.

elaeolite

An alternative spelling of eleolite.

elastic

a. Capable of sustaining stress without permanent deformation; the term is also used to denote conformity to the law of stress-strain proportionality. An elastic stress or elastic strain is a stress or strain within the elastic limit. *Roark* b. A physical property of minerals that may be bent without losing cohesion and that return to their original shape when released, e.g., micas. CF: [plastic](#); [flexible](#).

elastic aftereffect

See: [creep recovery](#)

elastic axis

The elastic axis of a beam is the line, lengthwise of the beam, along which transverse loads must be applied in order to produce bending only, with no torsion of the beam at any section. Strictly speaking, no such line exists except for a few conditions of loading. Usually the elastic axis is assumed to be the line that passes through the elastic center of every section. The term is most often used with reference to an airplane wing of either the shell or multiple-spar type. CF: [torsional center](#); flexural center; elastic center. *Roark*

elastic bitumen

See: [elaterite](#)

elastic boundary

The boundary of an underground opening that requires no support. The material around this boundary may be considered to be in the elastic state, and no pressure need be exerted against the boundary to prevent the material from fracturing and falling into the opening. *Woodruff*

elastic center

The elastic center of a given section of a beam is that point in the plane of the section lying midway between the flexural center and center of twist of that section. The three points may be identical and are usually assumed to be so. CF: [flexural center](#); [torsional center](#); [elastic axis](#). *Roark*

elastic deformation

Deformation of a substance, which disappears when the deforming forces are removed. Commonly, that type of deformation in which stress and strain are linearly related, according to Hooke's law. CF: [plastic deformation](#) *AGI*

elastic design

Design of a structure based on working stresses which are about one-half to two-thirds of the elastic limit of the material. For redundant frames, this method of design is replaced by the plastic design. See also: [plastic design](#)

elastic discontinuity

A boundary between strata of different elastic moduli and/or density at which seismic waves are reflected and refracted. *AGI*

elasticity

The property or quality of being elastic; said of a body that returns to its original form or condition after a displacing force is removed. See also: [elasticity of bulk](#); [Hooke's law](#).
AGI

elasticity of bulk

a. The property possessed by all substances by which they tend to recover their original volume after being compressed or extended. *Hess* b. The elasticity for changes in the volume of a body caused by changes in the pressure acting on it. The bulk modulus is the ratio of the change in pressure to the fractional change in volume. See also: [elasticity](#)
CTD

elastic limit

The greatest stress that can be developed in a material without permanent deformation remaining when the stress is released. *AGI*

elastic mineral pitch

See: [elaterite](#)

elastic modulus

See: [modulus of elasticity](#)

elastic rebound

Elastic recovery from strain. *AGI*

elastic surface waves

Waves that travel only on a free surface where the solid elastic materials transmitting them are bounded by air or water. *Leet, 2*

elastic zone

In explosion-formed crater nomenclature, the remote zone that undergoes no measurable permanent deformation. *Min. Miner. Eng., 2*

elaterite

A massive, amorphous, dark-brown metamorphic hydrocarbon ranging from soft and elastic to hard and brittle; melts in a candle flame without decrepitation; conchoidal fracture. Also called liverite. See also: [coorongite](#); [wurtzilite](#). Syn: [elastic bitumen](#); elastic mineral pitch; mineral caoutchouc.

elbaite

a. See: [red schorl](#); rubellite; ilvaite. b. A trigonal mineral, $3[\text{Na}(\text{Li},\text{Al})_3 \text{Al}_6 (\text{OH},\text{F})_4 (\text{BO}_3)_3 \text{Si}_6 \text{O}_{18}]$; tourmaline group; occurs in triangular and hexagonal prisms; varicolored; commonly zoned, pyroelectric and piezoelectric; in granites and granite pegmatites; and used as a gemstone (pink rubellite, blue indicolite, green verdolite, colorless achroite, zoned pink-white-green watermelon tourmaline).

el conveyor

A trough-type roller or wheel conveyor consisting of two parallel rows of rolls or wheels set at a 90 degrees included angle, with one row providing a sloped carrying surface and the other acting as a guard. See also: [roller conveyor](#); [troughed roller conveyor](#); [wheel conveyor](#).

El Doradoite

A trade name in El Dorado County, California, for a blue quartz that may be cut as a gemstone.

electric air drill

A type of tripod drill operated by compressed air supplied by a portable motor-driven compressor that accompanies the drill. *Fay*

electrical conductivity

A measure of the ease with which a conduction current can be caused to flow through a material under the influence of an applied electric field. It is the reciprocal of resistivity and is measured in mhos per meter. *AGI*

electrical double layer

Helmholtz layer. Zone that surrounds a particle in aqueous suspension or other electrolyte. Transition zone between the monomolecular zone of shear immediately coupled ionically to the discontinuity lattice at the particle's surface and the normal aqueous phase that exists from 50 to 5,000 Å and beyond. This zone of charge contains a superconcentration of ions drawn from the normal population of the liquid phase. See also: [zeta potential](#)

electrical engineer

An engineer in charge of all electrical plant and associated labor at a mine or colliery. He or she has an assistant in charge of all the underground electrical equipment, operations, and labor. The electrical engineer is under the authority of the colliery manager. *Nelson*

electrical method

A geophysical prospecting method that depends on the electrical or electrochemical properties of rocks. The resistivity, spontaneous-polarization, induced-polarization, and inductive-electromagnetic methods are the principal electrical methods. *AGI*

electrical plan

A plan, drawn to the same scale as the working plan, that shows the position of all electrical apparatus installed underground except signals and telephones. *Nelson*

electrical precipitation

The removal of suspended particles from gases by the aid of electrical discharges, using alternating or direct current. Alternating current agglomerates the suspended particles into larger aggregates, causing rapid settling, esp. if the gases are quiescent. Direct current is used when large volumes of rapidly moving gas, such as occur in smelter flues, are treated. The suspended particles within a strong electric field of constant polarity become charged and are then attracted to a plate (electrode) of opposite charge. *Fay*

electrical prospecting

Prospecting that makes use of three fundamental properties of rocks. One is the resistivity, or inverse conductivity. This governs the amount of current that passes through the rock when a specified potential difference is applied. Another is the electrochemical activity with respect to electrolytes in the ground. This is the basis of the self-potential method. The third is the dielectric constant. This gives information on the capacity of a rock material to store electric charge, and it must be taken into consideration when high-frequency alternating currents are introduced into the earth, as in inductive prospecting techniques. Electrical methods are more frequently used in searching for metals and minerals than in exploring for petroleum, mainly because most of them have proved effective only for shallow explorations. *Dobrin*

electrical protection

Protection is provided by fuses or other suitable automatic circuit-interrupting devices for preventing damage to circuits, equipment, and personnel by abnormal conditions, such as overcurrent, high or low voltage, and single phasing.

electrical puncturing

A rock fracturing technique, applied to secondary fragmentation in quarries, that is characterized by an almost instantaneous action and is accompanied by a mechanical weakening of the dielectric and a lowering of the resistance of the puncture path. If, after puncturing, a high-frequency current continues to pass between the contacts, the action

of the conduction current and electric field will rapidly heat the rock, leading to thermal puncture, in which the dielectric is transformed into a good conductor along the puncture path. Further intensive heating will give rise to thermal stresses sufficient to fracture the rock. *Min. Miner. Eng., 1*

electrical resistance inclinometer

An instrument to indicate when a long hole in a coal seam is deviating into the roof or floor. It may be used in underground gasification and pulsed-infusion shotfiring. It uses, among other things, a pellet of mercury to indicate the gradient by its position along a tube. *Nelson*

electrical resistance strain gage

An appliance for measuring strain that may be employed in roof-control research. It makes use of the change in electrical resistance of a thin wire when stretched under the influence of strata strain. Syn: [resistance strain gage](#) mechanical extensometer. *Nelson*

electrical rock fracture

A rock-fracturing technique in which electrical energy is used directly in fracturing the rock, either by heating it in a variable electric or electromagnetic field set up in the rock by a high-frequency electric current, or by the direct puncturing of the rock by an electric current. *Min. Miner. Eng., 1*

electrical slate

Slate principally of the mica variety. It should have high mechanical and dielectric strength, be readily machinable, and have low porosity. *USBM, 7*

electrical twinning

A type of quartz twinning in which the two or more intergrown parts are related as by a rotation of 180 degrees about the common $Z = c$ axis. The separate individuals of the twin are either all right handed or all left handed. Electrical twinning cannot be detected by optical tests, but can be recognized by etching, X-ray study, pyroelectric tests, or the distribution of the $x 5161$ or $s 1121$ faces. Syn: [Dauphine twinning](#); orientational twinning.

electrical well logging

The process of recording the formations traversed by a drill hole, based on the measurements of two basic parameters observable in uncased holes; namely, the spontaneous potential and the resistivity of the formations to the flow of electric currents. The detailed study in situ of the formations penetrated by a drill hole, based on

measurements made systematically by lowering an apparatus in the hole responding to the following physical factors or parameters: (1) the resistivities of the rocks; (2) their porosity; (3) their electrical anisotropy; (4) their temperature; and (5) the resistivity of the drilling muds. *AGI*

electric blasting

The firing of one or more charges electrically, whether electric blasting caps, electric squibs, or other electric igniting or exploding devices are used. *Fay*

electric blasting cap

a. A device for detonating charges of explosives electrically. It consists essentially of a blasting cap, into the charge of which a fine platinum wire is stretched across two protruding copper wires, the whole fastened in place by a crimp or plug. The heating of the platinum wire bridge by the electric current ignites the explosive charge in the cap, which in turn detonates the high explosive. b. Detonator fired electrically. See also: [electric detonator](#) *Pryor, 3*

electric braking

A system in which a braking action is applied to an electric motor by causing it to act as a generator. *Nelson*

electric cable

The conducting wires through which an electric current is conveyed to points in and about a mine, where it is required for lighting or motive power. See also: [armored cable](#)

electric calamine

Zinc silicate or calamine; so called on account of its strong pyroelectric properties, and to distinguish it from smithsonite. See also: [calamine](#) *Webster 2nd*

electric cap lamp

This lamp consists of a flat portable battery that is strapped around the miner's waist and is connected by an insulated cord to a small electric light and reflector that is fastened on the front of the miner's cap. See also: [safety lamp](#)

electric coal cutter

A coal cutter operated by an electric motor; used in coal mines. *CTD*

electric coal drill

An electric motor-driven drill designed for drilling holes in coal for placing blasting charges. Syn: [coal drill](#)

electric detonator

A detonator requiring electrical energy to activate the explosive train, detonating the base charge. See also: [blasting cap](#); electric blasting cap.

electric ear

System used to control grinding rate in a ball mill; a microphone listens to the grinding sound and maintains this by varying the rate of new feed to the mill. *Pryor, 3*

electric-eye method

A method of finding large diamonds in which the dry crushed ore is passed in a thin layer on a moving belt through a band of intense polarized light, which, if reflected from a large diamond, actuates a photoelectric cell, which calls attention to the large diamond. *Chandler*

electric furnace

A furnace using electricity to supply heat. *Mersereau, 2*

electric fuse

A metallic cup, usually containing fulminating mercury, in which are fixed two insulated conducting wires held by a plug, the latter holding the ends of the wires near to but not touching each other. At this plug is a small amount of a sensitive priming. When an electric current is sent from the battery through these conductors, the resulting spark fires the priming, then the fulminate and the charge of the explosive proper. *Stauffer*

electric gathering mine locomotive

An electric mine locomotive, the chief function of which is to move empty cars into, and to remove loaded cars from, the working places. Syn: [gathering locomotive](#); [gathering mine locomotive](#). See also: [gathering motor](#)

electric haulage mine locomotive

An electric mine locomotive used for hauling trains of cars, which have been gathered from the working faces of the mine, to the point of delivery of the cars.

electric hoist

See: [electric winder](#)

electric-hoist man

See: [hoistman](#)

electric ingot process

A continuous method of melting and casting metal with progressive solidification. The molten metal is completely protected from the atmosphere. There is minimum segregation, and as no refractory linings are used, there is no contamination. Sound ingots with high yield and no pipe are produced, and as the method possesses extreme flexibility it is possible to make small as well as relatively large ingots. *Osborne*

electric lamp

See: [cap lamp](#); hand electric lamp.

electric log

The generic term for a well log that displays electrical measurements of induced current flow (resistivity log, induction log) or natural potentials (spontaneous-potential curve) in the rocks of an uncased borehole. An electric log typically consists of the spontaneous-potential curve and one or more resistivity or induction curves. The Archie equations form the basis for interpretation of electric logs. Abbrev: E-log. Informal syn: resistivity log. See also: [borehole log](#); well logging. *AGI*

electric logging

a. A technique in which electrical measurements are made, and recorded at the surface, while a series of electrodes or coils is caused to traverse a borehole. The resulting curves can be used for geological correlation, and, under favorable circumstances, for the recognition of some rock properties and for indicating the nature and amount of the fluids in the pores of the rock. *Inst. Petrol.* b. The act or process of taking resistivity, porosity, electrical anisotropy, etc., measurements in a borehole using an electromagnetic teleclinometer or other electrode device. Also called electrical logging. See also: [self-potential log](#)

electric master fuse

See: [multifuse igniter](#)

electric mine locomotive

An electric locomotive designed for use underground. See also: [locomotive](#); [mine locomotive](#); [electric haulage mine locomotive](#); electric permissible mine locomotive; electric gathering mine locomotive.

electric mule

Electric motor. *Korson*

electric permissible mine locomotive

An electric locomotive carrying the official approval plate of the U.S. Mine Safety and Health Administration.

electric powder fuses

These fuses were designed so that electrical shotfiring methods could be used for initiating blasting powder. The powder fuse consists of a thick paper tube containing a small charge of blasting powder, with an ordinary low-tension fusehead fixed at one end. On passing electric current through the fusehead, it flashes and sets off the blasting powder in the tube, which can then initiate the main charge of blasting powder in the shot hole. *McAdam, 2*

electric precipitation

A method of collecting particulate particles used chiefly in air pollution control that consists of inducing an electric charge on the dust particles and collecting them on an oppositely charged device.

electric prospecting instruments

Geophysical prospecting instruments that measure the electrical characteristics of rocks. *Nelson*

electric resistance

The opposition of an electric circuit to the flow of current. *Kentucky*

electric resistance strain gage

This gage consists essentially of a grid of fine wire cemented to a paper membrane, which can be attached to the surface under investigation. The ends of the wire grid are spot welded to a metal strip for the terminal connections. The use of these gages depends upon the fact that certain alloys show a linear relationship between applied strain and electrical resistance, so that if a wire constructed from one of these alloys is fixed to the

surface of an object subject to variable strain, the change of resistance in the wire will be a measure of the change of strain in the object. *Issacson*

electric rotary drill

A hand-held rotary drill driven by an electric motor, which may be used in rock or coal. It may be of fan-cooled design with several rod speeds to suit different rocks. The use of aluminum or aluminum alloys is not favored where methane is liable to be present. This drill produces considerably less dust than the percussive drill. *Nelson*

electric shock

Paralysis of the nerve center that controls breathing or a regular heartbeat. Some symptoms of electric shock are sudden loss of consciousness, absence of respiration or respiration that cannot be detected, weak pulse, and burns. *Kentucky*

electric shovel

Most of the larger modern machines are electrically driven and are equipped with the Ward-Leonard system of control, which allows alternating current of fairly high voltage to be carried to the shovel over a very flexible electric cable. This cable is usually carried on a sled back of the shovel or on a reel on the shovel base. The current drives an alternating current motor, which is connected to, and drives, direct current generators, one for each of the operations of the shovel, and an exciter. Each direct current generator and the direct current motor which it drives are in a closed circuit. The field in each circuit is regulated by magnetic contactors or by rotating controls actuated by master controllers at the operator's position.

electric-shovel craneman

See: [shovel craneman](#)

electric slope engineer

In bituminous coal mining, one who operates a hoist powered by electricity to haul loaded and empty cars along a haulage slope to surface of mine. *DOT*

electric sponge

An electric centrifugal pump consisting of a small vertical centrifugal pump so designed that it will draw water if it is only 2 to 3 in (5.1 to 7.6 cm) deep. It is placed in the water at the bottom of a shaft and lifts the water up to a horizontal centrifugal pump placed about 50 ft (15.2 m) above. *Lewis*

electric squib

A small shell containing an explosive compound that is ignited by the electric current brought in through the lead wires. Used for firing single small holes loaded with black powder. *Lewis*

electric steel

Steel made in an electric furnace. *Mersereau, 2*

electric traction

The haulage of vehicles by electric power, derived from overhead wires, third rail, storage batteries, or diesel-driven generators mounted on the vehicles. *Hammond*

electric wheel

A wheel containing the motor and all the required gearing so that it is an independent drive unit. *Woodruff*

electric winder

A winder or hoist driven by an electric motor. *Nelson*

electroacoustic transducer

A transducer for receiving waves from an electric system and delivering waves to an acoustic system or vice versa. *Hy*

electrocast process

A method of producing refractory materials in the desired form by mixing the raw materials in the requisite proportions, heating to fusion in an electric furnace, and then casting. *Osborne*

electrochemical

Chemical action employing a current of electricity to cause or to sustain the action. *Crispin*

electrochemical corrosion

Corrosion that occurs when current flows between cathodic and anodic areas on metallic surfaces. *ASM, 1*

electrochemical equivalent

The weight of an element, compound, radical, or ion involved in a specified electrochemical reaction during the passage of a unit quantity of electricity, such as a faraday, an ampere-hour, or a coulomb. *Lowenheim*

electrochemical series

See: [electromotive force series](#)

electrode

a. In arc welding, a current-carrying rod that supports the arc between the rod and work, or between two rods as in twin carbon-arc welding. It may or may not furnish filler metal. *ASM, I* b. In resistance welding, a part of a resistance welding machine through which current and, in most cases, pressure are applied directly to the work. The electrode may be in the form of a rotating wheel, rotating roll, bar, cylinder, plate, clamp, chuck, or modification thereof. *ASM, I* c. A conductor (as a metallic substance or carbon) used to establish electrical contact with a nonmetallic portion of a circuit (as in an electrolytic cell, a storage battery, an electron tube, or an arc lamp). See also: [anode](#); [cathode](#).
Webster 3rd

electrode burnoff rate

The rate at which an electrode is consumed by an arc in units of mass per time per arc power. *Wood*

electrode configuration

Pattern in which the electrodes are set up. *Schieferdecker*

electrode consumption rate

The rate at which an electrode is consumed by an arc in units of mass per time per arc current. *Wood*

electrode melting rate

The rate at which an electrode is consumed by an arc in units of mass per time. *Wood*

electrodeposition

The deposition of a substance upon an electrode by passing electric current through an electrolyte. Electroplating (plating), electroforming, electrorefining, and electrowinning result from electrodeposition. Syn: [electrolytic deposition](#)

electrode potential

a. The potential difference at the surface of separation between the electronic and electrolytic conductors that make up the electrode. In the terminology of corrosion it is sometimes called the open-circuit potential. b. The potential of a half-cell as measured against a standard reference half-cell. *ASM, I*

electrode spacing

Distance between successive electrodes. *Schieferdecker*

electrodialysis

Dialysis assisted by the application of an electric potential across the semipermeable membrane. Two important uses of electrodialysis are in water desalination and in removing electrolytes from naturally occurring colloids such as proteins. CF: [electro-osmosis](#)

electroendosmosis

The movement of fluids through porous diaphragms caused by the application of an electric potential. *Lowenheim*

electroextraction

The application of electrolysis to recover metal from its salts. Syn: [electrowinning](#)

electrofiltration

The electromotive force set up between the two sides of the sheet when an electrolyte is forced through a sheet of some pervious solid dielectric. This electromotive force is proportional to the pressure and to the electrical resistivity of the liquid, and inversely proportional to its viscosity. *Lewis*

electrofiltration potential

An electrical potential that is caused by movement of fluids through porous formations. Syn: [streaming potential](#); [electrokinetic potential](#). *AGI*

electro galvanizing

The electroplating of zinc upon iron or steel. *ASM, I*

electrokinetic potential

See: [electrofiltration potential](#); zeta potential.

electrolysis

A method of breaking down a compound in its natural form or in solution by passing an electric current through it, the ions present moving to one electrode or the other where they may be released as new substances. *AGI*

electrolyte

a. A nonmetallic electric conductor (as a solution, liquid, or fused solid) in which current is carried by the movement of ions instead of electrons with the liberation of matter at the electrodes; a liquid ionic conductor. *Webster 3rd* b. A substance (as an acid, base, or salt) that, when dissolved in a suitable solvent (as water) or when fused, becomes an ionic conductor. *Webster 3rd* c. For ceramic applications, an electrolyte is a substance capable of dissociating partly or completely into ions in water. For clay dispersions, the basic electrolytes promote deflocculation while the acidic electrolytes produce the opposite effect, flocculation. *Lee*

electrolytic copper

Copper that has been refined by electrolytic deposition, including cathodes, which are the direct product of the refining operation; refinery shapes cast from melted cathodes; and, by extension, fabricators' products made therefrom. Usually when this term is used alone, it refers to electrolytic tough pitch copper without elements other than oxygen being present in significant amounts. *ASM, I*

electrolytic deposition

The production of a metal from a solution containing its salts by the passage of an electric current through the solution. In electrorefining, the operation is carried out in an electrolytic cell in which the metal is deposited upon the cathode or starting sheet. See also: [electrodeposition](#)

electrolytic dissociation

Dissociation in a solvent of molecules of the dissolving substance as cations and anions. Syn: [ionization](#)

electrolytic dissolution

The act or process of dissolving the diamond matrix metal in the crown of a bit utilizing the chemical decompositional effects of a direct electrical current on a metal object submerged in an acidic solution. *Long*

electrolytic iron

A very pure iron produced by an electrolytic process. It has excellent magnetic properties and is often used in magnet cores. *Crispin*

electrolytic lead

Lead refined by the Betts process; it has purity of about 99.995% to 99.998% lead. *CTD*

electrolytic polishing

Producing a smooth bright surface on metal by immersion as an anode in an electrolytic bath. *Webster 3rd*

electrolytic process

a. A process employing the electric current for separating and depositing metals from solution. *Fay* b. As used by the diamond-bit-setting industry, the process in which the chemical decompositional effects of subjecting metal objects immersed in an acidic solution to a flow of direct electric current is utilized to dissolve the metal in the crown of a worn diamond bit to free and salvage the diamonds. *Long*

electrolytic reduction

Removal of oxygen (or decrease of its active valency in the case of a positive element) by electrical means. *Pryor, 3*

electrolytic refining

Suspension of suitably shaped metal ingots as anodes in an electrolytic bath, alternated with sheets of the same metal in a refined state or inert metal, which act as starters or cathodes. Impurities remaining on the anodes are detached as anode slime or are dissolved in the electrolyte from which they must be systematically removed (stripped). *Pryor, 3*

electrolytics

The extraction and refining of metals by the use of electric currents. *Newton, 1*

electrolytic zinc

Zinc exceeding 99.9% purity, produced by electrodeposition. *Pryor, 3*

electrolyze

To decompose a compound, either liquid, molten, or in solution, by an electric current.

