a. Permanent deformation of the shape or volume of a substance, without rupture. It is mainly accompanied by crystal gliding and/or recrystallization. Syn: [plastic flow](#); [thixotropy](#). CF: [plastic strain](#) *AGI* b. Deformation by one or both of two grain-scale mechanisms: slip, and twinning. This is a metallurgical definition, increasingly used by geologists. Sometimes called crystal plasticity. *AGI* c. Rheological term for deformation characterized by a yield stress, which must be exceeded before flow begins. *AGI* d. An elastic deformation of brittle minerals--such as olivine under mantle conditions, or quartz, during metamorphism; deformation occurs along well-defined crystallographic planes in specific directions, which may be preserved as thin deformation lamellae or as deformation twinning. It may be annealed out by recrystallization. CF: [elastic](#)

[deformation](#) e. Irreversible deformation of metallic minerals, such as gold or copper. See also: [malleability](#)

plastic design

The design of steel or reinforced-concrete structural frames which is based on the assumption that plastic hinges form at points of maximum bending moment. See also: [elastic design](#); [plastic modulus](#). *Hammond*

plastic explosive

See: [plastic and semiplastic explosive](#)

plastic firebrick

A common term for both high duty and super-duty fire clay plastic refractories.

plastic flow

See: [plastic deformation](#)

plastic fracture

The breakage of a solid material under load when being permanently deformed. *Hammond*

plastic igniter cord

A corklike device for lighting a safety fuse. When the cord is ignited an intense flame passes along its length at a uniform rate and ignites the blackpowder core of an ordinary safety fuse. Two types are made: the fast has a nominal burning speed of 1 s/ft (3.3 s/m); the other is about 10 times as slow. *Nelson*

plasticity

The property of a material that enables it to undergo permanent deformation without appreciable volume change, elastic rebound, or rupture. See also: [plastic deformation](#); [plastic flow](#); [plastic limit](#); plastic soil; plastic state; plasticity index. *ASCE*

plasticity index

The water-content range of a material at which it is plastic, defined numerically as the liquid limit minus the plastic limit. CF: [Atterberg limits](#); [plastic limit](#).

plasticizer

A material, usually organic, capable of imparting plastic properties to nonplastics or improving the plasticity of ceramic mixtures. Syn: [wetting agent](#)

plastic limit

a. The water-content boundary beyond which a soil can be rolled into a thread approx. 3 mm in diameter without crumbling, i.e., beyond which it is plastic. b. The water content of a soil or clay material corresponding to an arbitrarily defined boundary between a plastic and a semisolid state. CF: [Atterberg limits](#); [plasticity index](#).

plastic modulus

A factor used in the plastic design of steel structures. It is a constant for each particular shape of section. See also: [plastic design](#) *Hammond*

plastic soil

a. A soil that can be rolled into 1/8-in (1.6-mm) diameter strings without crumbling. *Nichols, I* b. A soft, rubbery soil. *Nichols, I* c. A soil that exhibits plasticity. *ASCE*

plastic solid

A solid that undergoes change of shape continuously and indefinitely after the stress applied to it passes its elastic limit.

plastic state

The range of consistency within which a soil exhibits plastic properties. Also called plastic range. *ASCE*

plastic strain

In rocks, which are composed of many crystals commonly belonging to several mineral species, the term applies to any permanent deformation throughout which the rock maintains essential cohesion and strength regardless of the extent to which local microfracturing and displacement of individual grains may have entered into the process. CF: [plastic deformation](#)

plastic tamping rod

A tamping rod or stemmer, of a rigid nature, made from plastic possessing suitable dielectric properties. A plastic conducive to the building up of heavy charges of static electricity is unsuitable. *Nelson*

plastic tooling

Dies, jigs, and fixtures for metal forming, boring, assembly, and checking; made at a saving of time and labor, of laminated and cast components, and cemented into highly stable industrial tools, chiefly with epoxy and some with polyester resins. Epoxies are strong adhesive resins, particularly useful because of their low shrinkage factor. Polyesters have a cost advantage and are easy to handle. *Crispin*

plastic yield

The term commonly applied to plastic deformation. *Hammond*

plastic zone

In explosion-formed-crater nomenclature, this zone differs from the rupture zone by having less fracturing and only small permanent deformations. There is no distinct boundary between the rupture and plastic zones. *Min. Miner. Eng., 2*

Plast-Sponge

High-quality iron powder made by reduction of iron oxide; used in powder metallurgy. *Bennett*

plat

a. The map of a survey in horizontal projection, such as of a mine, townsite, etc. b. A diagram drawn to scale showing land boundaries and subdivisions, together with all data essential to the description of the several units. A plat differs from a map in that it does not show additional cultural, drainage, and relief features. *Seelye, 2* c. A platform, floor, or surface in or about a mine used esp. for loading and unloading ore, etc. *Webster 3rd*

plate

a. A flat iron or steel sheet laid around a mine-shaft collar, at the shaft bottom, or at any level station, to enable mine cars and other equipment to be easily turned and moved about. Also, a cast-iron plate with a circular ridge on which mine rail cars are turned at the junction of roads. b. A horizontal timber laid on a floor or sloping wall to receive a framework of timbers. c. A torsionally rigid thin segment of the Earth's lithosphere, which may be assumed to move horizontally and adjoins other lithospheric plates along zones of seismic activity. See also: [plate tectonics](#)

plate amalgamation

Use of copper or copper-alloy plates coated with enough mercury to form a soft adherent film, in order to trap gold from crushed ore pulp as it flows over the plates. The resulting amalgam, containing up to 40% metallic gold, is periodically scraped off and more mercury is added to the film. *Pryor, 3*

plate-and-frame filter

A filter press consisting of plates with a gridiron surface alternating with hollow frames, all of which are held by means of lugs, on the press framework. The corners of both frames and plates are cored to make continuous passages for pulp and solution; the filter cloth is placed over the plates. The pulp passageway connects with the large, square opening in the frame; the solution and passageways connect with the gridiron surface of the plate. The Dehne and the Merrill are well-known types. *Liddell*

plate apron feeder

An automatic arrangement by which coal or ore is fed forward on steel plates forming segments linked together in an endless chain. See also: [plate feeder](#)

plateau

Broadly, any comparatively flat area of great extent and elevation; specif. an extensive land region considerably elevated (more than 150 to 300 m in altitude) above the adjacent country or above sea level; it is commonly limited on at least one side by an abrupt descent, has a flat or nearly smooth surface but is often dissected by deep valleys and surmounted by high hills or mountains, and has a large part of its total surface at or near the summit level. A plateau is usually higher and has more noticeable relief than a plain (it often represents an elevated plain), and it is usually higher and more extensive than a mesa; it may be tectonic, residual, or volcanic in origin. See also: [tableland](#) CF: [mesa](#)

plateau basalt

A term applied to those basaltic lavas that occur as vast composite accumulations of horizontal or subhorizontal flows, which, erupted in rapid succession over great areas, have at times flooded sectors of the Earth's surface on a regional scale. They are generally believed to be the product of fissure eruptions. CF: [shield basalt](#) *AGI*

plateau gravel

A sheet, spread, or patch of surficial gravel, often compacted, occupying a flat area on a hilltop, plateau, or other high region at a height above that normally occupied by a stream-terrace gravel. It may represent a formerly extensive deposit that has been raised by earth movements and largely removed by erosion. *AGI*

plate bearing test

A method by which the load bearing capacity of a soil may be estimated. See also: [ultimate bearing pressure](#)

plate cleaner

A device for cleaning raw coal which uses the difference in the coefficient of resilience or friction between clean coal and an inclined plate, commonly of steel, and that between refuse and the plate to allow the clean coal to jump over a gap while the refuse falls through. *BS*, 5

plate conveyor

A conveyor in which the carrying medium is a series of steel plates, each in the form of a short trough, joined together with a slight overlap to form an articulated band. The plates are attached either to one center chain or to two side chains. The chains connect rollers running on an angle-iron framework and transmit the drive from the driveheads that can be installed at intermediate points as well as at the head or tail ends. A plate conveyor can negotiate bends down to about 20 ft (6.1 m) radius; available in widths 400, 540, and 640 mm with running speeds from 3 to 4 ft/s (0.9 to 1.2 m/s) with a carrying capacity from 100 to 400 st/h (90.7 to 362.8 t/h). Syn: [steel plate conveyor](#)

plate coordinate

In photographic mapping, either of two rectangular coordinates measured on a photograph with reference to the principal point as origin. *Seelye*, 2

plated crystal

A crystal with a conductive surface film of gold, silver, aluminum, or other metal produced by cathode sputtering, evaporation, or chemical methods. The films, to which lead wires may be soldered, take the place of the conventional clamped metal electrodes. *Am. Mineral.*, 2

plate feeder

The mechanical plate feeder is a device for feeding material at a fixed and uniform rate. It is generally applied at the tail end of a conveyor or elevator which feeds a plant, but may be applied to feeding any other single unit. It relieves the pressure and drag, with the consequent unnecessary wear on the belt, which is ordinarily experienced if feeding from a hopper directly to a belt. It not only cuts maintenance costs by eliminating uneven wear, but increased output can be obtained by steady feeding. This type of feeder also handles wet aggregate. See also: [disk feeder](#); [reciprocating feeder](#). *Pit and Quarry*; *ACSG*, 2

plate former

Used for lining shafts, winzes, and rises; usually constructed of comparatively thin steel sheeting, stiffened around the edges with angles. Plates should be of such size that they can be conveniently handled in the skips or buckets used for sinking. *Spalding*

plate girder

A built-up riveted or welded steel girder, having a deep vertical web plate, with a pair of angles riveted along each edge to act as compression and tension flanges. For heavier loads, flange plates are riveted or welded to the angles. *Hammond*

plate roll

A smooth roll for making sheet iron or plate iron, as distinguished from iron having grooves for rolling rails, beams, etc. *Standard, 2*

plate tectonics

A theory of global tectonics in which the lithosphere is divided into a number of plates whose pattern of horizontal movement is that of torsionally rigid bodies that interact with one another at their boundaries, causing seismic and tectonic activity along these boundaries. *AGI*

plate tongs

Tongs for grasping and handling iron or steel plates. *Standard, 2*

platform

a. The place on top of a breaker where the freshly mined coal is weighed by a weigh boss just before it is dumped into the machinery. *Korson* b. A wooden floor on the side of a gangway at the bottom of an inclined seam, to which the coal runs by gravity, and from which it is shoveled into mine cars. c. A plank or mesh steel-covered level area at the base of a drill tripod or derrick, used as a working space in front of a drill machine around the collar of the borehole. Sometimes the platform is large enough to act as a foundation and anchor for the drill machine. *Long* d. A scaffold. *Fay* e. A wood mat used in sets to support machinery on soft ground. Also called pontoon. *Nichols, 1* f. An operator's station on a large machine, particularly on rollers. *Nichols, 1* g. In the breaker, a flat or slightly inclined floor covered with iron plates onto which coal is run from the main screen bars and cleaned by platform workers. *Korson* h. Also a similar floored area in the tripod or derrick on which a laborer stands while working in a tripod or derrick. See also: [floor](#) *Long*

platform gantry

A gantry constructed for carrying a portal crane or a similar structure. *Hammond*

platform hoist

A power-driven hoist, having a lifting capacity ranging from 200 lb (90.7 kg) to about 2-1/2 st (2.27 t), which can be raised on a loading platform up to 200 ft (61 m) high.

Hammond

platina

a. Twisted silver wire. *Standard, 2* b. Crude native platinum. *AGI*

platinic gold

Said to be a native alloy containing 84.6% gold, 2.9% silver, 0.2% iron, 0.9% copper, and the remainder 11.4% platinum. *Hess*

platiniridium

An isometric mineral, (Ir,Pt) , with Ir 50% to 80% (atomic) of Ir + Pt; forms silver-white grains having sp gr, 22.6 to 22.8; Mohs hardness, 6 to 7.

platinize

To coat or combine with platinum, esp. by electroplating. *Standard, 2*

platinum

a. An isometric mineral, native platinum 4[Pt] with variable Pd, Ir, Fe, Ni; malleable; ductile; metallic; sp gr, 21.45; corrosion resistant; occurs in ultramafic rocks, quartz veins, and in placers. b. A malleable and ductile silvery-white metal, when pure. Symbol: Pt. Occurs native, accompanied by small quantities of iridium, osmium, palladium, ruthenium, and rhodium. Used in jewelry, wire, vessels for laboratory use, and in many valuable instruments including thermocouple elements. *Handbook of Chemistry and Physics, 3*

platinum-group metal

(PGM). Any of the minerals native platinum, osmium, iridium, palladium, rhodium, ruthenium, and their alloys, such as osmiridium (Ir,Os) , ruthenosmiridium (Ir,Os,Ru) , rutheniridosmine (Os,Ir,Ru) , and platiniridium (Ir,Pt) . Other alloys of PGM are exemplified by stanopalladinite, (Pd,Cu)₃ Sn₂ (?) ; and potarite, PdHg . Other sources of PGM are sperrylite, PtAs₂ ; cooperite, (Pt,Pd,Ni)S; stibiopalladinite, Pd₅ Sb₂ ; braggite, (Pt,Pd,Ni)S ; vysotskite, (Pd,Ni)S ; ruthenarsenite, (Ru,Ni)As ; cuproiridsite; CuIr₂ S₄ ; cuprorhodsit, CuRh₂ S₄ ; malanite, Cu(Pt,Ir)₂ S₄ ; and dayingite, CuCoPtS₄ . Varietal terms include plyxene and ferroplatinum for iron alloys and cuproplatinum for copper alloys.

platinum sponge

Metallic platinum in a gray, porous, spongy form; obtained by reducing ammonium chloroplatinate, which occludes large volumes of oxygen, hydrogen, and other gases. *Webster 3rd*

plattling

Brick laid flatwise on top of a kiln to keep in the heat. *Fay*

plattman

In bituminous coal mining, a colloquialism of English origin for a pusher who pushes loaded mine cars onto a cage from a platt (an enlarged underground opening at the shaft where cars are gathered prior to hoisting). *DOT*

plattnerite

a. A tetragonal mineral, PbO_2 ; rutile group; dimorphous with scrutinyite; iron black; occurs in lead mines. b. Erroneous spelling of planerite.

platy flow structure

An igneous rock structure of tabular sheets suggesting stratification. It is formed by contraction during cooling; the structure is parallel to the surface of cooling and is commonly accentuated by weathering. Syn: [platy structure](#); [planar flow structure](#). *AGI*

platynite

A trigonal mineral, $\text{PbBi}_2(\text{Se,S})_3$; metallic; iron-black; forms thin plates like graphite; at Falun, Sweden. Also spelled platinite.

platy structure

See: [platy flow structure](#)

playa

a. A term used in southwestern United States for a dry, vegetation-free, flat area at the lowest part of an undrained desert basin, underlain by stratified clay, silt, or sand, and commonly by soluble salts. The term is also applied to the basin containing an expanse of playa, which may be marked by ephemeral lakes. See also: [salina](#); [alkali flat](#); [salt flat](#); salar. Syn: [dry lake](#) b. See: [playa lake](#) c. A small, generally sandy land area at the mouth of a stream or along the shore of a bay. Etymol: Spanish, beach, shore, coast. *AGI*

playa basin

See: [bolson](#)

playa lake

A shallow, intermittent lake in an arid or semiarid region, covering or occupying a playa in the wet season but drying up in summer; an ephemeral lake that upon evaporation leaves or forms a playa. Syn: [playa](#) *AGI*

play of color

A pseudochromatic optical effect resulting in flashes of colored light from certain minerals, such as fire opal and labradorite, as they are turned in white light. Periodic spacings of phases with slightly differing refractive indices act as optical diffraction gratings in these minerals. CF: [fire](#); [opalescence](#); [pseudochromatism](#). Syn: [schiller](#)

plenargyrite

See: [matildite](#)

plenum

a. A system of ventilation in which air is forced into an inclosed space, such as a room or a caisson, so that the outward pressure of air in the space is slightly greater than the inward pressure from the outside, and thus leakage is outward instead of inward. b. A mode of ventilating a mine or a heading by forcing fresh air into it. c. Use of compressed air to hold soil from slumping into an excavation. *Nichols, 1*

pleochroic

See: [pleochroism](#)

pleochroic halo

a. A minute zone of color or darkening surrounding and produced by a radioactive mineral crystal or inclusion. *AGI* b. Any of the concentrically colored aureoles in minerals--e.g., micas, fluorite, and cordierite--centered by minute grains of minerals containing radioactive elements, such as zircon and monazite. This discoloration results from crystal structural radiation damage from alpha decay.

pleochroism

a. The property of exhibiting different colors in different directions by transmitted polarized light. *AGI* b. More precisely, the property of absorbing differently, light that

vibrates in different directions in passing through a crystal. If the crystal is uniaxial the change of color is called dichroism; if the crystal is biaxial, the change of color is called pleochroism. *AGI* c. The property of birefringent crystals (minerals) to absorb various wavelengths of light differentially depending on the vibration direction of the light within the crystal. Thus a mineral displaying pleochroism shows various colors or tints when it is traversed by plane polarized light and the orientation of the crystal is varied with respect to the plane of polarization. It is a common and diagnostic property of many minerals, and is easily observed under the petrographic microscope or a dichroscope. *AGI* d. The capacity of strongly anisotropic minerals to change absorption colors with changing electric vector in plane-polarized light; e.g., as seen with a polarized-light microscope. Uniaxial minerals may be dichroic and biaxial ones trichroic. Qualitative pleochroism is change of intensity in the same color; quantitative pleochroism shows change of color with change of orientation. Adj: pleochroic. CF: [dichroism](#); [trichroism](#). Syn: [polychroism](#)

pleomorphism

See: [polymorphism](#)

pleonaste

See: [ceylonite](#)

plessite

A fine grained intergrowth of kamacite and taenite.

pliable armored cable

A flexible cable having collective armor comprising stranded groups of fine, galvanized, steel wires. *BS, 13*

pliable support

A support composed of elastic materials that either yields to the roof pressure, or permits the subsidence of the roof without the support being completely destroyed and losing its significance. *Stoces*

plication

Intense, small-scale folding. Adj: plicated. CF: [crenulation](#) *AGI*

plout

Eng. To dress down or remove loose stone from the roof or sides. *SMRB*

plombierite

A mineral, $\text{Ca}_5 \text{H}_2 \text{Si}_6 \text{O}_{18} \cdot 6\text{H}_2 \text{O} (?)$.

plot mark

A mark made in a bit mold, bit die, or blank bit where a pip or hole is drilled to receive or to encompass a diamond. *Long*

plotting instrument

A large drawing machine by means of which stereoscopic pairs of vertical photographs can be viewed in conjunction with their ground control points and mechanically translated into accurate maps. *Hammond*

plotting scale

A scale used for setting off the lengths of lines in surveying.

plow

a. In coal mining, a cutter loader with knives or blades, which is pulled along the longwall face by a powerful chain. The broken coal is loaded onto an armored flexible conveyor which, with the aid of hydraulic rams, holds the plow up to the coal face and causes the knives to bite into the coal as they are pulled along. The plow is a continuous mining machine. See also: [plow-type machine](#) b. Applied to V-shaped belt scrapers that are attached to the belt conveyor frame and which press against the return belt. They are intended to remove coal or other material that might stick to the return belt and be crushed as the belt passes over the driving rolls or the return pulley. *Jones, I*

plow cut

See: [V-cut](#)

plow deflector

a. A steel plate attached to the end of a cutter loader for deflecting cut coal onto the face conveyor. *Nelson* b. A device for removing or diverting the dust and dirt off a belt conveyor and thus prevent it being carried back along the return belt. *Nelson*

plow steel

A high-tensile steel used in the manufacture of hoisting ropes.

plow-type machine

Plows may be divided into two classes: (1) machines that peel the coal to a depth of from 1 to 12 in (2.54 to 30.5 cm) by knives of various designs and the cut coal is then loaded onto a heavy type scraper chain conveyor; and (2) machines that peel a thin slice up to 2 in (5.1 cm) in thickness, by knives attached to each end of a steel box, and the coal is dragged along the face inside the box. From the aspect of speed of travel, plows may be divided into: (1) slow-moving types of 10 to 20 ft/min (3.0 to 6.1 m/min), which remove a thicker slice; and (2) fast-moving types at about 80 ft/min (24.4 m/min), which take a relatively thin slice. See also: [Anbauhobel](#); [continuous mining](#); [Lobbe Hobel](#). *Nelson*

plucking

a. Describes the sudden jerking or plucking on heavy endless-rope haulage when the rope again takes the load, following rope coils. Instead of slipping smoothly sideways, the rope tends to stick until the pressure of oncoming coils overcomes the friction; these slip suddenly, producing a momentary slackening followed by a sudden jerk or pluck as the rope again takes the load. This may loosen chains or clips and cause derailments and runaway sets. *Sinclair*, 5 b. The disruption of blocks of rock by a glacier or stream. *Standard*, 2

plug

a. A watertight seal in a shaft formed by removing the lining and inserting a concrete dam, or by placing a plug of clay over ordinary debris used to fill the shaft up to the location of the plug. *BS*, 10 b. See: [hoisting plug](#) c. A steel cylinder placed inside the annular opening in a coring bit to convert it for use as a noncoring bit. The face of the plug may or may not be provided with serrations, inset diamonds, or other types of cutting edges. *Long* d. See: [block](#) e. See: [cartridge](#) f. A cylindrical piece of wood or an expandable metal apparatus placed in a borehole to act as a base into which the drive wedge of a borehole deflection device is driven. g. Small wooden pin driven into a hole in the rock roof of a tunnel. The axis of the tunnel is marked on such plugs by tacks, or by small iron hooks from which a plummet lamp may be suspended for sighting upon. *Stauffer* h. To plug a well by cementing a block inside casing or capping the well with a metal plate. *Wheeler, R.R.* i. Any block installed within casing to prevent movement of fluids. *Wheeler, R.R.* j. A steel wedge used in quarrying dimension stone. See: [plug-and-feather method](#) k. A vertical, pipelike body of magma that represents the conduit to a former volcanic vent. CF: [neck](#)

plug-and-feather hole

A hole drilled for the purpose of splitting a block of stone. These holes are usually in rows. The plug is a slightly wedge-shaped piece of iron driven between two L-shaped irons, or feathers, inserted in the hole. *Stauffer*

plug-and-feather method

A method used in quarrying to reduce large masses of stone to smaller size. By using a hammer drill, a row of shallow holes is made along the line where a break is desired. The feathers consist of two iron strips flat on one side for contact with the wedge, and curved on the other to fit the wall of the drill hole. They are placed in the hole and the plug (a steel wedge) is placed between them. They are sledged lightly in succession until a fracture appears. Wherever possible, such fractures are made parallel with the rift of the stone. Syn: [multiple wedge](#) See also: [plug](#)

plug bit

a. A diamond bit that grinds out the full width of a hole. *Nichols, 1* b. A noncoring diamond-set bit that can be in the form of a bullnose bit, pilot bit, or concave bit. Also called bullnose bit; concave bit; noncore bit; pilot bit. *BS, 9*

plug box

Eng. A wooden water pipe used in coffering.

plug drill

A stonecutter's percussion drill. *Webster 3rd*

plugged

a. A borehole that has been filled or capped with a long plug, or in which a plug has been inserted. *Long* b. Cracks or openings in the rocks in the walls of a borehole that have been filled or sealed with cement or other substances. *Long* c. A borehole that has been drilled with a plug or noncoring bit. *Long* d. A blocked core barrel or bit. *Long* e. A coring bit in which a plug has been inserted. See also: [plug](#) *Long*

plugged bit

a. See: [noncoring bit](#) b. A core bit, the annular opening of which is tightly closed or blocked by a piece or the impacted fragments of a core. *Long*

plugged crib

A curb supporting the walling in a shaft and is itself supported on plugs or bolts driven into the ground around the shaft. The crib may be removed when the walling from below is carried up to it. See also: [strata bolt](#) *Nelson*

plugging

a. The stopping of the flow of water into a shaft by plugs of clay. *Zern* b. The material used, the act, or the process of inserting a plug in a borehole to fill it or the cracks and

openings in the borehole sidewalls. *Long* c. The act or process of drilling a borehole with a noncoring bit. *Long* d. The practice of filling holes and cavities in castings with porous silicate mixture (cast iron filler) before the application of cover coats. The filler must be firmly forced into the casting holes, since any entrapped air beneath the filler will expand during firing and force the material out causing blowholes. *Enam. Dict.*

plughole

a. A passageway that is left open, while working on an explosion-proof stopping, for the purpose of maintaining the ventilation of the fire area at or as near the normal quantity as possible, to prevent any increase in the combustible gases content in the air. After the stopping is completed, this hole is plugged up with sandbags in order to completely seal off the mine area. The plughole is generally a tapered passageway of about 3.5 ft (1.1 m) square at the inby side of the stopping and 2.5 ft (0.76 m) square at the outby side. *McAdam, 1* b. See: [block hole](#)

plughole stopping

A stopping in which the floor and the sidewalls of the passage are built of sandbags, and the roof may be the roof of the roadway or covering boards used between the webs of steel arches, or preferably, corrugated steel sheeting used as lagging behind steel arches. The plughole or passage is generally tapered from the inby end from 3 to 3.5 ft (0.9 to 1.1 m) square to 2.5 ft (0.76 m) square so that, in the event of an explosion, the plug of sandbags in the passage is subjected to a wedging action assisting to retain the plug in place. The plughole may be placed in the most convenient position and although this is often at the top, it is sometimes placed to the side and reasonably near the floor. *Sinclair, 1*

plugman

See: [pumping engineer](#)

plug shot

Scot. A small charge exploded in a hole to break up a stone of moderate size.

plug valve

A valve or cock opened or closed by the turning of a plug, usually conical in shape. Not to be confused with needle valve or globe valve. *Long*

plum

a. A large random-shaped stone dropped into a large-scale mass of concrete to economize on the volume of the concrete. *Hammond* b. An old form of plumb. *Fay*

plumb

a. See: [vertical](#) b. See: [plumb bob](#); plumbline. c. To carry a survey into a mine through a shaft by means of heavily weighted fine wires hung vertically in the shaft. The line of sight passing through the wires at the surface is thus transferred to the mine workings. An important piece of work: in mine shafts, and in transferring courses or bearings from one level to another. *Fay*

plumbago

a. A special quality of powdered graphite used to coat molds, and in a mixture with clay, to make crucibles. b. See also: [black lead](#); [graphite](#). c. Impure graphite or graphitic rock. d. Minerals resembling graphite; e.g., molybdenite.

plumbago crucible

Highly refractory crucible composed of a mixture of about equal parts of refractory clay and graphite. *Osborne*

plumb bob

a. A small weight or bob, hanging at the end of a cord, which under the action of gravity is oriented in a vertical direction. Also called a plummet. *CTD* b. A pointed weight hung from a string. Used for vertical alignment. *Nichols, 1*

plumber's dope

A soft sealing compound for pipe threads. *Nichols, 1*

plumbic

Of, pertaining to, or containing lead, esp. in its higher valence. CF: [plumbous](#)

plumbiferous

Containing lead. *Webster 3rd*

plumbing

Transferring a point at one level to a point vertically below or above it by means of a weight (plumb bob or plummet) suspended at the end of a string or wire (plumbline). See also: [centering of shaft](#); [string survey](#). *Nelson*

plumbline

A device used to produce a vertical line between a survey instrument and the reference point over (or sometimes under, in underground work) which it is set. Special plumblines are used in a vertical shaft to transfer a fixed or an azimuth angle from the surface to underground workings for the purpose of orientation. Also known as plumb bob; plummet. See also: [Weisbach triangle](#)

plumbocalcite

A variety of calcite containing a small amount of lead carbonate.

plumboferrite

A trigonal mineral, PbFe_4O_7 ; black; at Jakobsberg, Sweden.

plumbogummite

A trigonal mineral, $\text{PbAl}_3(\text{PO}_4)_2(\text{OH})_5 \cdot \text{H}_2\text{O}$; crandallite group; forms yellow to brown encrustations; in Cumberland, United Kingdom.

plumbojarosite

A trigonal mineral, $\text{PbFe}_6(\text{SO}_4)_4(\text{OH})_{12}$; alunite group; forms minute brown tabular crystals with rhombohedral cleavage.

plumbomicrolite

An isometric mineral, $(\text{Pb,Ca,U})_2\text{Ta}_2\text{O}_6(\text{OH})$; pyrochlore group. It occurs in greenish-yellow and orange masses and octahedra from Kivu, Zaire.

plumbous

Of, pertaining to, or containing lead, esp. in its lower valence. CF: [plumbic](#)

plumb pneumatic jig

Mineral concentrator in which air is pulsed upward through a porous deck by means of a rotary valve. *Pryor, 3*

plumb post

One of the vertical posts at the side of a tunnel resting on sills and carrying the wallplates; collectively, they support the tunnel roof by means of centering. *Stauffer*

plumites

A feathery variety of jamesonite. See also: [plumose antimony](#)

plummet

See: [plumblin](#)

plumose

Having a feathery appearance. *Fay*

plumose antimony

A feather-ore variety of jamesonite or boulangerite; also called feather ore. Also spelled plumites, plumosite.

plumose mica

A feathery variety of muscovite.

plumosite

A feathery variety of jamesonite or boulangerite.

plump

Corn. A corruption of the word pump.

plum-pudding stone

See: [puddingstone](#)

plunge

a. The vertical angle between a horizontal plane and the line of maximum elongation of an orebody. b. The inclination of a fold axis or other linear structure, measured in the vertical plane. CF: [apparent plunge](#); [dip](#). *AGI* c. To set the horizontal cross wire of a theodolite in the direction of a grade when establishing a grade between two points of known level. *AGI* d. To reverse the direction of the telescope of a theodolite by rotating it 180 degrees about its horizontal axis. Syn: [transit](#)

plunger

a. In blasting, a rod designed for thrusting into a drill hole and ascertaining the position of a cartridge. *Standard, 2* b. The piston of a force pump. *Fay* c. A piston and its attached rod. *Long*

plunger bucket

A pump piston without a valve. Also called plunger lift. *Webster 3rd*

plunger case

The pump barrel, or cylinder, in which a solid piston or plunger works. Also called pole case. *Fay*

plunger jig washer

A washer in which water is forced upward and then downward through a screen by the action of a plunger in an adjoining compartment. Although these machines are still in use, the term "jig washer" is now applied to the fixed-screen, air-pulse jig, which is directly descended from the first Baum washer used in 1892. See also: [jig washer](#); [pneumatic jig](#). *Nelson*

plunger lift

Scot. A pump and attached column of pipes, that raises water by means of a ram or piston. *Fay*

plunger press

A press in which the pressure is applied by a plunger, with a reciprocating motion, to charges of feed contained in molds in a vertical or horizontal table. *BS, 5*

plunger pump

a. Reciprocating pump used for moving water or pulp, in which a solid piston displaces the fluid. *Pryor, 3* b. A displacement-type pump may be of various types, such as: (1) the triplex pump, a vertical or horizontal, single-acting plunger type for small heads with three single-acting cylinders in the pump frame driven by a motor mounted on the outside of the frame and connected to the crankshaft of the pump through gearing; (2) the quadruplex or quintuplex pump, a pump having four or five cylinders; and (3) the duplex pump, a crank-and-flywheel type for high heads, with double-acting plungers. *Lewis*

plunger-type washbox

A washbox in which pulsating motion is produced by the reciprocating movement of a plunger or piston. Syn: [piston-type washbox](#)

plus distance

Fractional part of 100 ft or m used in designating the location of a point on a survey line—such as, 4+47.2, meaning 47.2 ft or m beyond Station 4; or 447.2 ft or m from the initial point, measured along a specified line. *Seelye, 2*

plush copper ore

See: [chalcotrichite](#); cuprite.

plus mesh

The portion of a powder sample retained on a screen of stated size. *Osborne*

plus sight

See: [backsight](#)

pluton

A body of medium- to coarse-grained igneous rock that formed beneath the surface by crystallization of a magma.

plutonic

a. Pertaining to igneous rocks formed at great depths. CF: [hypabyssal](#) *AGI* b. Pertaining to rocks formed by any process at great depth. Syn: [abyssal](#); [deep seated](#); [hypogene](#). *AGI*

plutonic metamorphism

Deep-seated regional metamorphism at high temperatures and pressures, often accompanied by strong deformation; batholithic intrusion with accompanying metasomatism, infiltration, and injection (or, alternatively, differential fusion or anatexis) is characteristic. CF: [injection metamorphism](#)

plutonic ore deposit

Collectively, the major group of ore deposits of magmatic origin that have been formed under abyssal conditions. *Schieferdecker*

plutonic rock

Igneous rock formed deep within the Earth under the influence of high heat and pressure, hypogene rocks; distinguished from eruptive rock formed at the surface. *Hess*

plutonic series

A series of different igneous rocks that evolved from the same original magma through various differentiation stages.

plutonism

a. The obsolete belief that all of the rocks of the Earth solidified from an original molten mass. CF: [neptunism](#) b. A general term for the phenomena associated with the formation of plutons. *AGI*

pluviometer

See: [rain gage](#)

ply

a. U.K. A thin band of shale lying immediately over a coal seam. b. U.K. A rib or successive ribs; e.g., of clayband with very thin partings. c. Limy ply; a limestone bed; Edinburgh, U.K.

pneumatic

Set in motion or operated by compressed air. *Nelson*

pneumatic blowpipe

A long, 3/4-in-diameter (1.9-cm-diameter) metal pipe, connected to an air supply; used to blow out dust and chippings from vertical blast holes at quarries. The blowpipe is generally used for holes exceeding about 12 ft (3.66 m) deep. A stream of water is sometimes used instead of an air jet. *Nelson*

pneumatic caisson

Closed casing in which air pressure is maintained equal to the pressures of the water and soils on the outside. The deeper the caisson, the higher the pressure that must be maintained. *Carson, 1*

pneumatic cartridge loader

A cartridge loader widely used for underwater blasting, for blasting without removing the overburden, and for long-hole blasting. It is also being used increasingly for tunneling and other sorts of rock blasting. *Langefors*

pneumatic cleaning

Mineral cleaning by machines that utilize air currents as the primary separating medium. The air machines can generally be divided into three types: (1) pneumatic jigs, in which the air current is pulsated; (2) pneumatic tables, in which the refuse is diverted from the direction of flow of the clean mineral by a system of riffles fixed to the deck; and (3) pneumatic launders, in which the products are flowing in the same direction, and the clean mineral is skimmed off the top of the bed and/or the refuse is extracted from the bottom in successive stages. *Mitchell*

pneumatic concentrator

Gravity jig, shaking table, or other device in which suitably ground minerals are separated by gravity during their exposure to a continuous or pulsating current of air. *Pryor, 3*

pneumatic conveying

Use of compressed air to move fairly fine aggregates laterally and/or vertically. *Pryor, 3*

pneumatic conveyor

a. A pipe or tube through which granular material is transported by airblast. It is used for pulverized coal, crushed rock (pneumatic stowing), cement, etc. The term could also be applied to a conveyor operated by compressed air. *Nelson* b. An arrangement of tubes or ducts through which bulk material or objects are conveyed in a pressure and/or vacuum system.

pneumatic drill

Compressed-air drill worked by reciprocating piston, hammer action, or turbo drive. *Pryor, 3*

pneumatic drill leg

See: [air-leg support](#)

pneumatic filling

A filling method in which compressed air is utilized to blow filling material into a mined-out stope. *Stoces*

pneumatic flotation cell

Machine in which the air used to generate a mineralized froth is blown into the cell, either through a porous septum at or near the bottom, or by pipes that bring low-pressure air to that region. *Pryor, 3*

pneumatic friction clutch

This clutch transmits power through friction shoes carried on the tube of cord and rubber construction. The pneumatic clutch is self-adjusting for wear owing to the natural resilience of the rubber tube. Disengagement is complete and automatic when the air under pressure is released. The clutch is controlled by finger pressure on a valve. The valve can be installed at the place most convenient for the operator. *Pit and Quarry*

pneumatic hammer

A hammer that uses compressed air for producing the impacting blow.

pneumatic hoist

A device for hoisting; operated by compressed air. *Standard, 2*

pneumatic injection

A method for fighting underground coal fires. This air-blowing technique involves the injection of an incombustible mineral, like rock wool or dry sand, through 6-in (15.2-cm) boreholes drilled from the surface to intersect underground passageways in the mines.

pneumatic jig

a. Air jig used in desert countries for concentrating ore. *Pryor, 3* b. A jiggling machine in which an airblast performs the work of separation of minerals. *Standard, 2* c. See: [Kirkup table](#); plunger jig washer.

pneumatic lighting

a. Underground lighting produced by a compressed-air turbomotor driving a small dynamo. *Pryor, 3* b. The use of compressed air to generate electric light. See also: [air turbolamp](#)

pneumatic lubricator

See: [line oiler](#)

pneumatic method

In flotation, a method in which gas is introduced under slight pressure near the bottom of the flotation vessel, the device used for introduction being either a submerged pipe or a porous cloth, frit, or rubber surface forming the wall of a wind box. *Gaudin, 2*

pneumatic mortar

Mortar applied to a surface with a cement gun in the same manner as guniting. Such mortar has a cube crushing strength of 3,000 psi (20.7 MPa) at 7 days and of 6,000 psi (41.4 MPa) at 28 days, with a water-cement ratio of 0.45. *Hammond*

pneumatic pick

A compressed-air-operated hand tool used to excavate coal, ore, and rock, with a punching action. Without the pick steel, its length is about 18 in (46 cm) and weight about 24 lb (10.8 kg). It delivers about 2,500 blows/min. The latest type is the water-controlled pick, so designed that the air valve is operated by water pressure. The water assists in suppressing the dust made during cutting. *Nelson*

pneumatic ram

A ram fed by a compressed-air pipeline. The piston is about 8 in (20 cm) in diameter, giving an area of 50 in² (323 cm²) and exerts a pushing force of up to 4,000 lb (1,800 kg). *Nelson*

pneumatic riveter

A compressed-air tool used for driving rivets. See also: [rivet](#) *Hammond*

pneumatic rod puller

An air-driven rod puller. See also: [rod puller](#)

pneumatics

The branch of physics that deals with the mechanical properties of gases, such as their pressure, elasticity, density, and also of pneumatic mechanisms; sometimes it includes acoustics. *Standard, 2*

pneumatic shaft sinking

a. Shaft sinking with the aid of a drop shaft fitted with an air-tight deck to form a working chamber. See also: [manlock](#) b. The caisson-sinking process now largely obsolescent in mining practice. *Nelson*

pneumatic stowing

A system of filling mined cavities in which crushed rock is carried along a pipeline by compressed air and discharged at high velocity into the space to be packed, the intense projection ensuring a very high density of packed material. For stowing shallow workings--up to 200 yd (183 m) in depth--the stowing plant may be installed on the surface. The air pressure is about 60 psi (414 kPa). For deeper workings, the plant may

be installed underground, and the crushed rock taken down from the surface. The stowing pipes are about 5 to 6 in (approx. 13 to 15 cm) in diameter. The system is often employed if important surface structures require protection. The material used is from old dirt heaps, screen dirt, and washery rejects. The material is crushed to $2\frac{1}{2}$ in (6.35 cm) and preferably without the $\frac{1}{2}$ -in (1.27-cm) material. See also: [air-stowing machine](#); crusher stower; hydraulic stowing; low-pressure air stower. *Nelson*

pneumatic table

An appliance for the dry cleaning of ore or coal. It consists of a perforated deck, with vertical ribs or riffles, which is reciprocated; the motion keeps the bed of raw coal sufficiently mobile for the blast of air from below to effect a process of stratification (or layering). The coal rises to the surface, with dirt at the base and a central layer of middlings. See also: [Birtley contraflow separator](#); [Kirkup table](#); Vee table; air table. *Nelson*

pneumatic tamper

Essentially a long-stroke piston with a mushroom-shaped foot about 4 in (10 cm) in diameter. It operates on compressed air, which is used to lift the piston and footpiece; their combined weight, in falling, supplies the impact. *Carson, I*

pneumatic tool

Tool operated by air pressure. *Crispin*

pneumatic transport

System composed of: a compressor, which provides airflow; a feeder, which meters the flow of material into a pipeline; and the pipeline-- for transporting coarse, dry, noncohesive material. *SME, I*

pneumatic water barrel

A special type of water barrel for removing water from a shaft sinking. By means of a hose connection to an air pump at the surface, a partial vacuum is created inside the barrel and the water lifts the valve and fills the barrel. The hose is then detached and the barrel is hoisted to the surface and discharged. Also called vacuum tank. *Nelson*

pneumatogenic

Said of a rock or mineral deposit formed by a gaseous agent. CF: [hydatogenic](#); [hydatopneumatogenic](#); [pneumatolytic](#). *AGI*

pneumatolysis

Alteration of a rock or crystallization of minerals by gaseous emanations derived from solidifying magma. Adj: pneumatolytic. *AGI*

pneumatolytic

A term used in different connotations by various authors and perhaps best abandoned. It has been used to describe: (1) the surface effects of gases near volcanoes; (2) contact-metamorphic effects surrounding deep-seated intrusives; (3) that stage in igneous differentiation between pegmatitic and hydrothermal, which is supposed to be characterized by gas-crystal equilibria; and (4) very loosely, any deposit containing minerals or elements commonly formed in pneumatolysis, such as tourmaline, topaz, fluorite, lithium, and tin, and hence presumed to have formed from a gas phase. CF: [pneumatogenic](#)

pneumatolytic metamorphism

Contact metamorphism in which the composition of a rock has been altered by introduced gaseous magmatic material.

pneumatolytic stage

That stage in the cooling of a magma during which the solid and gaseous phases are in equilibrium. *AGI*

pneumo-

A combining form taken from the Greek meaning lung, and used in connection with the terminology of geologic processes and effects involving gases and vapors. *Stokes*

pneumoconiosis

A disease of the lungs caused by habitual inhalation of irritant mineral or metallic particles. It occurs in any workplaces where dust is prevalent, such as mines, quarries, foundries, and potteries. Also called miner's asthma; miner's consumption; miner's lung. Also spelled pneumoconiosis; pneumonokoniosis. CF: [anthracosis](#); [silicosis](#). See also: [phthisis](#)

pneumokoniosis

See: [pneumoconiosis](#)

pocket

a. A localized enrichment; a crevice in bedrock containing gold; a rich patch of gold in a reef. b. A rich deposit of mineral, but not a vein. c. A bin, of a capacity equal to the skip,

used at the shaft bottom of an underground mine for quick and accurate skip loading. See also: [shaft pocket](#); [measuring chute](#). *Nelson* d. A receptacle, from which coal, ore, or waste is loaded into wagons or cars. *Fay* e. A ganister quarryman's local term for masses of rock, 30 to 50 ft (9.1 to 15.2 m) in width, that are worked out and loaded, leaving buttresses of untouched rock between them to support the upper masses. *Fay* f. A hole or depression in the wearing course of a roadway. *Fay* g. A local accumulation of gas. *Hudson* h. A bulge, sop, or belly in a lode or bed. See also: [belly](#) *Arkell* i. A cavity, whether filled with air, water, mineral, or gravel. *Arkell* j. In pegmatites, the central openings lined with crystals, including those of gem species. *Sinkankas*

pocket-and-fender method

In pillar extraction, a method in which lifts are mined in the same way as in the open-end method, except that a fender of coal or a series of small coal stumps is left adjacent to the gob as the lift is advanced. After the lift is completed, the fender or stumps of coal are blasted, and sometimes part of this coal is recovered. *Woodruff*

pocket-and-stump method

A method of mining pillars in which a narrow pillar of coal, called the stump, is left along the goaf (worked-out space) to support the roof while driving the pocket. This coal acts as a protection for the miners. When the pocket has been completed, the stump is worked back, then another pocket is driven, and so on. *Lewis*

pocket compass

A magnetic needle enclosed in a nonmagnetic case, the needle being free to swing over a graduated face or dial. The compass is useful for experimental purposes or for direction-finding in desolate parts of the countryside, or during darkness and foggy weather. *Morris*

pocket conveyor

A continuous series of pockets, formed of a flexible material festooned between crossrods, carried by two endless chains or other linkage that operate in horizontal, vertical and inclined paths.

pocket hunter

California. A miner or prospector who searches for small gold deposits which occur on the surface in the gold-bearing areas of the State. *Fay*

pocket of gas

A small accumulation of methane in a roof cavity, where it is beyond the reach of the ventilating air current. See also: [deflector sheet](#); combustible gases layer; hurdle sheet. *Nelson*

pocket transit

See: [Brunton compass](#)

pod

A rudely cylindrical orebody that decreases at the ends like a cigar or a potato. See also: [lens](#)

Podsol

See: [Podzol](#)

Podzol

A great soil group in the 1938 classification system; a group of zonal soils having an organic mat and a very thin organic-mineral layer overlying a gray, leached A2 horizon and a dark brown, illuvial B horizon enriched in iron oxide, alumina, and organic matter. It develops under coniferous or mixed forests or under heath, in a cool to temperate moist climate. Also spelled Podsol. Spelled "podzol" when used as the soil type belonging to the Podzol group. Etymol: Russian podsol, ash soil. *AGI*

podzolization

The process by which a soil becomes more acid owing to depletion of bases, and develops surface layers that are leached of clay and develop illuvial B horizons; the development of a podzol. Also spelled: podsolization. *AGI*

poecilitic

The original spelling of poikilitic. Now obsolete in American usage, it is still the most accepted European spelling. *AGI*

Poetsch process

a. The original freezing process of shaft sinking developed by F. H. Poetsch in 1883. See also: [freezing method](#) b. A process in which brine at subzero temperature is circulated through boreholes to freeze running water through which a shaft or tunnel is to be driven during development of a waterlogged mine. *Pryor, 3*

poicilitic

See: [poikilitic](#)

poidometer

An automatic weighing device for use on belt conveyors. The device feeds the material from a hopper in a uniform stream onto a short independent belt conveyor and from there onto the main belt or bin. The weight of material on the measuring belt actuates a scale beam that raises or lowers a gate controlling the rate of flow from the feed hopper to a certain predetermined load per foot of measuring belt. A meter records the travel of measuring belt, and this figure multiplied by the weight per foot of belt, as fixed by the scale beam adjustment, gives the weight of material handled in any given period. See also: [weightometer](#)

poikilit

See: [bornite](#)

poikilitic

A rock texture in which numerous grains of various minerals in random orientation are completely enclosed within a large, optically continuous crystal of different composition. Also spelled poicilitic. CF: [ophitic](#)

poikilitic texture

See: [poikilitic](#)

poikiloblastic

a. Said of a metamorphic texture in which small grains of one constituent lie within larger metacrysts. Modern usage favors this meaning. Syn: [sieve texture](#) b. Said of a metamorphic texture due to the development, during recrystallization, of a new mineral around numerous relicts of the original minerals, thus simulating the poikilitic texture of igneous rocks. CF: [helicitic](#)

point

a. A predetermined direction for driving a roadway underground. The point is fixed by roof plugs in the roadway. See also: [alignment](#); [spad](#). *Nelson* b. One one-hundredth (0.01) part of a carat. When less than one carat, the weight of a diamond is usually expressed in points; e.g., 20 points equals 1/5 carat. *Chandler* c. A pipe through which steam or hot water is brought into contact with frozen gravel to thaw it for mining or dredging. d. See: [well point](#) e. In quarrying, a type of wedge that tapers to a narrow, thin edge. f. The end or bottom of a borehole, as distinguished from the mouth or collar. *Fay* g. A tool used in trimming and smoothing rough stone surfaces. *Webster 3rd* h. Either of

a pair of tapered rails at a turnout that can be adjusted to direct a set of mine cars from a straight rail track to another track branching off at an angle. See also: [catch point](#); [turnout](#). *Nelson*

point agate

See: [point chalcedony](#)

point chalcedony

White or gray cryptocrystalline quartz flecked with tiny spots of iron oxide, giving the whole surface a uniform soft red color. Syn: [point agate](#)

point defect

A deviation from ideal crystal structure about a point location; e.g., interstitial, atom missing (Schottky), or combined (Frenkel). CF: [crystal defect](#); [Frenkel defect](#); [Schottky defect](#).

point driver

In metal mining, a person who drives steam or water points (specially made pipes with a chisel bit at one end) into the frozen ground of a placer deposit in advance of dredging operations, to thaw the ground so that it can be worked by the dredge for recovery of gold. Syn: [thawing](#) *DOT*

pointed box

A box, in the form of an inverted pyramid or wedge, in which minerals, after crushing and sizing, are separated in a current of water. See also: [spitzkasten](#)

point group

One of 32 geometrically possible arrays of symmetry elements intersecting at a point. These symmetry elements are axes of rotation, both proper and improper (1 = i, 2 = m). All minerals having the symmetry of one point group belong to the same crystal class. CF: [symmetry](#); [crystal class](#); space group.

point kriging

Estimating the value of a point from a set of nearby sample values using kriging. The kriged estimate for a point will usually be quite similar to the kriged estimate for a relatively small block centered on the point, but the computed kriging standard deviation will be higher. When a kriged point happens to coincide with a sampled location, the kriged estimate will equal the sample value. See also: [kriging](#)

point of attack

See: [portal](#)

point of compound curvature

The point of tangency common to two curves of different radii, the curves lying on the same side of the common tangent. Abbrev., P.C.C. *Seelye, 2*

point of curvature

The point where the alignment changes from a straight line or tangent to a circular curve; i.e., the point where the curve leaves the first tangent. Abbrev., P.C. *Seelye, 2*

point of decalescence

See: [decalescence](#)

point of frog

The intersection gagelines of the main track and a turnout. *Kiser*

point of intersection

a. The point where intersecting lines cross one another. *Jones, 2* b. The point where the two tangents to a circular curve intersect. Abbrev., P.I. Also called vertex. *Seelye, 2*

point of recalescence

See: [recalescence](#)

point of switch

That point in the track where a car passes from the main line onto the rails of a turnout. *Kiser*

point of tangency

The point where the alignment changes from a circular curve to a straight line or tangent; i.e., the point where the curve joins the second tangent. Abbrev., P.T. *Seelye, 2*

point plotting

In seismology, a procedure in reflection interpretation in which depth points are computed and plotted for each seismogram trace separately. *Schieferdecker*

point source

A single point from which light emanates; e.g., the sun or a lamp filament, or their reflections. In the case of multiple reflections, each is a point source.

poise

a. The unit of absolute viscosity, equal to one dyne-second per square centimeter. Named from the physicist Poiseuille. *AGI* b. The second unit of fluid viscosity, often expressed in centimeters or grams. See also: [absolute viscosity](#); [Poiseuille's law](#). *Pryor, 3*

Poiseuille's law

A statement in physics that the velocity of flow of a liquid through a capillary tube varies directly as the pressure and the fourth power of the diameter of the tube and inversely as the length of the tube and the coefficient of viscosity. See also: [poise](#)

poisoning

a. In ion-exchange terminology, loading of resin sites with unwanted ions, thereby eliminating them as locations for loading. *Pryor, 3* b. Fouling of an organic solvent used in stripping pregnant leach liquor. *Pryor, 3*

Poisson's ratio

The ratio of the lateral unit strain to the longitudinal unit strain in a body that has been stressed longitudinally within its elastic limit. It is one of the elastic constants. Symbol: σ . CF: [modulus of incompressibility](#)

poker man

A laborer who removes blue powder and ash residue from retorts after molten zinc has been tapped. Also called scraper. *DOT*

polar

a. Lacking a center of symmetry, with the result that crystals are acentric in their crystal forms and physical properties; i.e., electrostatic or magnetic properties are equal and opposite at the opposite ends of these crystals; e.g., tourmalines. Ant. nonpolar. b. An optical device, such as nicol prism or polarizing filter, for the production of plane-polarized light. See also: [nicol](#); [Nicol prism](#).

Polar Ajax

A high-strength, high-density, nitroglycerin gelatin explosive, supplied in both unsheathed and sheathed forms. See also: [Ajax](#)

polar curve

A graph showing the distribution of light in a flame safety lamp obtained by plotting the values obtained at intervals of 10 degrees around a full circle. *Mason*

polar explosive

Explosive containing an antifreeze ingredient and distinguished by the prefix polar. Polar and nonpolar explosives of equal grade possess similar characteristics. Explosives that contain nitroglycerin tend to freeze when stored at low temperatures for lengthy periods. Syn: [low-freezing explosive](#)

polariscope

An optical device consisting of two polarizers with a space between for a crystal or rock under study. Syn: [stauroscope](#)

polarity

In crystallography, the property of having differing types of termination at the two ends of a prismatic crystal. May be reflected in pyroelectric properties, conduction of electric current, etc.

polarizability

The property of an ion or atom to deform so as to create a dipole from the displacement of its electron cloud.

polarization

a. The difference between the equilibrium value of the potential of an electrode and the value attained when an appreciable current flows through a system. *Schlain* b. In electrolysis, the condition in the vicinity of an electrode, such that the potential necessary to get a desired reaction is increased beyond the reversible electrode potential. *ASM, I* c. The production of dipoles or higher-order multipoles in a medium. *AGI* d. The polarity or potential near an electrode. *AGI* e. In seismology, the direction of particle motion of shear (S) waves in a plane perpendicular to the direction of propagation. *AGI* f. A process of filtration or reflection by which ordinary light is converted to plane-polarized light in which the electric vector of a light ray is confined to a single plane.

polarized light

Light with its electric vector restricted to a plane or to an elliptically or circularly helical path as a result of filtration, reflection, or interaction with a crystal structure.

polarizer

In a polarized-light microscope, the polarizing filter or Nicol prism (polar) located below the sample stage. See also: [nicol](#); [analyzer](#).

polarizing prism

A prism of an anisotropic crystal, commonly calcite, cut and cemented together so as to permit passage of one of the doubly refracted light rays while reflecting the other out of the train of a microscope. Syn: [Nicol prism](#)

polar moment of inertia

The second moment of area about an axis perpendicular to its plane is known as the polar moment of inertia of a plane section. See also: [moment of inertia](#)

Polaroid

A sheet of cellulose impregnated with optically aligned crystals of quinine iodosulfate, which permit passage of light with its electric vector in one plane while absorbing all other impinging light. It is a cheap substitute for Nicol prisms in modern polarized-light microscopes.

Polar Viking

A typical nitroglycerin powder explosive, which is now supplied only in the sheathed form. *McAdam, 2*

polder

Dutch. Low fertile land, as in The Netherlands and Belgium, reclaimed from the sea by systems of dikes and embankments.

pole

a. Either of the two regions of a permanent magnet or an electromagnet where most of the lines of induction enter or leave. A point toward which a freely suspended ferromagnetic rod aligns itself. b. The negative or positive electrical pole in a circuit.

pole chain

A surveyor's chain. See also: [Gunter's chain](#)

pole figure

A stereographic projection representing the statistical average distribution of poles of a specific crystalline plane in a polycrystalline metal, with reference to an external system of axes. In an isotropic metal; i.e., in one having a completely random distribution of orientations, the pole density is stereographically uniform; preferred orientation is shown by an increased density of poles in certain areas. *ASM, 1*

poleman

See: [locomotive brakeman](#)

pole piece

A specially shaped piece of magnetic material forming an extension to a magnet; e.g., the salient poles of a generator or motor. *CTD*

pole strength

In measurement of magnetic strength, the number of unit poles in the measured field. One unit pole is the strength in a vacuum required to exert 1 dyn in a 1-cm gap between poles. *Pryor, 3*

polianite

A steel-gray dioxide of manganese, MnO_2 , crystallizing in the tetragonal system. It is distinguished from pyrolusite by its hardness and anhydrous character. *CMD; Dana, 4*

poling

a. The act or process of temporarily protecting the face of a level, drift, cut, etc., by driving poles or planks along the sides of the yet unbroken ground. Used esp. for holding up soft ground. See also: [forepoling](#) b. A step in the fire refining of copper to reduce the oxygen content to tolerable limits by covering the bath with coal or coke and thrusting greenwood poles below the surface. There is a vigorous release of reducing gases that combine with the oxygen contained in the metal. If the final oxygen content is too high, the metal is underpoled; if too low, overpoled; and if just right, tough pitch. *ASM, 1; CTD*

poling back

Carrying out excavation behind timbering already in place. *Hammond*

poling board

a. A forepoling board, driven horizontally ahead to support the roof when tunneling through running ground. See also: [forepoling](#) b. In trenching, either of a pair of side boards wedged apart. *Pryor, 3*

polirschiefer

Tripoli slate. Also called polishing slate. *Dana, 1*

polish

An attribute of surface texture of a rock, characterized by high luster and strong reflected light, produced by agents, such as desert or glacial polish, or by artificial grinding and smoothing; e.g., marble or granite. *AGI*

polished section

A slice of rock or mineral that has been highly polished for examination by reflected-light or electron microbeam techniques, a procedure mostly applied to opaque minerals. See also: [thin section](#); reflected-light microscope.

polished surface

See: [slickensides](#)

polishing

Removing the last traces of suspended matter from solutions by passing them through a filter coated with diatomaceous earth or similar material.

polishing cask

A barrel in which grained gunpowder is tumbled with graphite to glaze it. *Standard, 2*

polishing mill

A lap of metal, leather, or wood used by lapidaries in polishing gems. *Fay*

polled stone

Som. Stone hewn into shape and faced ready for building. Building stone with one side rough faced, as opposed to hammer-and-punch dressed. *Arkell*

pollen peat

Peat rich in pollen grains. *Tomkeieff*

poll pick

A pick with a head for breaking away hard partings in coal seams or knocking down rock already seamed by blasting. See also: [hammerpick](#) *Fay*

pollucite

An isometric mineral, $(\text{Cs, Na})_2 \text{Al}_2 \text{Si}_4 \text{O}_{12} \cdot \text{H}_2 \text{O}$; zeolite group; forms a series with analcime; colorless; occurs in granite pegmatites; a source of cesium and a minor gemstone. Syn: [pollux](#)

pollux

See: [pollucite](#)

poly-

A prefix signifying many. Used in many mineral names, such as polybasite, polycrase, polyhalite, and polyaugite. *CCD, 2; Spencer, 5*

polyargyrite

A mixture of argentite and tetrahedrite.

polybasite

A monoclinic mineral $(\text{Ag,Cu})_{16} \text{Sb}_2 \text{S}_{11}$; forms a series with pearcite; pseudohexagonal; soft; metallic; gray to black; sp gr, 6.0 to 6.2; in low-temperature veins; a source of silver.

polychroilite

Altered cordierite. *Dana, 1*

polychroism

See: [pleochroism](#)

polychroite

See: [cordierite](#)

polycrase

An orthorhombic mineral, $(Y,Ca,Ce,U,Th)(Ti,Nb,Ta)_2 O_6$; black; in granite pegmatites. Formerly spelled polykras.

polycrystal

A mineral specimen composed of an assemblage of individual crystals of various crystallographic orientations. See also: [glomerocryst](#); [syntaxy](#).

polycrystalline

An aggregate of crystals of the same species.

polydymite

An isometric mineral, $NiNi_2 S_4$; linnaeite group; easily confused with violarite.

polygenetic

a. Resulting from more than one process of formation, derived from more than one source, or originating or developing at various places and times; e.g., said of a mountain range resulting from several orogenic episodes. *AGI* b. Consisting of more than one type of material, or having a heterogeneous composition; e.g., said of a conglomerate composed of materials from several different sources. CF: [monogenetic](#)

polygon

A plane figure bounded by straight lines. *Jones, 2*

polygonal

A two-dimensional form having more than four regular straight sides.

polygonal method

An ore-reserve computation method in which an assumption is made that the area of influence of each drill hole extends halfway to the neighboring drill holes. Therefore, thickness and grade must vary uniformly in opposite directions and in such cases errors tend to be compensating. Where the thickness and grade vary in the same direction, the errors will accumulate and cause erroneous results. *Krumlauf*

polyhalite

A triclinic mineral, $K_2 Ca_2 Mg(SO_4)_4 \cdot 2H_2 O$; bitter tasting; varicolored; occurs in salt deposits in Texas, New Mexico, and Germany.

polykras

See: [polycrase](#)

polymer

a. A compound formed by the union of two or more molecules of the same simple substance. *Standard, 2* b. In the plural use, compounds identical in composition but which vary in molecular weight, such as ethylene (ethene), $\text{CH}_2 : \text{CH}_2$; propylene (propene), $\text{CH}_3 \text{CH} : \text{CH}_2$; and butylene (butene), $\text{CH}_3 \text{CH}_2 \text{CH} : \text{CH}_2$. *Standard, 2*

polymerization

Union of two or more molecules of given structure to form a new compound with the same elemental proportions but with different properties and a higher molecular weight. *Pryor, 3*

polymerize

To chemically combine small molecules into larger molecules; to undergo polymerization.

polymetallic sulfide

A sulfide deposit rich in copper, zinc, lead, silver, or gold, which forms as a result of hydrothermal activity in the vicinity of mid-ocean spreading centers or tectonically active basins. The first discovery of these deposits was from the French submersible *Cyana*, in 1979, during a joint international biological investigation of thermal springs on the deep seabed. The term derives from the French "sulfides polymetalliques."

polymignite

An orthorhombic mineral, $(\text{Ca}, \text{Fe}, \text{Y}, \text{Th})(\text{Nb}, \text{Ti}, \text{Ta}, \text{Zr})\text{O}_4$; radioactive; in syenites and granite pegmatites. Also spelled polymignyte.

polymorphism

The characteristic of a chemical compound to crystallize in more than one crystal class; e.g.: (1) kyanite, andalusite, and sillimanite; (2) quartz, tridymite, cristobalite, coesite, and stishovite. Allotropy refers specif. to chemical elements crystallizing in more than one class; e.g., graphite, diamond, chaoite, and lonsdaleite. Polymorphism limited to two or three crystal classes is dimorphism or trimorphism, respectively. Individual species are polymorphs (dimorphs, trimorphs). Polytypism refers to variable stacking of identical layer structures in different crystal classes. Adj: polymorphic (dimorphic,

trimorphic). Adv: polymorphous (dimorphous, trimorphous). Syn: [pleomorphism](#) trimorphism; isomorphism; isotopy; polysynony. See also: [allotropic](#)

polynigritite

Variety of nigritite found in a finely dispersed state in argillaceous rocks. CF: [keronigritite](#); [humonigritite](#). *Tomkeieff*

polynite

A montmorillonoid clay mineral in soils. *Spencer, 6*

polyphase

In electricity, having or producing two or more phases, such as a polyphase current. Syn: [multiphase](#)

polysomatic

Having a texture consisting of numerous small grains; said of minerals. *Standard, 2*

polysomatism

Minerals having a texture of many small grains.

polysynony

A condition where two or more minerals have the same composition, but different crystal classes owing to changed bond angles; e.g., alpha and beta quartz. CF: [polytypy](#); [polytropy](#); [polymorphism](#).

polysynthetic twinning

a. Two systems of lamellar twinning at an angle with one another. b. Successive twinning of three or more individuals, according to the same twin law, with parallel composition planes; commonly revealed by visibly striated cleavage planes; e.g., albite twinning in plagioclase feldspar. CF: [cyclic twinning](#); [twin laminae](#).

polythionic acid

Any of several acids in a series related to sulfurous and thiosulfuric acid. *Pryor, 3*

polytropy

A condition in which there is no change in the geometrical symmetry of the crystal structure of two related minerals, but a change to permit a variant in the resultant mineral; e.g., orthoclase microcline. CF: [polytypy](#); [polysyngony](#). *Hess*

polytypism

a. A condition in micas and similar clay minerals in which they show growth spirals which are due to lamellae of different orientations. *AGI* b. One-dimensional polymorphism resulting from alternate stacking of identical layers; e.g., kaolinite, nacrite, and dickite. Syn: [polytypy](#)

polytypy

A condition in which the space lattice of two related minerals is completely altered to a new type. This is illustrated by the quartz-tridymite relationship. See also: [polytypism](#) polytropy. *Hess*

polyvinyl butyral

A resin, with a plasticizer. Provides the interlayer in standard laminated glass made from either polished plate glass or window glass. *Lee*

polyxene

A variety of native platinum alloyed with iron.

Poncelet wheel

A kind of undershot waterwheel suitable for falls of less than 6 ft (1.8 m), having the buckets curved so that the water presses on them without impact.

Ponsard furnace

A furnace in which the escaping combustion gases, passing through tubular flues, heat the incoming air continuously through the flue walls. *Fay*

pontil

An iron rod used in glassmaking to carry and manipulate hot bottles, etc.; has a projection at the end, varying in shape according to the character of the ware carried. Also called snap; pontee; ponto; ponty; puntee; puntil; punty. *Standard, 2*

pontoon

a. A float supporting part of a structure, such as a bridge. *Nichols, 1* b. A wood platform used to support machinery on soft ground. *Nichols, 1*

pony set

A small timber set or frame incorporated in the main sets of a haulage level to accommodate an ore chute or other equipment from above or below. *Nelson*

pool

a. To undercut or undermine material, such as coal, esp. in excavating. *Webster 3rd* b. A continuous area of porous sedimentary rock that yields petroleum or gas on drilling. *Webster 3rd*

pool washing screen

A screen that is divided into alternate transverse screen cloth panels and metal plate pool sections. Water is directed to the pools, setting up a swirling motion that agitates fines into suspension. See also: [vibratory screen](#)

poor fumes

Toxic or irritating chemicals produced by an explosion. *Nichols, 1*

poorly sorted

See: [nongraded sediment](#)

pop

a. A short, secondary drill hole blasted to reduce larger pieces of rock or to trim a working face. Also called pophole; pop shot. See also: [pop shot](#) b. Explosion in sealed area of a mine. Manometers may record a sudden pressure rise due to such an explosion. *Sinclair, 1*

pop a boulder

To place and explode a stick of dynamite on a boulder so as to break it for easy removal from a mine. *Fay*

pophole

A secondary drill hole. See also: [pop](#)

pophole blasting

Breaking down large pieces of asbestos by means of short blastholes judiciously placed. *Sinclair, 7*

pop-off valve

A pressure-relief valve. *Long*

poppet

a. A pulley frame or the headgear over a shaft. A headframe. b. A valve that lifts bodily from its seat instead of being hinged. See also: [poppet valve](#); [puppet valve](#).

poppet head

a. The top of a derrick where the pulley is situated. *Gordon* b. See: [headgear](#)

poppet valve

A valve shaped like a mushroom, resting on a circular seat, and opened by raising the stem. See also: [poppet](#); [puppet valve](#). *Nichols, 1*

popping

The drilling, charging, and firing of a hole in the center of a boulder at quarry and open-cast mines. The hole is charged at the rate of 2 to 3 oz (57 to 85 g) of explosive per yd³ (74.2 to 111.3 g/m³) of rock. The charge is pushed to the bottom of the hole and then filled with sand or soil. Also called pop shooting. See also: [snakeholing](#) *Nelson*

poppy stone

Red orbicular jasper from California; popular for cutting en cabochon.

pop-shooting

A method of drilling a hole just beyond the center of a boulder to be broken so that the charge is centrally situated. Stemming is used. Pop-shooting is economical in explosives, but drilling is required. It is somewhat difficult to control the throw of broken material, but there is little noise to cause annoyance to nearby property owners. See also: [secondary blasting](#)

pop shot

a. In mining, a shot fired for trimming purposes. *BS, 12* b. In quarrying, a method of secondary blasting. *BS, 12* c. A shot by which a boulder in a mine is broken up by placing a stick of dynamite on top of the boulder and exploding it. *Ricketts* d. In

blasting, an explosion of the charge that simply blows out the tamping. Syn: [block hole shot](#)

pop valve

A pressure-relief valve. *Long*

porcelain clay

A clay suitable for use in the manufacture of porcelain; specif. kaolin. *AGI*

porcelain earth

See: [kaolinite](#)

porcelain jasper

A hard, naturally baked, impure clay or porcellanite that, because of its red color, was long considered a variety of jasper. See also: [porcellanite](#)

porcelain oven

A firing kiln used in baking porcelain. *Fay*

porcelaneous

Resembling unglazed porcelain; e.g., said of a rock consisting of chert and carbonate impurities or of clay and opaline silica. Also spelled: porcellaneous; porcelanous. *AGI*

porcellanite

A dense siliceous rock having the texture, dull luster, hardness, conchoidal fracture, and general appearance of unglazed porcelain; it is less hard, dense, and vitreous than chert. The term has been used for: an impure chert, in part argillaceous; an indurated or baked clay or shale often found in the roof or floor of a burned-out coal seam; and a fine-grained, acidic tuff compacted by secondary silica. Etymol: Italian *porcellana*, porcelain. Also spelled: porcelanite; porcelainite. See also: [siliceous shale](#); [porcelain jasper](#); [haelleflinta](#). *AGI*

pore

A space in rock or soil not occupied by solid mineral matter. Syn: [interstice](#); [void](#).

pore pressure

See: [neutral stress](#)

pore space

The open spaces or voids in a rock taken collectively. See also: [porosity](#); [permeability](#).

pore-space filling

The deposition of minerals in the voids of rocks or between the grains of loose sediment. *Nelson*

pore water

a. In soil technology, free water present in a soil. Normally under hydrostatic pressure. The shear strength of adjacent soil depends on this pore pressure, which reduces frictional resistance and soil stability. b. Subsurface water in the voids of a rock. Syn: [interstitial water](#)

pore-water pressure

See: [neutral stress](#)

porosimeter

An instrument used to determine the porosity of a rock sample by comparing the bulk volume of the sample with the aggregate volume of the pore spaces between the grains. Porosimeters are of various designs, some using liquids and some using gases, at known pressures, to find the volume of openings. *AGI*

porosity

a. The ratio, P , expressed as a percentage of the volume, V_p , of the pore space in a rock to the volume, V_r , of the rock, the latter volume including rock material plus the pore space; $P = 100 V_p/V_r$. *Holmes, 2* b. The amount of void space in a reservoir usually expressed as percent voids per bulk volume. Absolute porosity refers to the total amount of pore space in a reservoir, regardless of whether or not that space is accessible to fluid penetration. Effective porosity refers to the amount of connected pore spaces; i.e., the space available to fluid penetration. Syn: [total porosity](#)

porosity coefficient

Evolved by Professor H. Briggs in 1931 to express the conductance of a waste to air leakage, per foot length of the roadway per foot width of the leakage zone. *Roberts, 1*

porous

Containing voids, pores, cells, interstices, and other openings, which may or may not interconnect. See also: [porosity](#)

porous ground

Any assemblage of rock material that, as a result of fracturing, faulting, mode of deposition, etc., contains a high percentage of voids, pores, and other openings. *Long*

porous-pot electrode

Nonpolarizable electrode consisting of a metal bar immersed in a saturated electrolytic solution which is contained in a porous pot. *Schieferdecker*

porpezite

A native alloy of argentiferous gold with palladium, the palladium content varying up to 10%. From Porpez, Brazil. Syn: [palladium gold](#)

porphyrite

An obsolete term synonymous with porphyry. The term was originally used to distinguish porphyries that contain plagioclase phenocrysts from those that contain alkali feldspar phenocrysts. *AGI*

porphyritic

a. Said of the texture of an igneous rock in which larger crystals (phenocrysts) are set in a finer-grained groundmass, which may be crystalline or glassy or both. Also, said of a rock with such texture, or of the mineral forming the phenocrysts. *AGI* b. Pertaining to or resembling porphyry. *AGI*

porphyritic obsidian

Volcanic glass having microcrystalline phenocrysts.

porphyritic texture

See: [porphyritic](#)

porphyroblast

A pseudoporphyratic crystal in a rock produced by metamorphic recrystallization. Adj: porphyroblastic. Syn: [metacrystal](#); pseudophenocryst. *AGI*

porphyroblastic

a. Pertaining to the texture of a recrystallized metamorphic rock having large idioblasts of minerals possessing high form energy (e.g., garnet, andalusite) in a finer-grained crystalloblastic matrix. *AGI* b. See: [pseudoporphyratic](#)

porphyroclast

A rock fragment contained in mylonite.

porphyroclastic structure

See: [mortar structure](#)

porphyrogranulitic

Said of the texture of a diabase porphyry having phenocrysts of plagioclase and augite in a ground mass of plagioclase laths and augite.

porphyroid

Said of or pertaining to a blastoporphyratic or sometimes porphyroblastic metamorphic rock of igneous origin, or a feldspathic metasedimentary rock having the appearance of a porphyry. It occurs in the lower grades of regional metamorphism. *AGI*

porphyry

An igneous rock of any composition that contains conspicuous phenocrysts in a fine-grained groundmass; a porphyritic igneous rock. The term (from a Greek word for a purple dye) was first applied to a purple-red rock quarried in Egypt and characterized by phenocrysts of alkali feldspar. The rock name descriptive of the groundmass composition usually precedes the term; e.g., diorite porphyry. Obsolete syn: porphyrite. *AGI*

porphyry copper deposit

A large body of rock, typically porphyry, that contains disseminated chalcopyrite and other sulfide minerals. Such deposits are mined in bulk on a large scale, generally in open pits, for copper and byproduct molybdenum. Most deposits are 3 to 8 km across, and of low grade (less than 1% Cu). They are always associated with intermediate to felsic hypabyssal porphyritic intrusive rocks. Distribution of sulfide minerals changes outward from dissemination to veinlets and veins. Supergene enrichment has been very important at most deposits, as without it the grade would be too low to permit mining. *AGI*

porphyry deposit

a. A deposit in which minerals of copper, molybdenum, gold, or less commonly tungsten and tin, are disseminated or occur in a stockwork of small veinlets within a large mass of hydrothermally altered igneous rock. The host rock is commonly an intrusive porphyry, but other rocks intruded by a porphyry can also be hosts for ore minerals. b. A deposit, usually of copper, molybdenum, or tin, in igneous rock of any composition that contains larger crystals in a fine-grained groundmass. *SME, 1*

port

a. In drilling, a cylindrical opening through the bit shank from which the circulating fluid is discharged at the bit face into the water ways. *Long* b. Any opening in a furnace through which fuel or flame enters or exhaust gases escape. *ASTM*

portable aggregate plant

A plant mounted so that it can be moved over the highways on its own mounting and that performs all the operations of a stationary plant, including crushing, scalping, secondary crushing, screening, washing, and sand separation. Some of these complete plants are mounted on one chassis; others have the more common operations on one chassis with the supplementary equipment on separate portable mountings. *Pit and Quarry*

portable bucket loader

Any of several types of self-propelled multibucket loaders that are considered suitable for miscellaneous light excavating work. These loaders dig their own path, and to do this, have various means of gathering the material to a point where it will be picked up by the buckets as they pass over the lower tumbler. While these loaders are usually used for reclaiming from stockpiles, they can, under favorable conditions, excavate from deposits. These machines always are mounted on crawler treads. *Pit and Quarry*

portable concentric mine cable

A double conductor cable with one conductor located at the center and with the other conductor strands located concentric to the center conductor with rubber or synthetic insulation between conductors and over the outer conductor. Syn: [concentric mine cable](#)

portable conveyor

a. A conveyor designed to be moved as a unit. It is commonly wheel mounted and may or may not be sectional. *NEMA, 2* b. Any type of transportable conveyor, usually having supports that provide mobility. See also: [boxcar loader](#); [bucket loader](#); [hatch conveyor](#); loading conveyor; movable conveyor; portable drag conveyor; roller conveyor; trimmer conveyor; unloading conveyor; wheel conveyor.

portable crane

A hoisting device carried by a frame mounted on wheels. *Crispin*

portable crusher

A crusher with temporary support foundations, so that it can be moved in sections, or it can be moved along roadways with minimum dismantling. *SME, I*

portable drag conveyor

A portable conveyor upon which endless drag chains are used as the conveying medium. Also a term sometimes applied to a portable flight conveyor. See also: [drag-chain conveyor](#); [portable conveyor](#).

portable drill

Any size drill outfit that is wheel-, skid-, or track-mounted so that it can be moved readily as a unit. *Long*

portable electric lamp

Self-contained lamp (such as a battery-operated lamp) that may be worn on the person or carried about freely.

portable flame-resistant cable

A portable cable that will meet the flame tests of the U.S. Mine Safety and Health Administration.

portable loader

A loading machine mounted on wheels or crawler tracks. See also: [shovel loader](#)

portable mine blower

A motor-driven blower (fan) to provide secondary ventilation into spaces inadequately ventilated by the main ventilating system; the air is directed to such spaces through a duct.

portable mine cable

An extra-flexible cable used for connecting mobile or stationary equipment in a mine to a source of electric energy where permanent wiring is prohibited or impractical. (A portable cable for mining service is not always extra flexible and is used also with portable as well as with mobile and stationary equipment.)

portable parallel duplex mine cable

A double or triple conductor cable with conductors laid side by side without twisting, with rubber or synthetic insulation between conductors and around the whole. The third conductor, when present, is a safety ground wire.

portable pneumatic core sampler

A device developed by the U.S. Navy Ordnance Laboratory for sampling coral and sand bottoms. It consists of a four-legged pyramidal frame about 8 ft (2.4 m) high, a pneumatic hammer with air supply and exhaust hosing, 400 lb (180 kg) of lead weight, an anvil, and a 4-ft-long (1.2-m-long) aluminum barrel with a driving head for cutting through coral. *Hunt*

portable shunt

A tub-changing arrangement for a tunnel face. See also: [double-track portable switch](#)

portable substation

See: [transportable substation](#)

portable trailing cable

A flexible cable or cord used for connecting mobile, portable, or stationary equipment in mines to a trolley system or other external source of electric energy where permanent mine wiring is prohibited or is impractical. *USBM, 2*

portage

Can. Trail between waterways. *Hoffman*

portal

a. The rock face at which tunnel driving is started. Syn: [point of attack](#) b. The surface entrance to a drift, tunnel, adit, or entry. c. The log, concrete, timber, or masonry arch or retaining wall erected at the opening of a drift, tunnel, or adit.

portal crane

A type of jib crane carried on a four-legged portal frame, which runs along rails. See also: [goliath crane](#); [platform gantry](#). *Hammond*

portal-to-portal

A term encountered in disputes over what constitutes compensable "working time" under Federal laws. Portal literally means "entrance" and, in underground coal mining, portal refers to the mine mouth or entry at the surface. Hence, portal-to-portal as a descriptive term means strictly elapsed time from entry through the portal to exit on return. *BCI*

port crown

Port roof of a tank.

porte et gardin plow

See: [scraper plow](#)

porter

A long iron bar attached to a forging, or a piece in process of forging, by which to swing and turn it. *Standard, 2*

porthole

The opening or passageway connecting the inside of a bit or core barrel to the outside and through which the circulating medium is discharged. *Long*

Portland beds

See: [Portland limestone](#)

portland cement

A calcium-aluminum silicate produced by fusing or clinkering limestone and clay in a kiln so as to drive off carbon dioxide and produce an oxide glass. The clinker is ground very fine and, when mixed with water, will recrystallize and set. It is combined with aggregate to form concrete. The name is from a resemblance to the Portland limestone of England.

portland cement mortar

A mixture of portland cement, sand, and water. See also: [cement mortar](#) *Nelson*

portlandite

A hexagonal mineral, $\text{Ca}(\text{OH})_2$; occurs in skarns; an important constituent of portland cement.

Portland limestone

A series of limestone strata, belonging to the Oolite group (Upper Jurassic) on the Isle of Portland, Dorsetshire, England. Most of the building stone used in London is from these quarries.

Portland stone

a. A yellowish-white, oolitic limestone from the Isle of Portland (a peninsula in southern England), widely used for building purposes. *AGI* b. A purplish-brown sandstone (brownstone) from Portland, CT. *AGI*

portrait stone

A flat diamond, sometimes with several rows of facets around its edge; used for covering very small portraits. *Standard, 2*

posepnyte

An oxygenated hydrocarbon from the Great Western mercury mine, Lake County, CA. It occurs in plates and nodules, sometimes brittle, occasionally hard; the color is light green to reddish-brown; and sp gr, 0.85 to 0.985. *Fay*

position block

Mining claim that is in a position to contain a lode if it continues in the direction in which it has been proved in other claims, but which itself has not been proved.

positive

a. Electrically, a point at a relatively high potential with respect to another point. A positive ion is one in which a particle, molecular or atomic, has ceased to be neutral owing to loss of one or more electrons. *Pryor, 3* b. Positive ore is ore that has been proved to exist by being blocked out in panels sampled at close intervals on all four sides so as to establish its quality and quantity beyond reasonable doubt.

positive confining bed

The upper confining bed of an aquifer whose head is above the upper surface of the zone of saturation; i.e., above the water table. Little used. *AGI*

positive crystal

An optically positive crystal. *AGI*

positive derail

A device installed in or on a mine track to derail runaway cars or trips. This device is held open by a spring, necessitating that a worker hold it closed while a trip passes over it. *Hess*

positive-discharge bucket elevator

A spaced bucket-type elevator in which the buckets are maintained over the discharge chute for a sufficient time to permit free gravity discharge of bulk materials. See also: [bucket elevator](#)

positive displacement pump

A pump which discharges the same amount of water for a given power, regardless of the head against which it operates. See also: [bladder pump](#)

positive drive

A driving connection in two or more wheels or shafts that will turn them at approx. the same relative speeds under any conditions. *Nichols, 1*

positive element

A large structural feature or area that has had a long history of progressive uplift; also, in a relative sense, one that has been stable or has subsided much less than neighboring negative elements. *AGI*

positive elongation

Tabular, lathlike, or needle crystals with the electric vector of their slow ray parallel to the long direction of the crystal. Syn: [length slow](#)

positive ore

a. Ore exposed on four sides in blocks of a size variously prescribed. Syn: [ore developed](#) *Fay* b. Ore which is exposed and properly sampled on four sides, in blocks of reasonable size, having in view the nature of the deposit as regards uniformity of value per ton and of the third dimension, or thickness. *Fay*

positive rake

The orientation of a cutting tool in a manner, so that the angle formed by the leading face of the tool and the surface behind its cutting edge does not exceed 90 degrees ; e.g., teeth in a rip saw. Syn: [gouge rake](#) See also: [gouge angle](#) CF: [rake](#)

positive ray

Stream of positively charged atoms or molecules that take part in the electrical discharge in a rarefied gas. Positive rays have been studied by allowing them to pass through a perforated cathode onto a photographic plate, being deflected by magnetic and electrostatic fields (Thomson's parabola method) and by means of Aston's mass spectrograph. Syn: [canal ray](#)

positive temperature coefficient

See: [temperature coefficient](#)

positron

Positive electron of the same mass as a negative electron; has only transitory existence. *Pryor, 3*

possessio pedis

The actual possession of a mining claim by the first arrival.

possessory title

Title vested in the locator of a mining claim by compliance with the State and Federal mining laws.

possible crystal face

Any crystal face permitted by the symmetry of crystal structure but not appearing on a particular mineral specimen.

possible ore

An obsolete term for inferred reserves. See also: [reserve](#) Syn: [future ore](#)

post

a. To bring the survey, maps, and records of a mine up to date. *Fay* b. A charge of ore for a smelting furnace. *Webster 3rd* c. Any of the distance pieces to keep apart the frames or sets in a shaft; a studdle. *Webster 3rd* d. A mine timber, or any upright timber, but more commonly used to refer to the uprights which support the roof crosspieces. Commonly used in metal mines instead of leg which is the coal miners' term, esp. the in the Western United States. Syn: [upright](#) e. A support fastened between the roof and the floor of a coal seam; used with certain types of mining machines or augers. f. A pillar of coal or ore. g. An item of kiln furniture. Posts, also known as props or uprights, support the horizontal bats on which ware is sent on a tunnel kiln car. *Dodd* h. A discrete portion of bond between abrasive grains in a grinding wheel or other abrasive article. When an

abrasive grain held by a post has become worn, the post should break to release the worn grain so that a fresh abrasive grain will become exposed. *Dodd* i. A mass of slate traversed by so many joints as to be useless for building purposes. j. Any of the four vertical timbers of a square set. *Lewis*

post-and-stall

A mode of working coal, in which a certain amount of coal is left as pillars and the remainder is taken away, forming rooms or other openings. The method is also called bord-and-pillar; pillar-and-breast; etc. *Fay*

post brake

A type of brake sometimes fitted on a steam winder or haulage. It consists of two upright posts mounted on either side of the drum and operating on brake paths bolted to the drum cheeks. See also: [winder brake](#) *Nelson*

post drill

An auger (or drill) supported by a post. *Fay*

post hole

A shallow borehole. *Long*

post-hole auger

A hand-rotated drilling tool that enables bores to be sunk down to about 20 ft (6 m) in unsupported holes and deeper in cased holes. See also: [shell-and-auger boring](#)

post-hole digger

Large auger, rotated mechanically or by hand, used for digging in unconsolidated ground and retrieving a sample. *Pryor, 3*

posthumous

In tectonics, said of a recurrence of forces and movement along lines or over areas affected by similar forces in a previous period; overprint.

posting

York. Extracting the post or pillars; pillar robbing.

post jack

A jack for pulling posts. See also: [post puller](#) *Standard*, 2; *Fay*

postmineral movement

Movement usually along a fault that occurs after a mineral has been deposited.

postorogenic intrusion

An igneous intrusion that took place after an orogenic event or cycle.

post puller

An electric vehicle having a powered drum for handling wire rope used to pull mine props after coal has been removed; used for the recovery of the timber.

post puncher

A coal-mining machine of the puncher type supported by a post. *Fay*

post stone

An English term for any fine-grained sandstone or limestone. Also spelled: poststone. *AGI*

pot

a. A vessel for holding molten metal. *ASM*, 1 b. An electrolytic reduction cell used to make such metals as aluminum from fused electrolyte. *ASM*, 1 c. Mud-filled stump of *Sigillaria* in an upright position in the roof of certain coal seams. The stump became hollow by decay of the central pithy part, the hollow being filled by mud. This stump is now a separate mass of shale and is liable for collapse without warning. See also: [caldron bottom](#); [pot bottom](#). *Nelson* d. A colloquial syn. of seismic detector. *AGI* e. See: [abyss](#); line oiler.

potarite

A tetragonal mineral, PdHg ; silver white. Syn: [palladium amalgam](#)

potash

Potassium carbonate, K_2CO_3 ; formerly extracted from wood ashes; used as a component of glasses, glazes, and enamels to enhance colorants. Also called pearl ash. Syn: [potassium carbonate](#)

potash alum

See: [kalinite](#); alum; potassium alum.

potash feldspar

See: [potassium feldspar](#)

potash fixation

The retention of potassium in clays either by chemical combination in clay minerals or by adsorption. *AGI*

potash mica

See: [muscovite](#)

potash spar

See: [potassium feldspar](#); spar. CF: [soda spar](#)

potash syenite

A syenite with a large excess of potassium feldspar (microcline, orthoclase) or feldspathoid over sodium feldspar (albite).

potassic

Of, pertaining to, or containing potassium; relating to or containing potash. *Standard, 2*

potassium

A highly reactive metallic element of the alkali group; it is soft, light, and silvery. Symbol, K. Occurs abundantly in nature; obtained from the following minerals: sylvite, carnallite, langbeinite, and polyhalite. The greatest demand is for use in fertilizers. *Handbook of Chemistry and Physics, 3*

potassium alum

An isometric mineral, $KAl(SO_4)_2 \cdot 12H_2O$. Syn: [potash alum](#)

potassium aluminosilicate

See: [feldspar](#)

potassium apatite

A synthetic phosphate with K replacing Ca.

potassium bentonite

A clay of the illite group, formed by the alteration of volcanic ash; a metabentonite. Syn: [K-bentonite](#)

potassium carbonate

See: [potash](#)

potassium chloride

See: [sylvite](#)

potassium feldspar

The minerals microcline, orthoclase, and sanidine. Syn: [potash feldspar](#); potash spar; K-feldspar; K-spar.

potassium titanate

This compound, which approximates in composition to $K_2 Ti_6 O_{13}$ and melts at 1,370 degrees C, can be made into fibers for use as a heat-insulating material. *Dodd*

potato stone

See: [geode](#)

pot bottom

A large boulder or concretion having the rounded appearance of the bottom of an iron pot and easily detached from the roof of a coal seam. See also: [camel back](#); [kettle bottom](#); [tortoise](#). CF: [caldron bottom](#); bell. Syn: [pot](#); [potstone](#).

potch

Inferior opal that does not exhibit play of color; found in association with precious opal (Australia).

potential

a. The words potential and voltage are synonymous and mean electrical pressure. The potential of a circuit, machine, or any piece of electrical apparatus means the voltage normally existing between the conductors of such a circuit or the terminals of such a

machine or apparatus. In U.S. Bureau of Mines practice: (1) any potential less than 301 V shall be deemed a low potential; (2) any potential greater than 301 V but less than 651 V shall be deemed a medium potential; and (3) any potential in excess of 651 V shall be deemed a high potential. b. Any of several different scalar quantities, each of which involves energy as a function of position or of condition; e.g., the fluid potential of groundwater. *AGI*

potential crater zone

This is the region in which, if a sufficient quantity of explosive is used, the rock will be shattered and projected outward to form a crater. *Leet, 2*

potential-determining ion

Any ion which leaves the surface of a solid immersed in aqueous liquid before equilibrium (saturation point) has been reached, while an electrical double layer is building up and zeta-potential develops. *Pryor, 4*

potential difference

The difference in electric potential between two points; represents the work involved or the energy released in the transfer of a unit amount of electricity between them. *AGI*

potential energy

The form of mechanical energy a body possesses by virtue of its position. If a body is being dropped from a higher to a lower position, the body is losing potential energy, but if a body is being raised, then it gains potential energy. *Morris*

potential gradient

An ascending or descending value of voltage related to a linear measurement, such as a distance along the Earth surface or ground. *USBM, 2*

potential ore

Inferred reserves. See: [reserves](#)

potentiometric surface

An imaginary surface representing the total head of ground water; defined by the level to which water will rise in a well. The water table is a particular potentiometric surface. Syn: [piezometric surface](#); pressure surface. *AGI*

pothole

a. A kettlelike or circular depression, generally deeper than wide, worn into the solid rock in a stream bed at falls and strong rapids by sand, gravel, and stones being spun around by the force of the current. Also called a kettle hole; swallow hole. *Fay* b. A kettlelike to irregular steep-walled subcircular interruption of bedding in the Merensky Reef of the Bushveld Complex, South Africa. It is filled with younger material. c. A term used in Death Valley, California, for a circular opening, about a meter in diameter, filled with brine and lined with halite crystals. *AGI* d. An underground system of pitches and slopes. Applied in some cases to single pitches reaching the surface. e. A rounded, steep-sided depression resulting from downward surface solution. *AGI* f. The occurrence, in the nether roof of a coal seam, of an irregularly shaped mass generally broader at its base than elsewhere and with smooth sides (slickensides). *TIME* g. A circular or funnel-shaped depression in the surface caused by subsidence. *Hudson* h. A rounded cavity in the roof of a mine caused by a fall of rock, coal, ore, etc. i. A vertical pitch open to the surface. j. See: [abyss](#)

pot kiln

A small limekiln. *Webster 3rd*

pot lead

a. An obsolete term for graphite or black lead. *AGI; Fay* b. Graphite used on the bottoms of racing boats.

potlid

Eng. Flattened oval dogger of flaggy sandstone; so called because sometimes the upper or under layers, when split off, resemble potlids. CF: [baum pot](#)

pot ore

Foliated galena. *Arkell*

pot setting

In glassmaking, the placing of a pot in a furnace for the purpose of melting metal. *Standard, 2*

potstone

a. Impure steatite or massive talc; used in prehistoric times to make cooking vessels. Also spelled pot stone. b. See: [paramoudra](#)

potter

A skilled craftsman who fabricates ceramic ware using various forming techniques.

pottern ore

A term used in early metallurgical practice for an ore that becomes vitrified by heat, like the glazing of earthenware. *Standard, 2*

potter's asthma

See: [potter's consumption](#)

potter's bronchitis

See: [potter's consumption](#)

potter's clay

A plastic clay free from iron and devoid of fissility; suitable for modeling or making of pottery or adapted for use on a potter's wheel. It is white after burning. *AGI*

potter's consumption

An acute bronchitis often occurring among pottery employees, eventually affecting the lungs. *Standard, 2*

pottery spar

A 200-mesh feldspar produced for use by the manufacturers of chinaware, sanitary ware, ceramic tile, frits, enamel, glazes, electrical insulators, and vitrified grinding wheels. *AIME, 1*

potting

The placing of pots, containing either potassium nitrate or sodium nitrate and sulfuric acid, in the kilns used in the manufacture of sulfuric acid from sulfurous acid obtained from the combustion of sulfur in air. *Fay*

potty ore

Som. Brown iron ore, Brendon Hills. Apparently a color term, since the two varieties of ore are black and potty. *Arkell*

Poulter method

A seismic technique that dispenses with the need for drilling shotholes. In this air-shooting method, dynamite is exploded in arrays of simultaneous blasts with charges several feet above the ground. The principal difficulty involves the hazard of working with aboveground explosives and the damage to property or to the peace of mind of nearby inhabitants. *Dobrin*

pounceon

Wales. Underclay. Apparently a survival of the obsolete form of puncheon (punchin)--a supporting timber in a coal mine or in a building floor timber. Also spelled pounson. *Arkell*

pound

a. A large, natural fissure or cavity in strata. b. An underground reservoir of water. See also: [lodge](#)

pound-calorie

a. A hybrid term between the English and metric units and defined as the amount of heat required to raise 1 lb (0.454 kg) of water 1 degrees C. *Newton, 1* b. An engineering heat unit, often called centigrade heat unit (chu). Defined as above. Approx. equal to 1.8 Btu (1.9 kJ). *CTD*

pounder

An ore-mill stamp. *Standard, 2*

pound-foot

Unit of bending moment being the moment due to a force of 1 lb (0.454 kg) applied at a distance of 1 ft (30.48 cm). *Hammond*

pour

In founding: (1) the amount of material, as melted metal, poured at a time; and (2) the act, process, or operation of pouring melted metal; such as, make a pour at noon. *Standard, 2*

poured fitting

A connecting device that is fastened to the end of a cable (wire rope) by inserting the cable end in a funnel-shaped socket, separating the wires and filling the socket with molten zinc. *Nichols, 1*

pouring basin

A basin on top of a mold to receive the molten metal before it enters the sprue or downgate. *ASM, 1*

pouring gate

A channel in a mold through which to pour molten metal. *Fay*

pouring pit refractory

In the steel industry, refractory used for the transfer of steel from furnace to ingot. Refractories include ladle brick, nozzles, sleeves, stopper heads, mold plugs, hot tops, and mortars used for the brickwork involved. *ANSI*

pouty

In glassmaking, a long iron rod for either drawing out glass or twisting it to a fine thread.

powder

A general term for explosives including dynamite, but excluding caps. *Nichols, 1*

powder barrel

A barrel made for the conveyance of gunpowder, usually holding 100 lb (45.4 kg). CF: [powder keg](#)

powder box

A wooden box in a miner's breast or chamber, in which were kept black powder, cartridge paper, cartridge stick, squibs, lampwick, chalk, and tools. Syn: [tool box](#)

powder carrier

See: [powder monkey](#)

powder chest

A substantial, nonconductive portable container equipped with a lid and used temporarily at blasting sites for storage of explosives other than blasting agents. Unused explosives are returned to the magazine at the end of the shift. Syn: [day box](#)

powdered coal

Coal that has been crushed fine; may be transported by air to fire a boiler or industrial heating furnace. *BCI*

powdered ore

Aust. Ore disseminated with veinstuff.

powder explosive

An explosive containing still smaller quantities of liquid products, compared with plastic and semiplastic explosives, so that the spaces between the solid particles are not filled out entirely. As the result of this, the density of the mass is 20% to 40% lower than that of plastic and semiplastic explosives. *Fraenkel*

powder factor

The quantity of explosive used per unit of rock blasted, measured in lb/yd³ (kg/m³) per ton (metric ton) of rock.

powder house

A magazine for the temporary storage of explosives. See also: [magazine](#)

powder keg

A small metal keg for black blasting powder, usually having a capacity sufficient for 25 lb (13.5 kg) of powder. CF: [powder barrel](#)

powderman

a. A person in charge of explosives in an operation of any nature requiring their use. b. In bituminous coal mining and metal mining, one who handles proper storage of explosives in a powder house at a mine and issues powder, dynamite, caps, detonators, and fuses to miners as needed. At smaller mines, may deliver explosives to miners at working places. Also called powder monkey. See also: [blaster](#)

powderman helper

See: [powder monkey](#)

powder metal

As used in the diamond-drilling industry, the finely divided particles of iron, copper, nickel, zinc, tungsten carbide, etc., which, when mixed with a suitable binding material

and subjected to processing by heat and pressure, may be used as a matrix material to form a bit crown. *Long*

powder-metal bit

Any diamond bit, mechanically set, in which finely divided metal powders are used as a matrix to hold the diamonds in place. Also called powder-pressed bit; powder-set bit; sinter bit; sintered-metal bit. *Long*

powder metallurgy

The art of producing and utilizing metal powders for the production of massive materials and shaped objects. *ASM, 1*

powder-metallurgy technique

A metallurgical technique in which metal powder is pressed into a desired shape.

powder-metal process

The process of mechanically setting diamonds in a bit in a matrix of finely divided metal powders. The metal powder is first cold pressed to compact it in a bit mold or die and then heated to allow the bonding alloy to melt and bind the powder to the diamonds and bit blank. Hot pressing or coining follows heating of the powder in some modifications of the process. *Long*

powder mine

An excavation filled with powder for the purpose of blasting rocks. *Fay*

powder monkey

a. A person employed at the powder house of a coal mine whose duty is to deliver powder to the miners. b. In some metal mines, the person who distributes powder, dynamite, and fuses to the miners at the working faces. This is a nautical term, but is frequently used in the mining industry. c. In the quarry industry, one who carries powder or other explosives to the blaster and assists by placing prepared explosive in a hole, connecting a lead wire to a blasting machine, and performing other duties as directed. Also called blaster helper; powder carrier; powderman helper. See also: [powderman](#)

powder pattern

The array of monochromatic X-ray diffractions produced by a mineral powder. CF: [crystallogram](#)

powder porosity

Ratio of the volume of voids between particles, plus the volume of pores, to the volume occupied by the powder, including voids and pores. *Pryor, 3*

powellite

A tetragonal mineral, CaMoO_4 ; forms a series with scheelite as tungsten replaces molybdenum; a minor source of molybdenum in Idaho, Michigan, Nevada, and California, and Siberia, Russia.

powellizing process

A wood treatment consisting of impregnating the wood with a saccharin solution. It hardens the wood, and renders it fireproof to some extent. *Liddell*

power

a. Any form of energy available for doing any kind of work; e.g., steam power and water power. Specif., mechanical energy, as distinguished from work done by hand. *Standard, 2* b. Used loosely to indicate the electric current in a wire. *Fay* c. Rate of doing work. The foot-pound-second (fps) unit of power is the horsepower (hp), which is a rate of working equal to 550 ft.lbf/s (745.7 W). The electrical power unit, the watt, equals 10^7 cm-gram-second (cgs) units; i.e., 10^7 erg/s or 1 J/s. *CTD*

power arm

The part of a lever between the fulcrum and the point where force is applied. *Nichols, 2*

power barrow

See: [pedestrian-controlled dumper](#)

power control unit

One or more winches mounted on a tractor and used to manipulate parts of bulldozers, scrapers, or other machines. *Nichols, 2*

power control winch

A high-speed tractor-mounted winch with one to three drums; used chiefly for operating bulldozers, scrapers, and rooters. *Nichols, 1*

power dragscraper

A machine consisting of: (1) a bottomless scraper bucket; (2) a two-drum hoist; (3) two long cables that attach to the front and rear of the scraper; (4) a movable tail block; (5) a short, guyed mast located behind a ground hopper or other delivery point; and (6) two sheave blocks mounted on the mast to guide the operating cables to the hoist. The tail block is shifted manually from time to time, swinging the scraper in a wide arc until all the material within the operating radius has been taken out. *Pit and Quarry*

power earth auger

A mechanically operated auger for exploring and testing deposits that are not very hard. The drilling rig may be mounted on a lorry or on continuous tracks when greater depths may be reached. *Nelson*

powered supports

In fully mechanized coal mining, a system of pit props connected to a flexible armored conveyor by means of hydraulic rams. *Pryor, 3*

power factor

a. The ratio of the mean actual power in an alternating-current circuit measured in watts to the apparent power measured in volt-amperes; equal to the cosine of the phase difference between electromotive force and current. *Webster 3rd* b. The ratio of the total watts input to the total root-mean-square volt-ampere input to a rectifier or rectifier unit. *Coal Age, 1* c. A clause frequently found in electric power contracts, which sets forth that if a customer permits the average power factor of the load used to fall below a specified value, a penalty charge will be made. Power factor is often defined as the ratio of actual power to apparent power and is usually expressed as a percentage. *Kentucky*

power-factor meter

Meter that indicates the relation of the phase between the line current and the line voltage, which actually is the same as the power factor of the load. *Coal Age, 3*

power grizzly

Power-operated machine used mainly for removing dirt and fines from material to be crushed. There are three main types--the live-roll grizzly, the vibrating-bar grizzly, and the bar grizzly feeder. See also: [static grizzly](#)

power-operated supports

See: [self-advancing supports](#)

power pack

a. In general, an electrically operated hydraulic pump, placed at the gate end, to supply power to face equipment; e.g., self-advancing supports. The system forms a closed circuit with the oil returning to a reservoir containing about 212 gal (800 L) of oil. The pump can supply 2-1/2 gal (9.5 L) of oil per unit at 2,000 psi (13.8 MPa), which allows a setting load of about 9 st (8 t) per prop. See also: [hydraulic power](#) *Nelson* b. A unit that converts AC or DC current to AC or DC voltages suitable for the operation of electronic equipment. *NCB*

power rammer

A manually operated compacting machine, weighing about 200 lb (91 kg), raised by an intrinsic internal combustion mechanism and allowed to fall by gravity. See also: [mechanical rammer](#)

power sequence

A sequence control system that is suitable for a group of conveyors in tandem. The trunk conveyor contactor is first closed; after a delay of from 3 to 15 s, sufficient for its motor to come up to speed, power is switched on to the contactor of the second conveyor; finally, after a similar delay, power is switched on to the third conveyor or conveyors. All power comes through the number 1 conveyor contactor so that, if this conveyor is stopped, all other conveyors in tandem stop as well. See also: [sequence starting](#)

power shovel

An excavating and loading machine consisting of a digging bucket at the end of an arm suspended from a boom, which extends cranelike from the part of the machine that houses the powerplant. When digging, the bucket moves forward and upward so that the machine does not usually excavate below the level at which it stands. See also: [shovel loader](#)

power-shovel mining

Power shovels are used for mining coal, iron ore, phosphate deposits, and copper ore. The shovels may be used either for mining or for stripping and removing the overburden, or for both types of work, although at some coal mines the shovels used for stripping are considerably larger than those used for other mining. *Lewis*

power station

An assemblage of machines and equipment, including the necessary housing, where electrical energy is produced from some other form of energy. Steam boilers are fed with coal or oil and the heat generated is used to produce high-pressure steam. The steam then passes to turbines that drive the generators and thus produce electricity. *Nelson*

power takeoff

A place in a transmission or engine to which a shaft can be attached so as to drive an outside mechanism. *Nichols, 1*

power tongs

A mechanically powered wrench used to make up or break out a drill rod, casing, or pipe string. *Long*

power train

All moving parts connecting an engine with the point where work is accomplished. *Nichols, 1*

power unit

a. Generally applied to any device used to drive or operate machinery around a mine. Specif., it is used for the motor-speed reducer combination used to drive belt and chain conveyors. *Jones, 1* b. That part of a mining belt conveyor that consists of a power unit base, an electric motor, an electric controller, a speed reducer with a flexible coupling between motor and speed reducer, a power transmission device to power the drive pulley or pulleys, suitable covers for all moving parts and, if the power unit is of the detachable type, a device for attaching it to the conveyor. *NEMA, 2*

power upon the air

In coal mine ventilation, the horsepower applied is often known as the power upon the air. This may be the power exerted by a motive column due to the natural causes, to a furnace, or it may be the power of a mechanical motor. The power upon the air is always measured in foot pounds per minute. *Kentucky*

pozzolana

a. A leucitic tuff quarried near Pozzuoli, Italy, and used in the manufacture of hydraulic cement. The term is now applied more generally to a number of natural and manufactured materials, such as ash and slag, that impart specific properties to cement. Pozzolanic cements have superior strength when cured and are resistant to saline and acidic solutions. Also spelled: pozzolan; pozzuolana; pozzuolane. See also: [gaize](#) b. A material that is capable of reacting with lime in the presence of water at ordinary temperature to produce a cementitious compound. Natural pozzolanas are siliceous material of volcanic origin. They include trass and Santorin earth. Blast furnace slag is used to produce artificial pozzolanas. *CCD, 2*

pozzolana cement

A cement produced by grinding together portland cement clinker and a pozzolana, or by mixing together a hydrated lime and a pozzolana. Syn: [Roman cement](#)

practical shot

In coal mining, a shot for which a hole has been drilled in a direction selected with reasonable care and filled with powder and tamped with the same degree of care. *Fay*

prairie soil

Soil transitional between a pedalfer and a pedocal. *Leet, 1*

prase

a. A translucent dull green or yellow-green variety of chalcedony. b. Crystalline quartz containing abundant hairlike crystals of actinolite. Syn: [edinite](#); [mother-of-emerald](#).

praseodymium oxide

A rare earth that, together with zirconia and silica, produces a distinctive and stable yellow color for pottery decoration. *Dodd*

praseolite

a. A green alteration product of iolite. *Fay* b. A greenish foliated alteration product of cordierite.

prasopal

A green chromium variety of common opal from Australia, Hungary, and Brazil. Also spelled prase opal.

Pratt hypothesis

A suggested type of hydrostatic support for the Earth's solid outer crust in which crustal density is supposed to be greater under mountains than under oceans. CF: [isostasy](#); [Airy hypothesis](#).

Pratt truss

See: [N-truss](#)

Prayon process

The most common phosphoric acid dihydrate process for phosphoric acid production using sulfuric acid with naturally occurring phosphate rock. *Becker*

preaeration

Aeration of water or ore pulp before treatment, notably by froth flotation where deoxygenated water is used (e.g., from under a frozen lake). Also used to stabilize ore pulp containing unstable sulfides before cyanidation. *Pryor, 3*

prebaked anode

Anode produced by binding together crushed petroleum coke and coal-tar pitch in a mold under pressure; subsequently baked to 1,000 to 1,200 degrees C; used in a metallurgical electrical furnace and replaced as a unit when consumed; in the production of aluminum metal, the anode is attached to a metal rod.

preblast

Pertaining to the time period prior to the initiation of a blast.

preblast survey

Documentation of the existing condition of a structure prior to exposure to blasting vibrations.

Precambrian shield

Rocks older than the Cambrian age. Name refers to the great shield-shaped areas of ancient mineral-bearing rocks. These ancient rocks occur in many parts of the world. *Cumming, 1*

precementation process

Grouting the strata to control ground water prior to the start of construction or excavation, such as shaft sinking. Precementation has been used in South Africa to depths of 4,000 ft (1,200 m) and considerable savings have resulted. See also: [cementation sinking](#)

precious

Descriptive of the finest variety of a gem or mineral. Syn: [oriental](#); precious stone.

precious garnet

Brilliantly purple almandine.

precious metal

Any of several relatively scarce and valuable metals, such as gold, silver, and the platinum-group metals. *ASM, 1*

precious olivine

See: [peridot](#)

precious opal

A gem variety of opal that exhibits a brilliant play of delicate colors by diffraction of light from close-packed 150- to 300-nm spheres of cristobalite-tridymite. The color of the bulk material may be black or white. CF: [common opal](#)

precious serpentine

A pale or dark oil-green, massive, translucent serpentine. *Dana, 1*

precious stone

See: [gemstone](#)

precious topaz

a. Genuine topaz as distinguished from topaz-colored quartz (jewelers' topaz). b. An incorrect term for yellow to brown sapphire.

precious tourmaline

Dark-colored gem variety of tourmaline.

precipitant

Any agent, as a reagent, that when added or applied to a solution causes a precipitate of one or more of its constituents. *Standard, 2*

precipitate

a. The operation, act, or process of adding a chemical or chemicals to an aqueous solution to react with a dissolved material in the solution and remove the resulting new solid matter by settling. b. The solids resulting from the precipitation process.

precipitated sulfur

Sulfur precipitated from calcium polysulfide solutions by hydrochloric acid and washed to remove all calcium chloride.

precipitation

a. The process of separating mineral constituents from a solution; e.g., by evaporation (such as halite or anhydrite) or by cooling of magma (to form an igneous rock). b. Exsolution. c. Water that falls to the surface from the atmosphere as rain, snow, hail, or sleet. It is measured as a liquid-water equivalent regardless of the form in which it fell. *AGI*

precipitation barrier

Metal-rich water, as it moves away from the source of the metal, ordinarily comes into an environment where changing conditions of some kind cause precipitation of part or all of the metal from the water. Precipitation barriers account for the more than normal decay of hydrochemical anomalies than can be accounted for by simple dilution. They characteristically occur in spring and seepage areas where groundwaters coming to the surface encounter an environment of increased availability of oxygen, sunlight, and organic activity. *Hawkes, 2*

precipitation hardening

Hardening caused by the precipitation of a constituent from a supersaturated solid solution. See also: [aging](#); [hardening](#). *ASM, 1*

precipitation heat treatment

Artificial aging in which a constituent precipitates from a supersaturated solid solution. See also: [artificial aging](#); [progressive aging](#). *ASM, 1*

precipitation process

a. The manipulation of physical and/or chemical properties of a solution to cause one of the constituents of that solution to become insoluble. b. The treatment of lead ores by direct fusion with metallic iron or slag, or ore rich in iron; performed generally in a shaft furnace, rarely in a reverberatory. It is often combined with the roasting and reduction process. See also: [iron-reduction process](#)

precipitator

In beneficiation, smelting, and refining, a person who (1) tends zinc boxes in which gold or silver that has been dissolved in a cyanide solution is precipitated; and (2) precipitates gold from cyanide solution, except that the cyanide solution is agitated with zinc dust in

a mixing cone and precipitate, then turned into a filter press where the precipitate is recovered prior to the drying and refining to secure the gold. *DOT*

precision

The degree of agreement or uniformity of repeated measurements of a quantity; the degree of refinement in the performance of an operation or in the statement of a result. It is exemplified by the number of decimal places to which a computation is carried and a result stated. Precision relates to the quality of the operation by which a result is obtained, as distinguished from accuracy, but it is of no significance unless accuracy is also obtained. *AGI*

precision depth recorder

A device for recording a sonic depth trace. Abbrev., PDR. *Hy*

precision idler bearing

A bearing having ground races and in which the bore and outside diameter tolerances are held to ten-thousandths of an inch and the width tolerance to thousands of an inch. *NEMA, 2*

precooler load

The amount of sensible heat, removed from the air in precooling. *Hartman, 2*

precutting

Method used in machine mining where a coal cutter makes a cut along the face in front of a cutter loader. It may be adopted in hard coal seams or where an improvement in the +2-in (+5.1-cm) coal product is required. *Nelson*

precutting blade

A special blade attached to a plow that operates a little in advance of the main blades of the machine. It may be used in hard coals or to prevent the climbing of the machine, which would leave a layer of coal on the floor. *Nelson*

predicted 4-hour sweat rate

An index devised by the Medical Research Council of Great Britain which is based on the rate of loss of sweat from the body. It is designed to measure the physiological effect of work in near limiting conditions in hot working places, and is based on the assumption that heat stress is a function of the rate of sweating. *Roberts, 1*

predictive metallogeny

See: [mineral assessment](#)

preemption act

An act providing for a patent to agricultural lands. The act does not include mineral deposits, as they are expressly reserved.

preference

A familiar term under the public land laws meaning exclusive. *Ricketts*

preferential flotation

a. A name applied to a special type of differential flotation in which a mixture of two flotative, sulfide minerals is given a slight roast so that one may be oxidized, and therefore not float, and the other remain unchanged. b. Preferential flotation may also be achieved by control of pH or by addition of an activating agent or depressant to the flotation mixer, conditioner, or cell. *AGI*

preferential wetting

Applied to froth flotation when separating fine coal from coal washery slurries. The slurry or mixture is treated with a reagent that has an affinity for the material to be recovered and that will lend itself to subsequent stages in the separation process. *Nelson*

preferred orientation

Feature of a rock in which the grains are more or less systematically oriented by shape. A schist in which the mica plates are parallel to one another shows a preferred orientation; so does a hornblende schist in which the long axes of the hornblende crystals are parallel. See also: [orientation](#); [unoriented](#).

preformed rope

Wire rope in which the strands are bent to their correct lay before being laid up, so that the rope is unlikely to spin or kink. *Pryor, 3*

pregnant solution

A value-bearing solution in a hydrometallurgical operation. *Pryor, 4*

pregnant solvent

In solvent extraction, the metal-bearing solvent produced in the solvent extraction circuit.

pregs

The liquor resulting from leaching of ore to dissolve a valuable constituent. Term connotes such a solution when it has reached a loading sufficient to justify its removal from contact with the ore, for separate treatment to reclaim the contained values (by precipitation, ion exchange, or stripping). After this treatment, the now barren solution is returned to work, or if foul, is run to waste or regenerated. Also called pregnant solution; royals. *Pryor, 3*

preheat

To heat beforehand; as: (1) to heat (an engine) to an operating temperature before operation; and (2) to heat (metal) prior to a thermal or mechanical treatment. *Webster 3rd*

preheat zone

That portion of a continuous furnace through which the ware passes before entering the firing zone. *ASTM*

prehnite

An orthorhombic mineral, $\text{Ca}_2 \text{Al}_2 \text{Si}_3 \text{O}_{10} (\text{OH})_2$, in which Fe replaces Al; forms botryoidal or mammillary and radiating aggregates. Occurs in: hydrothermal veins, cavities, and amygdules in basalt; veins in felsic plutonic rocks; and low-grade metamorphic rocks. Commonly associated with zeolites. Syn: [aedelite](#)

prehnitoid

a. A variety of mizzonite resembling prehnite. *Dana, 1* b. Impure prehnite. *Dana, 1*

preliminary exploration

An investigation carried out along certain broad features of a coal or mineral area, with the object of deciding whether the proposition is such as to warrant a detailed or final exploration, which is often costly. *Nelson*

preliminary prospecting

Prospecting undertaken after scout prospecting has disclosed the existence of values. Preliminary prospecting helps to determine approx. the extent of the payable ground. *Griffith*

preliminary soil survey

A quick investigation of surface or near-surface conditions; no special equipment is employed. Tests are carried out on site for approximate classification of soil and are limited to visual or other simple tests. See also: [detailed soil survey](#); [general soil survey](#).
Nelson

premature blast

The detonation of an explosive charge earlier than warranted. Premature explosion may be due to carelessness, accidental percussion, a faulty fuse, or degenerated explosives. See also: [safety fuse](#); [hangfire](#). *Nelson; Pryor, 3*

premature block

An obstruction or block in a core barrel or bit that prevents the entry of core into the barrel before the bit can be advanced far enough to cut a length of core to fill the barrel.
Long

premature firing

The detonation of an explosive charge or the initiation of a blasting cap before the planned time. *Meyer*

premature set

a. The hardening of cement in a shorter time than normal or estimated. *Long* b. This may be caused by the addition of catalysts to cement to increase setting time or by downhole temperatures and pressure that cause cement to set prematurely.

premium tin

Tin of such high purity as to rate a special bonus in the metal market. *Pryor, 3*

premix

Aggregate that has been coated with bituminous binder before spreading. See also: [penetration macadam](#); [tarmacadam](#). *Nelson*

preparation

a. The treatment of ore or coal to reject waste. See also: [concentration](#); ore dressing; preparation plant. b. The process of preparing run-of-mine coal to meet market specifications by washing and sizing. *Jones, 1*

preparation boss

In bituminous coal mining, a foreman who is in charge of the operations of washing and sizing coal for market at the washery plant. *DOT*

preparation plant

Strictly speaking, a preparation plant may be any facility where coal is prepared for market, but by common usage it has come to mean a rather elaborate collection of facilities where coal is separated from its impurities, washed and sized, and loaded for shipment. Syn: [cleaning plant](#) *BCI*

preparatory work

Mining operations to facilitate mining proper after having explored a deposit and having made it accessible both in strike and dip. This work is executed almost entirely within the deposit and includes making: (1) inclines and transfer stations with manways; (2) sublevel drives between the levels; and (3) various crosscuts, chutes, minor shafts, raises, winzes, and other works. *Stoces*

prepare

a. To shear or undermine coal so that it can be readily blasted loose. *Fay* b. Arkansas. To make a cartridge for a blast. *Fay* c. Arkansas. To charge a blasthole. *Fay*

preplaning

The lead or stagger that exists between planing blades in the same vertical plane of a plow. *Nelson*

prereduced iron-ore pellet

A semimetallized pellet developed by the U.S. Bureau of Mines from taconite concentrates. The process involves rolling the concentrates into pellets, then drying, calcining, and roasting the pellets in a reducing (oxygen-deficient) atmosphere. During the heat-hardening stage, the pellets are partly converted to metal. Use of these pellets causes a considerable increase in pig-iron production. See also: [iron ore](#)

preselective

An arrangement by which a gear level can be moved, but the resulting speed shift will not take place until the clutch or the throttle is manipulated. *Nichols, I*

present

Eng. Stone of suitable thickness for shaping into a tile stone without frosting; occurs in Stonesfield slate series and Chipping Norton limestone of the Cotswolds. *Arkell*

present value

a. The present value of a mine may be considered to be a sum of money that may be allowed for the purchase, development, and equipment of a mine, with the expectation of receiving for this capital expenditure, during the estimated life of the mine, the return of this capital plus a substantial profit commensurate with the risk involved in the venture. *Hoover*

b. The present value of a property is the amount that, if invested now in its purchase, would find its repayment with commensurate profit in the estimated series of annual dividends. Actuarially, it is the discounted sum of each and all those dividends, after allowance for any estimated further capital expenditure on necessary works and equipment. *Truscott*

preservative

For mine timbers that are exposed to severe conditions of damp, ventilation, and stress, any of several chemicals used to impregnate them to resist dry or wet rot. These include copper sulfate, creosote, salt, sodium fluoride and silicofluoride, and zinc as chloride or sulfate. *Pryor, 3*

presplitting

a. A smooth blasting method in which cracks for the final contour are created by blasting prior to the drilling of the rest of the holes for the blast pattern. Once the crack is made, it screens off the surroundings to some extent from ground vibrations in the main round. *Langefors*

b. See: [controlled blasting](#)

press cloth

See: [filter cloth](#)

pressed amber

Synthetic amber produced by consolidating amber fragments under pressure with an oil binder. Syn: [reconstructed amber](#); [amberoid](#).

pressed cameo

Similar to molded cameo, but pressed. CF: [molded cameo](#)

pressed copal

Synthetic copal produced by consolidating copal fragments under pressure with an oil binder.

presser

In ceramics, a worker who molds the handle, ears, and decorative reliefs to be applied to a pottery vessel before firing. *Fay*

pressing machine

a. A machine that forms ceramic shapes by forcing plastic or semiplastic raw materials into a die or mold. b. A machine in which the whole forming operation is carried out by pressing the plastic glass by a plunger forced into a die or mold. The machine may be operated by hand or it may be fully automatic. *CTD*

pressure

a. The force exerted across a real or imaginary surface divided by the area of that surface; the force per unit area exerted on a surface by the medium in contact with it. *AGI* b. A commonly used short form for geostatic pressure. *AGI* c. As used in mine ventilation terminology, it is sometimes defined as the available energy content of the air and as the pressure difference between two points in a ventilation current as the energy lost due to friction between two points. *Roberts, 1* d. Force exerted by air per unit area, either gage or absolute. Atmospheric pressure is measured by a barometer. Measured in pounds per square inch, kilopascals, or inches of mercury. *Hartman, 1*

pressure anemometer

a. An instrument for measuring the velocity of ventilating air currents in mines. b. An anemometer indicating wind velocity by means of the velocity head exerted. *Standard, 2*

pressure arch

The driving of a narrow roadway results in the development of a pressure arch over the excavation. The strata within the arch bend slightly and cease to support the overlying beds, and the load is transferred to the solid or rock along the sides. The wider the roadway, the greater the span of the arch and its height at the crown. A similar but larger pressure arch is formed across a longwall face, with one leg resting on the solid coal and the other on the solid pack behind the coal face. See also: [abutment](#); [arch structure](#); [load transfer](#). *Nelson*

pressure arch theory

The pressure arch theory in roof action suggests that, when a narrow heading is advanced, the layers of rock in the immediate roof deflect slightly and relieve themselves

of the load of the overlying strata by transferring it to the sides of the opening by means of a pressure arch. The arch width just short of that which the higher strata cannot span and transfer the load to the sides of the opening is called the maximum-pressure arch. The depth mainly influences the minimum width of the pressure arch, although the type of overburden also plays a part. The following formula has been developed for approximating the minimum width of the maximum-pressure arch (W = minimum width of arch, in feet; D = depth of coal from surface, in feet): $W = 3[(D / 20) + 20]$. The equation does not apply for overburden less than 400 ft (122 m) or more than 2,000 ft (610 m) thick. *Coal Age, 3*

pressure balancing

When an area of a mine has been sealed off from the remainder of the workings by barriers or stoppings inserted at suitable points, it is important to prevent the circulation of air within the sealed area. This means that external air pressures must be equalized on all the seals. The object of equalizing the atmospheric pressures on the seals is attained by inserting or removing doors or brattice cloths at appropriate places. It is possible to make all the seals contiguous with a common airway by this means, so that, if they are not widely separated, they will be subjected to the same external atmospheric pressure. *Roberts, 1*

pressure block

Pressure formed over the workings by masses of rock being severed from the surrounding formations, creating pressure on the pillars, walls, or other supports. Pressure blocks of large size may result from natural geological phenomena, such as faults, or may occur as a result of mining operations. *Lewis*

pressure blower

A machine or blower having either pistons, cams, or fans for furnishing an airblast above atmospheric pressure. *Standard, 2*

pressure bump

An occurrence when a coal pillar suddenly fails on becoming overloaded by the weight of the rocks above it. Generally, the coal is forced with some violence into the roadways and other open spaces. See also: [rock bump](#); rock burst; shock bump; bumps. *Nelson*

pressure chamber

a. An enclosed space arranged on the access side of a stopping, which seals off an area and is furnished with means of raising or lowering the air pressure within it. *BS, 8* b. If the mine area to be sealed off is extensive, and the seals are widely scattered, the fact that they are subject to different pressures may be unavoidable. In this event, pressure

chambers may be required on the outby side of seals. Pressure chambers are also of value when the seals cannot be made tight, because of broken or fissured ground. The principle consists of building an outer chamber by erecting a second stopping on the outby side of the seal. The air pressure in the intervening space is then controlled to prevent movement of air across the seal. *Roberts, I c.* A method of driving tunnels and sinking shafts through running sand by holding back the loose material by compressed air. The technique is no longer applied to any great extent in mining. See also: [caisson sinking](#) *Nelson*

pressure creosoting

The most effective method of preserving timber by impregnation with creosote under pressure in tanks. *Hammond*

pressure detector

See: [hydrophone](#)

pressure die casting

The usual die casting process in which the molten metal is forced into highly finished molds under heavy pressure by plungers, compressed air, or combined methods. *Hammond*

pressure dome

a. See: [air dome](#) b. The bonnet on a steam boiler. *Long*

pressure drilling

A process of rotary drilling in which the drilling fluid is kept under pressure in an enclosed system. *Brantly, I*

pressure drop

The decrease in pressure at which a liquid or gas is made to move between the intake and discharge of a pipeline or drill stem. *Long*

pressure equalizer

In drilling, a diaphragm connected to the fluid column by a series of ports incorporated in the design of some core barrels and preventing the entry of drilling fluids into the core-barrel-head bearings. *Long*

pressure fan

a. A fan supplying air under pressure. *Webster 3rd* b. A fan that forces fresh air into a mine as distinguished from one that exhausts air from the mine. *Fay*

pressure figure

The indistinct six-rayed star produced on a mica plate after pressing with a dull point. CF: [percussion figure](#)

pressure filter

a. A machine for removing solids from tailings; the effluent can be reused in the washery or plant. The tailings are pumped into the filter under pressure; filtration takes place and solids are deposited in the chambers. Gradually the resistance increases until a pressure of 100 psi (690 kPa) is necessary to force more tailings into the press. At this stage, the chambers are almost full of solids. The feed is cut off and the press opened to allow the cakes to fall onto the conveyor beneath the chambers. The output of the pressure filter is low. *Nelson* b. A filter in which pressure is applied to increase the rate of filtration. *BS, 5* c. A filter in which the liquid to be filtered is forced through filtering material by a pressure greater than its own weight in the filter.

pressure forging

Forging done by a steady pressure, as in a hydraulic press. *Standard, 2*

pressure gage

An instrument used to measure the force per unit area exerted by a confined fluid or gas. *Long*

pressure grouting

a. The act or process of injecting, at high pressures, a thin cement slurry or grout through a pipeline or borehole to seal the pores or voids in rock or to cement fragmented rocks together. *Long* b. Forcing a slurry of cement and sand into subgrade or an embankment either by use of compressed air or by hydraulic pressure. *Urquhart*

pressure head

The height of a column of liquid supported, or capable of being supported, by the pressure at a point in the liquid. See also: [static head](#); total head. *AGI*

pressure leaching

In chemical extraction of valuable ore constituents, use of an autoclave to speed processing by means of increased temperatures and pressures. *Pryor, 3*

pressure per diamond

The feed pressure or load applied per diamond in a bit. The total load supported by the bit divided by the number of stones set in the bit face expresses the pressure per stone in numerical values. Also called diamond pressure; stone pressure. *Long*

pressure plate

In a clutch, a plate driven by the flywheel or rotating housing, which can be slid toward the flywheel to engage the lined disk or disks between them. *Nichols, I*

pressure process

Treatment of mine timber to prevent decay by forcing a preservative, such as creosote, zinc chloride, sodium fluoride, and other chemicals, into the cells of the wood. See also: [timber preservation](#)

pressure-quantity survey

See: [ventilation survey](#)

pressure ring

A ring about a large excavated area, evidenced by distortion of the openings near the main excavation. Shear cracks appear and minor slabbing of the rock takes place. *Lewis*

pressure shadow

The name sometimes applied to a fringe or halo differing from the groundmass that often accompanies a porphyroblast in a schistose rock. *Hess*

pressure stripping

The predominant means of extracting precious metal values from loaded activated carbon in the cyanidation process. Loaded carbon is placed in a pressure column along with a solution containing about 1% NaOH. This solution is circulated through the column at 150 degrees C until the precious metal values have been removed from the carbon absorbant. The loaded strip solution serves as the electrolyte for a subsequent electrowinning step for recovery of the precious metals. *Van Zyl*

pressure surface

See: [potentiometric surface](#)

pressure survey

An investigation to determine the pressure distribution or pressure losses along consecutive lengths or sections of a ventilation circuit. See also: [ventilation planning](#); [ventilation survey](#). *Nelson*

pressure testing

An indirect method of testing porosity and permeability of formations at elevations of proposed structures.

pressure water loader

A cartridge loader in which compressed water, rather than compressed air, is used for loading underwater. *Langefors*

pressure wave

A pressure produced by expanding gases moving at high velocity, the side component of which, equivalent to static pressure, may be recorded by a manometer at the side of the entry or mine passage. Syn: [P wave](#); compressional wave. *Rice, 2*

pressure wire

Wire leading from any of various points of an electric system to a central station, where a voltmeter indicates the potential of the system at the point. *Webster 2nd*

pressurized

a. Said of any structure, area, or zone fitted with an arrangement that maintains nearly normal atmospheric pressure. *Nelson* b. Said of any structure or area in which the pressure within is held higher than the outside pressure.

prestressing

The application of load to a structure so as to deform it in such a manner that the structure will withstand its working load more effectively or with less deflection. *Hammond*

pretensioning

The Hoyer method of prestressing concrete beams, precast in a workshop with the tensioned wires embedded in them and firmly anchored. *Hammond*

preventive maintenance

A system that enables breakdowns to be anticipated and arrangements made to perform the necessary overhauls and replacements in good time.

previtrain

The dense woody lenses in lignite that are equivalent to the vitrain in coal of higher rank. *AGI*

priceite

A triclinic mineral, $\text{Ca}_4 \text{B}_{10} \text{O}_{19} \cdot 7\text{H}_2 \text{O} (?)$; earthy to porcelainous white; conchoidal fracture. Syn: [pandermite](#)

pricking bar

a. A bar used in opening the taphole of a furnace. *Fay* b. A rod used for removing obstructions from tuyeres and blowpipes. *Fay*

priderite

A tetragonal mineral, $(\text{K}, \text{Ba})(\text{Ti}, \text{Fe})_8 \text{O}_{16}$; cryptomelane group; red; easily mistaken for rutile in leucite rocks; occurs at Kimberley, Western Australia.

prigunite

See: [iriginite](#)

prill

In assaying, the bullion bead resulting from cupellation of an auriferous or argentiferous lead button. *Pryor, I*

prillion

Tin extracted from slag. Also spelled prillon. *Standard, 2; Fay*

Primacord

A fuse composed of an explosive core within a textile or plastic covering. It detonates every explosive that is in direct contact with it. *Streefkerk*

Primacord-Bickford fuse

A detonating fuse having an explosive of pentaerythritetranitrate (PETN). Used in large-scale blasting work, esp. in quarries. *Lewis*

primary

a. Characteristic of or existing in a rock at the time of its formation; pertains to minerals, textures, etc.; original. Ant: secondary. b. Said of a mineral deposit unaffected by supergene enrichment. *AGI* c. Said of a metal obtained from ore rather than from scrap. Syn: [virgin](#)

primary anomaly

An anomaly formed by primary dispersion.

primary basalt

A presumed original magma, from which all other rock types are obtained by various processes of fractional crystallization.

primary blast

A blast used to fragment and displace material from its original position to facilitate subsequent handling and crushing. *Atlas*

primary blasting

The blasting of solid rock, ore, or coal; blasting in situ. See also: [secondary blasting](#)

primary breaker

A machine that takes over the work of size reduction from blasting operations; may be a gyratory or jaw breaker. Its capacity must be greater than the overall crushing plant capacity. In mines, primary ore crushing to about 7 in (18 cm) may be performed underground. See also: [reduction ratio](#); [tertiary crushing](#). *Nelson*

primary breaking

A stage in bituminous coal crushing that occurs at the entrance to a plant and consists of raw feed flowing into the primary breaker for reduction to a maximum top size of 4 in, 5 in, 6 in, or 8 in (10.2 cm, 12.7 cm, 15.2 cm, or 20.3 cm) either for washing or for other preparation purposes. *Mitchell*

primary cell

a. A group or bank of flotation cells in which the raw feed is given a preliminary treatment, either or both of the products being subsequently retreated. *BS*, 5 b. A cell that generates or makes its own electrical energy from the chemical action of its constituents; e.g., the voltaic cell, Daniell cell, LeClanche cell, and dry cell. *Morris*

primary clay

A clay found in the place where it was formed. CF: [residual clay](#); secondary clay. *AGI*

primary coil

a. The coil through which the inducing current passes in an induction coil or transformer. *Webster 3rd* b. A coil, forming part of an electrical machine or piece of apparatus, in which a current flows, setting up the magnetic flux necessary for the operation of the machine or apparatus. *CTD*

primary creep

Elastic deformation that is time-dependent and results from a constant differential stress acting over a long period of time. CF: [secondary creep](#)

primary crusher

a. The first crusher in a series for processing shale or other rocks. See also: [secondary crusher](#) b. In comminution of ore, a heavy-duty dry crushing machine capable of accepting run-of-mine coarse ore and reducing it in size to somewhere between 4 in and 6 in (10 cm and 15 cm). Heavy-duty connotes the ability both to handle large tonnages daily and to withstand very rough treatment. *Pryor, 3*

primary crushing

In ore dressing, the first stage in which crushers take run-of-mine ore and reduce it to a size small enough to be taken by the next crusher in the series. Ordinarily, the Blake jaw crusher or a gyratory crusher is used. *Newton, 1*

primary crystal

The first type of crystal that separates from a melt on cooling. *ASM, 1*

primary current distribution

The current distribution in an electrolytic cell that is free of polarization. *ASM, 1*

primary dip

See: [original dip](#)

primary dispersion

Geochemical dispersion of elements by processes operating within the Earth. CF: [secondary dispersion](#)

primary drilling

The process of drilling holes in a solid rock ledge in preparation for a blast by means of which the rock is thrown down. *Fay*

primary environment

See: [geochemical environment](#)

primary excavation

Digging in undisturbed soil, as distinguished from rehandling stockpiles. *Nichols, I*

primary flat joint

See: [L-joint](#)

primary flow structure

Structure of either linear or platy nature developed in igneous rocks prior to or during consolidation. *Stokes*

primary fluid inclusion

A fluid inclusion containing fluid trapped during original crystallization of its host mineral. *AGI*

primary foliation

The variety of platy flow structure that forms during crystallization of a magma and is due to the parallelism of platy minerals. *Stokes*

primary gneiss

A rock that exhibits planar or linear structures characteristic of metamorphic rocks, but lacks observable granulation or recrystallization, and is therefore considered to be of igneous origin. *AGI*

primary gneissic banding

Banding exhibited by certain igneous rocks of heterogeneous composition; produced by the admixture of two magmas only partly miscible or, in other cases, by magma

intimately admixed with country rock into which it has been injected along bedding or foliation planes. *CTD*

primary haulage

A short haul in which there is no secondary or mainline haulage; e.g., a mine is started into a hillside, using mine cars, track, and hand loaders. An empty car is placed for the loader, and the loaded car is taken to the dump manually or by machine, repeating the process for each loader. See also: [face haulage](#)

primary metal

a. Metal produced: by direct smelting of ore; from a mine product, such as that extracted from mined ore; from reprocessing mine tailings; or from reprocessing smelter or refinery slags or residues. *Camm* b. Metal extracted from ores, natural brines, or ocean water. Also called virgin metal. *Newton, 1* c. Ingot cast from reduced and perhaps refined metal as distinct from ingot containing recovered scrap metals. *Pryor, 3* d. Metal recovered as a principal or byproduct material from the processing of ores; includes metal recovered from ore processing wastes such as tailings, and downstream processing wastes such as slags and residues from the smelting and refining of the metal. Excludes metal recovered from scrap or its processing wastes (secondary metal).

primary mill

A mill for rolling ingots or the rolled products of ingots to blooms, billets, or slabs. This type of mill is often called a blooming mill and sometimes a cogging mill. *ASM, 1*

primary mineral

A mineral formed at the same time as the rock enclosing it, by igneous, hydrothermal, or pneumatolytic processes, and that retains its original composition and form. CF: [secondary mineral](#) *AGI*

primary mineral deposit

Syngenetic ore deposit.

primary ore

Ore that has remained practically unchanged from the time of original formation. *Stokes*

primary ore mineral

An ore mineral that was deposited during the original period or periods of metallization. The term has also been used to designate the earliest of a sequence of ore minerals, as

contrasted with later minerals of the same sequence, which some writers have called secondary. To avoid confusion, Ransome proposed the terms hypogene and supergene. Hypogene, as the word implies, indicates formation by ascending solutions. All hypogene minerals are necessarily primary, but not all primary ore minerals are hypogene; e.g., sedimentary hematite is of primary deposition even though it formed as a low-temperature precipitate.

primary phase

The only crystalline phase capable of existing in equilibrium with a given liquid; it is the first to appear on cooling from a liquid state and the last to disappear on heating to the melting point. *AGI*

primary reject elevator

A refuse elevator that extracts the first or heavier reject; usually situated at the feed end of a washbox. *BS, 5*

primary relict

A relict mineral that was a constituent of the original rock, whether igneous or sedimentary. *Schieferdecker*

primary screen

A screen used to divide coal (usually raw coal) into sizes more suitable for the subsequent cleaning of some or all of them. *BS, 5*

primary settling

The surface subsidence that manifests itself a few months after mineral extraction and that usually constitutes 60% to 90% of the total subsidence. It varies according to the depth and thickness of the seam, the nature of the overburden, the mining method, and the thoroughness of the filling in the mined-out areas. The primary period is followed by the secondary period, in which the surface subsides gradually for a period of many years or even decades. *Stoces*

primary shaft

The shaft from the surface in which the first stage of hoisting is carried out. *Spalding*

primary solid solution

A constituent of alloys that is formed when atoms of an element B are incorporated in the crystals of a metal A. In most cases, solution involves the substitution of B atoms for

some A atoms in the crystal structure of A, but there are cases in which the B atoms are situated in the interstices between the A atoms. *CTD*

primary source

An operation that produces or creates new dust. *Hartman, 2*

primary structure

a. A structure in an igneous rock that originated contemporaneously with the formation or emplacement of the rock, but before its final consolidation; e.g., layering developed during solidification of a magma. *AGI* b. A primary sedimentary structure, such as bedding or ripple marks. *AGI* c. The structure preexisting the deformation and reequilibration associated with the emplacement at shallow depth of a metamorphic body of deep origin during an orogeny. CF: [secondary structure](#)

primary washbox

The first of a series of washboxes, which receives the feed and from which one product at least is given further treatment. *BS, 5*

primary washer

The first of a series of washers, receiving raw feed, from which at least one product is retreated. *BS, 5*

primary water supply

The principal or original source from which drilling water is obtained, as opposed to recirculated water. *Long*

primary wave

See: [longitudinal wave](#)

primary zone

Portion of a lode below that changed by leaching and secondary enrichment, and characteristic of the type of ore most likely to persist into the deeper levels of a mine. *Pryor, 3*

prime mover

https://t.me/Geologybooks

- a. A machine that converts fuel or other natural energy into mechanical power. *Nelson*
b. A tractor or other vehicle used to pull other machines. *Nichols, 1* c. Any machine capable of producing power to do work. *Shell*

primer

- a. A contrivance, such as a cap, tube, or wafer, containing percussion powder or other compound for igniting an explosive charge; ignited by friction, percussion, or electricity. Syn: [percussion cap](#) *Webster 3rd* b. The cartridge or that portion of a charge that carries a detonator or is coupled to Cordtex fuse and that detonates or sets off the remainder of the charge. The primer cartridge is placed at one end of the charge with the detonator pointing toward the charge. See also: [direct initiation](#) *Nelson* c. In blasting, the cartridge in which the cap is placed. *Streefkerk* d. Usually the combination of a dynamite cartridge and a detonating cap. *Nichols, 1*

primer cartridge

The explosive cartridge into which a detonator has been inserted. *BS, 12*

primer charge

A boosting charge placed in contact with a detonator to ensure detonation of the main charge. *BS, 12*

prime virgin mercury

A term used for mercury produced by mines.

prime western spelter

See: [prime western zinc](#)

prime western zinc

Low grade of virgin zinc containing about 98% zinc, 1.60% lead, 0.08% iron, with no limitations on cadmium or aluminum. *Bennett*

priming

- a. The act of placing a detonator in an explosive charge. *Pryor, 3* b. The act of adding water to displace air, thereby promoting suction, as in a suction line of a pump. Water used to promote initial suction in a centrifugal or reciprocating pump.

priming cartridge

See: [primer](#)

priming coat

A coating of binder applied to a surface of natural compacted or stabilized soil before surface dressing. *Nelson*

priming tube

A tube containing fulminating powder for firing a charge. A detonator. *Standard, 2; Fay*

priming valve

a. A safety valve on the working cylinder of a steam engine to discharge the priming. *Standard, 2* b. A valve connected with the discharge pipe of a force pump through which the pump may be primed. *Fay*

primitive

See: [primitive circle](#)

primitive circle

In crystallography, the great circle on a stereographic projection that represents the equator of the spherical projection. The poles of all vertical crystal planes plot on the primitive. Syn: [primitive](#) *Fay*

primitive form

A crystal form from which other forms may be derived; e.g., a hexoctahedron has six faces replacing each octahedral face.

primitive unit cell

See: [unit cell](#)

princess

Roofing slate sized 24 in by 14 in (61 cm by 36 cm). *Pryor, 3*

principal

Primary, or leading function. A principal axis is the longest one in a crystal. The principal valence is that at which an element forms the greatest number of stable compounds. *Pryor, 3*

principal axis

a. In the tetragonal and hexagonal systems, the vertical crystallographic axis; hence what is the same thing in uniaxial crystals, the optic axis. In the orthorhombic and triclinic crystals, the axis of the principal zone; the axis with the shortest period, often the axis of the principal zone. In monoclinic crystals, the axis *c*, usually the axis of the principal zone excluding the symmetry axis; the symmetry axis *b*. *Fay*; *AGI* *b*. That crystallographic axis with unique symmetry in a crystal system, designated *c*, except in the monoclinic system where the second setting is used by mineralogists making *b* the unique axis. *c*. In a transducer used for sound emission or reception, a reference direction for angular coordinates used in describing the directional characteristics of the transducer. It is usually an axis of structural symmetry or the direction of maximum response, but if these do not coincide, the reference direction must be described explicitly. *Hy* *d*. In experimental structural geology, a principal axis of stress or a principal axis of strain.

principal axis of strain

One of the three mutually perpendicular axes of the strain ellipsoid.

principal axis of stress

One of the three mutually perpendicular axes that are perpendicular to the principal planes of stress. See also: [principal axis](#)

principal meridian

A central meridian on which a rectangular grid is based; specif. one of a pair of coordinate axes (along with the base line) used in the U.S. Public Land Survey system to subdivide public lands in a given region. It consists of a line extending north and south along the astronomic meridian passing through the initial point and along which standard township, section, and quarter-section corners are established. The principal meridian is the line from which the survey of the township boundaries is initiated along the parallels. *AGI*

principal moment of inertia

The moment of inertia of an area about either principal axis. *Roark*

principal point

The geometric center of an aerial photograph, or the point where the optical axis of the lens meets the film plane in an aerial camera. Symbol: *p*. See also: [fiducial mark](#)

principal section

- a. In crystallography, the plane passing through the optical axis of a crystal. *Standard, 2*
- b. The optical indicatrix of a biaxial mineral is a triaxial ellipsoid with semiaxes proportional to the refractive indices alpha, beta, and gamma. A principal section is an ellipse containing any two of these semiaxes. The indicatrix of a uniaxial mineral is an ellipsoid of revolution; its principal sections contain the axis of revolution which is proportional to the refractive index epsilon.

principal stress

The stress normal to one of three mutually perpendicular planes that intersect at a point in a body on which the shearing stress is zero. *ASM, 1*

principle of superposition

To determine the stress in a member due to a system of applied forces, the system can be split up into several component forces and their moments and reactions added in order to calculate the total stress. *Hammond*

principle of uniformity

See: [uniformitarianism](#)

Prins process

A dense-media process in which large-size coal is separated from the refuse in a flowing bed of small coal in a reciprocating launder. Refuse sinks to the bottom. The small coal is screened from the coarse refuse and returned to the head of the launder by a drag conveyor. The floating large coal passes over skimmers in the trough to the discharge chute. *Mitchell*

Prins washer

A combination trough washer and jig in which the feed enters the unit through the central launder, where stratification takes place. The stratified material overflowing the stationary trough is divided at the first opening in the shaking jig, allowing the upper stratum of the material to flow onto the top deck of the jig while the lower stratum enters the jig reclean chamber. (Mitchell, 1950)

priorite

An orthorhombic mineral, $(Y,Ca,Fe,Th)(Ti,Nb)_2(O,OH)_6$; now formally named aeschynite-(Y); forms series with aeschynite-(Ce) and with tantaloeschynite-(Y); black; forms with other rare-earth minerals in granite pegmatites and placers. Syn: [blomstrandine](#)

prism

a. The volume of a length of embankment or excavation. *Seelye, 1* b. The liquid mobile volume of a stream. *Seelye, 1* c. An open crystal form with faces and their intersecting edges parallel to the principal crystallographic axis. Prisms have three (trigonal), four (tetragonal), six (ditrigonal or hexagonal), eight (ditetragonal), or twelve (dihexagonal) faces. The nine-sided prisms of tourmaline are a combination of trigonal and hexagonal prisms. d. A long, narrow, wedge-shaped sedimentary body with width:thickness between 5:1 and 50:1; e.g., a bajada adjacent to an escarpment. It is typical of orogenic sediments formed during periods of intense crustal deformation; e.g., the arkoses found in fault troughs. CF: [tabular](#) Syn: [wedge](#)

prismatic

a. Descriptive of a clast with length to width ratio between 1.5:1 and 3:1. CF: [tabular](#) b. Pertaining to a sedimentary prism. c. Pertaining to a crystallographic prism. d. Descriptive of a crystal with one dimension markedly longer than the other two. e. Descriptive of two directions of cleavage. f. Descriptive of a metamorphic texture in which a large proportion of grains are prismatic and have approx. parallel orientation, giving a lined appearance in hand specimens and thin sections. CF: [equant](#) See also: [columnar](#)

prismatic compass

A small magnetic compass held in the hand when in use and equipped with peep sights and a glass prism so arranged that the magnetic bearing or azimuth of a line can be read (through the prism) from a circular graduated scale at the same time that the line is sighted over. *AGI*

prismatic plane

Any crystallographic plane that is parallel to the principal axis of a crystal.

prismatic quartz

Collectors' name for cordierite.

prismatic system

See: [orthorhombic system](#)

prismatic telescope

A telescope having an eyepiece fitted with a prism that reflects at 90 degrees. *Hammond*

prismoid

Any solid, bounded by planes, whose end faces are parallel. Usually understood to include also figures whose bounding surfaces are warped surfaces. *Seelye, 2*

prismoidal

Adj. of prismoid; used in sedimentary petrology (not prismatic, which is a crystallographic term).

prismoidal formula

A formula used in the calculation of earthwork quantities. It states that the volume of any prismoid is equal to one-sixth its length multiplied by the sum of the two end-areas plus four times the mid-area. *CTD*

probability

A statistical measure (where zero is impossibility and one is certainty) of the likelihood of occurrence of an event. *AGI*

probable ore

a. Indicated reserves. See: [reserves](#) b. A mineral deposit adjacent to developed ore but not yet proven by development. CF: [extension ore](#)

probable performance curve

A performance curve showing the expected results of a coal-preparation treatment. *BS, 5*

probable reserves

Areas of coal or mineral believed to lie beyond the developed reserves but not yet proven by development. See also: [economic coal reserves](#) Syn: [theoretical tonnage](#)

probe

a. A small tube containing a sensing element of electronic equipment, which can be lowered into a borehole to obtain measurements and data. *Long* b. To conduct a search for mineral-bearing ground by drilling or boring. *Long* c. To lower drill rods, etc., to locate obstructions and/or to determine the attitude of a piece of junk in a borehole. *Long*

probertite

A monoclinic mineral, $\text{NaCaB}_5\text{O}_7(\text{OH})_4 \cdot 3\text{H}_2\text{O}$; colorless; forms radiated columnar crystals; in Kern Country, CA. Syn: [kramerite](#); [boydite](#).

probing

Thrusting a pointed steel rod down through sand or soft clays to contact a seam or orebody. The point of the rod is examined for traces of coal or mineral. See also: [auger](#)

proceedings

The term proceedings is broader than the term action, yet in the mining law it is used in the sense of action and refers to the commencement of an action. It is used to enable a party to institute such proceedings under the different forms of actions allowed by the State and Federal courts. *Ricketts*

process

A series of operations conducted to achieve a result. *Webster 3rd*

process company

Company formed for the purpose of exploiting a patented process. *Hoover*

process flowsheet

A basic flowsheet indicating the main operational steps within a plant, the movement of the various materials between the steps, and the final products obtained, and often also the quantities of material with which the plant must be capable of dealing at various points. *BS, 5*

processing

a. The methods employed to clean, process, and prepare coal and metallic ores into the final marketable product. *Nelson* b. The various artificial methods adopted for strengthening a soil, such as compaction, treatment with bitumen, lime, cement, etc. See also: [stabilizer](#); [soil stabilization](#). *Nelson*

processioner

An official land surveyor. *Standard, 2*

process lag

In mineral processing, the delay or retardation in the response of the controlled variable at a point of measurement to a change in value of the manipulated variable. *Fuerstenau*

process metallurgy

Branch of metallurgy that deals with the recovery or extraction of metals from their ores. See also: [extractive metallurgy](#)

process scrap

The scrap arising during the manufacture of finished articles from iron and steel, and usually returned to steelworks after sorting and processing by scrap merchants. See also: [capital scrap](#); [circulating scrap](#). *Nelson*

Proctor penetration needle

A quick and convenient method for testing the resistance of a fine-grained soil to penetration at a standard rate of 1/2 in/s (1.27 cm/s). Needles from 1 to 0.05 in² (6.5 to 0.3 cm²) area are used, and a spring balance indicates the pressure required for the needle to penetrate the soil. See also: [penetration resistance](#); [penetrometer](#); soil. *Nelson*

prod cast

See: [impact cast](#)

prod mark

a. An indicator of slip direction on a slickensided fault surface, consisting of a groove made by a clast. *AGI* b. A short tool mark oriented parallel to the current of a stream and produced by an object that plowed into and was then raised above the bottom; its longitudinal profile is asymmetric. The mark deepens gradually downcurrent where it ends abruptly (unlike a flute). CF: [bounce cast](#) Syn: [impact cast](#)

produce

a. The marketable ores or minerals produced by mining and dressing. b. Corn. The amount of fine copper in one hundred parts of ore.

producer

a. Person who extracts ore or coal from mines, rock from quarries, metals from ore by metallurgical processes, etc. See also: [production](#) b. A producing well. *AGI* c. A furnace or apparatus that produces combustible gas to be used for fuel; usually of the updraft type, which forces or draws air or a mixture of air and steam through a layer of incandescent fuel (such as coke) with the resulting gas consisting chiefly of carbon monoxide, hydrogen, and nitrogen. *Webster 3rd* d. An organism (e.g., most plants) that can form new organic matter from inorganic matter such as carbon dioxide, water, and soluble salts. *AGI*

product

Percent of metal in ore. *Gordon*

production

That which is produced or made; any tangible result of industrial or other labor. The yield or output of a mine, metallurgical plant, or quarry. See also: [producer](#)

production checker

In metal mining, a person who keeps a record of the number of containers (cars, buckets, or skips) raised to the surface, and the amount of ore contained in each, estimating or weighing the contents. *DOT*

production gang

A team of workers employed at the face on production, covering all face operations, maintenance, and supplies. *Nelson*

productive

Yielding payable ore.

productive development

The headings and levels excavated in a coal seam, preparatory to opening out working faces. These drivages are planned to prove and render accessible the maximum area of coal for the minimum yardage of development work. The modern trend is to make in-the-seam development as productive as possible with the aid of machines. See also: [unproductive development](#) *Nelson*

productive land

Land that has produced farm crops within the previous 5 years. *Woodruff*

productivity

a. A term closely allied with, and that may be expressed as, the output per manshift of a face or colliery or metal mine. Productivity will vary with the degree of mechanization and multishift working; it is also a function of the horsepower, of a suitable nature, at the disposal of each miner. See also: [output](#) b. The efficiency with which economic resources (workers, materials, and machines) are employed to produce goods and services. *Crispin*

profile

a. The outline produced where the plane of a vertical section intersects the surface of ground; e.g., the longitudinal profile of a stream, or the profile of a coast or hill. Syn: [topographic profile](#) b. A graph or drawing that shows the variation of one property such as elevation or gravity, usually as ordinate, with respect to another property, such as distance. *AGI* c. Cross section of a region of cylindrical folds drawn perpendicular to the fold axes. *AGI* d. In seismic prospecting, the data recorded from one shot point by a number of groups of detectors. *AGI* e. See: [soil profile](#) f. A vertical section of a water table or other potentiometric surface, or of a body of surface water. *AGI* g. A drawing used in civil engineering to show a vertical section of the ground along a surveyed line or graded work. *Webster 3rd*

profile flying

The technique of flying at a constant height above the ground during airborne mineral exploration. Generally, the aircraft maintains a height of 300 ft or 500 ft (91 m or 152 m) above the ground. This often involves a series of skillfully controlled climbs and dives over rolling ground. See also: [vertical aerial photograph](#)

profile shooting

A type of seismic refraction in which the shots and detectors are laid out on long straight lines. Successive shots are taken at uniform or almost uniform intervals along each line, and successive detector spreads are shifted about the same distance as the corresponding shot points so as to keep the range of shot-detector distances approx. the same for all shots. Generally, shots are received from opposite directions on each detector spread. The distance range is chosen so that the first, or where desired the second, arrivals will be refracted from a particular formation such as the basement or a high-speed limestone marker. The proper distance is usually determined from time-distance plots based on experimental shooting at the onset of the program. *Dobrin*

profilograph

An instrument for plotting the perimeter profile of an airway on a reduced scale, and primarily used when taking air measurements underground.

profit

When one speaks of the interest on a mining investment, the rate mentioned ordinarily consists of the normal rate plus a substantial additional rate that represents the profit that should accrue in proportion to the hazardous nature of the mining business. In this sense, the rate of interest in most forms of mining should be high; to be satisfied with less than 10% annually would show a lack of acumen. *Hoover*

profit in sight

Probable gross profit from a mine's ore reserves, as distinct from the ground still to be blocked out.

proforma invoice

Invoice that does not charge for goods marked, but shows cost details. *Pryor, 3*

prograde metamorphism

Metamorphic changes in response to a higher pressure or temperature than that to which the rock last adjusted itself. CF: [retrograde metamorphism](#)

progress chart

A chart or graph forming a continuous record, which is kept up to date, of the amount of work done on a major project. It may take the form of a bar graph, divided into sections representing different jobs to be done, estimated and actual completion dates, etc. The chart covers the entire project from the initial site preparation or drivage to completion. *Nelson*

progressing cavity pump

See: [Mono pump](#)

progressive aging

In heat treatment, aging by increasing the temperature in steps or continuously during the aging cycle. See also: [precipitation heat treatment](#)

progressive failure

Rock or material failure in which the ultimate shearing resistance is progressively mobilized along the failure surface. *ASCE*

project data

Basic information needed by engineers concerned with design, site development, machine and housing assembly, plant erection, contract supervision, and coordination when planning, erecting, and bringing into operation a new mine and its attendant services, including the ore treatment plant. *Pryor, 3*

projected pipe

A pipe laid on the surface before building a fill that buries it. *Nichols, 1*

projection

a. In underground mining, a plan showing the proposed direction and location of entries, rooms, shafts, fans, and watercourses. Such projections commonly cover the entire property to be worked. b. A systematic, diagrammatic representation on a plane (flat) surface of three-dimensional space relations, produced by passing lines from various points to their intersection with a plane; esp. a map projection. *AGI* c. Any orderly method by which a projection is made; the process or operation of transferring a point from one surface to a corresponding position on another surface by graphical or analytical means, so that each point of one corresponds to one and only one point of the other. *AGI* d. See: [exposure](#) e. See: [outcrop](#) f. In mapping, a geometric (or mathematical) system of constructing the true meridians and parallels, or the plane rectangular coordinates on a map. *Seelye, 2* g. A geometrically or mathematically derived portrayal of the surface of the geoid on a plane surface. The requirement for a particular projection is that it show the features of the surface of the Earth with a minimum of distortion of distances, directions, shapes, and areas. *Hy* h. The act or result of constructing a figure upon a plane or other two-dimensional surface that corresponds point for point with a sphere, a spheroid, or some other three-dimensional form. *Fay*

projection balance

Shows movement of a pointer by means of an illuminated scale. *Pryor, 3*

project plans

A series of plans of a proposed new mine or reconstruction, which are drawn up for the purpose of obtaining approval of a project. *BS, 7*

prolapsed bedding

A series of flat folds with near-horizontal axial planes contained entirely within a bed with undisturbed boundaries.

prolong

Secondary condenser used in the zinc industry.

prong

Eng. The forked end of a bucket-pump rod; used for attachment to the traveling valve and seat. *Fay*

Prony's dynamometer

A dynamometer for obtaining data for computing power delivered by turbines and other water wheels, or from the flywheel of an engine, or transmitted by shafting. *Fay*

proof stress

a. The stress that will cause a specified small permanent set in a material. *ASM, 1* b. A specified stress to be applied to a member or structure to indicate its ability to withstand service loads. *ASM, 1*

propagate

To transmit or spread from place to place; as coal dust propagates a mine explosion.

propagated blast

A blast consisting of a number of unprimed charges of explosives and only one hole primed, generally for the purpose of ditching, where each charge is detonated by the explosion of the adjacent one, the shock being transmitted through the wet soil. In this method, one detonator fired in the middle of a line of holes is capable of bringing about the explosion of several hundred such charges. *Fay*

propagation

a. The transfer of a signal through a medium; e.g., sound in air, seismic waves in fluids and solids, electromagnetic waves in a vacuum. b. In general, propagation is said to occur when the flame of an explosion travels over considerable areas of a mine in such manner as might result in loss of life of workers in the mine. *Rice, 2*

propagation velocity

The speed of a wave in the material concerned, such as the propagation velocity of a detonation wave front traveling through an explosive or the propagation velocity of a seismic wave from a blast traveling through the ground.

prop-crib timbering

Shaft timbering with cribs kept the proper distance apart by means of props. *Fay*

prop cutter

In mining, a person who operates a power saw to cut to designated- and standard-length timbers and props used to support the walls and roofs of underground passageways and workplaces. Also called: prop sawyer; timber cutter. *DOT*

prop drawer

a. A sylvester or other appliance for withdrawing props from the waste area in coal mining. See also: [monkey winch](#) b. A worker who withdraws props and allows the roof to collapse. Props are withdrawn when caving of the roof is adopted. See also: [timber robber](#) *Nelson*

propeller fan

a. Axial-flow ventilating fan used to blow fresh air into mine workings or to extract foul air. *Pryor, 3* b. A fan having an impeller, other than of the centrifugal-type, rotating in an orifice, the air flow into and out of the impeller not being confined by any casing. *BS, 8*

propeller pump

This type of pump, often called axial-flow, develops most of its head by the propelling or lifting action of the vanes upon the liquid. These pumps are built in horizontal or vertical casings and are primarily used in handling sludge, dewatering pits, sewage pumping, and similar duties requiring large capacities and heads under 100 ft (30 m). *Pit and Quarry*

propeller shaft

Usually a main drive shaft fitted with universal joints. *Nichols, 1*

propel shaft

In a revolving shovel, a shaft that transmits engine power to the walking mechanism. *Nichols, 1*

proper

In crystallography, any symmetry rotation which does not change the chirality (handedness) of an asymmetric unit; e.g., not involving reflection or inversion. CF: [improper](#)

proper proportion

In a transparent gemstone, the proportion of the mass above and below the girdle, as well as the angles of the facets in relation to the girdle, that produces the greatest brilliancy from the particular species. These proportions vary with the refractive index of the gem species.

properties of sections

These include the cross-sectional area of a structural member, its moment of inertia, section modulus, and other geometrical properties essential for accurate design calculations. *Hammond*

property

One of the physical and chemical characteristics of a material.

property man

In bituminous coal mining, formerly one who kept record of location and has charge of distribution of coal cutting machines, drills, loaders, and other mechanical equipment in and about a mine. Now, one who oversees surface lands and structures.

prop-free

In longwall mining of a coal seam, a face with no posts between the coal and the conveyor used to remove it. *Pryor, 3*

prop-free front

a. In coal mining, longwall working in which support to the roof is given by roof beams cantilevered from behind the working face. This leaves unobstructed room for digging and conveying equipment in a mechanized working. *Pryor, 3* b. Such a face is necessary where armored flexible conveyors are used to carry a coal cutter or power loader. See also: [link bar](#); self-advancing supports. *Nelson*

propylene-glycol dinitrate explosive

An explosive containing the liquid ingredients named, in contradistinction to dynamite, which contains nitroglycerin. In commerce, the term dynamite is loosely used to include any mixture containing a liquid explosive. *Fay*

proportion

A statement of equality between two ratios. When one ratio is equal to another ratio, they are said to be in proportion. *Jones, 2*

proportional control action

As used in mineral processing, action in which there is a continuous linear relation between the output and the input. *Fuerstenau*

proportional counter

A gas-filled, radiation-detection tube in which the pulse produced is proportional to the number of ions formed in the gas by the primary ionizing particle. *ASM, I*

proportional limit

The greatest stress that a material is capable of withstanding without deviation from proportionality of stress to strain (Hooke's law). In the case of rocks, this term and "elastic limit" are restricted to short-time tests; rocks may slowly and permanently deform in periods of long duration, even at stresses below the short-time proportional limit.

proportional plus integral control action

As used in mineral processing, action in which the output is proportional to a linear combination of the input and to the time integral of the input. *Fuerstenau*

proportional plus integral plus derivative control action

As used in mineral processing, action in which the output is proportional to a linear combination of the input, the time integral of input, and the time rate of change of input. *Fuerstenau*

proportioning

Measuring by weight or by volume the constituents, before mixing of concrete, mortar, or plaster. *Hammond*

proppant

Hydraulic fracturing and propping agent employed in the gas and oil industry to enable production from deep petroleum reservoirs.

propping

The setting of timber props in mine workings. *Nelson*

prop retriever

See: [prop drawer](#)

prop sawyer

See: [prop cutter](#)

prop setter

In anthracite and bituminous coal mining, a worker who installs props (posts) to support the roofs of underground working places, placing and wedging them at the most effective points. *DOT*

prop wall

Props that are fastened together in a group, like a fence, and placed against the walls to prevent the roof from caving into the stope. *Stoces*

propylite

A hydrothermally altered andesite resembling a greenstone and containing calcite, chlorite, epidote, serpentine, quartz, pyrite, and iron oxides. The term was first used by Richthofen in 1868. Propylite is common in mining districts of the Western United States, generally in the outermost subzone of hydrothermal alteration. See also: [propylitization](#) *AGI*

propylitic alteration

See: [propylitization](#)

propylitization

The result of low-pressure-temperature alteration around many orebodies. The propylitic assemblage consists of epidote, chlorite, Mg-Fe-Ca carbonates, and sometimes albite-orthoclase, all involved in partial replacement of wall-rock minerals. Syn: [propylitic alteration](#) See also: [phyllic alteration](#)

prosopite

A monoclinic mineral, $\text{CaAl}_2(\text{F},\text{OH})_8$; forms tabular crystals or granular masses.

prospect

a. An area that is a potential site of mineral deposits, based on preliminary exploration. *AGI* b. Sometimes, an area that has been explored in a preliminary way but has not given evidence of economic value. *AGI* c. An area to be searched by some investigative technique, such as geophysical prospecting. *AGI* d. A geologic or geophysical anomaly, esp. one recommended for additional exploration. A prospect is distinct from a mine in that it is nonproducing. See also: [prospecting](#) e. A mineral property, the value of which has not been proved by exploration. *Lewis* f. To search for minerals or oil by looking for surface indications, by drilling boreholes, or both. *Long* g. A plot of ground believed to be mineralized enough to be of economic importance. *Long* h. Territory under examination for its mineral wealth. Prospecting is the search for deposits and is performed by aerial survey, magnetometry, surface examination, pitting, trenching, use

of a prospector's pan, geochemical testing of soil, drilling (shallow or deep), seismic probe, and resistivity survey. *Pryor*, 3 i. The gold or other mineral obtained by working a sample of ore. j. A formation that may be capable of development into a mine, but which is untested. See also: [favorable locality](#) k. A sample of gold obtained in panning. *Nelson* l. A specimen or sample of mineral obtained from a small amount of paydirt or ore. *Craigie* m. To work (a mine, ledge, etc.) experimentally in order to ascertain its richness in precious minerals. *Craigie*

prospect drilling

The exploratory drilling of boreholes in the search for minerals and petroleum. *Long*

prospect drill panner

In metal mining, a person who, with a cable drill rig, drills down through gravel to bedrock along a present or an old creek bed that usually has been prospected by a hand-dug hole. The panner saves the drillings and pans them to discover the possible presence of paydirt (gold-bearing gravel), and weighs gold particles recovered. In the event of the discovery of gold in quantities sufficient for profitable removal, the panner moves drill and continues operations to determine the boundaries of the gold-bearing strata. *DOT*

prospect entry

See: [prospect tunnel](#)

prospecting

a. The search for outcrops or surface exposure of mineral deposits. b. Searching for new deposits; also, preliminary explorations to test the value of lodes or placers already known to exist. c. The surface discovery of coal or mineral only proves its superficial existence and further work is necessary to establish its quality and extent. The term exploration is sometimes applied to this extension of the discovery work. See also: [exploration](#)

prospecting and mining

Generic terms which include the whole mode of obtaining metals and minerals. *Ricketts*

prospecting claim

Aust. A claim larger than the average; allotted to the miner who is the first in a district to discover the presence of gold. *Standard*, 2

prospecting dish

A simple appliance used in the search for gold and other heavy minerals. By means of water washing, the lighter, worthless material is separated from the valuable, heavier minerals, which are made visible by concentration and retention in the dish. Standard dishes with sloping sides are made in sizes ranging from top diameter 10 to 18 in (25 to 46 cm) and from 2 to 4 in (5 to 10 cm) deep, with riffles or grooves to retain the heavy minerals. Syn: [pan](#)

prospecting license

Authorization granted by a government to an individual in some countries, permitting the person to prospect for minerals and to register (stake) a claim. *Pryor, 3*

prospecting pan

See: [pan](#)

prospective ore

Ore that cannot be included as proved or probable, nor definitely known or stated in terms of tonnage. See also: [possible ore](#); [ore expectant](#).

prospector

A person engaged in exploring for valuable minerals or in testing supposed discoveries of the same.

prospect shaft

A shaft sunk in connection with prospecting operations. *Craigie*

prospect tunnel

A tunnel or entry driven through barren measures, or a fault, to ascertain the character of strata beyond. Syn: [prospect entry](#)

prospectus

A preliminary printed statement describing a business or other enterprise, and distributed to prospective buyers, investors, or participants, giving detailed information concerning the company's business and financial standing. Common in mining.

protecting magnet

Electromagnet or permanent magnet installed ahead of crushing machinery to remove tramp iron that otherwise might enter and damage the appliances. *Pryor, 3*

protection screen deck

A screen plate with large apertures mounted over the screening deck in order to reduce the load and wear thereon. *BS, 5*

protective alkali

In the cyanide process, the use of dissolved lime to maintain a slightly alkaline pulp, therefore ensuring that the cyanide salt retains its potency and does not acidify to hydrocyanic acid, which cannot dissolve gold or silver. See also: [cyanide process](#)

protective alkalinity

Lime added to auriferous pulp to ensure alkalinity. Important in the cyanidation process for precious metals. *Pryor, 1*

protest

An objection to the patent proceeding; when made, it calls for a hearing on the matter in the local land office. *Lewis*

protoamphibole

A name for a series of artificial orthorhombic fluoramphiboles having only half the a-dimension of anthophyllite. The presence of lithium and absence of calcium appear to be essential to their formation. Named because of a structural relation to protoenstatite. *Hey, 2*

protoclase

Leith's term for a rock possessing what he considered to be primary cleavage; e.g., bedding planes in sedimentary rock, formed concurrently with the rock. CF: [metaclase](#)

protoclastic

- a. Said of igneous rocks in which the earlier formed crystals have been broken or deformed because of differential flow of the magma before complete solidification. *AGI*
- b. Said of an igneous rock containing deformed xenocrysts. *AGI*
- c. Said of the texture characteristic of an early stage of cataclasis, with a very small amount of finite strain. *AGI*

protodolomite

a. Dolomite with calcium and magnesium disordered within layers rather than ordered by layer. b. An imperfectly crystallized synthetic material of composition near $\text{CaMg}(\text{CO}_3)_2$.

protogene

See: [protogine](#)

protogenous

Said of original rocks as opposed to derived rocks, and including saline deposits, coal, igneous rocks, and ore deposits. The term is no longer used. *Holmes, 2*

protogine

A granitic rock, occurring in the Alps, that has gneissic structure, contains sericite, chlorite, epidote, and garnet, and shows evidence of a composite origin or of crystallization (or partial recrystallization) under stress after consolidation. Also spelled protogene. The term, dating from 1806, is obsolete. *AGI*

protomylonite

a. A mylonitic rock produced from contact-metamorphosed rock, with granulation and flowage being due to overthrusts following the contact surfaces between intrusion and country rock. *AGI* b. A coherent crush breccia whose characteristically lenticular, megascopic particles faintly retain primary structures. It is a lower grade in the development of mylonite and ultramylonite. CF: [ultramylonite](#)

proton

An elementary particle with a single positive electrical charge and a mass approx. 1,847 times that of an electron. The atomic number of an atom equals the number of protons in its nucleus. *Lyman*

protoquartzite

A well-sorted, quartz-enriched sandstone that lacks the well-rounded grains of an orthoquartzite; specif. a lithic sandstone intermediate in composition between subgraywacke and orthoquartzite. *AGI*

protore

In older writings, any primary mineralized material too low in tenor to constitute ore but from which ore may be formed through secondary enrichment. As commonly employed today, the rock below the sulfide zone of supergene enrichment; the primary material

that cannot be produced at a profit under existing conditions but that may become profitable with technological advances or price increases. See also: [oxidized zone](#); sulfide zone.

protractor

An instrument used in drawing and plotting, designed for laying out or measuring angles on a flat or curved surface, and consisting of a plate marked with units of circular measure. See also: [goniometer](#)

proustite

A trigonal mineral, Ag_3AsS_3 ; dimorphous with xanthoconite; rhombohedral cleavage; soft; ruby red; occurs in low-temperature or secondary-enrichment veins; a minor source of silver. Syn: [light ruby silver](#); [light red silver ore](#).

prove

a. To determine, by boring from the surface or driving a passageway underground, the location and character of a coalbed or the nature of rock strata. *Hudson* b. To establish, by drilling, trenching, underground openings, or other means, that a given deposit of a valuable substance exists, and that its grade and dimensions equal or exceed some specified amounts. See also: [proved reserve](#)

proved ore

See: [proved reserve](#)

proved reserve

An ore deposit that has been reliably established as to its volume, tonnage, and quality by approved sampling, valuing, and testing methods supervised by a suitably qualified person. The proved reserve is the overridingly important asset of a mine, and by its nature is a wasting one from the start of exploitation unless it is increased by further development. Syn: [proved ore](#)

provenance

A place of origin; specif. the area from which the constituent materials of a sedimentary rock or facies are derived. Also, the rocks of which this area is composed. CF: [distributive province](#) *AGI*

prove up

a. To show that the requirements for receiving a patent for government land have been satisfied. *Webster 3rd* b. Can. To establish economic value of a property. *Hoffman*

proving hole

a. A borehole drilled for prospecting purposes. b. Advance bore or heading into a mineral deposit, made either to check the quality of the ore being approached or to relocate a deposit that has been distorted or dislocated by faulting. *Pryor, 3*

proving ring

A steel ring that has been accurately turned, heat treated, and polished. It is precisely calibrated in a testing machine by measuring its deflection for different loads and can be used for measuring applied loads on a structure. *Hammond*

proving the area

The establishment of the quantity and grade of coal or ore available for working by means of geological surveys, exploratory drilling, or exploring headings. *Nelson*

proximate analysis

a. The determination of the compounds contained in a mixture as distinguished from ultimate analysis, which is the determination of the elements contained in a compound. Used in the analysis of coal. *Standard, 2; Fay* b. The determination, by prescribed methods, of moisture, volatile matter, fixed carbon (by difference), and ash. The term proximate analysis does not include determinations of chemical elements or determinations other than those named. See also: [chemical constitution of coal](#)

proximity log

A Schlumberger log based on the principle of shallow investigation; as its name implies it is markedly affected by material that lies in its immediate proximity. It depends for its operation on the forcing of a more or less horizontal beam of current into the formation. Its vertical resolution is about 6 in (15 cm) and it is almost impervious to the presence of a mud cake on the formation wall. *Wyllie*

prudent-man (person) test

The basic legal standard for discovery under the mining law that states: Where minerals have been found and the evidence is of such a character that a person of ordinary prudence would be justified in the further expenditure of his labor and means, with a reasonable prospect of success in developing a valuable mine, the requirements of the statute have been met. *SME, 1*

P.R.U. hand pump and densitometer

A dust sampling instrument comprising a D.V.P. Mark 11 pump with a swept volume of 90 cm^3 . A filter paper is inserted into a bridge behind the inlet nozzle of the pump such that a circle of 1-cm diameter of the filter paper is exposed to the dust. The dust, while passing through the filter paper, produces a stain. The optical density of the stain is determined photoelectrically in a densitometer by the light that falls upon a galvanometer. The dust particle concentration is evaluated by a calibration factor. Its main disadvantage is that it underestimates the number of fine particles. *Nelson*

Prussian blue

See: [vivianite](#)

prussic acid

See: [hydrocyanic acid](#)

pry

Eng. Cornish miners' term for soft white clay. Also spelled pryán.

pryany lode

A lode in which the ore is mixed with gossan or flucan. *Arkell*

prypole

A pole that forms the prop of a hoisting gin and stands facing the windlass. *Webster 3rd*

psammite

a. A sandstone. The term is equivalent to the Latin-derived term arenite. *AGI* b. A term formerly used in Europe for a fine-grained, fissile, clayey sandstone. *AGI* c. The metamorphic derivative of arenite. Etymol: Greek psammos, sand. See also: [psephite](#); [pelite](#). Adj. psammitic. *AGI*

psatyrite

See: [hartite](#)

psephite

a. A sediment or sedimentary rock composed of large fragments set in a matrix varying in kind and amount; e.g., talus, breccia, shingle, gravel, and esp. conglomerate. The term

is equivalent to the Latin-derived term *rudite*. *AGI* b. The metamorphic derivative of *rudite*. Etymol: Greek *psephos*, pebble. See also: [psammite](#); [pelite](#). Adj: *psephitic*. *AGI*

pseudo-

A prefix meaning false or spurious. *AGI*

pseudoanticline

An upward buckling of the superficial layers of the ground due either to changes in volume brought about by pedogenic processes or to some other nontectonic cause.

Challinor

pseudoboleite

A tetragonal mineral, $Pb_5 Cu_4 Cl_{10} (OH)_8 \cdot 2H_2 O$; indigo blue; occurs only in parallel growth on *boleite*, at Boleo, Baja California, Mex. Also spelled *pseudoboleite*.

pseudobreccia

A partially dolomitized limestone, characterized by: a mottled appearance, that gives the rock a texture mimicking that of a *breccia*; or by a weathered surface that appears fragmental. It is produced diagenetically by selective grain growth in which localized, patchy, and irregularly shaped recrystallized masses of coarse calcite are embedded in a lighter colored and less altered matrix of calcareous mud. *AGI*

pseudobrookite

An orthorhombic mineral, $Fe_2 (Ti,Fe)O_5$; resembles *brookite*; occurs in cavities in *andesites*. See: [brookite](#)

pseudochromatism

Colors and color plays produced by physical optics as opposed to *chromophores*; e.g., diffraction, dispersion, and scattering. Syn: [structural color](#)

pseudoconglomerate

A rock that resembles, or may easily be mistaken for, a normal sedimentary conglomerate. Examples include a *crush conglomerate* consisting of cemented fragments that have been rolled and rounded nearly in place by orogenic forces; a *pebble dike*; a sandstone packed with rounded concretions; and an aggregate of rounded boulders produced in place by spheroidal weathering and surrounded by clayey material. See also: [crush conglomerate](#) *AGI*

pseudocrocidolite

Quartz pseudomorphous after crocidolite. Syn: [tiger's-eye](#); [hawk's-eye](#). *English*

pseudocrystalline

Composed of detrital crystalline grains little worn and solidly compacted by siliceous or other mineral matrix, so as to resemble a true crystalline rock.

pseudoeutectic texture

Intergrowth of sulfide minerals that simulate eutectic texture in metals. See also: [graphic granite](#)

pseudofibrous peat

Peat that in spite of its fibrous condition, is soft, noncoherent, plastic, and on drying, shows great shrinkage. See also: [fibrous peat](#); amorphous peat. *Tomkeieff*

pseudogalena

See: [sphalerite](#)

pseudohexagonal

Descriptive of minerals with hexagonal habit without hexagonal symmetry; e.g., hexagonal plates of monoclinic mica.

pseudojade

A name that may be applied to any mineral resembling jade in appearance; e.g., bowenite, massive serpentine. *English*

pseudoleucite

Large isometric crystals consisting of mixtures of nepheline and orthoclase, or of analcime formed as breakdown products of leucite; occurs in syenites from Arkansas, Montana, and Brazil. CF: [leucite](#); metaleucite.

pseudomalachite

A monoclinic mineral, $\text{Cu}_5(\text{PO}_4)_2(\text{OH})_4$; trimorphous with ludjibaite and reichenbachite; dark green. Syn: [dihydrate](#); [phosphochalcite](#); [phosphorochalcite](#); [tagilite](#).

pseudomorph

A mineral sample with the external crystal form of one mineral and the internal chemistry of another; e.g., cubes of goethite after pyrite resulting from oxidation of the ferrous sulfide to ferric oxyhydroxide. CF: [paramorph](#)

pseudomorphous quartz

Quartz displaying the form and habit of any of several mineral species, which it has assumed through replacement. The most common quartz pseudomorphs are those of calcite, barite, fluorite, and siderite. Silicified wood is quartz pseudomorphous after wood.

pseudomorphous tonstein

A type of tonstein characterized by numerous pseudomorphs of kaolinite-feldspar or kaolinite-mica within a kaolinite groundmass. *IHCP*

pseudophenocryst

See: [porphyroblast](#)

pseudophite

A compact massive mixture of chlorite minerals resembling serpentine.

pseudoporphyritic

a. Said of the texture of an igneous rock in which larger crystals have developed in a macrocrystalline groundmass, but were formed, at least in part, after the rock solidified (e.g., large potassium-feldspar crystals in a granite). *AGI* b. See: [porphyroblastic](#)

pseudosecondary inclusion

A fluid inclusion formed by healing of a fracture occurring during growth of the host crystal. *AGI*

pseudosuccinite

Variety of amber differing from Baltic amber in its reaction to solvents. *Tomkeieff*

pseudosymmetrical

Said of crystal structures in which the atoms are only slightly displaced from positions that would be in accord with a higher symmetry. Thus, a monoclinic, pseudotetragonal mineral contains atoms only slightly displaced from positions of tetragonal symmetry. *Hess*

pseudosymmetry

a. Close angular approximation of a mineral with lower symmetry to one of higher symmetry; e.g., pseudohexagonal micas with monoclinic symmetry. b. Compound twins simulating an external symmetry not found in their atomic structure; e.g., orthorhombic aragonite in pseudohexagonal prisms. Syn: [mimetic](#) c. Abnormal crystal growth along one direction; e.g., elongate native gold cubes with apparent tetragonal symmetry.

pseudotachylyte

a. A dense rock produced in the compression and shear associated with intense fault movements, involving extreme mylonitization and/or partial melting. Similar rocks, such as some of the Sudbury breccias, contain shock-metamorphic effects and may be injection breccias emplaced in fractures formed during meteoric impact. CF: [ultramylonite](#) b. A dark gray or black rock that externally resembles tachylyte and that typically occurs in irregularly branching veins. The material carries fragmental clasts of adjacent rock units, and shows evidence of having been at high temperature. Mirolitic and spherulitic crystallization has sometimes taken place in the extremely dense devitrified base. Some pseudotachylyte has behaved like an intrusive and has no structures obviously related to local crushing. *AGI*

pseudotopaz

Quartz simulating topaz. From Striegau, Silesia, Poland. *English*

pseudoviscosity

Viscous resistance offered by a slurry, sludge, mud, or suspension of minerals in water as a pulp, due to the specific surface involved, with possibly an element of thixotropy under stated conditions of pH value, agitation, flow, temperature, and solid-to-liquid ratio. The pseudoviscous effect is distinct from viscosity due to molecular shear. *Pryor*, 3

pseudovolcano

A large crater or circular hollow believed not to be associated with volcanic activity; e.g., a crater that is possibly meteoritic in origin but may be the result of phreatic explosion or cauldron subsidence. Adj: pseudovolcanic. *AGI*

pseudowollastonite

Synthetic triclinic CaSiO_3 polymorphous with wollastonite-1T, wollastonite-2M, and wollastonite-7T.

psilomelane

a. A general term for massive oxides of manganese not otherwise identified; commonly botryoidal or colloform; a source of manganese in the United States (Arkansas, Virginia, Georgia); also in India, South Africa, and Russia. CF: [cryptomelane](#); [wad](#). b. See: [romanechite](#); manganese oxide. CF: [pyrolusite](#)

psilomelanite

See: [psilomelane](#)

psychrometer

An instrument for measuring the vapor pressure and the relative humidity of the air or the quantity of moisture in the air. It consists of a dry-bulb thermometer and a wet-bulb thermometer, the latter having its bulb covered with a layer of muslin kept moist with water. The rate of evaporation from the moist muslin depends upon the quantity of moisture in the air. The more rapid the evaporation, the greater the cooling, and hence the greater the difference in the temperature readings of the two thermometers. Also called: hygrometer. *Standard, 2*

psychrometry

a. Study of atmospheric humidity and its effect on workers. The psychrometer, or hygrometer, measures the difference between dry-bulb and wet-bulb thermometer readings. *Pryor, 3* b. The determination of the psychrometric properties of air at a given state point. *Hartman, 2* c. Measurement of the humidity of air. *Nelson*

pteropod ooze

A fine-grained pelagic deposit with more than 30% calcium carbonate of organic origin, of which pteropods are an important constituent. *AGI*

ptilolite

See: [mordenite](#)

ptygmatic

See: [ptygmatic folding](#)

ptygmatic folding

Primary folding in migmatites (injection gneisses, etc.), caused by the high-temperature and high-pressure processes to which the migmatites owe their origin and composite character. CF: [flow folding](#)

public domain

Land owned, controlled, or heretofore disposed of by the U.S. Government. It includes the land that was ceded to the Government by the original 13 States, together with certain subsequent additions acquired by cession, treaty, and purchase. At its greatest extent, the public domain occupied more than 1,820 million acres (737 million ha). See also: [public land](#) *AGI*

public land

Land owned by a government, esp. a national government; specif. the part of the U.S. public domain to which title is still vested in the Federal Government and that is subject to appropriation, sale, or disposal under the general laws. *AGI*

public land and public use

There is a clear distinction between public lands and lands that have been severed from the public domain and reserved from sale or other disposition under general laws. Such reservation severs the land from the mass of the public domain and appropriates it to a public use. *Ricketts*

public limited liability company

An association of individuals, at least seven in number, who together subscribe the necessary means or capital--i.e., money, property, or other credit--to engage in a joint undertaking. *Truscott*

public mineral land

Land belonging to the United States containing a deposit of mineral in some form, metalliferous or nonmetalliferous, in quantity and quality sufficient to justify expenditures in the effort to extract it and subject to occupation and purchase under the mining laws. *Ricketts*

pucherite

An orthorhombic mineral, BiVO_4 ; trimorphous with clinobisvanite and dreyerite; reddish brown; a source of vanadium.

pucking cutter

A worker employed in a coal mine to cut the floor in cases of creep or upheaval toward the roof. *CTD*

puddingstone

a. A siliceous rock cut into blocks for furnace linings. b. See: [conglomerate](#)

puddle

a. Earthy material--such as a mixture of clay, sand, and gravel--placed with water to form a compact mass to reduce percolation. *Seelye, 1* b. To place such material. *Seelye, 1* c. To compact loose soil by soaking it and allowing it to dry. *Nichols, 1* d. The molten portion of a weld. *Webster 3rd* e. To work (metal) while molten. *Webster 3rd* f. To subject (iron) to the process of puddling. *Webster 3rd*

puddled steel

Steel made in a puddling furnace, a type of reverberatory furnace in which the flame plays down upon the metal. *Camm*

puddler

a. Worker who converts cast iron into wrought iron by puddling. See also: [puddling](#) b. A rabble used in puddling. *Webster 3rd* c. A puddling furnace. *Webster 3rd* d. A system of small pipes admitting compressed air to a tank of water and zinc chloride, to effect a thorough solution for use as a timber preservative. *Webster 2nd* e. A machine for breaking up alluvial wash, consisting of a shallow tank in which the arms rotate slowly. The coarse stones are forked out and the pulp passed down sluice boxes along which the gold settles. See also: [tormentor](#)

puddle roll

Any of the roughing rolls through which puddle balls are passed to be converted into bars. Collectively called a puddle train. *Standard, 2; Fay*

puddling

The agitation of a bath of molten pig iron by hand or by mechanical means, in an oxidizing atmosphere, in order to oxidize most of the carbon, silicon, and manganese, and thus produce wrought iron. See also: [danks' puddler](#)

puddling furnace

A reverberatory furnace for puddling pig iron. *Standard, 2*

puddling machine

A machine used for mixing auriferous clays with water to the proper consistency for the separation of the ore. *Fay*

puddling process

Production of wrought iron from molten pig iron, in an oxidizing atmosphere in a reverberatory furnace of special design. *Pryor, 3*

puff blowing

Blowing chips out of a hole by means of exhaust air from the drill. (Nichols, 1976)

puffed bar

In powder metallurgy, a cored bar expanded by internal gas pressure. *Rolfe*

puffer boy

A person employed to operate an engine used for hauling loaded mine cars through haulageways. Also the operator of any small stationary hoisting engine. See also: [puffer man](#)

puffer man

In bituminous coal mining, a worker who operates a small hoisting engine used for hauling loaded mine cars through haulageways in a mine, or operates a small stationary engine used for hoisting coal or rock in a shallow shaft, esp. for prospecting or development work. Also called: puffer; puffer boy; puffer tender. *DOT*

puffer tender

See: [puffer man](#)

puffstone

Eng. Travertine; hard enough to use for building; so called from its cavernous structure. *Arkell*

pug

a. A parting of clay that sometimes occurs between the walls of a vein and the country rock; gouge. b. The coal left on the floor by a coal cutter. See also: [following dirt](#) c. Clay or other material used in packing cracks to prevent leakage; also, to use this material. d. Crushed strata or clay. See also: [flucan](#)

pug lifter

One who removes coal left adhering to the floor by a coal-cutting machine. *CTD*

pug lifting

The breaking and clearing of the coal left adhering to the floor by a longwall coal cutter. *Nelson*

pug mill

a. A machine for mixing water and clay, consisting of a long horizontal barrel containing a long longitudinal shaft fitted with knives; the knives slice through the clay, mixing it with water, which is added by sprays from the top. The knives are canted to give some screw action, forcing the clay along the barrel and out one end. *AISI* b. See: [paddle-type mixing conveyor](#)

pug-mill operator

a. One who prepares ground, sifted, and filtered clay for molding by mixing it with water in a rotary-type mixer called a pug mill. This machine is frequently operated in conjunction with an auger mill and a cutting machine, the same worker tending the operation of all three machines simultaneously. Also called clay pugger; mixing-mill operator. *DOT* b. One who mixes ground preheated magnesia and carbon with hot asphalt in a pug mill to form a viscous mixture suitable for processing into pellets. Also called: mixer tender; pug miller; pug-mill tender. *DOT*

pug tub

See: [settler](#)

pull

a. The unit advance during the firing of each complete round of shotholes in a tunnel. b. To loosen the rock around the bottom of a hole by blasting. Usually used with a negative to describe a blast that did not shatter rock to the desired depth. *Nichols, I* c. The amount of core obtained each time a core barrel is removed from a borehole. *Long* d. To draw or remove coal pillars, or pillars of ore. e. To hoist drill-stem equipment from a borehole. *Long* f. Strata movements over large excavated areas will extend to the surface and the disturbed surface area is almost always larger than the area of the underground excavation. The extent of this pull or draw depends on the depth of the workings, the nature of the strata, the thickness of the seam being mined, and the degree of packing support. See also: [draw](#) *Lewis*

pull-apart structure

Features produced in beds that have been disrupted and separated during soft-sediment deformation. See also: [boudinage](#)

pull drift

A small crosscut through barren ground to connect two orebodies. *Hess*

puller-out

An operator who charges, pulls out, and otherwise manipulates crucibles. *Mersereau, 2*

puller rod

The rod used between the crank arm or drive arm of the drive unit and the panline of a shaker conveyor. Also called: connecting rod. *Jones, 1*

pulley

a. A cylinder, with a shaft for mounting it so that it may rotate; used to change the direction or plane of belt travel. If the shaft is designed to be mounted so that it will not rotate, a pulley includes the bearings that provide for rotation of the cylinder on the shaft. *NEMA, 2* b. A sheave or wheel with a grooved rim, over which a winding rope passes at the top of a headframe. *Fay* c. A wheel that carries a cable or belt on part of its surface. *Nichols, 1*

pulley man

See: [rollerman](#)

pulley oiler

In bituminous coal mining, a laborer who oils and greases the pulleys on which run the cables that are used to raise and lower cars along haulage roads underground and at the surface of mines. *DOT*

pulley repairman

See: [rollerman](#)

pull hole

In sublevel stoping, term applied to a raise along the haulage level put up to the first sublevel. The raise is enlarged at the bottom into a grizzly chamber immediately over the haulage level and at the top is widened into a funnel-shaped opening. As ore is broken, it drops directly into a pull hole. *Lewis*

pulling pillars

The common expression used for mining the coal in the pillars of a mine; robbing pillars. See also: [pulling stumps](#)

pulling stumps

The process of taking out the pillars of a coal mine. See also: [pulling pillars](#)

pull-over mill

A two-high mill in which a piece is rolled in one direction only, and after traveling between the rolls has to be passed back over the top roll for rerolling. *Osborne*

pull pin

A device for throwing mechanical parts in or out of gear, or for readily shifting in or away from a fixed relative position. *Crispin*

pull rope

The rope that pulls a journey of loaded cars on a haulage plane; the rope that pulls the loaded scoop or bucket in a scraper loader layout. See also: [tail rope](#)

pull shovel

A shovel with a hinge- and stick-mounted bucket that digs while being pulled inward. *Nichols, 1*

pullway

The path from the face to the loading point taken by the scraper of a scraper loading unit. *Jones, 1*

pull wheel

A large driving wheel or sprocket. *Nichols, 2*

pulmonary dust

Dust harmful to the respiratory system, including: silica (quartz, chert); silicates (asbestos, talc, mica, sillimanite); metal fumes (nearly all); beryllium ore; tin ore; iron ores (some); carborundum; coal (anthracite, bituminous). Syn: [fibrogenic dust](#)

pulp

a. A mixture of ground ore and water capable of flowing through suitably graded channels as a fluid. Its dilution or consistency is specified either as solid-liquid ratio (by weight) or as a percentage of solids (by weight). *Pryor, 2* b. Pac. Pulverized ore or coal mixed with water; also applied to dry, crushed ore. See also: [vacuum filter](#)

pulp assay

Pac. The assay of samples taken from the pulp after or during crushing.

pulp balance

Balance that weighs ore or coal pulp in a container of known volume; graduated to show pulp density directly. *Pryor, 3*

pulp climate

In mineral processing, the general physical and chemical conditions of a pulp, in which the pH, added chemicals, solid-liquid ratio, temperature, particle size range, and ionization of a flotation pulp are held within controlled limits while a considerable number of associated factors of less direct importance to the surface chemistry of the process are, at best, only indirectly monitored. *Pryor, 3*

pulp density

a. In mineral processing, the amount of solids in a pulp, typically ranging from 10% to 25%, by weight. It has a marked effect on the recovery and grade of concentrate. *Taggart, 1* b. The weight of a unit volume of pulp; e.g., if 1 cm³ of pulp weighs 2.4 g, then the pulp density is 2.4 g/cm³. *Newton, 1*

pulp dilution

The ratio of water to solids by weight. It is expressed as a ratio; e.g., a pulp dilution of 3 to 1 means that a pulp contains 3 t of water for each ton of solids. *Newton, 1*

pulpit

The special platform upon which the operator of a Bessemer converter stands. *Mersereau, 2*

pulpit man

Person who operates the complex controls of a rolling mill, in which iron and steel ingots or billets are rolled into shapes such as bars, T's, rails, and sheets, by throwing the correct electric switches when signaled or by personal observation. Also called: manipulator operator; mill control operator. *DOT*

pulpstone

A very large grindstone employed in pulp mills for crushing or grinding wood into fiber. *Fay*

pulsator

a. A motor-driven air compressor that supplies compressed air to an electric channeler. It receives the exhaust from the channeling machine cylinder and thus utilizes the pressure of the exhaust. b. In mineral processing, a Harz-type jig. See also: [Harz jig](#) *Pryor, 3*

pulsator jig

A gravity concentrator utilizing vertical pulsations in a hydraulic medium to separate particles by specific gravity differences.

pulsed infusion

A variation of water infusion that has been effective in reducing both explosives consumption and airborne dust concentrations during mining. Water is introduced under pressure into long holes containing explosive charges and forced into the coal seam by detonation of the charges. See also: [infusion shot firing](#)

pulsed infusion shot firing

A coal blasting technique that consists of firing an explosive charge in a borehole filled with water under pressure. The water is introduced through an infusion tube that also seals the hole. When the charge is fired, it produces in the water a high-pressure impulse that is transmitted into the numerous water-filled cleavage planes and slips and thus breaks the coal. The energy from the explosive is used more efficiently than when blasting in the conventional manner, and better coal preparation is obtained. See also: [water infusion](#); [long-hole infusion](#). *McAdam, 2*

pulsion stroke

In mineral concentration by jiggling, the stroke of the plunger device that controls the hydraulic lift of water through the bed of particles. *Pryor, 3*

pulsometer

a. A steam pump in which an automatic ball valve (the only moving part) admits steam alternately to a pair of chambers, forcing out water that had been sucked in by condensation of the steam after the previous stroke. It can tolerate very dirty water and has been widely used for shaft sinking and miscellaneous pumping duties. *Nelson* b. A displacement pump with valves for raising water by steam, partly by atmospheric

pressure, and partly by the direct action of the steam on the water, without intervention of a piston. Also called: vacuum pump. *Webster 3rd*

pulsometer pump

Pump with two chambers that are alternately filled and discharged. An automatic ball valve admits steam, which forces out the charge from the filled chamber while the other is filling as its steam condenses. *Pryor, 3*

pulverization

a. In soil stabilization work, the separation of particles from each other rather than the breaking up of individual particles. Separation of the particles is the first step towards good dispersion of stabilization additives and moisture. *Nelson* b. The reduction of metal to fine powder by mechanical means. Syn: [comminution](#); [soil stabilization](#).

pulverize

To reduce (as by crushing or grinding) to very small particles (as in fine powder or dust). *Webster 3rd*

pulverized fuel

Finely ground coal or other combustible material, that can be burned as it issues from a suitable nozzle, through which it is blown by compressed air. *Pryor, 3*

pulverizer

See: [fine grinder](#)

pulverulent

That which may easily be reduced to powder. Said of certain ores. *Weed, 2; Fay*

pumice

A light-colored, vesicular, glassy rock commonly having the composition of rhyolite. It is often sufficiently buoyant to float on water and is economically useful as a lightweight aggregate and as an abrasive. The adjectival form, pumiceous, is usually applied to pyroclastic ejecta. CF: [scoria](#); [pumicite](#). *AGI*

pumiceous

Adj. form of pumice.

pumicite

A very finely divided volcanic ash or volcanic dust ranging in color from white to gray and buff. It is the unconsolidated equivalent of tuff. See also: [ash](#)

pump

A mechanical device for transferring either liquids or gases from one place to another, or for compressing or attenuating gases. *AGI*

pump bob

The balance weight used to bring up the plunger in a Cornish pumping engine. *Standard*, 2

pump chamber

An underground pumping station. *Fay*

pumpellyite

a. A monoclinic mineral, $\text{Ca}_2(\text{Mg,Fe,Mn})(\text{Al,Mn,Fe})_2(\text{SiO}_4)(\text{Si}_2\text{O}_7)(\text{OH})_2 \cdot \text{H}_2\text{O}$; pumpellyite group; individual species named according to the preponderance of Fe, Mg, or Mn; occurs in minute bluish-green fibers or plates in Michigan, California, Haiti, and New Zealand. b. The mineral group jugoldite-(Fe), okhotskite, pumpellyite-(Fe), pumpellyite-(Mg), pumpellyite-(Mn), and shuiskite. Syn: [Lake Superior greenstone](#)

Pumpelly's rule

The generalization, made by Pumpelly in 1894, that the axes and axial surfaces of minor folds of an area are congruent with those of the major fold structures of the same phase of deformation. *AGI*

pumper

In bituminous coal mining, a person who works a hand pump to force water, accumulated underground in low places, into a drainage ditch flowing to a natural outlet or pumping station. See also: [ram operator](#)

pump fist

Eng. The lower end of a plunger case of a pump.

pumping

a. The act of moving a liquid or gas by means of a pump. b. The operation of filling a sludge pump by an up-and-down motion of the rods or rope. Also called pumping the sludger. c. In scraper operation, raising and lowering the bowl rapidly to force a larger load into it. *Nichols, 2* d. Alternately raising and lowering a digging edge to increase the volume of dirt being transported. *Nichols, 1* e. The motion of mercury in a barometer arising from the movement of a ship or from fluctuations of air pressure in a varying wind. *CTD*

pumping engineer

In mining and in the quarry industry, a person who operates one or a battery of pumps to force excess water from a lower level to the surface or to a drainage tunnel. Also called: pitwright; plugman. *DOT*

pumping head

In an airlift, the distance from the surface to the level of the water during pumping; it equals static head plus drop. *Lewis*

pumping shaft

The shaft containing the pumping machinery of a mine. *Standard, 2*

pump kettle

A convex perforated diaphragm fixed at the bottom of a pump tube to prevent the entrance of foreign matter; a strainer. *Fay*

pump lift

a. The vertical distance that a pump can suck up water. Theoretically, this should be about 34 ft (10.4 m) at sea level; practically, the limit is about 26 ft (7.9 m). *Long* b. The vertical distance a pump can force water to flow. *Long*

pump load

The back pressure and/or resistance to flow of fluids that a pump must overcome to force a fluid to flow through a pipeline, drill string, etc. *Long*

pump pressure

The force per unit area or pressure against which a pump acts to force a fluid to flow through a pipeline, drill string, etc.; also, the pressure imposed on the fluid ejected from a pump. *Long*

pump rod

The rod or system of rods (usually heavy beams) connecting a steam engine at the surface or at a higher level with the pump piston below. See also: [balance bob](#)

pump-rod plates

Scot. Spear plates; strips or plates of iron bolted to wooden pump rods at the joints for the purpose of making the connection. *Fay*

pump slip

Leakage past the valves and the plunger in a reciprocating pump, which should not be greater than 2% or 3% for a pump in good condition. *Lewis*

pump slope

A slope in which pumps are operated. *Fay*

pump station

a. In mining, a chamber near the shaft at depth, where a pump is installed. *Pryor, 3* b. An enlargement made in the shaft, slope, or entry to receive the pump. Also called pumproom. c. The site at which one or more pumps are installed along a pipeline for the purpose of forcing a fluid through the line. *Long*

pump stock

Lanc. See: [pump tree](#)

pump sump

A tank into which fluids gravitate and from which they are recirculated by means of a pump. *BS, 5*

pump surge

The pulsating effect transmitted to a pipeline or drill string at the completion of each compression stroke of a reciprocating-piston pump. *Long*

pump tree

Eng. A cast-iron (wrought iron was formerly used) pipe, generally 9 ft (2.7 m) in length, of which the water column or set is formed. Syn: [pump stock](#)

punch

a. A tool (ram) for knocking out timbers in coal workings. *Standard*, 2 b. See: [leg](#); punch prop.

punched screen

Thin plates through which holes have been punched. These may be round, rectangular, or slotted. *Pryor*, 3

puncher

An early-model pick machine used to undermine or shear coal by heavy blows of sharp steel points attached to a piston driven by compressed air. *Fay*

punching shear

If a heavily loaded column punches a hole through the base on which it rests, the base has failed in punching shear. This is prevented either by thickening the base or by enlarging the foot of the column so as to ensure that the allowable shear stress is not exceeded. *Hammond*

punch mining

a. Mining in which the rooms are opened off the strip mine highwall. *USBM*, 3 b. An underground method of extracting coal from finger-shaped areas of reserves not amenable to other mining methods. Openings are driven by continuous mining machines back and forth across the fingers from outcrop to outcrop leaving a pillar of coal between each cut.

punch prop

A short timber prop for supporting coal in holing or undercutting; a sprag. *Standard*, 2

puppet valve

A valve that, in opening, is lifted bodily from its seat by its spindle instead of being hinged at one side. See also: [poppet](#); [poppet valve](#). *Fay*

puppy

An underground set of pumps. *Fay*

pure bending

In mine subsidence, bending without fracture. *Briggs*

pure coal

See: [vitrain](#)

pure culture

A collection of microbial cells of the same species in a container that is devoid of any other form of life. *Rogoff*

pure oxide

Any of a group of refractories including alumina, magnesia, thoria, zirconia, beryllia, and ceria. *Osborne*

pure oxide ceramic

Ceramic product made from any of the pure oxides of nonmetallic materials; i.e., Al_2O_3 , MgO , SiO_2 , etc.

pure shear

A strain in which a rock body is elongated in one direction and shortened at right angles to this in such an amount that the volume remains unchanged. *AGI*

pure steel

The product of a basic open-hearth furnace refined to a point where the impurities are reduced to the lowest practicable minimum, after which copper and molybdenum are added in correct proportions. *Mersereau, 2*

purlins

Timbers spanning from truss to truss, and supporting the rafters of a roof. *Crispin*

puron

High-purity iron. *Osborne*

purple blende

An old syn. for kermesite. *Fay*

purple copper ore

A miners' term for bornite. Syn: [bornite](#)

purple ore

Sintered pyritic ore.

purpurite

An orthorhombic mineral, $MnPO_4$; forms a series with heterosite; deep red or reddish purple; forms small, irregular masses as an alteration product of lithiophilite and triphylite; at Pala, CA; Hill City, SD; Newry, ME; and the Erongo Mountains, Namibia.

pushbutton coal mining

A fully automatic and remotely controlled system of coal cutting, loading, and face conveying, including self-advancing roof support systems. See also: [manless coal face](#)

pushbutton winding control

A system in which the operation of the winder is similar to automatic cyclic winding, but the starting is instigated by the onsetter and banksman. When everything is ready for winding, the onsetter and banksman press their respective start pushbuttons and the winder starts, accelerates, and banks automatically without the intervention of the winding engineman. With this form of control, loading and discharging of the skips is fully automatic. See also: [automatic cyclic winding](#); manual winding control. *Nelson*

pusher

a. A laborer who pushes loaded mine cars on tracks from underground working places to haulage roads where they are hooked up to a locomotive and hauled to the surface, shaft, or slope bottom for hoisting. A pusher may, at bituminous mines, shift empty and loaded cars in and about the tippie, where coal is prepared for market. Also called: car puller; car shifter; headsman; putter; trailer; trammer. Syn: [mule](#); [wheeler](#). *DOT* b. One who encourages or hastens the miners. Also called jigger boss. *Ricketts* c. A tractor that pushes a scraper to help it pick up a load. *Nichols, 1*

pusher tractor

A bulldozer exerting pressure on the rear of a scraper loader while the loader is digging and loading unconsolidated ground being excavated and moved during opencast mining.

push hole

A hole through which glass is introduced to a flattening furnace. *Standard, 2*

push-pull support system

A method of advancing power-operated supports on a longwall face. Double-acting hydraulic jacks are used in conjunction with supports that slide forward on the floor and provide their own abutments for both their forward movement and that of the conveyor. *Nelson*

push-pull wave

A wave that advances by alternate compression and rarefaction of a medium, causing a particle in its path to move forward and backward along the direction of the wave's advance. In connection with waves in the Earth, also known as primary wave, compressional wave, longitudinal wave, or P-wave. *Leet, I*

push wave

See: [P wave](#)

put

To haul by hand. *Mason*

putrefaction

A process of decomposition of organic substances that occurs in the presence of water and with the complete exclusion of air. It is a kind of slow distillation whereby chiefly methane (CH₄) and smaller quantities of other gaseous products, such as hydrogen (H₂), ammonia (NH₃), and hydrogen sulfide (H₂S), are formed. CF: [disintegration](#)

PVC belt

There are two main types of belts: (1) solid woven carcass impregnated and covered with polyvinyl chloride; and (2) normal multiple construction, which has polyvinyl chloride interlayers and covers. PVC belts are now used widely in coal mines, being not only fire resistant but equal, if not better, in quality than normal rubber belting. See also: [conveyor](#) *Nelson*

P wave

A seismic wave that propagates by alternating compressions and rarefactions in an elastic medium; the motion is in the direction of propagation. It is the type that carries sound. Syn: [compressional wave](#); dilatational wave; irrotational wave; longitudinal wave; pressure wave; push wave. *AGI*

pycnite

A variety of topaz occurring in massive columnar aggregates. Also spelled pychite.

pycnocline

A steep vertical gradient of density. *Hy*

pycnometer

a. A device for weighing and thus determining the specific gravity of small quantities of oil or other liquids. Also spelled pyknometer. *Hess* b. A small bottle for determining the specific gravity of grains or small fragments.

pyrabol

See: [pyribole](#)

pyralmandite

A garnet composition between pyrope and almandine. See also: [pyrope](#)

pyralspite

The pyrope, almandine, spessartine subgroup of the garnet group. See also: [pyrope](#)

pyramid

An open crystal form consisting of nonparallel faces that intersect the *c* crystallographic axis and consist of three (trigonal), four (tetragonal), six (ditrigonal, hexagonal), or eight (ditetragonal) faces meeting at a point. CF: [bipyramid](#); [hemipyramid](#); [dome](#).

pyramidal

Descriptive of a crystal habit dominated by pyramids or bipyramids.

pyramidal garnet

Same as idocrase; a variety of vesuvianite. *Fay*

pyramid cut

a. In tunnel driving or shaft sinking, a pattern of shotholes drilled so that the middle holes converge and outline a pyramid-shaped volume of rock. These holes are fired first, and thus create a free face or relieving cut. *Pryor, 3* b. This cut has received its name from the shape of the initial opening. The three or four holes are so directed that they meet at a point farthest in. The pyramid cut is mainly employed in raises and for shaft

sinking but is not recommended for horizontal tunnels where a machine setup for a definite direction of the four holes cannot easily be obtained. Syn: [German cut](#) c. This type of cut usually consists of four holes drilled to meet at a common apex in the center of the face. This arrangement permits a high concentration of explosive to be used, and the pyramid cut is therefore particularly suitable for breaking hard ground. In very hard ground the number of holes forming the cut may be increased to six. The main disadvantage of this type of cut is the difficulty in drilling the holes at the correct angles so that they will meet at the back of the cut. As in the case of the wedge cut, therefore, a hole director should be used. Also called diamond cut. *McAdam*, 2 d. In underground blasting, a type of cut employed in which the three cut holes in the center may be drilled to form a pyramid. Also applied to four holes meeting in a point. The simultaneous firing of these holes is somewhat equivalent to using a very heavy charge of explosive and makes a powerful blast. *Lewis* e. A cut in which four central holes are drilled towards a focal point, and when fired break out a tetrahedral section of strata. *BS*, 12

pyramid-set

A bit crown, the face of which is covered with a series of stubby pyramids, each apex of which is set with a diamond. *Long*

pyramid structure

In crystallography, that of a crystal in which three or more inclined faces cut the three crystal axes. *Pryor*, 3

pyrargyrite

A trigonal mineral, Ag_3SbS_3 ; dimorphous with pyrostilpnite; rhombohedral cleavage; soft; deep red; in late-primary or secondary-enrichment veins, and an important source of silver. Syn: [antimonial red silver](#); [dark red silver ore](#); [dark ruby silver](#).

pyrene

A tetracyclic hydrocarbon obtained from the coal-tar fraction boiling above 360 degrees C; $\text{C}_{16}\text{H}_{10}$; soluble in carbon disulfide, toluene, and ligroin. *CTD; Handbook of Chemistry and Physics*, 2

pyreneite

A black variety of andradite garnet. Syn: [melanite](#)

pyrheliometer

An actinometer that measures the intensity of direct solar radiation. *AGI*

pyribole

The pyroxene group plus amphibole group. See also: [pyroxene](#)

pyricaustate

A general name for a fossil combustible substance. *Tomkeieff*

pyrite

a. An isometric mineral, FeS_2 ; dimorphous with marcasite; forms a series with catterite; crystallizes in cubes and pyritohedra; sparks readily if struck by steel; metallic; pale bronze to brass yellow; hardness varies from 6.0 to 6.5; occurs in veins, as magmatic segregation, as accessory in igneous rocks, and in metamorphic rocks, in sedimentary rocks including coal seams; a source of sulfur; may have included gold. Syn: [Alpine diamond](#); [iron pyrite](#); [fool's gold](#); [mundic](#); [common pyrite](#). b. The mineral group aurostibite, bravoite, catterite, erlichmanite, fukuchilite, geversite, hauerite, insizwaite, krutaite, laurite, malanite, maslovite, michenerite, penroseite, pyrite, sperrylite, testibiopalladite, trogtalite, vaesite, and villamaninite.

pyrites

a. Various metallic-looking sulfide minerals including iron pyrites (pyrite); copper pyrites (chalcopyrite); tin pyrites (stannite); white iron, cockscomb, or spear pyrites (marcasite); arsenical pyrites (arsenopyrite); cobalt pyrites (linnaeite); magnetic pyrites (pyrrhotite); and capillary pyrites (millerite). Without qualification it popularly refers to pyrite. b. Stones that may be used for striking fire.

pyrites of copper

Common name for chalcopyrite. *Weed, 1*

pyritic

Of, pertaining to, resembling, or having the properties of pyrites. *Standard, 2*

pyritic smelting

Smelting of sulfide copper ores, in which heat is supplied mainly by oxidation of iron sulfide. Syn: [oxidizing smelting](#)

pyritic sulfur

The part of the sulfur in coal that is in the form of pyrites or marcasite. *BS, 1*

pyritiferous

Containing or producing pyrite. *Webster 3rd*

pyritization

Introduction of or replacement by pyrite; e.g., the replacement of original fossil material by pyrite. A common hydrothermal introduction of pyrite specks in rock adjacent to veins.

pyritohedron

An isometric closed crystal form of 12 faces, each an irregular pentagon. It is named after pyrite, which characteristically has this crystal form. See also: [rhombohedral dodecahedron](#) CF: [dodecahedron](#)

pyroantimonite

See: [kermesite](#)

pyroaurite

A trigonal mineral, $Mg_6 Fe_2 (CO_3)_4(OH)_{16} \cdot 4H_2O$; hydrotalcite group; dimorphous with sjoegrenite; occurs in goldlike submetallic scales, or brown crystals having pearly to greasy luster. A silvery white variety is called igelstromite.

pyrobelonite

An orthorhombic mineral, $PbMn(VO_4)(OH)$; descloizite group; forms minute fire-red acicular crystals at Laangban, Sweden; a source of vanadium.

pyrobitumen

Any of the dark-colored, fairly hard, nonvolatile, carbon-rich material substances composed of hydrocarbon complexes, which may or may not contain oxygenated substances and are often associated with mineral matter. The nonmineral constituents are infusible, insoluble in water, and relatively insoluble in carbon disulfide. *AGI*

pyrobituminous

Pertaining to substances that yield bitumens upon heating. *AGI*

pyrochlore

a. An isometric mineral, $(\text{Ca,Na})_2 \text{Nb}_2 \text{O}_6 (\text{OH,F})$; forms a series with microlite; in pegmatites in Maine, California, Colorado, Africa, and Europe; a source of niobium. Syn: [pyrrhite](#) b. The mineral group including the betafite subgroup betafite, plumbobetafite, and ytrobetafite; the microlite subgroup bariomicrolite, bismutomicrolite, microlite, plumbomicrolite, and uranmicrolite; and the pyrochlore subgroup bariopyrochlore, ceriopyrochlore, kalipyrochlore, plumbopyrochlore, uranpyrochlore, and ytropyrochlore.

pyrochroite

A trigonal mineral, $\text{Mn}(\text{OH})_2$; brucite group; soft; pearly white darkening on exposure; has perfect basal cleavage.

pyroclast

An individual particle ejected during a volcanic eruption. It is usually classified according to size. *AGI*

pyroclastic

Produced by explosive or aerial ejection of ash, fragments, and glassy material from a volcanic vent. Applied to the rocks and rock layers as well as to the textures so formed. *Stokes*

pyroclastic deposit

A deposit made up mainly of rock material that has been expelled aurally, normally explosively, from a volcanic vent, such as agglomerate, tuff, and ash. The fragments range in size from bombs and blocks to dust or ash. Such deposits are usually designated according to the lavas to which they correspond in composition. *Stokes*

pyrogenesis

A broad term encompassing the intrusion and extrusion of magma and its derivative. Adj. pyrogenic. *AGI*

pyrogenetic

A term introduced to designate minerals, such as olivine and chromite, developed at high temperature in melts containing only a small proportion of volatile (hyperfusible or fugitive) constituents. See also: [pyrogenic](#)

pyrogenic

Said of a process or of a deposit involving the intrusion and/or extrusion of magma. See also: [pyrogenetic](#); [igneous](#). *AGI*

pyrogenic ore mineral

An ore mineral that crystallized as a primary magmatic mineral of igneous rocks. *Schieferdecker*

pyrogenic rock

A rock resulting from the cooling of a molten magma; an igneous rock.

pyrognostics

The characteristics (such as the degree of fusibility or the flame coloration) of a mineral observed by the use of the blowpipe. *Webster 3rd*

pyrolite

An explosive resembling gunpowder in composition. *Webster 2nd*

pyrolusite

A tetragonal mineral, MnO_2 ; rutile group; trimorphous with akhtenskite and ramsdellite; soft; metallic; steel gray; massive or reniform; a source of manganese. CF: [psilomelane](#) gray manganese ore.

pyrolysis

Chemical decomposition by the action of heat.

pyrolytic graphite

Graphite formed by pyrolysis of a carbonaceous gas. *Van Vlack*

pyrometallurgy

Metallurgy involved in winning and refining metals in which heat is used, as in roasting and smelting. Practically all iron and steel, nickel and tin, most copper, and a large proportion of zinc, gold, and silver, as well as many of the minor metals, are won from their ores and concentrates by pyrometallurgical methods. It is the most important and oldest class of the extractive processes. *ASM, 1*

pyrometamorphism

Metamorphism produced by heat; it is a local, intense type of thermal metamorphism, resulting from unusually high temperatures at the contact of a rock with magma, such as in xenoliths. CF: [igneous metamorphism](#); hydrometamorphism. See also: [thermal metamorphism](#)

pyrometasomatic

Formed by metasomatic changes in rocks, principally in limestone, at or near intrusive contacts, under the influence of magmatic emanations and high to moderate temperature and pressure. *AGI*

pyrometasomatism

Contact metamorphism. CF: [metasomatism](#)

pyrometer

An instrument that measures high temperature, e.g., of molten lavas, by electrical or optical means. See also: [optical pyrometer](#)

pyrometric cone

A small, slender three-sided pyramid made of ceramic or refractory material for use in determining the time-temperature effect of heating and in obtaining the pyrometric cone equivalent (PCE) of refractory material. Pyrometric cones are made in series, the temperature interval between successive cones usually being 20 degrees C. The best known series are Seger cones (Germany), Orton cones (United States), and Staffordshire cones (United Kingdom). See also: [cone](#); orton cone. *ARI; Dodd*

pyrometric cone equivalent

The number of that standard pyrometric cone whose tip would touch the supporting plaque simultaneously with a cone of the refractory material being investigated when tested in accordance with ASTM Test Method C-24. Abbrev. PCE. *ASTM*

pyromorphite

A hexagonal mineral, $Pb_5(PO_4)_3Cl$; apatite group, with iron replacing lead and arsenic replacing phosphorous; sp gr, 6 to 7; in oxidized zones of lead-ore deposits. Syn: [green lead ore](#)

pyrope

a. An isometric mineral, $8[Mg_3Al_2(SiO_4)_3]$; garnet group, with Fe and Mn replacing Mg and Cr replacing Al. See also: [pyralspite](#); [pyralmandite](#). Crystallizes in dodecahedra

and trapezohedra; deep red to black; in high-pressure ultramafic and metamorphic rocks; also in placers; a gemstone and an abrasive. See also: [Cape ruby](#); [Bohemian garnet](#). Syn: [rock ruby](#); magnesium-aluminum garnet. b. Formerly, a name for any bright red gem, such as ruby.

pyrophanite

An opal, e.g., hydrophane, artificially impregnated with melted wax. See also: [fire opal](#)

pyrophanite

A trigonal mineral, $MnTiO_3$; ilmenite group; forms a series with ilmenite; blood red.

pyrophoric sphalerite

A variety of sphalerite that gives off sparks or glows when abraded. Some pieces are so sensitive that the effect is obtained by scratching them with a fingernail. *Hess*

pyrophyllite

A monoclinic and triclinic mineral, $Al_2 Si_4 O_{10} (OH)_2$; foliated; soft; in schists and hydrothermal veins in North Carolina, California, Newfoundland, and Japan. Syn: [pencil stone](#). See also: [G stone](#)

pyrophysalite

A coarse opaque variety of topaz from Finbo, Sweden. Also spelled physalite.

pyropissite

An earthy nonphosphatic pyrobitumen composed primarily of water, humic acid, wax (a source of "montan wax"), and silica, associated with brown coal called pyropissitic brown coal.

pyroradiation pyrometer

A self-contained instrument with the millivoltmeter mounted in the pyrometer tube; the radiant energy is concentrated by means of an objective lens (quartz or fluorite) rather than by a reflecting mirror. *Newton, 2*

pyroretin

A brittle, brownish-black resin that occurs in brown coal near Aussig, Bohemia; sp gr, 1.05 to 1.18. *Fay*

pyrosalmite

Any member of the hexagonal mineral series, ferropyrosalmite-manganpyrosalmite, $(\text{Fe},\text{Mn})_8 \text{Si}_6 \text{O}_{15} (\text{OH},\text{Cl})_{10}$.

pyrostibite

See: [kermesite](#)

pyrostibnite

See: [kermesite](#)

pyrostilpnite

A monoclinic mineral, $\text{Ag}_3 \text{SbS}_3$; dimorphous with pyrargyrite; red. Syn: [fireblende](#)

pyrosulfuric acid

a. A heavy, oily, strongly corrosive liquid $\text{H}_2 \text{S}_2 \text{O}_7$ that consists of a solution of sulfur trioxide in anhydrous sulfuric acid. It fumes in moist air and reacts violently with water with the evolution of heat. *Webster 3rd* b. A solution of sulfur trioxide in sulfuric acid; $\text{H}_2 \text{S}_2 \text{O}_7$. Colorless to dark brown depending on purity; hygroscopic. *CCD, 2*

pyroxene

a. A group of chiefly magnesium-iron minerals including diopside, hedenbergite, augite, pigeonite, and many other rock-forming minerals. Although members of the group fall into different systems (orthorhombic, monoclinic, and triclinic), they are closely related in form, composition, and structure. See also: [acmite](#); [aegirite](#); [augite](#); [diallage](#); [enstatite](#); hypersthene. *Fay; AGI* b. The mineral group aegirine (Ae), aegirine-augite, clinoenstatite, clinoferrosilite, diopside (Di), donpeacorite, enstatite (En), essenite (Es), ferrosilite (Fs), hedenbergite (Hd), jadeite (Jd), jervisite (Je), johannsenite (Jo), kanoite (Ka), kosmochlor (Ko), natalyite, omphacite, petedunnite (Pe), pigeonite, and spodumene (Sp). Some former names relegated to synonyms include acmite = aegirine, bronzite = enstatite, clinohypersthene = clinoenstatite or clinoferrosilite, diallage = altered diopside or other pyroxene with good (100) parting, eulite = ferrosilite, fassaite = ferrian aluminian diopside or augite, ferroaugite = augite, ferrosalite = hedenbergite, hiddenite = spodumene, hypersthene = enstatite or ferrosilite, kunzite = spodumene, salite = diopside, titanaugite = titanian augite, uralite = pseudomorphous amphibole after pyroxene, and ureyite = kosmochlor. Pyroxenes (px) are either monoclinic (clinopyroxenes, cpx) or orthorhombic (orthopyroxenes, opx). General formula: $\text{AB}_2 \text{ZO}_6$: A = Ca, Fe^{2+} , Li, Mg, Mn^{2+} , Na, Zn; B = Al, Cr^{3+} , Fe^{2+} , Fe^{3+} , Mg, Mn^{2+} , Sc, Ti, V^{3+} ; Z = Al, Si. Their structures are built from single chains of silica tetrahedra each sharing two oxygens, with a silica:oxygen ratio of 1:3, electrostatic neutrality being maintained by cross-linking

cations. Crystals are prismatic with prismatic cleavage at 87 degrees and 93 degrees . Colors are mostly greens, but range from white to black. Etymol: Greek pyros (fire) + xenos (stranger) from a mistaken belief that they were only accidentally caught up in lavas. See also: [aegirine](#)

pyroxene perthite

Lamellar intergrowths of pyroxene of different kinds, as with the feldspars. Also pyroxene micropertthite, pyroxene cryptopertthite. *English*

pyroxenite

A coarse-grained, holocrystalline igneous rock consisting of 90% pyroxenes. It may contain biotite, hornblende, or olivine as accessories. *CTD*

pyroxenoid

Single-chain silicates with individual silica tetrahedra twisted relative to the pyroxene chains, resulting in triclinic symmetry; e.g., the wollastonites, rhodonite, and pectolite.

pyroxmangite

A triclinic mineral, $MnSiO_3$; forms a series with pyroxferroite where iron replaces manganese; forms brown cleavable masses near Iva, SC; Homedale, ID; Sweden; and Scotland.

pyrrhite

See: [pyrochlore](#)

pyrrhoarsenite

See: [berzeliite](#)

pyrrhotine

See: [pyrrhotite](#)

pyrrhotite

A monoclinic and hexagonal mineral, FeS ; invariably deficient in iron; variably ferrimagnetic; metallic; bronze yellow with iridescent tarnish; in mafic igneous rocks, contact metamorphic deposits, high-temperature veins, and granite pegmatites. Where associated with pentlandite and nickel replaces iron, it is a source of nickel. Also spelled pyrrhotine. Syn: [magnetic pyrite](#); [dipyrite](#).