electromagnetic brake

One in which rubbing surfaces are pressed together when electric current is passed through a solenoid; also, a braking system that uses magnetic attraction generated by an electromagnet as a braking force. *Pryor, 3*

electromagnetic damping

Commonly found in seismometers of the induction type. It may be used in mechanical seismographs by employing a copper plate moving between two permanent magnets. Induction seismometers depend upon voltage generated by motion of coil in the magnetic field. *AGI*

electromagnetic detector

An instrument used in aerial geophysical prospecting for the direct detection of conducting ores. An alternating electromagnetic field is transmitted from an aircraft. This field is received by the conducting body in the Earth and reradiated with some change in phase. The resultant field is picked up by the device, towed behind the aircraft, and compared with the transmitted field. The phase shift is measured automatically and recorded as a profile during flight. See also: [geophysical exploration](#) *Nelson*

electromagnetic geophone

The simplest, most widely used type of geophone. It consists of a coil and a magnet, one rigidly fixed with respect to the Earth and the other suspended from a fixed support by a spring. Any relative motion between the coil and magnet produces an electromotive force across the coil's terminals that is proportional to the velocity of the motion. *Dobrin*

electromagnetic methods

Group of electrical exploration methods in which one determines the magnetic field that is associated with the electrical current through the ground. *Schieferdecker*

electromagnetic prospecting

A geophysical method employing the generation of electromagnetic waves at the Earth's surface; when the waves penetrate the Earth and impinge on a conducting formation or orebody, they induce currents in the conductors, which are the source of new waves radiated from the conductors and detected by instruments at the surface. *AGI*

electromagnetic separation

A process of removing magnetic materials from relatively nonmagnetic materials, using electromagnets which travel along a conveyor, over a drum, or into a revolving screen. See also: [electrostatic separator](#); tramp iron. *Nelson*

electromagnetic spectrum

The entire range of electrical energy, extending from the extremely long radio rays at one end to the extremely short X-rays at the other. The visible spectrum (visible light) is included.

electromagnetic surveying

The act or process of using a geophysical method of systematically measuring electromagnetic waves in a specific area of the Earth's surface or in an area adjacent to boreholes. See also: [electromagnetic prospecting](#)

electromagnetism

The totality of electric and magnetic phenomena, or their study; particularly those phenomena with both electric and magnetic aspects, such as electromagnetic induction. *AGI*

electrometallurgy

A term covering the various electrical processes for the industrial working of metals; e.g., electrodeposition, electrorefining, and operations in electric furnaces. *CTD*

electromotive force series

The elements can be listed according to their standard electrode potentials. The more negative the potential, the greater the tendency of the metals to corrode but not necessarily at higher rates. This series is useful in studies of thermodynamic properties. A hydrogen gas electrode is the standard reference and is placed equal to zero. All potentials are positive or negative with respect to the hydrogen electrode. Also known as the emf series. Syn: [electrochemical series](#)

electron

One of the constituent elementary particles of an atom. A charge of negative electricity equal to about 1.602×10^{-19} C and having a mass when at rest of about 9.107×10^{-28} g or 1/1,837 that of a proton. Electrons surround the positively charged nucleus of the atom and determine the chemical properties of the atom. *Webster 3rd; Lyman*

electron beam melting

A melting process in which heat is supplied by a beam of electrons directed at the metal in high vacuum. *Thomas*

electron capture

A mode of radioactive decay in which an orbital electron is captured by the nucleus. The resulting nuclear transformation is identical with that in beta⁺ emission. *AGI*

electronegative

Descriptive of element or group that ionizes negatively, or acquires electrons and therefore becomes negatively charged anion. *Pryor, 3*

electronic CO detector

A portable, lightweight instrument for detecting carbon monoxide in mine air. Most of these instruments allow instantaneous reading of the carbon monoxide content but can also be used in an automated recording and monitoring system.

electronic filter

An air cleaner in which particulate matter in the airstream is electrically charged, then attracted to surfaces oppositely charged. *Strock, 2*

electronic high-level indicator

An electronic device that signals an operator when a bin is filled to capacity.

electronic liquid density instrument

A glass float on the end of a thin rod suspended in a liquid which is supported by two flat springs so that it is constrained to precise vertical motion. The float-rod assembly carries a coil similar to the voice-coil of a dynamic loudspeaker and a differential transformer core. Vertical movement of the float is detected by the electrical response of the differential transformer. The coil moves in a strong, radial, magnetic field, and when the float is buoyed up by the liquid, the reaction force between the coil and the field is used to pull it down. Thus, balance is achieved at a null position by adjusting the coil current while observing the null indicator. *Hunt*

electronic microscope

An instrument similar to the ordinary light microscope, but producing a much magnified image, which is received on a fluorescent screen and is recorded by using a camera. Instead of a beam of light to illuminate the material, a parallel beam of electrons is used. Its magnification is up to about 100,000 times. *Nelson*

electronics

The utilization based on the phenomena of conduction of electricity in a vacuum (thermionic valves), in a gas (thyatrons), and in semiconductors (transistors). *NCB*

electronic sentry

A device for mounting on any direct-current mobile mining machine that receives its power through a portable cable. The device cuts off the power from the machine and its trailing cable in the event of a ground fault, short circuit, or break in the cable, and prevents electrical flow as long as the trouble exists. *Nelson*

electronic sorting

See: [LaPointe picker](#)

electronic tramp iron detector

An appliance to prevent large pieces of tramp iron from entering a primary breaker when the ore feed is by conveyor. The appliance is straddled across the conveyor and when the tramp metal (magnetic or nonmagnetic) of dangerous size passes under the detector it automatically stops the conveyor and sounds an alarm, and will not restart motion until the tramp material is removed. *Nelson*

electronic weighing

See: [weighing-in-motion system](#)

electro-osmosis

The motion of liquid through a membrane under the influence of an applied electric field. See also: [osmosis](#); [thermo-osmosis](#). *AGI*

electrophoresis

a. Movement of colloid particles toward an oppositely charged electrode through a solution. *Pryor, 3* b. The movement toward electrodes of suspended charged particles in a fluid by applying an electromotive force to the electrodes that are in contact with the suspension. See also: [cataphoresis](#)

electroplate

To plate with an adherent continuous coating by electrodeposition; esp., to plate with a metal. *Webster 3rd*

electroplating

Electrodepositing metal (may be an alloy) in an adherent form upon an object serving as a cathode. *ASM, 1*

electropneumatic lighting

A method of lighting in which the well glass surrounding the bulb is flushed out with compressed air through a special valve before a self-contained generator commences to run; afterwards the exhaust from the turbine is passed through the lamp fitting with a small back pressure of 1-1/2 to 2 psi (10.3 to 13.8 kPa), preventing ingress of methane. The equipment can be used underground where the use of electricity is prohibited and for both roadway and face lighting. *Sinclair, 1*

electropositive

a. Positively charged; having more protons than electrons. An electropositive ion is a cation. *Pryor, 3* b. Term used to describe substances that tend to pass to the cathode in electrolysis. *Mersereau, 2*

electrorefining

The process of anodically dissolving a metal from an impure anode and depositing it in a purer state at the cathode. *Lowenheim*

electroscope

Any of various instruments for detecting the presence of an electric charge on a body, for determining whether the charge is positive or negative, or for indicating and measuring the intensity of radiation by means of the motion imparted to charged bodies (as strips of gold leaf) suspended from a metal conductor within an insulated chamber. *Webster 3rd*

electrostatic capacity

Quantity of electricity needed to raise system one unit of potential. *Pryor, 3*

electrostatic cleaning process

A method of cleaning small sizes of coal, namely, 0.1 to 2 mm, by passing the material over a slowly rotating roller through a high-voltage electrostatic field between the earthed roller and an adjacent wire. Coal loses its charge very slowly and is carried further around by the roller than the impurities, thus effecting separation with reasonable efficiency. *Nelson*

electrostatic precipitator

The most efficient of the dust samplers, the electrostatic precipitator is a medium-volume instrument. Air is drawn through a metal tube serving as a collecting surface (the anode) in which a platinum wire mounted axially acts as the ionizing and precipitating electrode (the cathode). A potential of about 10,000 V direct current is maintained across the tube and wire. The assembly mounting and collecting tube contains a small fan to induce air flow. *Hartman, 1*

electrostatics

Science of electric charges captured by bodies that then acquire special characteristics because of their retention of such charges. Electrostatic bunching is particle cling during the laboratory screening of dry material in which frictional electric charge is set up. *Pryor, 3*

electrostatic separation

A method of separating materials by dropping feed material between two electrodes, positive and negative, rotating in opposite directions. Nonrepelled materials drop in a vertical plane; susceptible materials are deposited in a forward position somewhat removed from the vertical plane. *ASM, 1*

electrostatic separator

A vessel fitted with positively and negatively charged conductors that may be used for extracting dust from flue gas or for separating mineral dust from gangues. *Nelson*

electrostatic strength

As applied to electric blasting caps, a measure of the detonator's ability to withstand electrostatic discharges without exploding. *Fraenkel*

Electrotape

A trade name for a precise electronic surveying device that transmits a radio-frequency signal to a responder unit, which in turn transmits the signal back to the interrogator unit. The time lapse between original transmission and receipt of return signal is measured and displayed in a direct digital readout for eventual reduction to a precise linear distance. It operates on the same principle as the tellurometer. See also: [tellurometer](#)

electrowinning

An electrochemical process in which a metal dissolved within an electrolyte is plated onto an electrode. Used to recover metals such as cobalt, copper, gold, and nickel from solution in the leaching of ores, concentrates, precipitates, matte, etc.

electrum

a. A part of the series isometric native gold-silver (Au-Ag); deep to pale yellow; argentiferous gold containing more than 20% silver. Also spelled *elektrum*. Syn: [gold argentide](#) b. An ancient Greek name, now obsolete, for amber. Also spelled *elektron*.

electrum metal

An alloy of gold and silver; contains from 55% to 88% gold. *Pryor, 3*

element

a. A substance that cannot be decomposed into other substances. *AGI* b. A substance all of whose atoms have the same atomic number. The first definition was accepted until the discovery of radioactivity (1896), and is still useful in a qualitative sense. It is no longer strictly correct, because (1) the natural radioactive decay involves the decomposition of one element into others, (2) one element may be converted into another by bombardment with high-speed particles, and (3) an element can be separated into its isotopes. The second definition is accurate, but has the disadvantage that it has little relevance to ordinary chemical reactions or to geologic processes. *AGI* c. In crystallography, any point, line, or plane about which crystal structure, crystal faces, or crystal symmetry, including translation, is symmetrically arrayed. CF: [operation](#)

elementary particle

Applied to any particle that cannot be further subdivided.

eleolite

A dark, translucent massive or coarsely crystalline variety of nepheline; greasy luster; may be used as an ornamental stone. Also spelled: *elaeolite*; *elaolite*.

eleolite syenite

See: [nepheline syenite](#)

elevating conveyor

Any conveyor used to discharge material at a point higher than that at which it was received. Term is specific. applied to certain underground mine conveyors.

elevating grader

A grader equipped with a collecting device and elevator, by which the loosened material can be loaded to spoil banks or into vehicles for transport. See also: [belt loader](#)

elevation

A general term for a topographic feature of any size that rises above the adjacent land or the surrounding ocean bottom; a place or station that is elevated. The vertical distance from a datum (usually mean sea level) to a point or object on the Earth's surface; esp. the height of a ground point above the level of the sea. The term is used synonymously with altitude in referring to distance above sea level, but in modern surveying practice the term elevation is preferred to indicate heights on the Earth's surface, whereas altitude is used to indicate the heights of points in space above the Earth's surface. *AGI*

elevation correction

In gravity measurements, the corrections applied to observed gravity values because of differences of station elevation to reduce them to an arbitrary reference or datum level, usually sea level. The corrections consist of (1) the free-air correction, to take care of the vertical decrease of gravity with increase of elevation, and (2) the Bouguer correction, to take care of the attraction of the material between the reference datum and that of the individual station. In seismic measurements, the corrections are applied to observed reflection time values due to differences of station elevation in order to reduce the observations to an arbitrary reference datum or fiducial plane. *AGI*

elevator

a. An apparatus used to facilitate the removal of coal from shuttle cars or low conveyors into mine cars. *BCI* b. A type of conveyor for raising coal, stone, ore, or slurry, usually at the coal preparation plant or mill. Normally it comprises a series of steel buckets attached to an endless chain. See also: [bucket elevator](#) *Nelson* c. A cage hoist. *Nichols, 1* d. A device for raising or lowering tubing, casing, or drive pipe, from or into well. e. An endless belt or chain conveyor with cleats, scoops, or buckets for raising material. *Webster 3rd* f. A cage or platform and its hoisting machinery, as in a building or mine, for conveying persons or goods to or from different levels. See also: [hoist](#) g. A vertical or steeply inclined conveyor. *BS, 5* h. A machine that raises material on a belt or a chain of small buckets. *Nichols, 1* i. A hinged circle or latch block provided with long links to hang on a hoistlike hook and used to hoist collared pipe, drill pipe and/or casing, and drill rods provided with elevator plugs. Some large elevators are fitted with slips for use on uncollared or flush-outside tubular equipment. *Long* j. A term sometimes and incorrectly used as a syn. of lifting bail. See also: [hydraulic dredge](#); [vertical reciprocating conveyor](#). *Long* k. An apparatus used to facilitate the removal of coal from shuttle cars or low conveyors into mine cars. *BCI*

elevator bucket

A vessel generally rectangular in plan and having a back suitably shaped for attachment to a chain or belt and a bottom or front designed to permit discharge of material as the bucket passes over the head wheel of a bucket elevator.

elevator dredger

A dredger fitted with a bucket ladder. *Hammond*

elevator plug

A short steel plug provided with a pin thread by means of which it may be coupled to the upper end of a stand of drill rods. Its diameter is greater than that of the drill rod to which it is attached, and hence it provides a shoulder that can be grasped by an elevator. When each stand of rod is provided with an elevator plug and an elevator is used in lieu of a rod-hoisting plug, the handling of rods is facilitated and a round trip can be made in less time. Syn: [rod plug](#)

elevator rope

A rope used to operate an elevator. *Zern*

Elie ruby

A small-grained variety of pyrope garnet in the trap tuff of Kincaig Point, near Elie, Fife, Scotland.

eliquate

a. To liquate; smelt. *Webster 3rd* b. To part by liquation. *Webster 3rd*

elkerite

A name applied to a subgroup of pyrobitumens rich in oxygen and partly soluble in alkali. They resemble an earthy brown coal and probably represent a product of intense weathering of bitumens. *Tomkeieff*

ellestadite

A hexagonal mineral, $\text{Ca}_5 (\text{SiO}_4, \text{PO}_4, \text{SO}_4)_3 (\text{F}, \text{OH}, \text{Cl})$; apatite group; it is chlorellestadite if $(\text{Cl} > \text{OH}, \text{F})$, fluorellestadite if $(\text{F} > \text{OH}, \text{Cl})$, or hydroxyllestadite if $(\text{OH} > \text{F}, \text{Cl})$. Hydroxyllestadite occurs as veinlets in blue calcite associated with wilkeite, idocrase, and similar contact metamorphic minerals at Crestmore, Riverside County, CA.

elliptical polarization

In optics, elliptically polarized light consisting of upward-spiraling vibration vectors, the surface of which is elliptical rather than circular, as in circular polarization. It is caused by the inconstant lengths of vibration vectors of mutually perpendicular plane-polarized

waves whose path differences differ in phase by amounts other than $(n+1)/4\lambda$ on emergence from a crystal. *AGI*

Elmore jig

A plunger-type jig of either single or multiple compartments. Its distinguishing features are (1) an automatic control in the form of a cylinder that measures the specific gravity of the mixture of coal and refuse; (2) the refuse draw is a star gate under the overflow lip in each compartment, which extends the full width of the jig; and (3) the hutch is commonly collected with a screw conveyor and discharged through the refuse elevator. Used both for treatment of nut and slack sizes of bituminous coal. *Mitchell*

elpasolite

An isometric mineral, $K_2 NaAlF_6$; associated with pachnolite in cryolite-bearing pegmatites of the Pikes Peak region, El Paso County, CO.

elpidite

An orthorhombic mineral, $Na_2 ZrSi_6 O_{15} \cdot 3H_2 O$; in fibrous, columnar, prismatic crystals in albitized nepheline-syenite pegmatites at Narsarsuk, Greenland; Kola Peninsula, Russia; Mont St. Hilare, PQ, Canada; and Tarbagatai, Kazakhstan.

Elsner's equation

In dissolution of gold by dilute aerated cyanide solution this reads: $4Au + 8NaCN + O_2 + 2H_2 O = 4NaAu(CN)_2 + 4NaOH$. Analogous equation is given for silver. Other mechanisms have been suggested by Janin and Bodlaender, the latter requiring two stages of reaction with the intermediate formation of hydrogen peroxide. See also: [MacArthur and Forest cyanide process](#)

Eltran method

Electrical exploration method in which an electrical transient is sent into the Earth and the change in shape of this transient is studied. *Schieferdecker*

eluant

Liquid used to displace captured ions from the zeolite or resin on which they are held; also, in ion exchange processes, solution used for elution. In chromatography, the solution used to displace absorbed substances. *Pryor, 3*

elutriation

a. A method of mechanical analysis of a sediment, in which the finer, lightweight particles are separated from the coarser, heavy particles by means of a slowly rising current of air or water of known and controlled velocity, carrying the lighter particles upward and allowing the heavier ones to sink. *AGI* b. Purification, or removal of material from a mixture or in suspension in water, by washing and decanting, leaving the heavier particles behind. Syn: [water separation](#)

elutriator

An appliance for washing or sizing very fine particles, based on the principle that large grains settle at a faster rate through a liquid than small grains of the same material. The medium is commonly an upward current of water. See also: [hydraulic classifier](#); [Stokes' law](#). *Nelson; Pryor, 3*

eluvial

a. Said of an incoherent mineral deposit, such as a placer, resulting from the decomposition or disintegration of rock in place. The material may have slumped or washed downslope for a short distance but has not been transported by a stream. *AGI* b. Pertaining to eluvium; residual. *AGI*

eluvium

a. An accumulation of rock debris produced in place by the decomposition or disintegration of rock; a weathering product; a residue. *AGI* b. Fine soil or sand moved and deposited by the wind, as in a sand dune. CF: [alluvium](#)

elvan

Cornish term for pneumatolized granite rocks containing tourmaline, fluorite, or topaz. *Pryor, 3*

emaldine

See: [emaldine](#)

emanation deposit

An ore deposit of gaseous magmatic origin.

embankment

A linear structure, usually of earth or gravel, constructed so as to extend above the natural ground surface and designed to hold back water from overflowing a level tract of

land, to retain water in a reservoir, tailings in a pond, or a stream in its channel, or to carry a roadway or railroad; e.g., a dike, seawall, or fill. *AGI*

embayment

a. Penetration of microcrystalline groundmass material into phenocrysts, making their normal euhedral boundaries incomplete. An irregular corrosion or modification of the outline of a crystal by the magma from which it previously crystallized or in which it occurs as a foreign inclusion; esp. the deep corrosion into the sides of a phenocryst. The penetration of a crystal by another, generally euhedral, crystal. Such a crystal is called an embayed crystal. *AGI* b. A downwarped area containing stratified rocks, either sedimentary or volcanic or both, that extends into a terrain of other rocks, e.g., the Mississippi Embayment of the U.S. Gulf Coast. *AGI*

embolite

a. Sectile, ductile; occurs as gray, yellowish or greenish-gray hornlike masses, waxy coatings, or crusts, as a secondary mineral in the oxidized zone of silver deposits; commonly associated with native silver, manganese oxides, and secondary lead and copper minerals. b. The chief source of silver in some Chilean mines occurring as yellow-green incrustations and masses. It occurs in Australia at Broken Hill, New South Wales, and at Silver Reef, Victoria; widespread in the silver mining districts of the United States. Syn: [horn silver](#)

embrittlement

Reduction in the normal ductility of a metal because of a physical or chemical change. *ASM, 1*

emerald

a. A brilliant green gem variety of beryl, highly prized as a gemstone. The color, which is caused by chromium or vanadium impurity, ranges from medium-light to medium-dark tones of slightly bluish green to slightly yellowish green. Syn: [smaragd](#) b. Any of various gemstones having a green color; e.g., oriental emerald (sapphire), copper emerald (diopase), Brazilian emerald (tourmaline), or Uralian emerald (demantoid variety of andradite garnet). c. Said of a gemmy and richly green-colored mineral; e.g., emerald jade (jadeite), emerald spodumene (variety hiddenite), or emerald malachite (diopase).

emerald copper

See: [diopase](#)

emerald cut

A step cut in which the finished gem is square or rectangular and the rows (steps) of elongated facets on the crown and pavilion are parallel to the girdle with sets on each of the four sides and in some cases at the corners; commonly used on diamonds to emphasize the absence of color and on emeralds and other colored stones to enhance the color. CF: [step cut](#)

emerald filter

See: [emerald glass](#)

emerald glass

The trade name for a color filter through which genuine emeralds and some other genuine stones appear reddish to violetish while glass imitations and some genuine stones appear greenish. Syn: [berylscope](#) See also: [Walton filter](#)

emeraldine

A misnomer for chalcedony stained green with chromic oxide. It is a deeper green than nickel-stained chalcedony and, unlike the nickel types, shows a red residual color under the dichromatic filter.

emerald jade

Semitransparent to translucent jadeite of emerald color. Syn: [imperial jade](#)

emerald loupe

See: [Walton filter](#)

emerald malachite

See: [diopase](#)

emerald nickel

See: [zaratite](#)

emerald triplet

An assembled stone commonly consisting of a crown and pavilion of rock crystal bound together by transparent green cement or a thin piece of green sintered glass; immersed in water and viewed sideways, the top and bottom are colorless with a line of color along the girdle. Green or colorless beryl may be used for the crown and possibly for the

pavilion. Glass may be used for the pavilion, and sometimes for the crown as well, but the trade still calls it an emerald triplet. Syn: [Soude emerald](#) See also: [tripletine](#)

emerandine

A misnomer for diopase.

emergence

a. A change in the levels of water and land such that the land is relatively higher and areas formerly under water are exposed; it results either from an uplift of the land or from a fall of the water level. Ant: submergence. *AGI* b. The point where an underground stream appears at the surface to become a surface stream. Syn: [resurgence](#); [rise](#); [rising](#). *AGI*

emery

An impure mineral of the corundum or aluminum oxide type used extensively as an abrasive before the development of electric-furnace products. See also: [emery rock](#)

emery rock

A granular rock that is composed essentially of an impure mixture of corundum, magnetite, and spinel, and that may be formed by magmatic segregation or by metamorphism of highly aluminous sediments. Syn: [emery](#); corundolite. *AGI*

emildine

A variety of spessartine garnet, with yttrium substituting for manganese up to 2%, in pegmatites at Elk Mountain, NM. See: [spessartine](#)

emilite

See: [emildine](#)

emission spectra

Monochromatic light from quantized electron transitions in thermally excited ions or atoms. CF: [absorption spectra](#)

emission spectrum

A spectrum regarded as characterizing the body that emits the rays rather than one through which they pass. *Standard, 2*

emission standards

The maximum amount of pollutant permitted to be discharged from a single polluting source. *NSC, 1*

emissivity

The ratio of radiant energy emitted by a body to that emitted by a perfect black body. A perfect black body has an emissivity of 1; a perfect reflector an emissivity of 0. *Strock, 2*

emmonsite

A triclinic mineral, $\text{Fe}_2(\text{TeO}_3)_3 \cdot 2\text{H}_2\text{O}$; in yellow-green microcrystalline masses, fibrous crusts, patches of minute acicular crystals, or thin scaly coatings in the oxidation zones of gold and silver telluride districts of North and Central America.

Emory picker

A chute with narrow opening for the cleaning of coal. The slate, traveling slowly because of friction, falls into the openings and thus is removed from the coal, which, rolling freely down the incline, is carried over the narrow gap. *Zern*

Empire drill

a. A light, hand-operated churn drill for testing placers from 10 to 125 ft (3.0 to 38.1 m) deep, though it is more commonly used for shallower holes. It consists of a string of 4-in (10.2-cm) casing, to the lower end of which is screwed a toothed cutting shoe. To the upper part, projecting above the ground, is fastened a round steel platform on which workers stand while operating the drilling tools. The casing can be turned by workers or a horse on the end of a long sweep fastened to the platform. The core of material inside the casing is loosened and brought to the surface by a drill pump on the end of a string of rods. CF: [Banka drill](#) *Lewis* b. A term often misused as a synonym for churn drill. *Long*

emplacement

A process by which igneous rock intrudes, or an orebody is formed in older rocks. *AGI*

emplectite

An orthorhombic mineral, CuBiS_2 ; metallic, grayish to tin-white, acicular to prismatic crystals with longitudinal striations; sp gr, 6.3 to 6.5; associated with chalcopyrite and other sulfides in silver veins or bismuth-rich parts of contact metamorphic deposits; may be confused with bismuthinite.

emplectum

See: [emplectite](#)

empressite

An orthorhombic mineral, AgTe ; forms fine granular, pale-bronze masses; sp gr, 7.61; associated with galena and native tellurium at the Empress Josephine Mine, Kerber Creek district, CO.

empty

An empty car, truck, tub, box, or wagon. *Mason*

empty-car puller

In bituminous coal mining, a laborer who pulls empty cars from cage or detaches them from hoisting cable when hoisting of loaded cars is done on one side of the shaft or haulage slope and lowering is done on the other. *DOT*

empty rope

Any winding or hauling rope from which the load upon it has been removed. *Fay*

empty track

A track for storing empty mine cars. *Fay*

empty trip

Applies to empty coal, ore, and waste cars returning for another load. *Fay*

Ems method

The condensation of dust and fumes from calcining furnaces by use of large flues filled with parallel rows of sheet iron. *Fay*

emulsification

The phenomenon of holding finely divided particles of a liquid in suspension within the body of another liquid. Banka method. *Shell*

emulsifier

a. See: [mud mixer](#) b. A saponifying or other agent added to water and oil or water and resins, causing them to form an emulsion. *Long*

emulsion

a. A liquid mixture in which a fatty or resinous substance is suspended in minute particles almost equivalent to molecular dispersion. *Fay* b. A suspension of one finely divided liquid phase in another. *ASM, I*

emulsion texture

An ore texture showing minute blebs or rounded inclusions of one mineral irregularly distributed in another. *AGI*

enantiomorphism

Having crystal forms that, while possessing neither a plane nor a center of symmetry, may occur in two positions that are mirror images of one another. The two positions cannot be converted into each other by any rotation, but are related to each other as are the right and left hand, hence designated right- and left-handed forms. Enantiomorphous crystals cause circular polarization of light, e.g., quartz.

enantiomorphous

In crystallography, similar in form but not superposable related to each other as the right hand is to the left, hence, one the mirror image of the other. *AGI*

enargite

An orthorhombic mineral, $\text{Cu}_3 \text{AsS}_4$; dimorphous with luzonite, metallic gray-black; in vein and replacement copper deposits as small crystals or granular masses; an important ore of copper and arsenic; may contain up to 7% antimony; localities include Butte, MT; Chuquicamata, Chile; Cerro de Pasco, Colquijirca, Peru; Tsumeb, Namibia; and Bor, Serbia.

en cabochon

Cut in a style characterized by a smooth-domed, but unfaceted, surface; e.g., a ruby cut en cabochon in order to bring out the star. Etymol: French. See also: [cabochon](#) for those gems that depend for their beauty largely upon minute oriented inclusions (e.g., crocidolite, star ruby, or sapphire), the plan of the stone being circular or oval.

encroachment

a. To work coal or mineral beyond the boundary that divides one mine area from another; to work coal from a barrier pillar that has been left as a safety measure. Also called trespass. *Nelson* b. The advancement of water, replacing withdrawn oil or gas in a reservoir. *AGI*

encrustation

a. A crust or coating of minerals formed on a rock surface; e.g., calcite on cave objects, soluble salts on a playa, or manganese-rich crusts on the ocean or lake floor. *AGI* b. The process by which a crust or coating is formed. Syn: [incrustation](#) *AGI*

end

a. The secondary cleavage more or less at right angles to the bord or face cleat. b. A direction parallel to the main natural line of cleat or cleavage in coal. Also called end line. *TIME* c. Solid rock face at the termination of a tunnel. *Pryor, 3*

end-bump table

A mechanically operated, sloping table by which heavy and light materials are separated. The end motion imparted to the table tends to drive all minerals up the slope of the table, but a flow of water carries the light materials down faster than the mechanical motion carries them up. The heavy materials settle to the bottom and finally reach the upper end and are delivered into a proper receptacle. The Gilpin County, Imlay, and Golden Gate concentrators are the chief types. Syn: [Imlay table](#) *Liddell*

end cleat

See: [butt cleat](#)

end clinometer

A clinometer designed to be fitted only to the bottom end of a drillrod string, as contrasted with a line clinometer that can be coupled into the drillrod string at any point between two rods. *Long*

end-discharge tippler

A framework to discharge the coal or mineral from a mine car or a wagon by elevating the rear end and to deliver the load from its front end onto a screen, chute, or bunker below track level. *Nelson*

end-dump car

See: [mine car](#)

end dumping

Process in which earth is pushed over the edge of a deep fill and allowed to roll down the slope. *Carson, 1*

endellinite

See: [bournonite](#)

endellionite

See: [bournonite](#)

endellite

A monoclinic mineral, $\text{Al}_2 \text{Si}_2 \text{O}_5 (\text{OH})_4 \cdot 2\text{H}_2 \text{O}$; kaolinite-serpentine group; soft, colorless to white; commonly tinted by impurities. (It is called halloysite in European literature.) Formerly called hydrated halloysite, hydrohalloysite, hydrokaolin.

end face

A coal face that is at right angles to the main cleats in the seam. *Nelson*

end-fired furnace

A furnace with fuel supplied from the end wall. *ASTM*

endgate

a. Gate at the front end of a car as it travels toward the dump. This gate has hooks that are engaged at the dump by stirrups that lift it, so that when the dump pitches forward the coal slides under the uplifted endgate and is discharged onto a chute or over a dump pile. *Zern* b. A gate leading to and at right angles to an end face. Also called ending. *TIME*

endgate car

A mine car constructed with one hinged end that lifts up as the car is tilted down, permitting the coal, ore, and waste to run out. See also: [mine car](#)

ending

a. A road driven at right angles to the end cleat. *Mason* b. Eng. An adit driven in a direction with the grain of the coal. *Fay*

endings

A pillar method of working. See also: [narrow work](#)

endless chain

A device for hauling coal in which a chain passes from the engine along one side of the road, around a pulley at the far end, and back again on the other side of the road. Empty cars, attached to one side of the chain by various kinds of clips or hooks, are hauled into the mine; loaded cars attached to the other side of the chain are hauled out of the mine. *Korson*

endless rope

A rope that moves in one direction, one part of which carries loaded cars from a mine at the same time that another part brings the empties into the mine. *Zern*

endlichite

An arsenian variety of vanadinite, intermediate in composition between vanadinite and mimetite.

endlines

The boundary lines of a mining claim that cross the general course of the vein at the surface. If the side lines cross the course of the vein instead of running parallel with it, they then constitute endlines. When a mining claim crosses the course of the lode or vein instead of being along such lode or vein, the endlines are those that measure the width of the claim as it crosses the lode. *Fay*

endlines not parallel

Extralateral rights are allowed on a claim whose endlines converge, but they are not allowed in case the endlines diverge. Converging endlines on a claim would have the disadvantage of giving the owner of such a claim a continually diminishing length of vein on working down the dip. *Lewis*

end member

a. One of the two or more simple compounds of which an isomorphous (solid-solution) series is composed. For example, the end members of the plagioclase feldspar series are albite, $\text{NaAlSi}_3\text{O}_8$, and anorthite, $\text{CaAl}_2\text{Si}_2\text{O}_8$. Syn: [minal](#) b. One of the two extremes of a series; e.g., types of sedimentary rock or of fossils. *AGI*

endogene

See: [endogenetic](#)

endogenetic

Derived from within; said of a geologic process, or of its resultant feature or rock, that originates within the Earth, e.g., volcanism, volcanoes, extrusive rocks. The term is also applied to chemical precipitates, e.g., evaporites, and to ore deposits that originate within the rocks that contain them. CF: [exogenetic](#); [hypogene](#). Syn: [endogene](#); endogenic; endogenous. *AGI*

endogenetic effects

See: [endomorphism](#)

endogenic

See: [endogenetic](#)

endogenous

See: [endogenetic](#)

endometamorphism

See: [endomorphism](#)

endomorph

A crystal surrounded by another crystal of a different mineral species. Adj. endomorphic, endomorphous.

endomorphic

Pertaining to contact metamorphism that takes place within the cooling intrusive rock; resulting from the reaction of the wall rock upon the peripheral portion of an intrusion.

endomorphic metamorphism

See: [endomorphism](#)

endomorphism

Changes within an igneous rock produced by the complete or partial assimilation of country-rock fragments or by reaction upon it by the country rock along the contact surfaces. It is a form of contact metamorphism with emphasis on changes produced within the igneous body rather than in the country rock. The term was originated by Fournet in 1867. CF: [exomorphism](#) Syn: [endometamorphism](#); [endomorphie metamorphism](#). *AGI*

end-on

Working a seam of coal, etc., at right angles to the cleat, or natural planes of cleavage. *Fay*

end-on working

Working of coal seam at right angles to the natural cleats, joints, or slips. *Pryor, 3*

endoscope

In gemology, an instrument that affords a magnified image of the drill hole of a pearl, used to distinguish between genuine and cultured pearl. A tiny beam of light is directed into the walls of the drill hole to reveal whether the structure of the pearl's core is concentric (genuine) or parallel (cultured).

endostratic formation

Bedding in clays resulting from alternating, desiccation, and saturation by groundwater. *Hess*

endothermic

Accompanied by the absorption of heat. Opposite of exothermic. *CTD*

endplate

In timbering, where both a cap and a sill are used, and posts act as dividers, the posts become the endplates. See: [sideplate](#)

end-port furnace

A furnace with ports for fuel and air in the end wall. *ASTM*

ends

York. Headings driven on the end or end-on. *Fay*

end slicing

See: [top slicing combined with ore caving](#)

end span

A span that is a slab or a continuous beam at its interior support. *Hammond*

endurance

The ability of a metal or a fabricated structure to recover from or to withstand repeated stress loadings or fluctuations. *Pryor, 3*

endurance limit

That stress below which a material can withstand hundreds of millions of repetitions of stress without fracturing. It is considerably lower than rupture strength. Syn: [fatigue limit](#)

endwall

a. The brick, concrete, or stonework construction at the sides of an excavation built to carry a flat or arched roof. Also called sidewall. *Spalding* b. The vertical refractory wall, farthest from the furnace chamber, of the downtake of an open-hearth steel furnace. *Dodd* c. One of the two vertical walls terminating a battery of coke ovens or a bench of gas retorts; it is generally constructed of refractory bricks and heat-insulating bricks with an exterior facing of building bricks. *Dodd*

en echelon

Said of geologic features that are in an overlapping or staggered arrangement, e.g., faults. Each is relatively short, but collectively they form a linear zone, in which the strike of the individual features is oblique to that of the zone as a whole. Etymol: French en echelon, in steplike arrangement. *AGI*

enelectrite

Minute, colorless, monoclinic, lath-shaped crystals, presumably a hydrocarbon; found in chemawinite (variety of amber), Cedar Lake, MB, Canada. *Tomkeieff*

energizing coil

Primary coil that is used in inductive methods to set up electric currents in the Earth. *Schieferdecker*

energy

a. The ability of a body to perform work. *Shell* b. The capacity for producing motion. Energy holds matter together. It can become mass, or it can be derived from mass. It takes such forms as kinetic, potential, heat, chemical, electrical, and atomic energy, and it can be changed from one of these forms to another. *Leet, 1* c. Kinetic energy is that due to motion, and potential energy is that due to position. In a stream, for example, the total energy at any section is represented by the sum of its potential and kinetic energies. *Seelye, 1*

engineering geology

Geology as applied to engineering practice, esp. mining and civil engineering. As defined by the Association of Engineering Geologists (1969), it is the application of geologic data, techniques, and principles to the study of naturally occurring rock and soil materials or ground water for the purpose of ensuring that geologic factors affecting the location, planning, design, construction, operation, and maintenance of engineering structures, and the development of ground-water resources, are properly recognized and adequately interpreted, utilized, and presented for use in engineering practice. Syn: [geologic engineering](#)

engineering system

Any member of any assemblage of members such as a composite column, a coupling, a truss, or other structure.

engine pit

Eng.; Scot. A shaft used entirely for pumping purposes.

engine plane

a. A system of rope haulage in which the loads are raised or lowered on the slope by a steam or electric hoist. In the simplest form only one track and one rope are required, and power is used for raising the load. Double engine planes have two separate tracks or three rails and a passing turnout. *Lewis* b. A roadway, horizontal or inclined, on which tubs or cars are hauled by rope haulage. *Nelson* c. Direct rope haulage. *Pryor*, 3

engine tender

N. Staff. See: [brakeman](#)

English cupellation

A method of refining silver in which a small reverberatory furnace with a movable bed and a fixed roof is used. The bullion is charged gradually, and the silver is refined in the same furnace where the cupellation is carried on.

englishite

An orthorhombic mineral, $K_3 Na_2 Ca_{10} Al_{15} (PO_4)_{21} (OH)_7 \cdot 26H_2 O$; occurs with crandallite, wardite, and other phosphate minerals in variscite nodules at Fairfield, UT, and in the Tip Top pegmatite, SD.

English method

A method of smelting lead ore in which the characteristics are a large charge of lead ore, a quick roasting, a high temperature throughout, and the aim to extract all the lead in the reverberatory. The hearth inclines toward the middle of one of the sides, the lead collects in the furnace and is tapped at intervals into an outside kettle. *Fay*

English process

In copper smelting, the process of reduction in a reverberatory furnace, after roasting, if necessary.

English zinc furnace

A furnace in which zinc is reduced and distilled from calcined ores in crucibles. *Fay*

engorgement

The clogging of a furnace. *Fay*

enhydrite

a. A mineral or rock having cavities containing water. b. See: [enhydros](#)

enhydros

A hollow nodule or geode of chalcedony containing water, possibly in large amounts. Syn: [enhydrite](#)

enhydrous

Containing water; having drops of included fluid; as enhydrous chalcedony. *Standard, 2*

enigmatite

See: [aenigmatite](#)

enlarging shots

Boreholes driven after the face of the rock has been unkeyed, and two or three free faces have thus been provided. *Stauffer*

en masse conveyer

A conveyer comprising a series of skeleton or solid flights on an endless chain or other linkage that operates in horizontal, inclined, or vertical paths within a closely fitted casing for the carrying run. The bulk material is conveyed and elevated en masse in a

substantially continuous stream with a full cross section of the casing. Also called chain conveyor. Syn: [continuous stream conveyor](#)

en masse feeder

See: [conveyor-type feeder](#)

enriched uranium

See: [uranium](#)

enrichment

See: [supergene enrichment](#)

Ensign-Bickford hot-wire lighter

A fuse lighter similar to a Fourth-of-July sparkler, that burns for 2-1/2 min, sufficient time to light 30 to 50 fuses. The lead splitter is a lead tube of diameter about 1/8 in (3.2 mm) in filled with a slow-burning powder that burns at the rate of 36 s/ft (118 s/m) with a hot splitting flame. *Lewis*

Ensign-Bickford master fuse lighter

A shell, similar to a shotgun cartridge, that contains an ignition compound in the base. As many as seven fuses can be pushed into the shell until the fuses contact the ignition compound. The lighting of one fuse, which burns into the shell, sets off the compound and ignites the other six fuses. *Lewis*

enstatite

An orthorhombic mineral, $2[\text{MgSiO}_3]$; pyroxene group; dimorphous with clinoenstatite; a common rock-forming mineral in basalt, gabbro, norite, pyroxenite, and peridotite. Formerly called amblystegite, bronzite, chladnite, ficinite, hypersthene (in part), orthobronzite, orthoenstatite, orthohypersthene (in part), paulite, peckhamite, protobasite, shepardite, and victorite. See also: [pyroxene](#)

enstenite

A group name for the orthopyroxenes of the MgSiO_3 - FeSiO_3 isomorphous series. It includes enstatite, hypersthene, and orthoferrosilite. CF: [clinoenstenite](#)

entrainment

The process of picking up and carrying along, as the collecting and movement of sediment by currents, or the incorporation of air bubbles into a cement slurry. *AGI*

entropy

a. A measure of the unavailable energy in a system; i.e., energy that cannot be converted into another form of energy. *AGI* b. A measure of the mixing of different kinds of sediment; high entropy is approach to unmixed sediment of one kind. *AGI* c. Ratio of amount of heat added to air to the absolute temperature at which it is added. Measured in Btu. *Hartman, 1* d. Specific entropy is the ratio of entropy to weight of substance. *Strock, 2*

entry

a. In coal mining a haulage road, gangway, or airway to the surface. b. An underground passage used for haulage or ventilation, or as a manway. Back entry, the air course parallel to and below an entry. Distinguished from straight entry, front entry, or main entry. Dip entry, an entry driven downhill so that water will stand at the face directly down a steep dip slope. Gob entry, a wide entry with a heap of refuse or gob along one side. Slab entry, an entry that is widened or slabbed to provide a working place for a second miner. Double entry, a system of opening a mine by two parallel entries; the air current is brought into the rooms through one entry and out through the parallel entry or air course. Cutoff entry, an entry driven to intersect another and furnish a more convenient outlet for the coal. Single entry, a system of opening a mine by driving a single entry only, in place of a pair of entries. The air current returns along the face of the rooms, which must be kept open. Triple entry, a system of opening a mine by driving three parallel entries for the main entries. Twin entry, a pair of entries close together and carrying the air current in and out, so laid out that rooms can be worked from both entries. Also called double entry. c. A coal heading. To develop a coal mine in the United States, one or more sets of main entries are driven into the take. Each set consists of four to eight coal headings, connected at intervals by crosscuts. From these, and usually at right angles, butt entries, three to six in number, are driven at intervals of up to 1,500 yd (1.37 km). Between the sets of butt entries, face entries, three to four in number, are driven at intervals of up to 500 yd (0.46 km) to form a block or panel. The entries to split the panels may be 12 to 20 ft (3.7 to 6.1 m) wide and at 50- to 100-ft (15.2- to 30.5-m) centers. Each entry is made as productive as possible, and productivity is often higher in the entry work than in pillar extraction. See also: [pillar-and-stall](#)

entry air course

A passage for air parallel to an entry.

entry conveyor

See: [underground mine conveyor](#); entry table.

entry driver

A combination mining machine designed and built to work in entries and other narrow places, and to load coal as it is broken down. An undercutting frame and two vertical shearing frames serve to undercut and shear the sides of the coal, so that the ram equipped with bars and operated by hydraulic jacks can break down the coal. The height at which the ram operates against the coal, when the undercut and shearing are completed, is adjustable. A conveyor in the undercutting frame carries the broken-down coal back to another conveyor mounted on a turntable so that the coal can be loaded into a mine car, or slate can be deposited on the gob side of the entry. The entire machine is mounted in a pan. *Kiser*

entry driver operator

In bituminous coal mining, one who operates a type of coal cutter known as a heading machine that is adapted to the driving of underground haulageways in coal from one part of the mine to another or to the surface. Also called entry driving machine operator. *DOT*

entryman

a. A miner who works in an entry. *Fay* b. One who enters upon public land with intent to secure an allotment under homestead, mining, or other laws. *Webster 3rd* c. In anthracite and bituminous coal mining, one who is engaged in driving a haulageway, airway, or passageway from one place to another in the mine or to the surface. Also called heading driver. *DOT*

entry stumps

Pillars of coal left in the mouths of abandoned rooms to support the road, entry, or gangway until the entry pillars are drawn. In Arkansas, these pillars are called entry stumps even when the rooms are first driven, before any pillars are pulled or the rooms abandoned. *Fay*

entry table

A conveyor that transports material to the feeding position of a machine.

envelope

a. The outer or covering part of a fold, esp. of a folded structure that includes some sort of structural break. CF: [core](#) b. A metamorphic rock surrounding an igneous intrusion. c. In a mineral, an outer part different in origin from an inner part.

environmental assessment

An analysis of environmental conditions which may involve baseline environmental analyses and data gathered with regard to zoological, botanical, geologic, and economic factors. This data may be utilized for environmental impact statements. Abbrev.: EA. *SME, 1*

environmental audit

An evaluation of environmental conditions at a particular facility or site. Major items that could be relevant to an environmental audit for a mining facility may include information on permits, surface and mineral rights, mine ownership and violations, archaeological sites, hydrology issues, air pollution, waste disposal, impoundments, mine fires, underground injections and previously mined areas. *SME, 1*

Environmental Impact Statement

A statement which is prepared by a Federal agency with regard to a permit, and is required under the National Environmental Policy Act (NEPA). The EIS may include but is not limited to information relating to the purposes and needs to which the agency is responding by the preparation of the EIS, alternatives, and the environmental consequences which may arise from the proposed action. *SME, 1*

eolian

a. Pertaining to the wind; esp. said of such deposits as loess and dune sand, of sedimentary structures such as wind-formed ripple marks, or of erosion and deposition accomplished by the wind. *AGI* b. Said of the active phase of a dune cycle, marked by diminished vegetal control and increased dune growth. Etymol: Aeolus, god of the winds. Syn: [aeolian](#)

eolian deposit

Wind-deposited accumulations, such as loess and dune sand. *Stokes*

eolianite

A consolidated sedimentary rock consisting of clastic material deposited by the wind; e.g., dune sand cemented below ground-water level by calcite. *AGI*

eolian placer

A placer concentrated by wind action.

eon

a. The formal geochronologic unit of highest rank, next above era. The Phanerozoic Eon encompasses the Paleozoic, Mesozoic, and Cenozoic Eras. *AGI* b. One billion years. Also spelled aeon. *AGI*

eosphorite

A monoclinic mineral, $\text{MnAl}(\text{PO}_4)(\text{OH})_2 \cdot \text{H}_2\text{O}$; forms a series with childrenite; pink to rose red; in granite pegmatites associated with manganese phosphates.