Q

quad

The composition quadrilateral for the Ca-Mg-Fe pyroxenes (enstatite-ferrosilite-diopside-hedenbergite).

quadrantal bearing

A horizontal angle or bearing less than 90 degrees , measured to north, south, east, or west from a survey line. *Hammond*

quadrant cutter

A machine that will make a shear cut as well as a horizontal cut. The central column is wedged tightly between roof and floor and operates similarly to a radial percussive coal cutter. *Nelson*

quadrant search

Similar to octant search, but using four sectors instead of eight sectors. Applies to any interpolation method where a limited number of sample data points are used to estimate intermediate values.

quadrilateral

A four-sided plane figure of any shape, having an area equal to the product of the diagonals multiplied by half the sine of the angle between them. *Hammond*

quadrille twinning

See: [crossed twinning](#)

quadrivalent

a. Having a valence of 4. *Webster 3rd* b. Having four valences; e.g., chlorine, which has a valence of 1, 3, 5, and 7. *Handbook of Chemistry and Physics, 2*

quadruple block

A pair of blocks, each having four sheaves, reeved with rope or cable and used to increase the lifting capacity of a drill-hoisting mechanism; a four-sheave block and tackle. *Long*

quagmire

A soft marsh or bog that gives under pressure. CF: [quaking bog](#). *AGI*

quake sheet

A well-defined bed resembling a slump sheet but produced by seismic shock from an earthquake and resulting in load casting without horizontal slip. *AGI*

quaking bog

A peat bog that is either floating or is growing over water-saturated ground, so that it shakes or trembles when walked on. Quagmire is sometimes used as a synonym. *AGI*

qualitative analysis

In chemistry, the process of determining which elements are present. *Standard, 2*

quality

a. Refers to the nature, and not the amount, of material. In the case of a coal seam, its quality is closely linked with its rank and its chemical composition. In the case of metals, average unit values are determined by systematic sampling and therefore represent a known quantity. See also: [ventilation standards](#) b. Native values of a gem irrespective of color and cut. *Hess* c. The ratio by weight of vapor to liquid plus vapor in a mixture, as in steam. *Strock, 2*

quality control

a. Systematic setting, check, and operation designed to maintain steady working conditions in continuous process such as mineral concentration; to forestall trouble; to check condition of ore, pulp, or products at important transfer points. *Pryor, 3* b. Graphic method of exposing abnormalities in sets of figures produced by measurement of repetitive operations or as variances from operating norms. *Pryor, 3* c. The maintaining of air within desired limits of purity. *Hartman, 1*

quantitation

Once a dust sample has been collected, it must be evaluated. Of principal concern is quantitation--determining how much dust or how many particles. Certain methods of quantitation are favored for the various sampling methods. The number basis is preferable for evaluating a pulmonary hazard, while the weight basis is preferred for toxic, radioactive, or explosive hazards. Number quantitation is usually employed for impinger, konimeter, molecular filter, and thermal precipitator samples. Weight quantitation is used for filter paper and electrostatic samples. *Hartman, 1*

quantitative

In testing ore, how much of each metal is present. *von Bernewitz*

quantitative analysis

In chemistry, the process of determining the quantity of each element present. Also called elementary analysis. Both volumetric and gravimetric methods are included. *Standard, 2*

quantitative survey

See: [ventilation survey](#)

quantity

Deals with the amount, and not the nature, of a substance. In the case of a coal seam, quantity refers to its workable thickness and acreage. In the case of ore, the quantity determines its commercial importance. Unit ore values without the quantity factor have only a qualitative significance. *Nelson*

quantity control

The control of air movement, its direction, and its magnitude. *Hartman, 2*

quantity-distance table

A table listing minimum recommended distances from explosive material stores of various weights to a specific location. *Meyer*

quaquaversal

Dipping outward in all directions from a central point, as a dome in stratified rocks. CF: [centroclinal](#); [periclinal](#).

quaquaversal fold

See: [dome](#)

quarey lode

See: [quarry lode](#)

quarfeloids

A portmanteau word from quartz, feldspar, and feldspathoids. CF: [feloids](#)

quarl

A large brick or tile; esp., a curved firebrick used to support melting pots for zinc and retort covers. *Webster 3rd*

quarman

See: [quarryman](#)

quarpit

An obsolete term for a quarry.

quarrel

a. A stone quarry. *Standard, 2* b. Materials from a quarry. *Standard, 2*

quarrier

A worker in a stone quarry. *Standard, 2*

quarry

a. An open or surface mineral working, usually for the extraction of building stone, as slate, limestone, etc. It is distinguished from a mine because a quarry usually is open at the top and front, and, in ordinary use of the term, by the character of the material extracted. See also: [opencast](#) b. Day work pit. Also called opencast; quarpit. *Pryor, 3* c. An underground excavation formed in the roof, or fault, for the purpose of obtaining material for pack walls.

quarry body

A dump body with sloped sides. *Nichols, 1*

quarry drainage

Arranging the quarry layout so that pools of water do not collect in the working area. One-half percent grade away from the face will generally keep the floor free of mud and water. *Nelson*

quarry drill

A blasthole drill. *Nichols, 1*

quarry face

The freshly split face of ashlar, squared off for the joints only, as it comes from the quarry, and used esp. for massive work. Distinguished from rock face. *Webster 3rd*

quarry-faced masonry

Masonry in which the face of the stone is left unfinished just as it comes from the quarry. *Crispin*

quarry floor

The lowest level on which stone is loaded. *Streefkerk*

quarrying

a. The surface exploitation of stone or mineral deposits from the Earth's crust. *Nelson* b. Removal of rock that has value because of its physical characteristics. *Nichols, 2* c. One of the effects of glaciation whereby blocks of stone, bounded mainly by joint planes, are lifted from the bedrock and carried away by ice. Also called plucking. *Stokes*

quarrying machine

Any machine used to drill holes or cut tunnels in native rock; a gang drill, or tunneling machine, but most commonly a small form of locomotive, bearing a rock-drilling mechanism, and operating on a track laid temporarily along or opposite the ledge to be cut. *Standard, 2*

quarry lode

A vein in a heading that is jointed and blocky, like granite in a quarry, or a heading in granite.

quarry machine

See: [quarrying machine](#)

quarryman

a. A person employed at the face of a quarry, stripping, drilling, excavating, and loading rock or economic product. *Nelson* b. One who operates a jackhammer to drill holes in quarry stone, and drives wedges into the holes to break or split off slabs or blocks of stone. Also called hammerman; plug-and-feather driller; rockman; rock splitter. *DOT* c. In crushed rock quarries, a laborer who performs any one or combination of such duties as: loading rock into boxes to be hoisted out of quarry pit; assisting in moving power shovel from one loading position to another; dumping rock from cars into crusher or storage bins; feeding rock into a crusher; tending belt conveyors that transport crushed

rock from crusher to storage bins; loading crushed rock from storage bins into trucks or railroad cars. *DOT* d. In building stone quarries, a laborer who performs any one or combination of such duties as: cleaning dirt and mud from surface and sides of stone deposits; chipping irregularities from surface of granite blocks; breaking large pieces of stone into smaller sizes suitable for building purposes with a sledge hammer; attaching hoisting cable hooks or slings to blocks of stone to be hoisted from quarry; guiding and steadying blocks of stone as they are loaded at the quarry surface on trucks or railroad cars by a derrick. *DOT*

quarry powder

Ammonium nitrate dynamites intended to replace the more costly gelatin dynamites used in quarrying, where blasts of several tons of explosives are used. Cartridges up to 8 in (20 cm) in diameter by 21 in (53 cm) in length, can be enclosed in metal cans to protect against water damage. *Lewis*

quarry-rid

Overburden. CF: [ridding](#)

quarry sap

a. The moisture contained in newly quarried stone. *Arkell* b. See: [quarry water](#)

quarry waste

Material discarded after crushing, as being too fine, irregular, or flaky for constructional work. *Nelson*

quarry water

a. Water that fills the pore spaces of a rock in a quarry. See also: [ground water](#) b. Subsurface water retained in freshly quarried rock. Syn: [quarry sap](#). *AGI*

quartation

The separation of gold from silver by dissolving out the latter with nitric acid. It requires not less than three-fourths of silver in the alloy, whence the name, which is also applied to the alloying of gold with silver, if necessary, to prepare it for this method of parting. See: [parting](#)

quarter

a. The act or process of dividing sludge, core, and other pulverized or granular samples into four equal parts. See also: [quartering](#). *Long* b. Syn. for quadrant as applied to a drill-bit crown. *Long*

quartering

a. The reduction in quantity of a large sample of material by dividing a heap into four approx. equal parts by diameters at right angles, removing two diagonally opposite quarters and mixing the two remaining quarters intimately together so as to obtain a truly representative half of the original mass. The process is repeated until a sample is obtained of the requisite size. Syn: [coning](#); [coning and quartering](#). *Taylor* b. To split a piece of core longitudinally into four equal parts. *Long*

quartering in

Lanc. A plan of building or putting together tubbing plates from the top downward, the rings and segments being bolted together as the work of excavation proceeds.

quartering way

a. A quarry term to designate a direction in which a rock cleaves with moderate facility; grain. See also: [roughway](#) b. The direction of the natural joints in a quarry rock. CF: [rift](#) c. Grain, second way, bate, hem, sheeting plane.

quarter line

Western United States. The survey line by which a section of government land is divided into quarter sections.

quarterly survey

An underground survey required by law to be undertaken at least once every three months for the purpose of bringing the working plans and other plans up to date. *BS*, 7

quarter octagonal

A square shaft with corners cut back. *Nichols*, 1

quarter-point veins

Small veins having an intermediate bearing between strike and cross veins.

quarter post

A post marking a corner of a quarter section of the U.S. Public Land Survey system. It is located midway between section corners. *AGI*

quarter section

A fourth of a normal section of the U.S. Public Land Survey system, representing a piece of land normally 1/2 mile (0.8 km) square and containing 160 acres (64 ha) nearly as possible. It is usually identified as the northeast, northwest, southeast, or southwest quarter of a particular section. *AGI*

quartz

a. A trigonal mineral, SiO_2 ; polymorphous with tridymite, cristobalite, coesite, tishovite, and keatite. Amethyst is a variety of the well-known amethystine color. Aventurine is a quartz spangled with scales of mica, hematite, or other minerals. False topaz or citrine is a yellow quartz. Rock crystal is a watery clear variety. Rose quartz is a pink variety. Rutilated quartz contains needles of rutile. Smoky quartz is a brownish variety, sometimes called cairngorm. Tigereye is crocidolite (an asbestoslike mineral) replaced by quartz and iron oxide and having a chatoyant effect. The name of the mineral is prefixed to the names of many rocks that contain it, as quartz porphyry, quartz diorite. See also: [alpha quartz](#); [beta quartz](#); [high quartz](#); [low quartz](#). *Sanford; Fay* b. Pac. Any hard, gold or silver ore, as distinguished from gravel or earth. Hence, quartz mining, as distinguished from hydraulic mining, etc. *Fay* c. A general term for a variety of cryptocrystalline varieties of SiO_2 ; e.g., agate, chalcedony.

quartz andesite

See: [dacite](#)

quartz battery

A stamp, or series of stamps, for crushing quartz ore. *Mathews*

quartz boil

An outcrop of a quartz vein.

quartz claim

In the United States, a mining claim containing ore in veins or lodes, as contrasted with placer claims carrying mineral, usually gold, in alluvium.

quartz conglomerate

A rock made of pebbles of quartz with sand. *Osborne*

quartz diorite

A group of plutonic rocks having the composition of diorite but with an appreciable amount of quartz, i.e., between 5% and 20% of the light-colored constituents; also, any rock in that group; the approximate intrusive equivalent of dacite. *AGI*

quartz felsite

See: [quartz porphyry](#)

quartz glass

Glass made by fusing quartz.

quartz gold

Gold that is not rounded and waterworn, but irregular and frequently twisted in form, usually very bright, and always of fine quality. *Craigie*

quartzic

See: [quartziferous](#)

quartziferous

Quartz-bearing as applied to a rock not defined by the presence of quartz, but containing minor amounts of it; e.g., limestone. Syn: [quartzic](#). See also: [quartzose](#)

quartz index

a. A derived quantity (qz) in the Niggli system of rock classification, which may be either positive or negative, and is as indicator of a rock's degree of silica saturation. *AGI* b. A term used to indicate the mineralogic maturity of a sandstone by measuring the percentage of detrital quartz. It is expressed as the ratio of quartz and chert to the combined percentage of sodic and potassic feldspar, rock fragments, and clay matrix. The index is used as a basis for evaluating the degree of weathering of the source rock and the degree to which the sediment has been transported. Values for sandstones range between 3 and 19. *AGI*

quartzite

a. A granoblastic metamorphic rock consisting mainly of quartz and formed by recrystallization of sandstone or chert by either regional or thermal metamorphism; metaquartzite. CF: [orthoquartzite](#) b. A very hard but unmetamorphosed sandstone, consisting chiefly of quartz grains that are so completely cemented with secondary silica

that the rock breaks across or through the grains rather than around them; an orthoquartzite. *AGI* c. Stone composed of silica grains so firmly cemented by silica that fracture occurs through the grains rather than around them. *USBM*, 7 d. As used in a general sense by drillers, a very hard, dense sandstone. *Long* e. A granulose metamorphic rock consisting essentially of quartz. *Holmes*, 1 f. Sandstone cemented by silica that has grown in optical continuity around each fragment. Syn: [ganister](#)

quartzitic

Of, pertaining to, or consisting of quartzite.

quartz keratophyre

Altered sodic diabase (trachyte) with accessory quartz.

quartz latite

The extrusive or hypabyssal equivalent of a quartz monzonite. The principal minerals are quartz, sanidine, biotite, sodic plagioclase, and hornblende, commonly as phenocrysts in a groundmass of potash feldspar and quartz (or tridymite, cristobalite), or glass in flows. Accessory minerals are magnetite, apatite, and zircon.

quartz lead

A lode or vein of ore with quartz gangue.

quartz liquefier

In metallurgy, an apparatus for extracting gold from its ore. By the action of an alkali and high-pressure steam, gold-bearing quartz is converted into a soluble silicate from which gold may be separated by washing. *Standard*, 2

quartz mill

A machine or establishment for pulverizing quartz ore, in order that the gold or silver it contains may be separated by chemical means; a stamp mill. *Standard*, 2; *Fay*

quartz mine

a. A mine in which the deposits of ore are found in veins or fissures in the rocks forming the earth's crust. Usually applied to lode gold mines, but not to placers. b. A miner's term for a mine in which the valuable constituent, e.g. gold, is found in siliceous veins rather than in placers. It is so named because quartz is the chief accessory mineral. *AGI*

quartz monzonite

A medium- to coarse-grained plutonic rock containing major plagioclase, orthoclase, and quartz, with minor biotite, hornblende, and accessory apatite, zircon, and opaque oxides. Syn: [adamellite](#)

quartzoid

A crystal having the form of two six-sided pyramids base to base. *Standard, 2*

quartz ore

A rock containing a large quantity of quartz. *Gordon*

quartzose

a. Of, pertaining to, or consisting of quartz. b. Containing quartz as a principal constituent; esp. applied to sediments and sedimentary rocks (e.g., sands and sandstones) consisting chiefly of quartz. CF: [quartziferous](#)

quartzous

See: [quartzose](#)

quartz porphyry

A field term for a medium-grained porphyritic igneous rock of felsic but unspecified composition occurring normally as minor stock or dike intrusions, and carrying prominent phenocrysts of quartz. It is a common altered companion to porphyry copper deposits. Syn: [quartz felsite](#)

quartz reef

A lode or vein of quartz. See also: [reef](#)

quartz sinter

Siliceous sinter. *Fay*

quartz syenite

A potash or soda syenite with quartz as an accessory, hence on the borderline between syenite and granite.

quartz trachyte

A fine-grained igneous rock consisting mostly of alkali feldspar, with normative quartz between 5% and 20%; the volcanic equivalent of quartz syenite. It normally shows trachytic texture. *AGI*

quartz wedge

a. An optical accessory with varying retardation used in polarized-light microscopy to determine birefringence and optic sign. CF: [Berek compensator](#) b. In polarized-light microscopy, an accessory plate that gives variable compensation for birefringence. CF: [accessory plate](#); [gypsum plate](#).

quartz

See: [quartzose](#)

Quaternary

The second period of the Cenozoic era, following the Tertiary; also, the corresponding system of rocks. It began 2 to 3 million years ago and extends to the present. It consists of two grossly unequal epochs; the Pleistocene, up to about 10,000 years ago, and the Holocene since that time. The Quaternary was originally designated an era rather than a period, with the epochs considered to be periods, and it is still sometimes used as such in the geologic literature. The Quaternary may also be incorporated into the Neogene, when the Neogene is designated as a period of the Tertiary era. *AGI*

quaternary alloy

An alloy containing four principal elements. *Rolfe*

queane

See: [quene](#)

quebracho

Aqueous extract of a bark of quebracho tree; contains up to 65% tannin. Used in froth-flotation as depressant for oxidized minerals. *Pryor, 3*

queen

Slate measuring 36 in by 24 in (91.44 cm by 60.96 cm). *Pryor, 3*

queer

A fissure, joint, or small cavity in a rock or quartz vein. Also spelled quere, queere, and qwear (U.K.).

queery

Corn. When the lode or rock on which the miner is driving partakes of the character of quarry stone, namely, in detached lumps by natural divisions, it is called queery ground, and is frequently worked with crowbars and levers instead of being blasted or gadded. A "queer of ground" is a detached rock. Also called quarry lode. See also: [queer](#)

quench

a. To cool suddenly (as heated steel) by immersion, esp. in water or oil. *Webster 3rd* b. To produce a crust or a succession of crusts on molten metal, each crust being removed as it is formed. *Standard, 2*

quenching

Generally means rapidly cooling metals and alloys, or any substance to below the critical range by immersing it in oil or water to harden it. Also applied to cooling in salt and molten-metal baths or by means of an air blast, and to the rapid cooling of other alloys after solution treatment. *CTD*

quenching oils

Oils used in heat treating. Fish oils are often used. Minerals, fish, vegetable, and animal oils are often compounded and sold under trade names. *Crispin*

quenching tub

A tub of water in which to cool, harden, or temper iron or steel. *Standard, 2*

quene

Crevice in lode or vein. Also spelled queane. *Hess*

quenselite

A monoclinic mineral, $\text{PbMnO}_2(\text{OH})$; occurs in pitch-black crystals with perfect cleavage; at Laangban, Sweden.

Querwellen wave

See: [Love wave](#)

questal bentonite

A colloidal bond which, when added to molding sands in amounts up to 3%, increases porosity and strength (green and dry), and reduces the amount of water needed. *Osborne*

quick

a. Said of a sediment that, when mixed with water, becomes extremely soft and incoherent and is capable of flowing easily under load or by force of gravity; e.g. quick clay or quicksand. *AGI* b. Said of blasting powder that burns or goes off very rapidly. c. See: [quicksilver](#) d. Said of an economically valuable or productive mineral deposit, in contrast to a dead ground or area. An ore is said to be quickening as its mineral content increases. Syn: [alive](#)

quickenning

Descriptive of an ore as its mineral content increases with distance.

quicklime sizes

The different sizes depending upon the type of limestone, kind of kiln used, or treatment subsequent to calcining. The sizes commonly recognized are as follows: (1) large lump-- 8 in (203 mm) and smaller; (2) pebble or crushed--2-1/2 in (64 mm) and smaller; (3) ground, screened, or granular--1/4 in (6.4 mm) and smaller; and (4) pulverized--substantially all passing a No. 20, 850 μ m, sieve. *ASTM*

quickness

The property of an explosive by virtue of which it exerts a sharp blow or shattering effect on the material with which it is in contact. The quickest explosive of the dynamite class is the 60% straight dynamite. Quick explosives are the ones particularly desired for mudcapping. For maximum effect for this purpose, they should be of high density and sensitiveness. See also: [quick](#)

quicksand

A mass or bed of fine sand, that consists of smooth rounded grains with little mutual adherence and that is usually saturated with water flowing upward through the voids, forming a semiliquid, highly mobile mass that yields easily to pressure. See also: [running ground](#). Syn: [running sand](#)

quicksilver

A common name for mercury. Syn: [native mercury](#)

quicksilver cradle

A wooden box placed in a sloping position, and fixed upon rockers, in which gold-bearing gravel is washed, the gold being caught by mercury in the lower part of the cradle. *Fay*

quicksilver rock

An altered rock consisting mainly of dark opal and chalcedony, commonly associated with ore in California mercury deposits in serpentine.

quick test

A shear test of a cohesive soil without allowing the sample to drain. See also: [drained shear test](#)

Quigley gun

An air gun which mixes dry, granular, refractory materials with water.

quill shaft

A light drive shaft inside a heavier one, and turning independently of it. *Nichols, 1*

quincite

Light carmine-red particles found in a limestone near Quincy, France; color apparently organic; a doubtful mineral. *Dana, 1*

quinquevalent

a. Having a valence of 5. *Webster 3rd* b. Having five valences. Tungsten has five valences which are 2, 3, 4, 5, and 6. *Handbook of Chemistry and Physics, 2*

quitclaim

a. A release of a claim; a deed of release; specif., a legal instrument by which some right, title, interest, or claim by one person in or to an estate held by himself or another is released to another, and which is sometimes used as a simple but effective conveyance for making a grant of lands whether by way of release or as an original conveyance. *Webster 3rd* b. In the United States, a document in which a mining company sells its surface rights but retains its mineral rights. *Nelson*

quoin

a. The keystone or a voussoir of an arch. b. A wedge to support or steady a stone. c. A large square ashlar or stone at the angle of a wall to limit the rubble and make the corner true and strong; an exterior masonry corner. d. One of the four facets on the crown, pavilion, or base of a gem.

Q wave

See: [Love wave](#)

R

rabatage

A system of working steep seams of any thickness. *Nelson*

rabbit-eye

York. Limestone in the Coralline Oolite. CF: [toad's-eye](#)

rabbittite

A monoclinic mineral, $\text{Ca}_3 \text{Mg}_3 (\text{UO}_2)_2 (\text{CO}_3)_6 (\text{OH})_4 \cdot 18\text{H}_2\text{O}$; radioactive; forms yellow efflorescence on mine walls.

rabble

a. An iron scraper serving as a rake in removing scoriae from the surface of melted metal. *Fay* b. A charcoal burner's shovel. *Webster 3rd* c. A mechanical rake for skimming the bath in a melting or refining furnace or for stirring the ore in a roasting furnace by hand or mechanically. *Webster 3rd*

rabbler

a. See: [rabble](#) b. One who uses a rabble, as in puddling iron. *Standard, 2* c. A scraper. *Standard, 2*

rabbling

Stirring molten metal, ore, or other charge, using a hoelike tool or other device. *ASM, 1*

rabbling tool

A rabble of simple construction for use by hand. Also called rabble rake. See also: [rabble](#)

race

A small thread of spar or ore.

raceway

The term is applied to conduits, moldings, and other hollow material, often concealed, through which wires are fished from one outlet to another. *Crispin*

rack

a. An inclined trough for washing or separating ore. *Nelson* b. A toothed or notched drill-base-slide and meshing-gear pinion used to facilitate the moving of a drill to clear the borehole when hoisting or lowering the drill string; generally limited to larger, skid-mounted machines. *Long* c. A framework of wood or metal for the orderly storage of core, pipe rods, etc., in a horizontal position. *Long* d. A tilting table on which concentrates are separated from the passing flow of finely ground pulp, the system being arranged to be periodically self-flushing. *Pryor, 3* e. A screen composed of parallel bars to catch floating debris. *Seelye, 1* f. In electroplating, a frame used for suspending and conducting current to one or more cathodes during electrodeposition. *Lowenheim*

rack-a-rock

Mining explosive based on a mixture of potassium chlorate and nitrobenzene. *Pryor, 3*

rack back

To move a drilling machine away from the borehole collar by sliding it on its base, using the rack-and-gear pinion to facilitate moving the machine. See also: [rack](#)

racked timbering

Timbering braced diagonally as stiffening against deformation. *Hammond*

rack frame

Inclined table used to treat slimes. *Pryor, 1*

rack gear

A toothed bar. *Nichols, 1*

racking

a. Old term for concentration in sluice boxes. b. The process of separating ores by washing on an inclined plane. c. See: [ragging](#)

racking table

A table on which to wash ore slimes. See also: [rack](#)

rack railroad

A cog railway; cog tramway. *Fay*

rack up

a. To move the drilling machine forward into alignment with the borehole, using the rack-and-gear pinion to facilitate moving the machine. *Long* b. To stack and arrange the drill rods in an orderly fashion in the tripod, mast, or derrick, or horizontally on a rack provided on the ground. *Long* c. To place core on a rack. *Long*

radial

Said of lines or other linear phenomena converging at a single center or departing from one.

radial arm

The movable cantilever supporting the drilling saddle in a radial drilling machine. *Crispin*

radial axis

See: [longitudinal trace](#)

radial dikes

A descriptive term for dikes that radiate outward from a center, commonly a volcanic neck or stock.

radial drainage pattern

A drainage pattern in which consequent streams radiate or diverge outward, like the spokes of a wheel, from a high central area; it is best developed on the slopes of a young, unbreached domal structure or of a volcanic cone. *AGI*

radial drill

a. A heavy drilling machine in which the drilling head is capable of radial adjustment along a rigid horizontal arm carried by a stand. See also: [radial percussive coal cutter](#) b. A small diamond drill having a drilling head that can be adjusted radially along a rigid horizontal arm radiating from a vertical column; usually driven by air and used to drill radial blastholes underground. See also: [radial drilling](#)

radial drilling

The drilling of a number of holes in a single plane and radiating from a common point. CF: [horadial](#)

radial-flow fan

A mine fan in which the air enters along the axis parallel to the shaft and is turned through a right angle by the blades and discharged radially. There are three main types with (1) backwardly inclined blades; (2) radial blades; and (3) forward curved blades. In (2) and (3) the blades are made of sheet steel, while in (1) the present tendency is to replace curved sheet-steel blades by blades of aerofoil cross section. The aerofoil bladed radial-flow fan has an efficiency of about 90%. CF: [axial-flow fan](#); [mixed-flow fan](#).
Nelson

radial machineman

In bituminous coal mining, a person who operates a radial-type coal cutter. The machine remains stationary at the center of the working place and undercuts or shears the coal in an arc rather than making a straight cut by moving across the working face. Also called arcwall machineman. *DOT*

radial percussive coal cutter

A heavy coal cutter for use in headings and rooms in pillar methods of working. The machine weighs about 12 hundredweight (545 kg) and is usually mounted on a light carriage to suit the mine track. A percussive drill, with extension rods, makes a horizontal cut about 5-1/2 ft (1.68 m) deep and 15 ft (4.57 m) wide at any height in the heading. The central column is tightened between roof and floor about 4-1/2 ft (1.37 m) from the face. The machine can also be used for drilling shotfiring holes. *Nelson*

radial pressure

The radial pressure of wire rope is a function of the rope tension, rope diameter, and tread diameter. The radial pressure can be determined by the following equation: $P = 2T/Dd$, where P equals radial pressure in pounds per square inch; T equals rope tension in pounds; D equals tread diameter of sheave or drum in inches; and d equals rope diameter in inches.

radial slicing

A method of caving by which all the ground around a central raise might be worked in a series of slices arranged like the spokes of a wheel. *Lewis*

radial strain

The change in length per unit length in a direction radially outward from the charge. *Duvall*

radial stress

a. Stress normal to the tangent to the boundary of any opening. *Obert* b. In the Earth, the stress normal to a spherical surface.

radial velocity

In a fan, the quantity of air delivered in cubic meters per second divided by the outlet area of the fan at the periphery.

radial ventilation

A ventilation system in which a number of downcast shafts arranged around the periphery of the working area are served by a common upcast shaft within the area, or vice versa. Sometimes known as compound ventilation. *BS, 8*

radian

A unit of plane angular measurement equal to the angle at the center of a circle subtended by an arc equal in length to the radius. One radian equals about 57.29 degrees. *Webster 3rd*

radiant energy

Energy that radiates or travels outward in all directions from a source. *MacCracken*

radiated

Said of an aggregate of acicular crystals that radiate from a central point. CF: [spherulitic](#)

radiated pyrite

See: [marcasite](#)

radiating

A mineral with crystals or fibers arranged around a center point, for example, stibnite. Also called divergent. *Nelson*

radiation absorbed dose

The basic unit of absorbed dose of ionizing radiation. One radiation absorbed dose (abbrev., rad) equals the absorption of 100 ergs of radiation energy per gram of matter. *Lyman*

radiation damage

a. A general term for the alteration of properties of a material arising from exposure to X-rays, gamma rays, neutrons, heavy-particle radiation, or fission fragments in nuclear fuel material. *ASM, I* b. Damage done to a crystal lattice (or glass) by passage of fission particles or alpha particles from the nuclear decay of a radioactive element residing in or near the lattice. See also: [metamict mineral](#) *AGI*

radiation detector

A device used either on the surface or in drill holes to detect and/or indicate the occurrence or the nearby presence of radioactive minerals. Also called electronic logger; gamma-ray detector; Geiger counter; Geiger-Mueller counter; Geiger-Mueller probe; scintillation counter; scintillometer. *Long*

radiation log

See: [radioactivity log](#)

radiation pyrometer

a. A device for ascertaining the temperature of a distant source of heat, such as a furnace. A concentrated group of thermocouples, called a thermopile, is used. Radiant heat from the furnace or object is focused by a lens onto the thermopile. Radiation pyrometers may be used for measuring temperatures to 7,000 degrees F (3,870 degrees C). The device is used in automatic control systems in mineral dressing and other processes. *Nelson* b. Pyrometer that determines temperature by measuring the intensity of radiation from the hot body.

radiation survey

A study of factors in any process or device involving radiation that could cause danger to any persons working near the process or device. *NCB*

radiation-type gage

An instrument for measuring the density or percentage of solids in slurries flowing through pipes. It normally uses a gamma-ray source, usually cesium-137 or cobalt-60, mounted in a lead-shielded holder on one side of the pipe. A radiation detector is mounted on the opposite side. Since the absorption of the gamma radiation, as it passes through the slurry, varies as a function of the density of the slurry, the change in radiation received by the radiation detector is representative of the specific gravity or percentage of solids in the slurry. See also: [differential pressure flowmeter](#)

radioactive

a. Generally, the property possessed by certain elements, such as uranium, of spontaneously emitting alpha, beta, and/or gamma rays by the disintegration of the nuclei of their atoms. *Long* b. Of, relating to, caused by, or exhibiting radioactivity. Abbrev., RA. *Webster 3rd*

radioactive decay

a. The change of one element to another by the emission of charged particles from the nuclei of its atoms. *AGI* b. The spontaneous disintegration of the atoms of certain nuclides into new nuclides, which may be stable or undergo further decay until a stable nuclide is finally created. Radioactive decay involves the emission of alpha particles, beta particles, and other energetic particles, and usually is accompanied by emission of gamma rays and by atomic de-excitation phenomena. It always results in the generation of heat. Syn: [radioactive disintegration](#)

radioactive disintegration

See: [radioactive decay](#)

radioactive dusts

Dusts that are injurious because of radiation. They include ores of uranium, radium, and thorium. *Hartman, 2*

radioactive element

Applied to certain unstable atoms, the nuclei of which spontaneously disintegrate, emitting particles and rays, eventually reverting through a series of such emissions into an atom having a stable nucleus and a different atomic number. Radium, e.g., becomes lead-207. *MacCracken*

radioactive mineral

One of six radioactive elements that occur naturally: potassium, rubidium, thorium, uranium, and associated radium, samarium, and lutecium. Thorium commonly occurs in

monazite, a sparsely scattered accessory mineral of certain granites, gneisses, and pegmatites. It is concentrated, however, by weathering processes in sands and gravels as commercial placer deposits along rivers and beaches. The most important primary uranium ore minerals are davidite and uraninite, esp. pitchblende, the massive variety. These minerals are of rather underspread occurrence in certain granites and pegmatites and occur as secondary minerals in metallic vein deposits. The secondary uranium minerals, however, are more underspread and more numerous than the primary uranium ore minerals. Secondary uranium minerals are found in weathered and oxidized zones of primary deposits and, also, in irregular flat-lying sandstones, such as those in the Colorado Plateau, where the uranium mineralization was precipitated from solutions. Carnotite, the potassium uranium vanadate of conspicuous yellow color, is perhaps the most important of the secondary uranium ore minerals. Others are tyuyamunite, which is closely related to carnotite, and the torbernites and autunites which are uranium minerals.

radioactive series

A succession of nuclides, each of which transforms by radioactive disintegration into the next until a stable nuclide results. The first member is called the parent, the intermediate members are called daughters, and the final stable member is called the end-product. Four radioactive series are the uranium series, the thorium series, the actinium series, and the neptunium series. *Glasstone*

radioactive tracer element

A radioactive isotope of an element used to study a process by observing the intensity of radioactivity.

radioactive waste

Equipment and materials from nuclear operations that are radioactive and for which there is no further use. Wastes are generally referred to as high-level (having radioactivity concentrations of hundreds to thousands of curies per gallon or per cubic foot); low-level (in the range of 1 microcurie per gallon or per cubic foot); and intermediate (between these extremes). *Lyman*

radioactivity

The spontaneous decay or disintegration of an unstable atomic nucleus, accompanied by the emission of radiation. See also: [radioactive decay](#) *Lyman*

radioactivity log

a. A log of a borehole obtained through the use of gamma, neutron, or other radioactivity logging methods. b. The generic name for well logs whose curves derive from reactions

of atomic nuclei involving the behavior of gamma rays and/or neutrons. Except for the natural gamma-ray log and the spectral gamma-ray log, they record the response of rocks very near the well bore to bombardment by gamma rays or neutrons from a source in the logging sonde. Most can be obtained in cased, empty, or fluid-filled well bores. Varieties include: density log; neutron log; neutron-activation log; epithermal-neutron log; pulsed-neutron-capture log. Syn: radiation log; [nuclear log](#). See also: [gamma-ray well log](#); [spectral gamma-ray log](#); [neutron log](#). *AGI*

radioactivity prospecting

Exploration for radioactive minerals utilizing various instruments, generally a Geiger counter or scintillation counter, by measuring the natural radioactivity of earth materials. *Dobrin*

radioaltimeter

Equipment carried in survey aircraft to ensure constant height above ground (not sea) level of 300 ft or 500 ft (91.4 m or 152.4 m)--a critical factor in certain airborne geophysical prospecting and aerial mapping surveys. See also: [profile flying](#)

radiocarbon

Radioactive carbon, esp. carbon-14, but also carbon-10 and carbon-11. *AGI*

radiocarbon dating

See: [carbon-14 dating](#)

radiochemistry

The chemical study of artificial and naturally occurring radioactive materials and their behavior. It includes their use in tracer studies and other chemical problems. *AGI*

radioelement

A form or sample of an element containing one or more radioactive isotopes.

radiogenic

Produced by radioactive transformation. Thus, uranium minerals contain radiogenic lead and radiogenic helium. The heat produced within the earth by the disintegration of radioactive nuclides is radiogenic heat.

radiograph

a. A photographic shadow image resulting from uneven absorption of radiation in the object being subjected to penetrating radiation. *ASM, 1* b. A picture produced upon a sensitive surface (such as a photographic film), by a form of radiation other than light; specif., an X-ray or a gamma-ray photograph. See: [roentgenogram](#)

radiography

a. A nondestructive method of internal examination in which metal or other objects are exposed to a beam of X-ray or gamma radiation. Differences in thickness, density, or absorption caused by internal discontinuities are apparent in the shadow image either on a fluorescent screen or on a photographic film placed behind the objects. *ASM, 1* b. The use of penetrating ionizing radiation to examine solid material. When the source of radiation is internal, such as an implanted radioactive tracer, the technique is known as autoradiography. *Lyman*

radiohalo

See: [pleochroic halo](#)

radioisotope

a. An unstable isotope of an element that decays or disintegrates spontaneously, emitting radiation. *Lyman* b. Radioisotope is loosely used as a syn. for radionuclide. See also: [radium](#); [radon](#). Syn: [unstable isotope](#)

Radiolaria

a. Subclass of the Sarcodina consisting of marine protozoans that possess complex internal siliceous skeletons. b. Silica rock formers. *Mason*

radiolarian ooze

Deposits of siliceous ooze made up largely of radiolarian skeletons and are formed at depths between 13,000 ft and 25,000 ft (4.0 km and 7.6 km). *AGI*

radio link

Radio signal unit used to control or communicate between scattered sections of mine, or to link isolated camp with other places. *Pryor, 3*

radiolite

A spherulite composed of radially arrayed acicular crystals.

radiolite survey instrument

A one-shot bore-hole-surveying instrument having the horizontal (compass) and vertical indicator markings painted with a radioactive substance, such as that on the luminous dial of a watch. The positions of these markings are recorded on small, circular, photographic film. *Long*

radiolitic

a. Said of the texture of an igneous rock characterized by radial, fanlike groupings of acicular crystals, resembling sectors of spherulites. *AGI* b. Said of limestones in which the components radiate from central points, with the cement comprising less than 50% of the total rock. *AGI*

radiometallography

The application of X-rays to the study of the internal structure of various materials, esp. metals. *Fay*

radiometer

Essentially a heat-flow meter used to measure long-wave radiation as well as solar radiation. It can be used both for daytime and nighttime measurements and to measure the net heat transfer through a surface. *Hunt*

radiometric assay

A test to determine contained quantity of uranium. The actual uranium present may be more or less than the assay shows. See also: [equilibrium](#); inequilibrium. *Ballard*

radiometric ore sorter

A device for separating gangue from uranium-bearing ore, after primary crushing. *Nelson*

radiometric prospecting

Use of portable Geiger-Muller apparatus for field detection of emission count in search for radioactive minerals. *Pryor, 3*

radiophone

An FM apparatus, using the mine haulageway trolley wire for power and antenna, that permits the dispatcher to talk back and forth with his motor crews as they are moving throughout the mine. This saves stopping and starting trips to make telephone calls. *Kentucky*

radiophyllite

See: [zeophyllite](#)

radiore method

An electromagnetic method used in mineral exploration in which a high-frequency current is used, ranging from 30,000 to 50,000 Hz, but, if necessary, a frequency as low as 50 to 3,000 Hz, can be made available. The detecting or direction-finding coil, mounted on a tripod, has the form of a pair of spectacles and is equipped with an amplifier and head telephone. When the exciting coil is energized, a current is caused to flow in the conductor and a secondary electromagnetic field is set up around the conductor. The detecting coil is affected by both the primary field from the exciting coil and the secondary field. *Lewis*

radium

A radioactive metallic element; one of the alkaline-earth metals. Symbol, Ra. It occurs in pitchblende ore, in carnotite sands, and in all uranium minerals. See also: [radioisotope](#)

radium G

A name for lead-206, the stable end-product of the radioactive disintegration of uranium-238 in the uranium disintegration series. Natural lead contains 23.6% of lead-206. Symbol, RaG. Syn: [uranium-lead](#) *Handbook of Chemistry and Physics, 2*

radiumite

A mixture of black pitchblende, yellow uranotile, and orange gummite. *Schaller*

radius

Horizontal distance from the center of rotation of a crane to its hoisting hook. *Nichols, 1*

radius of curve

A term used in laying mine track; the calculated radius of an arc that will connect two pieces of track (at a desired angle of direction from each other) with a smooth curve section.

radius of gyration

The value used when calculating the slenderness ratio of pillars and struts. If A is the cross-sectional area in inches of the pillar or strut and I is its moment of inertia, the radius of gyration is (I/A) , generally known as K. *Hammond*

radius of rupture

In crater tests, the average distance from the center of the explosive charge to the periphery of the crater at the surface. *Duvall*

radius ratio

a. The ratio of the radius of the smaller ion to that of the larger ion. It may not exceed 1. *Hurlbut* b. The ratio of the radius of the smaller ion to that of the larger; commonly cation to anion. Radius ratios are used to predict coordination numbers of anions about cations in ionic crystal structures. CF: [Pauling's rules](#)

radon

a. A heavy, radioactive, gaseous element; inert; the heaviest known gas. Symbol, Rn. Formed by the disintegration of uranium. Used similarly to radium in medicine. Radon build-up is a health consideration in uranium mines. *Handbook of Chemistry and Physics*, 3 b. Heaviest known gas. Colorless as a gas; yellow to orange-red, phosphorescent, opaque crystals; sp gr of liquid, 4.4 (at -62 degrees C); and of solid, 4.0; soluble in water; and slightly soluble in alcohol and in organic liquids. All 18 known isotopes from radon-204 to radon-224 are radioactive. Radon-222 emanates from thorium; half-life, 54.5 s; and an alpha particle emitter; and radon-219 or actinon emanates from actinium; half-life, 3.92 s; and an alpha particle and a gamma ray emitter. One part of radon exists in 1 sextillion parts of air. *Handbook of Chemistry and Physics*, 2

radon daughter

A radioactive element produced in the disintegration of radon. Syn: [radon progeny](#)

radon progeny

The short-lived decay products of radon, an inert gas that is one of the natural decay products of uranium. The short-lived radon progeny (i.e., polonium-210, lead-214, bismuth-214, and polonium-214) are solids and exist in air as free ions or as ions attached to dust particles. The U.S. Mine Safety and Health Administration has established radiation protection standards that limit a miner's radon progeny exposure to a concentration of 1.0 WL and an annual cumulative exposure to 4 WLM. Each WLM is determined as a 173-h cumulative, time weighted exposure. Syn: [radon daughter](#)

raffinate

The aqueous solution remaining after the metal has been extracted by the solvent; the tailing of the solvent extraction system.

raft

See: [float coal](#)

rafter timbering

A method of mine timbering in which the timbers appear like roof rafters.

rafting

a. The transporting of sediment, rocks, silt, and other matter of land origin out to sea by ice, logs, etc., with subsequent deposition of the rafted matter when the carrying agent disintegrates. *Hunt* b. Matting or agglomerating of powdered coal. *Bennett*

rag

a. In British usage, any of various hard, coarse, rubbly, or shelly rocks that weather with a rough irregular surface; e.g. a flaggy sandstone or limestone used as a building stone. The term appears in certain British stratigraphic names, as the Kentish Rag (a Cretaceous sandy limestone in East Kent). Syn: [ragstone](#) b. Any of various hard rocks, as a quartzose mica schist used for whetstones or a hard limestone used in building. *Webster 3rd* c. A large roofing slate left rough on one side. *Webster 3rd* d. To break (ore) into lumps for sorting; to cut or dress roughly (as a grindstone). *Webster 3rd*

ragged rolls

Rolls with rough surfaces to facilitate the gripping of the steel in the first stages of rolling, as distinguished from the smooth-finishing rolls. *Mersereau, 2*

ragging

a. The rough washing or concentration of ore or slimes on a rag frame. *Nelson* b. In roll crushers, grooves cut in surface to improve grip on feed, and increase angle of nip. Also, in ore concentration in jigs, oversized bedding placed on jig screens. *Pryor, 3* c. See: [bedding](#)

raggy stone

Thin-bedded or flaggy sandstone. *TIME*

ragstone

See: [rag](#)

rail

The chain or inner surface of a crawler. *Nichols, 1*

rail gage

The distance or width between the inner edges of the heads of the rails; (1) in coal mining, the rail gage for tub and car tracks ranges from 2 to 3 ft (0.6 to 0.9 m), and 2-1/3 ft (0.7 m) is considered a satisfactory compromise; (2) the standard gage for railway tracks is 4 ft, 8-1/2 in (1.44 m) and, (3) in metal mining, the rail gage ranges from 1-1/2 to 2-1/2 ft (0.46 to 0.76 m). See also: [track gage](#)

rail haulage system

A materials transportation system consisting of gondola cars, and the steel rails on which the cars are moved about with a suitably powered traction unit as a locomotive.

rail riffles

These may be either longitudinal or transverse and consist of rails of various sizes, placed in sets usually upside down, either longitudinally in the sluice box, or transversally across the box. They wear well, are rigid, and give some security against theft of gold from the sluice boxes. *Griffith*

rails

Specially shaped steel bars which, when laid parallel on crossties and fastened, form a track for vehicles with flanged wheels.

rail track ballast

Material placed around and between track ties and tamped under sides and ends of the ties to bring the track to proper grade by filling the space between the bottom of the ties and the graded roadbed.

rainbow chalcedony

Eng. A variety of chalcedony of thin concentric layers, which, when cut across, exhibit an iridescence resembling the colors of the rainbow. *Fay*

rainbow quartz

See: [iris quartz](#)

rain chamber

A chamber in which fumes, such as those from molten metal, may be condensed by a water shower. *Standard, 2*

rain gage

A device used to measure precipitation (melted snow, sleet, or hail as well as rain). It consists of a receiving funnel, a collecting vessel, and a measuring cylinder. Syn: [pluviometer](#); [hyetometer](#); [snow gage](#). *AGI*

rainwash

a. The washing-away of loose surface material by rainwater after it has reached the ground but before it has been concentrated into definite streams; specif. sheet erosion. Also, the movement downslope (under the action of gravity) of material loosened by rainwater. It occurs esp. in semiarid or scantily vegetated regions. *AGI* b. The material that originates by the process of rainwash; material transported and accumulated, or washed away, by rainwater. *AGI* c. The rainwater involved in the process of rainwash. *AGI*

raise

a. A vertical or inclined opening in a mine driven upward from a level to connect with the level above, or to explore the ground for a limited distance above one level. After two levels are connected, the connection may be a winze or a raise, depending upon which level is taken as the point of reference. Syn: [raised shaft](#) See also: [raise borer](#)

These machines are used to produce a circular excavation either between two existing levels in an underground mine or between the surface and an existing level in a mine. In raise boring, a pilothole is drilled down to the lower level, the drillbit is removed and replaced by a reamer head having a diameter with the same dimension as the desired excavation and this head then is rotated and pulled back up towards the machine. *SME, 1*

raise climber

Equipment used in an opening (raise) that is mined upward. *MSHA, 4*

raised shaft

See: [raise](#)

raising

Excavating a shaft or steep tunnel upward. See also: [raise](#); [rise](#). *Nelson*

rait

Mid. To split off the walls or sides of underground workings. Called rosh in Leicestershire. Syn: [rate](#)

rake

a. As used by diamond drillers and bit manufacturers, rake is the angle, measured in degrees, formed by the leading face of a cutting tool and the surface behind the cutting edge. See also: [negative rake](#); [positive rake](#). *Long* b. The inclination of anything from the vertical; said of mineral veins, faults, etc. See also: [pitch](#) c. A timber placed at an angle. See also: [rakers](#) d. Shale containing ironstone nodules. *BS, 11*

rake blade

A dozer blade or attachment made of spaced tines. *Nichols, 1*

rake classifier

A type of mechanical classifier utilizing reciprocal rakes on an inclined plane to separate coarse from fine material contained in a water pulp, overflowing the fine material and discharging the coarse material by means of an inclined raking system.

rakers

Slanting props placed at the end of a drift set to keep the timbers steady when blasts go off. See also: [rake](#)

rake thickener

Equipment for thickening in which the concentrated suspension settles in a container of circular section and is delivered mechanically to one or more discharge points by a series of arms revolving slowly around a central shaft. *BS, 5*

rake vein

a. A steeply inclined crosscutting irregular mineralized fracture or fissure. *BS, 11* b. Rake vein and gas vein are synonymous; it is said that they are lodes filling distinct fissures. Their course is irregular; their dip, as a rule, vertical. *Ricketts* c. A vein or lode cutting through the strata.

raking strut

A strut set at an angle to the vertical to support timbering during excavation. *Hammond*

Raky boring method

A method of boring somewhat similar to Fauck's. Hollow steel rods 2 in (5.08 cm) in diameter are used with a mud flush. A walking beam, fitted with steel springs, imparts from 80 to 120 short blows/min to the chisel. *Nelson*

Raleigh's law

In 1909 Lord Raleigh established the general law of fluid flow: $R = wV^2 (f)(wVD/m)$, where R = resistance of flow, w = density of fluid, V = velocity of flow, D = diameter of pipe, m = viscosity of fluid, f = signifies function. For any particular value of $(wVD)/m$, using any combination of quantities, there will be a definite corresponding value of R/wV^2 . *Lewis*

ralstonite

An isometric mineral, $Na_x Mg_x Al_{2-x} (F,OH)_6 \cdot H_2O$; structurally related to the pyrochlore group; occurs as octahedra.

Ralston's classification of coal

A classification based on the percentage of carbon, hydrogen, and oxygen in the ash-, moisture-, sulfur-, and nitrogen-free coal. These figures are plotted on trilinear coordinates giving well-defined zones of bituminous coals, lignites, peats, etc. *Miall*

ram

a. To stem; tamp. *Mason* b. Black ram, bog iron ore; gold ram, gold ore. *Arkell* c. The plunger of a pump. *Zern* d. A mechanical pusher for forcing (discharging) coke from a byproduct coke oven. *Mersereau, 2* e. An appliance for exerting a pressure on face equipment, such as steel supports, conveyors, or plows. See also: [hydraulic ram](#); [pneumatic ram](#). *Nelson*

ramdohrite

A monoclinic mineral, $Ag_3 Pb_6 Sb_{11} S_{24}$; forms dark-gray twinned prismatic to lance-shaped crystals; at Potosi, Bolivia. CF: [andorite](#)

rammel

Loose stone, or waste rock; loose sandy or stony barren soil; mixed shale and sandstone. Also spelled: rammell.

rammelsbergite

An orthorhombic mineral, NiAs_2 ; loellingite group; trimorphous with parammelsbergite and krutovite; metallic; tin white; sp gr, 7.1; in vein deposits. Syn: [white nickel](#)

rammer

A rod for charging and stemming shotholes. See also: [stemmer](#) *Nelson*

ramming

a. See: [stemming](#); tamping. b. See: [scaling](#)

ramming and patching refractories

Those which can be rammed to form a monolithic furnace lining or special shapes.

ram operator

In bituminous coal mining, a laborer who tends operation of, adjusts, and repairs pumping devices (rams) used in low places in shallow mines to force a portion of the mine water to the surface by utilization of the flow of the entire amount. Nearly obsolete. See: [pumper](#)

ramp

a. A fault that is a gravity (normal) fault near the surface but curves through the vertical to dip in the opposite direction at depth, where the displacement is that characteristic of a thrust. b. A portion of a thrust fault that cuts across formational contacts in a short distance. *AGI* c. An incline connecting two levels in an open pit or underground mine.

ram pump

a. A pump consisting essentially of a plunger or ram which forces the contained water into the discharge pipe. See also: [force pump](#) *Nelson* b. A single-acting reciprocating pump that has a ram instead of a piston. The ram has a constant diameter and does not fit closely in the cylinder, pumping only by displacement. *Hammond*

ramp valley

a. A valley produced by the ramping or upthrusting of two masses, one on either side of an intervening strip. b. A valley bounded by thrust faults.

ram scraper

A plow-type machine hauled by an endless chain at a speed of 6 ft/s (1.83 m/s). The ram scraper is pressed toward the face by the tension of the return strand, the return sheave being located in by for this purpose. Syn: Peissenberg ram. See also: manless face.

ramsdellite

An orthorhombic mineral, MnO_2 ; trimorphous with akhtenskite and pyrolusite.

rance

a. A prop set against the coal face that is undermined. *Fay* b. A dull red marble with blue and white markings. From Belgium, and sold in the United States as Belgian marble. *Webster 2nd; Fay*

rance marble

a. A white, hard, shining grit, striped red. *Arkell* b. A kind of variegated marble from Hainault, Belgium. *Arkell*

rand

S. Afr. A ridge, range of hills, or highland on either side of a river valley.

Rand

An abbrev. of Witwatersrand, the gold fields in the Republic of South Africa.

Randolph process

A modification of the series process of copper refining in which the electrodes lie horizontally, the top surface of each one acting as anode, the lower as cathode. Theoretically, it has the advantage of extremely low metal losses and great purity of copper. See also: [Hayden process](#); Smith process. *Liddell*

random

The direction of a rake vein.

random error

Any error that is wholly due to chance and does not recur; an accidental error. Ant: systematic error. *AGI*

random line

a. A trial line, directed as nearly as may be toward a fixed terminal point that is invisible from the initial point. *Seelye, 2* b. A random traverse; i.e., a traverse run from an initial to a terminal point to determine the direction of the latter from the former. *Seelye, 2*

random orientation

See: [random set](#)

random pattern

The setting of diamonds in a bit crown without regard to a geometric pattern--without regular and even spacing. See also: [random set](#) *Long*

random sample

a. A sample take without plan or pattern. *Nelson* b. A subset of a statistical population in which each item has an equal and independent chance of being chosen; e.g., a sample chosen to determine (within defined limits) the average characteristics of an orebody. *AGI*

random set

The setting of diamonds in a bit crown without regard to the attitude of their vector properties. Syn: [random orientation](#) See also: [random pattern](#)

random stone

A term applied by quarry personnel to quarried blocks of any dimensions.

Randupson process

A system of molding in which the molds are made of a mixture of silica sand and cement with water added. *Osborne*

rang

a. In the CIPW classification of igneous rocks, that division below order. b. A Ceylonese term for gold; from rangwelle meaning golden sand.

range

a. An area in which a mineral-bearing formation crops out; e.g., the iron range and copper range of the Lake Superior region; a mineral belt. *AGI* b. An established or well-defined line or course whose position is known and along which soundings are taken in a hydrographic survey. *AGI* c. Any series of contiguous townships (of the U.S. Public

Land Survey system) aligned north and south and numbered consecutively east and west from a principal meridian. *AGI* d. The distribution of a genus, species, or other taxonomic group of organisms through geologic time. *AGI* e. An orderly arrangement or family of diamond-drill fittings, such as casing, core barrels, drill rods, etc., with diameters appropriately related to each other and intended to be used together. Ranges commonly are designated by letter names, using letters such as E, A, B, and N individually or as the first letter in two- and three-letter names. CF: [group](#) f. For a spherical model, the distance at which the model reaches its maximum value, or sill. For the exponential and gaussian models, which approach the sill asymptotically, it means the "practical" or "effective" range, where the function reaches approximately 95% of the maximum. The nugget model effectively has a sill with a range of zero: the linear model uses "sill/range" merely to define the slope.

range line

One of the imaginary boundary lines running north and south at six-mile intervals and marking the relative east and west locations of townships in the U.S. public-land survey; a meridional township boundary line. CF: [township line](#)

range of stress

The range between the upper and lower limit of a cycle of stress, such as is applied in a fatigue test. The midpoint of the range is the mean stress. *CTD*

range pole

a. A 6- to 12-ft (2- to 3-m) wooden or metal pole painted in contrasting colors at 1-ft (0.3-m) intervals. It is used in surveying to mark lines of sight, stations, etc. b. See: [picket](#) c. A metal rod, pointed at one end, and usually painted alternately red and white at 1-ft intervals; used by surveyors as a line of sight. Syn: [ranging rod](#)

ranging rod

See: [range pole](#)

rank

a. Describes the stage of carbonification attained by a given coal. *IHCP* b. The place occupied by a coal in a classification. Specifications of the American Society for Testing and Materials cover the classification of coals according to their degree of metamorphism, or progressive alteration, from lignite to anthracite. For a complete description of this classification, consult ASTM Designation: D 388. *ASTM* c. When applied to coal, denotes its age in geological formation, not necessarily denoting quality. *BCI* d. The position of a coal relative to other coals in the coalification series from brown coal (low rank) to anthracite (high rank), indicating its maturity in terms of its

general chemical and physical properties. *BS, 11 e.* Those differences in the pure coal material due to geological processes designated as metamorphic, whereby the coal material changes from peat through lignite and bituminous coal to anthracite or even to graphite. *AGI f.* All coallike fossil fuels form a continuous and progressive series, ranging from lignite, through the various bituminous coals, to anthracite. It is the position of a particular coal in this series that determines its rank. Therefore, lignite is a low-rank coal while anthracite is a high-rank coal. See also: [coalification](#); [grade](#); Hilt's Law; [coal rank](#). *Nelson g.* A term primarily devised to indicate the position of a fuel in the series peat-anthracite, probably best measured by the percentage of carbon (ashless, dry basis). Thus rank depends on the degree of metamorphism of coal, and increase of rank is, in general, marked by the decrease of volatiles and moisture. *Tomkeieff h.* The term rank may also be applied to other series, such as the sapropelic coal series or the bitumen series. CF: [type Tomkeieff](#)

Rankine scale

An absolute-temperature scale in which a measurement interval equals a Fahrenheit degree and in which zero degrees is equal to -459.67 degrees F (-273.16 degrees C). Named for William J.M. Rankine, a Scottish physicist. See also: [temperature](#)

Rankine's formula

An empirical formula giving the collapsing load for a given column. *CTD*

Rankine's theory

The state of stress theory as developed by Rankine in 1860 for application to earth pressures. He formulated that the pressure on a vertical retaining wall restraining earth with a horizontal surface is $(1 - \sin\phi) / (1 + \sin\phi)$ multiplied by the soil density for each foot depth of soil retained, where ϕ is the angle of internal friction of the soil. The value $(1 - \sin\phi) / (1 + \sin\phi)$ is the coefficient of active earth pressure. *Hammond*

rankinite

A monoclinic mineral, $\text{Ca}_3\text{Si}_2\text{O}_7$; dimorphous with kilchoanite; rare in contact metamorphic rock, but common in blast furnace slag.

rank variety

Variety in coals brought about as a result of progressive metamorphism. More or less arbitrarily, although carefully, selected chemical criteria are used to differentiate coals of different rank. Physical criteria are also used but are more difficult of application. *AGI*

ransomite

A monoclinic mineral, $\text{CuFe}_2(\text{SO}_4)_4 \cdot 6\text{H}_2\text{O}$; forms slender sky-blue prisms; at Jerome, AZ.

rap

a. To warn workers in an adjoining working place of a blast, when the working places are separated by only a small pillar, by knocking on the pillar with a tool or bar. b. To test the roof by tapping it with a stick or bar. c. To signal by knocking on a steam, water, or air pipe. *Fay*

rapakivi

A hornblende-biotite granite containing large rounded crystals of orthoclase mantled with oligoclase. The name has come to be used most frequently as a textural term where it implies plagioclase rims around orthoclase in plutonic rocks.

rapid blow drilling

A drilling method utilizing a great number of short blows in quick succession rather than a few heavy blows from a relatively considerable altitude. In this method, the bit is fixed either to a rod or to a rope, so that it pounds the bottom in quick succession with short blows and at the same time rotates. *Stoces*

rapid excavation

An improved cycle and system of operation to achieve rapid advance and continuous operation in low-drillability rock. *SME, 1*

rapid plow

A fast moving plow with picks attached. The rapid plow is a continuous longwall cutter loader capable of working unattended on the face. For this reason, it is one of the safest machines in operation. See also: [hard-coal plow](#)

rap-in

Som. To wedge down blocks of stone in underground quarries.

rappage

Excess in size of a casting because the mold is larger than the pattern when the latter is unduly rapped, as with the hand, for drawing. *Standard, 2*

rapping

In foundry work, loosening of pattern before its withdrawal from molding sand in flask. *Pryor, 3*

rapping roller

An eccentric roller or a roller fitted with devices such as bars welded longitudinally along its outer casing, so arranged as to rap the belt and knock off fine coal or dust adhering to the return belt, or to centralize the coal on the carrying belt. *Nelson*

rare earths

Oxides of a series of 15 metallic elements, from lanthanum (atomic number 57) to lutetium (71), and of two other elements; yttrium (39), and scandium (21). These elements are not esp. rare in the Earth's crust, but concentrations are. The rare earth metals resemble one another very closely in chemical and physical properties, thus making it most difficult to separate them. The rare earths are constituents of certain minerals, esp. monazite, bastnaesite, and xenotime. Abbrev: REE. *AGI*

rarefaction

a. The process or act of making rare or less dense; increase of volume, the mass remaining the same: now usually of gases; also, the state of being rarified; as, the rarefaction of the atmosphere on a high mountain. *Standard, 2* b. Diminution of air pressure below normal, as in alternate half-cycles in the transmission of a sound wave past a point. *CTD*

rashings

A very friable carbonaceous clay, with numerous slickensides and sometimes streaks of coal. Rashings may underlie, overlie, or be interstratified with the coal; a very weak material and breaks up around the face supports. See also: [brashings](#)

Rasorite

See: [kernite](#)

rasp

An instrument used in a borehole for fishing operations, for reducing the length of the box, or for coupling lost tools. Also called mill; rose bit. *Long*

raspberry spar

a. See: [rhodochrosite](#) b. Pink tourmaline.

raspite

A monoclinic mineral, PbWO_4 ; dimorphous with stolzite; forms small tabular brownish-yellow crystals having intense adamantine luster; at Broken Hill, N.S.W., Australia.

ratchet

A set of teeth that are vertical on one side and sloped on the other; holds a pawl moving in one direction, but allows it to move in another. *Nichols, 1*

ratchet-and-pawl mechanism

A cogwheel (ratchet) with which a single pivoted catch (pawl) engages, thereby preventing any backward turning. *Hammond*

ratchet drill

A hand drill in which the drill holder is revolved intermittently by a lever through a ratchet wheel and pawl. A drill used for boring slate. *Webster 3rd; Fay*

ratchet man

The worker who operates the duckbill loader when mining with duckbill conveyors. *Lewis*

rate

See: [rait](#)

rate action (nonstandard)

As used in flotation, the component of proportional plus rate action or of proportional plus reset plus rate action for which there is a continuous linear relation between the rate of change of the controlled variable and the position of a final control element.

Fuerstenau

rated capacity

The load that a new wire rope or wire rope sling may handle under given operating conditions and at an assumed design factor.

rate determining step

In any series or sequence of chemical reactions used to leach a product from its ore, the slowest in the chain. *Pryor, 3*

rated horsepower

a. Theoretical horsepower of an engine based on dimensions and speed. *Nichols, I* b. Power of an engine according to a particular standard. *Nichols, I*

rated load

The kilowatt power output that can be delivered continuously at the rated output voltage. It may also be designated as the 100% load or full-load rating of the unit. *Coal Age, I*

rated output current

The current derived from the rated load and the rated output voltage. *Coal Age, I*

rated output voltage

The current specified as the basis of rating. *Coal Age, I*

rate of advance

a. The distance the bit penetrates a rock formation in a unit of time, such as inches (centimeters) per minute or feet (meters) per hour. *Long* b. In coal mining, the number of feet (meters) between the coal face at the beginning and at the end of a workshift.

rate of grade

See: [gradient](#)

rates of reduction

In crushing practice, these rates are (1) based on crusher dimensions, wherein the largest cube that will enter is compared with the largest that can be discharged, or (receiving opening) / (discharge opening); the receiving opening is measured from the top of the movable member to the top of the stationary member; and (2) based on actual products; (a) overall reduction ratio = (mean size of feed) / (mean size of product); (b) individual reduction ratio = (size most abundant in feed) / (mean size of grading band concerned). *South Australia*

rathite

See: [liveingite](#)

rathite-II

See: [liveingite](#)

rathole

a. A hole drilled at an angle to the main hole by means of a deflection wedge. *Long* b. A small-diameter pilot-type hole drilled a short distance ahead of a larger diameter hole to stabilize a smaller diameter bit and core barrel when used to core a limited portion of the borehole. After core drilling is completed, the rathole is reamed out and the larger size hole advanced, usually by some noncoring method. *Long* c. A small sump or settling pond in which the larger sized cuttings from a drill hole are collected between the top of the drill hole and the main settling pond. *Long* d. A slanting hole, perhaps 25 ft (7.62 m) deep, used for adjusting or lubricating the swivel on a grief stem. The start of a hole for rotary drilling. *Hess*

rathole bit

A bit designed and used to drill the first portion of a deflected hole alongside and beyond the deflection wedge; also, a bit used to drill a rathole. CF: [wedge bit](#)

rat-holing

The act or process of drilling a deflected or pilot hole. See also: [rathole](#)

rating

The maximum capacity of a drill hoist or a prime mover, such as an engine, motor, or pump; generally the maximum safe capacity. *Long*

rating flume

A flume used for purposes of control. *Hammond*

ratiometer

An instrument used to measure the ratio of two differences in potential. *AGI*

rational analysis

a. The mineralogical composition of a material as deduced from chemical analysis. b. The resolution into chemical types of a mass of rock or coal. *Francis, 2*

ratio of absorption

a. The percentage by weight that the absorbed water bears to the dry weight of the stone. b. The ratio (A), expressed as a percentage, of the volume (Vp) of the pore space in a rock to the weight (W) of the rock when dry, $A = 100 Vp/W$. *Holmes, 2*

ratio of concentration

(Weight of ore fed) / (Weight of concentrate produced). *Pryor, 3*

ratio of enrichment

The ratio of the percentage of valuable material in the concentrate to the percentage of the valuable material in the original material.

ratio of reduction

a. The relationship between the maximum size of the stone which will enter a crusher, and the size of its product. *Nichols, 1* b. The ratio of enrichment with respect to the sought mineral: (Assay value in feed) : (Assay value in concentrate). See also: [reduction ratio](#)

ratio of size reduction

Ratio of the upper particle size in the crushed material to the upper particle size of the feed material. *BS, 5*

rattle boxes

Limonite geodes from Chester County, PA. *Schaller*

rattler

a. York. Cannel coal. b. Scot. Inferior gas coal; sandy shale. c. U.K. A variety of gas coal that fetched high prices and was reputed to ignite with a match. It is hard, compact, uniform, bright, brittle, fine-grained, slightly sonorous when struck, and resembling jet but not so brilliant. *Arkell* d. A revolving steel drum with a charge of metal spheres used for testing the abrasive resistance of brick. e. A device for shaking out the cores from small castings, such as a tumbling barrel.

rattler test

A method for evaluating the resistance of paving bricks to impact and abrasion. A sample of 10 bricks is subjected to the action of 10 cast-iron balls 3.75 in (9.53 cm) in diameter and 245 to 260 balls 1.875 in (4.76 cm) in diameter in a drum 28 in (71.12 cm) in diameter, 20 in (50.8 cm) long, rotating at 30 rpm for 1 h. The severity of abrasion and impact is reported as a percentage loss in weight. *Dodd*

rattlesnake ore

A gray, black, and yellow mottled ore of carnotite and vanoxite, its spotted appearance resembling that of a rattlesnake. *AGI*

rauvite

A mineral, $\text{Ca}(\text{UO}_2)_2 \text{V}_{10} \text{O}_{28} \cdot 16\text{H}_2 \text{O}$; radioactive; purple- black; sandstone impregnation on the Colorado Plateau.

ravelly ground

Rock that breaks into small pieces when drilled and tends to cave or slough into the hole when the drill string is pulled, or binds the drill string by becoming wedged or locked between the drill rod and the borehole wall. *Long*

ravine

A small, narrow, deep depression, smaller than a gorge or a canyon but larger than a gully, usually carved by running water; esp. the narrow excavated channel of a mountain stream. Etymol: French, mountain torrent. *AGI*

raw

a. In ceramics, fresh from a plastic process; unbaked. *Standard, 2* b. Not prepared for use by heat. *Webster 3rd*

raw coal

Coal which has received no preparation other than possibly screening. Syn: [raw ore](#)

raw coal screen

A screen used for dividing run-of-mine coal into two or more sizes for further treatment or disposal; usually employed to remove the largest pieces for crushing and readdition to the run-of-mine coal. *BS, 5*

raw dolomite

a. Dolomite that has not been calcined. *ARI* b. Crushed dolomite used for dressing of basic open hearth bottoms and banks. *AISI*

raw feed coal

Coal supplied to a plant or machine, in which it undergoes some form of preparation. *BS, 5*

raw fuel

A fuel used in the form in which it is mined or obtained, for example, coal, lignite, peat, wood, mineral oil, natural gas. *Nelson*

rawhide hammer

A hand hammer having a rawhide head that serves to prevent bruising metal parts against which it is used. *Crispin*

raw material

The ingredients before being processed that enter into a finished product. *Crispin*

raw mica

A term commonly used for unmanufactured mica. *Skow*

raw ore

a. Ore that is not roasted or calcined. b. See: [raw coal](#)

raydist

A radio system for medium-range precision surveying in which the phases of two continuous-wave signals are compared. It is based on the heterodyne principle and uses low or medium frequencies. It requires a minimum number of frequencies and these frequencies usually need bear no fixed relationship with each other. *Hunt*

Rayleigh wave

a. A type of seismic surface wave having a retrograde, elliptical motion at the free surface. It is named after Lord Rayleigh, the English physicist who predicted its existence. Syn: [R wave](#) b. A surface wave associated with the free boundary of a solid. The wave is of maximum intensity at the surface and diminishes quite rapidly as one proceeds into the solid. Therefore, it has a tendency to hug the surface of the solid. Such waves have been used quite effectively in detecting surface cracks and flaws in castings. *Hunt*

Raymond flash dryer

A suspension-type dryer that employs the principle of flash drying of fine coal. The coal is transported vertically through a drying column in a stream of hot gases. The source of heat for this system is usually an automatic stoker. In this system, the hot gases are drawn into the drying column by the action of the fan connected to the cyclone collector

vent. The coal to be dried is continuously introduced to the hot gas stream. Virtually instantaneous drying occurs. The dried coal and the moisture-laden gases are drawn into the cyclone collector. The dry coal drops to the bottom of the collector and the moisture-laden gases are discharged by the fan to the atmosphere. See also: [thermal drying](#)
Kentucky; Mitchell

Raymond mill

Grinding mill in which spring-loaded rollers bear against a horizontal rotating bowl--developed for coal pulverization. *Pryor, 3*

rays

a. Negatively charged particles which leave the cathode in an evacuated tube at between 10,000 mi/s and 90,000 mi/s (approx. 16,000 km/s and 144,000 km/s), depending on voltage. Positive rays are gas ions (e.g., N^+ , O^+). X-rays are electromagnetic waves which travel at the velocity of light and are not deflected by magnetic fields. Length between 0.1 and 100 Aa (visible light lies between 4,000 and 8,000 Aa). Short X-rays are soft and long ones are hard. Rays emitted by radioactive substances are of three types, alpha, beta, and gamma. Alpha rays consist of He^{++} and move at some 10,000 mile/s (approx 16,000 km/s). Beta rays are electrons with speeds between 50,000 mi/s and 180,000 mi/s (approx. 80,000 km/s and 288,000 km/s); gamma rays are not charged. They move at the speed of light, but are shorter than X-rays (0.01 to 1 Aa). *Pryor, 3* b. In wave propagation a ray is the trajectory that a signal travels from the source to another point (location).

raywork

A kind of rubble work; in the United States, any rubble work of thin and small stones.

razorback

A sharp, narrow ridge, resembling the back of a razorback hog. *AGI*

razor saw

A narrow saw used in excavating limestone. *Webster 3rd*

razor stone

See: [novaculite](#)

reach

a. An arm of the sea extending up into the land; e.g. an estuary or bay. *AGI* b. A continuous and unbroken expanse or surface of water or land. *AGI* c. An unstated but specific distance; an interval. *AGI* d. The length of a channel, uniform with respect to discharge, depth, area, and slope. *AGI* e. The length of a channel for which a single gage affords a satisfactory measure of the stage and discharge. *AGI* f. The length of a stream between two specified gaging stations. *AGI* g. A relatively long, straight section of water along a lake shore; also, a narrow arm of a lake, reaching into the land. *AGI* h. A straight, continuous, or extended part of a stream, viewed without interruption (as between two bends) or chosen between two specified points; a straight section of a restricted waterway, much longer than a narrows. *AGI*

reactance

The part of the impedance of an alternating-current circuit that is due either to capacitance or inductance or to both and that is expressed in ohms. *Webster 3rd*

reaction border

See: [reaction rim](#); corona.

reaction curve

See: [cotectic line](#)

reaction line

See: [cotectic line](#)

reaction pair

Any two minerals, one of which crystallizes at the expense of the other by reaction with a melt; esp. two adjacent minerals in a reaction series.

reaction principle

A relationship between liquid and crystals during crystallization, esp. during fractionation, whereby crystals and liquid change composition in response to changing temperature and pressure. CF: [reaction series](#)

reaction rim

A rind of one mineral surrounding another and presumably crystallized by reaction of the core mineral with surrounding fluids. CF: [corrosion border](#)

reaction series

The sequence of minerals produced by reaction between liquid and crystals during crystallization of a complex magma. Bowen's reaction series has a continuous side (calcic to alkalic plagioclase) and a discontinuous side (olivine-pyroxene-amphibole-biotite).

reaction-zone width

In explosives, the distance that detonation advances before the products of combustion expand by an appreciable percentage. *Leet, 2*

reactive

Readily susceptible to chemical change. *Osborne*

reactive reagent

Substance, solution, or gas susceptible to chemical change, or used in influencing such change. *Pryor, 3*

reactive silica

The silica, SiO₂, present within various clay minerals occurring in bauxite. During the Bayer process digestion of bauxite, this silica reacts with comparable amounts of alumina to form insoluble sodium aluminum silicate, which is lost as refinery plant residue.

reactivity

a. A measure of ease of ignition and response to the controls varying the rate of burning. It is used particularly in connection with fuels for transport gas producers and low volatile fuels used for open fires. *Nelson* b. An assessment of the speed of reaction of a coal with oxygen under specified conditions. *BS, 4*

readily extractable metal

As used in geochemical prospecting, refers to the content of a metal that can be extracted from weathered rock, overburden, or stream sediment, by weak chemical reagents. Syn: [cold-extractable metal](#)

Reading jig

A plunger-type jig of relatively simple design with only a single plunger being manually controlled. The hutch compartment is round for good water distribution. *Mitchell*

realgar

https://t.me/Geologybooks

a. Arsenic monosulfide, AsS, contains 70.1% elemental arsenic. *Sanford* b. A monoclinic mineral, AsS ; dimorphous with pararealgar; red to orange; soft; in ore veins, hot springs, and as a volcanic sublimate. Syn: [red arsenic](#); [sandarac](#); [red orpiment](#).

real property

Includes mining claims, dumps, water rights, and ditches. *Ricketts*

ream

To enlarge the hole by re-drilling with a special bit. *Wheeler, R.R.*

ream back

The act or process of enlarging a squeezed or cave-obstructed borehole to its original size by reaming as the drill string is pulled. Syn: [reverse reaming](#)

reamer

A rotary-drilling tool with a special bit used for enlarging, smoothing, or straightening a drill hole, or making the hole circular when the drill has failed to do so. See also: [reaming bit](#); [reaming shell](#); [reamer](#). Also called gage stone. *AGI*

reamer bit

See: [reaming bit](#)

reamer shell

a. A cutter just above a diamond bit, used to assure a full-size hole. *Nichols, I* b. See also: [reaming shell](#)

reamer stone

See: [gage stone](#)

reaming

The act or process of enlarging a borehole. *Long*

reaming bit

A bit used to enlarge a borehole. Also called broaching bit; pilot reaming bit. Syn: [reamer](#); [reamer bit](#). *Long*

reaming diamond

See: [gage stone](#)

reaming pilot

a. See: [pilot](#) b. A smooth bar used to guide a reaming bit or casing bit in the hole. *BS, 9*

reaming pilot adapter

An adapter or coupling in a reaming pilot assembly that attaches the flush-joint casing to the casing reaming shell and the reaming pilot horn by pin and box threads, respectively. *Long*

reaming pilot horn

An adapter or coupling in a reaming pilot assembly attached to the reaming pilot adapter. It passes through the reaming shell and casing bit to which is attached the pilot bit. *Long*

reaming ring

See: [reaming shell](#)

reaming shell

a. A short tubular piece designed to couple a bit to a core barrel. The outside surface of the reaming shell is provided with inset diamonds or other cutting media set to a diameter to cut a specific clearance for the core barrel. See also: [reamer](#); [reamer shell](#). Syn: [reaming ring](#) *Long* b. Sets of two or more shells that are alternated every 50 ft (15.24 m) to keep loss in gauge to the hole uniform. The shell is changed when wear reaches 0.012 in (0.03 cm) below the original set diameter.

rebar

See: [reinforcing bar](#)

recalcescence

A phenomenon, associated with the transformation of gamma iron to alpha iron on the cooling (supercooling) of iron or steel, revealed by the brightening (reglowing) of the metal surface owing to the sudden increase in temperature caused by fast liberation of the latent heat of transformation. Syn: [point of recalcescence](#)

recarburize

a. To increase the carbon content of molten cast iron or steel by adding carbonaceous material, high-carbon pig iron, or a high-carbon alloy. *ASM, 1* b. To carburize a metal part to return surface carbon lost in processing. *ASM, 1*

recarburizing

Introducing spiegeleisen into the converter after the blow to add the desired element. *Mersereau, 2*

recast

To form anew by running, as molten metal, into a mold; cast again; as, to recast a cracked bell. *Standard, 2*

receiving hopper

A hopper used to receive and direct material to a conveyor.

Recent

The later of the two geologic epochs comprised in the Quaternary period, in the classification generally used; Holocene. Also, the deposits formed during that epoch. Recent includes the geologic time and deposits from the close of the Pleistocene (glacial) epoch until and including the present.

receptor

See: [acceptor](#)

recession

Going back, as the gradual retreat of a waterfall or an erosional escarpment, the melting back of a glacier, or the withdrawal of a body of water so that the shoreline moves successively farther away from the higher land. *Stokes*

recharge

a. The processes by which water is absorbed and added to the zone of saturation, either directly into an aquifer or indirectly by way of another formation; also, the quantity of water so added. b. Putting water brought from elsewhere into a body of ground water to augment ground-water supply. See also: [intake area](#)

reciprocal lattice

An array of points, each point at a distance that is the reciprocal of the d spacing between planes in the direction normal to each set of parallel planes as measured from the origin. Each reciprocal-lattice point may be associated with Bragg diffraction in a crystal. CF: [crystal lattice](#); direct lattice; X-ray diffraction.

reciprocal strain ellipsoid

In elastic theory, an ellipsoid of certain shape and orientation that under homogeneous strain is transformed into a sphere. CF: [strain ellipsoid](#)

reciprocating

Having a straight back-and-forth or up-and-down motion. *Nichols, 1*

reciprocating drill

A piston drill often referred to as a hammer drill. *Hammond*

reciprocating engine

Any steam or internal-combustion engine, which has a piston moving under pressure within a cylinder. *Hammond*

reciprocating feeder

a. A feeder in which the material is carried on a plate subjected to a reciprocating motion and so constructed that when the plate moves in the reverse direction the material remains stationary. The rate of feed is normally varied by adjusting the stroke of the reciprocating plate. See also: [plate feeder](#) b. A device used to empty a bin or hopper from the bottom by horizontal reciprocating action of its parts, usually after primary crushing. *ACSG, 2*

reciprocating flight conveyor

A reciprocating beam or beams with hinged flights arranged to advance bulk material along a conveyor trough. See also: [grit collector](#)

reciprocating pump

A pump consisting of a piston or plunger which lifts water to a higher level by a series of to-and-fro movements. See also: [pump](#) *Nelson*

reciprocating screen dryer

Usually an inclined reciprocating screen on which the coal travels and through which the hot gases pass. The screen may eliminate moisture in coal up to 2-1/2 in (6.4 cm) in size. It may also serve as a fine coal dryer to treat coals down to 1/8 in (0.32 cm). *Nelson*

recirculating water

Circulating water that has been in the circuit for more than one cycle, often recovered from a collecting device such as a thickener from which the clarified water is circulated back into the process stream.

recirculation

The continuous circulation of all or some part of the same air in part of a mine ventilation system. *BS, 8*

recirculation of air

A term describing a condition in which the ventilating air current is returned to the face repeatedly along a circuitous path. It may happen in the case of auxiliary fans or booster fans. If the intake end of the air pipes of a blowing fan is not placed well to the intake side of the main air current, the foul air from the heading may be recirculated to the face again and again. With an exhausting auxiliary fan, the end of the pipes is kept well to the return side of the main air current. See also: [two-fan auxiliary ventilation](#)

recirculation of water

The water used in a condenser or in a washery or other wet process is often repumped into the system by means of a circulating pump. The practice is economical in water and in reagent consumption and also reduces pollution of local streams. Water that is recirculated is clarified to reasonable purity. See also: [washery water](#)

reclaiming

a. Digging from stockpiles. *Nichols, 1* b. Reprocessing previously rejected material. *Nichols, 1*

reclaiming conveyor

a. Any of several types of conveyors used to reclaim bulk materials from storage. b. The conveyor which receives material from the reclaimer in a blending system.

reclamation

a. The recovery of coal or ore from a mine, or part of a mine, that has been abandoned because of fire, water, or other cause. b. Restoration of mined land to original contour, use, or condition.

recleaner cell

See: [cleaner cell](#)

reclosing circuit breaker

A circuit breaker that recloses automatically as soon as the demand for current becomes equal to or less than that for which the circuit breaker is set. *Zern*

recommended exposure limit

An 8-h or 10-h time-weighted average or ceiling of exposure to coal dust concentration; recommended by NIOSH and based on an evaluation of the health effects data. *NIOSH*

recomposed granite

a. An arkose consisting of consolidated feldspathic residue (produced by surface weathering of an underlying granitic rock) that has been so little reworked and so little decomposed that upon cementation the rock looks very much like the granite itself. It has a faint bedding, an unusual range of particle sizes (unlike the even-grained or porphyritic texture of true granite), and a greater percentage of quartz than is normal for granite. Syn: [reconstructed granite](#) b. A conglomerate that has been recrystallized by metamorphism into a rock that simulates granite, as in the Lake Superior region. CF: [meta-arkose](#)

recomposed rock

A rock produced in place by the cementation of the fragmental products of surface weathering; e.g. a recomposed granite. The term has been applied to a rock of intermediate character straddling an unconformable surface between the breccia of the lower formation and the conglomeratic base of the upper formation. *AGI*

reconnaissance

a. A general, exploratory examination or survey of the main features (or certain specific features) of a region, usually conducted as a preliminary to a more detailed survey; e.g. an engineering survey in preparing for triangulation of a region. It may be performed in the field or office, depending on the extent of information available. *AGI* b. A rapid geologic survey made to gain a broad, general knowledge of the geologic features of a region. *AGI*

reconnaissance map

A map incorporating the information obtained in a reconnaissance survey and data obtained from other sources.

reconnaissance sampling

See: [pilot sampling](#)

reconnoiter

To make a reconnaissance of; esp. to make a preliminary survey of an area for military or geologic purposes. *AGI*

reconstructed amber

See: [pressed amber](#)

reconstructed granite

See: [recomposed granite](#)

reconstructed turquoise

An imitation turquoise made of finely powdered ivory which is deposited in a solution of copper. *Fay*

reconstruction

The modernization of underground roadways, transport, ventilation systems, and the layout of mine workings. It may include modernization of shafts and winding and also the improvement of surface handling and cleaning or washing equipment. See also: [mechanization](#)

reconstructive transformation

An isochemical change in a crystal structure in which chemical bonds are broken and reformed, e.g., tridymite-quartz or diamond-graphite. CF: [dilatational transformation](#); [displacive transformation](#); rotational transformation; phase transformation.

record borehole

See: [record hole](#)

record hole

The first borehole drilled in an area that is cored so that a detail record of the formations penetrated can be obtained. Also called test hole. See also: [stratigraphic hole](#)

recording gage

A gage which automatically records the level of water in a stream or tank, or velocity and pressure in a pipe. It is operated by a float or by a submerged air tank fitted with a rubber diaphragm. *Hammond*

record table

Heavy-duty shaking table used to treat relatively coarse sands. Shaking is by double-link eccentric motion, with longer and slower throw than with Wilfley type of table. *Pryor, 3*

recover

a. To restore a mine or a part of a mine that has been damaged by explosion, fire, water, or other cause to a working condition. *Fay* b. See: [recovery](#)

recoverable grade

The true mill-head grade of an ore-stream in percent, ounces, or parts per million of a metal or mineral, less extractive metallurgical losses; the proportion of an ore material actually recovered.

recovered sulfur

Elemental sulfur produced from hydrogen sulfide obtained from sour natural gas, petroleum refinery gas, water gas, and other fuel gases.

recovery

a. The percentage of valuable constituent derived from an ore, or of coal from a coal seam; a measure of mining or extraction efficiency. *AGI* b. The ratio of the footage of core acquired from core drilling a specific length of borehole, expressed in percent. *Long* c. The carat weight of diamonds salvaged from a worn bit. *Long*

recovery plant

a. A plant designed for separating diamond particles from concentrate by various processes, usually including grease belts, jigs, electrostatic separators, and flotation. Also known as picking station. b. The processing facility where minerals are recovered.

recreational mining

Mining as an avocation rather than as a business. *Barton*

recrystallization

The formation, essentially in the solid state, of new crystalline mineral grains in a rock. The new grains are generally larger than the original grains, and may have the same or a different mineralogical composition. *AGI*

recrystallized silicon carbide

A refractory made of about 98% to 99% SiC.

rectangular drainage pattern

A drainage pattern in which the main streams and their tributaries display many right-angle bends and exhibit sections of approx. the same length; it is indicative of streams following prominent fault or joint systems that break the rocks into rectangular blocks. *AGI*

rectangular shaft

A shaft excavated to an oblong shape. The majority of shafts sunk in the Republic of South Africa before 1948 were rectangular and timber lined. The shape lends itself to equipping concurrently with sinking; it provides a convenient in-line hoisting arrangement and can easily be divided into separate compartments. However, in the 1950's and 1960's developments were towards the concrete lined circular shaft. See also: [compartment](#) *Nelson*

rectification

a. The process by which electric energy is transferred from an alternating-current circuit to a direct-current circuit. *Coal Age, 1* b. The purification of a liquid by redistillation. *CTD* c. In electronics and signal processing, the transformation of a signal from an alternating positive and negative signal into an all-positive signal by taking its absolute value.

rectifier

Equipment used in mines to convert alternating current to direct current.

rectifying device

An elementary device consisting of one anode and its cathode that has the characteristic of conducting current effectively in only one direction. *Coal Age, 1*

rectorite

A clay mineral with regularly interstratified mica and smectite layers. Syn: [allevardite](#)

recumbent fold

An overturned fold, the axial surface of which is horizontal or nearly so.

recuperator

a. A continuous heat exchanger in which heat is conducted from the products of combustion to incoming air through flue walls. *ASTM* b. A system of thin-walled refractory ducts used for the purpose of transferring heat from a heated gas to colder air or gas. *Harbison-Walker* c. Preheating equipment for recovering sensible heat from hot spent gases from a furnace and using it for heating incoming charge or fuel gases; essentially, a low-pressure heat exchanger. Syn: [regenerative heating](#) *Henderson*

recurrence horizon

A layer of peat marking a sharp change in the character of the peat and resulting from a profound change in climate. *Tomkeieff*

red antimony

See: [kermesite](#)

red arsenic

See: [realgar](#)

red beds

Sedimentary strata composed largely of sandstone, siltstone, and shale, with locally thin units of conglomerate, limestone, or marl, that are predominantly red in color due to the presence of ferric oxide (hematite) usually coating individual grains; e.g. the Permian and Triassic sedimentary rocks of western United States, and the Old Red Sandstone facies of the European Devonian. *AGI*

red cake

The vanadium concentrate in a milling operation. *Ballard*

red chalk

Hematite mixed with clay.

red clay

A brown to red deep-sea deposit, which usually contains manganese nodules or a film of manganese. It is the finest divided clay suspension that is derived from the land and transported by ocean currents, accumulating far from land and at the greatest depths. It has a high proportion of volcanic material due to lesser dilution of this material owing to slowness of accumulation of the clay portion. The color is believed to be caused by oxidation. Syn: [brown clay](#)

red cobalt

See: [erythrite](#)

red copper ore

See: [cuprite](#)

red copper oxide

See: [cuprite](#)

redd

a. Eng. To clear away fallen stone or debris. Syn: [rid](#) b. Northumb. Overburden. CF: [ridding](#) c. Scot. To scour through, take down, or rip. *Fay*

redd bing

A pile of waste made of material brought direct from the mine, not waste from washery. *Zern*

reddingite

An orthorhombic mineral, $Mn_3(PO_4)_2 \cdot 3H_2O$; forms a series with phosphoferrite; pink; at Redding, CT.

reddle

Red ocher mixed with clay. Also spelled ruddle, raddle.

reddleman

A dealer in reddle or red chalk.

red dog

Material of a reddish color resulting from the combustion of coal shale and other mine waste in dumps on the surface.

reddsman

Scot. One who works at night cleaning up and repairing roadways, etc.

red earth

The characteristic soil of most tropical regions. It is leached, red, deep, and clayey.

red glassy copper ore

See: [cuprite](#)

red-hard

A term applied to some varieties of tool steels that will retain their hardness even when operating at a red heat. *Newton, I*

red heart

A harmless reddish core, sometimes found in fire clay refractories.

red hematite

A compact columnar variety of hematite with a brownish-red to iron-black color; so called to contrast it with limonite and turgite. Syn: [ironstone clay](#)

redingtonite

A monoclinic mineral, $(\text{Fe,Mg,Ni})(\text{Cr,Al})_2(\text{SO}_4)_4 \cdot 22\text{H}_2\text{O}$; halotrichite group; forms reddish-purple fibrous masses.

Red I plate

See: [selenite plate](#)

red iron froth

A variety of hematite. *Fay*

red iron ore

See: [hematite](#)

red iron vitriol

See: [botryogen](#)

redistilled metal

Metal from which the impurities, usually zinc and mercury, have been eliminated by selective distillation.

red lead

See: [minium](#)

red lead ore

See: [crocoite](#)

redledgeite

A tetragonal mineral, $\text{BaTi}_6\text{Cr}_2\text{O}_{16} \cdot \text{H}_2\text{O}$; cryptomelane group. Formerly called chromrutile.

red lime mud

A red mud to which lime, caustic soda, or quebracho, has been added. The pH is usually 12.0 to 13.0.

red manganese

Any reddish manganese mineral, i.e., rhodonite and rhodochrosite. Also called red manganese ore.

red mercury

Alleged to be a compound of mercury and antimony, and described in the press to be an ingredient of explosives or nuclear weapons manufacture or possibly a descriptive term employed to mask illicit trading activity involving controlled substances. *SME, 1*

red metal

a. A copper matte containing about 48% copper. *Fay* b. Any one of several alloys used in the manufacture of silverware. *Fay*

red mud

a. A reddish-brown terrigenous deep-sea mud that accumulates on the sea floor in the neighborhood of deserts and off the mouths of great rivers; contains calcium carbonate up to 25%. *Hunt* b. A clay-water-base drilling fluid containing sufficient amounts of caustic soda and tannates to give a pronounced red appearance. The pH is usually 10.0 to 13.0. *Brantly, 1*

red ore

Hematite ore.

red orpiment

See: [realgar](#)

red oxide of copper

See: [cuprite](#)

red oxide of zinc

See: [zincite](#)

redox potential

Oxidation-reduction potential. *AGI*

redrill

To reopen a borehole by redrilling after it has been cemented, caved, or lost because of junk in the hole. Also called drill out, drilled out. CF: [overlap](#)

red roast

In fluidization roasting, conversion of iron from sulfides to red oxide. *Pryor, 3*

redruthite

Corn. Copper glance. See: [chalcocite](#)

reds

High explosive; used in mines. *Bennett*

red schorl

See: [elbaite](#); rubellite; rutile.

redsear

In ironworking, to break or crack when red-hot, as iron under the hammer. *Standard, 2*

red silver

A red silver sulfide; esp. pyrrargyrite and proustite. Syn: [red silver ore](#)

red silver ore

See: [red silver](#)

reduce

a. To lower the oxidation state by adding electrons to a chemical species. b. In general, to treat metallurgically for the production of metal. *Fay*

reduced iron

Free iron in a fine state of division obtained by reducing ferric oxide by heating it in a current of hydrogen. Also called iron by hydrogen, iron powder, and spongy iron. *Standard, 2; Fay*

reduced level

Height above specified datum level of a surveyed point. *Pryor, 3*

reduced natural frequency

The natural frequency of vibration of a foundation at an average ground pressure of unity is the reduced natural frequency divided by the square root of the ground pressure. This relationship has been established by Tschebotarioff. *Hammond*

reducing agent

a. A material that adds hydrogen to an element or compound. *McGraw-Hill, 1* b. A material that adds an electron to an element or compound; i.e., decreases the positiveness of its valence. *McGraw-Hill, 1*

reducing atmosphere

a. An atmosphere having a deficiency of oxygen. b. An atmosphere of hydrogen or other substance that readily provides electrons. c. Space from which air has been displaced by hydrogen, carbon monoxide, or other reducing gas. *CTD*

reducing flame

The blue part or inner cone of the flame produced by a blowpipe; characterized by an excess of hydrocarbon over oxygen so as to reduce mineral samples heated in it. See also: [blowpiping](#) CF: [oxidizing flame](#)

reducing furnace

A furnace in which ores are reduced from oxides, or metal is separated from other substances by a nonoxidizing heat or flame; usually a shaft furnace. Syn: [reduction furnace](#)

reducing roast

The reduction of metallic oxides, sulfides, or halides by heating in contact with carbon or other reducing agents. *Newton, 1; Newton, 2*

reduction

a. Process of reducing a metal compound to the metal and separating it from the slag; sometimes applied to the smelting process. b. A reaction taking place at the cathode in electrolysis through transfer of electrons to the species being reduced. c. A decrease in positive valence, or an increase in negative valence by the gaining of electrons. A metallic oxide loses oxygen through the action of reducing gas, reducing its valence. CF: [oxidation](#)

reduction cell

A pot or tank in which either a water solution of a salt or a fused salt is reduced electrolytically to form free metals or other substances. *ASM, 1*

reduction factor

The factor relating the allowable stress on a long column with that on a short column in order to prevent buckling. *Hammond*

reduction furnace

See: reducing furnace.

reduction of area

a. The difference between the cross-sectional area of a tension specimen at the section of rupture before loading and after rupture, expressed as a percentage of the original area. *Roark* b. Percentage decrease in cross-sectional area of bar or wire after rolling or drawing. *Hammond*

reduction of levels

The calculation of reduced levels from the staff readings recorded in a field book. *Hammond*

reduction ratio

In crushing, the ratio of the size of the largest feed particle to the smallest distance between the roll faces. As used frequently in the field, it is the ratio of the smallest aperture passing all of the feed to that passing all of the product. Another basis of expression is the ratio of the average size of feed to the average size of product. See also: [overall reduction ratio](#); [primary breaker](#). *Taggart, 1*

reduction roasting

Lowering of oxygen content of ore by heating in reducing atmosphere. *Pryor, 3*

reduction smelting

A pyrometallurgical process that produces an impure liquid metal and a liquid slag by heating a mixture of ore, flux, and reducing agent (usually coke). *Newton, 1; Newton, 2*

reduction to center

The offset of a side auxiliary telescope requires a correction to observed horizontal angles, and the offset of a top auxiliary telescope requires a correction to observed vertical angles. The process of computing the correct angle from the observed angle is called reduction to center. *Urquhart*

reduzate

A sediment formed in a strongly reducing environment; e.g., coal, sedimentary sulfides, or sedimentary sulfur. *AGI*

red vitriol

See: [bieberite](#); rose vitriol.

Redwood number

Viscosity, defined as rate of flow of oil from a Redwood viscometer. *Pryor*, 3

red zinc ore

See: [zincite](#)

red zinc oxide

See: [zincite](#)

reed

a. Scot. Rift, or direction of easiest splitting. b. Weakness in a sedimentary rock parallel with the bedding. See also: [cleat](#) c. A reed filled with powder to act as a fuse. See also: [spire](#)

reedmergnerite

A triclinic mineral, NaBSi_3O_8 ; feldspar group; occurs in small colorless prisms having wedge-shaped terminations; from oil wells in Duchesne County, UT.

reef

a. A ridgelike or moundlike structure, layered or massive, built by sedentary calcareous organisms, esp. corals, and consisting mostly of their remains; it is wave-resistant and stands above the surrounding sediment. Also, such a structure built in the geologic past and now enclosed in rock, commonly of differing lithology. *AGI* b. A narrow ridge or chain of rocks either at the water surface or too shallow to permit safe passage of a vessel. CF: [bank](#) c. A provincial term for a metalliferous mineral deposit, esp. gold bearing quartz. See also: [reefing](#)

reef cap

A deposit of fossil-reef material overlying or covering an island or mountain. *AGI*

reef drive

Aust. A cutting through the bedrock in alluvial mining for the purpose of seeking other underground, gold-bearing gravel channels.

reefing

Working auriferous reefs or veins. See: [reef](#)

reef knoll

See: [bioherm](#)

reef limestone

A limestone consisting of the remains of active reef-building organisms, such as corals, sponges, and bryozoans, and of sediment-binding organic constituents, such as calcareous algae. *AGI*

reef wash

Aust. Gold-bearing drift.

reel

A device used for hoisting that has largely been replaced by round ropes. A flat rope is used for the reel, which is wound on an overlapping spiral like a clock spring. The reel is like a conical drum that increases in diameter by the thickness of the rope at each turn. Reels are more suitable for hoisting from a single level than from different levels. *Lewis*

reel boy

In bituminous coal mining, one who works on an electric locomotive--power being transmitted through an electric cable wound around a reel on the locomotive--tending the cable to see that it is wound up and fed from the reel so that it will not pull or break from the point where electric current is supplied. Also called nipper. *DOT*

reel locomotive

A trolley locomotive with a wire rope reel for drawing cars out of rooms. The rope end is pulled by a runner into the face of the room, attached to a car, and reeled out by the locomotive. *Zern*

reenforcing bar

See: [reinforcing bar](#)

Ree's torsion anemometer

Consists of a thin square aluminum vane centrally suspended from a horizontal wire mounted in a vertical frame. The velocity of the air current is obtained from the measurement of the torque that has to be applied to the wire to bring the vane back to its vertical position. The instrument is mounted on a tripod, and the arrangement is such that the torsion can be applied, at a point 2 ft (0.6 m) away from the vane, by means of a shaft and bevel gearing. The instrument has been used to measure low air velocities in

mines down to about 10 ft/min (3 m/min) and up to 180 ft/min (55 m/min). Syn: [torsion anemometer](#)

reeve

The orderly arrangement of a rope or cable on a system of pulleys or sheaves to assemble block-and-tackle equipment for handling heavy loads. Also called reeved. *Long*

reeving

Threading or placement of a working line. *Nichols, 2*

reference axes

In structural petrology, three mutually perpendicular axes to which structural measurements are referred. a is the direction of tectonic transport, c is perpendicular to the plane along which differential movement takes place, and b lies in this plane but is perpendicular to a.

reference electrode

Hydrogen electrode used to determine electrode potentials of half-cells. *Pryor, 3*

reference level

See: [datum plane](#)

reference mark

A selected distant point from which the bearings to other points can be measured at a survey station. *Hammond*

reference plane

See: [datum plane](#)

reference seismometer

In seismic prospecting, a detector placed to record successive shots under similar conditions, to permit overall time comparisons. Used in connection with the shooting of wells for velocity. *AGI*

reference size

Separation size, designated size, or control size used to define analyses of the products of a sizing operation. *BS, 5*

reference standard

Taken or laid down as a standard for measuring, reckoning, or constructing. *Webster 3rd*

reference station

A station for which tidal constants have previously been determined and that is used as a standard for the comparison of simultaneous observations at a second station; also, a station for which independent daily predictions are given in the tide or current tables from which corresponding predictions are obtained for other stations by means of differences or factors. *AGI*

referencing

The process of measuring the horizontal (or slope) distances and directions from a survey station to nearby landmarks, reference marks, and other permanent objects that can be used in the recovery or relocation of the station. *AGI*

refikite

An orthorhombic mineral, $C_{20}H_{32}O_2$; soft; white; in modern resins and lignite at Montorio, Abruzzes, Italy. Also spelled reficite.

refine

a. To free from impurities; to free from dross or alloy; to purify, as metals; to cleanse. *Webster 3rd* b. To treat cast iron in the refinery furnace so as to remove the silicon. *Webster 3rd*

refined iron

Wrought iron made by puddling pig iron. *CTD*

refinery

a. A facility in which relatively crude smelter products such as blister copper are refined and emerge as acceptably pure products. b. An electrolytic or chemical facility producing pure metals.

refining

The purification of crude metallic products. *Fay*

refining heat

A medium orange heat, about 655 degrees C, which imparts fineness of grain and toughness to steel that is raised to it and afterwards quenched. *Webster 2nd*

refining temperature

A temperature, usually just higher than the transformation range, employed in the heat treatment of steel to refine the structure, particularly the grain size. *ASM, 1*

reflected-light microscope

A compound microscope in which plane-polarized light impinges upon a polished specimen, commonly opaque, the light being reflected back to the objective through a second polarizer, where mineral color and polarization colors are observed in the ocular. Syn: [ore microscope](#) See also: [optical constant](#); [polished section](#); [microscopy](#).

reflected-light microscopy

See: [ore microscopy](#)

reflected wave

A (gaseous) pressure wave resulting from a direct wave striking an obstacle or an opposing surface and being reflected backwards. *Rice, 2*

reflection

a. The return of a wave incident upon a surface to its original medium. CF: [refraction](#); [diffraction](#); [total reflection](#). b. The bounding back of light or other rays as they strike a solid surface. Light incident on a polished planar surface reflects at an angle equal to the incident angle, the proportion of reflected light increasing with increasing refractive index; e.g., for normal incidence, 17% reflects from diamond ($n=2.4$), and 5% reflects from quartz ($n=1.5$). c. In seismic prospecting, the returned energy (in wave form) from a shot that has been reflected from a velocity discontinuity back to a detector; the indication on a record of reflected energy. d. Misnomer for X-ray diffraction peaks. Also spelled reflexion.

reflection goniometer

An instrument that measures angles between crystal faces by reflecting a beam of light from successive faces as the crystal is rotated. See also: [contact goniometer](#)

reflection mechanism

A rule stating that rock breaks from the surface inward toward the explosive rather than from the explosive charge outward. Syn: [blasting reflection mechanism](#)

reflection method

See: [seismic reflection method](#)

reflection shooting

A type of seismic survey based on measurement of the travel times of waves that originate from an artificially produced disturbance and are reflected back at near-vertical incidence from subsurface boundaries separating media of different elastic-wave velocities. CF: [refraction shooting](#) *AGI*

reflection wave

A wave that is propagated backward through the burned gas as the result of an explosion wave being completely or partly arrested against the closed extremity, or in a constricted portion of its path, as in a tube, gallery, etc. *Fay*

reflectivity

The ratio of radiant energy reflected by a body to that falling upon it. *Strock, 2*

refraction

The deflection of a ray of light or of an energy wave (such as a seismic wave) due to its passage from one medium to another of differing density, which changes its velocity. CF: [reflection](#); [diffraction](#). *AGI*

refraction method

A seismic method of geophysical prospecting. See also: [refraction shooting](#)

refraction shooting

a. The detonation of heavy charges of explosive in comparatively shallow holes or pits. The effects may be measured over a wide area. The firing creates the shock waves in the seismic method of prospecting. *Nelson* b. A type of seismic survey based on the measurement of the travel times of seismic waves that have traveled nearly parallel to the surface of high-velocity layers, in order to map such layers. See also: [isochrone lines](#)

refractive index

See: [index of refraction](#); dispersion.

refractometer

a. A combustible gases detector. See also: [interference methanometer](#) *Nelson* b. An instrument for measuring indices of refraction of transparent substances, both liquid and solid. CF: [Abbe refractometer](#)

refractoriness

The capacity of a material to resist high temperature. In the refractories industry, the pyrometric cone equivalent (PCE) is a comparative value used to determine the refractoriness of a material. *Henderson*

refractory

a. Said of an ore from which it is difficult or expensive to recover its valuable constituents. *AGI* b. Exceptionally resistant to heat. *AGI* c. A nonmetallic material suitable for use in high-temperature applications. *AGI*

refractory bonding mortars

High-temperature bonding mortars containing various materials and exhibiting various properties, but primarily intended for providing structural bond between refractory units in high-temperature industrial furnace construction. *Henderson*

refractory brick

a. A brick made from refractory material, such as fire clay, bauxite, diaspore, etc., used to withstand high temperatures. Refractory bricks are made in various sizes and shapes. b. A brick used as a lining for the interior of fireboxes in furnaces and boilers. Refractory brick is constructed so that it can withstand very high temperatures, but it is not a very good insulator. *API, I*

refractory clay

See: [fireclay](#)

refractory lining

A lining that has high refractory qualities and is therefore suitable for furnace linings and boiler foundations. It is made from a good-quality refractory ore, clay, fireclay, or gannister. *Nelson*

refractory material

A material able to withstand high temperatures and, therefore, used in such applications as lining furnaces.

refractory ore

Ore difficult to treat for recovery of the valuable substances. *AGI*

refractory stone

Consists of sandstone, quartzite, mica schist, soapstone, or other rock that will withstand a moderately high temperature without fusing, cracking, or disintegrating. It may be used in solid blocks or crushed and mixed with a binder to form bricks. *USBM, 7*

refractory ware

Usually hollow ware, such as, saggars, pyrometer tubes, crucibles, etc.; also refractory brick and shapes.

refresher training

In mining, training given to all miners at least once a year consisting of 8 hours of instruction reviewing the essentials of new miner training. CF: [new miner training](#); [task training](#). *Federal Mine Safety*

refrigerant

A substance that will absorb heat while vaporizing and whose boiling point and other properties make it useful as a medium for refrigeration. *Strock, 2*

refrigeration

a. In special application to mining, cooling of air before release in lowest levels of deep, hot mine; also, expansion of compressed air for the same purpose. b. The process of absorption of heat from one location and its transfer to and rejection at another place; arbitrarily expressed in units of (short) tons and is equal to the coil cooling load divided by 12,000; 1 st (0.9 t) of ice in melting in 24 h liberates heat at the rate of 200 Btu/min (211 kJ/min), or 12,000 Btu/h (1.27 MJ/h). *Hartman, 1*

refrigeration plant

a. A surface plant to form the protective barrier of frozen ground in the freezing method of shaft sinking. The cooling agent used is ammonia which, in its gaseous state, is compressed to about 120 psi (827 kPa) when it passes to the top of the condensers, emerging at the bottom as liquid ammonia under pressure. It then passes through a regulator valve into the coolers where it immediately evaporates. The latent heat of

evaporation is extracted from the brine circuit--the brine being passed through the coolers by the brine pumps. The ammonia gas passes back for re-use. The brine emerges from the coolers at a temperature of -4 degrees F (-21.7 degrees C) and is pumped down the boreholes to freeze the water around the shaft sinking. b. A surface plant to cool liquids. These liquids or ice are sent underground to cool the air current in heat exchangers. By this method, the air in deep mines is cooled considerably and the working environment is improved. See also: [deep mining](#)

refuge chamber

An airtight, fire-resistant room in a mine used as a refuge in emergencies by miners unable to reach the surface. *MSHA, 4*

refuge hole

A place formed in the side of an underground haulageway in which a worker can take refuge during the passing of a train, or when shots are fired. Also called refuge stalls. See also: [manhole](#)

refusal

A condition arrived at when driving pipe, casing, piling, etc., when it cannot be driven to a greater depth or made to penetrate the ground a distance of more than 1 ft (30.5 cm) per 100 blows delivered by a drive hammer. *Long*

refuse

a. Waste material in the raw coal that has been removed in a cleaning or preparation plant. b. Notably used to describe colliery rejects; also called tailings. *Pryor, 3*

refuse conveyor

An adaptation of a drag chain conveyor.

refuse discharge pipes

Pipes used on some washboxes instead of a refuse worm. *BS, 5*

refuse elevator

See: [reject elevator](#)

refuse extraction chamber

That part of the washbox into which the refuse extractor discharges. *BS, 5*

refuse extractor

A device used in a washbox to remove the reject from the washing compartments, operated manually or automatically. *BS, 5*

refuse rotor

A reject gate in the form of a rotary (or star) valve. *BS, 5*

refuse worm

A screw conveyor fitted at the bottom of some washboxes to collect the fine reject which has passed through the apertures in the screen plate. *BS, 5*

regalian doctrine

The old doctrine that all mineral wealth was the prerogative of the crown or the feudatory lord. The concession system, in which the state or the private owner has the right to grant concessions or leases to mine operators at discretion and subject to certain general restrictions, had its origin in this doctrine. Almost all mining countries of the world, except the United States, follow this system. *Hoover*

regal jade

See: [Indian jade](#)

regenerated anhydrite

Anhydrite produced by dehydration of gypsum that itself was generated by the hydration of anhydrite.

regenerated dense medium

Medium obtained from the medium recovery system and purified (wholly or partly) from contaminating fine coal and clay. *BS, 5*

regeneration

a. In mineral leaching, reconstitution of barren leach solution after it has completed its chemical attack on mineral and its values have been removed. The regeneration of ion exchange resins and activated carbons by the removal of elements or compounds from extraction sites on the resins by special eluants. *Pryor, 3* b. A reversing heat exchanger for preheating combustion air (and gaseous fuels) from waste heat of the exhaust gases. *Van Vlack*

regenerative chambers

Separate compartments connected with a furnace; they are arranged for preheating the gas and the air used for fuel. *Mersereau, 2*

regenerative furnace

A furnace in which hot gases, usually waste combustion gases, pass through a set of chambers containing firebrick structures, to which the sensible heat is given up. The direction of hot-gas flow is diverted periodically to another set of chambers and cold incoming combustion gas or air is preheated in the hot chambers.

regenerative heating

See: [recuperator](#)

regenerative principle

Used in open-hearth furnaces to increase the furnace temperature by preheating the fuel gas and air previous to their combustion in the furnace. *Newton, 1*

regenerator checkers

Brick used in furnace regenerators to recover heat from hot outgoing gases, and later to release this heat to cold air or gas entering the furnace; so called because of the checkerboard pattern in which the bricks are arranged. *Harbison-Walker*

regime

In hydraulics, the condition of a river with respect to the rate of its flow as measured by the volume of water passing different cross sections in a given time. *Webster 3rd*

regional

a. Extending over large areas in contradistinction to local or restricted areas. *Fay* b. In gravity prospecting, contributions to the observed anomalies due to density irregularities at much greater depths than those of the possible structures, the location of which was the purpose of the survey. The term is also employed in an analogous sense in magnetic prospecting. *AGI*

regional anomaly

a. The more localized departures in the Earth's field from the values that would be predicted if the field were to originate with a single magnet oriented along the magnetic axis. These have maximums as great as 10,000 gamma, which is about a third the total

intensity at the equator, and extend over areas as large as a million square miles. The locations of such features do not change with time as do anomalies associated with secular variation. *Dobrin* b. The departure of a measured quantity from an expected or theoretical value on a scale larger than the most rapid spatial variations of the measured quantity; typically variations over tens to hundreds of kilometers.

regional dip

The nearly uniform inclination of strata over a wide area, generally at a low angle, as in the Atlantic and Gulf coastal plains and parts of the Midcontinent region. CF: [homocline](#)

regional metamorphism

A general term for metamorphism affecting an extensive region, as opposed to local or contact metamorphism. CF: [dynamothermal metamorphism](#); local metamorphism.

regional unconformity

A surface of discontinuity in sedimentary rocks that extends throughout an extensive region. It may record a significant interruption in deposition, tectonics, or erosion of older strata.

registered premises

Premises registered with the local authority for the storage of not more than 60 lb (27.2 kg) of explosive. See also: [licensed store](#); [magazine](#). *BS, 12*

reglette

A 12-in (0.3-m) scale divided into tenths and hundredths of a foot, used for accurate measurement in conjunction with a steel band that is graduated only in feet. See also: [band chain](#)

regolith

The layer or mantle of loose incoherent rock material, of whatever origin, that nearly everywhere underlies the surface of the land and rests on bedrock. It comprises rock waste of all sorts: volcanic ash, glacial drift, alluvium, windblown deposits, organic accumulations, and soils. Syn: [mantle rock](#)

regular lay

Wire rope or cable in which the individual wire or fibers forming a strand are twisted in a direction opposite to the twist of the strands. Also called ordinary lay. Syn: [standard lay](#)

regular-lay left lay

See: [left regular lay](#)

regular-lay right lay

See: [right regular lay](#)

regular polygon

A polygon having equal sides, and the angles between these sides are equal. *Jones, 2*

regular sampling

The sampling of the same coal or coke received regularly at a given point. There are two forms of regular sampling, namely, continuous sampling and intermittent sampling. *BS, 2*

regular ventilating circuit

All places in a mine through which there is a positive flow of air without the aid of a blower fan or of ventilation tubing.

regulated feed

In contrast with choke feed, feed that is throttled back to a value below the full capacity of the crusher. *South Australia*

regulated split

In mine ventilation, a split where it is necessary to control the volumes in certain low-resistance splits to cause air to flow into the splits of high resistance.

regulating gate

A gate used to vary size of opening so as to control the flow of material through the opening. See also: [bin gate](#)

regulator

a. A ventilating device, such as an opening in a wall or door; usually placed at the return of a split of air to govern the amount of air entering that portion of a mine. *Kentucky* b. A device for creating shock loss to restrict passage of air through an airway. Regulators are usually set in doors as adjustable, sliding partitions that can be varied to the desired opening. In their simplest form, for temporary service in an untraveled part of a mine,

regulators consist of doors propped partially open. Where possible, regulators are located on the exhaust side of a split (in a return airway) to minimize interference with traffic. See also: [ventilation](#) Syn: [ventilation regulator](#)

regulator door

See: [scale door](#)

regulus

Impure metal produced during smelting of ores or concentrates. *Pryor, 3*

reheater

An apparatus for reheating a substance, as ingot steel, that has cooled or partly cooled during some process. *Standard, 2*

reheater load

The amount of sensible heat in w (British thermal units per hour), restored to the air in reheating. *Hartman, 2*

reheating furnace

The furnace in which metal ingots, billets, blooms, etc., are heated to bring them to the temperature required for hot-working. *CTD*

Rehishshakenobel

A plow developed from the Anbauhobel machine and designed for cutting thin coal seams. The plow drives, instead of being on the face side of the conveyor, are on the waste side and the plow chains run in two tubes along the waste side of the conveyor chutes. See also: [Anbauhobel](#) *Nelson*

reinerite

An orthorhombic mineral, $Zn_3(AsO_3)_2$; blue to green; at Tsumeb, Namibia. (Not renierite.)

reinforcing bar

a. The basic material used to form grouted roof belts. b. Iron or steel bars of various cross-sectional shapes used to strengthen concrete. c. See: [rebar](#); reinforcing bar.

reinforcing steel

Steel bars of various shapes used in concrete construction to give added strength. *Crispin*

reinite

A pseudomorph, FeWO_4 ; after scheelite(?).

reiteration

In surveying, angular measurement made first with vertical circle of theodolite to right of sighting telescope, then repeated after transiting this through 180 degrees . Also called face right, face left observation. *Pryor, 3*

reject

a. The material extracted from the feed during cleaning for retreatment or discard. *BS, 5*
b. The stone or dirt discarded from a coal preparation plant, washery, or other process; has no value. See also: [middlings](#); [refuse](#); [residue](#); tailings. *Nelson*

reject elevator

An elevator for removing and draining the reject from a washing appliance. Syn: [refuse elevator](#)

reject gate

The mechanism of the refuse extractor that may be manually or automatically operated to control the rate of removal of reject from the washbox. *BS, 5*

rejuvenation

The renewal of any geologic process, such as the revival of a stream's erosive activity or the reactivation of a fissure.

relative age

The geologic age of a fossil organism, rock, geologic feature, or event, defined relative to other organisms, rocks, features, or events rather than in terms of years. CF: [absolute age](#)

relative biological effectiveness

The relative effectiveness of a given kind of ionizing radiation in producing a biological response as compared with 250,000 electron-volt gamma rays. Abbrev., rbe. *Lyman*

relative bulk strength

A measure of the energy available per unit volume of explosive as compared to an equal volume of ANFO at a density of 0.81 g/cm^3 ; it is calculated by dividing the bulk strength of an explosive by the bulk strength of ANFO and multiplying by 100. See also: [absolute bulk strength](#)

relative compaction

a. For soil compaction, two types of tests are necessary: (1) determining the dry density of the soil after a standard amount of compaction has been applied, and (2) measuring the density of the soil in the field. The state of compaction is expressed as the relative compaction, and is the percentage ratio of the field density to the maximum density as determined by standard compaction. The percentages of relative compaction are high, since the initial relative compaction is about 80%. *Nelson* b. The dry density of a soil in situ divided by the maximum dry density of the soil as established by the Proctor compaction test or any other standard test. See also: [loose ground](#)

relative consistency

The ratio of the liquid limit minus the natural water content to the plasticity index. *ASCE*

relative density

a. The relative density or specific gravity of a substance denotes the number of times the substance is heavier or lighter than water (for the same volume). Relative density and specific gravity mean the same thing. *Morris* b. The ratio of the difference between the void ratio of a cohesionless soil in the loosest state and any given void ratio to the difference between its void ratios in the loosest and in the densest states. *ASCE*

relative humidity

The ratio, expressed as a percentage, of the amount of water vapor in a given volume of air to the amount that would be present if the air were saturated at the same temperature. CF: [absolute humidity](#); specific humidity. *AGI*

relative movement

In fault descriptions, the displacement of one block relative to the other, rather than to some fixed point or plane of reference. *AGI*

relative roughness

The dimensionless ratio ϵ/d (where ϵ is the average height of the surface irregularities and d is the diameter of the pipe) is termed the relative roughness. The physical interpretation of this functional equation is that the friction factors of pipes are the same if their flow patterns in every detail are geometrically and dynamically similar.

The term Epsilon indicates the height of the irregularity above the boundary surface only; hence it is apparent that, dependent upon the thickness of the boundary layer adjacent to the surface, the projection can either lie submerged within the boundary layer or else project outside it. *Roberts, 1*

relative time

Geologic time determined by the placing of events in a chronologic order of occurrence; esp., time as determined by organic evolution or superposition. CF: [absolute time](#)

relative variogram

A variogram in which the ordinary variogram value for each lag has been divided by the square of the mean of the sample values used in computing the lag. This is sometimes useful when a "proportional effect" is present; i.e., when areas of higher than average concentration also have higher than average variance. When relative variogram models are used in kriging, the resulting kriging standard deviations represent decimal fractions of the estimated values.

relative weight strength

This is a measure of the energy available per weight of explosive as compared to an equal weight of ANFO. It is calculated by dividing the absolute weight strength (AWS) of the explosive by the AWS of ANFO and multiplying by 100. See also: [absolute weight strength](#)

relaxation

a. In experimental structural geology, the release of applied stress with time, due to any of various creep processes. *AGI* b. In an elastic medium, the decrease of elastic restoring force under applied stress, resulting in permanent deformation. *AGI* c. Relief of stress by creep. Some types of tests are designed to provide diminution of stress by relaxation at constant strain, as frequently occurs in service. *ASM, 1* d. The decrease of load support and of internal stress because of plastic strain at constant deformation. *AGI*

relay

A device, operated by an electric current, and causing by its operation abrupt changes in an electrical circuit (making or breaking the circuit, changing of the circuit connections, or variation in the circuit characteristics). *NCB*

relay haulage

Single-track, high-speed mine haulage from one relay station to another. Each operator has an exclusive track section between relay stations and can run at full speed since no

other haulage equipment is operating on the section. Side track at each relay station permits the operator to pick up or drop off loads or empties, then make the return run. Also called intermediate haulage. See also: [haulage](#)

relay motorman

See: [gathering motorman](#)

release analysis

A procedure employed to determine the best results possible in cleaning a coal by froth flotation. *BS*, 5

released mineral

A mineral formed during the crystallization of a magma as a consequence of an earlier phase failing to react with the liquid. Thus the failure of earlier formed olivine to react with the liquid portion of a magma to form pyroxene may result in the enrichment of the liquid in silica, which finally crystallizes as quartz, the released mineral. *AGI*

release fracture

A fracture developed as a consequence of the relief of stress in one particular direction. The term is generally applied to a fracture formed when the maximum principal stress decreases sufficiently that it becomes the minimum principal stress; the fracture is an extension fracture oriented perpendicular to the then-minimum principal-stress direction. *AGI*

release mesh

a. In liberation of specific mineral from its ore by comminution, the optimum grind. *Pryor*, 3 b. Specified mesh-of-grind for best conditions for treatment to recover a specific mineral from the ore. *Pryor*, 4

reliability of method

In geochemical prospecting, refers to the probability of obtaining and recognizing indications of an orebody or mineralized district by the method being used. Reliability depends not only on whether a readily detectable target exists and how effective the exploration method is in locating it, but also on the extent to which the anomaly is specif. related to ore and the extent to which it is possible that non-significant anomalies may confuse the interpretation. *Hawkes*, 2

relic

A landform that has survived decay or disintegration, such as an erosion remnant; or one that has been left behind after the disappearance of the greater part of its substance such as a remnant island. The term is sometimes used adjectivally as a synonym of relict, but this usage is not recommended. *AGI*

relict

Pertaining to a mineral, structure, or feature of an earlier rock that has persisted in a later rock in spite of processes tending to destroy it. Also, such a mineral, structure, or other feature. *AGI*

reliction

The slow and gradual withdrawal of the water in the sea, a lake, or a stream, leaving the former bottom as permanently exposed and uncovered dry land; it does not include seasonal fluctuations in water levels. Legally, the added land belongs to the owner of the adjacent land against which it abuts. Also, the land left uncovered by reliction. *AGI*

relict texture

In mineral deposits, an original texture that remains after partial or total replacement. *AGI*

relief

a. A term used loosely for the physical shape, configuration, or general unevenness of a part of the Earth's surface, considered with reference to variations of height and slope or to irregularities of the land surface; the elevations or differences in elevation, considered collectively, of a land surface. CF: [topography](#) b. The vertical difference in elevation between the hilltops or mountain summits and the lowlands or valleys of a given region. A region showing a great variation in elevation has high relief, and one showing little variation has low relief. *AGI* c. The range of values over an anomaly or within an area; e.g., the gravity relief for the magnitude of a gravity anomaly. *AGI* d. An apparently rough surface of a crystal section under a microscope. High relief indicates a great difference in index of refraction between the crystal and its mounting medium. The relief is positive if the refractive index of the mineral is greater than that of the medium, and negative in the reverse case. Syn: [shagreen](#) e. The result of the removal of tool material behind or adjacent to the cutting edge to provide clearance and prevent rubbing (heel drag). *ASM, I*

relief feature

See: [landform](#)

relief holes

a. Boreholes that are loaded and fired for the purpose of relieving or removing part of the burden of the charge to be fired in the main blast. b. Holes drilled closely along a line, that are not loaded, and that serve to weaken the rock so that it will break along that line. Syn: [trim holes](#) c. Singular. A port or passageway through which the core, as it advances into the inner tube of a double-tube core barrel, forces water out of the inner tube to the outside of the barrel through the innertube head. *Long* d. Singular. A borehole drilled ahead of underground openings to tap and drain a water-bearing formation. Also called cover hole; pilot hole. *Long*

relief limonite

Indigenous limonite that is porous and cavernous in texture, commonly botryoidal after chalcocite. CF: [indigenous limonite](#)

relief map

A map representing topographic relief of an area by contour lines, hachures, hill shading, coloring, or similar graphic means.

relief valve

A valve that will allow air or fluid to escape if its pressure becomes higher than the valve setting. Also called pressure relief valve. *Nichols, 1*

relief well

A borehole that is drilled at the toe of an earth dam as a relief for any high water pressure caused by the weight of the dam. *Hammond*

relieving cut

In a round of shots planned for sequential firing when shaft sinking or tunneling, holes fired after cut holes and before lifters and slippers. *Pryor, 3*

relieving platform

A loading deck for lorries on the land side of a retaining wall constructed, for example, as a jetty of steel sheet piling, the relieving platform being supported as a rule partly by the wall and partly by bearing piles. See also: [surcharge](#)

relieving shot

A shot fired to dislodge or expose a misfire. *BS, 12*

relighter flame safety lamp

A locked spirit-burning lamp fitted with an internal relighting device. *BS, 8*

relighting station

A place in a mine at which safety lamps can be relighted under controlled conditions. *BS, 13*

reluctance

Magnetic quality analogous to resistance in the flow of electric current. *Pryor, 3*

remanence

Residual magnetism in a ferromagnetic substance (its hysteresis) after removal of an external magnetizing force. *Pryor, 3*

remanent magnetization

a. Part of the magnetization of a body that does not disappear when the external magnetic field disappears. *Schieferdecker* b. That component of a rock's magnetization that has a fixed direction relative to the rock and is independent of moderate, applied magnetic fields such as the Earth's magnetic field. CF: [induced magnetization](#) See also: [hysteresis](#)

remnant

When a block of ground is stoped in such a way that at some time its remainder is surrounded on all sides by stoped ground, that remainder is termed a remnant. *Spalding*

remolded soil

Soil that has had its natural structure modified by manipulation. *ASCE*

remolding

Disturbance of the interval structure of clay or silt; when remolded, such material will lack shearing strength and gain compressibility. In consequence, driven piles are not recommended in certain clays. See also: [thixotropic fluid](#)

remolding index

The ratio of the modulus of deformation of a soil in the undisturbed state to the modulus of deformation of the soil in the remolded state. *ASCE*

remolding sensitivity

The ratio of the unconfined compressive strength of an undisturbed specimen of soil to the unconfined compressive strength of a specimen of the same soil after remolding at unaltered water content. Also called sensitivity ratio. *ASCE*

remolinite

See: [atacamite](#)

remote control

a. The control of plant operation by personnel or computers housed under conditions that can be remote, safe, and convenient. This is a feature of both electrical and electronic automatic control. In the control room, various plants can be started up by pushbutton and the governing conditions can be set. Instrumentation records all relevant data; it also gives warning of unsafe conditions and shuts down the plant if no correction is made. Changeover switches can introduce different operations and sequences in the working of the plant. Indicating lights can show what plant is working and the progress made. Fault indication can show the reason in the event of a shutdown. Also called centralized control. *Nelson* b. A term applied to a switch, circuit breaker, starter, or similar apparatus, to denote that its operation can be controlled manually, from a distance, by electrical or other means. *BS, 13*

remote control support system

A self-advancing support system in which the chocks and/or props are advanced and reset on a longwall face from a point in the gate road leading to the face. Hydraulic pressure and valves are commonly employed and the system is largely in the experimental stage. See also: [pushbutton coal mining](#)

remote sensing

A branch of geophysics that acquires and interprets airborne or satellite images of the surface using infrared and visible wavelengths of light.

renardite

An orthorhombic mineral, $\text{Pb}(\text{UO}_2)_4(\text{PO}_4)_2(\text{OH})_4 \cdot 7\text{H}_2\text{O}$ that may be the mineral dewindtite; at Kasolo, Zaire.

rending

The breaking of coal into lumps with a minimum of smalls. The relative slowness of low explosives makes them suitable for rending coal since they lack the greater shattering power of high explosives. *Mason*

rendrock

A dynamite used in blasting and consisting of nitroglycerin, potassium nitrate, wood pulp, and paraffin or pitch. *Webster 3rd*

renierite

A tetragonal mineral, $(\text{Cu,Zn})_{11}(\text{Ge,As})_2\text{Fe}_4\text{S}_{16}$; pseudocubic; a possible source of germanium. (Not reinerite.)

reniform

Kidney-shaped. Said of a crystal structure in which radiating crystals terminate in rounded masses; also said of mineral deposits having a surface of rounded, kidneylike shapes. CF: [colloform](#); [colloid minerals](#); botryoidal. *AGI*

Renn-Walz process

A method of reclaiming iron and other metals from the waste materials produced in the smelting of zinc and lead ores. The process differs from the Krupp-Renn method in that it is a volatilization process for recovering molten metals in oxide form. The metal vapors are oxidized by excess air and carried off in the flue gases from which they are subsequently filtered. *Osborne*

rensselaerite

A compact fibrous variety of talc pseudomorphous after pyroxene; harder than talc; polishes well; made into ornamental objects; in northern New York and Canada.

rent and royalty

a. The amount paid by a coal mining operator to the owner of the coal for each ton of coal mined and usually expressed in cents per ton. b. In mining leases, words used interchangeably to convey the same meaning. *Ricketts*

reopening sealed area

There are four methods used in reopening sealed-off areas in a mine: (1) the direct method in which the stoppings are breached and air is circulated around the district without previous inspection by a rescue team; (2) the prior-inspection method in which prior inspection of the whole district by a rescue team is followed by circulation of air around the district; (3) the stage method in which the ventilation is restored and the enclosed gases are removed in successive stages; and (4) the partial-reopening method which is adopted when it is required to recover part of a district but leave the remainder sealed off. *Sinclair, 1*

repairman

A worker whose duty it is to repair tracks, doors, brattices, or to reset timbers, etc., under the direction of a foreman. Also called repairer. *Zern*

repeated twinning

Crystal twinning involving more than two individuals. Syn: [multiple twin](#) cyclic twinning.

replaceable hydrogen

Hydrogen atoms in acid molecule that can be replaced by those of metal. *Pryor, 3*

replaceable insert

Diamond inset plates and other geometric forms fastened to and/or supported by the bit blank by brazing or mechanical locking so that in drilling they may be replaced when diamond wear exceeds a specified amount. *Long*

replaceable pilot

A central interchangeable pluglike portion of a noncoring bit protruding or leading the outside portion of such bits. See also: [pilot](#) *Long*

replacement

a. Change in composition of a mineral or mineral aggregate, presumably accomplished by diffusion of new material in and old material out without breakdown of the solid state. *AGI* b. A process of fossilization involving substitution of inorganic matter for the original organic constituents of an organism. *AGI*

replacement bit

See: [reset bit](#)

replacement deposit

A mineral deposit that has been formed by deposition from mineral solutions taking the place of some earlier, different substance.

replacing switch

A device consisting of a united pair of iron plates hinged to shoes fitting over the rails to replace, on the track, derailed railway rolling stock. Also used for mine cars. *Fay*

replica

A filling of mineral material deposited by percolating ground waters in external molds, thus reproducing the original exterior of the fossil shell or other object, with its exact size and shape. *AGI*

replicate sampling

Taking each sample in a number of subsamples by putting increments in turn into different containers, in order to estimate the sampling accuracy. The same total weight of sample is collected whether or not replicate sampling is employed. *BS, 2*

repose angle

The angle between the horizontal and the surface slope of any pile of material formed by free fall of the material.

representation work

Assessment work on a mining claim.

representative fraction

The scale of a map, expressed in the form of a numerical fraction that relates linear distances on the map to the corresponding actual distances on the ground, measured in the same units (centimeters, inches, feet); e.g., 1/24,000 indicates that one unit on the map represents 24,000 equivalent units on the ground. Abbrev: RF. *AGI*

representative sample

In testing or valuation of a mineral deposit, samples large enough and average in composition as to be considered representative of a specified volume of the surrounding orebody. Blended large samples from different exposures are not necessarily representative, since the mineral structure may have varied so as to introduce special problems from area to area in treatment. *Pryor, 3*

rerailer

A small lightweight device, used in pairs that straddle and are locked to each of the rails to retrack railroad cars and locomotives. Of Y-shaped design, they permit both wheels to be retracked from either or both sides of the rail at the same time. As the car is pulled across the device, the derailed wheels are channeled back onto the tracks. Also called retracker. See also: [frog](#)

rescue

To move live workers or dead bodies from a mine after a mine disaster. Sometimes called recover. The latter applies esp. to putting the mine in shape for operation again.

rescue apparatus

A name applied to certain types of apparatus worn by workers, permitting them to work in noxious or irrespirable atmospheres such as obtained during mine fires, following mine explosions, as a result of accidents in ammonia plants, from smelter fumes, etc. Oxygen compressed in a cylinder, a regenerating substance to purify the breathed air, and a closed system constitute the general principle of the apparatus. See also: [mine rescue apparatus](#)

rescue-car

See: [mine rescue car](#)

rescue station

Mine chamber equipped with rescue gear, including oxygen apparatus, and manned by trained rescue workers. *Pryor, 3*

rescue team

A team of workers, from five to eight strong, trained in the use of breathing apparatus and in rescue operations after colliery explosions or mine fires. The team trains every week or so at a rescue station. *Nelson*

research

Word often misused. Two broad meanings are reexamination of previously accepted data in the light of current expansion of basic knowledge; and search in reality, specific to an entirely novel concept and calling for development of new approaches. Wrongly defined when descriptive of original rehash. *Pryor, 3*

resection

a. A method in surveying by which the horizontal position of an occupied point is determined by drawing lines from the point to two or more points of known position. Syn: [intersection](#) b. A method of determining a plane-table position by orienting along a previously drawn foresight line and drawing one or more rays through the foresight from previously located stations. *AGI*

resequent fault-line scarp

A fault-line scarp in which the structurally downthrown block is also topographically lower than the upthrown block. CF: [obsequent fault-line scarp](#)

reserve

a. The quantity of mineral that is calculated to lie within given boundaries. It is described as total (or gross), workable, or probable working, depending on the application of certain arbitrary limits in respect of deposit thickness, depth, quality, geological conditions, and contemporary economic factors. Proved, probable, and possible reserves are other terms used in general mining practice. *BS*, 7 b. Sampled ore, developed, blocked out, or exposed on not less than three sides. See also: [development sampling](#); [ore reserve](#); [probable ore](#); workable. *CTD* c. The amount of payable ore, developed and ready for extraction, or blocked out ahead of immediate requirements. *Weed*, 2

reserve base

That part of an identified resource that meets specified minimum physical and chemical criteria related to current mining and production practices, including those for grade, quality, thickness, and depth. The reserve base is the in-place demonstrated (measured plus indicated) resource from which reserves are estimated. It may encompass those parts of the resources that have a reasonable potential for becoming economically available within planning horizons beyond those that assume proven technology and current economics. The reserve base includes those resources that are currently economic (reserves), marginally economic (marginal reserves), and some of those that are currently subeconomic (subeconomic resources). The term geologic reserve has been applied by others generally to the reserve-base category, but it also may include the inferred-reserve-base category; geologic reserve is not part of this classification system. *USGS*, 2

reserved coal

Coal reserved from lease, as coal under buildings.

reserved lands

Defined by the U.S. Department of the Interior as "federal lands which are dedicated or set aside for a specific public purpose or program and which are, therefore, generally not subject to disposition under the operation of all the public land laws." *SME*, 1

reserved mineral

Economic minerals that are not the property of the landowner but belong to the State. The State confers the right to prospect for and to mine these minerals on any one who applies for this right on the form prescribed and at the competent mining office. Such minerals as coal and iron ores are included in this group. CF: [unreserved mineral](#)

reserves

a. An estimate within specified accuracy limits of the valuable metal or mineral content of known deposits that may be produced under current economic conditions and with present technology. *Shanz* b. That part of the reserve base that could be economically extracted or produced at the time of determination. The term reserves need not signify that extraction facilities are in place and operative. Reserves include only recoverable materials; thus, terms such as extractable reserves and recoverable reserves are redundant and are not a part of this classification system. Syn: [mineral reserves](#) See also: [measured resources](#)

reset action (nonstandard)

In flotation, the component of control action in which the final control element is moved at a speed proportional to the extent of proportional position action. This term applies only to a multiple action including proportional position action. *Fuerstenau*

reset bit

A bit made by reusing the sound diamonds salvaged from a used drill bit and setting them in the crown attached to a new bit blank. Some new diamonds usually are added to those salvaged, since generally not all of the salvaged or recovered stones are reusable. Syn: [replacement bit](#) *Long*

resettable

A salvaged diamond or used diamonds in good condition; hence, diamonds that can be used again by being reset in another tool or bit. Also called usable diamond; usables; usable stone. *Long*

resetting

a. The act or process of producing a reset bit. See also: [reset bit](#) *Long* b. To rerun a casing string into a borehole by placing its bottom end at a lower point in the hole. *Long*

residual

a. Characteristic of, pertaining to, or consisting of residuum; remaining essentially in place after all but the least soluble constituents have been removed. b. Standing, as a remnant of a formerly greater mass of rock or area of land, above a surrounding area that has been generally planed; said of some rocks, hills, mesas, and groups of such features.

residual arkose

See: [grus](#)

residual boulder

A boulder of local origin produced by weathering and standing in locally derived soil or grus.

residual clay

Clay material formed in place by the weathering of rock, derived either from the chemical decay of feldspar and other rock minerals or from the removal of nonclay-mineral constituents by solution from a clay-bearing rock (such as an argillaceous limestone); a soil or a product of the soil-forming processes. CF: [primary clay](#); [secondary clay](#). *AGI*

residual element

An element present in an alloy or other material in small quantities after some type of treatment, but not added intentionally. *ASM, 1*

residual errors

The differences between measured values and the most probable value. *Seelye, 2*

residual field

a. See: [residual magnetic field](#) b. The field remaining after subtraction of an average or background field (e.g., gravity, magnetic).

residual gravity

In gravity prospecting, the portion of a gravity effect remaining after removal of some type of regional variation; usually the relatively small or local anomaly components of the total or observed gravity field. *AGI*

residual liquid

A late-stage magmatic fluid. Syn: [rest magma](#)

residual magnetic field

a. The magnetic field that remains in a part after the magnetizing force is removed. *ASM, 1* b. See: [residual field](#)

residual magnetism

a. In magnetic prospecting, the portion of a magnetic effect remaining after removal of some type of regional effect; usually the relatively small or local anomaly components of the total or observed magnetic field. *AGI* b. The magnetism remaining in a substance after the magnetizing force has been removed. See also: [remanence](#)

residual minerals

The rock-forming minerals that are either stable in the surface environment or unstable but react so slowly that they are not appreciably broken down. *Hawkes, 1*

residual oil

a. The amount of liquid petroleum remaining in a formation at the end of a specified production process. *AGI* b. Liquid or semi-liquid products obtained as residues from the distillation of petroleum. They contain the asphaltic hydrocarbons. Residual oils are also known as asphaltum oil, liquid asphalt, black oil, petroleum tailings, and residuum. *CCD, 2*

residual ore deposit

An accumulation of valuable minerals, formed by the natural removal of undesired constituents of rocks or conversion of useless to useful components.

residual placer

See: [residual ore deposit](#)

residuals

The elements ordinarily present in steel in small quantities without definite intent on the part of the steel maker. *Osborne*

residual stress

The stress that exists in an elastic solid body in the absence of, or in addition to, stresses caused by an external load. Such residual stress may be due to: (1) deformation, caused by cold-working, as in drawing or stamping; (2) change in the specific volume due to thermal expansion, a phase change, or magnetostriction; (3) by the joining together of structural parts by force, such as welding. *Hammond*

residue

a. The waste or final product from a hydrometallurgical plant. *Fay* b. S. Afr. The amount of valuable matter remaining in ore after treatment, in percent or pennyweights per ton. *Beerman* c. As applied to proximate analysis of coke, a calculated figure obtained by

subtracting the sum of the percentages of moisture in the analysis sample, volatile matter, and ash from 100. *BS, 1* d. That which remains after a part has been separated or otherwise treated. e. See: [rock fracture](#)

residuite

a. The constituent petrological unit or maceral occurring as characteristic unresolvable granular and translucent groundmass in clarain. *AGI* b. Same as residuum. *Tomkeieff*

residuum

a. Weathered material, including the soil, down to fresh, unweathered rock. *Legrand* b. Material resulting from the decomposition of rocks in place and consisting of the nearly insoluble material left after all the more readily soluble constituents of the rocks have been removed. c. The structureless groundmass of microscopically unresolvable constituents, consisting of particles of one to two microns or less, usually opaque, and of a dark color. It is the same as the lower range of fine micrinite. See also: [residue](#)

resilience

The ability of a material to store the energy of elastic strain. This ability is measured in terms of energy per unit volume. *AGI*

resilient couplings

The resilient type of coupling has many designs but essentially has torsional response to application or variation of the transmitted load. For the all-metal types, the resilient element may be in the form of laminated spring packs or a cylindrical grid member, connecting the driver and driven hubs. Resilience damps shock loads and also provides means of keeping gear teeth in contact, compensating for small errors in gear cutting. Other types use rubber or rubberlike material that may be in the form of a spider, segmental blocks, a number of balls, or a molded disk with metal inserts, providing the connection between the driver and driven hubs. *Pit and Quarry*

resiliometer

A device for testing resilience. *Standard, 2*

resin

a. One of various hard, brittle, transparent or translucent solids formed esp. from plant secretions and obtained as exudates of recent or fossil origin, such as conifers and certain tropical trees, by condensation of fluids on loss of volatile oils. Resins are yellowish to brown with resinous luster; fusible and flammable; soluble in ether and other organic solvents, but not in water; and represent a complex mixture of terpenes, resin alcohols,

and resin acids and their esters. CF: [amber](#); fossil resin. See also: [mineral resin](#) b. A synthetic addition or condensation polymerization substance or natural substance of high molecular weight, which under heat, pressure, or chemical treatment becomes moldable. See also: [bead](#); [beads](#). *Jessop*

resin-anchored bolts

A passive roof-bolting technique in which a rebar-type bolt is anchored in resin. A two-part resin cartridge is placed at the back of a hole and is mixed as the bolt is inserted and rotated. The bolt is forced tight against the roof until the resin sets.

resin-in-pulp

An ion exchange process applied in acid-leach slurry from which abrasive particles of sand have been removed. Abbrev., R.I.P. *Pryor, 3*

resin-in-pulp (RIP) process

The method in which pulp is classified to remove the sands, and the resin adsorbs the metal directly from the slime pulp without the necessity of thickening or filtering. It is esp. adapted for ores that do not settle readily, and where thickening and filtration are difficult. *Newton, 1*

resinite

A maceral of coal within the exinite group, consisting of resinous compounds, often in elliptical or spindle-shaped bodies representing cell-filling matter or resin rodlets. CF: [cutinite](#); [sporinite](#). *AGI*

resinite coal

This coal consists of more than 50% of small resin bodies embedded in gelito-collinite, fusinito-collinite, or in collinite of fusinitic nature. The resin bodies differ in shape and may be angular, spheroidal, or lenticular. Varying in size, they may be visible to the unaided eye in a hand specimen of coal or only distinguishable under the microscope. Resinite coal may also contain small quantities of microspores, fine fragments of fusinized tissue, and, not infrequently, broad streaks of vitrinite. Hand specimens of resinite coal are matt or semimatt and in coals of low rank are brown or brownish-black. On fractures perpendicular to the bedding, the resin bodies appear rounded, black, and lustrous; in the bedding planes themselves they frequently appear as matt rodlets. Resinite coals frequently are high in ash. *IHCP*

resin jack

See: [sphalerite](#)

resinoid

A coal constituent similar to material derived from resin. *AGI*

resinous

a. Resembling resin, as opal, and some yellow varieties of sphalerite. *Fay* b. The luster on fractured surfaces of minerals, e.g., opal, sulfur, amber, and sphalerite, and rocks, e.g., pitchstone. CF: [vitreous](#)

resinous coal

Coal in which the attritus may contain a large proportion of resinous matter. Coals of this type are found more often among the younger coals. *AGI*

resin rodlets

A fossil resinous secretion that may be isolated from coal. It was presumably deposited in a resin duct by a secretory epithelium. *AGI*

resin tin

See: [cassiterite](#)

resistance

a. When an air current flows through a mine it meets with frictional resistance from the roof, sides, and floor. The amount of this resistance depends upon the extent and nature of the rubbing surface, the area of the airways, and the velocity of the air. See also: [Atkinson](#) b. In flotation, a property opposing movement of material or flow of energy, and involving loss of potential (voltage, temperature, pressure, and level). *Fuerstenau* c. The property of an electrical circuit that opposes the flow of a current and is measured in ohms. Syn: [thermal resistance](#)

resistance methanometer

A version of the catalytic methanometer with the addition of improved detector elements. Platinum may be used as the filament that both heats the detecting element and acts simultaneously as a resistance type thermometer. Gas is drawn through the instrument by a rubber suction bulb, and the filaments are heated from a dry battery of the mercury type contained in the apparatus. Readings of methane concentration can be taken on the built-in electrical meter. *Nelson*

resistance of detonator

As applied to electric blasting caps, the total resistance of the leg wires and the bridge wire. *Fraenkel*

resistance strain gage

See: [electrical resistance strain gage](#)

resistance to blasting

Specific value of the resistance of the rock to the explosive force, determined by trial blasting. It is a function of maximum burden, hole depth, quantity of explosive (degree of packing), and throw. *Fraenkel*

resistivity

a. Resistance, R , of a block of specified material in terms of units of length l and cross section a . Unit volume is 1 cm^3 of the material concerned, and the resistivity measurement is made during electrical prospecting. Specific resistance = $(Ra) / l$. *Pryor, 3* b. The electrical resistance offered to the passage of a current. Usually expressed in ohm meters, which is the electrical resistance of a column of fluid 1 m long and 1 m^2 in cross section. *Brantly, 1* c. The opposite of conductivity of an electrical current passing through fluid-bearing rock formations. *Wheeler, R.R.* d. The electrical resistance between opposite faces of a 1-cm cube of a given substance. The unit of resistivity is ohm/centimeter. *Hy* e. The reciprocal of conductivity. Syn: [thermal resistivity](#) *Strock, 2*

resistivity method

Any electrical exploration method in which current is introduced into the ground by two contact electrodes and potential differences are measured between two or more other electrodes. *AGI*

resistivity profile

a. A geophysical survey using the resistivity method. An assembly of electrodes spaced at a constant distance is moved along profiles, resulting in lateral variations in resistivity being shown. In favorable terrain, the test shows the existence of faults that have thrown strata of different resistivity against each other; similar relationships result in the detection of an anticline, a syncline, or an underground channel. *Nelson* b. A survey by the resistivity method in which an array of electrodes is moved along profiles to determine lateral variations in resistivity. *AGI*

resistor

A device to provide resistance in an electric circuit, usually to limit the current, dissipate energy, or provide heat. *Kentucky*

resoiling

The replacement of the original topsoil at an opencast site on completion of operations to allow the growing of crops. See also: [surface reinstatement](#)

resolution

a. A measure of the ability of individual components, and of remote-sensing systems, to distinguish detail or to define closely spaced targets. *AGI* b. The minimum size of a feature that can be detected. See also: [resolving power](#) c. The separation of a vector into its components. *AGI* d. The sharpness with which the images of two closely adjacent spectrum lines, etc., may be distinguished. *AGI* e. In gravity or magnetic prospecting, the indication in some measured quantity, such as the vertical component of gravity, of the presence of two or more close but separate disturbing bodies. *AGI* f. In seismic prospecting, the ability to indicate separately two closely adjacent interfaces. *AGI* g. The ability of an optical or radiation system to separate closely related forms or entities; also, the degree to which they can be discriminated. *ASM, 1*

resolution limit

In gravity and magnetic prospecting, the separation of two disturbing bodies at which some obvious indication in a measured quantity of the presence of two separate bodies ceases to be visible. *AGI*

resolved-time method

A seismic reflection technique that involves the plotting of reflections in time and the representation of horizontal distances along the section in equivalent time units (obtained by dividing the true horizontal distance by the sub-weathering velocity as determined from first-arrival times). Once this transformation of the coordinate system is made, migration is accomplished by swinging arcs of reflection times from successive shot points and drawing lines which are tangent to the respective arcs for the same events from adjacent shot points. For the final mapping of migrated horizons in depth, the times are recorded directly beneath the shot points. These times are converted to depths by using the best available velocity information. *Dobrin*

resolving power

In optical viewing, the minimum distance possible between two separately distinguishable objects. *Pryor, 3*

resonance

a. A term denoting a variety of phenomena characterized by the abnormally large response of a system having a natural vibration period to a stimulus of the same, or

nearly the same, frequency. *AGI* b. A buildup of amplitude in a physical system when the frequency of an applied oscillatory force is close to the natural frequency of the system. *AGI*

resonance screen

A high-speed vibrating screen in which the applied force has a frequency equal to the natural frequency of the suspended mass. In its basic form, the vibrating frame of the resonance screen is a mass oscillating between two compression springs, that alternately store and return this energy. *Nelson*

resonant frequency drilling

Drilling that utilizes longitudinal vibration corresponding to the resonant frequency of the drill string in order to "fluidize" the sediments being sampled, thereby achieving efficient penetration. *Padan*

resorption border

A border of secondary minerals, produced by partial resorption and recrystallization, surrounding an original crystal constituent of a rock. Syn: [corrosion border](#)

resource

A concentration of naturally occurring solid, liquid, or gaseous material in or on the Earth's crust in such form and amount that economic extraction of a commodity from the concentration is currently or potentially feasible. *USGS, 2*

resource characterization

The determination of the shape, size, quality, quantity, and variability of the geologic entity and the limits of variable geologic features, so as to provide the information for synthesis of commonly subtle features into an accurate, predictive description of the resource environment. *SME, 1*

respirable-size particulate

Particulates in a size range that permits them to penetrate deep into the lungs upon inhalation. *NSC, 2*

respirator

a. A device (such as a gas mask) for protecting the respiratory tract (against irritating and poisonous gases, fumes, smoke, dusts) with or without equipment supplying oxygen or air. *Webster 3rd* b. A device for maintaining artificial respiration. *Webster 3rd* c. The

mining-type respirator is a fitting that covers the nose and mouth to prevent the wearer inhaling excessive quantities of dust. Tunnel miners and workers at sinter plants and blast furnaces are issued respirators for use where danger is known to exist. See also: [filter-type respirator](#); mask. *Nelson* d. A device worn over the mouth or nose for protecting the respiratory tract from noxious gases or dust.

respirator protection factor

- a. A measure of the degree of protection provided by a respirator to the wearer. *FR 166*
- b. The ratio of the ambient concentration of an airborne substance to the concentration of the substance inside the respirator at the breathing zone of the wearer, a measure of the degree of protection provided by a respirator to the wearer. *ANSI*

respiratory cycle

One complete breath--an inspiration followed by an expiration, including any pause that may occur between the movements. *Hunt*

resplendent

Referring to a degree of luster that reflects with brilliancy and gives well defined images; e.g., hematite and cassiterite.

rest magma

See: [residual liquid](#)

restoration

- a. Restoring the disturbed land to the conditions which existed at the site before any disturbance occurred. *SME, 1*
- b. The process of gaining or recovering land, bringing it into a condition for cultivation or other use. *SME, 1*
- c. Response to any disturbances to the Earth and its environment caused by mining activity. *SME, 1*
- d. Returning the disturbed site "to a form and productivity in conformity with a prior use plan." *SME, 1*
- e. The Surface Mining Control and Reclamation Act of 1977 (SMCRA) states that, among other provisions, reclamation must "restore the land affected to a condition capable of supporting the uses which it was capable of supporting prior to any mining, or higher or better uses." *SME, 1*

restore circulation

The action taken to fill or seal the cracks or openings through which drill fluid is escaping from the borehole into the rocks forming the walls of the borehole and by which the drill fluid is made to return to and overflow the collar of the borehole. *Long*

restrained cable plug and socket

a. A flameproof restrained plug and socket incorporates an interlock to ensure that the power connections are dead when they are separated or until they make contact; the design is such that the enclosure is flameproof at all times when there is contact between the pins and tubes. *BS, 13* b. A plug and socket designed to be held together by an operating bolt, or screwed union ring, or other equivalent device, the use of which enables the plug to be readily inserted or withdrawn. *BS, 13*

restrained plug and socket

These are used when the cable is removed from a machine or apparatus frequently. The most common type is the 100-amp British Standard plug and socket, and it is employed to connect the trailing cable to a coal cutter or face conveyor. The gland of the plug is arranged to grip the sheath of the cable and to make connection with the screen and earth core. Power and pilot conductors are connected to the appropriate contact tubes, which make connection with corresponding pins in the socket portion. *Mason*

restricted earth fault protection

As used in mining, a system of earth fault protection in which the fault current is limited, without requiring the use of sensitive earth fault protection. *BS, 13*

restricted resources

That part of any resource category that is restricted from extraction by laws or regulations, but otherwise meets all the requirements of reserves. *USGS, 2*

rests

The arrangement at the top and bottom of a shaft, or intermediate levels, for supporting the shaft cage while changing the tubs or cars. See also: [chair](#); [catch](#); [wing](#).

resue

a. To mine or strip sufficient barren rock to expose a narrow but rich vein, which is then extracted in a clean condition. *Nelson* b. To open up a stope, not in the vein but in the wall rock. See also: [resuing](#) c. In lode mining, separate removal of undercut barren rock immediately below a lode or vein too narrow for human entry. Following this, the lode is mined and separately removed. Used when the lode is less than 30 in (76 cm) wide. *Pryor, 3*

resuing

a. A method of stoping wherein the wall rock on one side of the vein is removed before the ore is broken. Employed on narrow veins, less than 30 in (76 cm), and yields cleaner ore than when wall and ore are broken together. b. A method of stoping in which the ore is broken down first and then the waste or vice versa; usually the one which breaks easier is blasted first. The broken waste is left in the stope as filling, and the ore is broken down on flooring laid on the fill to prevent admixture of ore and waste. Resuing is applicable where the ore is not frozen to the walls and works best if there is considerable difference between the hardness of the ore and of the wall rocks.

resurgence

See: [emergence](#)

retaining mesh

In sieving or screening, that mesh at which division is made between oversize (arrested on screen) and undersize (passing through meshes). *Pryor, 3*

retaining ring

a. In drilling, a shoulder inside a reaming shell that prevents entry of the core lifter into the core barrel. *Long* b. A term sometimes incorrectly applied to a core lifter. *Long*

retaining screen

The screen that has retained the particles. *Pit and Quarry*

retaining structure

A temporary or permanent structure used for holding dredged material on a limited basis, not to be confused with a confined disposal facility.

retardation

In crystal optics, the amount by which the slow wave falls behind the fast wave during passage through an anisotropic crystal plate. Retardation depends on plate thickness and the difference in refractive indices of its two principal directions. *AGI*

retarding conveyor

a. A chain-type conveyor used on steeply inclined faces, where the problem is not so much to move the coal but rather to restrain its movement downhill. It consists of link chains carrying discs 6 to 8 in (15 to 20 cm) in diameter at every yard (0.9 m). The endless chain runs in an open semicircular trough, and the coal is lowered to the discharge end. The chain returns uphill, in an enclosed tube, to the driving unit at the top

end. Its capacity is about 100 tons per hour. *Nelson* b. Any type of conveyor used to retard the rate of movement of bulk materials, packages, or objects, where the slope is such that the conveyed material tends to propel the conveying medium. See also: [declining conveyor](#)

retentivity

The capacity of a material to retain a portion of the magnetic field set up in it after the magnetizing force has been removed. *ASM, 1*

retgersite

A tetragonal mineral, $\text{NiSO}_4 \cdot 6\text{H}_2\text{O}$; dimorphous with nickelhexahydrite; blue green; associated with morenosite, the septehydrate.

Retger's salt

Thallium silver nitrate that melts to a yellow liquid at 75 degrees C having a density of 4.6 g/cm^3 ; can be diluted and used as a heavy liquid for mineral separation.

reticular

See: [reticulate](#)

reticulate

a. Said of a vein or lode with netlike texture; e.g., stockwork. CF: [stockwork](#) b. Said of a rock texture in which crystals are partially altered to a secondary mineral, forming a network that encloses remnants of the original mineral. CF: [mesh texture](#) Syn: [reticular](#)

reticulated

A mineral structure of fibers or columns that cross to resemble a net; e.g., rutile. See also: [reticulate](#)

reticulated veins

Veins that cross each other, forming a network. See also: [stockwork](#)

reticulate texture

See: [mesh texture](#)

reticule

A set of intersecting very fine lines, wires, etc., in the optical focus of an optical instrument. It is also referred to as graticule. See also: [collimation line](#)

reticulite

An extremely attenuate pyroclastic rock consisting of glass threads which join a series of points forming a polyhedral space lattice. It is formed from pumice by the collapse of the walls of adjacent vesicles and the retraction of the liquid into threads which form the perimeters of the former polygonal faces. The threads are usually of triangular cross section, indicating chilling, before rounding could take place. Such rock has generally been known by Dana's name, thread-lace scoria. See also: [thread-lace scoria](#)

retiform

Netted; reticulate; said of the boundaries of some vein quartz (rare). *Hess*

retigen

Bitumen contained in meteorites. The name indicates that this substance on distillation gives rise to resin, in contrast to kerogen which on distillation gives rise to oil. *Tomkeieff*

retinalite

A massive, honey-yellow or greenish variety of serpentine with a waxy or resinous luster.

retinasphalt

A light brown resinous substance found in brown coal in Devonshire, England. *Tomkeieff*

retinite

A variety of fossil resin found as rodlets secreted in canals or ducts of coal-forming plants.

retinosite

A microscopical constituent of torbanite consisting of translucent orange-red discs. CF: [gelosite](#); [humosite](#); [matrosite](#). *Tomkeieff*

retonation wave

A wave passing back through burned or burning explosion gases toward the origin, at the rate of a sound wave through gases of like temperature, from a point in the explosion wave, usually of high pressure, to an area of lower pressure. *Rice, 2*

retort

a. A vessel used for the distillation of volatile materials, as in the separation of some metals and the destructive distillation of coal. *ASM, 1* b. A long semicylinder, now usually of fireclay or silica, for the manufacture of coal gas. *Webster 3rd* c. See: [amalgam retort](#)

retorting

a. Removing the mercury from an amalgam by volatilizing it in an iron retort, conducting it away, and condensing it. *Fay* b. In the sulfur industry, synonymous with sublimation. *Fay*

retort pressman

A person who operates a hydraulic press in which fireclay retorts, used in smelting zinc ores, are made. *DOT*

retract

The mechanism by which a dipper shovel bucket is pulled back out of the digging. *Nichols, 1*

retractable wedge

A type of deflecting wedge that can be retrieved after the deflected drill hole has been completed. Syn: [retrievable wedge](#)

retracting

See: [crowding](#)

retreat

To work rooms or pillars to finish coal or ore extraction in an area that has been penetrated to its limits by advance work; workings are generally in the opposite direction of advance work and allow the area to be abandoned as finished. *BCI*

retreating longwall

a. First driving haulage road and airways to the boundary of a tract of coal and then mining it in a single face without pillars back toward the shaft. *Fay* b. See: [longwall retreating](#)

retreating system

a. A method of working a mine that is designed to allow a stope to cave soon after it is worked out, thus relieving the weight on the supports in adjacent stopes. *Lewis* b. A method of extracting coal or ore by driving a narrow heading to the boundary, then opening out a face and working the deposit backwards towards the shaft, drift, or main entry. See also: [longwall retreating](#) *Nelson* c. A stoping system in which supporting pillars of ore are left while deposit is worked outward from shafts toward the boundary, the pillars being removed (robbed) as the work retreats toward the shaft; the unsupported workings are abandoned and left to cave in. *Pryor*, 3 d. A system of robbing pillars in which the line of pillars being robbed retreats or moves from the boundary toward the shaft or mouth of the mine. See also: [longwall retreating](#)

retrievable inner barrel

The inner barrel assembly of a wire-line core barrel, designed for removing core from a borehole without pulling the rods. *Long*

retrievable wedge

See: [retractable wedge](#)

retrieving ring

A catch ring on a retractable wedge that engages a lifting device on the deflection barrel or bit, enabling the drill runner to remove a deflecting wedge from a borehole after deflection has been effected. *Long*

retrograde metamorphism

The mineralogical adjustment of relatively high-grade metamorphic rocks to temperatures lower than those of their initial metamorphism, characteristically inducing hydration and hydrous minerals. Syn: [retrogressive metamorphism](#); [diaphthoresis](#). CF: [prograde metamorphism](#)

retrogressive metamorphism

See: [retrograde metamorphism](#)

return

a. Any airway in which rapid air flows from the workings to the upcast shaft or fan. See also: [intake](#) b. Any airway which carries the ventilating air from the face outby and out of the mine. *BS, 8* c. Any surface turned back from the face of a principal surface. *ACSG, 1* d. The rate of profit in a process of production per unit of cost. *Webster 3rd*

return air

a. Air traveling in a return. *BS, 8* b. Air that has circulated the workings and is flowing towards the main mine fan; vitiated or foul air. *Nelson* c. Air returning to a heater or conditioner from the heated or conditioned space. *Strock, 2*

return aircourse

Portion of ventilation system of mine through which contaminated air is withdrawn and evacuated to surface. *Pryor, 3*

return circulation

That portion of a circulated drill fluid flowing from the face of a bit toward the collar of a borehole. CF: [return water](#)

returning charge

Charge made per unit of ore or concentrate treated by smelter in custom smelting. In addition to a basic charge that allows for process costs and agreed percentage loss in recovery, extra charges may be specified, or remitted as premiums, in adjustment of variations from the normal makeup of the parcel treated. *Pryor, 3*

returning fluid

The water, mud, or other circulated medium reaching the borehole collar after having been circulated past the drill bit. *Long*

return-line corrosion tester

A tester developed by the U.S. Bureau of Mines for detecting and controlling corrosion in steam-condensate-return lines of large heating plants. This tester determines types and rates of corrosion and can distinguish among various possible causes. It is assembled from ordinary black iron pipe nipples and couplings, the linings are easily machined, and the corroded linings can be analyzed quickly in any laboratory.

return man

In anthracite coal mining, one who resets timbers, shovels up falls of slate, rock, or dirt, and keeps in general repair the airways by which mine air returns to the surface. *DOT*

returns

a. The drill fluid and entrained sludge that overflows the collar of a borehole. *Long* b. In seismic reflection prospecting, the signals reflected back to the surface from layer boundaries in the subsurface. c. Also used in geophysical prospecting to register passage of waves caused by detonation of dynamite. *Hess*

return water

Drill fluid that reaches the surface and overflows the borehole collar after it has been circulated downward through the rods and past the drill bit. *Long*

retzian

An orthorhombic mineral, $(\text{Mn,Mg})_2(\text{Ce,La,Nd})(\text{AsO}_4)(\text{OH})_4$; speciated on the basis of predominance of cerium, lanthanum, or neodymium; in dolomite cavities in Sweden.

reussin

An impure Glauber's salt (mirabilite), found native. *Standard, 2*

reussinite

A resinlike, reddish-brown oxygenated hydrocarbon, soluble in boiling alcohol and in ether. Found in certain coal deposits.

revdanskite

An impure, hydrous nickel silicate from Revda (Revdinsk), Ural Mountains, Russia. Also spelled revdinite, revdinskite, rewdinskit, rewdanskite; rewdjanskit, and refdanskite. *English; Hey, 1*

revegetation

The process of restoring or replacing the botanical species upon an area disturbed by mineral operations. Revegetation is a customary requirement for reclamation of a mineral operation. *SME, 1*

reverberate

a. To deflect flame or heat, as in a reverberatory furnace. *Fay* b. To reduce by reverberated heat; to fuse. *Fay*

reverberation

a. The persistence of sound in an enclosed space as a result of multiple reflections after the sound source has stopped. *Hunt* b. The sound that persists in an enclosed space, as a result of repeated reflection or scattering, after the source of the sound has stopped.

Hunt

reverberatory furnace

A furnace, with a shallow hearth, usually non-regenerative, having a roof that deflects the flame and radiates heat toward the hearth or the surface of the charge. Firing may be with coal, pulverized coal, oil, or gas. Two of the most important types are the open-hearth steel furnaces and the large reverberatories employed in copper smelting. *ASM, I; CTD; Newton, I*

ASM, I; CTD; Newton, I

reversal

A local change of approx. 180 degrees in the direction of the regional dip.

reversal of ventilation

In the case of a centrifugal fan, the reversal arrangement may consist of an emergency drift connecting the fan with the downcast shaft. The drift is normally sealed off by airtight doors. In the case of an axial-flow fan, it is only necessary to reverse the rotation of the fan. This arrangement entails a reduction in volume and pressure in the reversed airflow. *Nelson*

reverse bearing

In surveying, a sight along the reverse direction of a line; the reciprocal of a given bearing. See also: [backsight](#)

reverse bend

To bend a line over a drum or a sheave, and then in the opposite direction over another sheave. *Nichols, I*

reverse book fashion

The manner in which drill core is laid in a core box, starting at the upper-right-hand corner of the box and laying core from right to left in each groove. CF: [snake fashion](#)

reverse circulation

The circulation of bit-coolant and cuttings-removal liquids, drilling fluid, mud, air, or gas down the borehole outside the drill rods and upward inside the drill rods. Also called countercurrent; counterflush. See also: [circulating fluid](#)

reverse-circulation core barrel

A core barrel designed so that core tends to float within the barrel when the fluid is circulated down the outside of the rods and returned to the surface inside the rods. *Long*

reverse classification

In jigging, stratification of particles by size with largest uppermost; in streaming, rolling effect of transporting current that arranges particles with smallest nearest feed end.

Pryor, 3

reverse-current braking

A method used in the braking of alternating-current winders. This method absorbs power equal to the energy destroyed and dissipates it in the liquid controller as heat. Two phases of the stator supply are interchanged by bringing back the driver's lever to the off position and then to that for the opposite direction of drum rotation. The amount of braking depends upon the position of the lever, since the lower the resistance in the controller, and therefore in the rotor circuit, the greater the rotor current and the braking torque produced. When the direction of rotation of the stator magnetic field is reversed, the voltage between the stator and the rotor is doubled and the insulation of both must be adequate to prevent breakdown. *Sinclair, 5*

reversed

See: [overtuned](#)

reversed bratticing

A method of narrow heading ventilation in coal mines by means of a brattice partition. The air is led to the face along the wide section of the heading and the contaminated air returns from the face along the narrow section. In this way, workers in the heading are placed in relatively clean air. *Nelson*

reversed fault

See: [reverse fault](#)

reversed flush boring

See: [counterboring](#)

reversed loader

A front-end loader mounted on a wheel tractor having the driving wheels in front and steering at the rear. *Nichols, I*

reverse fault

A fault on which the hanging wall appears to have moved upward relative to the footwall. The dip of the fault is usually greater than 45 degrees . There is dip separation but there may or may not be dip slip. CF: [normal fault](#) *AGI*

reverse feed

To move bit and drill stem backwards away from the borehole bottom while the drill stem is rotated. *Long*

reverse-feed gear

System of gears in drill swivel head that can be engaged to move the bit and drill stem backwards away from the bottom of the borehole while the drill stem is rotated in a clockwise direction. Syn: [backup gear](#); reverse gear. *Long*

reverse gear

See: [reverse-feed gear](#)

reverse initiation

See: [inverse initiation](#)

reverse laid rope

A wire rope with alternate strands right and left lay. *Hunt*

reverse reaming

See: [ream back](#)

reversible auxiliary ventilation

In this system, a single duct is provided and is normally operated by a blowing fan. After blasting, airflow is reversed and the fumes and dust are exhausted. Ventilation is again reversed to blowing, when the work at the face is resumed. The usual arrangement is to use two fans, one for forcing, one for exhausting, at the mouth of the heading. This arrangement is particularly suited to underground use as it allows clean air to be drawn from, and contaminated air to be discharged to, separate points in the main airways. See also: [auxiliary ventilation](#); two-fan auxiliary ventilation.

reversible endless-rope system

A haulage system in which a single rope is used passing around a surge wheel. A single track may be used or, if more than one train is hauled, a single track with passbys, or a three-rail system with passbys, that eliminates facing points, may be used. The system may be operated at higher speeds than normal endless systems since the trains are attached and detached from a rope at rest; it has been used for the haulage of workers at speeds up to 12 mph. Extra rope must be spliced onto the rope, and the return wheel moved forward, when the system is extended. *Sinclair, 5*

reversible pick

See: [double-ended pick](#)

reversible transducer

See: [bilateral transducer](#)

reversing clutch

A forward-and-reversing transmission that is shifted by a pair of friction clutches. *Nichols, 1*

reversing doors

The system of doors or shutters on or near a surface radial-flow fan for reversing the direction of the air passing through a mine. *BS, 8*

reversing machine

A molding machine having a flask or flasks that may be turned over for ramming the sand. *Standard, 2*

reversing mill

A type of rolling mill in which the stock being mechanically worked by rolling passes backwards and forwards between the same pair of rolls, which are reversed between each pass. See also: [continuous mill](#); three-high mill. *CTD*

reversing shaft

A shaft whose direction of rotation can be reversed by the use of clutches or brakes. *Nichols, 1*

reversing thermometer

A mercury-in-glass thermometer used to measure temperatures of the sea at depth. The temperature is recorded when the thermometer is inverted; and the recording is maintained until it is once again upright. A protected thermometer and an unprotected thermometer are usually used as a pair, attached to a Nansen bottle. *AGI*

revetment

a. A facing, sheathing, or retaining wall of masonry or other materials for protecting a mass or bank of earth, etc., as in fortifications and riverbanks. *Standard, 2* b. A wall sloped back sharply from its base. *Nichols, 1*

revolution

An obsolete term for a time of profound orogeny and other crustal movements, on a continentwide or even worldwide scale, the assumption being that such revolutions produced abrupt changes in geography, climate, and environment. See: [orogeny](#)

revolving screen

A screen consisting of a cylindrical (sometimes conical) screening surface mounted on a revolving frame for sizing coarse material; it is still common in gravel-washing, coal-washing, and stone-treating plants, but is not widely used in ore dressing. See also: [trommel](#); [trommel screen](#). *Newton, 1*

revolving shovel

A digging machine that has the machinery deck and attachment on a vertical pivot, so that it can swing independently of its base. *Nichols, 1*

revolving washing screens

The rotary washing screen is cylindrical in shape and made of three sections--a scrubber, a sand jacket, and a gravel-screening section--mounted on a steel frame. *Pit and Quarry*

rewash

To re-treat a product in the same or in another washer. *BS, 5*

rewash box

A washbox to which the product (or a portion thereof) of a previous washing operation is fed for additional treatment. *BS, 5*

rewdanskite

See: [revdanskite](#)

reworked

Said of components derived from an older sedimentary formation and incorporated in a younger one.

Reynolds number

A numerical quantity used as an index to characterize the type of flow in a hydraulic structure in which resistance to motion depends on the viscosity of the liquid in conjunction with the resisting force of inertia. It is the ratio of inertia forces to viscous forces, and is equal to the product of a characteristic velocity of the system (e.g., the mean, surface, or maximum velocity) and a characteristic linear dimension, such as diameter or depth, divided by the kinematic viscosity of the liquid; all expressed in consistent units in order that the combinations will be dimensionless. The number is chiefly applicable to closed systems of flow, such as pipes or conduits where there is free water surface, or to bodies fully immersed in the fluid so the free surface need not be considered. *AGI*

Rf value

In paper-strip chromatography, ratio of distance moved by component in solution under test to that of transporting solvent. *Pryor, 3*

rhabdite

See: [schreibersite](#)

rhabdomancy

A form of dowsing using a rod or twig. CF: [dowsing](#)

rhabdophane

a. A hexagonal mineral, $(\text{Ce,La,Nd})\text{PO}_4 \cdot \text{H}_2\text{O}$; speciated on the basis of predominance of cerium, lanthanum, or neodymium; Also spelled rhabdophanite. b. The mineral group brockite, grayite, ningyoite, rhabdophane-(Ce), rhabdophane-(La), rhabdophane-(Nd), and tristramite.

rheid

a. A substance below its melting point that deforms by viscous flow during the time of applied stress at an order of magnitude at least three times that of the elastic deformation under similar conditions. b. A body of rock showing flow structure.

rheid folding

Folding accompanied by slippage along shear planes at an angle to the bedding or older foliation.

rheidity

The capacity of material to flow within the earth. *AGI*

Rhenania furnace

A combination of the Hasenclever and O'Hara furnaces, with four hearths, and with a combination flue under the lowest hearth and one over the upper hearth. It has mechanical rabblers. *Fay*

Rhenish furnace

A zinc distillation furnace that is a modified type of the Silesian furnace. *Fay*

rhenum

A rare, silvery-white metal. Symbol, Re. Occurs in very small quantities in platinum ores and in columbite, gadolinite, and molybdenite. Used for filaments for mass spectrographs and ion gages; for thermocouples and photoflash lamps. *Handbook of Chemistry and Physics, 3*

Rheolaveur washer

A washer wherein raw coal and water is fed into the head of an inclined trough equipped with openings in the bottom for the discharge of rejects. There are three types of Rheolaveurs used in coal washing: (1) the sealed discharge type for coarse sizes, from which the reject falls against an upward current of water and is removed by an automatic gate that controls the feed to a drowned elevator; (2) a system of two, three, or four superimposed troughs for washing fine coal below about 1/2 in (1/3 cm). The troughs are equipped with several bottom discharge devices. The separation of the heavy shale from coal and middlings takes place progressively until finally the pure shale is discharged from the lowest trough, and (3) a system for washing slurry consisting usually of two troughs one above the other and equipped with a number of Rheo boxes of the open discharge type but designed to minimize the loss of coal with the fine shale. *Nelson*

rheology

Study of the flowage of materials, particularly plastic flow of solids and flow of non-Newtonian liquids. *AGI*

rheomorphism

The process by which a rock becomes mobile and deforms viscously as a result of at least partial fusion, commonly accomplished, if not promoted, by addition of new material by diffusion.

rheostat

a. An instrument for testing blasting machines by inserting definite resistance equal to a known number of electric blasting caps of a standard-length wire, using one electric blasting cap as an indicator. b. An instrument by which a variable or an adjustable resistance may be introduced into a circuit to regulate the strength of a current, as in the field coils of a motor or a generator. *Standard, 2*

rheostat rope

A small rope consisting of 8 strands of 7 wires each. *Hunt*

rhinestone

a. Quartz and other material cut to imitate diamond. b. Glass backed with a thin leaf of metallic foil to simulate a diamond. c. Originally a syn. of quartz crystal. d. Cut colored glass.

rhodesite

An orthorhombic mineral, $(\text{Ca}, \text{Na}_2, \text{K}_2)_8 \text{Si}_{16} \text{O}_{40} \cdot 11\text{H}_2\text{O}$; fibrous; resembles zeolites; at Bultfontein Mine, Kimberley, South Africa. See also: [mountainite](#)

rhodite

See: [rhodium gold](#)

rhodium

a. An element of the platinum group, Symbol: Rh. b. An isometric mineral, RhPt .

rhodium gold

Native gold alloyed with rhodium.

rhodochrome

Chromian clinocllore, formerly called kaemmererite.

rhodochrosite

A trigonal mineral, MnCO_3 ; calcite group, with Mn replaced by Fe toward siderite, Ca toward calcite, Mg, Zn, Co, and Cd; rhombohedral cleavage; in hydrothermal veins, residual manganese deposits, and pegmatites; a minor source of manganese. Syn: [manganese spar](#) See also: [dialogite](#); [raspberry spar](#).

rhodolite

A pale pink, rose, or purple to violet variety of pyrope garnet having good transparency; may be of gem quality.

rhodonite

A triclinic mineral, $(\text{Mn,Fe,Mg,Ca})\text{SiO}_3$; a pyroxenoid; in metasomatic manganese ore deposits; an ornamental stone, esp. in Russia. Syn: [manganese silicate](#); [manganese spar](#). See also: [red manganese](#)

rhodotilite

See: [inesite](#)

rhodites

A word employed by Wadsworth to designate smelting materials or fluxes. *Fay*

rhomb

See: [rhombus](#); rhombohedron.

rhombarsenite

See: [claudetite](#)

rhombenglimmer

See: [biotite](#)

rhombic

See: [rhombus](#); orthorhombic.

rhombic dodecahedron

The isometric form $hh0$ having twelve faces in the shape of a rhombus; e.g., garnet. CF: [pyritohedron](#)

rhombic mica

See: [phlogopite](#)

rhombic quartz

An old name for feldspar. *Fay*

rhombic system

a. In crystallography, same as the orthorhombic system. Syn: [orthorhombic system](#) b. A former name for the orthorhombic system.

rhomboclase

An orthorhombic mineral, $\text{HFe}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O}$; forms colorless to gray rhombic plates; in Slovakia.

rhombohedral division

In assigning point groups to six crystal systems, those members of the hexagonal system that may be assigned rhombohedral crystallographic axes a_r belong to the rhombohedral division of the hexagonal system. They have a unique triad, but not all point groups with a unique triad may be assigned rhombohedral axes; hence, not all trigonal point groups are rhombohedral. CF: [trigonal](#); [trigonal system](#).

rhombohedral iron ore

See: [siderite](#)

rhombohedral system

a. Same as the hexagonal system, except that the forms are referred to three axes parallel to the faces of the fundamental rhombohedron instead of to the usual four axes. *Fay* b. The trigonal division of the hexagonal system, the forms being referred to the same three axes as above. Neither usage has been generally accepted. *Fay*

rhombohedron

A parallelepiped with each face a rhombus. Dolomite crystallizes as rhombohedra, and members of the calcite group cleave as rhombohedra. Adj. rhombohedral.

rhomboid

A parallelogram that does not have any right angles, and one pair of opposite sides differ in length from the other pair of opposite sides. *Jones, 2*

rhomb spar

See: [dolomite](#)

rhombus

A parallelogram that does not have any right angles, but the sides are all equal in length. *Jones, 2*

rhoenite

A triclinic mineral, $\text{Ca}_2(\text{Fe,Mg,Ti})_6(\text{Si,Al})_6\text{O}_{20}$; aenigmatite group; in silica-undersaturated mafic to intermediate rocks commonly as an alteration product of amphiboles; in Germany and the Czech Republic.

rhums

Scot. Bituminous shale.

rhyacolite

See: [sanidine](#)

rhyodacite

The extrusive equivalent of granodiorite. The principal minerals, sodic plagioclase, sanidine, quartz, and biotite or hornblende, commonly occur as phenocrysts in a finely crystalline groundmass of alkali feldspar and quartz. Accessory minerals are apatite and magnetite, and occasionally augite. *AGI*

rhyolite

A group of extrusive igneous rocks, typically porphyritic and commonly exhibiting flow texture, with phenocrysts of quartz and alkali feldspar in a glassy to cryptocrystalline groundmass; also, any rock in that group; the extrusive equivalent of granite. Rhyolite grades into rhyodacite with decreasing alkali feldspar content and into trachyte with a decrease in quartz. The term was coined in 1860 by Baron von Richthofen (grandfather of the World War I aviator). Etymol: Greek rhyo-, from rhyax, stream of lava. See also: [liparite](#)

rhyolite glass

Obsidian.

rhyolite-porphry

A rhyolite in which some grains or crystals are visibly larger than others. *Sinkankas*

rhythmic crystallization

A phenomenon, observed in igneous rocks, in which different minerals crystallize in concentric layers, giving rise to orbicular structure. *AGI*

rhythmic driving

In this type driving, the drilling, loading, and blasting are carried out in one shift and the mucking and transportation in the following one. This enables every worker to specialize in his or her tasks and machines, which in a highly mechanized job is a necessary condition for making the best use of expensive equipment. It also reduces or eliminates the loss of time for ventilation; in rhythmic driving it is carried out between two shifts. *Langefors*

rhythmic sedimentation

A regular interbanding of two or more types of sediment or sedimentary rocks due to a regular change in the conditions of sedimentation, such as alternation of wet and dry periods. See also: [varved clay](#)

rhythmite

The couplet of distinct types of sedimentary rock, or the graded sequence of sediments, that form a unit bed or lamina in rhythmically bedded deposits. It implies no limit as to thickness of bed, lamina, or complexity, but the term should exclude groups of beds such as cyclothem and carries no time or seasonal connotation. CF: [cyclothem](#); [varve](#). *AGI*

rib

a. The side of a pillar or the wall of an entry. *BCI* b. The solid coal on the side of a gallery or longwall face; a pillar or barrier of coal left for support. c. The solid ore of a vein; an elongated pillar left to support the hanging wall in working out a vein. d. A stringer of ore in a lode. e. The termination of a coal face. Where solid coal is left, the term fast rib, end, or side, is used; and where the coal face ends at the gob, the term used is loose rib, end, or side. *TIME* f. See: [buttock](#) g. A hard zone, bed, or horizon within a formation; a silicified zone in a sedimentary stratum. *Long* h. A ridge projecting above

grade in the floor of a blasted area. *Nichols, 1* i. A ridge, paralleling the long axis of a drill string member, that acts as a wear-resistant surface. *Long*

ribbed roll

A crusher in which the material passes between a moving set of rolls with ribs on their surfaces parallel to the axis of the rolls. See also: [roll](#)

ribbing

Enlarging a heading or drift.

ribbon

a. One of a set of parallel bands or streaks in a mineral or rock, e.g., ribbon jasper; when the lines of contrast are on a larger scale, the term banding is used. See also: [stripe](#) b. Said of a vein having alternating streaks of ore with gangue or country rock, or simply of varicolored ore minerals. CF: [banded](#); [book structure](#). *AGI* c. A color band in slate that represents original bedding and crosses the superimposed slaty cleavage. Ribbon is generally undesirable and decreases the value of the slate. Syn: [pancake](#)

ribbon brake

A friction brake having a metal strap that encircles a wheel or drum and may be drawn tightly against it. A band brake. *Standard, 2; Fay*

ribbon diagram

Geologic cross section drawn in perspective and joining control points along a sinuous line. *AGI*

rib boss

See: [pillar boss](#)

rib dust

Dust found on the side walls of a mine. The dust from the roof is generally included with this sample. *Rice, 2*

rib hole

Final holes fired in blasting around sides of shaft or tunnel. Also called trimmer. *Pryor, 3*

rib line

A continuous line along which pillars are mined. See also: [break line](#) *Lewis*

rib lining

In rod or ball mill, replaceable ribs that project longitudinally from shell liners so as to act as lifters for crop load as mill rotates. *Pryor, 3*

rib mesh

Expanded metal stiffened at intervals with bent steel plates. *Hammond*

rib pillar

A pillar whose length is large compared with its width.

ribs

The lines or ridges of cut gems that distinguish the several parts of the work, both of brilliants and roses. *Hess*

rib-side

The side of a heading or roadway driven in the solid coal. See also: [narrow stall](#)

rib-side gate

A gate road in longwall mining with a rib of solid coal along one side. *Nelson*

rib-side pack

A pack formed by working 5 to 10 yd (4.6 to 9.1 m) of coal along a rib-side of a road and packing the waste. See also: [roadside pack](#); skipping. *Nelson*

rice coal

- a. Anthracite coal of a small size; No. 2 Buckwheat coal. See also: [anthracite coal sizes](#)
- b. A steam size of anthracite. *Jones, 1*

Richards' pulsator classifier

A classifier operating in such a manner that the pulp grains fall through a sorting column against an upward pulsating current of water. It has no screen. *Liddell*

Richards' pulsator jig

An outcome of the pulsator classifier, in which a pulsating column of water is used in the jig. See also: [pulsator jig](#)

Richards' shallow-pocket hindered-settling classifier

A series of pockets through which successively weaker streams of water are directed upward. The material that can settle does so, and is drawn off through spigots. *Liddell*

richetite

A triclinic mineral, $\text{PbU}_4\text{O}_{13} \cdot 4\text{H}_2\text{O}$; strongly radioactive; black; occurs embedded among fine needles of uranophane.

richmondite

a. A discredited mineral term since a number of specimens have proved to be mixtures containing, in order of abundance, argentian tetrahedrite, galena, sphalerite, chalcopyrite, pyrite, and perhaps stromeyerite. *Am. Mineral.*, 1 b. A mixture of sulfide minerals containing silver, lead, zinc, and copper.

rickardite

An orthorhombic mineral, Cu_7Te_5 ; pseudotetragonal; deep purple; at Vulcan and Bonanza, CO; Warren, AZ; and Salvador, Brazil.

ricket

An airway along the side of an adit or shaft. Also called ricketing.

rid

See: [redd](#)

ridding

N. of Eng. Separating ironstone from coal shale. See also: [redd](#) *Fay*

riddle

a. A barrel-shaped, revolving perforated drum in which blank coins are washed and dried after passing through a bath of sulfuric acid. *Standard*, 2 b. A coarse sieve. The large pieces of ore and rock picked out by hand are called knockings. The riddlings remain on the riddle; the fell goes through. *Webster 3rd*; *Fay* c. A sieve used to separate foundry sand or other granular materials into various particle-size grades or free such a material of undesirable foreign matter. *ASM*, 1

ride over

Arkansas. A squeeze that extends into the workings beyond the pillar. It is said to ride over a pillar. *Fay*

rider

a. A thin coal seam above a workable seam, or a seam that has no name. *Nelson* b. The rock lying between two lodes or beds; a mass of country rock enclosed in a lode; a horse. c. An ore deposit overlying the principal vein. *Standard, 2* d. A steel or iron crossbeam which slides between the guides in sinking a shaft. It is carried up and down by, but is not attached to, the hoppit, which it guides and steadies.

ridge

a. A long, narrow elevation of the Earth's surface, generally sharp crested with steep sides, either independently or as part of a larger mountain or hill. b. A long elevation of the deep-sea floor having steeper sides and less regular topography than a rise. *AGI*

ridge fillet

A runner or principal channel for molten metal. *Standard, 2*

ridge terrace

A ridge built along a contour line of a slope to pond rainwater above it. *Nichols, 1*

Ridgeway filter

A horizontal, revolving, continuous vacuum filter. The surface is an annular ring consisting of separate trays with vacuum and compressed air attachments. The filtering surface is on the underside, the trays being dipped into the tank of pulp to form the cake and then lifted out of it. *Liddell*

riding

Said of mine timbering when the sets are thrust out of line, or lean.

Ridley-Scholes bath

Dense-media system used to float coal away from shale, the latter falling to the bottom of a wedge-shaped pool of separating fluid and being withdrawn by a rising belt. *Pryor, 3*

rid-up runners

To clean up after a cast, as when the scrap, slag, and iron is removed from runners, troughs, and skimmers, and they are freshly clayed, loamed, or sanded. *Fay*

riebeckite

A monoclinic mineral, $\text{Na}_2 \text{Ca}(\text{MgFe}^{+2})_5 \text{Si}_8 \text{O}_{22} (\text{OH})_2$; amphibole group with $\text{Mg}/(\text{Mg}+\text{Fe}^{2+}) = 0$ to 0.49 and $\text{Fe}^{3+}/(\text{Fe}^{3+} + \text{Al}) = 0.7$ to 1.0; forms a series with magnesioriebeckite; fibrous; in soda-rich rhyolites, granites, and pegmatites; crocidolite variety is blue asbestos, tiger eye is crocidolite replaced by quartz. CF: [glaucothane](#)

Riecke's principle

The statement in thermodynamics that solution of a mineral tends to occur most readily at points where external pressure is greatest, and that crystallization occurs most readily at points where external pressure is least. It is applied to recrystallization in metamorphic rocks with attendant change in mineral shapes, such that mass is transferred from contact points to pressure shadows resulting in reduced rock porosity. It is named after the German physicist E. Riecke (1845-1915) although it was actually discovered and described by Sorby in 1863. *AGI*

riemannite

See: [alophane](#)

riffle

a. A natural shallows extending across a stream bed over which the water flows swiftly and the water surface is broken into waves; a shallow rapids of comparatively little fall. *AGI* b. The lining of the bottom of a sluice, made of blocks or slats of wood or stones, arranged in such a manner that chinks or slots are left between them, into which heavy mineral grains fall and are held for recovery. c. The raised portions of the deck of a concentrating table, that serve to trap the heaviest particles. Syn: [ripple](#) d. A device used to reduce the volume or weight of a sample consisting of a thin metal plate on which is mounted a series of metal strips to guide or deflect a small portion of the sample material into a separate container. CF: [sample splitter](#) e. Sample reducing device such as Clark riffler or Jones riffle, which splits a batch sample of ground ore into two equal streams as it falls across an assembly of deflecting chutes. See also: [sludge sampler](#) CF: [Jones splitter](#)

riffle bars

Slats of wood nailed across the bottom of a cradle or other gold-washing machine for the purpose of detaining the gold.

riffle box

A device designed to reduce a sample of coal or ore to half its original size. The box contains about 12 chutes discharging alternately to opposite sides. The width varies according to the largest particle size. The volume reduction is rapid for dry material of suitable fineness. *Nelson*

riffler

See: [sample splitter](#)

rifle

a. As used by drillers, a borehole that is following or has followed a spiral or corkscrew course; also said of a drill core that has spiral grooves appearing on its outside surface. *Long* b. A drill hole, in rock, that has become three-cornered while drilling. c. Applied to the three-cornered section of a hole drilled by hand. Though the bit is supposed to be turned one-eighth after each blow, to insure a circular hole, the majority of hand-drilled holes are three-cornered. *Stauffer*

rifle bar

A cylinder with curved splines. *Nichols, 1*

rifle nut

A splined nut that slides back and forth on a rifle bar. *Nichols, 1*

rifling

a. Working coal which was left behind over the waste. *Nelson* b. The spiral grooving in the walls of a drill hole and/or on the surface of a drill core. *Long* c. A borehole following a spiraled course. *Long*

rift

a. A regional-scale strike-slip fault, e.g., the San Andreas rift in California, with offset measured in hundreds of kilometers. *AGI* b. A trough or valley formed by faulting. c. In quarrying, a direction of parting in a massive rock, such as granite, at approx. right angles to the grain. CF: [grain](#); [hard way](#). *AGI* d. A narrow cleft, fissure, or other opening in rock (such as in limestone), made by cracking or splitting. *AGI* e. A planar property whereby granitic rocks split relatively easily in a direction other than the sheeting (parallel to the surface of the Earth.) *AGI* f. A term used in slate quarrying to describe a second direction of splitting less pronounced than slaty cleavage and usually at right angles to it. g. In sedimentary rocks, the horizontal plane of stratification, or the bed of the rock. *Stauffer* h. An obscure foliation, either vertical (or nearly so) or horizontal,

along which a rock splits more readily than in any other direction. Syn: [fault trace](#) i. A crack, such as in the mid-ocean ridges. *MacCracken*

rifter-trimmer

One who separates blocks of mica into sheets and trims sheets preparatory to processing. Also called full trimmer. *DOT*

rifting

The process of splitting hand-cobbed mica into sheets of usable thicknesses. *Skow*

rift structure

A long, narrow structural trough that is bounded by normal faults; a graben of regional extent. CF: [rift valley](#)

rift valley

a. A valley that has developed along a rift structure. Syn: [fault trough](#) b. The deep central cleft in the crest of the mid-oceanic ridge. Syn: [midocean rift](#)

rift zone

a. A system of parallel crustal fractures; a rift structure. *AGI* b. In Hawaii, a zone of volcanic features associated with underlying dike complexes. Syn: [volcanic rift zone](#)

rig

a. A drill machine complete with auxiliary and accessory equipment needed to drill boreholes. *Long* b. To assemble and set up a tripod, derrick, and/or drill machine and put it in order for use. Syn: [rig up](#) c. A general term denoting any machine. More specif., the front or attachment of a revolving shovel. See also: [drilling rig](#) *Nichols, I*

rigged

Drill machine and equipment in place at a drill site and ready to start drilling. *Long*

rigger

One who, with special equipment and tackle, moves and transports heavy machinery, etc. *Crispin*

rigging

a. Process of setting up a drill and its auxiliary equipment preparatory to drilling. Syn: [setting up](#) b. The cables or ropes anchoring a drill derrick, mast, or tripod. See also: [guy](#) c. Sometimes used as a term for derrick, mast, or tripod complete with anchor, stay ropes, and cables. *Long* d. The equipment or gear such as hoists, tackle, winches, chains, or rope used by riggers in their work. e. The engineering design, layout, and fabrication of pattern equipment for producing castings; including a study of the casting solidification program, feeding and gating, risering, skimmers, and fitting flasks. *ASM, I*

rigging bar

A long, extension-type jack bar or drill column for use underground, on which a drilling machine can be mounted. *Long*

right-angled block

In quarrying, a block of stone bounded by three pairs of parallel faces, all adjacent faces meeting at right angles.

right bank

The bank of a stream that is on the right when one looks downstream.

right-hand cutting tool

A cutter, all of whose flutes twist away in a clockwise direction when viewed from either end. *ASM, I*

right-hand feed screw

A diamond-drill feed screw that rotates in a clockwise direction. *Long*

right-hand lay

Rope or strand construction in which wires or strand are laid in a helix having a right-hand pitch. See also: [lay](#)

right lang lay

Wire or fiber rope or cable in which the individual wires or fibers forming a strand and the strands themselves are both twisted to the right. Also called right long lay. *Long*

right-lateral fault

A fault on which the displacement is such that the side opposite the observer appears displaced to the right. CF: [left-lateral fault](#) Syn: [dextral fault](#)

right lay

Wire or fiber rope or cable in which the strands formed from a group of individual wires or fibers are twisted to the right. *Long*

right line

A straight line; the shortest distance between two points. *Crispin*

right long lay

See: [right lang lay](#)

right-of-way

A grant by Act of Congress, to convey water over or across the public domain, for mining purposes.

right regular lay

Wire or fiber rope or cable in which the wires or fibers in the strand are twisted to the left and the strands to the right. Syn: [regular-lay right lay](#)

right running

a. N. of Eng. Applied to a vein carrying ore in beds often unproductive. b. N. of Eng. Rake veins extending approx. east and west.

rigid arch

A continuous arch which is fully fixed throughout. *Hammond*

rigid coupling

A rod-to-feed-screw sub or rod-to-drive-rod sub by means of which the drill rods are coupled directly to the feed screw or drive rod of the diamond-drill swivel head, and the chuck is discarded or eliminated. Also called screw-to-rod adapter. *Long*

rigid double tube

See: [rigid-type double-tube core barrel](#)

rigid ducts

See: [ventilation ducts](#)

rigid foam

Formed by mixing isocyanate and a polyether polyol containing a halogenated hydrocarbon agent. Mixing releases heat, causing the foam to expand as much as 30 times the original volume of the liquid. The foam, which becomes cellular and rigid within minutes, is heat resistant and essentially impervious to air and water, and has substantial binding strength. Its characteristics suggest possible uses in mining for insulation, stoppings to control ventilation, and seals to control water and to consolidate broken ground. *Encyclopaedia Britannica*

rigid frame

A framed structure having columns and beams rigidly connected; there are no hinged joints in this type of structure. *Hammond*

rigid hammer crusher

A machine in which size reduction is effected by elements rigidly fixed to a rotating horizontal shaft mounted in a surrounding casing. *BS, 5*

rigidity

The property of a material to resist applied stress that would tend to distort it. A fluid has zero rigidity. *AGI*

rigidity modulus

See: [modulus of rigidity](#)

rigid pavement

A road, taxitrack, or hardstanding constructed of concrete slabs. *Hammond*

rigid solution

Solubility of solution of elements in a natural glass as compared with a solid solution that implies crystallinity.

rigid-type double-tube core barrel

A double-tube core barrel in which both the outer and inner tubes are rigidly connected to a single headpiece. Syn: [rigid double tube](#) *Long*

rigid urethane foam

See: [rigid foam](#)

rig-up

See: [setting up](#)

rig up

See: [rig](#)

rig-up time

The time required to set up and make a drill rig ready for use at the site where a borehole is to be drilled. Also called setup time; rigging time; mobilizing a rig. *Long*

rill

To mine ore in such a way that it runs down a slope to a chute or loading level. Ore is said to be rilled to a chute when it is rolled down a slope left in mining. *Hess*

rill stope

Overhand stope so shaped that miners can stand on the ore they have severed, and work horizontally along the side walls of unbroken ore that confine the excavation. The stope is carried as an inverted stepped pyramid, its apex ending in a winze that leads to the tramming level, down to which ore gravitates or is moved. *Pryor, 3*

rim

a. The border, edge, or face of a cliff, as at the Grand Canyon of Arizona. *AGI* b. The outermost portion of a zoned crystal, e.g., a reaction rim. *AGI*

rim flying

A reconnaissance method in which a plane follows an outcrop along steep canyon walls, keeping where possible within 50 ft (15 m) of the face of the cliff. This type of prospecting has been successful in discovering new deposits in the Colorado Plateau region. *Dobrin*

rimmed steel

A low-carbon steel containing sufficient iron oxide to give a continuous evolution of carbon monoxide while the ingot is solidifying, resulting in a case or rim of metal virtually free of voids. Sheet and strip products made from the ingot have very good surface quality. *ASM, 1*

rimrock

a. The outcrop of a horizontal layer of resistant rock, such as sandstone, at the edge of a plateau, butte, or mesa; the cliff or ledge so formed. b. The bedrock rising to form the boundary of a placer deposit.

rimrocking

Prospecting for carnotite on the Colorado Plateau, where the favorable beds, more or less flat-lying, crop out in cliffs or rims.

rim texture

A texture in ores where the metasome forms a narrow rim around grains of the host mineral.

rim walking

Prospecting a canyon rim with a Geiger counter. *Ballard*

rincon

a. A term used in the Southwestern United States for a recess or hollow in a cliff or a reentrant in the borders of a mesa or plateau. Also called a cove. b. A term used in the Southwestern United States for a small, secluded valley. c. A bend in a stream.--Etymol: Spanish rincón, inside corner, nook.

ring

a. A complete circle of tubbing plates around a circular shaft. Syn: [tunnel lining](#) b. Troughs placed in shafts to catch the falling water, and so arranged as to convey it to a certain point. c. See also: [wedging crib](#) d. S. Staff. A circular piece of wrought iron, about 8 in (20 cm) deep, placed on the top of a skip of coal to increase its capacity.

ring arch

One composed of a series of straight, unbonded rows, one brick wide.

ring coal

a. An old name for bituminous coal. *Tomkeieff* b. Bituminous coal as opposed to stone coal or anthracite. *Arkell*

ring complex

An association of ring dikes and cone sheets. *AGI*

ring crusher

a. A type of hammermill with a high-speed horizontal shaft upon which a series of steel rings are swung. *ACSG*, 2 b. Impact mill, beater mill, or hammermill, in which the beaters are loosely swinging rings. *Pryor*, 3 c. See also: [hammermill](#)

ring-cut

Holes in a ring around one central hole used to carry a cavity forward, usually six. *Pryor*, 3

ring dike

A subcircular to circular dike with steep dip. Ring dikes may be many kilometers long, and hundreds or thousands of meters thick. Their radius is generally from 1 to 20 km. Although some ring dikes may form a nearly complete circle, more commonly they encompass 1/4 to 3/4 of a circle or ellipse. They are commonly associated with alkalic igneous complexes and carbonatites, so are probably related to deep shock effects or to cauldron subsidence. Ring dikes are commonly associated with cone sheets to form a ring complex. Syn: [ring-fracture intrusion](#)

ringed out

A diamond bit in the face of which has been gouged a circular groove deeper than, and at least as wide as, the diameter of one row of the inset diamonds. *Long*

ringer

A crowbar. *Fay*

ring fault

A steep ring-shaped fault, complete or incomplete. It is associated with cauldron subsidence.

ring-fracture intrusion

See: [ring dike](#)

ring holes

The group of boreholes radially drilled from a common-center setup. See also: [horadial](#); [radial drilling](#). *Long*

ring-induction method

An inductive method in which the primary coil and the measuring coil are concentric. *Schieferdecker*

ringing

The audible or ultrasonic tone produced in a mechanical part by shock, and having the natural frequency or frequencies of the part. The quality, amplitude, or decay rate of the tone may sometimes be used to indicate quality or soundness. *ASM, 1*

ring main

Closed loop of piping, including provision for entry of material, circulation boost and controlled withdrawal points; used for circulating solids such as pulverized fuel, or fluids such as lime slurry, continuously without settlement or chokeup. *Pryor, 3*

ring ore

Fragments of gangue covered with deposits of other minerals. See also: [cockade ore](#)

ring pit

A circular pit in which a large wheel is revolved for tempering clay. *Fay*

ring-roll crusher

A type of crusher in which high-speed rolls act on the inside circumference of a vertical cylinder to powder raw material like clay. *Enam. Dict.*

ring-roll grizzly

A sturdily built grizzly for handling large pieces of ore. This type transports its material across a series of grooved rollers moved mechanically, or alternatively by the sliding ore. Undersize falls through the grooves. *Pryor, 3*

ring-roll press

A press consisting of rolls of unequal diameter, revolving one within the other and in the same direction. *BS, 5*

Ringrose methane recorder

A recorder that gives a continuous record in the range of 0% to 3%. *Roberts, 1*

Ringrose pocket methanometer

A small instrument that is capable of estimating methane in the range of 0% to 2% .
Roberts, 1

ring-shaped occurrences

In some areas altered rock has been found as a halo over an orebody and thus serves as a geologic target for guiding prospecting operations. The ratio between the size of the ring and the orebody must not be too large for practical purposes. Such target rings are not always obvious and will only be recognized after much painstaking work and study. Also called bulls-eye alteration patterns. *Lewis*

ring stone

a. A voussoir showing on the face of the wall. *Webster 3rd* b. Eng. Large oolitic grains in very hard crystalline matrix, above the slates at Collyweston, U.K. CF: [sun bed](#)

ring stress

The zone of stress, higher than that pre-existing in the rock, which surrounds all development excavations is called the ring stress. *Spalding*

ring-stress bursts

In stoping, the ring stresses around a level, rise, or winze are so increased by the influence of an approaching stope face that at some point on the periphery the rock fails. The stress ring is broken, and the rock of sides, back, and bottom released thereby expands suddenly and violently into the excavation, causing a rock burst. This rock burst is identical in type with those occurring in development. It is usually extremely local in effect, though a heavy earth tremor is caused. *Spalding*

ring tension

Tension that develops in the wall of a circular tank containing liquid or solid material. *Hammond*

ring-type reaming shell

In drilling, a reaming shell, the inset reaming diamonds of which are set into a cast- or powder-metal band encircling the outside surface of the shell. *Long*

ring-type wedge

A drill-hole deflecting wedge having a short metal sleeve attached to the uppermost end. The outside diameter of the sleeve is the same as that of the lower, full-circle part of the wedge. *Long*

ring wall

The inner firebrick wall of a blast furnace. *Standard, 2*

rinkite

A monoclinic mineral, $(\text{Na,Ca,Ce})_3 \text{Ti}(\text{Si}_2 \text{O}_7)_2 \text{OF}_3$; weakly radioactive; forms prismatic crystals in veins containing silicates of cerium metals, yttrium, and niobium; near Barkevik, Norway, in sodalite syenite in the Julianehaab district, Greenland, and in large crystals on the Kola Peninsula, Russia. Also spelled rinkolite. Syn: [johnstrupite](#)

Rinman scale

A Swedish standard scale for the estimation of slag inclusions in iron and steel. This scale consists of a series of micrographs, designed to show different typical fields of view, and arranged in groups according to the form and distribution of the inclusions and numbered according to their quantity. *Osborne*

rinneite

A trigonal mineral, $\text{K}_3 \text{NaFeCl}_6$; colorless to varicolored; becomes brown on exposure to air and has an astringent taste.

rinsing

In the ion-exchange (IX) cycle, applied to pregnant leach liquors, the displacement wash used after the absorption cycle, which moves pregnant liquor still in the column onto the next absorption column in the series. Term also applied to water rinse used after elution cycle, and before acid rinse. *Pryor, 3*

rinsing water

a. Water used to remove fine particles from larger sizes, usually located over vibrating screens. *BS, 5* b. Syn: [spray water](#)

Rio Tinto process

Heap leaching of cupriferous sulfides after their slow oxidation to sulfates on prolonged atmospheric weathering. *Pryor, 3*

rip

a. To bring down rock in a roadway to increase headroom. See also: [dint](#) *Fraenkel* b. See: [brush](#)

riparian

a. Pertaining to or situated on the bank of a body of water, esp. of a watercourse such as a river; e.g., riparian land situated along or abutting upon a stream bank, or a riparian owner who lives or has property on a riverbank. *AGI* b. Pertaining to shrubs and trees with root systems that seek deep ground water, as mesquite and greasewood. *AGI*

riparian rights

The rights of a person owning land containing or bordering on a watercourse or other body of water in or to its banks, bed, or waters. Under common law, a person owning land bordering a nonnavigable stream owns the bed of the stream and may make reasonable use of its waters.

rip current

A strong surface current of short duration flowing seaward from the shore. It usually appears as a visible band of agitated water and is the return movement of water piled up on the shore by incoming waves and wind. Syn: [rip tide](#)

rippability

A measure of the ease or difficulty with which a rock or earth material can be broken by tractor-drawn rippers or rigid steel tines into pieces that can be economically moved by other equipment, usually scrapers.

ripper

a. Coal miner who breaks down the roof of a gate road to increase headroom or breaks down the roof at the ripping lip, or where the roof has sagged on a roadway due to subsidence. The miner is often paid on yardage of ripping performed. Also known as brusher; stoneman; repairer. See also: [trenchman](#); [stoneman](#). *Pryor*, 3 b. A tool for removing slates, or edging them. *Standard*, 2 c. An accessory that is either mounted or towed at the rear of a tractor and generally used in place of blasting as a means of loosening compacted soils and soft rocks for scraper loading. The ripper has long, angled teeth that are forced into the ground surface, ripping the earth loose to a depth of 2 ft (0.6 m) or more. *Carson*, 1 d. See: [rooter](#)

ripping

a. A machine for cutting stone into slabs by passing it on a bed under a gang of saws. *Standard*, 2 b. The act of breaking, with a tractor-drawn ripper or long-angled steel

tooth, compacted soils or rock into pieces small enough to be economically excavated or moved by other equipment such as a scraper or bulldozer. c. The breaking down of the roof in mine roadways to increase the headroom for haulage, traffic, and ventilation. See also: [brushing](#); second ripping. *Nelson*

ripping bed

A machine for cutting stone into slabs by passing it on a bed under a gang of saws. *Standard, 2*

ripping blasting

Where coal seams are worked by the longwall method it is necessary to maintain roadways leading to the face. These roadways should be of sufficient height to permit the easy passage of workers and materials, and this invariably means that some of the stone above the coal must be removed. This operation is known as ripping, and, unless the roof strata are very soft, blasting will be required. The main considerations in ripping blasting are to keep the sides of the roadway square, and to obtain good fragmentation of the stone so that it can be removed easily. *McAdam, 2*

ripping face support

A timber, or timber and steel structure, to provide support at the ripping lip. There are various types: one consists of bent corrugated steel bars behind which wooden planks are wedged; another consists of adjustable stretchers that are fitted across the roadway. See also: [roadhead](#) *Nelson*

ripping lip

a. The edge of the rippings at the face of a roadway. When enlarging a roadway, the ripping lip is the end of the enlarged section and where work is proceeding. See also: [forepoling girder](#) b. The edge of the nether roof at a gate end at the point up to which the ripping has been taken. *TIME*

ripping scaffold

A staging or platform erected over the moving conveyor at a ripping lip of a gate road, on which the miners can stand and work. This implies that the coalface and conveyor loading point are some distance ahead. *Nelson*

rip plates

A means of repairing damaged belting. It consists of two short plates, with teeth on one side to grip the belting, which are fastened on both sides of the belting across the rip or

worn place. Short bolts and nuts serve to compress and hold the plates tightly against the belting. *Jones, I*

ripple

A groove or bar across sluices for washing gold. See also: [riffle](#)

ripple board

An inclined trough having grooves or strips across its bottom to catch fine gold. See also: [riffle](#)

ripple index

The ratio of wavelength to amplitude of a ripple mark. It usually ranges from 6 to 22 for ripples produced by water currents or waves and from 20 to 50 for ripples produced by wind. Syn: [ripple-mark index](#)

ripple mark

a. An undulatory surface or surface sculpture consisting of alternating subparallel small-scale ridges and hollows formed at the interface between a fluid and incoherent sedimentary material (esp. loose sand). It is produced on land by wind action and subaqueously by currents or by the agitation of water in wave action, and generally trends at right angles or obliquely to the direction of flow of the moving fluid. It is no longer regarded as evidence solely of shallow water. *AGI* b. One of the small and fairly regular ridges, of various shapes and cross sections, produced on a ripple-marked surface; esp. a ripple preserved in consolidated rock and useful in determining the environment of deposition. The term was formerly restricted to symmetrical ripple mark, but now includes asymmetrical ripple mark. The singular form may be used to denote general ripple structure (as well as a specific ripple), and the plural form to describe a particular example.

ripple-mark index

See: [ripple index](#)

ripple voltage

The alternating component of a substantially unidirectional voltage. *Coal Age, I*

riprap

a. A layer of large, durable fragments of broken rock, specially selected and graded, thrown together irregularly (as offshore or on a soft bottom) or fitted together (as on the

upstream face of a dam). Its purpose is to prevent erosion by waves or currents and thereby preserve the shape of a surface, slope, or underlying structure. It is used for irrigation channels, river-improvement works, spillways at dams, and sea walls for shore protection. *AGI* b. The stone used for riprap. *AGI*

rip tide

See: [rip current](#)

rise

a. A vertical or inclined shaft from a lower to an upper level in a mine. See also: [upraise](#); raise. *Eng. Min. J., 1* b. To dig upward, as from one level to the next one above; opposite of sink. *Standard, 2* c. Upward inclination of a coal stratum. *Standard, 2* d. An ascending gallery at the end of a level. See also: [hade](#) *Gordon*

rise and fall

A system of reduction of levels by working out the rise or fall of staff readings from each level point to the one following it. See also: [collimation](#)

rise face

A face advancing toward the rise of a coal seam. *Briggs*

rise heading

A heading driven to the rise in a long-way workings. See also: [heading](#)

riser

a. A shaft excavated from below upward. See also: [raise](#); [rise](#). *Fay* b. See: [column pipe](#); rising main.

rising

a. An excavation carried from below upward; a rise or riser. *Standard, 2* b. Eng. The horizontal division of the stratum, from which the blocks of stone are lifted; e.g., in the Portland quarries. *Arkell*

rising column

See: [rising main](#)

rising current

The direction in which a drill circulation fluid is flowing after it has passed the bit and continues toward the collar of a borehole. *Long*

rising-head test

A soil permeability test in which the level of water in a borehole is reduced and then the rate at which the water recovers is observed. *Mining*

rising main

a. The length of steel piping that conveys the water from a pump to the surface or to a higher pump in the shaft. The term rising main is obsolete; delivery column preferred. Syn: [delivery column](#) *Nelson* b. See: [column pipe](#)

rising shaft

Excavating a shaft upwards from mine workings. See also: [rise](#); staple shaft. *Nelson*

rittingerite

See: [xanthoconite](#)

Ritinger's law

The energy required for reduction in particle size of a solid is directly proportional to the increase in surface area. CF: [Kick's law](#) *CCD*, 2

Ritinger table

A side-bump table with plane surface, actuated by a cam, spring, and bumping post. *Liddell*

rivelaine

A pick with one or two points, formed of flat iron, used to undercut coal by scraping instead of striking. *Fay*

river bar

A ridge or mound of boulders, gravel, sand, and mud found along or in a stream channel at places where decrease in velocity causes deposition of sediment.

river-bar placer

a. Gravel flats and terraces laid down by rivers when flowing at higher levels than at present. The deposits are sometimes gold or tin-bearing. See also: [bench placer](#) b. A term used in Alaska for placers on gravel flats in or adjacent to the beds of large streams.

river claim

A claim that includes the bed of a river.

river drift

The gravel deposits accumulated by a river in its torrential stages.

river flat

See: [alluvial flat](#)

river mining

Mining or excavating beds of existing rivers after deflecting their course, or by dredging without changing the flow of water.

river pebble

Applied in Florida to a certain class of phosphatic pebbles, or concretions, found in rivers as distinguished from land pebble phosphate.

river plain

See: [alluvial plain](#)

river quartz

Rounded, waterworn masses of quartz found in stream gravels.

river right

See: [creek right](#)

river run gravel

Natural gravel as found in deposits that have been subjected to the action of running water. See also: [alluvial deposit](#)

river sand

Sand generally composed of rounded particles, and may or may not contain clay or other impurities. It is obtained from the banks and beds of rivers. *Zern*

rives in

Eng. To crack open or produce fissures.

rivet

A round bar of mild steel having a conical, cup- or pan-shaped head, which is driven while red hot into a hole through two plates of steel that have to be joined together. Aluminum, copper, and other materials are also used for rivets. See also: [pneumatic riveter](#)

riveter

A worker who forms the head of a rivet, generally with a pneumatic rivet hammer. *Hammond*

rivet forge

A portable forge, used by boilermakers and ironworkers, for heating rivets near the work for which they are required. *Crispin*

rivet heater

A laborer responsible for heating rivets in a portable forge and throwing them with tongs to the rivet catcher. *Hammond*

rivet snap

A punch having a recess in its head shaped to the form of the rivet. See also: [pneumatic riveter](#)

rivet test

A test on the steel used for rivets, in which a bar is bent through 180 degrees ; if any cracks are formed, the steel is rejected. *Hammond*

rivet tester

A trained worker who can detect sound or loose rivets by testing them with a hammer. *Hammond*

riving seams

https://t.me/Geologybooks

Open fissures between beds of rock in a quarry.

R.K. process

A method for converting pig iron into a product with a low carbon content, which is suitable as a substitute for steel scrap for remelting in steel furnaces. *Osborne*

road

a. A roadway in a mine, e.g., gate road, traveling road, dummy road. *Nelson* b. Any mine passage or tunnel. *Mason* c. Rail track. *Mason*

roadbed

a. The material fundamental part of a road; primarily, the foundation of gravel, road metal, etc., constituting the bed, but by extension, esp. in railway use, the superstructure also. *Standard, 2* b. The foundation carrying the sleepers, rails, chairs, points, and crossings, etc., of a railway track. *CTD*

road cleaner

See: [track cleaner](#)

road dust

Dust found on the floor of a mine entry. *Rice, 2*

roadhead

The face of a roadway, usually in longwall conveyor mining. The records indicate that the roadhead is the most dangerous place in a coal mine based on accidents from falls of ground. See also: [ripping face support](#) *Nelson*

road-making plant

Various types of specialized plant used solely for road construction, including such machines as planers, scarifiers, rollers, pavers, finishers, gritters, and mixers. *Hammond*

roadman

a. A person employed on the laying and maintenance of rail tracks underground. Also known as a trackman. *Nelson* b. A person whose duty it is to keep the roads of a mine in order. *Fay* c. In bituminous coal mining, a general term for miners working along haulageways or airways (roads). Usually designated according to job, as repairman; wasteman. *DOT*

road metal

Crushed stone for surfacing macadamized roads, and for the base course of asphalt and concrete roadways; also used without asphaltic binder as the traffic-bearing surface, generally on secondary roads. *AGI*

road-mix method

A method of preparing aggregates for bituminous surfaces in which the aggregates and bitumen are combined on the surface of the road, using the penetration or mixed-in-place method. *Pit and Quarry*

road roller

Power-driven roller of any weight from one-half to 12 tons. *Hammond*

roadside pack

A pack built alongside a roadway. See also: [rib-side pack](#) *Nelson*

roadster

Low-priced model of a scraper or a truck. *Nichols, 1*

roadway

An underground drivage. It may be a heading, gate, stall, crosscut, level, or tunnel and driven in coal, ore, rock or in the waste area. It may form part of longwall or bord-and-pillar workings or an exploration heading. A roadway is not steeply inclined. See also: [roadway support](#) *Nelson*

roadway cable

An electric cable designed for use in mine roadways. It may be either rubber insulated, sheathed, and armored or paper insulated. *Nelson*

roadway consolidation

To bind the floor dust together with water and calcium chloride flakes, or other chemical, to form a firm plastic carpet. See also: [dust consolidation](#)

roadway support

A timber, steel, concrete, or other erection in a roadway to (1) ensure safety by preventing falls of ground, and (2) maintain the maximum possible roadway size by

resisting the tendency of the roadway to contract and distort. See also: [steel arch](#); [roadway](#). *Nelson*

roast

To heat to a point somewhat short of fusing, with access of air, as to expel volatile matter or effect oxidation. *Fay*

roaster

A reverberatory furnace or a muffle used in roasting ore. *Standard, 2*

roaster slag

Slag resulting from the calcination of white metal in the process of copper smelting. *Standard, 2*

roasting

a. Heating an ore to effect some chemical change that will facilitate smelting. *ASM, 1* b. The operation of heating sulfide ores in air to convert to oxide or sulfate. *CTD* c. Calcination, usually with oxidation. Good, dead, or sweet roasting is complete roasting; i.e., it is carried on until sulfurous and arsenious fumes cease to be given off. Kernel roasting is a process of treating poor sulfide copper ores, by roasting in lumps, whereby copper and nickel are concentrated in the interior of the lumps. *Fay* d. The heating of solids, frequently to promote a reaction with a gaseous constituent in the furnace atmosphere. See also: [magnetizing roast](#) *ARI*

roasting and reaction process

The treatment of metal ore in a reverberatory, by first partly roasting at a low temperature and then partly fusing the charge at a higher temperature, which causes a reaction between the lead oxide formed by roasting and the remaining sulfide, producing sulfurous acid and metallic lead. Syn: [air-reduction process](#)

roasting and reduction process

The treatment of lead ores by roasting to form lead oxide, and subsequent reducing fusion in a shaft furnace. *Fay*

roasting cylinder

A furnace with a rotating cylinder for roasting, amalgamating, or smelting ore. See also: [Bruckner furnace](#)

roasting furnace

A furnace in which finely ground ores and concentrates are roasted to eliminate sulfur or other elements or compounds; heat is provided by the burning sulfur. The essential feature is free access of air to the charge, by having a shallow bed that is continually rabbled. Many types have been devised; multiple hearth is the most widely used. *CTD*

roast sintering

See: [blast roasting](#)

roast stall

A form of roasting furnace, built in compartments or stalls open in front, with flues running up the wall at the back for the purpose of creating a draft.

rob

To extract mine pillars previously left for support, often preparatory to closing a mine. Syn: second mining.

robber

a. In anthracite and bituminous coal mining, one who breaks down and rips out with a pick, pillars of coal left to support the roof in rooms when the usual mining was being done. Also called pillar robber. *DOT* b. An extra cathode or cathode extension that reduces the current density on what would otherwise be a high current-density area on the work. *ASM, 1*

robbing

a. Removing timber from a mined-out stope to use it again elsewhere. *Stoces* b. Extraction of the pillars of ore left to support workings during original stoping. *Pryor, 3* c. Scot. Reducing the size of pillars; taking as much as possible off pillars, leaving only what is deemed sufficient to support the roof.

robbing an entry

See: [drawing an entry](#)

robbing pillars

The mining of coal pillars left to support the roof during development mining, often resulting in cave-ins. See also: [working the broken](#)

Robiette process

A heat treatment process carried out in a substantially closed furnace, in which a fluid fuel is burnt to partial combustion with a gas containing 70% or more of oxygen to produce a nonoxidizing atmosphere. The treatment is effected continuously in the furnace through which the heating gas and metal are passed in opposed directions. The fuel and gas are partially burnt at the exit end of the furnace, and passed to the cooler entry end of the furnace, and burnt to substantially complete combustion so as to preheat metal entering the furnace. *Osborne*

Robins-Messiter system

A stacking conveyor system in which material arrives on a conveyor belt and is fed to one or two wing conveyors. This part of the system moves so as to form a long ridge; reclaimed by raking gear that works across the ridge, moving slowly forward and shifting material loosened and blended by the rake action by means of a spiral that pushes it to a reclaiming conveyor at the side of the ridge. Used to stockpile ore, concentrates, and coal. *Pryor, 3*

Robinson and Rodger system

A method of obtaining sound steel by fluid compression of the ingot in the mold. The molds are divided in the center, a removable packing piece being placed between the halves of the mold. The packing piece is removed when the metal has set, and the mold is placed horizontally in the press, pressure being applied to the ingot at both ends. *Osborne*

robinsonite

A triclinic mineral, $Pb_4 Sb_6 O_{13}$.

robot loader

A pneumatic loader for inserting cartridges into drill holes.

Robson and Crowder process

An early oil flotation process. The oil was added to several times its weight of ore and mixed in a slowly revolving drum or tube. The process at one time had quite a large application. The process used but little water (25% to 30%) and no acid. *Fay*

Roburite

Smokeless and flameless safety explosive consisting of ammonium nitrate and dinitrobenzene or dinitrochloro benzene; used in mines. *Bennett*

roca

a. Sp. Rock or stone, whether in the ordinary or geological sense. b. Sp. Rock standing out from the general surface. c. Sp. A vein or bed of hard rock and stone.

roche

Fr. Rock, boulder.

rock

a. An aggregate of one or more minerals, e.g., granite, shale, marble; or a body of undifferentiated mineral matter, e.g., obsidian, or of solid organic material, e.g., coal. *AGI* b. Any prominent peak, cliff, or promontory, usually bare, when considered as a mass, e.g., the Rock of Gibraltar. *AGI* c. A rocky mass lying at or near the surface of a body of water, or along a jagged coastline, esp. where dangerous to shipping. *AGI* d. A slang term for a gem or diamond. *AGI* e. Strictly, any naturally formed aggregate or mass of mineral matter, whether or not coherent, constituting an essential and appreciable part of the Earth's crust. Ordinarily, any consolidated or coherent and relatively hard, naturally formed mass of mineral matter; stone. In instances, a single mineral forms a rock, as calcite, serpentine, kaolin, and a few others but the vast majority of rocks consist of two or more minerals. f. A local term used in New York and Pennsylvania for the more massive beds of bluestone that are not jointed and are, therefore, well-suited for structural purposes. g. In the geological sense, any natural deposit or portion of the Earth's crust whatever be its hardness or softness, but used by miners to denote sandstone. *TIME* h. In geology, the material that forms the essential part of the Earth's solid crust, and includes loose incoherent masses, such as a bed of sand, gravel, clay, or volcanic ash, as well as the very firm, hard and solid masses of granite, sandstone, limestone, etc. Most rocks are aggregates of one or more minerals, but some are composed entirely of glassy matter, or of mixtures of glass and minerals. *Hunt* i. In the Lake Superior region, crude copper ore as it comes from the mines. The concentrate obtained is called mineral, and contains about 65% metallic copper.

rock asphalt

See: [asphalt rock](#)

rock association

a. A group of igneous rocks within a petrographic province that are related chemically and petrographically, generally in a systematic manner such that chemical data for the rocks plot as smooth curves on variation diagrams. See also: [tribe](#) *AGI* b. The association of mineral deposits with certain rock types. If mineral-producing localities are considered individually, valuable generalizations often can be made, and

lithotectonic-plate tectonic classifications of ore deposits and exploration strategies derived from them.

rock base

See: [bedrock](#)

rock bit

a. Any one of many different types of roller or drill bits used on rotary-type drills for drilling large-size holes in soft-to-medium-hard rocks; also sometimes applied to drag-type bits. See also: [drag bit](#); roller bit. *Long* b. In mining, a detachable-type chisel or cruciform bit used on percussive drills to drill small-diameter holes in rock. *Long* c. See: [drill bit](#)

rock body

A dump body with oak planking set inside a double steel floor. *Nichols, 1*

rock bolt

A bar, usually constructed of steel, that is inserted into pre-drilled holes in rock and secured for the purpose of ground control. Rock bolts are classified according to the means by which they are secured or anchored in rock. In current usage there are mainly four types: expansion, wedge, grouted, and explosive. See also: [roof bolt](#)

rock bolting

a. See: [roof bolting](#) b. The process of rock bolting consists of (1) anchoring the bolt in a hole; (2) applying tension to the bolt to place the rock under compression parallel to the bolt; and (3) placing the bolts in such a pattern that they will properly support the rock structure. Rock may be supported by bolts in five ways: (1) suspension; (2) beam building; (3) reinforcement of arched opening requiring support; (4) reinforcement of an opening otherwise self-supporting; and (5) reinforcement of walls against shear and compressive action. See also: [roof bolting](#)

rockbridgeite

An orthorhombic mineral, $(\text{Fe},\text{Mn})\text{Fe}_4(\text{PO}_4)_3(\text{OH})_5$; forms a series with frondelite; dark green; named for Rockbridge County, VA.

rock bump

The sudden release of the weight of the rocks over a coal seam or of enormous lateral stresses due to structural or tectonic folds and thrusts and sometimes both. A rock bump may take the form of a pressure bump or a shock bump. *Nelson*

rock burst

A sudden and often violent breaking of a mass of rock from the walls of a tunnel, mine, or deep quarry, caused by failure of highly stressed rock and the rapid or instantaneous release of accumulated strain energy. It may result in closure of a mine opening, or projection of broken rock into it, accompanied by ground tremors, rockfalls, and air concussions. See also: [burst](#); [pressure bump](#). *AGI*

rock butter

A soft yellowish mixture of alum with aluminum and iron oxides; a decomposition product of aluminous rocks. See: [stone butter](#) *Standard, 2*

rock car runner

See: [car runner](#)

rock channeler

A machine used in quarrying for cutting an artificial seam in a mass of stone. It is made in several forms, the principal types being the bar channeler (in which the cutters are mounted on a carriage that works along a heavy bar or bars) and the track channeler. *Standard, 2*

rock chute

See: [chute](#); rock hole. Also called slate chute.

rock-chute mining

See: [bord-and-pillar method](#)

rock cleavage

The property or tendency of a rock to split along closely spaced planar structures, produced by deformation or metamorphism. See also: [schistosity](#)

rock cone bit

See: [roller bit](#)

rock contractor

In anthracite coal mining, one who contracts to mine rock, as distinguished from coal, at a certain price per ton or footage of advance. *DOT*

rock cork

A light-colored variety of asbestos. Syn: [mountain cork](#); [rock leather](#). *Standard, 2; Fay*

rock cover

Thickness of consolidated rock above the roof of an opening (equivalent to cover, minus depth of weathering or of other soil). CF: [cover](#)

rock crusher

A machine for reducing rock or ore to smaller sizes. Three principal types are the jaw crusher, the gyratory, and the hammer crusher.

rock crystal

a. Transparent quartz. *ASTM* b. Highly polished brown glassware, hand-cut or engraved. *ASTM*

rock cut

A way, esp. for a railroad, cut through a rock or rocky formation. *Mathews*

rock cuttings

See: [cuttings](#); sludge.

rock cycle

A sequence of events involving the formation, alteration, destruction, and reformation of rocks as a result of such processes as magmatism, erosion, transportation, deposition, lithification, and metamorphism. A possible sequence involves the crystallization of magma to form igneous rocks that are then broken down to sediment as a result of weathering, the sediments later being lithified to form sedimentary rocks, which in turn are altered to metamorphic rocks. *AGI*

rock dredge

a. A dredge that excavates rock for the purpose of deepening harbors and waterways; also, a device for sampling underwater outcrops and boulders. b. A general term for a

seabed sampling device consisting of a heavy bucket frame that is pulled across the seabed on a cable controlled by a winch operator on deck.

rock drift

A horizontal mine passage cut in rock, esp. along a vein on a principal level of a mine. See: [crosscut](#); stope.

rock drill

a. A machine for boring relatively short holes in rock for blasting purposes. It may be a sinker, jackhammer, drifter, or stoper. See also: [percussive drill](#); [rotary drill](#). Syn: [Waugh drill](#) *Nelson* b. A roller bit. *Long* c. A conical bit for drilling hard rock. *AGI*

rock-drill bit

See: [rock bit](#)

rock driller

a. In bituminous coal mining, one who works in rock or slate as distinguished from coal. Also called rock shooter; slate driller. *DOT* b. See: [rock splitter](#)

rock drivage

A hard heading or stone drift. *Nelson*

rock dust

a. The general name for any kind of inert dust used in rendering coal dust inert or in filling rock-dust barriers. Equivalent to the British stone dust. *Rice, 2* b. The dust produced in mines by blasting, drilling, shoveling, and handling rock. Rock dust in suspension varies in particle size and composition. The most dangerous dusts are silica, sericite, and asbestos; but all fine dusts are health hazards when inhaled. The smaller sizes, 10 microns and less, are more dangerous than the larger sizes. Wet drills, sprays, water infusion, and ample ventilation are employed to reduce the dust menace. See also: [dust consolidation](#); [dust-free conditions](#); stone dust; stone-dust barrier. *Nelson*

rock-dust barrier

a. A device that releases a large quantity of inert dust in the path of an explosion, extinguishing the flame. *Rice, 2* b. A series of troughs or shelves laden with rock dust and so arranged that the air waves from an explosion will trip them and fill the air with rock dust and thus quench the flame of exploding coal dust.

rock duster

a. A machine that distributes rock dust over the interior surfaces of a coal mine by means of air from a blower or pipeline or by means of a mechanical contrivance, to prevent coal dust explosions. Also called rock-dust machine. b. See: [rock-dust man](#)

rock dusting

a. The dusting of underground areas with powdered limestone to dilute the coal dust in the mine atmosphere and on the mine surfaces, thereby reducing explosion hazards. b. A very widespread control measure used in coal mines to combat explosive dusts. By machine, inert (combustible) dust is sprayed, dry or wet, on the roof, floor, and ribs in all working places and haulageways, to reduce the explosibility of settled coal dust. The Mine Safety and Health Administration requires rock dusting to within 40 ft (12 m) of the face. The incombustible content of settled dust samples after rock dusting must constitute 65% or more by weight, with an increase of 1% for each 0.1% methane present. A dust as nearly inert, physiologically, as possible, should be employed in rock dusting; limestone (calcium carbonate) is most widely used. *Hartman, 2*

rock-dusting machine

A machine consisting essentially of a flexible hose fed by a powerful blower. It is used in forcing rock dust, usually powdered limestone, onto the floor, walls or ribs, and rooms and entries of a mine, thereby making the coal dust nonexplosive.

rock-dust man

In bituminous coal mining, a laborer who sprinkles rock dust by hand or with a machine throughout mine workings as a precaution against explosions. Syn: [rock duster](#) *DOT*

rock-dust testing kit

This kit is designed to prevent coal-dust explosions. It helps to determine the explosion hazard prior to rock dusting, the fineness of the rock dust as it comes from the pulverizer, and the percentage of combustible matter present in rock and coal dust mixtures after rock dusting. *Best, 1*

rock-dust zone

A section of a mine entry, the ribs, roof, and floor of which have been coated with rock dust. *Rice, 2*

rocker

a. A small digging bucket mounted on two rocker arms in which auriferous alluvial sands are agitated by oscillation, in water, to collect gold. A shortened term for rocker shovel; rocker arm shovel. b. Used for testing placer deposits and for working pockets and small placer deposits. The gold-bearing gravel is placed on the screen; gold and fine sand are washed through the screen, and remaining stones are cleaned out. A chute directs the material to the upper end of the bottom, which may be covered with small transverse riffles or canvas. Waste material passes over a tailpiece at the end of the rocker. Rockers range in length from 6 to 12 ft (2 to 4 m), and in bottom width from 14 to 20 in (35 to 50 cm), with holes in the screens from 1/4 to 1/2 in (0.6 to 1.2 cm) in diameter. The slope of the rock should be adjusted to the nature of the gravel and is commonly 1 in 12, ranging from 1 in 8 to 1 in 20. Two workers with a rocker can handle from 3 to 5 yd³ (2.3 to 3.8 m³) of gravel in place in 10 h if the ground is easily rocked. *Lewis* c. A portable sluicebox used by prospectors and fossickers in treating alluvial mineral deposits. Also called rocking cradle. *Pryor*, 3

rocker arm

a. A lever resting on a curved base so that the position of its fulcrum moves as its angle changes. *Nichols*, 1 b. A bell crank with the fulcrum at the bottom. *Nichols*, 1

rocker arm shovel

See: [rocker shovel](#)

rocker bottom

See: [rocker](#)

rocker dump car

Among the smaller capacity cars, the most popular and most widely used are the gravity dump types, such as rocker dump and scoop cars, designed so that the weight of the load tips the body when a locking latch is released by hand. The body of this type is balanced to right itself after the load is discharged. Rocker dump cars range in capacity from 1 yd³ (0.76 m³) handloaded types, to units of 10 yd³ (7.6 m³) for power shovel loading. *Pit and Quarry*

rocker shovel

A digging and loading machine consisting of a bucket attached to a pair of semicircular runners that when rolled, lifts and dumps the bucket load into a car or other materials transport unit behind the machine.

rocker sieve

A miner's cradle or rocker, a cradlelike device for washing out mud from the contents of a dredge. *Mathews*

rock excavation

In situ removal of all firm, unaltered, and unweathered surface geological materials.

rock fabric

See: [fabric](#)

rock factor

See: [resistance to blasting](#)

rock failure

Fracture or failure of a rock that has been stressed beyond its ultimate strength. *AGI*

rockfall

a. The relatively free falling or precipitous movement of a newly detached segment of bedrock (usually massive, homogeneous, or jointed) of any size from a cliff or other very steep slope; it is the fastest form of mass movement and is most frequent in mountain areas and during spring when there is repeated freezing and thawing of water in cracks in the rock. Movement may be straight down, or in a series of leaps and bounds down the slope; it is not guided by an underlying slip surface. *AGI* b. The mass of rock moving in or moved by a rockfall; a mass of fallen rocks. Also spelled rock fall. *AGI*

rock fault

Eng. A replacement of a coal seam over a greater or lesser area by some other rock, usually sandstone. See also: [horse](#); [washout](#). *Fay*

rock-fill dam

An earth dam built of any broken rock or similar material that may be available. *Hammond*

rock filling

a. Waste rock, used to fill up worked-out stopes to support the roof. *Weed, 2* b. See: [overhand stoping](#)

rock flour

a. Powdered rock material formed by the grinding-up of rocks beneath a glacier, either deposited as part of the till or washed or blown away and deposited elsewhere as stratified drift or loess. Also called glacier meal. Syn: [rock meal](#) b. Fault gouge.

rock flow

a. The movement of solid rock when it is in a plastic state. *Leet, 1* b. The term given to a slope failure when there is a general breakdown of the rock mass. When such a rock mass is subjected to shear stresses sufficient to break down the cement or to cause crushing of the angularities and points of the rock blocks, the blocks will move as individuals and the mass will flow down the slope, or will slump into a more stable slope position. *Woodruff*

rock formation

See: [formation](#)

rock-forming mineral

A mineral that is common and abundant in the Earth's crust; one making up large masses of rock. From 20 to 30 minerals are usually considered as being the most important. *Stokes*

rock foundation

A foundation that is carried down to the solid rock. The rock is cut and dressed level, loose and decayed portions are removed, and holes filled with concrete. The crushing strength of the rock can be ascertained by tests and the bearing pressure should not exceed one-eighth of the value. *Nelson*

rock fracture

When rock is broken by crushing or impact, the resulting fragments can be divided into two components: (1) the complement, comprising a wide size distribution in accordance with a probability law, and (2) the residue of large incompletely broken pieces. The relative proportions of complement and residue depend upon the mode of fracture. If the rock is completely crushed, only complement is formed, but if the rock is fractured by the impact of a point or wedge, there may be more residue than complement. Syn: [complement](#)

rock glacier

An ice-cored mass of angular rock waste, usually heading in a cirque or other steep-walled amphitheater and in many cases grading into a true glacier.

rock glass

Obsidian or other volcanic glass.

rock gypsum

A massive, coarsely crystalline to finely granular, sedimentary rock of the mineral gypsum with bedding commonly disturbed by expansion during hydration of parent anhydrite. Syn: [gyprock](#)

rock hardness

The resistance of the rock to the intrusion of a foreign body. *Stoces*

rockhead

a. The upper surface of bedrock. b. The boundary between superficial deposits (or drift) and the underlying solid rock. *BS, 11* c. See: [bedrock](#)

rock hole

A short staple shaft driven from a lower to a higher coal seam and used for the gravity transfer of coal to the haulage road in the lower seam. See also: [roofing hole](#)

rock hound

An amateur mineralogist or collector.

rocking

a. The process of separating ores by washing on an incline trough. See also: [rocker](#) b. Pushing a resistant object repeatedly, and backing or rolling back between pushes to allow it to reach or cross its original position. *Nichols, 1*

rocking beam

See: [walking beam](#)

rocking cradle

Short sluice, hand-oscillated; used in gold prospecting and fossicking. See also: [rocker](#)

rocking lever

A beam to give the reciprocal motion in hand boring. *Nelson*

rock kicker

Usually found at sand and gravel processing facilities. A mechanical device consisting of a roller (with rows of metal protrusions along its length) placed at a 45 degrees angle just ahead of a feed hopper (or conveyor transfer point). It is usually run by a small electric motor and as roots, large stones, and clay meet the roller, they are dumped off the belt to a small pit that is periodically cleaned out.

rock kindred

See: [rock association](#)

rock leather

See: [mountain leather](#)

rock loader

a. Any device or machine used specif. for loading slate or rock inside a mine. However, it is most frequently used with scraper loaders equipped for handling rock. Syn: [rock-loader operator](#) b. See: [box loader](#)

rock-loader operator

See: [rock loader](#)

rockman

In bituminous coal mining, a foreman who is in charge of the drilling of holes in rock or slate and the charging and tamping of explosives in the holes drilled by miners prior to blasting. See also: [slateman](#) *DOT*

rockman helper

See: [slate-shooter helper](#)

rock meal

See: [rock flour](#)

rock mechanics

a. Mathematical analysis of the forces acting along joints, faults, and bedding planes of natural rock in situ, esp. in the evaluation of wall strengths, and hence slopes and slope ratios, in open-pit mines. b. The theoretical and applied science of the physical behavior

of rocks, representing a branch of mechanics concerned with the response of rock to the force fields of its physical environment (NAS-NRC, 1966). *AGI*

rock melt

A liquid solution of rock-forming mineral ions at sufficiently high temperatures to be considered molten.

rock milk

Soft pulverulent forms of calcite found in caves, or as an efflorescence. See: [agaric mineral](#)

rock miner

In anthracite and bituminous coal mining, a miner who works in rock as distinguished from coal. *DOT*

rock navy

A cranelike loading machine used at opencast pits and quarries. See also: [power shovel](#)

rock pedestal

See: [pedestal](#)

rock phosphate

See: [phosphate rock](#)

rock pillar

See: [hoodoo](#)

rock pressure

a. The pressure exerted by surrounding solids on the support system of underground openings, including that caused by the weight of the overlying material, residual unrelieved stresses, and pressures associated with swelling clays. *AGI* b. The compressive stress within the solid body of underground geologic material. *AGI* c. See: [ground pressure](#); geostatic pressure. d. In petroleum geology, the pressure under which fluids, such as water, oil, and gas, are confined in rocks. No particular cause or origin of the pressure is implied. Geophysicists and isostasis, however, have used, and are using, the term rock pressure in the primitive and more correct sense of the pressure exerted on underlying rock by superincumbent strata. To avoid confusion, it is desirable to

substitute for the term rock pressure, as now used in oil, gas, and underground water technology, the more appropriate term reservoir pressure. *Stokes*

rock pressure burst

A sudden and violent failure of rock masses under stresses exceeding the elastic strength of the rock. The classification and nomenclature of these occurrences are not clear and are based largely on effects and not on the basic causation factor. See also: [pressure bump](#); [rock bump](#); [rock burst](#). *Nelson*

rock quartz

Ordinary crystalline quartz. Also called rock crystal.

rock rake

A heavy duty rake blade. *Nichols, I*

rock roll

Inverted ridges of rock, usually sandstone, extending from the overlying strata into a coal seam, caused by localized streams active during the formation of the coal. See also: [classical washout](#)

rock ruby

A fine red variety of pyrope garnet. See also: [pyrope](#)

rock salt

Coarsely crystalline halite, NaCl, resulting from evaporation of saline water; in massive, fibrous, or granular aggregates; occurs as a nearly pure sedimentary rock, as extensive beds, or in domes or plugs. See also: [common salt](#); salt.

rock sediment

The combined cuttings and residue from drilling and sedimentary rocks and formations, commonly known as sand pumpings. *Williams*

rock series

See: [igneous-rock series](#)

rockshaft

A shaft made for sending down rock for filling the stopes, etc., generally kept nearly full, the rock being trammed away as needed. *Standard, 2*

rock sharp

A mineral expert. *Mathews*

rock shovel

A machine for loading broken rock. See also: [shovel loader](#) *Nelson*

rock silk

A silky variety of asbestos. *Fay*

rockslide

a. A slide involving a downward and usually sudden and rapid movement of newly detached segments of bedrock sliding or slipping over an inclined surface of weakness, as a surface of bedding, jointing, or faulting, or other preexisting structural feature. The moving mass is greatly deformed and usually breaks up into many small independent units. Rockslides frequently occur in high mountain ranges, as the Alps or Canadian Rockies. *AGI* b. The mass of rock moving in or moved by a rockslide. Also spelled rock slide. Syn: [rock slip](#)

rock slip

See: [rockslide](#)

rock slope

A slope driven through rock strata.

rock soap

See: [mountain soap](#)

rock spar

Material filling fracture cleavages in coal, consisting of nonclay mineral matter, probably deposited from solution, and sand, usually calcite or gypsum. *AGI*

rock splitter

In the stonework industry, one who splits large blocks of building granite, marble, and sandstone into slabs or smaller blocks, by drilling holes into the stone and then driving wedges into them until the stone breaks along the line of drilled holes. Also called rock breaker; rock driller. See also: [rock driller](#); [quarryman](#). *DOT*

rock stress

a. See: [rock pressure](#) b. The problem of determining the stresses that exist in the Earth's crust has long been of interest to engineers and geologists. Many mining problems are directly concerned with stresses that may cause mine openings to collapse. Two phases of occurrence of rock stresses are important: (1) the stresses existing in the rock before the excavation of the mine openings; i.e., the free field stress, and (2) the indirect stresses caused by the mine openings. See also: [free field stress](#)

rock temperature

a. The formational temperature at depth. The rate of increase of temperature with depth (the geothermal gradient) is highly variable over the earth, but averages 25 degrees C/km. *AGI* b. The temperature of the rock in a mine. *Lewis*

rock tunnel

A tunnel, drift, or crosscut driven through rock, usually connecting one coalbed with another; also through barren rock in metal mines.

rock turquoise

A matrix of turquoise with small grains of turquoise embedded in it. *Fay*

rock type

a. One of the three major groups of rocks: igneous, sedimentary, metamorphic. *AGI* b. A particular kind of rock having a specific set of characteristics. It may be a general classification, e.g., a basalt, or a specific classification, e.g., a basalt from a particular area and having a unique description. *AGI* c. The megascopically recognizable ingredients of coal rock; i.e., vitrain, clarain, durain, and fusain. See also: [banded ingredient](#)

rock waste

See: [debris](#)

rock weight

S. Afr. One (short) ton (0.9 t) of rock in place equals about 12 ft³ (0.34 m³). Horizontally, therefore, the weight of an ore reserve covering a claim over a stoping width of 3 ft (0.91 m) is 64,000 ft² X 3 ft / 12 ft³ /st = 16,000 st (14,500 t) at 100% payability. In case the vein dips downward, the resulting amount must be divided by the cosine of the angle of dip. *Beerman*

Rockwell hardness test

A method of determining the relative hardness of metals and case-hardened materials. The depth of penetration of a steel ball (for softer metals) or of a conical diamond point (for harder metals) is measured. See also: [scleroscope hardness test](#)

Rockwell machine

Trade name for an apparatus that measures the hardness of metals and alloys, in which a diamond-pointed cone is pressed under a specific load into the metal. The relative resistance to penetration (Rockwell hardness) is indicated by a number (Rockwell number) on a dial. The operation is called a Rockwell hardness test. Syn: [Rockwell tester](#)

Rockwell tester

See: [Rockwell machine](#)

rockwood

See: [mountain wood](#)

rock wool

See: [asbestos](#)

rod bit

A noncoring bit designed to fit a reaming shell that is threaded to couple directly to a drill rod, thus eliminating the core barrel in blasthole drilling. Also called blasthole bit. *Long*

rod clearance

See: [clearance](#)

rod coupling

Name for a double-pin-thread coupling used to connect two drill rods together. *Long*

rod damp

See: [safety clamp](#)

rodding

a. Cleaning and descaling of piping by means of scrapers attached to series of jointed rods. *Pryor, 3* b. Eng. The operation of fixing or repairing wooden cage guides in shafts. c. In metamorphic rocks, a linear structure in which the stronger parts, such as vein quartz or quartz pebbles, have been shaped into parallel rods. Whether the structure is formed parallel to the direction of transport or parallel to the fold axes has been debated.

AGI

rod dope

Grease or other material used to protect or lubricate drill rods. Also called rod grease.

Syn: [gunk](#)

rod drag

The rubbing of the rods or drill string on the sidewalls of the borehole. Syn: [rod friction](#)

rod drop

The distance of slump or slag in a long string of rods when released from the drill chuck.

Long

rod elevator

See: [elevator](#); elevator plug.

rod friction

a. The drag created in the flow of the drilling liquid by contact and constrictional effects created by the inside surface of the drill rods and couplings. CF: [skin friction](#); [wall friction](#). *Long* b. See: [rod drag](#)

rodingite

A massive dense buff to pink rock typically rich in grossular garnet and calcic pyroxene, and enveloped in serpentinite. Epidote, vesuvianite, and other calcium-rich minerals are commonly present. It is formed by metasomatic alteration of a protolith that, in many cases, was a dike rock, as shown by preservation of structures. The name was applied by Bell in 1911. *AGI*

Rodio-Dehottay process

A method of shaft sinking by the freezing method. It is based on the direct cooling effect of expanding highly compressed carbon dioxide in the freezing pipes. See also: [Koch freezing process](#)

rodlike

Refers to elongate crystals. CF: [acicular](#); [equant](#); [tabular](#); [lathlike](#).

rodman

a. A person who uses or carries a surveyor's leveling rod. Also called rodsman. *Standard*, 2 b. See: [staff man](#)

rod mill

a. A mill for rolling rod. *ASM*, 1 b. A mill for fine grinding, somewhat similar to a ball mill, but employing long steel rods instead of balls to effect the grinding. *ASM*, 1

rod millman

One who grinds clinker, phosphate rock, or ore in a revolving cylinder partially filled with round steel rods; also, he or she tests a product for fineness by observing how much material is left on sieve of determined mesh, and regulates amount of material entering the mill accordingly. *DOT*

rodney

Eng. A rude platform near the shaft's mouth for a night fire. *Fay*

rod plug

See: [elevator plug](#)

rod proof

A test specimen taken from the melt on an iron rod. *ASTM*

rod pull

a. The number of borehole round trips made in a unit of time. *Long* b. The number of lengths of drill rod (two or more standard 10-ft lengths coupled together and handled and stacked as unit lengths) needed to reach the bottom of the borehole. *Long*

rod puller

Various mechanisms, essentially a double-acting air-actuated piston equipped with a rod-gripping device, commonly used to pull drill rods from a borehole in underground workings where a small drill without a hoist is used, or from drill rods stuck in a drill hole. Syn: [air rod puller](#) *Long*

rod reaming shell

A reaming shell designed to be coupled directly to a drill rod. See also: [rod bit](#)

rod reducing bushing

A pin-to-box sub used to connect one size rod in a string to a larger or smaller size. *Long*

rod reducing coupling

A pin-to-pin adapter used to connect a rod of one size to one of a larger or smaller size. *Long*

rods

a. Eng. Vertical or inclined timbers for actuating pumps. b. Long bars of Swedish iron of the toughest quality, for boring through rocks, etc. c. See: [cage guide](#)

rod sag

The bending of a long drill string due solely to its own weight. Also called rod slack. Syn: [sag](#)

rod shaft

The mine shaft containing the pump rods.

rod shell

See: [rod reaming shell](#)

rod slack

See: [rod sag](#)

rod slap

The impact of drill rods with the sides of a borehole, occurring when the rods are rotating. Syn: [whip](#)

rod snap

A sudden acceleration in rotational speed of the rods followed immediately by a sudden return to the former speed. *Long*

rod spear

A long, tapered, four-sided fishing tool. Used to remove a lost drill rod or other tubular piece of drill equipment from a borehole. *Long*

rod stand

The length of drill rod handled and stacked in the tripod or derrick as a unit piece during round trips. Also called offtake. See also: [double](#); treble. *Long*

rod stock

Round steel rod. *Nichols, 1*

rod string

The drill rods coupled to form the connecting link between the core barrel and bit in the borehole and the drill machine at the collar of the borehole. *Long*

rod stuffing box

An annular packing gland fitting between the drill rod and the casing at the borehole collar. It allows the rod to rotate freely but prevents the escape of gas or liquid under pressure. Esp. utilized when drilling with counterflow; when drilling in an area where a high hydrostatic pressure or flow of water may be encountered, as in drilling a cover or pilot hole; or when drilling up holes from an underground drill site. *Long*

roentgen equivalent man

A unit of ionizing radiation, equal to the amount that produces the same damage to humans as 1 R of high-voltage X-rays. Abbrev. rem. *McGraw-Hill, 1*

roentgenite

See: [roentgenite](#)

roentgenogram

A photograph made with X-rays. Syn: [roentgenograph](#); [radiograph](#). *Webster 3rd*

roentgenograph

See: [roentgenogram](#)

Roesing lead pump

An automatic apparatus for discharging lead from the kettle; used in the Parkes process. *Fay*

Roesing wires

Wires suspended in a dust chamber to assist in settling and condensing dust and fumes from furnace gases. *Fay*

Roesler process

A process for separating copper, and in part silver, from gold by fusing with sulfur or with antimony sulfide, obtaining copper or silver sulfide. *Fay*

roestone

A fine-grained oolite resembling the roe of a fish. See: [oolite](#) *Fay*

Rohbach solution

An aqueous solution of mercuric barium iodide with a density of 3.5 g/cm^3 ; used for separating minerals by density.

Roheisenzunder process

A method that makes use of an airstream at a pressure of 4 atmospheres for atomizing molten pig iron into minute particles. The molten metal falling into an air stream formed by an annular slit in a steel cyclone is atomized, the particles falling into a water bath and subsequently dried. *Osborne*

Rohrbach solution

An aqueous solution of mercuric barium iodide; clear, yellow liquid; very refractive; sp. gr., 3.5. Used in separating minerals by their specific gravity and in microchemical detection of alkaloids. *CCD, 2*

roke

Prov. Eng. A vein of ore. A variation of rake. See: [rake](#)

roll

a. An elongate protrusion of shale, siltstone, or sandstone (locally limestone) from the roof into a coal seam, causing a thinning of the seam and sometimes replacing it almost entirely. CF: [cutout](#) commonly overlain by a thin coal stringer. *AGI* b. An elongate upheaval of the floor material into a coal seam, causing thinning of the seam. Syn: [horseback](#) c. Various minor deformations or dislocations of a coal seam, such as washouts, small monoclinical folds, or faults with little displacement. *AGI* d. In veins and other types of ore deposit, a thickening or an arcuate change in dip in the orebody. e. See: [roll orebody](#) f. A rotating cylinder used to support or guide a portion of conveyor belt. g. One of two cylinders or grooved rollers between which material is drawn, for reducing its thickness, as the finished rolls of a rolling mill. *BS, 11* h. The appearance of other types of mineral deposits in places where the bed or vein thickens or thins. *Mason* i. A roughly cylindrical distribution of uranium mineralization occurring usually in the Salt Wash Sandstone. There is some question whether the feature is structural or sedimentary. j. An inequality in the roof or floor of a mine. *NEMA, 1* k. S. Wales. The drum of a winding engine. l. Cast-iron or steel cylinder, used to break coal and other materials into various sizes. Applies to the type of crushing machinery in which the ore or coal is broken between cylindrical rolls, either plain or fitted with steel teeth, revolving toward each other, drawing the material in between the crushing peripheries, which rotate in a vertical plane. *Fay; Liddell* m. In powder metallurgy, a machine used to apply pressure progressively to form a compact. See also: [crushing roll](#); [ribbed roll](#); [smooth roll](#); [want](#); washout. *Rolfe*

roll compacting

The progressive compacting of metal powders by the use of a rolling mill. *ASTM*

roll crusher

A type of secondary or reduction crusher consisting of a heavy frame on which two rolls are mounted. These are driven so that they rotate toward one another. Rock fed in from above is nipped between the moving rolls, crushed, and discharged at the bottom. See also: [double-roll crusher](#) *Newton, 1*

rolled metal

Refers to metal, such as silver or stainless steel, which has been clad with a precious metal and rolled to reduce the thickness of the coat. *USBM, 7*

rolled plate

A thin plate of gold spread upon a layer of base metal by soldering the metals in the bar and then rolling the whole out into plate, forming a thinner plate of gold than that of the ware known as gold-filled. Also called rolled gold. *Fay*

rolled-steel joist

An I-beam made from a single piece of steel passed through a hot rolling mill. *Hammond*

roller

a. A broad pulley or wheel fixed to the floor, roof, or sides of roadways to prevent a haulage rope running against the ground that would cause excessive friction and wear of rails and sleepers. *Nelson* b. A component part of a roller chain in which it may serve only to reduce frictional loss occurring as the chain negotiates sprockets. Rollers may also serve as the rolling support for the chain and the load being conveyed. c. A heavy vehicle used for compacting soil, earth fill, and top layers of spoil dumps to increase the density and bearing capacity of the material. *Nelson*

roller bearings

Hard steel cylinders in bearings that have very low frictional resistance. *Hammond*

roller bit

a. A rotary boring bit consisting of two to four cone-shaped, toothed rollers that are turned by the rotation of the drill rods. Such bits are used in hard rock in oil well boring and in other deep holes down to 5,000 m and more. See also: [tricone bit](#); [drag bit](#). *Nelson* b. A type of rock-cutting bit used on diamond and rotary drills. The bit consists of a shank with toothed, circular, or cone-shaped cutter parts affixed to the head of the bit in such a manner that the cutters roll as the bit is rotated. Generally used for drilling 10-cm-size or larger holes in soft to medium-hard rocks, such as shale and limestone. Usually noncoring and not diamond set. Also called cone bit. CF: [noncoring bit](#) See also: [rock bit](#); [roller rock bit](#). Syn: [roller cone bit](#); roller-cutter bit; rolling cutter bit; toothed roller bit. *Long*

roller chain

a. Generally, any sprocket-driven chain made up of links connected by hinge pins and sleeves. *Nichols, 1* b. Specif., a chain whose hinge sleeves are protected by an outer sleeve or roller that is free to turn. *Nichols, 1*

roller cone bit

See: [roller bit](#)

roller-cone core bit

A type of roller bit with cutter cones arranged to cut an annular ring leaving an uncut section in the center as core. *Long*

roller conveyor

A series of rolls supported in a frame over which objects are advanced manually, by gravity or by power. See also: [controlled velocity roller conveyor](#); [el conveyor](#); gravity conveyor; herringbone roller conveyor; hydrostatic roller conveyor; portable conveyor. Syn: [gravity roller conveyor](#)

roller-cutter bit

See: [roller bit](#)

roller gate

Hollow cylindrical crest gate controlling a dam spillway. See also: [sector gate](#); [sliding gate](#). *Hammond*

roller grip

A device for clutching a traction cable between grooved sheaves or rollers.

rollerman

In mining, a laborer who inspects idler rollers or pulleys over which a cable passes along inclined haulageways, oiling or greasing rollers, resetting displaced ones, and repairing or replacing damaged ones. Also called pulley man; pulley repairer; pulley repairman; roller repairman; sheaveman; wheelman. *DOT*

roller repairman

See: [rollerman](#)

roller rock bit

A rotary bit fitted with two or more hardened steel or tungsten-carbide-tipped rollers of cylindrical or conical form. Variously known as two-cone bit, three-cone bit, four-cutter bit, etc. See also: [roller bit](#)

roller screen

See: [revolving screen](#)

rolley man

See: [incline repairman](#)

roll feeder

a. A smooth, fluted, or cleated roll or drum that rotates to deliver packages, objects, or bulk materials. b. A circular drum, plain or ribbed, rotating on a horizontal shaft and situated at the mouth of a bunker or hopper to control the rate of discharge of material therefrom. *BS*, 5

roll-front orebody

A roll orebody of the Wyoming type, which is bounded on the concave side by oxidized altered rock typically containing hematite or limonite, and on the convex side by relatively reduced altered rock typically containing pyrite and organic matter. See also: [roll orebody](#)

rolling and quartering

A sampling method in which the sample is formed into the requisite flat heap by placing it upon a rubber or other smooth sheet and, by lifting the corners of this sheet in proper rotation, rolling the material to and fro. The resultant heap is then quartered and alternate quarters are taken. This method is used with smaller bulk and smaller sizes of material. *Truscott*

rolling cradle

A rod slide equipped with rollers that contact the rods and over which the rods roll on being pulled or lowered into an angle borehole. *Long*

rolling cutter bit

See: [roller bit](#)

rolling plant

A rolling mill or establishment for rolling metal into forms. *Standard*, 2

rolling resistance

a. The sum of the external forces opposing motion over level terrain. *Carson*, 1 b. The tractive resistance caused by friction between the rails and wheels, which forms the major resistance on level tracks. See also: [tractive force](#)

rolling-up curtain weir

A type of frame weir, the frame of which remains upright, being rolled up from the bottom. *Hammond*

roll jaw crusher

A crusher of the same general type as the Blake or Dodge, but the moving jaw has a rolling instead of an oscillating motion. *Liddell*

rollman

In beneficiation, one who tends rolls that are used to crush ore, which has already been broken into small pieces in a crusher, to a fine size preparatory to the extraction of the valuable minerals. *DOT*

roll operator

One who operates conical rolls that separate stone from clay, preventing machine from jamming by regulating flow of clay into it. *DOT*

roll orebody

A uranium and/or vanadium orebody in a sandstone lens or layer, which cuts across bedding in sharply curving forms, commonly C-shaped or S-shaped in cross section. Two types can be distinguished: the Colorado Plateau type, named in 1956, and the Wyoming type, named in 1962. Roll orebodies of the Colorado Plateau type are of highly variable geometry, with their longest dimension in plan view parallel to the axes of buried sandstone lenses representing former stream channels, and surrounded by a wide halo of reduced (altered) rock. Orebodies of the Wyoming type are crescent-shaped in cross section and typically form in relatively thick, tabular, or elongate sandstone bodies, with the tips of the crescent thinning and becoming tangent to mudstone layers above and below. See also: [roll-front orebody](#)

roll scale

See: [mill scale](#)

roll screen

A screen consisting of a number of horizontal rotating shafts, fitted with elements arranged to provide screening apertures. *BS, 5*

roll sulfur

a. A commercial name for sulfur that has been purified and cast into rolls or sticks. *Standard, 2* b. See: [brimstone](#)

Roman cement

See: [pozzolana cement](#)

romanechite

A monoclinic mineral, $(\text{Ba}, \text{H}_2\text{O})\text{Mn}_5\text{O}_{10}$; rare as single crystals; commonly intergrown with other manganese oxides. Formerly called psilomelane, a term now reserved for mixtures. CF: [hollandite](#)

romanite

A yellow, black, or green amber from Romania. Also spelled rumanite. *English*

Roman ocher

A native ocher of a deep orange-yellow color. *Standard, 2*

Roman pearl

A hollow sphere of opalescent glass with its interior coated with essence d'orient and then filled with wax.

romeite

An isometric mineral, $(\text{Ca}, \text{Fe}, \text{Mn}, \text{Na})_2(\text{Sb}, \text{Ti})_2\text{O}_6(\text{O}, \text{OH}, \text{F})$; stibiconite group; forms clusters of minute yellow octahedra. Syn: [weslienite](#)

romometer

An instrument for measuring changes in vertical height and lateral movements of the roof relative to the floor at the coal face. Syn: [roof movement meter](#) *Nelson*

rondle

The crust or scale that forms upon the surface of molten metal in cooling. *Fay*

roentgen

The unit of exposure dose of X-ray or gamma-ray radiation. One roentgen is an exposure dose of X-ray or gamma-ray radiation such that the associated corpuscular emission per

0.001293 g of air produces, in air, ions carrying 1 electrostatic unit of quantity of electricity of either sign. Designated by the symbol R. Also spelled roentgen. *NCB*

roentgenite

Minute wax-yellow to brown, trigonal pyramidal crystals, intergrown with synchysite, parisite, and bastnasite, from Narsarsuk, Greenland. From X-ray and optical data, the composition is deduced as $\text{Ca}_2(\text{Ce,La})_3(\text{CO}_3)_5\text{F}_3$. Also spelled roentgenite. *Spencer, 5*

roof

a. The rock immediately above a coal seam. It is commonly a shale and is often carbonaceous in character and softer than similar rocks higher up in the roof strata. The roof shale may contain streaks and wisps of coaly material, which tends to weaken the deposit. Roof in coal mining corresponds to hanging wall in metal mining. See also: [roof stone](#) *Nelson* b. In mine timbering there are two classifications of roof, the immediate roof and the main roof. The immediate roof lies directly over the coal and may be a single layer or several layers of rock material of the same, or different consistencies, and from a few inches to several feet in thickness. This roof requires timbering to support it as the coal is removed. The main roof is the roof above the immediate top, and may vary from a few feet to several hundred, or even thousands of feet in thickness. This roof is generally controlled by leaving pillars of solid coal that will support its weight. *Kentucky* c. The country rock bordering the upper surface of an igneous intrusion. CF: [floor](#)

roof bolt

a. A long steel bolt inserted into walls or roof of underground excavations to strengthen the pinning of rock strata. It is inserted in a drilled hole and anchored by means of a mechanical expansion shell that grips the surrounding rock at about 4 ft (1 m) spacing and pins steel beams to the roof. b. Syn: [rock bolt](#) c. Current roof bolting consists of steel rods, 5/8 to 1 in (2 to 2.5 cm) or more in diameter and 3 to 8 ft (1 to 2.5 m) in length, anchored by a mechanical expansion shell, resin grout, or a combination of both. Grouted bolts may be fully or partially grouted. A steel plate, sometimes in combination with wooden headers or steel straps, fits tightly between the bolthead and mine roof or rib.

roof bolter

In bituminous coal mining, one who reinforces roofs of mine haulageways, side drifts, and working places with metal or timber to prevent rock and slate falls. Also called raise driller; stoperman; stoperperson; timberman. *DOT*

roof bolting

A system of roof support in mines. Boreholes usually from 3 to 12 ft (1 to 4 m) long are drilled upward in the roof, and bolts of 5/8 to 1 in (2 to 2.5 cm) or more in diameter are inserted into the holes and anchored at the top by a split cone, mechanical anchor, or resin grout. The bolts are put up in a definite pattern. The idea is to clamp together the several roof beds to form a composite beam with a strength considerably greater than the sum of the individual beds acting separately. See also: [slot-and-wedge bolt](#); [pin timbering](#); [rock bolting](#). CF: [strata bolt](#)

roof control

The scientific study of the behavior of rock undermined by mining operations and the most effective measures of controlling movements and failure. The subject is comprehensive, including the systematic measurement of the movement of strata and the forces and stresses involved. An attempt is made to correlate data with rock types and the type of excavation. See also: [rock mechanics](#)

roof cut

A machine cut made in the roof immediately above the seam. A roof cut is sometimes made in a soft band of dirt over the coal, which gives increased height in thin seams. The cut is made with a turret coal cutter. *Nelson*

roof cutting

It is a common occurrence to hear miners talk of gas cutting the roof and causing it to weaken; however, this condition is seldom encountered. There are some seams where gas does cut the roof, generally where top coal is left in gassy seams. The most common cause of roof cutting is its exposure to air. Guniting or painting of the top helps a condition of this kind. *Kentucky*

roof drill

Various hydraulically operated mechanized machines designed to install roof bolts. Two workers can install up to 200 bolts per shift. Units are available in both standard and special design to satisfy requirements in different mines. *Best, I*

roof-framy

A roof that is tenacious and when allowed to fall breaks down in large blocks or frames of stone. *Peel*

roofing

The wedging of a loaded wagon or horse against the top of an underground passage. *Fay*

roofing hole

In West Wales, a small, steeply inclined stone drivage from a lower to an upper coal seam or for exploration in disturbed ground. Syn: [roof-up](#) *Nelson*

roof jack

A screw- or pump-type extension post used as a temporary roof support. *BCI*

roof layer

a. Uniformly thick layer of rock supported or clamped at the edges by pillars. *Obert* b. A layer of combustible gas under the roof of mine workings. *BS, 8*

roof movement meter

See: [romometer](#)

roof pendant

A downward projection of country rock into an igneous intrusion. CF: [cupola](#)

roof pressure

The pressure that the overlying rocks exert on the support of mine workings. See also: [ground pressure](#)

roof rock

Rock forming the ceiling of a cave passage, underground chamber, mine opening, etc. *AGI*

roof shale

The layer or seam of shale occurring immediately above the Pittsburgh coal seam. Because of its friable nature, this shale or slate is taken down in most mining operations. *Rice, 2*

roof station

A survey station fixed in the roof of a mine roadway or working face. *BS, 7*

roof stone

Scot. The stone immediately above a coal seam. See also: [roof](#) *Fay*

roof stringer

Used in a weak or scaly top in narrow rooms or entries that have short life. It is done by placing lagging bars running parallel with the working place above the header. It has limited uses because of necessary additional height and because its weight rests on the center of the header. See also: [stringer](#)

roof testing

In the simple testing of the roof, it is struck by a hammer or a heavy object. A loose roof will give off a dull or hollow sound compared with a solid top, which has a clear ring. Good roof that has a clear ringing sound is called "bell top." Also known as sounding, sounding the roof, sounding the top, and jowling. Syn: [top testing](#)

roof-testing tool

Usually a wooden pole with a metallic ball at the upper end.

roof-to-floor convergence

The deformation of the coal or ore pillars is estimated by monitoring the closure of the entry. This roof-to-floor convergence is generally measured with a tube extensometer, to an accuracy of 0.001 in (25.4 μ m), or a tape measure, to an accuracy of 0.01 ft (3.048 mm). Measurements are repeatedly taken as the mining geometry changes. *SME, 1*

roof-up

See: [roofing hole](#)

roof work

A term applied to a vein worked overhead.

room

a. A place abutting an entry or airway where coal or ore has been mined and extending from the entry or airway to a face. b. A wide working place in a flat mine corresponding to a stope in a steep vein. A chamber. CF: [stope](#) c. A heading or short stall.

room-and-pillar

Said of a system of mining in which typically flat-lying beds of coal or ore are mined in rooms separated by pillars of undisturbed rock left for roof support. See also: [bord-and-pillar working](#); County of Durham system. Syn: [heading and stall](#)

room-and-pillar mining

In coal and metal mining, supporting the roof by pillars left at regular intervals. *Lewis*

room-and-pillar with waste filling

See: [overhand stoving](#)

room boss

In bituminous coal mining, a miner who inspects the working face in working places (rooms) to determine whether mining operations are being carried on properly and safety regulations are being observed. Also called wall boss. *DOT*

room conveyor

a. Any conveyor that carries coal from the face of a room toward the mouth. Normally, a room conveyor will deposit its coal into a car or another conveyor at the mouth of the room, but occasionally it will dump into a cross conveyor at some point between the face and the mouth. *Jones, I* b. See: [underground mine conveyor](#)

room entry

Any entry or set of entries from which rooms are turned. A panel entry.

room neck

A short passageway from the mine entry to the room in which a miner works.

room system with caving

See: [bord-and-pillar](#)

rooseveltite

A monoclinic mineral, BiAsO_4 ; monazite group; at Santiaguillo, Bolivia.

root clay

See: [underclay](#)

root deposit

A lode or vein from which alluvial cassiterite or gold may have been derived.

rooter

a. A towed scarifier; sometimes used to break up a hard surface and prior to the use of bulldozers in removing overburden at quarries and opencast pits. A heavy-duty ripper. *Nelson* b. A towed machine equipped with teeth, used primarily for loosening hard soil and soft rock. *Nichols, 2*

root hook

A very heavy hook designed to catch and tear out big roots when it is dragged along the ground. *Nichols, 1*

root-mean-square value

The root-mean-square value of an alternating current or voltage. It is the square root of the mean value of the squares of the instantaneous values taken over a complete cycle. When an alternating current or voltage is specified, it is almost invariably the root-mean-square value that is used. Also used of quantities that alternate over longer periods, for example, a month or year. Also known as effective value. Abbrev., R.M.S. *CTD*

rope and button conveyor

A conveyor consisting of a rope with disks or buttons attached at intervals, the upper flight running in a trough. The coal or other material is dropped into the trough, and the conveyor either is actuated by the weight of the coal in the trough when the trough is inclined forming a retarding conveyor, or moves the coal along the trough where the gradient is insufficient or adverse. In the one case a brake is provided; in the other, the sprockets are actuated by a motor. *Zern*

rope core

An important component of stranded ropes is the core, which may be either of fiber or of wire. In winding ropes it is generally made of manilla, sisal, or hemp. The function of the core is to support the strands and prevent them from bearing hard against one another. An even more important function is as a store for lubricant for the interior of the rope, and during manufacture it is saturated with lubricant. *Sinclair, 5*

rope cutter

See: [hook tender](#)

rope diameter

The diameter of a steel wire rope is the maximum obtainable measurement across the outer edges of the strands. The size of fiber ropes is usually specified by their

circumference. Modern steel wire winding ropes are large and heavy and may be 2-1/4 in (5.7 cm) in diameter for a moderately deep shaft. *Nelson*

rope driver

In bituminous coal mining, a foreperson who looks after the haulage cable and the equipment of trains of cars by which coal is hauled from the mine. The rope driver superintends the attaching of cars to cable by clipper and directs movement of the cable by signaling a slope engineer through a buzzer system. *DOT*

rope driving

The transmission of power by means of rope gearing, as distinguished from belt drive. *Crispin*

rope drum

Any drum, powered or otherwise, on which rope is wound; e.g., mining machine rope drums, room hoist rope drums, etc. *Jones, I*

rope fastening

The most suitable fastening between a wire rope and its socket is a white metal capping. Haulage ropes are generally doubled back on themselves around a steel thimble and secured with bulldog clips. *Hammond*

rope guide

Steel rope suspended in a vertical shaft to prevent excessive swinging of the cages or skips. Eight rope guides are generally used for the shaft, four for each cage, and two additional rubbing ropes are installed to prevent possible collision between the cages or skips. The ropes are suspended from girders fixed on the safety hook catch-plate platform and kept taut in the shaft by means of weights in the shaft bottom sump. The clearances between the cages, and also between the cage corners and the shaft wall, should be about 12 in (30.5 cm). See also: [fixed guides](#) *Nelson*

rope haulage

a. Means of moving loaded and empty mine cars by use of wire rope; generally used on steep inclines where use of electric mine locomotives is inefficient. *BCI* b. Any transportation system employing a steel wire rope to haul the mine cars or trams. See also: [direct-rope haulage](#); [main-and-tail haulage](#); tail-rope haulage. *Nelson*

rope haulage systems

Systems of rope haulage may be classified as (1) self-acting or gravity planes; (2) engine planes; (3) tail-rope haulage; (4) endless-rope haulage; and (5) aerial tramways, which are frequently considered by themselves, since they are not applied to transporting material underground. *Lewis*

rope lay

That length of rope in which one strand makes one complete revolution about the core.

rope plucking

The sudden jerking or twitching of a haulage rope due to the rope laps slipping to a smaller diameter on the drum. A severe plucking of a rope may be felt faintly more than 800 yd (725 m) distance from the engine. See also: [overhaul](#)

rope rider

An employee whose duty it is to see that cars are coupled properly, and to inspect ropes, chains, links, and all coupling equipment. A trip rider. See also: [brakeman](#)

rope roof bolt

A steel wire rope, with wedge heads fixed to its ends, used instead of the normal steel rod in roof bolting. Also known as cable bolting. The rope has a diameter of about 7/8 in (2.2 cm) and a length from 15 to 20 ft (4.5 to 6 m). *Nelson*

rope socket

A drop forged-steel device, with a tapered hole, which can be fastened to the end of a wire cable or rope and to which a load may be attached. It may be either the open- or closed-end type. *Long*

ropeway

a. A line or double line of suspended ropes, usually wire, along which articles of moderate weight may be transported on slings, either by gravity or power; much used in mining districts for transportation to watercourses or to railway lines. An aerial tramway. *Standard, 2* b. See: [aerial ropeway](#)

Ropp furnace

A long reverberatory furnace with a series of plows or rakes that are drawn over the hearth by a continuous cable, moving the ore steadily from the feed to the discharge end. *Fay*

roquesite

A tetragonal mineral, CuInS_2 ; chalcopyrite group; at Charrier, Allier, France.

rosasite

a. A monoclinic mineral, $4[(\text{Cu,Zn})_2 (\text{CO}_3)(\text{OH})_2]$; forms green to blue spherules in oxidized zones of zinc-copper-lead deposits. b. The mineral group glaukosphaerite, kolwezite, mcguinnessite, nullaginite, rosasite, and zincrosasite.

Roeschen method

A combustible-gas drainage method utilizing controlled drainage from the coal seams as they are being mined. This method, which is also known as the pack cavity method, was devised to extract gas from the mined-out areas of advancing longwall mining systems by leaving corridors or cavities at regular intervals in the pack. *Virginia Polytechnic*

roscherite

A monoclinic and triclinic mineral, $\text{Ca}(\text{Fe,Mn})_2 \text{Be}_3 (\text{PO}_4)_3 (\text{OH})_3 \cdot 2\text{H}_2\text{O}$.

roscoelite

A monoclinic mineral, $\text{K}(\text{V,Al,Mg})_2 (\text{AlSi}_3)\text{O}_{10} (\text{OH})_2$; mica group; soft; a source of vanadium.

rose beryl

The morganite variety of beryl.

rose bit

A hardened steel or alloy noncore bit with a serrated face to cut or mill out bits, casing, or other metal objects lost in the hole. Also used to mill off the rose-bit dropper on a Hall-Rowe wedge. Also called mill; milling bit. CF: [junk mill](#)

rose copper

See: [rosette copper](#)

rose diagram

A circular diagram for plotting strikes (with or without dips) of planar features, such as joints, faults, and dikes; so named because clusters of preferred orientations resemble the petals of a rose. *AGI*

roselite

a. A monoclinic mineral, $\text{Ca}_2(\text{Co,Mg})(\text{AsO}_4)_2 \cdot 2\text{H}_2\text{O}$; roselite group; forms a series with wendwilsonite; dimorphous with roselite-beta; perfect cleavage. b. The mineral group brandtite, roselite, wendwilsonite, and zincrosasite.

rose of cracks

The system with radial cracks issuing from the center of the hole as a result of the tangential stresses. *Langefors*

rose opal

A variety of opaque common opal having a fine red color. *CMD*

rose quartz

Crystalline quartz with a rose pink color, due probably to titanium in minute quantity. The color is destroyed by exposure to strong sunlight. Used as a gem or an ornamental stone. See also: [Bohemian ruby](#) *Fay*

rose steel

A steel that shows a peculiar fracture and texture in the interior, different from that near the surface. *Standard, 2*

rose topaz

The yellow-brown variety of topaz changed to rose pink by heating. These crystals often contain inclusions of liquid carbon dioxide. *CMD*

rosette

A radially symmetric, sand-filled crystalline aggregate or cluster with a fancied resemblance to a rose; formed in sedimentary rocks by barite, marcasite, or pyrite. See also: [petrified rose](#)

rosette copper

Disks of copper (red from the presence of suboxide) formed by cooling the surface of molten copper through sprinkling with water. Also called rose copper. *Fay*

rosette texture

A flowerlike or scalloped pattern of a mineral aggregate. *AGI*

rose vitriol

Cobalt sulfate. See also: [bieberite](#) vitriol. *Standard, 2*

rosickyite

A monoclinic mineral, S (gamma sulfur); dimorphous with sulfur. Syn: [gamma sulfur](#)

rosin

a. The hard, amber-colored residue left after distilling off volatile oil from pine pitch. *API, 1* b. To melt a resin and apply a coat to the right-handed threads of heated rod couplings; the coating sets when cooled, which permits the rods to be used in the same manner as left-hand-threaded rods in fishing operations. Also called rosinning. *Long*

rosin blende

A yellow variety of zinc blende, ZnS. When dark in color it is called blackjack.

rosined joints

Drill-rod or casing couplings to which hot rosin was applied and that were joined before the rosin cooled. *Long*

rosing

The act or process of milling a metal object in a borehole with a rose bit. *Long*

rosin jack

A yellow variety of sphalerite. Also called resin jack, rosin blende, rosen zinc. CF: [blackjack](#)

Rosin-Rammler equation

An equation relating to fine grinding: for most powders that have been prepared by grinding, the relationship between R, the residue remaining on any particular sieve, and the grain size in micrometers (x) is exponential: $R = 100e^{-bx^n}$, where e is the base of the natural logarithm and b and n are constants. (Dodd, 1964)

rosin tin

A reddish or yellowish variety of cassiterite. Also spelled resin tin.

rosin zinc

Sphalerite of a rosiny appearance. Hess

rosite

- a. See: [anorthite](#)
- b. An impure muscovite as alteration product.

rosiwal analysis

In petrography, a quantitative method of estimating the volume percentages of the minerals in a rock. Thin sections of a rock are examined with a microscope fitted with a micrometer that is used to measure the linear intercepts of each mineral along a particular set of lines. This method is based on the assumption that the area of a mineral on an exposed surface is proportional to its volume in the rock mass. AGI

rosolite

A rose-pink variety of grossularite garnet. Also called landerite and xalostocite. From Xalostoc, Morelos, Mexico. English

Ross and Welter furnace

A multiple-deck roasting furnace of the annular type; used in Germany. *Fay*

Ross feeder

Mechanism for control of rate of feed of coarse ore in the primary and secondary crushing system. Several heavy loops of chain lie above and bear on ore that rests in the delivery chute at just above its natural angle of repose. When the shaft from which the loops are suspended is rotated by its small motor, ore slides under control. *Pryor, 3*

Rossie furnace

An American variety of hearth for the treatment of galena, differing from the Scotch hearth in using wood as fuel, working continuously, and having hollow walls, to heat the blast. *Fay*

Rossi-Forel intensity scale

A scale for rating earthquake effects. Devised in 1878 by de Rossi (Italy) and Forel (Switzerland). No longer in general use, having been supplanted by Wood and Neumann's Modified Mercalli intensity scale of 1931. *AGI*

rosthornite

A brown to garnet-red resinous material forming lenticular masses in the coal of Caruthia. *AGI*

rotameter

A tapered float rises or falls in a transparent tube in accordance with the velocity of the rising liquid. Variations include spinning floats and magnetic or radioactive ones for use with opaque fluids. Rate-of-flow indicator. *Pryor, 3*

rotap

Laboratory screen shaker widely used in screen sizing analysis. Up to seven 8-in round screens are nested on the appliance and given a shaking, rotary, and tapping motion. *Pryor, 3*

rotary

See: [rotary table](#); rotary-drill rig.

rotary bit

As used in a broad sense by drillers, a roller bit. *Long*

rotary boring

A system of boring, using usually hollow rods, with or without the production of rock cores. Rock penetration is achieved by the rotation of the cutting tool. The method is used extensively in exploration, particularly when cores are required. It is the usual method in oil well boring with holes from 6 to 18 in (15 to 45 cm) in diameter. See also: [boring](#); [diamond drilling](#); [rotary drill](#). *Nelson*

rotary breaker

A breaking machine for coal, rock, or minerals. It consists of a trommel screen with a heavy cast steel shell fitted internally with lifts that progressively raise and convey the coal and stone forward and break it. As the material is broken the undersize passes through the apertures, so that excessive degradation does not occur. See also: [trommel](#); Bradford breaker. *Nelson*

rotary bucket drill

A rotary-type drill on which a rotary bucket is fastened to the kelly bar. The bucket is equipped with a hinged bottom, which has straight-edged cutting blades or teeth. When rotated by the kelly bar, the bucket loads from the bottom; when filled, it is withdrawn from the hole and dumped by unlatching the bottom. Holes 30 to 250 cm in diameter can

be drilled with this machine in soft, boulder-free ground. Also called bucket rig; dry-hole digger; rathole rig. See also: [bucket drill](#)

rotary compressor

A compressor designed for a delivery pressure of 100 psi (690 kPa) and ranging in capacity from 60 to 300 ft³ /min (2.1 to 8.5 m³ /min). See also: [air-conditioning process](#)

rotary drier

A drier in the shape of an inclined rotating tube used to dry loose material as it rolls through. *ACSG, 2*

rotary drill

Broadly, various types of drill machines that rotate a rigid, tubular string of rods to which is attached a bit for cutting rock to produce boreholes. The bit may be a roller cone bit, a toothed or fishtail drag bit, an auger bit, or a diamond bit. See also: [core drill](#); [rock drill](#). CF: [diamond drill](#); [shot drill](#).

rotary-drill cuttings

The chips and pulverized rock produced by the abrasive and chipping action of a drag, roller bit, or diamond bit when used on a diamond- or rotary-drill machine to drill a borehole. CF: [cuttings](#)

rotary drilling

The hydraulic process of drilling that consists of rotating a column of drill pipe, to the bottom of which is attached a drilling bit, and during the operation, circulating down through the pipe a current of mud-laden fluid, under pressure, by means of special slush pumps. The drilling mud and cuttings from the bit are forced upward and outside the drill pipe to the surface. CF: [cable-tool drilling](#)

rotary drill motor

The space available in the casing of a pneumatic rotary rock or coal drill is necessarily limited and precludes the use of a reciprocating engine. The power unit used instead is similar in design to the vane compressor. The rotor runs at a very high speed, between 3,500 rpm and 4,000 rpm, and this is reduced by gearing to give a drill spindle speed of about 650 rpm.

rotary-drill rig

A rotary drill complete with accessory tools and equipment necessary to drill boreholes.
Long

rotary dump

An apparatus for overturning one or more mine cars simultaneously to discharge coal. They may rotate either 180 degrees or 360 degrees . *BCI*

rotary dump car

A standard small car in which the car body, of about 2 yd³ (1.5 m³) capacity, is mounted on a turntable in the car frame. The car body may be swung by hand to dump over either side or either end. *Pit and Quarry*

rotary dumper

A steel structure that revolves a mine car and discharges the contents, usually sideways, into a bunker or onto a screen. *Nelson*

rotary excavator

Earth-moving machine with vertical wheel that carries digging buckets peripherally. These loosen soil and deliver to short conveyor loader, the assembly being mounted on crawler track. Capacity up to 5,000 st/h (4,500 t/h). Also called bucket wheel excavator. *Pryor, 3*

rotary fault

See: [rotational fault](#)

rotary feed table

a. A feeder comprising a horizontal rotating circular plate mounted under the mouth of a hopper and arranged with an adjustable plow to control the rate of flow of material over the edge of the plate. *BS, 5* b. See: [disk feeder](#)

rotary furnace

Horizontally mounted cylinder rotating between trunnions through which gas or oil flame is introduced. *Pryor, 3*

rotary-percussive drill

A drilling machine that operates as a purely rotary machine to which is added a percussive action. The specially designed rotary-percussive drilling bit not only gives a

greater penetration rate, but is also able to operate longer without deterioration of the cutting edges. A disadvantage is the great size of the air-operated machine, which is usually mounted on a carriage. *Nelson*

rotary percussive drilling

A method of drilling in which repeated blows are applied to the bit, which is continually rotated under power. *BS, 12*

rotary pump

A positive-displacement pump in which the liquid-propelling parts are cams, gears, impeller wheels, etc., rotating within a case, as distinguished from those pumps that move liquids by means of the to-and-fro motion of a piston within a cylinder. CF: [centrifugal pump](#) *Long*

rotary screen

a. A screen for sizing aggregate and similar material; it is a pierced rectangular plate bent into a cylinder. *Hammond* b. See: [trommel](#)

rotary shot drill

a. Any rotary drill used to drill blastholes. *Long* b. See: [seismograph drill](#)

rotary smelter

Any of the cylindrical smelters that depend on slow rotation about a horizontal axis for agitation of the molten mass. See also: [smelter](#) *ASTM*

rotary sorting table

A circular plate conveyor to effect a preliminary grading of coals and removal of stone by hand. A screened-out fraction of the run-of-mine coal is delivered to the table by chute from a conveyor. As the stream of coal revolves on the table, the various grades of coal and the dirt are raked into positions where they are diverted by plows into chutes. The operators are positioned on the inner and outer edges of the table and the coal is not handled but only raked. Syn: [circular grading table](#)

rotary table

a. The geared rotating table that propels the kelly and the drill stem when drilling a borehole with an oilfield-type rotary rig. Also called rotary; table; turntable. *Long* b. The mechanism used in some forms of rotary drilling to rotate the drilling column. *BS, 9*

rotary vane feeder

A rotor of cylindrical outline with radial, spaced plates or vanes rotating on a horizontal axis, for controlling the flow of bulk materials.

rotary vibrating tippler

A tippler designed to overcome the tendency for coal or dirt to stick to the bottom of the tubs or mine cars. When the tippler is in the inverted position, the car rests upon a vibrating frame that gives it a high-speed vertical jolting motion, which frees any material tending to stick inside the car. *Nelson*

rotating casing screw conveyor

A screw conveyor in which the tubular casing rotates at a different speed or in an opposite direction to the conveyor screw. See also: [screw conveyor](#)

rotational fault

A fault on which rotational movement is exhibited; a partial syn. of hinge fault. CF: [hinge fault](#); [scissor fault](#). Syn: [rotary fault](#)

rotational flow

Turbulent flow involving all parts of a moving liquid.

rotational movement

Apparent fault-block displacement in which the blocks have rotated relative to one another, so that alignment of formerly parallel features is disturbed. CF: [translational movement](#) *AGI*

rotational shear

One of four types of slope failure. Failure by rotational shear produces a movement of an almost undisturbed segment along a circular or spoon-shaped surface and occurs in comprehensive, uniform material. This material would not be affected by geological planes of weakness. Failure of this type can occur from causes that either increase the shear stresses or decrease the shear strength of the material. *Woodruff*

rotational slide

A slide of homogeneous earth or clay in which the slip surface of failure closely follows the arc of a circle. *Nelson*

rotational transformation

An isochemical phase change involving only a shift in angle of chemical bonds, e.g., beta-quartz to alpha-quartz. CF: [phase transformation](#); displacive transformation; reconstructive transformation; dilational transformation.

rotational wave

See: [S wave](#)

rotation firing

Crushing a small piece of rock with a first explosion, and timing other holes to throw their burdens toward the space made by that and other preceding explosions. Also called row shooting. *Nichols, 1*

rotation recorder

An instrument for measuring any slight rotation of a bridge support under load. See also: [spread recorder](#)

rotch

See: [rotche](#)

rotche

S. Staff. A soft and moderately friable sandstone. Also called roach; rotch; roche.

rothoffite

A brown variety of andradite garnet.

Rot I plate

See: [gypsum plate](#); selenite plate.

rotobelt filter

Drum-type vacuum filter in which the membrane is a belt, which leaves the drum at discharge point and is returned via pulleys. This arrangement facilitates washing of filter cake from both sides, also discharge. *Pryor, 3*

roto finish

A tumbling method using special chips and chemical compounds. *Osborne*

rotor

Any unit that does its work in a machine by spinning and does not drive other parts mechanically. *Nichols, I*

rotor steel process

A steelmaking process using the principle of rotation as in the Kaldo process. It has two lances; one above the bath surface uses low-pressure oxygen to burn carbon monoxide from the bath, while the other blows oxygen onto the bath at high pressure to obtain similar fast oxidation as in the L.D. steel process. *Nelson*

rotten reef

S. Afr. Decomposed, soft country rock found in connection with auriferous conglomerates.

rottenstone

A soft, light, earthy substance consisting of fine-grained silica resulting from the decomposition of siliceous shale-on limestone. It is used for polishing. CF: [diatomite](#)

rough

a. Highly fractured, broken, or cavey ground. *Long* b. An uncut gemstone. Pertaining to an uncut or unpolished gemstone; e.g., a rough diamond. *AGI*

roughbacks

Term used in the dimension stone industry for ends of blocks that are used as byproducts.

rough diamond

A diamond in its natural state. *Long*

rougher cell

Flotation cells in which the bulk of the gangue is removed from the ore or coal.

rough ground

Highly fractured, fragmented, or cavey rock formations. *Long*

roughing

Upgrading of run-of-mill feed either to produce a low-grade preliminary concentrate or to reject valueless tailings at an early stage. Performed by gravity on roughing tables, or in flotation in rougher circuit. See also: [cleaning](#)

roughing hole

A hole to receive slag from a blast furnace, or molten iron when it is undesirable to let it run into pigs. *Standard, 2*

roughing mill

a. A metal disk charged with an abrasive, used for the first work in grinding gems. *Standard, 2* b. A set of roughing rolls. *Standard, 2*

roughing rolls

The rolls of a train that first receive the pile, ingot, bloom, or billet, and partly form it into the final shape. Also called breaking-down or roughing-down rolls. *Fay*

roughing tool

The ordinary tool used by machinists for removing the outer skin and generally for heavy cuts on cast iron, wrought iron, and steel. *Crispin*

rough stone

a. See: [rough diamond](#) b. A gemstone that has not yet been polished or cut.

roughway

Corn. A quarry term to designate a direction along which there is no natural cleavage in a rock. See also: [cleaving way](#); [quartering way](#).

round

a. A planned pattern of drill holes or series of shots intended to be fired either simultaneously or with delay periods between shots; also, the muck pile obtained when the round is blasted. b. A round generally consists of cut holes, easers, and trimmers. See also: [drill-hole pattern](#); [shot firing in rounds](#). *Nelson* c. The holes drilled for blast, the advance from a blast, or the ore, or rock from a single blast. *Ballard* d. A blast including a succession of delay shots. *Nichols, 1* e. In the operation of a blast furnace, one complete charge of ore, coke, and limestone. *Henderson*

roundabouts

See: [circuits](#)

round-face bit

A bullnose bit; also, any bit the cutting face of which is rounded, such as a single- or double-round nose bit. *Long*

round-headed buttress dam

A mass concrete dam constructed of parallel buttresses thickened at the upstream end until they conjoin. See also: [multiple-arch dam](#) *Hammond*

round hook

A hook that has a smooth inner surface and will slide along a chain. *Nichols, 1*

rounding tool

A forming or swaging tool having a semicylindrical groove; a blacksmith's swage or collar tool. *Standard, 2*

round kiln

See: [beehive kiln](#)

roundstone

a. A rounded rock fragment of any size larger than a sand grain; a group name for pebbles, cobbles, or boulders -- any or all of these. *Stokes* b. A diamond crystal with an arched facet. *Hess* c. A term proposed by Fernald (1929) for any naturally rounded rock fragment of any size larger than a sand grain (diameter greater than 2 mm), such as a boulder, cobble, pebble, or granule. See also: [cobblestone](#)

round strand rope

A rope composed of a number of strands, generally six in number, twisted together or laid to form the rope around a core of hemp, sisal, or manilla, or, in a wire-cored rope, around a central strand composed of individual wires. *Sinclair, 5*

round trip

The process of pulling the drill string from a borehole, performing an operation on the string (such as changing a bit, emptying the core barrel, etc.), and then rerunning the drill string into the borehole. See also: [trip](#)

row

a. Corn. Coarse, undressed tin ore; refuse from stamping mills. *Arkell* b. N. Staff. A seam or bed of coal. c. A line of points in a lattice. See: [lattice](#)

roweite

An orthorhombic mineral, $\text{Ca}_2 \text{Mn}_2 \text{B}_4 \text{O}_7 (\text{OH})_6$; forms a series with fedorovskite; forms light brown laths; at Franklin, NJ.

rowlandite

An amorphous mineral, $\text{Y}_4 \text{FeSi}_4 \text{O}_{14} \text{F}_2 (?)$; massive; dark-green where fresh; becomes brick red on alteration.

row shooting

In a large blast, setting off the row of holes nearest the quarry face first, and other rows behind it in succession. *Nichols, 1*

Roxite

A nonpermitted gelatinous explosive; medium strength, high density, and good water resistance. Used in tunneling in nongassy mines in rocks of medium hardness. *Nelson*

royal barren

Solution overflowed from first ion-exchange column in a series that is receiving and stripping pregnant uranium liquor; contains some uranyl. *Pryor, 3*

royalty

a. A lease by which the owner or lessor grants to the lessee the privilege of mining and operating the land in consideration of the payment of a certain stipulated royalty on the mineral produced. *Ricketts* b. See: [overriding royalty](#) c. Ownership of mineral rights under restricted terms. *Wheeler, R.R.* d. Eng. The mineral estate or area of a colliery, or a portion of such property. A field of mining operations. e. The landowner's share of the value of minerals produced on a property. It is commonly a fractional share of the current market value (oil and gas) or a fixed amount per ton (mining). See also: [take](#)

royer

In foundry work, centrifugal belt thrower. Short length of conveyor belting travels at 2,000 to 4,000 ft/min (600 to 1,200 m/min) and conditions molding sands by discharging them vigorously so as to mix and partially dry them. Similar arrangement also used in forming storage piles and loading small material to ships. *Pryor, 3*

rozenite

a. A monoclinic mineral, $\text{FeSO}_4 \cdot 4\text{H}_2\text{O}$. b. The mineral group including aplowite, boyleite, ilesite, rozenite, and starkeyite.

rubasse

a. Fr. A crystalline variety of quartz containing, distributed through it, spangles of hematite that reflect a ruby red. Also spelled rubace. Also known as Ancona ruby; Mont Blanc ruby. *Standard, 2; Fay* b. Quartz, stained red in cracks to imitate ruby. *Hess*

rubber

a. Guide; binder; conductor. *Mason* b. Derb. Fine scythestone; micaceous sandstone. *Arkell* c. A gold-quartz amalgamator in which slime is rubbed against amalgamated copper surfaces. d. A bucking iron or bucking hammer. A broadhead hammer. *Fay* e. A building brick made from a sandy clay and lightly fired so that it can be readily rubbed to shape for use in gaged work. The crushing strength of such a brick is about 1,000 psi (6.9 MPa). *Dodd*

rubber-bushed couplings

Two flanged hubs, one equipped with rubber-bushed holes, the other equipped with pins that mesh with the rubber bushings. To prevent excessive wear, the rubber bushings are bushed with nonferrous bushings, which provide satisfactory contact and wearing surfaces. *Pit and Quarry*

rubber conveyor belt

A conveyor belt consisting of a central stress-bearing carcass for transmitting power enclosed in rubber or PVC covers to protect the carcass from abrasion and atmospheric changes. The carcass usually consists of plies of cotton duck fabric, but other constructions used are cotton cords, steel cables, and woven fabrics of synthetic fibers, such as rayon, nylon, Orlon, Dacron, fiberglass, and asbestos. The covers are furnished in various thicknesses and qualities of rubber or PVC compounds.

rubber-lined pipes

Pipes prepared for handling corrosive liquids in such processes as acid leaching. Also, pumps and impellers handling ore pulps. See also: [hydraulic stowing pipe](#)

rubberstone

A sharp-gritted Ohio or Indiana sandstone used for sharpening shoe knives; also known as shoe stone.

rubber-tired haulage

The underground use of tractors and dump truck haulage, of battery or diesel type, and battery-driven shuttle cars. See also: [trackless tunneling](#)

rubbing bed

In quarrying, a bed consisting of a circular disk of cast iron of varying diameters, rotating on a vertical axis. Marble slabs or blocks held on the surface of this rotating disk, to which sand and water are applied, are worn down to desired dimensions and smoothness. *AIME, 1*

rubbing stone

a. Stone used for rubbing, smoothing, or sharpening; in particular for facing building stones by removing toolmarks. *Arkell* b. A block of fine-grained abrasive, such as corundum, for the stoning of vitreous enamel. *Dodd*

rubbing surface

The total area of a given length of airway; i.e., the area of top, bottom, and sides added together, or the perimeter multiplied by the length.

rubble

a. A loose mass of angular rock fragments, commonly overlying outcropping rock; the unconsolidated equivalent of a breccia. CF: [talus](#) b. Loose, irregular pieces of artificially broken stone as it comes from a quarry. Syn: [rubblestone](#)

rubble concrete

Concrete in which large blocks of stone, roughly squared, are placed and arranged roughly in courses, so that they break joint both horizontally and vertically. The stones are placed with not less than 6 in (15 cm) of space between them so that the concrete may be properly rammed. Care is taken that all voids are filled with concrete. *Nelson*

rubbleman

In the quarry industry, a foreman who directs and supervises the work of drilling and splitting stone. *DOT*

rubble masonry

Uncut stone, used for rough work, foundations, backing, etc. *Crispin*

rubblerock

See: [breccia](#)

rubblestone

See: [rubble](#)

rubblly reef

Aust. A vein much broken up.

rubellite

A pink gem variety of elbaite. Syn: [red schorl](#)

ruberite

See: [cuprite](#)

rubicelle

A yellow or orange-red variety of spinel; an aluminate of magnesium. CF: [ruby spinel](#)

rubidium

A soft, silvery-white, metallic element of the alkali metal group, closely resembling potassium. Symbol, Rb. Widely distributed in small quantities in nature. Obtained commercially from lepidolite and from potassium minerals. Forms amalgams with mercury and alloys with gold, cesium, sodium, and potassium. Has been considered for use in space vehicles, and for use in thermoelectric generators. *Handbook of Chemistry and Physics, 3*

rubinblende

Miners' term for the red silver sulfides pyrargyrite, proustite, and miargyrite. Syn: [ruby blende](#)

rubinglimmer

See: [lepidocrocite](#)

Ruble hydraulic elevator

A device by which coarse material in placer gravel is separated from the fines and elevated onto a dump.

ruby

The red gem variety of corundum, the color due to the presence of chromium in the structure. CF: [sapphire](#)

ruby alumina

An abrasive similar to white alumina except ruby red in color because of the presence of chromic oxide. *ACSG*, 2

ruby arsenic

An early name for realgar. See also: [ruby sulfur](#)

ruby blende

a. A reddish variety of sphalerite. Syn: [ruby zinc](#) b. See: [rubinblende](#)

ruby cat's eye

A girasol ruby with a chatoyant effect. CF: [sapphire cat's eye](#)

ruby copper

See: [cuprite](#)

ruby copper ore

See: [cuprite](#)

ruby mica

An old syn. for goethite. *Fay*

ruby sand

A red-colored beach sand containing garnets, as at Nome, AK. *AGI*

ruby silver

Dark ruby silver is pyrargyrite, and light ruby silver is proustite. *Dana, 4*

ruby spinel

A red gem variety of spinel. CF: [almandine ruby](#); [balas ruby](#); [rubicelle](#).

ruby sulfur

See: [realgar](#) *Standard, 2*; *Fay*

ruby tin

A red variety of cassiterite.

ruby zinc

Miners' term for transparent red sphalerite or zincite. Syn: [ruby blende](#)

rudaceous

Said of a sedimentary rock composed of a significant amount of fragments coarser than sand grains; pertaining to a rudite. The term implies no special size, shape, or roundness of fragments throughout the gravel range, and is broader than pebbly, cobbly, and bouldery. Also said of the texture of such a rock. *AGI*

rudite

A general name used for consolidated sedimentary rocks composed of rounded or angular fragments coarser than sand (granules, pebbles, cobbles, boulders, or gravel or rubble); e.g., conglomerate, breccia, and calcirudite. The term is equivalent to the Greek-derived term, psephite. Etymol: Latin rudus, crushed stone, debris, rubble. See also: [lutite](#); arenite. *AGI*

Ruggles-Coles dryer

Rotary drier or kiln, in which material is worked through a horizontal cylinder counter to drying or heating gas blown through by fan. *Pryor, 3*

ruin

Eng. A term occasionally employed in familiar description for certain minerals whose sections or cut faces exhibit the appearance of ruined buildings, as ruin agate, ruin marble, etc. *Fay*

ruin agate

A brown variety of agate displaying on polished surfaces markings that resemble the outlines of ruined buildings.

ruin aragonite

Brecciated Mexican onyx (aragonite). *Schaller*

ruinform

Minerals having the form or appearance of ruins.

rule of approximation

Applicable to placer mining locations and entries upon surveyed lands to be applied on the basis of 10-acre (4-ha) legal subdivisions. *Ricketts*

ruling grade

The grade that determines tonnage that can be handled by a single locomotive over a particular engine district. *Urquhart*

ruling gradient

See: [limiting gradient](#)

rumanite

See: [romanite](#)

Rumford's photometer

A photometer consisting of a rod standing vertically in front of a white screen on which are cast shadows of it by the two light sources whose intensities are to be compared. When the shadows are of equal darkness the ratio of the intensities of the sources equals the square of the ratio of their distances from the screen. *CTD*

run

a. A branching or fingerlike extension of the feeder of an igneous intrusion. Typically spread laterally along several stratigraphic levels. *AGI* b. A flat irregular ribbonlike orebody following the stratification of the host rock. *AGI* c. The direction in which a vein of ore lies. d. A caving in of a mine working. e. Soft ground is said to run when it becomes mud and will not hold together or stand. f. The escape of any flowing material into a tunnel area; it may be sand, gravel, or mud. *Stauffer* g. See: [grain](#) h. The length of feed or the advance made by a bit in drilling before it becomes necessary to rechunk the

rods or empty the core barrel. CF: [pull](#) i. A round trip in drilling. *Long* j. Continuous production, the operation of equipment between major repairs. k. A test made of a process or material.

runaround

a. A passage driven in the shaft pillar to enable workers to pass safely from one side of the shaft to the other side. See also: [bypass](#) *Fay* b. A conveyor in the form of a circuit as distinguished from a shape in which the carrying and return runs travel substantially the same path.

runaway

The uncontrolled downward rush of trams when the haulage rope breaks or becomes detached while the set is being hauled up an incline. *Nelson*

runaway switch

Catch point or other automatic diverting switch gear; acts when a mine car runs downgrade or out of control by diverting it to a siding. *Pryor, 3*

runback

a. To drill slowly downward toward the bottom of the hole when the drill string has been inadvertently or deliberately lifted off-bottom during a rechucking operation. *Long* b. To retract feed mechanism to its starting position when rechucking. *Long*

runback water

Scot. Water from a set of pumps that is run back and pumped up again to keep the pump from going "on air" while the other pumps are at work.

run dry

To drill without circulating a drilling fluid or mud. CF: [dry block](#) *Long*

runic texture

Suggested by Johannsen as an alternative to graphic texture, since the intergrown quartz and feldspar resemble runic characters. *CTD*

run in

a. To lower the assembled drill rods, core barrel, and bit, or other types of pipe, casing, or drill string into a borehole. *Long* b. To drill the first few inches slowly at the

beginning of a core run or when collaring a borehole. *Long* c. The initial period of operation of any mechanism during which the component parts seat themselves. *Jackson, 1*

run-in table

See: entry table.

run levels

To survey an area or strip to determine elevations. *Nichols, 1*

runner

a. Bearer or carrier girder, beam, or bar. *Mason* b. A steel-shod poling board, driven into unbroken but loose ground as excavation proceeds. See also: [cross poling](#) c. See: [driller](#) d. A fault slip. *Fay*

runner box

A distribution box that divides the molten metal into several streams before it enters the mold cavity. *ASM, 1*

runners

Vertical timber sheet piles driven to protect an excavation from collapse. See also: [guide runner](#); [cross poling](#). *Hammond*

runner stick

A slightly tapering, round stick, used as a pattern for the opening through which molten metal is to be poured into the mold. *Standard, 2*

running

a. The act or process of operating a drill, drilling with a bit, or lowering casing, drivepipe, or drill string into a borehole. *Long* b. Earth and rock that will not stand, esp. when wetted, and falls, flows, or sloughs into a borehole or a workplace in a mine. *Long*

running block

See: [traveling block](#)

running dry

The act of drilling without circulating a drilling fluid. *Long*

running ground

a. Insecure or easily caved wall of excavation. *Pryor, 3* b. Ground that is incoherent, for example, soils, sand, peat, moss, or waterlogged material. It may be semiplastic or plastic, such as wet clays. All such deposits deform readily under pressure, and relief is obtained by squeezing into openings, such as mine workings. The miner uses the term running ground to indicate the difficulty of support and sometimes of danger. See also: [forepoling](#); [quicksand](#); [mud rush](#). *Nelson*

running kiln

A lime kiln that is fed from above and delivers continually below. *Standard, 2*

running lift

Light mine pump used in sinking, which can be raised or lowered in shaft as required. *Pryor, 3*

running measures

Eng. Sand and gravel containing much water.

running off

In founding, the opening of the taphole of a blast furnace and allowing of the molten metal to flow out to the molds. *Standard, 2*

running rope

A flexible rope of 6 strands, 12 wires each, and 7 hemp cores. *Hunt*

running sand

a. An unconsolidated sand. See also: [run](#) b. Quicksand. *Fay*

running sheave

A sheave used as a single-pulley traveling block. *Long*

runoff

a. That part of precipitation appearing in surface streams. *AGI* b. The collapse of a coal pillar in a steeply pitching seam, caused either naturally or by a small shot in connection with pillar robbing. The pillar is said to have run off. *Fay*

runoff coefficient

The percentage of precipitation that appears as runoff. The value of the coefficient is determined on the basis of climatic conditions and physiographic characteristics of the drainage area and is expressed as a constant between zero and one (Chow, 1964).

Symbol: *C*. *AGI*

runoff pit

Catchment to which spillage can gravitate should it be necessary to dump the contents of mill machines such as classifiers, thickeners, and slurry pumps. Provided with a reclaiming pump so that the contents can be returned to the appropriate part of the flow line. *Pryor, 3*

run of lode

Corn. The direction or course of a lode.

run-of-mill

Ore finally accepted by a mill for treatment, after waste and dense-media rejection. Original mined ore (run-of-mine) is ore as severed and hoisted. Syn: [mill-head ore](#)

run-of-mine

a. The raw mined material as it is delivered by the mine cars, skips, or conveyors and prior to treatment of any sort. See also: [pithead output](#) *Nelson* b. Average grade of ore produced from a mine. *New South Wales* c. Said of ore in its natural, unprocessed state; pertaining to ore just as it is mined. *AGI*

runout

a. The unintentional escape of molten metal from a mold, crucible, or furnace. *ASM, 1* b. In mineral processing, the dumping of pulp before the contained solids pack down and choke a stalled mechanism in the event of a breakdown or a power failure. *Pryor, 3*

runout fire

A forge in which cast iron is refined. *Fay*

run-to-waste

Drill cuttings that are not collected or saved as a sludge sample and are allowed to collect in the sump; also, the return drill-circulation fluid not returned to a sump for recirculation. *Long*

Ruoss jig

A jig used chiefly on tin dredges to treat the undersize from the main revolving screen. It differs from the Harz jig in that there is no longitudinal division and the screening compartment extends over the whole surface of the jig; the plungers are located in the hutch below the screen are set in a vertical plane and reciprocate horizontally. *Harrison*

rupture

Deformation characterized by loss of cohesion. Frequently flow grades into rupture, with a progressive loss of cohesion, until complete separation occurs. See also: [fracture](#)

rupture envelope

See: [Mohr envelope](#)

rupture factor

The term is used with reference to brittle materials; i.e., materials in which failure occurs through tensile rupture rather than through excessive deformation. For a member of given form, size, and material, loaded and supported in a given manner, the rupture factor is the ratio of the fictitious maximum tensile stress at failure, as calculated by the appropriate formula for elastic stress, to the ultimate tensile strength of the material as determined by a conventional tension test. *Roark*

rupture line

See: [Mohr envelope](#)

rupture strength

The differential stress that a material sustains at the instant of breaking, or rupture. The term is normally applied when deformation occurs at atmospheric confining pressure and room temperature. *AGI*

rupture zone

The region immediately adjacent to the boundary of an explosion crater characterized by excessive in-place crushing and fracturing where the stresses produced by the explosion exceeded the ultimate strength of the medium. CF: [plastic zone](#)

rush

a. A stampede of prospectors and miners into a new discovery area. b. A place where gold is found in abundance. *Standard, 2*

rush gold

See: [rusty gold](#)

russellite

Corn. A tetragonal mineral, $\text{Bi}_2 \text{WO}_6$; a yellow alteration product with native bismuth and wolframite.

Russell process

A metallurgical process similar to the Patera process, except that cuprous sodium hyposulfite is used in addition to the sodium hyposulfite. *Liddell*

Russia iron

A high-grade, smooth, glossy sheet iron, not liable to rust; once made by a process that was long a secret with Russian manufacturers. The sheets were subjected to severe hammering in piles with powdered charcoal between them. *Standard, 2*

Russian crystal

A colorless variety of gypsum.

rust

a. A corrosion product consisting of hydrated oxides of iron. Applied only to ferrous alloys. *ASM, 1* b. A mixture of iron filings, ammonium chloride, and sometimes sulfur, moistened and placed between iron surfaces, where it hardens by oxidation, and forms a solid joint called a rust joint. *Standard, 2* c. An English term for a black shale discolored by ocher. *AGI*

rustler

In anthracite and bituminous coal mining, a general term applied to any worker who looks after the haulage system, performing the necessary work by which mine cars are raised and lowered to and from the mine surface. May be designated according to job, as clipper; rollerman. *DOT*

rustless process

A process for the manufacture of stainless steels in an electric furnace that uses a chrome ore as a source of chromium with or without the addition of silicoferrochromium, conjointly with stainless steel scrap. The hearth of the furnace is lined with chromite bricks. *Osborne*

rusty gold

Cal. Free gold, that does not readily amalgamate, the particles being covered with a siliceous film, thin coating of oxide of iron or manganese, etc. Syn: [rush gold](#)

rute

In mining, threadlike veins of ore. *Standard, 2*

ruthenium

A hexagonal mineral, Ru .

rutherfordine

An orthorhombic mineral, $UO_2(CO_3)$; radioactive; earthy yellow; secondary.

rutilated quartz

Sagenitic quartz characterized by enclosed needles of rutile. CF: [fleches d'amour](#); [sagenite](#). Syn: [Venus hairstone](#) See also: [sagenitic quartz](#)

rutile

a. A tetragonal mineral, TiO_2 , in which titanium replaces iron; trimorphous with anatase and brookite; prismatic; in amphibolites, eclogites, granite pegmatites, veins, and placers; a source of titanium; also a gemstone. Syn: [red schorl](#); [titanic schorl](#). See also: [titanium dioxide](#); [zircon group](#). b. The mineral group argutite, cassiterite, paratellurite, plattnerite, pyrolusite, rutile, and stishovite.

R wave

See: [Rayleigh wave](#)

Rziha's theory

A mine subsidence theory that is a variant or extension of the vertical theory. In this theory, allowance is made for movements beyond the undermined area, but the dip of the beds is considered to be of little or no influence. Rziha maintained that if rock is

undercut, it will stay undisturbed if cohesion exceeds gravity and will fall if gravity exceeds cohesion. *Briggs*

S

Sabalite

Trade name for banded variscite; may be banded vashegyite and natrolite; used as a gem stone. Syn: [Trainite](#)

sabkha

a. A supratidal environment of sedimentation, formed under arid to semiarid conditions on restricted coastal plains just above normal high-tide level. It is gradational between the land surface and the intertidal environment. Sabkhas are characterized by evaporite-salt, tidal-flood, and eolian deposits, and are found on many modern coastlines, e.g., Persian Gulf, Gulf of California. See also: [tidal flat](#). *AGI* b. Any flat area, coastal or interior, where, through deflation and evaporation, salts crystallize near or at the surface. *AGI* c. In the rock record, a sabkha facies may be indicated by evaporites, absence of fossils, thin flat-pebble conglomerates, stromatolitic laminae, desiccation features such as mud cracks, and diagenetic modifications, for example, disrupted bedding, dissolution and replacement phenomena, and dolomitization. The sabkha environment may have been significant in the formation of certain petroleum and sulfide-mineral deposits. Etymol: Arabic. Also spelled: sabkhah. Syn: [sebkha](#)

sabugalite

A monoclinic mineral, $\text{HAl}(\text{UO}_2)_4(\text{PO}_4)_4 \cdot 16\text{H}_2\text{O}$; autunite group; pseudotetragonal; forms crusts of minute yellow platy crystals in pegmatites at Sabugal, Portugal.

sacrificial anodes

The anodes used in cathodic protection against corrosion. *Hammond*

sacrificial protection

Reducing the extent of corrosion of a metal in an electrolyte by coupling it to another metal that is electrochemically more active in the environment. *ASM, I*

saddle

a. A ridge connecting two higher elevations; a low point in the crestline of a ridge. A minor upfold along the axis of a syncline; a minor downfold along the axis of an anticline. b. A gold-bearing quartz vein of anticlinal form, occurring esp. in Australian saddle reefs. See also: [saddle reef](#) c. A peculiar formation of sand slate found in shale or sand rock may be surrounded by soapstone. The under or exposed side of a saddle looks like natural rock, but its upper side is smooth, having no particular bond with the sand rock with which it is embedded, and it is liable to fall out of its place, a fall, however, producing no other derangement of the surrounding parts of the room from which it falls. *Ricketts* d. A hump-shaped piece of roof rock with a smooth back, insecurely attached to adjacent strata. Also called saddleback. *Hudson*

saddleback

a. Eng.; Scot. A roll or undulation in the roof or pavement of a seam. See also: [saddle](#) b. A hill or ridge having a concave outline along its crest. *AGI*

saddle back reef

A lode or reef bent archwise. Anticline. *Pryor, 3*

saddle block

In a dipper shovel, the boom swivel block through which the stick slides when crowded or retracted. *Nichols, 1*

saddle reef

a. A mineral deposit associated with the crest of an anticlinal fold and following the bedding planes, usually found in vertical succession, esp. the gold-bearing quartz veins of Australia. Syn: [saddle vein](#). *AGI* b. Aust. A bedded vein that has the form of an anticline; an inverted saddle has the form of a syncline. See also: [saddle](#) c. An opening at the crest of a sharp fold in sedimentary rocks, occupied by ore. *Bateman, 2*

saddle vein

See: [saddle reef](#)

safety

As applied to mining, means freedom from danger, injury, or damage. *Kentucky*

safety belt

a. A worker's belt attachable to some fixed object to safeguard against falls. b. A protective belt or harness with remote anchorage, worn by a worker, for example, a

quarryman, working on a face at height. Since the belt allows a drop of about 6 ft (2 m) a shock absorber is provided. *Nelson* c. A belt worn by a derrickman or tripodman to prevent injury due to accidental falls from the top of a derrick. *Long* d. A belt to which tools are attached to prevent risk of their falling into machines, thickeners, etc. *Pryor*, 3

safety car

Any mine car or hoisting cage provided with safety stops, catches, or other precautionary devices. *Fay*

safety catch

A safety appliance that transfers the weight of the cage onto the guides if the winding rope breaks. *Nelson*

safety chain

A chain used across openings to mantrips and personnel carriers to prevent miners from falling out of a moving vehicle. Syn: [breakaway chain](#)

safety check

A check valve to slow the excessive travel speed of a piston in a hydraulic cylinder. *Long*

safety clamp

Any of several types of rod clamps used at the collar of a borehole to hold the drill rods while they are being pulled or lowered. Also called alligator; automatic spider; floor clamp; foot clamp. *Long*

safety department

A department that deals with all aspects of mine safety and safety training. See also: [safety engineer](#)

safety detaching hook

A device that releases automatically the hoisting rope from a cage in the event of an overwind. See also: [detaching hook](#)

safety door

A spare or extra door fixed ready for use in a roadway in the event of damage to the existing ventilation door. The safety door is also positioned so that it can be employed in

any emergency, for example, explosions or fires. The door may be of steel construction.
Nelson

safety engineer

An employee whose job is to inspect all possible danger spots in the mine and plant; to cooperate with safety committees in various parts of the organization; to keep informed upon safety literature and to carry on a perpetual educational campaign among workers; to cooperate with agencies such as the U.S. Mine Safety and Health Administration, the U.S. Bureau of Mines, the National Safety Council, and State bureaus and inspectors; to head all rescue work, first-aid instruction courses, and safety-first meetings; and to draw up and enforce a written code of minimum safety requirements for all work at the mine and plant.

safety explosive

Explosive that requires a powerful initial impulse and therefore may be handled safely under ordinary conditions. *Bennett*

safety factor

a. The ratio of breakage resistance to load. *Nichols, I* b. See: [factor of safety](#) c. Ratio of breaking stress to working stress. *Obert*

safety fuse

A train of powder enclosed in cotton, jute yarn, and waterproofing compounds; used for firing a cap containing the detonating compound, which in turn sets off the explosive charge. The fuse burns at the rate of 2 ft/min (0.6 m/min). Used mainly for small-scale blasting in quarries and metal mines. See also: [blasting fuse](#); [capped fuse](#); [premature blast](#). *Nelson*

safety gate

An automatically operated gate placed at the top of a mine shaft, or at landings, to guard the entrance, to prevent anyone from falling into the shaft. *Fay*

safety glass

Most commonly a sandwich of plastic between two sheets of glass; i.e., laminated safety glass. Also called tempered safety glass; wire safety glass. See also: [Triplex glass](#)

safety hat

a. A cap or hat with a hard crown worn by miners, will resist blows against it. *BCI* b. A hat or cap made of rigid material, designed for the protection of the heads of workers. If worn in a mine equipped with electricity, the material should be electrically nonconducting. Also called safety cap. c. See: [tin hat](#)

safety hook

a. A hoisting hook with a spring-loaded latch that prevents a load from accidentally slipping off the hook. *Long* b. A self-acting detachable hook on a mine cage, which acts in the event of an overwind. See: [safety detaching hook](#) c. A safety catch in a mine hoist. *Standard, 2*

safety inspector

See: [mine inspector](#)

safety joint

A coarse-threaded joint in the head of a double-tube core barrel. If the core barrel becomes lodged in the borehole, the safety joint, inner tube, and core can be removed by backing off at the safety joint, thereby facilitating the subsequent fishing job. *Long*

safety lamp

In gassy mines, a lamp of an approved type, which is relatively safe to use in atmospheres that may contain flammable gas. Latterly, the term tends to be restricted to naphtha-fueled safety lamps, which are issued to mine inspection personnel and used for combustible gas tests. See also: [bonnet](#); [cap lamp](#); [Davy lamp](#); [flame safety lamp](#); electric cap lamp. *Nelson*

safety-lamp keeper

See: [lampman](#)

safety-lamp mine

In Great Britain, a coal mine in no part of which below ground is the use of lamps or lights other than permitted lights lawful. *Nelson*

safety latch

A latch provided on a hook or elevator to prevent it from becoming detached prematurely. CF: [safety hook](#)

safety light

A spring-tensioned aluminum pole (of two sections) with a holder to hold a flashlight in a horizontal position with an adjustable screw aligned with the push button switch of the flashlight. If there is convergence of the mine roof (back), the adjustment screw will depress, putting on the light to warn a miner in the area. Sometimes accompanied by a convergence gauge (measures in thousandths). See also: [guardian angel](#)

safety lock

An offset swivel coupling that supports the weight of the rods when whipstocking. *Long*

safety platform

a. A platform built in a derrick as a safe working place for workers who must be up the derrick to handle elevators, casing, drill rods, etc. *Long* b. A platform with a hinged-door opening, over a shaft while being sunk, esp. where blasted materials are hoisted with a muck bucket. After the bucket is hoisted, the hinged door is closed to prevent any material from falling back onto workers in the shaft.

safety post

A timber placed near the face of working places to afford protection for the workers at the face. It must be set like a line timber and with equal care. *Kentucky*

safety powder

A term used for short-flame explosives before the introduction of permissible explosives. *Fay*

safety rope winch

A cable-winding device anchored at the upper grade of an inclined face and having its cable attached to the head of the coal cutter or cutter loader to assist overcoming frictional resistance of the cutter or loader while in operation against the grade.

safety stop

a. An appliance to stop or control cars near the shaft at the pit bottom or at the top of incline haulages. *Nelson* b. On a hoisting apparatus, a check by which a cage or lift may be prevented from falling. *Standard, 2* c. An automatic device on a hoisting engine designed to prevent overwinding. *Fay*

safety switch

A switch that provides shunt protection in blasting circuits between a blast site and the switch used to connect a power source to the blasting circuit. *CFR, 5*

safety tools

a. Nonsparking tools made of beryllium-copper alloy for use in explosive atmospheres. *Hess* b. A tool such as a catching hook, a grappling tong, a fish head, or a bell screw, for recovering broken boring tools, picking up material, etc., at the bottom of boreholes. *Fay*

safety valve

A pressure-relief valve. *Long*

safflorite

a. Essentially, a diarsenide of cobalt but usually with a considerable amount of iron, and rarely, a small amount of nickel. Syn: [cobalt lollingite](#) b. An orthorhombic mineral, $4[\text{CoAs}_2]$; loellingite group; dimorphous with clinosafflorite; metallic; tin-white tarnishing to dark gray; sp gr, 7.4; in hydrothermal veins.

safreiro

See: [mucker](#)

sag

a. A depression in a coal seam, mine floor, or roof. *AGI* b. A depression produced by downwarping of beds on the downthrown side of a fault such that they dip toward the fault. *AGI* c. The difference between the sagging path a conveyor belt actually takes due to the imposed load of material and its own weight, and the theoretical plane tangent to the top of the supporting idler rolls. d. See also: [rod sag](#)

sag belt tension

The minimum tension in any portion of the carrying run of belt necessary to prevent excessive sag of the belt between belt idlers.

sag bolt

Bolts installed at intersections to measure roof sag. A sag bolt is a 12-ft (3.5-m) unit put in without a bearing plate. It is securely anchored in the 12-ft horizon with the aid of a heavy nut, and extends about 2 in (5 cm) from the hole. Three 1/2-in (1.3-cm) strips of colored pressure-sensitive tape are wrapped around the extending section of the bolt, beginning with green at the roof line, then yellow and red. The color bands provide a simple, economical means of detecting roof sag at a glance. *Coal Age*, 3

sag correction

A tape correction applied to the apparent length of a level base line to counteract the sag in measuring tape. *Hammond*

sagenite

a. An acicular variety of rutile in reticulated twin groups. b. See: [rutilated quartz](#); Venus hairstone. Etymol: Latin "sagena" large fishing net. Adj: sagenitic.

sagenitic

Occurring as needles or plates intersecting in a gridlike or grill-like manner. CF: [acicular](#)

sagenitic quartz

Transparent quartz containing acicular rutile, tourmaline, goethite, actinolite, or other mineral. See also: [Thetis hairstone](#); Venus hairstone; rutilated quartz.

sagger

A coarse fireclay, often forming the floor of a coal seam, so called because it is used for making sagger or protective boxes in which delicate ceramic pieces are placed while being fired. Etymol: corruption of "safeguard." Also spelled: seggar. Syn: [sagre](#)

sagging moment

A bending moment that produces concave bending at midspan of a simply supported beam, generally termed a positive bending moment. It is the opposite of a negative or hogging moment, which would occur at the supports. *Hammond*

sag meter

See: [closure meter](#)

sag pipe

A term proposed as a substitute for inverted siphon. *Seelye, I*

sagponds

Ponds occupying depressions along active faults, owing to uneven settling of the ground.

sagre

See: [sagger](#)

sag structure

A general term for load casts and related sedimentary structures.

sag tower

A pair of floating lightweight sheaves, which give support, at a suitable point, to the ropes leading away from the winding drums. The sheaves are located at a point about one-third of the length of rope between the drum and winding pulleys, measured from the drum. A sag tower suppresses rope oscillation and dampens out the rhythmic swing of the rope. *Nelson*

sahlinite

A monoclinic mineral, $Pb_{14}(AsO_4)_2O_9Cl_4$; forms aggregates of thin yellow scales; at Laangban, Sweden.

sahlite

Alternate spelling of salite.

Saint Stephen's stone

A white or grayish chalcedony with tiny red spots so close together that the appearance at a distance is a uniform rose-red. *Hess*

sal

See: [sial](#)

salable coal

Total coal mine output less tonnage rejected or consumed during preparation for market. *Pryor, 3*

salable minerals

A legal term that for Federally owned lands, defines mineral commodities that are sold by sales contract from the Federal Government. These are generally construction materials and aggregates such as sand, gravel, cinders, roadbed, and ballast material. The applicable statute is the Mineral Materials Sale Act of 1947, as amended (30 USC 602-604, 611-615). *SME, 1*

salable output

The total tonnage of clean coal produced at a mine as distinct from pithead output. It is the tonnage of coal as weighed after being cleaned and classified in the preparation plant. *Nelson*

salamander

A solid mass of iron, frequently weighing many tons, that is deposited and substantially replaces the firebrick hearth in the bottom of a blast furnace after long periods of operation. Syn: [bear](#)

salamanders' hair

See: [asbestos](#)

sal ammoniac

An isometric mineral, $\text{NH}_4 \text{Cl}$; a volatile white crystalline salt forming encrustations around volcanic vents. Syn: [salmiak](#)

Salamon-Munro formula

A coal pillar design formula that predicts the strength of coal pillars based on a survey of failed and standing coal pillars in South Africa. The coal pillar strength is predicted from coal pillar height and width specifications combined with empirical constants developed from fitting the design equation to 125 case studies. *SME, 1*

salamstone

A pale-red or blue variety of gem corundum in small transparent hexagonal prisms in Sri Lanka.

salar

A term used in Southwestern United States and in the Chilean nitrate fields for a salt flat or for a salt-encrusted depression that may represent the basin of a salt lake. Etymol: Spanish, to salt. Pl: salares; salars. See also: [playa](#)

salband

a. A term current among miners for the parts of a vein or dike next to the country rock. b. The selvage of an igneous mass or of a mineral vein. Etymol: German Salband or Sahlband. *AGI*

saleeite

A monoclinic mineral, $\text{Mg}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 2\text{H}_2\text{O}$; autunite group; forms pseudotetragonal square yellow plates at Katanga, Zaire.

salesite

An orthorhombic mineral, $\text{Cu}(\text{IO}_3)(\text{OH})$; forms blue-green crystals; in Chile.

salic

Said of certain light-colored silicon- or aluminum-rich minerals present in the norm of igneous rocks; e.g., quartz, feldspar, feldspathoid. Also, applied to rocks having one or more of these minerals as major components of the norm. Etymol: a mnemonic term derived from "s"ilicon + "al"uminum + "ic." CF: [femic](#); [mafic](#); [felsic](#). *AGI*

saliferous

Salt-bearing; esp. said of strata producing, containing, or impregnated with salt. See also: [saline](#)

salimeter

A hydrometer specially graduated to indicate directly the percentage of a salt (as common salt) in a brine or other salt solution. *Webster 3rd*

salina

a. A place where crystalline salt deposits are formed or found, such as a salt flat or pan, a salada, or a salt lick; esp. a salt-encrusted playa or a wet playa. See also: [playa](#) b. A body of saline water, such as a salt pond, lake, well, or spring, or a playa lake having a high concentration of salts. *AGI* c. Saltworks. *AGI* d. Salt marsh. Etymol: Spanish; saltpit; salt mine; saltworks. Anglicized equivalent: saline. *AGI*

saline

a. A natural deposit of halite or of any other soluble salt; e.g., an evaporite. See also: [salines](#) b. An anglicized form of salina. In this usage, a saline may refer to various features such as a playa, a salt flat, a saltpan, a salt marsh, a salt lake, a salt pond, a salt well, or a saltworks. *AGI* c. Salt spring. *AGI* d. Salty; containing dissolved sodium chloride, e.g., seawater. *AGI* e. Having a salinity appreciably greater than that of seawater, e.g., a brine. *AGI* f. Containing dissolved salts at concentrations great enough to allow the precipitation of sodium chloride; hypersaline. *AGI* g. Said of a taste resembling that of common salt, esp. in describing the properties of a mineral. *AGI*

saline deposit

See: [evaporite](#)

saline deposits

See: [salines](#)

saline residue

See: [evaporite](#)

salines

a. A general term for the naturally occurring soluble salts, such as common salt, sodium carbonate, sodium nitrate, potassium salts, and borax. Syn: [saline deposits](#) b. A general term for salt mines, salt springs, salt beds, salt rock, and salt lands. *AGI*

saliniferous

Said of a stratum that yields salt. *AGI*

salinity

The total amount of solid material in grams contained in 1 kg of water when all the carbonate has been converted to oxide, the bromine and iodine have been replaced by chlorine, and all organic matter has been completely oxidized. Expressed as grams per kilogram of water or parts per thousand. *Hy*

salinity bridge

An instrument for determining salinity of water (a salinometer) by measuring electrical conductivity of the water sample with a wheatstone bridge. *Hunt*

salinometer

An instrument that measures conductivity of a water sample. This conductivity when compared with that of a sample of known salinity can be converted to an expression of salinity for the unknown. *Hy*

salite

A variety of diopside at Sala, Sweden. Also spelled sahlite.

salitral

A term used in Patagonia for a swampy place where salts (esp. potassium nitrate) become encrusted in the dry season. Etymol: Spanish, saltpeter bed. *AGI*

salmiak

See: [sal ammoniac](#)

salmoite

See: [tarbuttite](#)

salmonsite

a. A buff hydrous phosphate of manganese and iron, $\text{Fe}_2 \text{O}_3 \cdot 9\text{MnO} \cdot 4\text{P}_2 \text{O}_5 \cdot 14\text{H}_2 \text{O}$; orthorhombic; cleavable fibrous masses. An alteration product of hureaulite. From Pala, San Diego County, CA. *English* b. A mixture of hureaulite plus jahnsite.

salnatron

Crude soda ash. *Standard, 2*

salt

a. A general term for naturally occurring sodium chloride, NaCl. See also: [halite](#); [common salt](#); [rock salt](#). *AGI* b. To introduce extra amounts of a valuable mineral into a sample to be assayed or into the working places of a mine, with fraudulent intent. c. The generic term salt is applied to any one of a class of similar compounds formed when the acid hydrogen of an acid is partly or wholly replaced by a metal or a metallic radical. *Kaufmann*

salt-and-pepper sand

Sand consisting of a mixture of light- and dark-colored grains.

salt anticline

A diapiric or piercement structure, like a salt dome except that the salt core is linear rather than equidimensional, e.g., the salt anticlines in the Paradox basin of the central Colorado Plateau. Syn: [salt wall](#). *AGI*

saltation

A mode of sediment transport in which the particles are moved progressively forward in a series of short intermittent leaps, hops, or bounces from a bottom surface; e.g., sand particles skipping downwind by impact and rebound along a desert surface, or bounding

downstream under the influence of eddy currents that are not turbulent enough to retain the particles in suspension and thereby return them to the streambed at some distance downstream. It is intermediate in character between suspension and the rolling or sliding of traction. Etymol: Latin saltare, to jump, leap. *AGI*

salt block

a. An installation of vacuum pans or grainers for producing salt by evaporation. *Kaufmann* b. Evaporated salt or fine rock salt mechanically compressed into dense blocks, usually 50 lb (20 to 25 kg) in weight, for stock feeding. *Kaufmann*

salt boot

The lower portion of a vacuum pan into which finished salt settles; also, the pit or tank into which the barometric leg of a vacuum pan drops salt. *Kaufmann*

salt bottom

A flat piece of relatively low-lying ground encrusted with salt. *AGI*

saltbox

A small reservoir or tank, usually cylindrical, with a false bottom for drainage and a cleanout door, placed under an evaporator for removal of salt. *Kaufmann*

salt bridge

Usually an inverted glass U-shaped tube filled with a sodium chloride solution, the two legs of which dip into the connecting two vessels of electrolyte, forming an electrochemical cell. *Kaufmann*

salt cake

Commercial term for sodium sulfate, Na_2SO_4 . *AGI*

salt cote

See: [saltpit](#)

salt-crust process

A method of binding mine roadway dust by spraying the area with salt and water. The salt is subjected to wetting and drying cycles. The deposited dust is bound at first by surface tension and then in the recrystallization of the dissolved salt. *Nelson*

salt dome

A diapir or piercement structure with a central, nearly equidimensional salt plug, generally 1 to 2 km or more in diameter, which has risen through the enclosing sediments from a mother salt bed 5 km to more than 10 km beneath the top of the plug. Many salt plugs have a cap rock of less soluble evaporite minerals, esp. anhydrite. The enclosing sediments are commonly turned up and complexly faulted next to a salt plug, and the more permeable beds serve as reservoirs for oil and gas. Certain salt domes are sources of salt and sulfur. Salt domes are characteristic features of the Gulf Coastal Plain in North America and the North German Plain in Europe, but occur in many other regions. CF: [salt anticline](#). See also: salt tectonics. *AGI*

salt effect

The solubility of a precipitate in a solution of an electrolyte that has no ion in common with the precipitate is higher than it is in pure water. This is not the salting-out effect. CF: [salting out](#)

saltern

a. A saltworks where salt is produced by boiling or evaporation of salt or brine. *AGI* b. See: [salt garden](#)

salt flat

The level, salt-encrusted bottom of a lake or pond that is temporarily or permanently dried up; e.g., the Bonneville Salt Flats west of Salt Lake City, UT. See also: [playa](#); [alkali flat](#). *AGI*

salt furnace

A simple form of furnace for heating evaporating pans in a salt plant. *Kaufmann*

salt garden

A large, shallow basin or pond where seawater is evaporated by solar heat. Syn: [saltern](#)

salt horse

A quarryman's term for aplite. See also: [salt vein](#)

salting

The fraudulent adulteration of a sample, for example, adding a small amount of gold to a sample to make it appear that the gold content of the rock is much higher than it actually

is. Salting may be accidental, caused by the fortuitous segregation of rich mineral during sampling. Sampling methods are conducted to reduce chance segregation to a minimum. *Nelson*

salting a mine

Sprinkling gold or rich ore upon or digging it into the ground, or placing it in samples for assay. Drill holes for uranium may be salted before logging with radiation counters.

salting evaporator

An evaporator that produces crystals or other solids, in distinction to one that only concentrates liquids. *Kaufmann*

salting out

a. The addition of sodium chloride or some other electrolyte to a solution of a nonelectrolyte to reduce the solubility of the latter. The rarer converse effect is termed salting in. CF: [salt effect](#) b. Addition of salt to hasten or to improve the separation of soap from glycerol and weak lye during manufacture. Also, to hasten or to improve the separation of sulfated oil from the residual solution after sulfating. *Kaufmann*

salt mine

A mine in which rock-salt deposits are worked. See also: [salina](#). *Standard, 2*

salt of tartar

Potassium carbonate, K_2CO_3 .

salt of tin

A mordant made by dissolving tin in hydrochloric acid. Syn: [tin salt](#); stannous chloride. *Standard, 2*

saltpan

a. A shallow lake of brackish water. b. An undrained natural depression in which water gathers and leaves a deposit of salt on evaporation. CF: [playa](#). *Webster 3rd*

saltpeter

a. Potassium nitrate. One of the principal ingredients of black blasting powder. See: [niter](#)
b. Any earthy nitrate cave deposit.

saltpeter cave

A cave in which the earth fill contains appreciable quantities of nitrates; once mined commercially. Syn: [saltpeter earth](#)

saltpeter earth

See: [saltpeter cave](#)

saltpit

a. A pit where salt is obtained. Syn: [saltpan](#) b. Reservoir along a salt lake or a seacoast for making solar salt. *Kaufmann*

salt plug

The salt core of a salt dome. *AGI*

salt prairie

See: [soda prairie](#)

salts

Reaction products of acids (HX) with bases (M.OH). $M.OH + HX = MX + H_2O$ is the simplest formula. *Pryor, 3*

salt spar

Coarsely crystallized and cleavable halite. *Spencer, 3*

salt stock

A general term for a diapiric salt body of whatever shape. *AGI*

salt table

The flat upper surface of a salt stock, along which ground-water solution leads to the formation of cap rock by freeing anhydrite (Goldman, 1952). *AGI*

salt tectonics

A general term for the study of the structure and mechanism of emplacement of salt domes and other salt-controlled structures. Syn: [halokinesis](#). *AGI*

salt vein

A term applied by quarrymen to a coarse granite vein from 2 in (5 cm) to 2 ft (61 cm) or more thick, intersecting granite or any other crystalline rock. See also: [salt horse](#)

salt wall

See: [salt anticline](#)

salt well

A drilled or dug well from which brine is obtained. See also: [brine pit](#). *AGI*

saltworks

Any installation where salt is produced commercially, as by extraction from seawater, from wells, or from the brine of salt springs. Syn: [salina](#); [saltern](#). *AGI*

salvage

a. A layer or parting of clay or pug occurring on the wall of a vein. *CTD* b. To chemically or electrolytically remove diamonds from used diamond bits. *Long* c. To recover lost bits or drill pipe from a borehole. *Long* d. To reclaim residual assets left at minesite after the mine has closed.

salvage count

Number of resettable diamonds salvaged by cutting out of worn or used diamond bit. *Long*

salvage value

a. The net worth of diamonds recovered from a used or worn diamond bit or other diamond-inset tool. *Long* b. The net worth of on-site equipment, and tangible assets after a mine has been closed.

Salzgitter ore

An important iron ore deposit in Germany. It consists of conglomerated oolitic limonite and contains about 30% iron. *Osborne*

samarium

A bright, silvery, lustrous, metallic element of the rare-earth group. Symbol, Sm. It is found along with other members of the rare-earth elements in many minerals, including

monazite and bastnasite, which are commercial sources. Used for carbon-arc lighting for the motion picture industry, for permanent magnets, and in optical masers and lasers. *Handbook of Chemistry and Physics, 3*

samarium oxide

Sm₂ O₃ has a melting point of 2,350 degrees C. This material has a high thermal neutron cross section, making it usable as a nuclear control rod material. It is also used as a phosphor activator. *Lee*

samaraskite

A monoclinic mineral, (Y,Ce,U,Fe)₃ (Nb,Ta,Ti)₅ O₁₆ ; commonly metamict; in granite pegmatites. Syn: [ampangabeite](#); uranotantalite.

samite

Artificially produced silicon carbide or carborundum.

sample

a. Representative fraction of body of material; removed by approved methods; guarded against accidental or fraudulent adulteration; and tested or analyzed to determine the nature, composition, percentage of specified constituents, etc., and possibly their reactivity. Bulk samples are large (several tons), so taken as to represent the ore for the purpose of developing a suitable treatment. Channel samples, cores, chips, grab, pannings, stope samples, etc., are small ones-- made primarily to establish the value of the ore reserve. *Pryor, 3* b. A section of core or a specific quantity of drill cuttings that represents the whole from which it was removed. CF: [borings](#) *Long*

sample cutters

In mine valuation and process control, devices that cut a representative fraction from a pile of ore or from a passing stream. *Pryor, 3*

sample extruder

A mechanical device for removing a soil sample from a sampling tube; usually consists of a piston driven by a jackscrew or a hydraulic mechanism. *Long*

sample grinder

One who grinds samples of ore to required fineness (depending on character of ore) to prepare them for analysis by assayer. Also called sample crusher. *DOT*

sampleite

An orthorhombic mineral, $\text{NaCaCu}_5(\text{PO}_4)_4\text{Cl}\cdot 5\text{H}_2\text{O}$; forms crusts of minute blue crystals.

sample log

a. Strip of graph paper showing units of depth on which the geologist, using cores and samples, describes the rock formations penetrated by drilling. *Wheeler, R.R.* b. Syn: [drill log](#) c. A log depicting the sequence of lithologic characteristics of the rocks penetrated in drilling a well, compiled by a geologist from microscopic examination of well cuttings and cores. The information is referred to depth of origin and is plotted on a strip log form. See also: [well log](#) *AGI*

sample preparation

In coal and coke sampling, the process whereby an analysis sample is obtained from a sample by particle size reduction, mixing and sample dividing in successive stages. A stage of sample preparation refers to the sequence of operation leading up to a sample division. *BS, 2*

sampler

a. A mechanical device for selecting a certain fractional part of ore to be used as an assay sample; as, for example, split shovel, riffle sampler, Brunton's mechanical sampler, and Vezin's sampler. *Fay* b. An instrument designed to take samples of the flame or other explosion gases at predetermined intervals during an explosion. *Rice, 2* c. A specific device for recovering samples of overburden. See also: [sampler barrel](#) d. One whose duty it is to select and prepare samples of materials and products for an assay or analysis. *Fay*

sampler barrel

As used in soil-testing work, one of several tubelike devices used to cut and recover a core sample of soil or soft rock. It can either be a plain tube designed to be driven or pressed into the formation being sampled, or be equipped with cutter heads and helical flutes for taking the sample by rotary methods. Syn: [sampler tube](#)

sample reduction

Reducing a soil, coal, or other sample to manageable size while still obtaining a representative sample. The methods may be divided into manual (for example, quartering) and mechanical; riffle box. *Nelson*

sampler head

An adapter or sub for attaching a sampler to a drill-rod string. *Long*

sampler liner

A thin-wall tube fitted inside the barrel of a sampler. The liner serves as a retainer for the sample and when sealed at either end is used as a container in which the sample can be transported safely. Syn: [sampler tube](#)

sampler tube

See: [sampler barrel](#); sampler liner.

sample splitter

A device for separating dry incoherent material (such as sediment) into truly representative samples of workable size for laboratory study. Syn: [riffler](#)

sampling

a. The gathering of specimens of ore or wall rock for appraisal of an orebody. Since the average of many samples may be used, representative sampling is crucial. The term is usually modified to indicate the mode or locality; e.g., hand sampling, mine sampling, and channel sampling. *AGI* b. Cutting a representative part of an ore (or coal) deposit, which should truly represent its average value. Most usually a trenchlike cut 4 in (10.2 cm) wide and 2 in (5.1 cm) deep is cut into the clean face of ore (or coal) and across its course. Honest sampling requires good judgment and practical experience. *Weed, 2* c. Selecting a certain fractional part of ore or coal from cars, stock piles, etc., for analysis. *Fay* d. Separation of a representative fraction of ore, pulp, or any product for testing or checking purposes. *Pryor, 2*

sampling bag

Collection devices that use a pump to draw the contaminated air into a contaminant bag. The entire sampling bag containing the contaminated air is sent to the laboratory for analysis. *MSHA, 5*

sampling instrument

A device to determine the methane or dust concentration in mine air to assess safety and health. Instruments are designed to sample instantaneously, or over short periods, or to operate continuously. For methane, warning is required whenever the percentage approaches a danger figure. Dust dangers are not momentary peak concentrations but the bulk quantity of dust breathed over a period. See also: [dust sampling](#); methanometer. The term may also be applied to soil-, coal-, or mineral-sampling devices of an instrumental nature. *Nelson*

sampling pipe

A small pipe built into and through a stopping or seal to enable samples to be taken of the air within the sealed area. The analysis of such samples will give an indication of the state of the fire or heating. In the case of a waste heating a sampling pipe may be pushed into the waste, on the return side, to give an indication of the conditions. *Nelson*

sampling spoon

A cylinder with a spoonlike cutting edge for taking soil samples. *Long*

sampling tip

The head of a soil auger or soil-sampling barrel. *Long*

sampling train

The order of sequence in which personal health sampling equipment parts are assembled together to complete the cycle of assimilated breathed atmosphere that a person is exposed to during the working time period. *MSHA, 2*

sampling works

A plant and its equipment for sampling and determining the value of ores that are bought, sold, or treated metallurgically.

samsonite

A monoclinic mineral, $\text{Ag}_4 \text{MnSb}_2 \text{S}_6$; steel black but red in transmitted light; at the Samson Mine, Harz, Germany.

Samson loader

A loader in which the gathering head has rotating arms that pull the stone or coal onto ramps and push it to a scraper chain conveyor, which conveys it to and delivers it at the end of the jib. The jib can be swiveled horizontally and raised or lowered to suit the tub, car, or conveyor to which it is delivering. The whole machine is self-hauling (automobile) on power-driven tractor crawlers with mechanical steering. It is not applicable in steep inclinations. *Mason*

Samson stripper

A longwall cutter loader of the plow type, with two cutting blades, one at each end, operated by a hydraulic cylinder, which can give a powerful thrust (about 42 st or 38 t) to the blades and cause them to bite into the coal. While this thrust is being exerted, the

machine is anchored by means of a vertical jack that engages the roof and floor. The jack is built on sliding bars, and the machine is moved by sliding the jack along the bars to the next position for anchoring the machine. It travels alongside the conveyor but is not connected to it. A loading ramp guides the cut coal onto the conveyor. The machine is employed in seams from 4 to 5 ft (1.2 to 1.5 m) thick with a strong roof and floor.

Nelson

sand

a. A rock fragment or detrital particle smaller than a granule and larger than a coarse silt grain, having a diameter in range of 1/16 to 2 mm (62 to 2,000 μ m, or 0.0025 to 0.08 in, or 4 to 1 phi units, or a size between that at the lower limit of visibility of an individual particle with the unaided eye and that of the head of a small wooden match), being somewhat rounded by abrasion in the course of transport. In Great Britain, the range of 0.1 to 1 mm has been used. See also: [coarse sand](#); fine sand. *AGI* b. A loose aggregate, unlithified mineral or rock particles of sand size; an unconsolidated or moderately consolidated sedimentary deposit consisting essentially of medium-grained clastics. The material is most commonly composed of quartz, and when the term sand is used without qualification, a siliceous composition is implied; but the particles may be of any mineral composition or mixture of rock or mineral fragments, such as coral sand consisting of limestone fragments. Also, a mass of such material, esp. on a beach, desert, or in a streambed. *AGI* c. Sandstone. *AGI* d. Separate grains or particles of detrital rock material, easily distinguishable by the unaided eye, but not large enough to be called pebbles; also, a loose mass of such grains, forming an incoherent arenaceous sediment. Building sand, any hard, granular rock material finer than gravel and coarser than dust. The term indicates material comminuted by natural means. *Fay* e. Detrital material of size range from 2 to 1/16 mm in diameter. Very coarse, 1 to 2 mm; coarse, 1/2 to 1 mm; medium, 1/4 to 1/2 mm; fine, 1/4 to 1/8 mm; very fine, 1/8 to 1/16 mm. *AGI* f. Granular material, composed mainly of quartz, that will settle readily in water. In the mechanical analysis of soil, sand--according to international classification--has a size between 0.02 mm and 2.0 mm. It has no cohesion when dry or saturated but has apparent cohesion when damp. *Nelson* g. The residue after amalgamation on plates. *Nelson* h. In gold-ore treatment, the coarser and heavier portions of the crushed ore in a mill or battery. *Nelson* i. A driller's term applied loosely to any visibly granular sediment, or to any fluid-productive porous sedimentary unit or objective zone of a well. *AGI* j. A tract or region of sand, such as a sandy beach along the seashore, or a desert land. *AGI* k. A sandbank or a sandbar. The term is usually used in the plural; e.g., sea sands. *AGI* l. A term used in the United States for a rock or mineral particle in the soil, having a diameter in the range of 0.05 to 2 mm; prior to 1947, the range 1 to 2 mm was called fine gravel. The diameter range recognized by the International Society of Soil Science is 0.02 to 2 mm. A textural class of soil material containing 85% or more of sand, with the percentage of silt plus 1.5 times the percentage of clay not exceeding 15; specif. such material containing 25% or more of very coarse sand, coarse sand, and medium sand, and less than 50% of fine sand or very fine sand. The term has also been used for a soil containing 90% or more of sand. *AGI*

sandarac

See: [realgar](#)

sandbag

In the roof of a coal seam, a deposit of glacial debris formed by scour and fill subsequent to coal formation. See also: [debris bag](#)

sandbag stoppings

In many mines a rapid and efficient means of erecting stoppings and walls for the control of ventilation near the face. The walls of doors and air crossings in the workings are often entirely of interlocked sandbags. This method minimizes the use of brattice and gives more permanent results in the workings. *Mason*

sandbar

A bar or low ridge of sand that borders the shore and is built to, or nearly to, the water surface by currents in a river or by wave action along the shore of a lake or sea. Syn: [sand reef](#)

sand bearings

The supports of a core in the sand of a mold. *Standard, 2*

sand bed

a. The bed into which molten metal from a blast furnace is run. *Standard, 2* b. A floor of a foundry in which large iron castings are made. *Standard, 2*

sandblasting

A method of cleaning metal and stone surfaces with sand sprayed over them through a nozzle at high velocity. Sandblasting is also used to form pits on the intrinsically smooth surfaces of materials, such as glass, requiring a particular finish. *Hammond*

sand bottle

A sand-pouring cylinder used for determining the dry density of soil. *Nelson*

sandburrs

Concretions of sandstone. See also: [burr](#)

sand calcite

a. Calcite crystals containing abundant sand grains. b. Siliceous calcite.

sand crusher

A machine comprising a stationary cylinder into which the sand is charged. Inside this cylinder is fitted a main shaft onto which are bolted retaining discs whose main function is to prevent the loose ball in between each disc from traveling laterally. As the discs rotate on the shaft, the lumpy sand is moved into contact with the balls, which crush the sand to grain size. *Osborne*

sand crystal

A large euhedral or subhedral crystal (as of barite, gypsum, and esp. calcite) loaded with detrital-sand inclusions (up to 60%), developed by growth in an incompletely cemented sandstone during cementation. See also: [crystal sandstone](#)

sand diamonds

Name in the trade for diamonds occurring in the gravels and old marine deposits on the Gold Coast of Africa. *Griffith*

sand dike

A sedimentary dike consisting of sand that has been squeezed or injected upward into a fissure. See also: [neptunian dike](#)

sanded in

Drill-string equipment, casing, or drivepipe so firmly fastened in a borehole by reason of caving walls or impaction of sand, mud, or drill cuttings that the article cannot be pulled from the borehole. *Long*

Sander's process

A flotation process that uses, instead of an acid bath in deep pans, a dilute solution of aluminum sulfate in shallow pans. *Liddell*

sand fill

Hydraulic filling, stowing. Use of sand or plant tailings, conveyed underground by water to support cavities left by extraction of ore. *Pryor, 3*

sand filter

A filter for purifying domestic water, consisting of specially graded layers of aggregate and sand, through which the water flows slowly downwards. A similar type of filter is used for treating sewage effluent, but has coarser sand. *Hammond*

sand flag

Fine-grained sandstone that can be readily split into flagstones. *AGI*

sand floor

A sand bed in the floor near the blast furnace into which the molten pig is run to be cast into convenient sizes for handling. *Mersereau, 2*

sand flotation

The use of well-graded sand, mixed with water, as the medium for washing coal, as in the Chance washer. See also: [dense-medium washer](#) *Nelson*

sandhog

See: [sand pump](#)

sand holder

A cavity in a pump barrel to catch sand and keep it out of the way of the plunger or buckets. *Standard, 2*

sanding-machine worker

One who charges mixing mill and removes mixture of sand and refractory clay to be used in packing around ware in bisque firing. *DOT*

sand jack

A device consisting essentially of a sandbox and a series of plungers for gradually lowering into position a heavy weight, supported by the plungers, by running out the sand below. *Webster 3rd*

sand leaching

Sand leaching or percolation may be practiced wherever the ore is coarse enough to permit free passage of the solvent through the voids. The ore is loaded into large vats or tanks that are then filled with leaching solution. After the solution has been in contact with the ore for a certain time, it is withdrawn, and fresh solution is added. Liquid may

be added from the top (downward percolation) or from the bottom (upward percolation). See also: [percolation](#)

sandman

A laborer who switches flow of sand (waste minerals and water resulting from treatment of ore for removal of valuable minerals) in pipe or flumes from one stope (underground openings from which ore has been mined) to another, so that they will be properly filled with sand (after water has drained off) to support the walls and roof and prevent caving of the ground surrounding the worked out area. *DOT*

sand mold

A body of sand and binder surrounding a cavity for the reception of molten metal in the production of castings. The cavity must have dimensional accuracy, and the sand surrounding it must be of sufficient stability to allow the metal to solidify in the exact shape of the impression. The production of the sand mold involves making a pattern of the part to be cast, and packing molding sand round the pattern, which when withdrawn leaves the cavity into which the metal is poured, cores being inserted to leave cavities where desired in the casting. *Osborne*

sand muller

A machine for mixing sand and binders by a kneading and squeezing action for use in sand molds. The mixture is usually sand, clay, and water, but synthetic chemical binders may be used. *Osborne*

sand pipe

A pipe formed in sedimentary rocks, filled with sand. See also: [pipe](#) *AGI*

sand pump

a. A pump, usually a centrifugal type, capable of handling sand- and gravel-laden liquids without clogging or wearing unduly. Syn: [sandhog](#); suction bailer. See also: [gravel pump](#); [sludge pump](#); [swab](#). *Long* b. A pump for lifting tailings at ore-dressing plants. *Fay* c. A cylinder with a valve at the bottom, lowered into a drill hole from time to time to take out the accumulated slime resulting from the action of the drill on the rock. Also called shell pump; sludger. *Fay* d. A piston-type bailer. Also called American pump. *Long*

sand-pump dredger

A long pipe reaching down from a vessel into the sand, the latter being raised under the suction of a centrifugal pump and discharged into the vessel itself or an attendant barge. Also called a suction dredger. See also: [dredger](#)

sand-pump sampler

A sand sampler made and used in the same manner as an American pump or sand pump, a. *Long*

sand reef

See: [sandbar](#)

sand-replacement method

The normal method of measuring soil density. In its simplest form, the measurement requires only a container full of dry sand of known density, a balance and apparatus for determination of soil moisture content. *Nelson*

sandrock

a. A field term for a sandstone that is not firmly cemented. *AGI* b. A term used in southern England for a sandstone that crumbles between the fingers. *AGI* c. See: [sandstone](#)

sand roll

A metal roll cast in a mold of sand; distinguished from a chilled roll, which is cast in an iron mold or chill. *Standard, 2*

sands

a. The coarser and heavier portions of the crushed ore in a mill. *Fay* b. Tailings from the stamp mills of certain copper mines. *Fay* c. Particles of crushed ore of such a size that they settle readily in water and may be leached by allowing the solution to percolate. *CTD*

sands-and-slimes process

Any cyanidation process for gold ores that involves separation of two portions in a classifier, and separate treatment of sands by percolation and slimes by agitation. *Nelson*

sand seam

A quarry term for a more or less minute vein or dike of muscovite (white mica) with some quartz, in cases also with feldspar.

sandstone

a. A medium-grained clastic sedimentary rock composed of fragments of sand size set in a fine-grained matrix (silt or clay) and more or less firmly united by a cementing material (commonly silica, iron oxide, or calcium carbonate); the consolidated equivalent of sand. The sand particles usually consist of quartz, and the term sandstone, when used without qualification, indicates a rock containing about 85% to 90% quartz. The rock varies in color, may be deposited by water or wind, and contains numerous primary features (sedimentary structures and fossils). Sandstones may be classified according to composition of particles, mineralogic or textural maturity, fluidity index, diastrophism, primary structures, and type of cement. *AGI* b. A field term for any clastic rock containing individual particles that are visible to the unaided eye or slightly larger. Syn: [sandrock](#) *AGI*

sandstone dike

a. A clastic dike composed of sandstone or lithified sand; a lithified sand dike. *AGI* b. Stone intrusion. See also: [horseback](#)

sandstone grit

In geology, a coarse, angular-grained sandstone.

sandstone opal

A variety of opal occurring in boulders between layers of sandstone and soft clay in the form of pipes in thickness from 1 mm to 3 cm.

sandstone pipe

See: [cylindrical structure](#)

sand trap

a. A device for separating sand and other heavy or coarse particles from a cuttings-laden; drill-circulation fluid overflowing the collar of a borehole. CF: [shaker](#) b. A device, often a simple enlargement, in a conduit for arresting the sand, silt, etc., carried by the water, and generally including means of ejecting them from the conduit. *Seelye, I*

sand wall

A temporary independent wall separated from a slag-pocket wall by a thickness of sand for the purpose of easy slag removal and the protection of the permanent wall. *AISI*

sand washer

An apparatus for separating sand from earthy substances. *Fay*

sandy

See: [arenaceous](#)

sandy alumina

Coarse-grained, porous, granular textured alumina that has not been calcined to the alpha alumina stage (artificial corundum). Resembles fine sand, hence free-flowing, with nondusting qualities. The relatively large surface area of sandy alumina permits its use as an absorbent in dry scrubber units at primary aluminum smelters.

sanguinaria

a. Sp. Dark green bloodstone variegated by red spots. b. Sp. Hematite.

sanidine

A monoclinic mineral, $(K,Na)AlSi_3O_8$; feldspar group; forms a series with albite; prismatic cleavage; colorless; forms phenocrysts in felsic volcanic rocks. See also: [ice spar](#) CF: [feldspar](#); [glassy feldspar](#).

sanmartinite

A monoclinic mineral $(Zn,Fe)WO_4$; resembles wolframite; at San Martin, San Luis Province, Argentina. See also: [huebnerite](#)

santafeite

An orthorhombic mineral, $(Na,Ca,Sr)_3(Mn,Fe)_2Mn_2(VO_4)_4(OH,O)_5 \cdot 2H_2O$; forms black needles on limestone in New Mexico.

Santorin earth

A pozzolana from the Greek island of Santorin. A quoted composition is 64% SiO_2 , 13% Al_2O_3 , 5.5% Fe_2O_3 , 1% TiO_2 , 3.5% CaO , 2% MgO , 6.5% alkalies, and 4% loss on ignition. *Dodd*

sap

The part of the rock in a quarry that is next to the surface or to joints and crevices and has been somewhat stained and softened by weathering.

saphir d'eau

French water sapphire. An intense-blue variety of the mineral cordierite, occurring in waterworn masses in the river gravels of Ceylon; used as a gem stone. *CMD*

saponification

a. The hydrolysis of esters into acids and alcohols by the action of alkalies or acids--by boiling with water or by the action of superheated steam. It is the reverse process to esterification. *CTD* b. Conversion into soap; the process in which fatty substances form soap, by combination with an alkali. A term used in the flotation process. *Fay*

saponifier

Any compound, as a caustic alkali, used in soapmaking to convert the fatty acids into soap. A term used in the flotation process. *Standard, 2*

saponin

Complex polyhydroxy carboxylic flotation reagent used as depressant. It destroys bubble adhesion to collector-coated minerals. *Pryor, 3*

saponite

A monoclinic mineral, $(Ca/2,Na)_{0.3}(Mg,Fe)_3(Si,Al)_4O_{10}(OH)_2 \cdot 4H_2O$; smectite group; soft; massive; plastic; unctuous; in veins and cavities in serpentinite and basalt. Syn: [bowlingite](#); [mountain soap](#); [piotine](#); [soapstone](#). Etymol: Greek "sapon" soap.

sappare

a. See: [sapphire](#) b. See: [kyanite](#)

sapphire

a. A blue gem variety of corundum. Syn: [sappare](#) b. Any gem-quality corundum other than ruby (fancy sapphire). c. Synthetic alumina single-crystal boules made by the Verneuil process for use as bearings and thread guides.

sapphire cat's eye

A girasol sapphire with a chatoyant effect. CF: [ruby cat's eye](#)

sapphire glass

Sapphire-blue glass.

sapphire quartz

a. An opaque blue variety of quartz colored by nonparallel fibers of silicified crocidolite. Syn: [azure quartz](#); [blue quartz](#). See also: [siderite](#) b. Light to pale sapphire-blue quartz in the Western United States.

sapphirine

a. A rare aluminosilicate of magnesium occurring as disseminated blue chalcedony. Syn: [hauynite](#); [blue chalcedony](#). *CMD* b. A monoclinic or triclinic mineral, $(\text{Mg,Al})_8 (\text{Al,Si})_6 \text{O}_{20}$; light- to dark-blue to green; in Greenland, Madagascar, and Quebec.

saprocol

Indurated sapropel. *Tomkeieff*

saprolite

A soft, earthy, typically clay-rich, thoroughly decomposed rock, formed in place by chemical weathering of igneous, sedimentary, and metamorphic rocks. It often forms a layer or cover as much as 100 m thick, esp. in humid and tropical or subtropical climates; the color is commonly some shade of red or brown, but it may be white or gray. Saprolite is characterized by preservation of structures that were present in the unweathered rock. Syn: [saprolith](#); [sathrolith](#). CF: [geest](#); [laterite](#). *AGI*

saprolith

See: [saprolite](#)

sapropel

a. An aquatic ooze or sludge rich in organic (carbonaceous or bituminous) matter. *AGI*
b. A fluid organic slime originating in swamps as a product of putrefaction. In its chemical composition, it contains more hydrocarbon than peat. When dry, it is a lusterless, dull, dark, and extremely tough mass that is hard to break up. *Stutzer*

sapropel-clay

A sedimentary deposit in which the amount of clay exceeds that of sapropel. *AGI*

sapropelic coal

a. Designation of coal of which the original plant material was more or less transformed by putrefaction. Complete seams of sapropelic coals are rare, but layers or bands of varying thickness within seams are more frequent. This type coal is not abundant and proves troublesome in cleaning processes with jig and dense medium washers because of its lower density relative to humic coals of the same rank and the same ash content. *IHCP* b. A group of coals, including the cannel and torbanite types, which are largely composed of the indurated jellylike slime derived from macerated organic debris, and known as sapropel, and also of remains of spores and algae. They are typically massive, unbanded coals, which break with a conchoidal fracture and do not show, as a rule, jointing. *Tomkeieff* c. See: [cannel coal](#)

saprophyte

An organism living on dead or decaying organic material. *Rogoff*

sapropsammite

Sapropel rich in sand. *Tomkeieff*

sard

A translucent brown variety of chalcedony. Syn: [sardius](#); [sardine](#). See also: [carnelian](#); [sardonyx](#).

sardachate

A variety of agate with reddish bands of carnelian; carnelian agate. *Standard*, 2

sardine

See: [sard](#)

sardius

See: [sard](#)

sardonyx

a. A variety of chalcedonic quartz. See also: [onyx](#); [sard](#). *Fay* b. A banded gem variety of chalcedony with straight parallel reddish bands of sard alternating with white or colored bands of another mineral.

sargent tube

See: [acid-etch tube](#)

sarmientite

A monoclinic mineral, $\text{Fe}_2 (\text{AsO}_4)(\text{SO}_4)(\text{OH}).5\text{H}_2 \text{O}$; forms minute lemon-yellow crystals in Argentina.

sarsen stone

See: [graywether](#); druid stone.

sartorite

A monoclinic mineral. $\text{PbAs}_2 \text{S}_4$; metallic; dark gray; conchoidal fracture; in sugary dolomite of the Binnental at Lengnabach, Valais, Switzerland.

saryarkite

A tetragonal mineral, $(\text{Ca},\text{Y},\text{Th})_2 \text{Al}_4 (\text{SiO}_4 ,\text{PO}_4)_4 (\text{OH}).9\text{H}_2 \text{O}$ or $\text{Ca}(\text{Y},\text{Th})\text{Al}_5 (\text{SiO}_4)_2 (\text{PO}_4)_2 (\text{OH})_7 .6\text{H}_2 \text{O}$.

sassoline

See: [sassolite](#)

sassolite

A triclinic mineral, $\text{H}_3 \text{BO}_3$; forms small pearly scales as an incrustation, or as tabular crystals around fumaroles or vents of sulfurous emanations. Syn: [sassoline](#)

satelite

Fibrous serpentine with a slight chatoyant effect, being pseudomorphous after asbestiform tremolite that has been silicified, in Tulare County, CA. Syn: [serpentine cat's-eye](#)

satellite imagery

The counterpart of an object produced from a satellite by the reflection or re-representation of an object produced by optical, electro optical, optical mechanical, or electronic means. *ASPRS*

satellites

Certain minerals usually associated with diamond, such as ilmenite, garnet, zircon, rutile, corundum, spinel, olivine, and gorceixite. *Chandler*

sathrolith

See: [saproelite](#)

satin spar

a. A white, translucent, fine fibrous variety of gypsum, characterized by chatoyancy or a silky luster. b. A term used incorrectly for a fine fibrous or silky variety of calcite or aragonite. Syn: atlas spar; [feather gypsum](#); [satin stone](#).

satin stone

See: [satin spar](#)

satpaevite

A possibly orthorhombic mineral, $Al_{12} V_8 O_{37} \cdot 30H_2 O$; forms weakly pleochroic yellow flakes in argillaceous anthraxolitic vanadiferous deposits of Kurumsak and Balasanskandyk, Karatau, Kazakhstan.

saturated

a. A rock or soil is saturated with respect to water if all its interstices are filled with water. *AGI* b. In petrology, applied to minerals capable of crystallizing from rock magmas in the presence of an excess of silica. Such minerals are said to be saturated with regard to silica and include the feldspars, pyroxenes, amphiboles, micas, tourmaline, fayalite, spessartite, almandine, and accessory minerals, such as sphene, zircon, topaz, apatite, magnetite, and ilmenite. Also applied to igneous rocks composed wholly of saturated minerals. CF: [undersaturated](#) c. In fatty acids and other organic compounds, a structure in which each carbon valence is combined either with a distinct atom or by polylinkages. *Pryor, 3* d. A term describing a membrane that is filled as completely as practicable with bituminous material.

saturated air

Air that contains the maximum possible amount of water vapor at that temperature. The amount of water vapor that will saturate a given volume of air increases with the temperature. Therefore, if saturated air is cooled, the excess water vapor condenses in the form of mist. See also: [absolute humidity](#)

saturated mineral

A mineral that can form in the presence of free silica, i.e., one that contains the maximum amount of combined silica. *AGI*

saturated rock

a. A rock having quartz in its norm. *AGI* b. An igneous rock composed chiefly of saturated minerals. CF: [oversaturated rock](#); [undersaturated](#); [unsaturated](#). *AGI*

saturated surface

See: [water table](#)

saturated unit weight

The wet unit weight of a soil mass when saturated. See also: [unit weight](#)

saturated zone

See: [zone of saturation](#)

saturation curve

See: [zero air voids curve](#)

saturation pressure

That pressure for a given temperature at which the vapor and the liquid can exist in stable equilibrium. *Strock, 2*

sauconite

A monoclinic mineral, $\text{Na}_{0.3} \text{Zn}_3 (\text{Si}, \text{Al})_4 \text{O}_{10} (\text{OH})_2 \cdot 4\text{H}_2 \text{O}$; smectite group.

saukovite

A former name for cadmian metacinnabar.

sausserite

A tough, compact, and white, greenish, or grayish mineral aggregate consisting of a mixture of albite (or oligoclase) and zoisite or epidote, together with variable amounts of calcite, sericite, prehnite, and calcium-aluminum silicates other than those of the epidote group. It is an alteration product of plagioclase; once thought to be a mineral species.

saussurite

A tough, compact, white, greenish, or grayish mineral aggregate, resulting from the alteration of feldspars, and consisting of albite, prehnite, zoisite, epidote, and other calcium-aluminum silicates and calcite. *Fay; CTD*

saussuritization

The replacement, esp. of plagioclase in basalts and gabbros, by a fine-grained aggregate of zoisite, epidote, albite, calcite, sericite, and zeolites. It is a metamorphic or deuteritic process and is frequently accompanied by chloritization of the ferromagnesian minerals. *AGI*

Savelsberg process

See: [blast roasting](#)

saw gang

A frame provided with a number of parallel iron bars that are employed to saw stone. See also: [stone saw](#)

sawsetter

In stonework industry, one who maintains stone cutting saws in operating condition, replacing broken and bent saw blades from gang saws. Also called sawmaker. *DOT*

sawtooth back stoping

See: [overhand stoping](#)

sawtooth barrel

See: [basket](#)

sawtooth blasting

The blasting of oblique, horizontal holes along a face and so cutting a series of slabs that, in plan, resemble saw teeth. *Nelson*

saw-toothed

See: [serrate](#)

sawtooth floor channeling

A method of channeling inclined beds of marble by removing right-angle blocks in succession from the various beds, thus giving the floor a zigzag or sawtooth appearance.

sawtooth stoping

In the United States, a form of overhand stoping in which the general line of advance is up the dip. The benches are advanced in a line parallel with the drift. The method permits a large number of machines to be used but requires the miners to work under a comparatively dangerous back. *Nelson*

Sawyear-Kjellgren process

A process for converting beryl to beryllium oxide, based on quenching the melted beryl in cold water. The resultant frit reacts with concentrated sulfuric acid, and is steamed and agitated. The liquid, containing soluble beryllium and aluminum sulfates, is filtered and pumped to a tank where ammonium hydroxide is added. The resulting filtrate is further treated with a chelating agent to prevent impurities from precipitating upon subsequent addition of caustic soda. Hydrolysis follows, and the precipitate, beryllium hydroxide, is filtered off. This precipitate is ignited in an electric furnace to form beryllium oxide. *USBM, 7*

sawyer

a. In stonework industry, a general term applied to workers engaged in cutting stone with power driven saws. *DOT* b. A timber cutter.

sax

A slate-cutter's knifelike chopping tool for trimming roof slates, having a pointed pick at the back to make nail holes. Also called slate ax. *Standard, 2*

Saxonian chrysolite

A pale wine-yellow topaz. *Fay*

scab

a. To trim rough blocks of stone with a pick or broad chisel; used by quarrymen. See also: [scabble](#) b. A person who works at a mine contrary to union orders or during a strike. *Zern* c. A defect consisting of a flat volume of metal jointed to a casting through a small area. It is usually set in a depression, a flat side being separated from the metal of the casting proper by a thin layer of sand. *ASM, 1* d. A fault in the base metal for vitreous enameling; the scab is a partially detached piece of metal (which may subsequently have been rolled into the metal surface) and is liable to cause faults in the applied enamel coating. *Dodd*

scabble

To dress (as stone) in any way short of fine tooling or rubbing. CF: [scab](#)

scabblor

In quarry industry, one who roughs stone slabs in blocks with a scabbling pick to produce a uniform rectangular shape and to reduce shipping weight. *DOT*

scabbling

The rough trimming of blocks of dimension stone.

scabbling hammer

A hammer with two pointed ends for picking the stone after the spalling hammer. *Fay*

scabblings

Stone chips produced in dressing stone or ore. *Arkell*

scabby

In founding, blistered or marred with scabs; said of a casting. *Standard, 2*

scacchite

a. A deliquescent cubic mineral, MnCl_2 . *Larsen* b. A name applied to various minerals, including monticellite, a doubtful selenide of lead, and a brick-red powdery fluoride containing rare earths.

scad

A name occasionally applied to a nugget, as of gold.

Scaife process

A modified Ugine-Sejournet process for hot extrusion of steel and other metals. The basic difference between the original Sejournet extrusion process and the Scaife modification is one of direction. In the Sejournet, the billet is forced forward through the die with the mandrel projecting through the die to maintain internal shape. In the modified process, the billet is forced into the closed die and the ram pressure squeezes it back over the mandrel. Both are based on the use of molten glass as a lubricant.