Eotvoes balance

A sensitive torsion balance for measuring variations in the density of the underlying rocks; it records the horizontal gradient of gravity. *Webster 3rd*

Eotvoes torsion

See: [torsion balance](#)

Eotvoes torsion balance

See: [torsion balance](#)

epaulet

A five-sided step-cut gem resembling a shoulder ornament (epaulet) in outline.

epeirogenesis

See: [epeirogeny](#)

epeirogeny

As defined by Gilbert (1890), a form of diastrophism that has produced the larger features of the continents and oceans, for example, plateaus and basins, in contrast to the more localized process of orogeny, which has produced mountain chains. Epeirogenic movements are primarily vertical, either upward or downward, and have affected large parts of the continents, not only in the cratons but also in stabilized former orogenic belts, where they have produced most of the present mountainous topography. Some epeirogenic and orogenic structures grade into each other in detail, but most of them contrast strongly. Adj. epeirogenic. Syn: [epeirogenesis](#)

epi-

A prefix signifying on or upon. CF: [cata-](#)

epiasterism

Asterism seen by reflected light, as in star ruby or sapphire cut en cabochon to reveal asteria. The effect is created when light is reflected from suitably oriented inclusions within the stone.

epibenthic dredge

A bottom sampler consisting of a pair of sheet-metal skis attached to a light framework for a silk or nylon net. Removable rakers in front of the net stir up the bottom as the dredge advances, permitting the net to capture the benthic fauna and flora contained in the sediment. A bottom-walking wheel connected to a small counter indicates the distance over the bottom the device travels during a haul. *Hunt*

epibenthos

In oceanography, animals and plants found living below low tidemark and above the 100-fathom (183-m) line. *CTD*

epicontinental

Situated upon a continental plateau or platform, as an epicontinental sea. *Fay*

epidiabase

A name proposed as a replacement for epidiorite. *AGI*

epididymite

An orthorhombic mineral, $\text{NaBeSi}_3\text{O}_7(\text{OH})$; dimorphous with eudidymite; forms colorless tabular crystals in nepheline-syenite pegmatites with albite, elpidite, and analcime at Mont St. Hilare, PQ, Canada; Narsarsuk, Greenland; and Langesundfjord, Norway.

epidiorite

A metamorphosed gabbro or diabase in which generally fibrous amphibole (uralite) has replaced the original clinopyroxene (commonly augite). It is usually massive but may have some schistosity. See also: [epidiabase](#) *AGI*

epidosite

A metamorphic rock consisting of epidote and quartz, and generally containing other secondary minerals such as uralite and chlorite. *AGI*

epidote

a. A basic silicate of aluminum, calcium, and iron. One form is $\text{Ca}_2(\text{Fe}^{3+}, \text{Al})_3(\text{SiO}_4)_3(\text{OH})$; monoclinic; Mohs hardness, 6 to 7; sp gr, 3.25 to 3.5; and a common secondary constituent of igneous rocks. *Pryor*, 3 b. A monoclinic mineral, $2[\text{Ca}_2\text{FeAl}_2\text{O}(\text{OH})(\text{Si}_2\text{O}_7)(\text{SiO}_4)]$; green; forms a series with clinozoisite; a common rock-forming mineral with albite and chlorite in low-grade metamorphic rocks and an accessory in some igneous rocks; may be used as a minor gemstone; formerly called pistacite, arendalite, delphinite, thalalite. c. The mineral group allanite, allanite-(Y), clinozoisite, epidote, hancockite, mukhinite, piemontite, and zoisite.

epidotization

The hydrothermal introduction of epidote into rocks or the alteration of rocks in which plagioclase is albitized, freeing the anorthite molecule for the formation of epidote and zoisite, often accompanied by chloritization. These processes are characteristically associated with metamorphism. *AGI*

epigene

a. Said of a geologic process, or of its resultant features, occurring at or near the Earth's surface. CF: [hypogene](#) b. Pertaining to a crystal that is not natural to its enclosing material; e.g., a pseudomorph. *AGI*

epigenesis

a. The change in the mineral character of a rock as a result of external influences operating near the Earth's surface, e.g., mineral replacement during metamorphism. *AGI*
b. The changes, transformations, or processes, occurring at low temperatures and pressures, that affect sedimentary rocks subsequent to their compaction, exclusive of surficial alteration (weathering) and metamorphism; e.g., postdepositional dolomitization. *AGI*

epigenetic

a. Said of a mineral deposit formed later than the enclosing rocks. CF: [syngenetic](#) b. Produced on or near the Earth's surface, e.g., epigenetic valleys, etc. c. In ore petrology, applied to mineral deposits of later origin than the enclosing rocks or to the formation of secondary minerals by alteration. Syn: [epigenic](#)

epigenic

See: [epigene](#); epigenetic.

epigenite

An orthorhombic(?) mineral, $(\text{Cu,Fe})_5 \text{AsS}_6$ (?); metallic gray; forms prismatic crystals resembling arsenopyrite implanted on barite at the Neugl#1.uck Mine near Wittichen, Germany.

epiianthinite

See: [schoepite](#)

epimagmatic

See: [deuteric](#)

epineritic environment

The marine bottoms to a maximum depth of 20 fathoms (36.6 m). *Schieferdecker*

epiphysis

An apophysis or tongue of an intrusion which is detached from its source. Also spelled epiphesis. See also: [tongue](#)

epiplankton

In oceanography, plankton found in depths of less than 100 fathoms (183 m). *CTD*

epistilbite

A monoclinic mineral, $\text{Ca}[\text{Al}_2 \text{Si}_6 \text{O}_{16}] \cdot 5\text{H}_2 \text{O}$; zeolite group; dimorphous with goosecreekite; forms radiating spherical aggregates of prismatic crystals in cavities in basalt and andesite, or with beryl in pegmatites.

epistolite

A triclinic mineral, $\text{Na}_2 (\text{Nb,Ti})_2 \text{Si}_2 \text{O}_9 \cdot n\text{H}_2 \text{O}$; forms soft, pearly white rectangular plates in curved folia in the Julianehaab district of Greenland and the Lovozero alkali massif, Kola Peninsula, Russia.

epitaxy

a. Induced orientation of the crystal lattice of an electrodeposit at the plane of contact with the undisturbed underlying metal. *ASM, I* b. Orientation of one crystal with that of the crystalline substrate on which it grew; e.g., halite growing on a cleavage plane of mica because the mesh of the net of halite nearly coincides in shape and size with the pseudo-hexagonal net of the mica substrate. Adj: epitactic, epitaxial, epitaxial. CF: [distaxy](#); [topotaxy](#); [syntaxy](#).

epithermal

Said of a hydrothermal mineral deposit formed within about 1 km of the Earth's surface and in the temperature range of 50 to 200 degrees C, occurring mainly as veins. Also, said of that depositional environment. CF: [hypothermal deposit](#); [mesothermal](#); [leptothermal](#); [telethermal](#); xenothermal. *AGI*

epizone

According to Grubenmann's classification of metamorphic rocks (1904), the uppermost depth zone of metamorphism, characterized by low to moderate temperatures (less than 300 degrees C) and hydrostatic pressures with low to high shearing stress. Modern usage stresses pressure-temperature conditions (low metamorphic grade) rather than the likely depth of zone. CF: [mesozone](#); [katazone](#). *AGI*

epoch

a. The formal geochronologic unit, longer than an age and shorter than a period, during which the rocks of the corresponding series were formed. *AGI* b. A term used informally to designate a length (usually short) of geologic time; e.g., glacial epoch. *AGI*

epsomite

An orthorhombic mineral, $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$; bitter tasting; forms efflorescences of prismatic crystals, botryoidal masses, or incrustations on cave and mine walls from oxidizing sulfide minerals; also lacustrine deposits, mineral springs, and fumaroles. Syn: [epsom salt](#); bitter salt; hair salt. See also: [kieserite](#)

epsom salt

See: [epsomite](#)

eq.s. explosive

An unsheathed explosive incorporating cooling agents, which is equivalent in safety (relating to the ignition of methane-air mixture) on a charge-weight basis to an explosive having a sheath of cooling agents around it. Abbrev. for equivalent-to-sheathed explosive. *BS, 12*

equal-errors cut point

The density at which equal portions of the feed material are wrongly placed in each of two products of a specific-gravity separation. Syn: [wolf cut point](#)

equal-errors size

The separation size at which equal portions of the feed material are wrongly placed in each of two products of a sizing operation. *BS, 5*

equal-falling particles

Particles possessing equal terminal velocities. They are the oversize material and form the underflow of a classifier. See also: [Stokes' law](#); terminal velocity. *Nelson*

equalization of winding load

The balancing of the weight of the winding rope, which varies considerably during a winding cycle. See also: [balance rope](#); [winding](#); [winding drum](#). *Nelson*

equal lay

Ropes of which the layers of wires in strands have all been laid to the same length of lay. Also known as parallel lay. See also: [Warrington](#) *Hammond*

equant

a. Said of a crystal having the same or nearly the same diameter in all directions. CF: [anisodesmic](#); [tabular](#); [prismatic](#). Syn: [equidimensional](#); isometric. *AGI* b. Said of a sedimentary particle whose length is less than 1.5 times its width. *AGI* c. Said of a rock in which the majority of grains are equant. *AGI* d. Refers to crystals with roughly equal dimensions. CF: [tabular](#); lathlike; rodlike; acicular.

equant element

A fabric element all of whose dimensions are approx. equal. CF: [linear element](#); [planar element](#). *AGI*

equation of motion

The Newtonian law of motion states that the product of mass and acceleration equals the vector sum of the forces.

equiaxed crystals

Polyhedral crystals formed by spontaneous crystallization in the interior of a mass of metal in a mold. Distinguished from columnar crystals and chill crystals. *CTD*

equidimensional

See: [equant](#)

equiform

Said of crystals that have the same (or nearly the same) shape. *AGI*

equigranular

A textural term applied to rocks, the essential minerals of which are all of the same order of size. *Holmes, 1*

equilibrium

a. A perfect balance of physical forces such that when two or more forces act upon a body, the body remains at rest. *Morris* b. The state in which a reversible chemical reaction is proceeding at the same rate in each direction. Metastable equilibrium is a steady unsatisfied state that will undergo further change on addition of the phase necessary to complete its stability. Physical equilibrium can connote stable coexistence of a substance in two or more phases, such as solid, liquid, and/or vapor. *Pryor, 3* c. In geology, a balance between form and process, e.g., between the resistance of rocks along a coast and the erosional force of the waves. *AGI* d. That state of a chemical system in which the phases do not undergo any change of properties with the passage of time, provided they have the same properties when the same conditions are again reached by a different procedure. *AGI*

equilibrium diagram

See: [phase diagram](#)

equilibrium eutectic

The composition within any system of two or more crystalline phases that melts completely at the lowest temperature; the temperature at which such a composition melts. *ACSG, 2*

equilibrium moisture content

The moisture content of a soil when the water is static. *Nelson*

equilibrium moisture of coal

The moisture content retained at equilibrium in an atmosphere over a saturated solution of potassium sulfate at 30 degrees C, and 96% to 97% relative humidity. When the sample, before such equilibrium, contains total moisture at or above the equilibrium moisture, the equilibrium moisture may be considered as equivalent to inherent or bed moisture, and any excess may be considered as extraneous moisture.

equipment flowsheet

A diagram indicating, preferably by symbols, the units of plant to be used in the various operational steps carried out within a coal-preparation plant. *BS*, 5

equipotential line

- a. A line along which water will rise to the same elevation in piezometric tubes. *ASCE*
- b. A line along which the potential is everywhere constant for the attractive forces concerned.

equipotential-line method

A technique used in electrical prospecting requiring artificial currents. It is based on the principle that if two electrodes are inserted in the ground and an external voltage is applied across them, there will be a flow of current through the earth from one electrode to the other. If the medium through which the current flows is homogeneous in its electrical properties, the flow lines will be regular and in a horizontal plane, symmetrical about the line joining the electrodes. Any inhomogeneities in these properties will cause distortions in the lines of current flow. Such distortions indicate the existence of buried material with either higher conductivity than its surroundings, so that it attracts the flow lines toward itself, or with lower conductivity, so that it tends to force the lines into the surrounding medium. *Dobrin*

equipotential surface

A surface on which the potential is everywhere constant for the attractive forces concerned. The gravity vector is everywhere normal to a gravity equipotential surface; the geoid is an equipotential. Syn: [gravity equipotential surface](#); [niveau surface](#); [level surface](#). *AGI*

equivalent

Corresponding in geologic age or stratigraphic position; esp. said of strata or formations (in regions far from each other) that are contemporaneous in time of formation or deposition or that contain the same fossil forms. n. A stratum that is contemporaneous or equivalent in time or character. *AGI*

equivalent circuit

An electrical network, the frequency response of which is identical to that of a quartz oscillator plate. *Am. Mineral.*, 2

equivalent diameter

a. The diameter of a hypothetical sphere composed of material having the same specific gravity as that of the actual particle and of such size that it will settle in a given liquid at the same terminal velocity as the actual particle. Also called equivalent size. *ASCE* b. Twice the equivalent radius. *AGI*

equivalent evaporation

The quantity of water that would be evaporated by a given apparatus if the water is received by the apparatus at 212 degrees F (100 degrees C), and vaporized at that temperature under atmospheric pressure. It is expressed in kilograms per hour. *Strock, 2*

equivalent freefalling diameter

See: [equivalent particle diameter](#)

equivalent grade

In textural classification, refers to the arithmetic mean size. *AGI*

equivalent length

The resistance of a mine airway obstruction, duct or pipe elbow, valve, damper, orifice, bend, fitting, or other obstruction to flow, expressed in the number of feet of straight airway, duct, or pipe of the same cross section that would have the same resistance. *Strock, 2*

equivalent orifice

A term that compares the resistance of air of a mine to the resistance of a circular opening in a thin plate through which the same quantity of air flows under the same pressure as in the mine.

equivalent particle diameter

A concept used in evaluating the size of fine particles by a sedimentation process; it is defined as the diameter of a sphere that has the same density and the same freefalling velocity in any given fluid as the particle in question. CF: [particle size](#) Syn: [equivalent freefalling diameter](#)

equivalent radius

a. The radius of a spherical particle of density 2.65 (the density of quartz) which would have the same rate of settling as the given particle. *AGI* b. A measure of particle size, equal to the computed radius of a hypothetical sphere of specific gravity 2.65 (quartz)

having the same settling velocity and same density as those calculated for a given sedimentary particle in the same fluid; one half of the equivalent diameter. *AGI*

equivalent temperature

A composite of mean radiant temperature and air temperature; also defined as the mean temperature of the environment effective in controlling the rate of sensible heat loss from a black body in still air when the surface temperature and size of the black body are comparable to those of the human body. Where the enclosure surface (mean radiant temperature) and air temperatures are equal, this temperature is also the British equivalent temperature; when not equal, the British equivalent temperature is that temperature at which a body with an 80 degrees F (26.7 degrees C) surface temperature will lose sensible heat at the same rate as in the given environment. Syn: [British equivalent temperature](#)

equivolumnar wave

See: [distortional wave](#); S wave; transverse wave.

era

The formal geochronologic unit next in order of magnitude below an eon, during which the rocks of the corresponding erathem were formed; e.g., the Paleozoic Era, the Mesozoic Era, and the Cenozoic Era. Each of these includes two or more periods, during each of which a system of rocks was formed. Long-recognized Precambrian Eras are the Archeozoic (older) and Proterozoic (younger). *AGI*

eremeyevite

Former spelling of jeremejevite, also spelled eremeevite.

ericaite

An orthorhombic mineral, $(\text{Fe,Mg,Mn})_3 \text{B}_7 \text{O}_{13} \text{Cl}$; forms a series with boracite; dimorphous with congolite; Mohs hardness of 7 to 7-1/2; forms pseudocubes in halite-anhydrite deposits in the Harz Mountains, Germany.

Erinide

A U.S. trademark name for a yellowish-green synthetic spinel.

erinoid

A casein plastic used for molding many common objects and possibly for inferior gem imitations; sp gr, about 1.33; refractive index, 1.53 to 1.54.

eriochalcite

An orthorhombic mineral, $\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$; forms a sublimate of soft bluish-green woollike aggregates on the sides of fumaroles. Syn: [antofagasite](#); [erythrochalcite](#).

erosion

The group of physical and chemical processes by which earth or rock material is loosened or dissolved and removed from any part of the Earth's surface. It includes the processes of weathering, solution, corrosion, and transportation. The mechanical wear and transportation are effected by rain, running water, waves, moving ice, or winds, which use rock fragments to pound or to grind other rocks to powder or sand.

erosional unconformity

An unconformity that separates older rocks that have been subjected to erosion from younger sediments that cover them; specif. disconformity. *AGI*

erosion channel

See: [classical washout](#)

erosion surface

a. A land surface shaped and subdued by the action of erosion, esp. by running water. The term is generally applied to a level or nearly level surface. *AGI* b. An area that has been flattened by subaerial or marine erosion to form an area of relatively low relief at an elevation close to the base level (sea level) existing at the time of its formation. Relics of such surfaces may now be found far above sea level owing to the falling base level, below the present ocean surface. *Hunt*

erosion thrust

A thrust fault along which the hanging wall moved across an erosion surface.

erratic

A rock fragment carried by glacial ice or by floating ice, deposited at some distance from the outcrop from which it was derived, and generally though not necessarily resting on bedrock of different lithology. Size ranges from a pebble to a house-size block. *AGI*

error curve

A partition curve drawn to defined conventional scales with the portion showing recoveries over 50% reversed to enclose an error area. Syn: [tromp error curve](#)

error of closure

a. Of a traverse, the amount by which the computed position of the last point of the traverse fails to coincide with the initial point; i.e., the length of line necessary to close the traverse. Frequently, also, the ratio of the linear error of closure to the perimeter (also known as the error of the survey). *Seelye, 2* b. Of angles, the amount by which the sum of the measured angles fails to equal the true sum. *Seelye, 2* c. Of azimuths, the amount by which the measurement of the azimuth of the first line of a traverse, made after completing the circuit, fails to equal the initial measurement. *Seelye, 2* d. Of a level circuit, the amount by which the last computed elevation fails to equal the initial elevation; or the amount by which the differences of elevation in a circuit fail to add up (algebraically) to zero. *Seelye, 2* e. Of a horizon, the amount by which the sum of the angles measured around the horizon differs from 360 degrees. *Seelye, 2* f. Of a triangle, the amount by which the sum of the three angles of a triangle differs from the true sum; i.e., 180 degrees plus the spherical excess. *Seelye, 2*

erubescite

See: [bornite](#)

eruptive

Said of a rock formed by the solidification of magma; i.e., either an extrusive or an intrusive rock. Most writers restrict the term to its extrusive or volcanic sense. *AGI*

erythrine

See: [erythrite](#)

erythrite

A monoclinic mineral, $2[\text{Co}_3 (\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}]$; forms a series with annbergite and with hoernesite; occurs in soft pink to crimson crystals, globular or reniform masses, or earthy encrustations as a weathering product of cobalt ores in the oxidized parts of nickel-arsenic-silver-bearing veins; used as ore indicator for cobalt and possibly silver. Syn: [erythrine](#) cobalt ocher; peachblossom ore.

erythrocalcite

See: [eriochalcite](#)

escape

a. Eng. A second or additional shaft by which miners may get out of the mine in case of accident to the other shafts. Also an upcast; escape pit; escapeway. b. A wasteway for discharging the entire flow of a stream. *Seelye, I*

escape shaft

A shaft driven esp. to permit egress from the mine in case of emergency. *BCI*

escapeway

An opening through which the miners may leave the mine if the ordinary exit is obstructed. *Fay*

escarpment

a. A long, more or less continuous cliff or relatively steep slope facing in one general direction, breaking the continuity of the land by separating two level or gently sloping surfaces, and produced by erosion or by faulting. The term is often used synonymously with scarp, although escarpment is more often applied to a cliff formed by differential erosion. *AGI* b. A steep, abrupt face of rock, often presented by the highest strata in a line of cliffs, and generally marking the outcrop of a resistant layer occurring in a series of gently dipping softer strata; specif. the steep face of a cuesta. CF: [cuesta](#)

Eschka's mixture

A mixture of two parts magnesium and one part dried sodium carbonate; used as a reagent for determining sulfur in coal or coke. *Hackh*

eschynite

See: [aeschnite](#)

eskebornite

A tetragonal mineral, CuFeSe_2 ; chalcopyrite group; forms a series with chalcopyrite; is metallic brass yellow; variably magnetic; with chalcopyrite, clausthalite, and naumannite in dolomite veins, Eskeborn adit, Tilkerode, Harz Mountains, Germany.

eskolaite

A trigonal mineral, Cr_2O_3 ; hematite group; easily confused with hematite and magnetite; in a chromium-bearing tremolite skarn at the Outokumpu Mine, Finland.