Osborne

scalar

A quantity fully described by a number, such as a speed that has no associated direction. See also: [vector](#)

scale

a. The ratio between linear distance on a map, chart, globe, model, or photograph and the corresponding distance on the surface being mapped. It may be expressed in the form either of a direct or verbal statement using different units (e.g., 1/24,000 or 1:24,000, indicating that one unit on the map represents 24,000 identical units on the ground) or a graphic measure (such as a bar or line marked off in feet, miles, or kilometers). *AGI* b. Loose, thin fragments of rock, threatening to break or fall from the roof or wall of a mine. To remove such fragments. c. Crude paraffin wax, obtained by filtering the cooled heavy distillation from petroleum or shale. *Standard, 2* d. A fault, in glass or vitreous enamelware, in the form of an embedded particle of metal oxide or carbon. *Dodd* e. Newc. A small portion of air abstracted from the main current. Also called scale of air, and sometimes spelled skail. f. To regulate the air current in a roadway. *BS, 8* g. Used among English miners for carbonaceous shale interbedded with thin layers of coal. *Tomkeieff* h. The flakes and rubble that fall in after the ore has been removed. *Gordon*

scale cleaner

In bituminous coal mining, one who scales off loose pieces of slate from the roof and walls of haulageways, using a pick or a bar. Also called slate handler. *DOT*

scale copper

Copper in very thin flakes. *Weed, 2*

scaled distance

A factor relating similar blast effects from various size charges of the same explosive at various distances; it is computed by dividing the distance of concern by an exponential root of the explosive quantity detonated per delay.

scale door

A door that has an air regulator. Syn: [regulator door](#)

scalenohedron

A closed crystal form, each face of which is a scalene triangle; trigonal scalenohedra have 12 such faces; tetragonal have 8. Adjective: scalenoheral. See: [dogtooth spar](#)

scale of hardness

See: [hardness scale](#)

scaler

a. An electronic instrument for counting radiation-induced pulses from Geiger counters and other radiation detectors. *Lyman* b. A laborer who knocks the roasted lead ore off grates with a bar as it is dumped from conveyors into cars below, prior to melting, to separate and recover the lead. Lead ore is loaded on grates attached to a conveyor and carried through a furnace in which the sulfur is driven off by roasting. *DOT*

scales

For weighing materials in transit, these include the track scale (carload lots) in which the load is checked by manual operation of weights; platform scales; automatic dump hoppers; conveying weighers that continuously record or register the weight of a portion of passing conveyor belt. *Pryor, 3*

scale-up

In plant design, calculations of required capacities, machine sizes, etc., from data obtained in batch and pilot testing. *Pryor, 3*

scaling

a. The plucking down of loose stones or coal adhering to the solid face after a shot or a round of shots has been fired. *Nelson* b. Removal of loose rocks from the roof or walls. Also called ramming. CF: [exfoliation](#)

scaling bar

A long metal bar flattened on one end and used to remove loose material from a mine roof or rib. See also: [bar](#)

scaling furnace

A furnace or oven in which plates of iron are heated for the purpose of scaling them, as in the preparation of plates for tinning. *Fay*

scaling of the face

In mining, consists of the removal of loose overhanging rock. *Streefkerk*

scall

a. Eng. Loose ground; foliated ground is frequently called scally ground by miners. Also spelled scal. Probably a variation of scale. b. Rock easily broken up because of its scaly structure.

scallop

a. Eng. To cut or break off the sides of a heading without holing or using powder. b. Eng. To get or hew coal off the face. *SMRB* c. One of a mosaic of small shallow intersecting hollows formed on the surface of soluble rock by turbulent dissolution. They are steeper on the upstream side, and smaller sizes are formed by faster-flowing water. Syn: [flute](#); [solution ripple](#). *AGI*

scalp

a. The process of removing oversize lumps on a continuous basis from a stream of bulk material. b. Removing large pieces of mine waste from run-of-mine coal, usually when passing over a screen, on way to the preparation plant.

scalped anticline

See: [breached anticline](#)

scalper

Heavy screen shielding fine screen for separating differently sized particles. *Bennett*

scalping

a. The removal, by screen or grizzly, of undesirable fine material from broken ore, stone, or gravel. *Nelson* b. A milling term for the removal of a mineral during closed-circuit grinding of the ore. *Pryor, 2*

scalping screen

A coarse primary screen or grizzly; usually a vibrating grizzly. *Nichols, 1*

scaly

Said of the texture of a mineral, esp. a mica, in which small plates break or flake off from the surface like scales. *AGI*

scamy

Eng. Applied to freestone in thin layers, mixed with mica.

scamy post

N. of Eng. Soft, short, jointy freestone, thinly laminated and much mixed with mica.

scandium

A silvery-white metallic element that develops a slightly yellowish or pinkish cast upon exposure to air. Symbol, Sc. It occurs as a principal component in the rare mineral thortveitite; or is extracted as a by-product from uranium mill tailings. It is of interest for use in space missiles. *Handbook of Chemistry and Physics, 3*

scanning electroprobe X-ray microanalyzer

An instrument for metallurgical research. It can create visual images of the minutest particles in metals and alloys by use of X-ray beams. Magnification is up to 3,000 times, and particles smaller than a millionth of an inch can be examined in detail. *Nelson*

scantite

A gage by which slates are assorted in sizes.

scantling

a. The dimensions of a stone in length, breadth, and thickness. *Standard, 2* b. Stones more than 6 ft (2 m) long. *CTD* c. A piece of timber of thickness from 2 to 4 in (5 to 10 cm) and of width from 2 to 4-1/2 in (5 to 11 cm). *CTD* d. Small timber, such as 2 in by 3 in (5.1 cm by 7.6 cm), 2 in by 4 in (5.1 cm by 10.2 cm), etc., used for studding. *Crispin*

scapolite

a. A mineral group, $\text{Na}_4 \text{Al}_3 \text{Si}_9 \text{O}_{24} \text{Cl}$ (marialite), to $\text{Ca}_4 \text{Al}_6 \text{Si}_6 \text{O}_{24} (\text{CO}_3, \text{SO}_4)$ (meionite); a tetragonal isomorphous series; occurs in calcium-rich metamorphic rocks or igneous rocks as the product of alteration of plagioclase feldspar. b. Any mineral of the scapolite group, intermediate in composition between marialite and meionite (Ma:Me from 2:1 to 1:3), containing 46% to 54% silica, and resembling feldspar when massive, but having a higher density and a fibrous appearance. Intermediate compositions were formerly called dipyre and mizzonite for Ma- and Me-rich samples, respectively. Syn: [wernerite](#)

scapolitization

Introduction of, or replacement by, scapolite. Plagioclase is commonly so replaced. The replacement may involve introduction of chlorine. *AGI*

scar

In founding, an imperfect spot in a casting. *Standard, 2*

scarbroite

A hexagonal mineral, $\text{Al}_5(\text{OH})_{13}(\text{CO}_3)\cdot 5\text{H}_2\text{O}$; compact; fine-grained; in vertical fissures in sandstone at South Bay, Scarborough; in sandstone at Yorkshire, England. Also spelled scarbroeite. Syn: [tucanite](#)

scarcement

A projecting ledge of rock, left in a shaft as footing for a ladder or to support pitwork. *Fay*

scares

a. Lenticular pockets of clean coal in sandstone, usually found in the region of a washout. Also called coal scares. *Tomkeieff* b. N. of Eng. Thin laminae of pyrite in coal.

scarf

a. A lapped joint made by beveling, notching, or otherwise cutting away the sides of two timbers at the ends, and bolting or strapping them together so as to form one continuous piece, usually without increased thickness. Also called scarf joint. *Standard, 2* b. A piece of metal shaped or beveled for a scarf weld. *Standard, 2*

scarfer

In the iron and steel industry, one who tends rolls through which skelp (steel strips for making pipe or tube) or steel sheet is run to bevel edges prior to its being formed into tube. *DOT*

scarfing

a. Splicing timbers, so cut that when joined the resulting piece is not thicker at the joint than elsewhere. *Fay* b. Tapering the ends of two pieces to be joined to avoid an enlarged joint. *Crispin* c. Cutting surface areas of metal objects, ordinarily by using a gas torch. The operation permits surface defects to be cut from ingots, billets, or the edges of plate that is to be beveled for butt welding. *ASM, 1*

scarf joint

a. A butt joint in which the plane of the joint is inclined with respect to the main axis of the members. *ASM, 1* b. See: [scarf](#)

scarifier

A machine with downward projecting teeth for breaking hard soil at quarries and opencast pits. It may be self-propelled or attached to another vehicle. See also: [rooter](#)

scarify

To roughen up, as a road, for repairs. *Crispin*

scarp

a. A line of cliffs produced by faulting or by erosion. The term is an abbreviated form of escarpment, and the two terms commonly have the same meaning, although scarp is more often applied to cliffs formed by faulting. See also: [fault scarp](#) b. A relatively straight, clifflike face or slope of considerable linear extent, breaking the general continuity of the land by separating surfaces lying at different levels, as along the margin of a plateau or mesa. A scarp may be of any height. The term should not be used for a slope of highly irregular outline. CF: [cuesta](#)

scarring

The formation of scars or scaurs in roasting pyrite for sulfuric acid manufacture. *Fay*

scatter

Deviation of portions of a radiation beam by scattering centers in the medium through which the beam passes. In ultrasonics, it occurs by reflection, refraction, or diffraction at any acoustical discontinuity comparable in size with, or larger than, the wave length used; in radiography, the scatter occurs by the Compton, photoelectric, and pair-production processes. *ASM, 1*

scatter pile

In underground mining, ore left adjacent to a longwall face to stop flying ore from being lost when blasting. A secondary use is to confine ventilation. *Pryor, 3*

scavenge

To pick up surplus fluid and return it to a circulating system. *Nichols, 1*

scavenger

a. Any chemical that is added to a system or a mixture to consume, or to convert to an inactive form, small quantities of impurities or undesired materials. *CCD, 2* b. In flotation, a rougher cell in which the tailings, before being rejected as waste, are subjected to a scavenging flotation treatment. Concentrating tables are also used as scavenger machines. *Hess* c. In metallurgical operations, an active metal added to

combine with oxygen and/or nitrogen in the molten metal and so cause removal of impurities into slag. *CCD, 2* d. Oxygen, iodine, or more complex materials that, when added to a mixture, combine with free radicals in the mixture and permit the measurement of these radicals. *CCD, 2*

scavenger cells

Secondary cells for the retreatment of tailings. *BS, 5*

scavenger mining

The removal of coal so close to the surface as to undermine the topsoil, resulting in devastation above ground. Usually engaged in by an independent operator working an old mine on a lease from a major corporation. *Korson*

scavenging

In mineral processing, final stage in flotation of mineralized froth before discard of tailing. The cells are so worked as to remove for retreatment as much low-grade rising mineral as possible under the given working conditions. *Pryor, 3*

scawtite

A monoclinic mineral, $\text{Ca}_7 \text{Si}_6 (\text{CO}_3)_7 \text{O}_{18} \cdot 2\text{H}_2\text{O}$; forms bundles of thin, colorless, tabular crystals at Scawt Hill, County Antrim, Ireland.

scepter quartz

Quartz crystals resembling a scepter in shape.

schafarzikite

A tetragonal mineral, $\text{FeSb}_2 \text{O}_4$; red to reddish-brown.

schairerite

A trigonal mineral, $\text{Na}_{21} (\text{SO}_4)_7 \text{F}_6 \text{Cl}$; colorless; at Searles Lake, CA. CF: [galeite](#)

schallerite

A trigonal mineral, $(\text{Mn,Fe})_{16} \text{Si}_{12} \text{As}_3 \text{O}_{36} (\text{OH})_{17}$; dimorphous with nelenite; reddish-brown.

schapbachite

An isometric mineral, AgBiS_2 ; a high-temperature polymorph of matildite and member of the halite group; not recognized as a valid mineral species; occurs as acicular crystals, granular, or massive. See also: [matildite](#)

schaum earth

Same as aprite.

scheelite

A tetragonal mineral, CaWO_4 , with molybdenum replacing tungsten toward powellite CaMoO_4 ; prismatic cleavage; sp gr, 5.9 to 6.1; varicolored, fluoresces bright blue; in limestone and pneumatolitic veins near granite contacts, granite pegmatites; a source of tungsten.

scheererite

A whitish, gray; yellow, green, or pale reddish; brittle; tasteless; inodorous hydrocarbon; melts at 44 degrees C; soluble in alcohol and ether; may be distilled without decomposition, boiling at 92 degrees C. Syn: [xylocryptite](#)

schefferite

A mineral, $(\text{Na,Ca})(\text{Fe,Mn})\text{Si}_2\text{O}_6$; brown to black; a variety of manganoan aegirine.

scheibeite

a. Fossil resin found in brown coal. *Tomkeieff* b. A former name for phoenicochroite.

schematic

Showing principles of construction or operation, without accurate mechanical representation. *Nichols, 1*

scheteligite

a. A very rare, weakly radioactive, orthorhombic(?), black mineral, $(\text{Ca,Y,Sb,Mn})_2(\text{Ti,Ta,Nb,W})_2\text{O}_6(\text{O,OH})$, found at Torvelona, Norway, in pegmatite with plagioclase, tourmaline, bismuth, euxenite, thortveitite, monazite, alvite, beryl, garnet, and magnetite. Small amounts of uranium may be present. *Crosby* b. A name for an incompletely described possible member of the betafite subgroup of the pyrochlore group.

Schicht mixed-flow fan

In this fan, the blades are mounted on the curved portion of a dish-shaped rotor and are designed to impart dynamic energy but no pressure or static energy to the air, the dynamic energy being converted to pressure in the diffuser. The fan is suitable for water gauges up to 20 in (50.8 cm) and there is an absence of noise. It is useful where the resistance of the mine is known and not liable to alter materially. *Sinclair, 1*

schiefer spar

A variety of calcite occurring in very thin plates or scales. *Fay*

schiller

A phenomenon related to sheen; an almost metallic iridescent shimmer or play of color seen just below the surface in certain varieties of pyroxene, feldspar, etc. Etymol: German. See also: [adularescence](#); schillerization.

schiller-fels

Enstatite or bronzite peridotite with poikilitic pyroxenes. Orthorhombic pyroxenes possess the poikilitic texture to a peculiar degree, and esp. when more or less altered to bastite, the term schiller is esp. applied to them. *Fay*

schillerization

The development of poikilitic texture by the formation of inclusions and cavities along particular crystal planes, largely by solution somewhat as are etch figures. *Fay*

schiller obsidian

Obsidian with schiller effect.

schiller spar

An altered enstatite or bronzite, having approx. the composition of serpentine. Syn: [bastite](#)

schist

A strongly foliated crystalline rock, formed by dynamic metamorphism, that can be readily split into thin flakes or slabs due to the well developed parallelism of more than 50% of the minerals present, particularly those of lamellar or elongate prismatic habit, e.g., mica and hornblende. The mineral composition is not an essential factor in its definition unless specif. included in the rock name, e.g., quartz-muscovite schist. Varieties may also be based on general composition, e.g., calc-silicate schist, amphibole

schist; or on texture, e.g., spotted schist. See also: [magnesian schist](#); [pelitic schist](#). CF: [paraschist](#) *AGI*

schistose

Said of a rock displaying schistosity. *AGI*

schistosity

The foliation in schist or other coarse-grained, crystalline rock due to the parallel, planar arrangement of mineral grains of the platy, prismatic, or ellipsoidal types, usually mica. It is considered by some to be a type of cleavage. Adj: schistose. *AGI*

schizolite

A light-red variety of manganoan pectolite. See: [pectolite](#)

schlieren

a. Tabular bodies, generally a few inches to tens of feet long, that occur in plutonic rocks. They have the same general mineralogy as the rocks, but because of differences in mineral ratios, they are darker or lighter; the boundaries with the plutonic rock tend to be transitional. Some schlieren are modified inclusions, others may be segregations of minerals. Etymol: German. Sing: schliere. Also spelled schliere. Adj: schlieric. CF: [flow layer](#) b. Regions of different density in fluid, esp. as shown by special apparatus. *Hunt* c. A method or apparatus for visualizing or photographing regions of varying density in a field of flow. *Hunt*

Schmidt apparatus

Apparatus used to determine the position of rest of a freely swinging shaft plumbline. *BS, 7*

Schmidt-type magnetic field balance

This has been the most commonly used magnetic instrument for prospecting on land. It consists of a magnet pivoted near but not at its center of mass, so that the magnetic field of the earth creates a torque around the pivot that is opposed by the torque of the gravitational pull upon the center. The angle at which equilibrium is reached depends on the strength of the field. Readings are taken through an eyepiece by comparing a scale reflected from a mirror on the magnetic element with a fixed scale. The balance may be either the horizontal or vertical type. *Dobrin*

schmiederite

A monoclinic mineral, $\text{Cu}_2 \text{Pb}_2 (\text{SeO}_3)(\text{SeO}_4)(\text{OH})_4$; light blue; at La Rioja, Argentina. Also spelled schneiderite.

Schneider furnace

A distillation furnace for the reduction of zinc ores containing lead, with a recovery of the latter metal as well as the zinc. *Fay*

schoderite

A monoclinic mineral, $\text{Al}_2 (\text{PO}_4)(\text{VO}_4).8\text{H}_2 \text{O}$; yellow-orange.

schoenfliesite

The mineral group burtite, natanite, schoenfliesite, vismirnovite, and wickmanite.

schoepite

An orthorhombic mineral, $\text{UO}_3 .2\text{H}_2 \text{O}$; strongly radioactive; perfect cleavage; yellow; an alteration product of uraninite or ianthinite. Formerly called schoepite I. Syn: [epiianthinite](#) See also: [metaschoepite](#); [paraschoepite](#).

Scholl's method

A method for determining the uranium in any of its ores in which the uranium is extracted with dilute nitric acid. This extract is then diluted, filtered, and treated with ferric chloride and sodium carbonate causing the vanadium iron and aluminum to precipitate. The uranium is then precipitated from the filtrate by boiling with caustic soda and purified by solution in nitric acid. Following precipitating with ammonia, the ammonium uranate is ignited to the oxide, and weighed. When this weight is multiplied by the factor 0.847, it gives the weight of uranium.

scholzite

An orthorhombic mineral, $\text{CaZn}_2 (\text{PO}_4)_2 .2\text{H}_2 \text{O}$; dimorphous with parascholzite; colorless to white.

Schone's apparatus

An elutriator consisting of a tall glass vessel tapering toward the bottom, where water enters at a constant rate. Schone's formula is: $V = 104.7 (S1)^{1.57} D^{1.57}$ where V is the velocity of water (millimeter/second) required to carry away particles of diameter D and specific gravity, S. (Dodd, 1964)

schorlite

a. A black variety of tourmaline. *Dana, 4* b. A discontinued term for schorl.

schorlomite

An isometric mineral, $\text{Ca}_3 \text{Ti}_2 (\text{Fe}_2 \text{Si})\text{O}_{12}$, with Ti decreasing toward andradite in the garnet group.

schorl rock

A term used in Cornwall, England, for a granular rock composed essentially of aggregates of needlelike crystals of black tourmaline (schorl) associated with quartz, and resulting from the complete tourmalinization of granite. *AGI*

Schottky defect

a. An atomic vacancy. *Van Vlack* b. A point defect in a crystal structure where an atom is missing from a correct site. Syn: [vacancy](#) c. A defect in anionic crystal in which a single ion is removed from its interior lattice site and relocated in a lattice site at the surface of the crystal. d. A defect in anionic crystal consisting of the smallest number of positive-ion vacancies and negative-ion vacancies that leave the crystal electrically neutral.

Schramhobel cutter plow

See: [cutter plow](#)

schreibersite

A tetragonal mineral, $(\text{Fe,Ni})_3 \text{P}$; highly magnetic; contains small amounts of cobalt and traces of copper and tarnishes to brass yellow or brown. Schreibersite occurs in tables or plates as oriented inclusions in iron meteorites. Syn: [rhabdite](#)

schroeckingerite

A triclinic mineral, $\text{NaCa}_3 (\text{UO}_2)(\text{CO}_3)_3 (\text{SO}_4)\text{F}\cdot 10\text{H}_2\text{O}$; radioactive; soft; greenish-yellow color and fluorescence; an alteration product of uraninite; a source of uranium. Also spelled schroeckingerite. Syn: [dakeite](#)

schrotterite

An opaline variety of allophane rich in aluminum. Material at the type locality is a mixture of glassy hyalophane and earthy variscite.

schuchardtite

A name for interlayered Ni-rich vermiculites and chlorites.

schuetteite

A hexagonal mineral, $\text{Hg}_3(\text{SO}_4)_2$; yellow.

schuilingite

An orthorhombic mineral, $\text{PbCu}(\text{Nd,Gd,Sm,Y})(\text{CO}_3)_3(\text{OH}) \cdot 1.5\text{H}_2\text{O}$; light blue.

schultenite

A monoclinic mineral, PbHAsO_4 ; forms colorless thin crystalline plates; resembles selenite; at Tsumeb, Namibia.

Schulze elutriator

The original type of water elutriator; it has since been improved. *Dodd*

Schulze-Hardy rule

This states that the ion that causes a soluble to coagulate is opposite in sign to the electric charge of the colloidal particle; further, the coagulating power increases with the valency of the ion. *Pryor, 3*

Schulz's theory

A mine subsidence theory that distinguishes between the manner of fracture of shale and sandstone, holding that the former rock breaks along vertical lines irrespective of the angle of dip, and that the latter has a vertical fracture over a rise face and a fracture at right angles to the bed over a dip face. The theory predicts vertical lines of break in either rock for a level seam, and is, indeed, a compromise between the vertical theory and that of the normal. *Briggs*

Schumann plot

Integral plot in graphic representation of sizing analysis. *Pryor, 3*

schungite

See: [shungite](#)

schwartzite

A mercurian variety of tetrahedrite. Also spelled schwazite.

scientific alexandrite

A synthetic corundum colored by vanadium oxide to resemble true alexandrite in some of its optical characters.

scientific emerald

A synthetic beryl glass colored by chromic oxide to resemble true emerald in color.

scintillascope

See: [scintillation counter](#)

scintillation

A very small light flash excited in certain natural or synthetic crystals by radioactive rays or particles; the basic phenomenon of the scintillation counter in which the photoelectric effect of the scintillation flashes is amplified and measured to give a measure of intensity of radioactivity. *AGI*

scintillation counter

A sensitive instrument for the location of radioactive ore, such as uranium, radium, and thorium. It uses a transparent crystal that gives off a minute flash of light when struck by a gamma ray, and a photomultiplier tube that produces an electrical impulse when the light from the crystal strikes it. The scintillation counter has advantages over the Geiger counter as it is more sensitive, more compact, and can distinguish between types of radiation. The instrument responds to gamma rays emitted from the minerals mentioned and charts their intensity. It is used in aerial geophysical prospecting and the resulting maps are used as a guide for a more detailed ground investigation. See also: [coal-sensing probe](#) *Nelson*

scintillation probe

An electronic logging device consisting of a scintillation-type gamma-ray detecting unit built into a container small enough to be lowered into a borehole. *Long*

scintillometer

An instrument for measuring radioactivity, based on emission of light by certain crystals under impact of gamma rays. *AGI*

scissor fault

A fault of dislocation, in which two beds are thrown so as to cross each other. CF: [hinge fault](#); [rotational fault](#). *Zern*

sclaffery

Scot. Liable to break off in thin fragments, as the roof of a mine working.

sclerometer

An instrument for determining the degree of hardness of a mineral by ascertaining the pressure on a moving diamond point necessary to effect a scratch. *Standard, 2*

scleroscope hardness test

A test to determine the hardness of metals by measuring the rebound from them of a standard diamond-tipped hammer dropped from a given height. See also: [Shore hardness test](#); [Shore scleroscope](#). *Nelson*

sclerotinite

A maceral of coal within the inertinite group, consisting of the sclerotia of fungi or of fungal spores characterized by a round or oval form and varying size. *AGI*

scobs

The dross of metals. *Standard, 2*

scolecite

A monoclinic mineral, $\text{CaAl}_2\text{Si}_3\text{O}_{10} \cdot 3\text{H}_2\text{O}$; zeolite group; pseudotetragonal; fibrous to acicular; can show wormlike motion if heated; in cavities in basalt and hydrothermal veins.

sconce

A protecting cover or screen; protection; shelter. A metal cover and holder combined for holding a miner's candle, esp. for hanging on wooden timbers. *Webster 3rd; Fay*

scone

High-grade tin requiring little or no dressing. *Nelson*

scones

Firebricks of a certain standard size. *Osborne*

scoop

a. Diesel- or battery-powered equipment with a scoop attachment for cleaning up loose material, for loading mine cars or trucks, and hauling supplies. b. A large-sized shovel with a scoopshaped blade. *Zern* c. Coal miner's shovel; also sometimes used to refer to scraper. *BCI* d. See: [scraper bucket](#) e. A device that gathers ore at feed end of ball mill and delivers it into the feed trunnion. *Pryor, 3*

scoopman

In bituminous coal mining, a laborer who places the cable-drawn scoop of a scraper loader in position for it to scrape up coal (blasted from the working face) as it is dragged by the hoisting engine to a point where the coal is dumped into mine cars. *DOT*

scooptram

Similar to a front end loader; a low-profile loader articulating in the center with a large bucket in front (usually five tons or more) that transports ore in an underground mine. The operator sits at sideways controls facing the loader and drives it in either direction as required. Usually used for loading ore cars, shuttle cars, or hauling directly to an ore pocket.

scopulite

A rodlike or stemlike crystallite that terminates in brushes or plumes. *AGI*

score

a. A bill run up by a collier in bad times for the necessities of life. *Fay* b. See: [task](#) c. To mark with scratches or furrows; e.g., rocks in certain localities were scored by glacial drift. *Standard, 2*

scoria

a. A bomb-size pyroclast that is irregular in form and generally very vesicular. In less restricted usage, a vesicular cindery crust on the surface of andesitic or basaltic lava, the vesicular nature of which is due to the escape of volcanic gases before solidification; it is usually heavier, darker, and more crystalline than pumice. The adj. form, scoriaceous, is usually applied to pyroclastic ejecta. Cinder is sometimes used synonymously. CF: [pumice](#) b. A local term for melted or partly melted rock surrounding burned-out coal beds in the Western United States. See also: [clinker](#)

scoriaceous

Said of the texture of a coarsely vesicular pyroclastic rock (e.g., scoria), usually of andesitic or basaltic composition, and coarser than a pumiceous rock. The walls of the

vesicles may be either smooth or jagged. Also, said of a rock exhibiting such texture. Syn: [scoriform](#); [scorious](#). CF: [vesicular](#)

scorification

The separation of gold or silver by heating it to a high temperature with a large amount of granulated lead and a little borax, in a scorifier. The gold or silver dissolves in the molten lead, which sinks to the bottom of the vessel, while the impurities form a slag with the lead oxide that is produced. *Nelson*

scorifier

A bone ash or fireclay crucible somewhat larger than a cupel; used in assaying and in the metallurgical treatment of precious metals. *Nelson*

scoriform

See: [scoriaceous](#)

scorious

See: [scoriaceous](#)

scorodite

An orthorhombic mineral, $\text{FeAsO}_4 \cdot 2\text{H}_2\text{O}$; variscite group; colorless or pale-green to brown; in gossans, oxidized zones of metal veins, and around hot springs; a minor source of arsenic.

Scortecci process

A process for direct reduction of iron pyrites that depends on the dissociation of pyrites in the absence of air, and in the presence of carbon, with the formation of iron and carbon disulfide. *Osborne*

scorzalite

A monoclinic mineral, $(\text{Fe,Mg})\text{Al}_2(\text{PO}_4)_2(\text{OH})_2$; lazulite group; forms a series with lazulite; light blue.

scotch

a. A wooden stop-block or iron catch placed across or between the rails of underground roadways, to keep the cars from running loose, or to hold them when standing upon an

inclined plane. b. Leic. The lower lift of coal that is wedged up in driving a heading. c. To dress, as stone, with a pick or picking tool. *Standard, 2*

scotch block

a. A wedge or block temporarily fitted to a running rail in order to hold (scotch) the wheel of a railway vehicle. *Hammond* b. One form of gas port in an open-hearth steel furnace; the distinguishing feature is that it is monolithic, being made by ramming suitably graded refractory material around a metal template. *Dodd*

scotching

A method of dressing stones either with a pick or with pick-shaped chisels. *Fay*

Scotch pebble

A rounded fragment of agate, carnelian, cairngorm, or other variety of quartz; found in gravels of parts of Scotland and used as a semiprecious stone.

Scotch pig

A very pure grade of pig iron. *Standard, 2*

Scotch topaz

Applied in the gem stone trade to yellow transparent quartzes resembling Brazilian topaz in color; used for ornamental purposes. See also: [citrine](#)

scour

The erosion of the bed or bank of a river or of a seacoast by the action of flowing water and waves. See also: [scour protection](#)

scour and fill

A process of alternate excavation and refilling of a channel, as by a stream or the tides; esp. such a process occurring in time of flood when the discharge and velocity of an aggrading stream are suddenly increased, causing the digging of new channels that become filled with sediment when the flood subsides. Syn: [washout](#)

scouring cinder

A basic slag that attacks the lining of a shaft furnace. *Fay*

scour protection

The protection of soil or other submerged material against scour, by the use of steel sheet pilings, revetment, riprap, or brushwood, or by combining any such methods as most suited to the site. See also: [lining](#) *Hammond*

scout

a. One who gathers information about the drilling rig of a rival company for the benefit of its employer. Also called snoopers. *Long* b. An engineer who makes a preliminary examination of promising oil and mining claims and prospects. *Long* c. One who goes into a potential area, esp. for oil or gas, to lease or option the land. *Long*

scout boring

Trial bores made to test formations of area being prospected. *Pryor, 3*

scouter

In stoneworking, a quarryman whose function is to split off large portions of rock by means of a jump drill and wedges. *Standard, 2*

scout hole

A borehole penetrating only the uppermost part of an orebody with the intention of delineating its surface configuration. Also, a shallow hole drilled to scout for an indication of ore or to explore an area in a preliminary manner. *Long*

scout prospecting

Prospecting undertaken in new country in which the first step is to scout prospect rivers, streams, and creeks by washing gravel obtained from their beds. *Griffith*

scovan

Corn. A tin-bearing lode.

scovillite

A former name for rhabdophane.

scow

A device used to a limited extent to load solid blocks of coal. The scow proper is a flat steel plate that is moved underneath the undercut and blocks the coal by means of a hoist and a tail rope. The coal is then wedged down on the scow, and the solid block is hauled

by means of the hoist and a headrope to a delivery point where it is transferred to cars. *Jones, 1*

scowl bowl

See: [scowle](#)

scowle

Forest of Dean. Ancient ironstone quarry and mine workings. Syn: [scowl bowl](#)

scrablag

Hardpan; Isle of Man, U.K.

scram

a. To search for and extract ore in a mine that is apparently worked out. *Weed, 2* b. An Alabama term for a small soft-coal mine complete in itself.

scram drift

See: [scram drive](#)

scram drive

a. Underground drive above the tramming level, along which ore is moved by scrapers (slushers) to a discharge chute. *Pryor, 3* b. See: [scram drift](#)

scrap

a. Defective product not suitable for sale. *ASM, 1* b. Discarded metallic material, from whatever source, which may be reclaimed through melting and refining. *ASM, 1* c. Som. Stone only fit for rough walling. *Arkell* d. See: [diamond scrap](#)

scrap baler

In the iron and steel industry, one who presses, in a baling press, steel scrap into compact blocks, for remelting in the open-hearth furnace. Also called scrap builder; scrap pressman. *DOT*

scrap bar

The uneven ends of the muck bars. *Mersereau, 2*

scrap-carbon process

Indian scrap-carbon process using 100% steel scrap in which petroleum coke replaces carbon and acid slag replaces silicon. The hearth is protected from erosion by spreading an easily fusible silica sand over the banks before charging, and manganese ore is used instead of iron ore for oxidizing the carbon. *Osborne*

scraper

a. A rod for cleaning out a shothole prior to charging with explosives. See also: [stemmer](#); [spoon](#). *Nelson* b. A mechanical contrivance used at collieries to scrape the culm or slack along a trough to the place of deposit. c. A machine used in mines for loading cars and transporting ore or waste for short distances. There are two basic types of scraper: (1) the hoe or open type, which is particularly suitable for moving coarse, lumpy ore; and (2) the box or closed type, which is particularly suited for handling fine material, esp. on a loading slide. Syn: [box scraper](#) d. A digging, hauling, and grading machine having a cutting edge, a carrying bowl, a movable front wall (apron), and a dumping or ejecting mechanism. Also called carrying scraper or pan. *Nichols, I* e. An apparatus used to take up coal from the floor of a mine, after it has been shot, and deposit it either in cars or in a conveyor. See: [spoon](#) f. A rubber-tired device used to move earth in surface mining. *BCI* g. See: [carryall](#) h. See: [poker man](#) i. The name applied to a bowl scraper or a multibucket excavator. Also known as a scraper excavator. *Hammond*

scraper and break detector

In Great Britain, every shot firer is provided with a scraper for cleaning out shotholes, and in safety lamp mines a break detector must also be provided. The two tools are combined in the scraper and break detector. It can clean out a shothole and detect breaks in the walls of 1/8 in (3 mm) or more in width. The firing of a shot in a hole traversed by a crack exceeding 1/8 in in width is forbidden. *Nelson*

scraper box plow

a. A layout of rope-drawn scraper boxes with knives on the face side. They are drawn to and fro, and pushed against the face by guides controlled by rams. A haulage of 250 hp (186 kW) must be installed in a semipermanent engine room; it has a rope diameter of 1-1/4 in (3 cm) and a speed of 3 ft/s (1 m/s). No conveyor is required as the coal is scraped by boxes to the loading point. The maximum workable seam thickness is 20 in (51 cm) on gradients of 0 degrees to 30 degrees; maximum length of face, 220 to 275 yd (200 to 250 m); and advance per shift, 6-1/2 to 8 ft (2.0 to 2.4 m). *Nelson* b. See: [Haarmann plow](#); Kema plow; Gusto scraper box.

scraper bucket

a. One of the excavating bowls or buckets that form part of a scraper. *Hammond* b. In coal mines, the scraper bucket is a bottomless, three-sided box, with a hinged back. The hinge operates in a forward direction so that on the return journey on the coal face the back opens allowing the box to remain empty. On the loading journey, the coal closes the hinge and the material is drawn or scraped forward to the point of discharge. Syn: [scoop](#)

scraper chain conveyor

See: [chain conveyor](#)

scraper conveyor

a. A mechanical device for conveying coal, rock, ashes, culm, etc., in a metal trough by means of scrapers attached to a rope or chain. b. A conveyor consisting of chain-drawn scrapers or flights running in a trough through which they push the material to be transported. Also called drag-link conveyor; flight conveyor; chain conveyor. *BS*, 5

scraper hoist

A power-driven hoist that operates a scraper to move material (rock or coal) to a loading point.

scraper loader

a. A machine used for loading coal or rock by pulling an open-bottomed scoop back and forth between the face and the loading point by means of ropes, sheaves, and a multiple drum hoist. The filled scoop is pulled on the bottom to an apron or ramp where the load is discharged onto a car or conveyor. *Jones*, 1 b. A combined scraper and transporting machine. Originally towed by a tractor, but now diesel-electric with a direct current motor in each wheel. *Pryor*, 3 c. A double-drum winch with two steel ropes. The loading capacity of a scraper loader ranges from 30 to 80 tons per hour depending on conditions. The loader is used for transporting and loading coal on longwall faces, for removing and loading stone in tunnels, and for stowing dirt on longwall faces. Syn: [slusher](#)

scraper plow

One scraper box with picks, rope-drawn and unguided along the face. A 30-hp (22.4-kW) haulage advances with the face, which is made convex to eliminate the need for guides. Speed, 3 to 4 ft/s (approx. 1 m/s). Suitable seam conditions; thickness, 12 to 24 in (30 to 60 cm) at gradients of 0 degrees to 35 degrees (preferably 15 degrees to 25 degrees); and maximum length of face, 65 yd (60 m). Syn: [porte et gardin plow](#) *Nelson*

scraper ripper

Strip-mine equipment that breaks, loads, and hauls coal. Features include ripping teeth on the lip for breaking the coal and a flight conveyor for carrying the broken coal away from the lip. As the ripper teeth bite into and loosen the coal, the conveyor sweeps the loose coal upward and prevents buildup ahead of the lip. *Coal Age*, 3

scrap forgings

Forgings formed from wrought-iron scrap. *Standard*, 2

scrap hoist operator

In the iron and steel industry, one who operates a skip hoist to carry scrap material to the furnaces. *DOT*

scrap mica

Mica that because of size, color, or quality is below specifications for sheet mica. Includes flake mica and the mica, except sheet, obtained from pegmatite mining as a sole product or as a byproduct, from the preparation of sheet mica, and from waste in fabricating sheet mica. *Skow*

scrap picker

A person employed on the slag dump to pick out pieces of iron carried to the dump in slag ladles. *Fay*

scrapping bottom coal

Lifting coal that has been left by an undercutting machine. *Zern*

scrap sorter

In metallurgy, a laborer who sorts scrap metal and removes foreign matter preparatory to use in recasting. *DOT*

scratch

A calcareous, earthy, or strong substance that separates from seawater in boiling it for salt. See: [striation](#)

scratch pan

A pan in saltworks to receive the scratch. *Fay*

screaming joint

A joint from which air leaks and makes a screaming noise. Compressed air escaping at a screaming joint or hole in an air hose can be the cause of a mine fire. *Sinclair, 1*

scree

A sieve, screen, or strainer; a coal screen. See also: [talus](#)

scree bars

Scot. Bars of which a scree is constructed. See also: [scree](#)

screen

a. A large sieve for grading or sizing coal, ore, rock, or aggregate. It consists of a suitably mounted surface of woven wire or of punched plate; it may be flat or cylindrical, horizontal or inclined, stationary, shaking, or vibratory, and either wet or dry operation. See also: [Bradford breaker](#); [shaking screen](#); [stationary bar screen](#); vibratory screen. *Nelson* b. A cloth brattice or curtain hung across a road in a mine to direct the ventilation. See also: [brattice](#) c. A perforated sheet placed in the gating system of a mold to separate dirt from molten metal. *ASM, 1*

screen analysis

a. The size distribution of noncohering particles as determined by screening through a series of standard screens. *Harbison-Walker* b. See: [sieve analysis](#) c. The percentage of a sample retained on each size of a series of standard laboratory screens. *Nelson* d. Determination of the particle-size distribution of a soil, sediment, or ore by measuring the percentage of the particles that will pass through standard screens of various sizes. Syn: [grading test](#)

screen box

A container in which diamond screens are inserted and in which the material (diamond particles) that passes through a sieve or screen collects and is retained. *Long*

screen chute

A discharge chute equipped with a screen section, either stationary or vibrating, to remove the finer portions of the material being handled from the major line of flow.

screen cloth

A woven medium suitable for use in a screen deck. *BS, 5*

screen deck

A surface provided with apertures of specified size for carrying out the operation of screening. *BS, 5*

screened coal

Coal that has passed over any kind of a screen and therefore consists of the marketable sizes.

screened lump lime

Lump lime after forking or screening to remove the finer portion. The portion removed is usually that which will pass a 1/2-in sieve.

screened trailing cable

A flexible cable provided with a protective screen or screens of tinned copper wire, or other conducting material, applied (1) to enclose each power core separately (individual screening), or (2) to enclose all the cores of the cable (collective screening). *BS, 13*

screening

a. The separation of solid materials of different sizes by causing one component to remain on a surface provided with apertures through which the other component passes. *BS, 5* b. Use of one or more screens (sieves) to separate particles into defined sizes. Also called sizing. See also: [sieving](#)

screening machine

An apparatus having a shaking, oscillatory, or rotary motion, used for screening or sifting coal, stamped ores, and the like.

screenings

a. Fine coal that will pass through the smallest mesh screen normally loaded for commercial sale for industrial use. *BCI* b. The residue from a screening operation. *Nelson*

screenings crushing

A stage in bituminous coal crushing in which units for crushing screenings reduce secondary product to final small, commercial sizes, such as 1- to 3/8-in (2.5- to 1-cm) stoker coal or screenings. *Mitchell*

screen iron ore

Accumulation of surface debris on the lower slopes of iron-bearing hills. The scree material may contain sufficient iron ore to make its mining an economic proposition as at Middleback Ranges of South Australia. *Nelson*

screen loading chute

A type of chute with a bar screen or grizzly bottom that permits fines to fall onto the conveyor belt first, providing a cushion for the large material that passes over the screen.

screen overflow

That portion of the feed material discharged from the screen deck without having passed through the apertures. *BS, 5*

screen pipe

A perforated pipe lined with fine-mesh screen, set in portions of a borehole where the walls must be supported and the ingress of water or oil cannot be restricted. Also called well point. *Long*

screen plate

a. A metal plate with specific-sized openings used to control the fineness of grinding in dry pans and hammer mills. *ACSG, 2* b. A plate provided with apertures of specified size for use as a screen deck. *BS, 5*

screen room

That part of a breaker where boys picked slate and bony. *Korson*

screens

Wire meshes with specific-sized openings for grading particles of various sizes. See also: [vibrating screen](#)

screen size

A standard for determining the size of particles. The particles are passed through screens with openings of specified size. The size of the particles is determined by the size of the opening through which the particles will not pass. *Long*

screen sizing

Separating various-sized grain into portions, by a screen or sieve. Also called screening; sizing.

screen underflow

That portion of the feed material that has passed through the apertures in a screen deck. *BS*, 5

scree plate

Scot. An iron plate at the foot of a screen on which screened coal is discharged.

screw

a. The feed screw in the swivel head of a gear-feed diamond drill. *Long* b. Syn. for an auger stem having helical webs. *Long* c. A combined symmetry operation involving rotation about an axis and a translation parallel to it. CF: [space group](#) d. A crystal defect involving a dislocation about which layers of atoms spiral during crystal growth. CF: [Burgers vector](#)

screw bell

a. A device to withdraw broken rods from a borehole, when the fracture occurs below a joint. The screw bell is lowered to cut a thread on the end of the broken rod and thus secure a grip sufficient to withdraw it safely. *Nelson* b. A fishing tool shaped like a bell, bell tap, or bell screw. *Long* c. See: [bell screw](#); bell socket; bell tap.

screw conveyor

a. A conveyor screw revolving in a suitably shaped stationary trough, or casing fitted with hangers, trough ends, and other auxiliary accessories. b. A conveyor in which a spiral blade presses material forward as it rotates in a suitable housing. Syn: [tubular screw conveyor](#); spiral conveyor. See also: [grit collector](#); [vertical screw conveyor](#). *Pryor*, 3

screw-down mechanism

That mechanism on a mill for lowering and raising the rolls to accommodate the distance between them to the requirements of the article being rolled. *Mersereau*, 2

screw elevators

Vertical screw elevators are used for handling pulverulent materials. A typical installation for delivering bulk cement into a plant consists of a screw feeder, which takes the cement from the bulk-cement car and feeds it to the screw elevator. Both these units are airtight and all joints are fitted with rubber gaskets that prevent the loss of cement and render the operation dustproof. *Pit and Quarry*

screw fan

See: [axial-flow fan](#)

screwfeed

A system of gears, ratchets, and friction devices, or some combination of these parts, in the swivel head of a diamond drill, which controls the rate at which a bit is made to penetrate the rock formation being drilled. When controlled by a feed gear, the bit maintains the same penetration rate per revolution regardless of drill-stem revolutions per minute. Also called gear feed, mechanical feed. *Long*

screw feeder

An auger-type screw to transfer material from one piece of equipment to another. *ACSG, 2*

screwjack

See: [jackscrew](#)

screw mixer

See: [screw-type mixing conveyor](#)

screw pile

A wide helical blade fixed on a shaft and screwed into the ground by means of a winch or capstan. *Hammond*

screwplug

See: [hoisting plug](#)

screw shackle

A long cylindrical nut, threaded internally with a right-hand thread at one end and a left-hand thread at the other, used to connect and tighten together the ends of two rods forming a brace or tie. *Hammond*

screw-type mixing conveyor

A type of screw conveyor consisting of one or more conveyor screws, ribbon flight or cut flight, conveyor screws with or without auxiliary paddles. See also: [blending conveyor](#); [screw conveyor](#).

scribe

An instrument used by surveyors for marking posts, trees, etc. *Fay*

scrin

a. Derb. Ironstone in irregular-shaped nodules. b. Derb. A small subordinate vein. Also spelled skrin.

scroll

A helical projection on a drill rod or stem to remove cuttings from a hole. *BS, 12*

scronge

S. Wales. Overlying strata loosened or broken by workings underneath. Probably a variation of scrunge, to squeeze.

scrowl

a. Corn. A thin, sometimes calcareous or siliceous rock attached to the wall of a lode. b. Corn. Loose ore at the point where a lode is disturbed by a cross vein.

scrubber

a. Device in which coarse and sticky ore, clay, etc., is washed free of adherent material, or mildly disintegrated. The main forms are the wash-screen, wash trommel, log washer, and hydraulic jet or monitor. Scrubbers or scrubbing towers are also used to separate soluble gases with extracting liquids, or to remove dust from air by washing. *Pryor, 3* b. Device for separating environmentally noxious chemical substances from waste gas streams.

scrubstone

Eng. A provincial term for a variety of calciferous sandstone.

scruff

a. A mixture of tin oxide and iron-tin alloy formed as dross on a tin-coating bath. *ASM, 1*
b. See: [scum](#)

SCSR

See: [self-contained self-rescuer](#)

scuffing grind

Tumbling of sands with sufficient violence to remove loosely adherent surface coatings without otherwise breaking down the particles to any great extent. *Pryor, 3*

sculls

Incrustations of slag, dross, and metal on the contacting surfaces of vessels that treat or hold molten metals. *Pryor, 3*

sculp

To break slate into slabs suitable for splitting. See also: [hard way](#) *Webster 3rd; AIME, 1*

sculping

Fracturing the slate along the grain, e.g., across the cleavage. *Zern*

scum

a. Impure or extraneous matter that rises or collects at the surface of liquids, as vegetation on stagnant water, or dross on a bath of molten metal. Sometimes incorrectly used for the word froth in flotation. *Fay* b. A surface deposit sometimes formed on clay building bricks. The deposit may be of soluble salts present in the clay and carried to the surface of the bricks by water as it escapes during drying; it is then known as dryer scum. The deposit may also be formed during kiln firing, either from soluble salts in the clay or by reaction between the sulfur gases in the kiln atmosphere and minerals in the clay bricks; it is then known as kiln scum. Cf.: efflorescence. *Dodd* c. Undissolved batch constituents floating as a layer above the molten glass in a pot or tank furnace. *Dodd* d. Areas of poor gloss on a vitreous enamel; the fault may be due to action of furnace gases, to a nonuniform firing temperature, or to a film clay arising from faulty enamel suspension. *Dodd* e. The "clouds" appearing around decalcomania formed by varnish residue. *ACSG, 2* f. A surface defect appearing as dull patches on otherwise bright surfaces of glazes, glass, or porcelain enamel. *ACSG, 2*

scun

Dev. A small vein.

scythestone

A whetstone suitable for sharpening scythes.

sea

- a. An ocean, or alternatively a large body of (usually) salt water less than an ocean. *AGI*
b. Waves caused by wind at the place and time of observation. *AGI* c. State of the ocean or lake surface in regard to waves. *AGI*

seabeach placers

Alaska. Placers adjacent to the seashore to which the waves have access.

sea bloom

See: [plankton bloom](#)

sea coal

a. Old name for bituminous coal; so named either because it was exported by sea from collieries in coastal districts, or because it was at first applied to coal washed ashore from deposits below sea level. *Arkell* b. Coal dug from the earth; so called formerly to distinguish it from charcoal, because it was brought to London by sea. Known formerly as pit coal or earth coal. *Standard, 2* c. U.S. Rare. Soft coal as distinguished from anthracite. *Standard, 2* d. Archaic. Mineral coal. *Webster 3rd* e. Pulverized bituminous coal used as a foundry facing. *Webster 3rd*

sea current

The currents that constitute part of the general oceanic circulation. Syn. for ocean current. *Schieferdecker*

sea-floor trench

See: [trench](#)

sea-foam

a. An early syn. for meerschaum. b. See: [sepiolite](#)

seal

a. To secure a borehole or excavation against cave-ins and flowing or escaping gas or liquids by the use of cement or other sealants. *Long* b. To secure a mine opening against flowing or escaping gas, air, or liquids by injecting grout, by coating rock surfaces with gunite, or by erecting rock, concrete, wood, or cloth barriers. *Long* c. A short length of roadway that has been tightly filled with concrete, brickwork, sand, or other material to close off an area against fire, gas, or water. In the case of a fire, the seal cuts off the air supply and also prevents noxious fumes given off from reaching other parts of a mine. Also called stopping. See also: [firedamp](#)

sealant

See: [painting](#)

Seale construction

Wire strand construction having one size of wires for the outer layer with the same number of smaller wires in the underlayer. Both layers have the same length and direction of lay. *Hammond*

sealed area

In mining, portion of underground workings sealed off, usually because of fire (in which case no air is allowed to enter) or because no mineable coal remains in the area. See also: [unsealing](#)

sealed-off area

A part of a mine that has been sealed off from the rest of the mine. The object of sealing off a fire area is to: (1) contain the trouble, and to prevent an explosion that may occur inby from extending to other parts of the mine; (2) build up an extinctive atmosphere inside the sealed-off area; and (3) prevent the access of air to the inby side of the seal. *Nelson*

Seale rope

A wire rope that has six or eight strands each, having a large center wire covered by nine small wires that are covered in turn by nine large wires. *Lewis*

Seale's lay

A wire rope with the inner and outer layers consisting of the same number of wires, the outer being larger and lying in the grooves or valleys between the inner wires. Both layers are stranded or laid in one operation. Extra support is given to the outer wires by this method and the wires are in line contact throughout and there is no internal crosscutting of wires. *Sinclair, 5*

sea level correction

The deduction made from a measured length of a base line to establish its true length at sea level. See also: [tape corrections](#)

sealing

a. Shutting off all air from a mine or portion of a mine, a practice used in an emergency to check fire by eliminating oxygen. Also, as a routine shutting-off method for worked-out areas in some mines. *BCI* b. Sealing is used to overcome mine fires when other methods have failed. It involves the erection of temporary or permanent seals for the purpose of cutting off the oxygen supply to the area on fire. Sealing causes the fire to extinguish itself by consuming the oxygen in the sealed off area. *Kentucky* c. Cutting off the air supply to effect extinction of underground fires by erecting sandbag stoppings at convenient places. The combustion process uses up the available oxygen within the sealed area, the process is arrested and the hot ground cools down gradually as the heat is conducted away by the surrounding cooler strata. See also: [fire seal](#) *Mason* d. Closing pores in anodic coatings to render them less absorbent. *ASM, I* e. Plugging leaks in a casting by introducing thermosetting plastics into porous areas and subsequently setting the plastic with heat. *ASM, I*

sealing-wax wood

Pieces of wood full of resin found in brown coal. When ignited they burn, melting and giving off soot and an aromatic odor like sealing wax. *AGI*

seal off

The use of a cement or other sealant in a borehole. Seal off is not synonymous with blankoff and case off, where securing the walls of a borehole is accomplished by setting pipe or casing. CF: [blankoff](#); [seal](#). *Long*

seam

a. A stratum or bed of coal or other mineral; generally applied to large deposits of coal. *Fay; BCI* b. A particular bed or vein in a series of beds; it is usually said of coal but may also pertain to ore minerals. *AGI* c. A thin layer or stratum of rock separating two distinctive layers of different composition or greater magnitude. *AGI* d. A joint, cleft, or fissure. Syn: [crevice](#) e. A plane in a coalbed at which the different layers of coal are easily separated. f. A very narrow vein. g. See: [joint line](#)

seamanite

An orthorhombic mineral, $Mn_3(PO_4)_2(OH)_6$; pale- to wine-yellow; in the Chicagoan Mine, near Iron River, MI.

seam contour

A line drawn on a plan joining points on the floor or roof of a seam that have the same height above a prescribed datum. *BS, 7*

seamount

An elevation of the sea floor, 1000 m or higher, either flat-topped (called a guyot) or peaked (called a seapeak). Seamounts may be either discrete, arranged in a linear or random grouping, or connected at their bases and aligned along a ridge or rise. *AGI*

seam-out

A shot that merely blows out a soft stratum in the coal or escapes through a seam without loosening the main mass of coal. In Arkansas, called squeal-out. *Fay*

seamy

Full of seams, so as to be difficult to blast.

search coil

a. Sensitive device, using the mine-detector principle, for locating ferromagnetic material that is to be removed before ore treatment. It typically monitors a stream of ore passing along a conveyor belt, which it stops when iron is detected. *Pryor, 3* b. Coil that is used in electromagnetic methods for measuring the magnetic field that is associated with the electric current. *Schieferdecker*

search neighborhood

Any area searched during interpolation between sample data points. Applies to any interpolation method where a limited number of sample data points are used to estimate intermediate values.

searlesite

A monoclinic mineral, $\text{NaBSi}_2\text{O}_5(\text{OH})_2$; forms minute spherulites composed of radiating fibers; at Searles Lake, CA.

Searles Lake brine

A source of trona, $\text{Na}_3(\text{CO}_3)(\text{HCO}_3) \cdot 2\text{H}_2\text{O}$. Occurs in Searles Lake, San Bernardino County, CA. *CCD, 2; Handbook of Chemistry and Physics, 2*

sea sand

Sand containing alkaline salts that attract and retain moisture and cause efflorescence in brick masonry. *Zern*

sea slick

An area of sea surface, variable in size and markedly different in appearance, with color and/or oiliness; usually caused by plankton blooms. *Hy*

seasoned

Applied to quarystone after the moisture has dried out.

seasoning

A mode of treatment of iron castings that are allowed to remain in storage, or to stand out in the open, for a more or less extended period, e.g., 6 months, to effect a reduction in the residual stresses and consequently in the degree of distortion during subsequent machining. A very similar result can often be obtained by a comparatively short period, e.g., 30 min, of tumbling. Since stress relieving by heat treatment is a more certain process, and seasoning involves much delay and the use of considerable space for storage, stress relieving is more usually employed. *Osborne*

seasoning timber

The drying of the sap and moisture in the woody fibers and thus reducing the timber by shrinkage. It becomes more durable and weighs less. Timber may be air-dried, i.e., dried naturally in air, or kiln-dried, which means dried in kilns under the action of artificial heat. The former is more general. See also: [timber preservation](#)

sea state

Numerical or written description of ocean surface roughness. *Hy*

seat

a. The underclay or fireclay on which a coal seam rests. Also called seating. *Arkell* b. The foundation or framework on which a structure rests; e.g., engine seat, cage seat. *Fay*

seat clay

See: [underclay](#)

seat earth

a. A British term for a bed of rock underlying a coal seam, representing an old soil that supported the vegetation from which the coal was formed; specif. underclay. A highly siliceous seat earth is known locally as ganister. Also spelled: seatearth. Syn: [seat rock](#); [seat stone](#); hard seat. *AGI* b. A bed representing oil soil, usually containing abundant rootlets, underlying a coal seam. *BS, 11* c. The soil on which the coal forests flourished.

Nelson d. Stratum underlying the valuable seam. Floor of a coal seam. See also: [underlying](#); [underclay](#). *Pryor*, 3

seated

a. Placed in position. *Long* b. Closed by pressing the closure part of a valve against its seat. *Long*

seating

The surface of the point of support for a heavy load. *Hammond*

seat of settlement

The deposit of soil under a loaded foundation within which the major settlement occurs. See also: [excavation deformation](#); [settlement](#). *Nelson*

seat rock

See: [seat earth](#)

seat stone

See: [seat earth](#)

sebkainite

Crude potassium chloride obtained by solar evaporation of brine from a lake south of Gabes, Tunisia. *Hess*

sebkha

See: [sabkha](#)

secant modulus of elasticity

Materials such as concrete or prestressing wire have a variable Young's modulus (E) so that the particular value of E adopted must be either the slope of the tangent to the stress-strain curve or that of the secant. The latter is the line that joins the origin of the curve to, for instance, the 0.1% proof stress, expressed on the curve. For a material within its elastic range, the secant will coincide with the tangent. See also: [modulus of elasticity](#)

secondarily enriched deposit

Deposits that result from supergene enrichment.

Secondary

A term applied in the early 19th century as a syn. of Floetz. It was later applied to the extensive series of stratified rocks separating the older Primary and the younger Tertiary rocks, and ranging from the Silurian to the Cretaceous; still later, it was restricted to the whole of the Mesozoic Era. The term was abandoned in the late 19th century in favor of Mesozoic. *AGI*

secondary

Said of metal obtained from scrap rather than from ore.

secondary air

In a combustion chamber, air that meets with primary air to consume the fuel completely and complete combustion. *Newton, 1*

secondary anomaly

See: [geochemical anomaly](#)

secondary ash

Ash in coal derived from mineral matter precipitated in cleat clivities, etc. See also: [extraneous ash](#)

secondary beam

A beam supported off, and transferring loads to, main beams that are themselves carried directly by the walls or columns. *Hammond*

secondary blasting

Irrespective of the method of primary blasting employed, it may be necessary to reblast a proportion of the rock on the quarry floor so as to reduce it to a size suitable for handling by the excavators and crushers available. Two methods of secondary blasting of rock are available. The first, called the plaster or mudcap method, is to fire a charge of explosive placed on the rock and covered with clay, the shock of the detonating explosive breaking the block. The second technique, known as pop-shooting, is to drill a hole into the block and fire a small charge in this hole, which is usually stemmed with quarry fines. Also called blistering; bulldozing. See also: [plaster shooting](#); [popping](#); [snakeholing](#); pop shot; boulder blasting. *McAdam, 2*

secondary cell

A group of flotation cells in which a product from the primary cells is retreated. *BS, 5*

secondary clay

A clay that has been transported from its place of formation and redeposited elsewhere. CF: [residual clay](#); [primary clay](#). See: [sedimentary clay](#)

secondary consolidation

Consolidation of sedimentary material, at essentially constant pressure, resulting from internal processes such as recrystallization. *AGI*

secondary creep

Deformation of a material under a constant differential stress, with the strain-time relationship as a constant. CF: [primary creep](#) Syn: [steady-state creep](#)

secondary crusher

Crushing and pulverizing machines next in line after the primary crushing to further reduce the particle size of shale or other rock. See also: [primary crusher](#) types of jaw crusher and gyratory crusher, and also crushing rolls, hammer mills, and edge runner mills. *ACSG, 2; Dodd*

secondary crushing

In ore dressing, the second stage of grinding in which the discharge from the primary crusher is broken down to a size suitable for feed to fine grinding machines. *Newton, 1*

secondary deposit

a. Made when the sediments already deposited are eroded and redeposited. *Schieferdecker* b. A mineral deposit formed when a primary mineral deposit is subjected to chemical and/or mechanical alteration. Secondary deposits are divided into three groups: sedimentary rocks, secondarily enriched ore deposits, and residual or detrital ore deposits. *Hoover*

secondary dispersion

Geochemical dispersion of elements by processes originating at the surface of the Earth; opposite of primary dispersion. Secondary patterns are those formed at the Earth's surface by weathering, erosion, or surface transportation. Secondary patterns have been classified more in detail as halos, fans, and trains, depending on the characteristic shape of the pattern and its geometric relationship to the ore deposit or other source. *Hawkes, 1; Lewis*

secondary drilling

The process of drilling the so-called "popholes" for the purpose of breaking the larger masses of rock thrown down by the primary blast.

secondary dust source

If an operation agitates or disperses dust, it is a secondary source. See also: [primary source](#)

secondary enlargement

Deposition, around a clastic mineral grain, of material of the same composition as that grain and in optical and crystallographic continuity with it, often resulting in crystal faces characteristic of the original mineral; e.g., the addition of a quartz overgrowth around a silica grain in sandstone. *AGI*

secondary enrichment

See: [supergene enrichment](#)

secondary environment

See: [geochemical environment](#)

secondary fan

Any fan installed underground to ventilate tunnels or workings where the air current is sluggish. See also: [mine ventilation auxiliary fan](#); booster fan. *Nelson*

secondary geochemical cycle

This cycle is comprised of the processes of weathering, soil formation, erosion, transportation, and sedimentation. *Hawkes, 2*

secondary grinding

Further comminution of material already reduced to sand sizes in rod or ball mills. *Pryor, 3*

secondary hardness

Further increase in hardness produced on tempering high-speed steel after quenching due to precipitation of carbides. *CTD*

secondary haulage

That portion of the haulage system that collects the coal from the various gathering-haulage delivery points and delivers it to the main haulage system. *Wheeler, H.R.*

secondary lead

Lead derived from salvage of wornout end-product items, such as battery plates, cable covering, pipe and sheet, which are collected, remelted, and refined in secondary smelters to produce refined lead or various lead-base alloys. *USBM, 7*

secondary metal

Metal recovered from scrap by remelting and refining. *ASM, 1*

secondary metal scrap

Metal recovered from scrap by remelting and refining. *McGraw-Hill, 1*

secondary mineral

A mineral formed later than the rock enclosing it, usually at the expense of an earlier-formed primary mineral, as a result of weathering, metamorphism, or exsolution. *AGI*

secondary mineral deposit

A mineral deposit formed when a primary mineral deposit is subjected to alterations through chemical and/or mechanical weathering. Secondary deposits are divided into three groups: sedimentary rocks, secondarily enriched mineral deposits, and residual or detrital mineral deposits. *Lewis*

secondary porosity

Porosity developed after the formation of a deposit and resulting from subsequent fracturing, replacement, solution, or weathering. *AGI*

secondary products

See: [middlings](#)

secondary reject elevator

A refuse elevator that extracts the second or lighter reject; usually situated at the discharge end of the washbox. *BS, 5*

secondary rocks

Rocks composed of particles derived from the erosion or weathering of preexisting rocks, such as residual, chemical, or organic rocks formed of detrital, precipitated, or organically accumulated materials; specif., clastic sedimentary rocks. *AGI*

secondary settling

a. The period following the primary settling in surface subsidence in which the surface subsides gradually. This period may continue for many years or even decades. CF: [primary settling](#) b. Residual subsidence.

secondary shaft

The shaft that extends a mine downwards from the bottom of the primary shaft but not in line with the primary shaft. *Spalding*

secondary shooting

In quarrying, the reduction in size or dimension of blasted rock by additional or secondary blasting. *Streefkerk*

secondary splits

The main air splits occur at the shaft bottom. In most cases, these splits are again separated at some point in by and these are called secondary splits. See also: [ventilation](#); [splitting](#). *Nelson*

secondary structure

A structure that originated after the deposition or emplacement of the rock in which it is found, such as a fault, fold, or joint produced by tectonic movement; esp. an epigenetic sedimentary structure, such as a concretion or nodule produced by chemical action, or a sedimentary dike formed by infilling. CF: [primary structure](#)

secondary sulfide zone

See: [sulfide zone](#)

secondary twinning

Twinning produced subsequent to the original formation of a crystal.

secondary vein

A vein discovered subsequent to the one on which a mining claim was based; an incidental vein. CF: [discovery vein](#)

secondary water

Water entering the mine from other workings, as opposed to water inherent in the area worked by the mine. *BS, 10*

secondary wave

See: [S wave](#); transverse wave; distortional wave.

second-class lever

A lever whose force is exerted between the fulcrum and the point where it is applied. *Nichols, 1*

second-class ore

An ore that needs preliminary treatment before it is of a sufficiently high grade to be acceptable for shipment or market. CF: [first-class ore](#) Syn: [milling ore](#)

second-foot

A unit of $1 \text{ ft}^3 / \text{s}$ ($0.0283 \text{ m}^3 / \text{s}$). Usually abbreviated to cusec. *Seelye, 1; Hammond*

second-foot-day

The volume of water represented by a flow of $1 \text{ ft}^3 / \text{s}$ ($0.0283 \text{ m}^3 / \text{s}$) for 24 hours. It is $86,400 \text{ ft}^3$ ($2,445 \text{ m}^3$), or nearly 2 acre-feet (actually 1.9835); a convenient unit in storage computations. *Seelye, 1*

second mining

- a. The recovery of pillar coal after first-mining in chambers has been completed. *Hudson*
- b. The recovery of pillars after development of block pillars by the multiple entry system has completed a panel.

second moment of area

The correct term for the moment of inertia (I) of the plane area of a section. *Hammond*

second or back explosion

Aust. Supposed to be due to the ignition of gases developed from highly heated coal dust, and gases sucked out of the faces of coal by the partial vacuum resulting from the primary explosion, or liberated by the fall of roof. CF: [retonation wave](#)

second outlet

An emergency exit from a mine to the surface. Also called second opening; escapeway. *Hudson*

second ripping

The first back ripping on a roadway. See also: [back brusher](#) *Nelson*

seconds

N.S.W. The second-class ore that requires dressing.

seconds A.P.I.

A unit of viscosity in drilling mud as measured with a Marsh funnel according to American Petroleum Institute procedure. *Brantly, 1*

second weight

In mine subsidence, the powerful thrust or pressure, generally 20 to 40 ft (6 to 12 m) from the face, that causes distance from the roof to the floor to diminish rapidly and for packwalls to become compressed or pushed down into a soft bottom. Timber legs or metal supports (if any) in the gates are generally broken or twisted. *Briggs*

second worker

In anthracite coal mining, one who is required to serve a specified number of years before being termed a first-class miner. *DOT*

second working

a. The operation of getting or working out the coal pillars formed by the first working. *Fay* b. In coal mining, unless the pillars of coal are left permanently to support the surface, they are removed. This phase of mining is called the second working or pillar working. When the pillars are removed, nearly all of the coal has been recovered. CF: [first working](#) working. See also: [working the broken](#)

seconite

A finely ground plastic clay that in proportions not lower than 6% gives satisfactory green strength when used as a bond with molding sand. *Osborne*

secretion

a. The act or process by which animals and plants transform mineral material from solution into skeletal forms. *AGI* b. A secondary structure formed of material deposited from solution within a cavity in a rock, esp. a deposit formed on or parallel to the walls of the cavity; e.g., a mineral vein, an amygdale, or a geode. The space may be completely or only partly filled. CF: [concretion](#)

sectile

a. Capable of being cut with a knife without breaking off in pieces. *AGI* b. Said of a mineral that can be cut with a knife; e.g., argentite. c. A physical property of minerals permitting shaving of curls with a knife; e.g., gypsum. CF: [malleable](#)

sectility

A mineral is said to be sectile when it may be cut with a knife, but is not malleable, for example, graphite. *Nelson*

section

a. A portion of the working area of a mine. *BCI* b. Representation of features such as mine workings or geological features on a vertical (or inclined) plane. A longitudinal section is parallel to the strike of a vein or geologic plane. A cross section is perpendicular to the strike. *McKinstry* c. Detailed measurement, taken vertically, of a coal vein or of strata embracing several veins. *Hudson* d. A drawing or diagram of the strata sunk through in a shaft or inclined plane, or proved by boring. e. The local series of beds constituting a group or formation. *Standard, 2* f. A piece of land that is 1 square mile (2.59 km²) or 640 acres (259 ha) in area forming one of the 36 subdivisions of a township in a U.S. public-land survey. *Webster 3rd*

sectionalizing circuit breaker

See: [circuit breaker](#)

sectional mining belt conveyor

A belt conveyor so arranged that it can be lengthened or shortened by the addition or the removal of interchangeable increments or parts. *NEMA, 2*

sectional tank

A water tank built up of standardized pressed steel units having external flanges that are bolted together in an assembly for varying sizes of tank. *Hammond*

sectional-type conveyor

A conveyor that is lengthened or shortened by adding or removing intermediate sections. *NEMA, 1*

section boss

A more or less loosely used term applied to the assistant mine foreman in charge of an area, although used in law in some states in lieu of assistant foreman and certified as such. *BCI*

section factor

See: [section modulus](#)

section foreman

In anthracite and bituminous coal mining, a foreman who has complete charge of a section of a mine. Syn: [section man](#)

section-gage log

See: [caliper log](#)

section man

See: [section foreman](#)

section modulus

The term pertains to the cross section of a beam. The section modulus with respect to either principal central axis is the moment of inertia with respect to that axis divided by the distance from that axis to the most remote point of the section. The section modulus largely determines the flexural strength of a beam of given material. Also called section factor. *Roark*

section of rectifier unit

A part of a rectifier unit with its auxiliaries that may be operated independently. *Coal Age, 1*

sector gate

A roller gate in which the roller is in the form of a sector of a circle instead of being cylindrical. *Hammond*

secular

Said of a process or event lasting or persisting for an indefinitely long period of time, e.g., secular variation; progressive or cumulative rather than cyclic. *AGI*

secular variation

A relatively large, slow change in part of the Earth's magnetic field caused by the internal state of the planet and having a form roughly to be expected from a simple, but not quite uniformly polarized sphere. *AGI*

secundine dike

A dike that has been intruded into hot country rock. Pegmatites and aplites commonly occur in this mode. *AGI*

sedentary

Formed in place, without transportation, by the disintegration of the underlying rock or by the accumulation of organic material; said of some soils, etc. *Fay*

sediment

a. Solid fragmental material that originates from weathering of rocks and is transported or deposited by air, water, or ice, or that accumulates by other natural agents, such as chemical precipitation from solution or secretion by organisms, and that forms in layers on the Earth's surface at ordinary temperatures in a loose, unconsolidated form; e.g., sand, gravel, silt, mud, alluvium. *AGI* b. Strictly, solid material that has settled down from a state of suspension in a liquid. In the singular, the term is usually applied to material held in suspension in water or recently deposited from suspension. In the plural, the term is applied to all kinds of deposits, and refers to essentially unconsolidated materials. CF: [deposit](#) *AGI*

sedimentary

a. adj. Pertaining to or containing sediment; e.g., sedimentary deposit or a sedimentary complex. *AGI* b. Formed by the deposition of sediment (e.g., a sedimentary clay), or pertaining to the process of sedimentation (e.g., sedimentary volcanism).---n. A sedimentary rock or deposit. *AGI*

sedimentary ash

a. Mineral matter introduced into the coal substance during its accumulation. See also: [extraneous ash](#) b. Ash in coal derived from the mud mixed up with plant debris during the formation of coal. *Tomkeieff*

sedimentary clay

A clay that has been geologically transported from the site of its formation and redeposited elsewhere. The English ball clays, for example, are secondary kaolins. CF: [primary clay](#) *Dodd*

sedimentary cycle

See: [cycle of sedimentation](#)

sedimentary ore

A sedimentary rock of ore grade; an ore deposit formed by sedimentary processes, e.g., saline residues, phosphatic deposits, or iron ore of the Clinton ore type. *AGI*

sedimentary petrography

The description and classification of sedimentary rocks. Syn: [sedimentography](#)

sedimentary petrology

The study of the composition, characteristics, and origin of sediments and sedimentary rocks. *AGI*

sedimentary rock

A rock resulting from the consolidation of loose sediment that has accumulated in layers; e.g., a clastic rock (such as conglomerate or tillite) consisting of mechanically formed fragments of older rock transported from its source and deposited in water or from air or ice; or a chemical rock (such as rock salt or gypsum) formed by precipitation from solution; or an organic rock (such as certain limestones) consisting of the remains or secretions of plants and animals. The term is restricted by some authors to include only those rocks consisting of mechanically derived sediment; others extend it to embrace all rocks other than purely igneous and completely metamorphic rocks, thereby including pyroclastic rocks composed of fragments blown from volcanoes and deposited on land or in water. Syn: [stratified rock](#); [derivative rock](#). *AGI*

sedimentary rocks

Rocks formed by the accumulation of sediment in water (aqueous deposits) or from air (eolian deposits). The sediment may consist of rock fragments or particles of various

sizes (conglomerate sandstone, shale); of the remains or products of animals or plants (certain limestones and coal); of the product of chemical action or of evaporation (salt, gypsum, etc.); or of mixtures of these materials. Some sedimentary deposits (tuffs) are composed of fragments blown from volcanoes and deposited on land or in water. A characteristic feature of sedimentary deposits is a layered structure known as bedding or stratification. Each layer is a bed or stratum. Sedimentary beds as deposited lie flat or nearly flat. See: [stratified rocks](#)

sedimentary tuff

a. A tuff containing a subordinate amount of nonvolcanic detrital material. *AGI* b. A deposit of reworked tuff and other detrital material. *AGI*

sedimentation

a. The act or process of settling particles by mechanical means from a state of suspension in air or water. *AGI* b. Method of classification by exploitation of free-falling rates of minute (subsieve) particles. *Pryor, 4*

sedimentation balance

Apparatus used to measure settling rate of small particles dispersed in liquid. One scale-pan is immersed in the mixture, and the balance is adjusted by increasing the counterweight at suitable time intervals. Alternatively, a float is suspended, and the compensating external weight is reduced as the density of the suspension surrounding the float is reduced by settlement of its solids. *Pryor, 3*

sedimentation test

A test used when selecting materials for stabilized road construction and concrete. Soil, after pretreatment, is shaken up in water and allowed to settle out. The change in specific gravity of the suspended matter with time is measured, and the equivalent diameter is calculated from Stokes' law. See also: [organic test](#); [Stokes' law](#). *Hammond*

sedimentation trend

The direction in which sediments were laid down. Uranium mineralization often follows such trends, owing to increased porosity, carbon precipitants, and other factors. *Ballard*

sedimentation unit

A layer or deposit formed under essentially constant physical conditions, distinguished from other units by differences in grain size and/or fabric, indicating changes in velocity and/or direction of flow.

sediment dispersion

The dilution and settling of sediment in a cloud as it advects from a point source.

sedimentography

See: [sedimentary petrography](#)

sedimentology

The scientific study of sedimentary rocks and of the processes by which they were formed; the description, classification, origin, and interpretation of sediments. *AGI*

sediment tube

A long open tube fixed above the core barrel in the shot-drill method of exploratory boring. The enlarged space above the sediment tube reduces the upward velocity of the flushing water and the coarse chippings are deposited in the tube where they are retained until drawn up to the surface. Also called calyx; sludge barrel. *Nelson*

sediment vein

A sedimentary dike formed by the filling of a fissure from above with sedimentary material. *AGI*

Seebeck effect

The phenomenon involved in the operation of a thermocouple. Named for Thomas Seebeck, the German scientist, who first observed the phenomenon in 1822. See also: [thermocouple](#)

seed charge

A small charge of material added to a supersaturated solution to initiate precipitation. *ASM, 1*

seed gypsum

Gypsum beds of loose small crystals. *New South Wales*

seeding

In chemical treatment, addition of tiny crystals of material to a supersaturated solution to induce nuclear precipitation. *Pryor, 3*

seepage line

See: [line of seepage](#)

Seger cone

A small cone, made in the laboratory of a mixture of clay and salt, that softens at a definite, known temperature. It is used in the manufacture of refractories. It has also been used in volcanology to determine the approximate temperature of a molten lava. Syn: [pyrometric cone](#) *AGI*

segger

See: [sagger](#)

segregate

a. Pac. To separate the undivided joint ownership of a mining claim into smaller individually segregated claims. b. In geology, to separate from the general mass, and collect together or become concentrated at a particular place or in a certain region, such as in the process of crystallization or solidification. See also: [segregated vein](#)

segregated vein

A fissure whose mineral filling is derived from the country rock by the action of percolating water. CF: [infiltration vein](#) See also: [lateral secretion](#)

segregation

a. A secondary feature formed as a result of chemical rearrangement of minor constituents within a sediment after its deposition; e.g., a nodule of iron sulfide, a concretion of calcium carbonate, or a geode. *AGI* b. Partial reparation of a previously mixed batch of material into its constituents, as a result of differences in particle size or density. Segregation can occur in storage bins, on conveyors, and in feeders during dry or semidry processing. *Dodd*

segregation banding

A compositional banding in gneisses that is not primary in origin, but rather is the result of segregation of material from an originally more nearly homogeneous rock. *AGI*

segregation survey

The survey of a mining claim located on lands classified as agricultural.

sehta

See: [cobaltite](#)

seidozerite

A monoclinic mineral, $\text{Na}_4 \text{MnTi}(\text{Zr}_{1.5} \text{Ti}_{0.5})\text{O}_2 (\text{F,OH})(\text{Si}_2 \text{O}_7)$; forms brown-red needles embedded in microcline in a nepheline syenite pegmatite; near Lake Seidozero, Lovozero massif, Kola Peninsula, Russia.

seif dune

A long, sharp-crested dune extending in the direction of the wind that constructed it.
Mather

S.E.I. photometer

In this instrument, the internal comparison lamp is set to a standard brightness as indicated by a photoelectric cell and not by reference to a voltmeter or ammeter. *Roberts, 2*

seismic

a. Pertaining to, characteristic of, or produced by earthquakes or earth vibration; as, seismic disturbances; seismic records. *Standard, 2* b. Pertaining to sound waves generated by earthquakes or artificially by explosives to map subsurface structure. *Wheeler, R.R.*

seismic activity

See: [seismicity](#)

seismic analysis

A quick, easy, and inexpensive method of determining the consolidation of overburden. The process is based on the principle that sound or shock waves travel through different subsurface materials at varying speeds and along different paths. By this method the operator can determine whether overburden can be ripped or whether it will need to be drilled and blasted. *Coal Age, 3*

seismic area

The region affected by a particular earthquake. *AGI*

seismic belt

a. One of the broad, more or less well-defined, elongate zones in which most earthquakes originate. *Stokes* b. An elongate earthquake zone, esp. a zone of subduction or sea-floor spreading. *AGI*

seismic detector

See: [seismometer](#)

seismic diffraction

See: [diffraction](#)

seismic drill

See: [seismograph drill](#)

seismic event

Applied to any definite signal change or amplitude difference on a seismic record. It may be a reflection, a refraction, a diffraction, or a random signal. *AGI*

seismic explosives

Special forms of blasting gelatin, or gelatin and ammonia gelatin dynamites, used in geophysical prospecting by the seismic method; developed to shoot consistently at their characteristic rate of detonation under unusually heavy water pressure. *Lewis*

seismic focus

The place of origin within the Earth of an earthquake; usually some more or less restricted area of a fault surface. If the focus is to be some particular point, it is the central point of the area over which fault movement occurred and caused the earthquake. *Challinor*

seismicity

a. Measure of frequency and magnitudes of earthquakes in a given area; e.g., the average number of earthquakes per year and per 100 km² *Schieferdecker* b. The phenomenon of earth movements. *Hy*

seismic method

A geophysical prospecting method based on the fact that the speeds of transmission of shock waves through the Earth vary with the elastic constants and the densities of the rocks through which the waves pass. A seismic wave is initiated by firing an explosive

charge (or by equivalent artificial sources) at a known point (the shot point); records are made of the travel times taken for selected seismic waves to arrive at sensitive recorders (geophones). There are two main subdivisions of seismic operations: the reflection method and the refraction method. The seismic method has been applied to a lesser extent to elucidate mining problems, partly due to its high cost. It has been used to investigate the base of drift deposits, and drift-filled channels have been successfully outlined. *Nelson*

seismic noise

See: microseism.

seismic prospecting

A method of geophysical prospecting in which vibrations are set up by firing small explosive charges in the ground or by other artificial sources. Precise measurements of the resulting waves are taken, from which the nature and extent of underlying strata are revealed. *Hammond*

seismic reflection method

In this geophysical prospecting technique, the structure of subsurface formations is mapped by making use of the times required for a seismic wave (or pulse), generated in the Earth by a near-surface explosion of dynamite or by other artificial sources, to return to the surface after reflection from the formations themselves. The reflections are recorded by detecting instruments responsive to ground motion, which are laid along the ground near the site of generation of the seismic pulse. Variations in the reflection times from place to place on the surface usually indicate structural features in the rock below. Syn: [reflection method](#) *Dobrin*

seismic refraction method

In refraction shooting, the detecting instruments are laid down at a distance from the shothole that is large compared with the depth of the horizon to be mapped. The seismic waves travel large horizontal distances along distinct interfaces in the Earth, and the time required for travel gives information on the velocity and depth of certain subsurface formations. *Dobrin*

seismic shooting

a. The initiation of seismic waves in the rocks by the firing of an explosive charge at a known point. The disturbance must be capable of accurate timing and must be such that, after traveling considerable distances through varying strata, it produces a sharply defined effect on the seismograph. These requirements may be supplied by the shock produced by detonating a charge of high explosive. The intensity of the shock and its

effective range can be controlled by varying the quantity of explosive charge. See also: [reflection shooting](#); [refraction shooting](#). *Nelson* b. A method of geophysical prospecting in which elastic waves are produced in the Earth by the firing of explosives or by other means. See also: [reflection shooting](#); [refraction shooting](#). *AGI*

seismic shothole

A hole drilled for a seismic shot. It is usually a slim hole, although it has also been termed core hole. See also: [slim hole](#); structure test hole. *Williams*

seismic spread

See: [seismometer spread](#)

seismic survey

An exploration technique utilizing the variation in the rate of propagation of shock waves in layered media. It is used primarily to delineate subsurface geologic structures of possible economic importance. *Long*

seismic waves

The Earth motion produced by a natural (earthquake) or synthetic disturbance on the surface or underground; utilized in the seismic method of geophysical exploration and for investigating the Earth's interior. Three types of waves are produced: (1) longitudinal or P waves; (2) traverse or S waves; and (3) surface or Raleigh and L waves. The speed of propagation is characteristic for each type of rock, depending largely on its compactness. In sandy clay, the speed of the P wave is about 4,000 ft/s (1.22 km/s); in sandstone, 10,000 ft/s (3.05 km/s); and in igneous rock up to 22,000 ft/s (6.71 km/s). *Nelson*

Seismitron

An instrument designed to check ground stability. It amplifies 2.5 million times, and can detect a rock movement as small as 0.000001 in (2.54 μ m). Receiving phones are placed in holes in the area being tested. Either earphones or automatic recording apparatus may be used for listening. A rate of 3 or more microseisms per second indicates probable collapse, and any rate over 25 or 30 per minute is considered dangerous. This instrument is also finding use above ground in checking highway cut slopes. *Nichols, I*

seismogram

The record of Earth motion made by a seismograph. *AGI*

seismogram synthesis

a. This process produces an artificial reflection record from a continuous-velocity log or an electric log. With this system the log is converted from a depth scale to a time scale and is run through a scanning device that transforms the fluctuations on the log into electrical impulses that vary with time so as to simulate reflections. These impulses are passed through appropriate filters and are then recorded on an oscillograph in the same way as signals from a geophone. *Dobrin* b. The theoretically calculated ground motion that would be recorded for a given Earth structure and seismic source.

seismograph

a. An instrument that detects, magnifies, and records motions of the Earth, esp. those caused by earthquakes or explosions. The resulting record is a seismogram. CF: [seismometer](#); [geophone](#). *AGI* b. The instrument used to record the reception of the waves in the sound seismic method. It works on the general principle that its frame is shaken by the arrival of the waves, while a pendulum of high inertia, mounted in it, remains stationary. The relative movement of the frame and the pendulum is magnified by optical means in the seismograph and by electrical amplifiers in the geophone. The instrument can also detect and record earthquakes. See also: [geophone](#); [vibrograph](#). *Nelson*

seismograph drill

A rotary drill, pump, and hinged mast mounted as an integral drilling unit on a truck body and used primarily to drill vertical shallow holes in which explosives are placed and detonated to produce shock waves from the rock strata, which then are measured by seismic recording instruments. Also called jackknife rig; rotary shot drill; shothole drill. Syn: [seismic drill](#)

seismograph rod

A collared, tapered, V-thread-coupling drill rod used on seismograph drills. *Long*

seismology

a. The science of earthquakes and attendant phenomena. *Schieferdecker* b. A geophysical science that is concerned with the study of earthquakes and measurement of the elastic properties of the Earth. *AGI* c. The study of earthquakes, and of the structure of the Earth, by both natural and artificially generated seismic waves. *AGI*

seismometer

An instrument that detects Earth motions. Syn: [seismic detector](#) CF: [geophone](#); [hydrophone](#); [seismograph](#). *AGI*

seismometer spacing

Distance between successive seismometer positions. *Schieferdecker*

seismometer spread

A set of seismometers, placed along a straight line, that record the same shot. *Schieferdecker*

seismoscope

An instrument that merely indicates the occurrence of an earthquake. It is considered by some, however, to be the equivalent of a seismometer. *AGI*

seize

a. To bind wire rope with soft wire, to prevent it from raveling when cut. *Nichols, 1* b. See: [bind](#); freeze. c. To cohere or stick to an inadequately lubricated moving part, such as a bearing, piston, or sliding part, through excessive friction, pressure, or temperature. *Long* d. To protect rope ends by binding with yarn, marline, or fine wire. *Long*

selected fill

Dumped fills made up of selected materials. These fills are used when it is desired to utilize a particular property of a soil or rock and this property can be secured solely by selective excavation. *Carson, 1*

selective agglomeration

In coal beneficiation, the separation of coal from associated impurities, usually aided by additions of oily reagents that selectively attach to the coal surfaces. Generally restricted to material of 500 μ m top size. See also: [oil agglomeration](#)

selective crushing

Crushing in such a manner as to cause one ingredient of the feed to be crushed preferentially to others. *BS, 5*

selective digging

Separating two or more types of soil while digging them. *Nichols, 1*

selective filling

Hand filling, during which the miner rejects stone or dirt and loads only clean coal. Similar methods are adopted in metal mining. *Nelson*

selective flotation

a. A process for the preferential recovery of a particular ingredient of the coal, e.g., a petrological constituent, by froth flotation. *BS, 5* b. Generally refers to the surface or froth selecting of the valuable minerals rather than the gangue. Sometimes used to mean differential flotation. See also: [flotation](#); [preferential flotation](#). *Fay*

selective grinding

Grinding in such a manner as to cause one ingredient of the feed to be ground preferentially to others. *BS, 5*

selective mining

a. A method of mining whereby ore of high value is mined in such a manner as to make the low-grade ore left in the mine incapable of future profitable extraction. In other words, the best ore is selected in order to make good mill returns, leaving the low-grade ore in the mine. Frequently called robbing a mine. CF: [bulk mining](#) b. The object of selective mining is to obtain a relatively high-grade mine product; this usually entails the use of a much more expensive stoping system and high exploration and development costs in searching for and developing the separate bunches, stringers, lenses, and bands of ore. In general, selective methods are applicable where the valuable sections of the deposit are rather large, comparatively few in number, and separated by relatively large volumes of waste. Selective methods of stoping are square-set stoping, open stoping in low-dipping beds, and cut-and-fill stoping. c. In coal mining, selective methods may be dictated by market demands and prices. It may be desirable to work the different quality coal seams in such proportions as to obtain a uniform and salable blend over a period of years. In metal mining, the stopes may be restricted in both length and width and thus produce a much higher grade of ore. It is not always practicable to resort to selective mining because the mineralization may be so distributed as to necessitate taking the whole orebody in mining operations. *Nelson*

selective reflection

The reflection by a substance, such as an opaque gem, of light rays of only certain wavelengths, the others being absorbed. This cause of color in gems is a sort of selective absorption.

selective weathering

See: [differential weathering](#)

selective wetting

In mineral processing, development of selective attraction to the water phase of a pulp, as a prelude to flotation of an air-attracted fraction of the contained minerals. *Pryor, 3*

selectivity index

Criterion of trend in a continuous operation such as mineral processing. Abbrev., S.I. *Pryor, 3*

selector

In copper smelting, a kind of converter with horizontal tuyeres, to produce bottoms and a purified copper in one operation. *Webster 3rd*

select round

Sometimes used to designate the best quality of industrials normally used as drill diamonds. *Long*

selenite

a. Finely crystallized gypsum. *Cooper* b. A clear, colorless variety of gypsum, occurring (esp. in clays) in distinct, transparent monoclinic crystals or in large crystalline masses that cleave easily into broad folia. Syn: [spectacle stone](#)

selenite plate

In mineralogy, a plate of selenite that gives a purplish-red interference color of the first order with crossed polars. Syn: [gypsum plate](#); unit retardation plate; sensitive-tint plate; first-order red plate; Red I plate; Rot I plate.

selenium

A nonmetallic element and member of the sulfur family. Symbol, Se. It is widely distributed in small quantities, usually as selenides of heavy metals. Obtained from electrolytic copper refining. Used in photocells, exposure meters, and solar cells, and extensively in rectifiers. *Handbook of Chemistry and Physics, 3*

selenjoseite

See: [laitakarite](#)

selenolite

a. Wadsworth's name for rocks composed of gypsum or anhydrite. *Fay* b. A mineral, $Pb_2(SeO_4)(SO_4)$, reported as white needles with cerussite and molybdomenite at Cacheuta, Argentina. *Dana*, 2 c. Former name for olsacherite. d. Discredited name for downeyite, SeO_2 .

self-act

See: [gravity haulage](#)

self-acting door

A ventilation door consisting of two halves, so constructed that they are forced apart centrally by the trams as they come in contact with the converging beams that operate them. The door halves move on small pulleys that run on inclined rails so that after the passage of the trams the door closes by gravity. *Nelson*

self-acting incline

a. In transport by mine car, a brake incline. See also: [brake incline](#) *Pryor*, 3 b. See: [gravity haulage](#)

self-acting plane

An inclined plane upon which the weight or force of gravity acting on the full cars is sufficient to overcome the resistance of the empties; in other words, the full car, running down, pulls the other car (empty) up.

self-acting rope haulage

A system of rope haulage used for transporting material on the surface and to transfer loaded cars from one elevation to a lower one in mines. Slope must be sufficiently steep so the loaded cars will pull the empty cars up the grade. Syn: [gravity plane rope haulage](#)

self-advancing supports

An assembly of hydraulically operated steel hydraulic supports, on a longwall face, that are moved forward as an integral unit by means of a hydraulic ram coupled to the heavy steel face conveyor. Syn: [power-operated supports](#); [walking props](#). See also: [hydraulic chock](#); steel prop. *Nelson*

self-aligning carrying idler

A belt idler that controls and limits the side runout of the carrying belt within practical limits by means of a swivel mechanism. *NEMA*, 2

self-aligning return idler

A belt idler that controls and limits the side runout of the return belt within practical limits by means of a swivel mechanism. *NEMA, 2*

self-annealing

A term applied to metals, such as lead, tin, and zinc, that recrystallize at air temperature and in which little strain hardening is produced by cold working. *CTD*

self-centering chuck

A drill chuck that, when closed, automatically positions the drill rod in the center of the drive rod of a diamond-drill swivel head. *Long*

self-cleaning tail pulley

A conveyor belt structure tail pulley which is designed with vanes along the length of the tail pulley and often is hollow in the center to allow any spillage along the return belt to end up at the tail pulley, which allows it to fall to the sides to eliminate the debris.

self-cleansing gradient

The gradient at which flow in a pipe of a particular diameter will carry away any solids in it. This gradient must not be too steep nor too gradual, and is usually established under local laws affecting drains and sewers. *Hammond*

self-contained breathing apparatus

A self-sufficient breathing unit that permits freedom of movement, unencumbered by air hoses. It offers the wearer respiratory protection in atmospheres that are either oxygen-deficient or too highly toxic to permit the use of gask masks or respirators. The oxygen or air is supplied in compressed form or by chemical generation, and the wearer's exhalations are either purified for re-use or released to the surrounding atmosphere. The equipment is devised to afford protection for special lengths of time, in accordance with the standards set by the Mine Safety and Health Administration. The 2-h apparatus is used for mine rescue and recovery operations; shorter period apparatus is available for industrial uses and auxiliary equipment. *Best, 1*

self-contained portable electric lamps

Electric lamps that are operated by an electric battery; designed to be carried about by the user of the lamp. *Fay*

self-contained self-rescuer

A respiratory device used by miners for the purpose of escape during mine fires and explosions; it provides the wearer a closed-circuit supply of oxygen for a minimum of 10 min and up to 1 h. Syn: [SCSR](#)

self-diffusion

The spontaneous movement of an atom to a new site in a crystal of its own species, such as a copper atom within a crystal of copper. *ASM, 1*

self-dumping cages

Cages in which the cars are generally fitted with end doors; the cage deck is pivoted, and a roller engages with a tipping guide at the surface. As the cage is lifted, toward the end of the wind the deck tilts, the end door is lifted, and the coal is discharged. *Sinclair, 5*

self-dumping car

A mine car that can be side-tipped while in motion on a rail track. A ramp structure is fitted alongside the track opposite the spot where tipping is required. The car is fitted with a spherically contoured wheel that engages the ramp and gradually tilts the car while in motion. A chain attachment to the underframe opens the side of the car when tilted for tipping. The ramp can be retracted when not required. *Nelson*

self-energizing brake

A brake that is applied partly by friction between its lining and the drum. *Nichols, 1*

self-feeder

An automatic appliance for feeding ore to stamps or crushers without the employment of hand labor. *Fay*

self-feeding portable conveyor

Any type of power-propelled conveyor designed to advance into a pile of bulk material, thereby automatically feeding itself.

self-fluxing ores

Ores that contain both acid and basic gangue minerals in the proper ratio to form a suitable slag. *Newton, 1*

self-inductance

The property of a circuit whereby self-induction occurs. It is measured by the rate of change of linkages in a circuit that accompanies a rate of change of current in that circuit of one unit per second. *CTD*

self-issue system

A system of storage in lamp-room-operation charging and issue for alkaline-type car lamps, that allows a user access only to the storage racks for the purpose of lamp collection or return. Charging is controlled by a lamp-room attendant. *BS, 13*

self-loading dumper

A dumper provided with a bucket, hinged by arms to the chassis, that scoops up the material and discharges it backwards into the hopper. Hydraulic rams control the lift arms, bucket movement, and dumping operation. *Nelson*

self-opening reamer

An underreamer having cutters that expand when they come in contact with, and are pressed against, surface. CF: [expansion bit](#); [underreamer](#). *Long*

self-potential

See: [spontaneous](#)

self-potential curve

See: [spontaneous potential curve](#)

self-potential log

Strip recording of natural potentials of complex origin, arising in the immediate neighborhood of liquid-filled boreholes. See also: [electric logging](#)

self-potential method

An electrical exploration method in which one determines the spontaneous electrical potentials (spontaneous polarization) that are caused by electrochemical reactions associated with clay or metallic mineral deposits. Syn: [spontaneous-potential method](#)

self-potential prospecting

A method of electrical prospecting based on the measurement of natural earth potentials caused by the self-potential effects from orebodies, commonly metallic sulfides. *AGI*

self-powered scraper

A scraper built into a single unit with a tractor. *Nichols, 1*

self-priming centrifugal pump

A pump of the centrifugal type that combines in a single hydraulic stage and with a single hydraulic impeller and casing the dual ability to pump, under vacuum, either liquids or gases. These pumps are advantageously used for sump, bilge, mine water gathering, tankcar unloading, vacuum evaporator applications, chemical processing, and other uses where the liquid is below the pump centerline, or under high vacuum. The suction lift is usually guaranteed at 20 ft (6.1 m) for cold water at sea level. *Pit and Quarry*

self-reading staff

A leveling staff, marked with graduations so that an observer looking through the telescope of a level can read the elevation at which his or her line of sight intersects the staff. *Hammond*

self-rescuer

A small filtering device carried by a miner underground, either on a belt or in a pocket, to provide the miner with immediate protection against carbon monoxide and smoke in case of a mine fire or explosion. The device is used for escape purposes only because it does not sustain life in atmospheres containing deficient oxygen. The length of time a self-rescuer can be used is governed mainly by the humidity in the mine air; e.g., in moist air it will last for a minimum period of 30 min, and in moderately dry atmospheres, for a period of 1 h or more. See also: [Siebe-Gorman self-rescuer](#)

self-service system

A system of storage and issue for lead-acid-battery-operated lamps, whereby the user has direct access to the charging racks for the purpose of connecting or disconnecting a lamp from the charging circuit. See also: [attendance signaling system](#); [lamp room](#). *BS, 13*

self-shooter

See: [booming](#); flop gate.

self stones

Fragments of rocks still possessing the original shape and angles, Derbyshire, U.K.

self-stowing gate

Applied to an advance gate that carries forward a waste or skip, from 6 to 10 yd (5.5 to 9.1 m) wide, to take all the broken rock produced by the gate rippings. A short face conveyor is usually used to move the coal and dirt as required. The width of the waste is just sufficient for stowing the dirt produced. See also: [deepside](#)

self-timing anemometer

An anemometer that has a timing device incorporated in it. Twenty seconds after being started, the device automatically engages the pointer with the rotating vanes and after an interval of 1 min disengages it. See also: [anemometer](#)

seligmannite

An orthorhombic mineral, CuPbAsS_3 , with As replaced by Sb toward bournonite; forms small, lead-gray, complex crystals.

sellaite

A tetragonal mineral, MgF_2 ; colorless; structurally related to rutile.

selvage

a. The altered, clayey material found along a fault zone; fault gouge. Syn: [selvedge](#) b. A marginal zone of a rock mass, having some distinctive feature of fabric or composition; specif. the chilled border of an igneous mass (as of a dike or lava flow), usually characterized by a finer grain or sometimes a glassy texture, such as the glassy inner margins on the pillows in pillow lava. Syn: [selvedge](#); [salband](#). *AGI*

selvedge

See: [selvage](#)

Selvulize system

A cold vulcanizing method for use underground. It is simpler and quicker than hot vulcanizing and there is no fire or explosion risk involved. *Sinclair, 5*

semianthracite

The rank of coal, within the anthracitic class of Classification D 388, such that, on the dry and mineral-matter-free basis, the volatile matter content of the coal is greater than 8% but equal to or less than 14% (or the fixed carbon content is equal to or greater than 86% but less than 92%), and the coal is nonagglomerating. *ASTM*

semiarid

Said of a type of climate in which there is slightly more precipitation (25 to 50 cm) than in an arid climate, and in which sparse grasses are the characteristic vegetation. Syn: [subarid](#)

semiautomatic control

A system to control the speed of a winder consisting of a cam-operated rheostat in parallel with a manually operated winder controller, the instantaneous cam position being directly related to the position of a cage in the shaft. If the driver left the manual control in the full-speed position, the cam control and associated closed-loop control would take charge and automatically decelerate the winder to creep speed as the cage approaches the surface. Should the driver still defer the operation of the lever, the winder would stop on the operation of an overwind limit switch. By the introduction of a small switch to initiate the wind and another to terminate the wind, fully automatic operation is possible. See also: [automatic cyclic winding](#)

semicircumferentor

A surveyor's instrument used for setting out land or buildings to any angle and in preliminary survey work generally and made up of a horizontal graduated semicircle that surrounds a compass and is attached to a base with fixed vertical sights at each end and of a movable arm with vertical sights at each end that pivots on the center of the base. See also: [surveyor's compass](#)

semicontinuous mill

One that incorporates some stands in tandem, either for roughing or finishing, an example being a semicontinuous wire rod mill with a continuous roughing train and a looping finishing train. *Osborne*

semicoring bit

A noncoring bit that produces a small-diameter core. *Long*

semicrystalline

See: [hyalocrystalline](#)

semidry mining

a. Underground work in which humidity of ventilating air is kept low, though moisture is used in drilling to allay dust. *Pryor, 3* b. In semidry mining, every effort is made to prevent the ventilating air from picking up moisture in the downcast shafts and in the main ways leading to the workings. In the workings themselves, moisture is added freely in order to reduce dust, and the air rapidly becomes saturated. *Spalding*

semiduplex process

The process consists essentially of pouring molten metal from a primary open-hearth furnace on a heated solid charge of heavy and light alloy scrap (20% to 40% of total). The charge is melted and finished under reducing conditions. There is no boil. *Osborne*

semifusain

A coal constituent transitional between vitrain and fusain. It displays gradual disappearance of cell structure, hardness, and yellowish color when observed in thin sections. Same as vitrifusain. *Stutzer*

semifusinite

A constituent intermediate between vitrinite and fusinite showing a well-defined structure of wood and sclerenchyma. The cell cavities, either round, oval, or elongated in cross section, vary in size but are generally smaller and sometimes less well defined than those of fusinite. Occurs as lenses and bands of variable thickness, and as small fragments; associated with fusinite, or included in vitrite, clarite, duroclarite, clarodurite, and durite. It often lies as a transition material between vitrinite and fusinite, and the properties lie between those of fusinite and vitrinite; behaves as a semi-inert diluent in carbonization. *IHCP*

semigelatin

Dynamite containing both ammonium nitrate as the chief explosive ingredient and a certain percent of blasting gelatin to make it plastic enough to remain in holes directed upward. It is more resistant to water than ammonia dynamite, but less resistant than gelatin dynamite. *Lewis*

semihorizon mining

Coal mining that consists of driving cross-measure drifts and developing of the seams. The roads in the seam are equipped with conveyors for transporting coal, and locomotives may be used in the cross-measure drifts when these are horizontal or nearly so. Semihorizon mining may include the longwall-retreating method. *Nelson*

semikilled steel

Steel that is incompletely deoxidized and contains sufficient dissolved oxygen to react with the carbon to form carbon monoxide to offset solidification shrinkage. *ASM, I*

semiloose

In an excavation, both rock that is only partially detached from the solid and that rings as solid when struck, and rock being still attached to the solid, but parting from it by incipient shear cracks. *Spalding*

semimetallic pellets

See: [prereduced iron-ore pellet](#)

semimuffle furnace

A furnace with a partial muffle, in which the products of combustion come in contact with the ware. *ASTM*

semiopal

A loosely used term for common opal, hydrophane, and any partly dehydrated or impure opal, as distinguished from precious opal or fire opal. Syn: [hemiopal](#)

semiplastic explosives

In these types, the quantities of liquid products are insufficient to render the mixture compressible. When packing cartridges, however, the same high density is obtained as with plastic explosives. The proportions of the various constituents are actually so arranged that the spaces between the grains are filled out. The proportions in question are determined entirely according to the constituents selected. *Fraenkel*

semiportable electric equipment

Electric equipment that is moved infrequently; e.g., room hoists, room conveyors, and gathering pumps.

semiportable electric lamps

Electric lamps that are connected to a fixed source of power by a flexible cord whose length limits the movable range of the lamp.

semiprecious

Of less commercial value than those called precious; applied esp. to such stones as amethyst, garnet, jade, and tourmaline. *Webster 3rd*

semiround nose

A bit-crown design, in which the radius of the arc forming the rounded portion of the bit face is equal to or greater than the thickness of the bit wall. *Long*

semisolid bituminous material

Material having a penetration at 77 degrees F (25 degrees C), under a load of 100 g applied for 5 s, of more than 10; and a penetration at 77 degrees F, under a load of 50 g applied for 1 s, of not more than 350. *Urquhart*

semisplint coal

a. Coal intermediate between durain coal and clarain coal (duroclarain). *Tomkeieff* b. A coal in which the proportions of anthraxylon and attritus are more or less equal, but the attritus of which is essentially composed of brown and granular opaque matter in varying proportions. Translucent humic matter, spores, pollens, and finely divided fusain are always present in small proportions. Also known as block coal. CF: [bright coal](#); [splint coal](#). *Litton* c. A banded coal containing 20% to 30% of opaque attritus and more than 5% anthraxylon. *AGI*

semitrailer

A towed vehicle whose front rests on the towing unit. *Nichols, I*

semitranslucent

A degree of diaphaneity between translucent and opaque. Passes light through edges of cabochons but very little through thicker parts.

semitransparent

Used to describe mineral when objects may be seen through it but without distinct outlines.

semivitreous

That degree of vitrification evidenced by a moderate or intermediate water absorption. Also called semivitrified. See also: [impervious](#); [nonvitreous](#); vitreous. *ASTM*

semiwater gas

A mixture of carbon monoxide, carbon dioxide, hydrogen, and nitrogen obtained by passing a mixture of air and steam continuously through incandescent coke. Its calorific value is low, about 125 Btu/ft³ (4.66 MJ/m³). *Osborne*

semseyite

A monoclinic mineral, Pb₉ Sb₈ S₂₁; metallic; soft; sp gr, 5.8.

senaite

A trigonal mineral, $\text{Pb}(\text{Ti,Fe,Mn})_{21} \text{O}_{38}$; crichtonite group; black; forms rounded crystals and grains in diamond-bearing sands.

senarmontite

An isometric mineral, $\text{Sb}_2 \text{O}_3$; dimorphous with valentinite; resinous; Mohs hardness, 2 to 5; sp gr, 5.2 to 5.3.

sengierite

A monoclinic mineral, $\text{Cu}_2 (\text{UO}_2)_2 \text{V}_2 \text{O}_8 \cdot 6\text{H}_2 \text{O}$; yellow-green.

sensible cooling effect

The difference between the total cooling effect and the dehumidifying effect. *Strock, 2*

sensible heat

a. Thermal energy, the transfer of which to or from a substance results in a change of temperature. CF: [latent heat](#) b. The heat added to a body when its temperature is changed. c. The sensible heat of a body is the heat given off when it cools to ordinary temperature. *Newton, 1*

sensitive earth fault protection

A system of earth fault protection in which the fault current is limited by design to a low value which generally requires amplification in order to operate an earth fault relay. In the case of three-phase alternating-current systems, the limitation of the leakage current may be effected by either (1) inserting a current-limiting device between the neutral point of the system and earth (single-point earthing), or (2) connecting, in each circuit to be protected, all phases, in star, through current-limiting devices, each star point being connected to earth through an earth leakage protective device (multipoint earthing). *BS, 13*

sensitive explosive

See: [explosive sensitiveness](#)

sensitiveness

The property in a high explosive that permits it to be exploded by a shock. The more insensitive an explosive is, the stronger detonator it requires to develop the full strength.

sensitive-tint plate

See: [gypsum plate](#); selenite plate.

sensitivity

a. In explosives, a measure of the ease with which a substance can be caused to explode and its capacity to maintain explosion through the length of a borehole. *Nichols, 3* b. The least change in an observed quantity that can be perceived on the indicator of a given instrument. *AGI* c. The displacement of the indicator of a recording unit of an instrument per unit of change of a measurable quantity. *AGI* d. The effect of remolding on the shear strength and consolidation characteristics of a clay or cohesive soil. A sensitive clay is one whose shear strength is decreased to a fraction of its former value on remolding at constant moisture content. See also: [sensitivity ratio](#)

sensitivity ratio

A measurement of the sensitivity of a clay to the action of remolding. *Hammond*

sensitivity to propagation

Sensitivity to propagation of an explosive can be ascertained by a method called the Ardeer double-cartridge, or ADC, test. The ADC test consists of firing an explosive cartridge with a standard detonator and determining the maximum length of the gap across which the detonation wave will travel and detonate a second, or receptor, cartridge. Both the primer and the receptor cartridges should be of the same composition, diameter, and weight. *McAdam, 2*

sensor

The component of an instrument that converts an input signal into a quantity measured by another part of the instrument. Also called sensing element. *Hunt*

separate system

A drainage system in which sewerage and surface water are carried in separate sewers. See also: [surface-water drain](#)

separate tandem electric mine locomotive

See: [electric mine locomotive](#)

separate ventilation

An early term for auxiliary ventilation. *Nelson*

separating bath

a. A vessel containing dense medium in which the feed material is separated on a commercial scale into different fractions according to specific gravity. *BS, 5* b. The liquid in a separating bath. *BS, 5*

separating medium

Dense medium of the density required to achieve a given separation. *BS, 5*

separation

The distance between any two parts of an index plane (e.g., bed or vein) disrupted by a fault. See also: [horizontal separation](#); vertical separation; stratigraphic separation. *AGI*

separation coal

Eng. Coal that has been prepared by screening or washing.

separation density

The effective density at which a separation has taken place, calculated from a specific-gravity analysis of the products; commonly expressed as either partition density or equal errors cut point (density). *BS, 5*

separation distances

Minimum recommended distance between explosive materials and other materials or specific locations.

separation door

a. A door to separate the air in an intake airway from that in a return airway and prevent leakage. It is normally constructed with tongued-and-grooved boards secured by battens, and it is built into brick or concrete walls to form an airtight closure of the airway. Separation doors are usually arranged in twos or threes several yards apart, to reduce leakage when workers or cars are passing along the roadway. See also: [bearing door](#); [steel separation door](#); [ventilation doors](#). *Nelson* b. See: [air door](#)

separation size

A general term indicating the effective size at which separation has taken place, calculated from a size analysis of the product; commonly expressed as either partition size or equal errors size. *BS, 5*

separation valve

Eng. A massive cast-iron plate suspended from the roof of a return airway, through which all the return air of a separate district flows, allowing the air to always flow past or underneath it; but in the event of an explosion of gas, the force of the blast closes it against its frame or seating, and prevents a communication with other districts.

separator

a. A machine for separating, with the aid of water, suspensions, or air, materials of different specific gravity. Strictly, a separator parts two or more ingredients, both valuable, while a concentrator saves but one and rejects the rest; but the terms are often used interchangeably. b. Any machine for separating materials, such as the magnetic separator for separating magnetic materials from gangue. CF: [concentrator](#) c. A screen, esp. a revolving screen, for separating things like stones or coal into sizes. *Standard, 2*

sepiolite

A monoclinic mineral, $Mg_4 Si_6 O_{15} (OH)_2 \cdot 6H_2 O$; soft; sp gr, 2 but fibrous dry masses float on water; occurs in veins in calcite and in alluvial deposits formed from weathering of serpentine masses, chiefly in Asia Minor, as meerschaum; may be used in making pipes, ornamental carvings. Syn: [meerschaum](#); [sea-foam](#).

septaria

Plural of septarium.

septarian

Said of the irregular polygonal pattern of internal cracks developed in septaria, closely resembling the desiccation structure of mud cracks; also said of the epigenetic mineral deposits that may occur as fillings of these cracks. *AGI*

septarian concretion

See: [septarium](#)

septarian nodule

See: [septarium](#)

septarium

a. A large, roughly spheroidal concretion, 8 to 90 cm in diameter, usually of an impure argillaceous carbonate, such as clay ironstone. It is characterized internally by irregular

polyhedral blocks formed by a series of radiating cracks that widen toward the center and that intersect a series of cracks concentric with the margins; these cracks are invariably filled or partly filled by crystalline minerals (most commonly calcite) that cement the blocks together. Its origin involves the formation of an aluminous gel, case hardening of the exterior, shrinkage cracking due to dehydration of the colloidal mass in the interior, and vein filling. The veins sometimes weather in relief, thus producing a septate pattern. Syn: [septarian nodule](#); [septarian concretion](#); [beetle stone](#); [turtle stone](#). *AGI* b. A crystal-lined crack or fissure in a septarium. Pl: septaria. *AGI*

septechlorite

An alternate name for serpentine minerals reflecting their 7Aa basal spacing and chloritelike formulae.

septum

Membrane separating two phases, for example, pulp and filtrate. *Pryor, 3*

sequence control

A method of control whereby, once action has been initiated, a number of electrical circuits will automatically function in a prescribed order. *BS, 13*

sequence interlock

An interlock provided between a number of manually controlled electrical circuits, which are required to function in a prescribed order, and which prevents a circuit from being operated unless the preceding circuit has completed its part in the sequence. *BS, 13*

sequence starting

An arrangement whereby the starting of one belt conveyor starts all of its feeder conveyors in a predetermined manner. The purpose of sequence starting is to prevent spilling at transfer points and to reduce the power demand in starting the system. See also: [power sequence](#); [pilot sequence](#). *NEMA, 2*

sequester

A sequestering agent forms soluble complex ions with a simple ion, thereby inhibiting the activity of that ion. *Lowenheim*

serandite

A triclinic mineral, $\text{Na}(\text{Mn,Ca})_2 \text{Si}_3 \text{O}_8 (\text{OH})$, with Mn replaced by Ca toward pectolite; pink.

serendibite

A triclinic mineral, $\text{Ca}_2(\text{Mg,Al})_6(\text{Si,Al,B})_6\text{O}_{20}$; aenigmatite group; blue.

serial samples

Samples collected according to some predetermined plan, such as along the intersections of gridlines, or at stated distances or times. The method is used to ensure random sampling. *AGI*

seriate

Said of the texture of an igneous rock, typically porphyritic, in which the sizes of the grains vary gradually or in a continuous series. CF: [hiatal](#)

sericite

A white, fine-grained potassium mica occurring in small scales as an alteration product of various aluminosilicate minerals, having a silky luster, and found in various metamorphic rocks (esp. in schists and phyllites) or in the wall rocks, fault gouge, and vein fillings of many ore deposits. It is commonly muscovite or very close to muscovite in composition, but may also include paragonite and illite. See also: [muscovite](#)

sericitization

A hydrothermal, deuteric, or metamorphic process involving the introduction of, alteration to, or replacement by sericitic muscovite. *AGI*

series

a. Any number of rocks, minerals, or fossils having characteristics, such as growth patterns, succession, composition, or occurrence, that make it possible to arrange them in a natural sequence. *AGI* b. A conventional stratigraphic unit that is a division of a system. A series commonly constitutes a major unit of chronostratigraphic correlation within a province, between provinces, or between continents. *AGI* c. May be applied to intrusive rocks in the same time-stratigraphic sense. Formal series names are binomial, usually consisting of a geographic name (generally but not necessarily with the adjectival ending -an or -ian) and the word Series, the initial letter of both terms being capitalized. See also: [igneous-rock series](#) d. An arrangement of electric blasting caps in which the firing current passes through each of them in a single circuit. *Nichols, I*

series circuit firing

A method of connecting together a number of detonators that are to be fired electrically in one blast. Each detonator is connected to the adjacent detonator to form a continuous

circuit having two free ends that are then connected to the firing cable. In British coal mines, all rounds of shots must be connected electrically in series. This results in large rounds having a high electrical resistance, requiring high voltage at the exploder that, in turn, increases the chance of misfires due to current leakage. See also: [parallel circuit firing](#)

series firing

The firing of detonators in a round of shots by passing the total supply current through each of the detonators. CF: [parallel firing](#) *BS, 12*

series-in-parallel circuit

See: [parallel blasting circuit](#); parallel series circuit.

series parallel firing

The firing of detonators in a round of shots by dividing the total supply current into branches, each containing a certain number of detonators wired in series. *BS, 12*

series shots

A number of loaded holes connected and fired one after the other. In contradistinction to simultaneous firing, where the charges are connected electrically, and are all exploded at one time. *Stauffer*

series ventilation

A system of ventilating a number of faces consecutively by the same air current. *BS, 8*

serpentine

a. In petrology, a metamorphic rock serpentinite composed chiefly or wholly of the mineral serpentine. b. A group of common rock-forming minerals having the formula $(\text{Mg,Fe,Ni})_3 \text{Si}_2 \text{O}_5 (\text{OH})_4$; mostly monoclinic, but also orthorhombic; greasy or silky luster; slightly soapy feel; tough conchoidal fracture; commonly compact but may be granular or fibrous (asbestiform); green; invariably secondary, derived by alteration of magnesium-rich silicate minerals (esp. olivines); in both igneous and metamorphic rocks; translucent varieties commonly substitute for jade for ornamental and decorative purposes; fibrous varieties are used for asbestos. c. The mineral group antigorite, clinochrysotile, orthochrysotile, and lizardite. d. In former usage, serpentine and antigorite were mineral species and chrysotile was a variety. See also: [kaolinite-serpentine](#)

serpentine asbestos

See: [chrysotile](#)

serpentine cat's-eye

See: [satelite](#)

serpentine jade

A variety of the mineral serpentine, resembling bowenite, occurring in China; used as an ornamental stone. *CMD*

serpentine marble

See: [verde antique](#)

serpentine rock

See: [serpentinite](#)

serpentinite

A rock consisting almost wholly of serpentine-group minerals, e.g., antigorite and chrysotile or lizardite, derived from the alteration of ferromagnesian silicate minerals, such as olivine and pyroxene. Accessory chlorite, talc, and magnetite may be present. Syn: [serpentine rock](#) *AGI*

serpentinization

The process of hydrothermal alteration by which magnesium-rich silicate minerals (e.g., olivine, pyroxenes, and/or amphiboles in dunites, peridotites, and/or other ultrabasic rocks) are converted into or replaced by serpentine minerals. *AGI*

serpierite

A monoclinic mineral, $\text{Ca}(\text{Cu,Zn})_4(\text{SO}_4)_2(\text{OH})_6 \cdot 3\text{H}_2\text{O}$; dimorphous with orthoserpierite; sky-blue.

serra

See: [sierra](#)

serrate

a. Said of topographic features that are notched or toothed, or have a saw-edged profile; e.g., a serrate divide. Syn: [saw-toothed](#) b. Said of saw-toothed contacts between minerals,

usually resulting from replacement; e.g., the serrate texture of megacrysts in contact with plagioclase in igneous rocks. *AGI*

serumite

A bonding clay for foundry sands. *Osborne*

service factor

A factor by which the specified horsepower is multiplied to compensate for drive conditions. *Jackson, 1*

service shaft

A shaft employed solely for the hoisting of workers and materials to and from underground. *Nelson*

serving

a. Fiber cord wrapping around the surface of a wire rope. *Hammond* b. Corn. A supply of tin ready for smelting.

servomechanism

An automatic feedback control system for mechanical motion; it applies only to those systems in which the controlled quantity or output is mechanical position or one of its derivatives (velocity, acceleration, and so on). Also known as servo system. *McGraw-Hill, 1*

set

a. A timber frame used for supporting the sides of an excavation, shaft, or tunnel. Syn: [sett](#) b. See: [one-piece set](#); timber set; bench of timbers. c. The distance a pile penetrates with one blow from a driving hammer. *Nichols, 1* d. A group of essentially parallel planar features, esp. joints, dikes, faults, veins, etc. *AGI* e. A train of mine cars; a trip. *Fay* f. The failure of a rock subjected to intense pressure below the point of rupture to recover its original form when the pressure is relieved. *Fay* g. The discharge opening of a crushing machine to regulate the size of the largest escaping particle. *Pryor, 2* h. To fix a prop or sprag in place. i. To place a diamond in the crown of a bit. *Long* j. To place casting in a borehole. *Long*

set bit

A bit insert with diamonds or other cutting media. *Long*

set casing

The cementing of casing in the hole. The cement is introduced between the casing and the wall of the hole and then allowed to harden, thus sealing off intermediate formations and preventing fluids from then entering the hole. It is customary to set casing in the completion of a producing well. *Williams*

set casing shoe

A casing shoe set with diamonds. Often used for a one-shot attempt to drill casing down through overburden to bedrock. Also called casing-shoe bit. *Long*

set copper

An intermediate copper product containing about 3.5% cuprous oxide, obtained at the end of the oxidizing portion of the fire-refining cycle. *ASM, I*

set i.d.

See: [set inside diameter](#)

set inside diameter

The minimum inside diameter of a set core bit. Usually written set i.d. in drilling industry literature. Also called bore; center bore; inside gage. Abbrev. set i.d. *Long*

set o.d.

See: [set outside diameter](#)

set of timber

The timbers composing any framing, whether used in a shaft, slope, level, or gangway. Thus, the four pieces forming a single course in the curbing of a shaft, or the three or four pieces forming the legs and collar, and sometimes the sill, of an entry framing are together called a set, or timber set. *Zern*

set outside diameter

The maximum outside diameter of a set bit. Usually written set o.d. in drilling industry literature. Also called outside gage. Abbrev. set o.d. *Long*

set reaming shell

A reaming shell, a portion of the outside surface of which has embedded diamonds, diamond-inset inserts, or other cutting media, having a set diameter slightly greater than the standard set size of the bit to which the shell is coupled. *Long*

sett

a. A quarryman's term for a square-faced steel tool held in position and struck with a sledge to cause a fracture in a rock mass. b. Corn. A lease; the boundaries and terms of the mining ground taken by the adventurers. See also: [set](#) c. A timber frame used in underground support. Also spelled set. *Pryor, 3* d. A small rectangular dressed stone of granite, quartzite, or whinstone, used as road paving in localized areas subject to esp. heavy traffic. *Hammond*

setting

a. Those runners, sheeting, or poling boards which are held in place by one pair of timber frames supporting the sides of an excavation. See also: [timbering](#); [top frame](#). *Hammond*
b. The timber frames used at intervals in shaft sinking and close-poled behind. *Stauffer*
c. See: [heading](#) d. The act of contracting with miners for work to be done. *Standard, 2*

setting out

Marking out on the ground by means of pegs and lines the proposed positions and dimensions of earthworks, masonry, etc. Also called staking out. Syn: [laying out](#)

setting pattern

The geometric arrangement of the inset diamonds in a bit crown. *Long*

setting plug

A cylindrical object, having a diameter equal to the inside set diameter of a specific-size bit, used to measure the inside set diameter of a core bit. *Long*

setting ring

A ringlike sleeve, the inside diameter of which is the same as a specific set outside diameter of a diamond bit or reaming shell; it is used to check the set diameter of a bit or reaming shell. Also called bit gage; bit ring; gage ring; gaging ring; ring gage; setting gage. *Long*

setting rod

A special diamond-drill rod used to set a deflecting wedge in a borehole. *Long*

setting up

a. See: [rigging](#) b. In mining, to gather the necessary tools and complete all work preparatory to drilling. Syn: [setup](#) c. Hardening of air-setting or hydraulic-setting mortars. d. The act or process of setting a diamond bit. *Long*

settled ground

Ground that has ceased to subside over the waste area of a mine and has reached a state of full subsidence. *Nelson*

settlement

The lowering of the overlying strata in a mine, owing to extraction of the mined material. See also: [subsidence](#); [differential settlement](#); seat of settlement. *AGI*

settlement date

Agreed terms on which payment for a consignment of mineral is made. *Pryor, 3*

settlement price

The last unfulfilled offer to sell at cash price at the close of the second morning on the London Metal Exchange, prevails as the accepted cash price for the metal for the succeeding twenty-four hours. *Wolff*

settler

A separator; a tub, pan, vat, or tank in which a separation can be effected by settling. A tub or vat in which pulp from the amalgamating pan or battery pulp is allowed to settle; the pulp is stirred in water to remove the lighter portions. Syn: [pug tub](#) settling tank. *Fay*

settling box

A box or container in which drill cuttings or sludges are accumulated and coarse materials permitted to settle. *Long*

settling cone

A conical tank used to settle coarse solids from the circulating water. *BS, 5*

settlingite

A hard, brittle, pale-yellow to deep-red hydrocarbon (H:C about 1.53) in resinous drops on the walls of a lead mine at Settling Stones, Northumberland, U.K. See also: [settling stones resin](#)

settling pit

An excavation through which mine water is conducted in order to reduce its velocity, thus allowing sediment to settle and to be cleaned out from time to time. Also called dredge sump; settling sump (undesirable usage). *BS, 10*

settling pond

A pond, natural or artificial, for recovering the solids from washery effluent. *BS, 5*

settling sand

Drillers' term for friable sandstone that caves into wells and settles around the bit. *AGI*

settling stones resin

A resinoid, hard, brittle substance possessing a pale yellow to deep red color, a specific gravity of 1.16 to 1.54, and burning in a candle flame. It was found in an old lead mine in Northumberland, England. See also: [settlingite](#)

settling tank

a. A reservoir or tank into which the return water from a borehole collects and the entrained drill cuttings settle. *Long* b. A tank in which pulp is held while solids settle from suspension. Also called thickener; settler. *Pryor, 3*

settling vat

A vat in which particles of ore are allowed to settle. *Fay*

settling velocity

The rate at which suspended solids subside and are deposited. Syn: [full velocity](#)

setup

a. In surveying, location of theodolite above a station point. *Pryor, 3* b. In drilling, location of machine. *Pryor, 3* c. See: [setting up](#); rigging; rig; rig-up.

set weight

The quantity of diamonds set in a bit, expressed in carats. *Long*

severance

a. Separation of a mineral or royalty interest from other interests in the land by grant or reservation. A mineral or royalty deed or a grant of the land reserving a mineral or royalty interest, by the landowner before leasing, accomplishes a severance, as does his execution of an oil and gas lease. *Williams* b. See: [liberation](#)

severance tax

A State tax imposed on the severing of natural resources from the land based on the value or quantity of production. These types of taxes are usually calculated either as a flat rate per unit of production (sometimes called a "unit" or "specific" severance tax), or as a percentage of the value of the resource produced (sometimes called an "ad valorem" or "percentage" severance tax). The tax base for an ad valorem severance tax is generally either the gross or net value of resources produced or sold. *SME, I*

severed lands

These are lands where the surface estate is held by one party and the mineral estate is held by another. The owner of the mineral estate normally retains the right to enter and occupy the surface estate for the purposes of mineral development and extraction. Also called Split Estate Lands. *SME, I*

seyberite

See: [clintonite](#)

seybertite

A former name for clintonite.

Seyler's classification

A classification of coals based primarily upon the carbon and hydrogen content calculated to a pure-coal basis, according to the Parr formula. See also: [carbon-hydrogen ratio](#)

shackle

a. A connecting link or device for fastening parts together, usually in such a manner as to permit some motion. *Crispin* b. A connecting device for lines and drawbars consisting of a U-shaped section pierced for cross bolt or a pin. *Nichols, I* c. A short wrought-iron or

manganese-steel chain for connecting mine cars to form a journey or train, for transport by rope haulage or locomotive to and from the workings. Syn: [coupling](#) *Nelson*

shackler

A person employed to attach and detach the shackles between mine cars either at a junction near the face or at the pit bottom. Cars are attached at the junction to form trains for the locomotive or rope haulage. Another shackler detaches them at the pit bottom for loading into the cage. Syn: [offtake lad](#)

shadd

- a. Corn. Smooth, round stones on the surface, containing tin ore, and indicating a vein.
- b. See: [shoad](#)

shade

- a. A color that has been darkened by the addition of black. *Hansen*
- b. A term descriptive of that difference between colors resulting from a difference in luminosity only, the other color constants being essentially equal. A darker shade of a color is one that has a lower luminosity. *Hess*

shading

A method of showing relief on a map by simulating the appearance of sunlight and shadows, assuming an oblique light from the northwest so that slopes facing south and east are shaded (the steeper slopes being darker), thereby giving a three-dimensional impression similar to that of a relief model. The method is widely used on topographic maps in association with contour lines. *AGI*

shadow zone

- a. Region in which refraction effects cause exclusion of echo-ranging sound signals. *Hy*
- b. An area in which there is little penetration of acoustic waves. *AGI*
- c. A region 100 degrees to 140 degrees from the epicenter of an earthquake where, due to refraction from the low-velocity zone inside the core boundary, there are no direct arrivals of seismic waves. Syn: [blind zone](#)

shaft

- a. An excavation of limited area compared with its depth; made for finding or mining ore or coal, raising water, ore, rock, or coal, hoisting and lowering workers and material, or ventilating underground workings. The term is often specif. applied to an approx. vertical shaft, as distinguished from an incline or inclined shaft. A shaft is provided with a hoisting engine at the top for handling workers, rock, and supplies; or it may be used

only in connection with pumping or ventilating operations.. CF: [incline](#) b. A brick or stone stack or chimney. *Standard*, 2 c. The upper zone of a blast furnace. *Mersereau*, 2 d. See: [abyss](#)

shaft allowance

The difference between the excavation diameter and the finished diameter in the clear; the extra space allowed to accommodate the permanent shaft lining. *Nelson*

shaft bottom

See: [loop-type pit bottom](#); pit bottom; single-approach pit bottom.

shaft cable

a. A specially armored cable of great mechanical strength running down the shaft of a mine. *CTD* b. See: [borehole cable](#)

shaft capacity

The output of ore or coal that can be expected to be raised regularly and in normal circumstances, per day or week. *Nelson*

shaft casing

The structure enclosing the top of a shaft designed to prevent short circuiting of air into or out of the shaft. See also: [air lock](#) *BS*, 8

shaft cave

A cave formed primarily of a shaft or shafts. *AGI*

shaft collar

See: [collar structure](#)

shaft deformation bar

A useful contrivance for measuring the deformation in the cross section of a shaft. It consists of a length of 1-1/2-in (3.8-cm) pipe fitted at one end with a micrometer and at the other end with a hard steel cone. The micrometer should have a range of 3 to 4 in (7.6 to 10 cm) and should fit into a bushing in the pipe in some manner. It may thus be removed from the bar for safe keeping or during transport. *Issacson*

shaft drilling

The drilling of small shafts up to about 5 ft (1.5 m) in diameter with a shot drill. In Virginia, shafts up to 6 ft (1.8 m) in diameter have been sunk by core drilling. A ring 4 in (10 cm) wide is formed by roller bits similar to oilfield rotary drilling. Six tricone cutters are used, and a large core is formed. A central hole is drilled in the core, and a small explosive charge is fired to break it for removal. In some cases, it is removed bodily by a core catcher. *Nelson*

shaft feeder cable

A cable mounted in a shaft to transmit electrical power to the shaft bottom and/or to an intermediate level. *BS, 13*

shaft foot

Scot. The bottom of a shaft.

shaft guides

See: [cage guide](#); fixed guides; rope guide.

shaft-hoist engineer

See: [hoistman](#)

shaft horsepower

a. Actual horsepower produced by the engine after deducting the drag of accessories. Also called flywheel horsepower; belt horsepower. *Nichols, 1* b. The shaft horsepower of a winding engine is the average load of coal or ore in pounds (kilograms) raised per wind multiplied by the average number of winds per minute (which may be a fraction) multiplied by the depth of the shaft in feet and the product divided by 33,000. *Sinclair, 5*

shaft house

A building at the mouth of a shaft, where ore or rock is received from a mine. *Weed, 2*

shaft inset

The point where a horizontal tunnel intersects a shaft. Syn: [mounting](#) See also: [inset](#)

shaft kip

Eng. See: [kip](#)

shaft lighting

The lighting of shafts at landing stations is often found to be far from ideal. Work in the cages, during loading and unloading, and examination of shaft gear, are facilitated by the provision of fittings to provide a directional flux distribution in such a way that light is thrown forwards from the pit bottom or inset roadway into the shaft area. There must also be adequate illumination on a vertical plane at the shaft inset. *Roberts, 2*

shaft lining

The timber, steel, brick, or concrete structure fixed around a shaft to support the walls. In modern shafts, a concrete lining is generally favored as a permanent shaft support. *Nelson*

shaft mine

a. A mine in which the coal seam is reached by a vertical shaft which may vary in depth from less than 100 ft (30 m) to several thousand feet. *Kentucky* b. A mine in which the main entry or access is by means of a shaft. CF: [drift mining](#)

shaft mixer

See: [mixer](#)

shaft pillar

a. A large area of a coal seam that is left unworked around the shaft bottom to protect the shaft and the surface buildings from damage by subsidence. All roadways in the shaft pillar are narrow, and coal faces are not opened out until the limit line of the shaft pillar is reached. The area of the shaft pillar is considerably greater than the surface area requiring protection. Syn: [high pillar](#) pillar. *Nelson* b. A solid block of ore left around the shaft where it crosses the lode, for protection against earth movement. *Pryor, 3*

shaft plumbing

a. The operation of transferring one or more points at the surface of a vertical shaft to plumb line positions at the bottom of the shaft; a method to ensure that a shaft is sunk in the true vertical line. See also: [centering of shaft](#) b. Survey operation in which the orientation of two plumb bobs is measured both at the surface and at depth in order to transfer the bearing underground. See also: [Weisbach triangle](#)

shaft pocket

a. Ore storage, excavated at depth, which receives trammed ore pending removal by skip. *Pryor, 3* b. Loading pockets of one or more compartments for different classes of ore and for waste built at the shaft stations. They are cut into the walls on one or both sides

of a vertical shaft or in the hanging wall of an inclined shaft. See also: [pocket](#) c. See: [measuring chute](#)

shaft raising

See: [raising](#)

shaft section

A drawing or log giving details of the structure and the nature of strata intersected by a shaft. *BS, 7*

shaft set

a. Supporting frame of timber, masonry, or steel that supports the sides of a shaft and the gear. Composed of two wallplates, two end plates, and dividers that form shaft compartments. *Pryor, 3* b. A system of mine timbering similar to square sets. The shaft sets are placed from the surface downward, each new set supported from the set above until it is blocked in place. New wallplates are suspended from those of the set above by hanging bolts. Blocking, wedging, and lagging complete the work of timbering. At stations the shaft posts are made much longer than usual to give ample head room for unloading timber and other supplies. *Lewis*

shaft siding

The station or landing-place arranged for the full and empty tubs at the bottom of the winding shaft. *Peel*

shaft signal

Code of electric ringing, or for shallow depths, knocking, among the onsetter or hitcher at the shaft bottom, the banksman at the top, and the engineman who operates the winder. Signals inform the latter as to type of load, etc. A telephone is also installed. *Pryor, 3*

shaft signal indicator

A device, usually mounted in the winding engine house, which gives visual indication of the signals received from the banksman and the onsetter to regulate the movement of conveyances in a shaft, and that retains the indication until cancelled. *BS, 13*

shaft signal recorder

A device that records, on paper or otherwise, the signals given by the banksman and the onsetter and the movements of the winder drum. *BS, 13*

shaft sinking

a. Excavating a shaft downwards, usually from the surface, to the workable coal or ore. High sinking rates are possible by (1) mechanical mucking, (2) increased winding capacity, (3) improved concrete supply and placing, (4) improved surface layout, and (5) improved methods of blasting. *Nelson* b. Excavating a shaft with a shaft-sinking drill. CF: [raise](#)

shaft-sinking drill

A large-diameter drill with multiple rotary cones or cutting bits used for shaft sinking. An adaptation from oil well drills. *Eng. Min. J.*, 3

shaft-sinking power supply

A supply of compressed air at a working pressure of about 100 psi (690 kPa). The quantity required for a modern high-speed sinking may be 2,000 to 2,500 ft³/min (56.6 to 70.7 m³/min). At a new mine where two shafts are being sunk, the power installation may comprise eight slow-speed water-cooled compressors with a total output of almost 5,000 ft³/min (141.5 m³/min) at 100 psi. *Nelson*

shaft-sinking ventilation

The ventilation of a sinking shaft is by means of auxiliary fans. Axial flow fans powered by flameproof motors are commonly used. *Nelson*

shaft space

An opening created with the object of relieving pressure on the shaft. *Higham*

shaft spragger

In anthracite and bituminous coal mining, a laborer who controls the movement of mine cars as they are run to the top or to the bottom of the shaft by poking sprags (short metal or wooden rods) between the spokes of the wheels. *DOT*

shaft station

An enlargement of a level near a shaft from which ore, coal, or rock may be hoisted and supplies unloaded.

shaft survey

A survey to determine the alignment of a shaft.

shaft tackle

See: [poppet head](#); headframe; poppet.

shaft tunnel

N. Staff. Headings driven across the measures from shafts to intersect inclined seams.

shaft wall

a. The brick or concrete lining in a shaft to support the surrounding ground. The construction of the permanent shaft wall is normally in concrete with reinforcement at insets and in bad ground. The wall thickness is between 12 in and 36 in (30 cm and 91 cm) depending on the shaft size and water pressure within the strata. Also applied to the rock masses surrounding the shaft. See also: [permanent shaft support](#) *Nelson* b. The side of a shaft.

shag boss

In the stonework industry, a foreperson who supervises the removal of waste stone, loading and unloading of finished and semifinished stone, and the moving and piling of stone slabs and blocks at a stoneworking mill. *DOT*

shagreen

See: [relief](#)

shake

a. In a coal mine, a vertical crack in the seam and roof. *CTD* b. Fissures in rock. *Arkell* c. Minute calcite veins traversing limestone or other rocks containing carbonates. These veinlets, unlike vents, have no harmful effect on the building stone. *Arkell* d. A cavern, usually in limestone. e. A close-joint structure in rock, due to natural causes, such as pressure, weathering, etc. Used in the plural.

shaker

A mechanically vibrated screen through which a returning drill fluid is passed to screen out larger chips, fragments, and drill cuttings before the drill fluid flows into the sump. Syn: [shale screen](#); [shale shaker](#). *Long*

shaker chutes

Metal troughs, operated mechanically, for the loading of coal into mine cars underground. *Hudson*

shaker conveyor

a. A conveyor consisting of a length of metal troughs, with suitable supports, to which a reciprocating motion is imparted by drives. In the case of a downhill conveyor, a simple to-and-fro motion is sufficient to cause the coal to slide. With a level or a slight uphill gradient, a differential motion is necessary; i.e., a quick backward and slower forward strokes. The quick backward stroke causes the trough to slide under the coal, while the slower forward stroke moves the coal along to a new position. Syn: [jigger](#) vibrating conveyor. *Nelson* b. A type of oscillating conveyor.

shaker-conveyor engine

A reciprocating engine operated by compressed air which is used to impart the reciprocating motion to a shaker conveyor panline. *Jones, I*

shaker screen

A screening medium mounted in a rectangular frame, supported in a horizontal or slightly inclined position, and reciprocated longitudinally by a crank or eccentric and connecting rod. The unique feature that differentiates the shaker from all other screens is that the load is made to travel over the screening medium by the shaking motion of the screen. *Mitchell*

shaker-shovel loader

A machine for loading coal, ore, or rock usually in headings or tunnels. It consists of a wide flat shovel that is forced into the loose material along the floor by the forward motion of the conveyor. The shaking motion of the conveyor brings the material backwards, and it is loaded into cars or a conveyor. It works at its maximum efficiency to the rise or in flat tunnels. Also called duckbill loader. See also: [loader](#)

shake wave

A wave that advances by causing particles in its path to move from side to side or up and down at right angles to the direction of the wave's advance, a shake motion. *Leet, I*

shaking

a. See: [springing](#); shaking a hole. b. Corn. Washing ore; ore dressing.

shaking a hole

The enlargement of a blasthole, by exploding a stick of dynamite, so it will contain a larger amount of explosives for a big blast. Also called a shake blast. See also: [springing](#)

shaking conveyer

An apparatus that slides under the broken coal and by reciprocating motion moves the coal along to a discharge point. *BCI*

shaking-conveyor loader

The broad tapering shovellike end of a shaking conveyer that is thrust suddenly under the coal and slowly withdrawn so as to carry the coal that has been lifted toward the dumping point. *Zern*

shaking down

The stirring of an open-hearth bath with a rod to assist in oxidizing and removal of carbon. *Henderson*

shaking screen

a. A screen for sizing coal or other material. It consists of a screening surface of punched plate or wire mesh mounted in a rectangular frame, supported in a horizontal or slightly inclined position and reciprocated longitudinally by a crank or eccentric and connecting rod. The slightly inclined shaking screen is favored. Also called jiggling screen. See also: [trommel](#); [jiggling screen](#); [wet screening](#). *Nelson* b. A suspended screen moved with a back-and-forth or rotary motion with a throw of several inches or more. *Nichols, 1*

shaking table

a. In ore dressing, flattish tables oscillated horizontally during separation of minerals fed onto them. *Pryor, 2* b. In concentration of finely crushed ores by gravity, a rectangular deck with longitudinal riffles. It is shaken rapidly in a compounded to-and-fro motion by a vibrator, in such a way as to move the sands along, while they are exposed to the sweeping action of a stream of water flowing across the deck, which is tilted about its long axis. In dry or pneumatic tabling the feed is dry, and air is blown upward through a porous deck. *Pryor, 3* c. A slightly inclined table to which a lateral shaking motion is given by means of a small crank or an eccentric. One form is covered with copper plates coated with mercury for amalgamating gold or silver; other forms are provided with riffles and used in separating alluvial gold. Syn: [jerking table](#); [bumping table](#).

shale

a. A fine-grained detrital sedimentary rock, formed by the consolidation (esp. by compression) of clay, silt, or mud. It is characterized by finely laminated structure, which imparts a fissility approx. parallel to the bedding, along which the rock breaks readily into thin layers, and by an appreciable content of clay minerals and detrital quartz; a thinly laminated or fissile claystone, siltstone, or mudstone. It is generally soft

but sufficiently indurated so that it will not fall apart on wetting; it is less firm than argillite and slate, commonly has a splintery fracture and a smooth feel, and is easily scratched. Its color may be red, brown, black, or gray. Etymol: Teutonic, probably Old English scealu, shell, husk, akin to German schale, shell. *AGI* b. One of the impurities associated with coal seams; this term should not be used as a general term for washery rejects. *BS*, 5

shale-and-clay feeder

One who keeps conveyor belt that feeds dry mill constantly loaded with shale and clay. Also called clay-and-shale feeder; clay feeder; conveyor loader; shale-and-clay-conveyor man; shale feeder. *DOT*

shale band

See: [dirt band](#)

shale break

Thin layer or parting of shale between harder strata, primarily a driller's term. CF: [shell](#)

shale dust

The dust obtained by drying and grinding shale. *Rice*, 2

shalene

A term proposed in place of gasoline for that product distilled from oil shale. *von Bernewitz*

shale-off shale

Scot. Shale yielding oil on distillation. This term was formerly used as signifying argillaceous rock.

shale oil

A crude oil obtained from bituminous shales, esp. in Scotland, by submitting them to destructive distillation in special retorts. *Fay*

shale pit

A dumping place for coarse material screened out of rotary drill mud. *Nichols*, 1

shale screen

See: [shaker](#)

shale shaker

a. A cylindrical sieve or vibrating table that removes the drill cuttings from the circulating mud stream. *Wheeler, R.R.* b. See: [shaker](#)

shaley blaes

Scot. See: [bituminous shale](#)

shallow ground

Aust. Land having gold near its surface. *Standard, 2*

shallow well

A shaft sunk to pump surface water only. See also: [well](#)

shaly

Pertaining to, composed of, or having the character of shale; esp. readily split along closely spaced bedding planes, such as shaly structure or shaly parting. Also, said of a fine-grained, thinly laminated sandstone having the characteristic fissility of shale owing to the presence of thin layers of shale; or said of a siltstone possessing bedding-plane fissility. *AGI*

shamble

One of a set of shelves or benches, from one to the other of which ore is thrown successively in raising it to the level above, or to the surface. See also: [shammel](#)

shammel

a. A stage for shoveling ore upon, or for raising water. See also: [shamble](#) b. To work a mine by throwing the material excavated onto a stage or bench in the "cast after cast" method, which was the usual way before the art of regular mining by means of shafts had been introduced.

Shand's classification

A classification of igneous rocks based on crystallinity, degree of saturation with silica, degree of saturation with alumina, and color index. This system was developed in 1927 by S.J. Shand. *AGI*

shangie

Scot. A ring of straw or hemp put round a jumper in boring to prevent the water in the borehole from splashing out.

shank

a. The steel-threaded portion of a diamond bit to which the crown is attached. Also called bit blank; blank; blank bit. *Long* b. The body portion of any bit above its cutting edge. *Long* c. That part of the drill steel which is inserted in the chuck of the drill. *Fraenkel* d. A bar or standard which connects a rooter tooth with the frame. *Nichols, 2* e. A ladle for molten metal, with long handles for use by two or more workers. *Webster 3rd*

Shanklin sand

Eng. A marine deposit of siliceous sands and sandstone of various shades of green and yellow gray. Also called Lower Greensand.

shaped charge

An explosive contained in a case so shaped as to concentrate the power of the explosion in one small area. Shaped charges are used in armor-penetrating weapons, such as the bazooka, for tapping open-hearth furnaces, for cutting deep-well linings, and for breaking boulders. *Nichols, 3*

shaped stone

An artificially blunted or shaped carbon or diamond cut to form a point conforming to a specific profile. *Long*

shape factor

Property of a particle that determines the relation between its mass and surface area, and hence its response to frictional restraint. *Pryor, 4*

shape-firebrick molder

One who makes shaped firebricks in steel molds. *DOT*

shape-silica-brick molder

One who makes shaped silica bricks in steel molds. *DOT*

shard

a. A vitric fragment in pyroclastics; some have a characteristically curved surface of fracture. Shards generally consist of bubble-wall fragments produced by disintegration of pumice during or after an eruption. *AGI* b. Syn: [sherd](#)

sharp fire

Combustion with excess air and short flame. *ASTM*

sharp gravel

Angular flint gravel. *Arkell*

sharpite

An orthorhombic mineral, $\text{Ca}(\text{UO}_2)_6(\text{CO}_3)_5(\text{OH})_4 \cdot 6\text{H}_2\text{O}$; very radioactive; yellow-green.

sharp sand

Sand composed of angular quartz grains, used in making mortar.

sharp stone

a. Drill diamonds or carbon having sharp edges and corners that have not been artificially blunted or rounded through use. *Long* b. New-condition, unused carbon or drill diamonds. *Long* c. A sedimentary rock made up of angular particles more than 2 mm in its greatest dimension. *AGI*

shatter belt

A less-preferred syn. of "fault zone."

shatter cut

See: [burn cut](#)

shattered zone

Applied to a belt of country in which the rock is cracked in all directions, resulting in a network of small veins.

shatter index

The percentage of a specially prepared sample of coke remaining on a sieve of stated aperture after the sample has been subjected to a standardized dropping procedure. *BS, I*

shattery

S. Staff. Burnt clay in the vicinity of burnt coal.

shattuckite

An orthorhombic mineral, $\text{Cu}_5 (\text{SiO}_3)_4 (\text{OH})_2$; blue.

Shaver's disease

See: [bauxite pneumoconiosis](#)

shcherbakovite

An orthorhombic mineral, $(\text{K,Na,Ba})_3 (\text{Ti,Nb})_2 \text{Si}_4 \text{O}_{14}$; dark brown.

shear

a. A deformation resulting from stresses that cause or tend to cause contiguous parts of a body to slide relatively to each other in a direction parallel to their plane of contact. It is the mode of failure of a body or mass whereby the portion of the mass on one side of a plane or surface slides past the portion on the opposite side. In geological literature the term refers almost invariably to strain rather than to stress. It is also used to refer to surfaces and zones of failure by shear, and to surfaces along which differential movement has taken place. *AGI* b. See: [shearing](#) c. To make vertical cuts in a coal seam that has been undercut. *Standard, 2*

shear bursts

In deep mining fields, shear bursts are the most common type. By the occurrence of a single shear crack parallel to the face in one of the walls, the wall rock behind the shear plane is able to expand freely into the stope, heavily compressing those supports that until then have not taken stress, throwing still more stress on those that have, and causing the wall rock between the nearest supports and the face to disrupt and fill the place with debris. Shear bursts frequently occur at the working face of a pillar, remnant, or promontory. In such cases, they should not be mistaken for true pillar bursts. *Spalding*

shear-cake

A counterweighted refractory slab used as a gate or door to a small furnace or oven.
ASTM

shear cleavage

Refers to cleavage where there is displacement of preexisting surfaces across the cleavage plane by movement parallel to it. Syn: [slip cleavage](#)

shear cut

A vertical cut made by a special type of coal cutter or arc-shearing machine. Syn: [vertical cut](#)

shearer

a. In bituminous coal mining, one who operates a type of coal-cutting machine that shears (cuts) out a channel down the sides of the working face of coal (as distinguished from undercutting) prior to blasting the coal down. Also called shearing-machine operator. *DOT* b. A person who operates the shearing machine on a longwall face.

shearer loader

Machine that shears coal or other easily broken mineral from the longwall face of a seam and delivers the broken material continuously to a conveying system. *Pryor, 3*

shear failure

Failure in which movement caused by shearing stresses in a soil mass is of sufficient magnitude to destroy or seriously endanger a structure. Syn: [failure by rupture](#)

shear fold

A fold model of which the mechanism is shearing or slipping along closely spaced planes parallel to the fold's axial surface. The resultant structure is a similar fold. Syn: [slip fold](#)

shear fracture

A fracture that results from stresses that tend to shear one part of a rock past the adjacent part. See also: [shear joint](#) CF: [tension fracture](#)

shearing

a. The vertical side cutting that, together with holing or horizontal undercutting, constitutes the attack upon a face of coal. b. Making a vertical cut or groove in a coal face, breast, or block, as opposed to a kerf, which is a horizontal cut. Called in Arkansas a cut or cutting. See also: [shear](#) c. Vertical cuts applied in coal headings only to provide an additional free face, since in heading work it is usual to employ deeper cuts than on longwall faces, and the shots in headings are much tighter. *McAdam, 2* d. The deformation of rocks by cumulative small lateral movements along innumerable parallel

planes, generally resulting from pressure, and producing schistosity, cleavage, minute application, and other metamorphic structures.

shearing force

A straining action wherein tangentially applied forces tend to produce a skewing type of deformation. Shear forces are usually accompanied by normal forces produced by tension, thrust, or bending. *McGraw-Hill, 2*

shearing jib

A jib of a coal cutter or cutter loader that makes a vertical or shear cut in the coal, ore, or rock. *Nelson*

shearing machine

An electrically driven machine used to cut coal during longwall mining. Usually used in a double-drum configuration.

shearing-machine operator

See: [shearer](#)

shear joint

Joint that formed as a shear fracture. See also: [shear fracture](#)

shear lag

On account of shear strain, the longitudinal tensile or compressive bending stress in wide beam flanges diminishes with the distance from the web or webs; this stress diminution is called shear lag. *Roark*

shear legs

a. A high wooden frame placed over an engine or pumping shaft fitted with small pulleys and rope for lifting heavy weights. *Zern* b. A tripod on which miners sometimes stand in drilling. *Standard, 2*

shear modulus

Also known as the modulus of rigidity, it equals the shear stress divided by the shear strain. *Hammond*

shear of ore

Ore shoot or orebody. *von Bernewitz*

shear pin

A small soft-metal pin, connecting or pinning together two parts of a tool that will break by shearing if an excessive load is placed on the pinned components. The shearing of the pin prevents damage to the overloaded components; thus it is a safety device. *Long*

shear plane

A fracture that produces a positive draw. It differs from a weight break in that the character of the fracture is less ragged and heaving takes place over the unwrought coal instead of the waste. *Briggs*

shear rivet

Soft copper rivets used in the Hall-Rowe wedge to connect the drive and pilot wedges; they can be sheared off to leave the drive wedge as a permanent reference in the borehole at the point at which the hole is to be deflected. *Long*

shear slide

A slide produced by shear failure, usually along a plane of weakness, as bedding or cleavage. *AGI*

shear steel

A steel produced by heating blister steel (sheared to short lengths) to a high heat, welding by hammering or rolling, or both, and finally finishing under the hammer at the same or slightly greater heat. *Webster 3rd*

shear strain

Angular displacement of a structural member due to a force acting across it, measured in radians. See also: [shear modulus](#)

shear strength

a. The stress or load at which a material fails in shear. *Nelson* b. A measure of the shear value of a fluid. Also a measure of the gelling properties of a fluid. *Brantly, 1* c. The internal resistance of a body to shear stress, typically including a frictional part and a part independent of friction called cohesion. *AGI*

shear stress

a. The shear force operating in a material, measured per unit of cross-sectional area. See also: [stress](#); [shear modulus](#); [punching shear](#). *Hammond* b. The stress component tangential to a given plane. Also called shearing stress; tangential stress. *ASCE*

shear structure

Any rock structure caused by shearing, e.g., crushing, crumpling, or cleavage. *AGI*

shear wave

See: [S wave](#)

shear zone

a. A tabular zone of rock that has been crushed and brecciated by many parallel fractures due to shear strain. Such an area is often mineralized by ore-forming solutions. Syn: [sheeted zone](#); [sheeted-zone deposit](#). *AGI* b. Hogback. *Zern*

sheath

a. To enclose or encase with a covering. *Carson, 1* b. A chemical compound or mixture incorporated in a sheathed explosive unit that forms a flame-inhibiting cloud on detonation of the explosive. *CFR, 4*

sheathed explosive

A permitted explosive surrounded by a sheath containing a noncombustible powder. The powder acts as a cooling agent and reduces the temperature of the resultant gases of the explosion, and therefore reduces the risk of these hot gases causing a combustible gas ignition. See also: [eq](#)

sheathed explosive unit

A device consisting of an approved or permissible explosive covered by a sheath encased in a sealed covering and designed to be fired outside the confines of a borehole. *CFR, 4*

sheathing driver

Essentially a paving breaker, an impact hammer driven by air, designed and adapted for driving wood sheathing. *Carson, 1*

sheave

Grooved pulley wheel much used in underground rope haulage. See also: [Koepe sheave](#); [tail sheave](#); [winding sheave](#). *Pryor, 3*

sheave block

A pulley and a case provided with a means to anchor it. *Nichols, 1*

sheave wheel

See: [sheave](#)

shed

a. Eng. A thin, smooth parting in rocks, having both sides polished. b. Eng. A very thin layer of coal. c. A divide of land; e.g., a watershed. *AGI*

shedline

The summit line of elevated ground; the line of a watershed.

sheen

a. A subdued and commonly iridescent or metallic glitter that approaches but is just short of optical reflection and that modifies the surface luster of a mineral; e.g., the optical effect still visible in the body of a gem (such as tiger's-eye) after its silky surface appearance has been removed by polishing. b. A luster that emanates from just beneath the surface of a mineral; e.g., opalescence. CF: [luster](#)

sheep's-foot

A tamping roller with feet expanded at their outer tips. *Nichols, 1*

sheep silver

A Scottish term for mica.

sheer legs

See: [shear legs](#)

sheet

a. A general term for a tabular igneous intrusion, e.g., dike and sill, esp. if concordant or only slightly discordant. CF: [intrusive vein](#) *AGI* b. A term used in the Upper Mississippi lead-mining region of the United States for galena occurring in thin, continuous masses. *AGI* c. See: [blanket](#)

sheet deposit

A mineral deposit that is generally stratiform, more or less horizontal, and areally extensive relative to its thickness. *AGI*

sheet drying conveyor

A disk type of live roller conveyor equipped with air outlets from a blower to remove dampness from processed sheet metal while being conveyed.

sheeted ground

a. Several closely spaced parallel faults along which the wall rocks are broken into thin sheets. b. See: [shear zone](#)

sheeted vein

A group of closely spaced, distinct parallel fractures filled with mineral matter and separated by layers of barren rock.

sheeted zone

See: [shear zone](#)

sheeted-zone deposit

See: [shear zone](#)

sheeters

Light steel poling boards driven down to protect trench sides from collapse. *Hammond*

sheet flow

See: [laminar flow](#)

sheet ground

A term used in the Joplin district, Missouri, and applied to horizontal, low-grade, disseminated zinc-lead deposits, covering an extensive area. See also: [sheet deposit](#)

sheeting

a. The development, in rock formations, of small, closely spaced, parallel fractures. b. In a restricted sense, the gently dipping joints that are essentially parallel to the ground surface; they are more closely spaced near the surface and become progressively farther apart with depth. Esp. well-developed in granitic rocks. See also: [bedding](#) *AGI*

sheeting caps

A row of caps placed on blocks about 14 in (36 cm) high placed on top of the drift sets when constructing the permanent floor in the stope. Round poles are then laid lengthwise of the stope on the sheeting caps and are covered with lagging. *Lewis*

sheeting driver

An air hammer attachment that fits on plank ends so that they can be driven without splintering. *Nichols, I*

sheeting jacks

Push-type turnbuckles, used to set ditch bracing. *Nichols, I*

sheeting pile

See: [sheet pile](#)

sheet iron

See: [sheet](#)

sheet-iron pitch

The inclination of a coal seam at which loose coal will not move on the natural bottom, but at which it will slide or can be easily pushed along on iron slides placed on the bottom in the chambers or rooms. *Fay*

sheet jointing

See: [exfoliation](#)

sheet metal

See: [sheet](#)

sheet-metal gage

A gage used for measuring the thickness of sheet metal. *Crispin*

sheet mica

Mica that is relatively flat and sufficiently free from structural defects to enable it to be punched or stamped into specified shapes for use by the electronic and electrical industries. Sheet mica is classified further as block, film, and splittings. *Skow*

sheet pile

A pile with a generally flat cross section, which may be meshed or interlocked with adjacent similar members to form a diaphragm, wall, or bulkhead, and designed to resist lateral earth pressure or to reduce ground-water seepage. Syn: [sheeting pile](#)

sheet piles

Closely spaced piles of timber, reinforced concrete, prestressed concrete, or steel driven vertically into the ground to support earth pressure, to keep water out of an excavation, and often to form an integral part of a permanent structure. *Hammond*

sheet-pile wall

A wall formed of sheet piles which may be of cantilever design, or anchored back at one or two levels. A retaining wall. *Hammond*

sheet piling

A diaphragm made up of meshing or interlocking members of wood, steel, concrete, etc., driven individually to form an obstruction to percolation, to prevent movement of material, for cofferdams, for stabilization of foundations, etc. *Seelye, I*

sheet quarry

Often used in granite quarrying to designate a quarry having strong horizontal joints and few vertical ones.

sheets

Eng. Coarse cloth curtains or screens for directing the ventilation underground. Syn: [brattice cloth](#); [brattice sheeting](#).

sheet sand

A sandstone of great areal extent, presumably deposited by a transgressing sea advancing over a wide front and for a considerable distance. See also: [blanket sand](#)

sheet structure

See: [sheeting](#)

Sheffield process

A basic open-hearth process using charges so low in sulfur and phosphorus that they could be used in the acid process; the pig iron charged is hematite iron. The charge contains all the elements required to give the required analysis, plus the usual margin of carbon. The charge contains about 0.5% silicon and a maximum amount of manganese, to ensure correct conditions in the bath. *Osborne*

Shelby tube

A thin-walled soil-sampling tube, 12 to 30 in (30.5 to 76.2 cm) long, attached to a special rod adapter or sub by means of machine screws. The device is designed to take soil samples by pressing or pushing the tube down into the formation sampled. Syn: [Shelby-tube sampler](#); thin-wall drive sampler. CF: [thick-wall sampler](#); [thin-wall sampler](#).
Long

Shelby-tube sampler

See: [Shelby tube](#)

shelf

a. Corn. The solid rock or bedrock, esp. under alluvial tin deposits. b. Corn. A rock, ledge or rock, reef, or sandbank in the sea. c. Corn. A projecting layer or ledge of rock on land. d. Corn. The submerged border of a continent or of an island extending from the shoreline to the depth at which the sea floor begins to descend steeply toward the bottom of the ocean basin. See also: [continental shelf](#) e. Corn. A ledge of bedrock upon which drift rests. *Statistical Research Bureau*

shelf angle

A mild steel angle section, riveted or welded to the web of a comparatively deep I-beam supporting the formwork for hollow tiles or forming the seating for precast concrete floor or roof units. *Hammond*

shelf quarry

An open pit quarry where the ledge of stone forms a hill and the floor of the quarry worked on a hillside may be little, if any, lower than the surrounding country. In such openings, both transportation and drainage are favorable. *AIME, 1*

shelf retaining wall

A retaining wall of reinforced concrete having a relieving platform built onto its upper part. *Hammond*

shelf sea

The sea overlying the continental shelf.

shell

a. A thin, hard layer of rock encountered in drilling a well. CF: [shale break](#) b. The crust of the Earth. Also, any of the continuous and distinctive concentric zones or layers composing the interior of the Earth (beneath the crust). The term was formerly used for what is now called the mantle. Syn: [Earth shell](#) c. A sedimentary deposit consisting primarily of animal shells. *AGI* d. A steel tube from which air or other gas at high pressure is discharged with explosive force in a shothole; as used with Cardox, Hydrox, and air blasting. *BS, 12* e. Incorrectly used by some drillers as a syn. for reaming shell; also incorrectly used as a syn. for the inner or outer tube of a core barrel. *Long* f. A metal or paper case that holds a charge of powder. *Fay* g. A group of electrons in an atom, all of which have the same principal quantum number. *CTD* h. Any thin-wall tubular device. *Long* i. A torpedo used in oil wells. *Fay* j. A hollow structure or vessel. *ASM, 1* k. An article formed by deep drawing. *ASM, 1* l. The metal sleeve remaining when a billet is extruded with a dummy flock of somewhat smaller diameter. *ASM, 1* m. In shell molding, a hard layer of sand and thermosetting plastic or resin formed over a pattern and used as the mold wall. *ASM, 1* n. A tabular casting used in making seamless drawn tube. *ASM, 1* o. A pierced forging. *ASM, 1* p. In a grinding mill, external cylinder and ends. *Pryor, 3* q. The falling away of a 1- to 2-in (2.5- to 5.1-cm) internal layer of refractory from the roof of an all-basic open-hearth steel furnace; the probable cause is the combined effect of flux migration, temperature gradient, and stress. This form of wear is also known as slabbing. *Dodd* r. The shell of a hollow clay building block refers to the outer walls of the block. *Dodd* s. A curved form of plate construction applicable to roofs. *Hammond*

shell-and-auger boring

Method of making exploratory shallow bores in soft ground using an auger for clay and a shell, or sandpump, for sands. Syn: [post-hole auger](#) *Pryor, 3*

shell cameo

A cameo carved from shell with raised figure cut from white layers and the background cut away to the darker layers.

shell clearance

The difference between the outside diameter of a bit or core barrel and the outside set or gage diameter of a reaming shell. *Long*

shelling

See: [shell](#)

shell lime

Lump lime which, when flaked, has a characteristic shell-like appearance. It is used mainly in Scotland. *Osborne*

shell marl

a. A sandy, clayey, or limy deposit, loose or weakly consolidated, containing abundant molluscan shells; a common term in the coastal plain of the Southeastern United States. *AGI* b. A light-colored calcareous deposit formed on the bottoms of small freshwater lakes, composed largely of uncemented mollusk shells and precipitated calcium carbonate, along with the hard parts of minute organisms. *AGI*

shell pump

A simple form of sand pump or sludger consisting of a hollow cylinder with a ball or clack valve at the bottom, which is used with a flush of water to remove detritus. See also: [sand pump](#); [sludger](#). *Webster 3rd*

shelly formation

A thin and generally hard stratum encountered in drilling. See also: [shell](#)

shelter hole

In coal mining, a niche in the rib along a haulage road into which one may step to avoid passing trains. Also known as a manhole.

Shelton loader

An adapted coal-cutting machine in which the picks of the cutter chain are replaced by loading flights. The machine hauls itself along the face, the jib leading, by means of an anchored rope. The flights push the prepared coal up a ramp onto the face conveyor, and on their return path to the back of the prepared coal; they fold back and then open up for coal loading as they emerge at the end of the jib. It requires well-prepared coal for successful operation, and will load only in one direction; consequently it has to be flitted back along the coal face. The jib can be swung into line with the body for flitting. *Mason*

shepherd

Aust. A miner who preserves legal rights to a claim without working on it. *Standard, 2*

shepherding

Preserving the rights in a mining claim while doing the minimum possible amount of developing. *Nelson*

sherardize

To coat an article of iron or steel with zinc by covering with zinc dust in a tightly closed drum and heating for several hours at 300 to 420 degrees C so that a zinc-iron alloy is formed at the surface through the action of zinc vapor. *Webster 3rd*

sherardizing

A galvanizing process in which the metal to be coated is heated, with or without tumbling, in contact with zinc dust. *Liddell*

sherd

a. A fragment or broken piece of pottery. *AGI* b. See: [shard](#)

sheridanite

A variety of clinocllore of the chlorite group.

sherry topaz

a. A valuable and important variety of topaz the color of sherry wine. b. An incorrect name for citrine of the same color.

Sherwen shaker

An electromagnetic vibrator used in shaking table mechanisms, concrete consolidation, ore feeders, and screens. *Pryor, 3*

sherwoodite

A tetragonal mineral, $\text{Ca}_9 \text{Al}_2 \text{V}_{28} \text{O}_{80} \cdot 56\text{H}_2 \text{O}$; blue-black.

shield

a. A framework or diaphragm of steel, iron, or wood, used in tunneling and mining in unconsolidated materials. It is moved forward at the end of the tunnel or adit in process of excavation, and is used to support the ground ahead of the lining and to aid in its construction. *AGI* b. A large area of exposed basement rocks in a craton, commonly with a very gently convex surface, surrounded by sediment-covered platforms; e.g., Canadian Shield, Baltic Shield. The rocks of virtually all shield areas are Precambrian. Syn: [continental shield](#); [cratogene](#); continental nucleus. *AGI* c. In longwall mining, the

hydraulically powered roof supports that protect the face workers and advance as the panel is extracted.

shield basalt

A basaltic accumulation of smaller size than the plateau or flood basalts, arising from the confluence of lava flows from a large number of small, closely spaced volcanoes. CF: [plateau basalt](#) Syn: [multiple-vent basalt](#)

shield volcano

A volcano in the shape of a flattened dome, broad and low, built by flows of very fluid basaltic lava or by rhyolitic ash flows. Syn: [lava dome](#); basaltic dome. *AGI*

shift

a. A small fault or slip. See also: [subsidence](#) b. A fault or dislocation. c. The maximum relative displacement of points on opposite sides of a fault and far enough from it to be outside the dislocated zone. Also called net shift. See also: [dip shift](#); [normal shift](#); [strike shift](#); vertical shift. d. The number of hours or the part of any day worked. Also called tour. *Long* e. The gang of workers employed for the period, such as the day shift or the night shift. *Fay*

shifter

a. In bituminous coal mining, a general term for workers who assist brattice men, repairmen, timbermen, and other workers not engaged in the actual mining of coal. *DOT*
b. See: [track shifter](#)

shift gear

A gear on a gear-feed swivel head of a diamond drill by means of which the feed-shifter rod may be moved to engage the shifter-rod pin into the selected feed gear. *Long*

shifting clothes

Street clothes into which the miner changes on emerging from a mine. *Korson*

shift lever

A short rod or shaft attached to the shift-gear shaft by means of which the ratio of the driving to the driven gears may be changed in a gear-feed swivel head of a diamond drill or other transmission-gear mechanism. *Long*

shift work

Work performed at a mine and paid for by day wage as opposed to payment by results, namely by tonnage, yardage, or price list. *Nelson*

shinarump

See: [silicified wood](#)

shinbone protectors

A form of leggings that protect the shinbone. They are designed in both metal and tough plastic and are secured by leather straps around the legs. *Nelson*

shindle stone

Stone from which shingles or roofing slates are made. Local variant of shingle. *Arkell*

shingle

a. Coarse, loose, well-rounded waterworn detritus or alluvial material of various sizes; esp. beach gravel, composed of smooth and spheroidal or flattened pebbles, cobbles, and sometimes small boulders, generally measuring 20 to 200 mm in diameter; it occurs typically on the higher parts of a beach. The term is more widely used in Great Britain than in the United States. See also: [chingle](#) b. A place strewn with shingle; e.g., a shingle beach. Etymol: probably Scandinavian, akin to singel, coarse gravel that sings or crunches when walked on. *AGI*

shingler

A machine for squeezing puddled iron. *Webster 3rd*

shingle structure

The arrangement of closely spaced veins overlapping in the manner of shingles on a roof. Syn: [imbricate structure](#)

shingling

In wrought iron manufacture, the operation by which sinter and other impurities are removed from a bloom and the metal solidly welded together by hammering and squeezing. Also called nobbing. *Henderson*

shining

As applied to the degree of luster of minerals, means those that produce an image by reflection, but not one well-defined, as celestite.

shin plaster

See: [suspension](#)

ship auger

An auger having a simple spiral (helical) body and a single cutting edge, with or without a screw on the end without a spur at the outer end of the cutting edge, used to obtain soil samples in sticky material. *Long*

shiplap liners

Longitudinal lining plates for ball mill of wedgelike shape. The thin edge of each wedge underlies the thick edge of the preceding plate in the direction of revolution. *Pryor, 3*

ship observations

Meteorological and oceanographic data taken for a specific location, observed from a ship underway or at anchor. *Hy*

shipper shaft

In a dipper shovel, the hinge on which the stick pivots when the bucket is hoisted. *Nichols, 2*

shipping measure

For measuring entire internal capacity of a vessel: One register ton equals 100 ft³ (1.8 m³); for measuring cargo; one U.S. shipping ton equals 40 ft³ (1.1 m³) or 32.143 U.S. bushels. *Crispin*

shipping ore

a. Any ore of greater value when broken than the cost of freight and treatment. b. See: [first-class ore](#)

shirt

The inner lining of a blast furnace. *Standard, 2*

shiver

An old English term for soft and crumbly shale, or slate clay approaching shale. Also spelled chiver. Etymol: Middle English scifre. Adj: shivery. *AGI*

shiver spar

A variety of calcite with slaty structure; specif. argentine. Syn: [slate spar](#)

shivery post

Eng. See: [scamy](#)

shoad

a. Waterworn fragments of vein minerals found on the surface, such as beds of streams, away from the outcrop. *Arkell* b. Float ore, which has broken from outcrop and gravitated to a distance. *Pryor, 3* c. To shoad, to trace a lode by following up shoad. *Pryor, 3* d. Corn. Stream tin, or any surface rubble or talus containing fragments of tin, copper, or lead ore, and signifying proximity of a lode. *Arkell* e. See: [shode](#)

shoaling effect

Alteration of a wave proceeding from deep water into shallow water. The wavelength decreases and the wave height increases. *Hy*

shock bump

a. A rock bump caused by the sudden collapse of a thick sandstone or other strong deposit. See also: [rock burst](#); [pressure bump](#). *Nelson* b. A thump experienced in a mine when the breakage of overlying rocks produces the effect of a hammer blow. *Hammond* c. See: [bumps](#)

shock loading

In winding, shock loads produced by picking up a cage from the pit bottom with slack chains or by lifting heavy pithead gates or covers. This often causes dry fatigue in the winding ropes. *Sinclair, 5*

shock losses

Head losses resulting from changes in direction of flow or area of duct. They also occur at the inlet or discharge of a system, at splits or junctions of two or more currents of air, and at obstructions in airways. *Hartman, 2*

shock pressure loss

There is a constant ratio between shock pressure loss and the velocity pressure corresponding to the mean velocity of flow. Shock pressure losses can be calculated from the following formula: $P_s = XP_v$, where P_s equals the total shock pressure loss in

inches of water, P_v equals the velocity pressure, in inches of water corresponding to the mean velocity of flow (equals approx. $[V/4,000]^2$ at standard air density of 0.075 lb/ft³ or 1.2 kg/m³), and X equals an empirical factor or shock factor found by experiment. P_s and P_v are expressed in the same units and are equally affected by density. X is therefore independent of both the density and the units used and is the number of velocity pressures equivalent to the shock pressure loss. *Roberts, 1*

shock-proof

As applied to the current-carrying parts of an electric system, excepting trolley wires, is taken to mean that contact with such parts is prevented by the use of grounded metallic coverings or sheaths.

shock tube system

A system for initiating blasting caps in which the energy is transmitted to the cap by means of a shock wave inside a hollow plastic tube. See also: [gas detonation system](#); [nonelectric blasting](#). *Dick, 2*

shock wave

a. The wave of air and dust that, in some cases, travels ahead of the flame of a coal dust explosion. It may occur when an ignition takes place near the closed end of a mine roadway, and the reaction products behind the flame cannot escape freely. *Nelson* b. The wave sent out through the air by the discharge of the shot initiating an explosion. The wave travels with the velocity of sound and produces to the human ear a noise like the boom of a cannon. *Rice, 2* c. A compressional wave formed whenever the speed of a body relative to a medium exceeds that at which the medium can transmit sound, having an amplitude that exceeds the elastic limit of the medium in which it travels, and characterized by a disturbed region of small but finite thickness within which very abrupt changes occur in the pressure, temperature, density, and velocity of the medium; e.g., the wave sent out through the air by the discharge of the shot initiating an explosion. In rock, it travels at supersonic velocities and is capable of vaporizing, melting, mineralogically transforming, or strongly deforming rock materials. *AGI*

shock-wave compression

Nonisentropic adiabatic compression in a wave traveling at greater than local sound velocity. *Van Dolah*

shode

a. Corn. A loose fragment of veinstone. Ore washed or detached from the vein naturally. See also: [float ore](#) b. Eng. To search for ore by tracing the shode. See also: [shoad](#)

shoe

a. A trough to convey ore to a crusher. b. A metal block used in a variety of bending operations to form or support the part being processed. *ASM, 1* c. A coupling of rolled, cast, or forged steel to protect the lower end of the casting or drivepipe in overburden, or the bottom end of a sampler when pressed into a formation being sampled. *Long* d. A wearing piece in various types of machines used to break rock, such as a column of drill pipes; bottom of crushing stamp; muller of amalgamating pan. *Pryor, 3* e. The lower replaceable part of a gravity stamp which falls on the mineral ore or rock. *Nelson*

shoepite-III

See: [paraschoepite](#)

shoestring claim

A mining claim in the form of a long narrow strip.

shoestring location

A location of a long and narrow strip of mineral land. *Ricketts*

shonkinite

A dark-colored syenite composed chiefly of augite and alkali feldspar, and possibly containing olivine, hornblende, biotite, and nepheline. Its name, given by Weed and Pirsson in 1895, is derived from Shonkin, the Indian name for the Highwood Mountains of Montana. *AGI*

shoo-fly

a. Miner's work train. *Korson* b. Any crosscut between a haulageway and airway through which cars are run. See also: [pickup](#); [slant](#).

shoot

a. See: [ore shoot](#); pipe; blast; chute. Also spelled chute. b. To break coal loose from a seam by the use of explosives; loosely used, also as applied to other coal-breaking devices. *BCI* c. To break down by airblasting. *BS, 12* d. A body of ore, usually of elongated form, extending downward or upward in a vein. Also called ore shoot. *Long* e. The payable section of a lode; an enriched portion of a continuous orebody. *Nelson* f. Any considerable and somewhat regular mass of ore in a vein, frequently a rich ore streak in a vein; a chimney; also, a vein branching at a small angle from and reentering the main vein. *Standard, 2* g. The valuable minerals are commonly concentrated in certain portions of a vein that have one dimension much longer than the others. This

shoot or chimney of ore is usually highly inclined to the horizontal. *Lewis* h. To explode a charge in blasting operations. *Hudson* i. See: [blast](#) j. In seismic exploration, the firing of the explosive by an electrical impulse; also, the process of carrying out a seismic survey, to shoot an area or prospect. *AGI*

shooter

See: [blaster](#)

shooting

The use of explosives in rock breaking.

shooting against the bank

See: [blanket shooting](#)

shooting boat

In marine seismic exploration, a boat equipped to carry explosives, and from which the placing and firing of shots are performed. *AGI*

shooting by seismograph

The making of a seismographic survey. The term shooting derives from the setting off of explosions in the ground. The shock waves from these explosions are recorded by a seismograph, and from these records a contour map can be made. *Williams*

shooting needle

A blasting needle; a metallic rod used in the stemming of a drill hole for the purpose of leaving a cavity through which a charge may be fired. *Fay*

shooting off-the-solid

Mining coal by heavy blasting without undermining or shearing it. In England, called shooting fast. *Fay*

shooting on-the-free

The use of a smaller charge of powder to blow down the face of the coal after it has been undercut, as distinguished from "shooting off-the-solid". *Fay*

shooting rights

The right to enter upon land and make a geophysical survey. *Williams*

shooting truck

In seismic operations, a truck equipped to carry explosives, materials, and equipment for preparing, loading, tamping, and firing explosive charges. *AGI*

shooting valve

The control valve provided for the purpose of admitting compressed air to an airblasting shell and of venting residual air, in the shell and hose, to the atmosphere. *BS, 12*

shop rivet

A rivet driven in a workshop, as distinct from a field or site rivet. *Hammond*

shoran

A precise electronic measuring system for indicating distance from an airborne or shipborne station to each of two fixed ground stations simultaneously by recording (by means of cathode-ray screens) the time required for round-trip travel of radar signals or high-frequency radio waves and thereby determining the position of the mobile station. Its range is effectively limited to line-of-sight distances (or about 40 nmi or 74 km). Shoran is used in control of aerial photography, airborne geophysical prospecting, offshore hydrographic surveys, and geodetic surveying for measuring long distances. CF: [loran](#) navigation. *AGI*

shore drift

The coarse material covering the bottom where the agitation of the water at the bottom is effective constitutes shore drift. See also: [littoral drift](#)

Shore hardness test

A scale of hardness of rocks as determined by the Shore scleroscope test. The scale avoids the limitation of Mohs' scale of hardness and gives better assessment of rock hardness. See also: [tungsten carbide bit](#)

shore reef

See: [fringing reef](#)

Shore scleroscope

An instrument comprising a small diamond-shaped hammer that falls freely down a graduated tube of glass from a constant height. The hardness of the surface under test is measured by the height of the rebound. In one type of this instrument, the rebound of the hammer actuates the pointer of a scale so that the height of rebound is recorded. See also: [scleroscope hardness test](#)

shore terrace

a. A terrace produced by the action of waves and currents along the shore of a lake or sea; e.g., a wave-built terrace. *AGI* b. Marine terrace. *AGI*

shore up

To stay, prop up, or support by braces.

shoring

Timbers braced against a wall as a temporary support. Also, the timbering used to prevent a sliding of earth adjoining an excavation. *Crispin*

short

a. Said of roof shale that tends to break up or crush under pressure into small fragments and that will not hold in any span over a few inches. Also called tender. *Raistrick* b. Brittle; friable; breaking or crumbling readily; inclined to flake off; said of coal. c. Used to denote a roof that has very little structural strength. *TIME*

short awn

A direction of more than 45 degrees to the main natural line of cleat or cleavage in the coal. Also spelled horn. CF: [long awn](#)

short coal

See: [short](#)

short column

A column so short in relation to its cross section that, if overloaded, it will fail by crushing rather than by buckling. CF: [long column](#) *Hammond*

short-delay blasting

a. A method of blasting where the explosive charges are detonated with a very short delay interval between them. It enables shots to assist one another as in simultaneous

firing, and also each shot or group of shots establishes a free or semifree face for the following group of shots. *Nelson* b. Method of blasting by which charges are caused to explode in a given sequence with time intervals of 0.001 to 0.1 s. *Fraenkel*

short-delay detonator

a. A detonator in which the interval of time delay is incremental in milliseconds. Syn: [millisecond-delay detonator](#) b. The original 1-s delay detonators are no longer used, and the choice now lies between the one-half-second type and those known as short-delay detonators. These give better fragmentation of rock and consequently better loading rates. *Nelson*

short-delay electric detonator

An electric detonator with a designated delay period of 25 to 1,000 ms. *CFR, 4*

short-flame explosive

See: [permissible explosive](#)

short hole

Taphole in a furnace that is not properly stopped and that is likely to release the molten charge prematurely. *Henderson*

short-hole work

Diamond drilling where the length of borehole generally does not exceed 100 ft (30 m). *Long*

short period

The time required to drill a few holes for trolley hangers or a few short block holes, or one or two holes for bringing down a piece of loose roof.

short-period delay

An electric blasting cap that explodes one-fiftieth to one-half second after passage of an electric current. Syn: [millisecond delay](#) *Nichols, 1*

short-range order

a. Identical first-neighbor coordination of atoms. Typical of glassy structures. *Van Vlack*
b. A structural state in which cations have coordination polyhedra as predicted by radius ratios but lack the long-range order of crystallinity; e.g., silicate glasses. CF: [long-range](#)

[order](#) c. The type of order in which the probability of a given type of atom having neighbors of a given type (for example, that an Alpha atom is surrounded by Beta atoms) is greater than would be expected on a purely random basis. There is thus a tendency to form small ordered domains, but these do not link together at long distances.

short run

To be forced by adverse conditions or core blockage to pull the drill string before the core barrel being used is filled to capacity with core. CF: [long run](#)

shorts

a. As applied to asbestos, consist of the very shortest of classified grades; the fibers may vary from microscopical thin filaments to crude bundles of fibers of appreciable thickness. Included may be particles of nonfibrous serpentine ranging from a palpable powder to granules of visible size. *Sinclair*, 7 b. The product that is retained on a specified screen in the screening of a crushed or ground material. *ASM*, 1 c. In gold cyanidation, the oversize after the gold-rich zinc from the precipitation boxes has been rubbed through. *Pryor*, 3 d. The shortage in production under a royalty lease. *CTD*

short section

A section of land according to the U.S. Governmental Survey that contains less than 640 acres. *Williams*

short shot

Colloquialism for weathering (or low-velocity layer) shot in seismic prospecting. *AGI*

short-term exposure limit

A 15-min time-weighted average exposure that should not be exceeded at any time during a work day even if the 8-h time-weighted average is within the threshold limit value. Abbrev: STEL. *ACGIH*, 2

shortwall

a. The reverse of longwall, frequently used to mean the face of a room. *Zern* b. A method of mining in which comparatively small areas are worked separately, as opposed to longwall; e.g., room and pillar. *BCI* c. A length of coal face intermediate between a stall and a normal longwall face. A shortwall face may be any length between about 5 yd and 30 yd (4.6 m and 27 m) and is generally employed in pillar methods of working. Rooms and stables may also be classified as shortwall faces. See also: [shortwall development](#)

shortwall coal cutter

a. A machine for undercutting coal that has the cutter bar fixed in relation to the main body of the machine. It sumps and cuts across a face in a more or less continuous motion, except when it becomes necessary to stop to change the position of the ropes used to move the machine through the action of rope drums, or when difficulties in cutting are experienced. *Jones, I* b. A coal cutter that has a long, rigid chain jib in line with the body of the machine; it cuts across a heading from right to left, being drawn across by means of a steel wire rope. This machine cannot be readily flitted from one heading to another unless a power-propelled flitting truck is available; otherwise each heading requires its own shortwall cutter. A shortwall cutter will make a 6-ft (1.8-m) cut across a 15-ft (4.6-m) heading in 20 min, including sumping in and out of the cut. *Mason*

shortwall development

A system of coal working sometimes employed in seams 4 ft (1.2 m) or under in thickness, with the aid of machines. Short faces, each 15 to 30 yd (13.7 to 27 m) wide, are driven at 50- to 70-yd (46- to 61-m) centers, with crosscuts to assist coal transport and ventilation. The rippings are used to form roadside packs. The shortwalls are driven to the boundary, and the coal pillars are worked by longwall retreating. See also: [shortwall](#)

shoshonite

A trachyandesite composed of olivine and augite phenocrysts in a groundmass of labradorite with alkali feldspar rims, olivine, augite, a small amount of leucite, and some dark-colored glass. Shoshonite grades into absarokite with an increase in olivine and into banakite with more sanidine. Its name, given by Iddings in 1895, is derived from the Shoshone River, WY. *AGI*

shot

a. Coal that has been broken by blasting or other devices. *BCI* b. A single explosive charge fired in coal, stone, or ore. *Nelson* c. A detonation (or its equivalent) as used in seismic shooting. See also: [gouging shot](#) d. Small spherical particles of brittle hard steel used as the cutting agent in drilling a borehole with a shot drill. Also called adamantite shot; buckshot; chilled shot. See also: [gripping shot](#); [blast](#); shot drill. *Long*

shot blasting

A method similar to sandblasting for cleansing the surface of metals, using broken shot or steel grit instead of sand. *Hammond*

shot boring

The act or process of producing a borehole with a shot drill. See also: [shot drill](#)

shot-boring drill

See: [shot drill](#)

shot bort

a. Incorrectly used to designate a small spherical-shaped drill diamond. See: [drill diamond](#) b. See: [ballas](#) c. Variety of bort with little impurity, in milky-white to steel-gray spherical stones with radiating structure and great toughness. *Tomkeieff* d. Spheres of translucent diamond with more cohesion than ordinary bort. See also: [bort](#)

shot break

In seismic prospecting, a record of the instant of generation of seismic waves, as by an explosion. Syn: [time break](#); [shot instant](#). *AGI*

shot copper

Small, rounded particles of native copper, molded by the shape of vesicles in basaltic host rock, and resembling shot in size and shape. *AGI*

shotcrete

Gunitite that commonly includes coarse aggregate (up to 2 cm). *AGI*

shot datum

Seismic calculations are usually reduced to a convenient reference surface or plane. These calculations simulate a condition where the charge is shot on the reference surface and the energy is also recorded on this same reference surface. At this reference surface, the time-depth charts have their origin. *AGI*

shot depth

The distance from the surface to the explosive charge. In the case of small charges, the shot depth is measured to the center of the charge or to the bottom of the hole. In the case of large charges, the distances to the top and to the bottom of the column of explosives are frequently given, and may be reduced to effective shot depth to give the equivalent of a concentrated charge. *AGI*

shot drill

A core drill generally employed in rotary-drilling boreholes of less than 3 in (7.62 cm) to more than 6 ft (1.8 m) in diameter in hard rock or concrete, using chilled-steel shot as a cutting medium. Also called adamantine drill; calyx drill; chilled-shot drill. See also: [core drill](#); shaft drilling. Syn: [shot-boring drill](#)

shot-drilled shaft

Shafts of up to 5 ft (1.5 m) in diameter drilled through rock to a maximum depth of 1,200 ft (366 m) by means of a shot drill. The latter makes use of shot for cutting a circular groove in the rock being penetrated, from which solid cores are extracted. *Hammond*

shot elevation

a. Elevation of the dynamite charge in the shothole. *AGI* b. The elevation of the explosive charge in the shot hole. Not to be confused with shothole elevation. *AGI*

shot fast

Coal mined by blasting; shot off the solid.

shot feed

A device to introduce chilled-steel shot, at a uniform rate and in the proper quantities, into the circulating fluid flowing downward through the rods or pipe connected to the core barrel and bit of a shot drill. *Long*

shot firer

a. A worker whose special duty is to fire shots or blasts, esp. in coal mines. A shot lighter. Also called a shooter. b. In a coal mine, a qualified miner who tests for gas before firing explosive shots. *Pryor, 3* c. See: [blaster](#)

Shot Firer

A multiple-shot permissible blasting unit introduced in 1948, known as Capacitor Type Permissible Shot Firer. Weighing approx. 1 lb (0.454 kg) and about the size of an ordinary flashlight, the nonmetallic unit is equipped with a belt hook which permits its being carried under supervision of the shot firer. If desired, shots can be fired without removing the unit from the belt. It is capacitor operated, eliminating dependence on speed of operation for energy output. Capacitors supply high voltage, for a few milliseconds, more than ample to fire from 1 to 10 electric blasting caps. *Kentucky*

shot firing

a. The action of detonating or igniting a charge of explosive, usually in a drilled hole. *BS, 12* b. The firing of an explosive charge in a drilled hole to break the material to a suitable size for loading. *Nelson*

shot-firing blasting cord

A two-conductor cable used for completing the circuit between the electric blasting cap (or caps) and the blasting unit or other source of electric energy. Syn: [blasting cord](#)

shot-firing cable

A pair of insulated copper conductors which lead from the exploder to the detonator wires. It may be either twin-core (both conductors contained in the one cable) or single-core (each conductor contained in a separate cable). Twin-core cables having cores of four strands, each 0.018 in (0.046 cm) in diameter (4/0.018) with a resistance of approx. 5 Omega per 100 yd (91 m), are commonly used. Actual choice of cable must depend upon conditions of use and the relevant regulations. Syn: [twin-core shot-firing cable](#)

shot-firing cable tests

The methods of testing twin-core and single-core cables are identical. Two tests are applied, one for insulation and one for continuity, and where large and important charges are being fired, as in tunnel, wellhole, and quarry blasts, tests are made before every blast. For the cable insulation test, an approved circuit tester or ohmmeter is connected to one end of the cable, the two conductors at the other end being separated. No current should flow, and the resistance should be infinite. For the continuity test, the two far ends of the cable should be joined. The tester should show that the current is complete, or if an ohmmeter is used, this should show the correct resistance of the shot-firing cable. *Nelson*

shot-firing circuit

Extends from the exploder along the shot-firing cable, detonator wires, and finally the detonator. The shot-firing circuit is the path taken by the electric current from the exploder when a shot is detonated. *Nelson*

shot-firing curtain

A steel chain mat suspended from the roof about 9 to 12 ft (2.74 to 3.66 m) from the face of an advancing tunnel to limit damage to equipment and danger from flying debris when shot firing at the face. It consists of a steel frame with chains suspended about 6 in (15 cm) apart. See also: [blasting curtain](#)

shot firing in rounds

The firing of a number of shots in a tunnel, or shaft sinking at one operation with instantaneous or delay detonators. *Nelson*

shot-firing unit

See: [blasting unit](#)

shothole

a. A hole drilled for the purpose of shot firing. *BS, 12* b. A hole drilled in coal, ore, or rock, usually from 3 to 9 ft (0.9 to 2.7 m) in length (underground), for breaking down the material by means of explosives. *Nelson* c. The borehole in which an explosive is placed for blasting. See also: [blasthole](#) d. See: [shot point](#) e. A borehole drilled with a shot drill. *Long* f. In seismic prospecting, a borehole in which an explosive is placed for generating seismic waves. *AGI*

shothole bridge

a. When an obstruction in the shothole makes it difficult or impossible to get the charge deeper, the hole is said to be bridged. A narrow diameter in the hole due to a resistant bed often makes it difficult to get the charge down the hole. A mechanical device that purposely bridges the hole at a shallow depth in order that the hole may be filled. *AGI* b. An obstruction in a shothole that prevents an explosive charge from going deeper. It may be accidental or intentional. *AGI*

shothole casing

Lightweight pipe, usually about 4 in (10 cm) in diameter. A typical joint of casing is 10 ft (3 m) long and has threaded connections on both ends. The primary use of casing is to prevent the shothole from caving and bridging. The lightweight casing may be considered as an expendable item. *AGI*

shothole drill

a. Generally, a rotary percussion or auger type drill for making shotholes for blasting. b. Drills for shotholes are of two general types: (1) the rotary drill and (2) the churn drill. Rotary drill methods can be subdivided into (1) mechanical feed and (2) hydraulic feed. Both types provide a means for rotating the pipe, and both make provisions for circulating fluid down through the pipe, thus washing the cuttings away from the bit and conveying them up to the surface in the annular space between the wall of the hole and the string of drill pipe. The churn drill is similar to the larger cable-tool type. It is seldom used except in areas where underground cavities hamper the return flow of the circulating fluid used in the rotary methods. Portable drills, water jets, and airblast equipment and augers are also used in certain areas. Syn: [blasthole drill](#) *AGI*

shothole elevation

The elevation of the ground at the top of the shothole. *AGI*

shothole fatigue

Phenomenon causing observed travel times to a fixed receiver point to increase with successive shots in the same hole. *AGI*

shothole log

The drillers' record of the depths, thicknesses, and lithologic characteristics of the formations encountered in the seismic shothole. *AGI*

shothole plug

A plug, usually of wood, used by seismic field parties to plug a hole upon completion of shooting. This prevents caving, protects the public from injury, and protects the exploration company from damage claims that might result from open holes. *AGI*

shot instant

The elevation of the explosive charge in the shot hole. Not to be confused with shothole elevation. Syn: [shot break](#); [time break](#); [shot moment](#). *AGI*

shot metal

Metal in the form of small, spherical, or nearly spherical, pellets. It is usually made by causing molten metal to fall, dropwise, from a suitable height into a quenching medium. Also called shot. *Henderson*

shot moment

See: [time break](#); shot instant.

shot-moment line

An electric line wrapped around a dynamite charge and connected to a telephone or radio circuit. The explosion breaks the circuit to record the shot instant or moment. Use is largely obsolete. *AGI*

shot off the solid

A method of breaking coal from the solid seam by the use of explosives, when the seam has not previously been cut or sheared to prepare the coal for blasting. Also called shot fast. *BCI*

shot point

The point at which a charge of dynamite is exploded for the generation of seismic energy. In field practice, the shot point includes the hole and its immediately surrounding area. See also: [shothole](#)

shot rock

Blasted rock. *Nichols, 1*

shot runner

See: [fire runner](#)

shot samples

Samples taken for assay from molten metal by pouring a portion into water to granulate it. *Webster 3rd*

shot-sawed surface

Term used to describe the surface finish of building limestone that is deeply scored by using steel-shot abrasive with gangsaws. *AIME, 1*

shot soil

Soil in which small pellets of iron oxide occur or are forming. *AGI*

shot tamper

See: [tamper](#)

shotter

Bedded pebbles and sand; glacial outwash gravels. *Arkell*

shotting

The production of shot by pouring molten metal in finely divided streams. Solidified spherical particles are formed during descent and are cooled in a tank of water. *ASM, 1*

shotty gold

Small granular pieces of gold resembling shot.

shoulder

a. A line formed by the intersection of the face or leading surface of a bit crown and the straight-wall side surface of the crown. *Long* b. A ledge formed by an abrupt change in the course of a borehole. *Long* c. A ledge or projection on drill rods, couplings, pipe, or bits formed at points where an increase or decrease in diameter occurs. *Long* d. The side of a horizontal pipe, at the level of the center line. *Nichols, I* e. A short, rounded spur projecting laterally from the side of a mountain or hill. *AGI* f. The sloping part of a mountain or hill below the summit. *AGI*

shoulder cutting

S. Staff. Cutting the sides of the upper lift of a working place in a thick coal colliery next to the rib, preparatory to breaking the coal.

shoulder stone

The diamonds set in a bit at or along the line formed by the intersection of the face or leading surface of a bit crown and the straight-walled side surfaces of the bit crown or shank. CF: [kerf stone](#)

shovel

a. Any bucket-equipped machine used for digging and loading earthy or fragmented rock materials. b. There are two types of shovels, the square-point and the round-point. These are available with either long or short handles. The round-point shovel is used for general digging since its forward edge, curved to a point, most readily penetrates moist clays and sands. The square-point shovel is used for shoveling against hard surfaces or for trimming. *Carson, I* c. See: [power shovel](#)

shovel craneman

In bituminous coal mining, a maintenance mechanic who inspects, oils, greases, adjusts, and repairs machinery of a power shovel used to dig and load coal (after blasting) into cars in a strip mine. May be designated according to type of power, as electric-shovel craneman; steam-shovel craneman. Also called stripping-shovel craneman. *DOT*

shovel dozer

A tractor equipped with a front-mounted bucket that can be used for pushing, digging, and truckloading. *Nichols, I*

shovel front

In power-shovel nomenclature, the shovel front is composed of a main boom and a secondary boom known as the dipper stick, at the outer end of which is the dipper or shovel bucket. *Carson, 1*

shovel loader

A loading machine mounted on driven wheels by which it is forced into the loose rock at the tunnel face. A bucket hinged to the chassis scoops up the material, which is elevated over and discharged behind the machine. There are two types: (1) the bucket is discharged directly into a mine car behind the machine, and (2) a short conveyor, built into the loader, receives the dirt from the bucket and conveys it back into a car or conveyor. See also: [mechanical shovel](#); [loader](#); [loading shovel](#). *Nelson*

shovel trough

In a duckbill, the shovel part of the loading mechanism that is advanced into a coal pile or retracted according to the adjustment of the operating carrier. *Jones, 1*

show

a. When the flame of a safety lamp becomes elongated or unsteady, owing to the presence of combustible gases in the air, it is said to show. *Zern* b. The detectable presence of mineral, oil, or gas in a borehole, as determined by examination of the core or cuttings. *Long* c. Visual particles of gold found in panning a gravel deposit. *AGI*

shower roasting

Rapid oxidation-roast of finely ground sulfide ores, which are caused to fall through rising heated air. *Pryor, 3*

showing

a. The first appearance of float, indicating the approach to an outcropping vein or seam. *Zern* b. Can. Surface occurrence of mineral. *Hoffman*

shrinkage

a. The decrease in volume of a soil or fill material through the reduction of voids by mechanical compaction, superimposed loads, or natural consolidation. *Nelson* b. The settling or reduction in volume of earthen fills, cement slurries, or concrete on setting. *Long* c. In bitmaking by the powder-metal processes, the difference between the dimensions of the finished bit crown and those of the bit mold. *Long* d. The decrease in

volume of clayey soil or sediment owing to reduction of void volume, principally by drying. *AGI*

shrinkage cavity

A void left in cast metals as a result of solidification shrinkage. *ASM, 1*

shrinkage crack

A crack produced in fine-grained sediment or rock by the loss of contained water during drying or dehydration; e.g., a desiccation crack or a mud crack. *AGI*

shrinkage index

The numerical difference between the plastic and shrinkage limits. *ASCE*

shrinkage stope

One in which only part of the severed ore is removed during stoping, the balance being temporarily available as support of workings. Used in steeply dipping lodes with strong walls. *Pryor, 3*

shrinkage stoping

A vertical, overhand mining method whereby most of the broken ore remains in the stope to form a working floor for the miners. Another reason for leaving the broken ore in the stope is to provide additional wall support until the stope is completed and ready for drawdown. Stopes are mined upward in horizontal slices. Normally, about 35% of the ore derived from the stope cuts (the swell) can be drawn off ("shrunk") as mining progresses. As a consequence, no revenues can be obtained from the ore remaining in the stope until it is finally extracted and processed for its mineral values. The method is labor intensive and cannot be readily mechanized. It is usually applied to orebodies on narrow veins or orebodies where other methods cannot be used or might be impractical or uneconomical. The method can be easily applied to ore zones as narrow as 4 ft (1.2 m), but can also be successfully used in ore widths up to 100 ft (30 m). Syn: [shrinkage with waste fill](#)

shrinkage with waste fill

See: [shrinkage stoping](#)

Shropshire method

See: [longwall](#)

shroud laid rope

A rope of four strands laid around a core. *Zern*

shungite

A hard black amorphous material containing >98% carbon, interbedded among Precambrian schists; probably the metamorphic equivalent of bitumen, but possibly merely impure graphite. Also spelled schungite.

shunt

A connection between two wires of a blasting cap that prevents building up of opposed electric potential in them. *Nichols, 1*

shunt back

A track arrangement for bringing a wagon or mine car to another track without the need for a curve, turntable, or traverser. Also called back shunt; switchback. *Nelson*

shutdown time

One of the rate provisions in drilling contracts, specifying the compensation to the independent drilling contractor when drilling operations have been suspended at the request of the operator. *Williams*

shute

See: [chute](#)

shutoff valve

A device by means of which the flow of gas or fluid can be made to cease--usually not with the intention of metering or regulating the flow. *Long*

shuts

Scot. Movable or hinged supports for the cage at a shaft landing. Also called keps; keeps; chairs; dogs; seats.

shuttle

A back-and-forth motion of a machine that continues to face in one direction. *Nichols, 2*

shuttle car

A vehicle on rubber tires or continuous treads to transfer raw materials, such as coal and ore, from loading machines in trackless areas of a mine to the main transportation system. See also: [rubber-tired haulage](#); trackless tunneling. *Nelson*

shuttle-car operator

In bituminous coal mining, one who drives an electrically powered truck (shuttle car) in a coal mine to transport coal from the excavation point to the conveyor belt. *DOT*

shuttle conveyor

a. A conveyor that is moved forward or backward in normal operation to vary the loading or discharge points, or both. It may be designed to move only in a straight path, or in either a straight or a curved path. See also: [movable conveyor](#) b. Any conveyor, such as belt, chain, pan, apron, screw, etc., in a self-contained structure movable in a defined path parallel to the flow of the material.

shuttle multispectral infrared radiometer

See: [multispectral scanner](#)

sial

a. A layer of rocks, underlying all continents, that ranges from granitic at the top to gabbroic at the base. The thickness is variously placed at 30 to 35 km. The name derives from the principal ingredients, silica and alumina. Specific gravity, about 2.7. *AGI* b. A petrologic name for the upper layer of the Earth's crust, composed of rocks that are rich in silica and alumina; it may be the source of granitic magma. It is characteristic of the upper continental crust. Etymol: an acronym for silica + alumina. Adj: sialic. CF: [sialma](#) Syn: [sal](#); [granitic layer](#). *AGI*

siallite

a. A group name for the kaolin clay minerals and allophane. *AGI* b. A rock composed of siallite minerals. *AGI*

sialma

A mnemonic term derived from (si) for silica, (al) for alumina, and (ma) for magnesium, applied as a compositional term to a layer within the Earth that occupies a position intermediate between sial and sima. *AGI*

Siam ruby

A name sometimes erroneously applied to the dark ruby spinel occurring with the rubies of Thailand.

Siberian aquamarine

A blue-green beryl from Siberia, Russia.

Siberian ruby

Rubellite; a pink variety of elbaite found in Siberia.

siberite

A violet-red or purple variety of elbaite from Siberia. See also: [Siberian ruby](#)

Sicilian amber

Simetite, a variety of amber.

sickening

a. A scum that forms on the surface of mercury that retards amalgamating, caused by grease, sulfides, arsenides, etc. *Gordon* b. The flouring of mercury. See also: [floured](#)

sicklerite

An orthorhombic mineral, $\text{Li}(\text{Mn,Fe})\text{PO}_4$ forms a series with ferrisicklerite; dark brown. Syn: [manganese sicklerite](#)

sick mercury

Mercury that has become contaminated so that it has neither a clean, bright surface nor a spheroidal shape when in globules. Effect produced by sulfur, oil, talc, graphite, sulfides of antimony, arsenic or bismuth, calcium earths. In this state, it cannot be used to amalgamate gold. *Pryor, 3*

side

a. The more or less vertical face or wall of coal or goaf forming one side of an underground working place. b. The wall of a vein. c. Part of a rock mass bordering on a fault plane. *Schieferdecker*

side adit

A side passage sometimes made when the main adit is choked with waste rock.

side arch pups

Firebricks of a certain standard size. *Osborne*

side basse

A transverse direction of the line of dip in strata.

sideboard

a. A board used in timbering the sides of a heading. See also: [side trees](#) b. A board applied to the sides of conveyors, usually of the chain type, to increase the height when coal is being loaded at the face by hand onto the conveyor. Also applied to a baffle plate used with belt conveyors. *Jones, 1*

side-boom dredge

Similar to the hopper dredge except that the discharge, instead of going into hoppers or directly back into the sea, is carried in a discharge pipe hung from a boom, a distance of from 200 to 500 ft (60 to 150 m) directly to port or starboard of the vessel, and there discharged into the atmosphere, dropping vertically from a height of about 50 ft (15 m) onto the surface of the sea. The drag heads of the dredge provide a channel, and the excavated soil is spread over a wide shoal area on either side, without the necessity of hauling it to the sea. *Carson, 2*

sidecasting

Piling spoil alongside the excavation from which it is taken. *Nichols, 2*

side-discharge shovel

A shovel loader, driven by compressed air or by electricity, for loading loose coal or rock. A bucket of capacity 21 ft³ (0.59 m³), hinged to the chassis, digs, lifts, and discharges the material sideways onto a scraper or belt conveyor; suitable for stable holes, pillar methods of working, and general repair work. *Nelson*

side-entrance manhole

A deep manhole in which the access shaft is built to one side of the inspection chamber. *Hammond*

side-fired furnace

A furnace with fuel supplied from the side. *ASTM*

sidehill cut

A long excavation in a slope that has a bank on one side, and is near original grade on the other. *Nichols, 1*

side-hitching

An act in which a mule is hooked by its harness to the side instead of the front of a loaded car to give it enough momentum to slide onto a cage. *Korson*

side-laning

S. Staff. The widening of an abandoned gate road, and making it part of the new side of work. *Fay*

sideline

a. The line connecting the dredger with anchorage on either side and winch on board used to steady the hull in required digging position. See also: [headline](#) b. A surface line of the claim along the vein. It bounds the side of the claim.

sideline agreement

In a mineral claim where the apex law applies (United States), neighboring mine owners may come to a sideline agreement to adjust or limit the law as it affects their respective properties. *Nelson*

sidelong reef

An overhanging wall of rock in alluvial formation extending parallel with the course of the gutter; generally only on one side of it.

side piles

The side poling boards used in driving a heading. *Stauffer*

sideplate

In timbering, where both a cap and a sill are used, and the posts act as spreaders, the cap and the sill are spoken of as the sideplates. See also: [endplate](#); [wallplate](#). *Fay*

side-port furnace

A furnace with ports on the sides. *ASTM*

siderite

a. A trigonal mineral, FeCO_3 ; calcite group, with Fe replaced by Mg toward magnesite and Mn toward rhodochrosite; rhombohedral crystals and cleavage; light to dark brown; in bedded deposits (black-band ores, clay ironstone); occurs in hydrothermal veins, cavities in mafic igneous rocks, pegmatites, and limestone; a source of iron. Syn: [chalybite](#); spathic iron; sparry iron; rhombohedral iron ore; iron spar; junckerite; junkerite; siderose; white iron ore. See also: [iron ore](#) b. An obsolete syn. of sapphire quartz. See also: [sapphire quartz](#) *AGI* c. An obsolete term formerly applied to various minerals, such as hornblende, pharmacosiderite, and lazulite. *AGI* d. A general name for iron meteorites, composed almost wholly of iron alloyed with nickel. Obsolete syn: aerosiderite. *AGI*

siderodot

A variety of siderite containing calcium.

sideroferrite

A variety of native iron occurring as grains in petrified wood.

siderogel

Amorphous $\text{FeO}(\text{OH})$ in some bog iron ores.

sideromelane

A basaltic glass from the palagonite tuffs of Sicily, Italy. *Fay*

sideronatrite

An orthorhombic mineral, $\text{Na}_2 \text{Fe}(\text{SO}_4)_2 (\text{OH}) \cdot 3\text{H}_2 \text{O}$; soft; orange to straw-yellow.

siderophile

a. Said of an element concentrated in the metallic rather than in the silicate and sulfide phases of meteorites, and probably concentrated in the Earth's core relative to the mantle and crust (in Goldschmidt's scheme of element partition in the solid Earth). *AGI* b. Said of an element with a weak affinity for oxygen and sulfur, and readily soluble in molten iron. Examples are Fe, Ni, Co, P, Pt, Au. CF: [lithophile](#)

siderophyllite

A monoclinic mineral, $\text{KFe}_2 \text{Al}(\text{Al}_2 \text{Si}_2)\text{O}_{10} (\text{F},\text{OH})_2$; mica group.

siderosa

Sp. Spathic iron ore or siderite.

sideroscope

An instrument for detecting small quantities of iron by the magnetic needle. *Webster 2nd*

siderose

See: [siderite](#)

siderosis

Pneumoconiosis occurring in iron workers from inhalation of particles of iron. *Webster 3rd*

siderosphere

See: [inner core](#)

sidertil

A triclinic mineral, $\text{FeSO}_4 \cdot 5\text{H}_2\text{O}$; chalcantite group; light green.

sides

A local New York and Pennsylvania term applied by bluestone quarrymen to open joints that extend east and west.

side shearing

In salt mining, a vertical cut at each end of the room that permits the explosive to expand with the least resistance, thus promoting efficiency and power economy. *Kaufmann*

side shelves

The shelves fastened along the sides of the entry throughout the explosion zone on which dust is placed in explosion testing in an experimental mine or gallery. *Rice, 2*

side shot

A reading or measurement from a survey station to locate a point that is off the traverse or that is not intended to be used as a base for the extension of the survey. It is usually made to determine the position of some object that is to be shown on a map. *AGI*

side slicing

See: [top slicing combined with ore caving](#)

side spit

The emission of sparks through the sides of a burning fuse. *Fay*

side stoping

See: [overhand stoping](#)

side thrust

a. The lateral force against the borehole walls resulting from the buckling or sag in the drill rods at one or more points above the bit. *Long* b. The lateral force developed when the area covered by the bit is not uniformly hard. *Long*

sidetracked

a. A term applied when tools or downhole drilling equipment is not recovered from a borehole because of the drilling-by or bypassing techniques used. *Long* b. A term applied when a borehole has been deflected, so as to bypass an obstruction. *Long*

sidetracked hole

Drill purposely directed away from a normal, straight course in order to bypass an obstruction or to straighten the hole; or to redirect the deeper portion by redrilling to an alternate bottom-hole location. See also: [directional drilling](#); [deviation](#). *AGI*

sidetracking

The deliberate act or process of deflecting and redrilling the lower part of a borehole away from a previous course. *AGI*

side trees

a. Posts ranging from 3 to 6 in (7.6 to 15.2 cm) in thickness which support both the head trees and sideboards in a heading. *Hammond* b. The two posts of a heading set. See also: [headtree](#)

sidewall core

A core or rock sample extracted from the wall of a drill hole, either by shooting a retractable hollow projectile, or by mechanically removing a sample. *AGI*

sidewall coring tool

An eccentric sampling device that gouges a small sample, sometimes in the form of a core, from the sidewall of a borehole. Syn: [sidewall sampler](#) *Long*

sidewalls

a. Walls, usually masonry, at each end of a culvert. *Nichols, 1* b. See: [endwall](#)

sidewall sampler

See: [sidewall coring tool](#)

sidewall sampling

The process of securing samples of formations from the sides of the borehole anywhere in the hole that has not been cased. *AGI*

siding over

A short road driven in a pillar in a headwise direction. *Zern*

Siebe-Gorman self-rescuer

A self-rescuer consisting of a hermetically sealed, quick-release canister with inhalation and exhalation valves fitted to the top, a head strap, a rubber mouthpiece, a chin rest, and a nose clip. It is carried on a miner's belt and weighs only 22 oz (0.62 kg). The air enters at the perforated diaphragm in the bottom of the canister, and passes through layers of filters before it reaches the mouthpiece. The complete respirator is held in position by a head strap. See also: [self-rescuer](#) *McAdam, 1*

sieburgite

A fossil resin from the brown coal near Bonn, Germany; it ranges in color from golden yellow to brownish red, and is partly soluble in alcohol and ether. *Fay*

siege

The floor of a pot furnace, often called bench.

siegenite

An isometric mineral, $(\text{Ni},\text{Co})_3\text{S}_4$; linnaeite group.

Siemens and Halske process

A metallurgical process for the recovery of copper. Copper sulfides are dissolved by solutions of ferric sulfate containing free sulfuric acid, and the solution is then electrolyzed in a tank having a diaphragm. Copper is deposited, and ferric sulfate is regenerated. *Liddell*

Siemens direct process

A process for making wrought iron directly from iron ore, without the previous production of pig iron. *Standard, 2*

Siemens furnace

A reverberatory furnace, heated by gas, with the aid of regenerators. *Fay*

siemensite

A highly refractory material, produced by the fusion of chromite, bauxite, and magnesite, in an open electric arc furnace. *Osborne*

Siemens-Martin process

The production of steel in a reverberatory furnace by oxidation of the impurities by oxides added (either the rust on scrap, mill scale, or pure ores). It may be conducted on either acid or basic lining. See also: [open-hearth process](#)

Siemens producer

A furnace used for the manufacture of producer gas. *Fay*

Siemens-Silesian furnace

A Silesian zinc-distillation furnace employing the Siemens system of heat recuperation. *Fay*

sienna

a. A brownish orange-yellow clay colored by iron and manganese oxides; used as a pigment. b. See: [mineral paint](#)

sierra

a. A high range of hills or mountains, esp. one having jagged or irregular peaks that when projected against the sky resemble the teeth of a saw; e.g., the Sierra Nevada in California. The term is often used in the plural, and is common in the Southwestern

United States and in Latin America. Syn: [serra](#) b. A mountainous region in a sierra. Etymol: Spanish, saw, from Latin *serra*, saw. *AGI*

Sierra Leone

A diamond from the Sierra Leone District in Africa. *Long*

sieve

a. A laboratory vessel, the bottom of which is a woven-wire screen, used to separate soil or sedimentary material according to the size of its particles; it is usually made of brass, with the wire-mesh cloth having regularly spaced square holes of uniform diameter. CF: [screen](#) *AGI* b. The screen or grating fixed in a stamp box. c. Vessel, the bottom of which is porous, with apertures of defined size and shape, allowing contents to be retained as oversize or sieved through as undersize. The chief sieve systems used in laboratory work are rings 8 in (20.3 cm) in diameter with woven wire cloths so specified. *Pryor, 3* d. This term is generally reserved for testing equipment; the corresponding industrial equipment is generally called a screen. There are several standard series of test sieves; those most frequently met with in the ceramic industry are British standard sieves (conforming with B.S. 410), United States standard sieves (conforming with National Institute of Standards and Technology LC-584 or ASTM-E11), French standard sieves (AFNOR NF 11-501), and German standard sieves (DIN 4188). In Tyler sieves, the ratio between the mesh sizes of successive sieves in the series is 2; thus, the areas of the openings of each sieve are double those of the next finer sieve. *Dodd*

sieve analysis

Determination of the particle-size distribution in a soil, sediment, or rock by measuring the percentage of the particles that will pass through standard sieves of various sizes. Syn: [sieve classification](#)

sieve bend

Stationary screen with close-spaced wedge wire bars across wet pulp feed, set around arc of circle. *Pryor, 3*

sieve classification

The separation of powder into particle size ranges by the use of a series of graded sieves. Syn: [sieve analysis](#)

sieve fraction

In powder metallurgy, that portion of a powder sample that passes through a standard sieve of specified number and is retained by some finer sieve of specified number. *ASM, I*

sieve mesh

a. Standard opening in sieve or screen, defined by four boundary wires (warp and woof). The laboratory mesh is square and is defined by the shortest distance between two parallel wires as regards aperture (quoted in micrometers or millimeters), and by the number of parallel wires per linear inch as regards mesh. Sixty mesh equals 60 wires/in (152 wires/cm). *Pryor, 3* b. The length of the side of a hole in a sieve. See also: [mesh](#)
Fay

sieve scale

Term applied to the list of screen apertures, taken in order from the coarsest to the finest. *Pit and Quarry*

sieve shakers

Mechanized devices on which a nest of laboratory sieves can be shaken or electrically vibrated during the size analysis of sands. *Pryor, 3*

sieve sizes

Sieves are standardized in British Standard 410 and sieve size diamond powders in British Standard 1987. *Osborne*

sieve texture

See: [poikiloblastic](#)

sieving

a. Grading in accordance with particle size and shape by means of sieves or screens. *Pryor, 3* b. The operation of shaking loose materials in a sieve so that the finer particles pass through the mesh bottom. By using a number of sieves with different meshes, the particles can be graded according to size. Syn: [sifting](#)

sifting

See: [sieving](#)

sight

a. A bob or weighted string hung from an established point in the roof of a room or entry, to give direction to the miners driving the entry or room. *Fay* b. A bearing or angle taken with a compass or transit when making a survey. *Fay* c. Any established point of a survey. *Fay*

sight distance

The distance from which an object at eye level remains visible to an observer. *Hammond*

sighting hub

A stake or mark used by a driller as a means of setting and orienting a drill so that the borehole can be drilled to follow a predetermined directional course. *Long*

sight line

Established compass or transit course for alignment of working places, usually marked on the roof. *BCI*

sights

Bobs or weighted strings hung from two or more established points to give direction to miners driving a chamber or gangway. *Hudson*

sigloite

A triclinic mineral, $\text{FeAl}_2(\text{PO}_4)_2(\text{OH})_3 \cdot 7\text{H}_2\text{O}$; paravauxite group.

sigma heat

See: [total heat](#)

sigma recording methanometer

See: [butane flame methanometer](#)

signal code

See: [hoist signal code](#)

signaling system

The arrangement in use for transmitting signals to stop or start conveyors, rope haulages, locomotives, winders, etc. See also: [face signaling](#); [loudspeaker face telephone](#). *Nelson*

signal system

See: [mine fan signal system](#); hoist signal system.

significant anomaly

An anomaly that is related to ore and that can be used as a guide in exploration. See also: [geochemical anomaly](#)

silcrete

a. A term suggested by Lamplugh (1902) for a conglomerate consisting of surficial sand and gravel cemented into a hard mass by silica. Examples occur in post-Cretaceous strata of the United States. *AGI* b. A siliceous duricrust. Etymol: "sil"iceous + con"crete." CF: [calcrete](#); ferricrete. *AGI*

silent chain

A roller-type chain in which the sprockets are engaged by projections on the link side bars. *Nichols, 1*

silex

a. The French term for flint. *AGI* b. Silica; esp. quartz, such as a pure or finely ground form for use as a filler. *AGI* c. An old term formerly applied to a hard, dense rock, such as basalt or compact limestone. Etymol: Latin, hard stone, flint, quartz. The term was used by Pliny for quartz. *AGI*

silexite

a. An igneous rock composed essentially of primary quartz (60% to 100%), e.g., a quartz dike, segregation mass, or inclusion inside or outside its parent rock. *AGI* b. The French term for chert; specif. chert occurring in calcareous beds. See also: [chert](#)

silica

The chemically resistant dioxide of silicon, SiO_2 ; occurs naturally as five crystalline polymorphs: trigonal and hexagonal quartz, orthorhombic and hexagonal tridymite, tetragonal and isometric cristobalite, monoclinic coesite, and tetragonal stishovite. Also occurs as cryptocrystalline chalcedony, hydrated opal, the glass lechatelierite, skeletal material in diatoms and other living organisms, and fossil skeletal material in diatomite and other siliceous accumulations. Also occurs with other chemical elements in silicate minerals.

silica brick

a. Refractory bricks used to line roofs of furnaces, where there is no contact with basic molten material. *Pryor, 3* b. Silica cemented with a binding agent, for example, slurred lime. *Pryor, 3*

silica-firebrick molder

One who forms silica brick for use in lining furnaces and ovens of various kinds. *DOT*

silica refractories

Refractories made from quartzite, bonded by lime, and consisting essentially of silica, usually with about 2% of lime, and small quantities of iron oxide, alumina, and alkalis. *Henderson*

silica rock

An industrial term for certain sandstones and quartzites that contain at least 95% silica (quartz). It is used as a raw material of glass and other products. CF: [silica sand](#)

silica sand

An industrial term for a sand or an easily disaggregated sandstone that has a very high percentage of silica (quartz). It is a source of silicon and a raw material of glass and other industrial products. CF: [silica rock](#)

silicate

a. A compound whose crystal structure contains SiO_4 tetrahedra, either isolated or joined through one or more of the oxygen atoms to form groups, chains, sheets, or three-dimensional structures with metallic elements. Silicates were once classified according to hypothetical oxyacids of silicon (see metasilicate and orthosilicate) but are now classified according to crystal structure (see nesosilicate, sorosilicate, cyclosilicate, inosilicate, phyllosilicate, tectosilicate). *AGI* b. A term used in the Joplin district, Missouri, for zinc carbonate.

silicate brick

Usually refers to Forsterite brick. Strictly, most bricks are silicate bricks of one kind or other.

silicate degree

In the metallurgical nomenclature of slags, the ratio of the weight of oxygen in the acid to the weight of oxygen in the base. *Newton, 1*

silicate minerals

Minerals with crystal structure containing SiO_4 tetrahedron arranged as (1) isolated units, (2) single or double chains, (3) sheets, or (4) three-dimensional networks. *Leet, 1*

silication

The process of converting into or replacing by silicates, esp. in the formation of skarn minerals in carbonate rocks. CF: [silicification](#) silicated. *AGI*

silicatization process

A special method of sealing off water, for example, reducing its inflow into shafts, by the injection of calcium silicate under pressure. It is sometimes used to reduce the leakage of water through defective lengths of tubing in a shaft. The calcium silicate is highly impervious on solidification, behind the leaking tubing. *Nelson*

silicatosi

A disease of the lungs thought to be caused by silicates.

siliceous

a. Of, relating to, or derived from silica; containing or resembling silica or a silicate; silicic. Also spelled silicious. *Webster 3rd* b. Said of a rock containing free silica or, in the case of volcanic glass, silica in the norm.

siliceous dust

Dust arising from the crushing or other dry working of sand, sandstone, trap, granite, and other igneous rocks is included in this class. Siliceous dusts are not soluble in body fluids, and when introduced into the respiratory tract in the form of particles of certain sizes and in sufficiently high concentration, they produce nodular growths that often result in a form of pneumoconiosis that has been known as silicosis or "stone cutters" consumption. *Pit and Quarry*

siliceous earth

A general term including both diatomaceous earth (diatomite) and radiolarian earth (radiolarite).

siliceous fire clay

A fire clay composed mainly of fine white clay mixed with clean, sharp sand, found in pockets. *Nelson*

siliceous materials

Materials that consist mainly of SiO₂ and must be low in metallic oxides and alkalis. *Newton, 1*

siliceous oozes

These are pelagic deposits that contain a large percentage of siliceous skeletal materials produced by planktonic plants and animals. The siliceous oozes are subdivided into two types on the basis of the predominance of the forms represented, namely (1) diatom ooze, containing large amounts of diatom frustules, therefore, produced by plankton plants, and (2) radiolarian ooze, containing large proportions of radiolarian skeletons formed by these plankton animals. *Hunt*

siliceous ore

Another name for gold-quartz ores. *Newton, 1*

siliceous rocks

Generally, rocks high in silica.

siliceous shale

A hard, fine-grained rock of shaly structure generally believed to be shale altered by silicification. Syn: [phthanite](#) See also: [porcellanite](#)

siliceous sinter

The lightweight porous opaline variety of silica, white or nearly white, deposited as an incrustation by precipitation from the waters of geysers and hot springs. The term has been applied loosely to any deposit made by a geyser or hot spring. Syn: [sinter](#); [pearl sinter](#); [geyserite](#); [fiorite](#). *AGI*

silicic

a. In petrology, containing silica in dominant amount. b. In chemistry, containing silicon as the acid-forming element. c. Said of a silica-rich igneous rock or magma. Although there is no firm agreement among petrologists, the amount of silica is usually said to constitute at least 65% or two-thirds of the rock. In addition to the combined silica in feldspars, silicic rocks generally contain free silica in the form of quartz. Granite and rhyolite are typical silicic rocks. The synonymous terms "acid" and "acidic" are used almost as frequently as silicic. Syn: [acidic](#); [intermediate](#); [persilicic](#). CF: [basic](#); [ultrabasic](#). *AGI*

silicification

a. The introduction of, or replacement by, silica, generally resulting in the formation of fine-grained quartz, chalcedony, or opal, which may fill pores and replace existing minerals. CF: [silication](#) Syn: [silification](#) b. A process of fossilization whereby the original organic components of an organism are replaced by silica, as quartz, chalcedony, or opal. *AGI*

silicified

Adj. of silicification.

silicified wood

A material formed by replacement of wood by silica in such manner that the original form and structure of the wood is preserved. The silica is generally in the form of opal or chalcedony. Syn: [petrified wood](#); woodstone; agatized wood; fossilized wood; opalized wood; shinarump.

silicinate

Said of the silica cement of a sedimentary rock. *AGI*

silicious ore

See: [natural ore](#)

silicon

A nonmetallic element that is the second most abundant on Earth, being exceeded only by oxygen. Symbol, Si. Silicon is not found free in nature, but occurs as the oxide and silicate. Sand, quartz, rock crystal, amethyst, agate, flint, jasper, and opal are some of the forms in which the oxide appears. Hornblende, orthoclase, kaolin, and biotite are a few of the numerous silicate minerals. Used in the electronics and space-age industries; used to make concrete, brick, and glass. Miners often develop a serious lung disease, silicosis, from breathing large quantities of the dust. *Handbook of Chemistry and Physics, 3*

silicon alloys

Silicon bronze is a noncorroding alloy with copper and tin. Silicon copper (70% to 80% copper and 20% to 30% silicon) is an alloy added to molten copper or brass to remove oxygen. Silicon iron is a grain-improved iron, corrosion resistant. See also: [ferrosilicon](#)

silicon borides

Two compounds have been reported: SiB_4 , oxidation resistant to 1,370 degrees C; SiB_6 , melting point 1,950 degrees C. A special refractory has been made by reacting silicon and boron in air, the product containing SiB_4 and Si in a borosilicate matrix; it is stable in air to at least 1,550 degrees C and has good thermal shock resistance. Syn: [boron silicides](#)

silicon copper

A rich copper alloy added to molten copper in order to secure clean, solid castings free from blowholes, swellings, etc. *Crispin*

silicon dioxide

See: [silica](#)

siliconize

To unite or cause to unite with silicon, as in the combination of iron with silicon in certain metallurgical processes. *Standard, 2*

silicon-oxygen tetrahedron

A fundamental structural unit of silicate minerals formed by four oxygen ions surrounding one silicon ion such that lines connecting the four oxygen nuclei show the outline of a geometric tetrahedron. It is commonly written SiO_4 with the electronic charge of minus 4 for the unit assumed. See also: [silicate](#)

silicon spiegel

a. A spiegeleisen containing 15% to 20% manganese and 8% to 15% silicon used in making certain special steels. *Webster 3rd* b. A form of pig iron. *Henderson*

silicon steel

A variety of steel containing up to 5% silicon. It is very hard, but is brittle and difficult to work.

silicosis

a. Lung disease caused chiefly by inhaling rock dust from air drills. *Nichols, 1* b. A condition of massive fibrosis of the lungs marked by shortness of breath and resulting from prolonged inhalation of silica dusts by those--such as stonecutters, asbestos workers, miners--regularly exposed to such dusts. See also: [pneumoconiosis](#); [simple silicosis](#); mining disease. *Webster 3rd*

silicotuberculosis

Complication of tuberculosis by silica. *Hartman, 1*

silification

See: [silicification](#)

silk

Microscopically small, needlelike inclusions of rutile crystals in a natural gem, such as ruby, sapphire, or garnet, from which subsurface reflections produce a whitish sheen resembling that of silk fabric.

silklay

A finely ground-plastic clay of high refractoriness used as a bond for molding sands. *Osborne*

silky luster

a. The luster of silk, peculiar to minerals having a fibrous structure. The fibrous form of gypsum and satin spar are good examples of silky luster. *Nelson* b. A type of mineral luster characteristic of some fibrous minerals, such as chrysotile and gypsum.

sill

a. Applied in mining to flat-bedded strata of sandstone or similar hard rocks. *AGI* b. A concordant sheet of igneous rock lying nearly horizontal. A sill may become a dike or vice versa. *Nelson* c. The floor of a gallery or passage in a mine. *Standard, 2* d. Fireclay, used for making slate or sill pencils, Coal Measures. CF: [stone sill](#) e. See also: [floor sill](#) f. A submarine ridge or rise at a relatively shallow depth, separating a basin from another basin or from an adjacent sea and causing the basin to be partly closed, e.g., in the Straits of Gibraltar. *AGI* g. A ridge of bedrock or earth material at a shallow depth near the mouth of a fjord, separating the deep water of the fjord from the deep ocean water outside. Syn: [threshold](#) h. The upper limit of any variogram model that has such a limit, i.e., that tends to "level off" at large distances. The spherical, gaussian, exponential, and nugget models have sills. For the linear model, "sill/range" is used merely to define the slope.

sill depth

Greatest depth at which there is free, horizontal communication between two ocean basins. *Hy*

sillenite

An isometric mineral, $\text{Bi}_{12}\text{SiO}_{20}$; forms greenish, earthy or waxy masses; at Durango, Mexico.

sillimanite

a. An orthorhombic mineral, Al_2SiO_5 ; trimorphous with kyanite and andalusite; forms long, slender, needlelike crystals commonly in wisplike or fibrous aggregates (fibrolite) in gneisses and schists at granulite grade; also occurs in alluvial deposits. It forms at the highest temperatures and pressures of a regionally metamorphosed sequence and is characteristic of the innermost zone of contact-metamorphosed sediments. CF: [mullite](#); [fibrolite](#). b. Loosely used for the aluminum silicate minerals sillimanite, kyanite, andalusite, dumortierite, topaz, and mullite. c. A high heat-resisting ceramic material containing a maximum amount of mullite, developed from the alteration of andalusite during firing to 1,550 degrees C and used for special porcelain shapes, furnace patches, and refractories.

sillimanite schist

A schist containing an appreciable amount of sillimanite (fibrolite). *Sinkankas*

sillite

Gumbel's name for a rock from the Bavarian Alps, variously referred to by others as gabbro, diabase, mica syenite, and mica diorite.

sills

Strong timbers laid horizontally to support posts or other tunnel timbers. *Stauffer*

silo

A tall tower, usually cylindrical and of reinforced concrete construction, in which grain, cement, coal, or similar bulk material is stored. *Hammond*

silt

a. In anthracite terminology, the accumulation of waste fine coal, bone, and slate settled out of breaker water. It is made up of particles ranging in size from 3/32-in (2.4-mm) round-opening to the finest slime. The material is also called sludge, culm, fines, slush, and mud. It is the partly dewatered solids content of what has been defined as slurry. See also: [rock flour](#) b. In bituminous coal terminology: Syn: [coal sludge](#) c. Material passing the No. 200 U.S. standard sieve that is nonplastic or very slightly plastic and that

exhibits little or no strength when air-dried. *ASCE* d. Breaker waste composed of water, coal, slate, pyrite, and clay. *Korson*

siltation

See: [silting](#)

silt box

A loose iron box fitted in the bottom of a gulley for collecting deposited silt. It can be removed periodically for emptying and flushing. *Hammond*

silt displacement

A system of using a shield for driving a tunnel in silts that are nearly fluid. *Hammond*

silting

a. The deposition or accumulation of silt that is suspended throughout a body of standing water or in some considerable portion of it; esp. the choking, filling, or covering with stream-deposited silt behind a dam or other place of retarded flow, or in a reservoir. The term often includes sedimentary particles ranging in size from colloidal clay to sand. Syn: [siltation](#) b. Sedimentation in water that results in the deposition of somewhat fine material, which is suspended in the entire body of water or in some considerable portion of it. *AGI* c. Filling with soil or mud deposited by water. See also: [hydraulic mine filling](#)

silting up

The filling, or partial filling, with silt, as of a reservoir that receives fine-grained sediment brought in by streams and surface runoff. The term has been used synonymously with sedimentation without regard to any specific grain size. *AGI*

siltite

See: [siltstone](#)

siltstone

An indurated silt having the texture and composition of shale but lacking its fine lamination or fissility; a massive mudstone in which the silt predominates over clay; a nonfissile silt shale. It tends to be flaggy, containing hard, durable, generally thin layers, and often showing various primary current structures. Syn: [siltite](#) claystone. *AGI*

silt trap

A settling hole or basin that prevents water-borne soil from entering a pond or drainage system. *Nichols, 1*

Silurian

A period of the Paleozoic, thought to have covered the span of time between 440 and 400 million years ago; also, the corresponding system of rocks. The Silurian follows the Ordovician and precedes the Devonian; in the older literature, it was sometimes considered to include the Ordovician. It is named after the Silures, a Celtic tribe. *AGI*

silver

a. A white metallic element that is very ductile and malleable. Symbol, Ag. Occurs native and in ores such as argentite and horn silver; lead, lead-zinc, copper, gold, and copper-nickel ores are its principal sources. Used for jewelry, photography, dental alloys, and coinage. *Handbook of Chemistry and Physics, 3* b. An isometric or hexagonal mineral, Ag, native silver; commonly alloyed with Hg or Au; soft; metallic; sp gr, 10.5; in oxidized zones of hydrothermal deposits.

silver amalgam

a. A solid solution of mercury and silver crystallizing in the cubic system. The percentage of silver is usually about 26%, but in the variety arquerite it reaches 86%. It is of rare occurrence, and is found scattered either in mercury or silver deposits. *CMD* b. A naturally occurring "amalgam," an isometric mineral, (Ag,Hg); rarely found scattered either in mercury or silver deposits. See also: [amalgam](#)

silver bonanza

A rich silver mine. *Mathews*

silver-copper glance

See: [stromeyerite](#)

silver freighter

A wagoner who hauls silver ore. *Mathews*

silver glance

The native silver sulfide, argentite. *Fay*

silver halides

Silver bromide, AgBr; silver iodide, AgI; silver chloride, AgCl; and silver fluoride, AgF. The bromide and chloride are sensitive to light and are of basic importance in photography. *CMD*

silvering

a. A plating or covering of silver or an imitation of it, as applied to any surface; as, the silvering on the back of a mirror. *Standard, 2* b. The art or process of coating surfaces with silver. *Standard, 2*

silver lead

Lead containing silver. *Standard, 2*

silver lead ore

The name given to galena containing silver. When 1% or more of silver is present, it becomes a valuable ore of silver. Syn: [argentiferous galena](#) *CMD*

silver minerals

Occurs native, alloyed with gold as electrum, as sulfide argentite, Ag₂S, proustite, pyrargyrite, and horn silver, AgCl, or cerargyrite. Main source is argentiferous ores of lead, zinc, and copper where it is extracted as a byproduct. Bulk of production is used for coinage, electrical alloys, photographic chemicals, and the arts. *Pryor, 3*

silver sand

a. A sharp, fine sand of a silvery appearance used for grinding lithographic stones, etc. b. Specially pure silica. *Pryor, 3*

sima

a. The basic outer shell of the Earth; under the continents it underlies the sial, but under the oceans it directly underlies the water. Originally, the sima was considered basaltic in composition with a specific gravity of about 3.0. In recent years, it has been suggested that the sima is peridotitic in composition with a specific gravity of about 3.3. First used in its present form and spelling by Suess. *AGI* b. A petrologic name for the lower layer of the Earth's crust, composed of rocks that are rich in silica and magnesia. It is equivalent to the oceanic crust and to the lower portion of the continental crust, underlying the sial. Etymol: an acronym for silica + magnesia. Adj: simatic. CF: [sial](#); [sialma](#). Syn: [intermediate layer](#); [basaltic layer](#). *AGI*

Simbal breathing apparatus

An improved liquid oxygen breathing apparatus, weighing 33 lb (15 kg) and approved for use in British mines. Air is fed to the wearer at a temperature of 50 degrees F (10 degrees C) rising to 70 degrees F (21.1 degrees C) in just over 1/2 h and is still only 80 degrees F (26.7 degrees C) after 2-1/2 h. *Nelson*

simetite

A deep-red to light orange-yellow variety of amber having a high content of sulfur and oxygen and a low content of succinic acid; occurs in the waters off Sicily.

similar fold

A fold in which the orthogonal thickness of the folded strata is greater in the hinge than in the limbs, but the distance between any two folded surfaces is constant when measured parallel to the axial surface. Thus, if the shape of one bed is that of a sine curve, all the beds show the same shape. Similar folds show thinning on the limbs and thickening at the axes. CF: [parallel fold](#); [supratenuous fold](#). Syn: [concentric fold](#) *AGI*

similor

A golden-colored variety of brass. Also called Mannheim gold; Prince Rupert's metal.

simonyite

See: [bloedite](#)

simple beam

A simply supported beam. *Hammond*

simple bending

The bending of a beam that is freely supported, having no fixed end. *Hammond*

simple explosives

These explosives consist of one simple chemical compound. The explosive heat is liberated with the breaking down of the molecules and the atoms recombining to form water, carbon dioxide, nitrogen and other gases, and possibly solid substances such as carbon. To this group belong explosives in the proper sense of the word, such as nitroglycerin, nitroglycol, nitrocellulose, trotyl, and cyclonite (RDX). Also includes "molecular explosives." *Fraenkel*

simple kriging

A variety of kriging that assumes that local means are relatively constant and equal to the population mean, which is well known. The population mean is used as a factor in each local estimate along with the samples in the local neighborhood. This is not usually the most appropriate method for environmental situations.

simple mineral

A mineral found in nature, as distinguished from rocks, which, in the scientific sense, are mixtures of minerals. Calcite and hematite are simple minerals, while granite is a mixture of three simple minerals--quartz, feldspar, and mica. *Standard, 2; Fay*

simple ore

Ore that yields a single metal. CF: [complex ore](#)

simple pneumoconiosis

Pneumoconiosis of the lungs that can be related to the amount (and possibly the nature) of the dust breathed by miners over the years. See also: [complicated pneumoconiosis](#)

simple silicosis

Silicosis that is not complicated by tuberculosis; a condition that may remain almost stationary for many years. See also: [mining disease](#) *Nelson*

simple split seam

A coal seam that has separated into two layers of coal some distance apart vertically. See also: [multiple splitting](#)

Simplex pump

A reciprocating single- or double-action piston pump having one water cylinder. *Long*

simplotite

A monoclinic mineral, $\text{CaV}_4\text{O}_9 \cdot 5\text{H}_2\text{O}$; dark green.

simpsonite

A trigonal mineral, $\text{Al}_4(\text{Ta,Nb})_3(\text{O,OH,F})_{14}$; yellow-brown.

Simpson's rule

A rule for estimating the area of an irregular figure after dividing it into an even number of parallel strips of equal width. See also: [trapezoidal rule](#)

simulated insert bit

A core bit in the face of which are deeply cut, closely spaced waterways to produce the superficial appearance of an insert-type bit. Also called Thedford crown bit. *Long*

simulated workplace protection factor

A surrogate measure of the workplace protection provided by a respirator. *NIOSH*

simultaneous filling

Filling in which the mined-out area or room is filled immediately after mining out only a small part of the deposit. *Stoces*

simultaneous shot firing

The concurrent firing of a round of shots using instantaneous detonators. *BS, 12*

sincosite

A tetragonal mineral, $\text{Ca}(\text{VO})_2(\text{PO}_4)_2 \cdot 5\text{H}_2\text{O}$; a vanadium analog of the meta-autunite group; green; a source of vanadium.

sing

A hissing noise often made by gas and water when a seam of coal is cut into. *Fay*

singing

a. Resonance phenomenon that is frequently observed on marine seismograms. *Schieferdecker* b. A seismic resonance phenomenon that is produced by short-path multiples in a water layer. Syn: [reverberation](#); [ringing](#). *AGI*

single-acting ram

See: [one-way ram](#)

single-action pump

A pump valved so as to discharge liquid at only one end of the water cylinder. CF: [double-action pump](#)

single-approach pit bottom

A pit-bottom layout at a mine where development branches off on one side only. The empty cars are returned from the opposite side by a loop, shunt back, turntable, or traverse. See also: [loop-type pit bottom](#) *Nelson*

single-bench quarrying

Quarrying a rock ledge as a single bench the full height of the quarry face.

single block

A block with one pulley or sheave. *Long*

single consignment

A quantity of coal that is to be sampled to a specified accuracy. It is used in contradistinction to the sampling of a coal received regularly at a given point. See also: [isolated consignment](#)

single-core shot-firing cable

See: [shot-firing cable](#)

single crystal

A crystal, usually grown artificially, in which all parts have the same crystallographic orientation. *McGraw-Hill, 1*

single-cut sprocket

For double-pitch roller chains, a sprocket having one set of effective teeth. *Jackson, 1*

single-deck screen

A screen having one screening surface, not necessarily limited to one size or shape of aperture. *BS, 5*

single entry

A system of opening a mine by driving a single entry only, in place of a pair of entries. The air current returns along the face of the rooms, which must be kept open.

single-entry room-and-pillar mining

See: [room-and-pillar](#)

single-entry zone test

A test in which coal dust is placed only in a single entry. *Rice, 2*

single-grained structure

An arrangement composed of individual soil particles; characteristic structure of coarse-grained soils. See also: [soil structure](#); flocculent structure; honeycomb structure. *ASCE*

single-hand drilling

Rock drilling by hand; e.g., in narrow reefs. A drill steel held in the left hand is struck blows with a 4-lb (1.8-kg) hammer, the drill being turned between the blows. The drilling is very slow and laborious. *Nelson*

single-inlet fan

A centrifugal fan in which air enters the impeller at one side only. *BS, 8*

single-intake fan

A ventilating fan that takes or receives its air from one side only.

single jack

a. A lightweight hammer, usually 4 lb (1.8 kg) or less. When used in hand drilling holes in rock, the hammer is held in one hand and the drill is held in the other. *Long* b. Sometimes incorrectly used to designate a sinker drill. *Long* c. A drill column having a single jackscrew in the bottom end. See also: [drill column](#)

single-layer bit

See: [surface-set bit](#)

single opening

Any underground opening separated from a free surface by a distance greater than three times the size of the opening in the direction of the free face.

single outlet

For safety reasons, mines with only a single outlet (shaft) are subjected to restrictions in the numbers of mine workers employed at a time. *Beerman*

single packing

The conventional method of strip packing on a longwall face, in which the widest pack is along the roadside. A single packing system varies but may have a 10-yd (9.1-m) roadside pack, then 7 yd (6.4 m) of waste, followed by 4-yd (3.7-m) packs and 5 yd (4.6 m) of waste repeated across the entire face. See also: [double packing](#); [strip packing](#).
Nelson

single-phase circuit

A two-wire circuit using alternating current. *Kentucky*

single-pulley-drive conveyor

A conveyor in which power is transmitted to the belt by one pulley only. *NEMA, 2*

single refraction

Light refraction in an isotropic crystal or amorphous substance according to Snell's law, as opposed to the birefringence of an anisotropic crystal.

single-road stall

S. Wales. A system of working coal by narrow stalls. *Fay*

single-roll breaker

A coal-crushing machine in which the roll teeth crack downward on the lump and the roll itself compresses the coal against the breaker plates. Teeth of two or more designs are used generally on the same roll, some for the slugging, cracking, or blow action and others for a pulling and splitting force. The breakers are not easy to stall by choking, since they will pass a heavy overload, partly because of the action of a relief mechanism, with which they are all equipped. *Mitchell*

single-roll crusher

A crushing machine consisting of a rotating cylinder with a corrugated or toothed outer surface that crushes material by pinching it between the teeth and stationary breaking bars. CF: [double-roll crusher](#) *ACSG, 2*

single-rope friction pulley

See: [Koepe sheave](#)

single-rope haulage

A system of underground haulage in which a single rope is used, the empty trip running in by gravity. Engine-plane haulage.

single-round nose

The cross-sectional view of the cutting-face portion of a core bit when the profile is an arc having a radius equal to or greater than the wall thickness. See also: [profile](#)

single-round-nose bit

See: [single-round nose](#)

single-row blasting

The drilling, charging, and firing of a single row of vertical holes along a quarry or opencast face. The holes may be fired simultaneously or by delay detonators to give a peeling action starting at one end of the face. See also: [multiple-row blasting](#)

single shot

A charge in one drill hole only fired at one time, as contrasted with a multiple shot where charges in a number of holes are fired at one time.

single-shot blasting unit

A single-shot blasting unit is a unit designed for firing only one explosive charge at a time. Syn: [blasting unit](#)

single-shot exploders

Exploders of the magneto type that are operated by the twist action given by a half-turn of the firing key. A magneto exploder consists essentially of a small armature that can be rotated between the poles of a set of permanent magnets. The armature is rotated by means of toothed gear wheels actuated by the movement of the firing key. The electric circuit between the exploder and the detonator is completed by means of an automatic internal switch operating at the end of the stroke, or contact may be made by means of a pushbutton. *McAdam, 2*

single-shot instrument

A borehole surveying instrument that records only one measurement of the bearing and of the inclination of a hole on a single trip into the borehole. *Long*

single-shot survey

A borehole survey made with a single-shot instrument. *Long*

single sling

A sling that has a single hook at one end and an iron or steel ring at the other. See also: [two-leg sling](#)

single-speed floating control system

In flotation, floating control in which the manipulated variable changes at a fixed rate, increasing or decreasing depending on the sign of the actuating signal. *Fuerstenau*

single-spot method

One of three recognized methods of determining the average velocity of airflow along a mine roadway by anemometer. A velocity reading is taken at the center of the airway and the result is multiplied by the center constant, whose value ranges between 0.8 and 0.9, to give the average velocity of flow. Alternatively, the reading is taken along a midway line at a position some one-seventh to one-third of the width of the airway, measured from the side. At this position, the mean velocity is obtained, so that no adjustment is required. CF: [division method](#); traversing method. *Roberts, I*

single-stage pump

A centrifugal pump with a lift of 100 ft (30.5 m) per stage. *Hammond*

single-stall working

See: [room-and-pillar](#)

single stamp mill

a. A mill possessing batteries of one stamp each, like the Nissen, instead of the usual five. b. A mill possessing only one stamp, after the Lake Superior fashion, where one big stamp does the work of 150 ordinary gravity stamps. *Fay*

single-toggle jaw crusher

A jaw crusher with one jaw fixed, the other jaw oscillating through an eccentric mounted near its top. This type of jaw crusher has a relatively high output, and the product is of fairly uniform size. *Dodd*

single-unit panel

A longwall conveyor face from about 80 to 200 yd (73 to 183 m) long developed between two gate roads, one serving as an intake airway and usually for coal haulage, while the other acts as a return airway and for bringing in supplies to the face. See also: [double-unit conveyor](#) *Nelson*

single vein

A single ore deposit of identical origin, age and character throughout. A single small vein is weighed and measured by the same law and entitled to the same consideration as the mother lode, and very often is far more valuable in the eyes of the miner. *Ricketts*

singulosilicate

A slag with a silicate degree of 1. *Newton, 1; Newton, 2*

sinhalite

An orthorhombic mineral, $MgAlBO_4$; structurally analogous to olivines; yellow.

sinistral fault

See: [left-lateral fault](#)

sink

a. To excavate or drive a shaft or slope. b. The depression in a shaft made by a center blast. *Standard, 2* c. A water lodgment. See also: [sump](#) d. To put standpipe or casing down through overburden by rotation or by driving, chopping, or washing-- these methods being employed singly or in combination. *Long* e. To drill or put down a borehole. *Long* f. A depression in the land surface, esp. one having a central playa or saline lake with no outlet; a hollow in a limestone region communicating with a cavern or subterranean passage so that waters running into it disappear. Also called sinkhole; swallow hole. *Webster 3rd* g. Lanc. Natural cavity found in iron mines.

sinker

a. A rock drill for drilling blasting holes in a sinking shaft. *Nelson* b. A special movable pump used in shaft sinking. c. See: [sinker bar](#) d. A person who sinks mine shafts and puts in supporting timber or concrete. *Webster 3rd*

sinker bar

a. A heavy rod used to increase the snatching effect of the sliding jars in rope drilling. *BS, 9* b. A short bar or stem placed above the drill jars to give force to the upward jar in well drilling with cable tools. *Webster 3rd*

sinker drill

a. A one-person drill that can be held in the hand but is frequently mounted. This drill has found wide application in sinking shafts and is made in several sizes, each suited for a particular kind of work. Also called plugger drill. *Lewis* b. A rock drill of the jackhammer type commonly used in shaft sinkings. Also called sinker. *Webster 3rd* c. A hand-held compressed-air rock drill used in boring down holes such as in shaft sinking. *Pryor, 3*

sink-float processes

Processes that separate particles of different sizes or composition on the basis of specific gravity. When ore or coal particles are introduced into a liquid (or into a medium: a solid suspension), those having a specific gravity higher than that of the liquid will sink, while those that are lighter than the liquid will float. *Chem. Eng.*

sink-float separation

See: [dense-media separation](#)

sinkhole

A circular depression in a karst area. Its drainage is subterranean, its size is measured in meters or tens of meters, and it is commonly funnel shaped. Syn: [doline](#); [sink](#); [leach hole](#). Partial syn: collapse sink. *AGI*

sinking

a. The process by which a shaft is driven. *BCI* b. Extending excavations downward at or near the vertical plane. See also: [raising](#); [shaft sinking](#). *Nelson*

sinking fire

A forge in which wrought-iron scrap or refined pig iron is partly melted or welded together by means of a charcoal fire and a blast.

sinking head

See: [deadhead](#)

sinking in rock

Shaft sinking in rock usually comprises the following cycle: drilling a round of holes, blasting, removing the broken rock, trimming the shaft to form, placing the sets or concrete in position, and then preparing to drill the next round. *Lewis*

sinking kibble

A large bucket for raising the stones, etc., from a shaft being sunk. Sometimes called bowk; hoppett. *Peel*

sinking lift

A lift (pump) of small size with esp. heavy castings to resist the force of blasting; used in shaft sinking. A sinking pump, which is also sometimes called a sinker. *Standard, 2; Fay*

sinking plant

In a shaft, a sinking plant consists of the headframe, hoisting equipment, air-compressor for drills, concrete-mixing equipment, and suitable pumps. It may be temporary or permanent. *Lewis*

sinking platform

A scaffold or staging designed for use during shaft sinking, particularly during lining operations. *Nelson*

sinking pump

A long, narrow pump designed for keeping a shaft dry during sinking operations. It is usually large enough to deal with 1,000 gal/min (3,780 L/min) from the greatest depth at which water will be encountered. A sinking pump must be slung from the surface and be fairly easy to raise and lower when shot firing takes place at the shaft bottom. Most are of the electrically driven centrifugal type and allow for additional stages to be fitted as the shaft depth increases. It may be suspended by a single-drum, worm-driven, capstan engine with a very slow speed. See also: [borehole pump](#); [water barrel](#). *Nelson*

sinks

Fractions with a defined upper limit of specific gravity and so described, e.g., sinks 1.60 specific gravity. *BS, 5*

sinople

A red or brownish-red variety of quartz containing inclusions of hematite. Also spelled sinopal; sinopel.

sinter

a. A chemical sedimentary rock deposited as a hard incrustation on rocks or on the ground by precipitation from hot or cold mineral waters of springs, lakes, or streams;

specif. siliceous sinter and calcareous sinter (travertine). The term is indefinite and should be modified by the proper compositional adj., although when used alone it usually signifies siliceous sinter. Etymol: German sinter, cinder. CF: [tufa](#) b. A ceramic material or mixture fired to less than complete fusion, resulting in a coherent mass when cooled. c. A process for agglomerating ore concentrate in which partial reduction of minerals may take place and some impurities be expelled prior to subsequent smelting and refining. d. To heat a mass of fine particles for a prolonged time below the melting point, usually to cause agglomeration. *ASM, I* e. A process commonly used in making diamond bits, whereby powdered metal is compacted in a diamond-set mold or die, and the temperature is raised to a point just below melting, thus fusing the entire mass together. Also called sintered. *Long*

sinter bit

A bit, the crown of which is formed by applying heat and pressure to a mixture of powdered metals covering diamonds set inside a mold or die-shaped to the form of a bit crown. The bit crown thus formed may be a surface-set, multilayer, or impregnated type. *Long*

sinter cap

A zone of sinter typically positioned at the top of epithermal systems.

sintered carbide

Sintering as used in powder metallurgy consists of mixing metal carbide powders having different melting points, and then heating the mixture to a temperature approximating the lowest melting point of any metal included. In sintered carbides, powdered cobalt, having the lowest melting point, acts as the binder, holding together the unmelted particles of the hard carbides. See also: [cemented carbide](#)

sintered carbide-tipped pick

The pick generally used in coal cutters and cutter loaders, in which the sintered tip is brazed in various ways to the shank of the pick. In the external-tip type, which is widely used, the sintered tip is brazed externally to the shank, which is usually a forging. It is self-gaging and as the tip wears down, the cutting edge maintains its shape and clearance. In the slotted type, the tip is brazed into a slot cut in the shank of the pick. In the inserted-rod type, the sintered carbide takes the form of a rod inserted into a hollow in the shank of the pick, which is a forging. These picks are widely used in the soft coal mines in Germany. See also: [tungsten carbide bit](#); [coal-cutter pick](#). Syn: [inserted rod-type pick](#)

sintered matrix

A bit-crown diamond-embedment metal or alloy produced by a sinter powder-metal process. See also: [sinter](#); [sinter bit](#). *Long*

sintered-metal bit

See: [sinter bit](#)

sintering

A heat treatment for agglomerating small particles to form larger particles, cakes, or masses; in case of ores and concentrates, it is accomplished by fusion of certain constituents. *CTD*

sinter plant

A plant in which sintering is carried out. *Nelson*

sinter set

See: [sinter bit](#)

sinter-set bit

See: [sinter bit](#)

sinuous flow

See: [turbulent flow](#)

Sioux Falls jasper

A decorative brown jasperlike, fine-grained quartz, from Sioux Falls, SD. Used for tables and interior architectural trim.

siphon

An arrangement of closed pipes and valves to conduct water from one level to a lower level over an intervening ridge. The difference of level between the inlet and outlet ends of the pipe column must be sufficient to provide a head great enough to overcome the frictional resistance of the pipe column. The siphon was often used in the earlier days of mining when pumps were too costly or power was not available. See also: [suction head](#); inverted siphon. *Nelson*

siphonage

The action or operation of a siphon. *Fay*

siphon separator

An apparatus for the sizing of pulverized ores in an upward current of water. *Fay*

siphon tap

See: [Arents tap](#)

sipylite

See: [typrite](#)

Sirocco fan

A centrifugal fan, invented by Samuel Davidson in 1898, with 64 narrow blades curved forward, mounted at the periphery of a braced, open drum. It is a high-speed, small-diameter fan, usually direct driven. It was a popular fan in Great Britain for many years. See also: [Waddle fan](#) *Nelson*

siserskite

Former name for iridosmine.

sismondine

Former name for Mg-rich chloritoid.

site exploration

a. The investigation and testing of the surface, subsoil, and any obstruction at a site to obtain the full information necessary for designing a complete structure with its foundations. *Hammond* b. See: [site investigation](#)

site investigation

The collection of basic facts about, and the testing of, surface and subsurface materials (physical properties, distribution, and geologic structure) at a site, for the purpose of preparing suitable designs for a mine, an engineering structure, or other use. *AGI*

site rivet

A rivet driven on a construction site. See also: [shop rivet](#) *Hammond*

size

To separate minerals according to various screen meshes.

size analysis

See: [particle-size analysis](#)

size consist

Screen analysis of particle size (coal). *Bennett*

size distribution

a. See: [particle-size distribution](#) b. Analysis of crushed or ground materials on the basis of particle size. *Bennett* c. In sizing analysis of sands, the percentage of the sample retained on each laboratory sieve in the range examined. *Pryor, 3*

size-distribution curve

A graphical representation of the size analysis of a mixture of particles of various sizes, using an ordinary, logarithmic, or other scale. *BS, 5*

sized variation

The variation in dimensions of any ceramic product from the intended dimensions.

size fraction

Portion of a sample of sand lying between two size limits, the upper being the limiting and the lower the retaining mesh. *Pryor, 3*

size-frequency distribution

See: [particle-size distribution](#)

size range

That between upper (limiting) and lower (retaining) mesh sizes with reference to screened or classified material. *Pryor, 4*

size reduction

The breaking of large coal, ore, or stone by primary breaker, or the breaking of smaller sizes by grinding. See also: [reduction ratio](#); primary breaker. *Nelson*

size selector

A device attached to the intake of a dust-sampling instrument to remove the bulk of the particles above 5 to 10 μm in size; thus the resulting sample is more representative of the health-hazard size range of dust-- mainly 5 μm and smaller. See also: [dust sampling](#)

sizing

a. The arrangement, grading, or classification of particles according to size; e.g., the separation of mineral grains of a sediment into groups each of which has a certain range of size or maximum diameter, such as by sieving or screening. *AGI* b. See: [screening](#)

sizing punch

A punch used for pressing of the sintered compact during the sizing operation. *Osborne*

sizing screen

A screen or set of screens normally used for dividing a product (for example, washed coal) into a range of sizes. Also called grading screen and classifying screen (undesirable usage). *BS, 5*

sjogrenite

a. A hexagonal mineral, $\text{Mg}_6\text{Fe}_2(\text{CO}_3)(\text{OH})_{16}\cdot 4\text{H}_2\text{O}$; manasseite group; dimorphous with pyroaurite of the hydrotalcite group. b. The name was formerly used for the phosphates dufrenite and chalcosiderite.

S-joint

See: [longitudinal joint](#)

S.J. table

A pneumatic table of American design, for the drycleaning of coal. A sizing ratio of 2:1 is desirably the maximum range of sizes that the table can separate in one operation. See also: [Kirkup table](#)

skares

See: [scars](#)

skarn

An old Swedish mining term for silicate gangue (amphibole, pyroxene, garnet, etc.) of certain iron ore and sulfide deposits of Archean age, particularly those that have replaced limestone and dolomite. Its meaning has been generally expanded to include lime-bearing silicates, of any geologic age, derived from nearly pure limestone and dolomite with the introduction of large amounts of Si, Al, Fe, and Mg. In American usage, the term is more or less synonymous with tactite. See also: [calc-silicate hornfels](#)

skate-wheel conveyor

A type of wheel conveyor making use of a series of skate wheels mounted on common shafts or axles or mounted on parallel spaced bars on individual axles.

skeletal crystal

Crystals that develop under conditions of rapid growth and high degrees of supersaturation so that atoms or ions are added more rapidly to edges and corners of growing crystals, resulting in branched "dendrites" or hollow stepped depressions, "hoppers." Ice on windowpanes (frost) and pyrolusite on agate (moss agate) are dendrites; halite and gold may form hopper crystals. CF: [dendrite](#); [hopper crystal](#).

skeleton crystals

Hollow or imperfectly developed crystals formed by rapid crystallization. *Fay*

skeleton sheathing

Consists of a continuous wood frame with sheathing planks placed vertically at intervals, usually of about 4 ft (1.2 m), behind it. Used where the banks consist of compacted, stable soils, primarily to prevent initial yield at the top. CF: [close sheathing](#); [tight sheathing](#). *Carson, 1*

skeleton tubbing

A temporary method of supporting a circular shaft sinking. It consists essentially of iron curbs or rings. Each ring consists of segments of wrought iron, 3 to 5 in (7.62 to 12.7 cm) deep, 5/8 to 7/8 in (1.59 to 2.22 cm) thick, and from 6 to 8 ft (1.82 to 2.44 m) in length. The segments are bent to the curvature of the shaft and bolted together, each ring being suspended from the ring above. Laggings or backing deals are wedged behind the rings. Every fourth ring or so is supported on steel strata bolts driven into holes drilled in the rock sides. See also: [temporary shaft support](#)

skelp

Mild steel strip, often of Bessemer steel, from which tubes are made by drawing it through a welding bell, at welding temperature, to produce butt-welded or lap-welded tubes or pipes. See also: [butt weld](#) *Hammond*

skelp iron

Wrought iron rolled into flat bars suitable for making pipe. *Mersereau, 2*

skerry

a. An old English term meaning, variously, thin layers of micaceous sandstone in the Coal Measures, a thin ferruginous sandstone crowded with fossils, or a hard gritty clay used in making firebricks. b. Eng. Thin layers of sandstone in the Keuper Marls, Leicestershire, and Derbyshire coalfield. *Arkell* c. Micaceous sandstones in the Coal Measures of Wales and the Midlands. *Arkell* d. Eng. A thin band of ferruginous, micaceous rock, crowded with fossils, Middle Lias, Sutton Basset, Rutland. *Arkell*

skerrystone

Mid. Hard, thin-bedded sandstone.

skew

a. An irregular discontinuous vein striking out from the principal vein in an uncertain direction, lying in a slanting and irregular position. b. The angled support from which an arch is sprung. *AISI*

skewed

On a horizontal angle, or in an oblique course or direction. *Nichols, 1*

skewed roller conveyor

A roller conveyor having a series of rolls skewed to direct objects laterally while being conveyed.

skewness

In coal sampling, a lack of symmetry in the particle-size distribution. It is a tendency of the observed data to extend farther to one side of the average than to the other. *Mitchell*

skew plate

See: [bloomery](#)

skews

a. Stones cut to form the coping of a gable. *Arkell* b. Cracks on irregular joints in a mine, sometimes indicating danger from falls. *Arkell*

skiagite

A hypothetical garnet "molecule," $\text{Fe}_3 \text{Fe}_2 (\text{SiO}_4)_3$.

skialith

A vague remnant of country rock in granite, obscured by the process of granitization. CF: [schlieren](#); [xenolith](#). *AGI*

skid

a. An iron shoe or clog attached to a chain and placed under a wheel to prevent its turning when descending a steep hill; a drag. *Webster 3rd* b. An arrangement upon which certain coal-cutting machines travel along a working face. *Fay* c. A metal slide placed under a mine car wheel temporarily to restrict the speed of a trip on a descending grade. *BCI* d. A metal plate placed under a shortwall cutting machine to control it while cutting. *BCI* e. The sledlike platform forming the base on which a machine or structure is set and slid or skidded into position; also, the sled runner, bottom-most part of the base of a drill or other machine. *Long*

skid-mounted

A term applied when a drill or other machine is attached permanently to a skid. *Long*

ski-lift conveyor

A method of transporting miners to the coal face in special chairs that move continuously on an endless conveyor. *Nelson*

skim gate

A gating arrangement designed to prevent the passage of slag and other undesirable materials into a casting. *ASM, I*

skimmer

a. A single-bucket excavator in which the bucket travels along the boom, which is kept almost horizontal during operation. *Dodd* b. An excavator base machine equipped with jib and bucket for digging and loading from a shallow face above track level. *Nelson*

skimmer equipment

A digging bucket mounted to slide along the boom of an excavator so that the bucket can be used to trim various angles of slope from the horizontal to about 60 degrees elevation. *Hammond*

skimming

The removal of the top layer of soil or of irregularities in the ground surface at new mine or opencast sites. See also: [skimping](#) *Nelson*

skimming gate

A channel in a sand mold having over it a bridge that removes the dross from the molten metal as it passes through. See also: [skimmer](#) *Standard, 2*

skimming ladle

Any ladle used in skimming; specif., a ladle used for pouring molten metal, having its lip covered with a guard to retain the dross. *Standard, 2*

skimping

a. The skimmings of the dross from the ore in the vat or tank. *Nelson* b. See: [jigging](#)

skin effect

a. Tendency of an alternating current to concentrate at the surface of a conductor. *Schieferdecker* b. The frequency-dependent reduction of resistivity log measurements in conductive formations due to inductive interaction between the current paths; the induction logs now operating at about 20 kHz are most affected. *AGI* c. The reduction of formation permeability in the vicinity of a well bore caused by drilling and completion operations. *AGI* d. The concentration of alternating current in a conductor towards its exterior boundary. *AGI*

skin flotation

a. A concentration process in which adhesion is effected between a free water surface and particles, usually larger than those involved in froth flotation. *Gaudin, 1* b. In skin flotation processes, the separation between minerals and gangue is accomplished at the surface of a body of water, or, in other words, at the air-water interface. Use is made of the surface tension of the water and of the fact that certain minerals, such as sulfides and hydrocarbons, resist being wetted by water. See also: [flotation](#)

skin friction

a. Friction between a fluid and the surface of a solid moving through it, or between a moving fluid and its enclosing surface. *Webster 3rd* b. The frictional resistance developed between soil and a structure. *ASCE* c. Resistance of ground to the movement of a pile or caisson, generally proportional to the area in contact. *Hammond* d. See: [wall friction](#)

skin rock

The thin band of rock immediately surrounding an excavation. *Spalding*

skip

a. A guided steel hopper, usually rectangular, with a capacity up to 50 st (45.4 t), which is used in vertical or inclined shafts for hoisting coal or minerals. It can also be adapted for personnel riding. The skip is mounted within a carrying framework, having an aperture at the upper end to permit loading, and a hinged or sliding door at the lower end to permit discharge of the load. The cars at the pit bottom deliver their load either directly into two measuring chutes located at the side of the shaft or into a storage bunker from which the material is fed to the measuring chutes. *Nelson* b. A large hoisting bucket, constructed of boiler plate that slides between guides in a shaft, the bail usually connecting at or near the bottom of the bucket so that it may be automatically dumped at the surface. c. An open iron vehicle or car on four wheels, running on rails and used esp. on inclines or in inclined shafts. Sometimes spelled skep. d. A thin slice taken off a breast, pillar, or rib along its entire length or part of its length. Also called slab. e. A truck used in a mine. *Gordon* f. A small car that conveys the charge to the top of a blast furnace. *Mersereau, 2*

skip bucket

The tub or bucket used for containing the material conveyed by a skip hoist.

skip haulage

A method of underground haulage sometimes adopted in steep workings, where the gradient is 1:2 to 1:1.5. There are two kinds: (1) a skip carriage on which the tub is placed in a horizontal position; and (2) a self-dumping system in which the skip, which is permanently attached to the rope, is discharged automatically at the top of the incline and then returned for reloading. *Nelson*

skip hoist

A bucket or car operating up and down a defined path, receiving, elevating, and discharging bulk materials.

skip loader I

In metal mining, one who loads ore into a skip (large can-shaped container) from skip pockets (underground storage bins) at different shaft stations in a mine, operating a mechanical device to open and close the gates of the loading chutes. Also called skipman; skipper. *DOT*

skip miner

In bituminous coal mining, one who drills holes into pillars of coal supporting the roof, charges holes with explosives, and blasts out slabs (skips) of coal to widen haulageway or working place. *DOT*

skip operator

In the iron and steel industry, one who controls the skip hoist by which a skip car containing coke, limestone, or ore is hauled up an inclined runway to the furnace top and dumped into the charging bell of the furnace. *DOT*

skipping

The working of 2 to 10 yd (1.8 to 9.1 m) of coal along the side or sides of a narrow stall or heading to gain coal and make room for ripping stone. See also: [rib-side pack](#)

skipping the pillar

a. To take a slice off a pillar before abandoning the workings; to rob. *Fay* b. Widening a gangway or entry. *Fay*

skip shaft

A mine shaft esp. prepared for hauling a skip. *Standard, 2*

skip system

A system used for moving material from a quarry floor to a plant located at a considerable elevation. This system utilizes two parallel inclined tracks with a skip car operating on each track. The cars are operated by cables controlled by a winding gear at the head of the incline. The quarry trucks or cars deliver their loads to the skips through a chute at the base of the incline. A hopper at the top of the incline receives the loads from the skips and feeds the rock to a crusher. *Pit and Quarry*

skirt

A vertical strip placed at the side of a conveyor belt to prevent spillage or to increase capacity. *Nichols, 1*

skirting

In pillar extraction, it refers to a stall or roadway working a slice or lift of coal along the side of a pillar. *Nelson*

skirt plates

Steel sideplates that overlap a conveyor belt slightly and assist in settling the coal on the belt at the tail end or at a transfer point. *Nelson*

skirts

That which bounds and limits a vein's breadth, Derbyshire, U.K.

skirt-type core spring

A core lifter, usually a split-ring type, having a split, thin tubular extension attached above the beveled portion of the core spring, which slides upward and inside the lower end of the inner tube of a core barrel. *Long*

skleropelite

A rock produced by low-grade metamorphism of an argillaceous sediment without the development of cleavage. See also: [hornfels](#)

sklodowskite

A monoclinic mineral, $(\text{H}_3\text{O})_2\text{Mg}(\text{UO}_2)_2(\text{SiO}_4)_2 \cdot 2\text{H}_2\text{O}$; structurally similar to uranophane and cuprosklodowskite; strongly radioactive; citron-yellow. Also spelled sklodovskite.

skrin

Derb. Cross fissures in limestone, sometimes containing small quantities of ore. Also called scrin.

skull cracker

A heavy iron ball allowed to drop from a height to break up, or crack, hard substances, as aloxite, rock, etc. *Mersereau, 2*

skull drop

A place where heavy ladle skulls are broken. *Fay*

skulls

See: [skulls](#)

skutterudite

An isometric mineral, CoAs_{2-3} , having Co replaced by Ni toward nickel-skutterudite; metallic; tin white to silver gray showing iridescent tarnish; a minor source of cobalt.

Syn: [cobalt skutterudite](#)

slab

a. A piece of metal, intermediate between ingot and plate, with the width at least twice the thickness. *ASM, I* b. Cleaved or finely parallel jointed rocks, which split into tabular plates from 1 to 4 in (2.54 to 10.16 cm) thick. Slabs are seldom as strong as flags. Syn:

[slabstone](#)

slabbing

a. Close timbering between sets of timber. b. Lagging placed over bars. Also called slabs. c. Cutting a slice or slab from the side of a pillar.

slabbing cut

A drill hole pattern suitable for a wide rectangular tunnel; e.g., 8 ft by 15 ft (2.4 m by 4.6 m) wide. The entire face is fired in three separate rounds of shots, the first or cut holes providing a free face for the remaining shots. The face is broken in successive lifts or slabs from one side to the other. Also called swing cut. *Nelson*

slabbing machine

a. A power-driven, mobile cutting machine, which is a single-purpose cutter in that it cuts only a horizontal kerf at variable heights. Syn: [arcwall machine](#) b. A coal-cutting machine designed to make cuts in the side of a room or entry pillar preparatory to skipping or slabbing the pillar. *Jones, I*

slabbing method

A method of mining pillars in which successive slabs are cut from one side or rib of a pillar after a room is finished, until as much of the pillar is removed as can safely be recovered. This system has the disadvantage that the open area is always increasing and the loaders are working away from the solid pillars toward the goaf. *Lewis*

slab entry

An entry widened or slabbed to provide a working place for a second miner.

slabstone

A rock that readily splits into slabs; flagstone. See also: [slab](#) *AGI*

slack

a. Fine-grained coaly material resulting from weathering, screening, or washing of coal.
b. To disintegrate rapidly when exposed to weathering. *AGI* c. Commonly used to describe the smaller sizes of coal passing through screen openings, approx. 1 in (25.4 mm) or less in diameter. *Mitchell* d. The process by which soft coal disintegrates when exposed to the air and weather; also to slake, as lime. e. Small coal, usually less than 1/8 in (3.2 mm). It has a high ash content and is difficult to clean in the washery. High-ash slack is being used increasingly in special boilers and power stations. See also: [culm](#); duff. *Nelson*

slack adjuster

In air brakes, the connection between the brake chamber and the brake cam. *Nichols, 1*

slack box

Aust. A bin in which fine coal (slack) is stored.

slack-brake switch

See: [hoist slack brake switch](#)

slacken

In metal smelting, the scoria of previous operations, mixed with the ores to retard or prevent fusion of the nonmetallic portions. Also spelled slakin. *Standard, 2*

slack hauler

In bituminous coal mining, one who hauls small cars of slack (fine coal) from tippie to boiler room of power plant at mine to maintain fuel supply. *DOT*

slacking

a. Degradation in size (coal). *Bennett* b. Coals having a pronounced tendency to disintegrate or slack on exposure to weather, particularly when alternately wetted and dried or subjected to hot sunshine. Coals that slack readily contain relatively large amounts of moisture. When exposed to the weather, such coals lose moisture rapidly. As

the coal loses moisture at the surface, the moisture from the interior of the piece gradually drifts outward to the surface. If the loss of moisture at the surface proceeds at a faster rate than that at which it is replaced by moisture from the interior of the piece, then the shrinkage of the coal at the surface is greater than that in the interior; consequently, stresses are generated in the surface coal. These stresses cause the coal to crack and disintegrate. Also called weathering. See also: [weathering](#); [weathering index](#). *Mitchell*

slacking index

See: [weathering index](#)

slackline cableway

a. A cableway having one low and one high tower and a track cable with adjustable tension suspended between them. One end of the track cable is attached to a hoist drum by means of which the tension on the cable can be rapidly changed so as to position, lower, or raise the digging skip. b. A cable excavator having a track cable that is loosened to lower the bucket and tightened to raise it. *Nichols, 2*

slack quenching

The process of hardening steel by quenching from the austenitizing temperature at a rate slower than the critical cooling rate for the particular steel--resulting in incomplete hardening and the formation of one or more transformation products in addition to or instead of martensite. *ASM, 1*

slack water

The state of a tidal current when its velocity is near zero, the moment when a current reverses direction. Sometimes considered the intermediate period between ebb and flood currents during which the velocity of the currents is less than 0.1 knot (0.16 km/h). *Hy*

slag

a. Material from the iron blast furnace, resulting from the fusion of fluxstone with coke ash and the siliceous and aluminous impurities remaining after separation of iron from the ore. Slag is also produced in steelmaking. Formerly a solid waste, slag is now utilized for various purposes, chiefly in construction. *AGI* b. A scoriaceous or cindery pyroclastic rock. *AGI* c. A British term for a friable shale with many fossils. *AGI* d. A substance formed in any one of several ways by chemical action and fusion at furnace operating temperatures: (1) in smelting operations, through the combination of a flux, such as limestone, with the gangue or waste portion of the ore; (2) in the refining of metals, by substances such as lime added for the purpose of effecting or aiding the refining; or (3) by chemical reaction between refractories and fluxing agents, such as coal ash, or between different types of refractories. *Harbison-Walker* e. Partially fused

mixture of spilled batch, overflowed glass, breeze coal, and clay from the sieve. *ASTM* f. The top layer of the multilayer melt formed during some smelting and refining operations. In smelting, it contains the gangue minerals and the flux; in most refining operations, the oxidized impurities. *CTD* g. Oxide liquids (exclusive of the commercial glasses) with a high melting temperature. *Van Vlack* h. See: [blast-furnace slag](#); granulated slag.

slag blanket

The coating of slag, or scum, that forms on the top of the bath in the open-hearth furnace. *Mersereau*, 2

slag buggy

A very large pot for holding slag obtained in the smelting of ores. It is mounted on a railway truck or the like, so as to permit easy dumping. See also: [slag pot](#)

slag car

Iron vessel on wheels used to transport molten slag from furnace to dump. Also called slag buggy. *Pryor*, 3

slag dump

A dumping place for the shell or cone that forms in a slag pot. *Standard*, 2

slagable

Capable of becoming or forming into a slag. *Fay*

slagging

Destructive chemical reaction between refractories and external agents at high temperatures, resulting in the formation of a molten liquid. *Henderson*

slagging of refractories

Destructive chemical reaction between refractories and external agencies at high temperatures, resulting in the formation of a liquid.

slag hearth

A hearth, on the principle of the Scotch hearth, for the treatment of slags, etc., produced by lead smelting in the reverberatory furnace. The English slag hearth has one tuyere; the Castilian or Spanish, three. *Fay*

slag inclusion

Slag (dross) entrapped in a metal. *ASM, 1*

slag lead

Lead obtained by a resmelting of gray slag. *Fay*

slag pot

A vessel for the disposal of slag at furnaces. Small pots are mounted on wheels and moved by hand, while the larger ones are mounted on trucks for mechanical transportation. See also: [slag buggy](#); [slag car](#). *Fay*

slag runoff

Tapping off excess slag after the ore boil in the basic open-hearth process of steelmaking. *Bennett*

slake

a. To crumble or disintegrate, such as coal or lime. b. Small coal. c. To mix with water, so that a chemical combination takes place, as in the slaking of lime. d. To crumble in water. *Van Vlack*

slaking

a. The crumbling and disintegration of earth materials upon exposure to air or moisture; specif. the breaking up of dried clay or soil when saturated with or immersed in water, or of coal or clay-rich sedimentary rocks when exposed to air. *AGI* b. The disintegration of the walls of tunnels in swelling clay, owing to inward movement and circumferential compression. *AGI* c. The treating of lime with water to give hydrated (slaked) lime. *AGI*

slam

Eng. Thin slurry and mud, Yorkshire lead mines. *Arkell*

slant

a. Any short, inclined crosscut connecting the entry with its air course to facilitate the hauling of coal. Commonly called a dip switch when the coal is not level. See also: [shoo-fly](#) b. A heading driven diagonally between the dip and the strike of a coal seam. Also called a run. See also: [counter](#); [stone drift](#); [surface drift](#). *Fay*

slant chute

Chute driven diagonally across to connect a breast manway with a manway chute. See also: [slant](#)

slant drilling

See: [directional drilling](#)

slants

Eng. A set of joints in slate parallel to the main cleavage, Denbighshire. *Arkell*

slant vein

York. One vein crossing another at an acute angle. *Arkell*

slape back

Eng. See: [back](#)

slash

a. There are many successive ridges of shingle running in varying directions, and often with narrow strips of marsh enclosed between successive ridges. Such bands of marsh have been given the very appropriate name of slashes in New Jersey. *AGI* b. Swampy land, overgrown with dense underbrush. Local in the Northeast. *AGI* c. An open or cutover tract in a forest strewn with debris, as from logging; also such debris. *AGI*

slat bucket

A digging bucket of basket construction, used in handling sticky, chunky mud. *Nichols, I*

slate

a. A compact, fine-grained metamorphic rock that possesses slaty cleavage and hence can be split into slabs and thin plates. Most slate was formed from shale. *AGI* b. A coal miner's term for any shale accompanying coal; also, sometimes the equivalent of bone coal. *AGI* c. Dark shale lying next to the coalbeds. It contains impressions of the plant life of distant ages, proving the vegetable origin of coal. *Korson* d. A fine-grained metamorphic rock that breaks into thin slabs or sheets. Usually gray to black, sometimes green, yellow, brown, or red. Slates are composed of micas, chlorite, quartz, hematite, clays, and other minerals. Found in Pennsylvania, Vermont, Maine, Virginia, California, Colorado; Europe. Used for roofing; decorative stone; various building applications; in crushed form on shingles; abrasive; pigment. See also: [clay slate](#); phyllite; spotted slate. *CCD, 2*

slate chute

a. A chute for the passage of slate and bony coal to a pocket from which it is loaded into dump cars. *Fay* b. A chute driven through slate. *Fay*

slate cutter

In the stonework industry, one who operates an upright drilling machine to drill holes into slate so that the slabs may be fastened in place with wires or rods when installed in a building. *DOT*

slate ground

A term used in southern Wales for a dark fissile shale, resembling slate. *AGI*

slate handler

In bituminous coal mining, a laborer who shovels up falls of slate or rock along haulageways in a mine and loads it into cars. Also called rock handler. *DOT*

slate larryman

See: [slate motorman](#)

slateman

In anthracite and bituminous coal mining, a general term for a worker handling slate or rock as distinguished from coal. Usually designated according to type of activity, as rock driller; rock loader; slate motorman; slate picker; slate shooter. Also called rockman; slate handler. See also: [rockman](#); [slate handler](#). *DOT*

slateman helper

See: [slate-shooter helper](#)

slate motorman

In anthracite and bituminous coal mining, a person who operates a mine locomotive to haul trains of cars loaded with slate or shale, underground and at the surface of a mine. Also called larryman; slate larryman. *DOT*

slate saw

See: [marble saw](#)

slate shooter

In bituminous coal mining, one who drills holes into the slate roof of haulageways, and charges and sets off explosives to blast down slate to increase height or improve the safety of the roof. *DOT*

slate-shooter helper

In bituminous coal mining, a laborer who assists the slate shooter in removing the slate and rock from the roof, ribs, and face of haulageways. Also called rockman helper; slateman helper. *DOT*

slate spar

A variety of crystallized calcite. Also called shiver spar. *Standard, 2; Fay*

slat gate

A gate, for controlling water, composed of two upright grooved posts with boards between the boards of slats being removed or added to regulate the height of water.

slaty band

Scot. Ironstone and flaky blaes. *Nelson*

slaty cleavage

A pervasive, parallel foliation of fine-grained, platy minerals (mainly chlorite and sericite) in a direction perpendicular to the direction of maximum finite shortening, developed in slate or other homogeneous sedimentary rock by deformation and low-grade metamorphism. Most slaty cleavage is also axial-plane cleavage. Syn: [flow cleavage](#)

slave cylinder

A small cylinder whose piston is moved by a piston rod controlled by a larger cylinder. *Nichols, 1*

slave piston

A small piston having a fixed connection with a larger one. *Nichols, 1*

slave unit

A machine controlled by or through another unit of the same type. *Nichols, 1*

sleck

a. Eng. A kind of reddish sandstone. b. Eng. Small pit coal. *Arkell* c. Newc. Mud deposited by water in a mine. d. See: [slack](#)

sled

A drag used to convey coal along the road to where it is loaded into cars, or to the chute. Also called sledge; slype. *Fay*

sledger

a. In bituminous coal mining, one who digs out dirt, rock, or coal with a long-handled pick (sledge) in a strip mine so that it may be loaded into cars by hand or with a power shovel. *DOT* b. In the quarry industry, one who breaks up large stone into small pieces suitable for use in building work. Also called laborer, stone; rock breaker; spawl beater; stone sledger. *DOT*

sledging roll

Crushing roll with projection that breaks the rock, instead of fracturing it by squeezing. Also called slugging roll. *Pryor, 3*

sleeping rent

A fixed rent stated in leases of coal mines, as distinguished from royalty or share of profits. *Standard, 2*

sleeve catcher

A skirt-type core lifter. *Long*

slender beam

A beam, which if overloaded, will fail by buckling of the compression flange. *Hammond*

slew

a. To turn around (slue). *Mason* b. See: [slough](#)

slewing

a. The rotation of a crane jib so that the load moves through the arc of a circle on a horizontal line. *Hammond* b. To turn or twist.

slice

a. To remove ore by successive slices from the top of an orebody of considerable lateral extent and thickness. The slices may be 6 ft, 12 ft, 20 ft, or 40 ft (1.8 m, 3.6 m, 6.1 m, or 12.2 m) thick. b. A thin broad piece cut off, such as a portion of ore cut from a pillar or face.

slice bar

A thin, wide iron tool for cleaning clinkers from the grate bars of a furnace. *Standard, 2*

slice drill

In sublevel caving, the crosscuts driven between every other slice from 18 to 36 ft (5.47 to 10.94 m) apart. *Lewis*

slicing

In continuous mining, slicing consists of driving up some four to six places the set or desired distance, which may be 1,000 ft (304.8 m) or more, and then pulling the pillars on retreat. After completion of one slice, the unit moves over and mines another along the gob. See also: [top slicing](#)

slicing-and-filling system

See: [overhand stoping](#)

slicing method

Removal of a horizontal layer from a massive orebody. In top slicing extraction retreats along the top of the orebody, leaving a horizontal floor that becomes the top of the next slice. A timber mat separates this from the overburden, which caves downward as the slices are made. Other methods attack from the bottom (sublevel caving) or side. *Pryor, 3*

slick

Ore in a state of fine subdivision. Syn: [slime](#)

slickens

Extremely fine-grained material, such as finely pulverized tailings discharged from hydraulic mines or a thin layer of extremely fine silt deposited by a stream during a flood. *AGI*

slickensided clay

See: [stiff-fissured clay](#)

slickensides

The striations, grooves, and polish on joints and fault surfaces. CF: [striation](#)

slicker

A small implement used in a foundry for smoothing the surface of a mold. *Standard, 2*

slick hole

A hole column loaded with explosive, without springing. *Nichols, 1*

slicking

A narrow vein of ore. *Standard, 2*

slick top

In coal mining, a term used to describe the roof of the coal vein when it is very smooth. *Kentucky*

slide

a. An upright rail fixed in a shaft with corresponding grooves for steadying the cages. *Fay* b. A trough used to guide and to support rods in a tripod when drilling an angled hole. Also called rod slide. *Long* c. The bottom of a gold-washing cradle. *Standard, 2* d. As used by churn drillers, a fault plane or opening encountered in a hole that deflects the bit. *Long* e. A mass movement of descent resulting from failure of earth, snow, or rock under shear stress along one or several surfaces that are either visible or may reasonably be inferred; e.g., landslide, snowslide, and rockslide. The moving mass may or may not be greatly deformed, and movement may be rotational or planar. A slide can result from lateral erosion, lateral pressure, weight of overlying material, accumulation of moisture, earthquakes, expansion owing to freeze-thaw of water in cracks, regional tilting, undermining, and human agencies. *AGI* f. The mass of material moved in or deposited by a slide. *AGI*

slide coupling

See: [slip joint](#)

slide rail

A mounting of steel or cast iron for a belt driven machine enabling it to be moved along as the belt stretches in order to take up the slack. *Hammond*

slide rock

Rock making up the mass of material in a landslide or talus.

sliding angle

Angle at or above which rock in movement will continue to slide, but less than the angle needed to initiate movement from rest. *Pryor, 3*

sliding friction

Sliding friction is the resistance offered when one body slides over another body. The amount of friction or resistance is dependent on the laws of friction. *Morris*

sliding gate

A crest gate that has a high frictional resistance to opening and is therefore suitable only for small gates. See also: [roller gate](#) *Hammond*

sliding scale

A method of paying for the coal in proportion to the amount of lump coal it contains. *Fay*

sliding-scale system

A system which regulated colliers' wages by the ascertained selling price of coal. *Nelson*

sliding shoe

A metal plate that serves as partial or total support for devices used with shaker conveyors where the device must move or slide on the bottom. The shovel trough of a duckbill and certain types of swivels or angle troughs use this device. *Jones, 1*

slime

- a. Extremely fine sediment (#200 mesh), produced in the processing of ore or rock, esp. phosphate rock, which remains suspended in water indefinitely. Consists chiefly of clay.
- b. A material of extremely fine particle size encountered in ore treatment. *ASM, 1*
- c. Anode slimes are the metals or metal compounds left at, or falling from, the anode during electrolytic refining of metals. See also: [anode slime](#)
- d. A mixture of metals and some insoluble compounds that forms on the anode in electrolysis. *ASM, 1*
- e. A product

of wet grinding containing valuable ore in particles so fine as to be carried in suspension by water; chiefly used in the plural. *Webster 3rd f.* In metallurgy, ore reduced to a very fine powder and held in suspension in water so as to form a kind of thin ore mud; generally used in the plural. *g.* Primary slimes are extremely fine particles derived from ore, associated rock, clay, or altered rock. They are usually found in old dumps and in ore deposits that have been exposed to climatic action; they include clay, alumina, hydrated iron, near-colloidal common earths, and weathered feldspars. Secondary slimes are very finely ground minerals from the true ore. *Pryor, 2*

slime coating

In mineral processing, adherence of an impalpably fine layer of particles of another (for example, calcite on galena), therefore hindering or preventing true surface reaction in leaching or flotation. *Pryor, 3*

slime deliveryman

In beneficiation, smelting, and refining, a laborer who washes slime from cloth strainers, electrolysis tank debris, and collection barrels into a settling tank, using a water spray preparatory to recovery of precious metals from slime. Becoming obsolete. *DOT*

slime leaching

A leaching method in which the slime and the leach solution are agitated in one or more agitators until the ore minerals have been dissolved. Some agitators have mechanically driven paddles or elevators inside an agitation tank, which serve to keep the pulp in circulation until dissolution is complete. This method may be either continuous or intermittent. *Newton, 1*

slime pit

A tank or large reservoir of any kind into which the slimes are conducted in order that they may have time to settle, or in which they may be reserved for subsequent treatment. See also: [slime](#)

slimer

A machine that makes slime; e.g., a tube mill. *Fay*

slime sludge

a. The pulp or fine mud from a drill hole. b. See: [slime](#)

slime table

a. A table for the treatment of slime; a buddle. b. A shaking table used in gravity concentration of finely ground coal or ore, characterized by special riffles and shallow pools in which stratification is gently produced. *Pryor, 3*

slime tin

Cassiterite too finely ground to be readily concentrated by the use of gravity treatment. Usually associated with hydrated iron. *Pryor, 3*

slime water

Water defiled in washing ore. *Standard, 2*

slim hole

a. A rotary borehole having a diameter of 12.7 cm or less. *AGI* b. A drill hole of the smallest practicable size, often drilled with a truck-mounted rig; used primarily for mineral exploration or as a stratigraphic or structure test. See also: [structure test hole](#)
AGI

slim-hole drilling and casing

Use of the smallest feasible drill hole and casing size. *Williams*

sliming

Overgrinding in a ball mill. *Newton, 1*

sline

a. Mid. Potholes in a mine roof. b. The principal cleat in coal. c. A natural transverse cleavage of rock; a joint.

sling

a. A rope or chain put around stones or heavy weights for raising them. *Zern* b. A lifting hold consisting of two or more strands of chain or cable. *Nichols, 2* c. A ropelike device used to give additional support to lengths of drill rod too long to stand in the drill derrick without sagging unduly. *Long* d. A short loop or length of cable with small loops at either end. *Long*

sling block

A frame in which two sheaves are mounted so as to receive lines from opposite directions. *Nichols, 1*

sling hygrometer

See: [Storow whirling hygrometer](#)

sling psychrometer

A hygrometer held on a short length of cord and whirled around, the observer standing sideways to the air current. The wet bulb is thereby rapidly reduced to its final reading.
Hammond

slink

Scot. A wide clayey joint; a stage.

slip

a. Landslip, or subsiding mass of rock or clay in a quarry or pit; a minor landslide. b. A small fault. c. The relative displacement of formerly adjacent points on opposite sides of a fault, measured in the fault surface. See also: [dip slip](#); strike slip. Partial syn: shift. Syn: [total displacement](#) d. A joint or cleat in a coal seam. e. See: [kettle bottom](#) f. A joint in coal upon which there may have been no perceptible movement. g. See: [back](#) h. A joint or pronounced cleavage plane. *Mason* i. A sudden descent of a hanging or sticking charge in a blast furnace. j. One of a set of serrated-face wedges that fits inside the spider of a drill-rod clamping device. See also: [spider](#); [slips](#). *Long* k. The percentage of water leaking through valves, expressed as a percentage of the volume swept out by the bucket or ram, a measure of the volumetric efficiency of a pump. Generally for normal pumping speeds, the slip is between 5% and 10% but it may rise to 20% with higher pumping speeds. *Sinclair, 4* l. Under stress, minerals deform plastically along specific crystallographically determined slip planes in slip directions, analogous either to the sliding in a deck of playing cards, such as in quartz, or to a bundle of pencils, such as in olivine. Deformation lamellae may be preserved or destroyed by annealing. Although such slip is referred to as glide, it is not to be confused with a crystallographic glide--the combined symmetry element of translation and reflection. CF: [glide](#); glide direction; glide plane; gliding.

slip bowl

A spider. See also: [spider and slips](#)

slip-casting process

One in which clay, or other slip, is poured into plaster molds that absorb the water, leaving a body the shape of the mold.

slip clay

An easily fusible clay containing a high percentage of fluxing impurities, used to produce a natural glaze on the surface of clayware. See also: [slip](#)

slip cleavage

a. That variety of foliation along which there has been visible displacement, usually shown by bedding that is cut by the cleavage. Such displacements are commonly shown along many adjacent cleavage planes. *Billings* b. Microscopic folding and fracture accompanied by slippage; quarrymen's false cleavage. c. S. Wales. The cleat of coal in planes parallel with slips or faults. d. A type of cleavage that is superposed on slaty cleavage or schistosity, and is characterized by finite spacing of cleavage planes between which occur thin, tabular bodies of rock displaying a crenulated cross-lamination. Syn: [shear cleavage](#); [strain cleavage](#); strain-slip cleavage; close-joints cleavage. *AGI*

slip clutch

A friction clutch that protects a mechanism by slipping under excessive load. *Nichols, I*

slip dike

A dike that has been intruded along a fault plane. *AGI*

slip direction

The crystallographic direction in which the translation of slip takes place. See also: [glide direction](#)

slipes

S. Staff. Sledge runners, upon which a skip is dragged from the working breast to the tramway.

slip fiber

Veins of fibrous minerals, esp. asbestos, in which the fibers are more or less parallel to slickensided vein walls. CF: [cross fiber](#)

slip-fiber amphibole

See: [anthophyllite](#)

slip fold

See: [shear fold](#)

slip grip

A hold or grip on a drill rod, casing, or pipe by means of serrated-face steel wedges or slips. *Long*

slip joint

a. A contraction joint between two adjoining sections of wall, or at the horizontal bearing of beams, concrete slabs, and precast units, to allow slight movement in relation to one of the other. *Hammond* b. A splined connection loose enough to allow its two parts to slide on each other to change shaft length. *Nichols, 1*

slip line

Line that appears on the polished surface of a crystal or crystalline body that has been stressed beyond the elastic limit. In quantity, they represent the intersection of the surface by planes on which shear stress has produced plastic slip or gliding. Syn:

[Lueders line](#)

slip maker

See: [clay maker](#)

slip mixer

See: [clay maker](#)

slippage

See: [slip](#)

slippery parting

Eng. See: [back](#)

slipping cut

In blasting underground, a cut used in a wide tunnel face, in which each successive vertical line of shots (round) breaks to the face made by the previous round, so that the relieving cut moves across the end being blasted. Also known as slabbing cut; swing cut. *Pryor, 3*

slip plane

a. Closely spaced surfaces along which differential movement takes place in rock. Analogous to surfaces between playing cards. Syn: [glide plane](#); gliding plane. *Billings; AGI* b. The crystallographic plane in which slip occurs in a crystal. *ASM, 1*

slip process

See: [wet process](#)

slips

a. Small faults. *BS, 11* b. A tool used at the mouth of a borehole to grip the drill rods or the casing, as these are being inserted or withdrawn. *BS, 9* c. See: [backs](#); slickensides.

slip spear

A tool for extracting tubing from a borehole.

slip surface

The surface along which an earth bank is liable to fail under load. *Hammond*

slip surface of failure

In a bank of homogeneous earth or clay, the slip surface of failure closely follows the arc of a circle that usually intersects the toe of the bank. Stability depends upon fixing the position of the center of rotation of the slip surface along which the greatest shearing resistance would be required for equilibrium. See also: [circular slip](#); [landslide](#). *Nelson*

slip switch

A sensor installed on a conveyor drive pulley snub roller, on a return roller, on a bend roller, or on a head pulley that will detect a slowing of the conveyor, resulting in conveyor shut-down to avoid conveyor belt fires or overloading of the conveyor because of the slipping.

slip-type core lifter

A device used like a core spring, consisting of a series of tapered wedges contained in slotted recesses in a circular ring or sleeve; as the core enters the inner tube, it lifts the wedges along the taper, and when the barrel is lifted, the wedges are pulled tight against the core. *Long*

slip vein

A mineral vein accompanied by faulting or dislocation.

slip velocity

The rate, expressed in feet (meters) per minute, at which a given size and shape of rock particle will descend or settle in water; e.g., the slip velocity in water of a round, flat particle of rock, 1/2 in (1.27 cm) in diameter, is about 54 ft/min (16.5 m/min). *Long*

slit-side solid sampler

A solid-tube sampler with a slight twist on the bottom and an offset slit in the side. When rotated, the lip of the slit scrapes a sample from the side of a borehole. *Long*

slitter

Eng. A pick. *Fay*

slitting disk

Circular saw used in preparing rock specimens. The cutting edge incorporates diamond dust, and the thin steel disk revolves at high speed. *Pryor, 3*

slitting shot

A shot put into a large mass of coal detached by a previous blast.

stocking stone

Eng. A piece of rich ore used to tempt persons into a mining enterprise. See also: [salting a mine](#)

slope

a. The entry, passage, or main working gallery of a coal seam that dips at an angle. See also: [incline](#) b. Inside slope. c. See gradient. d. An inclined passage driven from the dip of a coal vein. CF: [slant](#) When not open at one end to the surface, it is known as an inside slope. See also: [incline](#); [plane](#). e. The inclination of a mine roadway or coal seam. *Nelson* f. The main working gallery or entry of a coal seam that dips at an angle and along which mine cars are hauled. *Nelson* g. An entrance to a mine driven down through an inclined coal seam; also, a mine having such an entrance. An inside slope is a passage in the mine driven through the seam by which coal is brought up from a lower level. *Korson* h. In a mining statute or in mining parlance, an inclined way, passage, or opening used for the same purpose as a shaft. Sometimes used to embrace the main haulage passageway, whether inclined or level. *Ricketts* i. The degree of inclination to the horizontal. Usually expressed as a ratio, such as 1:25, indicating one unit rise in 25 units of horizontal distance; or in a decimal fraction (0.04); degrees (2 degrees 18'); or percent (4%). It is sometimes expressed as steep, moderate, gentle, mild, flat, etc. Also

called gradient. *Hunt* j. In surface mining, the steepest possible slope of an excavation that is consistent with safety of working. *Mining* k. An inclined passageway (tunnel) from the surface, through the strata, that intersects the coal bed to be developed.

slope air course

A passageway parallel to the haulage slope used for the passage of the air current.

slope cage

A truck on which the cars are raised at slopes or steep dips. Also called slope carriage. See also: [carriage](#)

slope conveyor

a. Usually a troughed belt conveyor used for transporting coal or ore through an inclined passage to the surface from an underground mine. See also: [apron conveyor](#); [belt conveyor](#); [flight conveyor](#). b. Generally less than 1,000 ft (304.8 m) in length, the conveyor is designed to raise or lower material on steep grades and is commonly used to transport material from discharge bins or a main haulage conveyor to the outside. It is often used as a transfer conveyor from a lower to a higher entry or to a gangway in a pitching seam. *NEMA*, 2

slope correction

A calculation of deduction from a length as measured on a slope to bring it to its true horizontal length. See also: [tape corrections](#)

slope engineer

In anthracite and bituminous coal mining, one who operates a hoisting engine to haul loaded and empty mine cars along a level or inclined haulage road (slope or plane) in a mine on a level, or from a lower to an upper level, or to the mine surface. Also called drag engineer; dragline engineer; drumman; plane engineer; plane tender; slope tender. *DOT*

slope failure

a. The downward and outward movement of rock or unconsolidated material as a unit or as a series of units. Also called slump. *Leet*, 1 b. Failure of the mass of soil beneath a natural slope or a slope of an embankment by the formation of a slide. *Huntington* c. Slope failure may take place by one or more of three processes: (1) raveling, in which the material will assume an angle of repose approx. equal to the angle of friction of the material, and within limits the stable slope is independent of the weight of the mass, the height of the slope, and the size of the fragments. It is, however, characteristic of each

rock material and is dependent on angularity, grading, and mineral content; (2) transitional failure, in which failure occurs mostly along existing fault planes or other planes of weakness. Stability is a function of rock cohesion, the angle of internal friction, the angle of dip of the slip plane, the length of the slip surface, and the total weight of the block; and (3) rotational or base failure, which is uncommon in open-pit mines or rock cuts because of geologic structure. However, in the case of homogeneous cohesive material--very deep excavation or low rock strength--failure may occur along a cylindrical surface. Four types of slope failure are rockfall, rock flow, plane shear, and rotational shear. See also: [rockfall](#); [rock flow](#); [plane shear](#); [rotational shear](#). Syn: [base failure](#) d. Gradual or rapid downslope movement of soil or rock under gravitational stress, often as a result of man-caused factors; e.g., removal of material from the base of a slope. *AGI*

slope gage

A staff gage placed on an incline and graduated to indicate vertical heights. *Seelye, 1*

slope hoist

See: [direct-rope haulage](#)

slope mine

a. A mine opened by a slope or incline. b. A mine with an inclined opening used for the same purpose as a shaft or a drift mine. It resembles a tunnel, a drift, or a shaft, depending on its inclination. *Kentucky*

slope stability

a. The resistance of any inclined surface, as the wall of an open pit or cut, to failure by sliding or collapsing. b. The resistance of a natural or artificial slope or other inclined surface to failure by landsliding. *AGI*

slope stake

a. Stake set at the point where the finished side slope of an excavation or embankment cuts the surface of the ground. It is usually placed on a line at right angles to the center line and passing through the station point. *Seelye, 2* b. A stake marking the line where a cut or fill meets the original grade. *Nichols, 1*

slope staking

Marking the ground surface by pegs at points where proposed new slopes in cut or fill coincide with the original surface. *Hammond*

slope tender

See: [slope engineer](#)

slope test

A test to determine whether, and to what extent, the course of a well deviates from vertical. Syn: [angularity test](#)

sloshing loss

A loss occurring when there is a fluid in the pores of the rock. This loss arises from the relative movement of the fluid and solid as the elastic waves pass through the rock.
Wyllie

slot

A narrow, vertical opening generally too small to permit traverse by a person. *AGI*

slot-and-wedge bolt

A special rod designed for use in roof bolting. It consists of a mild steel rod, threaded at one end, the other end being split into halves for a length of about 5 in (12.7 cm). When the bolt is driven into the hole, a wedge opens the slotted end, thus forming the anchorage. See also: [bolt](#); wedge-and-sleeve bolt. *Nelson*

slot dozing

A method of moving large quantities of material with a bulldozer. Each trip is made in the same path; thus the spillage from the sides of the blade builds up along each side. All material pushed into the slot is retained in front of the blade; bigger loads are handled.
Nelson

slotted duct sampler

An instrument for sampling airborne dust consisting of a wide horizontal duct through which mine air enters in a streamline flow, so that dust particles will be deposited on the duct floor according to their falling speeds as derived from Stokes' law. The instrument combines the duties of monitoring and measuring airborne dust concentrations in mine roadways. See also: [thermal precipitator](#)

slough

Fragmentary rock material that has crumbled and fallen away from the sides of a borehole or mine working. It may obstruct a borehole or be washed out during circulation of the drilling mud. Pron: sluff. *AGI*

sloughing

Minor face and rib falls. *Coal Age, 3*

sloughing-off cone

Large cone (e.g., Callow) in pulp flow line designed to remove fine slimes as overflow while delivering a thickened spigot product containing the coarser particles. *Pryor, 3*

slovan

a. Corn. The outcrop or back of a lode. This generally applies to the appearance of a lode in a marshy place. b. A gallery in a mine; day level; esp. applied to damp places.

Standard, 2

slow-banking device

An appliance for use in conjunction with the Lilly controller for controlling the landing speed of less than 5 ft/s (1.52 m/s) when workers are being transported by winding. On each dial of the Lilly controller, an auxiliary dial is bolted to carry a slow-banking cam engaging near the end of the wind with a roller arm. The action of the appliance depends on the relative rate of movement of this roller and that of the piston in an oil dashpot cylinder. *Sinclair, 5*

slow gear

a. When applied to speed at which the drill motor rotates the drill stem, the transmission gear position giving the lowest number of bit revolutions per minute; thus, slow gear corresponds to low gear in an automobile. *Long* b. When applied to a screwfeed-type drill, the pair of feed gears in the feed mechanism that advances the bit the least amount for each revolution of drill drive rod and/or the coupled drill stem; e.g., a 400-feed gear is slower than a 100-feed gear. CF: [feed ratio](#)

slow igniter cord

It consists of a plastic incendiary composition extruded around a central copper wire. An iron wire is added to give greater strength, and the whole is then enclosed in a thin extruded plastic coating. The diameter of slow cord is 0.07 in (1.8 mm). *McAdam, 2*

slow powder

Blackpowder, often called gunpowder. Also, some of the slow-acting dynamites.
Nichols, 1

sludge

a. Refuse from a coal-washing plant. *Standard, 2* b. In diamond drilling, the portion of core ground finely by accident or defect in drilling, and therefore reducing the reliability of the portion of the sample in which it happened. Mineral mud, slurry too thick to flow. *Pryor, 3* c. Rock cuttings produced by a drill bit. *BS, 9* d. See: [cuttings](#) e. A semifluid, slushy, murky mass of sediment resulting from treatment of water, sewage, or industrial and mining wastes; often appearing as local bottom deposits in polluted bodies of water. *AGI* f. See: [slime](#)

sludge abatement

The control of the discharge into watercourses (or on adjacent land), of mineralized or impure water, or sludge, or mining debris. *Nelson*

sludge assay

The chemical assaying of drill cuttings for a specific metal or group of metals. *Long*

sludge barrel

a. See: [sediment tube](#) b. See: [calyx](#)

sludgebound

Any part of the drill-string equipment clogged by impacted cuttings. *Long*

sludge box

a. A wooden box in which the sludge is allowed to settle from the mud flush and sometimes retained for examination. *Nelson* b. See: [settling box](#)

sludge bucket

See: [calyx](#)

sludge channel

A tailrace for conveying the tailings away after the gold has been extracted from alluvial beds.

sludge mill

A machine in which the sludge (slime) from another mill is washed; as, e.g., a slime table.

sludge paddocks

Collecting or settling areas for the slurry which results from hydraulicking overburden. *Austin*

sludge pit

See: [sump](#)

sludge pump

Short iron pipe or tube fitted with a valve at the lower end, with which the sludge is extracted from a borehole. Also called bailer, mud pump. See also: [mud hog](#); [sand pump](#).

sludger

a. A long cylindrical tube, fitted with a valve at the bottom and open at the top, used for raising the mud that accumulates in the bottom of a boring during the sinking process. Also called sand pump; shell pump; sludge pump. *CTD* b. A scraper for clearing mud out of a shothole. *CTD* c. A centrifugal pump designed for dealing with sand and slime. See also: [bailer](#)

sludge sample

a. Samples of mud from a rotary drill, or sand from a churn drill, or fine materials from diamond drilling used to obtain information about the formation being drilled. *Nichols, I* b. All or part of the drill cuttings collected, dried, and saved for assaying or chemical analysis. *Long* c. The mud and chippings made during boring with a diamond or churn drill and sometimes used for sampling purposes. Little reliance can be placed on the assay of the sludge, and it is not regularly saved for assay, except occasionally when drilling in weathered or friable ore zones. Sludge tanks are often used to collect sludge samples. *Nelson*

sludge sampler

a. An individual responsible for collecting and preparing drill cuttings for the purpose of examining, assaying, chemical analysis, or storage. Also called sampler. *Long* b. A device used to collect and to split drill cuttings. See also: [riffle](#)

sludge sampling

Process of collecting and preparing drill cuttings as samples. *Long*

sludge-saver

A device for collecting all the drill cuttings from a given interval of borehole. *Long*

sludge splitter

See: [rifle](#)

sludge water

See: [return water](#)

sludging

Filling or choking the waterways of a bit with drill cuttings; mudding up.

sludging formation

A formation from which it is nearly impossible to recover core, so that sampling is done by collecting the drill cuttings or sludge. *Long*

sludging up

See: [sludging](#)

slue

To turn, twist, or swing about. To slide and turn or slip out of course. In cutting the coal, the machine moves from right to left, the back part moving faster than the front. It is necessary at intervals to stop the machine and straighten it, or "slue" it, as called by miners.

sluff

a. Mud cake detached from the wall of a borehole. *Long* b. A variant, incorrect spelling of slough. *Long* c. The falling of decomposed, soft rocks from the roof or walls of mine openings.

slug

a. A piece of alluvial gold up to about 1 lb (0.45 kg) weight. *Gordon* b. A lump of metal or valuable mineral. c. To inject a borehole with cement slurry or various liquids containing shredded materials in an attempt to restore lost circulation by sealing off the openings in the borehole-wall rocks. *Long* d. Small, shaped pieces of hard metal that can

be brazed or handpeened in slots or holes cut in the face of a blank bit. Slugs may or may not contain diamonds. CF: [insert](#) e. A mass of half-roasted ore. *Webster 3rd*

slug bit

See: [insert bit](#)

slugga

An Irish term for a hole in the ground surface, caused by the falling-in of limestone over a subterranean stream. CF: [sinkhole](#)

slugger

A tooth on a roll-type rock crusher. *Nichols, 1*

sluice

a. To mine an alluvial deposit by hydraulicking. *Nelson* b. A conduit or passage for carrying off surplus water, often at high velocity. It may be fitted with a valve or gate for stopping or regulating the flow. *AGI* c. A gate, such as a floodgate. *AGI* d. A body of water flowing through or stored behind a floodgate. *AGI* e. A long troughlike box set on a slope of about 1:20, through which placer gravel is carried by a stream of water. The sand and gravel are carried away, while most of the gold and other heavy minerals are caught in riffles or a blanket on the floor. See also: [box sluice](#); ground sluice; placer mining. *Nelson* f. See: [flume](#) g. An opening in a structure for passing debris. *Seelye, 1* h. A channel, drain, or small stream for carrying off surplus or overflow water. *Craigie*

sluicebox

Long, inclined trough or launder containing riffles in the bottom that provide a lodging place for heavy minerals in ore concentration. The material to be concentrated is carried down through the sluices on a current of water. Sluiceboxes are widely used in placer operations for concentrating elements such as gold and platinum, and minerals such as cassiterite, from stream gravels. *Newton, 1*

sluice fork

A form of fork having many tines, used to remove obstructions from a sluiceway.

sluice gate

The sliding gate of a sluice. *Webster 3rd*

sluice head

Aust. A supply of 1 ft³ /s (0.028 m³ /s) of water, regardless of the head, pressure, or size of orifice. CF: [miner's inch](#)

sluice tender

In metal mining, a laborer who tends sluiceboxes (troughs) used in placer mining to separate gold from the sand or gravel in which it occurs; and removes wood and other obstructions to see that the gravel and water run freely through the sluices and that the riffles (cleats) are clear, so that the gold will be caught and held when settling to the bottom. *DOT*

sluiceway

An artificial channel into which water is let by a sluice. *Webster 3rd*

sluicing

Concentrating heavy minerals by washing unconsolidated material through a box (sluice) equipped with riffles that trap the heavier minerals on the floor of the box. *AGI*

slum

a. The very finely divided clayey portion of the residue overflowing from a sluice box, particularly applied to deep lead mining. *Nelson* b. A short roadway to the dip in coal mines used solely to stock spare cars or the spake until required at the end of the shift. *Nelson* c. A soft clayey or shaley bed of coal. Also spelled slumb. d. Used in the plural for the discharge or waste from hydraulic mines. See also: [tailing](#); [slime](#).

slumgullion

A usually red, muddy deposit in mining sluices. *Webster 3rd*

slump

a. A landslide characterized by a shearing and rotary movement of a generally independent mass of rock or earth along a curved slip surface (concave upward) and about an axis parallel to the slope from which it descends, and by backward tilting of the mass with respect to that slope so that the slump surface often exhibits a reversed slope facing uphill. Syn: [slumping](#) b. The mass of material slipped down during, or produced by, a slump. *AGI*

slump bedding

A term applied loosely to any disturbed bedding; specif. deformed bedding produced by subaqueous slumping or lateral movement of newly deposited sediment. *AGI*

slumping

The downward movement, such as sliding or settling, of a slump. Syn: [slump](#)

slung cartridges

Cartridges of explosive lowered into position in drill hole blasting at the end of a length of strong twine (not wire). As detonating cord is normally used for ignition in drill holes, the primed cartridge is lowered first in each charge by using a detaching hook or a length of twine, and it is followed by the remainder of the charge. *Nelson*

slurry

a. The fine carbonaceous discharge from a mine washery. All washeries produce some slurry, which must be treated to separate the solids from the water in order to have a clear effluent for reuse or discharge. See also: [sludge](#) b. Fine particles concentrated in a portion of the circulating water (usually by settling) and waterborne to treatment plant of any kind. *BS, 5* c. A thin watery suspension; e.g., the feed to a filter press or other filtration equipment. *CCD, 2*

slurry blasting agents

Dense, insensitive, high-velocity explosives of great power and very high water resistance. They are usually mixtures of an explosive such as TNT, which is a reducing agent, or an oxidizing agent, such as ammonium nitrate and/or sodium nitrate, and water. A thickening or jelling substance such as guar gum is usually added. Slurries may also be made with nonexplosive reducing agents, including finely divided metals such as magnesium or aluminum, and with organic compounds such as sugar, molasses, or emulsified oil. These slurries are used chiefly in open pit mines where rock is hard and/or holes are wet. Also called DBA (dense blasting agent). *Nichols, 1*

slurry helper

A laborer who makes slurry for use by furnace sprayer, mixing specified amounts of silica, clay, and water in large drums with air-pressure hose. *DOT*

slurrying

The process of filling in joints with slurry. *Osborne*

slurry man

See: [furnace sprayer](#)

slurry pond

Any natural or artificial pond or lagoon for settling and draining the solids from washery slurry. *BS, 5*

slurry screen

A screen to recover a granular product from the circulating water in a washer, usually after a preliminary concentration of the solids and with or without the use of water sprays. *BS, 5*

slush

a. To fill mine workings with sand, culm, or other material, by hydraulic methods. See also: [hydraulic mine filling](#) b. Silt. c. To move ore or waste filling with a scraper (slusher) hoist.

slusher

a. See: [scraper loader](#) b. A mechanical dragshovel loader. *Mason* c. A mobile drag scraper with a metal slide to elevate the bucket to dump point. *Nichols, 1*

slusher drift

Drift in stope block above haulage level, down which scraper loader conveys broken ore to loading chutes, which are usually without gates. *Pryor, 3*

slusher operator

In metal mining, one who operates the hoisting engine of a scraper loader, known as a slusher, to load ore into cars or to scrape it into chutes, or to move sand or rock fill in the stopes. *DOT*

slushing

Term sometimes applied to hydraulic stowing and also to scraper loader operations. *Nelson*

slushing drift

A drift in an orebody, equipped with a scraper loader, for loading ore directly into cars in the haulage level. The drift is formed at right angles to the haulage level and over it so that the ore drops into the cars. *Nelson*

slushing oil

Used to coat metals, machine parts, etc., to prevent corrosion. It usually is nondrying oil or grease, which coats the metal very well but is easily removed when desired. *Crispin*

slush pit

An excavation dug near a drill to form a reservoir in which the returns from a borehole are collected and stored. Also called drill sump, mud pit, sludge pit, slush pond, sump. *Long*

slush pond

See: [slush pit](#); sump.

sly bed

Eng. Soft, black, bituminous shale with a white efflorescence on exposure. A hard calcareous band near the base, Middle Purbeck Beds, Swanage. *Arkell*

small coal

a. Coal broken into small pieces, usually smaller than stove size; slack. *Standard*, 2 b. Coal with a top size less than 3 in (7.6 cm). *BS*, 2

small colliery

Gr. Brit. Generally a colliery producing less than 1,000 st/d (907 t/d). See: [large colliery](#)

small-diameter blastholes

Multiple row blasting with holes 1 to 3 in (2.5 to 7.6 cm) in diameter in low-face quarries. Short-delay blasting is usually adopted using explosive factors similar to those of large diameter holes. With smaller diameter blastholes, the explosive charges can be brought up higher in the holes and so provide better breakage in blocky ground. *Nelson*

Smalley process

A method for desulfurizing iron and steel with metal hydrides in which a molten slag is floated on a mass of molten ferrous metal and at least one metal hydride is introduced into the mass. The molten ferrous metal is separated from the slag, the metallic hydrides breaking down into metal and nascent hydrogen. Hydrides of the alkali metals have been found very satisfactory and are readily available. *Osborne*

small mine

A coal mine employing not more than 50 persons below ground.

small ore

Eng. Copper, lead, and zinc ore dressed to a small size. See also: [smalls](#)

smalls

a. Small coal; slack. *Standard*, 2 b. One of the three main size groups by which coal is sold by the National Coal Board of Great Britain. It embraces all coals with no lower size limit and ranges from a top size of 2 to 1/8 in (50 to 3.3 mm), and can be either untreated, i.e., have received no preparation other than dry screening; or treated, having been washed or dry cleaned. See also: [graded coal](#); [large coal](#). *Nelson* c. Small particles of mixed ore and gangue. *Standard*, 2 d. See: [small ore](#)

small-stone bit

In mineral exploration drilling, a diamond bit set with 100% size or smaller diamonds. *Long*

small tin

Eng. Tin recovered from slimes.

smaltine

An arsenide of cobalt, often containing nickel and iron. Also called gray cobalt; tin-white cobalt. See also: [smaltite](#)

smaltite

a. Arsenic-deficient variety of skutterudite. Syn: [smaltine](#); tin-white cobalt; gray cobalt; white cobalt; speisscobalt. b. A general term for undetermined, apparently isometric, arsenides of cobalt or for a mixture of cobalt minerals.

smaragd

a. A precious stone of light green color; a variety of beryl. *Fay* b. See: [emerald](#)

smaragdite

A thin-foliated variety of amphibole, near actinolite in composition but carrying some alumina. It has a light green color resembling much common green diallage. *Fay*

smart aleck

A limit switch that cuts off power if a machine part is moved beyond its safe range. *Nichols, 1*

smashup

A wreck, usually of haulage equipment.

smectic state

Liquid-crystalline state of some fatty acids and soaps in which bundles of long molecules are oriented into parallel layers. Smectic liquid crystals are composed of a series of planes. They glide rather than flow. When less completely oriented (nematic), they are distributed at random and flow. *Pryor, 3*

smectite

a. Any clay mineral with swelling properties and high cation-exchange capacities; an expansive clay. b. A term originally applied to fuller's earth and later to montmorillonite; also to certain clay deposits that are apparently bentonite, and to a greenish variety of halloysite. c. The mineral group beidellite, hectorite, montmorillonite, nontronite, pimarite, saponite, sauconite, sobotkite, stevensite, and swinefordite.

smeddum

a. Fine particles of coal or ore. b. Fine coal slack. Also spelled smiddam; smiddum; smitham; smithem; smitten; smytham. *Standard, 2*

smelt

See: [smelting](#)

smelter

a. Person engaged in smelting or works in an establishment where ores are smelted. *Fay*
b. An establishment where ores are smelted to produce metal. *Fay* c. A furnace in which the raw materials of the frit batch are melted. See also: [batch smelter](#); [continuous smelter](#); [rotary smelter](#). *ASTM*

smelter returns

In a contract, returns from the ore, less the smelting charges, without deducting transportation charges. *Ricketts*

smelting

a. The chemical reduction of a metal from its ore by a process usually involving fusion, so that earthy and other impurities separate as lighter and more fusible slags and can readily be removed from the reduced metal. An example is the reduction of iron ore (iron oxide) by coke in a blast furnace to produce pig iron. Smelting may also involve preliminary treatment of ore, such as by calcination and further refining processes, before the metal is fit for a particular industrial use. *Rolfe* b. A process distinct from roasting, sintering, fire refining, and other pyrometallurgical operations. The two most important types are reduction smelting, which produces molten metal and molten slag, and matte smelting, which produces molten matte and molten slag. Smelting may be conducted in a blast furnace, a reverberatory furnace, or an electric furnace. Reduction smelting is usually performed in blast furnaces and matte smelting in reverberatories, but there are exceptions in both cases. Syn: [smelt](#)

smelting furnace

A blast furnace, reverberatory furnace, or electric furnace in which ore is smelted for the separation of a metal. *Standard, 2*

smelting works

An establishment in which metals are extracted from ores by furnaces. *Standard, 2*

smiddam

Derb. Lead-ore dust. A variation of smeddum.

smiddum

Eng. A variation of smeddum.

smiddum tails

Eng.; Scot. Ore sludge; ore slime. A variation of smeddum.

Smidth agglomerating kiln

A rotary kiln providing an alternative method to sintering for the treatment of fine ores and flue dust. *Osborne*

smith forge

A small, open-hearth furnace utilizing an air blast with coal or coke for fuel. It is commonly used for heating small metal parts previous to manual, hot-working operations. *Henderson*

smithite

A monoclinic mineral, AgAsS_2 ; dimorphous with trechmannite; red.

Smith process

a. A variation of the series system of copper refining in which the plates are placed horizontally, the top surface of each one acting as cathode, the lower as anode. Linen diaphragms must be placed between the plates to catch the slime. When these diaphragms break and allow the slime to drop on the cathode, it is difficult to remedy any short circuits without dismantling the tank. *Liddell* b. A process for sponge iron production that is carried out in vertical ovens or retorts, similar to coke ovens in design. Crushed ore or iron oxide material is mixed with carbonaceous material and charged into the oven, where it is heated and cooled by means of horizontal flues. It is preheated in the upper part of the oven by the waste gases; then the charge enters the reduction zone, and is subsequently cooled by the incoming air for combustion in the heating flues. *Osborne*

smithsonite

a. A white to yellow, or to brown and rarely green or blue variety of zinc carbonate. See also: [zinc carbonate](#) b. A trigonal mineral, ZnCO_3 , with Zn replaced by Fe; of the calcite group; rhombohedral cleavage; varicolored; commonly reniform, botryoidal, stalactitic, or granular; commonly altered from sphalerite in oxidized zones of limestone replacement; a source of zinc; distinguished from hemimorphite by its effervescence in acids. Syn: [dry-bone ore](#); calamine; zinc spar; szaskaite. c. A term sometimes used as a syn. of hemimorphite.

smitten

Fine gravellike ore, occurring free in mud openings, or derived from the breaking of the ore in blasting. A variation of smeddum.

smoke

The exhalation, visible vapor, or material that escapes or is expelled from a burning substance during combustion; applied esp. to the volatile matter expelled from wood, coal, peat, etc. together with the solid matter that is carried off in suspension with it. That which is expelled from metallic substances is generally called fume or fumes. See also: [fume](#); metallurgical smoke.

smokeless powder

Nitrocellulose containing 13.1% nitrogen. Produced by blending material of somewhat lower (12.6%) and slightly higher (13.2%) nitrogen content; converting to a dough with

an alcohol-ether mixture; extruding; cutting; and drying to a hard, horny product. Small amounts of stabilizers (amines) and plasticizers are usually present, as well as various modifying agents (nitrotoluene and nitroglycerin salts). *CCD, 2*

smoke stick

A means of making a smoke cloud to measure the velocity of air. Fuming sulfuric acid or anhydrous tin tetrachloride are favorite smoke producers. *Zern*

smokestone

See: [cairngorm](#); smoky quartz.

smoke technique

A technique used to measure only very low-speed air velocity. The release of smoke enables the fluid motion to be observed with the eye. If the smoke is timed over a measured distance along an airway of constant cross section then the velocity of flow can be determined. Usually a spot reading, that of maximum velocity, is obtained.

Roberts, 1

smoke tester

One who tests the efficiency of the Cottrell plant and flue recovery method by determining the rate of discharge of gases and solids from the smelter smokestack. *DOT*

smoke tube

To determine the presence of moving air, the direction of flow, and the approximate velocity of flow, the smoke tube method is commonly used, particularly in metal mines. The device consists of an aspirator bulb, which discharges air through a glass tube containing a smoke-generating reagent. Usually pumice stone saturated with anhydrous tin or titanium tetrachloride is employed. The dense white cloud of smoke released when the bulb is squeezed travels with the air current; the approximate air velocity in a mine airway is determined by timing how long the cloud takes to travel between two points.

Hartman, 2

smoke washer

A device in which smoke is forced upward against a downward spray of water in order to remove the solid particles in the smoke. *Webster 3rd*

smoke zone

The area surrounding a smelting plant in which the smoke or fumes damage vegetation, or in which it may be classed as a public menace or nuisance. *Fay*

smoky quartz

A light to very dark brown variety of quartz sometimes used as a semiprecious gemstone. Syn: [cairngorm](#); [smokestone](#).

smoky topaz

A trade name for smoky quartz used for jewelry.

smooth blasting

A technique used in surface and underground blasting in which a row or closely spaced drill holes are loaded with decoupled charges (charges with a smaller diameter than the drill hole) and fired simultaneously to produce an excavation contour without fracturing or damaging the rock behind or adjacent to the blasted face. See also: [controlled blasting](#)

smooth drilling

A rock formation in which a high recovery of core can be attained at a high rate of penetration. *Long*

smoother bar

A drag that breaks up lumps behind a leveling machine. *Nichols, 1*

smooth-faced drum

Plain-faced drum without grooves. *Hammond*

smooth head

York. A smooth plane of cleavage. See also: [bright head](#)

smoothing trowel

Trowel used by plasterers and cement workers for finishing surfaces. *Crispin*

smooth roll

A crusher in which the material passes between a moving set of rolls with smooth surfaces. See also: [roll](#)

S.M.R.E. combustible gases recorder

This methane recorder is a combination of the principles used in the Ringrose and McLuckie detectors. Two combustion chambers are used, each of which operates every 6 min, the operation being staggered so that 20 determinations are made per hour. Samples are drawn into the instrument by means of an electrically driven pump, the operation of the pump and the combustion filaments being controlled by cams on a shaft driven by the motor. Pressures are measured by an aneroid cell and recorded on a clockwork driven drum. *Roberts, 1*

smut

a. Soft, inferior coal. b. S. Staff. Bad, soft coal, containing much earthy matter. See also: [muck](#) c. Coal smuts. *CTD* d. Worthless outcrop material of a coal seam. *CTD* e. Poor, dull, sooty portions of a coal seam. *Gordon* f. A reaction product sometimes left on the surface of a metal after a pickling or etching operation. *ASM, 1*

smytham

Lead ore that has been stamped or pounded down to a sand or powder to remove rock and earth from the ore. *Hess*

smythite

A trigonal mineral, $(\text{Fe,Ni})_9 \text{S}_{11}$ or $(\text{Fe,Ni})_{13} \text{S}_{16}$; physical properties are almost identical with monoclinic pyrrhotine.

snag boat

A boat equipped with a hoist and grapple for clearing obstacles from the path of a dredge. *Nichols, 1*

snake fashion

A method of boxing core. Beginning in the upper-right-hand corner of the core box the core is run from right to left in the first row, from left to right in the second row, left to right in the third, etc., until the box is filled. CF: [reverse book fashion](#)

snakehole

a. A borehole driven horizontally or nearly so and approx. on a level with the quarry floor. b. A borehole driven under a boulder for containing a charge of explosives. In quarry work, it is called a lifter. c. Nearly horizontal holes drilled at the bottom of the face of a bench. The holes are not quite horizontal but are inclined slightly downward so

the bottoms will be a few feet below grade. *Lewis* d. A hole driven into a toe for blasting, with or without vertical holes. *Nichols, 1*

snakeholing

a. A method of blasting boulders to break them up, by boring a hole under a boulder and firing a charge in it; this is more efficient but slower than using plaster shots. See also: [plaster shooting](#) b. A horizontal bore on the quarry floor. *Pryor, 3* c. Drilling under a rock or face in order to blast it. *Nichols, 1*

snake line

A line used to skid a drill rig from place to place using a block and tackle or cable, one end of which is attached to a deadman and the other wrapped around the hoisting drum. *Long*

snake statement

A monthly statement by a coal company on which a crooked line in red ink was drawn to show a miner's indebtedness. The company checked off rent, supplies, and groceries, which often added up to more than a miner's monthly earnings. *Korson*

snaking

a. The progressive sliding forward of an armored flexible conveyor, by means of hydraulic rams, as the coal is removed by a cutter loader. See also: [self-advancing supports](#) b. Moving a drill rig by the use of its own cathead or hoist unit. See also: [bulldog](#) c. Towing a load with a long cable. *Nichols, 1* d. Inserting a tow or hoist line under an object without moving the object. *Nichols, 1*

snaking conveyor

See: [armored flexible conveyor](#)

snaphead rivet

A rivet having a hemispherical head. *Hammond*

snapper

a. A car coupler, trip rider, or brakeman. b. See: [grab sampler](#)

snatch block

a. A pulley in a case that can be easily fastened to lines or objects by means of a hook, ring, or shackle. *Nichols, 1* b. A single-rope sheave set in a housing provided with a latch link, which can be opened for admission of a rope or line without the necessity of threading the end of the rope through the block. *Long* c. A block or sheave with an eye through which lashing can be placed for fastening to a scaffold or pole. *Hammond* d. A sheave in a case having a pull hook or ring. *Nichols, 1*

sneck

a. The latch or catch of a door. *Webster 3rd* b. To lay (rubblework) with spalls and fragments to fill the interstices. *Webster 3rd*

Snell's law

a. The concept that the ray path of sound or light undergoes certain specific changes as it passes through different layers of water; the ratio of the sine of the angle of incidence to the sine of the angle of refraction is the same for all angles of incidence and is equal to the index of refraction. *Hy* b. Ordinary refraction where the index of refraction equals the sine of the angle of incidence divided by the sine of the angle of refraction. Syn: [law of refraction](#)

snorehole

The hole in the lower part of the windbore of a mining pump to admit the water.

snort valve

A butterfly valve opening from the cold-blast main of a blast furnace to the atmosphere. It allows casting at the furnace without shutting down the blowing engines; operated by large wheel or lever in the cast house. *Fay*

snow

Vapor-deposited skeletal ice crystals without a substrate; their accumulation; used for recreation and as a coolant. See: [ice](#)

snow gage

See: [rain gage](#)

snub

a. To increase the height of an undercut by means of explosives or otherwise. *Fay* b. To check descent of a car, by a turn of a rope around a post. CF: [jig chain](#) c. To check the descent of any object being lowered by hand.

snubber

In bituminous coal mining, a laborer who follows in the wake of a coal-cutting machine as it undercuts the face of coal, and breaks down the front of the working face above the channel with a pick so that the coal will drop freely when it is blasted. *DOT*

snubbing

a. A term applied by bluestone quarrymen to the process of forcing a cross break in the absence of an open seam. b. Increasing the height of an undercut by picking or blasting down the coal, just above the undercut.

snub-drive conveyor

A conveyor in which a snub pulley is used. *NEMA, 1*

snub pulley

An idler pulley so mounted as to increase the arc of contact between a belt and a drive pulley. When used in a wrap drive, it has the added function of changing the direction of the return belt travel. *NEMA, 2*

Snyder sampler

A mechanical sampler consisting of a cast-iron plate revolving in a vertical plane on a horizontal axis, and having an inclined sample spout passing through the flange. The ore to be sampled comes to the sampler by way of an inclined chute and impinges upon the flange of the sampling disk. Whenever the sample spout comes in line with the ore stream, the ore passes through the plate and into the sample; at all other times the ore is deflected from the plate and drops into the reject. Generally, the sampler makes from 10 to 30 rpm, and removes about 1/5 of the ore stream. *Newton, 1; Newton, 2*

soaking

a. A phase of a heating operation during which metal is maintained at the requisite temperature until the temperature is uniform throughout the mass. *CTD* b. Prolonged holding at a selected temperature. *ASM, 1*

soap earth

See: [steatite](#)

soaprock

See: [soapstone](#)

soapstone

a. Massive talc. Syn: [steatite](#); [soaprock](#). b. A metamorphic rock of massive, schistose, or interlaced fibrous or flaky texture and soft, unctuous (greasy) feel; composed essentially of talc with variable amounts of mica, chlorite, amphibole, and pyroxene; alteration product of ultramafic rock; may be carved into art objects or sawn into dimension stone for use where chemical resistance or high heat capacity is needed. c. A miners' and drillers' term for any soft, unctuous rock. Syn: [agalmatolite](#); [Manchurian jade](#); [talcum](#). d. See: [saponite](#); talc.

soapy feel

Unctuous; said of talc and other magnesium minerals. *Nelson*

soapy heads

Eng. In stones, joints filled with saponaceous or talclike mineral.

sobotkite

An aluminum-rich variety of saponite(?).

socket

a. A device fastened to the end of a rope by means of which the rope may be attached to its load; the socket may be opened or closed. *Zern* b. In blasting, the hole left after firing. *Pryor*, 3 c. A hollow tool for grasping and lifting tools that have been dropped into a well boring. *Standard*, 2 d. The point in a borehole, usually in bedrock, at which the bottom end of a string of casing or drivepipe is set. *Long* e. To lower casing or drivepipe into, and seat it in, a borehole. *Long* f. An overshot. *Long* g. A fishing tool designed to encircle and grasp a cylindrical object. *Long* h. To spring a borehole. See also: [camouflet](#) i. See: [bootleg](#)

soda

a. The normal carbonate of sodium, Na_2CO_3 , soda ash; the latter being the common name of the commercial product used in chemical industries. b. Sodium carbonate, Na_2CO_3 ; esp. the decahydrate, $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$. Loosely used for sodium oxide, sodium hydroxide, sodium bicarbonate, and even for sodium in informal expressions such as soda spar. A prefix added to the names of igneous rocks to indicate that they contain soda pyroxenes and/or soda amphiboles; e.g., soda rhyolite, soda trachyte, soda granite, etc. *AGI* c. A former name for natron.

soda alum

a. An alum of aluminum and sodium. Occurs in nature as the mineral mendozite. See also: [mendozite](#) b. See: [sodium alum](#)

soda-and-cleanup man

A laborer who sifts soda ash for use in refining copper. *DOT*

soda ash

Commercial term for sodium carbonate, Na_2CO_3 . *AGI*

soda feldspar

A sodium-aluminum silicate occasionally used as a refractory raw material in the manufacture of porcelain enamels, giving a softer enamel when used to replace potash feldspar in equal weights. See also: [albite](#) *Enam. Dict.*; *CTD*

soda hornblende

See: [arfvedsonite](#)

soda lakes

a. Salt lakes, the water of which contains a high content of sodium salts (chiefly chloride, sulfate, and acid carbonate). These salts also occur as an efflorescence around the lakes. *CMD* b. For soda lakes where the water has evaporated leaving behind evaporite salts, the term "dry soda lakes" may be used.

soda lime

a. A granular mixture of calcium hydroxide with sodium hydroxide, or potassium hydroxide, or both, and sometimes with other substances (such as kieselguhr). Used to absorb moisture and acid gases, esp. carbon dioxide, as in gas masks. b. Can refer to a type of glass container in which the principal ingredients are soda ash and lime.

soda-lime sinter process

Process for recovering alumina from red mud by mixing it with soda ash (Na_2CO_3) and ground limestone, and sintering in a rotary kiln at temperatures of 1,800 to 2,000 degrees F (980 to 1,090 degrees C). This breaks up the sodium aluminum silicate and forms an insoluble calcium silicate and sodium aluminate. The sinter is leached with water to recover the sodium silicate, which is then treated in the same way as in the standard Bayer process. *Newton, 1*

sodalite

a. An isometric mineral, $\text{Na}_8 \text{Al}_6 \text{Si}_6 \text{O}_{24} \text{Cl}_2$; sodalite group; typically blue or blue-violet; in various sodium-rich igneous rocks. b. The mineral group hauyne, lazurite, nosean, and sodalite.

sodalitite

An urtite composed chiefly of sodalite, with smaller amounts of acmite, eudialyte, and alkali feldspar. *AGI*

soda mica

See: [paragonite](#)

soda microcline

A microcline in which sodium replaces potassium. *Dana, 4*

soda niter

See: [nitratine](#); sodium nitrate.

soda nitrate

NaNO_3 , widely used as a fluxing raw material in enamels, usually in conjunction with soda ash. A small percentage is beneficial in oxidizing any organic impurities. Also called Chile nitre; saltpeter. Syn: [sodium nitrate](#)

soda orthoclase

Apparently monosymmetric feldspars with a notable amount of soda may be called soda orthoclase. When the soda equals or exceeds the potash, the crystals exhibit triclinic symmetry and are soda microcline. *Spencer, 5*

soda prairie

An extensive level barren tract of land covered with a whitish efflorescence of sodium carbonate (natron), as in parts of southwestern and western United States and Mexico. Syn: [salt prairie](#)

soda richterite

To replace the name astochite. See also: [astochite](#)

soda spar

An informal term for sodic feldspar, i.e. albite, or for a feldspar mixture assaying at least 7% Na₂ O. Syn: [Na-spar](#) CF: [potash spar](#)

soddyite

An orthorhombic mineral, (UO₂)₂ SiO₄ .2H₂ O ; pale yellow; in pegmatites with malachite, in fissure fillings with curite and sklodowskite. Also spelled soddite.

Soderberg anode

A continuously formed anode for aluminum production in which the mixture of petroleum coke and coal-tar pitch is continuously added to a steel casing and is baked as it passes through the heated casing, such that the baked anode emerging into the cell continuously replaces the anode being consumed.

Soderberg electrode

A continuously formed electrode used in a metallurgical electrical furnace, in which a mixture of petroleum coke and coal-tar pitch is continuously added to a steel casing and is baked as it passes through the heated casing, such that the baked electrode emerging into the furnace continuously replaces the electrode being consumed; e.g., used in aluminum and ferroalloy production; may be oriented either vertically or horizontally.

sodium

a. A soft, bright, silvery metallic element; one of the alkali metals. Symbol, Na. It is a very reactive element and is never found free in nature. The most common compound is sodium chloride. Sodium compounds are important to the paper, glass, soap, textile, petroleum, chemical, and metal industries. Metallic sodium should be handled with great care; it should be kept in an inert atmosphere and contact with water avoided. *Handbook of Chemistry and Physics*, 3 b. For some minerals with the "sodium" prefix, search under the root mineral name.

sodium alum

An isometric mineral, NaAl(SO₄)₂ .12H₂ O . Syn: [soda alum](#)

sodium arc light

See: [sodium light](#)

sodium autunite

A tetragonal mineral, Na₂ (UO₂)₂ (PO₄)₂ .8H₂ O ; meta-autunite group; radioactive; yellow.

sodium bentonite

See: [Wyoming bentonite](#)

sodium-calcium feldspar

See: [plagioclase](#)

sodium ethylxanthate

Pale green; $\text{NaC}_2\text{H}_5\text{OCSS}$; molecular weight, 144.19; and soluble in water and in ethyl alcohol. An ore-flotation agent. *Bennett; Handbook of Chemistry and Physics, 2*

sodium feldspar

See: [albite](#)

sodium hydroxide

See: [caustic soda](#)

sodium illite

A sodium-rich illite. See: [brammallite](#)

sodium light

Yellow light emitted by the glowing vapor of sodium, consisting of the D lines of sodium at wavelengths 5,890 Å and 5,896 Å; produced by special lamps and filters. Syn: [sodium vapor light](#); [sodium arc light](#).

sodium niobate

NaNbO_3 ; a compound believed to be ferro-electric and having potential use as a special electroceramic. The Curie temperature is 360 degrees C. *Dodd*

sodium nitrate

Colorless; transparent; odorless; hexagonal; NaNO_3 ; molecular weight, 84.99; slightly bitter taste; sp gr, 2.267; melting point, 308 degrees C; no boiling point because it decomposes at 380 degrees C; soluble in water, in ethyl alcohol, and in methyl alcohol; very soluble in ammonia; only slightly soluble in acetone; and slightly soluble in glycerol. Used as an oxidizer in solid rocket propellants, a flux, in glass manufacture, in military explosives, and in enamel for pottery. Also used in enamel frit batches to prevent reduction of any easily reducible ingredients, such as lead oxide. The function of

sodium nitrate, when used in glass batches, is to oxidize organic matter and to prevent reduction of some of the batch constituents. Syn: [soda niter](#) See also: [soda nitrate CCD](#), 2; *Handbook of Chemistry and Physics*, 2; *Lee*

sodium nitrate gelignites

These explosives are sometimes referred to as straight gelatins. They are really modifications of blasting gelatin in which varying percentages of nitroglycerin are replaced by sodium nitrate and combustible material to give a range of gelatinous explosives of varying strengths. The nitroglycerin content may be from about 30% to 80%. Straight gelatins are characterized by their plastic consistency; high densities of 1.5 to 1.6 g/cm³; medium velocity of detonation of 2,500 m/s; good resistance to the effects of water, which also gives them good storage properties, and they possess fume characteristics suitable for underground workings. All the various requirements for metal mining, tunneling, and quarrying operations are covered by this wide range of gelatinous explosives. Their high resistance to water makes them particularly useful in wet conditions, and their relatively high density is advantageous where a powerful concentration of explosive energy is required. *McAdam*, 2

sodium regulations

A permit, not including more than 2,560 acres (1,037 ha) in one State, is granted to prospect for chlorides, sulfates, carbonates, borates, silicates, or nitrates of sodium, and the royalty and rentals are similar to those for potash. Where necessary to secure the most economical mining, a person, association, or corporation may be permitted to hold up to 15,360 acres (6,221 ha) in one State. *Lewis*

sodium sesquicarbonate

Colorless, gray, or yellowish-white; monoclinic; Na₃(CO₃)(HCO₃).2H₂O; mol wt, 226.03; sp gr, 2.112, but ranges from 2.11 to 2.147 in the mineral; Mohs hardness, 2.5 to 3.0; soluble in water. Extensive deposits of sodium sesquicarbonate, variously known as the mineral natrona, trona, or urao, occur in California and Wyoming; in Hungary and Egypt; and in the deserts of Africa, Asia, and South America. Syn: [natrona](#); trona; [urao](#). *Handbook of Chemistry and Physics*, 2; *CCD*, 2

sodium tannate

Sometimes used as a deflocculant for clay slips; the effect is marked, only a small proportion being required. The material used for this purpose is generally prepared from NaOH and tannic acid; the former should be in excess and the pH should be about 8 to 9. *Dodd*

sodium tantalate

NaTaO₃ ; a ferro-electric compound having the ilmenite structure at room temperature; the Curie temperature is approx. 475 degrees C. Of potential interest as a special electroceramic. *Dodd*

sodium uranate

Na₂ (UO₂)₂ (ASO₄)₂ .8H₂ O ; has been used as a source of uranium for uranium red. *Dodd*

sodium uranospinite

A tetragonal mineral, (Na₂ ,Ca)(UO₂)₂ (AsO₄)₂ .5H₂ O ; meta-autunite group; radioactive; yellow-green to yellow; forms fine, tabular to elongated crystals or radial fibrous aggregates; in the oxidation zone of primary hydrothermal deposits. It is the most abundant secondary uranium mineral.

sodium vanadate

NaVO₃ ; a ferro-electric compound having potential use as a special electroceramic. The Curie temperature is approx. 330 degrees C. *Dodd*

sodium vapor light

See: [sodium light](#)

sodium xanthate

a. Yellowish; amorphous; NaS.CS.OC₂ H₅ ; molecular weight, 144.19; and soluble in water and in ethyl alcohol. Used as a flotation agent. *Bennett; Handbook of Chemistry and Physics, 2* b. See: [sodium ethylxanthate](#)

soffioni

An emanation, from the Earth, of vapors that are principally boric acid; also, the opening from which the vapors issue. See also: [solfataria](#); fumarole; mofette.

soft

a. Bituminous as opposed to anthracite coal. b. In mineralogy, usually refers to minerals readily scratched by a needle or knife blade. *Hess* c. Tender, friable, or full of slips and joints. d. As applied to a glass or glaze, refers to a low softening temperature; such a glass or glaze, when cold, is also likely to be relatively soft; i.e., of lower than average hardness, in the normal sense. *Dodd*

soft coal

Bituminous coal as opposed to anthracite. See also: [bituminous coal](#) *Fay*

soften

To heat ore so that the minerals are cracked and fissured, permitting easier crushing. *Fay*

softening

a. Treatment in which metal is heated below its critical point and then slowly cooled. *Pryor, 3* b. Of lead, the removal of antimony and other impurities. *Fay*

softening point

a. Certain materials do not have a definite melting point but soften over a range of temperatures. In certain refractory substances, the softening point is measured as the pyrometric cone equivalent (PCE), which is the number of that standard pyrometric cone whose tip would touch the supporting plaque simultaneously with a cone of the refractory material being investigated. b. When referring to glass, the temperature at which the viscosity is $10^{7.6}$ P ($10^{0.6}$ MPa.s); this viscosity corresponds to the temperature at which tubes, for example, can be conveniently bent. Also known as the 7.6 temperature; Littleton softening point. *Dodd*

soft formation

See: [soft ground](#)

soft ground

a. That part of a mineral deposit that can be mined without drilling and shooting. It is commonly the upper, weathered portion of the deposit. *AGI* b. Heavy ground. Rock about underground openings that does not stand well and requires timbering.

soft-ground boring tool

Drilling tool used in soft ground, such as overburden, clay, soft shale, etc. *Long*

soft inclusion

Applied in the grading of quartz crystals to feathery or fernlike types of foreign inclusions, which look soft (no implication of physical hardness). *Am. Mineral., 2*

soft iron

Iron which can be worked with ordinary cutting tools or which can be readily abraded with files. It is darker gray in color than the harder cast iron. *Crispin*

soft mica

Mica which, when slightly flexed or distorted with thumb pressure, generally shows a tendency toward delamination. Such mica, in thick pieces, generally gives a dull sound when tapped against a hard surface. *Skow*

softness

Tendency to deform easily. It is indicated in a tensile test by low ultimate tensile stress and large reduction in area. Usually the elongation is also high. In a notched bar test, specimens bend instead of fracturing, and energy absorbed is relatively small. See also: [toughness](#); brittleness. *CTD*

soft ore

A term used in the Lake Superior region for an earthy, incoherent iron ore mainly composed of hematite or limonite (goethite) and containing 45% to 60% iron. *AGI*

soft phosphate

A term which is applied arbitrarily to anything phosphatic that is not distinctly hard rock.

soft radiation

Ionizing radiation of long wavelength and low penetration. *NCB*

soft rock

a. A term used loosely for sedimentary rock, as distinguished from igneous or metamorphic rock. *AGI* b. Rock that can be removed by air-driven hammers, but cannot be handled economically by pick. CF: [hard rock](#)

soft-rock geology

A colloquial term for geology of sedimentary rocks, as opposed to hardrock geology. *AGI*

soft skin

A soft outer skin developed on burned diamonds. *Long*

soft steel

A general term applied to steels of low carbon content that do not temper. See also: [mild steel](#)

soft vector

A plane or direction in a diamond or other mineral having less resistance to abrasion than that of the hard-vector planes. CF: [hard vector](#) *Long*

soft water

Water free from calcium carbonate and calcium sulfate. CF: [hard water](#); hardness. *Crispin*

soil

a. All unconsolidated materials above bedrock. This is the meaning of the term as used by early geologists and in some recent geologic reports, and has been vigorously advocated by Legget (1967, 1973). It is the common usage among engineering geologists (see, e.g., compaction; soil mechanics). In recent years the approx. syn. regolith has come into wide geological use. *AGI* b. The natural medium for growth of land plants.--Etymol: Latin solum, ground. See also: [sounding](#)

soil analysis

See: [soil survey](#)

soil catena

A related sequence of soil profile types created by changes from one drainage condition to another. These changes are usually transitional. *Hawkes, 2*

soil cement

The addition of cement to a soil, as a binding agent, and converting it into a weak form of concrete. See also: [cement stabilization](#) *Nelson*

soil classification tests

The tests are of two main types, namely: (1) mechanical analysis, performed by sieving or sedimentation, to determine the size-distribution of the constituent particles; and (2) index property tests, for soils passing a 36-mesh British Standard sieve, by means of which the type is deduced from the moisture content at standard consistencies. See also: [index properties](#)

soil core

A cylindrical sample of soil for tests and examination. Undisturbed samples may be obtained by the use of special appliances, which allow extraction of soil cores of

diameter usually 1-1/2 in (3.8 cm) or 4 in (10.2 cm). The core barrel, forming part of the coring tool, is detachable and is capped and the core hermetically sealed for delivery to the laboratory. The natural moisture content and other properties are preserved for examination. Individual soil cores, up to 3 ft (0.9 m) in length, may be obtained by continuous coring if necessary. See also: [borehole samples](#); [undisturbed sample](#). *Nelson*

soil creep

The gradual, steady downhill movement of soil and loose rock material on a slope that may be very gentle but is usually steep. Syn: [surficial creep](#)

soil flow

See: [solifluction](#)

soil fluction

See: [solifluction](#)

soil formation

The processes whereby fragmental material resulting from rock weathering is transformed into a medium that can support plant growth.

soil-forming factors

Factors, such as parent material, climate, vegetation, topography, organisms, and time, involved in the transformation of an original geologic deposit into a soil profile. *ASCE*

soil horizon

A layer of a soil that is distinguishable from adjacent layers by characteristic physical properties, such as structure, color, or texture, or by chemical composition, including content of organic matter or degree of acidity or alkalinity. Soil horizons are generally designated by a capital letter, with or without a numerical annotation, e.g. A horizon, A2 horizon. Syn: [horizon](#); [soil zone](#); [pedologic horizon](#). *AGI*

soil mechanics

The application of the principles of mechanics and hydraulics to engineering problems dealing with the behavior and nature of soils, sediments, and other unconsolidated accumulations of solid particles; the detailed and systematic study of the physical properties and utilization of soils, esp. in relation to highway and foundation engineering and to the study of other problems relating to soil stability. *AGI*

soil penetrometer

A sounding instrument, which may be used to supplement the vane test. It consists essentially of a rod inside a tube. When the appliance is mechanically jacked into the ground, the point or cone of the rod records all differences in resistance to penetration. It thus determines quickly the soil strength profile in depth and detects any soft beds in advance of the vane tests. See also: [penetration log](#)

soil physics

The organized body of knowledge concerned with the physical characteristics of soil and with the methods employed in their determinations. *ASCE*

soil profile

A vertical section of a soil that displays all its horizons. Syn: [profile](#)

soil sampler

a. A tube driven into the ground so as to obtain an undisturbed soil sample. In sands, such tubes would be fitted with a core catcher. *Hammond* b. One of a number of different mechanical devices used for taking samples of an unconsolidated material. See also: [solid-barrel sampler](#); split-tube barrel; split-tube sampler. *Long*

soil science

The study of the properties, occurrence, and management of soil as a natural resource. Generally it includes the chemistry, microbiology, physics, morphology, and mineralogy of soils, as well as their genesis and classification. Syn: [pedology](#)

soil shredder

A machine employed in soil stabilization comprising two nearly touching half drums, which rotate in opposite directions and break up the soil. *Hammond*

soil stabilization

Chemical or mechanical treatment designed to increase or maintain the stability of a mass of soil or otherwise to improve its engineering properties. See also: [cement-modified soil](#); [cement stabilization](#); processing; pulverization. *ASCE*

soil structure

The arrangement and state of aggregation of soil particles in a soil mass. See also: [flocculent structure](#); [honeycomb structure](#); single-grained structure. *ASCE*

soil survey

a. A detailed investigation of the soils at a site, including boreholes and tests to determine their nature, thickness, strength, and depth to bedrock. See also: [site investigation](#); [soil mechanics](#). b. Geochemical prospecting term for the chemical analysis of systematically collected samples of soil and weathered rock.

soil test

The laboratory procedure followed in examining and determining the physical characteristics of a soil sample. *Long*

soil zone

See: [soil horizon](#)

Soisson Rodange process

A process for the manufacture of high-quality killed basic Bessemer steel in which the steel, after dephosphorization, is poured into another ladle containing the solid components of a basic oxidizing and fluid slag. Blowing for 30 to 40 s generates sufficient heat to promote mixing and to avoid skull. Phosphorus contents are readily lowered and high-quality killed steel is produced with low additional cost. *Osborne*

sol

a. A homogeneous suspension or dispersion of colloidal matter in a fluid (liquid or gas). *AGI* b. A completely mobile mud. A sol is in a more fluid form than a gel. *AGI*

solar

a. A platform in a Cornish Mine shaft and esp. between a series of ladders; a longitudinal partition forming an air passage between itself and the roof in a mine. Usually spelled sollar or soller. See also: [sollar](#) b. A colloquialism used by surveyors to mean an observation on the sun.

solar salt

Salt obtained by solar evaporation of seawater or other brine in shallow lagoons or ponds.

solder

a. To unite the surfaces of metals. *Nelson* b. An alloy of uniting metals. Brazing solders are alloys of zinc and copper, while soft solders are alloys of tin and lead *Nelson*

soldier frame

Frame set into the inside of a shaft prior to breaking through for a heading. *Stauffer*

sole

a. The under surface of a rock body or vein, esp. the bottom of a sedimentary stratum. *AGI* b. The fault plane underlying a thrust sheet. *AGI* c. The middle and lower parts of the shear surface of a landslide. *AGI* d. The major fault plane over which other beds ride forward as a group during distributive faulting. e. The lowest thrust plane in an area of overthrusting. Commonly rocks above are imbricated. *AGI* f. The bottom of a level.

Solenhofen stone

A lithographic limestone of Late Jurassic age found at Solenhofen (Solnhofen), a village in Bavaria, West Germany. It is evenly and thinly stratified and contains little clays. See also: [lithographic limestone](#) *AGI*

sofatarara

A type of fumarole, the gases of which are characteristically sulfurous. Etymol: the Solfatarara volcano, Italy. *AGI*

sofataric

Applied to a dormant or decadent stage of volcanic activity characterized by the emission at the surface of gases and vapors of volatile substances.

solid

a. Coal that has not been undermined, shear cut, or otherwise prepared for blasting. Used in the expression, "shooting off the solid." *Fay* b. That part of the coal that cannot be thrown out by a single shot, or the coal beyond the loose end. Used in expressions describing holes drilled for blasting, such as "three feet into the solid," or "on the solid." *Fay* c. Unmined; ungot. *Mason* d. A rock having few open cracks, crevices, or joints and relatively unaffected by the weakening effects of weathering. *Long* e. A diamond free of cracks discernible by eye. *Long* f. The rock near underground openings that stands well without artificial support. *Long*

solid-barrel sampler

A straight-walled cylinder with or without a valve on the bottom. Used for taking soil samples. CF: [soil sampler](#); [split-tube sampler](#). *Long*

solid bearing

A one-piece bushing. *Nichols, 1*

solid bit

See: [noncoring bit](#)

solid bituminous material

Material having a penetration at 77 degrees F (25 degrees C), under a load of 100 g applied for 5 to 10 s. *Urquhart*

solid car

A mine car equipped with a swivel coupling and generally used with a rotary dump. One or more cars are pulled into the rotary dump, which turns through 180 degrees and the coal is emptied out. See also: [mine car](#) *Kentucky*

solid couplings

Generally of either the flanged-face or the compression type. They are used to connect two shafts to make a permanent joint and usually are designed to be capable of transmitting the full load capacity of the shaft. This coupling has no flexibility, either torsional, angular, or axial, hence it is limited to those installations where rigid connections are suitable, particularly in line shafts and extension shafts. *Pit and Quarry*

solid crib timbering

Shaft timbering with cribs laid solidly upon one another.

solid-crown bit

See: [noncoring bit](#)

solid-drawn

Drawn from hollow ingots, or otherwise, on mandrels of successively decreasing diameters; said of certain seamless metal tubes. *Standard, 2*

solid drilling

In diamond drilling, using a bit that grinds the whole face, without preserving a core for sampling. *Nichols, 1*

solid explosives

These explosives are employed to a certain extent in the form of a powder in cartridges, or as a light-running granulated mass, or as solid sticks. They have the disadvantage that the density of charging will be small, which means that the cost of drilling will be comparatively high. *Fraenkel*

solid fuels

Any fuel that is a solid; such as wood, peat, lignite, bituminous, and anthracite coals of the natural variety and the prepared varieties such as, pulverized coal, briquettes, charcoal, and coke. Divided into two broad classes: naturally occurring and manufactured. *Newton, 1*

solidification range

Temperature range over which mixtures (alloys, fluxes) melt. In a constitutional diagram, the area between liquidus and solidus. *Pryor, 3*

solidification shrinkage

The decrease in volume of a metal during solidification. *ASM, 1*

solid loading

Filling a drill hole with all the explosive that can be crammed into it, except for stemming space at top. *Nichols, 1*

solid map

Gr. Brit. A geological map showing the extent of solid rock, on the assumption that all surficial deposits, other than alluvium, are absent or removed. *AGI*

solid packing

See: [solid stowing](#)

solid road

Any roadway driven through the solid coal seam with rib sides. See also: [narrow stall](#); [narrow work](#). *Nelson*

solid rock

Gr. Brit. Bedrock. *AGI*

solids handling pump

Usually a centrifugal pump designed to resist abrasion and used for pumping sand, gravel, fine coal, and ore tailings. Rubber linings are generally used, which last longer than steel or iron. See also: [pulsometer](#)

solid smokeless fuel

A solid fuel, such as coke, which produces comparatively no smoke when burned in an open grate. See also: [anthracite](#); [briquette](#); [coke](#). *Nelson*

solid solubility

The extent to which one metal is capable of forming solid solutions with another. This varies widely between different pairs of metals, some of which are mutually soluble in all proportions, while others are practically insoluble in each other. *CTD*

solid solution

a. A single crystalline phase that may be varied in composition within finite limits without the appearance of an additional phase. Syn: [mix-crystal](#); [mixed crystal](#). *AGI* b. Partial or total miscibility between two or more crystal structures; e.g., ionic substitution. Syn: [crystal solution](#) CF: [isomorphous mixture](#); [isomorphous series](#).

solid stowing

The complete filling of the waste area behind a longwall face with stone and dirt. The packing operation may be by hand or mechanical methods, e.g., pneumatic stowing. See also: [double packing](#); [stowing method](#); strip packing. *Nelson*

solidus

On a temperature-composition diagram, the locus of points in a system at temperatures above which solid and liquid are in equilibrium and below which the system is completely solid. In binary systems without solid solutions, it is a straight line; in binary systems with solid solutions, it is a curved line or a combination of straight and curved lines; in ternary systems, it is a flat plane or a curved surface. *AGI*

solid web

The web of a steel beam consisting of a rolled section or a plate as distinct from a lattice. *Hammond*

solid woven conveyor belt

A construction of conveyor belt consisting of multiple plies of fabrics woven into one piece, which is done on looms designed for this purpose. Stripes are woven into the belt

to show the number of plies, which range from 2 to 10. Impregnating and coating treatments are frequently employed.

solifluction

The slow, viscous downslope flow of waterlogged soil and other surficial material, normally at 0.5 to 5.0 cm/yr; esp. the flow occurring at high elevations in regions underlain by frozen ground (not necessarily permafrost) that acts as a downward barrier to water percolation, initiated by frost action and augmented by meltwater resulting from alternate freezing and thawing of snow and ground ice. The term has been extended to include similar movement in temperate and tropical regions; also, it has been used as a syn. of soil creep, although solifluction is generally more rapid. It is preferable to restrict the term to slow soil movement in periglacial areas. Also spelled solifluxion. Syn: [soil flow](#); soil fluction; sludging. *AGI*

sollar

a. Landing stage in a mine shaft. Also spelled soller; solar. *Pryor, 3* b. A timber staging, alongside a haulage level, for piling ore ready for loading into mine cars. *Nelson* c. A staging between ladderway sections in a shaft. *Nelson* d. The plank flooring of a gallery covering a gutterway beneath. e. A longitudinal partition forming an air passage between itself and the roof in a mine working. *Webster 3rd* f. A platform from which trammers shovel or throw the ore or rock into a car. g. A wooden platform fixed in a shaft for ladders to rest on. See also: [air sollar](#)

soller

See: [sollar](#)

solonetz soil

A soil occurring most commonly under arid conditions, but may also be found in semiarid and subhumid regions. Usually found in depressions where it has originated by evaporation under shallow ground-water conditions. Characterized by sodium carbonate as the predominant salt and a dark-colored B horizon, which is strongly alkaline in reaction. *Hawkes, 2*

solubility

a. The extent that one material will dissolve in another, generally expressed as mass percent, or as volume percent or parts per 100 parts of solvent by mass or volume. The temperature should be specified. *ASTM* b. The weight of a dissolved substance that will saturate 100 g of a solvent. *CTD* c. Concentration of a substance in a saturated solution; i.e., in equilibrium between dissolved and undissolved phases at given temperature. *Pryor, 3*

solubility product concentration

In a saturated solution of an electrovalent compound having limited solubility, the product of the ionic concentrations, at the exponential value shown in the stoichiometric equation for its dissociation, is constant at a given temperature. *Pryor, 3*

soluble

Capable of being dissolved in a fluid. *Crispin*

soluble anode

An anode that goes into solution during an electrolytic process. *Osborne*

soluble glass

Solid sodium silicate or potassium silicate. Syn: [water glass](#) *CTD*

solute

- a. The substance dissolved in a solution, as distinguished from the solvent. *Standard, 2*
- b. A substance dissolved in a liquid.

solution

A substance that is a homogeneous mixture and has a continuous variation of composition up to a solubility limit.

solution breccia

A collapse breccia formed where soluble material has been partly or wholly removed by solution, thereby allowing the overlying rock to settle and become fragmented; e.g. a breccia consisting of chert fragments gathered from a limestone whose carbonate material has been dissolved away. See also: [evaporite-solution breccia](#) *AGI*

solution cavity

A cavity formed in certain rocks in which percolating solutions have filled with valuable minerals; cavities formed in certain rocks, such as limestones, where portions have been dissolved by percolating waters. See also: [mineralization](#)

solution injection

Artificial cementing of loose soils or strata to increase their load-bearing capacity. *Hammond*

solution mining

a. The in-place dissolution of water-soluble mineral components of an ore deposit by permitting a leaching solution, usually aqueous, to trickle downward through the fractured ore to collection galleries at depth. It is a type of chemical mining. CF: [in situ leaching](#) b. The mining of soluble rock material, esp. salt, from underground deposits by pumping water down wells into contact with the deposit and removing the artificial brine thus created. *AGI* c. Hydrometallurgical treatment of ore for recovery of the mineral values at the mine site, in conjunction with conventional open pit or underground mining procedures. See also: [surface leaching](#)

solution pipe

A vertical cylindrical hole, formed by solution and often without surface expression, that is filled with detrital matter. *AGI*

solution plane

A crystallographic direction of chemical solubility in a crystal, possibly due to exsolution of a second crystalline phase on falling temperature and/or pressure or to unannealed slip during plastic deformation. Solution planes may lead to parting in some mineral specimens.

solution ripple

See: [scallop](#)

solution subsidence

Gradual subsidence of nonsoluble strata due to the solution of underlying rock. *AGI*

solvate

A chemical compound consisting of a dissolved substance and its solvent, e.g. hydrated calcium sulfate. *AGI*

Solvay process

Manufacture of sodium carbonate or soda ash, Na_2CO_3 from salt (sodium chloride), ammonia, carbon dioxide, and limestone by a sequence of reactions involving recovery and reuse of practically all the ammonia and part of the carbon dioxide. Limestone is calcined to quicklime and carbon dioxide. The carbon dioxide is dissolved in water containing the ammonia and salt, with resulting precipitation of sodium bicarbonate. This is separated by filtration, dried, and heated to form sodium carbonate. The liquor

from the bicarbonate filtration is heated and treated with lime to regenerate the ammonia. Calcium chloride is a major byproduct. *CCD, 2*

solvent

a. A substance used to dissolve another substance. *Crispin* b. That component of a solution that is present in excess; or the physical state of which is the same as that of the solution. *CTD*

solvent extraction

a. A method of separating one or more substances from a mixture, by treating a solution of the mixture with a solvent that will dissolve the required substances, leaving the others. *Hammond* b. A process in which one or more components are removed from a liquid mixture by intimate contact with a second liquid, which is itself nearly insoluble in the first liquid and dissolves the impurities and not the substance that is to be purified. Syn: [liquid-liquid extraction](#) *CCD, 2*

sonar

The method or equipment for determining, by underwater sound, the presence, location, or nature of objects in the sea. The word sonar is an acronym derived from the expression SOund NAvigation and Ranging. *Hunt*

sonar boomer seismic system

A complete continuous seismic profiling system consists of the boomer unit, sonar recorder, transducer fish, receiving hydrophone, preamplifier, if necessary, and variable filter. Sonar boomer units are available from 1000 W-second models up to 13,000 W-second (experimental models). The standard boomer consists of a power supply, capacitor bank and transducer. Boomers are used for marine geological studies and dredging surveys. The power supply output is fed to the capacitor bank, which is discharged into the transducer producing a precisely repeatable pressure pulse in the water. *Hunt*

sondalite

A metamorphic rock composed of cordierite, quartz, garnet, tourmaline, and kyanite. *Holmes, 2*

sonde

The elongate cylindrical tool assembly used in a borehole to acquire a well log. It contains various energy-input devices and/or response sensors. The sonde is lowered into the borehole by a multi-conductor cable, or wire line. *AGI*

sonic drilling

Core drilling through high-powered vibrations transmitted down the drill casing to a cutting shoe. The casing and the shoe vibrate into the ground and through the rock, resulting in an undisturbed core of unconsolidated material. *SME, 1*

sonic gage

See: [acoustic-strain gage](#)

sonic log

An "acoustic log" showing the interval-transit time of compressional seismic waves in rocks near the well bore of a liquid-filled borehole. Used chiefly for estimating porosity and lithology.

sonic method

A method of measuring underground rock pressure by determining the velocity of sound through the rock. Sonic velocity is a function of the elastic modulus of the rock traversed by the wave, and this, in turn, is a function of the pressure. A hammer blow on the rock face is used to initiate the sound waves, which are picked up by a microphone placed at the site of the blow and by a second microphone at the other end of the path through the rock under test. The difference between the times of the signals received from the two microphones will equal the time taken by the sonic pulse to pass through the rock. The signals are converted into visible waveforms on the screen of an oscillograph, and these are photographed or otherwise recorded to form a permanent record. *Issacson*

sonic pile driver

A driver based on the principle of delivering vertical vibrations to the head of a pile in alternating up and down cycles at a rate of 100 Hz. These vibrations set up high-amplitude waves of tension and compression in the pile, producing alternate expansion and contraction in minute amounts. The elongation of the pile in expansion displaces the soil at the pile tip, and the weight of the pile, hammer, and added loads shoves the pile into the miniscule void. Since this action is occurring at the rate of 100 Hz, the individual movements need not be of great magnitude to produce rapid penetration of the pile. *Carson, 2*

sonigage

An ultrasonic testing instrument used primarily for the measurement of the thickness of materials. *Osborne*

sonims

Solid, nonmetallic inclusions in metal. *Henderson*

soniscope

An inspection instrument, which sends, by electronic means, pulses of high frequency through the material to be tested and measures the time of travel from the transmitter on one face to the receiver on the distant face of the material. This method of inspection is known as pulse testing. *Osborne*

sonograph

Seismograph developed by Frank Rieber for the application of reflection methods to areas of complex geology and steeply dipping beds. The ordinary oscillograph traces are replaced by sound tracks of variable transparency on a moving picture film. The analyzer adds up impulses which are in phase while the random effects tend to cancel one another. *AGI*

sonolite

A monoclinic mineral, $Mn_9(SiO_4)(OH,F)_2$; humite group; dimorphous with jerrygibbsite; red-orange.

sonometer

An instrument for measuring rock stress. Piano wire is tuned between two bolts cemented into drill holes in the rock, and a change of pitch after destressing is observed and used to indicate stress. *Pryor, 3*

sonoprobe

A type of echo sounder that generates sound waves and records their reflections. It is used in subbottom profiling. *AGI*

Sonstadt solution

A solution of mercuric iodide in potassium iodide with a density of 3.2 g/cm^3 and used as a "heavy liquid." CF: [bromoform](#); Klein solution; methylene iodide; Clerici solution. Syn: [Thoulet solution](#)

soot

A black substance, consisting essentially of carbon from the smoke of wood or coal, esp. that which adheres to the inside of the chimney, containing also volatile products condensed from the combustion of the wood or coal, including certain ammonia salts. *Standard, 2*

sooty chalcocite

A black, pulverent variety of chalcocite of supergene origin.

sooty streamers

Fine and often unburned dust settling out in steamy, warm conditions in stagnant situations. *Sinclair, 1*

sop

a. Cumb. A hematite iron-orebody of circular or oval plan and conical section, formed in a swallow hole. *Arkell* b. Cumb. A nest or pocket of black lead. *Arkell*

Sophia-Jacoba process

See: [Barvoys process](#)

sopwith staff

A telescopic self-reading staff dividing into three sections, set one above the other when the staff is at its full extent of 14 ft (4.3 m). Graduations are marked in feet, tenths and hundredths of a foot, and the thickness of the horizontal lines is 0.01 ft (3.05 mm), alternately black and white. *Hammond*

sordavalite

An old name for the glassy salbands of small, diabase dikes formerly regarded as a mineral. It is derived from Sordavala, Finland.

Sorel cement

Calcined magnesite or magnesia mixed with a solution of magnesium chloride. It sets to a hard mass within a few hours. The basis of artificial flooring cements. *CTD*

sorels slag

A titanium slag containing about 80% TiO_2 . It is made by electric-furnace smelting of iron-titanium ores. *Newton, 1*

Soret's principle

If differences of temperature are induced in a solution of sodium chloride or some other substance in water, the dissolved material will become relatively more concentrated in those portions in which the temperature is lowest. *Fay*

soroche

A mountain sickness that attacks miners who are newcomers in high altitudes. Symptoms are headaches, nausea, vomiting, and nosebleed. If the symptoms do not soon pass, there is nothing to be done except return to a lower altitude. *Hoover*

sorption

Any type of retention of a material at a surface, esp. when the mechanism is not specified. Adsorption is then restricted to the physical process that leads to the formation of a unimolecular surface layer; chemisorption refers to the corresponding chemical process; and absorption to the entrance of the sorbed material within the solid. *Miall*

sorted

See: [graded](#)

sorting

a. In a genetic sense, it may be applied to the dynamic process by which granular or fragmental material having some particular characteristic, such as similar size, shape, specific gravity, or hydraulic value, is selected from a larger heterogeneous mass. b. The degree of similarity, in respect to some particular characteristic, of the component parts in a mass of material. c. A measure of the spread of a distribution on either side of an average. d. The separation of coal or ore as mined into valuable material and waste. e. See: [handpicking](#)

sorting coefficient

a. A coefficient used in describing the distribution of grain sizes in a sample of unconsolidated material. It is defined as $S_0 = Q_1 / Q_3$, where Q_1 is the diameter that has 75% of the cumulative size-frequency (by weight) distribution smaller than itself and 25% larger than itself, and Q_3 is that diameter having 25% of the distribution smaller and 75% larger than itself. *Hunt* b. Dimensionless measure for degree of sorting. *Schieferdecker*

soude emerald

See: [emerald triplet](#)

sound

a. The act of striking a mine roof with a metal testing bar to ascertain whether or not it is strong and safe. *Hudson* b. A dam or barrier in a mine in which the frictional resistance to the passage of water is high. Such a dam permits little water to pass through it and is

said to be "sound." *Sinclair*, 4 c. Elastic waves in which the direction of particle motion is longitudinal; i.e., parallel with the direction of propagation. The term is sometimes restricted to such waves in gases, particularly air, and in liquids, particularly water, but it is also applied to wave motion in solids. It is the type of wave motion most often used in reflection-seismic exploration. *AGI*

sound channel

Sound waves in the surface layers of the ocean tend to be refracted downward due to decrease of temperature with depth. In deep waters the sound waves are refracted upward by high and increasing pressure, which has a greater influence on the resulting refractive index of these layers than the decreasing temperature. The result is the formation at mid-depth of a wave guide that permits compressional waves of acoustic frequencies to travel great distances. *Hy*

sounding

a. See: [roof testing](#) b. Rapping on a pillar to signal a person on the other side or to enable the person to estimate its width. c. A rough method of judging by sound the direction and distance apart of two roadways driven in coal to meet each other. The sounding is made by giving two slow and three sharp knocks on the solid coal, which is answered in similar manner from the opposite roadway. The method is sometimes called chap. *Nelson* d. Subsurface investigation by observing the penetration resistance of the subsurface material without drilling holes. This can be done by driving a rod into the ground or by using a penetrometer. See also: [penetrometer](#); soil. *Long*

sounding lead

In measuring water depth, the hand lead used in sounding. See also: [hand lead](#)

sounding rod

A closed pipe, 1 in (2.5 cm) in diameter, with a flush point and a driving tip, used in sounding. See also: [sounding](#)

sounding the top

Tapping the roof with a pick or bar to test its soundness. *Korson*

sound intensity

In a specified direction at any point, the average rate of sound energy transmitted in the specified direction through a unit area normal to this direction at the point considered. *Hy*

sound velocity

The rate at which a sound wave travels through a medium. Velocity is equal to the square root of the bulk modulus divided by density. *Hy*

sound wave

a. Sometimes used interchangeably with shock wave; technically, a wave motion in the air which affects the human ear as sound. Owing to the reflection of waves from the various surfaces, the sound is more or less prolonged, and as it reaches a given point is really a series of vibrations. *Rice, 2* b. The wave of compression emanating from any sound source. Since sound travels as a wave of compression it heats the water as it passes through a water mass. Density and compressibility thus influence the velocity of sound; increasing density due to temperature, salinity, and pressure changes increases the velocity. High frequency waves above 10,000 Hz have very short range because absorption is high. Low frequencies have greater range. See: [longitudinal wave](#)

sour

a. Having an acid or tart taste; applied to minerals having the taste of sulfuric acid. b. Said of crude oil or natural gas containing significant fractions of sulfur compounds. CF: [sweet](#)

source

a. In seismic prospecting either: (1) the point of origin or shot from which elastic waves are propagated, or (2) the formation, horizon, interface, or boundary at which a seismic wave is refracted and/or reflected and returned to the surface. In earthquake seismology, the point of origin of an earthquake. In neutron logging, the source of neutrons at one end of the logging tool. *AGI* b. A radioactive material packaged to produce radiation for experimental or industrial use. *Lyman* c. The point of origin or procurement. *Webster 3rd*

source area

The area from which the sedimentary material is derived.

source-receiver product

In seismic prospecting, the product of the number of detectors per trace and the number of sources used simultaneously. *AGI*

source rock

The geological formation in which oil, gas, and/or other minerals originate. *AGI*

sourdough

a. Old-fashioned and seasoned prospector. *Pryor, 3* b. A miner who has lived in Alaska more than one season. *von Bernewitz*

sour gas

Slang for either natural gas or a gasoline contaminated with odor-causing sulfur compounds. In natural gas the contaminant is usually hydrogen sulfide, which can be removed by passing the gas mixture through carbonate solutions containing special metal or organic activators. In gasolines, the sour contaminants are usually mercaptans, which are removed in the doctor treatment or by ethylene oxide with a phenolic catalyst. The improved gas or gasoline is known as sweet gas. *CCD, 2*

souring

a. An alternative term for aging. See also: [aging](#) b. The storage for a short time of the moistened batch for making basic refractories; some magnesium hydroxide is formed and this acts as a temporary bond after the bricks have been shaped and dried. If souring is allowed to proceed too far, cracking of the bricks is likely during drying and the initial stages of firing. The high pressure exerted by modern brick presses generally gives sufficient dry strength without the bricks being soured, and souring is therefore now generally omitted. *Dodd*

South African diamond

Whole-stone diamonds having outside faces that are smooth as contrasted to the pebbly, encrusted surface of a Congo diamond; also applied to diamonds produced in South African mines as contrasted to those found in the Sierra Leone, Congo, Brazil, etc. *Long*

southing

A distance measured southwards from an east-west reference line. *Hammond*

south-seeking pole

See: [north-seeking pole](#)

South Staffordshire method

See: [room-and-pillar](#)

southwestern cell

Pneumatic flotation machine consisting of a long tank with V-shaped base into which pipes connected with a low-pressure source deliver compressed air. Internal baffles provide an air lift and the cell discharges a mineralized froth along one or both sides, the tailing leaving at the far end. The Britannia cell is a modified form. See also: [Britannia cell](#) *Pryor, 3*

souzalite

A monoclinic mineral, $(\text{Mg,Fe})_3(\text{Al,Fe})_4(\text{PO}_4)_4(\text{OH})_6 \cdot 2\text{H}_2\text{O}$; forms a series with gormanite; green.

sovereign gold

Standard 22 carat gold, containing 91.7% gold and 8.3% copper. *Osborne*

soevite

A carbonatite that contains calcite as a dominant phase. The name, given by Broegger in 1921, is for Soeve, Fen complex, Norway. *AGI*

sow

a. Mold of larger size than a pig. *Webster 3rd* b. A channel or runner that conducts molten metal to the rows of molds in a pig bed. *Webster 3rd* c. A mass of metal solidified in such a channel or mold. *Webster 3rd* d. An accretion that frequently forms in the hearth or crucible of a furnace; it consists mainly of iron. Also called salamander, bear, or shadrach. *Fay*

Soxhlet thimble

A dust-sampling instrument. The apparatus gives a gravimetric mass sample, with no information on the size distribution of the dust collected. Is useful where a sample is needed for determining mass concentration and for collecting dust for chemical, petrological, and X-ray analysis. See also: [Hexhlet sampler](#); [tyndallometer](#). *Roberts, 1*

spaad

A fibrous talc. From the German spath.

spaced loading

a. Loading so that cartridges or groups of cartridges are separated by open spacers that do not prevent the concussion from one charge from reaching the next. *Nichols, 1* b. See: [deck loading](#)

space frame

A three-dimensional frame that is stable against wind pressure without being braced against any other structure. *Hammond*

space group

In crystallography, any one of 230 independent combinations of the 14 essentially different kinds of three-dimensional periodicity (Bravais lattices) with other symmetry operations (point groups, screws, glides). CF: [plane group](#); [Bravais lattice](#); [point group](#); [screw](#); [glide](#).

space lattice

a. A three-dimensional regularly repeating set of points so arranged as to determine sets of equally spaced parallel planes in various directions forming polyhedral cells (as in a honeycomb). Specif., a set of such points occupied by the atoms of a crystal. b. The pattern formed by the spatial distribution of atoms or radicals in a crystal. See also: [crystal pattern](#); [lattice](#). *Hackh* c. Any one of 14 infinite three-dimensional arrays of points such that each point is in an identical point environment. Syn: [Bravais lattice](#) CF: [net](#)

spacer

a. A piece of metal wire twisted at each end so as to form at one end a guard to keep the explosive in a shothole in place and at the other end another guard to hold the tamping in its place, thus providing an open space between explosive and tamping. When this is provided, the charge constitutes a cushion shot. *Zern* b. Piece of wood doweling which is interposed between charges to extend the column of explosive. *Nelson* c. A marker block. Also called spacer block. *Long* d. The tapered section of a pug joining the barrel to the die; in this section beyond the shaft carrying the screw or blades, the clay is compounded before it issues through the die. *Dodd*

spacing

The distance between adjacent shotholes in a direction parallel to the quarry or other face. *Nelson*

Spackman System

See: [coal constituent classification](#)

spad

a. A means of marking an underground survey station that consists of a flat spike in which is drilled a hole for the threading of a plumbline. *BS, 7* b. See: [spud](#)

spade drill

See: [flat drill](#)

spade-end wedge

A type of deflecting wedge in boreholes. See also: [deflecting wedge](#) *Long*

spadiard

Corn. A worker in the tin mines. Also called spalliard. *Standard, 2*

spake

A term used in South Wales for a train of personnel carriages, for use on the main slants at the beginning and end of each shift. The seats are so arranged that they are horizontal when the carriage is on the inclined slant. See also: [man-riding car](#); [man-riding conductor](#). *Nelson*

spall

a. A relatively thin, commonly curved and sharp-edged piece of rock produced by exfoliation. b. To break off in layers parallel to a surface. c. To break ore. Pieces of ore thus broken are called spalls. Also spelled: spawl.

spalliard

Eng. A pickman; a working miner. A laborer in tinworks. Also spelled spallier.

spalling

The chipping, fracturing, or fragmentation, and the upward and outward heaving, of rock caused by the action of a shock wave at a free surface or by release of pressure. Syn: [exfoliation](#)

spalling floor

A place for breaking ore with a 4- to 5-lb (1.8- to 2.3-kg) sledge hammer.

span

a. The horizontal distance between the side supports or solid abutments along sides of a roadway. See also: [abutment](#); [pressure arch](#). *Nelson* b. The horizontal distance between the supports of a bridge, arch, beam, or similar structural member. See also: [clear span](#); [effective span](#). *Hammond*

spangle gold

Aust. Smooth, flat scales of gold.

spangolite

A trigonal mineral, $\text{Cu}_6 \text{Al}(\text{SO}_4)(\text{OH})_{12} \cdot 3\text{H}_2\text{O}$; soft; vitreous; dark green; in Cochise County, AZ.

Spanish chalk

A variety of steatite in Aragon, Spain.

Spanish emerald

Emerald of the finest quality (presumably from South America). *Schaller*

Spanish lazulite

Iolite, a variety of cordierite.

Spanish topaz

a. Any orange, orange-brown, or orange-red variety of quartz resembling the color of topaz; e.g., heat-treated amethyst. CF: [topaz](#); Madeira topaz. b. A wine-colored or brownish red citrine from Spain.

spantone

See: [gypsum](#)

spar

a. A term loosely applied to any transparent or translucent light-colored mineral that is readily cleavable having a vitreous luster; e.g., Iceland spar (calcite), fluorspar (flourite), feldspar, heavy spar (barite). b. Applied locally by miners to small clay veins found in coal seams. *AGI* c. Corn. Quartz. d. See: [Iceland spar](#)

sparable ore

A nonmetallic tin ore occurring in small granules. *Osborne*

sparagmite

A collective term for the late Precambrian fragmental rocks of Scandinavia, esp. the feldspathic sandstones of the Swedish Jotnian, consisting mainly of coarse arkoses and subarkoses, together with polygenetic conglomerates and graywackes. Etymol: Greek sparagma, fragment, thing torn, piece. *AGI*

spare

N. of Eng. A wedge from 6 to 8 in (15 to 20 cm) long for driving behind plates when adjusting them to the circle of the shaft. Also called spear wedge.

spare face

See: [standby face](#)

sparite

a. A descriptive term for the crystalline transparent or translucent interstitial component of limestone, consisting of clean, relatively coarse-grained calcite or aragonite that either accumulated during deposition or was introduced later as a cement. It is more coarsely crystalline than micrite, the grains having diameters that exceed 10 μ m. *AGI* b. A limestone in which the sparite cement is more abundant than the micrite matrix. *AGI*

spark absorber

See: [absorber](#)

spark chamber

An instrument for detecting and measuring nuclear radiation; analogous to the cloud chamber. It consists of numerous electrically charged metal plates mounted in a parallel array, the spaces between the plates being occupied by inert gas. Ionizing radiation causes sparks to jump between the plates along its path through the chamber. See also: [bubble chamber](#); cloud chamber. *Lyman*

sparker

A marine seismic source that employs an electrical spark discharge to form the outgoing signal and produces a trace in the recorder showing the subbottom strata. *Hy*

sparkle metal

A matte containing about 74% copper. *Webster 3rd*

spark test

Identification of type of iron alloy by appearance of sparks emitted when rubbed on grindstone. *Pryor, 3*

sparry

a. Pertaining to, resembling, or consisting of "spar"; e.g., sparry vein or sparry luster. Like spathic; as in feldspathic. See also: [spar](#) b. Pertaining to "sparite" esp. in allusion to the relative clarity, both in thin section and hand specimen, of the calcite cement; abounding with sparite, such as a sparry rock.

sparry iron

See: [siderite](#)

sparry lode

A lode filled with spar, e.g., fluorspar, calcspar, or heavy spar.

sparse vitrain

A field term to denote, in accordance with an arbitrary scale established for use in describing banded coal, a frequency of occurrence of vitrain bands comprising less than 15% of the total coal layer. CF: [abundant vitrain](#); [dominant vitrain](#); [moderate vitrain](#).
AGI

spartaite

A variety of calcite containing some manganese. *Fay*

spartalite

A former name for zincite.

spate

a. Corn. In mining, to fine for disobedience of orders. b. A variation of spall.

spathic

Resembling spar, esp. in regard to having good cleavage. Syn: [spathose](#)

spathic iron

A native ferrous carbonite, also called siderite, containing 48% iron and usually traces of manganese. It is the best native ore for making steel tools by the direct method formerly used. See also: [siderite](#) *Sandstrom*

spathic iron ore

See: [siderite](#)

spathization

Widely distributed crystallization of sparry carbonates, such as calcite and dolomite; development of relatively large sparry crystals that have good cleavage. *AGI*

spathose

See: [spathic](#)

spathose iron

Carbonate of iron, FeCO_3 . See also: [siderite](#)

spawl

See: [spall](#)

spawl beater

See: [sledger](#)

SP curve

See: [spontaneous potential curve](#)

spear

a. One of several types of fishing tools designed to be driven and wedged inside of bits, rods, etc., lost in a borehole. CF: [fishing tap](#) *Long* b. A rodlike fishing tool having a barbed-hook end, used to recover rope, wire line, and other materials from a borehole. *Long* c. Eng. A wooden pump rod cut into lengths of about 40 ft (12 m), and, for heavy work, often measuring 16 in (40.6 cm) square. Wrought iron spears are also used. *Fay*

spearhead

- a. The point of convergence of two cross faces set off in the form of the letter V. *TIME*
b. A conical head on a wire-line core barrel, engaged by the dogs on the overshot assembly for the purpose of removing the inner tube of the core barrel from a borehole. *Long*

spear pyrite

A marcasite in twin crystals resembling the head of a spear. See: [marcasite](#)

special

See: [special rounds](#)

special flexible rope

A wire rope composed of 6 strands of 37 wires each. *Lewis*

special rounds

Sometimes used to designate a very high quality or grade of drill diamonds. *Long*

specialty steel

A steel containing alloys that provide special properties, such as resistance to corrosion or to heavy load. Also called alloy steel. *Hammond*

species

A mineral distinguished from others by its unique chemical and physical properties; it may have varieties. *AGI*

specific

Word used with a special meaning in mineral dressing, where minerals of the same species often exhibit differences in their reactions. "Specific to" warns the observer that the process in hand is empirical in some ways, designed to apply to one specific orebody. *Pryor, 3*

specific adhesion

The chemical bond between glued or cemented surfaces as distinct from any form of mechanical bond. *Hammond*

specific adsorption

Selective adsorbing action. *Pryor, 3*

specific damping capacity

A measure of the vibrational energy absorbed by the rock and may be considered to be a measure of the internal friction. It is determined by the sharpness of resonance that is evident when a specimen is vibrated through a range of frequencies centered on the fundamental longitudinal resonant frequency. Damping of the dry type (coulomb damping) is commonly assumed to be independent of the velocity, and thus independent of the frequency, and is somewhat sensitive to moisture content. Syn: [coulomb damping](#)

specific extraction of rock broken

Quantity of broken rock (ore) in volume or weight per foot drilled or fired per quantity of explosive. *Fraenkel*

specific gravity

a. The ratio between the weight of a unit volume of a substance and that of some other standard substance, under standard conditions of temperature and pressure. For solids and liquids, the specific gravity is based upon water as the standard. The true specific gravity of a body is based on the volume of solid material, excluding all pores. The bulk or volume specific gravity is based upon the volume as a whole--i.e., the solid material with all included pores. The apparent specific gravity is based upon the volume of the solid material plus the volume of the sealed pores. See also: [apparent specific gravity](#) b. Ratio of densities of a gas and air, based on dry air = 1. *Hartman, 2* c. The weight of a substance compared with the weight of an equal volume of pure water at 4 degrees C. Specific gravity is numerically equal to density given in grams per cubic centimeter or milliliter. CF: [density](#)

specific-gravity hydrometer

A hydrometer indicating the specific gravity or relation of the weight of a given liquid per unit volume to the weight of a given unit volume of water. See also: [hydrometer](#); [Marsh funnel](#). *Long*

specific gravity of soil grains

This is measured in a calibrated glass bottle with special precautions against the inclusion of air. Such testing is applied in many soil problem computations. See also: [pycnometer](#)

specific heat

a. Heat required to raise the temperature of a unit weight of air 1 degrees F (0.56 degrees C). Usually, the specific heat at constant pressure is used in air conditioning. For ordinary concrete and steel it is 0.22 Btu/lb/ degrees F and 0.12 Btu/lb/ degrees F (0.92 kJ/kg/ degrees C and 0.50 kJ/kg/ degrees C), respectively. *Hartman, 2* b. The ratio of the amount of heat required to raise a unit weight of a material 1 degree to the amount of heat required to raise the same unit weight of water 1 degree. *Brantly, 2* c. The heat in calories required to raise the temperature of 1 g of a substance 1 degrees C. *Webster 3rd*

specific humidity

a. The mass of moisture per unit mass of dry air. *Roberts, 1* b. Absolute humidity, or weight of water vapor contained per unit weight of dry air. CF: [relative humidity](#) *Hartman, 1*

specific mineral

See: [essential mineral](#)

specific population

Number of particles in unit volume of pulp. *Pryor, 4*

specific resistance

See: [resistivity](#)

specific retention

The ratio of the volume of water that a given body of rock or soil will hold against the pull of gravity to the volume of the body itself. It is usually expressed as a percentage. CF: [field capacity](#)

specific speed

a. A factor by which the performance of any particular design of impeller for a centrifugal pump or water turbine can be computed. It is the speed in revolutions per minute at which a geometrically similar impeller of suitable diameter will rotate to deliver 1 gal/min (3.785 L/min) at 1 ft (30.5 cm) head in the case of a pump. In a water turbine, the specific speed is that at which a geometrically similar runner of suitable diameter will turn to develop 1 hp (746 W) under a head of 1 ft (30.5 cm). *Hammond* b. The particular speed at which a fan achieves its maximum efficiency. *Roberts, 1*

specific surface

a. The surface area per unit of volume of soil particles. *ASCE* b. The ratio of the total surface of a substance (as an adsorbent) to its volume; surface area (as of a finely divided powder) per unit mass. *Webster 3rd*

specific volume

a. Volume of one gram at specified temperature. *Pryor, 3* b. Volume per unit weight of dry air. Not equal to the reciprocal of density, which is based on unit volume of mixture. Measured in cubic feet per pound (cubic meters per kilogram). *Hartman, 2*

specific weight of sediment

The dry weight per unit volume of the sediment in place. See also: [dry density](#)

specific yield

The ratio of the volume of water that a given mass of saturated rock or soil will yield by gravity to the volume of that mass. This ratio is stated as a percentage. CF: [effective porosity](#)

specimen

a. A sample, as of a fossil, rock, or ore. Among miners, it is often restricted to selected or handsome samples, such as fine pieces of ore, crystals, or fragments of quartz showing visible gold. CF: [hand specimen](#) b. A small mass of coal, rock, or, mineral, or soil, which gives, roughly, an idea of the kind and quality of the deposit from which it was derived. In the case of ore in particular, the specimen should admit of the identification of the various minerals present. A specimen cannot be viewed as a sample. *Nelson*

specimen boss

An employee whose duty is to watch carefully, in all parts of the mine, for the appearance of high-grade mineral, and when it is likely that such spots will be opened up, should be the first person at the face after the blast to prevent high-grading (the theft of valuable samples). *Hoover*

specimen hunting

Another name for high-grading. *Hoover*

specimens

In mineral dressing, unusually rich pieces of ore or characteristic constituents thereof in coarsely crystalline form--not representative samples. *Pryor, 4*

speck

A small piece of alluvial gold weighing up to 1 oz or 2 oz (28 g or 56 g). *Gordon*

speckstone

An early name for talc or steatite. Etymol: German "Speckstein", "bacon stone," alluding to its greasy feel.

spectacle

A two-handled frame for carrying well-boring tools. *Standard, 2*

spectacle stone

An early popular name for selenite, alluding to its transparency. *Fay*

spectral gamma-ray log

Record of the radiation spectrum and relative intensities of gamma rays emitted by strata penetrated in drilling. Because of their different energies the relative amounts of radioactivity contributed by different elements can be determined. CF: [gamma-ray well log](#) See also: [radioactivity log](#)

spectrometer

An optical instrument similar to, but more versatile than, the simple spectroscope. Scales are provided for reading angles. A wavelength spectrometer is one designed or equipped in a manner to measure the wavelengths at which absorption bands occur in an absorption spectrum.

spectrophotometer

An instrument to detect very slight differences in color of solutions of different chemicals and thus measure the quantity of the chemical present. It consists of a light source, an optical prism for providing monochromatic light; i.e., light of a single wavelength only, and a device for measuring the intensity of the light beam after it has passed through the solution. Traces of aluminum in steel may be determined in this way. Also called spekker. *Nelson*

spectrum

a. A band of light showing in orderly succession the rainbow colors or isolated bands or colors corresponding to different wavelengths, as seen through a spectroscope or photographed in a spectrograph. The visible spectrum is only a small region in the vast

spectrum of electromagnetic waves, which extend from the longest radio waves to the minutely short waves (gamma rays) emitted by radioactive elements. See also: [emission spectrum](#); [continuous spectrum](#); [absorption spectrum](#). *Anderson* b. An array of visible light ordered according to its constituent wavelengths (colors) by being sent through a prism or diffraction grating. *AGI* c. An array of intensity values ordered according to any physical parameter, e.g. energy spectrum, mass spectrum, velocity spectrum. *AGI* d. Amplitude and phase response as a function of frequency for the components of a wavetrain, such as given by Fourier analysis, or as used to specify filter-response characteristics. Pl: "spectra." Adj: "spectral."

spectrum colors

The hues or wavelengths into which white light is separated upon passing through a transparent prism, six of which are readily distinguished by the normal human eye: red, orange, yellow, green, blue, and violet. See also: [visible spectrum](#) outside the visible range.

specular

Mirrorlike, as specular iron ore, which is a hard variety of hematite. See also: [specularite](#)

specular hematite

See: [specularite](#)

specular iron

Variety of hematite, Fe_2O_3 , black, lustrous, metallic gleam. Mohs hardness, 5.5 to 6.5. May be micaceous in form. Contains 70% iron; sp gr, 4.9 to 5.3. See also: [specularite](#); [hematite](#). *Pryor*, 3

specular iron ore

A variety of hematite with brilliant black color and metallic luster. See: [hematite](#)

specularite

A black or gray variety of hematite with splendant metallic luster, often showing iridescence; occurs in micaceous or foliated masses or in tabular or disklike crystals. Syn: [specular hematite](#); [gray hematite](#). See also: [hematite](#); [specular iron](#); [iron glance](#).

specular schist

Metamorphosed oxide-facies iron formation characterized by a high percentage of strongly aligned flakes of specular hematite. CF: [itabirite](#)

specular stone

Mica. *Standard*, 2

speculative resources

Undiscovered resources that may occur either in known types of deposits in favorable geologic settings where mineral discoveries have not been made, or in types of deposits as yet unrecognized for their economic potential. If exploration confirms their existence and reveals enough information about their quantity, grade, and quality, they will be reclassified as identified resources. *USGS*, 2

speed

The length of belt, chain, cable, or other linkage which passes a fixed point within a given time. It is usually expressed in terms of feet per minute. In the case of the rolling chain conveyor, the load is moved at a rate double the chain speed. In screw conveyors, the speed is expressed in terms of revolutions per minute and the speed at which the material is conveyed is dependent upon speed, pitch of the screw, type of flight, angle of inclination, nature of material, etc.

speedy moisture tester

A calcium carbide method for the quick determination of moisture. A pressure gage is calibrated to give direct values of moisture content percent of soil samples. *Nelson*

speiss

Metallic arsenides and antimonides smelted from cobalt and lead ores. *Pryor*, 3

speisscobalt

See: [smaltite](#)

speleologist

One who scientifically investigates caverns.

speleology

The scientific study or exploration of caverns and related features.

speleothem

A secondary mineral deposit formed in caves.

spell

A rest period for crews at furnace, stock house, etc., or a period of work in drilling the taphole; a change or turn. *Fay*

spellerizing

Subjecting the heated bloom to the action of rolls having regularly shaped projections on their working surface, then subjecting the bloom while still hot to the action of smooth-faced rolls. The surface working is said to give a dense texture to pipe made from the bloom, adapting it to resist corrosion. *Liddell*

spelter

Zinc of under 99.6% purity. *Hammond*

Spence automatic desulfurizer

An improved maletra furnace provided with automatic rakes. *Fay*

Spence furnace

A furnace of the muffle or reverberatory type, the ore being supported on shelves and stirred mechanically. *Fay*

spencerite

a. A monoclinic mineral, $Zn_4(PO_4)_2(OH)_2 \cdot 3H_2O$; pearly white. b. The synthetic material $(Fe,Mn)_3(C,Si)$.

spencite

See: [tritomite](#)

spend

a. To break ground; to continue working. b. To exhaust by mining; to dig out; used in the phrase, to spend ground. *Standard, 2*

spent fuel

Nuclear-reactor fuel that has been irradiated to the extent that it can no longer effectively sustain a chain reaction. Fuel becomes spent when its fissionable isotopes have been partially consumed and fission-product poisons have accumulated in it. Syn: [depleted fuel](#)

spent shot

A blasthole that has been fired, but has not done its work.

spergenite

A calcarenite that contains oolites and fossil debris (such as bryozoan and foraminiferal fragments) and that has a quartz content not exceeding 10%. Type locality: Spergen Hill, situated a few miles southeast of Salem, Indiana, where the Salem Limestone (formerly the Spergen Limestone) is found. Syn: [Bedford Limestone](#)

sperrylite

An isometric mineral, $PtAs_2$; pyrite group; tin white; sp gr, 10.6; occurs with heavy-metal ores, also in placers.