Esperanza classifier

A classifier of the free-settling type in which the settled material is removed by dragging it up an inclined plane by means of a continuous belt of flat blades or paddles. It is continuous in its operation. *Liddell*

esplanade

A broad bench or terrace bordering a canyon, esp. in the plateau areas of the southwestern United States.

espley rock

A conglomerate or breccia with rapid lateral passage through grit to fine sandstone; cement usually ferruginous with some lime and alumina. Characteristically developed amid variegated clays of Etruria Marl group of Upper Coal Measures in the English Midlands. *Arkell*

essential mineral

A mineral component of a rock that is necessary to the classification and nomenclature of the rock, but that is not necessarily present in large amounts. CF: [accessory mineral](#)

essexite

An alkali gabbro primarily composed of plagioclase, hornblende, biotite, and titanite, with lesser amounts of alkali feldspar and nepheline. Essexite grades into theralite with a decrease in potassium feldspar and an increase in the feldspathoid minerals. Its name is derived from Essex County, MA. *AGI*

essonite

A yellow-brown or reddish-brown transparent gem variety of grossular garnet containing iron. Syn: [cinnamon stone](#); [hyacinth](#); [jacinth](#). See: [hessonite](#)

estramadurite

A massive variety of apatite found in Estramadura, Spain. A phosphate ore. *Hey, 1; English*

estuarine deposit

A sedimentary deposit laid down in the brackish water of an estuary, characterized by fine-grained sediments (chiefly clay and silt) of marine and fluvial origin mixed with a high proportion of decomposed terrestrial organic matter; it is finer grained and of more uniform composition than a deltaic deposit. *AGI*

estuary

a. The seaward end or the funnel-shaped tidal mouth of a river valley where fresh water comes into contact with seawater and where tidal effects are evident. *AGI* b. A portion of an ocean or an arm of the sea affected by fresh water; e.g., the Baltic Sea. *AGI* c. A drowned river mouth formed by the subsidence of land near the coast or by the rise of sea level. *AGI*

etch angle

The angle formed between the true horizon and the actual plane of the etch ring in an acid bottle as measured before capillarity corrections. Also called apparent angle. See also: [capillarity](#) *Long*

etch figure

A marking, commonly in the form of minute pits, produced by a solvent on a crystal surface; the form varies with the mineral species and the solvent, but reflects the symmetry of the structure; also called etching figure.

etching

A process of engraving in which lines, frosting, or roughening are produced by an acid or mordant. Often used in studying the composition and structure of metals, sandgrains, and crystals.

etch line

A line of demarcation between the etched and unetched portions of the inside of an acid bottle, used to determine the inclination of a borehole by an acid-dip survey. *Long*

etch method

A method, using a soda-lime glass tube partially filled with a dilute solution of hydrofluoric acid, of determining the angle at which a borehole is inclined at any specific point of its course below the collar. See also: [acid-dip survey](#)

etch pattern

Regular surface marking developed by solvent action on smooth surface of alloy or crystal, and characteristic for that specific substance. The reagent used is an etchant, usually of an acid in water or alcohol. *Pryor, 3*

etch ring

See: [etch line](#)

etch time

The time required for a dilute solution of hydrofluoric acid of a specific strength to etch the inside of an acid bottle enough so that the line of demarcation between the etched and unetched portions of the acid bottle is clearly discernible. Also known as etching time. *Long*

etch tube

See: [acid-etch tube](#)

ethanamide

See: [acetamide](#)

ethanol

See: [alcohol](#)

ethical gemology

The study of the correct and incorrect nomenclature of gems, with emphasis on clarifying names and terms that may mislead or deceive purchasers.

ethine

See acetylene.

ethmolith

A crosscutting intrusive body of plutonic rock that narrows downward.

ethylenediamene

Used as an electrolyte to transform coal into a tan-gray substance with a relatively high hydrogen-to-carbon ratio.

ethylene glycol

A highly explosive liquid $\text{HOCH}_2\text{CH}_2\text{OH}$; somewhat volatile; nonfreezing; explosive base. Used as an antifreeze. *Lewis*

ethyne

See: [acetylene](#)

etindite

a. Leucite nephelinite. *AGI* b. A dark-colored extrusive rock intermediate in composition between leucitite and nephelinite with phenocrysts of clinopyroxene in a dense groundmass of leucite, nepheline, and clinopyroxene. The name is not included in the IUGS classification of extrusive igneous rocks.

eubitumen

A collective name for fluid, viscid, and solid bitumens that are easily soluble in organic solvents. Petroleum, ozokerite, elaterite, and asphalt are examples. *Tomkeieff*

eucairite

An orthorhombic mineral, CuAgSe ; soft; sp gr, 7.6 to 7.8; in most deposits of selenium minerals, associated with unangite, klockmannite, and clausthalite, e.g., Smaland, Sweden; Copiapo, Chile; and the Harz Mountains, Germany. Also spelled eukairite.

eucalyptus oil

Frothing agent used in flotation. Essential oil distilled from leaves of eucalyptus trees. *Pryor, 3*

euchlorine

An orthorhombic mineral, $(\text{K,Na})_8 \text{Cu}_9 (\text{SO}_4)_{10} (\text{OH})_6 (?)$; emerald green; forms thin incrustations on lava and fumarole deposits on Mt. Vesuvius, Italy.

euchroite

An orthorhombic mineral, $\text{Cu}_2 (\text{AsO}_4)(\text{OH}).3\text{H}_2\text{O}$; vitreous; transparent to translucent; emerald or leek green; associated with azurite, malachite, or olivenite in the oxidation zones of copper deposits.

euclase

A monoclinic mineral, $4[\text{BeAlSiO}_4 (\text{OH})]$; vitreous; Mohs hardness, 7-1/2; in auriferous sands in Austria, Russia, Brazil, Peru, and Tasmania Australia; and used as a minor gemstone.

eucolite

A variety of eudialyte that is optically negative and rich in calcium. Also spelled eukolite.

eucryptite

A trigonal mineral, LiAlSiO_4 ; transparent, vitreous; fluoresces pink in UV light; Mohs hardness = 6-1/2; forms with albite in pegmatites. If heated, beta-eucryptite expands normal to the c axis, but contracts parallel to c.

eucrystalline

See: [macrocrystalline](#)

eudialyte

A trigonal mineral, $\text{Na}_4(\text{Ca,Ce})_2(\text{Fe,Mn,Y})\text{ZrSi}_8\text{O}_{22}(\text{OH,Cl})_2(?)$; weakly radioactive; in nepheline syenite and granite, commonly associated with arfvedsonite, sodalite, feldspar, aegirine, catapleiite, and astrophyllite. CF: [eucolite](#) Syn: [barsanovite](#)

eudidymite

A monoclinic mineral, $\text{NaBeSi}_3\text{O}_7(\text{OH})$; dimorphous with epididymite; vitreous, in transparent to translucent tabular crystals with lamellar twinning having one perfect and one imperfect cleavage; in nepheline-syenite pegmatites with albite, elpidite, and analcime.

eudiometer

An instrument for the volumetric measurement and analysis of gases. *Webster 3rd*

euohedral

a. Said of a mineral grain that is completely bounded by its own rational faces, and whose growth during crystallization or recrystallization was not restrained or interfered with by adjacent grains. *AGI* b. Said of the shape of such a crystal. Syn: [idiomorphic](#) subhedral. See: [automorphic](#)

Eulerian methods of current measurement

A measurement of the rate of flow past a geographically fixed point; current meter methods. *Hy*

eulite

See: [ferrosilite](#)

eulytite

An isometric mineral, $\text{Bi}_4(\text{SiO}_4)_3$; vitreous, transparent to translucent tetrahedral crystals associated with native bismuth near Schneeberg, Saxony, Germany. Syn: [bismuth blende](#)

euosmite

A brownish-yellow resin with low oxygen content and a characteristic pleasant odor found in brown coal.

europia

See: [europium oxide](#)

europium oxide

Rare-earth oxide; pale rose; Eu_2O_3 ; melting point, above 1,300 degrees C; and sp gr, 7.42. Used as a nuclear-control-rod material and in fluorescent glass. Syn: [europia](#) *Lee*; *Handbook of Chemistry and Physics*, 2

eusapropel

A well-matured organic ooze. *Tomkeieff*

euscope

A grain-size comparator. *Osborne*

eustasy

The worldwide sea-level regime and its fluctuations, caused by absolute changes in the quantity of seawater, e.g., by continental icecap fluctuations. *AGI*

eustatic

Pertaining to worldwide changes of sea level that affect all the oceans. Eustatic changes may have various causes, but the changes dominant in the last few million years were caused by additions of water to, or removal of water from, the continental icecaps. *AGI*

eutaxic

Said of a stratified mineral deposit. CF: [ataxic](#)

eutaxitic

Said of the banded structure of certain extrusive rocks, which results in a streaked or blotched appearance. Also, said of a rock exhibiting such structure, e.g., a eutaxite. The bands or lenses were originally ejected as individual portions of magmas, were drawn out in a viscous state, and formed a heterogeneous mass in response to welding. *AGI*

eutectic

Said of a system consisting of two or more solid phases and a liquid whose composition can be expressed in terms of positive quantities of the solid phases, all coexisting at an (isobarically) invariant point, which is the minimum melting temperature for the assemblage of solids. Addition or removal of heat causes an increase or decrease, respectively, of the proportion of liquid to solid phases, but does not change the temperature of the system or the composition of any phases. See also: [eutectoid](#) *AGI*

eutectic point

The lowest temperature at which a eutectic mixture will melt. Syn: [eutectic temperature](#)

eutectic ratio

The ratio of solid phases crystallizing from the eutectic liquid at the eutectic temperature. It is such as to yield a gross composition for the crystal mixture that is identical with that of the liquid. It is most frequently stated in terms of weight percent.

eutectic temperature

See: [eutectic point](#)

eutectic texture

A pattern of intergrowth of two or more minerals, formed as they coprecipitate during crystallization, e.g., the quartz and feldspar of graphic granite. See also: [exsolution texture](#) *AGI*

eutectoid

The equivalent of eutectic, when applied to a system all of whose participating phases are crystalline. *AGI*

eutectoid texture

See: [eutectic texture](#)

eutomous

In mineralogy, having distinct cleavage; cleaving readily. *Fay*

eutrophic

Said of a body of water characterized by a high level of plant nutrients, with correspondingly high primary productivity. *AGI*

eutrophic peat

Peat rich in plant nutrients, nitrogen, potassium, phosphorus, and calcium. Synonymous with calcareous peat. *Tomkeieff*

euxamite

Radioactive radium mineral found in Brazil. *Bennett*

euxenite

An orthorhombic mineral, $(Y,Ca,Ce,U,La,Th)(Nb,Ta,Ti)_2 O_6$; forms a series with polycrase; brilliant to vitreous brown to black; in pegmatites and placers commonly with monazite in Canada; Madagascar; Norway; and Pennsylvania. A source of uranium, niobium, and tantalum. Formerly called loranskite.

euxinic

a. Pertaining to an environment of restricted circulation and stagnant or anaerobic conditions, such as a fjord or a nearly isolated or silled basin with toxic bottom waters. Also, pertaining to the material (such as black organic sediments and hydrogen-sulfide muds) deposited in such an environment or basin, and to the process of deposition of such material (as in the Black Sea). *AGI* b. Pertaining to a rock facies that includes black shales and graphitic sediments of various kinds. Etymol: Greek euxenos, hospitable. *AGI*

evaluate

To fix a valuation, but not to appraise.

evaluation

The fixing of a evaluation, not an appraisal. Used in preference to the word valuation which is often confused with appraisal.

evansite

An amorphous mineral, $Al_3 (PO_4)(OH)_6 .6H_2 O(?)$; may contain small amounts of uranium and thorium; associated with limonite and allophane.

evaporate

To convert into vapor. See also: [evaporite](#)

evaporation

a. The process, also called vaporization, by which a substance passes from the liquid or solid state to the vapor state. Limited by some to vaporization of a liquid, in contrast to sublimation, the direct vaporization of a solid. Also limited by some (e.g., hydrologists) to vaporization that takes place below the boiling point of the liquid. The opposite of condensation. *AGI* b. The process by which a substance is converted from a liquid state into a vapor. Specif., the conversion of a liquid into vapor in order to remove it wholly or partly from a liquid of higher boiling point or from solids dissolved in or mixed with it. CF: [distillation](#); [sublimation](#).

evaporation gage

A graduated vessel of glass for determining the rate of evaporation of a liquid placed in it, in a given time and exposure. *Fay*

evaporative cooling

a. The conversion of sensible heat to latent heat with addition of moisture and practically no change in total heat content of air. *Hartman, 2* b. Cooling by the evaporation of water, heat for which is supplied by the air; feasible where the wet-bulb depression is marked, and consequently widely used in dry climates. *Strock, 2*

evaporite

A nonclastic sedimentary rock composed primarily of minerals produced from a saline solution as a result of extensive or total evaporation of the solvent. Examples include gypsum, anhydrite, rock salt, primary dolomite, and various nitrates and borates. The term sometimes includes rocks developed by metamorphism or transport of other evaporites. Syn: [evaporate](#); [saline deposit](#); [saline residue](#). *AGI*

evaporite-solution breccia

A solution breccia formed where soluble evaporites (rock salt, anhydrite, gypsum, etc.) have been removed. See also: [solution breccia](#)

evase

A passage of gradually increasing area through which the air discharged by a fan must pass. The velocity of the air is gradually reduced and much of the kinetic energy is transformed into equivalent pressure energy. See also: [volute](#)

evening emerald

Olivine (peridot or chrysolite varieties) that loses some of its yellow tinge and appears more greenish (like an emerald) in artificial light, used as a gem. Syn: [night emerald](#)

evenkite

A monoclinic mineral n-tetracosane C₂₄ H₅₀ ; forms waxlike crystals in geodes in a vein cutting vesicular tuff, Evenki district, lower Tunguska River, Siberia, Russia.

everlasting lamps

N. of Eng. Natural jets of combustible gases or small blowers that continue to burn as long as gas is given off. *Fay*

evolutionary operation

A method of process operation that introduces tightly controlled variations designed to transfer laboratory-proved improvements into changes leading to better commercial production. *Pryor, 3*

EW

Letter name specifying the dimensions of bits, core barrels, and drill rods in the E-size and W-group wireline diamond-drilling system having a core diameter of 21.5 mm and a hole diameter of 37.7 mm. CF: [EX](#) *Cumming, 2*

EX

Letter name specifying the dimensions of core, core barrels, and casing in the E-size and X-series wireline diamond-drilling system having a core diameter of 21.5 mm and a hole diameter of 37.7 mm. The EX designation for coring bits has been replaced by the EW designation. Syn: [EW](#) *Cumming, 2*

excavating cableway

Cableway fitted with a bucket suitably designed for excavating. *Hammond*

excavation

a. The act or process of removing soil and/or rock materials from one location and transporting them to another. It includes digging, blasting, breaking, loading, and hauling, either at the surface or underground. See also: [breaking ground](#) b. A pit, cavity, hole, or other uncovered cutting produced by excavation. *AGI* c. The material dug out in making a channel or cavity. *AGI*

excavation deformation

The zone around any excavation within which a structure might be disturbed by rock movements resulting from that excavation. *Nelson*

excavator

The term embraces a large number of power-operated digging and loading machines. Variants are the grab, skimmer, trencher, rotary digger, bucket wheel, and grader. See also: [bulldozer](#); [continuous-bucket excavator](#); dragline; power shovel; walking dragline. *Nelson; Pryor, 3*

excavator base machine

A tracted prime mover to which can be fitted a variety of front-end excavating and lifting appliances. *Nelson*

excellent fumes

Fumes that contain a minimum of toxic and irritating chemicals. *Nichols, 1*

exception

A reservation or exception of the minerals in a tract of land conveyed is a separation of the estate in the minerals from the estate in the surface, and it makes no difference whether the word used is excepted or reserved. *Ricketts*

excess air

In practice, complete combustion cannot be obtained without slightly more air than is theoretically necessary. The amount of this excess air varies with the design and mechanical condition of the appliance, but ranges from 15% upward. *Nelson*

excessive location

A mining claim in excess of the width allowed by law.

excess spoil

Spoil in excess of that necessary to backfill and grade affected areas to the approximate original contour. The term may include box-cut spoil where it has been demonstrated for the duration of the mining operation, that the box-cut spoil is not needed to restore the approximate original contour.

excitation

The addition of energy to a system, thereby transferring it from its ground state to an excited state. Excitation of a nucleus, an atom, or a molecule can result from absorption of photons or from inelastic collisions with other particles or systems.

excitation time

The minimum time for which electric current must flow in the fusehead of a detonator to ensure its ignition. *BS, 12*

Exclusive Economic Zone

An area beyond and adjacent to the territorial sea, subject to the specific legal regime established in Part V, Articles 55-75 of the United Nations Convention on the Law of the Sea, under which the rights and jurisdiction of the coastal State and the rights and freedoms of other States are governed by the relevant provisions of the Convention. Abbrev. EEZ. EEZ resources rights include both living and non-living resources of the subsoil and superjacent water of the zone. The EEZ will not extend beyond 200 nmi (364 km) from the baseline from which the territorial sea is measured. CF: [continental shelf](#)

exclusive prospecting license

Grant of right to prospect a designated area for a limited period. Abbrev. EPL. *Pryor, 3*

exempted claim

A mining title on which exemption from otherwise essential activity has been granted. *Pryor, 3*

exemptions

Exemption laws are grants of personal privileges to debtors, which may be waived by contract or surrender or by neglect to claim before sale. *Ricketts*

exfoliate

To peel off in concentric layers, as some rocks weather.

exfoliation

a. The process by which concentric scales, plates, or shells of rock, from less than a centimeter to several meters in thickness, are successively spalled or stripped from the bare surface of a large rock mass. It is caused by physical or chemical forces producing differential stresses within the rock, as by expansion of minerals as a result of near-surface chemical weathering, or by the release of confining pressure of a once deeply buried rock as it is brought nearer to the surface by erosion. It often results in a rounded

rock mass or dome-shaped hill. CF: [spheroidal weathering](#); [spheroidal parting](#). Syn: [spalling](#); [scaling](#); sheeting; sheet jointing. *AGI* b. The property of some silicate minerals, e.g., vermiculite, or rocks, e.g., perlite, to expand permanently when heated to form an irregular or vesicular structure. CF: [intumescence](#)

exfoliation dome

A large dome-shaped form, developed in massive homogeneous coarse-grained rocks, esp. granite, by exfoliation; well-known examples occur in Yosemite Valley, CA. *AGI*

exhalation

a. The streaming-forth of volcanic gases; also, the escape of gases from a magmatic fluid. *AGI* b. Any vapor or gas arising from substances or surfaces exposed to the atmosphere. c. Any gas or vapor formed beneath the surface of the Earth and escaping either through a conduit or fissure, or from molten lava or a hot spring; an emanation. d. An exhaling or sending forth, as of steam or vapor. Something that is exhaled or given off or that rises in the form of a gas, fumes, or steam, for example, a foul exhalation from the marsh. *Webster 3rd*

exhaust fan

In coal mining, a fan that sucks used air from a mine and thereby causes fresh air to enter by separate entries to repeat the cycle. *BCI*

exhausting auxiliary fan

An auxiliary fan that exhausts air from the face of a tunnel through ducting or piping and discharges it into the return side of the airway off which the tunnel branches. See also: [extraction ventilation](#); auxiliary ventilation; suction fan. *Nelson*

exhaustion

In mining, the complete removal of ore reserves.

exhaust ventilation

A system of ventilation in which the fan draws air through the workings by suction. Opposite of forced ventilation. See also: [auxiliary ventilation](#)

exinite

a. M.C. Stopes in 1935 used the term exinite for the constituent represented by the exines of spores in coal. C.A. Seyler in 1932, however, used the term with its present meaning designating the following group of macerals--sporinite, cutinite, alginite, resinite. The

macerals grouped under the term exinite are not necessarily exines but appear to have similar technical properties. The term liptinite was introduced by A. Ammosov in 1956. Little information is so far available on the technological behavior of pure exinite. By comparison and extrapolation it has proved possible, however, to deduce that in coals with more than 35% volatile matter exinite is the maceral group richest in volatile matter and in hydrogen (about 80% and about 9%, respectively). In coals with 18% to 25% volatile matter, exinite is more resilient than the vitrinite; in coals with more than 25% volatile matter, it has even greater resilience than micrinite. Exinite, therefore, increases the strength of bands in which it occurs and in broken coal concentrates in particles greater than 1 mm. *IHCP* b. The micropetrologic constituent, or maceral, of spore exines and cuticular matter. See also: [sporinite](#); [cutinite](#). *AGI* c. A coal maceral group including sporinite, cutinite, alginite, resinite, and liptodetrinite, derived from spores, cuticular matter, resins, and waxes. Exinite is relatively rich in hydrogen. It is a common component of attrital coal. CF: [inertinite](#); [vitrinite](#). Syn: [liptinite](#)

exinoid

A coal constituent similar to material derived from plant exines. *AGI*

existent corner

A claim corner whose position is evidenced by a monument or its accessories as described in the field note record, or whose location can be identified by the aid of acceptable testimony. *Seelye*, 2

exogene

See: [exogenetic](#)

exogenetic

a. Said of processes originating at or near the surface of the Earth, such as weathering and denudation, and of rocks, ore deposits, and landforms that owe their origin to such processes. CF: [endogenetic](#) exogenic; exogenous. *AGI* b. Said of energy sources and objects of extraterrestrial origin, as solar radiation, cosmic rays, meteorites, and cosmic dust. *AGI*

exogenic

See: [exogenetic](#)

exogenous

See: [exogenetic](#)

exogenous inclusion

See: [xenolith](#)

exometamorphic

A descriptive term for those changes produced by contact metamorphism in the wall rock of the intrusion; opposite of endomorphitic.

exometamorphism

See: [exomorphism](#)

exomorphitic metamorphism

See: [exomorphism](#)

exomorphism

Changes in country rock produced by the intense heat and other properties of magma or lava in contact with them; it is a form of contact metamorphism in the usual sense. The term was originated by Fournet in 1867. CF: [endomorphism](#) *AGI*

exotic

Applied to a boulder, block, or larger rock body unrelated to the rocks with which it is now associated, which has been moved from its place of origin by one of several processes. Exotic masses of tectonic origin are also allochthonous; those of glacial or ice-rafted origin are generally called erratics. *AGI*

exotic limonite

Limonite precipitated in rock that did not formerly contain any iron-bearing sulfide. CF: [indigenous limonite](#)

expanded blast-furnace slag

The lightweight cellular material obtained by controlled processing of molten blast-furnace slag with water or with water and other agents, such as steam or compressed air or both. *ASTM*

expanding electrode test

A geophysical test based on the resistivity method to determine underground geological structure. *Nelson*

expanding reamer

A reamer capable of slight adjustment in diameter by means of a coned internal plug acting in a partially split length of the tool. *Nelson*

expanding waterway

A channel or groove incised into and across the face of a bit, the depth and/or width of which gradually increases from the inside to the outside walls of the bit. *Long*

expansion bit

A drill bit that may be adjusted to cut various sizes of holes. The adjustment of some types may be accomplished by mechanical means while the bit is inside the borehole. Also called paddy; paddy bit. *Long*

expansion bolt

A bolt equipped with a split casing that acts as a wedge; used for attaching to brick or concrete. *Crispin*

expansion cutter

A borehole drill bit having cutters that may be expanded to cut a larger size hole than the size of the bit in its unexpanded state; also, a device equipped with cutters that may be expanded inside casing or pipe to sever, or cut slits or holes in, the casing or pipe. CF: [paddy](#)

expansion dome

Imaginary dome of rock above underground working, matched by a similar inverted dome below the stope. The dome lies inside the zone of stress due to an unsupported ground, but it is partially destressed owing to expansion and peripheral transfer of load. *Pryor, 3*

expansion fissure

In petrology, one of a system of fissures that radiate irregularly through feldspar and other minerals adjacent to olivine crystals that have been replaced by serpentine. The alteration of olivine to serpentine involves considerable increase in volume, and the stresses so produced are relieved by the fissuring of the surrounding minerals. This phenomenon is common in norite and gabbro. *AGI*

expansion loop

Either a bend like the letter U or a coil in a line of pipe to provide for expansion or contraction. *Fay*

expansion ring

A hoop or ring of U-section used to join lengths of pipe so as to permit of expansion. *Fay*

expected tonnage

The calculated tonnage of recoverable ore in the mine. *Lewis*

experimental face

A normal longwall face on which new machines, such as a cutter loader, may be put to work to gain experience and perhaps improved. Such trials may disclose weaknesses, and they would also indicate the best support system, turnover, and other operating factors. See also: [standby face](#) Syn: [trial face](#)

experimental mineralogy

The study of chemical and isotopic variations in minerals as a function of temperature and pressure. CF: [chemical mineralogy](#); [crystallogeny](#); phase equilibria.