Sperry process

A process for manufacturing white lead in which softened and desilverized lead anodes, preferably containing some bismuth, are placed in the Sperry cells. Direct current dissolves the lead from the anodes, and carbon dioxide is used to precipitate white lead (basic lead carbonate) from the solution. The Sperry process slime, which contains the impurities from the anodes, is washed, dried, and melted to an impure bismuth bullion, which goes to the bismuth refinery. *USBM, 5*

spessartine

An isometric mineral, $Mn_3 Al_2 (SiO_4)_3$; garnet group with Mn replaced by Fe and Mg; crystallizes as dodecahedra and trapezohedra; in skarns and granite pegmatites; may be of gem quality. Also spelled spessartite. CF: [emildine](#) Syn: [manganese-aluminum garnet](#)

spessartite

A "lamprophyre" composed of phenocrysts of green hornblende or clinopyroxene in a ground mass of sodic plagioclase, with accessory olivine, biotite, apatite, and opaque oxides. Named for Spessart, Germany. Syn: [spessartine](#)

spew

The cauliflowerlike blowout or outcrop of a lode that extends beyond the limits of the defined vein deeper down.

sphaerocobaltite

A trigonal mineral, CoCO_3 ; calcite group; forms peach-blossom red spherical masses. Also spelled sferocobaltite. Syn: [cobaltocalcite](#)

sphaerolitic

See: [spherulitic](#)

sphaerosiderite

Alternate spelling of sphaerosiderite.

sphagnum peat

Peat composed mainly of bog moss. It is characterized by an open texture, is lightweight, has a high absorbing power, good isolating properties, a clean appearance, and freedom from black dust. *Tomkeieff*

sphalerite

a. An isometric mineral, ZnS , with Zn replaced by Fe with minor Mn, As, and Cd; trimorphous with wurtzite and matraite; perfect dodecahedral cleavage; resinous to adamantine; occurs with galena in veins and irregular replacement in limestone; a source of zinc. Syn: [blende](#); zinc blende; jack; blackjack; steel jack; false galena; pseudogalena; mock ore; mock lead. See also: [beta zinc sulfide](#) b. The mineral group coloradoite, hawleyite, metacinnabar, sphalerite, stilleite, and tiemannite.

sphene

See: [titanite](#)

sphenoid

An open crystal form of two nonparallel faces which intersect two or three crystallographic axes. CF: [dome](#); [disphenoid](#).

sphenolith

A wedgelike igneous intrusion, partly concordant and partly discordant. *AGI*

sphenomanganite

See: [manganite](#)

Sphenopterias

A fernlike tree of the coal forest characterized by round-lobed pinnules that are contracted at the base. See also: [Neuropteris](#)

sphere ore

See: [cockade ore](#)

spheric

A general term applied to rocks made up of spherules. It includes such textures as oolitic, pisolitic, spherulitic, variolitic, orbicular, etc. *Johannsen*

spherical dam

A brick or concrete seal or stopping built into a roadway to close off an area against water. The convex surface is from the water side of the roadway. The construction is built well into the ground and all crevices cemented. *Nelson*

spherical model

A function frequently used when fitting mathematical models to experimental variograms, often in combination with a nugget model.

spherical wave

A seismic wave propagated from a point source whose front surfaces are concentric spheres. *AGI*

spherical wave front

Spherical surface that a given portion of a seismic impulse (in an isotropic medium) occupies at any particular time. *AGI*

spherical weathering

See: [spheroidal weathering](#)

spherite

a. The preferred spelling for sphaerite. *English* b. Spherical grains, including ovulite with concentric structure and spherulite with radial structure. *Spencer, 2*

spherocobaltite

See: [sphaerocobaltite](#)

spherocrystal

A homogeneous spherulite formed of minute crystals branching outward from the center. See also: [spherulite](#)

spheroid

In general, any figure differing but little from a sphere. In geodesy, a mathematical figure closely approaching the geoid in form and size, and used as a surface of reference for geodetic surveys.

spheroidal

a. Having the shape of a spheroid. *AGI* b. Composed of spherulites. *AGI* c. Said of the texture of a rock composed of numerous spherulites. *AGI*

spheroidal jointing

See: [spheroidal parting](#)

spheroidal parting

A series of concentric and spheroidal or ellipsoidal cracks produced about compact nuclei in fine-grained, homogeneous rocks. CF: [exfoliation](#); spheroidal weathering. Syn: [spheroidal jointing](#)

spheroidal structure

See: [orbicular structure](#)

spheroidal weathering

A form of chemical weathering in which concentric or spherical shells of decayed rock (ranging in diameter from 2 cm to 2 m) are successively loosened and separated from a block of rock by water penetrating the bounding joints or other fractures and attacking the block from all sides. It is similar to the larger-scale exfoliation produced usually by mechanical weathering. See also: [spheroidal parting](#) Syn: [onion-skin weathering](#); [concentric weathering](#); [spherical weathering](#). CF: [exfoliation](#)

spherosiderite

A variety of siderite occurring in globular concretionary aggregates of bladelike crystals radiating from a center, generally in a clayey matrix (such as those in or below underclays associated with coal measures). It appears to be the result of weathering of

water-logged sediments in which iron, leached out of surface soil, is redeposited in a lower zone characterized by reducing conditions. Also spelled sphaerosiderite.

spherulite

a. A rounded or spherical mass of acicular crystals, commonly of feldspar, radiating from a central point. Spherulites may range in size from microscopic to several centimeters in diameter. Also spelled: sphaerolite. *AGI* b. Any more or less spherical body or coarsely crystalline aggregate with a radial internal structure arranged around one or more centers, varying in size from microscopic grains to objects many centimeters in diameter, formed in a sedimentary rock in the place where it is now found; e.g., a minute particle of chalcedony in certain limestones, or a large carbonate concretion or nodule in shale. CF: [spherite](#); [varirole](#). *AGI* c. A small (0.5 to 5 mm in diameter), spherical or spheroidal particle composed of a thin, dense calcareous outer layer with a sparry calcite core. It can originate by recrystallization or by biologic processes. *AGI*

spherulitic

Said of the texture of a rock composed of numerous spherulites; also, said of a rock containing spherulites. CF: [variolitic](#); [radiated](#). Syn: [globular](#); [sphaerolitic](#). *AGI*

spider

a. A ring inserted at the joints of the suspension column of a borehole pump. Radial vanes from the ring support a central sleeve, which acts as a steady bearing from the pump shaft. *BS, IO* b. The bowl part of a spider and slips. Also called bowl. See also: [spider and slips](#) c. See: [drum horn](#) d. Assembly of radiating tie rods on the top of a furnace. *ASTM*

spider and slips

A gripping device used to grip and hold rods or casing while coupling or uncoupling them as they are being run into or pulled from a borehole. Also called bowl and slips. See also: [spider](#)

spider gear

A differential gear that rotates on its shaft in a rotating case. *Nichols, I*

spiderweb rock

A local term in Ohio for sandstone beds that show crossbedding on a small scale, which is complicated by intricate interlacing of fine-bedding planes. Frequently seen in sawed

stones, esp. where the lamination is slightly oblique or irregular. It is very like the grain of wood that shows in a planed board.

spiegeleisen

An alloy containing 10% to 25% manganese. Is used in steelmaking as a deoxidizing agent and to raise the manganese content of the steel. Also called spiegel and psiegel iron. *CTD; Henderson; Camp*

spigot product

In ore dressing, the material discharged at the bottom of the hydraulic classifier. *Newton, I*

spike amygdule

A cylindrical amygdule whose longer axis is at right angles to the bedding.

spike driver

In bituminous coal mining, one who drives a team of two or more draft animals in tandem for hauling wagons or cars of coal. Also called spike-team driver. *DOT*

spike team

a. A team consisting of three draft animals, two of which are at the pole while the third pads. *Fay* b. Three mules, two abreast and one in the lead, used in a mine to haul coal cars. *Fay*

spike-team driver

See: [spike driver](#)

spiking

A term used in the United States for the operation of adding ferromanganese, silicomanganese, or other deoxidizing agent, to an open hearth bath for the immediate stoppage of all oxidizing reactions. *Osborne*

spile

a. A large timber driven into the ground, used as a foundation; a pile. *Crispin* b. A plank driven ahead of a tunnel face for roof support. Also called forepole. *Nichols, I* c. A temporary lagging driven ahead on levels in loose ground. See also: [spill](#) d. A short piece

of plank sharpened flatways and used for driving into watery strata as sheet piling to assist in checking the flow.

spiler

An ironstone miner who excavates and sets timber supports in roadways through wastes and disturbed ground. *Nelson*

Spilhaus-Miller sea sampler

An instrument resembling the bathythermograph and operating in a similar fashion, with the additional ability of obtaining water samples at discrete depths within the limit of operation. Basically, a bathythermograph to which 12 small seawater sampling bottles are attached, it performs the same functions as a cast of Nansen bottles and reversing thermometers to limited depths, but with less accuracy. It is useful for studies of shallow water areas, bays, and estuaries, where rapidity of sampling is of greater importance than the degree of accuracy of temperatures. *Hunt*

spiling

a. Forepiling over timber and steel supports in weak, loose beds. See also: [spilling](#) b. Driving timbers ahead of an advancing tunnel through treacherous, loose, watery ground. *Pryor, 3*

spilite

An altered basalt, characteristically amygdaloidal or vesicular, in which the feldspar has been albitized and is typically accompanied by chlorite, calcite, epidote, chalcedony, prehnite, or other low-temperature hydrous crystallization products characteristic of a greenstone. Spilite often occurs as submarine lava flows and exhibits pillow structure. Adj: spilitic. The name was given by Brongniart in 1827. *AGI*

spilitic suite

A group of altered extrusive and minor intrusive basaltic rocks that characteristically have a high albite content. The group is named for its type member, spilite. *AGI*

spilitization

Albitization of a basalt to form a spilite. *AGI*

spill

Any of the thick laths or poles driven ahead of the main timbering to support the roof or sides in advancing a level in loose ground, or to support the sides of a shaft when sinking through a stratum of loose ground. Syn: [spile](#)

spilla

Ore, pulp, circulating liquor inadvertently discharged from flow line and requiring appropriate means of recovery or removal. Syn: [spillage](#) *Pryor, 4*

spillage

See: [spilla](#)

spillage conveyor

A small, short conveyor to lift coal out of a spillage pit and deliver it into a mine car or onto the main conveyor. It is usually a chain conveyor run either continuously or intermittently. *Nelson*

spillage pit

An opening below the loading point of a trunk or gate conveyor, to receive spillage. If the output is small, the pit may be emptied by hand once or twice in a shift, but if big tonnages are loaded, a spillage conveyor is installed. *Nelson*

spilling

A method of tunneling through loose, running ground by driving spills (sharp-edged thick boards or steel rods) ahead and around timber or steel frames. *Nelson*

spill pit

See: [runoff pit](#)

spill trough

A trough to retrieve melted brass that may be spilled in pouring from a crucible into a flask. *Standard, 2*

spilosite

A rock representing an early stage in the formation of adinol or spotted slate. CF: [adinole](#)

spindle

- a. Shaft of a machine tool on which a cutter or grinding wheel may be mounted. *ASM, 1*
b. Metal shaft to which a mounted wheel is cemented. *ASM, 1* c. In founding, a rod or pipe used in forming a core. *Standard, 2*

spindle conveyor

A chain-on-end conveyor in which the chain pins are extended in a vertical plane, usually of enlarged diameter in that portion above the chain, on which special revolvable fixtures can be rotated, for the purpose of spraying or drying. Outboard rollers or sliding shoes support the chain and product.

spindle speed

- a. Same as bit rotational speed. *Long* b. The number of times the drive rod of a gear-feed-drill swivel head must turn to advance the attached drill string 1 in (2.54 cm). *Long*

spindle stage

A graduated horizontal rotation axis attached to a microscope stage for observation and measurement of optical properties of small crystals. CF: [goniometer](#); [universal stage](#).

spinel

- a. An isometric mineral, $MgAl_2O_4$; crystallizes as octahedra; colorless to pale tints; Mohs hardness, 7.5 to 8; in high-temperature metamorphic rocks, contact metamorphosed limestones, serpentinites, and ultramafic rocks; may be of gem quality.
b. The spinel series gahnite, galaxite, hercynite, and spinel. c. The mineral group brunogeierite, chromite, cochromite, coulsonite, cuprospinel, franklinite, gahnite, galaxite, hercynite, jacobsite, magnesiochromite, magnesioferrite, magnetite, manganochromite, nichromite, ringwoodite, spinel, trevorite, ulvoespinel, and vuorelainenite. d. Minerals with the spinel structure, such as the linnaeite group. e. A synthetic crystal with spinel structure that is used as a gemstone, a refractory, or for instrument bearings; e.g., ferros spinel. Also spelled spinelle; spinell; spinelite. See also: [magnesium aluminate](#)

spinel emery

A mixture of spinel, corundum, and magnetite, the corundum being present in variable proportions. It is a heavy, black, fine-grained aggregate. Dark gray crystals of corundum appear in the best varieties.

spinellid

See: [spinel](#)

spinellite

A medium- to coarse-grained hypidiomorphic-granular titaniferous magnetite-rich igneous rock with spinel from a few percent to 20%.

spinifex texture

Interpenetrating lacy elongate olivine crystals in komatiite, commonly considered to have been formed by quenching. Their disposition resembles the intermesh of an Australian grass for which the texture is named. *AGI*

spinning cable

A flexible wire or plant-fiber cable or rope used as a spinning chain. See also: [spinning chain](#)

spinning chain

Link chain wrapped several times around drill rod, casing, or pipe and used on the drum to spin up or spin out such equipment when it is being pulled or run into a borehole. A rope or flexible wire cable may be used in lieu of a chain. *Long*

spinning fiber

Asbestos suitable for the spinning of asbestos fabrics.

spinning rope

A plant-fiber rope used for the same purpose as a spinning chain. See also: [spinning chain](#)

spin out

To unscrew lengths of drill rod casing, or pipe by mechanical means, using a spinning chain, rope, or cable in conjunction with power derived from the cathead or other rotating device. *Long*

S-P interval

In earthquake seismology, the time interval between the first arrivals of transverse (S) and longitudinal (P) waves, which is proportional to the distance from the earthquake source. *AGI*

spintharoscope

Screen coated with zinc sulfide or other fluorescing substance, on which scintillations are observable when bombarded by radioactive rays. *Pryor, 3*

spin up

To screw lengths of drill rod, casing, or pipe together by mechanical means by using a spinning chain, cable, or rope in conjunction with power derived from the cathead or other rotating device. *Long*

spiral

a. A spiral coal chute that mechanically separates the slate from the coal. The lighter, irregularly-shaped coal falls over the edge of the spiral while the flatter and heavier slate adheres somewhat to the chute surface and is carried down to a special pocket. b. The Humphrey's spiral is successfully used in recovering chromite from chrome; sands, rutile, ilmenite, and zircon from beach sands (Florida); and tantalum minerals and lepidolite from crushed ores. Also used in concentrating some iron ores and coal. See also: [Humphrey's spiral](#)

spiralarm methanometer

An instrument that depends on the heat output of burning methane for its action. There are two varieties: those having a controlled flame burning within them and those in which combustion of the methane occurs on electrically heated filaments. A combustible gas alarm making use of the flame principle is the Naylor Spiralarm. *Roberts, 1*

spiral classifier

See: [Akins' classifier](#)

spiral cleaner

A device for removing dirt from a conveyor belt. *Nichols, 1*

spiral coal cleaner

A spiral chute in which the plate is inclined towards the center of the spiral. The stone tends to flow down centrally, the coal tends to slide off around the outside of the spiral. They are seldom used as coal cleaners. *Nelson*

spiral concentrator

A sluice formed in five or six tight spirals, in which centrifugal force aids the separating effect of sluice action. See also: [Humphrey's spiral](#)

spiral conveyor

See: [screw conveyor](#)

spiral core

A piece of core the outside surface of which is rifled. See also: [rifle](#) *Long*

spiral curve

a. A curve of gradually increasing radius that allows an easy transition between a circular arc and a straight on a road or railway. *Hammond* b. In railroad or highway surveying, a curve of progressively decreasing (or increasing) radius used in joining a tangent with a simple circular curve or in joining two circular curves of different radii. Syn: [transition curve](#)

spiral grooving

See: [rifling](#)

spiral gummer

A screw device, attached to a longwall coal cutter, for removing the holings and depositing them either in the track of the machine or at the side clear of the face. It is designed in two types: end discharge and side discharge. *Nelson*

spiral hole

A borehole that follows a corkscrewlike course. CF: [rifle](#)

spiraling

a. Rifling. *Nichols, 2* b. A drill hole twisting into a spiral around its intended centerline. *Nichols, 2*

spiral level

A section of convex glass tube containing fluid and an air bubble. When level, the air bubble centers itself on an etched line on the tube.

spiral system

In open pit mining, a haul road arranged spirally along the perimeter walls of the pit so that gradient of road is more or less uniform from the bottom to the top of the pit.

spiral track

A track layout for rail or road transport from large opencast pits. The track is arranged spirally along the steep rise from the coal or ore benches so that the gradient is moderate throughout. *Nelson*

Spiral Vane Disk Cutter

Trade name for a cutter loader incorporating a special variety of shearer head. The Mark II model consists of section plates welded together to form a composite whole spiral. The disk is made in different sizes to give cutting diameters of from 31 to 72 in (79 to 183 cm) with a maximum web depth of 30 in (76 cm). A single spiral is used for softer coals and a double spiral for hard coals. A plow attached to the machine throws the coal onto the conveyor. *Nelson*

spiral worm

A device to withdraw broken rods from a borehole. It is lowered down the hole and the screw is turned around until it grips the broken rod below the joint. See also: [wad hook](#); [wad coil](#). *Nelson*

spire

A kind of fuse. The tube carrying a train to the charge in a blasthole. Also called reed or rush, because these, as well as spires of grass, are used for the purpose. See also: [reed](#)

Spirelmo smoke helmet

A helmet in which the crown and frontpiece are blocked out of rawhide, and the front shield is fitted with two mica windows in hinged aluminum frames. It has a twin-tubed air feed on each side of the helmet and a valve for the escape of excess and vitiated air. Air is supplied through an armored hose from double-acting bellows or a blower worked by a second person at the fresh air base. Airtightness is obtained by means of a soft leather apron secured in position about the neck and shoulders. Illumination is provided by portable electric lamps, and communication with the wearer by an approved type of mine telephone. *Sinclair, 1; Mason*

spirit of copper

Acetic acid obtained by distilling copper acetate.

spirits of niter

a. Nitric acid. *Osborne* b. A solution of ethyl nitrite in alcohol. *Osborne*

spirits of sulfur

Sulfurous acid. *Osborne*

spirits of verdigris

Acetic acid. *Osborne*

spirits of vinegar

Dilute acetic acid. *Osborne*

spirits of wine

Ethyl alcohol. *Osborne*

spirits of wood

Methyl alcohol. *Osborne*

spiroffite

A monoclinic mineral, $(\text{Mn,Zn})_2 \text{Te}_3 \text{O}_8$; red to purple.

spitted fuse

Slow-burning fuse that has been cut open at the lighting end for ease of ignition. A small quantity of the plastic explosive used in the hole is sometimes inserted in the cut. *Pryor*, 3

spitting

a. Lighting the fuse for a blast. b. An action of or appearance on the surface of slowly cooled, large masses of melted silver or platinum, in which the crust is forcibly perforated by jets of oxygen, often carrying with them drops of molten metal. Also called sprouting. *Standard*, 2

spitting rock

A rock mass under stress that ejects small fragments with considerable velocity on breaking.

spitzkasten

A series of hopper-shaped or pointed boxes for separating mineral-bearing slimes according to fineness, in which the width of each box is double that of its predecessor, while the lengths increase by arithmetical progression. As used in flotation, it is the froth-separating compartment of mechanical-agitation-type flotation machines. Also called spitz. See also: [funnel box](#)

spitzlутten

Hydraulic classifiers shaped like the spitzkasten, but having provision for pressure water to flow upward from near the apex, thus improving efficiency of separation. *Pryor, 3*

splasher

a. A plate lined with firebrick and placed over the iron trough next to the taphole to keep down flame that blows from the taphole during a cast. *Fay* b. A water spray system for the protection of the metal structure immediately above the tapping hole during the tapping of a blast furnace. *Henderson*

splash man

A laborer who shovels charcoal over the surface of molten copper being poured from a reverberatory furnace into a tilting ladle to prevent excess oxidation of metal. *DOT*

splay

One of a series of divergent small faults at the extremities of a major fault. Splays are typically associated with rifts.

splay faulting

Minor faulting that diverges from a longer dislocation at an acute angle.

splendent

Applied to the degree of luster of a mineral, reflecting with brilliancy and giving well-defined images, such as hematite or cassiterite.

splice

a. A joint made in a broken haulage rope. Splicing is a skilled job and the rope ends are unlaidd for a length on each side of the break and reformed to a definite pattern. *Nelson* b. Generally used to designate an insulated reconnection of wires of an electric cable after it has been cut. *BCI* c. To unite two ropes by interweaving the strands.

splice box

An enclosed connector permitting short sections of cable to be connected together to obtain a portable cable of the required length.

spliced

Said of a vein that pinches out and is overlapped by another parallel vein.

splint coal

A miner's term long used in Eastern United States and Scotland for certain hard dull coals with a distinctive type of fracture. Splint coals are irregular and blocky, with an uneven rough fracture, grayish black in color and of granular texture. Splint coals are banded coals. Coals containing more than 5% of anthraxylon and more than 30% of opaque attritus determined by microscopic examination are classed as splint coal. The content of anthraxylon and opaque matter is determined perpendicular to the bedding across the entire thin section (2 to 3 cm in width). The opaque attrital portion of the splint coal may be intercalated with fine, hairlike streaks of anthraxylon. It occurs mainly as bands and benches in otherwise bright-banded coal and is wide-spread in bituminous coal seams. Corresponds either to duroclarite or, more frequently, to clarodurite according to the ratio of vitrinite and inertinite. May also correspond to vitrinertite.
IHCP

splintery fracture

The property shown by certain minerals or rocks of breaking or fracturing into elongated fragments like splinters of wood.

split

a. To divide the air current into separate circuits to ventilate more than one section of the mine. CF: [air split](#) b. The workings ventilated by that branch. c. A bench separated by a considerable interval from the other benches of a coal bed. d. The upper or lower portion of a divided coal seam. *CTD* e. To divide a pillar or post by driving one or more roads through it. f. A layer of coal which has separated from its parent seam. See also: [split seam](#); [ventilation](#); [splitting](#). *Nelson* g. The process of dividing a core lengthwise, dividing a granular material into several representative parts for sending samples to several interested parties or reducing either core storage space or the quantity of material retained as a sample. *Long* h. The division of a bed of coal into two or more horizontal sections by intervening rock strata. *Hudson*

split-barrel sampler

A drive-type soil sampler with a split barrel; also a swivel-type double-tube core barrel, the inner tube of which is split. Syn: [split-tube sampler](#)

split brilliant

A brilliant split apart at the base of its pyramidal forms, so as to make two gems. *Standard, 2*

split bushing

A bushing made in two pieces, for ease of insertion and removal. *Nichols, 1*

split check

A system of leasing practiced at Cripple Creek, Colorado, whereby the miners and company divide the profits. *von Bernewitz*

split coal

Coalbed separated by clay, shale, or sandstone parting that thickens so that both benches cannot be mined together. *AGI*

split core

A core that has been split lengthwise into halves or quarters. *Long*

split core barrel

A type of core barrel which can be opened longitudinally to remove the core. *BS, 9*

split inner-tube core barrel

A double-tube core barrel with the inner tube split lengthwise. *Long*

split lagging

Drum lagging made in two pieces to allow changing it without dismantling the drum. *Nichols, 1*

split-ring core lifter

A hardened steel having an open slit, an outside taper, an inside or outside serrated surface. In its expanded state, it allows the core to pass through it freely, but when the drill string is lifted, the outside taper surface slides downward into the bevel of the bit or reaming shell, causing the ring to contract and grip tightly the core which it surrounds. Also called core catcher; core gripper; core lifter; ring lifter; split-ring lifter; spring lifter. *Long*

split-ring lifter

See: [split-ring core lifter](#)

split rock

A rock possessing tabular structure, or which cleaves easily in the lines of lamination, and is consequently suitable for flagging and curbstones.

splits

In mine ventilation, airways connected in parallel. *Hartman, 2*

split seam

A coal seam that has separated into two or more layers which may, or may not, rejoin some distance away. Syn: [coal split](#) See also: [multiple splitting](#)

split shovel

A device for sampling fine ore, consisting of a fork in which the prongs are separate scoops, each scoop being the same width as the open spaces between.

split spread

A type of seismic spread in which the shot point is at the center of the arrangement of geophones. It is commonly used for continuous profiling and for dip shooting. Syn: [straddle spread](#); [symmetric spread](#). *AGI*

split sprocket

A two-piece sprocket that can be assembled on a shaft without removing the shaft bearings. *Nichols, 1*

split system

a. A system of ventilation in which air is split along the airways or at the face. See also: [natural splitting](#); [controlled splitting](#). b. Historically, a combination of warm air heating and radiator heating. Also used for other combinations, such as hot water steam, steam warm air, etc. *Strock, 2*

split the air

See: [split](#)

splitting

a. Parting of a coalbed into two or more benches separated by other rocks. *AGI* b. In mine ventilation, the practice of connecting airways in parallel by dividing the total air flow among them. *Hartman, 2* c. Abrasion of a rock fragment resulting in the production of two or three subequal parts or grains. *AGI* d. The property or tendency of a stratified rock of separating along a plane or surface of parting. *AGI* e. The sampling of a large mass of loose material (e.g., a sediment) by dividing it into two or more parts; e.g., quartering. *AGI*

splitting knife

A knife used for splitting leather or for diamond cleaving. *Standard, 2*

splitting method

A method of mining pillars seldom followed. A room is first driven through the pillars, splitting them into smaller blocks. The pockets are turned at right angles and are driven into the blocks. This method is really gouging the pillars and is wasteful. *Lewis*

splitting of air

See: [ventilation](#); splitting.

splitting shot

Arkansas. A shot put into a large mass of coal detached by a previous blast. See also: [block hole](#)

split-tube barrel

See: [soil sampler](#); split-barrel sampler.

split-tube sampler

See: [soil sampler](#); split-barrel sampler. CF: [solid-barrel sampler](#)

spodumene

A monoclinic mineral, $\text{LiAlSi}_2\text{O}_6$; pyroxene group; prismatic cleavage; in granite pegmatites in crystals up to scores of meters long (called logs); a source of lithium; may be of gem quality (lavender kunzite, green hiddenite). Formerly called triphane. Syn: [lithia amethyst](#); [lithia emerald](#).

spoil

Overburden, nonore, or other waste material removed in mining, quarrying, dredging, or excavating. See also: [waste](#)

spoil bank

- a. A term common in surface mining to designate the accumulation of overburden. *BCI*
- b. Underground refuse piled outside. *BCI*
- c. That part of a mine from which coal has been removed and the space more or less filled up with waste. *BCI*
- d. To leave coal and other minerals that are not marketable in a mine. See also: [spoil heap](#)

spoil dam

An earthen dike forming a depression in which returns from a borehole can be collected and retained. *Long*

spoil heap

- a. The pile of dirt produced by mining operations and stacked at the surface of a mine either in conical heaps or in layered deposits. Syn: [dump](#); [tip](#). *Nelson*
- b. A pile of refuse material from an excavation or mining operation; e.g., a pile of dirt removed from, and stacked at the surface of, a mine in a conical heap or in layered deposits, such as a tip heap from a coal mine. See also: [spoil bank](#)

spoil-heap fire

The spontaneous heating and burning of small coal, carbonaceous shale, and perhaps iron pyrites in spoil heaps. *Nelson*

spoil pile

See: [waste dump](#)

spoil pool

The reservoir formed by a spoil dam in which the returns from a borehole collect and are retained. CF: [sludge pit](#); [sump](#). *Long*

spoils

- a. See: [cuttings](#)
- b. The debris or waste material from a mine. *Long*

sponge

- a. A form of metal characterized by a porous condition, which is the result of the decomposition or reduction of a compound without fusion. The term is applied to forms

of iron, the platinum-group metals, titanium, and zirconium. Metal has appearance of a sponge due to high porosity. *ASM, 1* b. Hafnium produced by the Kroll process. *Thomas*

sponge iron powder

Ground and sized sponge iron, which may have been purified or annealed or both. *ASTM*

sponge metal

A form of metal characterized by a porous condition, which is the result of the decomposition or reduction of a compound without fusion. Metal has the appearance of a sponge due to high porosity. *ASM, 1*

spongy

Said of a vesicular rock structure with thin partitions between the vesicles, thus resembling a sponge.

spongy iron

See: [reduced iron](#)

spontaneous

Used to describe the driving potential that causes electric currents to circulate in boreholes. These currents are not in any way deliberately induced by the well-logging equipment. Also called self-potential; SP curve. See also: [spontaneous potential curve](#)

spontaneous combustion

a. The heating and slow combustion of coal and coaly material initiated by the absorption of oxygen. The two main factors involved are (1) a coal of a suitable chemical and physical nature; and (2) sufficient broken coal and air leaking through it to supply the oxygen needed. The heat generated is retained with consequent rise in temperature. See also: [gob fire](#); hydrogen sulfide; open fire; weathering of coal. *Nelson*
b. The outbreak of fire in combustible material that occurs without the direct application of a flame or a spark. It is usually caused by slow oxidation processes (such as atmospheric oxidation or bacterial fermentation) under conditions that do not permit the dissipation of heat. c. Ignition that can occur when certain materials such as tung oil are stored in bulk, resulting from the generation of heat, which cannot be readily dissipated; often heat is generated by microbial action. Also known as spontaneous ignition.

McGraw-Hill, 1

spontaneous polarization

a. Electrochemical reactions of certain orebodies causing spontaneous electrical potentials. *Schieferdecker* b. See: [self-potential method](#); spontaneous potential method.

spontaneous potential curve

The electric log curve that records changes in natural potential along an uncased borehole. Small voltages are developed between mud filtrate and formation water of an invaded bed, and also across the shale-to-mud interface. These electrochemical components are augmented by an electrokinetic potential (streaming potential) developed when mud filtrate moves toward a formation region of lower fluid pressure through the mud cake. Where formation waters are less resistive (more saline) than drilling-mud filtrate, the spontaneous-potential curve deflects to the left from the shale baseline. First used about 1932, the curve was added to the resistivity log to make up the basic electric log of well-logging practice. Syn: [SP curve](#); [self-potential curve](#). *AGI*

spontaneous-potential method

See: [self-potential method](#)

spontaneous potential method

An electrical method in which a potential field caused by spontaneous electrochemical phenomena is measured. Syn: [self-potential method](#); spontaneous polarization. *AGI*

spool

a. Cast iron distance piece placed between timbers. *Hammond* b. To wind rope or cable on a hoist drum. *Long* c. The drum of a hoist. *Long* d. The movable part of a slide-type hydraulic valve. *Nichols, I* e. To wind in a winch cable. *Nichols, I*

spool-type roller conveyor

A type of roller conveyor in which the rolls are of conical or tapered shape with a diameter at the ends of roll larger than at the center.

spoon

A tool for cleaning dust or sludge from quarry blasting holes. Syn: [scraper](#)

spooner

In bituminous coal mining, a laborer who scoops drillings out of boreholes in which explosives are to be charged for blasting down coal, using a slender iron rod with a cup-shaped projection bent at right angles to the handle. *DOT*

spooning

Many mineral raw materials, such as petroleum, cementation water (water containing dissolved copper or iron sulfates or other metal compounds), or brine are extracted by pumping through boreholes. In spooning, a long spoon (a hollow cylinder with a bottom equipped with a clap valve, or ball valve, and open above) is attached to a cable that is let down into the boreholes where the cylinder fills with the liquid; this is emptied out after the cylinder is raised. *Stoces*

spoon proof

Test-ladle specimen taken during various stages of melting and fining. *ASTM*

spoon sampler

A rotating soil sampler, fitted with an auger-type cutting shoe. *Long*

spore

Part of the reproduction organs of many coal measures' plants. There are two kinds, namely, megaspores (female) and microspores (male). They are found in most coal seams, particularly the dull layers. Megaspores vary from 1 to 5 mm in size, and microspores (or pollen grains) from about 0.01 to 0.1 mm. *Nelson*

spore coal

a. Coal in which the attritus contains a large amount of spore matter along with transparent attritus. See also: [cannel coal](#) b. Coal formed out of the spores of lycopods.

sporinite

A maceral of the exinite group consisting of spore exines generally much flattened parallel to stratification. CF: [cutinite](#) See also: [resinite](#)

sporinite coal

This type of coal consists of more than 50% of spores (microspores and megaspores). Other structured components uniformly distributed through the coal are cuticles, resin bodies, and gelified and fusinized tissues. Hand specimens of low rank sporinite coal are brownish, with matt or granular surfaces. The coal may have high or low ash and occurs in seams of different geological, age but is particularly common as bands of limited thickness in seams of the Lower Carboniferous. Sporinite coal naturally admixed with medium rank gelitocollinite coals is used for coking. *IHCP*

sporogelite

A colloidal form of aluminum hydroxide, $\text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}$, occurring as one of the constituents of bauxite. Also called cliachite; alumogel. Syn: [diasporogelite](#)

spot

a. To mark the site at which a borehole is to be drilled, a piece of equipment placed, or a structure built. *Long* b. To set a drill or piece of machinery at a preselected site. *Long* c. An inclusion in a diamond. *Long* d. To direct to the exact loading or dumping place. *Nichols, 1*

spot-bolting

The use of one or just a few roof bolts at spot locations. *USBM, 4*

spot cooler

Low capacity, semiportable refrigeration unit of 150,000 to 500,000 Btu/h (44 to 146.5 kW) cooling capacity that is used in cooling sites of limited extent, such as an underground enginehouse or the face of a development end. The refrigerant used is nontoxic, and an electric or compressed-air drive is applied to a reciprocating compressor. *Roberts, 1*

spot level

The reduced level of any survey point. *Hammond*

spot log

A log or marker placed to show a truck driver the spot to stop to be loaded. *Nichols, 1*

spotted schist

See: [spotted slate](#)

spotted slate

A slaty or schistose argillaceous rock whose spotted appearance is the result of incipient growth of porphyroblasts in response to contact metamorphism of low to medium intensity. CF: [desmosite](#); [spilosite](#); adinole. See also: [fleckschiefer](#); [fruchtschiefer](#); [garbenschiefer](#); maculose. Syn: [spotted schist](#); [knotted schist](#); [knotted slate](#). *AGI*

spotter

a. In truck usage, the person who directs the driver into loading or dumping position. *Nichols, 1* b. In a pile driver, the horizontal connection between the machinery deck and the lead (pile guide). *Nichols, 1* c. See: [car pincher](#)

spot tests

Simple and speedy qualitative tests used to identify minerals species when prospecting, valuing a deposit, or testing mill products. *Pryor, 3*

spotting hoist

A small haulage engine used for bringing mine cars into the correct position under a loading chute, feeder or other point. See also: [pickrose hoist](#)

spotty ore

Ore in which the valuable material is concentrated irregularly as small particles; e.g., coarse gold in low-grade rocks. *Nelson*

spout delivery pump

A pump, similar to a diaphragm pump, that is not capable of delivering water above its own height. See also: [force pump](#)

spoutman

Person who directs the pouring of slag from a ladle through a spout into a reverberatory furnace used for smelting. *DOT*

sprag

a. A short wooden prop set in a slanting position for supporting the coal during the operation of holding. b. To chock or stop, as a vehicle or wheel, by a sprag; prop. See also: [spur](#) c. The horizontal member of a square act of timbers running parallel to the axis of a heading. *Stauffer* d. See: [rod spear](#); *stell*.

spragger

In anthracite and bituminous coal mining, a laborer who rides trains of cars and controls their free movement down gently sloping inclines by throwing switches and by poking sprags (short, stout, metal or wooden rods) between the wheel spokes to stop them. *DOT*

spragging

The act of checking a mine car with a sprag. *Korson*

sprag road

A mine road having such a sharp grade that sprags are needed to control the descent of a car; hence, two-, three-, or four-sprag road. See also: [sprag](#)

spray

In a hydrocyclone, the discharge from the apex in spray form, showing that the cyclone is not overloaded. *Pryor, 3*

spraying machine

A machine that applies a spray under pressure on mine timber supports to preserve and fireproof them. It may also be used for limewashing and water spraying of dust. The machine is mounted on wheels and operated by compressed air. *Nelson*

spraying screen

A screen used for the removal, by spraying, of fine solids present among or adhering to larger particles. *BS, 5*

sprays

Appliances to damp deposits of dust in tunnels and workings before and after shotfiring and loading operations. Water sprays are also used along dusty roadways. Various types of mist projectors and atomizers are used and effect considerable improvement, but the dust trapped consists chiefly of the coarser particles. In many dusty mines, a water pipe system extends throughout the workings and sprays are employed at all loading and other dusty points. Sprays are also used to suppress dust at coal and ore processing plants. See also: [whale-type jib](#)

spray water

See: [rinsing water](#)

spread

a. The area covered at a given thickness by a given quantity of such materials as chippings or road binder. *Hammond* b. The surface in proportion to the depth of a stone. *Hess* c. The surface or width at the girdle in proportion to the depth of a cut stone, such as a diamond. d. The layout of geophone groups from which data from a single shot are recorded simultaneously. Syn: [seismometer spread](#); [seismic spread](#).

spreader

a. A horizontal timber below the cap of a set, to stiffen the legs and to support the brattice when there are two air courses in the same gangway. b. A piece of timber stretched across a shaft as a temporary support of the walls. c. A tool used in sharpening machine drill bits. *Fay* d. A strut in a tunnel or heading timber sets. *Nelson* e. A machine which spreads dumped material with its blades. *Nelson*

spreader chains

Chains joining the end of the tail chain to ends of the spreader. *Zern*

spreader operator

See: [tripper man](#)

spread recorder

An instrument used in bridge testing to measure any outward spread of an abutment under load. See also: [rotation recorder](#)

spring

a. To enlarge the bottom of a drill hole by small charges of a high explosive in order to make room for the full charge; to chamber a drill hole. See also: [camouflet](#) b. To chamber. See also: [chamber](#) c. A general name for any natural discharge of hot or cold pure or mineralized water.

spring auxillary cylinder

A heavy tension spring, enclosed in a cylinder, which is connected to the panline of certain types of shaker conveyors to keep the conveyor in tension. It is attached to the conveyor by a driving chain and to a prop by a fixing chain. Keeping the conveyor in tension, it is claimed, will save the conveyor connections and increase the output. *Jones, I*

spring constant

Force that produces a unit elongation of the spring used in geophysical instruments. *AGI*

spring core lifter

See: [core lifter](#)

spring dart

a. A tool used to retrieve lost boring gear. *Pryor, 3* b. A device to withdraw the steel casing from a borehole when finished. The casing is cut into convenient lengths and then the spring dart is lowered to bring up each length separately. The dart springs open immediately when it meets a cut or recess in the casing, which length it then grips and lifts to the surface. *Nelson*

springing

a. A quarry blasting method in which a succession of charges is fired in a borehole to open up a chamber. *BS, 12* b. Enlarging the bottom of a drill hole by exploding a small charge in it. *Nichols, 1* c. In certain types of rock, large quantities of stone can be blasted down by the method known as springing the shothole. The technique requires that the rock contains well-defined bedding or jointing planes, such as are found in most sedimentary and some igneous rocks, particularly granite. The principle of springing is to drill a borehole with a heavy burden and then explode a succession of gradually increasing charges of black powder so that the bedding planes or joints are opened up to permit the placing of a large final charge. Syn: [bullying](#); [overspringing](#). *McAdam, 2*

springing a hole

See: [springing](#)

spring lifter

See: [core lifter](#)

spring line

The meeting of the roof arch and the sides of a tunnel. *Nichols, 1*

spring-loaded

Held in contact or engagement by springs. *Nichols, 1*

spring-roll crusher

A crushing machine similar to the double-roll crusher with the difference that springs are fixed to the bearings of one roll. *Nelson*

spring rolls

Crushing rolls used in ore breaking. Two parallel cylinders, mounted horizontally, are held apart by shims, and pressed together by powerful springs. Crushable rocks falling between them are drawn down as the cylinders revolve, but unbreakable material causes the springs to yield and let it pass without damage. *Pryor, 3*

spring washer

A washer consisting of a steel ring cut through and bent into helical form, which prevents a nut from unscrewing. *Hammond*

sprinkling

An act of spraying water into the atmosphere and on coal surfaces to allay coal dust. *BCI*

sprocket

A gear that meshes with a chain or crawler track. *Nichols, 1*

sprocket gear

A gear that meshes with a roller or silent chain. *Nichols, 1*

sprue hole

A pouring hole in a mold; a gate. *Standard, 2*

spud

a. To break ground with a drilling rig at the start of well-drilling operations. Syn: [spud-in](#)
b. To bore, as the first 50 ft (15 m) of an oil well, by the use of a bull wheel. *Standard, 2*
c. To commence drilling operations by making a hole. *Wheeler, R.R.* d. To begin the drilling of a borehole with a spud or diamond-point bit. *Long* e. An offset type of fishing tool used to clear a space around tools stuck in a borehole. *Long* f. A cabletool drill bit. *Long* g. An anchorage during dredging provided by a steel post underneath a dredger that can be lowered by a toothed rack or by ropes until it is secured in the seabed, riverbed, or dredge pond. *Hammond*

spud bit

a. A mud or diamond-point bit used to drill through overburden or soil down to bedrock. *Long* b. A broad, dull, chisel-face drilling tool for working in earth down to rock with a churn or cabletool drill. *Long*

spudded-in

A term applied to a borehole that has been started and the hole has reached bedrock and/or the standpipe has been set. *Long*

spudder

a. A churn drill, churn-drill operator, or the special bit used to begin a borehole by rotary, diamond, or churn drills. *Long* b. A colloquialism for a small drilling-rig. *Williams*

spudder drill

See: [churn drill](#)

spudding

a. The operation, in rope drilling, of boring through the subsoil at the start of a hole. *BS, 9* b. In diamond and/or rotary drilling, a general term applied to drilling through overburden with a fishtail bit, drag bit, or diamond-point bit. *Long* c. Sinking a conductor, standpipe, or casing with a churn- or cable-type drill rig. *Long*

spudding bit

a. A broad dull drilling tool for working in earth down to the rock. *Standard, 2* b. A heavy chisel bit used in percussive drilling to drill through subsoil. *BS, 9* c. See: [spud bit](#) d. The bit used to start the hole. When the hole is deep enough, regular drilling tools are substituted. *Williams*

spudding boreholes

The working of a cable drill up and down on a short length of rope, when passing through the superficial deposits down to bedrock. This section of hole is cased. *Nelson*

spudding drill

A drill that makes a hole by lifting and dropping a chisel bit. Syn: [churn drill](#)

spudding driller

In petroleum production industry, one who uses a lightweight, portable drilling rig (spudder) for the drilling of shallow wells, or a regular cable drilling rig to drill the first few feet of a well. Also called spudder or spud driller. Syn: [spud driller](#)

spudding drum

In a churn drill, the winch that controls the drilling line. *Nichols, 1*

spudding tool

Tool used to begin a borehole in earthy materials with a diamond or rotary drill; also, a drilling tool used by a cable tool or churn drill. *Long*

spud drill

See: [churn drill](#)

spud driller

See: [spudding driller](#)

spud-in

See: [spud](#)

spuds

On a dredge, steel tubes pointed at the bottom and provided with lifting tackle at the top that are used to hold and to move the dredge. *Nichols, 2*

spud setter

A mine surveyor. See also: [spud](#)

spud well

On a dredge, a pair of guide collars for a spud. *Nichols, 1*

spur

a. A brace or prop. See also: [sprag](#) b. A small vein branching from a main one. *AGI* c. A rock ridge projecting from a sidewall after inadequate blasting. *Nichols, 1* d. A relatively short and small vein of quartz that cuts across the bedding, in contrast to a saddle reef that more or less follows the bedding. *Nelson*

spur-end facet

See: [triangular facet](#)

spurrite

A monoclinic mineral, $\text{Ca}_5(\text{SiO}_4)_2(\text{CO}_3)$; dimorphous with paraspurrite; forms light gray granular masses resembling limestone; at Velardena, Durango, Mexico; Scawt Hill, Ireland; Luna County, NM; and Crestmore, CA.

spurt

Forest of Dean. A disintegrated stone.

spur track

In railroading, a short sidetrack connecting with the main track at one end only. *Standard, 2*

spur valley

A short branch valley. *Nichols, 1*

square

A term used in the slate industry with reference to roofing slate. A square is a sufficient number of any size to lay 100 ft² (9.29 m²) of roof, allowing the standard 3-in (7.62-cm) lap. The estimated weight of a square of 1/4-in (6.4-mm) slate is 1,000 lb (454 kg).

square drill collar

A long stabilizer of rectangular shape that when used properly gives a super-packed-hole effect. Square drill collars are made primarily from 30-ft (9.14-m) steel bar stock with a diagonal measurement greater than the hole diameter in which the collar will eventually be used. This collar has proved successful in controlling rapid directional and deviational changes in wells drilled in a disturbed-belt-type area. *API, 2*

square-mile-foot

A unit of measure representing the volume of water 1 ft (0.3 m) deep over an area of 1 mile² (2.6 km²). See also: [acre-foot](#) *Hammond*

square set

A set of timbers used to provide support in a stope or an underground mine. Each timber set consists of a vertical post and two horizontal members known as a cap and girt. The timber ends are sawed to allow adjoining timbers to interlock. They are framed at mutual right angles, and when joined with other sets form a continuous timber framework that conforms to the irregular shape of the stope. The posts are 6 to 7 ft (1.83 to 2.13 m) high, while the caps and girts are 4 to 6 ft (1.22 to 1.83 m) long. Caps and girts are placed on top of the posts, a line of caps being at right angles to a line of girts. Square sets vary in dimensions at different mines, but in general should give a clear opening of at least 5 ft (1.52 m) each way between posts to afford sufficient working space in the stope, and a clear height of 6-1/2 ft (1.98 m) is about the minimum height desirable. This system of timber support can be adapted to large and irregular orebodies resulting in an elaborate network extending the full height and width of a stope.

square-set and fill

See: [square-set stoping](#)

square-set block caving

A method of block caving in which the caved ore is extracted through drifts supported by square sets. A retreating system is adopted. *Nelson*

square-set slicing

See: [top slicing and cover caving](#)

square-set stoping

A method of stoping in which the walls and back of the excavation are supported by a system of interlocking framed timbers (square set). A square set of timber consists of a vertical post and two horizontal members set at mutually right angles. The mining process is slow and only enough ore is excavated to provide room for installation of each successive set of timber. The stopes are usually mined out in floors or horizontal panels, and the sets of each successive floor are framed into the top of the preceding floor. Syn: [alternate pillar and stope](#); overhand vertical slice; underhand vertical slice. CF: [back-filling system](#)

square-set system

A method of mine timbering in which heavy timbers are framed together in rectangular sets, 6 to 7 ft (1.83 to 2.13 m) high, and 4 to 6 ft (1.22 to 1.83 m) square, so as to fill in as the orebody is removed by overhand stoping. *Webster 3rd*

square-set underhand

See: [square-set stoping](#)

square thread

a. A screw thread the cross section of which is square. *Long* b. A robust type of screw thread that can transmit thrust in both directions. *Hammond*

square work

See: [sublevel stoping](#)

square work and caving

See: [sublevel stoping](#)

squat lads!

Fall flat down on the floor. In the early days of coal mining, igniting the gas was a very common thing; so, whenever an explosion took place, the colliers shouted to one another, "Squat, lads!" *Fay*

squealer

A shot that breaks the coal only enough to allow the gases of detonation to escape with a whistling or squealing sound; also called a whistler. *Zern*

squeal-out

Arkansas. See: [seam-out](#); squealer.

squealy coal

Arkansas. Seamy coal from which the powder gases escape with a squealing sound. *Fay*

squeeze

a. A crushing of coal or other materials with the roof moving nearer to the floor, due to the weight of the overlying strata. *Lewis* b. The settling, without breaking, of a mine roof over a considerable area of workings. Also called creep; crush; pinch; nip. c. The effect of the closure of stope walls on supports placed between them. *Spalding* d. A passageway in a cave that is very narrow and can be passed by a person only with great difficulty. *AGI* e. Applied to sections in coal seams where they have become constricted by the squeezing in of the overlying or underlying rock as a result of pressure during folding or other movements. *AGI* f. A pinch of a vein in passing through hard bands of rock. *Gordon* g. To inject a grout into a borehole under high pressure. *Long* h. The plastic movement of a soft rock in the walls of a borehole or mine working that reduces the diameter of the opening. *Long* i. Pumping cement back of casing under high pressure to block off or re-cement channeled areas. *Wheeler, R.R.* j. The rapid or gradual closing of a mine working by the displacement of weak floor strata from beneath supporting pillars into adjacent mine rooms. See also: [want](#)

squeezer

A mine tub controller that acts by squeezing the tub or the wheels. *Mason*

squeeze riveter

A single-stroke, compressed-air cylinder for closing rivets through the medium of a toggle mechanism. *Hammond*

squeezing

The slow increase in weight on pillars or solid coal eventually resulting in such things as crushing of the coal, heaving of the bottom, and the driving of pillars into soft floor or top. The cause normally is leaving pillars or other supports which, after considerable area is opened up, prove to be inadequate, permitting the top to settle gradually with transfer of the weight to active places and solid coal. *Coal Age, 3*

squib

a. See: [electric squib](#) b. A thin tube filled with black powder, forming a slow-burning fuse to explode a stemmed charge of black powder. *BS, 12* c. A small charge of powder exploded in the bottom of a drill hole, to spring the rock, after which a heavy shot is fired. A springing shot. d. In well boring, a vessel, containing the explosive and fitted with a time fuse, that is lowered into a well to detonate the nitroglycerin charge. e. A firing device that will burn with a flash which will ignite black powder. *Nichols, 1*

squib shot

A blast with a small quantity of high explosives fired at some point in a borehole for the purpose of dislodging some foreign material that has fallen into it. *Fay*

squinted vein

Derb. A mineral vein cut by a dike and thereby thrown out of alinement on the two sides of the dike. *Arkell*

squirrel cage fan

A centrifugal blower with forward-curved blades. *Strock, 2*

squirrel-cage motor

An alternating current electric motor with many applications. The rotor is made of strong parallel copper or aluminum bars on the perimeter, joined to end rings of the same metal. *Hammond*

squotting

A stage in the heating of clay when so much of the material has fused that the mass begins to lose its shape and becomes viscous. See also: [fusion of clay](#); [vitrifying](#). *Nelson*

stab

a. To guide a pipe, casing, or drill rod so that the threads will engage properly. *Long* b. To recover a drill tool lost in a borehole by using a spear-shaped or pointed fishing tool. *Long* c. In addition to a drill string, the action of lining up and catching the threads of the loose piece. *Nichols, 1*

stability

a. The resistance of a structure, slope, or embankment to failure by sliding or collapsing under normal conditions for which it was designed; e.g., bank stability and slope stability. See also: [bank slope stability](#) b. In thermodynamics, an equilibrium state to which a system will tend to move from any other state under the same external conditions. *AGI*

stability series

A grouping of minerals arranged according to their persistence in nature; i.e., to their resistance to alteration or destruction by weathering, abrasion during transportation, and postdepositional solution; e.g., olivine (least stable), augite, hornblende, biotite (most stable). The most stable minerals are those that tend to be at equilibrium at the Earth's surface. Syn: [order of persistence](#)

stabilized coupling

A rod coupling built up to reaming-shell size by welding on an abrasion-resistant metal, applied in ridges parallel to the long axis of the drill rod. *Long*

stabilized tray conveyor

See: [over-and-under conveyor](#)

stabilizer

a. A hardened, splined bushing, sometimes freely rotating, slightly larger than the outer diameter of a core barrel. Also called ferrule; fluted coupling. *Long* b. A misnomer for guide rod. *Long* c. Any powdered or liquid additive used as an agent in soil stabilization. See also: [processing](#)

stable

a. Not readily decomposed or deformed. CF: [unstable](#) b. A short drivage, room, or space excavated at the end of a longwall face to accommodate a coal cutter or cutter loader. The stable provides room for turning the machine where this is necessary, and also exposes a buttock for the machine to start its cut across the face. *Nelson*

stable gravimeter

An instrument that uses a high order of optical and/or mechanical magnification so that an extremely small change in the position of a weight or associated property can be accurately measured. *AGI*

stable hole conveyor

A short belt or other conveyor for use in stables in advance of the longwall face. The conveyor is usually about 18 in (46 cm) wide and driven at the tail end by a combined electric motor and drive pulley. The unit can be transported by sliding on steel skids, and is useful where coal or stone has to be moved short distances in confined spaces. See also: [shortwall](#)

stable isotope

A nuclide that does not undergo radioactive decay. *Lyman*

stable lead

Any of the nonradioactive isotopes of lead. *Handbook of Chemistry and Physics, 2*

stable relict

A relict mineral that was not only stable under the conditions prevailing while it was formed but also under newly imposed conditions of metamorphism. CF: [unstable relict](#)

stack

a. To stand and rack drill rods in a drill tripod or derrick. *Long* b. Chock; a chock built of old timber. *Mason* c. A shaft furnace. d. Any structure or part thereof that contains a flue or flues for the discharge of gases. See also: [inwall](#)

stack effect

The impulse of a heated gas to rise in a vertical passage, as in a chimney, a small enclosure, or building. Syn: [chimney effect](#) *Strock, 2*

stacker

a. A conveyor, mounted on a long steel boom, for carrying tailings beyond the stern of a gold or tin dredge to avoid silting it up. *Nelson* b. A machine for blending ore before processing. c. A conveyor adapted to piling or stacking bulk materials, packages, or objects. d. With a blending system, the stacker operates over the stocking conveyor in a manner similar to a wing belt tripper to build layered piles or beds of material parallel to the stocking conveyor. See also: [boom conveyor](#); portable conveyor; wing belt tripper; apron conveyor; belt conveyor; flight conveyor; portable conveyor. e. One who controls

conveyor belt moving molds containing molten lead through water spray to stamping and discharge tables. *DOT* f. One who stacks coal, etc. *Fay* g. Leic. A miner who looked after the unloading of the coal on the bank, on behalf of the miners, in the earlier days of mining. *Fay* h. A machine for blending ore that beds the ore before reclaiming for processing.

stack height

The height of a convector enclosure measured from the bottom of the enclosure to the top of the outlet. *Strock*, 2

stacking fault

A type of "plane defect" in a crystal structure, caused by one or more closest-packed layers added to or removed from a normal cubic closest-, hexagonal closest-, or other regular closest-packed sequence.

stadia

a. A surveying technique or method using a stadia rod in which distances from an instrument to the rod are measured by observing through a telescope the intercept on the rod subtending a small known angle at the point of observation, the distance to the rod being proportional to the rod intercept. The angle is usually defined by two fixed lines in the reticle of the telescope. *AGI* b. See: [stadia rod](#) c. An instrument used in a stadia survey; esp. an instrument with stadia hairs.--Pl: stadias. The term is also used as an adj. in such expressions as stadia surveying, stadia distance, and stadia station. *AGI*

stadia hairs

Horizontal cross hairs equidistant from the central horizontal cross hair; esp. two horizontal parallel lines or marks in the reticle of a transit telescope, arranged symmetrically above and below the line of sight, and used in the stadia method of surveying. Syn: [stadia wires](#)

stadia rod

A graduated rod used with an instrument having stadia hairs to measure the distance from the observation point to the place where the rod is positioned. Syn: [stadia](#)

stadia surveying

The process of measuring distances and elevations by observing through a telescope the distance intercepted on a rod between two horizontal cross-hairs. These hairs are carried on the same ring as the regular horizontal crosshair, and are equidistant from it. *Zern*

stadia tables

Mathematical tables from which may be found, without computation, the horizontal and vertical components of a reading made with a transit and stadia rod.

stadia wires

See: [stadia hairs](#)

stadia work

Tacheometric survey, in which points sighted from a survey station are oriented as with a theodolite, and their distance is read by means of a vertically held leveling staff on stadia wires. *Pryor, 3*

staff

a. A surveyor's leveling rod. *Standard, 2* b. An iron puddler's rabble or rabbler. *Fay*

staff gage

Graduated scale marked on a rod or a metal plate, or on the masonry of a bridge pier or similar structure, from which the depth of water in a canal, dock, or river can be read. *Hammond*

staff hole

A small hole in a puddling furnace through which the puddler heats the staff. See also: [staff](#)

staff man

The person who carries a leveling staff for a surveyor. See also: [target rod](#); [telemeter rod](#). *Hammond*

Staffordian Series

The so-called transition group of the British Coal Measures, between the Middle and Upper Coal Measures in the Carboniferous System. They include the Newcastle-under-Lyme Group and the Etruria Marl, and the Blackband Group in north Staffordshire, England. *CTD*

stafflux

A material made by sintering together lumps of limestone and certain kinds of iron oxide, such as iron ore or mill scale, at a temperature of 1,450 degrees C in a rotary furnace. Though fusion does not occur, the iron oxide rapidly penetrates the limestone completely and forms dicalcium ferrite. *Osborne*

stage

a. A landing, such as in a shaft mine. b. A platform on which mine cars stand. c. A step in a process. d. A time-stratigraphic unit next in rank below a series and corresponding to an age; it generally consists of several biostratigraphic zones. It is the most important unit for long-range correlation.

stage addition

In flotation, this refers to deliberate use of insufficient reagent in the early part of the treatment to increase selectivity of conditioning, followed by further addition at a later point in the process. *Pryor, 4*

stage compression

See: [compound compression](#)

stage crushing

A method of crushing in which there is a series of crushers, each one crushing finer than the one preceding.

stage grinding

Comminution in successive stages. *Pryor, 4*

stage loader

See: [feeder conveyor](#)

stage plumbing

A precise method of orienting underground workings in which plumb lines are transferred down a deep shaft in stages of 400 to 600 ft (120 to 185 m). While shaft sinking is in progress, the lines can also be employed to orient the shaft itself and to keep it plumb. *BS, 7*

stage pumping

Draining a mine by means of two or more pumps placed at different levels, each of which raises the water to the next pump above or to the surface.

stage treatment

In mineral processing, development of the desired condition of the particles by defined states, such as comminution to successively fine sizes (possibly coupled with staged concentration or gangue elimination) between such stages of comminution. *Pryor, 3*

stage winding

Winding, usually in compound shafts, where the wind is divided into two or more stages, and underground winding engines are installed to deal with the lower stages. *Sinclair, 5*

stage working

A system of working minerals by removing the strata above the beds, after which the various beds are removed in steps or stages.

staggered blastholes

When shot firing in thick coal seams, two rows of holes may be necessary. These are usually staggered to a triangular pattern to distribute the burden. A similar pattern is often adopted in quarry wellhole blasting. *Nelson*

staggered holes

To arrange boreholes in a row, in such a manner that those in one row are placed opposite the spaces between the boreholes in the next row. *Long*

stag hole

Usually a short hole drilled, charged, and fired to shatter the rock near the collars of the cut holes. *Nelson*

staging

a. A temporary flooring or scaffold, or platform. *Zern* b. One or more working platforms, fixed at defined levels in deep trenches or similar excavations, on to which excavated earth is thrown by shovel. *Hammond*

stained stone

A gemstone with color altered by a coloring agent, such as a dye, or by impregnation with a substance, such as sugar, followed by chemical or heat treatment, which usually produces a permanent color; e.g., green chalcedony. CF: [burnt stone](#)

stainierite

See: [heterogenite](#)

stainless steel

Iron-base alloy containing enough chromium to confer a superior corrosion resistance. *ASM, 1; Newton, 1; CTD; Camp*

stains

Inclusions and intergrowths in mica arising from foreign materials, resulting in a partial or total loss of transparency. *Skow*

stake

a. Grubstake. b. A pointed piece of wood driven into the ground to mark a boundary, survey station, or elevation. c. See: [sprag](#) d. An iron peg used as power electrode to transfer current into the ground in electrical prospecting. This term is also used to include all power and search electrodes, such as iron pegs, copper coils, and copper screens; also, a station marker used by field parties. *AGI* e. A permanent interest, as in an enterprise or a mine.

staking out

The physical act of locating a lode or placer mining claim.

stalactite

A conical or cylindrical mineral deposit that hangs from the ceiling of a cave. See also: [stalagmite](#)

stalagmite

A conical or cylindrical mineral deposit that is developed upward from the floor of a cave by the action of dripping water. See also: [stalactite](#) Syn: [dropping stones](#)

stalagmometer

An apparatus for determining surface tension. The mass of a drop of a liquid is measured by weighing a known number of drops or by counting the number of drops obtained from a given volume of the liquid. *Lowenheim*

stalch

Eng. A mass of ore left in a mine.

stall

a. A narrow coal drivage in pillar-and-stall. See also: [narrow stall](#); stallman. *Nelson* b. A working place at the coal face; a term associated with narrow workings. *Mason*

stall-and-breast

See: [room-and-pillar](#)

stall-and-room working

A pillar method of working a relatively thick coal seam by a system of compartments; a modification of pillar-and-stall. *Nelson*

stalling angle

The blades of axial-flow fans are of aerofoil section, which when inclined at a small angle (known as the angle of attack) to the air stream produce a large lift or raising force for a small drag or retarding force. The lift force is the useful one which gives the thrust to the air in an axial-flow fan. The lift increases with increase in the angle of attack until a point is reached when the lift begins to fall. This angle is the "critical" or "stalling angle." Syn: [critical angle](#)

stallman

A collier who works at the face of a narrow stall or a longwall stall. The collier is paid according to a pricelist of so much per ton of coal loaded out and for other work, such as timbering. A stallman usually has another miner alongside. *Nelson*

stall roasting

The roasting of ore in small enclosures of earth or masonry walls. The enclosures are called stalls and may be open or closed. *Fay*

stamler

See: [feeder breaker](#)

stamp

- a. To break up ore and gangue by machinery, for washing out heavier metallic particles.
- b. A heavy pestle raised by water or steam power for crushing ore. A stamp in which the blow of the pestle is caused by its mere weight is called a gravity stamp. *Webster 3rd*

stamp battery

See: [stamp mill](#)

stamp duty

The amount of ore (tons) that one stamp will crush in 24 h.

stamper box

A stamp-mill mortar box. *Fay*

stamp hammer

A power hammer that moves vertically. *Webster 3rd*

stamp head

A heavy and nearly cylindrical cast-iron head fixed on the lower end of the stamp rod, shank, or lifter to give weight in stamping the ore. The lower surface of the stamp head is generally protected by a cheese-shaped shoe of harder iron or steel that may be removed when worn-out. These shoes work upon dies of the same form laid in the bottom of the mortar or stamper box. See also: [stamp](#)

stamping

- a. Reducing to the desired fineness in a stamp mill. The grain is usually not so fine as that produced by grinding in pans. *Fay*
- b. A general term covering almost all press operations. It includes blanking, shearing, hot or cold forming, drawing, bending, and coining. *ASM, I*
- c. A process for application, by hand or by machine, of decoration to pottery ware; a rubber stamp with a sponge backing is used. Stamping is particularly suitable for the application of backstamps and for some forms of gold decoration. See also: [backstamp](#)

stamping maundrill

Leic. A heavy pick.

stamp mill

An apparatus, and the building containing it, in which rock is crushed by descending pestles (stamps), operated by water power or steam power. Amalgamation is usually combined with crushing when gold or silver is the metal sought, but copper, tin, and other ores are stamped to prepare them for dressing. The technique is obsolete. Syn: [stamp battery](#)

stamp shoe

The heavy, chilled-iron casting, attached to the lower end of a stamp piston, which does the actual crushing of rock in a stamp mill. It drops on a round steel block called a die. *Weed, 2*

stampsman

Person who attends or operates a stamp or stamp battery. *Fay*

stampwork

A term used in the Lake Superior region for rock containing disseminated native copper.

stanchion

a. A vertical prop or strut. *Zern* b. A support or post of iron or wood. *Crispin*

stand

a. Two or more lengths of drill rod or casing coupled together and handled as a unit length as they are taken from a borehole and set upright in a drill tripod or derrick. See also: [double](#); [forble](#); [treble](#). *Long* b. A drill floor. *Long* c. To allow a cement slurry to remain undisturbed in a borehole until it hardens or sets. *Long* d. To set a string of casing in a borehole. *Long*

standage

a. Reservoir or storage capacity, said of water and of mine cars. *Mason* b. See: [sump](#) c. The capacity of a sump or lodge. *BS, 10* d. See: [lodge](#)

standage room

A length of roadway provided near a shaft bottom to stock loaded mine cars and/or empty cars: (1) during peak hours when the coal reaches the pit bottom at a faster rate than the shaft can wind; and (2) during emergency periods, such as plant breakdown at the surface, thus permitting coal production to continue. In general, the standage room accommodates 45-min to 1-h winding capacity. See also: [bunker conveyor](#); [bunkering capacity](#). *Nelson*

standard air density

In mine ventilation, the standard density of air for mine ventilation work is considered to be 0.075 lb/ft³ (1.2014 kg/m³). This is based upon the weight of 1 ft³ (0.028 m³) of dry air at 70 degrees F (21.1 degrees C) at a sea-level pressure of 29.9 in (759 mm) of mercury.

standard bit

A bit the size and design of which are as specified in standards accepted by the drilling industry. *Long*

standard conditions

In refrigeration, an evaporation temperature of 5 degrees F (-15 degrees C), condensing temperature of 86 degrees F (30 degrees C), liquid temperature before the expansion valve of 77 degrees F (25 degrees C), and suction temperature 14 degrees F (-10 degrees C). *Strock, 2*

standard copper

Practically any brand of 96%, or higher, fineness.

standard core bit

See: [standard bit](#)

standard electrode reference

Electrode used as a standard in measurements of electrode potential, because its potential is constant and reproducible; used for pH measurements, polarographic analysis, etc.

standard ignition test

A method developed for testing coal dust to obtain the limits of explosibility. *Rice, 2*

standard impinger

For many years, the Greenburg-Smith impinger was the routine dust sampling instrument in this country. It is still relied upon as a standard, but because of its size and weight, is little used underground today. *Hartman, 1*

standard lay

See: [regular lay](#)

standard mineral

See: [normative mineral](#)

standard mix

Concrete mixed in the proportions of 1 part cement, 2 parts sand, and 4 parts coarse material. See also: [aggregate](#); [cement](#). *Nelson*

standard of ventilation

An adequate amount of ventilation to dilute and render harmless all noxious and flammable gases to such an extent that all roads and workings in a mine shall be kept in a fit state for working or passing therein. *Mason*

standard parallel

a. A parallel of latitude that is selected as a standard axis on which to base a grid system; specif. one of a set of parallels of latitude (other than the base line) of the U.S. Public Land Survey system, passing through a selected township corner on a principal meridian, and on which standard township, section, and quarter-section corners are established. Standard parallels are usually at intervals of 24 miles north or south of the base line, and they are used to limit the convergence of range lines that intersect them from the south so that nominally square sections and townships can be laid out. Syn: [correction line](#) b. A parallel of latitude that is used as a control line in the computation of a map projection; e.g., the parallel of a normal-aspect conical projection along which the principal scale is preserved. *AGI* c. A parallel of latitude on a map or chart along which the scale is as stated for that map or chart. *AGI*

standard penetration test

a. A soil-sampling procedure to determine the number of blows by a drive hammer, freely falling a distance of 30 in (0.76 m) per blow, needed to drive a standard sampling spoon 1 ft (0.3 m). The first 6 to 7 in (15.24 to 17.78 cm) of penetration is disregarded, but the blows required to drive the sample the ensuing foot are counted. *Long* b. See: [penetration test](#)

standard plow

The original coal plow; a heavy double-ended machine with fixed blades. Its length is 6-1/2 ft (1.98 m); its height ranges from 14 to 31 in (35.6 to 78.7 cm). The depth of cut can be varied from 2 to 6 in (5.1 to 15.2 cm). The rapid plow has evolved from this relatively slow-moving machine. *Nelson*

standard pressure

a. A term applied to valves and fittings suitable for a working steam pressure of 125 psi (862 kPa). *Strock, 1* b. See: [normal pressure](#)

standard rig

a. An archaic term for a cable-tool drilling rig. *AGI* b. A common misnomer for cable-tool rig, churn-drill rig. *Long*

standard section

A geologic section showing as completely as possible a sequence of all the strata in a certain area, in their correct order, thus affording a standard for correlation. It supplements (and sometimes supplants) the type section, esp. for time-stratigraphic units. *AGI*

Standard Temperature and Pressure

Atmospheric pressure of 760 mm of mercury, at 0 degrees C. *Pryor, 3*

standard tin

Tin of 99.75% or greater purity. *Bennett*

standard wire gage

Gage number defining the diameter of wire. Abbrev.: SWG. *Pryor, 3*

standby face

A spare conveyor face, of normal length, that could be worked should another face cease production due to faults, washouts, roof collapse, water, gas, or any other unforeseen impediment. Syn: [spare face](#) *Nelson*

standdown

Gr. Brit. The sending of miners home because they cannot be usefully employed due to any reason outside the control of the management. In some cases, coal mining awards confine this right to certain occurrences, e.g., breakdown of plant or machines. *Nelson*

standing

a. Used by drillers to denote that work has been stopped for a considerable time. *Long* b. Drill rods or casing stacked vertically in the drill tripod or derrick. *Long*

standing column

The column of drilling liquid left in the hole when the drill tools have been removed.
Long

standing fire

A fire in a mine continuing to smoulder for a long time, often many years. *Fay*

standing gas

A body of combustible gases known to exist in a mine, but not in circulation; sometimes fenced off. *Fay*

standing shot

The result of a small or undercharged shot wherein the coal is loosened so that it is easily mined by pick. The term is a misnomer, as it applies to the result and not the "shot" or "charge." *Fay*

standing time

Gr. Brit. The period when face workers are idle due to the lack of empty cars, etc. Payments are made to miners on piecework for time lost. See also: [lying money](#)

stand of drill rods

See: [stand](#)

standoff

a. A short length of core attached to and left standing upright in the bottom of the borehole when the core barrel is pulled. *Long* b. On taper-tool or drillpipe joints, the space between the pin- and box-thread shoulders before wrenching up. *Long*

standpipe

a. A relatively short length of pipe driven into the upper soillike portion of the overburden as the first step of collaring or spudding-in a borehole. Also called conductor; conductor pipe. *Long* b. A short piece of pipe wedged or cemented into a borehole after completion to act as a marker and keep collar free of cave. CF: [surface string](#)

standpiping

Driving pipe deep enough through overburden to keep soil, sand, etc., out of a borehole. See also: [standpipe](#)

stands

Connected joints of drill pipe racked in the derrick while changing the bit. *Wheeler, R.R.*

stank

a. To make watertight; to seal off; an airtight and watertight wall against old mine workings. See also: [seal](#); [sealed-off area](#). *Nelson* b. A small cofferdam constructed of timber and made watertight with clay. *Hammond* c. See: [stanking](#)

stanking

a. A watertight stopping or bulkhead. *BS, 10* b. The application of a waterproofing material to a stopping or bulkhead. *BS, 10*

Stanley compensating diaphragm

A specially designed theodolite used as a direct reading tachometer. See also: [Beaman stadia arc](#)

stanley header

See: [header](#)

stannary

a. A tin mine or tin works. *Webster 2nd* b. One of the regions in England containing tinworks and formerly placed under jurisdiction of special courts. Usually used in plural. *Webster 3rd*

stannary courts

Eng. Courts in Cornwall and Devonshire for the purpose of regulating the affairs of tin mines and tin miners.

stannatores

An early name applied to Cornish tin miners.

stanniferous

Relating to or containing tin; as, stanniferous ore.

stannine

See: [stannite](#)

stannite

a. A tetragonal mineral, $\text{Cu}_2\text{FeSnS}_4$; zinc may replace iron; tannite group; metallic; in granular masses in veins associated with cassiterite. Syn: [tin pyrites](#); [bell-metal ore](#). b. The mineral group briartite, cernyite, famatinite, hocartite, kuramite, luzonite, permingeatite, pirquitasite, sakuraiite, and stannite. c. Impure cassiterite. Syn: [tin pyrites](#); [stannine](#).

stannopalladinite

A hexagonal mineral $(\text{Pd,Cu})_3\text{Sn}_2$ (?) .

stannous chloride

See: [salt of tin](#)

stannum

See: [tin](#)

stantienite

A black variety of retinite having a very high oxygen content (23%). Syn: [black amber](#)

Stanton diagram

Historically, a plot of the airflow friction coefficient against the Reynolds number is referred to as a Stanton diagram.

staple

a. A shaft that is smaller and shorter than the principal one and joins different levels. *Webster 3rd* b. An internal shaft connecting two coal seams. Also called staple pit. CF: [winze](#)

staple shaft

a. An underground shaft, which does not penetrate to the surface. *Fraenkel* b. A relatively small vertical pit connecting a lower seam to an upper seam. It corresponds to a rise or winze in metal mining. A staple shaft is an important drivage in horizon mining and may be used for dropping coal or stowing dirt to a lower level. It is often equipped with a spiral chute or an auxiliary winder system with a single cage and counterweight. See also: [subincline](#)

star

In minerals, the presence of needlelike oriented inclusions aligned along crystallographic axes, generally in the plane normal to the c axis in the hexagonal and trigonal crystal systems. Syn: [asteriated](#)

star antimony

Refined metallic antimony characterized by crystalline patterns resembling stars or fern leaves on its surface. Also called star metal. *Webster 3rd*

starch

Used as depressant in flotation process. Alkaline starch (starch dissolved in dilute sodium hydroxide) is a flocculating agent used in purifying the water in coal-cleaning plants. Also known as amylum. *Pryor, 3*

star drill

A tool with a star-shaped point used for drilling in stone or masonry. *Crispin*

star facet

Small triangular facet situated between the bezel facets and the table on the crown of an American (Tolkowski theoretical) brilliant-cut diamond.

star feeder

A rotating feeder consisting of a horizontal shaft fitted with radial blades running within a close-fitting cylindrical chamber provided with an inlet and an outlet. Also called star gate; star valve (undesirable usage). *BS, 5*

star garnet

Variant of almandine. *Hey, 1*

starkeyite

A monoclinic mineral, $\text{MgSO}_4 \cdot 4\text{H}_2\text{O}$; rozenite group. Named for the Starkey Mine, Madison County, MO. Syn: [leonhardtite](#)

Starlite

Trade name given by Kunz to artificially-colored blue zircon from Thailand. *English*

star metal

See: [star antimony](#)

star quartz

A variety of quartz containing within the crystal whitish or colored starlike radiations along the diametral planes. The asterism is due to the inclusion of submicroscopic needles of another mineral arranged in parallel fashion. In star blue quartz in Virginia and Texas, the other mineral is rutile. See also: [asteriated quartz](#)

star reamer

A star-shaped tool for regulating the diameter of, or straightening, a borehole.

star ruby

A semiopaque to semitransparent asteriated variety of ruby normally having six chatoyant rays. CF: [corundum cat's eye](#)

star sapphire

A semiopaque to semitransparent asteriated variety of sapphire normally with six rays resulting from the presence of microscopic crystals (e.g., rutile needles) in various orientations with the gemstone. See also: [asteria](#)

star stone

a. An asteria; esp. a star sapphire. *AGI* b. Less correctly, any asteriated stone, including even petrified wood containing small starlike figures in its more transparent parts. *AGI*

starter

a. A slightly larger drill used for making the beginning of a hole, the remainder of the hole being made with a drill of smaller gage known as a follower. *Fay* b. Pennsylvania. The miner who ascends to the battery to start the coal to run. See also: [battery starter](#) c. Protective equipment to ensure that an electric motor does not receive too high a current when starting. *Hammond*

starter bar

A steel reinforcing bar embedded in the concrete and projecting through a construction joint to bind adjoining masses of concrete together. *Hammond*

starting barrel

A short core barrel used to begin coring operations when the distance between the drill chuck and the bottom of the hole, or to the rock surface in which a borehole is to be collared, is too short to permit use of a full 1.5-m-long or 3-m-long core barrel. *Long*

starting casing barrel

A short piece of casing to which a casing bit and shell are attached and used under the same conditions as a starting barrel. See also: [starting barrel](#)

starting sheet

A thin sheet of metal used as the cathode in electrolytic refining. *ASM, 1*

starting submergence

In an air lift, the distance below the static head at which the air picks up water. *Lewis*

starvation

a. In comminution, avoidance of crowding in the machine by restricting rate of feed. b. In conditioning for flotation, use of threshold quantity of collector agent to aid in selective adsorption by the desired species of mineral.

Stassfurt deposits

A series of saline minerals, found in the Triassic rocks at Stassfurt, Saxony, Germany, which include halite, anhydrite, kieserite, gypsum, and boracite.

stassfurtite

A massive variety of boracite found in Germany. It resembles a fine-grained white marble; sometimes has a subcolumnar structure. *Fay; CTD*

statement of performance

A statement describing the scope and duty of a plant in terms, e.g., of the tonnage of coal treated per hour, the processes used, the separations effected and sizes produced; sometimes also used to express the results of plant operation. *BS, 5*

state mine inspector

See: [inspector](#); mine inspector.

state point

The psychrometric properties of air at given conditions, e.g., dry bulb temperature, wet bulb temperature, and barometric pressure. *Hartman, 2*

stathmograph

An apparatus that records automatically, in the form of a graph, the loss of weight during the whole reduction of iron ores. *Osborne*

static air mover

See: [air mover](#)

statically determinate frame

A structural frame in which the bending moments and reactions can be determined by the laws of statics alone. *Hammond*

statically indeterminate frame

A redundant frame in which the bending moments and reactions cannot be calculated from statical equations alone. See also: [perfect frame](#) *Hammond*

static balance

A condition of rest created by inertia (dead weight) sufficient to oppose outside forces. *Nichols, 1*

static efficiency

Is calculated in the same way as fan efficiency, but using a reading of static pressure at some point instead of total pressure. Was formerly widely quoted, and is still used to some extent, in relation to mine fans. See also: [fan efficiency](#)

static E.P.

The electrode potential measured when no current is flowing between the electrode and the electrolyte. *Lowenheim*

static grizzly

A grizzly in the form of a stationary bar screen, often improvised from bars or rails set longitudinally, without cross bars. If used as a chute it has a slope of 35 degrees to 45 degrees. It may allow suitable pieces of coal or ore to pass over, and the unwanted small sizes drop through, or it rejects oversize pieces while allowing suitable material to drop through. See also: [power grizzly](#)

static head

a. The height of a standing column of water as measured from the bottom of a borehole upward. Sometimes expressed in units of weight as measured at the bottom of the borehole. *Long* b. In an air lift, the distance from the surface or top of the well casing to the normal surface of the water when not pumping. *Lewis* c. The sum of the suction and discharge heads. *Carson, I* d. See: [hydrostatic head](#); static level.

static level

The water level of a well that is not being affected by withdrawal of ground water. *AGI*

static load

a. The basal pressure exerted by the weight of a mass at rest, such as the load imposed on a drill bit by the weight of the drill-stem equipment or the pressure exerted on the rocks around an underground opening by the weight of the superimposed rocks. Syn: [dead load](#) b. A load that is at rest and exerts downward pressure only, such as a hydrostatic load. *Nichols, I*

static metamorphism

A variety of regional metamorphism brought about by the action of heat and solvents at high lithostatic pressures, not at pressures induced by orogenic deformation. See also: [load metamorphism](#) CF: [thermal metamorphism](#)

static moment

The static moment of a section about an axis, Y, is also termed the first moment of the area about the axis. It is the sum of the products obtained by multiplying each component of an area, A, by its distance, X, from Y. See also: [moment of inertia](#)

static penetration test

A penetration test in which the testing device is pushed into soil with a measurable force, as distinct from a dynamic penetration test in which the testing device is driven into the ground by blows from a standard hammer. See also: [penetrometer](#); [soil](#). *Hammond*

statics

That branch of mechanics dealing with the relations of forces that produce equilibrium among material bodies. *Webster 3rd*

static switch

A device giving contactless control of a circuit; e.g., a transistor, thyatron, saturable reactor, etc. *NCB*

static tube

A static tube has a shaped, solid nose, on the downstream side of which a number of small holes are positioned around the circumference. The holes are so placed that the pressure in the tube is that of the undisturbed airstream. Unlike the Pitot tube, the measured pressure is affected considerably both by the position of the stem of the tube in relation to the pressure holes, and by the distance between the holes and the nose tip. The static tube is considerably more sensitive to yaw than is the Pitot tube. See also: [Pitot tube](#); [Pitot-static tube](#). *Roberts, 1*

static water level

The level of water in a well or borehole when pumping is not in progress. *BS, 10*

station

a. See: [underground station](#); tank station. b. A reference point in surveying, marked at the surface by a metal plate set in concrete, or by a plug drilled into the roof of an underground working. *Pryor, 3* c. A length of 100 ft (30.5 m), measured along a given line, which may be straight, broken, or curved. *Seelye, 2* d. Any point on a straight, broken, or curved line whose position is indicated by its total distance from a starting point, or zero point. For example, station 4+47.2 identifies a point 447.2 ft (135.3 m) from the starting point, the distance being measured along a given line. e. A location on a conveyor system where bulk material is received or discharged. f. Any one of a series of stakes or points indicating distance from a point of beginning or reference. g. A setup point; i.e., a marked point on the ground, over which an instrument is to be placed.

stationary bar screen

A large-capacity screening or sorting appliance for coal or ore. It consists of a series of heavy metal bars arranged side by side and spaced at a definite distance apart. The bars are set at an angle so that material delivered at the upper end will just slide, and chutes are arranged to receive oversize at the lower end and undersize passing between the bars. The stationary bar screen is still used at many small mines. See also: [Bradford breaker](#); [resonance screen](#); screen. *Nelson*

stationary block

The relatively undeformed rocks beneath the plane of an overthrust fault. See also: [autochthon](#)

stationary dredge

a. A dredge that is not self-propelled, the dredged material from which is discharged into either a hopper barge or a pipeline. *Hammond* b. A fixed vessel with equipment for digging, washing, and concentrating alluvial deposits. See also: [dredge](#)

stationary engine

An engine located on a fixed foundation, as distinguished from a portable engine. *Crispin*

stationary equipment

Stationary equipment is installed in a given location and is not moved from that location in performing its function. This includes equipment such as substations, pumps, and storage-battery charging stations.

stationary grizzly

The simplest of all separating devices and the cheapest to install and maintain. It consists of a series of fixed bars or rails spaced the required distance apart in order that the "undersize" may drop through. The use of a stationary grizzly is limited to coarse screening of dry material (aperture 2 in or 5.1 cm and larger), although it is sometimes used with openings as small as 3/4 in (1.9 cm), the efficiency dropping off in proportion. It is not satisfactory for moist or sticky material. *Pit and Quarry*

stationary inner-tube core barrel

See: [rigid-type double-tube core barrel](#)

stationary jaw

The fixed jaw of a safety clamp or wrench. Syn: [stationary slip](#) CF: [anvil](#)

stationary mass

In some seismometers, a heavy weight, either suspended or supported, that, because of inertia, tends to remain quiescent during an earthquake. Syn: [steady mass](#)

stationary-piston drive sampler

A piston-type sampler in which the position of the piston relative to the sample remains constant during the sampling operation. *Long*

stationary slip

See: [stationary jaw](#)

station foreman

In metal mining, a laborer who supervises the haulage and handling of ore, timber, and mining supplies at a shaft station. *DOT*

stations

Permanently marked points on the centerline of a tunnel . These stations may be outside of the tunnel and used for projecting the centerline into the tunnel, or they may mark the centerline inside the tunnel. *Stauffer*

station yards haul

Equals the number of cubic yards multiplied by the number of 100-ft (30.5-m) stations through which it is moved. *Nichols, I*

statistical uniformity

A term describing that variation in quality of materials of manufactured goods that is stable and determinate, so that statistical analysis and prediction can be applied to it. See also: [representative sample](#); level of control. *Hammond*

statistics

The collection, tabulation, and study of numerical facts and data. In industry, statistics indicate trends that would be almost impossible to establish by other means. The statistical method is useful in: (1) estimating the real value of work done, goods, or machines in terms of useful service and maintenance costs; and (2) estimating and forecasting profits and markets. See also: [parameter](#)

stator

In a torque converter, a set of fixed vanes that change the direction of flow of fluid entering the pump or the next stage turbine. *Nichols, I*

statuary marble

A fine-grained saccharoidal marble used by sculptors. The best qualities are pure white and free from markings.

staurolite

A monoclinic mineral, $\text{Fe}_2 \text{Al}_9 \text{Si}_4 \text{O}_{22} (\text{OH})_2$; pseudo-orthorhombic; Mohs hardness, 7.5; a common accessory in medium-grade regional metamorphic rocks; may be of gem

quality; cruciform twins called fairy crosses. Syn: [staurotide](#); [cross-stone](#); [grenatite](#); fairy stone; lucky stone.

stauroscope

A type of polariscope used to determine the direction of light polarization in a crystal for accurate measurement of angles of extinction. See also: [polariscope](#)

staurotide

See: [staurolite](#)

staurotypous

In mineralogy, having crosslike markings. *Standard, 2*

stave

a. A ladder step. *Zern* b. A wedge-shaped section placed around the die of a stamp to take up the side wear.

stavrite

An obsolete term for a type of biotite amphibolite.

stay

A diagonal brace or tie bar to stiffen or prevent movement of a structural component. *Hammond*

stay-bolt tap

A type of combination reamer and tap used extensively in locomotive-boiler work. *Crispin*

stead

S. Wales. Very thin bands of ironstone in coal measures. *AGI*

Stead's reagent

An etching reagent, used in metallographic examination of steels, containing 100 mL methyl alcohol, 18 mL water, 2 mL concentrated hydrochloric acid, 1 g copper chloride, and 4 g magnesium chloride. *Osborne*

steady-flow process

A flow process in which none of the variables of flow changes with time. *Hartman, 2*

steady-head tank

In connection with use of moderate pressure hydraulic water (e.g., in classification of ore pulps), a reservoir set above the draw-off points of the system, which maintains a full supply of water at a set height and therefore constant pressure. *Pryor, 3*

steady mass

See: [stationary mass](#)

steady point

A pointed steel bar that can be locked in a clamp, and is used to brace a drill frame against the ground. *Nichols, 1*

steady-state creep

See: [secondary creep](#)

steady-state velocity

The constant maximum detonation velocity achieved by an explosive charge of a given diameter, mixture and density; it is the velocity at which a detonation will sustain itself through a column of explosive.

stealite

Chiastolite, a variety of andalusite.

steamboat rolls

Those rolls in an anthracite breaker that are set farthest apart to break the coal into steamboat coal. *Standard, 2*

steam gas

Highly superheated steam. *Webster 2nd*

steam hammer

A heavy hammer, moving between vertical guides, actuated by steam pressure. *Crispin*

steam-hoist man

See: [hoistman](#)

steam infusion

The injection of steam into the coal seam by infusion tubes, connected to a small boiler through high-pressure hose pipes, to suppress the dust in situ. The technique and equipment are somewhat similar to water infusion. Owing to technical, safety, and other problems, water infusion is preferred. *Nelson*

steam jet

a. A system of ventilating a mine by means of a number of jets of steam at high pressure kept constantly blowing off from a series of pipes in the bottom of the upcast shaft. b. A jet of steam to moisten the intake air current and thus keep the coal dust in the mine wet. *Zern*

steam jet refrigeration

A method of cooling involving the use of steam nozzles to reduce the pressure in a water chamber so that the water boils at a low temperature; since heat is drawn from the water, it is thus cooled. *Strock, 2*

steam main

A horizontal pipe for carrying live steam from a boiler to radiators, a steam engine, or other steam consuming device. *Crispin*

steam point

See: [point](#)

steam shovel

An excavating machine in which a large dipper is operated by steam power. Used for stripping purposes and in open-pit mining, esp. for iron and coal. A similar shovel is now operated by electricity, gasoline, and diesel engines. *Standard, 2*

steam shovel mine

An opencut mine in which steam shovels or other power shovels are used for loading cars. *Hess*

steam stamp

A crushing machine consisting of a vertical stamp shaft that is forced down to strike its blow, and lifted up preparatory to striking the next, by a steam piston. *Fay*

steam thawing

A method of dredging permanently frozen ground in Alaska and the Yukon Territory in which steam is forced through pipes that are fitted with steel points on one end and a driving head on the other end so that the pipes can be hammered into the frozen gravel. Thawing by steam is a slow and costly process. See also: [thawing](#)

steam winder

The most common type of steam winder is the two-cylinder double-acting horizontal engine driving direct on the drum shaft. These engines, which are made with cylinders up to 42 in (1.1 m) in diameter and with a 84-in (2.1-m) stroke, possess the merit of simplicity and ease of control. The two cylinders act on cranks set at 90 degrees to each other and are large enough for either to start the engine from rest against a full load, since one may happen to stop at dead center (i.e., with the piston at the end of its stroke, in which position it can exert no turning moment on the crank). *Mason*

Stear fan

A propeller or axial-flow fan developed by Steart in Australia. See also: [fan](#)

steatite

a. A compact, massive, fine-grained, fairly homogeneous talc-rich rock. b. Gray-green or brown massive impure talc that is carved easily into ornamental objects. Syn: [lardite](#); [lard stone](#); [soapstone](#); [soap earth](#). See also: [talc](#)

steatite talc

A relatively pure or high-grade variety of talc suitable for use in electronic insulators, the purest commercial form of talc. Syn: [French chalk](#)

steatitization

Introduction of, alteration to, or replacement by, talc (steatite); esp. the act or process of hydrothermal alteration of ultrabasic rocks that results in the formation of a talcose rock (such as steatite, soapstone, or relatively pure concentrations of talc). *AGI*

Stebinger drum

A delicate vertical-angle adjustment for the vernier on the alidade, graduated in hundredths of a revolution. See also: [gale alidade](#) CF: [tangent screw](#)

steel

a. An iron-base alloy, malleable in some temperature range as initially cast, containing manganese, usually carbon, and often other alloying elements. In carbon steel and low-alloy steel, the maximum carbon is about 2.0%; in high-alloy steel, about 2.5%. The dividing line between low-alloy and high-alloy steels is generally regarded as being at about 5% metallic alloying elements. Steel is to be differentiated from two general classes of irons: the cast irons, on the high-carbon side and the relatively pure irons, such as ingot iron, carbonyl iron, and electrolytic iron, on the low-carbon side. In some steels containing extremely low carbon, the manganese content is the principal differentiating factor, steel usually containing at least 0.25%; ingot iron contains considerably less. *ASM, 1* b. The borer, consisting of shank, shaft, and bit or cutting edge; used for rock-drilling with drifters or jackhammers. *CTD* c. In air hammers, the hollow or solid steel bar that connects the hammer with the cutting tool. *Nichols, 2*

steel arch

Curved length of steel, usually of H-section, used for supporting mine roadways. Two-, three-, or four-segment arches are available, with straight leg, splayed leg, horseshoe, or circular design; in double radius or with welded baseplate. See also: [Usspurwies arch](#); Toussaint-Heintzmann arch; steel support; steel ring. *Nelson*

steel band belt

A belt of relatively thin carbon or stainless strip steel alloyed and heat treated to withstand continued flexing over pulleys.

steel belt

Thin, flat, steel belts ranging from 0.008 to 0.035 in (0.02 to 0.09 cm) in thickness and from 7/8 to 8 in (2.2 to 20.3 cm) in width have been successfully used. The pulleys should be faced with a thin layer of cork. Steel belts can be run at speeds as high as 10,000 ft/min (3.0 km/min). It has been claimed that a 4-in (10.2-cm) steel belt will transmit as much power as a 19-in (48.3-cm) leather belt. *Crispin*

steel bit

The cutting tool at the end of the drill steel. Various bit shapes are used, the three commonest being the single chisel bit (used only for hand drills); the double chisel bit (used for fairly soft rock), and the cross bit (used for hard rock and for general purposes). See also: [tungsten carbide bit](#); [chisel bit](#); [cross-chopping bit](#). *Nelson*

steel boy

A youngster who carries drills to the miners, and collects dull drills and sees that they are returned to the blacksmith shop. *Fay*

steel cable

A flexible rope, the strands of which are steel wires. See also: [cable](#) *Long*

steel-cable conveyor belt

A rubber conveyor belt in which the carcass is composed of a single plane of steel cables that acts as a longitudinal tension-carrying member and includes two or more plies of fabric to provide transverse strength and hold the cables together.

steel casing

A pipe to support the walls of a borehole in loose ground. The casing is secured in position by a concrete block or by the cross beams of the platform. It is driven down from the surface and follows the drilling operation closely or sometimes even precedes the borehole in sand or very loose ground. See also: [borehole casing](#)

steel centralizer

On a wagon drill, a guide to hold the starting steel in proper alignment. *Nichols, 2*

steel erector

A skilled member of a team specially trained to erect steel framed buildings, bridges, and other steel structures. *Hammond*

steel guides

Steel rails, rods, or bars fixed in a vertical shaft to guide the cage and prevent it from swinging. See also: [fixed guides](#)

steel jack

a. A screw jack esp. suitable in mechanical mining. Under headers at or near the face, steel jacks or posts are used for upright timbers to be replaced as equipment advances. Also called steel post. *Kentucky* b. See: [sphalerite](#)

steelmaking

The process of making steel from solid or molten pig iron, with or without admixture with steel scrap. The processes used are the Bessemer, open-hearth, crucible, electric arc, high-frequency induction, and duplex. *CTD*

steel mill

A mill where steel is made, processed, and shaped. *Webster 3rd*

steel needle

An instrument used in preparing blasting holes; used before the safety fuse was invented. *Fay*

steel ore

A name given to various iron ores and esp. to siderite, because it was supposed to be esp. adapted for making steel by the earlier and direct process. *Fay*

steel plate conveyor

See: [plate conveyor](#)

steel press

A machine for compressing molten steel in casting to improve the quality of the product. *Standard, 2*

steel prop

A steel upright or post used to support the nether roof at a longwall or other face. It usually incorporates a yielding device. See also: [hydraulic prop](#); [mechanical yielding prop](#); self-advancing supports. *Nelson*

steel puller

A hinged clamp on the bottom of a hand drill. *Nichols, 1*

steel rectangular shaft supports

A shaft support consisting of H-beams, I-beams, angles, and sheeting. The design is somewhat similar to that used for timber. Bolts, rivets, and fastening angles are used to connect and secure the steel members. The fastening angles are riveted to the beams. The addition of galvanized-iron corrugated wall sheets (or laggings) form a secure and fireproof shaft. See also: [permanent shaft support](#); [barring](#); [bunton](#); [wallplate](#); [lagging](#). *Nelson*

steel ring

Ring- or horseshoe-shaped support for underground traveling way. Also called arch ring. See also: [steel arch](#)

steel scrap

Miscellaneous pieces of steel, old and new, used in the bath for steel making, esp. in the open-hearth furnace. *Mersereau, 2*

steel separation door

A steel door specially erected for the purpose of being closed only in an emergency, such as a fire or an explosion. Steel is necessary for strength and to avoid destruction by fire. Steel doors may also be used as separation doors in the vicinity of the pit bottom or fan drift. Also called safety door; emergency door. See also: [separation door](#) *Nelson*

steel sets

Used in main entries of coal mines and in shafts of metal mines in the United States. The sections have I-beams for caps and H-beams for posts or wall plates, the H-section giving equal stiffness in two directions at right angles to each other. Steel sets of various shapes are coming into wide use in deep European coal mines where pressures are so great that timber would not be satisfactory. See also: [steel tunnel support](#) *Lewis*

steel sheet piling

Piling composed of interlocking rolled steel sections driven vertically into the ground with guide walings in place before excavation starts. *Hammond*

steel shot

Chilled cast iron drops. Syn: [chilled shot](#)

steel support

A straight or curved length of steel, usually of H or channel section, used for support purposes in mine roadways, faces, or shafts. A steel support (1) possesses a high degree of permanency or long service; (2) ensures a minimum area of excavation for given dimensions in the clear; and (3) is fireproof. In return airways and shafts, a chrome-nickel-copper steel is sometimes used to counteract the corrosive air. For high-strength roof bars best results are obtained by the use of heat-treated low-alloy steels of the carbon manganese type. See also: [arch girder](#); [steel arch](#); straight girder support; support; Usspurwies arch; Toussaint-Heintzmann arch. *Nelson*

steel tunnel support

Tunnel-support systems made of steel are roughly of five types: continuous rib; rib and post; rib and wallplate; rib, wallplate, and post; and full circle rib. (1) A continuous rib system is usually made in two pieces for maximum speed of erection, lowest first cost, and lowest erection cost. Sometimes used in three or four pieces to meet special conditions and the following methods of attack: full face, side drift, and multiple drift. (2) A rib and post system is employed with the following methods of attack: full face in tunnels whose roof arch makes an angle with the sidewall; multiple drift and side drift in tunnels of such large size that two-piece continuous ribs cannot be shipped and/or handled; and heading and bench and top heading for support in the drift (with truss panels) for early support to roof. (3) In a rib and wallplate system, the rib is also usually made in two pieces for maximum speed of erection, lowest first cost, and lowest erection cost. It is sometimes used in three or more pieces to meet special conditions and with the following methods of attack: heading and bench, top heading, and full face. This type is esp. applicable to circular and high-sided tunnel sections where only a light roof support is needed. (4) In a rib, wallplate, and post system, these elements of support are used with the following methods of attack: heading and bench and top heading--for quick support to a roof; side drift--in large tunnels with bad rock conditions requiring quick support; and full face--for favorable rock where support is not needed tight to the face, for a tunnel whose roof makes an angle with the sidewall, and where post and rib spacing differ; and (5) A full circle rib--this method is used with the following attack: full face--in tunnels in squeezing, swelling and crushed rock, or any rock that imposes considerable side pressure, also where bottom conditions make it impossible to carry roof loads on foot blocks, and in earth tunnel conditions sometimes encountered in rock tunnels; and heading and bench--under earth tunnel conditions with joints at spring line. The inverted strut is used where mild side pressures are encountered and also to prevent the bottom from heaving. A full circle with ribs closely spaced is heavily lagged for heavy loads associated with squeezing conditions. See also: [steel sets](#) *Lewis*

steel wire rope

See: [wire rope](#)

steenstrupine

A trigonal mineral, $\text{Na}_{14} \text{Ce}_6 \text{Mn}^{+2} \text{Mn}^{+3} \text{Fe}_2 (\text{Zr,Th})(\text{Si}_6 \text{O}_{18})_2 (\text{PO}_4)_7 \cdot 3\text{H}_2 \text{O}$.

steep

See: [brasque](#)

steep gradient

In general, in coal mining, an inclination (of a roadway, working, or coal seam) steeper than 1:4. *Nelson*

steeply inclined

Deposits and coal seams having a dip of from 40 degrees to 60 degrees . *Stoces*

steering brake

A brake that slows or stops on one side of a tractor. *Nichols, 1*

steering clutch

A clutch that can disconnect power from one side of a tractor. *Nichols, 1*

Stefan-Boltzmann Law

a. The energy radiated in unit time by a black body is given as $E=K(T^4 -T_0^4)$, where T is the absolute temperature of the body, T_0 the absolute temperature of the surroundings, and K is a constant. *Osborne* b. The statement that the radiant flux of a black body is equal to the absolute temperature to the fourth power times the Stefan-Boltzmann constant of $(5.6696+ \text{ or } -0.001) \times 10^{-8} \text{ W (m)}^{-2} \text{ (K)}^{-4}$. *AGI*

steigerite

A monoclinic mineral, $\text{AlVO}_4 \cdot 3\text{H}_2\text{O}$; weakly radioactive; forms coatings on highly weathered sandstones of the Colorado-Utah carnotite region.

stein

Stonework used to secure the sides of a shaft. *Gordon*

steinmannite

A variety of galena with part of the lead replaced with antimony and arsenic. *Standard, 2*

stele

In coal, primarily the vascular tissues of the axis of a vascular plant. It consists of two parts: the xylem that carries water from the roots, and the phloem that carries the food. *Hess*

stell

See: [sprag](#)

stellate

Said of an aggregate of crystals in a starlike arrangement; e.g., wavellite.

stell prop

A steel or timber prop fixed firmly between the roof and the floor at the end of a longwall face and from which a coal cutter is hauled by rope when cutting. A stell prop may also be used as part of a belt-tensioning arrangement or a return sheave. Syn: [anchor prop](#) See also: [conveyor creep](#)

stem

a. To insert and pack stemming in a shothole. See also: [tamp](#) *BS, 12* b. The assemblage of drill rods in a borehole connecting a drill bit and core barrel to the drill machine. *Long* c. The heavy iron rod acting as the connecting link between the bit and the balance of the string of tools on a churn rod in a borehole connecting a drill bit drill. *Long* d. Frequently used as a syn. for ram or tamp. See: [stemming](#)

stem bag

Fire-resisting paper bag, about 8 in (20.3 cm) long, filled with dry sand for stemming shotholes in coal or hard headings. See: [water-ampul stemming](#)

stemmer

A wooden rod used by shot firers for inserting the explosive cartridges and stemming material in shotholes. The stemmer must be long enough to reach the back of the shothole, and has a diameter 1/8 in (3.2 mm) larger than the cartridges. Metal is not permitted in any part of a stemmer used in British coal mines. Also called tamping rod or stick; beater. See also: [tamping](#); [scraper](#); [break detector](#). *Nelson*

stemming

a. The material (limestone chippings or sand and clay) used to fill a shothole, after the explosive charge has been inserted, to prevent the explosion from blowing out along the hole. In tunnels and hard headings, the stemming may be blown in by a hurricane air stemmer. *Nelson* b. The act of pushing and tamping the material in the hole. See also: [water-ampul stemming](#); [tamp](#). *Nelson* c. Inert material packed between the explosive charge and the outer end of the shothole, or between adjacent charges in deck charging. *BS, 12* d. See: [tamping](#); stem.

stemming rod

A nonmetallic rod used to push explosive cartridges into position in a shothole and to ram tight the stemming. Syn: [stemming stick](#) See also: [tamping stick](#); [tamping rod](#). *BS, 12*

stemming stick

See: [stemming rod](#)

stench

A substance with a distinctive, disagreeable odor put in the air current to warn underground workers of fire or other emergency; ethyl mercaptan is commonly used. *Hess*

stench capsule

A fire-warning device designed to be bolted to a flat surface that may rise to a dangerous temperature. It consists of a cavity filled with 20 cm³ of ethyl or butyl mercaptan alone or with other stench agents and is sealed with a fusible plug in a brass container with a hexagonal head, arranged to liberate the stench agent at any temperature chosen. Tests in pits have shown that a strong smell could be detected 1.7 miles (2.7 km) from the discharge point 25 to 30 min after the device operated. *Sinclair, 1*

stenonite

A monoclinic mineral, (Sr,Ba,Na)₂Al(CO₃)F₅.

stent

a. The amount of work expected from a coal miner in a day or week. See also: [stint](#) b. See: [pitch](#) c. Corn. Tourmaline and quartz veins in kaolinized granite. d. U.K. Rubble; waste. e. U.K. Extent or limit, as of a pitch or bargain.

stenting

N. of Eng. See: [stenton](#)

stenton

A connecting roadway between two adjacent roadways that may be used for ventilation purposes. Also called air slit; crosscut; cross hole; thirling; througher; spout. Syn: [crosscut](#) breakthrough; pillar-and-stall. *BS, 8*

step

a. Fault; a small fault; a small fault in a stepped series of faults. *Mason* b. A small offset on a piece of core or in a drill hole resulting from a sudden sidewise deviation of the bit as it enters a hard, tilted stratum or rock underlying a softer rock. CF: [kick](#) c. One of several terracelike or stairstep concentric configurations on the crown of a diamond bit.

See also: [step-face bit](#) d. A treatment of one part of a sample in a sample divider (thus a pass consists of one or more steps). *BS*, 3 e. The action of setting a lock gate into a vertical position. *Hammond*

step cut

a. A mode of cutting gems in steplike facets. *Standard*, 2 b. A form of cutting employed for stones not deeply colored when they are not cut as brilliants; a simple typical form is that of a stepped pyramid with the apex sliced off. Also called trap cut. *Hess* c. A style of cutting, widely used on colored gemstones, in which long, narrow, four-sided facets form in a series or row parallel to the girdle and decrease in length as they recede above and below the girdle, giving the appearance of steps. The number of rows, or steps, may vary, although it is usually three on both the crown and pavilion. Different shapes of step cuts are described by their outline; e.g., rectangular or square step cut. Syn: [trap cut](#)

step-face bit

A thin-nosed bit with diamonds set in several concentric terracelike rows that form the outside wall. *Long*

step fault

a. One of a set of parallel, closely spaced faults over which the total displacement is distributed. CF: [fault zone](#) distributive fault. *AGI* b. One of a series of low-angle thrust faults in which the fault planes step both down and laterally in the stratigraphic section to lower glide planes. Step faulting is due to variation in the competence of the beds in the stratigraphic section. *AGI* c. A series of parallel faults that, all inclined in the same direction, gives rise to a gigantic staircase; hence these are called step faults. Each step is a fault block and its top may be horizontal or tilted. *AGI*

stephanite

An orthorhombic mineral, Ag_5SbS_4 ; soft; metallic; sp gr, 6.2 to 6.3; in veins; a source of silver. Syn: [brittle silver ore](#); black silver; goldschmidtine.

Stephenson lamp

An early type of coal miners' lamp. It had a glass chimney surrounded by a wire gauze about 2 in (5.1 cm) in diameter. The glass chimney was covered by a perforated copper cap, and the air was fed to the flame from below through small holes and wire gauze in a lateral extension of the oil vessel. The lamp was unsafe; it passed flame when the velocity of the air current exceeded about 8 ft/s (2.4 m/s). See also: [safety lamp](#) *Nelson*

steppe

An extensive, treeless grassland area in the semiarid mid-latitudes of southeastern Europe and Asia. It is generally considered drier than the prairie which develops in the subhumid midlatitudes of the United States. *AGI*

stepped foundation

See: [benched foundation](#)

stepped longwall

A system of longwall stalls in which the faces are carried forward in a steplike formation, one stall about 5 yd (4.6 m) in advance of the next stall. It is claimed to have advantages when the roof is friable. See also: [top holes](#)

stepped stope

The term implies that mining at one face is stepped aside from that below so as not to hinder the work at it. Syn: [advance stope](#)

stepping ahead

Term used in dredging operations when the digging spud is dropped, the other spud is raised, and the dredge is ready to begin a new cut. *Lewis*

step reef

See: [step vein](#)

step socket

A special form of socket for use on locked-wire rope. *Zern*

step up

To increase the voltage of (a current) by means of a transformer. *Webster 3rd*

step vein

A vein alternately cutting through the strata of country rock and conforming with them. Syn: [step reef](#)

stercorite

A triclinic mineral, $H(NH_4)Na(PO_4) \cdot 4H_2O$. Syn: [microcosmic salt](#)

stereocomparator

A stereoscope for accurately measuring the three space coordinates of the image of a point on an aerial photography; it is used in making topographic measurements by the comparison of stereoscopic photographs. *AGI*

stereogram

a. A graphic diagram on a plane surface, giving a three-dimensional representation, such as projecting a set of angular relations; e.g., a block diagram of geologic structure, or a stereographic projection of a crystal. *AGI* b. A stereoscopic pair of photographs correctly oriented and mounted for viewing with a stereoscope. Syn: [stereographic projection](#); stereograph. *AGI*

stereograph

See: [stereogram](#)

stereographic projection

a. A map projection in which meridians and parallels are projected onto a tangent plane, with the point of projection on the surface of the sphere diametrically opposite to the point of tangency of the projecting plane. Any point of tangency may be selected (at a pole, on the equator, or a point in between). *AGI* b. A similar projection used in optical mineralogy and structural geology, made on an equatorial plane (passing through the center of the sphere) with the point of projection at the south pole. Syn: [stereogram](#) *AGI*

stereometric map

A relief map made by the application of the stereoscopic principle to aerial or terrestrial photographs. Syn: [stereotopographic map](#)

stereoscopic principle

The formation of a single, three-dimensional image by simultaneous vision with both eyes of two photographic images of the same terrain taken from different camera stations. *AGI*

stereoscopic vision

Simultaneous vision with both eyes in which the mental impression of depth and distance is obtained, usually by means of two different perspectives of an object (such as two photographs of the same area taken from different camera stations); the viewing of an object in three dimensions. Syn: [stereoscopy](#); [stereovision](#). *AGI*

stereoscopy

See: [stereoscopic vision](#)

stereosphere

a. That part of the Earth's crust that lies above the level of compensation, or the top of the asthenosphere. See also: [asthenosphere](#) *AGI* b. The relatively strong outer shell of the Earth. *AGI* c. A term that was originally proposed for the innermost shell of the Earth's mantle, but is also used as equivalent to the lithosphere. *AGI*

stereotopographic map

See: [stereometric map](#)

stereovision

See: [stereoscopic vision](#)

sterilized coal

That part of a coal seam that, for various reasons, is not mined. *BS*, 7

sterling silver

A silver alloy containing at least 92.5% silver, the remainder being unspecified but usually copper. *ASM*, 1

sternbergite

An orthorhombic mineral, AgFe_2S_3 ; cubanite group; forms tabular crystals or soft flexible laminae. Syn: [flexible silver ore](#)

sterny

Scot. Rough; coarse-grained or crystalline, for example, sterny limestone.

sterrettite

See: [kolbeckite](#)

stetefeldite

A somewhat uncertain compound containing silver, copper, iron, antimony, sulfur, and water $[\text{Ag}_2\text{Sb}_2(\text{O},\text{OH})_7]$ (?).

Stetefeldt furnace

A furnace for the chloridizing and roasting of silver ores, and also for roasting fine copper ores low in sulfur. Provision is made for an auxiliary fireplace. *Fay*

stevensite

A monoclinic mineral, $\text{Ca}_{2}(\text{Mg}_{3}\text{Si}_{4}\text{O}_{10}(\text{OH})_{2})_{0.3}$; smectite group; with no tetrahedral substitution of Al for Si, its layer charge arises from octahedral vacancies. Syn: [aphrodite](#)

stewartite

a. A triclinic mineral, $\text{MnFe}_{2}(\text{PO}_{4})_{2}(\text{OH})_{2} \cdot 8\text{H}_{2}\text{O}$; dimorphous with laueite; forms minute crystals and tufts of fibers in pegmatites. b. A steel-gray, ash-rich, fibrous variety of bort containing iron, having magnetic properties, in the diamond mines of Kimberley, South Africa.

stey

Scot. Steep; highly inclined.

stibianite

See: [stibiconite](#)

stibiconite

a. An isometric mineral, $\text{Sb}_{3}\text{O}_{6}(\text{OH})$; pale yellow or chalky white; in antimony ore deposits as an alteration of stibnite. Syn: [stibianite](#); [stiblite](#). b. The mineral group blindheimite, lewisite, partzite, romeite, stetefeldtite, and stibiconite.

stibiocolumbite

An orthorhombic mineral, SbNbO_{4} ; forms a series with stibiotantalite.

stibiopalladinite

A hexagonal mineral, $\text{Pd}_{5}\text{Sb}_{2}$; sp gr, 9.5; occurs with platinum ores; a source of platinum and palladium. Syn: [allopalladium](#)

stibiotantalite

An orthorhombic mineral, SbTaO_{4} ; forms a series with stibiocolumbite.

stibium

The ancient name for antimony and stibnite and now used in pharmacy for the metal.
See: [stibnite](#)

stiblite

See: [stibiconite](#)

stibnite

An orthorhombic mineral, $Sb_2 S_3$; dimorphous with metastibnite; soft; metallic; may contain gold and silver; occurs in massive forms and in vertically striated prisms having perfect cleavage, in low-temperature veins and around hot springs; the chief source of antimony. Syn: [antimonite](#); [antimony glance](#); [gray antimony](#); [stibium](#). See also: [stibnium](#)

stibnium

An ancient name for "stibnite" used (as in Egypt) as a cosmetic for painting the eyes. See also: [stibnite](#)

stichtite

A trigonal mineral, $Mg_6 Cr_2 (CO_3)_4(OH)_{16} \cdot 4H_2 O$; hydrotalcite group; dimorphous with barbertonite; lilac colored; in Dundas, Tasmania, Australia; Transvaal, South Africa; Cunningsburgh, Shetland Islands; and Quebec, Canada.

stick

A cartridge of explosive. *BCI*

sticking

a. A small vein (a scriin) not wide enough for shoulder room, Derbyshire, U.K. *Arkell* b. The selvage of mineralized country rock at the side of a vein. *Arkell* c. A rib or ore in a vein, or a small rake vein crossing the main vein, Derbyshire, U.K. *Arkell* d. U.K. A thin vein of ore or thin seam of clay in an ore vein.

sticking scrins

Eng. Small veins that do not afford shoulder room.

stick loading

A technique used in trench blasting, etc., in which a lower concentration of charge is obtained by placing wooden pegs between every cartridge in the hole thus halving the concentration. *Langefors*

stickup

See: [standoff](#)

sticky

A term applied when drilling rock or a formation so soft that the drill bit tends to penetrate too rapidly and the circulation fluid is unable to clear the cuttings away fast enough to prevent their adhering to and compacting on the surfaces of the bit and other downhole drilling equipment and/or the borehole sidewalls. CF: [balling formation](#); [gummy](#). *Long*

sticky limit

The lowest water content at which a soil will stick to a metal blade drawn across the surface of the soil mass. *ASCE*

stiff clay

Clay of low plasticity.

stiffener

A steel angle or bar riveted or welded across the web of a built-up girder to stiffen it. *CTD*

stiff-fissured clay

A clay that is firm when dry at depth but is intersected by cracks through which water will seep easily. Clay deposits of this type are liable to slips on hillside slopes. Syn: [slickensided clay](#)

stiff mud

A plastic mix of clay of very stiff consistency, as extruded from an auger machine.

stiffness

The ability of a metal or shape to resist elastic deflection. For identical shapes, the stiffness is proportional to the modulus of elasticity. *ASM, I*

stifle

Scot. Noxious gas resulting from an underground fire.

stilbite

a. A monoclinic and triclinic mineral, $\text{Na}_2 \text{Ca}_4 [\text{Al}_{10} \text{Si}_{26} \text{O}_{72}] \cdot 34\text{H}_2 \text{O}$; zeolite group, with K replacing Na; forms sheaflike crystal aggregates and radiated masses in cavities in igneous rocks, as an alteration of plagioclase, or in hydrothermal veins. b. Ger. See: [heulandite](#)

still

a. An apparatus in which a substance is changed by heat into vapor, with or without chemical decomposition. The vapor is then liquefied in a condenser and collected in another part of the apparatus. *Standard, 2* b. See: [amalgam retort](#)

still coke

The residue left in the still on distilling crude shale oil to dryness. *Fay*

stilling well

A chamber connected to a main body of water by a small inlet; such an arrangement is suitable for a recording gage. *Hammond*

Stillson wrench

The pipe wrench of common use, named for its inventor. *Crispin*

stillwellite

A trigonal mineral, $(\text{Ce}, \text{La}, \text{Ca})\text{BSiO}_5$.

stilpnomelane

A monoclinic and triclinic mineral, $\text{K}(\text{Mg}, \text{Fe})_8 (\text{Si}, \text{Al})_{12} (\text{O}, \text{OH})_{27} (?)$; black to green-black; in micalike plates, fibrous forms, and velvety bronze-colored incrustations. Syn: [chalcodite](#)

stilt

A device to allow roadway steel arches a measure of yield under roof pressure to prevent buckling. The stilt may take the form of wooden extensions strapped to the legs of the arch, wire bags filled with dirt, a mechanical frictional appliance, or a hydraulic stilt. See also: [yielding support](#)

stinger

a. A steel cylinder projecting beyond the face of a cutting bit that serves as a pilot or guide. See also: [pilot](#) b. The pneumatically actuated piston attached to a pointed rod that acts as a feed mechanism on a stoper drill. *Long*

stinger ream

To ream a borehole using a reaming bit equipped with a pilot or stinger. *Long*

sting-out

Hot air and flame exhausted through openings in furnaces or tanks due to positive internal pressure. *ASTM*

stinkdamp

A mining term for hydrogen sulfide. The gas has an unpleasant smell, resembling that of rotten eggs, hence the name. The presence of this gas may indicate a gob fire in its early stages. Produced by the distintegration of iron pyrites. See also: [damp](#)

stinker

a. A British miner's term for inferior coal that stinks when burned. *Tomkeieff* b. A Welsh term for dolomite. *Arkell*

stinkquartz

A variety of quartz that emits a fetid odor when struck. *Fay*

stinkstein

See: [stinkstone](#)

stinkstone

a. A stone that emits an odor on being struck or rubbed; specif. a bituminous limestone (or brown dolomite) that gives off a fetid smell (owing to decomposition of organic matter) when rubbed or broken. It may emit a sweet-and-sour smell if the carbonate rock is rich in organic-phosphatic material. See also: [anthraconite](#); bituminous limestone. Syn: [stinkstein](#) b. Boulders of phosphate rock from Tennessee.

stint

A fixed work target on the coalface that every collier is expected to do in one shift or a single week. In longwall conveyor work, it is the length, area, or volume of face that the miner regularly clears or loads out. Also called stent; cut. Syn: [cut](#)

stip

See: [hitch](#)

stirian

An early name for nickel-bearing marcasite.

stitch

To fasten a timber by toenailing.

stitched canvas conveyor belt

A construction of conveyor belt made up of plies of cotton fabric stitched together. Stitched canvas belts may be untreated, impregnated, or coated. See also: [belt](#)

stochastic

Containing a random variable; word used to describe a system (e.g., sampling method) that has in it an element of randomness. *Pryor, 3*

stock

a. A rarely used term for a chimneylike orebody. Syn: [pipe](#) b. An irregular, metalliferous mass in a rock formation, such as a stock of lead ore in limestone. CF: [boss](#)

stock craneman

Person who lifts and moves stock, such as limestone, scrap iron, or pig iron, for the open-hearth furnace. *DOT*

stockhouse larryman

Person who drives an electric car to haul ore and limestone from the stockpiles to the blast furnace. *DOT*

stocking conveyor

A belt conveyor in a blending system that receives bulk materials for delivery to the stacker conveyor.

stockpile

a. An accumulation of ore or mineral built up when demand slackens or when the treatment plant or beneficiation equipment is incomplete or temporarily unequal to handling the mine output; any heap of material formed to create a reserve for loading or other purposes. *Nelson* b. The ore accumulated at the surface when shipping is suspended. *Standard, 2* c. Material dug and piled for future use. *Nichols, 2*

stockwork

A mineral deposit consisting of a three-dimensional network of planar to irregular veinlets closely enough spaced that the whole mass can be mined. CF: [reticulate](#)

stockyard

A space reserved on the surface near the materials shaft for the temporary storage of steel, timber, and other bulky items of supplies for mine use. The yard is surfaced and a mine car is used throughout. *Nelson*

stoichiometric

With reference to a compound or a phase, pertaining to the exact proportions of its constituents specified by its chemical formula. It is generally implied that a stoichiometric phase does not deviate measurably from its ideal composition. *AGI*

stoke

Unit of kinematic viscosity. The cgs unit of kinematic viscosity being that of a fluid that has a viscosity of 1 P (100 mPa.s) and a density of 1 g/cm³. *Webster 3rd*

stokehole

A hole, as in a reverberatory furnace, for introducing a rabble or other tool for stirring. *Standard, 2*

stoker

A mechanical appliance for feeding coal, coke, or other fuel into a boiler or furnace. In hand stoking, the person who shovels the fuel into the furnace is known as the stoker. See also: [underfeed stoker](#); vibrating grate. *Nelson*

stoker coal

a. A screen size of coal specif. for use in automatic firing equipment. *BCI* b. This coal can be of any rank and the stoker is usually designed to fit the coal available. Factors of importance in the selection of coal for stoker use are size limits; size consist; uniformity

of shipments; coking properties; ash-fusion characteristics; ash, sulfur, and volatile-matter percentages. *Mitchell*

stokesite

An orthorhombic mineral, $\text{CaSnSi}_3\text{O}_9 \cdot 2\text{H}_2\text{O}$; forms acute pyramids; at Roscommon Cliff, St. Just, Cornwall, U.K.

Stokes' law

a. A formula expressing the rates of settling of spherical particles in a fluid. *AGI* b. Gives the rate of fall of a small sphere in a viscous fluid. When a small sphere falls under the action of gravity through a viscous medium it ultimately acquires a constant velocity, V : $V = \frac{2ga^2(d_1 - d_2)}{9\eta}$ where g is gravitational acceleration, a is the radius of the sphere, d_1 and d_2 are the densities of the sphere and of the medium, respectively, and η is the coefficient of viscosity. V will be in centimeters per second if g is in centimeters per second per second; a will be in centimeters; d_1 and d_2 will be in grams per cubic centimeter; and η will be in dynes second per square centimeter, or poises. *Handbook of Chemistry and Physics*, 2 c. The wavelength of light emitted by a fluorescent material is longer than that of the radiation used to excite the fluorescence. In modern language, the emitted photons carry off less energy than is brought in by the exciting photons; the details accord with the energy conservation principle. See also: [elutriator](#); [sedimentation test](#); [terminal velocity](#). *Handbook of Chemistry and Physics*, 2 d. At low velocities, the frictional force on a spherical body moving through a fluid at constant velocity is equal to 6π times the product of the velocity, the fluid viscosity, and the radius of the sphere. The wavelength of luminescence excited by radiation is always greater than that of the exciting radiation. *McGraw-Hill*, 1

Stokes stretcher

The simplest type of stretcher used for underground first aid. This basket-type stretcher acts as a splint for the whole body, and is constructed of tubular steel and strong wire mesh. Used for lifting or lowering injured persons in difficult places. This type of stretcher is used in metal mines or in coal mines where the coalbed has a steep pitch.

See also: [stretcher](#)

stoking

See: [continuous sintering](#)

stoltzite

A tetragonal mineral, $4[\text{PbWO}_4]$; dimorphous with raspite; crystallizes in bipyramids; sp gr, 7.9 to 8.3; in oxidized zones of tungsten deposits.

stomp

A short wooden plug fixed in the roof, to which lines are hung, or to serve as a bench mark for surveys. *Fay*

stone

a. A mineral or group of consolidated minerals either in mass or in a fragment of pebble or larger size. *AGI* b. A stony meteorite. c. A cut and polished gem or other precious mineral (but not a synthetic compound used in ornamentation). d. Crushed or naturally angular particles of rock that will pass a 3-in (7.6-cm) sieve and be retained on a No. 4 U.S. Standard sieve. *ASCE*

stone band

See: [dirt band](#)

stone bind

Eng. Interbedded layers of sandstone and shale, or for a rock (such as siltstone) intermediate between a sandstone and a mudstone. *AGI*

stone butter

a. A variety of halotrichite. Syn: [rock butter](#) b. A variety of alum. c. A variety of clay.

stone clunch

Eng. Very hard underclay (clunch) with interbeds of sand. *AGI*

stone coal

a. Wales. Anthracite, in lumps; also certain other very hard varieties of coal. *Fay* b. Mineral coal, as distinguished from charcoal; esp., in England, hard or anthracite coal. *Standard, 2* c. Sometimes applied to anthracite on account of its hardness. See also: [anthracite](#) d. Early term for anthracite. *Korson*

stone concentration

See: [diamond concentration](#)

stone content

See: [diamond content](#)

stone count

See: [diamond count](#)

stone crane operator

a. In the quarry industry, a person who lifts blocks of stone and boxes of broken stone with a guy derrick in a quarry. Also called stone hoist operator. *DOT* b. In the stonework industry, one who lifts and moves blocks of stone with an electric bridge crane in a stone mill. *DOT*

stonecutter

a. Person whose occupation is cutting stone; a stone mason. *Standard, 2* b. A gem cutter. *Standard, 2* c. A machine for facing stone. *Standard, 2*

stone drift

A drift excavated in rock, such as from the surface down to a coal seam. See also: [hard heading](#); [rock drivage](#); [slant](#). *Nelson*

stone dust

a. In coal mines any inert dust spread on roadways as a defense against the danger of coal dust explosions. The stone dust used is of a type that does not cake in mine air. Ground limestone is satisfactory in most conditions. About 5% less limestone is required than shale, and gypsum has about two to three times the efficiency of shale. Gypsum appears to owe its high efficiency to its hydrate water. Inert dusts are effective because they absorb heat that the coal dust would otherwise receive from the flame. See also: [dust consolidation](#) b. Shale dust. *Mason* c. Loosely applied to any incombustible dust used to render coal dust incombustible. *Mason*

stone-dust barrier

A device erected at strategic points in mine roadways for the purpose of arresting explosions. Consists essentially of trays loaded with stone dust, which are upset or overturned by the pressure wave in front of an explosion ahead of the flame, producing a dense curtain or cloud of inert dust to blanket the flame and stop further propagation of the explosion. See also: [colliery explosion](#); [flame inhibitor](#). *Sinclair, 1*

stone duster

The person in charge of stone dusting in coal mines. *Nelson*

stone dusting

The systematic distribution of stone dust along mine roadways to cover the coal dust and reduce its flammability. Although stone dusting may not always stop an explosion, it is less violent with stone dusting than without. Safety regulations in many countries require that stone dust be applied either mixed with the coal dust along mine roadways or as stone dust barriers, to reduce the liability of coal-dust explosions. *Nelson; Roberts, 1*

stone exposure

See: [diamond exposure](#)

stone fields

See: [block field](#)

stone flax

An early name for asbestos.

stone gobber

In bituminous coal mining, person who removes stone and other refuse from coal mine floors and dumps refuse into mine cars for disposal. *DOT*

stone hammer

A hammer for breaking or dressing stone. *Standard, 2*

stonehead

a. U.K. A heading driven in stone or bind. b. The solid rock first met in sinking a shaft. c. See: [bedrock](#)

stone intrusion

Irregular masses of sandstone occurring within a coal seam or penetrating the seam from top to bottom, sometimes much distorted, but always connected with a similar sandstone in the roof or higher strata. Also called stone eye. See also: [drop](#)

stone land

An area that is economically valuable for some variety of stone, such as granite or sandstone, that can be quarried. CF: [mineral land](#) *AGI*

stoneman

a. A miner employed on stonework. See also: [ripper](#) b. A worker who drills shotholes in rock in readiness for firing by the shotfirer. *Hammond*

stone mill

a. A stone crusher. *Standard, 2* b. A machine for dressing and finishing marble, slate, etc.; a stone dresser. *Standard, 2*

stone mine

a. Scot. An ironstone mine or working. b. Scot. A mine driven in barren strata.

stone ocher

Ocher found in hard globular masses. *Webster 3rd*

stone of ore

A piece of ore.

stone per carat

The number of near-equal-size diamonds the weight of which is 1 carat, hence a relative measure of the size of diamonds. Syn: [diamonds per carat](#)

stone pit

A quarry where stones are dug. *Webster 2nd*

stone planer

In the concrete products and stonework industry, person who shapes, smooths, squares, and removes excess material from the surfaces of blocks or slabs of building or ornamental stone (limestone, slate, sandstone, marble, and such concrete work as imitation marble) on a planer. Also called planer hand; planer man; planer operator; planing machine operator. *DOT*

stone polisher

In the stonework industry, person who polishes to a high luster by hand methods those curved, irregular, and straight surfaces of blocks and slabs of marble and granite that cannot be polished by machine. May be designated according to kind of stone, such as granite polisher or marble polisher. Also called stone finisher. *DOT*

stone pressure

See: [diamond pressure](#)

stones

a. Detached particles of rock usually smaller than 10 in (25 cm) in diameter. Stones are classed as gravel on bottom sediment charts. *Hunt* b. In mica, small embedded crystals or holes resulting from stones. Also called stone holes. *Skow*

stone saw

A stone-cutting apparatus having no teeth, being a simple iron band fed with sand and water, cutting by attrition. *Standard, 2*

stone sawyer

Person who cuts stone.

stone sill

Cumb. Sandy fireclay. CF: [sill](#)

stone spavin

York. Usually a stone bind or sandstone with rootlets. *Arkell*

stone tubbing

Watertight stone walling of a shaft cemented at the back.

stone wall

See: [hogback](#)

stoneware clay

A clay suitable for manufacture of stoneware (ceramic ware fired to a hard, dense condition and with an absorption of less than 5%); used for items such as crocks, jugs, and jars. It possesses good plasticity, fusible minerals, and a long firing range. *AGI*

stone weight

See: [diamond content](#)

stonework

a. All underground work involving the excavation, loading, or handling of rock or dirt, such as ripping, dinting, tunneling, packing, etc. In thin coal seams, stonework is a major cost item. See also: [dead work](#) *Nelson* b. The process of working in stone; the shaping, preparation, or setting of stone. *Webster 3rd*

stone yellow

See: [yellow ocher](#)

stony clunch

Eng. Compressed clays with sandstone layers interspersed, Midlands. *Arkell*

stook

The last stump or corner block of coal left when extracting pillars by means of lifts, in pillar methods of working. *Nelson*

stool

a. The point where a miner stops digging downward to work outward. *Hess* b. The assembly carrying the return rollers and brackets for connecting standard sections together in belt conveyors. *Nelson*

stooled

Eng. Applied to a vein cut vertically for some distance.

stool end

A supporting pillar mine. *Webster 3rd*

stoop-and-room

See: [bord-and-pillar](#)

stooper

A miner in pillar methods of working employed in pillar robbing; a practice now obsolete. *Nelson*

stoopway

A passageway, the height of which requires a person to stoop or crouch in traversing it. *AGI*

stop

a. Any cleat or beam to check the descent of a cage, car, pump, pump rods, etc. b. In mining, a variation of stope.

stopblocks

A simple arrangement of two stout timbers, sliding on pivots, one of which can be placed across the track rail and held in position by the other block. They are often used on haulage landings to prevent trams running down the incline uncontrolled. Syn: [nubber](#)

stope

a. An excavation from which ore has been removed in a series of steps. A variation of step. Usually applied to highly inclined or vertical veins. Frequently used incorrectly as a syn. for room, which is a wide-working place in a flat mine. *Standard, 2* b. To excavate ore in a vein by driving horizontally upon it a series of workings, one immediately over the other, or vice versa. Each horizontal working is called a stope because when a number of them are in progress, each working face under attack assumes the shape of a flight of stairs. When the first stope is begun at a lower corner of the body of ore to be removed, and, after it has advanced a convenient distance, the next is commenced above it. This is called overhand stoping. When the first stope begins at an upper corner, and the succeeding ones are below it, it is called underhand stoping. The term stoping is loosely applied to any subterranean extraction of ore except that which is incidentally performed in sinking shafts, driving levels, etc., for the purpose of opening the mine. c. Commonly applied to the extraction of ore, but does not include the ore removed in sinking shafts and in driving levels, drifts, and other development openings. *Lewis* d. The working above and below a level where the mass of the orebody is broken. A stope is the very antithesis of a shaft, tunnel, drift, winze, or other similar excavation in a mine. *Ricketts* e. Any excavation in a mine, other than development workings, made for the purpose of extracting ore. The outlines of the orebody determine the outlines of the stope. The term is also applied to breaking ground by drilling and blasting or other methods. See also: [caving](#) f. A body of mineral left by running drifts about it. *Standard, 2*

stope board

A timber staging on the floor of a stope for setting a rock drill. The stage is tilted to enable the bottom holes being drilled in the same inclined direction. *Nelson*

stope development

The driving of subsidiary openings designed to prepare blocks of ore for actual extraction by stoping.

stope driller

In metal mining, one who operates compressed air, percussion-type rock drill in a stope (an underground opening from which ore is extracted in a series of steps). Also called stoper. *DOT*

stope fillings

Broken mullock or rock or the broken low-grade portion of a lode or vein used to fill stopes on abandonment. *Nelson*

stope hoist

A small portable compressed-air hoist for operating a scraper-loader or for pulling heavy timbers into position, often used in narrow stopes. *Nelson*

stope miner

See: [miner](#)

stop end

The shuttering erected at the end of a length of concrete construction and shaped to provide a suitable joint for the next length. *Hammond*

stope pillar

A column of ore left to support the stope. *Pryor, 3*

stoper

a. A stoping drill. b. A light percussive drill incorporating a pneumatic cylinder to provide support and thrust while drilling steeply upward. *BS, 12* c. See: [stope driller](#)

stoperperson

See: [roof bolter](#)

stope sampling

The sampling of exposure in the stopes, or of material coming from the stopes. This type of sampling permits a closer control of the grade of ore being won and is conducted largely at the working place or stope. *Truscott*

stope scraper

In metal mining, one who shovels or rakes ore into mine cars in a stope (an underground opening in a vein from which ore is extracted in a series of steps). Syn: [hand scraper](#)

stope washings

In gold mines, auriferous slimes washed down from the floor (footwall) of the stope and sent to the mill. *Pryor, 3*

stopping

a. The act of excavating rock, either above or below a level, in a series of steps. In its broadest sense rock stopping means the act of excavating rock by means of a series of horizontal, vertical, or inclined workings in veins or large, irregular bodies of ore, or by rooms in flat deposits. It covers the breaking and removal of the rock from underground openings, except those driven for exploration and development. The removal of ore from drifts, crosscuts, shafts, winzes, and raises, which are excavated to explore and develop an ore deposit, is incidental to the main purpose for which stopes are driven and is not a stopping operation. Exploratory and development openings are driven to prepare a mine for extraction of the ore by stopping. See also: [stope](#) b. In civil engineering, an enlargement. *Fraenkel* c. The loosening and removal of ore in a mine either by working upward (overhead or overhand) or downward (underhand). *AGI*

stopping-and-filling

See: [overhand stopping](#)

stopping drill

A small air or electric drill, usually mounted on an extensible column, for working stopes, raises, and narrow workings.

stopping ground

Part of an orebody opened by drifts and raises, and ready for breaking down.

stopping in horizontal layers

See: [overhand stopping](#)

stopping methods

The classification of stopping methods adopted by the U.S. Bureau of Mines, devised largely on the basis of rock stability, is as follows: (1) stopes naturally supported--this includes open stopping with open stopes in small orebodies, and sublevel stopping; and open stopes with pillar supports that includes casual pillars and room (or stope) and

pillar (regular arrangement); (2) stopes artificially supported--this includes shrinkage stoping, with pillars, without pillars, and with subsequent waste filling; cut-and-fill stoping; stilled stopes in narrow veins; and square-set stoping; (3) cave stopes--this includes caving (ore broken by induced caving), block caving, including caving to main levels and caving to chutes or branched raises; sublevel caving and top slicing (mining under a mat that, together with caved capping, follows the mining downward in successive stages); and (4) combinations of supported and caved stopes (as shrinkage stoping with pillar caving, cut-and-fill stoping with top slicing of pillars, etc.)

stopping underhand

Mining a stope downward in such a series that presents the appearance of a flight of steps.

stopping width

a. Width of lode broken during mining, including any barren rock. *Pryor*, 3 b. Used in underground sampling and is estimated from direct measurement behind the stope face and reduced to allow for any waste stowed. With wide tabular deposits, there is little difference between the stopping width and the clean width. *Nelson*

stopoff

To close off part of a mine by means of a brattice, wall, stopping, etc.

stopper hole

In a puddling furnace, the hole through which the rabble is introduced. *Webster 2nd*

stopper maker

One who forms and finishes fire clay stoppers for open hearth ladles, using a stopper press and a finishing machine. *DOT*

stopping

a. A brattice, or more commonly, a masonry or brick wall built across old headings, chutes, airways, etc., to confine the ventilating current to certain passages, and also to lock up the gas in old workings, and in some cases to smother a mine fire. b. A permanent wall built to close off unused crosscuts to prevent the air from short circuiting. *Lewis* c. A dam or seal to isolate old workings containing water or injurious gases. See also: [dam](#); [inrush of water](#). Syn: [ventilation stopping](#) *Nelson*

stopping builder

In bituminous coal mining, one who builds walls of concrete, stone, or brick and mortar, to close off old passageways or haulageways underground, to maintain ventilation in new workings. *DOT*

storage battery locomotive

An underground locomotive powered by storage batteries. *Hammond*

Storrow whirling hygrometer

A hygrometer in which the two thermometers are mounted side by side on a brass frame and fitted with a loose handle so that it can be whirled in the atmosphere to be tested. The instrument is whirled at some 200 rpm for about 1 min and the readings on the wet- and dry-bulb thermometers recorded; used in conjunction with Glaisher's or Marvin's hygrometrical tables. It gives more consistent and accurate results than the ordinary instrument. See also: [whirling hygrometer](#)

stottite

a. A tetragonal mineral, $\text{FeGe}(\text{OH})_6$; greasy; at Tsumeb, Namibia. b. The mineral group jeanbandyite, mopungite, stottite, and tetrawickmanite.

stove

a. A large steel furnace or oven connected with the blast furnace to preheat the blast before it is introduced into the furnace proper. *Mersereau, 2* b. A kiln, as for firing pottery or drying minerals. *Webster 2nd*

stove coal

a. In anthracite only; two sizes of stove coal are made, large and small. Large stove, known as No. 3, passes through a 2-1/4- to 2-in (5.7- to 5-cm) mesh and over a 1-7/8- to 1-1/2-in (4.8- to 3.8-cm) mesh; small stove, known as No. 4, passes through a 1-7/8- to 1-3/8-in (4.8- to 3.5-cm) mesh and over a 1-1/8- to 1-in (2.9- to 2.5-cm) mesh. Only one size of stove coal is now usually made. It passes through a 2-in (5-cm) square mesh and over a 1-3/8-in (3.5-cm) square mesh. *Zern* b. See: [anthracite coal sizes](#)

stoved salt

Stoved open-pan salt. *Kaufmann*

stovepipe

Riveted-seam or spiral-welded-seam, thin-wall pipe used as a conductor, standpipe, or casing in a borehole. *Long*

stovepipe casing

See: [stovepipe](#)

stow

a. To pack away rubbish into goaves or old workings. b. To gob; to fill the waste; to put debris into the waste. *Mason*

stowage

Scot. In longwall mining the space from which the mineral has been extracted and which has been filled with waste.

stowce

Derb. A wooden landmark, placed to indicate possession of mining ground. Also spelled stowse.

stowing

a. A method of mining in which all the material of the vein is removed and the waste is packed into the space left by the working. b. The debris of a vein thrown back of a miner and which supports the roof or hanging wall of the excavation. *Zern* c. See: [solid packing](#)

stowing method

Any of several methods of working coal or ore deposits in which systematic stowing of the worked out areas is part of the system. See also: [coal mining methods](#); [solid stowing](#); [strip packing](#). *Nelson*

straddle

A vertical mine timber, esp. one supporting a set in a shaft.

straddle spread

See: [split spread](#)

strahlite

From the German "strahlstein." (radiating stone), the original name for actinolite (Greek "aktis" radiating). See also: [actinolite](#)

straight

Common term for straight brick, as a 9-in (23-cm) straight.

straightaway

In stripping, a pit that follows a straight line when projected on a horizontal plane.
Woodruff

straight chopping bit

See: [chopping bit](#)

straight-cut gang frame

In quarrying, a saw gang that slides back and forth on a bed, as contrasted with the ordinary saw gang that swings back and forth when suspended from above.

straight dynamites

Dynamites composed of nitroglycerin, a combustible such as wood meal, sodium nitrate, and an antacid, such as calcium or magnesium carbonate, and are made in 15% to 60% strength, the percentage representing the proportion of nitroglycerin in the dynamites. They are powerful, quick acting, and fairly water resistant, but on detonation produce poisonous gases, esp. in the higher grades. Their relatively high cost, sensitivity to shock and friction, and high flammability, together with the dangerous fumes developed, make them less suitable for general use than more recently developed modifications.

Lewis; Carson, 1

straightedge leveling

A system of leveling using a straightedge and a spirit level. *BS, 7*

straight girder support

An H-section girder used as a roadway or face beam support. The girder for spanning roadways is commonly 6 in (15.2 cm) deep and 5 in (12.7 cm) in width of flange. It is supported by wood or steel props or by brick or concrete sidewalls, the roof being made secure by timber or sheet lagging. Channel section girders are also used in special cases.

See also: [steel support](#)

straight point

Aust. That straight portion of the inner main rail between the rails of a turnout.

straight-side core bit

See: [straight-wall bit](#)

straight stall

A lateral excavation into a thick seam of coal. Also called straight coal. *Standard, 2; Fay*

straight-type wedge

A plain deflecting wedge, not equipped with a rose or stabilizing ring. *Long*

straight-wall bit

An annular-shaped (core) bit the inner walls of which are parallel with the outer walls and not tapered to receive a core lifter. Syn: [straight-side core bit](#)

straight-wall core shell

a. A reaming shell the outside walls of which are straight and not set with diamonds or hard-metal reaming points. *Long* b. Sometimes used as a syn. for blank reaming shell. *Long*

straight work

a. Narrow headings in coal. *CTD* b. A method of working coal by driving parallel headings and then removing the coal between them. *CTD*

strain

a. Change in the shape or volume of a body as a result of stress; a change in relative configuration of the particles of a substance. Syn: [deformation](#) b. Deformation resulting from applied force; within elastic limits strain is proportional to stress. CF: [stress](#) c. A measure of the change in the size or shape of a body, referred to its original size or shape. Linear strain is the change per unit length of a linear dimension. True strain (natural strain) is the natural logarithm of the ratio of the length at the moment of observation to the original gage length. Conventional strain is the linear strain referred to the original gage length. Shearing strain (shear strain) is the change in angle (expressed in radians) between two lines originally at right angles. When the term strain is used alone, it usually refers to the linear strain in the direction of the applied stress. See also: [true strain](#) *ASM, 1* d. There are, generally speaking, two kinds of strains: normal and shear. Normal strains are those that may result in the relative displacement of two particles along the line joining those particles, whereas in shear strains, the particles are displaced at a right angle to the line joining them. All possible deformations may be represented as a combination of these two types of strain. *Issacson*

strain bar

An instrument well suited for measuring the strain on a rock face. It consists essentially of an invar steel bar with a fixed point at one end and a movable point attached to a rider at the other end. The rider may be moved along the bar between two stops, and the extent of movement is indicated by a dial gage attached to the bar. *Issacson*

strain break

Fractures occurring in rock quarries where the rock is under compressive stress. This stress is relieved locally in the process of quarrying, resulting in the rending or fracturing of the rock mass.

strain burst

Rock burst in which there is spitting, flaking, and sudden fracturing at the face, indicating increased pressure there. *Higham*

strain cleavage

See: [slip cleavage](#)

strain ellipsoid

In elastic theory, a sphere under homogeneous strain is transformed into an ellipsoid with this property; the ratio of the length of a line, which has a given direction in the strained state, to the length of the corresponding line in the unstrained state, is proportional to the central radius vector of the surface drawn in the given direction. The ellipsoid whose half axes are the principal strains. CF: [reciprocal strain ellipsoid](#)

strain gage

a. A general term for a device with which mechanical strain can be measured, commonly by an electrical signal, e.g., a wire strain gage. *AGI* b. An electrical, mechanical, or optical device for measuring movement of rock, cumulative loading of support props, opening cracks, etc. *Pryor, 3* c. An electromechanical device that transforms small displacements to changes in resistance that are proportional to the displacement. Strain gages are used in ocean bottom pressure measuring equipment. *Hunt*

strain relief method

A technique for the determination of absolute (total) strain and stress within rock in situ. In this method, a smooth hole is bored in the rock and a gage is inserted to measure diametral deformation. The hole is then overcored with a large coring bit so that the cylinder of rock containing the deformation measuring gage is free to expand. The

change in the diameter of the hole when the rock cylinder is free to expand is a function of the original stress in the rock and its elastic modulus. *Woodruff*

strain restoration method

A technique for the determination of absolute (total) strain and stress within rock in situ. This method involves (1) installation of strain gages on the rock surface; (2) cutting of a slot in the rock between the strain gages so that the surface rock is free to expand; (3) installation of a "flat-jack" (hydraulic pressure cell) in the slot; and (4) application of hydraulic pressure to the flat jack until the rock is restored to its original state of strain. The original stress in the rock is presumed to be equal to the final pressure in the flat jack. *Woodruff*

strain rosette

At any point on the surface of a stressed body, strains measured on each of three properly chosen intersecting gage lines make possible the calculation of the principal stresses at that point. Such gage lines, and the corresponding strains, are called a strain rosette. *Roark*

strain sheet

a. A skeleton drawing of a structure, as a roof of truss or a bridge, showing the stress to which each member will be subjected. b. A quarryman's term for granite sheets produced by compressive strain.

strain-slip cleavage

See: [false cleavage](#); slip cleavage.

Straits tin

One of the purest commercial forms of tin (99.89% purity) produced from alluvial ores in Malaysia.

strait work

See: [straight work](#)

strake

a. A relatively wide launder or sluice set at a slope and covered with a blanket or corduroy for catching comparatively coarse gold and valuable mineral. See also: [blanket strake](#) b. A trough in which ore, gravel, etc., are washed; a launder. *Standard, 2* c. The place where ore is assorted on the floor of a mine; a dressing floor. *Standard, 2*

stranded

Term for wire rope with one or more broken strands. *Pryor, 3*

stranded rope

See: [preformed rope](#); multistrand rope; flattened strand rope.

stranskiite

A triclinic mineral, $(\text{Zn,Cu})_3 (\text{AsO}_4)_2$; blue; at Tsumeb, Namibia.

strap

a. A bar; a beam; a coal face bar. *Mason* b. A thin bar or metal plate, similar to a fishplate, used to secure together butt-jointed timber or steel members. *Hammond*

strap brake

A brake generally used on small winding engines. *Sinclair, 5*

strap fishplates

Flattened bars of iron with holes punched through them for bolts. The holes are made somewhat larger than the bolt to permit rail expansion and contraction. *Kiser*

strap-rope haulage

A system of haulage (usually endless rope) in which the engine is installed on the surface, and the power is transmitted to the haulage drums at the pit bottom by means of a rope, which is known as a strap rope, or a driving rope. This rope merely transmits power and is distinct from the haulage rope. *Nelson*

straps

Thin metal support members from 5 to 20 ft (1.5 to 6 m) long are bolted to the mine roof to prevent roof deterioration between the bolts. Also known as roof mats or bacon skins.

strata

Plural of stratum.

strata bolt

A bolt or rod, from 2 to 5 ft (0.6 to 1.5 m) or more in length, set in drill holes in the strata for the support of curbs, skeleton tubing, helical steel supports, etc., in shafts and staple shafts. In general, the weaker the ground, the longer the bolts. CF: [roof bolting](#) *Nelson*

strata-bound

Said of a mineral deposit confined to a single stratigraphic unit. The term can refer to a stratiform deposit, to variously oriented orebodies contained within the unit, or to a deposit containing veinlets and alteration zones that may or may not be strictly conformable with bedding. *AGI*

strata control

See: [roof control](#)

strata gases

These occur in the mineral deposit itself or in adjacent or nearby formations. Their origin may be in a particular formation in which they were laid down or formed subsequently by chemical action, or they may occasionally migrate into other formations, frequently because of release of pressure with mining. Water flow and rock porosity and fissures also allow gas migration. The principal strata gases are methane, carbon dioxide, nitrogen, sulfur dioxide, hydrogen sulfide, and radon. *Hartman, 1*

stratascope

An apparatus inserted in the drill hole that permits engineers to make a visual inspection of the strata. *Coal Age, 3*

strata temperature

The strata temperature is determined by the surface temperature, the diffusivity of the strata, and the emissivity of the surface. With rocks of high thermal conductivity, and thus, high diffusivity, as in metal mines, the increase in temperature with depth is small, i.e., the geothermic gradient is low. Where rocks have low thermal conductivity, as in coal measure strata, the geothermic gradient is steep. Syn: [geothermic gradient](#)

strategic and critical material

Materials that (a) would be needed to supply the military, industrial, and essential civilian needs of the United States during a national emergency, and (b) are not found or produced in the United States in sufficient quantities to meet such need. *Strategic*

strategic mica

Ruby and nonruby block mica. Good-stained or better qualities, grade No. 6 or larger; ruby-stained A/B quality, grade No. 6 or larger; ruby and nonruby film, first and second qualities, grade No. 4 and smaller; muscovite and phlogopite splittings; and phlogopite block of high heat quality. *Skow*

strategic minerals

Minerals essential to the national defense, for the supply of which, during war, we are wholly or in part dependent on foreign sources, and for which strict measures controlling conservation and distribution are necessary. For example, chromium- and tin-bearing minerals, quartz crystal, and sheet mica were some of the "strategic minerals" during World War II.

stratificate

Characterized by numerous very thin parallel layers, whether separable or not, either of sedimentary deposition (as a bed of clay) or of deposition from solution (as in a stalagmite or banded agate). *AGI*

stratification

a. The formation, accumulation, or deposition of material in layers; specif. the arrangement or disposition of sedimentary rocks in strata. See also: [bedding](#) b. A structure produced by deposition of sediments in strata; a stratified formation, or stratum. It may be due to differences of texture, hardness, cohesion or cementation, color, internal structure, and mineralogic or lithologic composition. *AGI* c. The state of being stratified; a term describing a layered or bedded sequence, or signifying the existence of strata. *AGI* d. A structure produced by deposition of sediments in beds or layers (strata), laminae, lenses, wedges, and other essentially tabular units. *AGI*

stratification of methane

In relatively unventilated cavities in coal mines, such as wastes, it is frequently found that the methane percentage or concentration is higher at roof level, lower at midheight, and least at floor level. This is termed stratification of methane. See also: [combustible gases layer](#) *Nelson*

stratification plane

See: [bedding plane](#); stratification of methane.

stratified

Formed, arranged, or laid down in layers or strata; esp. said of any layered sedimentary rock or deposit. See also: [bedded](#)

stratified rock

See: [sedimentary rock](#)

stratified rocks

a. Derivative or stratified rocks may be fragmental or crystalline; those that have been mechanically formed are all fragmental; those that have been chemically precipitated are generally crystalline; and those composed of organic remains are sometimes partially crystalline. Syn: [sedimentary rocks](#) b. Rocks arranged in layers. *Shell*

stratiform

a. Said of a special type of strata-bound deposit in which the desired rock or ore constitutes, or is strictly coextensive with, one or more sedimentary, metamorphic, or igneous layers; e.g., beds of salt or iron oxide, or layers rich in chromite or platinum in a layered igneous complex. *AGI* b. Having the form of a layer, bed, or stratum; consisting of roughly parallel bands or sheets, such as a stratiform intrusion. Incorrect spellings: strataform, stratoform. *AGI* c. Bedded or layered. *Bateman, 2*

stratigrapher

A geologist who specializes in stratigraphy.

stratigraphic

Pertaining to the composition, sequence, and correlation of stratified rocks.

stratigraphic classification

The arbitrary, but systematic arrangement, zonation, or partitioning of the sequence of rock strata of the Earth's crust into units with reference to the many different characters, properties, or attributes that the strata may possess (Hedberg, 1958). *AGI*

stratigraphic control

a. The influence of stratigraphic features on ore deposition, e.g., ore minerals selectively replacing calcareous beds. CF: [structural control](#) *AGI* b. The degree of understanding of the stratigraphy of an area; the body of knowledge that can be used to interpret its stratigraphy or geologic history. *AGI*

stratigraphic geology

See: [stratigraphy](#)

stratigraphic heave

a. For normal faults, the width of the gap between two parts of a disrupted bed, measured in the direction of the faulted bedding plane. *Schieferdecker* b. For reverse faults, the width of the overlap between two parts of a disrupted bed, measured in the direction of the faulted bedding plane. *Schieferdecker*

stratigraphic hole

A borehole drilled specif. to obtain a detailed record of the character and composition of the rock formation penetrated and not for the purpose of locating a mineral deposit. See also: [record hole](#)

stratigraphic section

See: [geologic section](#)

stratigraphic separation

The thickness of the strata that originally separated two beds brought into contact at a fault. Syn: [stratigraphic throw](#)

stratigraphic sequence

A chronologic succession of sedimentary rocks from older below to younger above, essentially without interruption; e.g., a sequence of bedded rocks of interregional scope, bounded by unconformities. *AGI*

stratigraphic throw

See: [stratigraphic separation](#); throw.

stratigraphy

a. The science of rock strata. It is concerned not only with the original succession and age relations of rock strata but also with their form, distribution, lithologic composition, fossil content, geophysical and geochemical properties; indeed, with all characters and attributes of rocks as strata; and their interpretation in terms of environment or mode of origin, and geologic history. All classes of rocks, consolidated or unconsolidated, fall within the general scope of stratigraphy. Some nonstratiform rock bodies are considered because of their association with or close relation to rock strata. Syn: [stratigraphic geology](#) *AGI* b. The arrangement of strata, esp. as to geographic position and chronologic order of sequence. *AGI* c. The sum of the characteristics studied in stratigraphy; the part of the geology of an area or district pertaining to the character of its stratified rocks. *AGI* d. A term sometimes used to signify the study of historical geology.

AGI e. That branch of geology that treats of the formation, composition, sequence, and correlation of the stratified rocks as parts of the Earth's crust. f. That part of the descriptive geology of an area or district that pertains to the discrimination, character, thickness, sequence, age, and correlation of the rocks of the district.

stratometric survey

A system whereby the in situ orientation of a core sample can be reproduced on the surface. A line is inscribed on the smoothed bottom of a borehole, and its azimuth relationship with a compass direction photographically recorded. When cored and removed from the borehole, the inscribed line can be used as a guide in orienting the core on the surface. *Long*

stratum

a. A bed or layer of rock; strata, more than one layer. *Fay* b. A layer greater than 1 cm in thickness. *Pettijohn, 1* c. A tabular or sheetlike body or layer of sedimentary rock, visually separable from other layers above and below; a bed. The term is more frequently used in its plural form, strata. CF: [lamina](#)

stratum plain

See: [stripped plain](#)

straw boss

A generic term that sometimes includes all supervisory officials in a mine; a supervisor of a small group of miners usually working under a certified foreman. *BCI*

stray current

a. The use of direct current electric power in most coal mines presents a problem of corrosion caused by an electrolytic action on pipes. Where the track is employed as a conductor of electricity in this type of power system, the voltage drop produces a difference in potential between the track and earth or other structures that may serve as a conductor, such as pipelines. This condition may cause an electric current to flow in pipelines that form a parallel path with the track system. b. Electric current that is introduced in the earth by leakage of industrial currents. *Schieferdecker*

streak

a. The color of a mineral when scraped on a white ceramic plate. b. The color of a mineral powder usually obtained by scratching with steel or by rubbing on unglazed porcelain; it is more diagnostic for identification than bulk mineral color. c. A long, narrow, irregular stretch of land or water. d. A comparatively small and flattish or

elongate sedimentary body, visibly differing from adjacent rock, but without the sharp boundaries typical of a lens or layer. e. A long, narrow body of sand, perhaps representing an old shoreline; a shoestring. f. The outcropping edge of a coal bed.

streaking

See: [mineral streaking](#)

streak plate

In mineral identification, a piece of unglazed porcelain, hardness about 7 on the Mohs scale, used for rubbing a sample to obtain its powder color, or "streak."

stream-down sluice

A sluice box placed to receive the material rejected from the tables of a dredge.

stream gold

Gold in placer deposits of alluvial origin.

streaming

a. Separating ore from gravel by the aid of running water. b. The working of alluvial deposits for the tin found in them; the washing of tin ore from the detrital materials; also, the reduction of stream tin. *Standard, 2* c. A property that combustible gas possesses as a result of its low density. If, in a sloping roadway having a smooth roof, combustible gas is released from a break at the lower end, the gas will cling to the roof and stream upwards forming a pool at the upper end. Pure streaming and diffusion can occur where the air currents are sluggish or nonexistent, such as in wastes that have not collapsed, and roadways of large cross-sectional area in which the ventilation air speed is low. *Roberts, 1*

streaming potential

Potential difference between a permeable diaphragm and the liquid passing through it. *Pryor, 3*

streamline

A hypothetical line that shows the velocity direction of the fluid stream at each point along the line. Streamlines do not therefore cross each other. A set of streamlines charts the flow pattern. If the flow is steady then the streamline pattern does not change with time. If, however, the streamlines are continually changing shape the flow is unsteady. *Roberts, 1*

streamline flow

See: [laminar flow](#)

streamlining

This involves the placing of fairing around or over obstructions to airflow, in such a way as to change that flow from turbulent to laminar. *Spalding*

stream tin

Cassiterite occurring as waterworn pebbles in alluvial or placer deposits. CF: [lode tin](#)

stream tube

A tube of fluid the enveloping surface of which consists of streamlines. *Roberts, 1*

streamworks

- a. Corn. A name given by miners to alluvial tin deposits usually worked in the open air.
- b. A place where ore, generally tin ore, is washed from alluvial deposits. *Standard, 2*

stREbbau

Ger. The longwall system of coal mining. *Fay*

street ell

A pipe elbow with male threads on one end, female on the other. *Nichols, 1*

strek

Corn. A trough for washing tin ore. A variation of strake.

strengite

- a. An orthorhombic mineral, $\text{FePO}_4 \cdot 2\text{H}_2\text{O}$; variscite group; forms a series with variscite; may have Mn replacing Fe; dimorphous with phosphosiderite; pale red.
- b. The mineral group mansfieldite, scorodite, strengite, and variscite.

strength

The stress at which a rock ruptures or fails.

strength of current

The number of amperes flowing through a circuit. Analogous to the flow of gallons per minute in a water pipe. *Crispin*

strength of materials

The science that deals with the effects of forces in causing changes in the size and shape of bodies. (Crispin, 1964)

stress

In a solid, the force per unit area, acting on any surface within it, and variously expressed as pounds or tons per square inch, or dynes or kilograms per square centimeter; also, by extension, the external pressure that creates the internal force. The stress at any point is mathematically defined by nine values: three to specify the normal components and six to specify the shear components, relative to three mutually perpendicular reference axes. CF: [strain](#) shear stress. *AGI*

stress analysis

Determination of the stresses in the component parts of a structure when subjected to load. See also: [photoelasticity](#)

stress circle

A Mohr circle that reveals the distribution of stress. *Hammond*

stress-corrosion cracking

Failure by cracking under combined action of corrosion and stress, either external (applied) or internal (residual). Cracking may be either intergranular or transgranular, depending on metal and corrosive medium. *ASM, I*

stress diagram

See: [stress-strain diagram](#)

stress difference

The difference between the greatest and least of the three principal stresses. *AGI*

stress envelope

The zone of extra stress around a cylindrical hole being actually cylindrical in form. Syn: [ring stress](#)

stress field

The state of stress, either homogeneous or varying from point to point, in a given domain. *AGI*

stress meter

An instrument designed to measure pressure changes within rock as a result of mining operations. The instrument consists of a tongue of steel containing a groove filled with glycerin. When pressure is exerted upon the external surface of the tongue, the glycerin is partially squeezed from the groove and exerts pressure on a diaphragm, which accordingly bulges outwards. A strain gage is cemented on the outer wall of the diaphragm, and as the curvature increases and the gage is strained, so does its resistance vary. *Issacson*

stress mineral

A term suggested for minerals such as chlorite, chloritoid, talc, albite, epidote, amphiboles, and kyanite, whose formation in metamorphosed rocks is favored by shearing stress. CF: [antistress mineral](#)

stress-number (S-N) curve

A curve obtained in fatigue tests by subjecting a series of specimens of a given material to different ranges of stress and plotting the range of stress against the number of cycles required to produce failure. In steel and many other metals, there is a limiting range of stress below which failure will not be produced even by an indefinite number of cycles. *CTD*

stress ring

Stress rings are force lines drawn on the cross section of an excavation to indicate the distribution of the additional stress in the rock caused by that excavation. *Spalding*

stress solid

The solid figure formed by surfaces bounding vectors drawn at all points of the cross section of a member and representing the unit normal stress at each such point. The stress solid gives a picture of the stress distribution on a section. *Roark*

stress-strain curve

A curve similar to a load extension curve, except that the load is divided by the original cross-sectional area of the test piece and expressed as tons or pounds per square inch,

while the extension is divided by the length over which it is measured and expressed in inches per inch. See also: [load-extension curve](#)

stress-strain diagram

a. A graph on which is plotted stress vs. strain. Such a graph may be constructed in any test during which frequent or continuous measurements of both stress and strain are made. It is commonly constructed for the compression, tension, and torsion tests. It is usually necessary for the determination of deformation energy, elastic limit, modulus of elasticity, modulus of rigidity, proportional limit, and yield strength. It is often useful in determination of elongation, modulus of rupture, ultimate strength and related properties. *Hunt* b. The curve obtained by plotting unit stresses as ordinates against corresponding unit strains as abscissas. Syn: [stress diagram](#) *Roark*

stress trajectory

A line (in a stressed body) tangent to the direction of one of the principal stresses at every point through which it passes. Syn: [isostatic](#)

stress zone

This is the zone of additional stress in the rock surrounding and caused by a stoped area. *Spalding*

stret

The system of mining coal by headings or narrow work. See also: [bord-and-pillar](#)

stretch

A particular direction or course; as, the stretch of a coal seam. *Standard, 2*

stretcher

a. A bar used for roof support on a roadway, which is either wedged against or pocketed into the sides of the roadway and not supported by legs or struts. *TIME* b. A bar fixed across a narrow working place or tunnel to support a rock drill. *CTD* c. A main backing deal or longitudinal bar in contact with three or more support bars or girders. *Mason*

stretchers

In shaft-sinking, the crosspieces holding the walling apart. *Stauffer*

stretch fault

See: [stretch thrust](#)

stretch thrust

A little-used term for a reverse fault formed by shear in the inverted limb of an overturned fold. Syn: [stretch fault](#)

stria

a. One of a series of parallel straight lines on the surface of a crystal, as in pyrite, indicative of an oscillation between two crystal forms; also, one of a series of such lines on the cleavage planes of a mineral, as of plagioclase, calcite, or corundum, indicative of polysynthetic twinning. Syn: [striation](#) b. Striation. *AGI* c. A minute groove or channel; a threadlike line or narrow band (as of color) esp. when one of a series of parallel grooves or lines, such as glacial stria. *Webster 3rd*

striae

a. A line or furrow generally seen on the walls of a lode or fault. *Gordon* b. Plural of stria. *AGI*

striated

Adj. of striation.

striated cleavage

A cleavage surface grooved with striae, e.g., plagioclase.

striated crystal

A crystal face grooved with striae; e.g., pyrite or quartz.

striation

a. See: [stria](#) b. One of multiple scratches or minute lines, generally parallel, inscribed on a rock surface by a geologic agent, i.e., glaciers, streams, or faulting. Syn: [scratch](#) c. The condition of being striated; the disposition of striations.--Adj: striated; striate. *AGI*

striding level

a. A spirit level so mounted that it can be placed astride a surveying instrument and so supported that it can be used for precise leveling of the horizontal axis of the instrument or for measuring any remaining inclination of the horizontal axis. *AGI* b. A demountable spirit level that can be attached to the telescope tube to level the line of sight. *AGI*

strike

a. The course or bearing of the outcrop of an inclined bed, vein, or fault plane on a level surface; the direction of a horizontal line perpendicular to the direction of the dip. CF: [direction of strata](#); [trace](#); [trend](#). b. v. To find a vein of ore. n. A valuable discovery. *Webster 3rd* c. See: [course](#); level course; fault strike. d. To withdraw supports. See also: [line of bearing](#) Syn: [strike a lead](#)

strike a lead

See: [strike](#)

strike cut

In separating blocks of stone in a quarry, the cut that is parallel to the strike of the rock strata.

strike fault

A fault whose strike is parallel to the strike of the strata. CF: [dip fault](#); [oblique fault](#).

strike shift

In a fault, the shift or relative displacement of the rock units parallel to the strike of the fault, but outside the fault zone itself; a partial syn. of strike slip. See also: [shift](#)

strike-shift fault

See: [strike-slip fault](#)

strike slip

a. In a fault, the component of the movement or slip that is parallel to the strike of the fault. CF: [dip slip](#); [oblique slip](#). Syn: [horizontal displacement](#); [horizontal separation](#). Partial syn: strike shift. *AGI* b. A horizontal component of the slip parallel with the fault strike. *Schieferdecker*

strike-slip fault

a. A fault on which the movement is parallel to the fault's strike. CF: [dip-slip fault](#) Syn: [strike-shift fault](#) b. A fault in which the net slip is practically in the direction of the fault strike. Syn: [transcurrent fault](#)

strike valley

A valley eroded in and parallel to the strike of the underlying rocks of a region. Syn: [longitudinal valley](#)

strike working

Where the dip of the coal seam is about 1 in 10 or less, the opencast method of working usually employed is to excavate along lines parallel to the outcrop. This is termed the strike or opencast method. See also: [box-cut method](#)

striking

Electrodepositing, under special conditions, a very thin film of metal that will facilitate further plating with another metal or with the same metal under different conditions. *ASM, 1*

striking hammer

A quarryman's hammer for striking a rock drill. *Standard, 2*

striking plates

Two horizontal timbers separated by striking wedges and supporting an arch center. The latter is lowered by slacking the wedges. *Stauffer*

striking solution

A dilute solution of silver cyanide, containing potassium cyanide, in which articles to be silver-plated are dipped before being immersed in the silver bath proper. *Standard, 2*

string

a. Drilling bit, jars, drill stem, rope socket, and other tools connected to the lower end of a drilling cable in standard or percussion drilling. Also used for the rig and complete drilling equipment. Syn: [drill string](#); string of tools. *AGI* b. A measurement of depth of a drill hole obtained by stringing over the length of cable from the drilling floor to the crown pulley on top of the derrick or mast. *AGI* c. A very small vein, either independent or occurring as a branch of a larger vein; a stringer.

stringer

a. A mineral veinlet or filament, usually one of a number, occurring in a discontinuous subparallel pattern in host rock. See also: [stringer lode](#) *AGI* b. A thin layer of coal at the top of a bed, separating in places from the main coal by material similar to that comprising the roof. c. A heavy timber or plank, usually horizontal but sometimes

inclined, supporting other members of a structure; also, the horizontal crosspiece in square set timbering. d. See: [roof stringer](#)

stringer lead

A small orebody--generally, a vein leading to a more valuable one. *AGI*

stringer lode

A shattered zone containing a network of small nonpersistent veins. Syn: [stringer zone](#)

stringer sets

Mine timbering in which the caps reach across two or more sets in a drift or stope. *Hess*

stringer zone

See: [stringer lode](#)

string loading

Filling a drill hole with cartridges smaller in diameter than the hole, without slitting or tamping them. *Nichols, 1*

string of tools

a. In a churn drill, the tools suspended on the drilling cable. *Nichols, 1* b. The entire downhole drilling assembly. See also: [string](#)

string survey

a. A rough method of transferring points from upper to lower levels in very narrow steep workings by suspending strings from point to point and measuring offsets. The excavation dimensions may be similarly obtained. See also: [plumbing](#) b. The use of stretched strings in awkward underground workings to provide survey lines and a basis for offsets. In the lost-thread method of survey, a string or thread is paid out over a measuring device as a traverse line is walked. *Pryor, 3*

strip

a. In mining, to remove the earth, rock, and other material from the mineral to be mined, usually by power shovels. Generally practiced only where the mineral lies close to the Earth's surface. *BCI* b. To remove from a quarry, or other open working, the overlying earth and disintegrated or barren surface rock. See also: [baring](#) c. To mine coal,

alongside a fault, or barrier. d. To fill prepared coal from a coal face. See: [stripping](#) Syn: [stripping a mine](#)

Stripa process

a. A heavy medium process developed in Sweden for concentrating iron, copper, and chromite ores. The rate of supply of water over a shaking bed of wet sand effects the separation of heavy and light fractions. b. A method of gravity treatment of coarse sands, in which feed is shaken along horizontal launder and at the same time kept in teeter by hydraulic water. Constituent minerals stratify into separable layers. *Pryor, 3*

strip-borer drill

A skid- or crawler-mounted drill operated by electric motor or diesel engine. It is used at quarry or opencast sites for drilling horizontal blast holes 3 to 6 in (7.6 to 15.2 cm) in diameter, and up to 100 ft (30 m) in length, without the use of flush water. It cannot penetrate strong strata. *Nelson*

stripe

The series of bands of variation in color or texture in a rock mass, or the course of the planes of such bands, as indicative of the course of the bedding plane when that is otherwise obscure. See also: [ribbon](#) *Standard, 2*

Stripkolex

Trademark for a dynamite for coal stripping operations. *CCD, 2*

strip mine

A stripping; an opencut mine in which the overburden is removed from a coalbed before the coal is taken out. See also: [opencast](#); [opencut](#); openpit mine. *Hess*

strip mining

The mining of coal by surface mining methods as distinguished from the mining of metalliferous ores by surface mining methods; the latter is commonly designated as openpit mining. See also: [opencast method](#); openpit mining; surface mining. *Woodruff*

strip packing

An arrangement of alternate packs and wastes built in a direction parallel to the gate roads in longwall conveyor mining. A common practice is to allow 5-yd (4.5-m) wastes between 4-yd (3.7-m) packs, or both are made 5 yd wide. The dimensions vary with local conditions. See also: [stowing method](#); [double packing](#); [single packing](#). *Nelson*

stripped illite

See: [degraded illite](#)

stripped plain

A plain composed of flat-lying or gently tilted sedimentary rocks from which sediments have been removed down to some resistant bed that has controlled the depth of erosion.

CF: [dip slope](#)

stripper

a. A nearly depleted well whose income barely exceeds operating cost of production. *Wheeler, R.R.* b. In the quarry industry, a laborer who cleans up dirt left by the power shovel in stripping overlying ground from rock, using a shovel and wheelbarrow. *DOT*

stripping

a. The removal of earth or nonore rock materials as required to gain access to the desired coal, ore, or mineral materials; the process of removing overburden or waste material in a surface mining operation. b. The earth, rock, or soil so removed. c. The loading or clearing away of coal from a longwall face after shotfiring. *Nelson* d. Opencast mining. *Nelson* e. See: [stripping the quarry](#); strip. f. In chemical extraction of minerals, treatment of pregnant solution to remove dissolved values. *Pryor, 3*

stripping a gutter

Removing the headings from off the wash dirt, which is left undisturbed.

stripping a jig

Aust. The forming of a jig, by enlarging a cut-through on an incline. See also: [jig](#)

stripping a mine

a. See: [strip](#) b. Robbing a mine of its best ore.

stripping area

In stripping operations, an area encompassing the pay material, its bottom depth, the thickness of the layer of waste, the slope of the natural ground surface, and the steepness of the safe slope of cuts. *Nichols, 1*

stripping a shaft

a. Taking out the timber from an abandoned shaft. b. Trimming or squaring the sides of a shaft.

stripping-pit limits

The strip area that includes area of pay material plus enough area beyond the limits of the ore pit to provide for a bench. The total volume of stripping will be that vertically above the limits of the ore pit plus that outside of the ore pit necessary to maintain safe strip-pit slopes and benches and provide working approaches to the pit. *Jackson, 3*

stripping ratio

The unit amount of spoil or overburden that must be removed to gain access to a unit amount of ore or mineral material, generally expressed in cubic yards of overburden to raw tons of mineral material.

stripping salt

See: [abraumsalze](#)

stripping shovel

A shovel with an esp. long boom and stick that enables it to reach further and pile higher. *Nichols, 2*

stripping-shovel operator

In bituminous coal mining, one who operates a power shovel in a strip mine to strip back overlying ground and to load coal into cars. Also called coal-loading-shovel engineer; loading-shovel engineer. Syn: [boom cat](#) *DOT*

stripping solution

In solvent extraction, the aqueous solution used to re-extract the metal from the pregnant solution.

stripping system

The removal of the overburden and mining of the ore in one or more benches, the ore face being broken by blasting and the broken ore loaded by hand, shoveling machine, or steam shovel. The name "terrace or bench open-pit working" has been suggested.

stripping the quarry

The removal of all dirt and unwanted disintegrated material from the quarry face. See: [stripping](#)

strip pit

A coal or other mine worked by stripping. An open-pit mine.

strip sample

A sample, making a notch or groove, cut from roof to floor of a coal seam, or from hanging wall to footwall of a vein. See also: [channel sample](#)

strip thrust

See: [decollement](#)

stroke

a. The distance traveled by a piston in a pump or a piston in a hydraulic-feed mechanism on a drill. *Long* b. The maximum distance a piston moves within a cylinder before the direction of its travel is reversed. *Long* c. The distance a churn-drill stem and bit are raised for dropping while drilling. *Long*

stroke of crusher

The difference between the open and closed positions measured at the throat of the crusher. For small crushers it is about 3/8 to 3/4 in (0.95 to 1.9 cm), and for large crushers from 1 to 2 in (2.5 to 5 cm). Also called throw of crusher. *Newton, 2*

stromatite

A type of mixed rock or chormite in which the units of the fabric (granitic material and metamorphic or sedimentary rock) form a system of layers, strata, or bands so intricately united that the whole rather than the individual layers constitutes the geological field unit.

stromatolite

A structure produced by sediment trapping and/or precipitation as a result of the growth of cyanophytes (blue-green algae). It has a variety of gross forms, from nearly horizontal to markedly columnar, domal, or subspherical. Syn: [algal stromatolite](#); [stromatolith](#). *AGI*

stromatolith

a. See: [stromatolite](#) b. A complex, sill-like igneous intrusion that is interfingered with sedimentary strata. *AGI*

stromeyerite

An orthorhombic mineral, AgCuS ; metallic; soft; steel gray with blue tarnish; sp gr, 6.2 to 6.3; in copper-silver veins; a source of copper and silver. Syn: [silver-copper glance](#)

strong

a. Hard and thick; said of dikes. *Standard, 2* b. Important or rich; said of veins. *Standard, 2* c. Referring to the character of bind, meaning that the argillaceous material is largely mixed with the arenaceous or siliceous material. d. Scot. Hard, not easily broken, e.g., strong coal, strong blaes. e. Said of large or important mineral veins or faults. *AGI*

strongback

A heavy timber or metal beam or bar for taking a strain. *Webster 3rd*

strong lode

A large, persistent lode. At Alston moor, England, applied to lodes lying in a fault plane in which the difference of level between similar strata is considerable.

strontianite

An orthorhombic mineral, $4[\text{SrCO}_3]$; aragonite group; in hydrothermal veins associated with limestones, less commonly with eruptive rocks in California, New York, Washington, Germany, and Mexico; a source of strontium. Syn: [carbonate of strontium](#)

strontioginorite

A monoclinic mineral, $(\text{Sr,Ca})_2 \text{B}_{14} \text{O}_{23} \cdot 8\text{H}_2 \text{O}$; forms a series with ginorite. CF: [ginorite](#)

strontium

A silvery-white, alkaline-earth metal. Symbol, Sr. It does not occur naturally; found chiefly as celestite (SrSO_4) and strontianite (SrCO_3). Major use at present is for color television picture tubes. *Handbook of Chemistry and Physics, 3*

strontium-apatite

A hexagonal mineral, $\text{Sr}_5 (\text{PO}_4)_3 (\text{OH})$; apatite group; vitreous; light green; in sugary albite filling interstices between crystals of aegirine and eckermannite in veins in alkalic pegmatites from Inagil massif, southern Yakutia, Russia.

strontium minerals

Used primarily in television face-plate glass, in ceramic ferrites, and in pyrotechnics. The United States imports most of its celestite, the chief source of strontium, from Mexico and Germany.

strontium stannate

SrSnO_3 ; sometimes used as an additive to titanate bodies, one result being a decrease in the Curie temperature. *Dodd*

strontium titanate

SrTiO_3 ; isometric; and melting point, 1,670 degrees C. Used in ceramic dielectric bodies, either alone or in combination with barium titanate or other titanates. *Lee; Handbook of Chemistry and Physics, 2*

strontium zirconate

SrZrO_3 ; melting point, 2,700 degrees C; sp gr, 5.48. Sometimes used in small amounts (3% to 5%) in ceramic dielectric bodies, one effect being to lower the Curie temperature. *Dodd*

struck capacity

a. The capacity of a mine car, tram, hopper, or wagon to the flat surface at the edges; i.e., the volume of water it would hold if of watertight construction. *Nelson* b. In scraper loading, the maximum volume of liquid that the bowl can hold. CF: [heaped capacity](#)

struck out

Corn. The termination of a vein or lode by a fault.

structural

Of or pertaining to rock deformation or to features that result from it. *AGI*

structural analysis

The initial stage of structural design, in which all the forces carried by the various parts of a structure are determined. *Hammond*

structural basin

A low area in the Earth's crust, of tectonic origin, in which sediments have accumulated, e.g., a circular centrocline such as the Michigan Basin, a fault-bordered intermontane feature such as the Bighorn Basin of Wyoming, or a linear crustal downwarp such as the Appalachian Basin. Such features were drainage basins at the time of sedimentation, but are not necessarily so today. *AGI*

structural bottoming

See: [bottoming](#)

structural color

See: [pseudochromatism](#)

structural control

The influence of structural features on ore deposition, e.g., ore minerals filling fractures. CF: [stratigraphic control](#)

structural dome

See: [dome](#)

structural drilling

Drilling done specif. to obtain detailed information delineating the location of folds, domes, faults, and other subsurface structural features undiscernible by studying strata exposed at the surface. CF: [structure drilling](#)

structural fabric

See: [fabric](#)

structural geology

The branch of geology that deals with the form, arrangement, and internal structure of the rocks, and esp. with the description, representation, and analysis of structures, chiefly on a moderate to small scale. The subject is similar to tectonics, but the latter is generally used for the broader regional or historical phases. *AGI*

structural high

High point of a structure. See also: [high](#)

structural load

The load due to the structure itself as distinguished from the imposed load. *Crispin*

structural log

A record of the breaks, fractures, faults, and physical properties of rocks within a formation.

structural low

Low point of a structure. See also: [low](#)

structural petrology

The analysis of fabric on the thin-section or micro scale. It includes the study of grain shapes and relationships (microstructure) and the study of crystallographic preferred orientations. The transmission electron microscope is also employed to examine the substructures of deformed crystals. *AGI*

structural plain

See: [stripped plain](#)

structural relief

a. The vertical distance between stratigraphically equivalent points at the crest of an anticline and in the trough of an adjacent syncline. *AGI* b. More generally, the difference in elevation between the highest and lowest points of a bed or stratigraphic horizon in a given region. *AGI*

structural steelwork

Rolled steel sections or other fabricated members assembled to form structural frames by riveting, welding, bolting, or a combination of all three. *Hammond*

structural terrace

a. A local shelf or steplike flattening in otherwise uniformly dipping strata, composed of a synclinal bend above and an anticlinal bend at a lower level. *AGI* b. A terracelike landform controlled by the structure of the underlying rocks; esp. a terrace produced by the more rapid erosion of weaker strata lying on more resistant rocks in a formation with horizontal bedding. *AGI*

structural valley

A valley that owes its origin or form to the underlying geologic structure. *AGI*

structural vitrain

See: [phyllovitrinite](#)

structure

a. The parts or members of any building that carry the loads and transmit them to the foundations. Structures in mining areas may suffer some subsidence and are designed accordingly. *Nelson* b. Geologically, the disposition of the rock formations; i.e., the broad dips, folds, faults, and unconformities at depth. *Nelson* c. In petrology, one of the larger features of a rock mass, like bedding, flow banding, jointing, cleavage, and brecciation; also, the sum total of such features. CF: [texture](#) d. See: [soil structure](#)

structure contour

A contour that portrays a structural surface such as a formation boundary or a fault. Syn: [subsurface contour](#)

structure-controlled shoot

An ore shoot that is localized by geologic structure. Changes in strike and dip of fissures are favorable sites for ore shoots.

structure drilling

a. Exploratory drilling to determine the geological structure with reference to the coal or minerals sought. Rotary or diamond drilling is usually employed to yield cores at key horizons. *Nelson* b. A form of drilling practiced in the Lake Superior iron district to sample soft iron formations by countercirculation-wash boring methods. CF: [structural drilling](#)

structure section

A diagram to show the observed geological structure on a vertical face or, more commonly, to show the inferred geological structure as it would appear on the side of a vertical trench cut into the earth. The vertical scale is often exaggerated.

structure test hole

A hole drilled for geologic structure alone, although other types of information may be acquired during the drilling. This type of hole is drilled to a structural datum, which is normally short of known or expected producing zones. See also: [seismic shothole](#); [slim hole](#). *Williams*

strunzite

A triclinic mineral, $\text{MnFe}_2(\text{PO}_4)_2(\text{OH})_2 \cdot 6\text{H}_2\text{O}$; pseudomonoclinic; forms straw-yellow radiating fibers from the alteration of triphylite.

strut

a. A piece of wood or steel inserted between each pair of steel or timber supports on roadways to resist buckling and to maintain the proper spacing between the sets. *Nelson*
b. A mine prop to sustain compression, whether vertical or inclined. *Zern*
c. An inside brace. *Nichols, I*
d. A diagonal brace between two legs of a drill tripod or derrick; also, a vertical-compression member in a structure or in an underground timber set. *Long*

strut tenon

A tenon, such as is used on a diagonal piece or strut, usually on heavy timbers. *Crispin*

Struve ventilator

A pneumatic ventilating apparatus consisting of two vessellike gas holders, which are moved up and down in a tank of water. By this means, air is sucked out of a mine. *Zern*

struvite

An orthorhombic mineral, $(\text{NH}_4)\text{MgPO}_4 \cdot 6\text{H}_2\text{O}$; soft; has one perfect and one good cleavage.

stub entry

A short, narrow entry turned from another entry and driven into the solid coal, but not connected with other mine workings; a dead end. Syn: [dead end](#)

Stub's gage

A gage for measuring the size of wire. Also known as Birmingham gage. *Crispin*

stub switches

Switches used to some extent on narrow-gage industrial tramways; consisting of a pair of short switch rails, held only at or near one end and free to move at the other end to meet rails of straight or diverging track. *Urquhart*

stud

a. A bolt having one end firmly anchored. *Nichols, I*
b. A threaded rod or a bolt without a head. *Hammond*
c. An upright beam or scantling as in the framework of a dwelling. *Crispin*

studdle

a. A strong crossbeam in a shaft collar set. *Nelson* b. Corn. A prop to support the middle of a stull. c. A distance piece between successive frames of timbering. d. A vertical member of a shaft-timber set. The sets are placed at each corner and at the intersection of the dividers and the wallplates. e. An upright prop supporting a platform in a mine, usually one of a set of four. *Standard, 2*

stud-type chain

A roller chain in which the inner (block) links are connected solidly by nonrotating bushings. *Nichols, 1*

stuffed

a. A mineral having foreign ions in large interstices in its structure; e.g., garnet with an extra cation. b. A mineral structure derived from another by coupled replacement of a cation with two cations of lower valence, one of which occupies a structural cavity; e.g., feldspars derived from coesite by aluminum ions replacing silicon in the framework coupled with alkali or alkali earth ions in structural cavities.

stuffed mineral

A mineral having large interstices in its structure may accommodate various foreign ions in these holes; such a mineral is then said to be stuffed. The stuffing may have considerable consequences on the stability of the mineral. *AGI*

stuffing box

A chamber designed to contain packing and to maintain a fluid-tight joint about a piston rod where it enters a cylinder or around a drill rod where it enters the casing at the collar of a borehole. *Long*

stull

a. A timber prop set between the walls of a stope, or supporting the mine roof. b. A timber platform on which valueless rock or mineral is deposited. c. Corn. A platform (stull-covering) laid on timbers (stullpieces), braced across a working from side to side, to support workers or to carry ore or waste. d. A round timber used to support the sides or back working of a mine. *Mersereau, 2*

stull covering

A platform resting on stulls in a stope as a stage for miners or for holding rock or mineral. *Nelson*

stulled stopes

Stopes in which the roof is supported by stulls, square-set timbering, or concrete columns. *Stoces*

stull piece

A piece of timber placed slanting over the back of a level to prevent rock falling into the level from the stopes above. *Standard, 2*

stull stoping

The walls of narrow veins frequently are supported by stull timbers placed between the foot and hanging walls, which constitute the only artificial support provided during the excavation of the stopes. Stulls may be placed at irregular intervals to support local patches of insecure ground, in which case the stopes are virtually open stopes. Sometimes the stulls are placed at regular intervals both along the stope and vertically, in which case stull stoping should be considered a distinctive method.

stull timbering

The support of walls in shrinkage stoping by setting stulls. *Nelson*

stulm

An approx. horizontal passageway into a mine; an adit. Taken from the German term stollen. *Webster 3rd*

stump

a. Entry pillars; small portion of room pillars left for pick mining. *BCI* b. A small pillar of coal left between the gangway or airway and the breasts to protect these passages; any small pillar. *Fay* c. A narrow pillar of coal. *Lewis*

stumper

A narrow heavy dozer attachment used in pushing out stumps. *Nichols, 1*

stump prop

Short posts set under the crown bars of a tunnel. *Stauffer*

stump pulling

See: [pillar robbing](#)

stunning

A quarry worker's term for the formation of fractures caused by the cutting bars of a channeling machine striking the rock with excessively heavy blows.

Sturtevant balanced rolls

Rolls in which all four boxes are moveable in position by springs to divide the thrust whenever the springs yield and thus reduce internal stresses. *Liddell*

Sturtevant grinder

A disk grinder in which one disk is stationary and the other rotates. The stationary disk is moved out of center from time to time, so that any groove that forms can be ground out. *Liddell*

Sturtevant ring roll crusher

A crusher similar to the Kent roller mill. *Liddell*

Sturtevant roll jaw crusher

A crusher in which the motion of the upper part of the jaws is like that of the Dodge crusher, while the lower parts of the jaws, of cylindrical surfaces of varying radii, grind the ore between them. *Liddell*

Sturzelberger iron reduction process

A process evolved for dealing with pyrite roasting residues rich in zinc (8% to 10%). The direct reduction takes place in a short rotary drum that has a rammed tar-dolomite lining. Lime is added to produce a highly basic slag; the pyrite cinders, precalcined, are mixed with coke breeze and fired with pulverized coal burners. The zinc is recovered from the waste gases. The drum works discontinuously in 7-h heats, and the capacity of such a plant is limited in comparison with a blast furnace. The product is a liquid pig iron. *Osborne*

Stygian deposits

A general term for ore deposits formed underground by waters of atmospheric origin.

stylolite

A surface or contact, usually in carbonate rocks, that is marked by an irregular and interlocking penetration of the two sides: the columns, pits, and teethlike projections on one side fit into their counterparts on the other. As usually seen in cross section, it

resembles a suture or the tracing of a stylus. The seam is characterized by a concentration of insoluble constituents of the rock; e.g., clay, carbon or iron oxides, and is commonly parallel to the bedding. Etymol: Greek stylos, pillar, + lithos, stone. Syn: [crowfoot](#); [suture joint](#). *AGI*

stylotypite

Syn: [tetrahedrite](#) appreciable silver.

Styrian jade

Pseudophite, a compact massive variety of clinocllore.

stythe

a. Gr. Brit. Carbonic acid gas, often found in old workings and given off in most shallow mines. Also spelled stithe. *Tomkeieff* b. See: [blackdamp](#)

sub-

A prefix denoting under, below, or less than. Containing only a relatively small proportion or less than the normal amount of (such) an element or radical; not used systematically. *Webster 3rd*

subaeration cells

See: [sub-A flotation cells](#)

subaeration method

In flotation, a method employing an impeller, of which the principal function is to keep the pulp in suspension, and a port for admission of air below the surface of the pulp, this port of entry being in the vicinity of the impeller. *Gaudin, 2*

subaerial

Said of conditions and processes, such as erosion, that exist or operate in the open air on or immediately adjacent to the land surface; or of features and materials, such as eolian deposits, that are formed or situated on the land surface. The term is sometimes considered to include fluvial. CF: [subaqueous](#); [subterranean](#). See also: [surficial](#) *AGI*

sub-A flotation cells

Those in which air is supplied direct to a rotary agitator, mechanically driven, situated at depth in the flotation cell so that air is churned with ore pulp. Two types are (1) that in

which air is drawn down by impeller; and (2) that in which low-pressure air is blown in.
Syn: [subaeration cells](#)

subalkalic

a. A group term applied to rocks of the tholeiitic and calc-alkaline series. *AGI* b. Said of an igneous rock that contains no alkali minerals other than feldspars. *AGI* c. Used to describe an igneous rock of the Pacific suite. *AGI*

subangular

Somewhat angular, free from sharp angles but not smoothly rounded; specif. said of a sedimentary particle showing definite effects of slight abrasion, retaining its original general form, and having faces that are virtually untouched and edges and corners that are rounded off to some extent. *AGI*

subaqueous

Said of conditions and processes, or of features and deposits, that exist or are situated in or under water, esp. freshwater, as in a lake or stream. CF: [subaerial](#)

subaqueous disposal

A mine waste management practice whereby mill tailings or mine waste rock are emplaced under a body of water to minimize sulfide oxidation and acid formation, and eliminate airborne particulate pollution. If a natural sedimentation basin is utilized, erosion hazards inherent to subaerial impoundments are eliminated.

subaqueous mining

Surface mining in which the material mined is removed from the bed of a natural body of water. *AIME*, 2

subarid

See: [semiarid](#)

subarkose

A sandstone that does not have enough feldspar to be classed as an arkose, or a sandstone that is intermediate in composition between arkose and pure quartz sandstone. CF: [arkose](#)

subaudible noise

Noise the intensity of which is so low that it can only be detected by means of a microphone and suitable amplifying equipment. How these subaudible noises, or microseisms, originate has not definitely been established, but it is believed that they are produced by incipient cracking or intermovement between fragments of crystalline aggregates in the rock. It has been found that almost invariably a period of increased microseismic activity precedes any large-scale ground movement or failure. *Issacson*

subbase

a. A layer of material laid on the natural ground under a road base for purposes of strengthening. CF: [subgrade](#) b. The lowest part of a base. *Crispin*

subbituminous A coal

The rank of coal, within the subbituminous class of Classification D 388, such that, on the moist, mineral-matter-free basis, the gross calorific value of the coal in British thermal units per pound is equal to greater than 10,500 (24.42 MJ/kg) but less than 11,500 (26.75 MJ/kg) and the coal is nonagglomerating. *ASTM*

subbituminous B coal

The rank of coal, within the subbituminous class of Classification D 388, such that, on the moist, mineral-matter-free basis, the gross calorific value of the coal in British thermal units per pound is equal to greater than 9,500 (22.10 MJ/kg) but less than 10,500 (24.42 MJ/kg) and the coal is nonagglomerating. *ASTM*

subbituminous C coal

The rank of coal, within the subbituminous class of Classification D 388, such that, on the moist mineral-matter-free basis, the gross calorific value of the coal in British thermal units per pound is greater than 8,300 (19.31 MJ/kg) but less than 9,500 (22.10 MJ/kg), and the coal is nonagglomerating. *ASTM*

subbituminous coal

a. Black lignite or lignitic coal. *Fay* b. Coal of rank intermediate between lignite and bituminous. In the specifications adopted jointly by the American Society for Testing and Materials (D388-38) and the American Standards Association (M20.1-1938), subbituminous coals are those with calorific values in the range 8,300 to 13,000 Btu (19.3 to 30.2 MJ/kg), calculated on a moist, mineral-matter-free basis, which are both weathering and nonagglomerating according to criteria in the classification. *Stokes*

subconchoidal

Partially or indistinctly conchoidal. *Webster 3rd*

subcooling

Cooling of a liquid refrigerant below the condensing temperature at constant pressure. *Strock, 2*

subcritical area of extraction

An area of goaf too small to cause full subsidence at the surface. See also: [critical area of extraction](#)

subdeposit level

See: [group level](#)

subdrift caving

See: [sublevel caving](#)

subdrifting and caving

See: [top slicing combined with ore caving](#)

subdrilling

See: [underdrilling](#)

subduction

The process of one lithospheric plate descending beneath another. See also: [obduction](#)

subduction zone

A long, narrow belt in which subduction takes place; e.g., along the Peru-Chile trench or in the volcanic arc belts of the western Pacific Ocean. *AGI*

subeconomic resources

The part of identified resources that does not meet the economic criteria of reserves and marginal reserves. *USGS, 2*

suberain

A subvariety of provitrain in which the corky origin of the cellular structure is microscopically visible. CF: [periblain](#); [xylain](#). *AGI*

suberinite

- a. A variety of provitrinite characteristic of suberain and consisting of corky tissue. *AGI*
- b. A maceral of brown coal and lignite derived from the suberin layer in corkified cell walls of some Mesozoic and younger plants. CF: [periblinite](#); [xylinite](#); [telinite](#). *AGI*

subfeldspathic

- a. Said of a mature lithic wacke (or lithic graywacke) in which quartz grains and fragments of siliceous and argillaceous rocks predominate, and feldspars make up less than 10% of the rock and may be altogether lacking. Such rocks have also been called subgraywackes. *AGI*
- b. Said of a mature lithic arenite containing abundant quartz grains and fragments of the more stable rocks (such as cherts), and less than 10% feldspar grains. *AGI*

subgrade

A layer, stratum, or material immediately beneath some principal surface; specif. a layer of earth or rock that is graded to receive the foundation of an engineering structure. Often it is the soil or natural ground that is prepared and compacted to support, and that lies directly below, a road, pavement, building, airfield, or railway. CF: [subbase](#)

subgrade surface

The surface of the earth or rock prepared to support a structure or a pavement system. *ASCE*

subgraywacke

The most common type of sandstone, intermediate in composition between orthoquartzite and graywacke (Pettijohn, 1957). Composition is typically 30% to 65% quartz and chert, less than 15% clay matrix, more than 25% unstable materials such as feldspar grains and rock fragments, and voids or mineral cement exceeding the amount of clay matrix. The rock is lighter colored and better sorted, and has less matrix, than graywacke. CF: [graywacke](#)

subhedral

- a. Said of a mineral grain that is bounded partly by its own rational faces and partly by surfaces formed against preexisting grains as a result of either crystallization or recrystallization. *AGI*
- b. Said of the shape of such a crystal, intermediate between euhedral and anhedral. *AGI*

subhydrous macerals

Macerals having a low hydrogen content, such as fusinite. *Tomkeieff*

subincline

An inclined shaft along the footwall of a reef on the Rand. It develops and extracts ore from areas below the main haulage level. See also: [staple shaft](#)

subindividual

One of the small crystals that often unite in parallel growths to build up larger crystals of the same general habit. *Standard, 2*

subjacent

Said of a stratum situated immediately under a particular higher stratum or below an unconformity. Ant: superjacent. Syn: [underlying](#)

subjective brightness

The subjective brightness of a surface is determined by two factors, the light flux radiated from the surface and the sensitivity of the eye under the conditions in which the surface is seen. The sensitivity of the eye is partly controlled by the contrasts presented over the visual field, but is mainly dependent on its adaptation brightness level. *Roberts, 2*

sublevel

a. A secondary level for working ore in top slicing and sublevel caving; a companion heading. *Nelson* b. An intermediate level opened a short distance below the main level; or, in the caving system of mining, 15 to 20 ft (4.6 to 6.1 m) below the top of the orebody, preliminary to caving the ore between it and the level above. See also: [sublevel stoping](#); [caving system](#).

sublevel backstopping

See: [sublevel stoping](#)

sublevel caving

a. A stoping method in which relatively thin blocks of ore are caused to cave by successively undermining small panels. The ore deposit is developed by a series of sublevels spaced at vertical intervals of 18 to 25 ft or 30 ft (5.5 to 7.6 m or 9.1 m) and occasionally more. Usually only one or two sublevels are developed at a time, beginning at the top of the orebody. The sublevels are developed by connecting the raises with a longitudinal subdrift from which timbered slice drifts are driven right and left opposite

the raises to the ore boundaries or to the limits of the block. Usually alternate drifts are driven first, and caving back from them is begun and continued while the intermediate slices are being driven. The caving is begun at the ends of the slices by blasting out cuts and retreating in the same manner toward the raises. The broken and caved ore formerly was shoveled into cars and trammed to the raises, but in recent years it is dragged to the raises by power scrapers. Successively lower sublevels are developed and caved back until the entire block has been mined. This method is intermediate between block caving and top slicing, since part of the ore is mined as in top slicing and part is caved. See also: [top slicing combined with ore caving](#) b. Similar to top slicing from which it is thought to have been developed. The general plan of operations is to mine every other slice by driving crosscuts (slice drifts) from 18 to 36 ft (5.5 to 11.0 m) apart. The ore between the crosscuts as well as that in the slice above is then mined, thus causing the overlying material to cave. The method is applicable to irregular and steeply dipping orebodies that cannot be worked by top slicing. The present tendency is to sink vertical shafts in the footwall rather than inclined shafts as formerly done. Also called subdrift caving. *Lewis*

sublevel drive

A drive often made in a section, esp. in gently inclined deposits, that divides the deposit into narrower panels and zones. They are narrower, and the support and equipment for them is more simple than that required in level drives. *Stoces*

sublevel method

See: [sublevel stoping](#)

sublevel slicing

See: [top slicing combined with ore caving](#); sublevel stoping.

sublevel stoping

a. In this mining method, the ore is excavated in open stopes, retreating from one end of the stope toward the other. The orebody is developed first by a series of sublevel drifts above the main haulage level. The sublevels are connected by a starting raise at one end of the stope and by a passageway raise for entrance to them and the stope face at the other end. Chute raises connect the haulage level to the lowest sublevel, at which the tops of the chute raises are belled out to form mill holes. Beginning at the starting raise the ore is benched down from the sublevels; the broken ore falls into the mill holes, where it is drawn off through the chutes. The stope face is kept nearly vertical as it is benched backward toward the passageway raise. b. A mining method involving overhand, underhand, and shrinkage stoping. Its characteristic feature is the use of sublevels. The sublevels are worked simultaneously, the lowest on a given block being farthest advanced and the subs above following one another at short intervals. The

uppermost sublevel underneath the cover is partly caved. The caved cover follows down upon the caved ore. The broken ore is in part drawn from the level, and a part remains in the stope to give lateral support to the walls and to prevent admixture of cover and ore. The breaking faces are developed by crosscuts, which are extended from wall to wall from the end of the sublevel. The method can also be looked upon as a retreating method, the orebody being worked from the top down and the individual blocks upon a given level being worked from their ends to the center. Modifications of this method are chamber-and-pillar system; chambers without filling; combination of subslicing and stoping; drift stoping; filling system; Mitchell slicing system; pillar robbing; pillar robbing and hand filling; room-and-pillar system; square work and caving; square work, pillar robbing, and hand filling; sublevel back stoping; sublevel method; sublevel slicing system; substoping. c. A method of mining best adapted to steeply inclined deposits that have strong ore and strong walls. The ore is usually blocked out by two horizontal drifts separated vertically by 100 to 200 ft (30 to 61 m) and raises between the two horizontal drifts, the latter separated by comparable distances. Vertical pillars may be left between stopes on the same level, and horizontal ones to support the main haulage. After the main blocks of ore have been completely mined, it is common practice to rob the pillars, and the walls of the stope may collapse after the pillars have been robbed. *Lewis* d. Of lodes, open-stope mining in which ore is blasted and drawn through footwall openings to a gathering level in the country rock below. Used with strong containing walls and wide lodes. *Pryor*, 3 e. Of massive deposits, working simultaneously of a series of sublevels echeloned vertically, the lowest leading and the uppermost being partly caved as the covered rock descends. *Pryor*, 3 f. See: [sublevel backstopping](#); substoping.

sublimate

a. A coating or deposit formed in a glass tube or on charcoal as a result of heating certain minerals. b. The product of sublimation. *CTD* c. A solid deposit by a gas or vapor; commonly used in reference to material deposited by volcanic gases. *AGI*

sublimation

a. The process by which a solid substance vaporizes without passing through a liquid stage. CF: [evaporation](#) b. The process of ore deposition, as of sulfur or mercury, by vapors; the volatilization and transportation of minerals followed by their deposition at reduced temperatures and pressures. Sublimation deposits are generally associated with fumarolic activity. *AGI*

sublimation theory

The theory that a vein was filled first with metallic vapors.

sublime

To cause to pass from the solid state to the vapor state by the action of heat and again to condense to solid form.

submarginal land

Generally means land not very good for farming. Tens of millions of tons of coal are removed each year by stripping the surface of this type land. *Kentucky*

submarine blast

A charge of high explosives fired in boreholes drilled in the rock underwater for dislodging dangerous projections and deepening channels. *Fay*

submarine canyon

An elongated, steep-walled cleft running across or partially across the Continental Shelf, the continental borderland and/or slope, the bottom of which grades continually downwards. *AGI*

submarine drilling

Drilling from the surface of a body of water with a drill mounted on an anchored tower, platform, or barge. *Long*

submarine mines

Workings that follow the mineral under the sea. Syn: [undersea workings](#) *Zern*

submarine packing

Special heavy paper shells in which dynamite is packed in underwater blasting. *Carson, 2*

submarine throat

A throat with the fluid level below the bottom of a melter. See also: [throat](#)

submerged unit weight

The weight of the solids in air minus the weight of water displaced by the solids per unit of volume of soil mass; the saturated unit weight minus the unit weight of water. See also: [unit weight](#)

submergence

https://t.me/Geologybooks

a. In an air lift, the distance below the water level, during pumping, at which the air picks up water. *Lewis* b. A term that implies that part of a land area has become inundated by the sea but does not imply whether the sea rose over the land or the land sank beneath the sea. *AGI*

submetallic luster

A luster between metallic luster and nonmetallic luster. *Hurlbut*

subophitic

Said of the texture of an igneous rock in which the feldspar crystals are approx. the same size as the pyroxene and are only partially included by them. The term ophitic generally includes such textures. *AGI*

suboutcrop

a. S. Afr. Rock that would have been the outcrop on the surface, but is covered by other formations. *Beerman* b. Area of intersection of a geologic feature with the surface of bedrock beneath the regolith. *Hawkes, 1*

subsample

In coal and coke sampling, part of the sample consisting of a number of increments spaced evenly over the unit. *BS, 2*

subsequent ore deposit

See: [epigenetic](#)

subsidence

The sudden sinking or gradual downward settling of the Earth's surface with little or no horizontal motion. The movement is not restricted in rate, magnitude, or area involved. Subsidence may be caused by natural geologic processes, such as solution, thawing, compaction, slow crustal warping, or withdrawal of fluid lava from beneath a solid crust; or by human activity, such as subsurface mining or the pumping of oil or groundwater. See also: [shift](#); [cauldron subsidence](#); [settlement](#). Syn: [land subsidence](#); [bottom subsidence](#). *AGI*

subsidence area

The area affected by subsidence over areas where minerals or other substances have been removed. The area is larger than the mined-out area below. *AGI*

subsidence basin

A shallow troughlike depression at the surface resulting from subsidence. *Nelson*

subsidence break

A fracture in the rocks overlying a coal seam or mineral deposit as a result of its removal by mining operations. The subsidence break usually extends from the face upward and backward over the unworked area. *Nelson*

subsidence factor

Full subsidence expressed as a fraction of the thickness of coal seam extracted. See also: [maximum subsidence](#)

subsidiary fracture

Minor breaks sometimes developed in the rocks along a fault plane. They often indicate the general direction of movement and were caused by differential tension in the rocks contiguous to the main fault plane. See: [tension fracture](#)

subsidiary survey

An underground survey made to determine the position of a faceline or goafline or some other specific feature. *BS, 7*

subsidiary transport

The conveying or haulage of coal or mineral along the working faces and outward to a junction or loading point. See also: [main transport](#); underground haulage. *Nelson*

subsieve analysis

In powder metallurgy, size distribution of particles all of which will pass through a 44- μ m (No. 325) standard sieve, as determined by specified methods. *ASM, 1*

subsieve material

In mineral dressing, material finer than 400 mesh that must be sized by elutriation in rising currents of water or air, by microscopic counts, or other methods. *Newton, 1*

subsieve sizes

Particle sizes too small for efficient grading on screens; usually minus 200-mesh material. They are examined by elutriation (beaker decantation, sedimentation, infrasizing in air, turbidimetry, permeability). *Pryor, 3*

subsilicate

A basic silicate.

subsilicic

A term proposed by Clarke (1908) to replace basic. CF: [persilicic](#); mediosilicic. *AGI*

subslicing

See: [top slicing combined with ore caving](#)

subsoil drainage

The removal of subsoil water by open intercepting ditches and drain pipes. The distance between subsoil drains is a maximum in sandy soils and a minimum in clay. See also: [catchwater drain](#)

subsoiling

The firing of small charges of dynamite 2 ft or 3 ft (0.6 m or 0.9 m) below the surface for breaking up impervious strata of soil, clay, etc., for aerating, draining, and moistening the soil.

subsoil plow

A one-tooth ripper designed for agricultural work. Also called pan breaker. *Nichols, 1*

substage

a. A subdivision of a stage; the rocks formed during a subage of geologic time. *AGI* b. In a microscope, a mechanism for holding polarizers or other attachments below the stage. *AGI*

substation

An electrical installation containing generating or power-conversion equipment and associated electric equipment and parts, such as switchboards, switches, wiring, fuses, circuit breakers, compensators, and transformers.

substitute

Any substance represented to be, or used to imitate, a gemstone; e.g., plastic, glass, doublet, synthetic ruby, or natural spinel; all could be substitutes for natural ruby. *AGI*

substitution

A chemical defect wherein one ion replaces another in a crystal structure. Substitution may be partial; e.g., iron for zinc in sphalerite up to 30%, or complete; e.g., manganese and iron in the series rhodochrosite-siderite.

substopping

a. An open stope method of mining employed in wide orebodies with strong walls. *Nelson* b. See: [sublevel stoping](#)

substrate

a. A layer of metal underlying a coating, regardless of whether the layer is basis metal. *ASM, 1* b. The true lattice of a crystal, as distinct from its discontinuity lattice, or surface. *Pryor, 2*

substructure

a. That part of any structure that is below ground, more particularly the foundations. The latter may take many forms, according to the nature and bearing strength of the ground. *Hammond* b. The lower portion of a structure upon which something else is built up. *Crispin*

subsurface

a. The zone below the surface, in which geologic features, principally stratigraphic and structural, are interpreted on the basis of drill records and various kinds of geophysical evidence. *AGI* b. Rock and soil materials lying beneath the Earth's surface.--adj. Formed or occurring beneath a surface, esp. beneath the Earth's surface. CF: [surficial](#) c. An underground workplace. *Long*

subsurface contour

See: [structure contour](#)

subsurface correlation

Correlation of rock units and structures that do not appear at the surface, by means of well logs, mine maps, and geophysical data. *Stokes*

subsurface corrosion

Formation of isolated particles of corrosion products beneath the metal surface. This results from the preferential reaction of certain alloy constituents by inward diffusion of oxygen, nitrogen, and sulfur. *ASM, I*

subsurface geology

Geology and correlation of rock formations, structures, and other features beneath the land or sea-floor surface as revealed or inferred by exploratory drilling, underground workings, and geophysical methods. CF: [surface geology](#)

subsurface injection

See: [subsurface waste disposal](#)

subsurface map

a. A map depicting geologic data or features below the Earth's surface; esp. a plan of mine workings, or a structure-contour map of a petroleum reservoir or an underground ore deposit, coal seam, or key bed. *AGI* b. A plane surface representation, generally in horizontal projection, of geologic data or features beneath the Earth's surface. There are many types of subsurface maps, such as structure contour maps, isopachous maps, and maps showing variations in lithology, or proportions of different types of lithology in rocks not exposed at the surface. *Stokes*

subsurface waste disposal

Waste disposal in which manufacturing wastes are deposited in porous underground rock formations. Disposal wells should be at least 200 ft (61 m) deeper than the deepest water-bearing formation, and they must be sealed with cement from top to bottom. Also called subsurface injection.

subsurface water

Water in the lithosphere in solid, liquid, or gaseous form. It includes all water beneath the land surface and beneath bodies of surface water. Syn: [subterranean water](#); [underground water](#); ground water. *AGI*

subtense bar

A horizontal bar used in the subtense system of surveying by tacheometry. It is held at a distant point and its distance is calculated from its known length and the angle that it subtends at the observer's eye. See also: [tachymeter](#)

subterrain

See: [subterrane](#)

subterrane

The bedrock beneath a surficial deposit or below a given geologic formation. Syn: [subterranean](#)

subterranean

Formed or occurring beneath the Earth's surface, or situated within the Earth. CF: [subaerial](#) subterranean. *AGI*

subterranean stream

A body of subsurface water flowing through a cave or a group of communicating caves, as in a karstic region. *AGI*

subterranean water

See: [ground water](#); subsurface water.

subterrestrial

See: [subterranean](#)

subtranslucent

See: [semitranslucent](#)

subtransparent

Imperfectly or partially transparent; semitransparent. *Webster 3rd*

subvitreous

Not quite vitreous. *Webster 3rd*

subvolcanic

See: [hypabyssal](#)

subweathering

Below weathering. Pertaining to the consolidated material-bedrock or high-velocity weathered layer or zone. This velocity is distinctly greater than that in the weathered zone. *AGI*

succinite

a. An old name for amber, esp. amber mined in former East Prussia (Poland) or recovered from the Baltic Sea. b. A light yellow, amber-colored variety of grossular garnet.

suck

The shape of the bottom of a cutting edge or tooth that tends to pull it into the ground as it is moved. *Nichols, 1*

sucked stone

Corn. A honeycombed or porous stone.

sucking pump

A suction pump. *Standard, 2*

suction

a. Atmospheric pressure pushing against a partial vacuum. *Nichols, 1* b. The pull of a pump. *Nichols, 1* c. Adhesion of a mass of mud to the underside of an object being lifted out of it. *Nichols, 1*

suction anemometer

An anemometer that measures wind velocity by the degree of exhaustion caused by wind blowing through or across a tube. *Standard, 2*

suction bailer

See: [sand pump](#)

suction basket

The strainer at the foot of the suction pipe of a pump or of a suction hose. *Standard, 2*

suction blast

See: [backlash](#)

suction chamber

A suction chamber is designed to provide a trough of low pressure between the sealed area and the intake, so that air that would otherwise be drawn into the sealed area, through fissures and pores surrounding the seal, is drawn instead into the chamber. If the pressure within the sealed-off mine area is less than that outside, it is necessary to reduce the pressure within the chamber. This can be done by using an ejector or fan to draw air through a pipe in the outer wall of the chamber; a second pipe, fitted with a control valve, serves as an intake. Adjustment of the valve gives regulation of the chamber pressure within fine limits. *Roberts, 1*

suction cutter

a. In dredging, use of pump fed by pipe with power-rotated cutting blades to lift spoil. *Pryor, 1* b. In alluvial dredging, use of power-rotated cutting shoe to detach minerals from deposit, followed by their delivery by suction and elevation through a centrifugal pump. *Pryor, 3*

suction-cutter dredge

A dredge in which rotary blades dislodge the material to be excavated, which is then removed by suction, as in a sand-pump dredger. *CTD*

suction dredge

a. A dredge that digs by means of powerful suction pumps, the semiliquid spoil thus raised being frequently conveyed away in a floating pipeline. *Hammond* b. See: [sand-pump dredger](#) c. A dredge in which the material is lifted by pumping through a suction pipe.

suction fan

A fan that sucks or draws the air toward it through airways or air pipes. The term generally used is exhaust fan. *Nelson*

suction head

The head or height to which water can be raised on the suction side of the pump by atmospheric pressure. See also: [lift pump](#)

suction lift

In pump nomenclature, it exists when the liquid level is below the pump centerline and/or when a gage on the suction would show a vacuum.

sudburite

An augite-bearing hypersthene basalt characterized by pillow structure and containing bytownite and magnetite. It differs from normal basalts in containing neither glass nor olivine and in having an equigranular texture (Johannsen, 1937). Its name, given by Coleman in 1914, is derived from the Sudbury District, ON, Canada. Not recommended usage. *AGI*

sugar sand

A variety of sandstone that breaks up into granules resembling sugar.

sugar spar

Corn. Friable granular quartz. See also: [sugary quartz](#)

sugar stone

a. Eng. An ironstone in Norfolk, so-named from its rich brown color. *Arkell* b. Compact white to pink datolite from the Michigan copper district.

sugar-tube method

A dust-sampling technique that measures airborne dustiness on a mass basis. In the glass tube is placed a layer, 1-1/2 in (3.8 cm) deep, of sized granulated sugar weighing 100 g. By means of a suitable pump, air is drawn through the sugar tube at a rate of approx. 1 ft³/min (0.0283 m³/min). The dust is retained in the sugar tube, which is then stoppered and sent to the laboratory for analysis. The sugar is dissolved and the dust is caught on a filter paper that is incinerated to give the weight of dust. *Greenburg*

sugary quartz

A granular and somewhat friable and massive variety of quartz. Syn: [sugar spar](#)

suite

a. A set of apparently comagmatic igneous rocks. *AGI* b. A collection of rock specimens from a single area, generally representing related igneous rocks. *AGI* c. A collection of rock specimens of a single kind; e.g., granites from all over the world. *AGI* d. In stratigraphy, the lithodemic unit next higher in rank to lithodeme. It comprises two or more associated lithodemes of the same class (e.g., plutonic, metamorphic). For cartographic and hierarchical purposes, suite is comparable to group. The name of a suite combines a geographic term, the term suite, and an adj. denoting the fundamental character of the suite; e.g., Idaho Springs Metamorphic Suite. *AGI* e. A major group of Tertiary and younger igneous rocks thought by Harker (1909) to characterize regions

around each of the world's great oceans. Because there is such a wide variety of tectonic environments and associated rock types in these regions, the terms are now seldom used. See also: [Atlantic suite](#); [Pacific suite](#); [Mediterranean suite](#). CF: [lithodeme](#)

suites (of igneous rocks)

See: [consanguinity](#)

sulfate-bearing soils

On silts where the groundwater contains more than 0.1% of SO_3 , or where a clay soil has more than 0.5% of this substance, the use of lime-free cement in all concrete work is essential to prevent the resulting chemical attack. High-alumina cement gives complete protection, but a sulfate-resisting cement to British Standard 12 may be used where conditions are less severe. *Hammond*

sulfate sulfur

The inorganic sulfur in coal other than the pyritic sulfur. *BS, 1*

sulfate test

Sulfate in soil can be precipitated as barium sulfate and measured so as to indicate whether water or soil will have a harmful effect on concrete. *Hammond*

sulfating roast

A roast in which conditions in a furnace allow sulfur in feed to recombine with calcined products to form sulfates. Syn: [sulfatizing roast](#) *Pryor, 3*

sulfatizing

The chemical reaction that takes place in many roasting operations in which metallic sulfates form instead of oxides. *Newton, 1*

sulfatizing roast

See: [sulfating roast](#)

sulfhydryl-collector method

In flotation, a method for treatment of various oxygen ores where sulfhydryl collectors are used to float the base-metal minerals from associated minerals. *Gaudin, 2*

sulfide

a. A mineral compound characterized by the linkage of sulfur with a metal or semimetal; e.g., galena, PbS, or pyrite, FeS₂. *AGI* b. A mineral with S²⁻ or S₂²⁻ as its anion.

sulfide enrichment

Enrichment of a deposit by replacement of one sulfide by another of high value, as pyrite by chalcocite. *AGI*

sulfide of iron

An iron ore with sulfur as its main impurity. *Mersereau, 2*

sulfide ore

Ore in which the sulfide minerals predominate. See also: [mixed ore](#)

sulfide zone

a. That part of a sulfide deposit that has not been oxidized by near-surface waters. See also: [oxidized zone](#); [protore](#). *AGI* b. A generally manto-shaped deposit in which secondary sulfide enrichment has occurred as a part of ore-deposit oxidation. Syn: [secondary sulfide zone](#)

sulfidization

In conditioning a flotation pulp, addition of soluble alkaline sulfides in aqueous solution to produce a sulfide-metal layer on an oxidized ore surface. *Pryor, 3*

sulfidizing method

In flotation, a method for treatment of various oxide ores in which the desired base-metal minerals are sulfidized, then the ore is floated as if it were a sulfide ore. It is useful in treating lead carbonate ores, less useful if other lead minerals are present, and of limited utility in connection with copper and zinc ores. *Gaudin, 2*

sulfite

A salt or ester of sulfurous acid; a compound containing the radical, SO₃⁻. *AGI*

sulfo-antimonite

A mineral in which sulfur and antimony are united chemically with a metal. *Weed, 2*

sulfoarsenite

An ore mineral of any metal or metals with which sulfur and arsenic are united chemically. *Weed, 2*

sulfonic acid

A hydrophilic group. In the sulfate ester, an oxygen link is provided, forming the acid group of many commercial surface-active agents in which a little sulfonic acid and much long-chain sulfate ester are linked to fatty acids and oils. Examples of reagents used in mineral processing include Lissapol LS (sodium salt of oleic acid chloride and p-anisidine sulfonic acid); and Aerosol (sulfosuccinic acid diester). *Pryor, 3*

sulfonite

Light green to yellow vasinous variety of sulfur-containing bitumen. *Tomkeieff*

sulfophile

Elements that occur preferentially in minerals free of oxygen (or fluorine or chlorine); i.e., mostly as sulfides, selenides, tellurides, arsenides, antimonides, intermetallic compounds, native elements, etc. This group includes some of the chalcophile and some of the siderophile elements as classified by Goldschmidt. *AGI*

sulfur

a. Sulfureted hydrogen, $H_2 S$; stinkdamp. *Fay* b. One of the elements present in varying quantities in most bituminous coal as part of the ash and deleterious to coke for steelmaking. *BCI* c. An orthorhombic mineral, 128[S] ; native sulfur; dimorphous with rosickyite; soft; yellow; around volcanic fumaroles, in salt deposits associated with limestone, gypsum, and anhydrite; a source of elemental sulfur. Also called brimstone. d. A mining term for iron sulfide (pyrite) in coal seams and with zinc ores in Wisconsin and Missouri. Formerly spelled sulphur. e. See: [crude sulfur](#)

sulfur ball

a. An accumulation of sulfur in the form of iron pyrites sometimes found in coal seams, often hard enough to break the bits on cutting machines. *BCI* b. A concretionary form of the sulfide of iron occurring as both pyrite and marcasite. This material seems to crystallize or grow within the coal as a result of the action of waters bearing sulfuric acid acting upon compounds of iron. This iron is then taken into solution as iron sulfates and subsequently converted to sulfides that form into the sulfur ball. *Kentucky*

sulfur dome

An inverted container, holding a high concentration of sulfur dioxide gas, used in die casting to cover a pot of molten magnesium to prevent burning. *ASM, 1*

sulfuret

Pac. The undecomposed metallic ores, usually sulfides. Chiefly applied to auriferous pyrites. Concentrate and sulfide are preferable. An old syn. for sulfide. Obsolete.

sulfur group

The group VI elements sulfur, selenium, tellurium, and oxygen.

sulfur mining

Thick sulfur-bearing deposits may be worked by a network of tunnels and general caving. The bed is extracted in a series of thick slices, horizontal if the dip is great, or parallel to the dip if it is moderate. See also: [Frasch process](#)

sulfur ore

Pyrite, often roasted for its sulfur. *Webster 2nd*

sulfydril

Mercapto thiol. -SH, the monovalent radical. *Pryor, 3*

sullage

a. Mud and silt deposited from flowing water. *Hammond* b. Scoria on molten metal in the ladle. *Webster 3rd*

Sullivan angle compressor

A two-stage compressor in which the low-pressure cylinder is horizontal and the high-pressure cylinder is vertical. It is a compact compressor and is driven by a belt, or it can be directly connected to an electric motor or diesel engine. *Lewis*

sulphur

See: [sulfur](#)

sulvanite

An isometric mineral, Cu_3VS_4 ; forms a series with arsenosulvanite; bronze yellow; at Burra Burra, South Australia; and Mercur, UT.

summary of reinforcement

A cutting list with details of reinforcing bars. *Hammond*

summer black oil

A black lubricating oil of 540 degrees F (282 degrees C) fire test, used as a heavy tempering oil and for waterproofing cement.

sump

a. An excavation made underground to collect water, from which it is pumped to the surface or to another sump nearer the surface. Sumps are placed at the bottom of a shaft, near the shaft on a level, or at some interior point. *Lewis* b. An excavation smaller than and ahead of the regular work in driving a mine tunnel or sinking a mine shaft. *Webster 3rd* c. A hole sunk in a drift to a depth of 2 to 3 yd (1.8 to 2.7 m). *Hess* d. To undercut coal preliminary to placing a shortwall machine in position for cutting along the working face. Sometimes called a sumping cut. e. To test the load in depth. *Gordon* f. See: [cut](#) g. To drill diagonally. *Mason* h. See: [jib in](#) i. A pit or basin in which the returns from a borehole are collected and stored and in which the cuttings settle before recirculating the cuttings-free drilling fluid. *Long* j. A cellar under a drill floor. *Long*

sump cleaner

In bituminous coal mining, one who shovels up accumulations of coal, rock, dirt, and refuse at the bottom of a shaft and loads it into buckets that are hoisted to the surface or an upper level for dumping. *DOT*

sumper

a. A shothole drilled diagonally. *Mason* b. In bituminous coal mining, a person who oils and greases coal-cutting machines. Also called machine sumper. *DOT*

sump fuse

A waterproof fuse for use in a sump. *Standard, 2*

sumping

a. Forcing the cutter bar of a coal cutter into or under the coal. Also called sumping cut. b. A small square shaft, generally made in the airheadings when crossing faults, etc., or made to prove the thickness of coal, etc.

sumping bar

An angle iron about 8 ft (2.4 m) long with flanges about 4 in (10 cm) high, weighing about 75 lb (34 kg). Its function is to guide the cutter bar on an electric coal-cutting machine. *Fay*

sumping cut

See: [sump](#)

sumping-in

See: [jibbing-in](#)

sumpman

In metal mining, a person who installs sets of timbers to support the walls of a shaft, working with the shaft sinking crew and installing the timbers as the work advances. *DOT*

sump shaft

The shaft in a mine at the bottom of which is the sump. *Standard, 2*

sump shot

A blast made in a shaft that is being sunk, to make a collecting place for water. *Standard, 2*

sump winze

A winze sunk in the bottom of the lowest level, to explore the lode below and ascertain whether the sinking of the main shaft is advisable. *Standard, 2*

sun bed

a. A sublithographic limestone or mudstone at the top of the White Lias, the upper surface of which bears polygonal cracks attributed to sun drying. b. Alternatively a corruption of "sound" bed because, when dry, the rock rings when broken with a hammer. CF: [guinea bed](#); [ring stone](#).

sun cheek

The south side of a vein. *Arkell*

sun crack

See: [mud crack](#)

Sunday stone

A calcareous deposit formed inside pipes carrying waste water from collieries. It is composed of alternating dark and light bands corresponding to the day and night shifts and a broader light band corresponding to Sunday. *Arkell*

Sundberg method

In electrical prospecting, an inductive method in which the current flows through an insulated copper cable connected to a source of alternating current and run along the surface in a rectangle 1 mile by 1/2 mile (1.6 km by 0.8 km) in dimensions. A series of transverse profiles are laid out perpendicular to and crossing the cable, and the magnetic part of the electromagnetic field is measured at discrete points along the profiles by special search coils consisting of several hundred turns of wire. The magnitude and direction of the induced field observed by the coils can be related to the inductive effect of the subsurface material directly below. *Dobrin*

sundiusite

a. A monoclinic mineral, $Pb_{10}(SO_4)Cl_2O_8$; forms plumose aggregates of adamantine crystals having one perfect cleavage; at Laangban, Sweden. b. A name proposed for a hypothetical amphibole end-member composition, but never accepted by the IMA nor widely used by mineralogists.

sundtite

See: [andorite](#)

sun gear

The central gear in a planetary set. *Nichols, 1*

sunk

Drilled or excavated downward. *Long*

sunken pit

See: [dig-down pit](#)

sunk shaft

A shaft that is driven from the top downward (vertical or inclined). *Fraenkel*

sun opal

See: [fire opal](#)

sunshine

A name of a soft grade of paraffin wax with a low melting point. It can be burned in an ordinary miners' lamp with a nail (usually copper) in the wick and gives little smoke. Also called miners' sunshine.

sunstone

a. An aventurine feldspar, generally a brilliant, translucent variety of oligoclase that emits a reddish or golden billowy reflection from minute scales or flakes of hematite spangled throughout and arrayed parallel to planes of repeated twinning. CF: [goldstone](#); [moonstone](#). Syn: [heliolite](#) b. A red-to-yellow variety of bytownite caused by minute inclusions of copper and found in basalt from Oregon. See also: [aventurine](#)

sun vein

N. of Eng. Ore vein discovered on the south side of a hill. Sun is synonymous with south, so sun veins are south veins.

super airflow cleaner

In this cleaner, the coal is fed from a raw coal hopper by an oscillating plunger feeder ensuring uniform feed throughout the entire width of the machine deck. A rotating shutter in the inlet duct provides a pulsating air current, which is much more effective as a separating current than a uniform airstream. The coal and refuse stratify as they move toward the discharge end of the deck with the refuse falling to the bottom against the deck. The perforated deck has four refuse draws; normally the products of the first two draws are discharged as refuse and the third and fourth draws as middlings. The product of the third draw may be refuse or middlings, depending on the ash content of the feed. Generally, this cleaner is an effective machine for cleaning coal from 3/4 in (1.91 cm) to 1/4 in (0.64 cm) by 28 mesh if it contains less than 5% of surface moisture. It will not clean effectively below 20 mesh. *Kentucky*

superalloy

An alloy for very high-temperature service in which relatively high stresses (tensile, vibratory, and shock) are encountered and oxidation resistance is frequently required. *ASM, I*

supercapacity bucket elevator

A type of continuous bucket elevator employing supercapacity elevator buckets. See also: [supercapacity elevator bucket](#)

supercapacity elevator bucket

A type of continuous elevator bucket used with a pair of chains in which the back of the bucket at the bottom extends backward into space between the up and down runs to provide additional capacity without increase in length or projection. See also: [supercapacity bucket elevator](#)

supercharger

A blower that increases the intake pressure of an engine. *Nichols, 1*

superconductivity

The abrupt and large increase in electrical conductivity exhibited by some materials at very low temperatures. *ASM, 1*

supercritical area of extraction

An area of goaf of sufficient extent to cause full subsidence at more than one point on the surface. *Nelson*

superdip

An instrument of limited sensitivity for measuring changes in the total intensity of the magnetic field. *Schieferdecker*

superdusting

The presence of a very large excess of coal dust in the air over that required for consumption of the oxygen. *Rice, 2*

superexchange

The antiparallel alignment of unpaired d electrons of metal cations through coupling with p electrons of intervening anions to produce magnetic order. CF: [ferrimagnetism](#); [antiferromagnetism](#).

superficial

Pertaining to, or lying on or in, a surface or surface layer; e.g., superficial weathering of a rock, or a superficial structure formed in a sediment by surface creep. The term is used

esp. in Great Britain; the syn. surficial is more generally applied in the United States. *AGI*

superficial compaction

Compaction of soil in layers generally not greater than 6 in (15 cm) deep, by various methods, including the use of the frog rammer, vibration, sheepsfoot roller, pneumatic tired rollers, or similar machines. See also: [compaction equipment](#)

superficial deposit

The most recent of geological formations; unconsolidated detrital material lying on or near the surface, generally unstratified. See: [surface deposit](#)

supergene

Said of a mineral deposit or enrichment formed near the surface, commonly by descending solutions; also, said of those solutions and of that environment. CF: [hypogene](#); [mesogene](#). *AGI*

supergene enrichment

A mineral deposition process in which near-surface oxidation produces acidic solutions that leach metals, carry them downward, and reprecipitate them, thus enriching sulfide minerals already present. Syn: [enrichment](#); secondary enrichment. See also: [oxidized zone](#)

superheated steam

Steam above a temperature of 100 degrees C; produced by heating water under a pressure greater than standard atmosphere. *Nelson*

superheater

a. A device that superheats, esp. steam or other gases; esp. a coil or other device through which steam from a boiler passes to be superheated. *Webster 3rd* b. A refractory lined chamber in a water-gas plant that ensures completion of the decomposition of the oil vapors begun in the carburetor. *Dodd*

superimpose

In geology, to establish (a structural system) over, independently of, and eventually upon underlying structures; said of terranes, rivers, drainage systems, valleys, etc.; as, a superimposed valley. *Standard, 2*

superimposed halo

A dispersion pattern formed in the regolith by the movement of material in subsurface waters. *Hawkes, 1*

superintendent-of-tanks

One who supervises the feeding and maintenance of glass-melting furnaces (tanks), and the operation of reheating ovens (lehrs) for fire-glazing glass articles. Directs unloading and storage of raw materials and crushing and washing of waste glass (cullet) used as ingredients in the manufacture of new glass. *DOT*

superjacent pattern

A dispersion pattern developed more or less directly over the bedrock source. *Hawkes, 2*

superjacent roadway system

See: [methane drainage](#)

superlattice

X-ray diffractions, in addition to fundamental diffractions, which appear as an alloy inverts from disorder to perfect order of its constituent atoms at lattice sites; called superlattice diffractions and attributed to a superstructure of ordered atoms. Superlattice diffractions also appear where long-range order obtains in the stacking of silicate structural units, such as in phyllosilicates. See: [superstructure](#); long-range order.

superpanner

A mechanism that simulates rocking, bumping, and sluicing action used in panning and gives precise information as to the possibility of gravity treatment of sands. It is used in rapid assays and as a research aid. *Pryor, 2*

superphosphate

Any of various commercial phosphate fertilizers obtained as white to gray granules or powders by acidulating ground insoluble phosphate rock, such as: (1) a product made by acidulating with sulfuric acid, consisting essentially of primary calcium phosphate, calcium sulfate, and smaller quantities of secondary calcium phosphate, and containing usually about 20% of available phosphoric acid; or (2) a product made by acidulating with phosphoric acid, consisting essentially of primary calcium phosphate and containing usually 40% to 50% of available phosphoric acid. *Webster 3rd*

superposition

a. A principle stating that if a body is subjected to several stresses acting simultaneously, then each stress produces its own strain or strains, and these strains may be superimposed to give the complete state of strain of the solid. Similarly, two separate stress distributions in a body, due to the application of two separate stresses, may be superimposed to give the stress distribution due to the simultaneous application of these two stresses. *Issacson* b. The order in which rocks are placed or accumulated in beds one above the other, the highest bed being the youngest. *AGI*

superprint

See: [overprint](#)

superpushing

Using extra large pushers, or two or even three standard units in tandem, to increase the speed and size of loading. *Nichols, 1*

supersaturated solution

A solution that contains more of the solute than is normally present when equilibrium is established between the saturated solution and undissolved solute. *AGI*

super section

Two sets of mining equipment operating simultaneously and sharing a common dumping point on the same section, with each set being ventilated by a separate split on intake air. *FR 95*

superstructure

A crystal structure resulting from large unit cells when an alloy inverts from disordered occupancy of lattice sites by "averaged" constituent atoms in small unit cells to individual atomic species occupying specific lattice sites and having long-range order; e.g., disordered Cu_3Au has a primitive cubic unit cell with averaged "Cu-Au atoms" at each corner, while ordered Cu_3Au has a face-centered cell with Au atoms at its corners and Cu at its face centers, the large face-centered unit cell containing eight of the small primitive unit cells. See: [superlattice](#); long-range order.

supplementary twinning

Twinning by which a crystal simulates the symmetry of a crystal class with higher grade in the same system.

supplied-air respirator

An atmosphere-supplying device that provides the wearer with respirable air from a source that is outside of the contaminated area. *Best, I*

supply cager

In anthracite and bituminous coal mining, one who directs and assists the loading of mine supplies on a cage (elevator) at a mine having a separate shaft or shaft compartment for handling supplies. *DOT*

supply-hoist engineer

See: [supply-hoist operator](#)

supply-hoist operator

In anthracite and bituminous coal mining, one who operates the hoisting machinery that serves the shaft or shaft compartment of a mine in which mining supplies are lowered into the mine. Also called supply-hoist engineer. *DOT*

supply motorman

In bituminous coal mining, a person who operates a mine locomotive to haul trips (trains) of cars, loaded with timbers, rails, explosives, and other supplies, into a mine. *DOT*

supply pump

See: [bank pump](#)

support

A general term for any timber, steel, concrete, brick, or stone structure erected to counteract the subsidence of the roof strata when undermined. See also: [self-advancing supports](#); [steel arch](#); [steel support](#). *Nelson*

support roller

In a crawler machine, a roller that supports the slack upper part of the track. *Nichols, I*

supports

Materials placed in stopes for the purpose of ground control, that is to arrest or regulate the closure of the walls. *Spalding*

suppressed weir

A measuring weir having its sides flush with the sides of the channel, so that there are no end contractions. *Hammond*

supratenuous fold

A pattern of fold in which there is thickening at the synclinal troughs and thinning at the anticlinal crests. It is formed by differential compaction on an uneven basement surface. CF: [similar fold](#); parallel fold. *AGI*

surcharge

a. Any load including earth that is supported above the level of the top of a retaining wall. See also: [relieving platform](#); active earth pressure. *Hammond* b. The algebraic sum of the losses and gains of a cornet of gold during cupellation and solution. *Fay*

surface

a. The top of the ground. As used in the conveyance of coal in place, or in a conveyance of land reserving the minerals, includes not merely the surface within the boundary lines, without thickness, but includes whatever earth, soil, or land lies above the superincumbent upon the coal or mineral reserved. b. See: [cover](#); drift; mantle; overburden. c. In geology, usually refers to (1) the boundary surface between one bed or mass of rock and another immediately adjacent, such as a bedding surface, a fault surface, a surface of unconformity, a surface of igneous contact, or (2) an imaginary surface, such as the axial surface of a fold. *Challinor*

surface action

Any kind of action that affects a surface; e.g., action of smoke fumes, moisture, etc., on a painted surface. *Crispin*

surface-active agent

Chemical compound that modifies physical, electrical, or chemical characteristics of surface of solid, also surface tensions of solids or liquids. Used in froth flotation and in detergency. Characteristically, its heteropolar molecules are attracted to a specific type of surface in a mixture where one group forms polar monolayer attachments while the rest of the molecule points outward and changes the relations between the surface and the ambient phase. These relations may change lyophilic and aerophilic attraction, surface tension, intermiscellar grouping, emulsification, and froth foaming. Surface-active agents include cleaners (e.g., soaps); water repellants (e.g., greases); dispersants and emulsifiers (e.g., glue); and additives adsorbed at interfaces between liquids (usually aqueous) and external gas, liquid or solid phases, with resulting change in interfacial tension. Three electrochemical types are unionized molecule, anion, and cation. Important characteristics of surface-active agents are solubility in the medium

and effects of specific adsorption at interfaces. Such agents either provide anchorage between phases or form a barrier, according to their flocculating or dispersing effect. *Pryor, 3*

surface activity

The property possessed by certain solid substances to influence the surface tension of liquids. See also: [depressant](#); [flotation agent](#); surface tension. *Hammond*

surface air leakage

The amount of surface air entering a fan through the casing at the top of the upcast shaft, the airlock doors, and the fan-drift walls. The extent of leakage will depend on the fan-drift water-gage method of construction, the number and type of entrances, and whether the upcast shaft is used for winding. The surface leakage at airlocks may vary from about 25,000 ft³/min (708 m³/min) at 5-in (12.7-cm) water gage to about 55,000 ft³/min (1,557 m³/min) at 25-in (63.5-cm) fan-drift water gage. See also: [volumetric efficiency](#)

surface area

Of a particle, area calculated from data obtained by a specified method, such as: (1) adsorption measurement, (2) calculation, (3) permeability measurement, (4) microscopic observation, or (5) close screening and averaging from study of a number of particles. *Pryor, 3*

surface break

See: [surface damage](#)

surface bunker

A large capacity hopper or standage room to store coal or mineral coming from the winding shaft. The provision tends to equalize the run of mine going to the preparation plant and smooth out any minor breakdowns in the plant. *Nelson*

surface charges

All expenses incurred on the surface of a mine that have to be charged against the mineral.

surface circuit

The mine car track layout from the shaft to the preparation plant and back to the shaft. The term includes all the equipment necessary to move and control the movement of cars, such as creepers, retarders, back shunts, traversers, and turntables. *Nelson*

surface clay

An unconsolidated, unstratified clay occurring on the surface. *ASTM*

surface conductance

The heat transmitted from (or to) a surface to (or from) the fluid in contact with the surface in a unit of time per unit of surface area per degree temperature difference between the surface and fluid. Measured in units of watts per square meter Kelvin. *Strock, 2*

surface damage

a. Any damage done to land surface during mine exploration or development operations. Syn: [surface break](#) b. Scot. Ground occupied and damaged by colliery operations; the compensation for such.

surface deposit

a. Orebody that is exposed and can be mined from the surface. *Zern* b. See: [superficial deposit](#)

surface dressing

The covering of an existing surface with a coating of bituminous binder covered by a layer of chippings or fine aggregate. *Nelson*

surface drift

A drift (usually inclined) from the surface to the coal seam or orebody to be developed. See also: [drift mining](#); [slant](#). *Nelson*

surface drilling

Boreholes collared at the surface of the Earth, as opposed to holes collared in mine workings or underwater. See also: [surface rig](#) *Long*

surface energy

Product of surface tension (dynes per centimeter) and surface area (centimeters), expressed in ergs. Work required to increase surface area by unit area. *Pryor, 3*

surface factor

See: [fineness factor](#)

surface geology

a. Geology and correlation of rock formations, structures, and other features as seen at the Earth's surface. CF: [subsurface geology](#) AGI b. See: [surficial geology](#)

surface leaching

A mining practice that represents an alternative to conventional ore beneficiation in that the mineral values are hydrometallurgically extracted rather than concentrated in solid form for further processing. See also: [solution mining](#)

surface lift

A term used in the freezing method of shaft sinking. The surface around the shaft tends to heave owing to the formation of ice and the variation of temperatures. This uplift is sufficient to throw surface structures, such as winding towers, out of alignment. To enable corrections to be made, the tower bases may be mounted on grillages with facilities for jacking to keep the towers level. *Nelson*

surface lines

The boundary lines of a mining claim as indicated by the locator.

surface loss

Losses of air occurring in the restricted area around the tub and caused by the increased velocity along the walls of the airway, and from the friction and turbulent effects due to the surfaces of the tub. For an empty tub, a portion of the turbulent effect is due to eddying and shock within the tub. *Roberts, 1*

surface mining

a. The mining in surface excavations. It includes placer mining, mining in open glory-hole or milling pits, mining and removing ore from opencuts by hand or with mechanical excavating and transportation equipment, and the removal of capping or overburden to uncover the ores. b. Mining at or near the surface. This type of mining is generally done where the overburden can be removed without too much expense. *Kentucky* c. The obtaining of coal from the outcroppings or by the removal of overburden from a seam of coal, as opposed to underground mining; or any mining at or near the surface. Also called strip mining; placer mining, opencast; opencut mining; open-pit mining. *BCI; Standard, 2*

surface plan

A map of the surface layout of a mine. *BS, 7*

surface reinstatement

The restoration of the surface after opencast mining operations have been completed. The work may involve leveling the hill-and-dale formation, drainage, and relaying of the original topsoil, also known as resoiling. *Nelson*

surface rig

A drill rig designed specif. and used only for surface drilling operations. See also: [surface drilling](#)

surface rights

- a. The ownership of the surface of land only where mineral rights are reserved. *Weed, 2*
- b. The right of a mineral owner or an oil and gas lessee to use so much of the surface of land as may be reasonably necessary for the conduct of operations under the lease. *Williams*
- c. Those reserved to the owner of the land beneath which ore is being mined. *Pryor, 3*

surface-set bit

A bit containing a single layer of diamonds set so that the diamonds protrude on the surface of the crown. Also called single-layer bit. CF: [multilayer bit](#)

surface slope

The inclination of the water surface expressed as change of elevation per unit of slope length; the sine of the angle that the water surface makes with the horizontal. The tangent of that angle is ordinarily used; no appreciable error resulting except for the steeper slopes. *Seelye, 1*

surface speed

See: [peripheral speed](#)

surface string

A large diameter drivepipe sunk through the uppermost part of the overburden. CF: [conductor](#); [standpipe](#). *Long*

surface tension

- a. In the flotation process, the contractile force at the surface of a liquid whereby resistance is offered to rupture.
- b. Interfacial tension between two phases, one of which is a gas. *ASM, 1*
- c. A condition that exists at the free surface of a body (such as a liquid)

by reason of intermolecular forces unsymmetrically disposed about the individual surface molecules and is manifested by properties resembling those of an elastic skin under tension. Specif., the force per unit length of any straight line on the surface that the surface layers on opposite sides of the line exert upon each other. See also: [surface activity](#)

surface texture

The aggregate of the surface features of sedimentary particles, independent of size, shape, or roundness; e.g., polish, frosting, or striations. *AGI*

surface thrust

See: [erosion thrust](#)

surface water

Water that rests on the surface of the lithosphere. *AGI*

surface-water drain

Any pipe laid in the ground for carrying away surface water. See also: [separate system](#)

surface wave

An elastic wave in which the energy is confined to the surface or a narrow region just below the free surface of an extended solid. These waves readily follow the curvature of the part being inspected and are reflected only from sharp changes of direction at the surface. *ASM, I*

surface working

See: [surface mining](#)

surfactant

Surface active agent, a substance that affects the properties of the surface of a liquid or solid by concentrating in the surface layer. *Brantly, I*

surfeit

Gr. Brit. Afterdamp or chokedamp; or pressure exercised by a pent-up gas resulting in its escape with or without rupture of strata. *Tomkeieff*

surficial

Pertaining to, or occurring on, a surface, esp. the surface of the Earth. CF: [subsurface](#)

surficial creep

See: [soil creep](#)

surficial geology

Geology of surficial deposits, including soils; the term is sometimes applied to the study of bedrock at or near the Earth's surface. See also: [surface geology](#)

surf zone

The area between the outermost breaker and the limit of wave uprush. Syn: [breaker zone](#)

surge

a. To move sideways; to fleet. *Mason* b. The uneven rate of flow and regular variations in pressure caused by time lags between pressure strokes on a piston-type pump. *Long* c. In fluid flow, long-interval variations in velocity and pressure that are not necessarily periodic and may even be transient. *AGI*

surge bin

a. In salt mining, a generally large bin above the crusher into which the mine-run salt is dumped prior to being discharged into the primary crusher. A feeder at the bottom of the surge bin facilitates transfer of the mine-run material to the crusher. *Kaufmann* b. A compartment for temporary storage, which will allow converting a variable rate of supply into a steady flow of the same average amount. *Nichols, I*

surge bunker

A large-capacity storage hopper, installed near the pit bottom or at the input end of a processing plant to provide uniform feeding of material from bulk deliveries. Surge bunkers are generally required either on the surface or underground to act as a buffer between the shaft and the coal preparation plant and the working faces. See also: [bunker](#); [surge hopper](#). *Nelson; Sinclair, 5*

surge hopper

A hopper (bunker) designed to receive a feed at fluctuating rate and to deliver it at some predetermined rate. Syn: [surge bunker](#)

surge pipe

Open-topped standpipe to release pressure from surge. *Hammond*

surge pulley

The pulley used on a tension carriage in endless-rope haulage. See also: [balanced direct-rope haulage](#)

surge tank

a. A standpipe or storage reservoir at the downstream end of a closed aqueduct or feeder pipe, as for a water wheel, to absorb sudden rises of pressure and to furnish water quickly during a drop in pressure. *Webster 3rd* b. An open tank to which the top of a surge pipe is connected so as to avoid loss of water during a pressure surge. *Hammond* c. In pumping of ore pulps, a relatively small tank that maintains a steady loading of the pump. When new pulp is in short supply, a float valve causes recirculation of part of the load, therefore avoiding settlement. Alternatively, a float may vary the speed of the pump, vary the rate of delivery to the tank, or divert the flow to a parallel system. *Pryor, 3*

surging

The flapping of a moving rope. See: [whipping](#)

surturbrand

An Icelandic term for a peatlike variety of brown coal or lignite occurring in the Pliocene deposits and sometimes under the volcanic overflows of Iceland.

survey

a. The orderly and exacting process of examining and delineating the physical or chemical characteristics of the Earth's surface, subsurface, or internal constitution by topographic, geologic, geophysical, or geochemical measurements; esp. the act or operation of making detailed measurements for determining the relative positions of points on or beneath the Earth's surface. *AGI* b. The associated data or results obtained in a survey; a map or description of an area obtained by surveying. *AGI* c. An organization engaged in making surveys; e.g., a government agency such as the U.S. Geological Survey. d. See: [borehole survey](#) e. To determine and delineate the form, extent, and position of (as a tract of land, a coast, or a harbor) by taking linear and angular measurements and by applying the principles of geometry and trigonometry. *Webster 3rd* f. A measured plan and description of a portion of an area or of a road or line through an area obtained by surveying. *Webster 3rd* g. The information plotted from a borehole survey. *Long*

surveying

a. The act or process of making a borehole survey. See also: [borehole survey](#) b. Specif., in civil engineering, the science or art of making such measurements as are necessary to determine the relative position of points on or beneath the surface of the Earth, or to establish such points. *Seelye, 2* c. The art of making a survey; specif. the applied science that teaches the art of making such measurements as are necessary to determine the area of any part of the Earth's surface, the lengths and directions of the boundary lines, and the contour of the surface, and of accurately delineating the whole on paper. *AGI* d. The act of making a survey; the occupation of a person that surveys. *AGI*

survey meter

An instrument sensitive to ionizing radiations used in prospecting for radioactive deposits. *Webster 3rd*

surveyor

One who applies special knowledge and techniques gained through experience or training to make surface and underground surveys at a mine, locating himself/herself on the Earth's surface by taking instrument shots on the sun or stars and making necessary calculations, surveying and calculating the volume of material in dumps, carrying survey lines underground by shaft plumbing (cord or wire with attached bob is suspended from the shaft surface) and instrument shots taken on the bob at a shaft station, controlling by underground surveys and calculations the driving and connection of underground passages on and between various levels, computing the volume of coal in portions of the mine from survey notes, and drafting maps of the mine workings. Also called spud setter; underground surveyor. Syn: [mine surveyor](#)

surveyor's compass

An instrument used in surveying for measuring horizontal angles. Syn: [surveyor's dial](#) *Webster 3rd*

surveyor's cross

A simple instrument made of two bars forming a right-angled cross with sights at each end and used in setting out right angles in surveying. *Webster 3rd*

surveyor's dial

See: [surveyor's compass](#)

surveyor's level

A leveling instrument consisting of a telescope (with cross hairs) and a spirit level mounted on a tripod, revolving on a vertical axis, and having leveling screws that are used to adjust the instrument to the horizontal. *AGI*

surveyor's measure

A system of measurement used in land surveying, having the surveyor's chain (one chain = 4 rods = 66 ft = 20.1 m = 100 links = 1/80 mile) as a unit. CF: [Gunter's chain](#)

Surwell clinograph

Well-surveying device for large-diameter holes that determines the departure of the borehole from vertical. Uses a gyroscope and spherical level with a photographic record made on 16-mm moving-picture film, which includes a photograph of a small watch by which the depth is determined from correlation with a synchronized depth-time record made at surface. *AGI*

susannite

A trigonal mineral, $Pb_4(SO_4)(CO_3)_2(OH)_2$; trimorphous with leadhillite and macphersonite; in the Susanna Mine, Leadhills, Scotland.

susceptibility

a. Property of a material that defines the extent to which it will be magnetized in a given external field. *Schieferdecker* b. The ratio of the electric polarization to the electric intensity in a polarized dielectric. The ratio of induced magnetization to the strength H of the magnetic field causing the magnetization. Syn: [magnetic susceptibility](#); [volume susceptibility](#). *AGI*

suspect terrane

A terrane whose spatial and genetic relations with respect to adjacent terranes during their time of formation is unknown or uncertain. Inasmuch as most terranes fall into these categories, the term may be considered redundant. See also terrane. *AGI*

suspended matter

Particles from the feed, of specific gravity equal or close to that of a separating medium, and which are therefore relatively difficult to remove from the bath. *BS, 5*

suspended solids

Solids that can be separated from a liquid by filtration. *Bennett*

suspended tray conveyor

A vertical conveyor having one or more endless chains with suitable pendant trays, cars, or carriers that receive objects at one elevation and deliver them to another elevation.

Syn: [corner-fastened tray conveyor](#); corner-hung tray conveyor; suspended tray elevator; suspended tray lift.

suspended tray elevator

See: [suspended tray conveyor](#)

suspended tray lift

See: [suspended tray conveyor](#)

suspended tubbing

A permanent method of lining a circular shaft in which the tubbing (German type) is temporarily suspended from the next wedging curb above. Slurry is run in behind the tubbing by means of a funnel passing through the holes provided in the segments. No temporary supports are required. See also: [tubbing](#)

suspended water

See: [vadose water](#)

suspension

a. The condition of a mixture of solid particles and water or air in which the solid particles are individually supported, normally by means of an upwardly moving current and sometimes with the assistance of mechanical agitation. *BS, 5* b. A mode of sediment transport in which the upward currents in eddies of turbulent flow are capable of supporting the weight of sediment particles and keeping them indefinitely held in the surrounding fluid (such as silt in water or dust in air). *AGI* c. The state of a substance in such a mode of transport; also, the substance itself. *AGI* d. A method of rock bolting employed to secure loose fragments or sections of rock that may fall from a mine roof. *Lewis; Fraenkel*

suspension current

See: [turbidity current](#)

suspension dryer

See: [flash coal dryer](#)

suspensoid particles

Small solid particles suspended in a liquid; they exhibit the Brownian movement and do not settle by themselves, but can be readily coagulated. *Bennett*

suspent

Material in suspension that is to be filtered out. *Bennett*

sussexite

A white mineral: $(\text{Mn}, \text{Mg})\text{BO}_2(\text{OH})$. It is isomorphous with szaibelyite. *AGI*

Sutton, Steele, and Steele dry table

A concentrator of the Wilfley type in motion, but instead of using water, stratification is by means of rising currents of air. Heavy grains are pushed forward by the head motion, while lighter grains roll or flow down the slope toward the tailing side. *Liddell*

suture joint

See: [stylolite](#)

svabite

A hexagonal mineral, $\text{Ca}_5(\text{AsO}_4)_3\text{F}$; apatite group.

svanbergite

A trigonal mineral, $\text{SrAl}_3(\text{PO}_4)(\text{SO}_4)(\text{OH})_6$; beudantite group; at Wermland and Skane, Sweden.

svitalskite

See: [celadonite](#)

swab

a. A pistonlike device provided with a rubber cap ring that is used to clean out debris inside a borehole or casing. *Long* b. See: [bailer](#); sand pump. c. In well drilling, to pull the drill string so rapidly that the drill mud is sucked up and overflows the collar of the borehole, thus leaving an undesirably empty borehole. *Long* d. Procedure for applying suction within the casing or tubing to draw fluid from a reservoir rock. *Wheeler, R.R.* e. A rod with flexible rubber suction cups working inside the pipe on a wire line. *Wheeler,*

R.R. f. A hemp brush used in founding, esp. for holding water, moistening mold joints, spraying on edges, or spreading blacking on dry-sand molds. *Webster 3rd*

swad

a. Newc. A thin layer of stone or refuse coal at the bottom of the seam. b. N. of Eng. Impure shaly coal or black shale. *Arkell*

swag

a. A shallow, water-filled hollow produced by subsidence, resulting from underground mining. *AGI* b. A digger's roll of blankets, containing spare clothes, food, etc. *Gordon*

swage block

A large rectangular block of cast iron used by a blacksmith. It is pierced through with numerous holes, both round and square in section, for the reception of work that requires shouldering. *Crispin*

swallet hole

See: [sinkhole](#)

swallow

Derb. A loose, broken, or porous place in a vein. It derives its name from the ease with which water sinks through the loose material.

swamp

As applied to a mining claim, to clear a narrow strip along the boundary line, where the location is on timberland.

swamp buggy

Any vehicle with very large, low-pressure tires enabling it to be used in swamps.

swamp ore

See: [bog iron](#); bog iron ore.

swarf

a. In diamond grinding operations, a relatively dry dust derived either from grinding operations where no coolant or lubricant is applied to the grinding operation or where the

coolant (kerosene, an aqueous solution, or an emulsion of oil and water) is sprayed on the wheel as a fine mist. *Chandler* b. Fine metallic particles removed by a cutting or grinding tool; chippings and shavings from soft iron castings used as a reducing agent in various chemical syntheses. *Webster 3rd* c. Scot. A tool for widening boreholes. *Fay* d. An intimate mixture of grinding chips and fine particles of abrasive and bond resulting from a grinding operation. *ASM, 1*

swarm

See: [dike swarm](#)

swartzite

A monoclinic mineral, $\text{CaMg}(\text{UO}_2)(\text{CO}_3)_3 \cdot 12\text{H}_2\text{O}$; radioactive; green; forms an efflorescence with gypsum, schroekingite, bayleyite, and andersonite.

swaugh

Derb. A soft clay in the vein.

S wave

A body wave that travels through the interior of an elastic medium with particle motion perpendicular to the direction of propagation. Originally applied to earthquake seismology, where it was the second (hence: S) type of wave to arrive at a recording station. Syn: [distortional wave](#); equivolumnar wave; rotational wave; secondary wave; shear wave. See also: [transverse wave](#)

sway

A sideways movement, such as sidesway, in a structural frame. *Hammond*

swaying of a bank

York. Undergoing disturbance due to weight of the roof. A settling of the mine roof.

sway rod

A diagonal brace designed to resist wind or other horizontal force acting on a structural framework. *Hammond*

sweal

a. Eng. To burn slowly. b. To melt and run down; to waste away without feeding the flame. A candle is said to sweat when the grease runs down owing to its burning in a strong current of air or being improperly carried or fixed.

sweat

a. To gather surface moisture in beads as a result of condensation. The roof of a mine is said to sweat when drops of water are formed upon it, by condensation of steam formed by the heating of the waste or goaf. *Webster 3rd* b. To exude nitroglycerin; said of dynamite in which nitroglycerin separates from its adsorbent. *Webster 3rd*

sweaters

See: [thawing](#)

sweating

a. The condensation of moisture and distillation products on the surface of a roast heap, forming a damp and sticky crust. *Fay* b. See: [exudation](#)

sweating out

Bringing small globules of one of the low-melting constituents of an alloy to the surface during heat treatment, such as lead out of bronze. *ASM, I*

swedenborgite

A hexagonal mineral, $\text{NaBe}_4\text{SbO}_7$; at Laangban, Sweden.

Swedish bit

See: [chisel bit](#)

Swedish iron

An iron of highest quality owing to the freedom from phosphorus and sulfur of the Swedish ore. *Crispin*

Swedish mining compass

A compass in which a magnetic needle is suspended on a jewel and a stirrup so that it can rotate about both a horizontal and a vertical axis. *AGI*

sweep

a. Aust. That part of a branch that reunites with the main vein farther on. b. In founding, a profile pattern, used esp. in forming molds for cylindrical or other symmetrical articles. *Standard, 2* c. A form or template used for shaping sand molds or cores by hand. *ASM, 1* d. A curved metal blade projecting from the central shaft of a pug mill to force clay through holes at the bottom. *Standard, 2*

sweeping

See: [sweeps](#)

sweeping table

Stationary circular buddle provided with rotating brushes that prevent formation of channels as pulp flows radially across. *Pryor, 3*

sweep plates

Eng. Curved plates for barrowways at a turn. A turnsheet.

sweeps

a. The dust of the workshops of jewelers, goldsmiths, silversmiths, and assayers and refiners of gold and silver. Also called sweeping. b. Brushwood arms on round buddles that rotate slowly and break down channels as ore slime runs across the surface. *Pryor, 3*

sweepwashings

Valuable metal washed from sweeps. *Standard, 2*

sweet

a. Eng. Free from combustible gases or other gases, or from fire stink. b. Applied to potable water and to oil and gas free of hydrogen sulfide. c. Said of crude oil or natural gas that contains few or no sulfur compounds. CF: [sour](#)

sweetish astringent

Applied to those minerals that have the taste of alum.

sweet roast

See: [dead roast](#)

sweet roasting

Complete roasting or until arsenic and sulfur fumes cease to form. See also: [roasting](#)

sweet water

See: [fresh water](#)

swell

a. A space in a seam from which the coal has been eroded and its place filled with clay or sand. Syn: [horseback](#) b. A local enlargement or thickening in a vein or ore deposit, as opposed to a pinch. c. The tendency of soils, on being removed from their natural, compacted beds, to increase in volume owing to an increase in void ratio; i.e., the space between soil particle increases. *Carson, I* d. A low dome or quaquaversal anticline of considerable areal extent. e. Waves caused by the wind but no longer being activated. *Schieferdecker* f. Long and generally symmetrical waves, period approx. 10 s, produced by storm and wind remote from the point of observation. These are gravity waves and contribute to the mixing processes in the surface layer and thus to its sound transmission properties. *Hy* g. In geology, a large-scale submarine topographic feature rising above the surrounding surface and having nearly equal length and width. *Hy*

swelled coupling

A rod coupling having a considerably larger outside diameter than the drill rods to which it is threaded, such as BW rod outside diameter with AW rod threads. Syn: [oversize coupling](#)

swelled ground

a. A soil or rock that expands when wetted. *Long* b. Soil or rock that flows into mine workings as a result of pressure.

swelling number

A numerical expression to indicate the relative swelling properties of a sample when heated under standardized conditions. *Nelson*

swelling of shale

When a shaft is sunk through a thick, dry deposit of shale, the absorption of water may cause the shale to swell and damage the shaft lining. Again, when shale is exposed to weathering, the lamina tends to separate and the material swells. When wet, the disintegrated mass still further swells and eventually becomes a plastic clayey deposit. *Nelson*

swelling pressure

a. The pressure that heated and softened coal exerts when it is obstructed from free swelling. b. The pressure exerted by a contained clay when absorbing water in a confined space.

swilley

A depression in a mine road from which the road rises both ways. *Mason*

swimming stone

See: [floatstone](#)

swinestone

a. A variety of marble that gives off a fetid odor when broken or rubbed. Also called stinkstone. See also: [bituminous limestone](#) b. See: [fetid calcite](#) c. See: [anthraconite](#)

swing

a. In power-shovel nomenclature, the rotation of the superstructure on the vertical shaft in the mounting. *Carson, 1* b. In revolving shovels, to rotate the shovel on its base. *Nichols, 1* c. See: [swing radius](#) d. In churn drills, to operate a string of tools. *Nichols, 1*

swing angle

The distance in degrees that a shovel must swing between digging and dumping points. *Nichols, 2*

swing cut

See: [slabbing cut](#)

swing-hammer crusher

a. A rock breaker in which crushing force is generated by hammers loosely mounted on a rapidly revolving shaft. Rock entering the crushing chamber is hit and rebounds against liner plates of walls or against other rock, until small enough to escape through a grid. *Pryor, 3* b. A machine in which size reduction is effected by elements loosely pivoted to disks fitted on a rotating horizontal shaft mounted in a surrounding casing. Also called pulverizer; swing-hammer mill; swing hammer. See also: [Jeffrey crusher](#)

swing-hammer regulator

A simple method of regulating the flow of lump ore in a chute. It consists of several heavy pivoted hammers that allow fine ore to pass through, but check the passage of lumps. *Nelson*

swinging a claim

The adjustment of the boundaries of a mining claim to more nearly conform to the strike of the vein. A reasonable time is allowed the discoverer to explore the vein or lode to find out its strike and make the adjustment.

swinging-electrode controller

This controller is made up of three fixed electrodes consisting of groups of parallel plates of noncorroding alloy fixed at the bottom of curved troughs of insulating material of uniform width and varying depth. The trough is deep at the end, corresponding to full speed and minimum resistance; it is shallow at the maximum-resistance starting position. The moving electrodes, of similar construction, are joined to form the star point of the rotor and are moved toward or away from the fixed electrodes, giving a wide range of resistance. *Sinclair, 5*

swinging-gate anemometer

An instrument of the steady deflection type where speed is read off directly from the scale of the instrument. This is most useful for measuring low speeds, since it permits a spot reading. This instrument does not integrate and is used extensively in work connected with the ventilation of building interiors and to a fair extent underground. *Roberts, 1*

swinging plate

An amalgamated copper plate hung in a sluice to catch float gold. *Fay*

swinging-vane anemometer

This instrument consists essentially of a damped, pivoted vane that is deflected when placed in an airstream. As the weight of the vane is constant, the angle of inclination will be dependent upon the rate of change of momentum of the impinging airstream. The instrument gives a direct reading and can be calibrated for use over a wide range of velocities, from 20 to 2,000 ft/min (6.1 to 609.6 m/min). In underground airways, it can be used without attachments. Its main use is the measurement of air velocity in ducts and the rate of air discharge from ventilating grills. *Roberts, 1*

swing-jib crane

A crane with one horizontal boom on which there is a counterweight. It can swing through a full circle. See also: [tower crane](#)

swing loader

A tractor loader that digs in front and can swing the bucket to dump to the side of the tractor. *Nichols, 1*

swing loose

Arkansas. To gradually loosen over a considerable area and sag; said of the rock over a mine working.

swing of a lathe

The largest diameter of work that can be carried between the centers of a lathe. In England, the swing refers to radius. *Crispin*

swing parting

Arkansas. A parting some distance from the mouth of an entry. The loaded cars are left by the gathering driver to be taken out by a swing driver.

swing radius

See: [swing](#)

swing roller

In a revolving shovel, one of several tapered wheels that roll on a circular turntable and support the upper works. *Nichols, 1*

swing shift

a. Workday from 4 p.m. to midnight. *Nichols, 1* b. Occasionally refers to the 12 midnight to 8 a.m. shift. *Nichols, 1* c. Working arrangement in a three-shift continuously run plant that changes working hours at regular intervals. During swing the old morning shift becomes the new afternoon shift. The afternoon shift of the first period must work the morning shift of the next with only an 8-h break on the first day of change. *Pryor, 3*

Swiss lapis

A fraudulent imitation of lapis lazuli (lazurite) obtained by staining pale-colored jasper or ironstone with ferrocyanide. Also known as German lapis. See also: [false lapis](#)

switch

a. A mine switch is a device for enabling a car or a trip of cars to pass from one track to another. The term switch is also frequently used in a loose sense to apply to the whole side track or turnout, and a car standing on a side track is frequently said to be standing on the switch. See also latches. *Kiser* b. Eng. A mechanical device for opening and closing an electric circuit; a mechanism for shifting a moving body in another direction. *CTD*

switchback

a. A zigzag arrangement of a roadway (or rail tracks) for surmounting the grade of a steep hill or the slope wall of a surface or open-pit mine. Common in mountainous mining districts. b. A hairpin curve. *Nichols, I* c. See: [shunt back](#)

switchgear

This is a general term applied to switching, interrupting, controlling, metering, protective, and regulating devices, as well as assemblies of these devices with associated interconnections, accessories, and supporting structures. The term is used primarily in connection with generation, transmission, distribution, and conversion of electric power.

switch plate

An iron plate on tramroads in mines used to change the direction of movement. Syn: [turnsheet](#)

switch point

A movable tongue or rail for diverting a train from one track to another.

switch throw

a. The arrangement of levers by means of which a switch is thrown for the straight track or the turnout. *Jones, I* b. The handle or lever by which a switch is operated.

swither

A colloquial term used in the Wisconsin lead-mining region for an offshoot or branch of a main lode. *AGI*

swivel coupling

a. A coupling where one link is made so that it can be rotated independently of other links. When such a coupling is used, one or more cars can be rotated on a revolving

dump without uncoupling from the rest of the trip. *Zern* b. A coupling that gives complete rotary freedom to a deflecting wedge-setting assembly in boreholes. *Long*

swivel head

a. The assembly of a spindle, chuck, feed nut, and feed gears on a diamond-drill machine that surrounds, rotates, and advances the drill rods and drilling stem. On a hydraulic-feed drill, the feed gears are replaced by a hydraulically actuated piston assembly. Also called boring head; drill head; drilling head; gate. *Long* b. In a diamond drill, the mechanism that rotates the kelly and drill string. *Nichols, 1*

swivel-head bevel gear

The bevel gear mounted on the outside of the drive quill in the swivel head of hydraulic-feed and/or some types of gear-feed diamond drills. The gear meshes with, and is driven by, a matching gear on the drill-motor shaft. *Long*

swivel hoisting plug

See: [hoisting plug](#)

swivel neck

Syn. for a water or a mud swivel in borehole drilling. Also called gooseneck. *Long*

swivel plug

See: [hoisting plug](#)

swivel trough

A short, adjustable-angle trough that permits turning the conveyor panline any amount up to 30 degrees, either to the right or to the left. The position of the swivel is controlled by a roof jack and a pendulum. *Jones, 1*

swivel vise

A bench vise that may be rotated on its base to bring the work that it holds into better position. *Crispin*

sycee silver

Pure, uncoined, lump silver of various sizes, usually stamped with a banker's or assayer's seal; used by the Chinese as a medium of exchange and reckoned by weight. The larger

lumps, sometimes called shoes, are boat shaped and weigh about 1 lb troy (370 g).
Standard, 2

syenite

A group of plutonic rocks containing alkali feldspar (usually orthoclase, microcline, or perthite), a small amount of plagioclase (less than in "monzonite"), one or more mafic minerals (esp. hornblende), and quartz, if present, only as an accessory; also, any rock in that group; the intrusive equivalent of "trachyte." With an increase in the quartz content, syenite grades into "granite." Its name is derived from Syene, Egypt. A.G. Werner in 1788 applied the name in its present meaning; the Egyptian rock is a granite containing much quartz.

syenodiorite

A group of plutonic rocks intermediate in composition between syenite and diorite, containing both alkali feldspar (usually orthoclase) and plagioclase feldspar, commonly more of the former; also, any rock in that group. Generally considered a syn. of monzonite, but may also include both monzonite and rocks intermediate between monzonite and diorite (Streckeisen, 1967). See also: [monzonite](#)

syenogabbro

A plutonic rock differing in composition from gabbro by the presence of alkali feldspar.
AGI

sylvane

Former name for native tellurium and for sylvanite.

sylvanite

a. A monoclinic mineral, $2[\text{AuAgTe}_4]$; soft; metallic; commonly in implanted crystals resembling written characters; sp gr, 8.1; in quartz veins; a source of gold and silver. Also spelled silvanite. Syn: [graphic ore](#); [graphic tellurium](#); [white tellurium](#); [yellow tellurium](#); goldschmidtite. b. An old name for native tellurium. *Dana, 1*

sylvester

A hand-operated device for withdrawing supports from the waste or old workings. The appliance enables a leverage of about 30 to 1 to be applied. A long chain allows it to be positioned a safe distance from the support to be extracted. It may also be used for applying tension or for moving machines short distances. See also: [tension end](#); [monkey winch](#). *Nelson*

Sylvester process

A three-step method for the recovery of manganese and iron from open-hearth slag and low-grade ores. *Osborne*

sylvine

The name for potassium chloride found native in the salt deposits at Stassfurt, Germany. See also: [sylvite](#)

sylvinite

A mining term for the mixtures of sylvite and halite occurring in the Prussian salt deposits; mined as potassium ore. *English; AGI*

sylvite

An isometric mineral, $4[\text{KCl}]$; cubic cleavage; bitter salty taste; soft; white; in evaporite deposits and around fumaroles; the chief source of potassium. Syn: [sylvine](#); [leopoldite](#).

symbiosis

Two or more organisms living together to the mutual benefit of both. *Rogoff*

symbol

A diagram, design, letter, color hue, abbrev., or other graphic device placed on maps, charts, and diagrams, that by convention, usage, or reference to a legend is understood to represent a specific characteristic, feature, or object, such as structural data, rock outcrops, or mine openings. *AGI*

symbols of crystal faces

a. The mathematical expressions for designating the position of crystal faces on coordinate axes. See also: [Miller indices](#); [plane](#). b. Any sign or letter used in crystallography to designate a group of smaller faces. *AGI*

symmetrical dispersion

In optical mineralogy, the dispersion that produces an interference figure with color distribution symmetrical to the trace of the axial plane and also to a line normal to it.

symmetrical fold

A fold whose limbs have the same angle of dip relative to the axial surface. CF: [asymmetric fold](#)

symmetric spread

See: [split spread](#)

symmetry

a. Symmetry in crystallography results from periodic repetition. A symmetry element is the geometrical locus about which a group of repeating operations acts. It may be a center, a mirror plane, or a rotation axis. b. A symmetry group is a collection of symmetry elements that may intersect at a point (point group) or that may be distributed in three-dimensional space (space group). See also: [point group](#) c. The symmetry of a fabric is the combined symmetry of all the elements making up the fabric. There are five possible symmetries: (1) spherical, for fabrics having the symmetry of a sphere; (2) axial, for fabrics having the symmetry of a spheroid; (3) orthorhombic, for fabrics having the symmetry of a triaxial ellipsoid; (4) monoclinic, for fabrics having one unique plane of symmetry; and (5) triclinic, for fabrics having no planes of symmetry.

symmetry axis

See: [axis of symmetry](#); crystal axis.

symon

Red shale, Shropshire, United Kingdom. See also: [calamanco](#)

symond strings

Thin veins of calcium carbonate running through the coal. Also spelled simon strings.

symon fault

A syn. of horseback, named after such a structure in the Coalbrookdale coalfield of England that was originally thought to be a large fault. See also: [horseback](#)

Symon's cone crusher

A modified gyratory crusher used in secondary ore crushing that consists of a downward-flaring bowl within which is gyrated a conical crushing head. The main shaft is gyrated by means of a long eccentric that is driven by bevel gears. See also: [gyrasphere crusher](#)

Symon's disk crusher

A mill in which the crushing is done between two cup-shaped plates that revolve on shafts set at a small angle to each other. These disks revolve with the same speed in the same direction and are so set as to be widest apart at the bottom. Feed is from the center, and the material is gradually crushed as it nears the edge and is then thrown out by centrifugal force. *Liddell*

sympathetic detonation

a. Detonation of an explosive material by means of an impulse from another detonation through air, earth, or water. *Dick, 1* b. The initiation of an explosive charge without a priming device by the detonation of another charge close by. Syn: [flash over](#)

symplectic

Said of a rock texture produced by the intimate intergrowth of two different minerals; sometimes the term is restricted to such textures of secondary origin. One of the minerals may assume a vermicular habit. Also, said of a rock exhibiting such texture, or of the intergrowth itself; i.e., symplectite. Also spelled: symplektic; symplectitic; symplektitic. CF: [dactylitic](#)

symplectite

An intimate intergrowth of two different minerals, sometimes restricted to those of secondary origin; also, a rock (igneous or thermally metamorphosed) characterized by symplectic texture. Also spelled: symplektite. CF: [pegmatite](#)

symplesite

A triclinic mineral, $\text{Fe}_3 (\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; vivianite group; dimorphous with parasymplesite; soft.

symptomatic mineral

See: [diagnostic mineral](#)

synadelphite

A triclinic mineral, $(\text{Mn,Mg,Ca,Pb})_9 (\text{AsO}_3)(\text{AsO}_4)_2 (\text{OH})_9 \cdot 2\text{H}_2\text{O}(?)$; pseudo-orthorhombic.

synantetic

Proposed by Sederholm and applied to those primary minerals in igneous rocks that are formed by the reaction of two other minerals, as in kelyphite rims, reaction rims, etc. *Johannsen*

synchisite

A rare, weakly radioactive, orthorhombic or monoclinic mineral, $\text{Ca}(\text{Ce}, \text{Nd}, \text{Y}, \text{La})(\text{CO}_3)_2 \text{F}$, usually found in pegmatites associated with aegirite, microcline, astrophyllite, fluorite, gadolinite, xenotime, cordylite, and catapleiite. May be related to parisite. Also spelled synchysite. *Crosby*

synchromesh

A silent-shift transmission construction in which hub speeds are synchronized before engagement by contact of leather cones. *Nichols, 1*

synchronal

See: [synchronous](#)

synchronicity

The state of being synchronous or simultaneous; coincident existence, formation, or occurrence of geologic events or features in time, such as glacial synchronicity. Syn: [synchronism](#)

synchronic

See: [synchronous](#)

synchronism

The state when the phase difference between two or more periodic quantities is zero; they are then said to be in phase. See: [synchronicity](#)

synchronous

Occurring, existing, or formed at the same time; contemporary or simultaneous. The term is applied to rock surfaces on which every point has the same geologic age, such as the boundary between two ideal time-stratigraphic units in continuous and unbroken succession. It is also applied to growth (or depositional) faults and to plutons emplaced contemporaneously with orogenies. CF: [isochronous](#); [diachronous](#). Syn: [synchronal](#); [synchronic](#). *AGI*

synchronous motor

This type of motor has a stator similar to a squirrel cage motor, but the rotor has a direct-current field winding with salient poles equal in number to the stator poles. The direct current is supplied to the field winding through slip rings. In addition to the direct-

current field windings, the rotor normally has a squirrel cage (amortisseur) winding that is used for starting. *Pit and Quarry*

synchysite

Orthorhombic minerals, synchysite-(Ce) $\text{CaCe}(\text{CO}_3)_2\text{F}$, synchysite-(Nd) $\text{CaNd}(\text{CO}_3)_2\text{F}$, and synchysite-(Y) $\text{CaY}(\text{CO}_3)_2\text{F}$ (doverite) of the bastnaesite group; pseudo-hexagonal. See: [doverite](#)

synclinal

An obsolete form of syncline.--adj. Pertaining to a syncline. CF: [anticlinal](#)

synclinal axis

In geology, the central line of a syncline, toward which the beds dip from both sides. See also: [axis](#)

synclinal mountain

A mountain whose geologic structure is that of a syncline. CF: [anticlinal mountain](#)

synclinal valley

A valley whose geologic structure is a syncline. CF: [anticlinal valley](#)

syncline

A fold in which the core contains the stratigraphically younger rocks; it is generally concave upward. CF: [anticline](#) synclinal. *AGI*

synclinorium

a. A compound syncline; a closely folded belt, the broad general structure of which is synclinal. Also called synclinore. b. A major syncline composed of many smaller folds. See also: [geosyncline](#)

syndicate man

In bituminous coal mining, a person who works with a party of miners who operate machines for undercutting, drilling, and loading coal into cars at the working face and are paid on a basis of tonnage of coal mined. *DOT*

synergism

a. Action of two agents, usually two chemicals, to produce an end effect greater than or different from the sum of the effects of the two agents acting separately. b. Used in metallurgy with reference to reagent combinations to obtain the maximum possible recovery of ore or metal. *Nelson*

synform

A fold whose limbs close downward in strata for which the stratigraphic sequence is unknown. CF: [syncline](#); [antiform](#). *AGI*

syngenetic

a. Said of a mineral deposit formed contemporaneously with, and by essentially the same processes as, the enclosing rocks. CF: [epigenetic](#) *AGI* b. Said of a primary sedimentary structure, such as a ripple mark, formed contemporaneously with the deposition of the sediment. *AGI*

syngenetic deposit

A deposit formed contemporaneously with the parent rock and enclosed by it. There are two types of syngenetic deposits, igneous and sedimentary. Some examples are nickeliferous sulfides, nontitaniferous magnetite, diamond, chromite, and corundum. *Lewis*

synkinematic

See: [syntectonic](#)

synneusis

A mechanism by which small plagioclase crystals float into growing phenocrysts of potassium feldspar. Also, said of the texture of a rock showing such crystals. Etymol: Greek, to swim together. *AGI*

synorogenic

Said of a geologic process or event occurring during a period of orogenic activity; or said of a rock or feature so formed. CF: [syntectonic](#) *AGI*

synorogenic pluton

An igneous intrusion emplaced during a period of orogenic activity. *AGI*

syntaxy

An intergrowth between two mineral species in which single or multiple unit cells coincide in size and shape, e.g., bastnaesite-synchisite. CF: [distaxy](#); [epitaxy](#); [topotaxy](#); [polycrystal](#).

syntectic

The adj. of syntexis.

syntectite

A rock formed by syntexis.

syntectonic

Said of a geologic process or event occurring during any kind of tectonic activity, or of a rock or feature so formed. CF: [synorogenic](#) Syn: [synkinematic](#)

syntexis

a. The formation of magma by melting of two or more rock types and assimilation of country rock; anatexis of two or more rock types. *AGI* b. Modification of the composition of a magma by assimilation. *AGI* c. Any kind of reaction between a rising body of magma and the crustal rocks with which it comes into contact.--Adj: syntectic. See also: [anatexis](#)

synthesis

The production of a chemical compound by the union of elements or of simpler compounds or by the degradation of a complex compound, esp. by laboratory or industrial methods.

synthetic

See: [synthetic stone](#)

synthetic diamond

a. A diamond produced artificially by subjecting a carbonaceous material to extremely high temperature and pressure; currently and commonly called MM and/or manmade diamond. See also: [manmade diamond](#) b. A misnomer for sintered tungsten carbide. *Long*

synthetic gem

One artificially made from chemicals. *Schaller*

synthetic mineral

An artificial substance having all the properties of a mineral. *Hurlbut*

synthetic ore

Material that is the equivalent of, or better than, natural ore, can be put to the same uses, and is produced by means other than ordinary concentration, calcining, sintering, or nodulizing.

synthetic ruby

In chemical composition and in all their physical characters, including optical properties, synthetic ruby and synthetic sapphire are true crystalline ruby or sapphire, but they are produced in quantity in the laboratory by fusing pure precipitated alumina with a predetermined amount of pigmentary material. They can be distinguished from natural stones only by the most careful examination. Syn: [synthetic sapphire](#)

synthetic sapphire

See: [synthetic ruby](#)

synthetic stone

A man-made stone that has the same physical, optical, and chemical properties, and the same chemical composition, as the genuine or natural stone that it reproduces. Many gem materials have been made synthetically as a scientific experiment, but only corundum, spinel, emerald, rutile, garnet, quartz, chrysoberyl (alexandrite), opal, and turquoise have been made commercially and cut as gemstones for the jewelry trade. Syn: [imitation](#)

syntron feeder

A feeder placed under a bin, hopper, or ore pass opening (or raise) that vibrates by the use of magnetic force to distribute ore evenly onto a moving conveyor belt. It can be adjusted to regulate the flow through various degrees of vibration.

syphon brick

A brick for tapping metal from the cupola, the primary object of which is to eliminate the tapping and botting up of the cupola tap hole each time metal is drawn off. With the syphon brick, the orifice from which the metal is drawn is continually open to the atmosphere, and the flow of metal is controlled by shutting the blast on and off. The ease of control permits the use of quite small ladles at the cupola, so that there is no need for redistribution from large to small ladles. *Osborne*

Syrian garnet

Trade name for almandine garnet, of gem stone quality. *CTD*

sysertskite

Former name for iridosmine.

system

a. A standard, worldwide division; contains rocks formed during a fundamental chronologic unit, a period. An example is the Devonian system. *AGI* b. The fundamental time-rock unit is the system. *AGI* c. In crystallography, the division of first rank, in the classification of crystals according to form. The six systems ordinarily recognized are the isometric, tetragonal, hexagonal, orthorhombic (or rhombic), monoclinic, and triclinic; some divide the hexagonal system into hexagonal and trigonal. d. Applied to the sum of the phases that can be formed from one, two (binary system), three (ternary system), or more components under different conditions of temperature, pressure, and composition. *Holmes, 2* e. The term system or general system of work means simply that the work, as it is commenced on the ground is such that, if continued, will lead to a discovery and development of the veins or orebodies that are supposed to be in the claim, or, if these are known, that the work will facilitate the extraction of the ores and mineral. *Ricketts*

systematic error

Any error that persists and cannot be considered as due entirely to chance, or an error that follows some definite mathematical or physical law or pattern and that can be compensated, at least partly, by the determination and application of a correction; e.g., an error whose magnitude changes in proportion to known changes in observational conditions, such as an error caused by the effects of temperature or pressure on a measuring instrument or on the object to be measured. CF: [random error](#)

systematic sampling error

a. An error that arises from some basic defect in the sampling or preparation process such that the result obtained is always either higher or lower than the true figure. Systematic errors are additive; i.e., if there are two sources of error, the total error is obtained by adding the individual errors. *Nelson* b. An error due to some known physical law by which it might be predicted; those errors produced by the same cause affect the mean in the same sense and do not tend to balance each other but rather give a definite bias to the mean. An error that results from some bias in the measurement process and is not due to chance, in contrast to random error. *McGraw-Hill, 1*

systematic support

The setting of timber or steel supports regularly at fixed intervals irrespective of the condition of the roof and sides; a support in accordance with a system specified in rules made by the manager of the mine. *Nelson*

systematic timbering

Placing mine timbers according to a predetermined plan, regardless of roof conditions. *Zern*

systems of crystals

The seven large divisions into which all crystallizing substances can be placed, namely isometric (or cubic), tetragonal, hexagonal, trigonal, orthorhombic (or rhombic), monoclinic, and triclinic. This classification is based on the degree of symmetry displayed by the crystals. *CMD*

szaibelyite

A white to yellow acicular mineral, $MgBO_2(OH)$. Probably orthorhombic. Occurs in nodules; related to camsellite. Syn: [ascharite](#) *Larsen; Dana, 2*

szaskaite

See: [smithsonite](#)

szomolnokite

A monoclinic mineral, $FeSO_4 \cdot H_2O$; kieserite group.

T

taaffeite

A hexagonal mineral, $BeMg_3Al_8O_{16}$; hoegbomite group; a dimorph of musgravite; violet-red.

tab

Token, check, tally. Syn: [teller](#)

tabasheer

Translucent to opaque and white to bluish white opaline silica of organic origin (deposited with the joints of a bamboo shoot), valued in the East Indies as a medicine and used in native jewelry. Also spelled tabaschir or tabashir.

tabby

A mixture of lime with shells, gravel, or stones in equal proportions, with an equal proportion of water, forming a mass that when dry becomes as hard as rock; a substitute for bricks or stone in building. *Fay*

Tabbyite

Trade name for a variety of solid asphalt found in veins in Tabby Canyon, UT.

table

a. See: [rotary table](#) crushed particles of ore or coal from gangue. *Weed, 2* c. In placer mining, a wide, shallow sluice box designed to recover gold or other valuable mineral from screened gravel. See also: [undercurrent](#) *Hess*

table cut

a. An early style of fashioning diamonds in which opposite points of an octahedron were ground down to squares to form a large cutlet and a larger table, the remaining parts of the eight octahedral faces being polished. b. A term used somewhat loosely to describe any one of the variations of the "bevel cut," provided it has the usual large table of that cut. Syn: [bevel cut](#)

table diamond

A relatively flat diamond of table cut. *Webster 3rd*

table flotation

Flotation process practiced on a shaking table. Ore or coal is ground, deslimed, conditioned, and fed to table as thick slurry. Flotable particles become glomerules, held together by minute air bubbles and edge adhesion. These roll across and are discharged nearly opposite the feed end. The process is helped by jets of low-pressure air from piping set across table. Tailings work along deck to discharge end. *Pryor, 3*

tableland

a. A general term for a broad, elevated region with a nearly level or undulating surface of considerable extent; e.g., South Africa. *AGI* b. A plateau bordered by abrupt clifflike edges rising sharply from the surrounding lowland; a mesa. *AGI*

table spar

See: [tabular spar](#); wollastonite.

tabling

Separation of two materials of different densities by passing a dilute suspension over a slightly inclined table having a reciprocal horizontal motion or shake with a slow forward motion and a fast return. *Bennett*

tabular

a. Said of a feature having two dimensions that are much larger or longer than the third, such as a dike, or of a geomorphic feature having a flat surface, such as a plateau. *AGI*
b. Said of the shape of a sedimentary body whose width to thickness ratio is greater than 50:1, but less than 1,000:1 (Krynine, 1948); e.g., a graywacke formation in a geosynclinal deposit. CF: [blanket](#); [prism](#). *AGI*
c. Said of a sedimentary particle whose length is 1.5 to 3 times its thickness (Krynine, 1948). CF: [prismatic](#)
d. Said of a metamorphic texture in which a large proportion of grains are tabular and have approximately parallel orientation (Hart, 1977) *AGI*
e. Said of a crystal form that shows one dimension markedly smaller than the other two.
f. Tabular crystals, such as wollastonite, may occur in tables, plates, disks, foliae, and scales. *Schieferdecker*; *AGI*
g. A mineral showing broad, flat surface, e.g., wollastonite. *Nelson*
h. See: [tabular deposit](#)
i. Refers to crystals that have three distinctly different dimensions. CF: [acicular](#); [anisodesmic](#); [equant](#).

tabular crystal

A crystal flattened parallel to any face. *Standard, 2*

tabular deposit

A flat tablelike or stratified bed; e.g., a coal seam. See: [tabular](#) *Nelson*

tabular spar

Wollastonite in tabular form. Syn: [table spar](#)

tabular structure

The structure of a mineral or rock that makes it tend to separate into plates or laminae. *AGI*

Taby cut

A modified double-spiral cut, the benefits of which are that the holes are located vertically below one another on one and the same line to facilitate drilling. *Langefors*

tacharanite

A monoclinic mineral, $\text{Ca}_{12} \text{Al}_2 \text{Si}_{18} \text{O}_{51} \cdot 18\text{H}_2 \text{O}$.

tacheometer

See: [tachymeter](#); subtense bar.

tachometer

An instrument for measuring speed. In mining it is used on hoists lifting cages, cars, or skim in shafts or slope. *Zern*

tachyhydrite

A trigonal mineral, $\text{CaMg}_2 \text{Cl}_6 \cdot 12\text{H}_2 \text{O}$. Also spelled tachydrite or tachhydrite.

tachymeter

A surveying instrument designed for use in the rapid determination from a single observation of the distance, direction, and elevation difference of a distant object; esp. a transit or theodolite with stadia hairs, or an instrument in which the base line for distance measurements is an integral part of the instrument. Syn: [multiplying constant](#); [tacheometer](#). *AGI*

tachymetry

A method of rapid surveying using the tachymeter; e.g., the stadia method of surveying used in United States. *AGI*

tack

a. A small pillar of coal. *Fay* b. Veinstone; gangue, etc. See also: [taking](#)

tackey

Having a rough, catchy surface. *Gordon*

tackle

An assemblage of ropes or wire cables and pulleys arranged for hoisting or pulling. *Long*

Tacoma process

An electrolytic method for the production of iron powder. *Osborne*

taconite

a. A local term used in the Lake Superior iron-bearing district of Minnesota for any bedded ferruginous chert or variously tinted jaspery rock, esp. one that enclosed the Mesabi iron ores (granular hematite); an unleached iron formation containing magnetite, hematite, siderite, and hydrous iron silicates (greenalite, minnesotaite, and stilpnomelane). The term is specif. applied to this rock when the iron content, either banded or disseminated, is at least 25%. Also spelled taconyte. *AGI* b. Since World War II, a low-grade iron formation suitable for concentration of magnetite and hematite by fine grinding and magnetic treatment, from which pellets containing 62% to 65% iron can be produced. *AGI*

taconite ore

A type of highly abrasive iron ore now extensively mined in the United States. *Sandstrom*

taconyte

See: [taconite](#)

tactite

A rock of complex mineralogical composition, formed by contact metamorphism and metasomatism of carbonate rocks. It is typically coarse-grained and rich in garnet, iron-rich pyroxene, epidote, wollastonite, and scapolite. Approximate syn: skarn. See also: [calc-silicate hornfels](#)

taeniolite

A monoclinic mineral, $\text{KLiMg}_2\text{Si}_4\text{O}_{10}\text{F}_2$; mica group; at Narsarsuk, Greenland, and Magnet Cove, AR. Also spelled tainiolite.

taenite

An isometric mineral, (Fe,Ni); contains 27% to 65% nickel; occurs in iron meteorites as lamellae or strips flanking bands of kamacite. Also called gamma-nickel-iron (face-centered cubic). See also: [nickel iron](#)

tag

A numbered piece that a miner attaches to or places on each car a miner loads. The tag is removed at the tippie where the car is credited to the miner. See also: [tally](#); [ticket](#). CF: [wedge rock](#)

tagged atom

See: [tracer](#)

Tagg's method

a. A graphical method of determining the resistivity of the ground. *AGI* b. A method of interpretation of resistivity sounding data obtained with a Wenner array over a two-layered Earth. *AGI*

tagilite

See: [pseudomalachite](#)

tagline

A line from a crane boom to a clamshell bucket that holds the bucket from spinning out of position. *Nichols, 1*

tail

a. (also plural). The inferior, less valuable, or refuse part of anything; foots, bottoms, dregs; sediment. See also: [tailings](#) b. The poor grade of ore slime at the lower end of the slime box as it flows from the stamps. *Standard, 2* c. The unexposed end of a brick or stone in a wall; a tailing. *Standard, 2* d. The rear of a shovel deck. *Nichols, 1* e. The anchor end of a cable excavator. *Nichols, 1* f. A bar or barrier formed behind a small isle or a skerry. Also called trailing spit; banner bank. *Schieferdecker*

tail anchor

The anchor for a track cable, or the turn point for a backhaul line in a cable excavator. *Nichols, 2*

tail beam

A joist or beam that abuts against the header joist. Syn: [tail joist](#) *Crispin*

tailblock

a. The boom foot and idler sprocket assembly on a ladder ditcher. *Nichols, 1* b. The block used to pull a slusher to the face.

tailboard

See: [tailgate](#)

tail chain

A chain used in mine haulage; also, tail rope. *Korson*

tail crab

In mining, a crab or winch for operating a tail rope. *Standard, 2*

tailend

a. That part of a mining belt conveyor that consists of the tail section and, when required, a belt takeup, a telescopic section, and a loading station. *NEMA, 2* b. The end of a conveyor remote from the delivery point. See also: [tension end](#)

tailend loading station

See: [loading station](#)

tailgate

A subsidiary gate road to a conveyor face as opposed to a main gate. The tailgate commonly acts as the return airway and supplies road to the face. Syn: [barrier gate](#); [tailboard](#). See also: [bottom gate](#)

tail house

The buildings in which tailings are treated. *Fay*

tailing

a. Giving the proper angle, or elevation, in driving the poling boards in a heading. *Stauffer* b. The part of a projecting brick or stone inserted in a wall. *Crispin*

tailing pit

See: [catch pit](#)

tailing pond

Area closed at lower end by constraining wall or dam to which mill effluents are run. Clear water may be returned after settlement in dam, via penstock(s) and piping. *Pryor, 3*

tailings

a. The gangue and other refuse material resulting from the washing, concentration, or treatment of ground ore. See also: [tail](#) *Webster 3rd* b. Those portions of washed ore or coal that are regarded as too poor to be treated further *Standard, 2* c. Applied to sectional residue, e.g., table tailings, which is the residue from shaking screens and tables. *Nelson* d. The reject from froth flotation cells. *BS, 5*

tailings dam

One to which slurry is transported, the solids settling while the liquid may be withdrawn. *Pryor, 3*

tailings machine

A machine for sifting the tailings and collecting the gold from the detritus after it has passed through the washer. *Nelson*

tailings settling tank

A vessel to remove solids from the tailings effluent as in a coal washery. The tank is about 60 ft (18 m) in diameter and 10 ft (3 m) deep. The tailings are fed in at the center with a flocculant. As the suspension travels from the center to overflow at the perimeter of the tank, the solids settle out and the clear water overflows, is collected, and is returned to the washer for reuse. *Nelson*

tailings wheel

A wheel carrying buckets or compartments on the periphery and used in conveying liquid, pulp, or sand from a lower to a higher level. *Fay*

tail joist

A joist that has one end terminating against a header joist. See: [tail beam](#)

taillight

A light carried at the back end of a car, train, trip, or movable machinery.

tail of water

The edge of water standing in mine workings. *BS, 10*

tail pipe

The suction pipe of a pump. *Fay*

tail pulley

a. The terminal pulley at the end of the conveyor opposite the normal discharge end. It is usually an idler pulley but may be a drive pulley. *NEMA, 2* b. The pulley or roller in the tail or foot section of a belt conveyor around which the belt runs. Also known as foot-section pulley. *Jones, 1*

tailrace

A trough or channel used for conveying the tailings; a channel for conducting water away from any plant or works. *Nelson*

tail rope

a. The rope that passes around the return sheave in main-and-tail haulage or a scraper loader layout. See also: [main rope](#) b. The rope used to draw the empties back into a mine in a tail-rope haulage system. *Zern* c. A counterbalance rope attached beneath a cage when the cages are hoisted in balance. *Zern* d. A hemp rope used for moving pumps in shafts. *Fay*

tail-rope boy

See: [tail-rope coupler](#)

tail-rope coupler

In bituminous coal mining, one who works on a tail-rope haulage system, removing the haulage-cable hook from the rear of a train of empty cars that has been lowered down an inclined haulageway, and attaching the hook to the front of a train of loaded cars to be hauled to the surface. Also called tail-rope boy. *DOT*

tail-rope engineer

In bituminous coal mining, one who operates a hoisting engine that draws the cable of a tail-rope haulage system used to raise and lower mine cars on tracks between the surface and a level in a mine. *DOT*

tail rope fireman

In bituminous coal mining, a person who fires the boiler supplying steam for the engine that powers the tail-rope haulage system, a type of cable haulage used to raise and lower cars along an incline between the surface and a level in a mine. *DOT*

tail-rope haulage

A single track system of rope haulage in which a double-drum haulage engine at the unloading terminal winds the main rope on one drum. The train or trip of cars is connected to the other end of the main rope and also to a tail rope that extends to the inner terminal in the mine, around a tail sheave, and then back over idler sheaves at one side of the haulageway to the other drum at the haulage engine. See also: [rope haulage](#)

tail-rope man

See: [tail-rope rider](#)

tail-rope rider

In bituminous coal mining, one who works on trains of cars hauled by tail-rope haulage system at mine, coupling and uncoupling cars, and hooking and unhooking cable to and from trains. Also called tail-rope man. *DOT*

tail-rope system

A method of haulage in which one rope--the main rope--is attached to the front end of a trip of cars and another rope--the tail rope--is attached to the rear end of the trip. It is operated by a hoisting engine and two separate drums. *Hudson*

tails

Can. Portion of tailings containing some mineral that cannot be economically removed. This is constantly assayed as it leaves the treatment plant so that recovery can be known and controlled at all times. CF: [heads](#)

tail section

The part of a mining belt conveyor that consists of the tail pulley, the framing, belt idlers if included, and means for attaching a belt takeup. *NEMA, 2*

tail shaft

The shaft in the tail or foot section of a belt or chain conveyor that supports either the tail pulley or the tail sprocket. *Jones, 1*

tail sheave

a. An arrangement whereby a sheave is placed at the bottom of a shaft, and a rope is fastened to the bottom of one cage and then passed down around the sheave and up to the bottom of the cage in the other compartments; thus practically complete balancing is

effected. *Lewis* b. The pulley around which the tail rope of a scraper loader or main-and-tail haulage passes. See also: [turn pulley](#)

tail swing

The clearance required by the rear of a revolving shovel. *Nichols, 1*

tail-track system

The simplest form of track layout for car or trip loading. In this system, the track can merely be extended down the heading, or it can be turned right or left, and then turned back, U-fashion, in an adjacent heading. The major disadvantage is that trips must come out the same way they go in, meaning increased loss of time unless the changing track is very close. *Coal Age, 3*

tail water

The water downstream from a structure, as below a dam. *AGI*

tainiolite

See: [taeniolite](#)

take

a. A mineral-bearing area that a mine is permitted to work. Also called holding; parcel; taking. *BS, 7* b. The area or extent of coal that a coal mine owner has the right, under a lease, to mine and extract. See also: [concession system](#); [royalty](#). *Nelson* c. Eng. The extent or area of a lease of mineral property, often several thousand acres. *Fay* d. Lanc. To show or reveal gas. *Fay*

takeout

Cumb. An outcrop. As a verb, to crop out. *Fay*

take the air

a. To measure the ventilating current. *Fay* b. Applied to a ventilating fan as working well, or working poorly. *Fay*

takeup

a. In a belt-conveyor system, a tensioning device such as a carriage-mounted weight free to run downslope or a takeup pulley with weights hanging vertically below the belt near

the feed end. *Pryor*, 3 b. Any device for taking up slack or removing the looseness of parts due to wear or other cause. *Crispin* c. See: [chain takeup](#)

takeup pulley

An idler pulley so mounted that its position is adjustable to accommodate changes in the length of the belt as may be necessary to maintain proper belt tension. *NEMA*, 2

taking

Eng. A mineral-land lease. See also: [take](#); [tack](#). *Fay*

takyr

A surface depression containing clay and evaporites in south-central Asia. Also spelled takir.

Talbot continuous process

A pig iron and ore process that depends upon the rapid oxidation of the impurities contained in pig iron by a liquid, highly ferruginous slag and that is carried out in the basic open-hearth furnace, generally of the tilting type. The essential feature of the process is to retain a certain amount of metal in the furnace (1) to dilute the impurities contained in the additions of pig iron, and (2) to supply the heat necessary to keep the slag very fluid. *Osborne*

Talbot process

A process for protecting the inside of cast-iron pipes with a coating of sand and bitumen. *Hammond*

talc

a. A monoclinic and triclinic mineral, $2[Mg_6(OH)_4(Si_8O_{20})]$; basal cleavage; soft; has a greasy or soapy feel; easily cut with a knife; occurs as hydrothermal alteration of ultramafic rocks, low-grade metamorphism of siliceous dolomites in foliated, granular, or fibrous masses; an insulator, ceramic raw material, and lubricant. Originally spelled talck. See also: [steatite](#); [soapstone](#). b. In commercial usage, a talcose rock; a rock consisting of talc, tremolite, chlorite, anthophyllite, and related minerals. Syn: [talcum](#)

talcite

a. A massive variety of talc. *Fay* b. Damourite, a soapy-feeling hydromuscovite.

talcoid

Resembling talc, as talcoid schist. *Fay*

talcose

a. Pertaining to or containing talc; e.g., talcose schist. b. Resembling talc; e.g., a talcose rock that is soft and soapy to the touch.

talc schist

A schist in which talc is the dominant schistose mineral. Common associates are mica and quartz. *AGI*

talcum

See: [talc](#); soapstone.

talking

Applied to a series of small bumps or cracking noises within the walls. Bumping, talking, and spitting are signs that the rock is beginning to yield to the stresses and indicate a change in conditions within the rock. *Spalding*

tallow drop

A style of cutting precious stones in which the stone is domed on one or both sides. *Fay*

tallow peat

Ir. A variety of highly flammable peat. *Tomkeieff*

tallow top

A precious stone with a very rounded front and a flat back. *Standard, 2*

tally

a. A mark or number placed on every car of coal or ore a miner sends out, usually a metal ticket. By counting these, a tally is made of all the cars the miner sends out. See also: [tab](#); [tag](#); [ticket](#). *Fay* b. A brass tag attached to a chain at every tenth link, and so marked or shaped as to enable the position of the tally along the chain to be immediately read. *CTD*

tally boy

See: [tally shouter](#)

tallyman

See: [chute checker](#)

tally shouter

A laborer who calls out the number chalked on each loaded mine car, as it is run on scales for weighing, so that the weighmaster can identify for pay purposes the miner who loaded the car. Syn: [tally boy](#)

talus

Rock fragments of any size or shape (usually coarse and angular) derived from and lying at the base of a cliff or very steep, rocky slope. Also, the outward sloping and accumulated heap or mass of such loose broken rock, considered as a unit, and formed chiefly by gravitational falling, rolling, or sliding. See also: [scree](#)

talus creep

The slow downslope movement of talus, either individual rock fragments or the mass as a whole. *AGI*

talus fan

See: [alluvial fan](#)

tam-o-shanter

A very fine-grained, soft, gritty, natural stone found in Scotland. *Fay*

tamp

a. To tightly pack a drilled hole with moist, loose material after the charge has been placed. *Hudson* b. To fill a charged shothole with clay or other stemming material to confine the force of the explosion. See also: [stemming](#) c. To ram or pound down ballast on a railway track, or road metal. *CTD* d. See: [stem](#)

tamper

a. In bituminous coal mining, one who fills drill holes in which explosives have been charged, by machine driller or miner, with clay or some other tamping material, using a tamping bar. Also called shot tamper. *DOT* b. An implement for tamping or compacting material; a tamping iron or tamping bar. Sometimes made of wood, copper, or iron with a copper tip. See also: [tamping bar](#) c. One who tamps. *Standard, 2* d. A tool for compacting soil in spots not accessible to rollers. *Nichols, 1*

tamping

a. The act of inserting and packing explosives and stemming in a shothole. See also: [stemmer](#) b. The act of packing a drilled hole around a cartridge with fine dirt from the floor of a mine before blasting, to prevent a misdirection of the force of the blast. *Korson* c. The material placed over a charge in a borehole, to better confine the force of the explosion to the lower part of the hole. *Stauffer* d. Ramming down, as of ballast. *Crispin* e. The operation of compacting freshly placed concrete by repeated blows. *Taylor* f. The shaping of a semidry powder, e.g., of refractory material, in a mold by repeated blows delivered mechanically on the top mold plate. *Dodd*

tamping bag

A paper bag that is filled with good stemming material such as sand for use in horizontal and upward-sloping holes. Plastic bags are also available for this purpose. See also: [tamp](#)

tamping bar

A piece of wood the size of a broom handle for pushing explosive cartridges and stemming into shotholes. See also: [tamper](#) *Hammond; von Bernewitz*

tamping plug

A plug of iron or wood used instead of tamping material to close up a loaded blasthole. *Standard, 2*

tamping pole

A pole of nonsparking material used to tamp in blast holes. Syn: [loading pole](#)

tamping rod

See: [stemmer](#); stemming rod.

tamping roller

One or more steel drums, fitted with projecting feet, and towed by means of a box frame. *Nichols, 1*

tamping stick

See: [stemming rod](#)

tandem

a. A double-axle drive unit for a truck or grader. A bogie. *Nichols, 1* b. A pair in which one part follows the other. *Nichols, 1*

tandem drive

A three-axle vehicle having two driving axles. *Nichols, 1*

tandem-drive conveyor

A conveyor having a belt drive mechanism in which the conveyor belt is in contact with two drive pulleys, both of which are driven with the same motor. *NEMA, 2*

tandem hoisting

Hoisting in a deep shaft with two skips running in one shaft. The lower skip is suspended from the tail rope of the upper skip. Both are loaded and discharged simultaneously. The upper one discharges at the surface and is loaded at a pocket halfway down the shaft. The lower skip is loaded at the shaft bottom and discharges at the half-way pocket. Thus, the rope on the winding drum is only equal to half the full depth. See also: [two-stage hoisting](#)

tandem hydroseparator

A two-celled hydroseparator with troughs. The raw coal feed is conveyed through a trough by water under pressure where the refuse stratifies to the bottom. The action in the first cell is that of a forceful upward current, which results in the removal of the heavy refuse. In the second cell a lighter current permits the settling of lighter and smaller refuse. The refuse settles to a perforated cell deck where it joins the slowly moving slate bed to the discharge. Refuse discharge is controlled by a refuse gate or hinged plate at the end of the cell bed. *Kentucky*

Tandem support system

A trade name for a longwall steel support system. It consists of two 50-st (45-t) chocks in line at right angles to the face and linked together with a double-acting ram. In operation, the front chock is lowered and advanced with the conveyor and reset to the roof; the rear chock is then lowered and brought forward. *Nelson*

tandem unit panel

A longwall conveyor face with two face conveyors of different capacities, one delivering on to the other--tandem fashion. The layout has the disadvantage that the whole tonnage of coal must be transported along the second conveyor, and any breakdown on the second conveyor will affect the output of the entire face. *Nelson*

tanette

A small hill covering a residual surface of laterite, frequently ore bearing. *Hess*

tangawaite

See: [bowenite](#)

tangeite

Former name for calciovolborthite.

tangent

a. A straight line that touches, but does not transect, a given curve or surface at one and only one point; a line that touches a circle and is perpendicular to its radius at the point of contact. *AGI* b. The part of a traverse included between the point of tangency (the point in a line survey where a circular curve ends and a tangent begins) of one curve and the point of a curvature (the point in a line survey where a tangent ends and a circular curve begins) of the next curve. *AGI* c. A great-circle line that is tangent to a parallel of latitude at a township corner in the U.S. Public Land Surveys system. *AGI* d. A term sometimes applied to a long straight line of a traverse whether or not the termini of the line are points of curve. *AGI* e. The ratio of the length of the leg opposite an acute angle in a right-angled triangle to the length of the leg adjacent to the angle. Adj. said of a line or surface that meets a curve or surface at only one point. *AGI*

tangent distance

The distance from the point of curvature to the point of intersection (vertex), or from the point of intersection to the point of tangency. See also: [intersection point](#)

tangential stress

a. Stress parallel to the tangent to the boundary of any opening. *Obert* b. See: [shear stress](#)

tangent point

The point at which a curve meets a straight line or another curve. *Hammond*

tangent screw

A very fine, slow-motion screw giving a tangential movement for making the final setting to a precision surveying instrument (such as for completing the alignment of sight

on a theodolite or transit by gentle rotation of the reading circle about its axis). CF: [Stebinger drum](#)

tangiwai

A variety of serpentine used by the Maoris for ornaments. Similar to bowenite. See also: [bowenite](#)

tangiwaite

A term used by the Maoris of New Zealand for bowenite, a massive variety of antigorite. Also spelled tangiwai or tangawaite.

tangle sheet

Mica with intergrowths of crystals or laminae resulting in books that split well in some places but tear to produce a large proportion of partial films. *Skow*

tank

a. A large vessel or receptacle, made either of wood or of metal, intended to contain a fluid or gas, as water tank, gasoline tank. Syn: [vat](#) *Fay* b. A melting unit, in which the container for the molten glass is constructed from refractory blocks. *ASTM*

tankage

a. The act or process of storing oil, etc., in a tank. *Fay* b. The price charged or paid for storage in a tank. *Fay* c. The capacity of a tank or tanks. *Fay* d. The waste residue deposited in lixiviating vats or tanks. *Fay*

tank furnace

Essentially a large box of refractory material holding from 6 to 200 st (5.4 to 181 t) of glass, through the sides of which are cut ports fed with a combustible mixture (producer gas and air, coke oven gas and air, or oil spray and air), so that flame sweeps over the glass surface. With the furnace is associated a regenerative or recuperative system for the purpose of recovering part of the heat from the waste gas. *CTD*

tank station

See: [station](#)

tantalite

A mineral series ferrotantalite-manganotantalite; unless specified it refers to ferrotantalite, an orthorhombic mineral, FeTa_2O_6 ; black; in pegmatites; the main source of tantalum.

tantalum

A rather brittle, lustrous, hard, heavy, gray metallic element. Symbol, Ta. Occurs principally in the mineral columbite-tantalite, $(\text{Fe,Mn})(\text{Nb,Ta})_2\text{O}_6$. Widely used to fabricate chemical process equipment, nuclear reactors, and aircraft and missile parts. Used to make electrolytic capacitors, vacuum furnace parts, and surgical appliances. *Handbook of Chemistry and Physics, 3*

tantalum borides

Several borides are known, including the following: TaB_2 , melting point, 3,200 degrees C; sp gr, 12.5; thermal expansion, 5.5×10^{-6} ; TaB , melting point, 2,400 degrees C; sp gr, 14.3; Ta_3B_4 , melts incongruently at 2,650 degrees C; sp gr, 13.6. *Dodd*

tantalum nitrides

Two nitrides are known: TaN , melting point, 3,090+ or -50 degrees C; Ta_2N , which loses nitrogen at 1,900 degrees C. *Dodd*

tanteuxenite

An orthorhombic mineral, $(\text{Y,Ce,Ca})(\text{Ta,Nb,Ti})_2(\text{O,OH})_6$; black. Syn: [delorenzite](#)

tantite

A possibly triclinic mineral, Ti_2O_5 .

Tanzanite

A blue to violet gem variety of zoisite.

tap

a. To cut or bore into old workings or water-bearing strata for the purpose of proving or extracting gas or water. *BS, 10* b. To intersect with a borehole and withdraw or drain the contained liquid as water from a water-bearing formation or from underground workings. *Long* c. To drive one passageway into another. *Hudson* d. To win coal in a new district. *Fay* e. A threaded cone-shaped fishing tool. It may be either an inside or an outside tap, depending on whether the tap fits into or over the outside of a piece being fished. Syn: [tapered tap](#) f. A quantity of a liquid, as molten metal from a furnace, run out

at one time. *Webster 3rd* g. To drain a furnace. *ASTM* h. To remove excess slag from the floor of a pot furnace. *ASTM*

tap bar

A pointed bar by which a blast-furnace tap-hole is opened or the metal in a melting pot, etc., is tested. Syn: [tapping bar](#)

tape

A continuous ribbon or strip of steel, invar, dimensionally stable alloys, specially made cloth, or other suitable material, having a constant cross section and marked with linear graduations, used by surveyors in place of a chain for the measurement of lengths or distances. *AGI*

tape corrections

These are applied as a routine matter to slope, temperature, sag, standardization, gravity and sea level effect when measuring a length accurately with a tape. See also: [precision](#); [tension correction](#). *Hammond*

taper

A gradual and uniform decrease in size, as a tapered socket, a tapered shaft, a tapered shank. *Crispin*

taper bit

A long cone-shaped noncoring bit used in drilling blastholes and in wedging and reaming operations. When the nose of the bit is rounded and the overall shape resembles the silk end of a corncob, the bit often is called a corncob bit. CF: [bullnose bit](#)

tapered core bit

A core bit having a conical diamond-inset crown surface tapering from a borehole size at the bit face to the next larger borehole size at its upper, shank, or reaming-shell end, as from EX to AX, or BX to NX. *Long*

tapered end

An end of rope having a reduced diameter to facilitate threading the rope through fittings and over pulleys. *Hammond*

tapered-flange beam

The common form of rolled steel joist in which the inner surfaces of the flanges are tapered, normally at an angle of 98 degrees to the web. See also: [web](#)

tapered reamer

A reamer having a conical diamond-inset surface tapering from any borehole size at its lower (bit) end to the next larger borehole size at its upper (core barrel) end, such as EX to AX, AX to BX, BX to NX. *Long*

tapered step-core bit

See: [tapered step-face bit](#)

tapered step-face bit

A tapered core bit having the cutting face set in the same manner as a step-face bit. *Long*

tapered tap

See: [tap](#)

taper-lock sprocket

A sprocket with a split tapered bushing for rigid mounting on a shaft. *Jackson, 1*

taper of thread

Measurement in inches of taper or slope for a 1-ft (0.3-m) length of the threaded section of rod or pipe. *Brantly, 2*

taper pin

A straight-sided pin that is smaller at one end than at the other. *Nichols, 1*

taper rope

A rope that has a gradually diminishing diameter from the upper to the lower end. The diameter of the rope is decreased by dropping one wire at a time at regular intervals. Both round and flat ropes may be made tapered, and such ropes are intended for deep shaft hoisting with a view to proportioning the diameter of the rope to the load to be sustained at different depths. *Zern*

taper-type dropper

A device by which straight-type wedge can be attached to a diamond-drill rod, lowered, and set in a borehole. *Long*

tape-triangulation method

A method of measuring mine roadway area in which a tape is stretched diagonally across the roadway. Offsets to the roof, floor, and sides are taken at right angles to the tape and on both sides of it. Alternatively, the floor of the cross section is divided into equal increments and vertical offsets to the roof are made at each division. Horizontal offsets to the sidewalls are made from the nearest adjacent vertical offsets. The measurements so obtained are plotted to scale, and the area of the resulting diagram is determined from the plot. Syn: [mine roadway area measurement](#)

taphole

A hole at or near the bottom of a furnace or ladle through which molten metal, matte, or slag can be tapped or drawn from a furnace. Also called tapping hole. Syn: [metal notch](#)

tapiolite

The mineral series ferrotapiolite-manganotapiolite.

tappet

a. A sliding member working in a guide, interposed between a cam and the push rod or valve system that it operates, to eliminate side thrust on the latter. *CTD* b. The collar under which a cam is inserted so as to lift a stamp. Also called disk. *Fay*

tapping

a. Opening the outlet of a melting furnace to remove molten metal. *ASM, I* b. Removing molten metal from a furnace. *ASM, I* c. The act of boring a hole into old workings to release gradually any accumulation of water and gas. This may be followed by driving an advance heading into the area. As the heading is extended, boreholes are kept in advance of the face to prevent the sudden breakthrough of water. See also: [inrush of water](#)

tapping assembly

A mechanical device consisting of a short piece of casing cemented in the collar of a borehole at the upper end of which is affixed a gate or large plug valve followed by a rod stuffing box. Utilizing this assembly, underground drilling can be accomplished safely in areas of high hydrostatic pressure. *Long*

tapping bar

See: [tap bar](#)

tapping clay

A plastic clay used in plugging the tap-hole of a smelting furnace. *Standard, 2*

tapping old workings

Boring a hole into old workings to release gradually any accumulation of water and gas. The borehole tapping may be followed by driving an advance heading into the area. As the heading is extended, boreholes are kept in advance of the face to prevent the sudden breakthrough of water. See also: [inundation](#); [inrush of water](#). *Nelson*

tar

a. A thick brown to black viscous organic liquid, free of water, which is obtained by condensing the volatile products of destructive distillation of coal, wood, oil, etc. It has a variable composition, depending on the temperature and material used to obtain it. *AGI*
b. Any of various dark brown or black, bituminous, usually odorous, viscous liquids or semiliquids that are obtained by the destructive distillation of wood, coal, peat, shale, and other organic material, and yield pitch on distillation. *Webster 3rd*
c. Soft pitch or thickened petroleum, found in cavities of some limestones. *Fay*

taramellite

An orthorhombic mineral, $\text{Ba}_4 \text{Fe}_4 (\text{B}_2 \text{Si}_8 \text{O}_{27}) \text{O}_2 \text{Cl}$; forms a series with titantaramellite; forms reddish-brown radiating fibrous aggregates; at Candoglia, Piemont, Italy.

taramite

A monoclinic mineral, $\text{Na}_2 \text{CaFe}_3 \text{Al}_2 (\text{Si}_6 \text{Al}_2) \text{O}_{22} (\text{OH})_2$; amphibole group with magnesium replacing iron toward magnesiotalamite; black; at Wali-tarama, Mariupol, Ukraine.

tarapacaite

An orthorhombic mineral, $\text{K}_2 \text{CrO}_4$; has the olivine structure; yellow.

tarasovite

An interstratified mica and clay.

tarbuttite

A triclinic mineral, $Zn_2(PO_4)(OH)$; forms a series with paradamite; at Broken Hill, Kabwe, Zambia. Syn: [salmoite](#)

tare

a. To weigh mine cars when empty in order to determine the weight of coal in a car when the loaded car is weighed, done at specific intervals so that miners paid on a tonnage basis may receive proper credit for coal that they have loaded. *BCI* b. Allowance for weight of packing or container in which goods are moved. The difference between gross and net weight. *Pryor, 3*

target

a. Sliding weight on a leveling rod used in surveying, to enable the staffman to read the line of collimation. In underground leveling, a bead on a hanging plumbline used for the same purpose; distance from this to the roof or working is then measured. *Pryor, 3* b. The point a borehole or exploration work is intended to reach. c. The distinctive marking or instrumentation of a ground point to aid in its identification on an aerial photograph. It is a material marking so arranged and placed on the ground as to form a distinctive pattern over a geodetic or other control-point marker, on a property corner or line, or at the position of an identifying point above an underground facility or feature. *AGI* d. The image pattern on an aerial photograph of the actual mark or target placed on the ground prior to photography. *AGI* e. The vane or sliding sight on a surveyor's level rod; a device, object, or point upon which sights are made. *AGI*

target rod

A type of leveling staff provided with a sliding target, which can be moved by the staffman, under direction from the leveler, to a position in which it is in line with the line of sight of the level, the staff reading being recorded by the staffman. *CTD*

tarmacadam

Asphalt that is made artificially from grit, crushed stone, or gravel and is bonded or coated with tar or a tarbitumen mixture. See also: [premix](#) *Nelson*

tarnish

A thin alteration film that forms on mineral surfaces, esp. on copper minerals, with color and luster different from that on fresh fractures.

Tarnowitz process

A metallurgical process in which large charges of lead ore are roasted at low temperatures in furnaces and treated substantially, such as in the Carinthian process. The residual containing considerable lead is remelted in special furnaces. *Fay*

tarring

a. The coating of piles used for permanent work with prepared acid-free tar before driving. The tar is obtained from the high-temperature carbonization of coal in horizontal retorts. *Nelson* b. The act of coating, (as of a pipe) with tar.

task

The number of tons or the amount of ore or material that can or should be loaded either by mechanical loaders or by hand loaders. Also called score. *Jackson, 2*

task training

Specific training given to a miner prior to performing a task where the worker has had no previous work experience. CF: [new miner training](#); refresher training. *Federal Mine Safety*

Tasmanian alexandrite

Alexandrite (chrysoberyl) of good gem quality from Tasmania, Australia.

tasmanite

An impure coal, transitional between cannel coal and oil shale. Syn: [combustible shale](#); [yellow coal](#); Mersey yellow coal; [white coal](#). *AGI*

tasmanite shale

See: [tasmanite](#)

tatarskite

An orthorhombic mineral, $\text{Ca}_6 \text{Mg}_2 (\text{SO}_4)_2 (\text{CO}_3)_2 \text{Cl}_4 (\text{OH})_4 \cdot 7\text{H}_2\text{O}$; with anhydrite in saline strata of the Caspian depression.

tator butt

Shrop. Fragile sandstone.

tautline cableway

The tautline cableway differs from the aerial tramway in that its operation is limited to the distance between two towers (not more than 3,000 ft or 915 m apart), it has only one carrier, and the traction cable is reeved at the carrier so that loads can be raised and lowered. Also, the tautline cableway is not restricted to a fixed position; the towers can be mounted on trucks or crawlers, and the machine then can be shifted across a wide area. The machine will hoist loads from any point under the span, convey these loads in either direction, and lower these loads at any point under the span. By using movable towers, an area of any length can be traversed. Equipped with slings, this machine will pick up and carry unwieldy loads of every kind; then by exchanging the slings for a skip, it will handle large chunks of ore, stone, etc., or it can be equipped with a dump bucket to handle any bulk material, including semifluid mixtures. *Pit and Quarry*

tautomeric

Descriptive term for amphoteric substance, able to react in accordance with two oppositely directed structural arrangements of its atoms. *Pryor, 3*

tavistockite

An old name for an apatite mineral.

tavorite

A triclinic mineral, $\text{LiFe}(\text{PO}_4)(\text{OH})$; amblygonite group; forms green or yellow fine-grained aggregates; in Brazil.

tawmawite

A yellow to green to dark-green variety of epidote containing chromium; occurs in Tawmaw, upper Burma (Myanmar).

taxoite

Serpentine from Chester County, PA. *Schaller*

taylorite

a. An obsolete name for bentonite; named after William Taylor who made the first commercial shipments of the clay from the Rock Creek district, Wyoming. b. A variety of arcanite containing ammonium found in guano beds on islands off Peru.

Taylor producer

A furnace used for the manufacture of producer gas. *Fay*

Taylor-White process

A process for heat-treating high-speed steels. *Webster 3rd*

T-bolt

A bolt with a T-shaped head, made to fit into a T-shaped slot in a drill swivel head; by means of it the swivel head can be turned to any angle of inclination to drill a borehole. Also, a similar bolt made to fit into a T-slot in the bed of a machine, for the purpose of holding a piece of metal to be machined or to fasten a machine to its base. *Long*

tchesa stick

a. An igniting stick used to light powder fuses when firing a round of shots. Also called a fire stick. *Pryor, 3* b. A paper shell about 1/4 in (0.64 cm) in diameter and 8 in (20.3 cm) long, filled with a balanced combustible that gives a strong spitting flame of 4 min duration. This device requires the individual lighting of each fuse. *Lewis* c. See: [fuse lighter](#)

T-chisel

A boring tool with its cut-edge made in the form of the letter T. *Fay*

teallite

An orthorhombic mineral, (Pb,Sn)S ; perfect basal cleavage; soft; blackish gray; sp gr, 6.4; in veins; a source of lead and tin.

teardrop set

A surface-set diamond-bit crown molded in a die, prepared so that each inset diamond is backed by a raised teardrop-shaped mound of matrix metal. *Long*

tear fault

A steep to vertical fault associated with a low-angle overthrust fault and occurring in the hanging wall. It strikes perpendicular to the strike of the overthrust; displacement may be horizontal, and there may be a scissor effect. It is considered by some to be a type of strike-slip fault. *AGI*

teary ground

a. Ground easily broken and worked. *Gordon* b. Corn. A lode or stratum that breaks easily by reason of many joint planes. *Fay*

teasing rods

Light iron rods, about 2 ft (0.6 m) long, hinged together to form one continuous length of 40 to 60 ft (12 to 18 m). They are pushed up inside a drainage borehole casing to clear stoppages of pebbles and gravel, thus allowing the drainage water to flow freely. *Eng. Min. J., 1*

teaze hole

The opening of a glass furnace through which fuel is introduced. *Standard, 2*

tectogene

a. A long, relatively narrow unit of downfolding of sialic crust considered to be related to mountain-building processes. *AGI* b. The downfolded portion of an orogen. Syn: [downbuckle](#)

tectogenesis

See: [orogeny](#)

tectonic

Said of or pertaining to the forces involved in, or the resulting structures or features of, tectonics. Syn: [geotectonic](#)

tectonic breccia

A breccia formed as a result of crustal movements, usually developed from brittle rocks. CF: [fault breccia](#); [fold breccia](#); [crush breccia](#). *AGI*

tectonic conglomerate

See: [crush conglomerate](#)

tectonic gap

See: [lag fault](#)

tectonic map

A map that portrays the architecture of the outer part of the Earth. It is similar to a structure-contour map, which primarily shows dipping strata, folds, faults, and the like, but the tectonic map also presents some indication of the ages and kinds of rocks from which the structures were made, as well as their historical development. *AGI*

tectonics

A branch of geology dealing with the broad architecture of the outer part of the Earth; i.e., the regional assembling of structural or deformational features, a study of their mutual relations, origin, and historical evolution. It is closely related to structural geology, with which the distinctions are blurred, but tectonics generally deals with larger features. Adj: tectonic. Syn: [geotectonics](#)

tectonism

See: [diastrophism](#)

tectonite

Any rock whose fabric reflects the history of its deformation; a rock whose fabric clearly displays coordinated geometric features that indicate continuous solid flow during formation (Turner and Weiss, 1963). Also spelled tektonite. *AGI*

tectonometer

A radar apparatus that detects changes in rock structure, particularly faults. *Nelson*

tectonophysicist

One who studies clastic deformation, flow, and rupture of constituent materials of the Earth's crust and mantle to make deductions concerning the forces causing these deformations (changes). *DOT*

tectonosphere

The outer part of the Earth above the level of isostatic equilibrium, in which the dynamic processes are thought to occur that cause orogenesis near and at the surface. CF: [crust](#)

tedge

In founding, an ingate in a mold. *Standard, 2*

tee

a. Eng. A crossvein meeting a main vein without intersecting it. b. A sleeve with a third opening in the side, usually at right angles, to allow a branch line to be connected to the main pipeline. *Kentucky* c. A fitting, either cast or wrought, that has one side outlet at right angles to the run. A single outlet branch pipe. *Strock, 1*

tee-beam

A rolled steel section in the shape of the letter T, the flat top being the table. *Hammond*

tee-bolt

See: [T-bolt](#)

teem

To pour molten metal from a ladle into ingot molds. The term applies particularly to the specific operation of pouring either iron or steel into ingot molds. Also called teeming. *ASM, 1*

teemer

a. A pourer of metal. *Standard, 2* b. One who controls the rate of pouring (teeming) stainless steel into molds. *DOT* c. The person who teems or casts the pot of glass. See also: [casting](#) *ASTM*

teeming

a. Shaping glass by pouring it into or on molds, tables, or rolls. b. See: [casting](#)

teeming trough

Lanc. A cistern (or trough) into which the water is pumped from a mine. *Fay*

teepelite

a. A tetragonal mineral, $\text{Na}_2 \text{B}(\text{OH})_4 \text{Cl}$. b. See: [burkeite](#); gauslinite. From Borax Lake, CA. *English*

teeter

a. Dancing or boiling movement of small particles in a rising fluid column, when the velocity is too high to let them fall and too low to sweep them clear. Characteristic zone in hydraulic classifiers. *Pryor, 3* b. The condition of a suspension of solids in an upward-moving current of water or air, whereby the support given to the particles reduces the internal friction between them to such an extent that the suspension acquires fluid or partially fluid properties. *BS, 5*

teineite

An orthorhombic mineral, $\text{CuTeO}_3 \cdot 2\text{H}_2\text{O}$; blue; at the Teine Mine, Japan.

tekoretin

Fossil hydrocarbon similar to fichtelite. *Tomkeieff*

tektite

Glass spheroid, often with aerodynamic shape, found in strewn fields and associated with impact craters; each cluster of tektites is named for its locality, such as moldavites and australites. A tektite has been shaped by flight through the atmosphere while chilling and ablating and melted by meteorite impact. See also: [water chrysolite](#)

tektonite

See: [tectonite](#)

telain

a. Anglicized from the German telit. Greater fragments of plant tissues, which are completely soaked with vitrain; i.e., the cell walls as well as the cell cavities. *AGI* b. Used in the names of transitional coal lithotypes, e.g., clarotelain. *AGI*

telegraph

A vertical rectangular timber or steel chute for the transfer of coal to a lower level. Strips of wood placed crosswise in the chute retard the downward flow, and the chute is kept full for the same purpose. *Nelson*

telemagmatic

Said of a hydrothermal mineral deposit located far from its magmatic source. CF: [apomagmatic](#); [cryptomagmatic](#). See also: [telethermal](#) *AGI*

telemeter rod

A leveling staff used in connection with stadia work. See also: [stadia rod](#)

teleoperation

The remote manual operation of equipment that is usually not within the direct eyesight of the operator, yet the operator requires and is provided with sensory information (sight, sound, accelerations, etc.) for effective manual control.

telephoto lens

A combination of positive and negative lenses designed to obtain larger magnification of distant objects than is possible with ordinary lenses. *Seelye, 2*

telescopic derrick

A drill derrick divided into two or more sections, made so that the uppermost sections nest successively into the lower sections. In use, the sections are extended and locked into place to form a tall derrick and when moved are nested to form a unit length transportable on a single truck. *Long*

telescopic drill rig

A mobile electric, hydraulic, four-drill rig for boring blasting holes in quarries and opencast pits. All drills, percussive and rotary, can be simultaneously or independently raised, lowered, or slewed, enabling the rig to serve a working face 32 ft (9.8 m) high and 24 ft (7.3 m) wide. *Nelson*

telescopic loading trough

A shaker conveyor trough of two sections, one nested in the other, used near the face for advancing the trough line without the necessity of adding either a standard or a short length of pan after each cut. C-clamps hold the two sections together in any desired length. *Jones, 1*

telescopic section

That section of a rigid side-framed conveyor that is (1) adjustable in length, (2) immediately adjacent to the tail section, and (3) so designed that it forms a continuous framing and cover for the return belt when the tail section is pulled back to tension the belt. *NEMA, 2*

telescoping conveyor

A type of conveyor, the length of which may be varied by telescoping frame members. See also: [extendable conveyor](#)

telethermal

Said of a hydrothermal mineral deposit formed at shallow depth and relatively low temperatures, with little or no wall-rock alteration, presumably far from the source of hydrothermal solutions. Also, said of that environment. See also: [telemagmatic](#) mesothermal; epithermal; xenothermal; leptothermal. *AGI*

telinite

a. This term was proposed by W.J. Jongmans (1935) to designate a vitrinite showing cellular structure. The Nomenclature Subcommittee of the International Committee for Coal Petrology decided in 1957 to use the term telinite only for the cell walls seen in

vitrinite. Only in this manner can telinite be rightly included among the macerals. Telinite shows more or less clearly defined cell structure (wood, periderm, etc.) sometimes deformed. The cells are generally filled with collinite, but the structure is better shown when the cells are either empty or filled by material such as resinite, fine micrinite, clay minerals, etc. *IHCP* b. A maceral of coal within the vitrinite group, characteristic of vitrain and consisting of cell-wall material. CF: [suberinite](#); [xylinite](#).
AGI

teller

See: [tab](#)

telltale

a. A simple device for indicating selected conditions of loading, flow, direction, etc. *Pryor, 3* b. A device for keeping a check on employees (as factory hands, drivers, check takers), esp. a time clock. *Webster 3rd*

telluric bismuth

A former name for tetradymite. See also: [tetradymite](#)

telluric current

Natural electric current that flows on or near the Earth's surface in large sheets. Syn: [earth current](#)

telluric-current prospecting

A geophysical prospecting technique utilizing natural Earth currents as a source instead of artificially generated currents injected into the ground. *Dobrin*

telluric ocher

The mineral tellurite, TeO_2 . *Fay*

telluric silver

See: [hessite](#)

telluride

A mineral that is a compound of a metal and tellurium, such as hessite, Ag_2Te .

tellurides

Ores of the precious metals (chiefly gold) containing tellurium. *Gordon*

telluriferous

Yielding or containing tellurium. *Standard, 2*

tellurite

An orthorhombic mineral, TeO_2 ; dimorphous with paratellurite; colorless to yellow; occurs in hydrothermal veins.

tellurium

A trigonal mineral, Te , native tellurium; soft; sp gr, 6.2; semimetallic; in pyrite, sulfur, or in the fine dust of gold-telluride mines.

tellurium glance

See: [nagyagite](#)

tellurium mineral

Primarily native tellurium, Te ; tellurite, TeO_2 ; tetradyomite, $\text{Bi}_2 \text{Te}_2 \text{S}$; or hessite, $\text{Ag}_2 \text{Te}$.

tellurnickel

See: [melonite](#)

tellurobismuthite

A trigonal mineral, $\text{Bi}_2 \text{Te}_3$; tetradyomite group; forms a series with tellurantimony.

tellurometer

Trade name of a rugged portable electronic device that measures ground distances precisely by determining the velocity of a phase-modulated, continuous, microwave radio signal transmitted between two instruments operating alternately as master station and remote station. It has a range up to 35 to 40 miles (56 to 64 km). CF: [geodimeter](#)

telpher

An electric hoist that hangs from a power-driven wheeled cab rolling on an overhead rail; it is often referred to as a monorail. See also: [aerial ropeway](#)

telpherage

Automatic aerial transportation, as by the aid of electricity, esp. that system in which the carriages having independent motors are run on a stout wire conducting an electric current. *Standard, 2*

Telsmith breaker

A type of gyratory crusher often used for primary crushing. It has a fixed spindle; i.e., the spindle is not suspended from above, but is mounted in a long eccentric sleeve. Rotation of the sleeve imparts a gyratory motion to the crushing head, but gives a parallel stroke; i.e., the axis of the spindle describes a cylinder rather than a cone as in the suspended spindle gyratory. Adjustment for set in the Telsmith breaker is accomplished by placing shims between the bottom of the breaking head and an adjusting plate--the addition of shims at this point raises the crushing head and increases the throat opening. *Newton, 1; Newton, 2*

Telsmith gyrasphere

A type of secondary crusher that utilizes the gyratory principle; it has a hemispherical crushing head. *Newton, 1*

temblor

See: [earthquake](#)

temiskamite

See: [maucherite](#)

temperature

a. The heat content of a body as measured on a definite scale based on some observable phenomenon; e.g., the expansion of mercury on heating. See also: [absolute temperature](#); [Celsius](#); [centigrade](#); critical temperature; Fahrenheit; Kelvin temperature scale; Rankine scale. *Webster 3rd* b. A degree of hotness or of coldness measured on one of several arbitrary scales based on some observable phenomenon; e.g., the expansion of mercury on heating. The degree of a material substance that is a linear function of the kinetic energy of the random motion of its molecules. The degree of a vacuum that depends upon the density of the radiant energy within it. Abbreviations and symbols, temp; T; t; T; t. CF: [absolute zero](#) *Webster 3rd*

temperature coefficient

A numerical value indicating the relation between a change in temperature and a simultaneous change in some other property (e.g., solubility). Specif., the factor a in the equation $R_t = R_0 (1 + at)$, in which R_t equals the resistance of a conductor at t degrees C, and R_0 equals its resistance at 0 degrees C. Syn: [positive temperature coefficient](#)

temperature colors

Colors shown to the eye by incandescent bodies at different temperatures.

temperature dew point

Temperature at which condensation of water occurs; a saturation temperature. *Hartman, 2*

temperature gradient

a. The rate of change of temperature with distance in a specified direction. Also called lapse rate. *AGI* b. A curve showing the temperature at different distances from the hot face, in a refractory wall.

temperature logging

The measurement of temperature in boreholes by use of a delicate thermometer that will record temperature anomalies of as much as 7 degrees F (3.9 degrees C) for thin coal seams in coal measures according to the thermal conductivity of the rocks concerned. *Sinclair, 3*

temperature profile recorder

A portable unit consisting of a thermistor sensing element, 6-V power supply, amplifier, and recorder. The recorder is geared to a drum containing an electrical cable to which the bead is fastened. When the bead is lowered into the water, the paper on the recorder is moved accordingly. Depth is measured by the amount of wire paid out. This device is used in shallow water, particularly in lakes. *Hunt*

temperature-regulating equipment

Any equipment used for heating and cooling the rectifier together with the devices for controlling and indicating its temperature. *Coal Age, 1*

temperature standards

For normal measurement, 0 degrees C (regarding gas properties). For thermodynamics and physical properties, either 18 degrees C or 25 degrees C, as defined in each stated case. *Pryor, 3*

temperature steel

Reinforcement introduced into a concrete slab or other member to minimize any cracks arising from shrinkage or from temperature stresses. *Hammond*

temperature stress

Stress in a structural member due to a rise or fall of temperature. See also: [temperature steel](#)

temperature survey

a. A geophysical prospecting method that measures either (1) temperature anomalies in boreholes or (2) temperature trends and concentrations along the ground surface. For example, a temperature survey across a salt dome may give peak values in the central area, due to the high thermal conductivity of the buried salt mass. See also: [temperature logging](#) *Nelson* b. Measurement of temperature in drill holes. An absolute accuracy of about 0.05 degrees C and a precision of about 0.005 degrees C can be obtained. Maps of isotherm surfaces can be constructed that help to detect anomalies in geologic structure or subsurface ground-water conditions. *AGI*

tempered

In brickmaking, (1) moistened and worked to the proper consistency, as clay for bricks or molding, and (2) capable of being cut with ease, as bricks made of such clay. *Standard, 2*

tempered steel

Steel that has been hardened and subsequently tempered by a second lower heating. *Fay*

temperer

One who or that which tempers; specif., a machine for mingling and thoroughly working potter's clay, brick clay, mortar, plaster, or other materials. *Standard, 2*

temper hardening

A term applied to alloys that increase in hardness when heated after rapid cooling; also to the operation of producing this. Also called artificial aging; distinguished from aging or age hardening, which occurs at atmospheric temperature. Both processes are covered by the term precipitation hardening. *CTD*

tempering bar

See: [forgen](#)

tempering furnace

A furnace for heating articles in the process of tempering. *Standard, 2*

tempering machine

A machine for giving large steel plates a uniform and thorough tempering without permitting them to bend or buckle; usually by pressing them between hot masses of iron, or by firmly clamping them between jaws or plates while immersing them in a tempering bath. *Standard, 2*

tempering oven

An oven for heating glass in the process of annealing; a leer. *Standard, 2*

template

a. A form for building tunnel invert. *Stauffer* b. A pattern device used as a guide to mark points at which boreholes are to be collared in ring drilling. *Long*

temporary adjustment

An adjustment, such as leveling or focusing, made to a surveying instrument at each setup. See also: [permanent adjustment](#) *Hammond*

temporary hardness

See: [carbonate hardness](#)

temporary hardness of water

The carbonate component of water hardness, which can be destroyed by boiling. See also: [hard water](#)

temporary roof support

In coal mining; during roof bolting process, vertical posts are installed tight with wedges near the area where the next roof bolt will be installed. These are installed by reaching from a bolted area of the roof. Installed to support potentially loose roof to prevent fall onto persons.

temporary shaft support

A timber or steel lining inserted for a limited period until a permanent shaft support is installed. See also: [skeleton tubing](#)

temporary splice

According to the Federal Coal Mine Safety Act, a temporary splice is one that does not have a rubber or neoprene jacket vulcanized over the splice and bonded to the cable jacket. *USBM, 3*

tenacity

a. The property of the particles or molecules of a substance to resist separation; tensile strength. *AGI* b. The force of strength with which the particles (or molecules) of a mineral or rock hold together or resist separation. The terms commonly used to describe the tenacity of a mineral are friable, brittle, sectile, malleable, flexible, elastic, and tough. *Stokes*

tender

a. Said of roof shale that tends to break up or crush under pressure into small fragments and that will not hold in any span over a few inches. Also called short. *Raistrick* b. The formal offer by the tenderer to carry out the work described in the drawings and/or specification for a certain sum of money. See also: [agreement](#)

tennantite

An isometric mineral, $(\text{Cu,Fe})_{12}\text{As}_4\text{S}_{13}$; tetrahedrite group; forms a series with tetrahedrite; may contain zinc, silver, or cobalt replacing copper; in veins; an important source of copper. Syn: [gray copper ore](#)

tenon

A projecting tongue fitting into a corresponding cavity called a mortise. *Fay*

tenor

See: [grade](#)

tenorite

A monoclinic mineral, CuO ; occurs in gray scales, black powder, or earthy masses; sp gr, 6.4; in oxidized zones of copper deposits; a source of copper. Syn: [melaconite](#); [black copper](#). See also: [black copper ore](#)

tensile force

A force such as the force applied when a haulage rope pulls a set of tubs. *Morris*

tensile strength

The maximum applied tensile stress that a body can withstand before failure occurs. Syn: [tenacity](#) *AGI*

tensile stress

A normal stress that tends to cause separation across the plane on which it acts. CF: [compressive stress](#)

tensile test

A test in which material is subjected to an increasing tensile pull until it fractures. A stress-strain curve may be plotted, and the limit of proportionality, proof stress, yield point, ultimate tensile stress, elongation, and reduction in area can be determined. *CTD*

tension

a. In subsidence, the amount of lengthening per unit of measurement. *Nelson* b. In engineering, a pulling force or stress; metals in tension are strong, while concrete and masonry are weak. *Nelson* c. A system of forces tending to draw apart the parts of a body, esp. of a belt, a line, a cord, or a sheet, combined with an equal and opposite system of resisting forces of cohesion holding the parts of the body together. The stress caused by pulling; opposite of compression and distinguished from torsion. *Standard*, 2 d. Sometimes used in place of voltage or electromotive force. See also: [tension zone](#)

tension carriage

A bogie or frame carrying a pulley around which the rope of an endless rope haulage passes to be tensioned or tightened. The bogie moves on rails and may be kept taut by balance weights or placed on an inclined roadway (with sufficient weights) to move up or down according to the tension in the endless rope. A tension device is necessary to take up any slack rope created by varying loads on the haulage system. *Nelson*

tension-control cylinder

A hydraulic piston and cylinder mechanism that can be attached to a rotary-drill feedoff line and adjusted to allow the drill stem to feed downward while maintaining a constant preset tension on the drill string. See also: [tension drilling](#)

tension correction

The correction that must be applied to a tape if it is being used at a tension different from that at which it was standardized. See also: [tape corrections](#)

tension drilling

Drilling with part of the weight of the drill string supported by the drill swivel head or suspended on a drilling line, as opposed to drilling with the entire weight of the string imposed on the bit. See also: [tension-control cylinder](#); [weight indicator](#). *Long*

tension end

The tail end or receiving end of a belt conveyor. It consists of a return drum carried in a boxlike structure. A scraper, plow, or brush is attached to remove as much as possible of the spillage on the bottom belt before it passes on to the return drum. The tension end is drawn back by two sylvesters attached to staking anchor props; this enables adequate, but not excessive, tension to be imparted to the belt. See also: [sylvester](#); *tailend*. *Sinclair, 5*

tension fault

a. A generic term for any fault caused by tension. *AGI* b. Geological fault due to tension, which separates rock strata; unlike gravity or normal fault, since strata may reappear on other side of gap caused by fall of intervening section to lower level when fissure opened. *Pryor, 3*

tension flange

The side of a beam in tension, being the lower side in the general case of a simple beam supported at both ends. *Hammond*

tension fracture

a. A fracture that is the result of tensional stress in a rock. CF: [shear fracture](#) *AGI* b. A fracture that is the result of stresses that tend to pull material apart. *Billings* c. See: [subsidiary fracture](#)

tension jack

A type of jack equipped with a jackscrew for wedging against the roof, which also has a ratchet device for applying tension on a chain to be attached to the tail or foot section of a belt conveyor. The jacks and tension chains pull the tail section back until the belt is at the proper tension. *Jones, 1*

tension joint

A joint that is a tension fracture. Syn: [cross joint](#); [tension fracture](#).

tension linkage

A chain application in which linear motion is not continuous in direction. *Jackson, I*

tension zone

The surface area affected by tensile strain. CF: [compression zone](#); neutral zone; tension. *Nelson*

tepee butte

A conical hill or knoll resembling a Native American tepee; esp. an isolated, residual hill formed by a capping of resistant rock that protects the underlying softer material from erosion. Also spelled: teepee butte. *AGI*

tepetate

a. An evaporite consisting of a calcareous crust coating solid rocks on or just beneath the surface of an arid or semiarid region; a deposit of caliche. *AGI* b. Mex. A volcanic tuff, or a secondary volcanic or chemical nonmarine deposit, very commonly calcareous. Etymol. Mexican Sp., from Nahuatl (Aztec) tepetatl, stone matting. *AGI*

tephra

A general term for all pyroclastics of a volcano. *AGI*

tephrite

A group of extrusive rocks, of basaltic character, primarily composed of calcic plagioclase, augite, and nepheline or leucite as the main feldspathoids, with accessory alkali feldspar; also, any member of that group; the extrusive equivalent of theralite. With the addition of olivine, the rock would be called a basanite. *AGI*

tephritoid

Said of a rock resembling tephrite.

tepla-masse

A coal-tar pitch, for protecting the outside of steel tubes against corrosion and bacteria. *Osborne*

terlinguaite

A monoclinic mineral, Hg_2ClO ; yellow; at Terlingua, TX.

terminal curvature

A sharp, local change in the dip of strata or cleavage near a fault. Not commonly used in the United States. CF: [drag](#)

terminal velocity

The constant velocity acquired by a particle falling in water or air when the frictional resistance is equal to the gravitational pull. See also: [equal-falling particles](#); [Stokes' law](#).
Nelson

termination

In mineralogy, the end of a crystal, esp. crystal faces that intercept the crystallographic axis, as distinguished from a broken or polished end. Crystals are singly terminated if faces appear on one end as in attached crystals or ones lacking the symmetry to require faces on both ends to complete a crystal form; they are doubly terminated if faces appear on both ends.

terms of reference

Schedule that defines responsibilities and area of activity delegated to and/or accepted by subsection, department, or subordinate official in organization working on line-and-staff system of large company where harmonious cooperation might otherwise be endangered.
Pryor, 3

ternary

a. A phase system that may be defined in terms of three components. b. Any phase in a ternary system consisting of all three components. c. A eutectic, peritectic, or other singular point in a ternary system.

ternary steel

An alloy steel that contains one alloying element; the term is synonymous with a simple alloy steel. It contains the one element plus the iron and carbon, hence ternary. *Fay*

terne

Sheet iron or steel coated with an alloy of about four parts lead to one part tin. *Webster 3rd*

terneplate

Sheet steel covered with a tin-lead alloy.

Terni furnace

A modification of the open-hearth furnace in which the essential feature is the port design. The air ports gradually increase in cross section until they are as large as the hearth itself, thus practically eliminating turbulent flow in the furnace. *Osborne*

terosin

See: [fichtelite](#)

terpene

Hydrocarbon present (30% to 60%) in pine oil, which is widely used as frother in the flotation process. *Pryor, 3*

terpineol

The principal frothing agent in pine oil. *Pryor, 3*

terra alba

a. Finely pulverized powder, $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$, made from gypsum and used in the manufacture of paper, paints, artificial marble, and composition plastics. *CCD, 2* b. Any of several white mineral substances, such as (1) gypsum ground for a pigment; (2) kaolin used esp. as an adulterant of paints; (3) burnt alum; (4) magnesia; and (5) blanc fixe. *Webster 3rd*

terrace

a. A level or nearly level plain, generally narrow in comparison with its length, from which the surface slopes upward on one side and downward on the other side. Terraces and their bounding slopes are formed in a variety of ways, some being aggradational and others degradational. *Fay* b. A flaw in marble, commonly cored out and filled up. *Webster 2nd* c. A raised portion of an ancient riverbed or a bank on which alluvial deposits may be found. *Nelson* d. A bench in quarry or opencast mining. *Nelson* e. A ridge, a ridge and hollow, or a flat bench built along a ground contour. *Nichols, 1* f. A narrow, gently sloping constructional coastal strip extending seaward or lakeward, and veneered by a sedimentary deposit; esp. a wave-built terrace. *AGI* g. Loosely, a stripped wave-cut platform that has been exposed by uplift or by lowering of the water level; an elevated wave-cut bench. *AGI* h. Any long, narrow, relatively level or gently inclined surface, generally less broad than a plain, bounded along one edge by a steeper descending slope and along the other by a steeper ascending slope; a large bench or steplike ledge breaking the continuity of a slope. The term is usually applied to both the

lower or front slope (the riser) and the flattish surface (the tread), and it commonly denotes a valley-contained, aggradational form composed of unconsolidated material as contrasted with a bench eroded in solid rock. A terrace commonly occurs along the margin and above the level of a body of water, marking a former water level; e.g., a stream terrace. *AGI* i. A term commonly but incorrectly applied to the deposit underlying the tread and riser of a terrace, esp. the alluvium of a stream terrace; this deposit should more properly be referred to as a fill, alluvial fill, or alluvial deposit, in order to differentiate it from the topographic form. *AGI* j. See: [structural terrace](#)

terrace placer

See: [bench placer](#)

terra cotta clay

A term applied loosely to any fine-textured, fairly plastic clay that acquires a natural vitreous skin in burning and that is used in the manufacture of terra cotta. It is characterized by low shrinkage, freedom from warping, strong bonding, and absence of soluble salts. *AGI*

terra-cotta model maker

One who makes metal profiles and wooden forms for use in casting plaster terra-cotta block mold. *DOT*

terrain

A tract or region of the Earth's surface considered as a physical feature, an ecologic environment, or a site of some planned human activity, e.g., an engineering location; or in terms of military science, as in terrain analysis. Not to be confused with terrane. *AGI*

terrain coefficient

A terrain coefficient is a number expressing the ratio of actual ground displacement by elastic waves to that which the same waves would produce in rock. The terrain coefficient for rock is thus 1; for unconsolidated materials it ranges upward to as high as 30, depending on the thickness of the material. *Leet*, 2

terrain correction

A correction applied to observed values obtained in geophysical surveys in order to remove the effect of variations in the observations due to the topography near observation sites. Syn: [topographic correction](#) *AGI*

terrain slope

Used to describe quarries when located in low slopes. CF: [hillside](#) *Streefkerk*

terrane

a. A group of strata, a zone, or a series of rocks; used in the description of rocks in a general, provisional, or noncommittal sense. *Fay* b. A region considered in relation to its fitness for some purpose; an extent of ground or territory. *Standard, 2* c. A fault-bounded body of rock of regional extent, characterized by a geologic history different from that of contiguous terranes. A terrane is generally considered to be a discrete allochthonous fragment of oceanic or continental material added to a craton at an active margin by accretion. See also: [suspect terrane](#) d. Informally, a region where a particular rock or group of rocks predominates. Not to be confused with terrain. *AGI*

terra ponderosa

Literally, heavy earth; another name for heavy spar or barite. *Fay*

terra rossa

A reddish-brown residual soil found as a mantle over limestone bedrock, typically in the karst areas around the Adriatic Sea, under conditions of Mediterranean-type climate. Also spelled: terra rosa. Etymol: Italian, red earth. *AGI*

terras

In marble working, a defective or disfigured place in a marble block, which is cut out and filled with a composition. Also spelled terrace. *Standard, 2; Fay*

terra sienna

See: [ocher](#)

terra silicea

See: [infusorial earth](#)

terrazzo

Small chips or pieces of stone, usually marble or limestone, about 1/2 to 3/4 in (1.3 to 1.9 cm) in diameter, made by crushing and screening. Terrazzo chips are used with portland cement in making floors, which are smoothed down and polished after the cement has hardened. *USBM, 6*

terrestrial

a. Pertaining to the Earth. *AGI* b. Pertaining to the Earth's dry land. *AGI*

terrestrial deposit

a. A sedimentary deposit laid down on land above tidal reach, as opposed to a marine deposit, and including sediments resulting from the activity of glaciers, wind, rainwash, or streams; e.g., a lake deposit, or a continental deposit. *AGI* b. Strictly, a sedimentary deposit laid down on land, as opposed to one resulting from the action of water; e.g., a glacial or eolian deposit. *AGI* c. A sedimentary deposit formed by springs or by underground water in rock cavities. CF: [terrigenous deposit](#)

terrestrial magnetism

The natural magnetic field within and surrounding the Earth and the factors affecting it. *Hy*

terre verte

a. Fr. "green earth". Glauconite or other phyllosilicate used as artist's pigment. b. Collective name for various pale bluish-green earths formed by the disintegration of minerals, principally those of the hornblende type. Also called green earth.

terrigenous

Derived from the land or continent. *AGI*

terrigenous deposit

Shallow marine sediment consisting of material eroded from the land surface. CF: [terrestrial deposit](#)

terrigenous sediments

Sediments derived from the destruction of preexisting rocks on the Earth's surface, as distinguished, e.g., from sediments of organic or volcanic origin. *Stokes*

territe

A plastic explosive that consists of the constituents blasting gelatin+BNT+sodium nitrate+ammonium perchlorate. The explosive has a relatively low rate of detonation and is very insensitive, on which account care must be taken to ensure that its initiation is extremely powerful. *Fraenkel*

territorial sea

A belt of sea, not exceeding 12 nmi (22.2 km) in breadth, lying beyond its land territory and internal waters and, in the case of an archipelagic State, its archipelagic waters, in which a coastal State has sovereignty. *United Nations*

terroite

An extra-strong high explosive of the nitroglycerin type. *Standard, 2*

Tertiary

The first period of the Cenozoic Era (after the Cretaceous of the Mesozoic Era and before the Quaternary), thought to have covered the span of time between 65 million years and 3 to 2 million years ago. It is divided into five epochs: the Paleocene, Eocene, Oligocene, Miocene, and Pliocene. It was originally designated an era rather than a period; in this sense, it may be considered to have either five periods (Paleocene, Eocene, Oligocene, Miocene, Pliocene) or two (Paleogene and Neogene), with the Pleistocene and Holocene included in the Neogene. *AGI*

tertiary crushing

The preliminary breaking down of run-of-mine ore and sometimes coal. In metal mines, the tertiary crushing may be performed at a central point underground. See also: [primary breaker](#)

tertiary grinding

When a particularly fine grinding of ore is needed, two and even three ball mills may be used in a series to attain the degree of fineness. The successive stages are referred to as primary, secondary, and tertiary grinding. *Newton, 1*

tertiary shaft

The shaft that extends a mine downward from the bottom of the secondary shaft. *Spalding*

tervalent

Having three different valences. Syn: [trivalent](#)

tessellated

a. A surface divided into squares, or figures approaching squares, by joints or natural divisions. *Fay* b. Composed of tesserae--small cubes of stone, marble, glass, or terra cotta variously colored and arranged in artistic design: inlaid; mosaic; as tessellated pavement. *Standard, 2*

tesseral

In crystallography, the same as isometric. *Standard, 2*

test

a. To search for mineral deposits in an unproved area by means of boreholes. b. To obtain samples of soil or rock from which the physical characteristics of the soil or rock can be determined, such as in foundation testing. c. An exploratory borehole.

test bore

Drilling to test subsoil and rocks when considering foundations of buildings, dams, and heavy plant. *Pryor, 3*

test boring

As used by foundation engineers, the act or process of sinking holes into the overburden (sometimes to considerable depth into bedrock) with rotary or drive sampling equipment for the purpose of recovering samples from which information on the physical characteristics of the materials penetrated can be obtained; also applied to the sample or samples so obtained. Syn: [borehole](#); [drill hole](#); [drilling](#). *Long*

test core

Core removed from a concrete structure by diamond core drilling and tested in a laboratory to determine the strength and other physical properties of the concrete. Also, core removed from a borehole drilled in search of oil and used to determine the porosity of the core and whether oil is present. *Long*

test detonator

An instantaneous detonator that has a strength equivalent to that of a detonator with a base charge of 0.40 to 0.45 g PETN. *CFR, 4*

tester

a. A sampling instrument. *Nelson* b. A person responsible for carrying out ventilation, dust, or other tests. *Nelson* c. Service company representative who supervises borehole testing operations. *Wheeler, R.R.*

test hole

a. Generally, any borehole drilled to obtain samples whereby the structural and physical characteristics of the rocks penetrated can be determined; more specif., a hole produced

by rotary or driving soil-testing tools in the course of obtaining samples used in soil- and foundation-testing work. *Long* b. Usually a small hole drilled ahead and flanking in a working place to ascertain proximity of old workings and to determine water or air content of same. *BCI* c. A drill hole or shallow excavation for testing an orebody; a test pit. *Fay* d. A taphole, as in a cementation furnace. *Standard, 2*

testing bedrock

See: [bedrock test](#)

testing flame

The lowered flame of a miner's flame safety lamp, which is used to detect the presence of small percentages of combustible gases in mine air. *Nelson*

testing machine

A machine used for applying test loads to standard test pieces or to structural members. Machines are available for carrying out tensile, compressive, impact, and fatigue tests. *Hammond*

test lead

Lead free from any silver, and often finely granulated; used in testing or cupelling, assaying, etc. *Webster 3rd*

test paper

Paper (as litmus paper) cut usually in strips and saturated with an indicator or other reagent that changes color in testing for various substances. *Webster 3rd*

test piece

A piece of material prepared in a suitable shape so that it can be tested in a testing machine. *Hammond*

test pit

a. A shallow shaft or excavation made to determine the existence, extent, or grade of a mineral deposit, or to determine the fitness of an area for engineering works, such as buildings or bridges. *Stokes* b. See: [test hole](#); trial pit.

test ring

An oval iron frame for holding a test or movable cupelling hearth. *Fay*

test stone

Basanite. Used for testing streak of precious metals.

tetartohedral

Said of a point group or of specific crystal forms in the isometric and tetragonal crystal systems that have but one-fourth the crystal faces generated for the equivalent crystal form in the holohedral (most symmetric) crystal class. These complimentary merohedral forms are designated plus or minus and left or right, four forms being required to show all the faces of the holohedral form because each form lacks both a center and mirror planes of symmetry. See also: [merohedral](#)

tetraboron carbide

See: [boron carbide](#)

tetrad

A crystallographic axis of rotation of 90 degrees , four-fold. CF: [axis of symmetry](#)

tetradymite

a. A trigonal mineral, $\text{Bi}_2 \text{Te}_2 \text{S}$; forms foliated masses in auriferous veins, commonly with tellurobismuthite; a source of bismuth. Syn: [telluric bismuth](#); [bismuth telluride](#). b. The mineral group kawazulite, paraganajuatite, skippenite, tellurantimony, tellurobismuthite, and tetradymite.

tetraethyllead

An antiknock constituent of gasoline; $\text{Pb} (\text{C}_2 \text{H}_5)_4$.

tetragonal

a. Designating or belonging to a system of crystallization having all three axes at right angles and the two lateral axes equal. This system is called tetragonal system. *Fay* b. The crystal system in which crystals have one four-fold symmetry axis. *Hurlbut* c. The crystal system characterized by three orthogonal crystallographic axes, the principal or c axis being a tetrad (4-fold axis), longer or shorter than the two lateral a axes. See also: [crystal systems](#)

tetragonal trisoctahedron

See: [trapezohedron](#)

tetrahedral

Having the symmetry or shape of a tetrahedron.

tetrahedrite

a. An isometric mineral, $(\text{Cu,Fe})_{12}\text{Sb}_4\text{S}_{13}$, having copper replaced by zinc, lead, mercury, cobalt, nickel, or silver; forms a series with tennantite and freibergite; metallic; crystallizes in tetrahedra; occurs in hydrothermal veins and contact metamorphic deposits; a source of copper and other metals. Syn: [gray copper](#) ore; gray copper; panabase; panabasite; stylumite. b. The mineral group freibergite, giraudite, goldfieldite, hakite, tennantite, and tetrahedrite.

tetrahedron

An isometric crystal form of four faces, each an equilateral triangle; the alternate faces of an octahedron. Adj: tetrahedral.

tetrahexahedron

An isometric crystal form (hk0) of 24 faces, each an isosceles triangle, so arranged that four faces appear to replace each face of a cube (hexahedron).

tetravalence

An atom, or group, having four valence bonds. *Pryor, 3*

tetravalent

a. Having a valence of 4. *Webster 3rd* b. Having four valences; e.g., chlorine, which has valences of 1, 3, 5, and 7. *Webster 2nd; Handbook of Chemistry and Physics, 2*

tewel

a. A hole; bore; a chimney, as for smoke. *Webster 3rd* b. The tuyere of a furnace. *Webster 2nd*

texture

The general physical appearance or character of a rock, including the geometric aspects of, and the mutual relations among, its component particles or crystals; e.g., the size, shape, and arrangement of the constituent elements of a sedimentary rock, or the crystallinity, granularity, and fabric of the constituent elements of an igneous rock. The term is applied to the smaller (megascopic or microscopic) features as seen on a smooth surface of a homogeneous rock or mineral aggregate. The term structure is generally

used for the larger features of a rock. The two terms should not be used synonymously, although certain textural features may parallel major structural features. Confusion may arise because in some languages, e.g., French, the usage of texture and structure are the reverse of the English usage. CF: [structure](#) *AGI*

thalenite

A monoclinic mineral, $Y_3 Si_3 O_{10} (OH)(?)$; red to pink; in pegmatites.

thallium

A metallic element resembling lead in physical properties; the metal is silvery-white, but turns bluish-gray in air. Symbol, Tl. Occurs in crooksite, lorandite, and hutchinsonite. It is also present in pyrites and is recovered from the roasting of this ore in the manufacture of sulfuric acid and from the smelting of lead and zinc ores. Used in low-melting glasses, photocells, and infrared detectors. *Handbook of Chemistry and Physics, 3*

thalweg

a. The line of continuous maximum descent from any point on a land surface; e.g., the line of greatest slope along a valley floor, or the line crossing all contour lines at right angles, or the line connecting the lowest points along the bed of a stream. Etymol: German Talweg, valley way. Also spelled: talweg. *AGI* b. In physical geography, a term adopted into English usage signifying the line of greatest slope along the bottom of a valley; i.e., a line drawn through the lowest points of a valley in its downward slope. It thus marks the natural direction of a watercourse. *AGI* c. In hydraulics, the line joining the deepest points of a stream channel. *AGI* d. By many geomorphologists, the term is used as a syn. for valley profile. *AGI* e. The center line of the principal navigational channel of a waterway constituting a boundary between political subdivisions. *Hunt*

thanite

a. A mixture of kainite and halite. *English* b. Carbon oxysulfide, COS, as a natural gas.

thaumasite

A hexagonal mineral, $Ca_6 Si_2 (CO_3)_2 (SO_4)_2 (OH)_{12} \cdot 24H_2 O$; white; fibrous.

thaw house

A small building, designed for thawing dynamite, of such size as to provide enough thawed dynamite for a day's work. *Fay*

thawing

a. A method of working permanently frozen ground in which water at a temperature of from 50 to 60 degrees F (10 to 15.6 degrees C) is pumped through pipes down into the frozen gravel. The pipes through which the water is pumped are called sweaters. See also: [steam thawing](#); [thaw pipe](#). *Lewis* b. In dynamiting, warming to reduce risk of premature explosion that might originate from rupture of frozen crystal. Performed in thaw house or thawing kettle using steam or hot water. With modern methods of explosive manufacture, the need has practically disappeared. *Pryor, 3*

thawing kettle

A double kettle, built somewhat like a farina boiler, having two compartments, an outer compartment, which is filled with hot water and which entirely surrounds the inner compartment that contains the dynamite to be thawed. It is provided with a lid for retaining the heat. *Fay*

thaw pipe

A string of pipe lowered into a string of drill rods that is frozen in a borehole drilled into permafrost, through which water is circulated to thaw the ice and free the drill rods. See also: [thawing](#)

thaw shed operator

In the coke products industry, one who thaws frozen materials in railroad cars by heating sections of shed where cars are spotted. *DOT*

THDM

See: [translucent humic degradation matter](#)

thelotite

A carbonaceous constituent of torbanite, occurring in the form of a solidified clear, jellylike substance, something like solidified dopplerite, but probably of unlike chemical composition. *Tomkeieff*

thematic mapper

A cross-track scanner deployed on Landsat that records seven bands of data from the visible through the thermal IR regions. See: [multispectral scanner](#)

thenardite

An orthorhombic mineral, Na_2SO_4 ; soft; forms masses and crusts in evaporite deposits and around fumaroles; a source of sodium sulfate. Also called verde salt.

theodolite

A precision surveying instrument that is used for measuring angular distances in both vertical and horizontal planes.

theoretical depression

The water gage produced by an imaginary fan that is perfect and is connected to an evase chimney of infinite height to eliminate kinetic losses at discharge. Its calculated value depends only on the speed of the blade tips and on the shape of the blades. See also: [manometric efficiency](#); [initial depression](#). *Nelson*

theoretical fan depression

The depression that can be produced by a perfect fan. *BS, 8*

theoretical tonnage

See: [probable reserves](#)

theoretical yield

The maximum yield (as shown by the washability curve) of a product with a specified percentage of ash. *BS, 5*

theory of lateral secretion

The theory that the contents of a vein or lode are derived from the adjacent country rock by a leaching process, in which either superficial water or thermal water is involved.

theory of machines

Comprises the study of the relative motion between the parts of a machine and the study of the forces that act on those parts. See also: [machine design](#)

theralite

A group of mafic plutonic rocks composed of calcic plagioclase, feldspathoids, and augite, with lesser amounts of sodic sanidine and sodic amphiboles and accessory olivine; also, any rock in that group; the intrusive equivalent of tephrite. Theralite grades into nepheline monzonite with an increase in the alkali feldspar content, into gabbro as the feldspathoid content diminishes, and into diorite with both fewer feldspathoids and increasingly sodic plagioclase. The term, defined by Rosenbusch in 1887, is derived from the Greek word for eagerly looked for, not from the island of Thera (Santorini). *AGI*

therm

Equals 100,000 Btu (105,500 kJ). *Newton, 1*

thermal

Hot or warm; applied to springs that discharge water heated by natural agencies. *Fay*

thermal-acceptance ratio

A physiological method of assessing the effect of a given climate upon workers, that is based on the ratio between the heat actually lost by the body via the skin, lungs, etc., and the maximum that can be lost in the prevailing conditions. *Roberts, 1*

thermal analysis

a. A method for determining transformations in a metal by noting the temperatures at which thermal arrests occur. These arrests are manifested by changes in slope of the plotted or mechanically traced heating and cooling curves. *ASM, 1* b. The study of chemical and/or physical changes in materials as a function of temperature, i.e., the heat evolved or absorbed during such changes. *AGI*

thermal boring

Use of high-temperature flame to fuse rock in drilling. Heat comes from ignition of kerosene with oxygen or other fuel system, at bottom of drill hole, and water with compressed air may be used to flush out the products. *Pryor, 3*

thermal capacity

a. Heat required to raise the temperature of a body 1 degrees C. Syn: [heat capacity](#) b. The amount of heat that a clay product will absorb, usually expressed in British thermal units per degree Fahrenheit (kilojoules per degree Celsius). *ACSG, 2*

thermal conductivity

a. The time rate of transfer of heat by conduction, through unit thickness, across unit area for unit difference of temperature. *AGI* b. A measure of the ability of a material to conduct heat. Typical values of thermal conductivity for rocks range from 3 to 15 mcal/cm/s/ degrees C (12.6 to 62.8 kJ/cm/s/ degrees C). Syn: [heat conductivity](#); thermal diffusivity of strata. *AGI*

thermal cutout

A device fitted in hydraulic power systems underground so that temperatures cannot rise above about 85 degrees C. It is a safeguard against fire risk due to a rapid rise in temperature if the fluid circuit is interrupted by wrong manipulation of valves, etc.

Nelson

thermal diffusivity of strata

See: [thermal conductivity](#)

thermal drying

a. The evaporation of water by thermal means from a mixture of coal and water. See also: [McNally-Vissac dryer](#); [multilouvre dryer](#); Raymond flash dryer; cascade coal dryer; flash coal dryer; fluidized bed dryer. *Mitchell* b. The application of heat (generally hot-air currents) to wet coals and other materials and the evaporation of the free moisture and also part of the inherent moisture. *Nelson*

thermal efficiency

The ratio of the electric power produced by a powerplant to the heat value of the fuel consumed; thus, a measure of the efficiency with which the plant converts thermal energy to electric energy. Symbol, η . *Lyman; Handbook of Chemistry and Physics, 2*

thermal electromotive force

The electromotive force generated in a circuit containing two dissimilar metals when one junction is at a different temperature from the other. *ASM, 1*

thermal emissivity

The thermal emissivity, or heat transfer coefficient, of a rock surface is the rate at which heat will flow from rock to air, per unit area for 1 degree temperature difference. This varies with color and other surface characteristics. Measured in $W/m^2 \cdot K$. *Roberts, 1*

thermal expansion

The increase in linear dimensions and volume that occurs when materials are heated and that is counterbalanced by a contraction of equal amount when the materials are cooled. *Harbison-Walker*

thermal gradient

In the Earth, the rate at which temperature increases with depth below the surface. In a mine, this is usually estimated at 5.3 degrees F/1,000 ft (1 degrees C/100 m) of shaft depth. Some variability with time of day is typically observed. *SME, 1*

thermal metamorphism

A type of metamorphism resulting in chemical reconstitution controlled by a temperature increase, and influenced to a lesser extent by confining pressure; there is no requirement of simultaneous deformation. See also: [pyrometamorphism](#) load metamorphism; static metamorphism. Syn: [thermometamorphism](#) *AGI*

thermal precipitator

An instrument for obtaining information regarding the number of particles present in unit volume of a dust cloud, together with their size distribution. This is probably the most efficient instrument used for dust counts since its efficiency is practically 100% for all particles from 0.2 to 10 μm in diameter. See also: [Hexhlet sampler](#); [dust sampling](#).

thermal probe

A device used for measuring the heat flow out of ocean bottom sediment. *Hunt*

thermal prospecting

A system of geophysical prospecting based on measuring underground temperatures or temperature gradients and relating their irregularities to geological deformation. *AGI*

thermal reactor

A nuclear reactor in which the fission chain reaction is sustained primarily by thermal neutrons. Most reactors are thermal reactors. *Lyman*

thermal-release water spray

A device that brings water sprays into action when heating occurs on roadway belt conveyors. The local heat fuses an element holding taut wires. On release by fusion, the wires allow spray valves to open and the water cools the affected area. *Nelson*

thermal resistance

See: [resistance](#)

thermal resistivity

See: [resistivity](#)

thermal separation

The separation of minerals and metals by heat. The method is used, e.g., to remove impurities from rock salt. The crude salt is first exposed to radiant heat. The impurities absorb the heat and become warm, while the rock salt transmits the radiant heat and remains cool. The warm, impure particles adhere slightly to a belt covered with heat-sensitive resin, while the salt remains free. Separation takes place at the end of the belt. The cool salt is thrown into one container, while the adhering impurities drop directly into another. *Nelson*

thermal shock

Failure of a material, esp. a brittle material, due to the thermal stress of rapidly rising or falling temperature. *AGI*

thermal shock resistance

The ability to withstand sudden heating, cooling, or both without cracking or spalling.

thermal spalling

The chipping or spalling of ceramic ware by repeated heating and cooling.

thermal spring

A spring whose water temperature is appreciably higher than the local mean annual atmospheric temperature. *AGI*

thermal value (volatile matter)

The calorific value of volatile matter in therms per ton of dry coke, of the gas given off when dry coke, ground to pass a 36-mesh B.S. test sieve, is heated under standard conditions. *BS, I*

thermal water

Water, generally of a spring or geyser, whose temperature is appreciably above the local mean annual air temperature. *AGI*

thermic boring

a. A method of boring holes in concrete under the high temperature generated by a burning steel tube, known as a lance. This is packed with steel wool, through which a jet of suitable gas flows to ignite the end of the lance and keep it burning. *Hammond* b. See: [jet piercing](#)

thermic drilling

See: [jet piercing](#)

thermistor

An electrical resistor made of a material whose resistance varies sharply in a known manner with the temperature. Thermistors are commonly used for shipboard oceanographic temperature measurements because of their percentage response to unit temperature change and their great sensitivity. *Hunt*

thermite

a. Any fossil combustible substance. *Tomkeieff* b. An intimate mixture of aluminum powder and powdered iron oxide that when caused to react by strong heating emits a great deal of heat and yields alumina and a white-hot molten mass of metallic iron. *Webster 3rd*

thermit process

The energetic action of finely divided aluminum on a metallic oxide, when heated together, is utilized for the production of metallic iron manganese, chromium, tungsten, molybdenum, uranium, etc. The aluminum combines directly with the oxygen of the oxide, and the heat emitted by the reaction is sufficient to promote the fusion of the reduced metal. *Nelson*

thermoanemometer

See: [thermometer anemometer](#)

thermocline

Frequently used in geophysics to describe the decrease in temperature that always occurs at great depths. *Hunt*

thermocouple

Two conductors of different metals joined together at both ends, producing a loop in which an electric current will flow when there is a difference in temperature between the two junctions. Abbrev., tc. *Lyman; Zimmerman*

thermodynamics

The mathematical treatment of the relation of heat to mechanical and other forms of energy. *AGI*

thermoelectric conversion

The conversion of heat into electricity by the use of thermocouples. *Lyman*

thermoelectricity

Electricity involved in thermoelectric phenomena. Specif., electricity accumulated or put in motion by thermoelectric action. *Webster 3rd*

thermoelectric metals

Metals or alloys used in thermocouples for measuring high temperatures. Platinum, nickel, copper, rhodium, etc., are much used. *Crispin*

thermograph

A self-recording thermometer that gives a continuous trace of air temperature on a rotating drum worked by clockwork. It is mainly used for recording variations in temperature rather than actual temperatures. *Hammond*

thermoluminescence

The property of minerals to emit light when heated. It results from the release of energy stored by displaced electrons trapped in a crystal structure. See also: [calorescence](#)

thermometamorphism

See: [thermal metamorphism](#)

thermometer

An instrument for determining temperature usually by means of a scale graduated directly in temperature units and consisting typically of (1) a device having a bimetallic element, the expansion or contraction of which indicates a change in temperature, or (2) a glass bulb attached to a fine tube of glass with a numbered scale etched on it or fastened to it and containing a liquid (as mercury or cooled alcohol) that is sealed in and rises and falls with changes of temperature and that indicates the temperature by the number at the top of the column of liquid. *Webster 3rd*

thermometer anemometer

An anemometer consisting of two thermometers, one with an electric heating element (battery powered) connected to the bulb. The heated bulb cools in an airstream, and the difference in temperature as registered by the heated and unheated thermometers can be translated into air velocity by a conversion chart. It is nondirectional and can be made safe (6 V) for use in explosive atmospheres. Syn: [thermoanemometer](#)

thermometer float

This instrument is used for studying the temperature structure in the upper 10 m of water. The instrument is in two sections; a float, which contains a spooling winch from which the sensing unit is lowered, and an indicator case, which contains the remote indicating equipment and remote control system. The two sections are connected by an electric cable and flexible shaft, supported by net floats. The indicator case is clear lucite. It contains the indicating meter and electric circuitry for temperature determination. It also contains a Veeder-Root counter, which indicates directly in centimeters the depth at which the sensing unit is located. This instrument makes it possible to read temperature to within 0.1 degrees C and to know the depth of the sensing unit to within + or -0.5 cm. It is intended to be used at sea from a skiff or tender rather than from the research vessel itself. *Hunt*

thermometer scales

Two thermometer scales are in general use, the Fahrenheit, which is generally used in engineering, and the Celsius, which is almost universally used in scientific work. The Fahrenheit scale has the freezing point at 32 degrees F and the boiling point at 212 degrees F, whereas the Celsius scale has the freezing point at 0 degrees C and the boiling point at 100 degrees C. The Celsius scale is commonly called the centigrade scale. *Nelson*

thermometric fan test

A method of assessing the efficiency of a mine fan by comparing the temperature rise in an ideal isentropic fan for a given fan pressure with the measured temperature rise actually occurring in the fan under consideration when producing the same fan pressure. The ratio of isentropic temperature rise to the actual temperature rise across the fan gives the fan efficiency. The method gives an accuracy of + or -5%. See also: [overall ventilation efficiency](#)

thermonatrite

An orthorhombic mineral, $\text{Na}_2\text{CO}_3 \cdot \text{H}_2\text{O}$; forms flat, white, water-soluble crystals in some lakes and alkali soils, also a saline residue.

thermo-osmosis

Natural migration of moisture from a relatively warm part of a mass of soil toward a cooler part. See also: [electro-osmosis](#)

thermopile

An apparatus consisting of a number of thermoelectric couples (as of antimony and bismuth or of copper sulfide and German silver) combined so as to multiply the effect used; (1) to generate electric currents for various purposes, and (2) in a very sensitive form for determining intensities of radiation due esp. to its heating effect. *Webster 3rd*

thermoplastic

In plastics, rigid material that temporarily becomes soft when heated and can then be molded into a shape that it will retain on cooling. Ant. for thermosetting, a material that reacts chemically on heating (curing) and is then resistant to deformation when reheated. *Pryor, 3*

thermoscopic bar

Small ceramic bar of specified composition that softens at certain temperatures. See also: [Holdcroft thermoscope bar](#)

thermostat

An automatic device for regulating temperature (as by opening or closing the damper of a heating furnace or by regulating the supply of gas) and commonly utilizing either the differential expansion of solids or the vapor pressure of liquids. *Webster 3rd*

Thetis hairstone

Coarsely crystalline quartz containing inclusions of asbestiform amphibole, esp. hornblende or actinolite, that may be tangled or wound into a ball. See also: Venus hairstone; [sagenitic quartz](#).

thick-bedded

A relative term applied to sedimentary beds variously defined as more than 2.5 in (6.4 cm) to more than 40 in (100 cm) in thickness; specif. said of a bed whose thickness is in the range of 2 to 4 ft (60 to 120 cm), a bed greater than 120 cm being very thick-bedded. CF: [tight-bedded](#); thin-bedded. *AGI*

thickener

A vessel or apparatus for reducing the proportion of water in a pulp by means of sedimentation. *Nelson*

thickening

a. The process of concentrating a relatively dilute slime pulp into a thick pulp, i.e., one containing a smaller percentage of moisture, by rejecting liquid that is substantially solid

free. Settling is another name for the same operation. *Taggart, 1* b. The concentration of the solids in a suspension with a view to recovering one fraction with a higher concentration of solids than in the original suspension. *BS, 5*

thickness

a. The distance at right angles between the hanging wall and the footwall of a lode or lens. *Standard, 2* b. As used in mine subsidence, the thickness of a bed or seam of mineral is the distance from its roof to its floor, measured at right angles to the plane of stratification. *Briggs* c. That dimension designed to lie at right angles to the face of the wall, floor, or other assembly. *ASTM*

thickness contour

See: [isopach](#)

thickness line

See: [isopach](#)

thick seam

In general, a coal seam over 4 ft (1.22 m) in thickness. See also: [medium-thickness seam](#)

thick-wall sampler

A soil sampler made from a steel tube having a wall thickness greater than 16 gage. See also: [drive sampler](#) Shelby-tube sampler. *Long*

Thiess process

A chlorination process for recovering gold from its ore. For each ton (0.9 t) of ore in a revolving drum, 130 gal (492 L) of water, 30 lb (13.6 kg) of lime chloride, and 36 lb (16.3 kg) of concentrated sulfuric acid are added, and the drum is revolved for some time. A solution of gold chloride is thus obtained. *Fay*

thill

a. The floor of a coal seam. See also: [underclay](#) b. Eng. Seat earth or pavement of underclay directly underlying a coalbed, Newcastle. *Raistrick* c. A thin stratum of fireclay. *Webster 3rd*

thimble

An oval iron ring around which a rope end is bent and fastened to form an eye. *Zern*

thimble joint

A sleeve joint packed to allow longitudinal expansion. A slip expansion joint. *Fay*

thin-bedded

A relative term applied to sedimentary beds variously defined as less than 1 ft (30 cm) to less than 0.4 in (1 cm) in thickness; specif. said of a bed whose thickness is in the range of 2 to 24 in (5 to 60 cm), a bed less than 5 cm but more than 1 cm thick being very thin-bedded. CF: [tight-bedded](#); [thick-bedded](#). *AGI*

thinolite

A tufa deposit of fibrous calcite pseudomorphous after an unknown precursor occurring on an enormous scale in northwestern Nevada; also occurs about Mono Lake, CA. It forms layers of interlaced pale yellow or light brown crystals, commonly skeletal with pyramidal terminations. Syn: [thinolitic tufa](#)

thinolitic tufa

See: [thinolite](#)

thin out

To grow progressively thinner in one direction until extinction. The term is applied to a stratum, vein, or other body of rock that decreases gradually in thickness so that its upper and lower surfaces eventually meet and the layer of rock disappears. The thinning may be original or due to truncation beneath an unconformity. Syn: [pinch out](#); [wedge out](#). *AGI*

thin seam

In general, a coal seam 2 ft (0.6 m) and under in thickness. See also: [economic coal reserves](#)

thin-seam miner

An adaptation of the auger surface miner, the thin-seam miner cuts an entry 8 ft (2.4 m) wide and up to 5 ft (1.5 m) high into coal located under the highwall in surface mines. *SME, 1*

thin section

a. A fragment of rock or mineral mechanically ground to a thickness of approx. 0.03 mm, and mounted between glasses as a microscope slide. Rocks and most minerals

except the oxides and sulfides of the metals are translucent to transparent in thin section, and the optical properties of each mineral can be studied with the microscope. See also: [polished section](#) b. A rock or mineral slice cut for study by transmitted light with a polarized-light microscope. It may also be polished for study with a reflected-light microscope. c. A coal seam less than its normal thickness. *Nelson*

thin stock

Slabs of stone employed for wainscoting, flooring, etc. *Fay*

thin-wall bit

A coring bit the kerf or wall thickness of which is about one-half or less that of the wall thickness of the same outside-diameter-size standard coring bit. *Long*

thin-wall drive sampler

See: [Shelby tube](#); thin-wall sampler.

thin-wall sampler

A soil-sampling barrel made from steel tubing having approx. a 16-gage wall thickness. Syn: [thin-wall drive sampler](#); [thin-wall tube sampler](#). CF: [Shelby tube](#)

thin-wall tube sampler

See: [thin-wall sampler](#)

Thiobacillus ferrooxidans

A bacterial strain that catalyzes the oxidation of ferrous iron (Fe^{+2}) to ferric iron (Fe^{+3}). *SME, 1*

Thiobacillus thiooxidans

A bacterial strain that catalyzes the oxidation of sulfur to sulfate (SO_4^{-2}). *SME, 1*

thio-carbanilid

A derivative from thio-urea. In the flotation process, it is used as a collector agent of low solubility in water; it is sometimes used in copper or galena flotation. *Pryor, 3*

thiocarbonates

Powerful collector agents in the flotation process where xanthates fail. *Pryor, 3*

thiofuran

See: [thiophene](#)

thiokerite

Kerite containing 9% sulfur. *Tomkeieff*

thiophene

A liquid; $C_4 H_4 S$; analogous to furan and pyrrole in its heterocyclic structure and resembles benzene both physically and chemically except for its greater reactivity. Found in small amounts (as up to 0.5% by weight) in benzene from coal tar unless it has been removed by treatment with sulfuric acid. Used chiefly in organic synthesis. Syn: [thiofuran](#)

thiophile elements

Equivalent to chalcophile. Literally, sulfur-loving. See also: [chalcophile](#)

thiophosphates

Sulphydic flotation agents, produced by reacting phosphorus pentasulfide with phenols, alcohols, etc., and marketed as Aerofloats. *Pryor, 3*

third-class lever

A lever to which force is applied between the fulcrum and the work point. *Nichols, 1*

Third Theory of Comminution

The Third Theory states that the specific work input required for size reduction is inversely proportional to the square root of the product size, less the work required to form the feed. *Pit and Quarry*

thirl

- a. A cross hole or ventilation passage between two headings. See also: [thurl](#); [thurling](#); [thirling](#). *Standard, 2*
- b. To cut out the lost coal between two workings or headings. *CTD*
- c. To cut through from one working into another. *CTD*

thirling

a. The driving of a proposed roadway from two points some distance apart to meet each other; the connecting of underground roadways or shafts. *Nelson* b. See: [thirl](#); crosscut; through cut. c. See: [holing](#); stenton.

this vein

A notice claiming a location upon this vein has only one meaning. It raises an inference that the notice was posted upon or in close proximity to a vein or lode, although, as a fact, no vein or lode then was exposed. *Ricketts*

thixotropic fluid

Clays termed thixotropic are those that reveal this property by weakening when they are remolded and by increasing in strength when allowed to stand undisturbed. See also: [remolding](#) oil-well drilling fluids. *Hammond*

thixotropy

a. The property of certain colloidal substances, such as a thixotropic clay, to weaken or change from a gel to a sol when shaken, but to increase in strength upon standing. *AGI*
b. The property of a material that enables it to stiffen in a relatively short time on standing, but upon agitation or manipulation to change to a very soft consistency or to a fluid of high velocity, the process being completely reversible. Used in muds for drilling deep oil wells since, if the drill stops, rock chips on the way to the surface are held in suspension instead of settling to the bottom where they might jam the drilling bit. See also: [gel](#); [plastic deformation](#). *ASCE*

tholeiite

A silica-oversaturated (quartz-normative) basalt, characterized by the presence of low-calcium pyroxenes (orthopyroxene and/or pigeonite) in addition to clinopyroxene and calcic plagioclase. Olivine may be present in the mode, but neither olivine nor nepheline appear in the norm. CF: [basalt](#)

thomaite

A variety of siderite that is found massive and in pyramidal crystals. *Standard, 2*

Thomas converter

A bottom-blown basic pneumatic converter having a basic bottom and lining, usually dolomite, and employing a basic slag. *ASM, 1*

Thomas-Gilchrist process

Conversion of iron to steel in basic-lined Bessemer converter. Phosphorus combines with dolomite in this lining to produce basic slag. *Pryor, 3*

Thomas slag

The finely powdered basic slag obtained in the Thomas-Gilchrist process. It consists of phosphates and is used as a fertilizer. *Hackh*

Thomas steel

Steel made in a Bessemer converter using a basic refractory lining. The process was developed by Thomas and Gilchrist. In Europe such steel is known as Thomas steel; in Great Britain, Thomas-Gilchrist steel; and in the United States, basic Bessemer steel. *Henderson*

Thompson arc cutter

See: [arc cutter](#)

thompsonite

An orthorhombic mineral, $\text{Na}_4 \text{Ca}_8 [\text{Al}_{20} \text{Si}_{20} \text{O}_{80}] \cdot 24\text{H}_2\text{O}$; zeolite group; pseudotetragonal; occurs in amydules and crevices in basalts and tuffs; also an alteration of anorthite. Also called ozarkite.

Thompson pilot shoulder reamer

A reaming or coring bit with an articulated steel pilot protruding about 36 in (91 cm) beyond the face of the bit. The diameter of the pilot is slightly smaller than the set inside diameter of the bit; its upper end is a piston fitted tightly inside a single-tube barrel with its attached coring bit. When lowered into a borehole in which a deflection wedge has been set, the pilot section forces the coring bit to ream out the first part of the deflected hole at a point about 20 in (51 cm) above the tip of the wedge. Reaming is continued to about 6 in (15 cm) below the wedge tip, at which point the pilot shoulder reamer is withdrawn and replaced by a bullnose or deflection bit. *Long*

Thompson wedge

A retrievable type of deflecting wedge. See also: [deflecting wedge](#) *Long*

thomsenolite

A monoclinic mineral, $\text{NaCaAlF}_6 \cdot \text{H}_2\text{O}$; dimorphous with pachnolite; forms small, white prismatic crystals on cryolite.

thoreaulite

A monoclinic mineral, SnTa_2O_6 ; forms a series with foordite; brown; in pegmatite at Katanga, Congo.

thoria

A rare refractory oxide, ThO_2 .

thorian gummite

See: [thorogummite](#)

thorianite

An isometric mineral, ThO_2 ; commonly contains lanthanides; has fluorite structure; forms a series with uraninite; highly radioactive and metamict; sp gr, 9.7; in pegmatites; in placers associated with zircon, ilmenite, geikielite, thorite, and other heavy minerals; an important source of uranium and thorium. Also called isometric thorium.

thorian uraninite

A variety of uraninite containing thorium in partial substitution for uranium. *Crosby*

thorium borides

Two borides are known: ThB_4 (gray) and ThB_6 (deep red). More attention has been paid to the tetraboride, the properties of which are melting point, >2,200 degrees C (but oxidizes slowly above 1,000 degrees C); thermal expansion, 5.9×10^{-6} (20 to 1,000 degrees C); sp gr, 8.45 g/mL; modulus of rupture (20 degrees C), 20,000 psi (138 MPa) . Some properties of ThB_6 are melting point, 2,200 degrees C; sp gr, 7.1. *Dodd*

thorium carbides

Two carbides are known: ThC , melting point, 2,625 degrees C; ThC_2 , melting point, 2,655 degrees C. These special carbides are of potential interest in nuclear engineering. *Dodd*

thorium disintegration series

The series of radioactive elements produced as successive intermediate products when the element thorium (thorium 232) undergoes its spontaneous natural radioactive disintegration into stable lead (lead 208). *CCD, 2*

thorium mineral

One of several minerals including monazite, in which Th replaces rare earths; thorite, ThSiO_4 ; and thorianite, ThO_2 .

thorium nitride

Three thorium nitrides have been reported: ThN , Th_2N_3 , and Th_3N_4 . *Dodd*

thorium sulfides

Three thorium sulfides have been reported: Th_4S_7 , Th_2S_3 , and ThS . Crucibles made of these sulfides have been used as containers for molten cerium. *Dodd*

thorogummite

A tetragonal mineral, $\text{Th}(\text{SiO}_4)_{1-x}(\text{OH})_{4x}$; may contain up to 31% uranium; has zircon structure. Differs from thorite (1) in being secondary, formed by the alteration of primary thorium minerals including thorite itself; (2) in not being metamict but forming crystalline aggregates; and (3) in containing essential (OH). Syn: [thorian gummite](#); [mackintoshite](#); [maitlandite](#).

thoron

A name for radon 220, a member of the thorium disintegration series; symbol, Tn; emits alpha particles; and half-life, 5.5 s. Also called emanation; thorium emanation. *Handbook of Chemistry and Physics, 2*

thorostenstrupine

A mineral, $\text{Na}_2(\text{Th,RE})(\text{Mn,Ta,Fe})\text{H}_2[(\text{Si,P})\text{O}_4]_3$; metamict; dark brown to black.

thorotungstite

See: [yttrotungstite](#)

thorough joints

Vertical joints affecting all the strata, as opposed to cracks or looses, oolite quarries, Northamptonshire, United Kingdom. Syn: [upright joints](#)

thortveitite

A monoclinic mineral, $(\text{Sc,Y})_2\text{Si}_2\text{O}_7$; may contain up to 42% yttrium replacing scandium; weakly radioactive; grayish green when fresh, altering to white to reddish gray; in pegmatites associated with monazite, euxenite, beryl, struvite, and possibly fergusonite; the only known mineral rich in scandium.

Thoulet's law

Heavy mineral suites increase in complexity with decreasing geologic age.

Thoulet solution

A yellowish-green, transparent, aqueous solution of potassium mercuric iodide, having a maximum specific gravity of 3.19. Also known as Sonstadt solution. Used in the sink-float process of mineral separation. *Holmes, 2*

thread

a. An extremely small vein, even thinner than a stringer. *Fay* b. A more or less straight line of stall faces, having no cuttings, loose ends, fast ends, or steps. *Fay* c. To reeve rope or cable through a sheave or block and tackle. *Long*

thread cutter

A name sometimes applied to a diamond crystal having the shape of an octahedron. *Long*

thread-lace scoria

A scoria in which the vesicle walls have burst and are represented only by an extremely delicate three-dimensional network of glass threads. See also: [reticulite](#)

three-circle goniometer

See: [goniometer](#)

three-cone bit

See: [roller rock bit](#). Also called tricone bit.

three-dimension dip

In seismic prospecting, the true dip of a reflection or refraction horizon found by exploration and calculation. See: [true dip](#)

threefold

An axial symmetry operation requiring three repetitions to complete 360 degrees or return to identity. Syn: [triad](#)

three-high mill

Consists of three horizontal rolls, one above the other, each rotating continuously in one direction only, the piece being rolled between the bottom and middle, and middle and top rolls alternately. *Osborne*

three-hinged arch

An arch hinged at its abutments and at its crown with the advantage that each half can sink in relation to the other without damaging the arch. *Hammond*

three-jaw chuck

A drill chuck having three serrated-face movable jaws that can be made to grip and hold fast an inserted drill rod. See also: [chuck](#)

threeeling

In crystallography, a crystal of three parts united by the same twinning law. Syn: [trilling](#)

three-part line

A single strand of rope or cable doubled back around two sheaves so that three parts of it pull a load together. *Nichols, 1*

three-phase circuit

Usually a three-wire circuit using alternating current with three equal voltages. This should not be confused with the three-wire service supplying 110 V and 220 V. This latter is merely a two-voltage single-phase circuit arrangement and is used almost universally to provide power and lighting to homes and small business establishments. *Kentucky*

three-phase current

Alternating current in which three separate pulses are present, identical in frequency and voltage, but separated by 120 degrees. *Pryor, 3*

three-phase inclusion

An inclusion consisting of a liquid with a gas bubble and a crystal within a crystal. See also: [negative crystal](#); [inclusion](#).

three-piece set

A set of timber used in ground that requires greater support than a two-piece set or stull will provide. A cap is supported by two posts often spread apart at the bottom to give greater stability. See also: [timber set](#); [four-piece set](#). *Lewis*

three-point problem

a. In surveying, a method used to orient underground workings via three plumb lines suspended in a vertical shaft. *Pryor, 3* b. The problem in plane table surveying of locating precisely the point at which the table is set up, using three fixed points that are visible from the plane table. *Hammond* c. The problem of determining dip and strike of a plane from elevations determined at three known points not in a straight line.

three-product washing

A method in which the cleanest fraction of the coal with an ash content of 1% to 2% (for hydrogenation, etc.) is separated; the remainder giving coal with an ash content of 10% to 15% (for boiler firing, etc.) and finally incombustible shale. *Nelson*

three-shift cyclic mining

A system of cyclic mining on a longwall conveyor face, with coal cutting on one shift, hand filling and conveying on the next, and ripping, packing, and advancement of the face conveyor on the third shift. The system restricts coal production to one shift. *Nelson*

three-term process controller

Instrument that automatically regulates a process in proportional, integral, and derivative terms, thus neutralizing and removing the errors that arise during operation. *Pryor, 3*

three-throw ram pump

This type of pump consists essentially of three single-acting ram pumps side by side, either vertical or horizontal, and driven from a triple crankshaft with cranks set at angles of 120 degrees. The three-throw pump can deal with heads up to 1,000 yd (900 m) in a single lift. *Sinclair, 4*

three-wire system

A voltage improvement system that consists of the series operation of two generators. One circuit of a mine is fed from one generator, and a second circuit is fed from the other generator. The mine track or return is common to both generators and is connected between the generators. This method provides high voltage for transmission of power, yet the individual circuits provide normal low-voltage power. In effect, this is the Edison three-wire system, wherein the rails form the neutral third wire. The third wire (mine

track) carries only the unbalance between the loads on the two separate circuits.
Kentucky

threshold

a. In geochemical prospecting, the limiting anomalous value below which variations represent only normal background effects and above which they have significance in terms of possible mineral deposits. *Hawkes, 1* b. In analytical chemistry, the limiting sensitivity of an analytical method, the detection limit. *Hawkes, 1*

Threshold Limit Value

A time-weighted average concentration under which most people can work consistently for 8 hours a day, day after day, with no harmful effects. A table of these values and accompanying precautions is published annually by the American Conference of Governmental Hygienists. *NSC, 2*

throat

a. The part of a blast furnace at the top of the stack. *Dodd* b. The zone of decreased cross section found between the port area and the furnace chamber in some designs of open-hearth steel furnaces. *Dodd* c. The submerged passage connecting the melting end to the working end of a glass tank furnace; the refractory blocks forming the sides of the throat are known as throat cheeks, sleeper blocks, or dice blocks; the refractories for the top are the throat cover. See also: [submarine throat](#) d. The least thickness of a weld, the calculation of its strength being based on the thickness at the throat. *Hammond*

throat of crusher

Point at which the rock is discharged. Its short dimension varies, depending upon whether the swing jaw is in the open or closed position. *Newton, 2*

throttle

To obstruct the flow of, as steam to an engine esp. by a throttle valve. *Webster 3rd*

throttle valve

A valve designed to regulate the supply of a fluid (as steam or gas and air) to an engine. *Webster 3rd*

through

A passage cut through a pillar to connect two rooms. *Fay*

through cut

An excavation between parallel banks that begins and ends at original grade. See also: [thirling](#)

througher

See: [stenton](#)

throughput

Quantity of material passed through the mill or a section thereof in a given time or at a given rate. *Pryor, 3*

through ventilation

The normal ventilation produced in a mine as the air flows from the intake to the return, as opposed to ventilation produced locally by auxiliary fans. *Nelson*

throw

a. The amplitude of shake of a vibratory screen, concentrating table, jigger conveyor, etc. *Nelson* b. Lateral displacement of a screen, shaking table, or crushing surface in motion. *Pryor, 4* c. The projection of broken rock during blasting. See also: [flyrock](#) *Standard, 2*; *Fay* d. The distance from an air supply opening measured in the direction of air flow, from the opening to the point where the air velocity is 50 ft/min (15.2 m/min). *Strock, 2* e. The amount of vertical displacement up (upthrow) or down (downthrow) produced by a fault; sometimes, loosely, a dislocation not vertical, the direction being specified. See also: [heave](#); [perpendicular throw](#); stratigraphic throw. *Fay* f. The vertical component of the net slip on a fault. *AGI*

thrower belt

See: [boxcar loader](#)

throwing clay

Clay plastic enough to be shaped on a potter's wheel.

thrown

a. Faulted or broken up by a fault. *Fay* b. Turned, as a piece of ceramic ware on a potter's wheel. *Standard, 2*

throw of crusher

See: [stroke of crusher](#)

throwoff switch

Aust. A switch by means of which an obstruction is thrown across the rails of a track, causing the derailment of the trucks. A derailing switch.

throwout bearing

a. A bearing, sliding on a clutch jackshaft, that carries the engage and disengage mechanism. *Nichols, 1* b. A bearing that permits a clutch throwout collar to slide along the clutch shaft without rotating with it. *Nichols, 1*

thrust

a. An overriding movement of one crustal unit over another, such as in thrust faulting. *AGI* b. See: [thrust fault](#); fault. c. A crushing of coal pillars caused by excess weight of the superincumbent rocks, the floor being harder than the roof. CF: [creep](#) *Fay* d. The ruins of a fallen roof, after pillars and stalls have been removed. *Fay* e. The weight or pressure applied to a bit to make it cut. *Long*

thrust arm

A cable-controlled bar that can slide by power in two directions. *Nichols, 1*

thrust bearing

a. A bearing that resists attempts of a shaft to move along its axis. *Pryor, 3* b. A bearing designed to carry axial loads on a shaft. *Shell*

thrust block

The antifriction part of the thrust yoke attached to the drive rod in the swivel head of a diamond-drill machine. Also called cage; friction head; thrust collar. See also: [thrust sheet](#)

thrust borer

Mechanism for forcing a hole through an embankment for the insertion of pipes or cables. *Hammond*

thrust fault

a. A fault with a dip of 45 degrees or less over much of its extent, on which the hanging wall appears to have moved upward relative to the footwall. Horizontal compression

rather than vertical displacement is its characteristic feature. CF: [normal fault](#) Syn: [thrust](#); [overthrust](#). *AGI* b. A reverse fault that is characterized by a low angle of inclination with reference to a horizontal plane. *AGI* c. A reverse fault heading at a high angle. *BS, 11*

thrust nappe

See: [thrust sheet](#)

thrust plane

a. The surface of a thrust fault, when the surface is planar. *AGI* b. The plane of a thrust or reversed fault. Syn: [overthrust plane](#)

thrust plate

The upper and/or lower race parts of the thrust bearing in the thrust block or cage on the drive rod in a diamond-drill swivel head. Syn: [thrust race](#)

thrust race

See: [thrust plate](#)

thrust sheet

The body of rock above a large-scale thrust fault whose surface is horizontal or very gently dipping. Syn: [thrust block](#); [thrust nappe](#); thrust plate. *AGI*

thrust washer

A washer that holds a rotating part from sideward movement in its bearings. *Nichols, 1*

thrust yoke

The part connecting the piston rods of the feed mechanism on a hydraulic-feed diamond-drill swivel head to the thrust block, which forms the connecting link between the yoke and the drive rod, by means of which link the longitudinal movements of the feed mechanism are transmitted to the swivel-head drive rod. Also called back end; cage. *Long*

thulite

An intense pink variety of zoisite containing manganese; an ornamental stone.