exploder

a. A cap or fulminating cartridge, placed in a charge of gunpowder or other explosive, and exploded by electricity or by a fuse. Also called detonator. Syn: [battery](#) b. Electric shot-firing apparatus specially designed to provide a source of electric energy of sufficient power to fire electric detonators. Each type of exploder is designed to fire a specific number of shots in series, and exploders are rated accordingly; e.g., single-shot exploders, 30-shot exploders, and 100-shot exploders. See also: [Beethoven exploder](#) Syn: [blasting unit](#) c. A chemical employed for the instantaneous explosion of powder. *Zern*

exploding bridge wire

A wire that explodes upon application of current. It takes the place of the primary explosive in an electric detonator.

exploit

a. Excavate in such a manner as to utilize material in a particular vein or layer, and waste or avoid surrounding material. *Nichols, 1* b. Turn a natural resource to economic account. For example, to exploit a mineral deposit. *Webster 3rd*

exploitation

a. The process of winning or producing from the Earth the oil, gas, minerals, or rocks that have been found as the result of exploration. *AGI* b. The extraction and utilization of ore.

exploration

a. The search for coal, mineral, or ore by (1) geological surveys; (2) geophysical prospecting (may be ground, aerial, or both); (3) boreholes and trial pits; or (4) surface or underground headings, drifts, or tunnels. Exploration aims at locating the presence of economic deposits and establishing their nature, shape, and grade, and the investigation may be divided into (1) preliminary and (2) final. See also: [preliminary exploration](#) *Nelson* b. A mode of acquiring rights to mining claims.

exploration drilling

Drilling boreholes by the rotary, diamond, percussive, or any other method of drilling for geologic information or in search of a mineral deposit. *Long*

exploratory drift

A drift that is driven in an ore deposit for the purpose of exploring the deposit both horizontally and vertically to see whether it will be worth working. *Stoces*

exploratory drilling

The drilling of boreholes from the surface or from underground workings, to seek and locate coal or mineral deposits and to establish geological structure. Exploratory drilling is frequently done from underground workings, the holes being drilled upward, horizontally, or downward as required. For underground drilling, roller bits, diamond crowns, or tungsten-carbide bits may be used and can be coring or noncoring. Rotary boring is the predominant method for exploratory work from the surface, particularly where cores of significant deposits are required. See also: [borehole samples](#); [drill sampling](#); [underground exploration](#); diamond drilling. *Nelson*

exploratory work

Mining operations to determine the size of a deposit, and also its character along the strike as well as its dip. This is done by making drives and inclines. These openings follow the deposit both in strike and dip. They are designed in such a way so as to make it possible to use them for mining proper should the exploration turn out favorably. Syn: [exploration](#)

explorer's alidade

See: [gale alidade](#)

exploring drift

The working drift approaching old workings whose exact position is uncertain, bored as a precaution against an unexpected holing. *Peel*

explosibility curves

Curve lines drawn through coordinating points, indicating ignition or propagation, in which the rectilinear coordinates of the diagram are factors of volatile fixed-carbon ratios, total incombustible, density of dust, size of dust particles, and combustible gases, if any, in the air current. *Rice, 2*

explosibility limit

The addition of inert dust to coal dust decreases its explosibility, and when enough has been added an explosion cannot occur. The point at which explosion cannot occur is said to be the explosibility limit of the coal in question. *Rice, 2*

explosible

Capable of being exploded. *Webster 3rd*

explosion dust

The dust deposited from the cloud raised by the explosion, which settles after the explosion has died down, only part of which may be traversed by the flame. *Sinclair, 1*

explosion-hazard investigation

The investigation of a mine to determine the possibility of an explosion occurring by reason of the kind, size, purity, and dryness of the coal dust along the mine passages and the presence or absence of combustible gases. It also determines the degree of the hazard of an explosion from natural conditions and of one arising through the neglect or ignorance of the mine personnel. The purpose of such investigations is to make specific recommendations for reducing that hazard to a negligible point by appropriate methods and continued diligence. *Rice, 2*

explosion pressure

The pressure developed at the instant of an explosion. *Streefkerk*

explosion proof

a. The term "explosion-proof casing" or "enclosure" means that it is so constructed and maintained as to prevent the ignition of gas surrounding it by any sparks, flashes, or explosions of gas that may occur within such enclosures. *Fay* b. Said of electrical apparatus so designed that an explosion of flammable gas inside the enclosure will not ignite flammable gas outside. Also called flameproof. *CTD* c. Fitting, motor, switch, or fixture so made and maintained as to preclude possibility of sparks, arcs, or heat sufficient to initiate explosion in surrounding air or mine dust. *Pryor, 3*

explosion-proof motor

The U.S. Bureau of Mines has applied the term "explosion proof" to motors constructed so as to prevent the ignition of gas surrounding the motor by any sparks, flashes, or explosions of gas or of gas and coal dust that may occur within the motor casing. See also: [permissible motor](#)

explosions from molten iron

An explosion caused by molten iron coming in contact with water or wet material. *Fay*

explosion-tested equipment

In explosion-tested equipment, housings for electric parts are designed to withstand internal explosions of methane-air mixtures without causing ignition of such mixtures that surround the housings.

explosion tuff

A tuff whose pyroclastic fragments are in the place in which they fell, rather than having been washed into place after they landed. *AGI*

explosion wave

The wave or flame that passes through a uniform gaseous mixture with a permanent maximum velocity. The rate of the explosion wave is a definite physical constant for each mixture. The explosion wave travels with the velocity of sound in the burning gas, which itself is moving rapidly forward en masse in the same direction, so that the explosion wave is propagated far more rapidly than sound travels in the unburned gas. *Fay*

explosive

a. Any chemical compound, mixture, or device that is capable of undergoing a rapid chemical reaction, producing an explosion; a cap sensitive mixture. b. Any mixture or chemical compound by whose decomposition or combustion gas is generated with such rapidity that it can be used for blasting or in firearms; e.g., gunpowder, dynamite, etc.

See also: [explosive factor](#); Morcol; permitted explosive; sheathed explosive. c. In coal mining, there are two main classes permissible and nonpermissible; i.e., those safe for use in coal mines and those that are not. See also: [coal mining explosives](#)

explosive antimony

A black powder obtained either by the rapid cooling of antimony vapor or by the electrolysis of a solution of antimony chloride in hydrochloric acid, using a platinum cathode and an antimony anode. When scratched, the hard black mass deposited on the cathode will explode. The mass may consist of a solid solution of antimony trichloride in metallic antimony. *Camm*

explosive cooling agent

A substance added to a permitted explosive to cool the explosion flame and thus reduce the risk of igniting mine gases. The agent may be sodium chloride and sodium bicarbonate. *Nelson*

explosive drilling

A technique developed for deep-hole drilling in esp. strong and abrasive rocks. In this method, a series of small underwater explosions are used to break the rock at the bottom of the hole, the fragments from each explosion being washed away by the flushing water. *Min. Miner. Eng., 1*

explosive dusts

Dusts that are combustible when airborne. They include metallic dusts (magnesium, aluminum, zinc, tin, iron), coal (bituminous, lignite), and sulfide ores. *Hartman, 2*

explosive factor

The ratio between the burden of a shothole in tons or cubic yards and the weight of explosive charge in pounds; i.e., tons (cubic yards) per pound of explosive. The factor is dependent on the rock and the fragmentation required, but 5 st/lb (10 t/kg) is about average in quarry blasting. See also: [loading ratio](#)

explosive force

A force represented with separate values for the heat liberated by the explosive decomposition and the detonating rate. *Streefkerk*

explosive limits

The limits of percentage composition of mixtures of gases and air (or oxygen) within which an explosion takes place when the mixture is ignited. *Inst. Petrol.*

explosive loading factor

See: [powder factor](#)

explosively anchored rockbolt

A device to give better support in underground mining operations. It can be anchored more firmly than conventional bolts because the principle of explosive forming enables the anchor to grip the sides of the borehole along its entire length, if necessary. The key to the design is a seamless steel anchoring tube, welded to the threaded end of the bolt. Exploding a small charge inside the tube makes it expand to fit tightly in the borehole. Water, wax, or a similar buffer surrounds the charge to distribute the force of the explosion evenly and prevent it from rupturing the tube. Its use may permit mining of mineral deposits formerly considered uneconomic because of the hazards encountered in loose rock formations.

explosiveness of dust

The ability of a dust to produce violent effects; it is measured by the pressure produced after the explosion has traveled a fixed distance under standard conditions. *Sinclair, 1*

explosive oil

See: [nitroglycerin](#)

explosive ratio

The weight of explosive per cubic feet (cubic meter) of rock broken. Also called powder factor. See also: [loading ratio](#)

explosives casting

In explosives casting, large amounts of low-cost ammonium nitrate mixtures are loaded into medium-sized drill holes in a usual ratio of more than 1 lb of powder per cubic yard (0.59 kg/m^3) of overburden. The explosive charges are detonated through millisecond-delay electric blasting caps. When the shot is fired, a large part of the overburden is blasted into the pit away from the high wall and up on the spoil pile where it attains a favorable angle of repose. *Woodruff*

explosive sensitiveness

The ease with which an explosive will detonate or explode. *Nelson*

explosive shattering

This method consists in soaking the ore thoroughly in water and then heating to 180 degrees C under a pressure of 150 psi (1.03 MPa). The pressure is then suddenly released, and the absorbed water is converted to steam, which shatters and liberates mineral particles without harmful overgrinding of the ore. *Newton, 2*

explosive store

A surface building at a mine where explosives and detonators may be kept. *Nelson*

explosive strength

A measure of the amount of energy released by an explosive on detonation and its capacity to do useful work. Several methods of expressing explosive strength are used, but in most cases the figures are calculated from the deflection of a freely suspended ballistic mortar in which small explosive charges are fired. *Nelson*

explosive stripping

A method in which, by using an excess of explosives in the strip mine bench, up to about 40% of the overburden can be removed from the coal seam by the energy of the explosive, thereby requiring no excavation. *Encyclopaedia Britannica*

exponential model

A function frequently used when fitting mathematical models to experimental variograms, often in combination with a nugget model.

exposed coalfield

a. A coalfield where the coal measures crop out at the surface all around its margin or boundary. South Wales, England, is a good example of an exposed coalfield. See also: [coal basin](#); [concealed coalfield](#). *Nelson* b. Deposits of coal that crop out at the surface, as along the rim of a coal basin. CF: [crop coal](#)

exposure

a. An area of a rock formation or geologic structure that is visible (hammerable), either naturally or artificially, i.e., is unobscured by soil, vegetation, water, or the works of humans; also, the condition of being exposed to view at the Earth's surface. CF: [outcrop](#)
b. The nature and degree of openness of a slope or place to wind, sunlight, weather, oceanic influences, etc. The term is sometimes regarded as a syn. of aspect. *AGI* c. The proportional mass of a diamond or other cutting medium protruding beyond the surface of the metal in which it is inset in the face of the bit. Sometimes incorrectly called

clearance. *Long d.* The total quantity of light received per unit area on a sensitized plate or film, usually expressed as the product of the light intensity and the time during which the light-sensitive material is subjected to the action of light. A loosely used term generally understood to mean the length of time during which light is allowed to act on a sensitive surface. The act of exposing a light-sensitive material to a light source. An individual picture of a strip of photographs. *AGI*

exsiccated alum

See: [burnt alum](#)

exsolution

The process whereby an initially homogeneous solid solution separates into two (or possibly more) distinct crystalline phases without addition or removal of material, i.e., without change in the bulk composition. It generally, though not necessarily, occurs on cooling. Syn: [unmixing](#) *AGI*

exsolutional

Applied to those sedimentary rocks that solidify from solution either by precipitation or by secretion.

exsolution texture

A general term for the texture of any mineral aggregate or intergrowth formed by exsolution. It is generally fairly homogeneous, ranging from perthitic to geometrically regular. See also: [eutectic texture](#) *AGI*

extendable conveyor

a. For bulk materials it is usually of troughed design and may be lengthened or shortened while in operation. Commonly used in underground mine conveyor work. b. For packaged materials, objects, or units, the conveyor may be one of several types including roller, wheel, and belt conveyors. Construction is such that the conveyor may be lengthened or shortened within limits to suit operating needs. See also: [telescoping conveyor](#)

extended charges

Explosive charges spaced at intervals in a quarry or opencast blast hole. See also: [deck loading](#)

extensible conveyor

A conveyor capable of being lengthened or shortened while in operation. *NEMA, 2*

extensible discharge trough

Consists of two or more shaker conveyor troughs, nested, to be installed on the discharge end of the pan line so as to provide for adjustment of the position of the discharge point. After adjustment, they are locked in place. *Jones, 1*

extension

Part of and physically associated with a known mineral deposit, but outside of the identified parts. *Barton*

extensional fault

See: [tension fault](#)

extension fracture

A fracture that develops perpendicular to the direction of greatest stress and parallel to the direction of compression; a tension fracture. See also: [extension joint](#)

extension joint

A joint that forms parallel to the direction of compression; a joint that is an extension fracture. See also: [extension fracture](#)

extension ore

Ore believed to exist ahead of ore exposed in the face of a drift. See also: [probable ore](#)

extensometer

a. Instrument used for measuring small deformations, deflections, or displacements. *Obert* b. An instrument for measuring changes caused by stress in a linear dimension of a body. *ASM, 1*

external sintered tip pick

See: [sintered carbide-tipped pick](#)

extinction

In polarized-light microscopy with crossed polars and an anisotropic mineral in the light train, when the two electric vectors (permitted light or vibration directions) of a

randomly oriented crystal are each parallel to those of the polars, no light is transmitted and the crystal is at extinction. Isotropic crystals and anisotropic crystals viewed parallel to an optic axis remain extinct upon stage rotation, while randomly oriented anisotropic crystals go extinct four times upon stage rotation of 360 degrees. CF: [anisotropy](#); [extinction angle](#); [extinction direction](#); inclined extinction; optic axis; parallel extinction; undulatory extinction.

extinction angle

The angle between a crystallographic direction and a position of maximum extinction of an anisotropic crystal as viewed with a polarized-light microscope or polariscope. It can be diagnostic in mineral identification. Syn: [angle of extinction](#)

extinction direction

In polarized-light microscopy, the angular position of extinction with respect to a crystallographic axis, a crystal face, a cleavage plane, or a twin plane. CF: [extinction](#)

extinctive atmosphere

An atmosphere created behind mine seals when the supply of oxygen is completely cut off, thereby bringing combustion to an end. *Roberts, 1*

extractable metal

Metal that can be extracted from a sample by a specified chemical treatment, ordinarily only part of the metal that is in the sample. Often abbreviated as "Ex Zn, Ex Cu," etc., indicating the metal of interest. The process is referred to as partial extraction, or selective extraction. Syn: [readily extractable metal](#)

extractant

In solvent extraction, the active organic reagent that forms an extractable complex with the metal. *Newton, 1*

extraction

a. The process of mining and removal of coal or ore from a mine. *Nelson* b. Used in relation to all processes of obtaining metals from ores. Broadly, these processes involve breaking down ore both mechanically (crushing) and chemically (decomposition), and separating the metal from the associated gangue. Extractive metallurgy may be conveniently divided into beneficiation, pyrometallurgy, hydrometallurgy, and electrometallurgy. c. A designation for that part of the metallic content of the ore obtained by a final metallurgical process, e.g., the extraction was 85%. CF: [recovery](#) d. The process of dissolving and separating out specific constituents of a sample by

treatment with solvents specific for those constituents. e. In chemical engineering, the operation wherein a liquid or solid mixture is brought into contact with an immiscible or partially miscible liquid to achieve a redistribution of solute between the phases.

extraction metallurgy

Process of producing metal from ores or their concentrates. *Pryor, 3*

extraction ratio

Ratio of the mined volumes to the total volumes. Also called strip ratio. *Obert*

extraction ventilation

The ventilation of a tunnel face (or mine) by an exhaust fan. See also: [exhausting auxiliary fan](#) *Nelson*

extraction water

Superheated water pumped into wells to melt and to extract molten sulfur from salt domes. *Goldman*

extractive metallurgy

The extraction of metals from their ores or from the naturally occurring aggregates of minerals by various mechanical and chemical methods. The major divisions of extractive metallurgy may be classified as mineral dressing, pyrometallurgy, hydrometallurgy, and electrometallurgy. *Kirk*

extrados

The exterior arc of an arch, as in a tunnel. *Sandstrom*

extradosal

The fractured ground outside of the fracture zone. In many mines, extradosal bursts occur more frequently than intradosal; i.e., the extradosal ground ahead of the working face serves as an abutment that supports the superincumbent rock to the surface. CF: [intradosal](#) *Lewis*

extra dynamite

Differs from straight dynamite in that a portion of the nitroglycerin content is replaced with sufficient ammonium nitrate to maintain the grade strength, manufactured in grade strengths of from 20% to 60%. It is lower in velocity and water resistance than straight

dynamite, but is less sensitive to shock and friction and less flammable. See also: [ammonia dynamite](#); [low-density explosive](#). *Carson, 1*

extraflexible hoisting rope

A rope consisting of 8 strands of 19 wires each with a large hemp center. *Hunt*

extrahazardous

Unusually dangerous; specif. used in insurance in classifying occupational risks, as mining is extrahazardous.

extralateral

Situated or extending beyond the sides; specif. noting the right of a mine owner to the extension of a lode or vein from his or her claim beyond the sidelines, but within the vertical planes through the endlines.

extralateral rights

Among numerous provisions, the statute (30 USC 26) provides that extralateral rights to veins, lodes, and ledges that come to an apex within the boundary lines and dip downward so as to extend outside the vertical planes through the side lines belong to the owner of such lode location. The extralateral portion of the vein is that part that extends on its downward dip through the vertical planes along the side lines.

extralite

An explosive mixture consisting of ammonium nitrate and carbonate, liquid and solid hydrocarbons, and zinc chlorate. *Standard, 2*

extraneous ash

Ash in coal that is derived from inorganic material introduced during formation of the seam, such as sedimentary particles, or filling cracks in the coal. See also: [ash](#); [ash yield](#); [inherent ash](#). Syn: [secondary ash](#); sedimentary ash. *AGI*

extraneous electricity

Electrical energy, other than actual firing current or the test current from a blasting galvanometer, that is present at a blast site and that could enter an electric blasting circuit; such electricity can include lightning, current from high tension powerline, and static charge carried on a person.

extraordinary ray

Light passing through anisotropic crystals is doubly refracted with one or both ray directions not parallel to their wave normals. Such light rays do not follow Snell's law [$n = (\sin i) / (\sin r)$] of ordinary refraction and are termed "extraordinary." Also written E-ray or e-ray. CF: [law of refraction](#)

extrapolation

Projection of a graphic curve beyond the line of points established from plotting data.

extra-special improved plow

A grade of wire rope used for winding, with a tensile strength of between 115 st/in² and 125 st/in² (16.2 t/cm² and 17.6 t/cm²). *Mason*

extraterrestrial mining

The mining of metals and minerals on locations other than the Earth through space colonization of planets and moons. *SME, 1*

extraterritorial rights

Sometimes affect employment in alien countries by giving immunity from some laws. May affect working conditions. *Pryor, 3*

extrusion

a. The emission of relatively viscous lava onto the Earth's surface; also, the rock so formed. CF: [effusion](#) b. The operation of producing rods, tubes, and various solid and hollow sections, by forcing heated metal through a suitable die by means of a ram; applied to numerous nonferrous metals, alloys, and other substances. *CTD* c. The act or process of extruding; thrusting or pushing out; also, a form produced by the process; a protrusion. *Webster 3rd; Webster 2nd* d. The emission of magmatic material (generally lavas) at the Earth's surface; also, the structure or form produced by the process, such as a lava flow, a volcanic dome, or certain pyroclastic rocks. *AGI* e. Lava or mud forced out, as through a vent or fissure, onto the Earth's surface. *Webster 3rd* f. Plastic clay forced through a mouthpiece of a pugmill or a press, forming a rod or a tube, which can be cut to the desired length. *Rosenthal*

extrusive

Said of igneous rock that has been erupted onto the surface of the Earth. Extrusive rocks include lava flows and pyroclastic material such as volcanic ash. An extrusive rock. CF: [intrusive](#) volcanic; eruptive. *AGI*

exudation

The action by which all or a portion of the low-melting constituent of a compact is forced to the surface during sintering. Sometimes referred to as "bleed out." Syn: [sweating](#)

ex vessel

A price quoted ex vessel used in connection with a port name means all costs paid until free of the ship's tackle at the port designated. *Hess*

eye

a. The top or mouth of a shaft. *BS, 8* b. The central or intake opening of a radial-flow fan. *BS, 8* c. The entrance to a mine working at which daylight can be seen from within. *Pryor, 3* d. The hole in a pick or hammer head, that receives the handle. *Fay* e. The opening at the top of a beehive coke oven for charging. *Mersereau, 2* f. The opening in the bottom of a pot furnace through which the flame enters. *ASTM*

eye agate

Agate displaying concentric bands, commonly of various colors, about a dark center suggesting an eye. Also called Aleppo stone.

eyebolt

A rod or bolt having an eye or loop at one end and threaded at the other end. *Long*

eyesight

A window or other opening in a tuyere through which the operator can see into the melting zone of the blast furnace. *Mersereau, 2*

ezcurrite

A triclinic mineral, $\text{Na}_4 \text{B}_{10} \text{O}_{17} \cdot 7\text{H}_2 \text{O}$; associated with kernite, borax, and tinalconite at the Tincalayu borax mine, Salta province, Argentina.

F

fabianite

A monoclinic mineral, $\text{CaB}_3 \text{O}_5 (\text{OH})$; colorless; fluoresces brownish-yellow under UV light; Mohs hardness, 6; associated with halite, anhydrite, and howlite in a rock-salt drill core at Rehden, Diepholz, Germany.

Fabian system

May be described as the father of freefall drilling systems, all others having originated from it, although it is not now used in its original form. See also: [free fall](#)

fabric

a. The spatial arrangement and orientation of the components (crystals, particles, cement) of a sedimentary rock. CF: [packing](#) b. The complete spatial and geometrical configuration of all those components that make up a deformed rock. It covers such terms as texture, structure, and preferred orientation. Syn: [rock fabric](#)

fabricator

A company which transforms refined metal (and sometimes scrap as well) into semifabricated products, (e.g., wire, cable, tubes, strip, rods) for sale to an end-consumer. Also called semifabricator. *Wolff*

fabric element

A component of a rock fabric that acts as a unit in response to deformative forces.

fabric-type dust collector

A collector that utilizes a fabric or cloth to remove dust particles from the air. The basic idea is the same as that employed in vacuum cleaners, but there is usually an automatic or self-cleaning feature for recovering the dust. Fabric-type dust collectors should not be subjected to excessively abrasive or corrosive materials, or high temperatures that might injure the fabric, unless special materials have been employed for that purpose. Bags and tubes employing glass filter fabric are capable of handling gases with temperatures up to 550 degrees F (288 degrees C), and also can withstand the action of many corrosive gases. Fabric-type collectors fall into two groups on the basis of design. One uses the fabric in a closed bag or a series of small-diameter bags commonly called tubes, while the other has the fabric on a frame like a screen. *Pit and Quarry*

face

a. The surface of an unbroken coal bed at the advancing end of the working place. b. Sedimentary beds are said to face in the direction of the stratigraphic top of the succession (or to be directed toward the younger rocks or to the side that was originally upward), so that an overturned bed facing to the east may have a dip of 45 degrees to the west. Folds are said to face in the direction of the stratigraphically younger rocks along their axial surfaces and normal to their axes; this coincides with the direction toward which the beds face at the hinge (a normal upright fold faces upward, an overturned anticline faces downward, and an asymmetric fold faces its steeper flank). Faults are said

to face in the direction of the structurally lower unit. *AGI* c. The principal cleavage plane of coal, at right angles to the stratification. d. The exposed surface of a coal or ore deposit in the working place where mining is proceeding. See also: [coal face](#); [face height](#); [working face](#). e. An edge of rock used as a starting point in figuring drilling and blasting. *Nichols, I* f. The part of a bit in contact with the bottom of a borehole, when drilling is in progress, that cuts the material being drilled; cutting face. *Long* g. To dress a bit. h. The bottom of a drill or borehole. i. The original upper surface of a layer of rock, esp. if it has been raised to a vertical or a steeply inclined position. j. The plane surface of a mineral crystal. k. The surface exposed by excavation. The working face, front, or forehead is the face at the end of the tunnel heading, or at the end of the full-size excavation. l. A cleat or back. *Fay* m. The smooth surface of the coal as contrasted to butt. n. The main cleavage; bord cleat. *Mason* o. The more or less vertical surface of rock exposed by blasting or excavating, or the cutting edge of a drill hole. *Nichols, I* p. The width of a roll crusher. *Nichols, I* q. The outer surface of a pulley in contact with a belt; the outer surface of a gear, roll, or drum usually expressed in terms of inches of width. r. The end of a drive. *Gordon* s. In structure, the original upper surface of a stratum esp. if it has been raised to a vertical or a steeply inclined position. *AGI*

face-airing

The operation of directing the intake air to and along the working face of a mine. The term was used in the early part of the 18th century to describe the coursing of air naturally induced in a coal mine. See also: [circulation of air](#)

face area

The working area in from the last open crosscut in an entry or a room, including the pillar being extracted or longwall being mined.

face belt conveyor

A light belt conveyor employed at the face. It is the type generally used in conventional machine mining. *Nelson*

face belt joints

Three types of face belt joints are used: (1) hinged-plate type, which is attached to the belt by means of copper rivets and interconnected by means of pins; (2) wire-hook joints, the most popular type--the hooks are inserted by means of a hand-operated machine and are connected by a flexible steel pin; and (3) spliced joint, in which a portion on each side of the belt is cut away so as to provide a splice, and this is secured by cramped-type pins, which are inserted and knocked over by hand. *Mason*

face boss

In bituminous coal mining, a foreman in charge of all operations at the working faces where coal is undercut, drilled, blasted, and loaded. Also called face foreman. *DOT*

face cleat

The major joint or cleavage system in a coal seam. CF: [butt cleat](#) See also: [cleat](#); [face](#).

face concentration

The ratio of pithead output (tons) to length of face (yard) or tons per yard of face. The management objective is to keep this figure as high as practicable. See also: [concentration of output](#)

face conveyor

a. Any type of conveyor employed at the working face that delivers coal into another conveyor or into a car. *Nelson* b. See: [underground mine conveyor](#) c. A conveyor, generally 10 to 100 ft (3.0 to 30.5 m) in length, used in room and pillar mining to move material from the face to a room or section conveyor. See also: [armored flexible conveyor](#); [gate conveyor](#). *NEMA*, 2

faced crystal

Applied in the trade to a natural mass of quartz bounded by one or more of the original crystal faces. *Am. Mineral.*, 2

face-discharge bit

A bit designed for drilling in soft formations and for use on a double-tube core barrel, the inner tube of which fits snugly into a recess cut into the inside wall of the bit directly above the inside reaming stones. The bit is provided with a number of holes drilled longitudinally through the wall of the bit, through which the circulation liquid flows and is ejected at the cutting face of the bit. Also called bottom-discharge bit; face-ejection bit. *Long*

face-ejection bit

See: [face-discharge bit](#)

face entry

An entry driven at right angles to the face cleat and parallel to the butt cleat. *BCI*

face equipment

Face equipment is mobile or portable mining machinery having electric motors or accessory equipment normally installed or operated in by the last open crosscut in an entry or room.

face half and half

Eng. A longwall face crossing the main cleavage planes of the seam at an angle of 45 degrees. *SMRB*

face hammer

Used for rough dressing stones. It has one blunt end and one cutting end. *Crispin*

face haulage

The transportation of mined coal from the working face to an intermediate haulage. It is accomplished by shuttle cars, conveyors, locomotives, and mine cars, or by combinations of such equipment. See: [primary haulage](#) *Woodruff*

face height

The vertical height of a quarry or opencast face from top to toe; i.e., the height of overburden and coal, ore, or stone. A face height is chosen that can be reached by the excavator so that all scaling of loose material can be accomplished by the machine, thus eliminating the necessity for workers to go over the face on ropes to bar off loose ground. Where the height exceeds this figure, a form of benching may be adopted. See also: [face](#)

face left

See: [face right](#)

facellite

See: [kaliophilite](#)

face loading pan

A shaker conveyor pan or trough that has been widened for one-half of its length to provide a greater loading surface when used at the face. *Jones, I*

face mechanization

On a longwall face, the term implies the use of some type of cutter loader with perhaps self-advancing ports, giving a quicker turnover and higher productivity. In the case of a

rock drivage the term would mean the regular use of a shovel loader. See also: [conventional machine mining](#) *Nelson*

face of hole

The bottom of a borehole. *Long*

face-on

a. A location where the face of the breast or entry is parallel to the face cleats of the seam. See: [face](#) b. Working of a mine in a direction parallel to the natural cleats. CF: [end-on](#)

face on end

See: [end face](#)

face right

Position of the vertical circle of a theodolite with respect to the telescope, viewed from the eyepiece end. *Pryor, 3*

face run

N. of Eng. The time during which a coal-getting machine is moving along the face. *Trist*

face sampling

The cutting of pieces of ore and rock from exposed faces of ore and waste. The faces may be natural outcrops or faces exposed in surface trenches and pits. Face samples may be taken by cutting grooves or channels of uniform width and depth across the face or sections of the face or by picking off small pieces all over the face, more or less at random.

face shovel equipment

An excavator base machine fitted with boom and bucket for excavating and loading material from an exposed face above track level. *Nelson*

face signal

N. of Eng. A wire stretched along the face to control, directly or indirectly, the running of the face conveyor. *Trist*

face signaling

The system for transmitting signals from points on a conveyor face to the operator at the control panel near the main gate. See also: [signaling system](#)

face slip

a. The front slip of a coal seam. CF: [back slip](#) b. An inclined joint in coal sloping away from the hewing face. *Arkell*

face stone

A diamond inset in the face portion of a bit. CF: [kerf stone](#) *Long*

facet

a. One of the polished plane surfaces of a gemstone, cut so as to enhance the stone's brilliance and beauty. b. To cut facets. c. A nearly planar surface produced on a rock fragment by abrasion, as by wind sandblasting, by the grinding action of a glacier, or by a stream that differentially removes material from the upstream side of a boulder, cobble, or pebble inclined at 50 degrees or less to the direction of the impinging current. d. Asymmetrically scalloped rock surfaces. Syn: [flute](#) e. Any plane surface produced by erosion or faulting and intersecting a general slope of the land; e.g., a triangular facet. f. Any part of a landscape defined as a unit for geographic study on the basis of homogeneous topography.

faceted boulder

A boulder that has been ground flat on one or more sides by the action of natural agents, such as by glacier ice, streams, or wind. CF: [faceted pebble](#)

faceted pebble

A pebble on which facets have been developed by natural agents, such as by wave erosion on a beach or by the grinding action of a glacier. CF: [faceted boulder](#)

faceted spur

The end of a ridge that has been truncated or steeply beveled by stream erosion, glaciation, or faulting. See also: [truncated spur](#)

face timbering

The placing of safety posts at the working face to support the roof of the mine. The safety post is the most important timber in a mine because exposure is greater at this point than at any other since the newly exposed top is always of unknown quality. See also: [timbering](#) *Kentucky*

faceting machine

A mechanical device for holding stone during grinding and polishing facets at the exact angles that theoretically produce the most brilliant stone. Rarely used in fashioning diamonds or other valuable stone where preservation of weight is more important than maximum brilliancy.

face transfer point

See: [transfer point](#)

face wall

A wall built to sustain a face cut into the earth, in distinction to a retaining wall, which supports earth deposited behind it. *Zern*

facies

A term of wide application, referring to such aspects of rock units as rock type, mode of origin, composition, fossil content, or environment of deposition. CF: [lithofacies](#)

facies change

A lateral or vertical variation in the lithologic or paleontologic characteristics of contemporaneous sedimentary deposits. It is caused by, or reflects, a change in the depositional environment. *AGI*

facies contour

A line indicating equivalence in lithofacies development; e.g., a particular value of the sand-to-shale ratio.

facies fauna

A group of animals characteristic of a given stratigraphic facies or adapted to life in a restricted environment; e.g., the black-shale fauna of the Middle and Upper Devonian of the Appalachian region of the United States. *AGI*

facies fossil

A fossil, usually a single species or a genus, that is restricted to a defined stratigraphic facies or is adapted to life in a restricted environment. It prefers certain ecologic surroundings and may exist in them from place to place with little change for long periods of time. *AGI*

facies map

A map showing the distribution of different types of rock attributes or facies occurring within a designated geologic unit.

facing

a. Aust. The main vertical joints often seen in coal seams; they may be confined to the coal, or continue into the adjoining rocks. See also: [cleat](#) b. A face slip or joint as opposed to a back slip. The plane is inclined towards the observer from floor to roof. *Nelson* c. A powdered substance (such as graphite) applied to the face of a mold or mixed with sand that forms it, to give a smooth surface to the casting. *Webster 3rd* d. Applied to the original direction of a layer. *AGI* e. In machining, generating a surface on a rotating workpiece by the traverse of a tool perpendicular to the axis of rotation. *ASM, I* f. In founding, special sand placed against a pattern to improve the surface quality of the casting. *ASM, I* g. Any material, forming a part of a wall, used as a finishing surface. *ACSG, I*

facing of strata

The direction of the top of beds is esp. important in steeply dipping or overturned beds. The tops of the beds or their facing is determined by ripple marks, graded bedding, crossbedding, mud cracks, pillow structure, etc. *AGI*

fact cut

A type of cut gem bounded by planar faces as distinguished from cabochon cut or other unfaceted cut. Also called faceted cut.

factor of safety

The ratio of the ultimate breaking strength of the material to the force exerted against it. If a rope will break under a load of 6,000 lb (2,724 kg), and it is carrying a load of 2,000 lb (908 kg), its factor of safety is $6,000/2,000 = 3$, or f.s 3. See also: [allowable stress](#) *Brantly, 2*

Fagersta cut

This cut is drilled with handheld equipment. The empty hole is drilled in two steps, the first as an ordinary hole and the second as an enlargement of this pilot hole. The cut is something between a four-section cut and a double-spiral cut. The Fagersta cut is drilled with light equipment, which makes it suitable for use in mines and in small drifts, where drilling with heavy machines is not profitable. *Langefors*

faheyite

A hexagonal mineral, $(\text{Mn,Mg})\text{Fe}_2 \text{Be}_2 (\text{PO}_4)_4 \cdot 6\text{H}_2 \text{O}$; forms tufts, rosettes, or botryoidal masses of fibers coating primary minerals, such as muscovite and quartz; in pegmatites, Minas Gerais, Brazil.

fahlband

A term originally used by German miners to indicate a band of sulfide impregnation in metamorphic rocks. The sulfides are too abundant to be classed as accessory minerals, but too sparse to form an ore lens. Fahlbands have a characteristic rusty-brown appearance on weathering. *AGI*

fahlerz

Ger. A gray copper ore. Sometimes called fahl ore. Syn: [tetrahedrite](#); tennantite. *Fay*; *AGI*

fahlunite

Altered cordierite.

Fahrenheit

Commonly used thermometer scale in which the freezing point of water is 32 degrees and the boiling point is 212 degrees . To convert from the Fahrenheit scale to the centigrade or Celsius scale, subtract 32 and multiply by 5/9. Symbol, F. See also: [temperature](#)

Fahrenwald machines

These include (1) a hydraulic classifier and (2) a flotation cell marketed as the Denver Sub A. *Pryor, 3*

failed hole

A drill hole loaded with dynamite that did not explode. *Fay*

failure by rupture

See: [shear failure](#)

fairchildite

A hexagonal mineral, $\text{K}_2 \text{Ca}(\text{CO}_3)_2$; dimorphous with bueschliite; in fused wood ash in partly burned trees.

fairfieldite

a. A triclinic mineral, $\text{Ca}_2(\text{Mn,Fe})(\text{PO}_4)_2 \cdot 2\text{H}_2\text{O}$; transparent pearly to subadamantine; in granite pegmatites in Fairfield County, CT, as an alteration of dickinsonite and a pseudomorph after rhodochrosite. b. The mineral group cassidyite, collinsite, fairfieldite, messelite, and roselite-beta. Syn: [leucomanganite](#)

fairlead

a. A device that lines up cable so that it will wind smoothly onto a drum. *Nichols, 2* b. Applies to the swivel pulley on the drag rope of a dragline excavator. *Hammond* c. A block, ring, or strip of plank with holes that serves as a guide for the running rigging or for any ship's rope and keeps it from chafing. *Webster 3rd*

fairy stone

a. A cruciform-twinned crystal of staurolite, used as a curio stone without fashioning for adornment. The term is also applied as a syn. of staurolite, and esp. to the variety occurring in the form of a twinned crystal. See also: [staurolite](#) b. Any of various odd or fantastically shaped calcareous or ferruginous concretions formed in alluvial clays. *AGI* c. A fossil sea urchin. *AGI* d. A stone arrowhead. *AGI*

fake reflection

Accidental lineup of disturbances on a seismogram simulating a reflection. *Schieferdecker*

Falconbridge process

Recovery of nickel from a nickel-copper matte. After crushing and roasting to remove sulfur, the copper is acid-leached, filtered off, and electrolyzed. The residual solids are melted, cast as anodes, and refined to produce nickel. *Pryor, 3*

falding furnace

A mechanically raked muffle furnace having three hearths with combustion flues under the lowest hearth. *Fay*

fall

a. A mass of rock, coal, or ore that has collapsed from the roof or sides of a mine roadway or face. Falls of ground are responsible for the greatest proportion of underground deaths and injuries. *Nelson* b. A length of face undergoing holing or breaking down for loading. c. The rolling of coal from the face into the room, usually as the result of blasting; sometimes the amount blasted down. Locally, also the caved roof

after the coal is extracted. *BCI* d. To blast, wedge, or in any other way to break down coal from the face of a working place. *CTD* e. A system of working a thick seam of coal by falling or breaking down the upper part after the lower portion has been mined. CF: [caving system](#) f. A mass of roof or side that has fallen in any subterranean working or gallery, resulting from any cause whatever. g. The collapse of the roof of a level or tunnel, or of a flat working place or stall; the collapse of the hanging wall of an inclined working place or stope. *CTD* h. To crumble or break up from exposure to the weather; clays, shales, etc., fall.

fallers

Movable supports for a cage. Also called fangs; keps. *Nelson*

fallhammer test

A test used to determine impact sensitivity of an explosive conducted by allowing standard hammer weights to fall on an amount of confined explosive charge and measuring the fall height required to decompose or detonate the charge. *Meyer*

falling-head test

A soil permeability test in which the borehole is filled up with water and the rate at which the water falls is observed. *Mining*

falling-pin seismometer

A limit recorder of the intensity of ground vibrations initiated by a quarry or opencast blast. It consists essentially of a level glass base on which a number of pins 1/4 in (0.64 cm) in diameter and of lengths ranging from 6 to 15 in (15 to 38 cm) are stood upright. The pins stand inside hollow steel rods so that each pin can fall over independently of the others. The longer the pin, the less energy required to topple it. In practice it has been accepted that if the shorter pins (up to 10 in or 25 cm) remain standing, then there is no possibility of structural damage to a building by a quarry blast. See also: [vibrograph](#)

falling slag

Blast furnace slag that contains sufficient calcium orthosilicate to render it liable to fall to a powder when cold. Such a slag is precluded from use as a concrete aggregate by the limits of composition specified in British Standards 1047. *Dodd*

fall line

An imaginary line or narrow zone connecting the waterfalls on several adjacent near-parallel rivers, marking the points where these rivers make a sudden descent from an upland to a lowland, as at the edge of a plateau; specif. the fall line marking the

boundary between the ancient, resistant crystalline rocks of the Piedmont Plateau and the younger, softer sediments of the Atlantic Coastal Plain in the Eastern United States. It also marks the limit of navigability of the rivers. Syn: [fall zone](#) *AGI*

fall of ground

Rock falling from the roof into a mine opening. See also: [fall](#) *Weed, 2*

fall ridder

See: [bordroom man](#)

fall table

A hinged platform to cover the mouth of a shaft. *Nelson*

fall velocity

See: [settling velocity](#)

fall zone

See: [fall line](#)

false amethyst

An early name for violet-colored fluorite when cut as a gem. Other colors of the same mineral were called false emerald, ruby, sapphire, or topaz. *Fay*

false anticline

An anticlinelike structure produced by compaction of sediment over a resistant mass, such as a buried hill or reef. *AGI*

false bedding

See: [crossbedding](#); current bedding.

false bottom

a. An apparent bedrock underlying an alluvial deposit that conceals a lower alluvial deposit; e.g., a bed of clay or sand cemented by hydrous iron oxides, on which a gold placer deposit accumulates, and under which there is another alluvial deposit resting on bedrock. *AGI* b. A strip of wire screening nailed to a wooden frame that fits into the bottom of a sluice box to trap fine sand containing gold. When the frame is removed, the

fine sand, containing gold, is scraped up and placed in pans for washing down. False bottoms are employed for saving both fine and coarse gold. *Griffith* c. Aust.; U.S. A bed of drift lying on the top of other alluvial deposits, beneath which there may be a true bottom or a lower bed of wash resting directly upon the bedrock. *Fay* d. A floor of iron placed in a puddling machine. *Fay* e. A flat, hexagonal or cylindrical piece of iron upon which the ore is crushed in a stamp mill; the die. In Victoria, Australia, it is called stamper bed. *Fay* f. An insert put in either member of a die set to increase the strength and improve the life of the die. *ASM, I*

false chrysolite

See: [moldavite](#)

false cleavage

a. See: [strain-slip cleavage](#) b. A secondary cleavage superposed on slaty cleavage. c. Closely spaced surfaces, a millimeter or so apart, along which a rock splits. The surfaces are either minute faults or the short limbs of small folds. *AGI* d. A quarrying term for minor cleavage in a rock, such as slip cleavage, to distinguish it from the dominant cleavage. Geologically, the term is misleading and should be avoided. *AGI*

false diamond

Any colorless mineral that if cut and polished makes a brilliant gem; e.g., zircon, corundum, and topaz. Having less dispersion, lower refractive index, and birefringence, they are easily distinguished from diamond.

false equilibrium

The growth of a metastable or monotropic phase under conditions apparently indicating true equilibrium, as in the development of andalusite crystals in which sillimanite actually represents the stable phase. *AGI*

false form

See: [pseudomorph](#)

false galena

An obsolete term for blende. See also: [sphalerite](#)

false gate

A gate carried forward in the seam thickness only (which must be over 3 ft or 0.9 m), with cut-throughs as required to the main gate. The false gate has a short conveyor that

takes the face conveyor coal and delivers it to the main gate conveyor through a crosscut a short distance behind the face. This layout enables the main gate rippings to be worked on three shifts. *Nelson*

false gossan

A laterally or vertically displaced, rather than indigenous, iron-oxide zone. It may be confused with the iron oxide of a gossan, which is weathered from underlying sulfide deposits. *AGI*

false horizon

See: [artificial horizon](#)

false hyacinth

See: [essonite](#)

false lapis

a. See: [lazulite](#) b. Agate, jasper, or other varieties of chalcedony dyed blue. Syn: [false lapis lazuli](#); [Swiss lapis](#); [German lapis](#).

false lapis lazuli

See: [false lapis](#)

false-leg arches

Temporary arch legs used adjacent to the face conveyor in an advance gate to allow the conveyor to be moved forward and still maintain the gate supports. The conveyor side half-arch is temporarily replaced by props and crossbars (false legs). When the conveyor has passed, the half-arch is bolted back in position. *Nelson*

false ruby

Some garnets, e.g., Arizona ruby, Bohemian ruby, Cape ruby, and some spinels, e.g., balas ruby, ruby spinel, are ruby colored. See also: [balas ruby](#); [Elie ruby](#).

false stratification

An old term for cross-stratification. *AGI*

false stull

A stull so placed as to offer support or reinforcement for a stull, prop, or other timber.

false topaz

a. A transparent yellow variety of quartz, specif. citrine. See also: [citrine](#) b. A yellow variety of fluorite.

famatinite

A tetragonal mineral, Cu_3SbS_4 ; stannite group; occurs with enargite, tetrahedrite-tennantite, chalcopyrite, and covellite in copper ores worldwide, notably at Mankayan, Luzon, Philippines; Famatina, Argentina; and Butte, MT.

family

The basic unit of the clan of igneous rocks. *AGI*

fan

a. To drill a number of boreholes each in a different horizontal or vertical direction from a single drill setup. *Long* b. An accumulation of debris brought down by a stream descending through a steep ravine and debouching in the plain beneath, where the detrital material spreads out in the shape of a fan, forming a section of a very low cone. See also: [alluvial fan](#)

fan cleavage

Cleavage that, if studied over a large enough area, dips at different angles so that, like the ribs of a fan, it converges either upward or downward. *AGI*

fan cut

A cut in which holes of equal or increasing length are drilled in a pattern on a horizontal plane or in a selected stratum to break out a considerable part of it before the rest of the round is fired; the holes are fired in succession in accordance with the increasing angle they form in relation to the face. *BS, 12*

fancy

A term applied to semiprecious stones prized for qualities other than intrinsic value.

fancy lump coal

a. Soft coal from which all slack and nut coal has been removed. *Fay* b. Ark. Semianthracite coal of larger size than grate coal. *Fay*

fan drift

- a. The short tunnel connecting the upcast shaft with the exhaust fan. See also: [ventilation](#)
- b. The enclosed airtight passage, road, or gallery from the mine to the fan. *Mason*
- c. The passage or duct for the intake of a ventilating fan on a mine. *CTD*
- d. An airway leading from a mine shaft, or airway, to a fan. *BS, 8*

fan drift doors

When there are two fans at a mine it is necessary to install isolation doors for each drift leading to a fan in order to prevent the working fan from drawing air from the outside atmosphere. With modern fan layouts, the fan drift may be 5 m or more square and pass 300 m³/s of air and sometimes more. Modern fan drift doors can be fixed in any position from fully open to fully closed and can be manipulated by one person from outside the fan drift. Doors of the butterfly type are often used and can be opened manually or by power. See also: [main separation door](#)

fan efficiency

The ratio obtained by dividing useful power output by power input. This is expressed as a percentage. Fan efficiency is understood to mean that air power is calculated from volume flowing and total pressure, on the assumption that the air does not change in volume. The velocity head, present in the air leaving the evase, is considered as a loss. The power input is that supplied to the fan shaft and thus includes the loss in the fan bearings but excludes all losses in the drive.

fan exhaust

An electric fan used for the removal of enamel dust from the spray booth, or fumes from the pickle room, thus safeguarding the health of the worker. *Enam. Dict.*

fan fireman

In bituminous coal mining, a person who tends and fires the boiler generating steam for driving fans used for mine ventilation. *DOT*

fan fold

A fold with a broad hinge region and limbs that converge away from the hinge. *AGI*

fang bolt

Used for attaching ironwork to timber. The nut is a plate with teeth, which bite into the wood. To tighten, the bolt is turned while the nut remains stationary. *Crispin*

fanglomerate

A sedimentary rock consisting of slightly waterworn, heterogeneous fragments of all sizes, deposited in an alluvial fan and later cemented into a firm rock; it is characterized by persistence parallel to the depositional strike and by rapid thinning down dip. *AGI*

fan laws

The general fan laws are the same for either axial-flow or centrifugal fans. These laws are as follows: (1) air quantity varies directly as fan speed; quantity is independent of air density (twice the volume requires twice the speed); (2) pressures induced vary directly as fan speed squared, and directly as density (twice the volume develops four times the pressure); (3) the fan-power input varies directly as the fan speed cubed and directly as the air density (twice the volume requires eight times the power); and (4) the mechanical efficiency of the fan is independent of the fan speed and density.

fanner

Scot. A small portable hand fan. *Fay*

Fanning's equation

Frictional pressure drop (Δp_t) of fluid flowing in a pipe; $\Delta p_t = 2f(v^2/g)(l/d)$, where f is a function of the Reynolds number, v = rate of flow, g is acceleration due to gravity, l and d are length and diameter of pipe. *Pryor, 3*

Fann viscosimeter

A specific make of viscosimeter. See also: [viscometer](#)

fan rating

The head, quantity, power, and efficiency to be expected when a fan is operating at peak efficiency. *Hartman, 2*

fan scarp

A fault scarplet or small fault scarp entirely in piedmont alluvium or in an alluvial fan. *AGI*

fan shaft

a. The ventilating shaft to which a mine fan is connected. *BS, 8* b. The spindle on which a fan impeller is mounted. *BS, 8*

fan shooting

A type of seismic survey in which detectors are laid out along an arc so that each detector is in a different direction at roughly the same distance from a single shot point. It was used in the 1920's and 1930's to detect the presence of shallow salt domes intruding low-velocity sediments. Syn: [arc shooting](#)

fan static head

See: [fan static pressure](#)

fan static pressure

a. The total ventilating pressure required to circulate the air through a mine less the natural ventilation pressure. Also called fan useful pressure. *Nelson* b. The difference between fan total pressure and fan velocity pressure. Syn: [fan static head](#)

fan structure

The fold structure of an anticlinorium. *AGI*

fan total head

Equal to the fan static head plus the velocity head at the fan discharge corresponding to a given quantity of air flow. See also: [total ventilating pressure](#)

fan total pressure

The algebraic difference between the mean total pressure at the fan outlet and the mean total pressure at the fan inlet. *BS, 8*

fan velocity pressure

The velocity pressure corresponding to the average velocity at the fan outlet. *BS, 8*

Far East Rand

S. Afr. The area between Boksburg and Heidelberg, Transvaal, limited in the north and east by the outcrops or sub-outcrops of the Main Reef, but not yet limited in the south. *Beerman*

farewell rock

The highest rock formation of the Millstone Grit of South Wales, occurring immediately beneath the Coal Measures. Since all workable coal seams occur in the Coal Measures, it is useless to search for coal in these rocks, hence the miner's term. *Nelson*

Farrar process

Method of case-hardening iron by use of ammonium chloride, manganese dioxide, and potassium ferrocyanide. *Pryor, 3*

farringtonite

A monoclinic mineral, $Mg_3(PO_4)_2$, with iron and silicon present; colorless, wax-white, or yellow; peripheral to olivine nodules in the Springwater pallasite meteorite discovered near Springwater, SK, Canada.

fascicular schist

A schist with elongated ferromagnesian minerals lying in a plane but otherwise unoriented. *Knopf*

fashioned gemstone

Gemstone that has been cut and polished.

Fashoda garnet

Dark-red to brownish-red pyrope garnet from Tanzania, the clear blood-red specimens used as gems.

fassaite

a. See: [augite](#) b. Ferrian aluminian diopside or augite.

fast cord

Igniter cord consisting of three central paper strings coated with a black powder composition and held together with cotton counterwinding. These are then enclosed in an extruded layer of plastic incendiary composition and finished with an outer plastic covering. The overall diameter of fast igniter cord is approximately 0.10 in (2.5 mm). *McAdam, 2*

fast country

Solid or undisturbed rock. Syn: [fast ground](#)

fast-delay detonation

A loosely applied term for any method for the firing of blasts involving the use of the blasting timer or millisecond-delay caps. *Streefkerk*

fast end

a. The part of the coalbed next to the rock. *Fay* b. A gangway with rock on both sides. See also: [loose end](#) c. The limit of a stall in one direction, or where the face line of the adjoining stall is not up to or level with, nor in advance of, it. *Fay*

fast feed

See: [fast gear](#)

fast-feed gear

See: [fast gear](#)

fast gear

a. As used by drillers in referring to the feed gears in a gear-feed swivel head, the pair of gears installed in the head that produces the greatest amount of bit advance per revolution of the drill stem. Also called fast feed; high feed. *Long* b. As used by drillers in referring to the speed at which the drill motor rotates the drill stem or hoist drum, the transmission gear position giving the fastest rotation per engine revolutions per minute. *Long*

fast ground

See: [fast country](#)

fast junking

See: [junking](#)

fast line

That portion of the cable or wire line, reeved through a block and tackle, that runs from the stationary block to the hoisting drum on a drill machine. CF: [deadline](#)

fast powder

Dynamite or other explosive having a high-speed detonation. *Nichols, 1*

fast side

a. The rock adjoining the coal. *Arkell* b. The end of the face where there is a solid face more or less at right angles. *Mason*

fat clay

A cohesive and compressible clay of high plasticity, containing a high proportion of minerals that make it greasy to the feel. It is difficult to work when damp, but strong when dry. CF: [lean clay](#) *AGI*

fathogram

A continuous profile of the depth obtained by echo soundings. *AGI*

fathometer

An instrument used in measuring the depth of water by the time required for a sound wave to travel from surface to bottom and for its echo to be returned. It may also be used for measuring the rise and fall of the tides in offshore localities. *Hunt*

fatigue

The weakening or failure of a material after many repetitions of a stress that of itself is not strong enough to cause failure. *AGI*

fatigue limit

The maximum stress below which a material can presumably endure an infinite number of stress cycles.

fatigue of metals

A deterioration in the crystalline structure and strength of metals due to repeated stresses above a certain critical value. See also: [annealing](#) *Nelson*

fatigue ratio

The ratio of the fatigue limit for cycles of reversed flexural stress to the tensile strength.

fat stone

Stone with fracture surfaces having a greasy luster. Syn: [nepheline](#)

fatty amber

A yellowish amber resembling goose fat; not as opaque as cloudy amber. Syn: [flohmic amber](#)

fatty luster

Having the brilliancy of a freshly oiled reflecting surface; characteristic of slightly transparent minerals, e.g., serpentine and sulfur. Syn: [greasy luster](#)

Fauck's boring method

An earlier percussive boring method used largely in Europe for exploration, etc. The cutting tool is given a rapid but very short stroke, and the hole is flushed by water passing down through the hollow rods. No beam is used, but the rope to which the boring tools are suspended has an up-and-down motion imparted to it by an eccentric. The arrangement gives up to 250 strokes/min with a stroke length as low as 3-1/4 in (8.3 cm). *Nelson*

fauld

The tympan arch or working arch of a furnace. *Fay*

faulding boards

Catches in a mine shaft to facilitate the stopping of the cage at intermediate coal seams. *CTD*

fault

a. A fracture or a fracture zone in crustal rocks along which there has been displacement of the two sides relative to one another parallel to the fracture. The displacement may be a few inches or many miles long. b. A break in the continuity of a body of rock. It is accompanied by a movement on one side of the break or the other so that what were once parts of one continuous rock stratum or vein are now separated. The amount of displacement of the parts may range from a few inches to thousands of feet. Various descriptive names have been given to different kinds of faults, including closed fault; dip fault; dip-slip fault; distributive fault; flaw fault; gravity fault; heave fault; hinge fault; horizontal fault; longitudinal fault; normal fault; oblique fault; oblique slip fault; open fault; overthrust fault; parallel displacement fault; pivotal fault; reverse fault; rotary fault; step fault; strike fault; strike-slip fault; thrust fault; transcurrent fault; translatory fault; underthrust; vertical fault; want. c. In coal mining, a sudden thinning or disappearance of a coal seam. Also known as a want or pinchout. *Kentucky*

fault basin

A region depressed relative to the surrounding region and separated from it by bordering faults.

fault bench

A small fault terrace. *AGI*

fault block

a. A mass bounded on at least two opposite sides by faults. It may be elevated or depressed relative to the adjoining region, or it may be elevated relative to the region on one side and depressed relative to that on the other side. *AGI* b. A body of rock bounded by one or more faults. *AGI* c. The displaced mass of rocks on either side of a fault plane. See also: [footwall](#); [hanging wall](#). *Nelson*

fault-block mountain

See: [block mountain](#)

fault breccia

a. The assemblage of angular fragments resulting from the crushing, shattering, or shearing of rocks during movement on a fault; a friction breccia. It is distinguished by its cross-cutting relations, by the presence of fault gouge, and by blocks with slickensides. *AGI* b. Angular to subangular fragments of crushed rock, up to several meters in size, filling a fault. Syn: [fault stuff](#)

fault casing

A layer of hardened clay lining the fault plane and often showing groovings and striae due to the rock movement along the fault plane. See also: [fault gouge](#)

fault complex

An intricate system of interconnecting and intersecting faults of the same or different ages.

faulted mountain

See: [block mountain](#)

fault embayment

A depressed region in a fault zone or between two faults, invaded by the sea. The Red Sea and Tomales Bay on the San Andreas fault in California are examples.

fault escarpment

See: [fault scarp](#)

fault fissure

A fissure that is the result of faulting. It may or may not be filled with vein material. *AGI*

fault-fold

A structure that is associated with a combination of folding and nearly vertical faulting, in which crustal material that has been fractured into elongate strips tends to drape over the uplifted areas to resemble anticlines and to crumple into the downthrown areas to resemble synclines. *AGI*

fault gap

A depression between the offset ends of a ridge developed on a resistant rock layer that has been displaced by a transverse fault. *Stokes*

fault gouge

A layer of hardened clay lining a fault plane, commonly showing grooves and striae indicating the direction of most recent movement. Syn: [fault casing](#)

fault groove

One of the undulations on a fault surface, deeper than fault striae but similarly formed. They record larger movements and have greater significance as indicating the direction of movement. *Stokes*

fault growth

Intermittent, small-scale movement along a fault surface that, accumulated, results in considerable displacement. *AGI*

fault heave

The amount of lateral movement of the strata at a fault. The fault throw and heave are essential elements of a fault and form basic values when exploring and driving to recover the disrupted coal seam. See also: [fault shift](#)

faulting

The process of fracturing and displacement that produces a fault. *AGI*

fault inlier

An isolated exposure of the overridden rock in a region of thrust faulting. It is surrounded by rocks of the overriding block and is thus separated from other surface exposures of rock like itself. *Stokes*

fault line

The intersection of a fault surface or a fault plane with the surface of the Earth or with any artificial surface of reference. Syn: [fault trace](#); fault trend.

fault-line scarp

An escarpment that is the result of differential erosion along a fault line rather than the direct result of movement along the fault; e.g., the east face of the Sierra Nevada in California.

fault-line valley

A valley that follows the line of a fault. Fault valleys are usually straight for long distances. *Stokes*

fault mosaic

An area divided by intersecting faults into blocks that have settled in varying degrees. *Stokes*

fault plane

A fault surface without notable curvature. See also: [plane](#) CF: [fault surface](#)

fault scarp

An escarpment that owes its relief to a line of faulting, the escarpment occurring on the upthrown side of the fault. See also: [scarp](#)

fault set

A group of faults that are parallel, or nearly so, and that are related to a particular deformational episode. CF: [fault system](#)

fault shift

The lateral movement of the rocks at a fault. In a normal fault it represents the barren ground on a plan of the area (coal mining). Syn: [fault heave](#)

fault striae

The scratches on faulted surfaces caused by forced movement of particles or projecting hard points against the fault walls. They may indicate the direction of movement on the fault. CF: [slickensides](#)

fault strike

The direction, with respect to north, of the intersection of the fault surface, or of the shear zone, with a horizontal plane. See: [strike](#) *AGI*

fault stuff

Rock filling a fault. See also: [fault breccia](#)

fault surface

The surface of a fracture along which dislocation has taken place. CF: [fault plane](#)

fault system

Two or more fault sets that were formed at the same time. CF: [fault set](#)

fault terrace

An irregular, terracelike tract between two fault scarps, produced on a hillside by step faulting in which the downthrow is systematically on the same side of two approx. parallel faults. CF: [fault bench](#)

fault trace

See: [fault line](#); rift.

fault trap

A trap, the closure of which results from the presence of one or more faults. *AGI*

fault trend

See: [fault line](#)

fault trough

See: [rift valley](#)

fault-trough coast

See: [fault embayment](#)

fault vein

A mineral vein deposited in a fault fissure. *Fay*

fault wedge

A wedge-shaped block of rock between two faults. *Stokes*

faulty structure

Irregularities of gemstone crystallization and subsequent breakage or separation, such as cleavage cracks, clouds, or feathers.

fault zone

A fault that is expressed as a zone of numerous small fractures or of breccia or fault gouge. A fault zone may be as wide as hundreds of meters. CF: [step fault](#) belt. *AGI*

fauna

The entire animal population, living or fossil, of a given area, environment, formation, or time span. CF: [flora](#) *AGI*

faunal

Of or pertaining to a natural assemblage of animals.

faustite

A triclinic mineral, $(\text{Zn,Cu})\text{Al}_6(\text{PO}_4)_4(\text{OH})_8 \cdot 4\text{H}_2\text{O}$; turquoise group; in fine grained apple-green masses in Eureka County, NV.

Faust jig

A plunger-type jig, usually built with multiple compartments. It has three distinguishing features: (1) plungers on both sides of the screen plate, are accurately synchronized; (2) the refuse is withdrawn through kettle valves near the overflow lips in the respective compartments; and (3) the hutch is commonly discharged periodically by the operator by means of suitable hand valves operated from the working floor. This jig is used extensively on slack sizes of bituminous coal. *Mitchell*

Fauvelle

A system of drilling that provides for the continuous removal of the detritus from the well by means of a water flush or current of water.

favas

Braz. In the diamond fields, brown pebbles consisting of a hydrated phosphate, or of titanium and zirconium oxides; regarded as good indications of the presence of diamonds.

favorable locality

The experienced prospector always seeks a favorable locality, which may be in the neighborhood of a mining district or else in a locality that contains favorable rocks and structures and appears as if it might contain the mineral sought. See also: [critical area](#)

fayalite

An orthorhombic mineral, $4[\text{Fe}_2 \text{SiO}_4]$; olivine group, with iron replaced by magnesium toward forsterite or by manganese toward tephroite; greenish-yellow to yellowish-amber; a common rock-forming mineral in iron-rich metasediments, quartz syenites and granites, ferrogabbro, and some felsic and alkaline volcanic rocks.

Fayol's theory

See: [harmless depth theory](#)

fea

Shrop. Workable measures, usually ironstone. Syn: [fey](#)

feasibility studies

Studies gathering together the information that is required for a decision whether and how to proceed further. A study of this kind may vary from a preliminary estimate of mill cost to a very complete survey that may include a market analysis, mining plan with ore grades and mining cost, metallurgical testing, process development, plans for the mill, cash flow analysis, etc. *SME*, 2

feather alum

See: [alunogen](#); halotrichite.

feather amphibolite

A metamorphic rock in which porphyroblastic crystals of amphibole (usually hornblende) tend to form stellate or sheaflike groups on the planes of foliation or schistosity. CF: [amphibolite](#) *AGI*

feather edge

a. The thin end of a wedge-shaped piece of rock or coal. b. A sharp edge, such as that produced when a brick is cut lengthwise from corner to corner to produce a triangular cross section. See also: [knife edge](#)

feather ends

Firebricks with tapered ends. *Osborne*

feather gypsum

See: [satin spar](#)

feather metal

Copper granulated by being poured molten into cold water. *Webster 3rd*

feather ore

a. See: [jamesonite](#) b. A capillary, fibrous, or feathery habit of an antimony-sulfide mineral, specif. jamesonite, but including stibnite and boulangerite.

feather quartz

Imperfect quartz crystals that meet at an angle of a crystallographic plane so that a cross section somewhat resembles a feather.

feathers of litharge

Litharge crystals.

fecal pellet

An organic excrement, mainly of invertebrates, occurring esp. in modern marine deposits but also fossilized in some sedimentary rocks; usually of a simple ovoid form less than a millimeter in length, or more rarely rod-shaped with longitudinal or transverse sculpturing, devoid of internal structure, and smaller than a coprolite. Also spelled faecal pellet. *AGI*

Federov stage

See: [universal stage](#)

feed

a. Material treated for removal of its valuable mineral contents. Also, feed to any machine or process along a mill's flow line. Also called mill-head ore. *Pryor, 3* b. The process of supplying material to a conveying or processing unit. *Nichols, 1* c. The forward motion imparted to the drills or cutters of a rock-drilling or coal-cutting machine. d. A mechanism that pushes a drill into its work. *Nichols, 1* e. The longitudinal movements imparted to a drill stem to cause the bit to cut and penetrate the formation being drilled. *Long* f. See: [drill feed](#) g. The distance that the drill stem on a diamond drill may be advanced before the rods must be rechucked. *Long* h. In stonecutting, sand and water employed to assist the saw blade in cutting.

feed control

System of valves or other mechanical device controlling the rate at which longitudinal movements are imparted to the diamond- or rock-drill stem and/or the cutting teeth on a coal-cutting machine. *Long*

feed-control valve

A small valve, usually a needle valve, on the outlet of the hydraulic-feed cylinder on the swivel head of a diamond drill; used to control minutely the speed of the hydraulic piston travel and, hence, the rate at which the bit penetrates the rock being drilled. Also called drip valve; needle valve. *Long*

feed-end blocks

In rotary kilns, special fire-clay shapes or rotary-kiln blocks so installed as to reduce the kiln diameter.

feeder

a. Small fissures or cracks through which methane or other gases escape from the coal. As working faces are advanced, fresh feeders are encountered in each fall of coal. *Kentucky* b. Any flow of water or gas entering a mine. *BS, 10* c. A conveyor or bunker structure for delivering coal or other broken material at a controllable rate. See also: [feeder conveyor](#); Lofco car feeder. *Nelson* d. A flow of water from the strata or from old workings. *Nelson* e. A small ore vein leading to a larger one. See also: [feeder vein](#)

feeder and catchers tables

A pair of reversible conveyors, entry and exit, which provide for repeat feeding of metal being processed through a rolling mill.

feeder breaker

A portable feeding and crushing unit which can move on its own or often be installed in a stationary position. The unit has a feed chain (often referred to as a flight chain) inside a shallow built-on hopper that drags the mined ore into a rotating breaker head (shaft), which has various sizes of breaker heads (known as piks). These piks rotate downward as the chain drags the stone or ore into it, crushing the ore to various sizes depending on the height of the mounted rotating breaker head. Syn: [stamler](#)

feeder circuit

A feeder circuit is a conductor or group of conductors and associated protective and switching devices installed on the surface, in mine entries, or in gangways, but not extending beyond the limits set for permanent mine wiring.

feeder connection

The opening or surrounding blocks in a furnace wall to receive the channel leading to the feeder. *ASTM*

feeder conveyor

a. A short auxiliary conveyor designed to receive coal from the face conveyor and load it onto the gate conveyor. Also called stage loader. See also: [feeder](#); [gate-end feeder](#); [gate-end loader](#). *Nelson* b. Any conveyor that transports material to another conveyor. *NEMA, 2*

feeder trough

In a duckbill, the trough that is attached to the conveyor pan line and serves as a base on which the feeder trough rides. *Jones, 1*

feeder vein

A small ore-bearing vein joining a larger one. See also: [feeder](#)

feed gear

The gearing or assemblage of three to four pairs of matched gears in a gear-feed swivel head of a diamond drill by means of which the drill string coupled to the feed screw is made to advance and penetrate the formation. See also: [gear](#)

feedhead

See: [swivel head](#)

feeding baffle

A door or gate that can be opened or closed to regulate the discharge of material from a hopper, bin, or chute. *Nelson*

feed pressure