Thum-Balbach process

A silver refining process using carbon cathodes, dore anodes, and a silver nitrate-nitric acid electrolyte. The silver is scraped off the bottom as crystals. *Liddell*

thumb-marked fracture

The minute ripples or thumbmarks characteristic of the fractured surface of amethyst. *CMD*

Thum furnace

A gas-fired furnace esp. for the treatment of zinc ore that is high in lead. *Fay*

thunderbolt

a. A stone or stony concretion, esp. if elongated and tapering, found in the ground and ignorantly supposed to have fallen from the sky. *Standard, 2* b. A nodule or mass of iron pyrites found in English chalk formations. *Standard, 2*

thunder egg

A popular term for a small, geodelike body of chalcedony, opal, or agate that has weathered out of the welded tuffs or lava, particularly from central Oregon. *AGI*

thuringite

A monoclinic mineral, $[\text{Fe}(\text{OH})_2 (\text{AlSi}_3 \text{O}_{10})] \cdot 3[(\text{Mg}, \text{Fe})(\text{OH})_2]$; pseudo-hexagonal; forms monoclinic plates having micaceous cleavage; an iron-rich chamosite.

thurl

S. Staff. To cut through from one working into another. Also spelled thirl. *Fay*

thurling

A passage cut from room to room, in post-and-stall working. See also: [thirl](#); [thirling](#). *Fay*

thwarting

A short tunnel driven between two or more veins where they are nearly vertical. *Nelson*

thyatron

A gas-filled valve or tube in which the initiation of current in an ionized gas or vapor is controlled by the voltage applied to a control electrode. *NCB*

Thyssen gravimeter

An early gravity meter of the unstable equilibrium type. *AGI*

Tibet stone

A mixture of aventurine quartz and quartz porphyry that may be of various colors and has been cut as ornamental or curio stones, in Russia.

ticket

a. A sealed bid for ore to be sold. *Webster 3rd* b. The numbered check that the miner puts on his loaded car to inform the weighmaster to whom the coal belongs. See also: [tag](#); [tally](#). *Fay*

tick hole

A small cavity in a rock; a vug. *Fay*

tidal flat

An extensive marshy or barren tract of land that is alternately covered and uncovered by the tide, and consisting of unconsolidated sediment (mostly mud and sand). It may form the top surface of a deltaic deposit. See also: [sabkha](#)

tidal marsh

See: [tidal flat](#)

tide flat

See: [tidal flat](#)

tidelands

Technically lands overflowed during floodtide, but the term, by reason of the so-called Tidelands cases, has been used to describe that portion of the continental shelf between the shore and the claimed boundaries of the States--3 miles or 9 miles (4.8 km or 14.4 km) at sea. *Williams*

tie

a. A beam, post, rod, or angle to hold two pieces together; a tension member in a construction. *Webster 3rd* b. One of the transverse supports to which railroad rails are fastened to keep them to line, gauge, and grade. *Webster 3rd* c. Linear or angular

measurements or a combination of the two made for the purpose of locating other points from points of known position. Ties may be made to connect physical objects with the survey line, or to locate the instrument point with reference to physical objects so that it can be reestablished if lost. To tie in is to close a survey on itself or on another survey, or to locate a point by means of ties. *Seelye, 2*

tieback

a. A beam serving the purpose similar to a fend-off beam, but fixed at the opposite side of the shaft or inclined road. *Fay* b. The wire ropes or stayrods that are sometimes used on the side of the tower opposite the hoisting engine, in place of or to reinforce the engine braces. *Fay*

tie bar

a. A bar used as a tie rod. *Webster 3rd* b. A rod between two railway switch rails to hold them to gauge. *Webster 3rd*

tied retaining wall

A retaining wall tied into the adjoining ground by means of a deadman (wood block) or other suitable anchorage. *Hammond*

tie line

a. A line at constant temperature that connects any two phases that are in equilibrium at the temperature of the tie line. Syn: [conode](#) b. A line measured on the ground to connect some object to a survey; e.g., a line joining opposite corners of a four-sided figure, thereby enabling its area to be checked by triangulation. *AGI*

tiemannite

An isometric mineral, HgSe ; has sphalerite structure; dark gray to black.

tie plate

A metal plate used under rails where they rest on ties. The rail is spiked to the tie through holes in the plate. *Jones, 1*

tie point

a. A point to which a tie is made; esp. a point of closure of a survey either on itself or on another survey. *AGI* b. An image point identified on oblique aerial photographs in the overlap area between two or more adjacent strips of photography. They tie individual

sets of photographs into a single flight unit and adjacent flights into a common network. *AGI*

tie pumping

When track is not adequately drained and water enters the ballast and roadbed, tie pumping occurs. Under the action of the rolling stock, pressure on the tie discharges water to the surface, washing the ballast from beneath and around the tie.

tie rod

A round or square iron rod passing through or over a furnace and connected with a buckstay to assist in binding the furnace together. *Fay*

tierra

Sp. Any rock or mineral; tierra blanca (Mex.), a calcareous tufa; tierra de batan, fuller's earth; tierra de fluor (Venez.), a bed of reddish clayey earth; tierra de porcelana, china clay; tierra pesada, heavy spar. *Fay*

tierra blanca

A Spanish term for white ground or white earth, and applied to white calcareous deposits such as tufa, caliche, and chalky limestone. *AGI*

tiff

a. Sparry calcite in Wisconsin and southwestern Missouri zinc fields. b. Sparry barite in southeastern Missouri.

tiffanyite

A hydrocarbon present in certain diamonds causing phosphorescence.

tiger

A device, as a fork, for supporting a continuous series of well-boring rods or tubes while raising or lowering them in the hole. *Standard, 2; Fay*

tigereye

Alternative spelling of tiger's-eye.

tiger's-eye

a. A usually yellow-brown chatoyant stone that is much used for ornament and is a silicified crocidolite in which the fibers penetrating the quartz are changed to oxide of iron. Also spelled tigereye. CF: [hawk's-eye](#) See also: [occidental cat's-eye](#); [oriental cat's-eye](#). *Webster 3rd* b. Crocidolite asbestos replaced by quartz to yield a yellow-brown chatoyant stone used for ornament. c. Ceramic glaze resembling tiger's-eye.

tight

a. Soil or rock formations lacking veins of weakness. Syn: [tight formation](#) b. Blasts or blastholes around which rock cannot break away freely. *Nichols, I* c. Inadequate clearance or the barest minimum of clearance between working parts. *Long* d. Unbroken, crack-free, and solid rock in which a naked hole will stand without caving. *Long* e. A borehole made impermeable to water by cementation or casing. *Long* f. An impermeable rock formation. *Long* g. An underground opening having limited space in which to work. *Long* h. Lacking in porosity; impervious. *Wheeler, R.R.*

tight-bedded

In sandstone quarrying, a term used to describe the rock if it is massive, showing no open-bed seams. CF: [thin-bedded](#); [thick-bedded](#). *AIME, I*

tight-burning clay

A clay that is dense or approaches vitrification after firing.

tight formation

See: [tight](#); tight rock.

tight hole

a. A borehole the diameter of which is too small for adequate clearance between the drill-stem equipment and/or inserted casing. *Long* b. A borehole the wall rocks of which are impermeable to water or have been made tight by cementation or insertion of casing. *Long* c. A borehole-drilling operation, access to which and information about which are not released except to authorized persons. *Long*

tight lagging

Lagging placed touching each other. See also: [tight sheathing](#)

tight rock

a. Rock formation in which the joints, cracks, or crevices are sealed and impermeable to water. *Long* b. Rock composed of tightly cemented grains of very fine, even-sized

crystals. *Long* c. Rock that does not chip easily under the impact of cable tools. *Long* d. A tough, resilient rock. *Long* e. Can. Without evidence of shearing or mineralization. Syn: [tight formation](#)

tightset

A quarrymen's term, equivalent to blind seam, or incipient joint. *Fay*

tight sheathing

The most complete sheathing using wood timbering. Used where water or fine wet soils must be retained. The frame is designed for this use and is generally stronger than that required for other types of sheathing. A specially edged plank, generally tongue-and-grooved, eliminates the crevices existing in close sheathing. CF: [close sheathing](#); skeleton sheathing. See also: [tight lagging](#)

tight shot

An explosive shot that has been set off to loosen coal in a seam that has not been previously cut or sheared. *BCI*

tilasite

A monoclinic mineral, $\text{CaMg}(\text{AsO}_4)_2\text{F}$; isomorphous with isokite; violet-gray; at Laangban, Sweden, and Kajlidongri, Central India.

tile copper

Copper obtained by roasting and refining the metal bottoms that collect under the regulus in smelting certain impure ores; usually cast in flat, rectangular plates, hence its name. See also: [bottoms](#) *Standard, 2*

tile machine

A machine for making tubular or arch-shaped tiles from clay, operating by forcing the raw material through a die, in a continuous stream, which is cut into suitable lengths by wires. *Standard, 2*

tile ore

An earthy variety of cuprite, brick red because of admixed iron oxides.

tiler

a. A kiln or oven for baking tiles. *Standard, 2* b. A maker or layer of tiles. *Standard, 2*

tile shoe

A device that permits laying tile directly behind a ditcher. Also called tile box. *Nichols, 1*

tile works

A tilery or tile field. *Standard, 2*

tilgate stone

Beds of calcareous sandstone or ironstone, near Hastings, England. *Fay*

till

Dominantly unsorted and unstratified drift, generally unconsolidated, deposited directly by and underneath a glacier without subsequent reworking by meltwater, and consisting of a heterogeneous mixture of clay, silt, sand, gravel, and boulders ranging widely in size and shape. See also: [boulder clay](#); [moraine](#). Syn: [glacial till](#); [ice-laid drift](#). *AGI*

tiller rope

A flexible wire rope composed of six small ropes, usually of seven wire strands each laid about a hemp core. *Zern*

tilleyite

A monoclinic mineral, $\text{Ca}_5(\text{Si}_2\text{O}_7)(\text{CO}_3)_2$; forms white grains in rock at Crestmore, CA.

tillite

A consolidated or indurated sedimentary rock formed by lithification of glacial till, esp. pre-Pleistocene till (such as the Late Carboniferous tillites in South Africa and India). *AGI*

tilt

a. The angle at the perspective center of an aerial photograph between the plumb line and the perpendicular from the interior perspective center to the plane of the photograph. *AGI* b. The lack of parallelism (or the angle) between the plane of the photograph from a downward-pointing aerial camera and the horizontal plane (normal to the plumb line) of the ground. *AGI* c. In aerial photography, the angle between the lens axis and a vertical through the exposure station (rear nodal point of lens). It is seldom more than 3 degrees and can generally be kept to 1 degrees. This is regarded as satisfactory for

vertical photographs. *Seelye, 2; Hammond d.* To hammer or forge with a tilt hammer; as, to tilt steel to render it more ductile. *Standard, 2*

tilt hammer

A hammer for shingling or forging iron, arranged as a lever of the first or third order, and tilted or tripped by means of a cam or cog gearing and allowed to fall upon the billet, bloom, or bar. *Fay*

tilting dozer

A bulldozer whose blade can be pivoted on a horizontal center pin to cut low on either side. *Nichols, 1*

tilting furnace

Open-hearth furnace swung about its major axis when pouring out the melted product. *Pryor, 3*

tilting gate

A crest gate for dam spillways designed so that water pressure acting upon it will do so only at a definite level. It closes automatically when the water level falls to normal. *Hammond*

tilting idlers

An arrangement of idler rollers on a conveyor in which the top set is mounted on vertical arms which pivot on spindles set low down on the frame of the roller stool. This permits the entire carrier frame to lean forward slightly in the direction of belt travel. In the event of the belt not running true, the tilting idlers guide it back to its correct course again. *Nelson*

tilting level

A surveying instrument with sighting telescope so mounted that it can be raised or lowered through a limited arc without impairing accuracy of reading, though axis of rotation is not precisely horizontal. The bubble tube is usually mounted alongside the telescope and is viewed from the eyepiece and through an optical sighting arrangement, which either brings opposite halves of the bubble image into coincidence or the end of the bubble to a reference line. *Pryor, 3; Mason*

tilting mixer

A concrete mixer with a rotating drum, which is tilted to discharge its contents.
Hammond

timber

a. Any of the wooden props, posts, bars, collars, lagging, steel joists or beams, etc., used to support mine workings. *Fay* b. To set or place timbers in a mine. *Fay* c. Applied to rough blocks of natural rock as it comes from a quarry before being shaped into sharpening stones. *Mersereau, 2*

timber boss

See: [timberman](#)

timber drawer

a. An appliance for withdrawing timber supports from wastes, e.g., a sylvester. *Nelson*
b. A miner engaged in timber drawing. *Nelson* c. See: [timber puller](#)

timber drawing

See: [drawing timber](#)

timbered stope

Stope in which square-set timbering and its variations are employed. As a rule, the ground is broken by overhand methods, the face being advanced by successive small excavations, each one timbered before the next is begun. *Higham*

timberer

One who cuts, frames, and/or puts in place any of the timbers used in a shaft, slope, mine, or tunnel. Also one who draws props, posts, etc. Syn: [timberman](#)

timber foreman

See: [timberman](#)

timbering

a. The operation of setting timber supports in mine workings or shafts to support the roof or the face of a tunnel during excavation and lining. The term "support" would cover the setting of timber, steel, concrete, or masonry supports. See also: [setting](#); [timber set](#); [face timbering](#); pin timbering. *Nelson* b. Timber work taken collectively in a mine. *Standard, 2* c. Protecting against falls of roof formation of a mine, by means of horizontal timbers

or caps extending across the passageway just under the roof, the ends of such timbers resting upon the vertical timbers or posts. *Ricketts* d. Timber to support the roof or the face of a tunnel during excavation and lining. *Stauffer*

timbering machine

An electrically driven machine to raise and hold timbers in place while supporting posts are set after being cut to length by the machine's power-driven saw.

timbering set

A tunnel support consisting of a roof beam, or arch, and two posts. *Nichols, 1*

timber jack

A jack to raise and hold crossbars against the roof while props are being set. *Hess*

timberman

a. In bituminous coal mining, a head timberman is a foreman who supervises workers installing timbers in a mine to support the roof and walls of haulageways, passageways, and the shaft. Also called timber boss; timber foreman. *DOT* b. A miner skilled in notching, erecting, and securing timbers set in mine workings. The craft of the timberman is gradually becoming extinct with the advent of power tools and steel as a support. *Nelson* c. See: [roof bolter](#); timberer.

timberman helper

In mining, a laborer who assists a timberman in erecting supports for the roof of a mine, using posts, headers, cap pieces, and wedges. *DOT*

timber mat

Broken timber forming roof of ore deposit being extracted by caving methods such as top slicing. It separates the downward gravitating overburden and rock strata from the ore. *Pryor, 3*

timber packer

a. A laborer who delivers timber to the working place in a pitching or inclined coal seam. *Fay* b. See: [pack builder](#)

timber pickling

A method to assist timber preservation; e.g., creosoting. See also: [timber preservation](#)

timber preservation

Any treatment of mine timber for the purpose of extending the useful life of the timber. Various preservatives are used, such as creosote, zinc chloride, sodium fluoride, and other chemicals. See also: [brush treatment](#); [guniting](#); [open-tank method](#); [pressure process](#); Bethell's process; timber pickling; seasoning timber. *Lewis*

timber puller

a. A piece of equipment used in removing the supports or timbers in a mine. A timber puller should be constructed so that the operator will be under safe roof while drawing the timber. A sylvester is an example of this type of equipment. Also called timber drawer. *Kentucky* b. See: [timber robber](#)

timber rights

The right to cut timber on the public domain for commercial use.

timber robber

In anthracite and bituminous coal mining, a laborer who pulls out and recovers timbers and props in working places from which all coal has been mined. Also called prop drawer; timber puller. *DOT*

timber set

A timber frame to support the roof, sides, and sometimes the floor of mine roadways or shafts. For a mine roadway, the simplest timber set consists of a crossbar, cap, or collar supported on two upright posts or arms with round or board lagging. Such a set will resist roof pressure and moderate side pressure and is erected at intervals of from 2 to 6 ft (0.6 to 1.8 m). The timbers are about 5 to 10 in (12.7 to 25.4 cm) in diameter. In South Wales, such a timber set is known as double timber. See also: [timbering](#); [bar timbering](#); [two-piece set](#); [three-piece set](#); four-piece set. *Nelson*

timber trolley

A strong carriage of low height for transporting timber from the surface stockyard to underground workings. It consists of a timber or steel base, mounted on wheels, with U-shaped arms in which the timber is lashed with chains. See also: [bogie](#)

timber truck

Any truck or car used for hauling timbers inside a mine. In conveyor work, it is applied to the small truck mounted on wheels that is designed to run in the panline of a shaker conveyor for the purpose of carrying timber and other materials to the face. *Jones, I*

time-and-motion study

The coordination and analysis of the data provided by time study and motion study. *Nelson*

time at shot point

In seismic exploration, the time required for the seismic impulse to travel from the charge in the shothole to the surface of the Earth. Syn: [uphole time](#)

time break

An indication on a seismic record showing the instant of detonation of a shot or charge. CF: [time signal](#) time mark. *AGI*

time correlation

Correlation of rocks in one area with those of another area on basis of time equivalence or contemporaneity of origin.

time-delay relay

Relay that does not operate until a predetermined time has elapsed. The time ratings are usually adjustable, but some time-delay relays have the time rating built into them. *Coal Age, 3*

time-depth chart

A graphical expression of the functional relation between the velocity function and the times observed in the seismic method of geophysical exploration. It permits time increments to be converted to corresponding depths. Syn: [time-depth curve](#)

time-depth curve

See: [time-depth chart](#)

time-distance curve

In refraction seismic computations, a graph, usually with arrival times of distinctive seismic signals plotted as ordinates and with distances along the surface of the Earth plotted as abscissas. In earthquake studies, the times of arrival of seismic waves at recording stations may be known, but the time of initiation of the waves may be unknown. As data are accumulated from different recording stations, a time-distance graph may be constructed. If it is possible to extrapolate this graph to the origin on the time and distance coordinates, it becomes a travel-time curve. *AGI*

time-distance graph

In refraction seismic computations, a plot of the arrival times of refracted events against the shot-point-to-detector distance. The reciprocal slopes of the plotted segments are the refraction velocities for the refracting bed. *AGI*

time gradient

In the reflection seismic methods applied to dipping reflectors, the travel time curves may not be straight lines; i.e., the apparent velocity observed varies with the spread from shot point to detectors. The time gradient is the reciprocal of the apparent velocity. In seismic prospecting, also the rate of change of travel time with depth. *AGI*

time lag

a. In refraction seismic interpretation, where arrival times are plotted against shot-detector distances, if some of the paths from shot point to detector include a low-speed bed, the corresponding arrival times will be abnormally long, and the departure from normal travel time is called a time lag. Also, in seismic prospecting, time delays in arrivals due to phase shifts in filtering, to shot-hole fatigue, etc. *AGI* b. A delay in the arrival time of seismic energy from the time expected. Time lags may be produced by an abnormal low-velocity layer, phase shifts in filtering, or other factors. *AGI*

time leads

In a method of interpretation of refraction seismic records where the arrival times are plotted against shot-detector distances, if some of the paths from shot point to detector include a high-speed segment, the corresponding travel times will not fall on a smooth curve. The departure in this case from the curve is called a time lead, and it is proportional to the horizontal extent of the high-speed segment. Used in salt-dome exploration. *AGI*

time mark

a. See: [time break](#) b. Mark corresponding to a particular time (e.g., hour, minute, and second time marks) on a seismic recording.

timer lines

Lines on a seismogram that mark increments of time. *Schieferdecker*

time-rock unit

See: [time-stratigraphic unit](#)

time scale

See: [geologic time scale](#)

time signal

In geophysics, a signal used to indicate the time of explosion in a shothole and successive intervals of time on the recording. CF: [time break](#)

time-stratigraphic unit

A body of rock established to serve as the material reference for all rocks formed during the same span of time. Each of its boundaries is synchronous. Chronostratigraphic units in order of decreasing rank are eonothem, erathem, system, series, stage. Syn: [chronostratic unit](#); chronolithologic unit; time-rock unit; chronolith. *AGI*

time study

A detailed investigation in which the average time taken to do each operation of a complete cycle is recorded. See also: [method study](#); motion study. *Nelson*

time tie

In seismograph continuous profiling, a coincident travel path for seismic energy initiated at opposite ends of the path. The use of such coincident travel paths on adjacent reflection layouts facilitates correlation from one layout to the next as the shot point or recording position is changed. *AGI*

time-transgressive

See: [diachronous](#)

time value

The interval of geologic time represented by or involved in producing a stratigraphic unit, an unconformity, the range of a fossil, or any geologic feature or event. *AGI*

timing

The time elapsing between two successive exposures of an aircraft camera when taking vertical photographs. See also: [photogrammetry](#) *Hammond*

timing line

One of a series of marks or lines placed on seismic records at precisely determined intervals of time (usually at intervals of 0.01 or 0.005 s) for the purpose of measuring the arrival time of recorded events. *AGI*

tin

a. A tetragonal mineral, Sn : rare; soft; malleable: bluish white. b. The metal extracted from cassiterite; used as a coating to protect iron and copper, such as a foil, and in solder, bronze, and other alloys. Commercially, tin is available in three grades: Grade A must assay 99.75%; grade B must assay 99.7%; and grade C, or common tin, must assay 99% tin. c. To coat with tin, such as to tin iron; tinplate. *Standard, 2* d. Metallic element that has a highly crystalline structure. Symbol, Sn. Found chiefly in cassiterite, SnO_2 . Used in alloys such as soft solder, type metal, fusible metal, pewter, bronze, and bell metal and as a crystalline tin-niobium alloy. *Handbook of Chemistry and Physics, 3* e. See: [zinn](#)

tin bound

a. Corn. To mark a limit, as on a tract of waste land, within which one claims or reserves the right to mine unworked tin ore. *Standard, 2* b. Land so reserved. *Standard, 2*

tincal

The name given, since early times, to crude borax obtained from salt lakes in Kashmir, India, and Xizang (formerly Tibet), China. Also spelled tinkal. Syn: [borax](#)

tincalconite

A trigonal mineral, $\text{Na}_2\text{B}_4\text{O}_5(\text{OH})_4 \cdot 3\text{H}_2\text{O}$. Syn: [mojavite](#); [octahedral borax](#).

tin-can safety lamp

A Davy lamp placed inside a tin can or cylinder having a glass in front, airholes near the bottom, and an open top. *Fay*

tinder ore

An impure variety of jamesonite. *Standard, 2*

tin dish

A pan used by prospectors for washing gold-bearing materials and extracting the gold. See also: [pan](#)

tin dredging

The extraction of tin-bearing ore from placers by means of dredges. *Nelson*

tine

The actual excavating tooth or point of a grab bucket, scraper loader, dragline, or excavator bucket. *Hammond*

tin floor

a. Corn. A thin flat mass of tinstone between beds of rock. *Fay* b. A flat mass of tin ore. *Standard, 2*

tinge

A color designation. A faint trace of a hue that modifies another hue, as a blue with a tinge of green, i.e., blue tinged with green or, stated differently, very slightly greenish-blue.

tin ground

Corn. Tin-bearing alluvium, stream works. *Arkell*

tin hat

A head covering made of reinforced sheet aluminum or plastic-impregnated fabric and shaped somewhat like a sun helmet; worn for protection and/or to reduce the severity of head injuries from falling objects. Also called hard hat. Syn: [safety hat](#)

tinkal

See: [tincal](#)

tinker

Derb. Laminated carbonaceous shale. *Fay*

tin minerals

Virtually all the industrial supply of tin comes from cassiterite, SnO_2 , though a little has been won from the sulfides stannite, cylindrite, and franckeite. Bulk of cassiterite comes from alluvial workings. Main market is in tin plating, tin foil, solders, bearing metals, bronze and other alloys, and such salts as opacifiers and dye mordants. *Pryor, 3*

tinned sheet iron

See: [tin plate](#)

tinner

A tinsmith. *Webster 3rd*

tinning metal

An alloy of equal parts of tin and lead; used by electrotypers for coating copper shells before backing. *Fay*

tin ore

See: [cassiterite](#)

tin plate

Sheet iron or steel, cleaned by pickling in acid and then passed through bath of molten tin to produce coating. Three grades are charcoal plate, coke plate, and crystallized. Tin is also deposited by electroplating. Syn: [tinned sheet iron](#)

tin pyrites

See: [stannite](#)

tin salt

See: [salt of tin](#)

tin spar

See: [cassiterite](#)

tinstone

See: [cassiterite](#)

tin stone

See: [cassiterite](#)

tin-white cobalt

See: [smaltite](#)

tinworks

A place or an establishment where tin is manufactured or mined. *Standard, 2*

tip

a. The point at which loaded mine cars are dumped on the surface. Also called tipple. *Hudson* b. A piece of tool material secured to a cutter tooth or blade. *ASM, 1*

tipple

a. Originally the place where the mine cars were tipped and emptied of their coal, and still used in that sense, but more generally applied to the surface structures of a mine, including the preparation plant and loading tracks. *BCI* b. The dump; a cradle dump. c. Aust. The tracks, trestles, screens, etc., at the entrance to a colliery where coal is screened and loaded. CF: [dump](#)

T-iron

a. An angle iron having T-shaped cross section. *Fay* b. T-rails used in a mine, as distinguished from wooden rails. *Fay*

titan

See: [titanium](#); titanite.

titanaugite

See: [titanian augite](#)

titanhornblende

A titaniferous variety of hornblende. *English*

titania

a. See: [titanium dioxide](#) b. TiO_2 . Also called titanium oxide; titanic dioxide; titanic oxide. A common constituent of iron ores. Used as a pigment, and it replaces zinc oxide in manufacturing white rubber and as a filler for paper; can be used alone as a refractory and as an electrical insulator. Its crystals show marked piezoelectric effects and have a greater brilliance and a higher refractive index than diamond. c. The minerals tetragonal rutile, anatase, octahedrite, and orthorhombic brookite. d. Commonly refers to synthetic white titanium dioxide that is produced mainly from ilmenite, FeTiO_3 , that contains 50% to 54% TiO_2 .

titanian augite

See: [titanaugite](#)

titanic anhydrite

A white pulverulent titanium oxide, TiO_2 , found native as brookite, octahedrite, and rutile, and a common constituent of iron ores. Also called titanic oxide. *Fay*

titanic dioxide

See: [titanium dioxide](#)

titanic iron ore

See: [ilmenite](#)

titanic oxide

See: [titanium dioxide](#)

titanic schorl

See: [rutile](#)

titaniferous magnetite

Magnetite containing titanium. *Bateman, 2*

titanite

A monoclinic mineral, CaTiOSiO_4 ; Ca is replaced by Sr, Ba, Na, Mn, Th, or rare earths; Ti is replaced by Al, Fe, Mg, Nb, Ta, V, or Cr; up to 1/5 of O_2^- may be replaced by $(\text{OH}, \text{F})^-$; weakly radioactive: forms wedge-shaped crystals; a common accessory in felsic plutonic rocks, in gneisses, schists, and marbles; a source of titanium. Formerly called sphene.

titanium

A silvery-gray or iron-gray, metallic element. Symbol, Ti. Found in nature only in combined form; occurs chiefly in ilmenite (FeTiO_3), and in rutile and titanite. Used as an alloying agent with aluminum, molybdenum, manganese, iron, and other metals. Used in aircraft and missiles and has potential for use in desalination plants. *Handbook of Chemistry and Physics, 3*

titanium carbide

A compound produced by fusing titanium dioxide with carbon or calcium carbide. Has a melting point in the range of 3,140 to 3,160 degrees C. This very hard, refractory material is used for wear-resistant applications and where good thermal shock resistance is needed, as in bearings, nozzles, and special refractories under either neutral or reducing conditions. *Lee*

titanium dioxide

a. Also called titanium oxide, titanic dioxide, titanic oxide, titania, rutile, anatase, or brookite. Colorless, white, pale yellow or yellowish-red, reddish-brown, brown, blue or bluish, violet, and black; tetragonal and orthorhombic; TiO_2 ; molecular weight, 79.90; sp gr, 3.82 to 5.13 depending on crystal system and crystal form; Mohs hardness, 5.5 to 6.5; melting point, 1,825 to 1,850 degrees C; boiling point, 2,500 to 3,000 degrees C; insoluble in water and in most acids; and soluble in hot concentrated sulfuric acid and in alkalis. Titanium dioxide occurs as the minerals rutile (tetragonal); anatase or octahedrite (tetragonal); and brookite (orthorhombic). Titanium dioxide is a common constituent of iron ores. *Handbook of Chemistry and Physics, 2; CCD, 2* b. Titanium dioxide as rutile: colorless, pale yellow, reddish-brown, red, bluish, violet, and black; tetragonal; adamantine to submetallic luster; refractive indexes, 2.616 and 2.903; sp gr, 4.26 and ranges from 4.18 to 5.13; Mohs hardness, 6.0 to 6.5; and the same melting points, boiling points and solubility characteristics as above. Titanium dioxide possesses the greatest hiding power of all the white pigments. Used in glassware and in ceramics, in enamel frits, in welding rods, and single crystals are used as high-temperature transducers. Syn: [titania](#); [octahedrite](#).

titanium dioxide pigments

Any of three grades of titanium-dioxide-based pigments used in the production of paints, paper, and many other products requiring a white pigment with a high hiding power and chemical stability. Rutile and anatase grades are more or less pure titanium dioxide, but owing to a difference in crystal structure, they differ slightly in hiding power and chalking quality. Titanium dioxide of pigment quality is manufactured principally by treating finely ground ilmenite or titanium slag with concentrated sulfuric acid. Also used in ceramics and fiberglass, and in making titanium gems. *USBM, 6*

titanium nitride

TiN; a special refractory material (melting point, 2,930 degrees C). It can readily be produced from TiCl_4 and NH_3 . *Dodd*

titanium oxide

a. TiO_2 ; used as an opacifier, particularly in vitreous enamels, and as a constituent of some ceramic colors. Titania and titanate electroceramics, for use in the radio frequency field, are based on this oxide and its compounds. Titania occurs in three crystalline forms: anatase, brookite, and rutile. *Dodd* b. See: [titanium dioxide](#)

titanium silicide

Ti_5Si_3 ; sp gr, 4.2. This special ceramic has good resistance to high temperature oxidation, but not to thermal shock. *Dodd*

titanium sponge

The metal product from reducing titanium tetrachloride with magnesium in the Kroll process. It is called sponge because of its spongelike appearance. Sodium-reduced metal also is referred to as sponge. *USBM, 7*

titanomagnetite

See: [titanomagnetite](#)

titanmelanite

A titaniferous andradite approaching schorlomite in composition; garnet group.

titanomagnetite

a. A titaniferous variety of magnetite with titanium in crystal solution. Syn: [titanomagnetite](#) b. A term for mixtures of magnetite, ilmenite, and ulvoespinel. CF: [mogensenite](#)

titan process

A process of concentrating iron ore that comprises the steps of (1) effecting a dry, thermal, partial reduction of the iron in the ore to the metallic state to a degree of reduction of between 50% and 80%, (2) subjecting the reduced product to a magnetic separation, and (3) recovering the magnetic concentrate. *Osborne*

tithe ore

Eng. A portion of ore set aside for the payment of rental or royalty on mineral lands. *Fay*

title

The right to enter, develop, and work a coal or mineral deposit. See also: [claim](#); [lease](#). *Nelson*

TLV

See: [Threshold Limit Value](#)

toadrock

See: [toadstone](#)

toad's-eye

Eng. Shelly pink limestone in the Corbula Beds of the Purbeck Beds at Durlston Bay. So called because it is full of the small gastropods *Pachychilus manselli* that resemble eyes when seen in transverse section. CF: [rabbit-eye](#)

toad's-eye tin

A reddish or brownish variety of cassiterite in botryoidal or reniform shapes with internal concentric or fibrous structure.

toadstone

a. Applied earlier to various stones or stonelike objects likened in color or shape to toads (batrachites, bufonites, crapodius). Syn: [toadrock](#); fiery dragon. *Arzell* b. Eng. A kind of traprock. c. An old Derbyshire name for amygdaloidal basalt lava in the Carboniferous Limestone. d. A fossilized object, such as a fish tooth or palatal bone, once thought to have formed within a toad and frequently worn as a charm or an antidote for poison. Syn: [toadrock](#)

tobacco rock

A term used in the Southwest United States for a favorable host rock for uranium, characterized by light yellow or gray color and by brown limonite stains. *AGI*

tobermorite

An orthorhombic mineral, $\text{Ca}_9 \text{Si}_{12} \text{O}_{30} (\text{OH})_6 \cdot 4\text{H}_2\text{O}$; the principal cementing compound in Portland cement.

toddite

A mixture of columbite and samarskite.

todorokite

A monoclinic mineral, $(\text{Na,Ca})_{0.5}(\text{Mn,Mg})_6\text{O}_{12}\cdot 4\text{H}_2\text{O}$; forms black spongy banded and reniform aggregates composed of minute lathlike crystals; in Hokkaido, Japan.

toe

a. The base of the coal, ore, or overburden face in a quarry or opencast mine. *Nelson* b. The front end of a frog, opposite the heel, in a car track. c. The lowest part of a slope or cliff; the downslope end of an alluvial fan. *AGI*

toeboard

A raised edging around the perimeter of a work platform in drilling to prevent hand-tools from being accidentally kicked or knocked off the platform. *Long*

toe cut

In underground blasting, the cut obtained by the use of single cut holes inclined downward. *Lewis*

toehole

A blasting hole, usually drilled horizontally or at a slight inclination into the base of a bank, bench, or slope of a quarry or open pit mine.

toeing-in

A quarry term for the wedging-in of the end of a granite sheet under an overhanging joint, probably in consequence of the faulting of the sheets along the joint. It is also applied to the overlapping of lenticular sheets. *Fay*

toe of a shot

The distance from the inner end of the hole to the adjacent free face measured at right angles to the direction of the hole; or that portion of the hole that is filled with powder; or that part of the seam to be broken lying between the powder and a free face. *Zern*

toernebohmite

See: [tornebohmite](#)

toe-to-toe drilling

The drilling of large-diameter blasting holes in quarries and opencast pits. They are put down vertically from top to bottom of the quarry face. Deck loading is often adopted,

with half to two-thirds of the total charge at the bottom and the remainder in one or more deck charges as required. *Nelson*

to gauge

a. Made to gauge, or a size as specified, esp. as applied to the outside set diameter of bits and reaming shells and the inside diameter of a borehole. *Long* b. To determine, by measurement or other test, the capacity, quantity, or dimension. *Long*

toggle action

Application of crushing force so that the distance moved diminishes without change of input strength, between gape and set. Thus greatest speed of movement of the approaching faces is applied with weakest thrust and vice versa. *Pryor, 4*

toggle joint

A joint having a central hinge like an elbow, and operated by applying the power at the junction of motion, as from horizontal to vertical, and giving enormous mechanical advantage; a mechanism common in many forms of presses and in stone crushers. *Standard, 2*

toggle mechanism

A mechanism utilized to apply heavy pressure from a small applied force, such as in a jaw breaker, and other machinery. *Hammond*

toise

An old French unit of length used in early geodetic surveys and equal to 6 French ft, 6.396 U.S. ft, or 1.949 m. *AGI*

tolerance

A specified allowance (either plus or minus) of the given dimensions of a finished product to take care of inaccuracies in workmanship of parts to be fitted together. The amount allowed as tolerance is generally small as compared with the standard dimension of the part; e.g., the tolerance allowed in the set diameters of a diamond bit is + or -0.02 mm. *Long*

tolerance limits

In control of a measured value in a process, limited drift from optimum or norm (e.g., pH 7.6 + or - 0.2). *Pryor, 3*

toll

Ches. Royalty on rock salt, or other mineral. *Fay*

toll enrichment

A proposed arrangement by which uranium owned privately could be enriched in uranium-235 content in U.S. Government facilities upon the payment of a service charge. *Lyman*

toll refining

Situation in which the owner of ore or concentrate contracts the refining of the metal to another party for a fee, but the refined metal remains under the original ownership for final sale or disposition.

tom

a. An inclined trough in which gold-bearing earth or gravel is crudely washed; usually called long tom because it is longer than the rocker. *Webster 2nd* b. Cumb. A parting of black shale in a coal seam. *Arkell*

Tomassi process

An electrolytic process for refining lead in which the electrolyte is a solution of a double acetate of lead and potassium or sodium. The anodes are cast from crude argentiferous lead, and the cathodes are in the form of large disks of copper or aluminum bronze and are about half immersed in the electrolyte. *Fay*

tommy bar

A short rod used as a lever or handle for turning a jackscrew or a spanner by being inserted loosely in the hole provided for that purpose. *Long*

tomography

A division of radiography dealing with the photography of a particular plane in an object while leaving out undesired detail in other planes. Although this technique was developed for medical radiography, it is recommended for certain purposes in work with metals where it is essential that the location of faults be exactly known. *Osborne*

ton-cap screen

Commercial brand of wire screen cloth with long rectangular meshes. *Pryor, 3*

tone

a. That attribute of a color that determines its position in a scale from light to dark. Thus white, and also light gray, are light tones, and dark gray is the dark tone of the same color sensation; pink is a light tone of red, and maroon a dark tone. A light tone is usually known as a tint, a dark tone as a shade. See also: [intensity](#) b. A monochromatic frequency of vibration, such as in a violin string or vibrations of bodies of finite size and shape.

tong die

A hard, replaceable, serrated metal insert in pipe tongs, which comes in contact with and grips the outside of a pipe, casing, or drill rod. Also called tong key. *Long*

tongs

One of the various tools or wrench devices that can be made to fit and grasp drill rods, casing, or drivepipe. *Long*

tongue

a. A branch or offshoot of a larger intrusive body. See also: [epiphysis](#) Syn: [apophysis](#) b. A minor lithostratigraphic unit of limited geographic extent, being a subdivision of a formation or member, and disappearing laterally (usually by facies change) in one direction; a member that extends outward beyond the main body of a formation. CF: [lentil](#) c. A lava flow that is an offshoot from a larger flow; it may be as much as several kilometers in length. *AGI*

tongue joint

In welding, a split joint formed by inserting a wedge-shaped piece into a corresponding split piece and welding the two together. *Fay*

tongue plate

An adjustable plate that controls the quantity of feed entrapped by the rolls of a double-roll press. *BS, 5*

tongue test

A test by which crystals and crystalline gemstones can be distinguished from glass that feels warmer in comparison when held to the tongue because of its lower thermal conductivity.

tonite

A blasting explosive consisting of a mixture of guncotton with a nitrate and sometimes a nitro compound. *Webster 3rd*

ton-kilometer

A unit of measurement often used for the work done in transport. The number of ton-kilometers is the weight in tons of material transported multiplied by the number of kilometers driven. *Stoces*

Ton MPH

A system that permits calculating how hard an earth-moving tire should work and how much work it is doing. The Ton MPH for any tire is determined by multiplying the mean load and average speed. The resulting figure provides an index to the work a tire is doing. The system enables the operator to determine which type of tires to use to get top performance without overheating. *Coal Age, 3*

tonnage factor

Cubic feet of ore per ton in deposit. *Pryor, 3*

tonnage man

In anthracite coal mining, a person who is paid at a certain rate per ton of coal mined. *DOT*

ton of refrigeration

The extraction of 200 Btu/min (211 kJ/min), 12,000 Btu/h (12.7 MJ/h), or 288,000 Btu/d (3.1 GJ/d). The last is also called a ton-day of refrigeration. A ton of refrigeration is equal to 3.5168 kW of heat removal. *Strock, 2*

Tonpilz machine

An apparatus for measuring damping values. *Osborne*

tonstein

A compact argillaceous rock containing the clay mineral kaolinite in a variety of forms together with occasional detrital and carbonaceous material; commonly occurring as a thin band in a Carboniferous coal seam (or locally in the roof of a seam); often used as an aid in correlating European strata of Westphalian age. *AGI*

tool box

See: [powder box](#)

tool box miner

A lazy miner, specif. one who rests on a tool box while another miner does the work. *Korson*

tooldresser

The driller's helper on a cable tool rig. Syn: [cable-tool dresser](#); toolie. *AGI*

tool extractor

An implement for grasping and withdrawing drilling tools when broken, detached, or lost in a borehole. A fishing tool. Also called tool grab. *Long*

tool grinder

In stonework industry, one who grinds the cutting tools for stoneworking planers and lathes to a keen edge of the desired shape. *DOT*

tool heat treater

One who hardens and tempers tools, dies, and fixtures.

toolie

A worker who sharpens churn-drill bits; a dresser. See also: [tooldresser](#)

toolmaker

A worker skilled in the making of jigs, fixtures, gauges, etc. *Crispin*

tool nipper

A person who carries powder, drills, and tools to the various levels of a mine and brings dulled tools and drills to the surface. *Fay*

toolpusher

a. The head driller or drill foreman. *Long* b. The general supervisor of operations on a drilling rig. More commonly used in petroleum drilling. *AGI*

toolstone

Industrial diamond used for wire-drawing dies, indenter points, shaped-diamond tools, glaziers, and dressers. Toolstones approach gem diamonds in perfection, although not in color. The finer grades may be identical with diamonds sold as low-grade gems. The lower grade toolstones are also sometimes used as drill diamonds. CF: [drill diamond](#)
Long

tooth

a. Steel projections on a tool, such as a saw or excavation bucket, designed to provide a cutting or increased digging action. b. A projection on the circumference of a wheel (gear), designed to engage corresponding projections on another wheel (cog), and thereby transmit force.

tooth base

a. The inner part of a two-piece tooth on a digging bucket. *Nichols, 1* b. Occasionally, the socket in which a tooth fits. *Nichols, 1*

tooth brake

A brake used to hold a shaft by means of a tooth or teeth engaging with fixed sockets. Not used for slowing or stopping. *Nichols, 1*

toothed roller bit

See: [roller bit](#)

toothed-shoe cutter

A drivepipe or casing shoe with a serrated or toothed cutting edge. *Long*

tooth turquoise

Odontolite; fossil tooth material.

too wet

A mine-safety expression used to describe those mines or areas of mines that are too wet to propagate explosions even though they are not rock dusted. Too wet is when water exudes from a ball of dust when it is squeezed in the hands.

top

a. The surface around a mine shaft; the outside. *Jones, I* b. A mine roof; the upper part of a coalbed separated from the rest by a seam or parting. *Fay* c. The apex of a vein. *Hess* d. See: [cap](#); blue cap; overburden.

top and apex

The words top and apex as applied to mineral veins were not a part of the miner's terminology prior to the adoption of the U.S. Mining Law of 1872, but were words used by legislators to convey the intent of the formulators of that law. CF: [apex](#)

topaz

A triclinic mineral, $Al_2(F,OH)_2SiO_4$; pseudo-orthorhombic; colorless to pale blue, pale yellow to pinkish-beige ("sherry" topaz); defines hardness 8 on the Mohs scale; in cavities in granites, granite pegmatites, and rhyolites, and in surrounding metamorphic rocks; may be of gem quality. CF: [false topaz](#); [Scotch topaz](#); Spanish topaz.

topazfels

See: [topazite](#)

topazite

A hypabyssal rock composed almost entirely of quartz and topaz (Johannsen, 1920). Syn: [topazfels](#); [topazoseme](#); [topaz rock](#). *AGI*

topazolite

A yellow variety of andradite resembling topaz.

topazoseme

See: [topazite](#)

topaz-quartz

See: [gold topaz](#)

topaz rock

See: [topazite](#)

top bed

Eng. Often applied to the highest bed in a quarry. In Dorset and Somerset, the upper division of the Inferior Oolite. *Arkell*

top benching

The method by which the bench is removed from above, as with a dragline. See also: [benching](#)

top brick

Fireclay brick for use in lining the top section of a blast furnace. *ARI*

top cager

A worker at the top of a shaft to superintend the operation of lowering and raising of a cage. At most mines, duties include removing loaded cars from the cage and placing empty cars on the cage. See also: [cager](#) *Fay*

top canch

That part of a mine roof that has to be taken down to give headroom on roadways. *Fay*

top crystals

Standard grade of diamonds. *Hess*

top cut

a. A machine cut made in the upper limit of the workable section of a coal seam. See also: [overcut](#) b. A horizontal cut or groove made in coal at or near the top of the working face. See also: [middle cut](#); [bottom cut](#).

topcutter

A cutting machine designed esp. for cutting through the seam at a high level above the footwall. *Stoces*

top frame

A frame set at or just below ground level as a preliminary to the main timbering in an excavation. See also: [setting](#)

top gate

A gate road at the upper end of an inclined longwall conveyor face; usually a tailgate.
See also: [bottom gate](#)

top heading

A method of driving used for adits, tunnels, and drifts. The upper part or top heading is driven to the full length, before the enlargement of the rest of the section is carried out.
Fraenkel

top holes

An earlier system of working coal between two levels in an inclined coal seam. The top holes are driven to the full rise, and the face-line is usually stepped. Only the coal is worked, and no ripping is done in the top holes. The coal gravitates into trams in the lower level. See also: [stepped longwall](#)

top hooker

See: [lander](#)

tophus

See: [tufa](#)

top kick

See: [top shot](#)

top lander

See: [lander](#)

top lease

A lease granted by a landowner during existence of a recorded mineral lease that is to become effective if and when the existing lease expires or is terminated. *Williams*

topman

In mining, a worker who is employed at surface jobs around the mine plant.

topographic contour

An imaginary line on the ground, all points of which are at the same elevation above (or below) a specified datum surface. *AGI*

topographic correction

See: [terrain correction](#)

topographic map

A map showing the topographic features of a land surface, commonly by means of contour lines. It is generally on a sufficiently large scale to show in detail selected man-made and natural features, including relief, and such physical and cultural features as vegetation, roads, and drainage. CF: [planimetric map](#)

topographic profile

See: [profile](#)

topographic quadrangle

Map upon which is shown a portion of land having elevations indicated by a series of separate lines, each of which passes through a specified elevation; the sinuosity and spacing or crowding together of the contour lines, as they are called, indicate slope and relief of the terrain.

topographic unconformity

a. The relationship between two parts of a landscape or two kinds of topography that are out of adjustment with one another, due to an interruption in the ordinary course of the erosion cycle of a region; e.g., a lack of harmony between the topographic forms of the upper and lower parts of a valley, due to rejuvenation. *AGI* b. A land surface exhibiting topographic unconformity. *AGI*

topography

a. The general configuration of a land surface or any part of the Earth's surface, including its relief and the position of its natural and manmade features. CF: [relief](#) b. The natural or physical surface features of a region, considered collectively as to form; the features revealed by the contour lines of a map. In nongeologic usage, the term includes manmade features (such as are shown on a topographic map). *AGI* c. The art or practice of accurately and graphically delineating in detail, as on a map or chart or by a model, selected natural and manmade surface features of a region. Also, the description, study, or representation of such features. Etymol: Greek topos, place, + graphein, to write. *AGI*

topotaxy

A recrystallization in which the crystallographic orientation of the parent crystal determines that of the product crystal, e.g., goethite to hematite with $a \rightarrow c/3$, $b \rightarrow 2a$, and $c \rightarrow T3/3$. CF: [epitaxy](#); syntaxy.

topping

a. The contents of a loaded mine car above water level. *Hudson* b. Fine material forming a surface layer or dressing for a road or grade. *Nichols, I* c. A finishing layer of fine concrete, usually 2 in (5.1 cm) thick, laid over the base concrete of a ground floor or over the structural components of a solid or hollow suspended floor or roof. *Hammond*

toppings

Eng. The first regular layers of flints in the Brandon flint mines. *Arkell*

top ripping

Roof ripping. *Nelson*

top rod

Scot. The rod connecting the uppermost pump rod to the bellcrank (lever) on a bellcrank drive. *Fay*

top shot

An explosion or puff of gas at a furnace top. Syn: [top kick](#)

topside

a. On the surface as opposed to underground. *Long* b. Above the drill rig in the derrick or tripod. *Long* c. The inlet end of the hydraulic cylinder of a hydraulic-feed mechanism on a diamond drill. *Long*

top slice

A horizontal block of ore extracted by top slicing. The dimensions vary in different mines. *Nelson*

top slicing

A method of stoping in which the ore is extracted by excavating a series of horizontal (sometimes inclined) timbered slices alongside each other, beginning at the top of the orebody and working progressively downward; the slices are caved by blasting out the timbers, bringing the capping or overburden down upon the bottom of the slices that

have been previously covered with a floor or mat of timber to separate the caved material from the solid ore beneath. Succeedingly lower slices are mined in a similar manner up to the overlying mat or gob, which consists of an accumulation of broken timbers and lagging from the upper slices and of caved capping. See also: [block caving](#)

top slicing and caving

See: [top slicing and cover caving](#)

top slicing and cover caving

A mining method that entails working the orebody from the top down in successive horizontal slices that may follow one another sequentially or simultaneously. The whole thickness of the slice is worked. The ore may be broken by overhand or underhand stoping in each unit. The overburden or cover is caved after mining a unit. Syn: [mining ore from top down](#); top slicing and caving; transverse slicing with caving. *Fay*

top slicing combined with ore caving

A method of working an orebody from the top down in successive slices. Instead of taking the full height of the slices, only the lower part is taken and the upper part is caved. After removing this portion of the ore, the cover is caved. A timber mat is used in most cases to separate the broken cover from the ore and for safety. Also known as caving system subdrifting and caving; subslicing; slicing under ore with back cave; sublevel caving; sublevel slicing. *Fay*

top testing

See: [roof testing](#)

top wall

See: [hanging wall](#)

top water

Water introduced with the raw coal feed to assist the transport of material through the washbox. Also called transport water. CF: [flush water](#)

tor

A high, isolated crag, pinnacle, or rocky peak; or a pile of rocks, much jointed and usually granitic, exposed to intense weathering, and often assuming peculiar or fantastic shapes, e.g., the granite rocks standing as prominent masses on the moors of Devon and Cornwall, England. *AGI*

Torbane Hill mineral

See: [torbanite](#)

torbanite

a. A variety of algal or boghead coal from Torbane Hill, Scotland. It is layered, compact, brownish-black to black in color, very tough, and difficult to break. On distillation, torbanite gives a high yield of oil. Also called bathvillite. See also: [bitumenite](#); [boghead cannel](#); boghead coal; boghedite; kerosine shale. Syn: [Torbane Hill mineral](#) *Tomkeieff* b. A dark-brown variety of cannel coal. c. An oil shale mined in South Africa. *Beerman*

torbernite

A tetragonal mineral, $\text{Cu}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 12\text{H}_2\text{O}$; autunite group; strongly radioactive; green; in tabular or foliated crystals, associated with other uranium minerals; commonly in parallel growth with autunite; a secondary mineral resulting from alteration of uraninite. Also called chalcolite, copper uranite, cuprouranite. Syn: [uranmica](#); [uranphyllite](#). CF: [metatorbernite](#)

torch

An oil-burning, wick-fed, miners' lamp of tin or copper, with a long spout. *Fay*

torendrikite

A monoclinic mineral, $(\text{Na},\text{Mg},\text{Fe})_7\text{Si}_4\text{O}_{11}(\text{OH},\text{F})$ approx.; an amphibole intermediate between richterite and glaucophane; dark blue; at Itorendrika, Madagascar, and near Tine, Wadai, Africa.

torf dolomite

See: [coal ball](#)

torf-dopplerit

See: [dopplerite](#)

tormentor

a. A wooden axle, studded with iron spikes, for puddling auriferous clay as it spins or turns in a trough. See also: [puddler](#) b. A device somewhat similar to a log washer. *Fay*

Tornado

The Tornado crusher is based on the principle of central impeller shoes spinning to hurl particles of gravel against breaker plates at tremendous speed. The impact literally "explodes" the rock, causing it to cleave across the grain as well as with the grain, producing the most desirable cubical product. *Pit and Quarry*

tornebohmite

A monoclinic mineral, $(\text{Ce,La})_2 \text{Al}(\text{SiO}_4)_2 (\text{OH})$; weakly radioactive; green to olive; in contact zones at Bastnaes, Sweden. Also spelled toernebohmite.

torpedo

An encased explosive charge that is slid, lowered, or dropped into a borehole and exploded to clear the hole of obstructions or to open connections with passage ways to an oil or water supply. Also called a bullet. *Long*

torque

The effectiveness of a force that tends to rotate a body; the product of the force and the perpendicular distance from its line of action to its axis. *AGI*

torque bar

Square or vertically fluted bar run on one type of auger drill to rotate, raise, and lower the auger. See also: [torque rod](#)

torque converter

A hydraulic coupling that utilizes slippage to multiply torque. *Nichols, I*

torquemeter

A device for measuring the actual torque transmitted to the drilling head and/or to the drill-rod string. *Long*

torque rod

A bar having the function of resisting or absorbing twisting strains. Syn: [torque bar](#)

torque thickener

Tank thickener in which bottom rakes rise when overloaded with settled material. *Pryor, 3*

torr

The pressure exerted per square centimeter by a column of mercury 1 mm high at a temperature of 0 degrees C where the acceleration of gravity is 980.665 cm/s^2 . *Hy*

torrents

Beds of quicksand encountered below the chalk marl in the Anzin Coalfield, in France.

torreyite

A monoclinic mineral, $(\text{Mg},\text{Mn})_9 \text{Zn}_4 (\text{SO}_4)_2 (\text{OH})_{22} \cdot 8\text{H}_2\text{O}$; related to mooreite and lawsonbauerite; at Sterling Hill, NJ.

torsional center

If a twisting couple is applied at a given section of a straight member, that section rotates about some point in its plane. This point, which does not move when the member twists, is the torsional center of that section. It is sometimes defined as though identical with the flexural center, but the two points do not always coincide. Syn: [center of twist](#); center of torsion; center of shear. CF: [flexural center](#); [elastic center](#); elastic axis. *Roark*

torsional shear test

A shear test in which a relatively thin test specimen of solid circular or annular cross section, usually confined between rings, is subjected to an axial load and to shear in torsion. In-place torsion shear tests may be performed by pressing a dentated solid circular or annular plate against the soil and measuring its resistance to rotation under a given axial load. *ASCE*

torsion anemometer

See: [Ree's torsion anemometer](#)

torsion balance

A geophysical prospecting instrument that is used to determine distortions in the gravitational field. It consists of a pair of masses suspended by a sensitive torsion fiber and so supported that they are displaced both horizontally and vertically from each other. A measurement is made of the rotation of the suspended system about the fiber; the rotation is caused by slight differences in the gravitational attraction on the two masses. Syn: [Eoetvoes torsion balance](#)

torsion break

A break in the drill core caused by an accumulation of chips at the bit face. When drilling is stopped to rechuck, these chips grip the core, and the core is twisted and broken. CF: [torsion fracture](#)

torsion fracture

A spiraled crack in a drill core caused by torque in a blocked bit or core barrel. CF: [torsion break](#)

torsion seismometer

A seismograph with which the horizontal component of the earthquake can be defined making use of the torsion of a vertical suspension thread on which a stationary mass is fastened offcenter. *Schieferdecker*

tortoise

Sometimes applied by miners to structures such as pots, bells, kettles, and other rock masses that tend to fall easily from the roof of a coal mine. See also: [pot bottom](#); [camel back](#). *AGI*

tortuous flow

See: [turbulent flow](#)

tossing

The operation of raising the grade or purity of a concentrate by violent stirring, followed by packing, in a kieve or open dolly tub. Chimming is a similar process on a smaller scale. See: [tozing](#)

total acidity

Acidity to phenolphthalein. Total acidity of mine water indicates the complete capacity of water to produce chemical change by acid reaction. It is the total amount of acid held in solution or the sum of the quantities of both the ionized and the un-ionized portions of actual acid and the potential quantity of acid that can be formed from mineral salts held in solution. Total acidity is customarily reported in equivalent parts per million (ppm) by weight of calcium carbonate. The indicated total acidity of mine water found by currently accepted methods of analysis generally is greater than the actual total acidity. *Felegy*

total ash

Residue of the mineral matter obtained by incinerating coal under standard conditions. *BS, 5*

total bit load

A drilling term describing the total amount of any load or pressure, expressed in kilograms, pounds, or tons, that is applied to a bit when it is in use. *Long*

total cap lag

A blasting term describing the total time between application of current and the detonation. *Streefkerk*

total carbon

The sum of the free and combined carbon (including carbon in solution) in a ferrous alloy. *ASM, 1*

total cooling effect

The difference between the total heat content of the air-steam mixture entering a conditioner per hour and the total heat of the mixture leaving per hour. *Strock, 2*

total cooling load

The sum of the sensible and latent heat components that must be removed from a space to maintain desired conditions. *Hartman, 2*

total critical load

a. The total load or pressure that must be applied to a bit for its optimum rate of penetration in a specific rock. *Long* b. The maximum load that can be applied to a bit without causing damage to the bit. CF: [critical pressure](#)

total displacement

See: [slip](#)

total dynamic head

The total of the static head (the suction discharge heads), the friction head, together with any discharge head that must be overcome by a pump is termed the total dynamic head. *Carson, 1*

total energy

The total energy at any section in a moving fluid consists of the sum of the internal static, velocity, and potential energies at that section. *Hartman, 2*

total hardness

See: [hardness](#)

total hardness of water

All waters contain two forms of hardness, i.e., temporary (or carbonate) hardness, and permanent (noncarbonate) hardness. The combination of the two is referred to as total hardness. See also: [hard water](#) *Nelson*

total head

The sum of the elevation head, pressure head, and velocity head of a liquid. For ground water, the velocity-head component is generally negligible. *AGI*

total heat

a. The total heat of atmospheric air is the heat contained in the same amount of dry air (known as sensible heat) plus the latent heat of the contained water vapor plus the sensible heat of the water vapor above the wet-bulb temperature. This is called the sigma function or sigma heat. True total heat or enthalpy is the sigma heat plus the heat of the water below the wet-bulb temperature. The latter is a very small quantity, and in mining work sigma heat is always used. Sigma heat is usually measured above 0 degrees F (-18 degrees C), so that it is the heat that would be given up if all moisture were condensed out and removed and the air cooled to 0 degrees F. Some engineers use 32 degrees F (0 degrees C) as the basic temperature so care should be taken to verify the base used. If absolute total heat is specified, it is measured above absolute zero (-459 degrees F or -273 degrees C). *Spalding* b. The sum of sensible heat and latent heat in a substance or fluid above a base point, usually 32 degrees F or 0 degrees F. *Strock, 2*

total lift

In an air lift, the distance water is elevated during pumping. Total lift equals drop plus static head plus elevation. Also called lift. *Lewis*

total magnetic intensity

The vector resultant of the intensity of the horizontal and vertical components of the Earth's magnetic field at a specified point. *Hy*

total moisture

a. Free moisture plus moisture in air-dried coal, both being expressed as percentages of the sample as received. *BS, 5* b. The moisture in the coal or coke as samples. *BS, 1*

total of correctly placed material

The sum of the weights of material correctly included in the products of a sizing or density separation, expressed as a percentage of the weight of the feed to the separator (and equal to 100 minus the "total of misplaced material"). *BS, 5*

total of misplaced material

The sum of the weights of the misplaced material in the products of a sizing or density separation, expressed as a percentage of the weight of the feed. When three products are made in a single separator, the total of misplaced material will be the sum of the weight of material wrongly placed in each of the three products, expressed as a percentage of the feed to the separator. *BS, 5*

total porosity

See: [porosity](#)

total pressure

a. The total ventilating pressure in a mine, usually measured in the fan drift. *Nelson* b. The algebraic sum of static pressure and velocity pressure at any particular point. *BS, 8* c. The pressure in a soil mass due to overlying material and any superimposed loads. *Nelson* d. The pressure on any horizontal plane in a mass of soil as calculated from the weight of the material above the plane, or the soil together with any applied loads. *Hammond*

total reflection

In gemology and optical mineralogy, total reflection occurs in a transparent solid where a light ray strikes the surface of a medium of lower refractive index at any angle greater than its critical angle as defined $\sin r = 1/n$, where r is the critical angle and n is the refractive index of the solid (or n_2/n_1 , where n_1 represents the lower refractive index if other than 1 for air). CF: [critical angle](#); reflection; law of refraction.

total reflectometer

An instrument for measuring the critical angle in a transparent solid.

total resistance

The total resistance (R) or friction of a ventilation system is calculated from the total ventilating pressure (P) and the total quantity of air at the fan (Q). Thus: $R = P/Q^2$.

Nelson

total stress

The total force per unit area acting within a mass of soil. It is the sum of the neutral and effective stresses. *ASCE*

total tonnage

Tonnage of ore or product shipped plus tonnage of ore, waste, and tailings dumped.

Hoover

total value

Value of ore or product shipped plus value of the ore, waste, and tailings dumped.

Hoover

total ventilating power

The sum of the natural ventilating power plus the effective (or air) horsepower of all fans in series. When the circuit is divided and fans are in parallel, the total ventilating power of each split is worked out separately, the natural and fan powers being added; finally the power of each circuit is summed to give the total ventilating horsepower. *Spalding*

total ventilating pressure

The pressure required to overcome the static and potential energy head losses and to provide the velocity head to move a quantity of air through a network. See also:

[ventilating pressure](#); [mine total head](#); fan total head; water gage.

Totco test

A test to determine the deviation of a well from the vertical, employing an instrument known as a Totco. *Williams*

touchstone

A black, flinty stone, such as a silicified shale or slate, or a variety of quartz allied to chert or jasper, whose smoothed surface was formerly used to test the purity or fineness of alloys of gold and silver by comparing the streak left on the stone when rubbed by the metal with that made by an alloy of predetermined composition. Syn: [Lydian stone](#); basanite. *AGI*

tough

The exact state or quality of texture and consistency of refined copper. See also: [tough cake](#)

tough cake

Refined or commercial copper. See also: [cake copper](#); [tough](#). *Fay*

toughness

a. A property of a material that denotes, nominally, an intermediate value between softness and brittleness. Tensile tests show a tough material to have a fairly high tensile strength accompanied by moderate values of elongation and reduction of area. *Henderson* b. The amount of work required to deform a body to its rupture point. *AGI*

toughness index

The ratio between the index of plasticity and the flow index of a soil. *Hammond*

toughness of refractories

Resistance to crumbling, to abrasion, or to coarse particles being dislodged from the brick structure.

tough pitch

a. A term used in electrolytic copper refining to designate copper that has set, from the molten condition, with a level surface. See also: [underpoled copper](#); [overpoled copper](#). *Fay* b. A term applied to copper in which the oxygen content has been correctly adjusted at 0.03% to 0.06% by poling. Distinguished from overpoled and underpoled copper. *CTD*

tough pitch copper

Copper containing from 0.02% to 0.05% oxygen, obtained by refining copper in a reverberatory furnace. *ASM, I*

tough tom

Soft tenacious clay floor of coal seams. *Arkell*

tough way

A quarryman's term for the third easiest direction of rock fracture after the rift and the grain. Syn: [hard way](#)

tour

A work-shift. Sometimes incorrectly spelled tower. *Long*

tourmaline

a. Any member of the trigonal mineral group, $XY_3 Z_6 (BO_3)_3 Si_6 O_{18} (OH,F)_4$ where X is Na partially replaced by Ca, K, Mg, or a vacancy, Y is Mg, Fe^{2+} , Li, or Al, and Z is Al and Fe^{3+} ; forms prisms of three, six, or nine sides; commonly vertically striated; varicolored; an accessory in granite pegmatites, felsic igneous rocks, and metamorphic rocks. Transparent and flawless crystals may be cut for gems. b. The mineral group buergerite, dravite, elbaite, ferridravite, liddicoatite, schorl, and uvite.

tourmalinization

Introduction of, or replacement by, tourmaline. *AGI*

Toussaint-Heintzmann arch

A channel-type, steel-arch support consisting of three elements or sections set close to the face of a tunnel. These elements overlap and yield by sliding one upon the other under the constraint of bolted clamps. The center or crown element is usually foreset to give temporary protection until the complete arch is erected. See also: [Usspurwies arch](#); steel arch; steel support. *Nelson*

tow conveyor

An endless chain supported by trolleys from an overhead track or running in a track at (above, flush with, or under) the floor with means for towing trucks, dollies, or cars.

towed grader

See: [grader](#)

tower

a. See: [tour](#) b. A misnomer for derrick and an incorrect spelling of tour. *Long*

tower crane

A swing-jib or other type of crane mounted on top of a tower, the base of which may sometimes move on rails. These cranes are esp. effective on congested sites. See also: [monotower crane](#); [swing-jib crane](#). *Hammond*

tower engineer

In anthracite coal mining, one who operates a hoist to raise loaded mine cars from the surface of a mine to the top of the breaker, where the coal is dumped, crushed, and prepared for market. *DOT*

tower excavator

A cableway excavator designed specif. for levee work, but which is used extensively in the stripping of overburden, spoil, or waste in surface mining. The unit is basically an excavator with towers either fixed or movable. With the headtower located on the spoil pile and the tail tower on the unexcavated wall, it is possible to dig pits of almost unlimited width.

tower loader

A front-end loader whose bucket is lifted along tracks on a more or less vertical tower. *Nichols, I*

Towers magnetic stirrer

A device utilizing a rotating field of magnetic force to induce a vigorous rotary movement in a small magnetized bar totally enclosed in a polythene or glass tube, and placed in the liquid to be stirred. *Osborne*

township

The unit of survey of the U.S. Public Land Survey system, representing a piece of land that is bounded on the east and west by meridians approx. 6 miles (9.6 km) apart (exactly 6 miles at its south border) and on the north and south by parallels 6 miles apart, and that is normally subdivided into 36 sections. Townships are located with reference to the initial point of a principal meridian and base line, and are normally numbered consecutively north and south from a base line (e.g., township 14 north indicates a township in the 14th tier north of a base line). The term township is used in conjunction with the appropriate range to indicate the coordinates of a particular township in reference to the initial point (e.g., township 3 south, range 4 west indicates the particular township that is the 3rd township south of the base line and the 4th township west of the principal meridian controlling the surveys in that area). Abbrev. (when citing specific location): T. *AGI*

township line

One of the imaginary boundary lines running east and west at 6-mile (9.6-km) intervals and marking the relative north and south locations of townships in a U.S. public land survey. CF: [range line](#)

toxic dusts

Dusts poisonous to body organs, tissue, etc. They include ores of beryllium, arsenic, lead, uranium, radium, thorium, chromium, vanadium, mercury, cadmium, antimony, selenium, manganese, tungsten, nickel, and silver (principally the oxides and carbonates). *Hartman, 2*

toxicity symptoms

In geochemical exploration, a collective term for the abnormal colors and morphological features of a plant caused by a poisonous element in the nutrient solution. *Hawkes, 1*

toxic mine drainage

Water that is discharged from active or abandoned mines or other areas affected by mineral exploration or surface mining and reclamation operations that contains a substance that through chemical action or physical effects is likely to kill, injure, or impair biota commonly present in the area(s) to which it might be exposed.

tozing

See: [tossing](#)

trace

a. A concentration of a substance that is detectable, but too minute for accurate quantitative determination. *AGI* b. A quantity of precipitation that is insufficient to be measured by a gauge. *AGI* c. A sign, evidence, or indication of a former presence; specif. a mark left behind by an extinct animal, such as a trace fossil. *AGI* d. The record of the output of one geophone group with time after the shot, displayed on paper, film, or magnetic tape. *AGI* e. The intersection of a geological surface with another surface, e.g., the trace of bedding on a fault surface, or the trace of a fault or outcrop on the ground. CF: [trend](#); [strike](#). *AGI* f. A very small quantity of a chemical constituent or component, esp. when not quantitatively determined because of extremely low concentrations. g. To follow the lode on the surface, and to lay it open by long pits. *Fay* h. Recording on the seismogram of a single seismometer station. *Schieferdecker*

trace-by-trace plotting

A procedure used in seismic reflection where reflection times from all traces, or sometimes alternate traces, are plotted at the reflecting point positions (midway between

shot and detector). When no correction has been made for "normal moveout," the plotted times appear to lie along arcs that are convex upward and straddle the shot positions symmetrically. CF: [center-trace time](#)

trace element

a. An element that is not essential in a mineral, but that is found in small quantities in its structure or adsorbed on its surfaces. Although not quantitatively defined, it is conventionally assumed to constitute significantly less than 1.0% of the mineral. Syn: [accessory element](#); guest element. *AGI* b. An element that occurs in minute quantities in plant or animal tissue and that is essential physiologically. Syn: [minor element](#); [microelement](#). *AGI*

tracer

An element or compound that has been made radioactive so that it can be followed (traced) easily in industrial and biological processes. Radiation emitted by the tracer (radioisotope) pinpoints its location. Abbrev., tcr. *Lyman; Zimmerman*

tracer gas

A gas introduced in small quantities into the main body of air to determine either the air current or the leakage paths in a ventilation system. *BS, 8*

tracer-gas technique

This method, as applied for the measurement of airflow in headings, can be used for determining velocities below the working range of the vane anemometer. The tracer used is normally nitrous oxide. The technique consists of releasing a quantity of tracer gas, either instantaneously or over a timed interval. The tracer then diffuses throughout the airstream until a position is reached where it is uniformly dispersed over the cross section of the airway. At such a position, samples are taken and these are put through the analyzer to determine the gas concentration. *Roberts, 1*

tracer test

In ground water hydrology, a field technique for estimating transport parameters by injecting a tracer (e.g., dye, radioactive substance, or chemical not naturally present in the flow system) and monitoring the time and concentrations at a downgradient location. *Domenico*

trace slip

In a fault, that component of the net slip that is parallel to the trace of an index plane, such as bedding, on the fault plane. See also: [trace-slip fault](#)

trace-slip fault

A fault on which the net slip is trace slip, or slip parallel to the trace of the bedding or other index plane. *AGI*

trachyandesite

An extrusive rock, intermediate in composition between trachyte and andesite, with sodic plagioclase, alkali feldspar, and one or more mafic minerals (biotite, amphibole, or pyroxene). See also: [mugearite](#) *AGI*

trachybasalt

An extrusive rock intermediate in composition between trachyte and basalt, characterized by the presence of both calcic plagioclase and alkali feldspar, along with clinopyroxene, olivine, and possibly minor analcime or leucite. Approx. synonymous with hawaiiite. *AGI*

trachyte

A group of fine-grained, generally porphyritic, extrusive rocks having alkali feldspar and minor mafic minerals (biotite, hornblende, or pyroxene) as the main components, and possibly a small amount of sodic plagioclase; also, any member of that group; the extrusive equivalent of syenite. Trachyte grades into latite as the alkali feldspar content decreases, and into rhyolite with an increase in quartz. Etymol: Greek trachys, rough, in reference to the fact that rocks of this group are commonly rough to the touch. *AGI*

trachytic

a. A textural term applied to volcanic rocks in which feldspar microlites of the groundmass have a subparallel arrangement corresponding to the flow lines of the lava from which they were formed. CF: [trachytoid](#); pilotaxitic. *AGI* b. Pertaining to or composed of trachyte. *AGI*

trachytoid

A textural term originally applied to phaneritic igneous rocks by analogy with the trachytic texture of some lava flows. In such rocks (e.g., many nepheline syenites), the feldspars have a parallel or subparallel disposition; trachytoid is now used for all similar textures, regardless of the composition of the rock in which they occur. CF: [trachytic](#) *AGI*

tracing float

A process in which float is followed back to its origin. A prospector moves up slope looking for pieces of float until no more are to be seen. If, at this point, no outcrop is visible, the probabilities are that soil or loose surface material covers a hidden outcrop, which can be sought by digging pits or trenches. *Lewis*

track

a. The groove cut in a rock by a diamond inset in the crown of a bit. *Long* b. A pattern applied to setting diamonds in a bit crown, in which the diamonds are arranged in concentric circular rows so that the diamonds in a specific row follow the track cut by a preceding diamond. *Long* c. The slide or rack on which a diamond-drill swivel head can be moved to positions above and/or clear of the collar of a borehole. *Long* d. See: [conveyor track](#) e. A crawler track. *Nichols, 1*

track bolt

A chair bolt or coach screw used in fastening rails. *Hammond*

track braking

Track brakes, similar to those used on surface tramcars, may be installed on heavy downgrades underground to supplement other braking systems; they apply blocks to the rails by mechanical, pneumatic, or electromagnetic power. The normal shoe brake must be designed to work in conjunction with the track brakes so that the wheels are not skidded when the track brakes utilize part of the weight of the locomotive. Electromagnetic track brakes may utilize the braking currents produced in rheostatic braking to excite the electromagnets, which are then pulled down onto the rails and produce a strong retarding pull. *Sinclair, 5*

track cable

Steel wire rope, usually a locked-coil rope that supports the wheels of the carriers of a cableway. *Hammond*

track cable scraper

This type of excavator operates in general the same as a slackline cableway, except that it uses a bottomless scraper bucket that must convey its load over the ground instead of through the air. Like the slackline cableway, this machine is operated by a two-drum hoist that controls a track cable that spans the working area and a haulage cable that leads to the front of the bucket. Both cables are reeved through sheave blocks attached to a high guyed mast or tower at the head end of the installation. When the bucket comes in with a load and reaches the desired dumping point, a few rotations of the rear drum of the hoist serve to tighten the track cable and lift the bucket off its load; then the brake is

released on the front drum that controls the haulage cable, permitting the empty bucket and carrier to glide back down the inclined track cable. *Pit and Quarry*

track channeler

In quarrying, a rock channeler designed to operate from a track on which it is mounted; frequently a combined locomotive and channeling machine. *Standard, 2*

track cleaner

In mining, a laborer who cleans mine track and switches by shoveling coal, ore, rock, mud, and refuse, and throwing it to one side or loading it into a mine car. Also called road cleaner. *DOT*

track cleaners

A machine to remove gob from railroad tracks, between rails, and to a distance of 48 in (1.2 m) from the track centers. Digger plates remove gob to the top of ties, while wings on either side of the machine gather it from the sides of the track into the track, to be moved by conveyors to a car at the machine's rear. One person operates the towing motor and observes the digging, while another controls the digging plate height, adjusts wing plows, and observes loading. *Best, 1*

track diamonds

Diamonds set in the face or lead portion of the drill-bit crown. Syn: [track stones](#)

track frame

In a crawler mounting, a side frame to which the track roller and idler are attached. Also called truck frame. *Nichols, 1*

track gage

a. The distance between the inside edges of installed railway rails. *BCI* b. The minimum track gage that should be used on a modern haulage system is 3 ft 6 in (1.07 m). This gage has been established as a standard by the American Mining Congress as a result of the consensus of opinion of mining engineers and manufacturers in the United States. *Wheeler, H.R.* c. See also: [rail gage](#)

track haulage

Movement or transportation of excavated or mined materials in cars or trucks running on rails.

tracklaying tractor

A tractor moving on crawler tracks. *Hammond*

trackless mine

A mine with no rails. In such mines, rubber-tired vehicles operate independently of tracks and are used for haulage and transport. *Stoces*

trackless tunneling

A method of tunneling using loaders mounted on crawler tracks, and a diesel- or battery-powered dump-truck haulage system. See also: [rubber-tired haulage](#)

track-mounted

Referring to the operation of equipment on tracks, such as track-mounted cutting machines, track-mounted loaders, etc. *Jones, I*

track-moving machine operator

In metal mining, one who operates a machine that moves and lays track mechanically in open pit mines, picking up a section of track and moving and laying it in the desired position without having to detach rails from ties. Also called track-laying machine operator. Syn: [hydraulic jack operator](#)

track pin

A hinge pin connecting two sections or shoes of a crawler track. *Nichols, I*

track resistance

The total rolling friction of a train on straight level track. It is generally taken as 30 lb per short ton weight (15 kg/t) of the train for cars having plain bearings and 20 lb/st (10 kg/t) for cars with roller bearings. These figures may be increased by 10 to 15 lb (5.0 to 7.5 kg) if the track is in poor condition and may be less for track in excellent condition. *Lewis*

track roller

In a crawler machine, the small wheels that are under the track frame and that rest on the track. Also called truck rollers. *Nichols, I*

track shifter

A machine or appliance used in shifting a railway track laterally. Also the operator of such a device or machine. See also: [shifter](#)

track spike

A heavy steel nail of square section that is driven into a wooden sleeper to hold a flanged rail. *Hammond*

track stones

See: [track diamonds](#)

track wheel

One of a set of small flanged steel wheels resting on a crawler track and supporting a track frame. *Nichols, 1*

traction

a. The act of drawing a vehicle over a surface and the force exerted in so doing. Traction is the friction developed between tracks or tires and the surface of the ground on which they are moving. *Carson, 1* b. The total amount of driving push of a vehicle on a given surface. *Nichols, 1*

tractive efficiency

A measure of the proportion of the weight resting on tracks or drive wheels that can be converted into vehicle movement. *Nichols, 1*

tractive effort

a. The effort exerted by a locomotive at the rim of its driving wheels; it is a function of its weight, the nature of its tires, and the condition of the track. It is equal to the weight of the locomotive times the adhesion of the locomotive to the track. For steel wheels on clean dry track the adhesion is 25%, and the tractive effort is therefore 500 lb/st of weight (250 kg/t). For cast-iron wheels the adhesion is 20%. *Lewis* b. The necessary drawbar pull plus the resistance of the locomotive itself. *Kentucky* c. See: [tractive force](#)

tractive force

a. The pull exerted by a haulage rope on the drawbar of a car to overcome the frictional resistance of the car and the force of gravity acting on it. Also, the force available at the wheels of a locomotive to move the machine and its attached load. Syn: [tractive effort](#) b. The pull that a locomotive is capable of producing at its drawbar. *Hammond* c. In hydraulics, drag or shear developed on the wetted area of a streambed, acting in the

direction of flow. As measured per unit of wetted area, unit tractive force equals the specific weight of water times hydraulic radius times slope of channel bed (Chow, 1957).
AGI

tractive power

The weight of the vehicle multiplied by the coefficient of traction; it is the total pounds of pull that can be exerted before slippage occurs. *Carson, I*

tractive resistance

The resistance to motion due to friction per unit weight hauled. *Hammond*

tractor

A self-propelled vehicle--which may be mounted on crawler tracks, on wheels with large pneumatic tires, or on a mixture of both--intended for moving itself and other vehicles. See also: [wheeled tractor](#); mine tractor. *Hammond*

tractor drills

These drills have a crawler mounting that supports the feed guide bar on an extendable arm. Small air motors control the movements of the arm used in tilting and turning the guide bar and provide power for crawler movement. The compressor is a separate unit, which can be towed by the tractor drill. Also called a Jumbo.

tractor loader

A tractor equipped with a bucket that can be used to dig, and to elevate to dump at truck height. Also called tractor shovel; shovel dozer. *Nichols, I*

tractor pan operator

In beneficiation, smelting, and refining, one who scrapes up bauxite ore from stockpiles, hauls the ore to the crusher, and dumps it into the crusher hopper, using a combination bulldozer carryall. *DOT*

tractor shovel

One of the names applied to a class of excavating equipment that has a bucket supported from the front end of a tractor. See also: [loader](#) *Carson, I*

traffic marks

Abrasions that result from metal to metal contact and vibration during transit. These abrasions are usually dark in appearance because of the presence of a dark powder, which consists of aluminum and aluminum oxide fines produced by the abrasive action of surfaces rubbing together. *Light Metal Age*

trailer

a. A towed carrier that rests on its own front and rear wheels. Also called full trailer. *Nichols, 1* b. See: [drag](#)

trailing cable

a. A cable for carrying electricity from a permanent line or trolley wire to a movable machine, such as used in mining or quarrying. The cable is heavily insulated and protected with either galvanized steel wire armoring, extra stout braiding hosepipe, or other material. It is usually paid out from a reel as the machine advances. See also: [individually screened trailing cable](#) b. A flexible insulated cable used for transmitting power from the main power source, such as a trolley wire, nipping station, or junction box, to a mobile machine. It includes cables between the nipping station and distribution center.

trailing cable coupler

An assembly of two restrained-type sockets for coupling together two trailing cables fitted with restrained plugs. *BS, 13*

trail of a fault

Crushed material of a bed or vein that indicates the direction of fault movement; it may be valuable as a guide to the main vein. See also: [drag ore](#)

train

A number of empty or loaded mine cars, coupled together, for transport by rope haulage or locomotive. See also: [journey](#)

train dispatcher

See: [motor boss](#)

training face

Usually a longwall coal face where new colliery entrants or trainees can gain experience, skills, and confidence in the winning and working of coal. *Nelson*

training gallery

A short tunnel or chamber attached to a rescue station in which rescue workers may receive training in an atmosphere of dense smoke. It is also used to give rescue workers experience in stretcher drill, the use of stretchers, reviving apparatus, tube-breathing apparatus, artificial respiration, etc. *Nelson*

training the belt

Adjusting the troughing idlers, return idlers, or tail or head pulleys forward or back so that conveyor belting will run in the desired position on the conveyor frame to prevent spilling of ore.

Trainite

The trade name for a mixture of vashegyite with a colloidal zeolitic mineral, used as a gemstone; originates near Manhattan, NV. Originally described as banded variscite. Syn: [Sabalite](#)

trainman

In metal mining, a laborer who loads ore into railroad cars. *DOT*

train-mile

One mile (1.6 km) traversed by one train; used as a unit in railroad accounting. *Webster 3rd*

train of rolls

A series of mills, one after the other, each successive mill approaching more nearly the size of the finished piece. *Mersereau, 2*

train resistance

The grade resistance plus the track resistance. *Kentucky*

trajectory

Line that intersects wave fronts at right angles. *Schieferdecker*

tram

a. A trip of coal cars. *Jones, 1* b. Generally, to move a self-propelled piece of equipment other than a locomotive; tramcar. *BCI* c. A boxlike wagon of steel, running on a

tramway or railway in a mine, for conveying coal or ore. Also called tramcar, tub, cocoa pan, corve, corf, or hutch. *CTD; Webster 3rd* d. To haul or push trams or cars about in a mine. *Fay* e. A four-wheeled truck to carry a tub, corve, or hutch. *Fay*

tramcar

Eng. A car used in coal mines. Syn: [tram](#)

tramlines

a. An overfill appearing as two parallel lines on rolled bars. *Osborne* b. Long, straight marks due to drawn-out inclusions on rolled sheet. *Osborne*

trammel

a. A board with two grooves intersecting at right angles, in which the two ends of a beam compass can slide and describe an ellipse. *Hammond* b. See: [beam compass](#) c. A pivoted rod, used to keep brick in alignment in lining circular kilns.

trammer

a. A person who loads broken rock on tramcars and delivers it at the shaft. *Fay* b. Trammers work as assistant miners in all the work a miner does. They load the broken mineral onto shaker or belt conveyors, fill and haul the mine cars, bring in the mine timber and other materials to support and equip the mine workings, serve the mining and transport machines, and work also as auxiliary mine timbermen. *Stoces* c. One who transports coal, ore concentrate, or flux to roasting furnaces or bins. *DOT*

tramming

The practice of pushing tubs, mine cars, or trams, by hand. Tramming was an earlier practice in longwall stall mining, but is now largely obsolete. On the surface, tramming means moving material in skips or wagons running on light railway track. *Nelson*

tramming motor

a. An electric locomotive used for hauling loaded trips. *Jones, 1* b. The motor in a cutting machine that supplies the power for moving or tramming the machine. *Jones, 1*

tramp iron

a. Stray metal objects, such as coal-cutter picks or bolts, that have become mixed with the run-of-mine coal or ore. *Nelson* b. Any loose piece of metal in a borehole. *Long*

tramp oversize

Ore that is too large to be handled efficiently by the machine into which it is fed. *Pryor, 3*

tramrail

Eng. A rail for a tram. A light railroad rail distinguished from tram plate by being rolled while the latter is cast. *Webster 3rd*

tramroad

A mine haulage road. *Jones, 1*

tram rope

A hauling rope, to which cars are attached by a clip or chain, either singly or in trips. *Zern*

tram vibrator

See: [vibrating platform](#)

tramway

a. A roadway having plates or rails on which wheeled vehicles may run. Syn: [tramroad](#)
b. A suspended cable system along which material, such as ore or rock, is transported in suspended buckets. See also: [aerial tramway](#) c. A system in which carriers are supported by cable and in which the movement is continuous over one or more spans.

transcurrent fault

A large-scale strike-slip fault in which the fault surface is steeply inclined. Syn: [transverse fault](#); [transverse thrust](#). See also: [strike-slip fault](#)

transducer

a. A device actuated by one transmission system and supplying related waves to another transmission system; the input and output energies may be of different forms. Ultrasonic transducers, e.g., accept electrical waves and deliver ultrasonic waves, the reverse also being true. *ASM, 1* b. A device that measures physical quantities in a system--such as ground displacement, velocity, or acceleration-- and converts them into related or proportional units of electronic outputs (e.g., voltage, current). CF: [geophone](#)

transfer

A vertical or inclined connection between two or more levels; used as an ore pass.
Nelson

transfer car

a. A quarry car provided with transverse tracks on which the gang car may be conveyed to or from the saw gang. *Fay* b. A car equipped with rails, used to transfer a drier or kiln car from one set of tracks to another. *ACSG, 2*

transfer case

A transmission or gearset that provides drive to secondary drives, winches, etc.

transfer chute

A chute used at a transfer point in a conveyor system. The chute is designed with a curved base or some other feature so that the load can be discharged in a centralized stream and in the same direction as the receiving conveyor. *Nelson*

transfer conveyor

Conveyor generally 50 to 300 ft (15 to 90 m) in length. It is used to transport material only from one conveyor to another. *NEMA, 2*

transfer-gang-car system

A system used in quarries to save time in handling stone blocks and slabs. In this system, a transfer car that runs on a depressed track in front of the gangs is provided with a short section of track across the top. A gang car loaded with marble, sandstone, etc., is placed on this track and when moved to proper position is shifted beneath the gang saw. Similarly, a gang car loaded with sawed slabs may be quickly moved from beneath the saws to the transfer car for transportation to the shops. *AIME, 1*

transfer gear

Self-actuating mechanism at shaft head by which a skip is emptied and its contents moved away to the next stage of handling. *Pryor, 3*

transfer impedance

a. The transfer impedance of a network made up of a source and a load connected by a transducer is the ratio of the phasor representing the source voltage to the phasor representing the load current of the load. *Hunt* b. The complex-valued ratio of voltage at one pair of terminals to the current at another pair in a four-terminal network. *AGI*

transfer point

The point where coal or mineral is transferred from one conveyor to another. See also: [loading point](#)

transfer table

A table connected with rolling mills for laterally transferring work from one mill to the other. *Mersereau, 2*

transformation

A constitutional change in a solid metal; e.g., the change from gamma to alpha iron, or the formation of pearlite from austenite. *CTD*

transformation temperature

The temperature at which a change in phase occurs. The term is sometimes used to denote the limiting temperature of a transformation range.

transformed flow net

A flow net whose boundaries have been properly modified (transformed) so that a net consisting of curvilinear squares can be constructed to represent flow conditions in an anisotropic porous medium. *ASCE*

transformist

A proponent of the theory that all granites had a metasomatic or palingenic origin. CF: [magmatist](#) *AGI*

transfusion

The entry and exit of any gaseous or hydrothermal fluid in solid rock to produce such rocks as granite. CF: [granitization](#)

transgranular

See: [intracrystalline](#)

transgression

a. The spread or extension of the sea over land areas, and the consequent evidence of such advance (such as strata deposited unconformably on older rocks, esp. where the new marine deposits are spread far and wide over the former land surface). Also, any

change (such as rise of sea level or subsidence of land) that brings offshore, typically deep-water environments to areas formerly occupied by nearshore, typically shallow-water conditions, or that shifts the boundary between marine and nonmarine deposition (or between deposition and erosion) outward from the center of a marine basin. Ant: regression. CF: [onlap](#) marine transgression. *AGI* b. A term used mostly in Europe for discrepancy in the boundary lines of continuous strata; i.e., unconformity. See also: [unconformity](#) *AGI*

transgressive overlap

See: [onlap](#)

transient velocity

A velocity, different from the steady state velocity, which a primer imparts to a column of powder to start detonation.

transistor

A device for controlling or amplifying electric currents by means of potential probes through a crystal of a semiconductor, commonly silicon or germanium.

transit

a. A theodolite in which the telescope can be reversed (turned end for end) in its supports without being lifted from them, by rotating it 180 degrees or more about its horizontal transverse axis. *AGI* b. The act of reversing the direction of a telescope (of a transit) by rotation about its horizontal axis.---v. To reverse the direction of a telescope (of a transit) by rotating it 180 degrees about its horizontal axis. Syn: [plunge](#)

Transite

A trade name for a material of asbestos fiber and Portland cement molded under high pressure. Used for fireproof walls, roofing, and in lining ovens, etc. *Crispin*

transition belt

A short belt carrying material from a loading point to a main conveyor belt. *Nichols, I*

transition curve

a. A curve designed to effect a gradual change between a straight and a circular curve. *Hammond* b. See: [spiral curve](#)

transition elements

a. In the periodic system, those elements characterized by the increment of inner d shells of electrons which may become involved in secondary or hybrid bond formation. b. Elements having atomic numbers 21 (Sc) to 30 (Zn), 39 (Y) to 48 (Cd), and 57 (La) to 80 (Hg).

transition metals

Elements in the middle of the long periods of the periodic table. Usage varies, but most commonly the transition elements are taken to include those from scandium to zinc in the first long period, from yttrium to cadmium in the second, and from lanthanum to mercury (excluding the 14 rare-earth metals from cerium to lutecium) in the third. *AGI*

transition point

A single point at which different phases of matter are capable of existing together in equilibrium. Syn: [inversion point](#)

transition temperature

The temperature at which the change from tough to brittle fracture occurs in a notched bar impact test, or sometimes in other forms of test, e.g., notched tensile test. Syn: [inversion point](#)

transitman

One who operates a surveyor's transit. The person need not necessarily be a graduate engineer. *Crispin*

translational fault

A fault in which there has been translational movement and no rotational component of movement; dip in the two walls remains the same. It can be strictly applied only to segments of faults. Syn: [translatory fault](#) *AGI*

translational movement

Apparent fault-block displacement in which the blocks have not rotated relative to one another, so that features that were parallel before movement remain so afterwards. CF: [rotational movement](#) See also: [translational fault](#) *AGI*

translation lattice

See: [crystal lattice](#)

translatory fault

See: [translational fault](#)

translucency

A term used to describe mineral crystals sufficiently transparent to transmit light. Also called subtransparency. CF: [transparency](#) Pryor, 3

translucent

The optical property of a mineral to transmit light without objects being visible. CF: [opaque](#)

translucent attritus

This term was first used by R. Thiessen in 1930 referring to the attritus of ordinary humic coal, which is ordinarily composed largely of transparent humic matter, with spores, cuticles, resins, and opaque matter in minor proportions. Translucent attritus consists of the complex residual organic matter, exclusive of anthraxylon, in bituminous lower rank coal that transmits light in thin section. The following macerals of the Stopes-Heerlen nomenclature are included in translucent attritus: vitrinite less than 14 μ m thick; sporinite; cutinite; alginite; resinite; and those parts of semifusinite, micrinite, and sclerotinite that are weakly reflecting, that is semitranslucent. Translucent attritus is a collective term and is not comparable with any of the microlithotypes of the European system of nomenclature. *IHCP*

translucent glass

Glass that will admit rays of light to pass but through which objects cannot be seen. *Mersereau, 2*

translucent humic degradation matter

Transparent humic matter consisting of irregular particles varying greatly in shape and size. Although rounded or ovoid particles are not rare, humic matter is mostly flattened in form and usually of frayed or tattered appearance. The particles are of the same deep red color as the anthraxylon strips, becoming lighter in thinner sections. Syn: [THDM](#)
IHCP

transmissibility

Term used to describe the ability of a system either to amplify or to suppress an input vibration. It is the ratio of the response amplitude of the system in steady-state forced vibration to the excitation amplitude. The ratio may be between forces, displacements, velocities, or accelerations. *Hy*

transmission

A mechanism that provides a variety of gear ratios for different load conditions, speed, or direction of rotation.

transmission reversing

A transmission that has only a forward and reverse shift. *Nichols, 1*

transmissometer

An instrument that measures the capability of a fluid to transmit light; esp. one that measures the turbidity of water by determining the percent transmission of a light beam. See also: [turbidimeter](#)

transmittance

Rate of heat flow per unit area per unit temperature difference. *Strock, 2*

transmitted light

Light that has passed through an object, as distinguished from light reflected from a surface. The nonopaque minerals in rocks are commonly studied in transmitted plane-polarized light for characterization and identification by use of a polarized-light microscope. Gems are usually examined for imperfections by transmitted light. CF: [birefringence](#); index of refraction.

transmutation

The transformation of one element into another. Radioactive decay is an example. Transmutation can also be accomplished by bombardment of atoms with high-speed particles. *AGI*

transmute

In alchemy, the transformation of baser metals into more precious metals. *Gordon*

transopaque

The property of a mineral to transmit light in part of the visible spectrum while being opaque in another. CF: [opaque](#)

transparency

a. The degree to which visible light is transmitted through a solid. A mineral is termed transparent if objects can be clearly seen through it, as through glass; e.g., rock crystal (quartz), selenite (gypsum), Iceland spar (calcite), and gem diamond. Syn: [diaphaneity](#) opaque. b. The capacity of seawater to transmit light; the depth to which water is transparent may be measured by use of a Secchi disc. c. A positive image, either black and white or in color, on a clear base (glass or film), intended to be viewed by transmitted light; a diapositive.

transparent

a. Permitting the passage of electromagnetic radiation. b. Things that may be seen through; e.g., rock crystal (quartz), Iceland spar (calcite), selenite (gypsum). CF: [opaque](#)

transparent glass

Glass through which objects can be seen. *Mersereau, 2*

transponder

An automated receiver and/or transmitter for transmitting signals when triggered by an interrogating signal. *Hy*

transport

a. A mining term used to cover vehicular transport, hydraulic transport, and conveyors. See also: [conveyor](#); [haulage](#); [hydraulic pipe transport](#). *Nelson* b. Syn: [transportation](#) occurs in combined terms such as sediment transport and mass transport. *AGI*

transportable equipment

Machines or equipment that can be moved from one part of a mine to another by mechanical means, such as but not by self-propulsion, on a track, or on attached wheels. See also: [mobile equipment](#)

transportable substation

A transformer equipped with switchgear and mounted upon wheels or skids. Syn: [portable substation](#)

transportation

a. In geology, the shifting of material from one place to another on the Earth's surface by moving water, ice, or air. The carriage of mud and dissolved salts by rivers, the passage of a dust-laden whirlwind across a desert, the inland march of sand dunes from a seashore, and the creeping movement of rocks on a glacier are all examples of

transportation. See also: [transport](#) b. The hauling or moving from one place to another of material, such as ore, coal, rock, etc. *Fay*

transport controller

A person stationed in a central position, at a large opencast pit or quarry, to observe all the excavations. By means of signals, the individual is informed when and where vehicles or cars are required and can instruct the lorry or locomotive drivers accordingly. *Nelson*

transported gossan

Some transported gossans are simply colluvial accumulations of fragments of normal gossan that have moved down the slope from the site of weathering. Another variety of an entirely different origin is effectively a fossil spring or seepage deposit, where at one time iron-rich ground water has precipitated massive limonite at or near the daylight surface. *Hawkes, 2*

transport number

In electrolysis, a proportional fall in the number of ions concentrated at an electrode n =loss of concentration at cathode, and/or loss at cathode and anode. This phenomenon is caused by differences in the rate of travel of various species of ion. *Pryor, 3*

transuranic

a. Of, or pertaining to, radioactive substances produced by bombarding uranium with neutrons. *Bennett* b. Having an atomic number higher than that of uranium; having an atomic number higher than 92. *Webster 3rd*

Transvaal emerald

See: [African emerald](#)

Transvaal garnet

A green garnet, possibly grossular or a variety of andradite.

transverse fault

A fault that strikes obliquely or perpendicular to the general structural trend of the region. See also: [transcurrent fault](#)

transverse gallery

An auxiliary crosscut made in thick deposits across an orebody for the purpose of dividing it into sections along strike. It is used only a short time and runs across the thickness of the deposit only. *Stoces*

transverse joint

A joint that is transverse to the strike of the strata or schistosity.

transverse loading

The loading on a beam. *Hammond*

transverse pitch

The lateral distance between the center lines of each strand of a multiple-strand chain, or between the tooth profiles on a sprocket for a multiple-strand roller chain. *Jackson, I*

transverse riffles

See: [Hungarian riffles](#)

transverse slicing with caving

See: [top slicing and cover caving](#)

transverse strength

a. A measure of the capability of a stone bar (or beam) supported at its ends to bear a weight or load at its center. *Fay* b. The strength of a specimen tested in transverse bending; normally synonymous with modulus of rupture but also used to refer to breaking load. *Taylor*

transverse thrust

See: [transcurrent fault](#)

transverse trace

A trace on the ground motion record representing the component of motion in a horizontal plane at a right angle to the seismic wave travel direction.

transverse ventilation

See: [peripheral ventilation](#)

transverse wave

a. In seismology, a wave motion in which the motion of the particles, or the entity that vibrates, is perpendicular to the direction of progression of the wave train. *AGI* b. In geophysics, a body seismic wave advancing by shearing displacements. *AGI* c. A wave in which the direction of propagation of the wave is normal to the displacements of the medium; e.g., a vibrating string. The gravity wave in which fluid parcels move in circular orbits is an example of a mixed transverse-longitudinal wave. The Rossby wave is also mixed, except in the case of zero current speed, when it is a transverse wave. Syn: [distortional wave](#); [secondary wave](#). See also: [S wave](#)

transverse with filling

See: [overhand stoping](#)

trap

a. Any dark-colored fine-grained nongranitic rock, such as a basalt, peridotite, diabase, or fine-grained gabbro; also applied to any such rock used as crushed stone. Syn: [trapp](#); [traprock](#); [trappide](#). CF: [whinstone](#) *AGI* b. A device for separating suspended sediment from flowing water; e.g., a sand trap. *AGI* c. A door used for cutting off a ventilating current and that is occasionally opened for haulage or passage. See also: [trapdoor](#) *Fay* d. A device to separate denser material from less-dense material, such as entrained water in a stream or a compressed-air line. *Long* e. That portion of any mass of porous, permeable rock that is sealed on top and down the sides by relatively nonporous and impermeable rock and that lies above the intersection of a horizontal plane passing through the lowest point of complete sealing.

trap cut

A gem with a row or rows of steplike facets around the table and culet (or small lower terminus of the gem, parallel to the table), or around the culet alone. See also: [step cut](#)

trapdoor

a. A door in a mine passage to regulate or direct the ventilating current. Also called weather door. See also: [trap](#) b. See: [air door](#)

trapezohedron

a. An isometric crystal form of 24 faces, each face of which is ideally a four-sided figure having no two sides parallel, or a trapezium. Syn: [leucitohedron](#) b. A crystal form consisting of six, eight, or twelve faces, half of which above are offset from the other half below. Each face is, ideally, a trapezium. The tetragonal and hexagonal forms may be right- or left-handed. *AGI*

trapezoid

A quadrilateral that has only two sides parallel. *Jones, 2*

trapezoidal rule

A rule for estimating the area of an irregular figure by dividing it into parallel strips of equal width, each strip being a trapezium. See also: [Simpson's rule](#)

trapp

See: [trap](#)

trapper

a. An employee, normally an apprentice, used to open and close mine doors. Also called trapper boy; nipper; door tender; doorman. Syn: [door boy](#) *BCI; Fay* b. An employee who assists the dispatcher by throwing switches and attending telephone at an inside station. *BCI*

trapper boy

See: [trapper](#)

trappide

See: [trap](#)

trap points

Points placed on a railway line to derail a train that has been incorrectly signaled. *Hammond*

traprock

See: [trap](#)

trash screen

Protective screen for removing detritus from the pulp stream ahead of a processing unit. *Pryor, 4*

trass

A common name in the older literature for unwelded massive ash and pumice-flow deposits. Trass has been used in the production of pozzolan cement. CF: [ignimbrite](#)

traveling angle of draw

The angle of draw advancing with a moving face. *Nelson*

traveling apron

See: [apron](#)

traveling block

a. The movable unit, consisting of sheaves, frame, clevis, and/or hook, connected to, and hoisted or lowered with, the load in a block-and-tackle system. Also called floating block; running block. *Long* b. The pulley block that hangs below the crown block and is used for lifting the drilling column. *BS, 9* c. A frame for a sheave or a set of sheaves that slides in a track. Syn: [traveling sheave](#)

traveling compartment

The section of a mine shaft used for raising and lowering miners. *Stoces*

traveling gantry

A movable gantry built on wheels for traveling on rails and supporting a hoisting device. *Hammond*

traveling road

A roadway used by miners for walking to and from the face; i.e., from the shaft bottom or main entry to the workings and back. Syn: [traveling way](#) *Nelson*

traveling sheave

A sheave block that slides in a track. See also: [traveling block](#) *Nichols, 1*

traveling way

See: [traveling road](#)

traveling weight

The portion of the overlying strata at the coal face that is supported and controlled by face supports. This weight "advances" as the face line moves forward. See also: [underweight](#)

traverse

a. A sequence or system of measured lengths and directions of straight lines connecting a series of surveyed points (or stations) on the Earth's surface, obtained by or from field measurements, and used in determining the relative positions of the points (or stations). *AGI* b. A line surveyed across a plot of ground. *AGI* c. To make a traverse; to carry out a traverse survey. See also: [traverse survey](#) d. A vein or fissure in a rock, running obliquely and in a transverse direction. *AGI* e. A line across a thin section or other sample along which grains of various minerals are counted or measured. *AGI*

traverser

A platform superimposed upon or forming part of the rail track that is free to roll or slide sideways so that a car can be moved bodily from one track to another parallel to it. See also: [inclined traverser](#) *Nelson*

traverser system

The basic idea of this system is to confine the mine-car circuit to the smallest possible compass near the mine shaft. This avoids locking up cars on the surface that are better employed underground and reduces labor requirements. In this system, instead of the use of shunt backs on car circuits, the direction of car travel is changed by running onto a portable platform that then moves the car bodily in a transverse direction. The system can be applied, in conjunction with the necessary lifts, to multideck cages. This system may be operated electrically, hydraulically, or pneumatically. *Sinclair, 5*

traverse survey

A survey in which a series of lines joined end to end are completely determined as to length and direction, these lines being often used as a basis for triangulation. It is used esp. for long narrow strips of land (such as for railroads) and for underground surveys. Syn: [traverse](#) *AGI*

traverse tables

Published tables giving the differences of latitude and departure for different angles. *Hammond*

traversing method

One of three recognized methods for determining the average velocity of airflow along a mine roadway by an anemometer. This is the general routine procedure applied when measuring air velocities in mine roadways. While the instrument is running, it is slowly and steadily moved up and down a series of imagined vertical lines, so as to cover equal areas in equal time. The total period is usually 1 min for a medium-sized roadway. The integrated reading is then the mean velocity for that section. CF: [division method](#); [single-spot method](#). *Roberts, 1*

travertine

a. A dense, finely crystalline, massive or concretionary limestone; generally white, tan, or cream; commonly having a fibrous or concentric structure and splintery fracture; formed by rapid chemical precipitation of calcium carbonate from solution in surface and ground waters, such as by agitation of stream water or by evaporation around the mouth or in the conduit of a spring, esp. a hot spring. It also occurs in limestone caves, where it forms stalactites, stalagmites, and other deposits; as a vein filling; along faults; and in soil crusts. The spongy or less compact variety is tufa. See also: [cave onyx](#); onyx; [onyx marble](#). Syn: [calcareous sinter](#); [calc-sinter](#). b. A term that has been applied to any cave deposit or calcium carbonate. c. A term used inappropriately as a syn. of kankar. d. Etymol. Italian tivertino from the old Roman name of Tivoli, a town near Rome, where travertine forms an extensive deposit. Also spelled travertin. Syn: [travertine marble](#)

travertine marble

See: [travertine](#)

trawley

A small truck or car conveying material about a furnace or iron mill; sometimes applied to trucks, in mines, etc. See also: [trolley](#) *Fay*

tray

a. A car, carrier, or pallet, usually suspended from the moving element of a conveyor. b. A section of gravity conveyor, chain conveyor, or shaker conveyor. See also: [pan](#); [trough](#). Syn: [tray carrier](#)

tray carrier

See: [tray](#)

tray thickener

A drying unit that differs from the ordinary round tank in that it houses several horizontal trays that divide it into compartments. Each has its own set of rakes and its

own underflow for settled material and peripheral overflow. Used where space is limited or in subarctic conditions that call for antifreeze housing. *Pryor, 3*

tread

a. The ground contact surface on a tire or a track shoe. *Nichols, 1* b. Occasionally, a high-friction lagging on a belt pulley. *Nichols, 1* c. The pit in which brickmakers soak their clay before putting it into the pug mill. *Standard, 2*

tread tractor

A form of locomotive that is serviceable over rough roads. A trailer, with capacity up to 16 yd³ (12.2 m³), with bottom discharge or two-way side discharge is used with the tractor. The maximum speed is about 6 m/h. *Nelson*

treasure box

A pocket of very rich ore.

treated stone

A gemstone that has been heated, stained, oiled, or coated; treated by various types of irradiation, in order to improve or otherwise alter its color; or laser-drilled to make flaws inconspicuous. Also, a stone that has been preserved from dehydration, such as an opal whose cracks have been filled with oil or other liquid; or one in which special effects have been produced; e.g., amber with "spangles" (tension cracks). See also: [altered stone](#)

treatment

The reduction of ores by any process whereby the valuable constituent is recovered. *Fay*

treble

Three standard lengths of drill rod or drill pipe connected together and handled and stacked in a drill tripod or derrick as a unit length of rod on borehole round trips. Also incorrectly spelled thribble; thrible; tribble; trible. See also: [stand](#); [rod stand](#). *Long*

treble coursing

In mining, the system of dividing a ventilating current into three coursings. *Standard, 2*

trechmannite

A trigonal mineral, AgAsS_2 ; forms minute scarlet-vermillion rhombohedral crystals; at Binenthal, Switzerland.

tree

a. Visible projection of electrodeposited metal formed at a site of high current density. *ASM, 1* b. A thick log used as a prop in heavy ground. A prop, leg, or puncheon. See also: [treed](#) c. The fulcrum for the lever used in boring. *Fay* d. A treelike aggregate of crystals, which forms from solution on a suspended substrate that induces crystallization. *Webster 2nd*

tree agate

A moss agate with dendritic markings resembling trees. Syn: [tree stone](#)

treed

Supported by props, such as a mine roof. See also: [tree](#)

treeling

See: [trilling](#)

treenail

A hardwood plug drilled so as to allow a track spike to be driven through it into a timber sleeper. *Hammond*

tree ore

A high-grade uranium ore consisting of buried carbon trash that has been replaced or enriched with uranium-bearing solutions. *AGI*

tree stone

See: [tree agate](#)

tremolite

A monoclinic mineral, $2[\text{Ca}_2 \text{Mg}_5 \text{Si}_8 \text{O}_{22} (\text{OH})_2]$; amphibole group with magnesium replaced by iron, and silicon by aluminum toward actinolite; white to green; long-bladed or stout prismatic crystals; may show columnar, fibrous, or granular masses or compact aggregates; in low-grade metamorphic rocks such as dolomitic limestones and talc schists; the nephrite variety is the gemstone jade; the asbestiform variety is byssolite. CF: [actinolite](#)

tremolitic

Pertaining to or characterized by the presence of tremolite, as tremolitic marble.

tremor tract

a. An area of intensely jumbled coal and associated beds. The contortions contain sharp folds, thrusts, and glides. The mode or origin is controversial. A theory that has gained some favor is that the disturbance was initiated by a seismic shock, causing the coal seam and beds to crack and heave. Later, lateral forces appear to have produced the final complicated structures. *Nelson* b. In coal mining, an area of complex folding, faulting, and gliding of coal seams and associated rocks. It may be formed by seismic shocks during the deposit's semicompacted state. *AGI*

trench

a. A long, straight, commonly U-shaped valley or depression between two mountain ranges. *AGI* b. A narrow, steep-sided canyon, gully, or other depression eroded by a stream. *AGI* c. Any long, narrow cut or excavation produced naturally in the Earth's surface by erosion or tectonic movements. Also, a similar feature produced artificially, such as a ditch dug in prospecting for minerals. *AGI* d. An elongated but proportionally narrow depression, with steeply sloping longitudinal borders, one of which (the continental) rises higher than the other (the oceanic). Trenches are the ends of unsymmetrical basins and lie beside the continental border or island chains. Syn: [marginal trench](#) *AGI* e. A long but narrow depression of the deep-sea floor having relatively steep sides. *AGI* f. A long, narrow, intermontane depression occupied by two or more streams (whether expanded into lakes or not), alternately draining the depression in opposite directions. *AGI* g. A narrow ditch. *AGI* h. In geological exploration, a narrow, shallow ditch cut across a mineral deposit to obtain samples or to observe character. i. A long, narrow excavation in the ground, as a trench dug for the laying of pipes. *Crispin* j. A temporary scar in which a conduit is placed and then covered over. CF: [ditch](#)

trench excavation

Excavation in which the width of operations and, generally, the depth are limited. Trenching may be performed in any soil and will sometimes fall into the category of limited-area, vertical excavation. *Carson, I*

trench excavator

A self-propelled machine generally mounted on crawler tracks designed for digging trenches or ditches. It is equipped with either a bucket ladder or buckets mounted around the periphery of a circular wheel. *Hammond*

trenchman

See: [ripper](#)

trench sampling

A slight refinement of grab sampling in which the material to be sampled is spread out flat and channeled in one direction with a shovel, and the material for the sample is taken at regular intervals along the channel. The procedure is repeated with several other channels in different directions until a sample of the proper size has been secured. Also called channel sampling. *Newton, 1*

trend

a. A general term for the direction or bearing of the outcrop of a geological feature of any dimension, such as a layer, vein, orebody, fold, or orogenic belt. CF: [strike](#) b. The direction or rate of increase or decrease in magnitude of the individual members of a time series of data when random fluctuations of individual members are disregarded; the general movement through a sufficiently long period of time of some statistical progressive change. *AGI* c. The direction or bearing of a bed, dike, sill, etc., or of the intersection of the plane of a bed, dike, joint, fault, or other structural feature with the surface of the ground. *Fay* d. The direction or bearing of a fold or series of folds in rocks, of the axes of the folds, of subsurface structures, of oriented or elongated structures indicated by geological surveys, or of topographic features that are consequent on the geologic structure. (As used in either sense, the trend may or may not coincide with the strike, depending on the structural relations at the place of observation.) CF: [trace](#) *Fay*

trent agitator

An agitator with paddle-wheel-type arms; they are hollow, and the pulp solution or air is discharged from nozzles on these arms, thus causing the stirrer to rotate. *Liddell*

Trenton

a. A subdivision of the American Ordovician sometimes considered as the equivalent of the whole Middle Ordovician and sometimes restricted to a portion of this series. *Webster 3rd* b. Formerly, a division of the lower Silurian.

Trent process

Agglomeration process sometimes used in coal cleaning and briquetting. Raw coal crushed to minus 65 mesh is agitated with water and oil. Coal agglomerates and ash-forming fraction are removed in aqueous solution. *Pryor, 3*

trepan

a. A boring tool once used in the Kind-Chaudron shaft-sinking method. *Nelson* b. A boring machine used for shaft sinking through water-bearing strata.

trepanner

A cutter loader for continuous mining in longwall faces. Its main cutting unit is the trepanner wheel with cutting arms, one at each end of the machine to enable it to cut in both directions on the face. Also fitted are a vertical, back-shearing jib; a floor-cutting jib, duplicated to enable cutting in either direction; and, if necessary, a roof-cutting disk. The machine is used in conjunction with an armored flexible conveyor on a prop-free front face; suitable for seams between 3 ft and 4 ft (0.9 m and 1.2 m) thick, although it can work in thicker seams if the top coal falls freely. *Nelson*

trepanning

A type of boring in which an annular cut is made into a solid material, with the coincidental formation of a plug or solid cylinder. *ASM, 1*

trepan shearer

A cutter loader in which the trepanner head is incorporated into the shearer-loader while the cutting drum is retained to dress the floor and back of the cut. *Nelson*

trespass

Working coal from the property or take of another coal mine owner. See also: [encroachment](#)

trestle

a. A bridge, usually of timber or steel, that has a number of closely spaced supports between abutments. *Nichols, 1* b. A bent of timber, reinforced concrete, or steel, supporting a temporary or permanent structure. *Hammond*

trestleman

Person who unloads coke, limestone, and ore, and keeps bins poked down. *Fay*

tret

Allowance to purchaser for waste. *Pryor, 3*

trevorite

An isometric mineral, NiFe_2O_4 ; magnetite series of the spinel group; black with greenish tint; at Barberton, Transvaal, South Africa.

triad

In crystallography, an element of symmetry characterized by a rotational axis requiring three operations to return to identity. Isometric symmetry contains four diagonal triads; trigonal symmetry requires a unique triad. CF: [threefold](#)

trial face

See: [experimental face](#)

trial pit

A shallow hole, 2 to 3 ft (0.6 to 0.9 m) in diameter, put down to test shallow minerals or to establish the nature and thickness of superficial deposits and depth to bedrock. See also: [test pit](#); [pit sampling](#). *Nelson*

trial shots

The experimental shots and rounds fired in a sinking pit, tunnel, opencast, or quarry to determine the best drill-hole pattern to use. This is carried out when hard rocks are exposed. *Nelson*

triamorph

A chemical compound crystallizing in three different crystal structures.

triangle cut

The characteristic feature of this cut lies in the fact that the drill holes are arranged in zigzag. In this way a larger opening is obtained because the drill holes can break out between the preceding rows. Each vertical row of holes breaks out a layer. If the front holes do not break out to the full depth, the burnt-out holes indicate the direction of break for the following row of holes since the holes are arranged in zigzag. The name, triangle cut, is due to the distribution of the holes at the working face and the form of the initial opening. *Fraenkel*

triangle shooting

A refraction type of seismic shooting used to facilitate the separation of intercept times into constituent delay times. Three profiles can be laid out as sides of a triangle. If intercept times are obtained at each of the vertices of the triangle from shots at the other two vertices, one can solve for the delay times at the three corners. Delay times along the

sides of the triangle can be determined by taking differentials in the intercept times with respect to the delay times established at the vertices. *Dobrin*

triangular core

The strand core of a flattened strand rope. *Hammond*

triangular facet

A physiographic feature having a broad base and an apex pointing upward; specif. the face on the end of a faceted spur, usually a remnant of a fault plane at the base of a block mountain. A triangular facet may also form by wave erosion of a mountain front or by glacial truncation of a spur. Syn: [spur-end facet](#)

triangular method

A method of ore reserve estimation based on the assumption that a linear relationship exists between grade difference and the distance between all drill holes. *Krumlauf*

triangular texture

In mineral deposits, texture produced when exsolved or replacement mineral crystals are arranged in a triangular pattern, following the crystallographic directions of the host mineral. *AGI*

triangulate

To divide into triangles; esp. to use, survey, map, or determine by triangulation. Etymol: back-formation from triangulation. *AGI*

triangulation

a. A trigonometric operation for finding the directions and distances to and the coordinates of a point by means of bearings from two fixed points a known distance apart; specif. a method of surveying in which the stations are points on the ground at the vertices of a chain or network of triangles, whose angles are measured instrumentally, and whose sides are derived by computation from selected sides or base lines, the lengths of which are obtained by direct measurement on the ground or by computation from other triangles. Triangulation is generally used where the area surveyed is large and requires the use of geodetic methods. CF: [trilateration](#) b. The network or system of triangles into which any part of the Earth's surface is divided in a trigonometric survey. *AGI*

triaxial compression test

A test in which a cylindrical specimen of rock encased in an impervious membrane is subjected to a confining pressure and then loaded axially to failure. See also: [unconfined compression test](#) Syn: [triaxial shear test](#)

triaxial shear test

See: [triaxial compression test](#)

tribe

A subdivision of the rock association or kindred. A tribe is made up of clans. See also: [rock association](#)

tribocouple

Two chemically dissimilar metals in mutual electrical contact. The friction produced by the mechanical agitation of the two members of the couple results in the flow of an electric current. The power of a tribocouple is the magnitude of the current that it will generate under specified conditions of friction. *Osborne*

Triboelectrostatic separation process

An electrostatic process under development, in which fine-size dry coal is blown rapidly past a copper baffling device that imparts positive triboelectric charges on the coal and negative charges on the associated mineral matter. The material is introduced into an electrostatic separator, where it is separated.

triboluminescence

a. The property of some specimens of zinc sulfide of emitting sparks when scratched. *Fay* b. Luminescence in which electrons in a trapped state are released by abrasion or crushing. CF: [luminescence](#)

tribrach

a. Three leveling screws and footplate used to attach a theodolite or surveyor's level to its tripod, level the instrument, and center it precisely over its mark. *Pryor, 3* b. The frame below a theodolite on which three foot screws are mounted. See also: [limb](#)

tribromomethane

See: [bromoform](#)

tribute work

In mining, work on shares. *Standard*, 2

tributing

a. A system under which a syndicate of miners delivers coal at the pithead at an agreed price. This system may be used where ore deposits are too small and scattered to conduct normal mining activities. "Tributors" work and deliver their ore to the owner and receive payment based on the ore's ascertained value. *Nelson* b. Working on a sharing basis. *Pryor*, 3

tricalcium pentaluminate

A compound, $3\text{CaO} \cdot 5\text{Al}_2\text{O}_3$, formerly believed to be present in high-alumina hydraulic cement. It is now known that a melt of this composition consists of a mixture of $\text{CaO} \cdot 2\text{Al}_2\text{O}_3$ and $\text{CaO} \cdot \text{Al}_2\text{O}_3$, the latter compound being responsible for the hydraulic properties. *Dodd*

tricalcium silicate

$3\text{CaO} \cdot \text{SiO}_2$; dissociates at approx. 1,900 degrees C to form CaO and $2\text{CaO} \cdot \text{SiO}_2$. This compound is the principal cementing constituent of Portland cement, small quantities of MgO and Al_2O_3 usually being present in solid solution. Tricalcium silicate is also present in stabilized dolomite refractories. *Dodd*

trichalcite

A former name for tyrolite. See also: [tyrolite](#)

trichite

A straight or curved hairlike crystallite, usually black. Trichites occur singly or radially arranged in clusters and are found in glassy igneous rocks. *AGI*

trichloroethylene

Colorless; stable; low-boiling; heavy; mobile; toxic; liquid; $\text{CHCl}:\text{CCl}_2$. *CCD*, 2

trichroism

Characteristic of a crystal showing three different colors in transmitted light; limited to crystallization in the orthorhombic, monoclinic, and triclinic systems. CF: [pleochroism](#); [dichroism](#).

trickle drain

A pond overflow pipe set vertically with its open top level with the water surface.
Nichols, I

trickle scale

Scale that has become detached from a pack of sheets in pack rolling, trickling in between the pack and becoming embedded in the surface of the sheets during further rolling. *Osborne*

triclinic

a. In crystallography, periodicity requiring three crystal axes having no further constraint on the interaxial angles designated alpha, beta, and gamma. b. The least symmetric of the seven (or six) crystal systems, requiring all three axial vectors a, b, and c and three interaxial angles alpha, beta, and gamma as lattice parameters. Of its two crystal classes, one has a center of symmetry and the other does not. Feldspars and axinites crystallize in the triclinic system. Syn: anorthic (obsolete); triclinic system.

triclinic block

In quarrying, a term applied to a block of stone bounded by three pairs of parallel faces, none of which intersect at right angles. *Fay*

triclinic crystal

Crystal having no symmetry elements, or only an inverse center. The typical crystal has three unequal axes, no two of which are perpendicular. *Henderson*

triclinic system

See: [triclinic](#)

tricone bit

A roller bit having three cone-shaped cutters in the head of the bit. See also: [roller bit](#)

tricone roller bit

See: [tricone bit](#)

tridimite

See: [tridymite](#)

tridymite

https://t.me/Geologybooks

A monoclinic and triclinic mineral, $4[\text{SiO}_2]$; pseudo-hexagonal; polymorphous with coesite, cristobalite, quartz, and stishovite; colorless to white; in felsic volcanics and refractories. Also spelled tridimite.

Triger process

A method of sinking through water-bearing ground in which a shaft is lined with tubing and provided with an air lock so that work proceeds under air pressure. CF: [Kind-Chaudron process](#)

trigger circuit

A circuit having a number of states of electrical condition (which are either stable or quasi-stable) or that is unstable with at least one stable state and so designed that a desired transition can be initiated by the application of a suitable trigger excitation. By quasi-stable state is meant a state that persists during the time of interest. *NCB*

trigger effect

When rock is subjected to increasing stresses there comes a time when it is on the point of failure. In some circumstances it may remain at that point for a considerable time. Any small external influence, such as a seismic wave, may then be sufficient to precipitate the failure. This is known as the trigger effect. *Spalding*

triggers

Term applied to any number of things that may initiate or trigger rock bursts. Such triggers include blasting, changes of temperature, sudden influxes of water, and even rock bursts themselves, which sometimes act as a trigger impulse to initiate a second burst. *Issacson*

trigonal

a. Describes a crystal form or structure with a unique triad of symmetry. b. A symmetry operation requiring three repetitions to return to identity. Syn: [triad](#) c. Characteristic of, pertaining to, or belonging in the trigonal system or in the rhombohedral division of the hexagonal system. (Not all trigonal point groups may be characterized by rhombohedral axes, hence the incongruence between the trigonal system and the rhombohedral division of the hexagonal system.) CF: [rhombohedral division](#); [hexagonal system](#).

trigonal coordination

In a crystal structure, a cation with three anions around it at the points of a triangle, e.g., C in a CO_3^{2-} group.

trigonal system

In assigning point groups to seven crystal systems, the trigonal system is characterized by a unique triad, that element of rotational symmetry for which three operations of 120 degrees return a lattice to identity. CF: [rhombohedral division](#); [hexagonal system](#).

trigonite

A monoclinic mineral, $Pb_3 Mn(AsO_3)_2 (AsO_2 OH)$; forms sulfur-yellow triangular wedge-shaped crystals; at Laangban, Sweden.

trigonometrical leveling

Basically this method consists of determining the vertical heights by measurement of distances and angles of inclination. Angles of inclination are measured either by hand instruments or more accurately by theodolite. *Mason*

trigonometrical survey

See: [triangulation](#)

trigonometry

Measurement of three-angled figures, or measurement by use of three-angled figures. *Jones, 2*

trihydrocalcite

A hydrous calcium carbonate, $CaCO_3 \cdot 3H_2O$. A moldlike incrustation on chalk marl. From Nova-Alexandria, Poland. *English*

trikalsilite

A hexagonal mineral, $(K,Na)AlSiO_4$; polymorphous with kaliophilite, kalsilite, and panunzite.

trilateration

A method of surveying in which the lengths of the three sides of a series of touching or overlapping triangles are measured (usually by electronic methods) and the angles are computed from the measured lengths. CF: [triangulation](#)

trill

See: [trilling](#)

trilling

A cyclic crystal twin consisting of three individuals. CF: [furling](#); fiveling; eightling. Syn: [treeling](#); [trill](#). See also: [threeling](#)

trilobite

A primitive, extinct crustacean, occurring throughout the Paleozoic and abundant in the earlier Paleozoic periods, characterized by a segmented body divided by longitudinal grooves into three lobes.

trimerite

A monoclinic mineral, $\text{CaMn}_2 \text{Be}_3 (\text{SiO}_4)_3$.

trimetric

A solid figure in which the three axes are all unequal, but intersect one another at right angles. Syn: [orthorhombic](#)

trim holes

Unloaded drill holes closely spaced along a line to limit the breakage of a blast. Syn: [relief holes](#)

trimmer

a. A shothole bored slightly outward to trim the drivage to the shape required. *Mason* b. An apparatus for trimming a pile of coal into a regular form (such as a cone or prism). *Webster 3rd* c. One who uses a shovel to distribute loose material--such as coal, rubbish, sand, or other substances--in railroad cars or holds of ships and barges during or after loading. May be designated according to material trimmed, such as a coal trimmer. *DOT*

trimmer conveyor

A self-contained, light-weight portable conveyor, usually of the belt type, for use in unloading and delivering bulk materials from trucks to domestic storage, and for trimming bulk materials in bins or piles. See also: [portable conveyor](#)

trimmer holes

These complete the breaking out of the ground. The positioning and number of trimmer shots are governed by the size of the drift, the hardness of the ground, and the fragmentation required for the loading-out method to be adopted. *McAdam, 2*

trimmers

a. The shotholes drilled around the periphery of a shaft or tunnel that break or trim the sides of the excavation to the shape and size required. See also: [cut holes](#) b. The top row of holes in a tunnel face. *Stauffer*

trimming shed

See: [mica house](#)

trimorphism

The property of a chemical compound to crystallize in one of three different crystal structures. CF: [dimorphism](#); [polymorphism](#).

trimorphous

A chemical compound that may crystallize in one of three different crystal structures.

trinascol

Dense asphaltic petroleum containing 9% sulfur. *Tomkeieff*

trinitrate glycerol

See: [nitroglycerin](#)

trinitrin

See: [nitroglycerin](#)

trinitrotoluene-ammonium nitrate explosive

An explosive containing ammonium nitrate sensitized with trinitrotoluene. A proportion of aluminum powder or calcium silicide may be added to increase power and sensitiveness. *Nelson*

trinkerite

A resinous substance occurring in large amorphous masses of a hyacinth-red to chestnut-brown color in brown coal near Albona, Istria (former Yugoslavia). Resembles tasmanite in composition. *AGI*

trioctahedral

Pertaining to a layered-mineral structure of the kaolinite-serpentine, talc-pyrophyllite, mica, or chlorite groups in which all three of the positions with octahedral coordination are occupied, mainly by divalent cations, such as Mg, or by a mix of monovalent and trivalent cations, such as Li and Al. CF: [dioctahedral](#)

trip

a. A small train of mine cars. *Korson* b. The number of cars moved at one time by a transportation unit. *Hudson* c. The operation in rotary drilling of pulling out (trip out) and running in (trip in) the drill string, as required to replace a worn bit, extract a core, or recover a fish. Syn: [round trip](#) d. An automatic arrangement for dumping cars; a tipper, a kickup. *Fay* e. A release catch. *Nichols, I*

trip change

A term used in mine transportation for the period during which the loads (loaded mine cars) are taken away and a fresh trip of empties is brought back. This period is known as trip change in contrast to car change. In this interval a great deal of potential loading time can be lost. *Kentucky*

trip coil

A device for opening protective equipment or a circuit breaker, operated by a solenoid. *Hammond*

tripestone

a. A mineral form with the outward appearance of tripe or intestines, e.g., stalactitic calcite, crumpled gypsum laminae, contorted concretionary anhydrite, barite. Also spelled tripe stone. b. Stalactite resembling intestines. *Arkell* c. A variety of gypsum formed of crumpled, alternating laminae of pure white gypsum and gray argillaceous gypsum. *Arkell* d. A contorted concretionary variety of anhydrite. *Fay*

trip hammer

A power hammer operated by a tripping mechanism that causes the hammer to drop. *Crispin*

triphane

A former name for spodumene.

triphylite

An orthorhombic mineral, $4[\text{LiFe}^{2+}(\text{PO}_4)]$, with manganese replacing iron toward lithiophilite; bluish to greenish gray; in granite pegmatites.

trip lamp

A removable self-contained mine lamp, designed for marking the rear end of a train (trip) of mine cars.

triple entry

A system of opening a mine by driving three parallel entries for the main entries. See also: [main entry](#)

triple-entry room-and-pillar mining

See: [room-and-pillar](#)

triple point

An invariant point at which three phases coexist in a unary system. When not otherwise specified, it usually refers to the coexistence of solid, liquid, and vapor of a pure substance. *AGI*

triplet

An assembled stone of two main parts of gem materials bonded by a layer of cement or other thin substance (the third part of the triplet), which gives color to the assemblage. CF: [doublet](#); [emerald triplet](#).

tripletine

A name for emerald-colored beryl triplet. See also: [emerald triplet](#)

triple-tube core barrel

A special core barrel used to take soil samples, as in foundation testing. The inner tube is swivel mounted and nonrotating and extends through, and a short distance beyond, the bit. Hence, the bit only cuts clearance for the outer tube or core-barrel assembly, and the core taken by the inner tube is cut by a spudding action. The triple or core tube is mounted inside the inner tube to receive the core and is split longitudinally to facilitate removal of the core. Also called clay barrel. *Long*

Triplex glass

A patented form of laminated glass. See also: [safety glass](#)

triplexing

A method of steelmaking that involves the use of three processes, e.g., a sequence of melting in a cupola, blowing in a Bessemer converter, and finishing in a basic electric furnace, or a combination of the acid Bessemer converter, the basic open-hearth furnace, and the basic electric furnace. *Osborne*

triplex pump

A positive-displacement piston pump having three water cylinders mounted side by side. It may be either a single- or double-action type. CF: [duplex pump](#)

triplite

A monoclinic mineral, $8[(\text{Mn,Fe,Mg,Ca})_2(\text{PO}_4)(\text{F,OH})]$; brown; forms fibrous masses; in granite pegmatites. Syn: [pitchy iron ore](#)

triploidite

A monoclinic mineral, $(\text{Mn,Fe})_2(\text{PO}_4)(\text{OH})$; perfect cleavage.

trip maker

A device to elevate cars on an inclined track as received from a kickback. *Zern*

tripod

A three-legged support for a rock drill, hoisting drum, magnetometer, or any other piece of equipment.

tripoli

See: [diatomite](#)

tripolite

A term that has been applied as a syn. of diatomite, in reference to the material from the north African location of Tripoli. It has also been used, less correctly, as a syn. of tripoli. See also: [diatomite](#) *AGI*

tripper

a. A device in the run of a conveyor comprising two free drums around which the belt passes S-fashion. *Nelson* b. A device for discharging material from a belt conveyor. *Nelson* c. A double pulley that turns a short section of a conveyor belt upside down in

order to dump its load into a side chute. *Nichols, 1* d. A device or mechanism that trips, as a device for causing the load on a conveyor to be discharged into a hopper or other receptacle. *Webster 3rd* e. An automatic car dump. f. A device for tipping and dumping the skip at the top of the blast furnace. *Mersereau, 2*

tripper man

Person who unloads grain or ore from conveyor belt into bins or processing equipment by operating a tripper. Syn: [conveyor-operator tripper](#); conveyor-tripper operator; spreader operator. *DOT*

tripping

a. The process of pulling and/or lowering drill-string equipment in a borehole. *Long* b. To open a latch or locking device, thereby allowing a door or gate to open to empty the contents of a skip, bailer, etc. *Long*

trippkeite

A tetragonal mineral, $\text{CuAs}^{+3}_2\text{O}_4$; excellent prismatic cleavage permitting crystals to be broken into flexible fibers; blue-green; at Atacama, Chile.

trip recorder

See: [hoist trip recorder](#)

trip sender

In bituminous coal mining, a laborer who switches cars to various tracks, couples and uncouples trains, and attaches and detaches cars to and from the haulage cable at a mine where there are several sidetracks on the haulageway. *DOT*

tripuhyite

A tetragonal mineral, FeSb_2O_6 ; forms dull greenish-yellow microcrystalline aggregates; in the cinnabar-bearing gravels of Tripuhy, Ouro Preto, Minas Gerais, Brazil.

trisilicate

In metallurgy, a slag with a silicate degree of 3. *Newton, 1; Newton, 2*

trislope screen

A screen in which each section of the deck is flatter than the preceding one. The rate of feed is reduced on succeeding sections to maintain proper bed depth for rapid

stratification. It is designed for fine dry screening of 3/4-in (19-mm) by 0-in, 1/2-in (13-mm) by 0-in, and 1/4-in (6 mm) by 0-in moist coal or other material. See also: [varislope screen](#) *Nelson*

trisoctahedron

A crystal form of 24 faces in the isometric system with the gross appearance of each face of an octahedron being replaced by three faces arrayed around a diagonal triad. Each face of a trigonal trisoctahedron is an isosceles triangle, while each face of a tetragonal trisoctahedron is a trapezoid. Syn: [trapezohedron](#)

trisodium phosphate

Na_3PO_4 , a chemical compound used in some enamel frit compositions. *Enam. Dict.*

tristetrahedron

a. An isometric hemihedron included under 12 trapeziform faces; a tetragonal tristetrahedron. *Standard, 2* b. An isometric hemihedron included under 12 isosceles triangular faces; a trigonal tristetrahedron. *Standard, 2*

tritium

The radioactive isotope of hydrogen having two neutrons and one proton in the nucleus. Being hydrogen-3, it is heavier than deuterium (heavy hydrogen or hydrogen-2). *Lyman; Handbook of Chemistry and Physics, 2*

tritomite

A trigonal mineral, $(\text{Ce,La,Y,Th})_5(\text{Si,B,Al})_3(\text{O,OH,F})_{13}$ (?); moderately radioactive; metamict; dark brown; in syenite with leucophanite, analcime, mosandrite, aegirine, and catapleiite. Formerly called spencite.

triton value

The number of grams of TNT required to produce the same angle of recoil of the ballistic mortar as 10 g of the explosive under test. *McAdam, 2*

triturate

a. A powder produced from a solid by grinding, usually with the addition of some liquid. *Gaynor* b. To grind to a powder, usually with the addition of some liquid. *Gaynor*

trituration

Reduction to a fine powder by grinding. Syn: [comminution](#) CF: [levigation](#)

trivalent

a. Having a valence of 3. *Webster 3rd; Standard, 2* b. Having three valences; e.g., chromium, which has valences of 2, 3, and 6. Syn: [tervalent](#)

troctolite

A gabbro that is composed chiefly of calcic plagioclase (e.g., labradorite) and olivine with little or no pyroxene. Such rocks commonly are speckled like trout. Syn: [forellenstein](#); [troutstone](#). *AGI*

troegerite

See: troegerite

trof-dopplerit

See: [dopplerite](#)

troegerite

A very rare tetragonal mineral, $H(UO_2)(AsO_4) \cdot 4H_2O$; autunite group; strongly radioactive; lemon-yellow; in veins with walpurgite, zeunerite, uranospinite, pitchblende, and other uranium minerals. Also spelled troegerite.

Troeger's classification

A quantitative mineralogic classification of igneous rocks proposed by E. Troeger in 1935. *AGI*

trogtalite

An isometric mineral, $CoSe_2$; pyrite group; dimorphous with hastite; violet.

troilite

A hexagonal mineral, FeS ; a meteorite mineral related to pyrrhotite, $Fe_{1-x}S$, in terrestrial rocks.

Trojan coal powder

High explosive used in mines. *Bennett*

trolley

a. The grooved wheel, fixed in bearings at the end of a trolley pole, pressed upward in rolling contact with the overhead trolley wire to take off the electric current for operating the locomotive or other piece of motorized equipment. A trolley glider is frequently used in place of the wheel, making a sliding contact with the wire. Also called trolley wheel. *Jones, I* b. A low carriage, mounted on wheels, for carrying timber, supplies, and machines underground. See also: [trawley](#); [bogie](#). *Nelson*

trolley conveyor

A series of trolleys supported from or within an overhead track and connected by an endless propelling medium, such as a chain, a cable, or other linkage, with loads usually suspended from the trolley. Trolley conveyors may be designed for single or multiple plane operation. Syn: [overhead conveyor](#); [overhead trolley conveyor](#).

trolley locomotive

a. A mine locomotive operated by electricity drawn from overhead conductors. Small grooved wheels or gliders are held in contact with the conductors, and the current passes down a trolley arm to the motor. It is very efficient where heavy loads are hauled up relatively steep gradients. Generally restricted to intake airways not nearer than 300 yd (274 m) to a working face. *Nelson* b. A mine locomotive operated by electricity drawn from overhead trolley wires. *Nelson*

trolley voltage

Although not actually set by law, the generally accepted maximum direct current trolley voltage is considered to be 300 V. The use of alternating current voltages above 220 V in mines is usually permitted, provided the conductors are properly insulated and the cables end in suitable terminal boxes. *Kentucky*

trolley wire

The means by which power is conveyed to an electric trolley locomotive. It is hung from the roof and conducts power to the locomotive by the trolley pole. Power from it is sometimes also used to run other equipment. *BCI*

trolley wire guards

Coverings for exposed trolley wires in mines and other locations where transportation power wires are within reaching height and are a constant source of danger to all personnel. Coverings, made of rubber or some other insulating material, guard workers from severe burns or electrocution by direct contact with the wire. *Best, I*

trombe

An apparatus for producing a blast of air by means of a falling stream of water, which mechanically carries air down with it, to be subsequently separated and compressed in a reservoir or drum below. See also: [water blast](#)

trommel

A revolving cylindrical screen used in size classification of coarsely crushed ore, coal, gravel, and crushed stone. The material to be screened is delivered inside the trommel at one end. The fine material drops through the holes; the coarse material is delivered at the other end. Also called, according to its various uses, sizing trommel, washing drum, and washing trommel. Also spelled tromel. See also: [revolving screen](#); rotary breaker; rotary screen; shaking screen. *ASM, 1; Liddell; Standard, 2*

trommel screen

A screen in which the screening surface is formed into a cylinder or frustum of a cone, mounted upon a rotating shaft or on revolving rollers. See also: [revolving screen](#)

tromp curve

See: [ash curve](#)

tromp cut point

See: [partition density](#)

Tromp distribution curve

A curve showing the float-sink percentage of each density fraction of the feed coal. The quantity of clean coal recovered is plotted against the mean densities of the density fraction. From this curve the specific gravity of separation and the sharpness of the separation can be determined. Such a curve is independent of the coal being washed and is characteristic of a specific coal-washing device.

trompe

See: [trombe](#)

tromp error curve

See: [error curve](#)

Tromp process

a. The Tromp process was the first to introduce (about 1938) the use of magnetite suspension in dense-medium washing. The magnetite is ground to about minus 1/250 in (0.1 mm) and added to water. The process makes use of an unstable suspension with horizontal currents of differing densities at intermediate levels. The process operates within the size range 6 to 200 mm and in practice is used for raw coal down to 1/4 in (6.4 mm). It gives a reasonably accurate three-product separation. *Nelson* b. A dense-medium process that utilizes a rapidly settling suspension of finely powdered magnetite or sintered roasted pyrite. This process may be used on any size of coal from 10 to 1/4 in (254 to 6.4 mm) and for any specific gravity from 1.3 to 1.9. The grain size of the magnetite or pyrite is minus 0.1 mm. The quick settling of the magnetite particles gives a higher specific gravity in the lower layers of the wash box, which makes it possible to obtain three products: clean coal, middlings, and refuse. *Mitchell*

trona

A monoclinic mineral, $\text{Na}_3(\text{CO}_3)(\text{HCO}_3)\cdot 2\text{H}_2\text{O}$; soft; vitreous; colorless to white; alkaline tasting; in saline lake deposits and desert soils; a major source of sodium compounds from extensive deposits at Searles and Owens Lakes, CA, and in Wyoming, Hungary, Egypt, Africa, and Venezuela. See also: [sodium sesquicarbonate](#)

Trona process

The method used for the separation and the purification of soda ash (anhydrous sodium carbonate), anhydrous sodium sulfate, boric acid, borax, potassium sulfate, bromine, and potassium chloride from brine at Searles Lake, San Bernardino County, CA. *CCD*, 2

trondhjemite

A light-colored plutonic rock composed primarily of sodic plagioclase (esp. oligoclase), quartz, sparse biotite, and little or no alkali feldspar. Its name, given by Goldschmidt in 1916, is derived from Trondhjem, Norway. Also spelled: trondjemite; trondheimite. *AGI*

trondjemite

See: [trondhjemite](#)

troostite

a. A manganoan variety of willemitite occurring in large reddish crystals. b. A previously unresolvable, rapidly etching, fine aggregate of carbide and ferrite produced either by tempering martensite at a low temperature or by quenching a steel at a rate slower than the critical cooling rate. Preferred terminology for the first product is tempered martensite; for the latter, fine pearlite. *ASM*, 1

troostitic structure

Fine aggregates of ferrite and cementite in steel; emulsified ferrite. *Pryor, 3*

Tro-Pari survey instrument

Trade name of a single-shot borehole surveying instrument combining a compass and inclinometer, which is locked in place by the action of a preset time clock. *Long*

tropic pack

A special type of packing to protect explosives from deteriorating when subjected to hot, humid atmospheric conditions, such as in tropical areas. The explosives, after being sealed with paraffin, are packed in cartons, which are then wrapped in waxed paper and also sealed with paraffin. The filled cartons are then placed inside a satchel-type case liner of bitumen-laminated paper reinforced with sisal fiber and completely sealed with a waterproof adhesive. *Nelson*

trough

a. A channel, open or covered, that contains coal or ore being conveyed on a chain or shaker conveyor. The shape of the cross section depends on the type of conveyor involved. See also: [tray](#) b. A hollow or undulation in a mineral field, or in a mineral working. In geology, synonymous with basin; synclinal. See also: [graben](#) c. The lowest point of a given stratum in any profile through a fold. CF: [trough line](#) d. A line occupying the lowest part of a fold; the line connecting the lowest parts on the same bed in an infinite number of cross sections. See also: [trough plane](#)

trough banding

Rhythmic layering or alignment of minerals in an igneous rock, confined to troughlike depressions and considered to have been produced by currents set up in the magma during cooling. *AGI*

trough conveyor

A pan conveyor or gravity conveyor. *Nelson*

troughed belt

A belt conveyor in which the carrying side is made to form a shallow trough by means of troughing idlers. *Nelson*

troughed belt conveyor

A belt conveyor with the belt edges elevated on the carrying run to form a trough by conforming to the shape of the troughed carrying idlers or other supporting surface. See also: [belt conveyor](#)

troughed roller conveyor

A roller conveyor having two rows of rolls set at an angle to form a trough over which objects are conveyed. See also: [el conveyor](#)

trough fault

A fault, generally a normal fault, that bounds a graben or other structural depression. *AGI*

troughing

a. A structural section shaped like a wide U; riveted or welded to form a bridge deck with the U-shaped sections turned alternately upwards and downwards. *Hammond* b. Making repeated dozer pushes in one track, so that ridges of spilled material hold dirt in front of the blade. *Nichols, I* c. Eng. In Derbyshire, toadstones filling fissures.

troughing idler

A belt idler having two or more rolls arranged to turn up the edges of the belt so as to form the belt into a trough. *NEMA, I*

troughing rolls

The rolls of a troughing idler that are so mounted on an incline as to elevate each edge of the belt to form a trough. *NEMA, I*

trough line

a. The line occupying the lowest part of the fold, or, more precisely, the line connecting the lowest parts of the same bed in an infinite number of cross sections. CF: [trough](#) b. The line joining the trough points of a given stratum. *AGI*

trough plane

The plane that joins the troughs of a series of beds in a syncline; generally, but not necessarily, the same as the axial plane. See also: [trough](#)

trough vein

A trough-shaped ore deposit formed between sedimentary beds in the troughs of synclinal structures.

trough washer

a. A washer applying the principle of alluviation in troughs. *BS, 5* b. In its simplest form, a trough washer is a sloping wooden trough, 1-1/2 to 2 ft (0.46 to 0.6 m) wide, 8 to 12 ft (2.4 to 3.7 m) long, and 1 ft (0.9 m) deep, open at the tail end, but closed at the head end. It is used to float adhering clay or fine material from the coarser portions of ore or coal. A log washer.

troutstone

See: [troctolite](#)

trow

A wooden channel for air or water. *Fay*

troy ounce

One-twelfth of a pound of 5,760 grains (troy pound), or 480 grains. A troy ounce equals 20 pennyweights, 1.09714 avoirdupois oz, or 31.1035 g. It is used in all assay returns for gold, silver, and platinum-group metals. *Fay; Zimmerman*

troy pound

A unit of weight that equals 5,760 grains, 12 tr oz, 240 pennyweights, 13.1657 avoirdupois oz, 0.82286 avoirdupois lb, or 373.2509 g. *Fay; Zimmerman*

troy weight

These are the weights used for precious metals. The equivalents are 24 grains = 1 pennyweight; 20 pennyweights = 1 oz; 12 oz = 1 lb. The troy grain is the same as the avoirdupois grain, but the ounce is larger on the troy scale; 1 tr oz = 31.103 g; 1 avoirdupois oz = 28.35 g. *Anderson*

truck

Any wheeled vehicle, usually self-propelled, used to transport heavy articles or materials. In mining, usually applied to dump and/or bottom-dump semitrailers used to transport mined waste and ore materials. The number of types of these haulage units varies widely from the small 2-st (1.8-t) standard dump truck to the unit with capacity 200 st (181 t) or greater. For larger stripping operations, where the haulage conditions are not too rugged, a diesel tractor pulling a bottom-dump semitrailer of capacity 40 to

60 st (36 to 54 t) is most common. The newer trucks are equipped with power steering, power brakes, torque converters, and automatic transmissions.

truck mixer

A concrete mixer, generally mounted on a lorry, or crawler-type tracks, which mixes concrete during the journey from the batching plant to the construction site. *Hammond*

truck roller

See: [track roller](#)

trudellite

A mixture of chloraluminite and natroalunite.

true azimuth

The azimuth measured clockwise from true north through 360 degrees . *AGI*

true bearing

The bearing expressed as a horizontal angle between a geographic meridian and a line on the Earth; esp. a horizontal angle measured clockwise from true north. CF: [magnetic bearing](#)

true depth

The actual depth of a specific point in a borehole measured vertically from the surface in which the borehole was collared. Syn: [true vertical depth](#)

true dip

a. A syn. of dip, used in comparison with apparent dip. Syn: [full dip](#) *AGI* b. The angle at which veins, strata, etc., dip, as measured vertically downward from the horizon along a line at right angles to the strike of the veins, strata, etc.; also, the dip of a vein, strata, etc., as determined on oriented core. See also: [core orientation](#); [oriented core](#); apparent dip. *Long* c. The maximum angle which an inclined bed makes with a horizontal plane. It is the direction in which water would flow if poured on the smooth upper surface of the bed at the outcrop. Also called dip. See also: [level course](#) d. See: [three-dimension dip](#)

true lode

See: [fissure vein](#)

true middlings

a. See: [bone coal](#) b. Comparatively high-ash material so nearly homogeneous that its quality cannot readily be improved by crushing and cleaning. *BS*, 5

true strain

The integral, over the whole of a finite extension, of each infinitesimal elongation divided by the corresponding momentary length. It is equal to $\log_e (1 + \epsilon)$, where ϵ is the strain as ordinarily defined. See also: [strain](#)

true stress

For an axially loaded bar, the load divided by the corresponding actual cross-sectional area. It differs from the stress as ordinarily defined because of the change in area due to loading. See also: [stress](#) *Roark*

true vein

An occurrence of ore, usually disseminated through a gangue of veinstone, and having more or less regular development in length, width, and depth. See also: [vein](#); [fissure vein](#). *Fay*

true vertical depth

See: [true depth](#)

true whiting

A finely divided calcium carbonate prepared by wet grinding and levigating natural chalk; a variety of limestone. *USBM*, 7

true width

a. The width or thickness of a vein, stratum, etc., as measured perpendicular or normal to dip and strike. The true width is always the width of the vein, etc., at its narrowest point. CF: [apparent width](#) *Long* b. The true width of a vein in sampling may be found by $w = h \sin a$, where h = horizontal width, w = true width, and a = angle of dip. In this formula, angle a is known from previous observations, and the horizontal width can be measured with a level. It is important that horizontal width is measured at right angles to strike.

Hoover

truffite

Fibrous nodular lignite which when struck emits an odor like that of truffles. It occurs in large nodular masses inside a normal lignite of Cretaceous age in France. *Tomkeieff*

truing-machine operator

One who grinds the surfaces of refractory blocks to reduce them to standard dimensions, using a truing machine. *DOT*

trumpeting

Eng. A channel or passage partitioned off from a shaft or left behind the lining, usually running along one corner of the latter. Used for ventilation. *Webster 2nd*

trumpet log

See: [microlaterolog](#)

truncated spur

A spur that projected into a preglacial valley and was partially worn away or beveled by a moving glacier as it widened and straightened the valley. See also: [faceted spur](#)

trunk

a. A long, narrow, inclined box in which fine ore is separated from impurities. *Fay* b. A launder for conveying slimes, etc. *Webster 2nd* c. To separate slimes by means of a trunk for further treatment. *Webster 2nd*

trunk conveyor

A high-capacity main road conveyor, usually a belt conveyor. It may extend from the main inby loading point to the shaft bottom or along levels or drifts to the surface. It varies from 42 to 60 in (1.07 to 1.52 m) wide and is powered by a motor of about 200 hp (149 kW). See also: [conveyor](#); gathering conveyor. *Nelson*

trunkline

a. A detonating cord line used to connect the downlines or other detonating cord lines in a blast pattern. Usually runs along each row of blastholes. *Dick, 2* b. The line of detonating cord that is used to connect and initiate other lines of detonating cord, used on the ground surface to initiate downlines.

trunk pumping engine

A pump that commands the drainage of underground waters over a considerable area of mine workings, being a substitute for a number of smaller, independent pumps. *Fay*

trunk roadway

The main development heading from the pit bottom, usually driven along the strike of the coal seam. Because it will carry heavy traffic and large volumes of air, a trunk roadway is at least 14 ft (4.3 m) wide and wide enough for two rail tracks. At intervals, crossheadings are excavated for opening out conveyor panels in the coal seam. Trunk roadways are usually driven in pairs for ventilation, storage space, and access. *Nelson*

trunnion

a. Either of two opposite pivots, journals, or gudgeons, usually cylindrical and horizontal, projecting one from each side of a piece of ordnance, the cylinder of an oscillating engine, a molding flask, a converter, etc., and supported by bearings, to provide a means of swiveling or turning. *Webster 2nd* b. An oscillating bar that allows changes in angle between a unit fastened to its center, and another attached to both ends. *Nichols, 1* c. A heavy horizontal hinge. Also called walking beam; walking bar. *Nichols, 1*

trunnion axis

The horizontal axis about which the telescope of a theodolite can be rotated. *Hammond*

trunnion plate

A metal plate lining the bearings or recesses in which the trunnions rest. *Webster 2nd*

truscottite

A hexagonal mineral, $(\text{Ca},\text{Mn})_{14} \text{Si}_{24} \text{O}_{58} (\text{OH})_8 \cdot 2\text{H}_2\text{O}$; in spherical aggregates of white scales; at Benkulen, Sumatra.

truss

a. An assemblage of members, such as beams, bars, and rods, typically arranged in a triangle or combination of triangles to form a rigid framework, such as for supporting a load over a wide area that cannot be deformed by the application of exterior force without deformation of one or more of its members. *Webster 3rd* b. A framed structure built up entirely from tension and compression members, arranged in panels so as to be stable under load; used for supporting loads over long spans. *CTD*

trussed beam

A beam of timber or other material that is stiffened so as to reduce deflection. *Hammond*

tsavolite

A green gem variety of garnet. Also spelled tsavorite.

tscheremchite

See: [cheremchite](#)

tschermakite

A monoclinic mineral, $\text{Ca}_2(\text{Mg,Fe})_3\text{Al}_2(\text{Si}_6\text{Al}_2)\text{O}_{22}(\text{OH})_2$; amphibole group, having $\text{Mg}/(\text{Mg} + \text{Fe}) = 0.5$ to 1.0 ; forms a series with ferrotschermakite.

tsilaisite

A synthetic manganese tourmaline or manganian elbaite.

tsumebite

A monoclinic mineral, $\text{Pb}_2\text{Cu}(\text{PO}_4)(\text{SO}_4)(\text{OH})$; brackenbuschite group; in small, tabular, emerald-green crystals; at Tsumeb, Namibia.

tub

a. A tram, wagon, corf, or corve. *CTD* b. A small rail-track vehicle for carrying coal or minerals, with a capacity ranging from 10 to 25 hundredweights (453.6 to 1,134 kg). Tub is the term used in most English mines; tram is used in South Wales; and hutch is used in Scotland. *Nelson* c. A box or bucket in which coal or ore is sent up a shaft. A keeve. *Webster 3rd* d. To line, such as in a mine shaft, with tubbing; to keep back water by tubbing. See also: [tubbing](#) e. A large circular base that provides the maximum practical bearing area, and on which is mounted the revolving frame or subbase of a walking dragline. *Austin*

tub-and-stall

See: [bord-and-pillar working](#)

tubber

A double-pointed pickax; a beele. *Standard, 2*

tubber man

A person who uses a tubber. *Standard, 2*

tubbing

a. The watertight cast-iron lining of a circular shaft built up of segments that are fixed together with flanges. The flanges are internal and bolted in German tubbing; they are external in English tubbing, which gives a smooth inner face because the segments are wedged and not bolted. The space outside the tubbing is grouted to add strength and improve watertightness. See also: [tub](#); [suspended tubbing](#). *Nelson* b. Eng. A lining of timber or metal for a shaft, as in a mine, esp. a watertight shaft lining consisting of a series of cast-iron cylinders bolted together and used to sink through water-bearing strata. *Webster 3rd* c. A shaft lining of casks or cylindrical caissons of iron or wood. See also: [plank tubbing](#); [wooden tubbing](#). *Fay*

tubbing wedge

A small wooden wedge hammered between the joints of tubbing plates. *Zern*

tube-axial fan

An airfoil (propeller) or disk fan within a cylinder and including driving-mechanism supports either for belt drive or direct connection. *Strock, 2*

tube blower

A person who cleans boiler tubes. *Fay*

tube clamp

a. A clamp or clip for gripping a tube or pipe; esp., a jawed tool used in hoisting and lowering well tubes in drilling. *Standard, 2* b. A misnomer for casing clamp. *Long*

tube mill

A revolving cylinder, usually lined with silex, nearly half filled with glacial or water-worn flints, used for fine grinding of certain ores, preliminary to further treatment. The material to be ground, mixed with water, is fed through a trunnion at one end and passes out the opposite trunnion as a slime. This is an exceptionally long mill with a relatively small diameter. Syn: [cylindrical mill](#)

tubercle texture

In mineral deposits, a texture in which gangue is replaced by automorphic minerals. CF: [atoll texture](#)

tuberose

A mineral exhibiting very irregular rounded surfaces, often giving rise to gnarled, rootlike shapes. *Nelson*

tub hooker

The person who hooks or unhooks the hoisting rope to or from the buckets. *Hess*

tubing

a. The tube lining of boreholes; casing. *Fay* b. Hollow cast-iron segments placed in a shaft to dam water or sink through quicksand. Also spelled tubbing. *Fay* c. See: [ventilation tubing](#) d. A small-diameter removable pipe, suspended and immobilized in a well inside a large-diameter casing and opening at a producing zone, through which fluids are produced (brought to the surface). *AGI* e. The act or process of placing tubing in a well. *AGI* f. The act of lining a deep borehole by driving down iron tubes. See also: [casing](#) g. A misnomer for casing. *Long* h. Small-diameter removable pipe through which oil and gas are produced from the well. *Wheeler, R.R.*

tubular screw conveyor

See: [screw conveyor](#)

tucanite

See: [scarbroite](#)

tucking frame

A frame in timbering in which the poling boards are supported by walings at their upper and lower ends. *Hammond*

tucking space

The space between the blocks separating the cap in a heading set from the poling driven. This space provides for driving a second set of poling boards. *Stauffer*

tue irons

Blacksmith's tongs. *Standard, 2*

tufa

A chemical sedimentary rock composed of calcium carbonate, formed by evaporation as a surficial, spongy, porous, semifriable incrustation around the mouth of a hot or cold spring or seep, or along a stream carrying calcium carbonate in solution, and exceptionally as a thick, bulbous, concretionary or compact deposit in a lake or along its shore. It may also be precipitated by algae or bacteria. The hard, dense variety is travertine. The term is rarely applied to a similar deposit consisting of silica. It is not to be confused with tuff. Etymol: Italian tufo. CF: [sinter](#) petrified moss. *AGI*

tuffaceous

Pertaining to or like tufa. Not to be confused with tuffaceous. *AGI*

tuff

A general term for all consolidated pyroclastic rocks. Not to be confused with tufa. Adj: tuffaceous. CF: [crystal tuff](#)

tuffaceous

Said of sediments containing up to 50% tuff. CF: [tuffaceous](#)

tuff breccia

A pyroclastic rock consisting of more or less equal amounts of ash, lapilli, and larger fragments. *AGI*

tuffite

A tuff containing both pyroclastic and detrital material, but predominantly pyroclasts. *AGI*

tuff lava

Applied to consolidated, lavalike tuff consisting primarily of lenses of black and gray obsidian lying in a tuffaceous matrix that displays a streaky, varicolored banding or eutaxitic structure. Rocks of this sort are generally considered to be the product of ash flows or nue#1.es ardent. Syn: [welded tuff](#)

tuft

Eng. Any porous or soft stone, such as the sandstone in the Alston district of Cumberland; tufa. *AGI*

tuft stone

a. Eng. Tufa near Newport, Monmouthshire, and Dursley, Gloucestershire. b. Eng. Toadstone, Derbyshire. See also: [toadstone](#)

tugger

See: [air hoist](#)

tugger hoist

An air hoist for mines. *von Bernewitz*

tugger man

See: [tugger operator](#)

tugger operator

In mining, a person who operates a small portable or semiportable hoist (tugger), powered by compressed air or electricity, to raise coal, ore, rock, or supplies in a shaft or stope or along an incline inside a mine. Also called tugger man. *DOT*

tugtupite

A tetragonal mineral, $\text{Na}_4 \text{AlBeSi}_4 \text{O}_{12} \text{Cl}$; in the Ilimaussaq massif, southwest Greenland. Formerly called beryllosodalite.

tuiles

The working openings at the discharging end of a glass furnace. *Mersereau, 2*

Tukon hardness test

A method of determining the hardness of microconstituents by using the Knoop or Vicker's type of diamond indenter. See also: [microhardness](#); Vickers hardness test. *Henderson*

tumble

To smooth, clean, or polish, as castings, by friction with each other or with a polishing material in a rotating box or barrel; to rattle. *Standard, 2*

tumbled

Semiprecious and precious stones, cleaved carbon, or other diamonds, the sharp edges and corners of which have been rounded and blunted by tumbling action in a barrel-shaped vessel. *Long*

tumbler

a. A projecting piece on a revolving shaft or rockshaft for actuating another piece. In dredges, both an upper and a lower tumbler support the bucket line. *Fay* b. Any piece of equipment that polishes gemstones by a tumbling action.

tumbler test

Test for determining relative friability of a particular size of sized coal. *Bennett*

tumbling

An operation in which the work, usually castings or forgings, is rotated in a barrel with metal slugs or abrasives to remove sand, scale, or fins. It may be done dry or with an aqueous solution. Sometimes called rumbling or rattling. *ASM, 1*

tumbling barrel

A revolving barrel, cask, or box in which objects or materials (such as small metal parts, castings, plastics, leather, or clothing) undergo a process (such as finishing, polishing, coating, softening, or drying) by being whirled about and so brought into vigorous frictional contact. Also called rattler; rumble; scouring barrel. *Webster 3rd*

tumbling box

A tumbling barrel for small objects. *Webster 3rd*

tumbling mill

Any horizontally mounted cylindrical mill in which contents are tumbled when rotating. Name often used in connection with cleaning of objects. *Pryor, 3*

tumbling shaft

The camshaft used in stamp mills. *Fay*

tumbling stone

N. of Eng. Boulders or detached masses of rock.

tumescence

The swelling of a volcanic edifice due to accumulation of magma in the reservoir. It may or may not be followed by an eruption. Syn: [inflation](#) *AGI*

tundra

A treeless, level or gently undulating plain characteristic of arctic and subarctic regions. It usually has a marshy surface, which supports a growth of mosses, lichens, and numerous low shrubs and is underlain by a dark, mucky soil and permafrost. *AGI*

tundra placer

See: [gravel plain placer](#)

tunellite

A monoclinic mineral, $\text{SrB}_6\text{O}_9(\text{OH})_2 \cdot 3\text{H}_2\text{O}$; subvitreous to pearly; colorless; forms compact fine-grained secondary nodules; also prismatic and tabular crystals; at Kramer and in the Furnace Creek area of Death Valley, CA.

tune work

Labor paid for by the day or the hour, in contrast to piecework. *Fay*

tungstate

A mineral containing the radical $(\text{WO}_4)^{2-}$, in which the hexavalent tungsten ion and its four oxygens form a flattened square rather than a tetrahedron, e.g., the wolframite series, $(\text{Fe},\text{Mn})\text{WO}_4$. Tungsten and molybdenite may substitute for each other.

tungsten

A hard, brittle, white or gray metallic element. Symbol, W. Also known as wolfram. Found combined in certain minerals such as wolframite, $(\text{Fe},\text{Mn})\text{WO}_4$; scheelite, CaWO_4 ; huebnerite, MnWO_4 ; and ferberite, FeWO_4 . Tungsten and its alloys are used extensively for filaments for electric lamps, electron and television tubes, X-ray targets, and numerous space missile and high-temperature applications. See also: [wolframite](#) *Handbook of Chemistry and Physics, 3*

tungsten alloy

An alloy used in drill-bit-crown matrices and in making bit and reaming-shell inserts by powder methods in which the principal constituent is tungsten, generally in the form of carbide. Tungsten carbide powder usually is mixed with a powdered cobalt or other metal to bind it together in a cohesive mass. *Long*

tungsten carbide

A mixture consisting of 85% to 95% tungsten carbide and 5% to 15% cobalt; sp gr, 12 to 16; Mohs hardness, about 9.0; it is not affected by severe high industrial temperatures. Used for machine tools and for abrasives for machining and grinding metals, rocks, molded products, porcelain, and glass. *CCD, 2*

tungsten carbide bit

A drilling bit tipped with tungsten carbide. A 9% cobalt carbide generally gives the best results, and comparisons are usually referred to bits of this standard. Tests with tungsten carbide bits indicate that efficient drilling is possible only up to a hardness of about 55 Shore; beyond this, wear increases rapidly until, at 62 Shore, the cost becomes prohibitive. Several factors affect the cutting life of the bits, including the grade of carbide used, the rake angle of the cutters, the length of cutting edges, and support of cutters. See also: [steel bit](#); [coal-cutter pick](#); Shore hardness test; sintered carbide-tipped pick. *Nelson*

tungsten carbide insert

a. A small plate or slug of tungsten carbide alloy mounted in the crown or shank of a bit or in grooves on the outside surface of a reaming shell to provide wear-resistant or rock-cutting surfaces or edges. The term is sometimes incorrectly applied to diamond-set plates of tungsten carbide alloy inset as reaming surfaces in reaming shells. *Long* b. In mining, a slug composed of tungsten carbide alloy shaped and mounted in the bit face so that the slug acts as the cutting edge of the bit. *Long* c. Hemispherical-ended cylinders of sintered carbide are inserted in place of the usual teeth to give 10 to 15 times the total footage and 2 to 3 times the cutting rate. However, hard rocks are drilled more economically by diamond boring. *Nelson*

tungsten direct-from-ore process

An electrowinning method developed by the U.S. Bureau of Mines for producing high-quality tungsten powder directly from ore. A strong electric current separates the metal from the ore, which has been placed in solution, and deposits it as a pure powder on an electrode. Electrowon tungsten compares favorably with hydrogen-reduced tungsten.

tungstenite

A trigonal or hexagonal mineral, WS_2 ; forms dark, lead-gray, minute, foliated or earthy scales; at the Emma Mine, Utah.

tungstic ocher

See: [ferritungstite](#); tungstite. Also called wolfram ocher.

tungstite

An orthorhombic mineral, $WO_2(OH)_2$; yellow to green; in oxidized zone of tungsten deposits. Syn: [tungstic ocher](#); [wolframine](#).

tunna

A Welsh term for a hoisting bucket; a bowk; a kibble. *Fay*

tunnel

a. A horizontal or inclined stone drivage for development or to connect mine workings, seams, or shafts. It may be open to the surface at one end and used for drainage, ventilation, or haulage or as a personnel egress (walking or riding) from the mine workings. See also: [tunneling](#) *Nelson* b. See: [crut](#) c. A leaden tube used in making sulfuric acid to connect adjoining chambers in a series. *Standard, 2* d. A long, narrow subterranean passageway. e. A horizontal or nearly horizontal underground passage that is open at both ends. The term is loosely applied in many cases to an adit. An adit, if continued through a hill, would be a tunnel. Any level or drift in a mine open at one end, or which may serve for an adit. Often used as a syn. for adit; drift; gallery. See also: [adit](#) f. To penetrate with or as if with a tunnel; to make a passage through or under; to make or use a tunnel; to undermine. *Webster 3rd*

tunnel blast

a. A blast effected by the detonation of great quantities of explosive, loaded in small tunnels driven into the face at the level of the quarry floor or at the level of the terrain at the foot of the slope of the deposit. This blasting method is called tunneling. *Streefkerk* b. See: [heading blast](#)

tunnel blasting

A method of heavy blasting in which a heading is driven into the rock and afterwards filled with explosives in large quantities. This is similar to a borehole on a large scale, except that the heading is usually divided into two parts on the same level at right angles to the first heading. This forms a T, the ends of which are filled with explosives and the intermediate parts of which are filled with inert material like an ordinary borehole. Similar to gopher hole blasting. See also: [gopher hole blasting](#)

tunnel borer

Any boring machine for making a tunnel; often a ram armed with cutting faces operated by compressed air. *Standard, 2*

tunnel carriage

A rapid tunneling procedure, consisting of a combined drill carriage and manifold for water and air so that immediately when the carriage is at the face, drilling may commence with no lost time for connecting up, waiting for drill steels, etc. The air is supplied at pressures of 95 to 100 psi (655 to 690 kPa). *Nelson*

tunnel claim

When a lode or vein is discovered in a tunnel, the tunnel owner is called upon to locate the area containing the vein or lode on the surface and thus create a mining claim. *Ricketts*

tunnel column

A heavy bar used for mounting machine drills in large drifts or tunnels, and usually holding two machines. *Fay*

tunnel excavation

Excavation carried out completely underground and limited in width and height. *Carson, I*

tunnel face

The working face in an excavation or tunnel or other working place from which driving is carried out. *Fraenkel*

tunneling

The operation of excavating, driving, and lining tunnels. *Nelson*

tunnel kiln

A long tunnel-shaped furnace through which the charge is generally moved on cars, passing progressively through zones in which the temperature is maintained for preheating, firing, and cooling. *ARI*

tunnel-kiln operator

One who controls the operation of a tunnel kiln in which bricks are fired, and a preheating chamber in which bricks are heated prior to firing and after drying. *DOT*

tunnel lining

a. The timber, brick, concrete, or steel supports erected in a tunnel to maintain dimensions and safe working conditions. See also: [steel tunnel support](#); [lining](#). *Nelson* b. See: [ring](#); tunnel support.

tunnelman

In anthracite coal mining, one who drives a tunnel in rock from one coal seam to another or through a fault (the movement of the earth having separated a once continuous seam into two sections). *DOT*

tunnel miner

A miner experienced in the use and handling of rock drills and shovel loaders, and in tunnel-blasting methods. Such a miner is wholly employed on tunneling and is usually paid a fixed rate per shift with perhaps a bonus payment for high rates of tunnel advance. *Nelson*

tunnel right

A right to enter upon and occupy a specific piece of ground for the purpose of carrying out work in a tunnel and extracting waste rock or earth necessary to complete the tunnel, and making such use after completion as may be necessary to work the mining ground or lode owned by the party running the tunnel. By implication, the grant of such a right carries with it every incident and appurtenant thereto, including the right to dump the waste rock at the mouth of the tunnel on the land owned by the grantor at the time of the conveyance of the tunnel right, such right or easement being necessary for the full and free enjoyment of the tunnel right. *Ricketts*

tunnel set

Timbers of sufficient strength to support the roof of the tunnel. They are sometimes set upon sills and usually capped with short crosspieces. *Fay*

tunnel shaft

A shaft sunk, such as in a hill, to meet a horizontal tunnel. Also called tunnel pit. *Standard, 2*

tunnel site

a. An area for a tunnel. The locator of a tunnel site is given the right to all veins cut by the tunnel within 3,000 ft (915 m) of its portal, and 1,500 ft (457 m) on the strike of each blind vein cut; this length may be all on one side of the tunnel or divided as desired. The veins must be blind lodes not previously known to exist. *Lewis* b. There is no distinction

between a tunnel claim under which a tunnel is run for the development of veins or lodes already located, and one where a tunnel is projected for blind veins or lodes. *Ricketts*

tunnel support

See: [steel tunnel support](#); tunnel lining.

tunnel system

A method of mining in which tunnels or drifts are extended at regular intervals from the floor of the pit into the orebody. The extension of the drift beyond the working face is made great enough to facilitate the handling of several cars at a time. The ore is mined above the drift level, and the cars are loaded by lifting short boards that span an opening, through the lagging on and above the centerline of the drift. The method avoids the construction of raises and chutes and facilitates the filling of the cars. *Fay*

tup

The ram or monkey, or falling weight, of a piledriver, drophammer, etc.; specif., the heavy head of a steam hammer in which the upper pallet is secured. *Webster 2nd*

turanite

An orthorhombic(?) mineral, $\text{Cu}_5(\text{VO}_4)_2(\text{OH})_4(?)$; weakly radioactive; green; forms reniform crusts and spherical concretions having a radial fibrous structure with other vanadium and uranium minerals; in cavities in limestone; at Tyuya Muyun, Fergana, Turkistan.

turbid

Stirred up or disturbed, such as by sediment; not clear or translucent, being opaque with suspended matter, such as of a sediment-laden stream flowing into a lake; cloudy or muddy in physical appearance, such as of a feldspar containing minute inclusions. *AGI*

turbidimeter

An instrument for measuring or comparing the turbidity of liquids in terms of the reduction in intensity of a light beam passing through the medium. See also:

[transmissometer](#)

turbidimetry

Measurement of the amount of suspended or slow-settling matter in a liquid; the measurement of the decrease in intensity of a light beam passed through a medium. CF: [nephelometry](#)

turbidite

A sediment or rock deposited from, or inferred to have been deposited from, a turbidity current. It is characterized by graded bedding, moderate sorting, and well-developed primary structures. *AGI*

turbidity

a. The state, condition, or quality of opaqueness or reduced clarity of a fluid, due to the presence of suspended matter. *AGI* b. A measure of the ability of suspended material to disturb or diminish the penetration of light through a fluid. *AGI*

turbidity current

A density current in water, air, or other fluid, caused by different amounts of matter in suspension, such as a dry-snow avalanche or a descending cloud of volcanic dust; specif. a bottom-flowing current laden with suspended sediment, moving swiftly (under the influence of gravity) down a subaqueous slope and spreading horizontally on the floor of the body of water, having been set and/or maintained in motion by locally churned- or stirred-up sediment that gives the water a density greater than that of the surrounding or overlying clear water. Such currents are known to occur in lakes, and are believed to have produced the submarine canyons notching the continental slope. They appear to originate in various ways, such as by storm waves, tsunamis, earthquake-induced sliding, tectonic movement, oversupply of sediment, and heavily charged rivers in spate with densities exceeding that of sea-water. The term is applied to a current due to turbidity, not to one showing that property. Syn: [suspension current](#)

turbidity size analysis

A kind of particle-size analysis based upon the amount of material in turbid suspension, the turbidity decreasing as the particles settle. *AGI*

turbine pump

A pump with a shrouded impeller and receiving the water at its center. A diffusion ring containing vanes surrounds the impeller and directs the impeller discharge into a circular casing, which delivers into the eye of the next impeller in series. The diffusion ring converts the high-velocity discharge of the impeller into pressure head. The turbine pump is widely used in mines. See also: [diffuser chamber](#)

turboaxial fan

An axial flow fan with a turbine rotor-type impeller. *BS, 8*

turbocompressor

The type of machine commonly installed at a colliery today where a large volume of compressed air is required. A single unit can deliver 10,000 ft³/min (283 m³/min) or more of free air, and the floor space occupied is a minimum for these capacities. It is also ideally suited for direct drive by a steam turbine, and this combination is commonly found at collieries. The compressor consists essentially of a number of impellers keyed to a shaft and running in a fixed casing with specially shaped passages. Each impeller is in the form of a hollow wheel, the two sides being united by curved vanes. See also: [air-conditioning process](#)

turbodrill

In rotary drilling, a drill bit that is directly rotated by a turbine attached to the drill pipe at the bottom of the hole and driven by drilling mud pumped under high pressure. It was developed in the former U.S.S.R. for drilling deep oil wells. *AGI*

turbodrilling

A system of drilling in which the bit is directly driven by a turbine at the bottom of the hole. *BS, 9*

turbulence

See: [turbulent flow](#)

turbulent flow

a. Water flow in which the flow lines are confused and heterogeneously mixed. It is typical of flow in surface-water bodies. CF: [laminar flow](#) Syn: [tortuous flow](#); [turbulence](#). *AGI* b. Fluid motion in which random motions of parts of the fluid are superimposed upon a simple pattern of flow. All or nearly all fluid flow displays some degree of turbulence. Opposite of streamline flow. *Hunt* c. A fluid flow in which there is an unsteady motion of the particles, the motion at a fixed point being inconstant. Turbulent flow occurs at a speed above the critical velocity of Reynolds. Also called tortuous flow; sinuous flow; eddy flow. *Nelson* d. When air flows over roughnesses on the sides of the airway or passes obstructions at over a certain velocity, eddies are set up in the air and its flow becomes turbulent. Opposite of laminar flow. *Spalding* e. When the fluid particles are moving in directions other than in a straight line parallel to the axis of the pipe or duct. *Strock, 2*

turbulent resistance

Resistance that causes vortices and eddies to form behind a moving particle because of the rapid displacement of the liquid when the body moves through it. CF: [viscous resistance](#)

turf

a. Same as peat. There are several varieties, as white, brown, black, stone, gas, or candle turf. *Fay* b. Sod, the upper strata of topsoil filled with the roots of grass and other small plants.

turgite

An iron ore and sandstone cement consisting of hematite with adsorbed water. It is fibrous and red in mass with an orange tint when powdered. Also spelled turjite. Syn: [hydrohematite](#)

Turkey slate

A whetstone or honestone. See also: [Turkey stone](#)

Turkey stone

A very fine-grained siliceous rock, containing up to 25% calcite, quarried in central Turkey and used as a whetstone; novaculite. Syn: [Turkey slate](#)

turkis

A turquoise. *Standard, 2*

turmeric paper

Paper impregnated with an extract of turmeric. Used as a test for alkaline substances, which turn it from yellow to reddish-brown, and for boric acid, which turns it red-brown. *Webster 3rd*

turn

a. A curve into a pillar. *BCI* b. The time or period during which coal, etc., is raised from a mine. Also called run; shift. c. To open rooms, headings, or chutes off from an entry or gangway. d. The number of cars allowed each miner. Good turn means many cars for each miner. *Fay* e. To draw or wind coal up a shaft or up an inclined plane to the surface. *Fay* f. Curved tramrails, often made of cast iron, laid round a corner or turn. *Fay* g. To set undried bricks on edge to facilitate drying. *Standard, 2*

turn angles

To measure the angle between directions with a surveying instrument. *Nichols, 1*

turn bat

A wooden stick used in turning the tongs that hold a bloom under the hammer. *Fay*

turn bolt

A bolt turned in a lathe to a close tolerance and used in steel-to-steel connections. *Hammond*

turned vertical shaft

A shaft sunk vertically in the hanging wall block until it intersects a reef, after which it is sunk down at an angle in the footwall parallel to the reef. This unusual practice is sometimes adopted on the Rand because it enables the mine to become productive at an earlier stage. See also: [incline shaft](#)

turnerite

A yellowish-brown variety of monazite. *Standard, 2*

turnhouse

a. A point where workings turn from a crosscut to a level along the lode. *Gordon* b. The first cutting on a lode after it is cut in a crosscut. Syn: [house](#)

turning effect

See: [moment of force](#)

turning over and packing shift

On mechanized longwall faces, the shift during which face conveyors are moved over, and the operations of ripping, packing, and drawing supports from the wastes are performed. *Mason*

turning point

a. A surveying point on which a level rod is held, after a foresight has been made on it, and before the differential-leveling instrument is moved to another station so that a backsight may be made on it to determine the height of instrument after the resetting; a point of intersection between survey lines, such as the intervening point between two bench marks upon which rod readings are taken. It is established for the purpose of allowing the leveling instrument to be moved forward (alternately leapfrogging with the rod) along the line of survey without a break in the series of measured differences of elevation. Abbrev: TP. *AGI* b. A physical object representing a turning point, such as a steel pin or stake driven into the ground. *AGI*

turning vane

Curved strips placed in a sharp bend or elbow in rectangular duct to direct the air around the bend in a streamlined flow. *Strock, 2*

turn keeper

See: [motor boss](#)

turnout

a. The branching off of one rail track from another. *Nelson* b. A contrivance for passing from one track to another. *Zern* c. A siding or bypass in an underground haulageway. d. A switch on a mine railroad. *Korson*

turnover

a. The distance the conveyor is advanced during each cycle of operations; i.e., approx. the depth of machine cut. See also: [conventional machine mining](#) b. A device used to rotate an object through approx. 180 degrees so that its carrying surface is changed to the opposite side. c. See: [move-up](#)

turn pulley

A sheave fixed at the inside end of an endless or tail-rope hauling plane, around which the rope returns. See also: [tail sheave](#)

turns

A term used with any device used to change the direction of a shaker conveyor trough line; e.g., curved trough turn, adjustable angle turn, right angle turn, etc. The angle turn corresponds to the bell crank drive in principle of operation. *Jones, 1*

turnsheet

See: [flat sheet](#)

turquoise

a. A triclinic mineral, $1[\text{CuAl}_6(\text{OH})_8(\text{PO}_4)_4 \cdot 4\text{H}_2\text{O}]$ with Fe replacing Al toward chalcociderite; forms waxy blue-green reniform masses having a botryoidal surface, rarely with minute crystals; occurs in arid regions where surface water acted on aluminous rock; may be a gemstone. Also spelled turquois. Syn: [Turkey stone](#); calaite. b. The mineral group aheylite, chalcociderite, coeruleolactite, faustite, planerite, and turquoise.

turret coal cutter

A coal cutter in which the horizontal jib can be adjusted vertically to cut at different levels in the seam, for example, an overcut. The center of gravity of such a machine makes it top heavy and less stable than the ordinary undercutter. See also: [overcutting machine](#); universal coal cutter. *Nelson*

turret jib

A vertical rotating jib fitted with cutter picks and driven from the end sprocket of the bottom jib of a coal cutter. The turret jib is satisfactory in seams where the coal parts readily from the roof and is not too hard. See also: [mushroom jib](#); [curved jib](#). *Nelson*

turtle back

A name for chlorastrolite (pumpellyite), esp. the green variety with patches of color; also, turquoise matrix or variscite matrix.

turtle stone

See: [septarium](#)

turtlestones

Large, nodular concretions found in certain clays and marls. In form, they have a rough resemblance to turtles, and this appearance is increased by their being divided into angular compartments by cracks filled with spar, reminding one of the plates on the shell of a turtle. *Fay*

Tuscarora quartzite

An important source of raw material for silica refractories. A typical analysis is 97.8% SiO₂, 0.9% Al₂O₃, 0.7% Fe₂O₃, and 0.4% alkalis. *Dodd*

tusiite

A former name for calciocopiapite.

tutenag

a. A white alloy, resembling German silver, used in making tableware, etc., with varying proportions of copper, zinc, nickel, and sometimes a little lead or iron. *Standard, 2* b. Zinc or spelter, esp. that from China and the East Indies. *Standard, 2*

Tutogen

A foam-producing agent used in fire extinguishers. *Sinclair, 1*

tutwork

Sometimes used for piecework or contract work. *Nelson*

tuxtlite

A pyroxene mineral, $(\text{Na,Al,Ca,Mg})\text{Si}_2\text{O}_6$; midway in composition between diopside and jadeite; pea-green; massive; at Tuxtla, Mexico. Formerly called diopside-jadeite. Also spelled tuxlite.

tuyere

A tube or opening in a metallurgical furnace through which air is blown as part of the extraction or refining process. In a blast furnace, the tuyeres are water-cooled metal tubes which pass through the refractory lining of the bosh (tube). *Dodd*

tuyere arch

An arch in a blast furnace to admit a tuyere. See also: [tuyere](#) *Standard, 2; Fay*

tuyere brick

A refractory shape containing one or more holes through which air and other gases are introduced into a furnace. *ARI*

tweel

A counterweighted furnace door, opening vertically. Also spelled tuille. *ASTM*

twig

a. See: [divining rod](#) b. Thin strip of plastic fire clay used in ceramic modeling, esp. in imitation basketwork. *Standard, 2*

twill cloth

Weave used in screens and filters, in which two or more warp threads interweave one wood thread. *Pryor, 3*

twin axis

The crystal axis about which one individual of a twin crystal may be rotated (usually 180 degrees) to bring it into coincidence with the other individual. It cannot be coincident with the axes of twofold, fourfold, or sixfold symmetry. Syn: [twinning axis](#)

twin colors

See: [dichroic colors](#)

twin-core shot-firing cable

See: [shot-firing cable](#)

twin crystal

A composite of two or more crystal individuals having a definite crystallographic relationship to each other. The orientation of one individual may be the mirror image of the other across a twin plane, or an orientation that can be derived by rotating the twin portions about a twin axis, or some other rational twin law. Twinned individuals in a twin crystal commonly show reentrant angles between crystal faces or on cleavage planes. A twin crystal may exhibit symmetry higher than that of its crystal individuals.

twin crystals

Crystals in which one or more parts, regularly arranged, are in reverse position with reference to the other part or parts. They often appear externally to consist of two or more crystals symmetrically united, and sometimes have the form of a cross or star. They also exhibit the composition in the reversed arrangement of part of the faces, in the striae of the surface, and in re-entering angles; in certain cases, the compound structure can only be surely detected by an examination in polarized light. *Fay*

twin entry

A pair of parallel entries, one of which is an intake air course and the other a return air course. Rooms can be worked from both entries. Often called double entry. *Fay*

twin laminae

The laminae or thin plates in repeated or polysynthetic twins. CF: [polysynthetic twinning](#); [repeated twinning](#).

twin law

A statement or statements of the symmetrical relationships between the members of a twin crystal, e.g., the twin plane or the twin axis that resolves one crystal individual into congruity with another in a twin crystal. The twin law cannot be an element of symmetry

of the point group of the twin parts, although it may be an element in a point group with higher symmetry in the same crystal system.

twinning axis

See: [twin axis](#)

twinning law

The special and characteristic method according to which twin crystals of any mineral are formed. *Fay*

twinning plane

In a twin crystal, a plane normal to the twinning axis. *Fay*

twinoriascope

A type of instrument used to detect and mark twinning and determine the sense of orientation in etched sections. *Am. Mineral.*, 2

twinoscope

An instrument employing a directed beam of light used to examine etched wafers for twinning. *Am. Mineral.*, 2

twin packer

A packer designed so that a borehole can be sealed simultaneously at two separated points. *Long*

twin plane

In a twin crystal, a plane through which one twin individual forms a mirror image of the other, or the plane at right angles to the axis about which one individual is rotated with respect to the other. The twin plane is commonly the composition plane across which the individuals are joined. With rare exceptions, a twin plane is a possible crystal face for the crystal individuals.

twist conveyor

An L-shaped conveyor in which the carrying surface and guard gradually exchange their functional duties.

twist drill

A drill made by twisting a length of steel of rectangular or oval section into a spiral form, hence the term twist drill. Many hand-operated coal drills are of this type, and the rotation of the drill spiral removes the cuttings from the hole. See also: [auger](#); [coal auger](#).
Nelson

twisted-loop splice

Splice made by holding the bared wires side by side. Half of their length is bent back to form a loop at the end. The loop is then twisted around the main shank of wire. *Carson, I*

twister operator

In the asbestos products industry, one who twists together two or more strands of wire and asbestos yarn for use in weaving asbestos products, such as brake linings. *DOT*

twisting force

A force, such as the force on the shaft of a rotating motor. *Morris*

twistoff

The breaking off of a member of the drill string, caused by excessive torsional stress.
Long

two-circle goniometer

A device permitting rotation of a small crystal about two orthogonal axes for optical observation. CF: [goniometer](#)

two-component explosives

Consist of two or more unmixed, commercially manufactured, prepackaged chemicals, including oxidizing chemicals, flammable liquids, or solids that are not independently classified as explosives. When combined, however, the mixture is classified as an explosive and is stored, transported, and handled as an explosive. *Cote*

two-cone bit

See: [roller rock bit](#)

two-fan auxiliary ventilation

An arrangement, using two auxiliary fans, for ventilating a mine tunnel or hard heading. It consists of an exhausting fan with rigid ducting to within about 100 ft (30 m) of the

face, and a forcing fan using a flexible duct discharging air about 20 ft (6 m) from the face. The ducts of the two units overlap by at least 30 ft (9 m) to minimize the recirculation of air. The air delivered by the forcing fan does not exceed about one-third of that removed by the exhaust fan. See also: [overlap auxiliary ventilation](#); auxiliary ventilation; recirculation of air; reversible auxiliary ventilation. *Nelson*

twofold

A symmetry axis requiring two repetitions to complete 360 degrees and return to identity. Syn: [diad](#)

two-high mill

Contains two horizontal rolls, one above the other. In some two-high mills the direction of rolling can be reversed, and these are known as reversing mills; i.e., when a piece has passed through the rolls, the rolls are stopped and then rotated in the opposite direction, thus imposing another pass on the steel, the operation being repeated until the desired reduction is attained. Between passes, adjustment is made to the height of the top roll, and/or the piece is moved sideways by means of manipulators, to be in line with other grooves in the rolls. *Osborne*

two-hinged arch

A rigid frame hinged at both supports. It may have an arched or rectangular form. *Hammond*

two intakes

The provision of two intake airways, generally side by side, to a ventilating area of a mine. *Nelson*

two-jaw chuck

A chuck equipped with two movable clamping or holding devices by means of which the motion of the chuck is imparted to the drill rods. *Long*

two-leg sling

A sling having two chains or ropes which hang from a thimble. See also: [single sling](#)

two-liquid differential manometer

Consists of two concentric glass tubes, each expanded into a large bulb at the upper end. The lower end of the outer tube is sealed, and the inner tube reaches nearly to the bottom of the outer tube. Two liquids are used, and the movement of the interface between the

two liquids down the central tube is used as an index against which the change in pressure is measured. See also: [manometer](#)

two-mica granite

A granite containing both dark mica (biotite) and light mica (muscovite). This rock was called true granite by Rosenbusch and binary granite by Keyes. CF: [aplogranite](#)

two-part line

A single strand of rope or cable doubled back around a sheave so that two parts of it pull a load together. *Nichols, 2*

two-piece set

A set of timbers consisting of a cap and a single post. If the ground is loose and must be supported over the side or back, lagging, commonly of 2-in (5.1-cm) boards, is used. These boards extend from the center line of the post or cap to the middle of the next post or cap. If they are placed touching each other, such an arrangement is called tight lagging; if a few inches apart (which depends on the nature of the ground to be held back), it is called open lagging. See also: [timber set](#)

two-plane idler

A troughing idler in which the troughing roll shafts are in a vertical plane separate from but parallel to a vertical plane through the shaft of the center roll or rolls. *NEMA, 1*

two-process washer

A method of cleaning raw coal in which the material from 8 to 1/16 in (203 to 1.6 mm) in size is treated in heavy-medium washers, and the fines below 1/16 in are treated by froth flotation. *Nelson*

two-speed differential

A differential having a high-flow gearshift between the drive shaft and the ring gear. *Nichols, 1*

two-stage compression

Air compression carried out in two stages as is usual for pressures exceeding 60 psi (414 kPa) or for outputs greater than 100 hp (74.6 kW). See also: [intercooler](#)

two-stage hoisting

Deep-shaft hoisting with two winders, one at the surface and the other at middepth in the shaft. The surface engine winds minerals from the middepth pocket, and the other winds from the pit bottom to the middepth point. The arrangement is often adopted in turned vertical shafts. See also: [tandem hoisting](#)

two-step control system

In flotation, a system in which the manipulated variable alternates between two predetermined values. *Fuerstenau*

two-stroke cycle

A working cycle of a piston in an internal combustion engine consisting of two strokes, in which the piston during the first stroke compresses the fuel mixture on one side while receiving the expansive thrust of previously compressed gases on the other side, and during the second draws in a fresh charge on one side while expelling burnt gases on the other. *Webster 3rd*

two-way ram

A hydraulic cylinder in which fluid can be supplied to either end, so the piston can be moved by power in two directions. Syn: [double-acting ram](#) *Nichols, 2*

tychite

An isometric mineral, $\text{Na}_6 \text{Mg}_2 (\text{CO}_3)_4 (\text{SO}_4)$, having iron replacing magnesium toward ferrotychite; isomorphous with northupite, $\text{Na}_6 \text{Mg}_2 (\text{CO}_3)_4 \text{Cl}_2$, with which it occurs; forms small white octahedra; at Borax Lake, San Bernadino County, CA.

tying across and behind

Systematic exploration by a mine rescue team of all intersecting and adjacent passageways so that the team is never forward (toward the working face) of an accessible, unexplored area. *MSHA, 4*

Tyler sieve

See: [sieve](#)

Tyler Standard series

The series of carefully woven, square-mesh wire screens most commonly used in the United States in screening ores. *Newton, 1*

tymp

Eng. A horizontal roof timber in a coal mine; a cap or lid. *Standard, 2*

tymp stone

A large clay plug filling an open space in the front jackets of a smelting furnace, through which the taphole passes. *Standard, 2*

tyndallascope

See: [tyndallometer](#)

Tyndall effect

The scattering or reflection of a strong beam of light by suspended colloids; no such scattering or reflection comes from true solutions.

tyndallometer

An instrument that measures the intensity of the light scattered at an angle from the incident beam by a dust cloud. It correlates well with the concentration determined by a thermal precipitator and surface area calculated from such a count. It needs to be calibrated for each type of dust against the thermal precipitator. Syn: [tyndalloscope](#) See also: [dust sampling](#)

tyndalloscope

See: [tyndallometer](#)

type

a. See: [rock type](#) b. A coal classification based on the constituent plant materials. CF: [rank](#); [grade](#). *AGI* c. Those differences in coals that are due to variations in the kind of plant material of which the coal is composed, whereby such varieties as common banded coal, cannel coal, algal coal, and splint coal are produced. *AGI* d. A kind, particularly in petrology (rock type); either general (for example, basalt is a rock type) or particular (for example, a particular basalt from a particular locality is a unique type specified by a description). *Challinor*

type-D drift indicator

A single-shot borehole-surveying instrument utilizing photographic paper on which is recorded the compass bearing and inclination of the course of a borehole. The type-D instrument, when mounted in a special thin-walled protective container, is small enough to be used in an AX-size hole. *Long*

type-M drift indicator

A single-shot borehole-surveying instrument that records the compass bearing and inclination of the course of a borehole through the action of a strong beam of light directed through the plumb bob onto a light-sensitive paper disk. It is similar to, but larger than, a type-D drift indicator. *Long*

type of coal

a. The concept type provides a means for classifying standard varieties of coal microscopically on the basis of simple proportions of anthraxylon or anthraxylon and opaque attritus, including their subdivision into banded and non-banded coals. *IHCP* b. A type of coal is a variety initially determined by the nature of the ingredient matter, the conditions of deposition, and the extent of operation of the first or biochemical process of coal making. *IHCP*

type section

The originally described sequence of strata that constitute a stratigraphic unit. It serves as an objective standard with which spatially separated parts of the unit may be compared, and it is preferably in an area where the unit shows maximum thickness and is completely exposed (or at least shows top and bottom). *AGI*

type specimen

A specimen or individual designated as type of a species or lesser group and serving as the final criterion of the characteristics of that group. *Webster 3rd*

type-W drift indicator

A mechanical single-shot borehole-surveying instrument for use where exceptionally high temperatures are encountered in a hole. It records the compass bearing and inclination of a borehole by making a dot on a special paper by means of a plumb bob, incorporating a depressible stylus. *Long*

typhonic rocks

Rocks that have come from the depths of the Earth; i.e., plutonic and eruptive rocks. *Fay*

typomorphic mineral

A mineral that is typically developed in only a narrow range of temperature and pressure. CF: [index mineral](#)

typrite

a. A variety of fergusonite found near Arendal, Norway. *Fay* b. See: [sipylite](#)

tyre valve

Adjustable annular ring, made of plastic, used to control the aperture area at the apex of a hydrocyclone. *Pryor, 3*

tyrolite

An orthorhombic mineral, $\text{Ca}_2 \text{Cu}_9 (\text{AsO}_4)_4 (\text{OH})_{10} \cdot 10\text{H}_2 \text{O}$; forms green crystal aggregates having foliated micaceous structure. Formerly called trichalcite.

tyuyamunite

An orthorhombic mineral, $\text{Ca}(\text{UO}_2)_2 (\text{VO}_4)_2 \cdot 8\text{H}_2 \text{O}$; soft; waxy; yellow; fluoresces yellow-green; in secondary encrustations in limestones, sandstones, or concentrated by organic matter; associated with malachite, ferghanite, turanite, barite, calcite, carnotite, and vanadium minerals; widely distributed in the Colorado Plateau area; source of uranium and vanadium. Formerly called calciocarnotite.

U

U-bit

A popular type of rotary bit used in British mining practice. It has two cutting legs, although some American and German bits employ three legs. A core is formed between the legs, which is broken off as cutting proceeds; some bits have a core-cutting device consisting of a tungsten carbide tip in the center. *Fraenkel*

Udden grade scale

A logarithmic grade scale devised by Johan A. Udden (1859-1932), U.S. geologist; it uses 1 mm as the reference point and progresses by the fixed ratio of 1:2 in the direction of decreasing size and of 2:1 in the direction of increasing size, such as 0.25, 0.5, 1, 2, 4. See also: [Wentworth grade scale](#)

ugrandite

The group of calcium garnets uvarovite, grossular, andradite, goldmanite, hibschite, kimzeyite, and schorlomite

uhligite

An isometric mineral, $(\text{Ca,Ti,Al,Zr})_2 \text{O}_3$; forms black octahedra in a nepheline syenite near Lake Magad, Tanzania.

uigite

A discredited term equal to thomsonite. *Am. Mineral.*, 1

uintaite

A variety of natural asphalt occurring in the Uinta Valley, Utah, as rounded masses of brilliant black solid hydrocarbon. Syn: [gilsonite](#); mineral rubber. *CMD*

ulexite

A triclinic mineral, $\text{NaCaB}_5 \text{O}_6 (\text{OH})_6 \cdot 5\text{H}_2 \text{O}$; soft; forms silky white, saline crusts and masses of extremely fine acicular crystals; in saline lake deposits as in Nevada and Chile. Also called cotton ball; boronatrocalcite; natronborocalcite; natroborocalcite.

ullmannite

A triclinic mineral, NiSbS ; cobaltite group; pseudocubic; metallic; steel-gray to silver-white; in veins; a source of nickel. Also called nickel-antimony glance.

Ullrich magnetic separators

These machines have powerful electromagnets in a wedge section. The material is treated on rolls on which magnetism is induced; they consist of alternate disks of soft iron and some nonmagnetic material. The ore is fed over the first roll, which removes the most magnetic material, and the tailings go on to the second, which is weaker, where a second separation is made. *Liddell*

ulmain

A kind of euveitrite that consists completely of ulmin but that is not precipitated from solution. CF: [collain](#)

ulmification

The process of peat formation. *Tomkeieff*

ulmin brown

See: [Vandyke brown](#)

ulminite

a. A maceral of brown coal within the huminite group, consisting of gelified plant-cell walls (ICCP, 1971). *AGI* b. A variety of euvitrinite characteristic of ulmain and consisting of gelified but not precipitated plant material. CF: [collinite](#)

ulrichite

A hypabyssal rock composed essentially of large phenocrysts of alkalic feldspar, sodic pyroxene, amphibole, and nepheline with smaller phenocrysts of accessory olivine. Feldspar, pyroxene, and amphibole recur in the groundmass. A porphyritic variety of olivine-bearing phonolite. Syn: [uraninite](#)

ultimate analysis

a. The determination of the elements contained in a compound, as distinguished from proximate analysis, which is the determination of the compounds contained in a mixture. *Standard, 2* b. In the case of coal and coke, the determination of carbon and hydrogen in the material, as found in the gaseous products of its complete combustion, the determinations of sulfur, nitrogen, and ash in the material as a whole, and the calculation of oxygen by difference. *ASTM* c. The principal reason for the ultimate analysis of coal is for the classification of coals according to rank, although it is often used for commercial and industrial purposes when it is most desirable to know the sulfur content of coal. Also known as total analysis of coal. *Cooper*

ultimate bearing capacity

The average load per unit of area required to produce failure by rupture of a supporting soil mass. See also: [bearing capacity](#)

ultimate bearing pressure

The pressure under which a foundation will settle with no increase of load. See also: [plate bearing test](#)

ultimate CO₂

The percent of carbon dioxide that would appear in the flue gases if combustion were perfect. Varies with the fuel. *Strock, 2*

ultimate compressive strength

That point at which failure by crushing occurs. *Pryor, 3*

ultimate elongation

The percentage of permanent deformation remaining after tensile rupture, measured over an arbitrary length including the section of rupture. *Roark*

ultimately controlled variable

In mineral processing, the variable whose control is the end purpose of the automatic control system. *Fuerstenau*

ultimate strength

The ultimate strength of a material in tension, compression, or shear, respectively, is the maximum tensile, compressive, or shear stress that the material can sustain, calculated on the basis of the ultimate load and the original or unstrained dimensions. It is implied that the condition of stress represents uniaxial tension, uniaxial compression, or pure shear, as the case may be. *Roark*

ultimate tensile stress

The load at which a test piece breaks, divided by its original area. See also: [tensile strength](#)

ultrabasic

Said of an igneous rock having a silica content lower than that of a basic rock. Percentage limitations are arbitrary; the upper limit was originally set at 44%. The term is frequently used interchangeably with ultramafic. Although most ultrabasic rocks are also ultramafic, there are some exceptions; e.g., monomineralic rocks composed of pyroxenes are ultramafic but are not ultrabasic because of their high silica content. A monomineralic rock composed of anorthite would be considered ultrabasic ($\text{SiO}_2 = 43.2\%$) but not ultramafic. Ultrabasic is one subdivision of a widely used system for classifying igneous rocks on the basis of silica content; the other subdivisions are acidic, basic, and intermediate. CF: [ultramafic](#); [silicic](#). *AGI*

ultrabasite

A germanium-bearing variety of diaphorite from Freiberg, Saxony, Germany.

ultraflotation

A recently developed process for use in fine-particle flotation. The underlying principle is the use of a finely ground (minus 325-mesh) auxiliary mineral as a carrier for the fine particles to be floated. The fine particles form a slime coating on the carrier mineral; the carrier mineral is then floated, and the fines are piggybacked into the froth. *Fuerstenau*

ultramafic

Said of an igneous rock composed chiefly of mafic minerals, e.g., monomineralic rocks composed of hypersthene, augite, or olivine. CF: [hypermelanic](#); [ultrabasic](#). *AGI*

ultramafites

Collective name for igneous rocks containing 90% or more mafic minerals; includes picrites, peridotites, and pyroxenites.

ultramarine

A name for synthetic lazurite; extended to related compounds. Also applied to the durable brilliant blue pigment made from its powder. Syn: [lapis lazuli](#)

ultramarine yellow

A lemon-yellow pigment consisting of barium chromate. *Fay*

ultrametamorphism

Metamorphic processes at the extreme upper range of temperatures and pressures, at which partial to complete fusion of the affected rocks takes place and magma is produced. The term was originated by Holmquist in 1909. *AGI*

ultramicroscope

A microscope in which a strong beam of light (Tyndall beam) is viewed at right angles. Individual soluble particles too small to be seen under a normal microscope then appear as bright spots against a dark background. Ultramicroscopy operates below 0.25 μ m. *Pryor, 3*

ultramylonite

An ultracrushed variety of mylonite, in which primary structures and porphyroclasts have been obliterated so that the rock becomes homogeneous and dense, with little if any parallel structure. CF: [protomylonite](#); pseudotachylyte. Syn: [flinty crush rock](#)

ultrasima

The supposedly ultrabasic layer of the Earth below the sima, immediately below the Mohorovicic discontinuity. *AGI*

ultrasonic drilling

A vibration drilling technique that can be used in drilling, cutting, and shaping of hard materials. In this method, ultrasonic vibrations are generated by the compression and

extension of a core of electrostrictive or magnetostrictive material in a rapidly alternating electric or magnetic field. The most easily assembled is a magnetostrictive transducer, and the most common magnetostrictive materials, which change in dimension when magnetized, are nickel and vanadium permanganate. *Min. Miner. Eng., 1*

ultrasonic inspection

A nondestructive method of testing, based upon the fact that ultrasonic waves are reflected and refracted at the boundaries of a solid medium, from which it is possible to obtain the echoes of a wave transmitted from the surface of a test piece. In addition to being reflected from the boundary of the specimen at which they are directed, the waves are also reflected back by any flaws that lie in the path of the wave. Syn: [ultrasonic testing](#)

ultrasonic testing

See: [ultrasonic inspection](#)

ultrasonic tests

Tests in which high-frequency vibrations (inaudible to a human ear) are used to assist in determining wall thicknesses, pulp densities, etc. *Pryor, 3*

ultrasonography

A modification of the use of ultrasonic waves for the detection of internal flaws in metals. By using a persistent screen cathode ray tube and causing the echoes to brighten the trace instead of deflecting it, an ultrasonic image is produced that can be examined and interpreted like a radiograph. *Osborne*

ultraviolet

a. Of radiation, beyond the visible spectrum at its violet end; having a wavelength shorter than those of visible light and longer than those of X-rays. *Webster 3rd* b. Relating to, producing, or employing ultraviolet radiation. CF: [visible light](#)

ultraviolet rays

Electromagnetic waves in the wavelength between visible light rays and X-rays. Ultraviolet light furnishes a quick method of finding and identifying certain metals. *Nelson*

ultrawet

Alkylated monosodium benzene sulfonate, a wetting agent. *Pryor, 3*

ulvite

See: [ulvoespinel](#)

ulvoespinel

An isometric mineral, $8[\text{Fe}_2 \text{TiO}_4]$; spinel group; in mafic igneous rocks as fine exsolution lamellae in magnetite. Named for the Ulvoe Islands, Sweden. Syn: [ulvite](#)

umangite

A tetragonal mineral, $\text{Cu}_3 \text{Se}_2$; dark red, tarnishing to violet.

umbauhobel

A plow developed from the Anbauhobel machine to allow the conversion of a Lobbe Hobel to give the plow an independent drive. *Nelson*

umber

A brown earth that is darker than ocher and sienna, consisting of iron oxide and oxyhydroxide with manganese oxides, clay, and lime. Highly valued as a permanent pigment, it may be used in its greenish brown natural state (raw umber) or in the dark or reddish brown calcined state (burnt umber). CF: [ocher](#); [sienna](#).

umbrella

Protective hood over a hoisting cage in a mine shaft. *Pryor, 3*

umohoite

A monoclinic and orthorhombic mineral, $\text{UO}_2 \text{MoO}_4 \cdot 4\text{H}_2 \text{O}$; black to blue-black; secondary; the only known uranium mineral to contain molybdenum.

umpire

An assay made by a third party to settle a difference found in the results of assays made by the purchaser and the seller of ore. See also: [control assay](#)

U.M. plate

Universal mill plate, or plate that is rolled to width by vertical rolls as well as being rolled to thickness by horizontal rolls. *Osborne*

unakite

An epidote-rich granite, which also contains pink orthoclase, quartz, also minor opaque oxides, apatite, and zircon. The name is derived from the type locality, the Unaka Range, Great Smoky Mountains, in eastern Tennessee. *AGI*

unbalanced cutter chain

A cutter chain that carries more picks along the bottom line than the topline. Most chains for cutting at floor level are unbalanced to assist in keeping the jib down. See also: [balanced cutter chain](#)

unbalanced hoisting

The method of hoisting in small one-compartment shafts where only one cage is in operation, as opposed to balanced winding. *Nelson*

unbalanced shothole

A shothole in which the explosive charge breaks down the coal at the back of the machine cut while leaving the front portion standing or in large blocks. This may happen with a deep bottom cut in a thin seam where the vertical distance from the explosive to the inner end of the cut is shorter than the horizontal distance to the exposed face of the seam. *Nelson*

unchuck

To disengage the drill chuck from the drill stem. *Long*

unclassified excavation

Excavation paid for at a fixed price per yard, regardless of whether it is earth or rock. *Nichols, I*

unconfined compression appliance

A portable appliance for carrying out uniaxial compression tests at a site. Syn: [unrestrained compression apparatus](#)

unconfined compression test

A special condition of a triaxial compression test in which no confining pressure is applied. See also: [triaxial compression test](#); [crushing test](#). *AGI*

unconfined compressive strength

See: [compressive strength](#)

unconformability

The quality, state, or condition of being unconformable, such as the relationship of unconformable strata; unconformity. See also: [unconformity](#)

unconformable

Said of strata or stratification exhibiting the relation of unconformity to the older underlying rocks; not succeeding the underlying rocks in immediate order of age or not fitting together with them as parts of a continuous whole. In the strict sense, the term is applied to younger strata that do not conform in position or that do not have the same dip and strike as those of the immediately underlying rocks. Also, said of the contact between unconformable rocks. CF: [conformable](#) *AGI*

unconformity

a. A substantial break or gap in the geologic record where a rock unit is overlain by another that is not next in stratigraphic succession, such as an interruption in the continuity of a depositional sequence of sedimentary rocks or a break between eroded igneous rocks and younger sedimentary strata. It results from a change that caused deposition to cease for a considerable span of time, and it normally implies uplift and erosion with loss of the previously formed record. *AGI* b. The structural relationship between rock strata in contact, characterized by a lack of continuity in deposition, and corresponding to a period of nondeposition, weathering, or esp. erosion prior to the deposition of the younger beds, and often marked by absence of parallelism between the strata; strictly, the relationship where the younger overlying stratum does not conform to the dip and strike of the older underlying rocks, as shown specif. by an angular unconformity. Syn: [unconformability](#); [transgression](#). *AGI*

unconsolidated strata

Rocks consisting of loosely coherent or uncemented particles, whether occurring at the surface or at depth.

unconsolidated surface deposits

Surface deposits such as moss, peat, sand, gravel, silt, or mud. *BS, 7*

unconventional mineral deposit

A mineral deposit of such unusual grade, mineralogy, or geologic setting that experienced mining personnel would not consider it to be similar to any known deposit type. *Barton*

unctuous

Greasy or soapy to the touch, as certain magnesian minerals. *Standard, 2*

uncut

a. A diamond the original shape of which has not been altered artificially. *Long b.*
Unadulterated.

undation theory

A theory proposed by Van Bemmelen (1933) that explains the structural and tectonic features of the Earth's crust by vertical upward and downward movements caused by waves that are generated by deep-seated magma. *AGI*

under

See: [undermanager](#)

underboom sprays

Sprays located on the rear corners of the shovel at the sides of the continuous miner and aimed towards the front of the gathering arms to suppress dust by wetting the coal. *SME, 1*

underbreak

Rock that remains unbroken inside the neat lines in a tunnel or shaft after firing a round of explosive shots. CF: [overbreak](#)

underbreaking

See: [underhand stoping](#)

underburden

Insufficient burden of rock in relation to the explosive charge, resulting in a blown-out shot or a premature shot through shock of a neighboring charge of a blast pattern, often yielding less work than expected.

undercast

a. An air crossing in which one airway is deflected to pass under the other. *BS, 8* b. The lower airway of an air crossing. See also: [air crossing](#) *BS, 8* c. An undercast is nothing more than an inverted overcast. Undercasts are not considered to be as efficient as overcasts, owing to the tendency of water to collect in them. CF: [overcast](#)

underchain haulage

Haulage in which the chains are placed beneath a mine car at certain intervals with suitable hooks that thrust against the car axle. *Stoces*

underchaining

A drive is underchained when it incorporates a chain of substantially lower rating than that indicated by normal selection procedures. *Jackson, 1*

underclay

a. A layer of fine-grained detrital material, usually clay, lying immediately beneath a coalbed or forming the floor of a coal seam. It represents the old soil in which the plants (from which the coal was formed) were rooted, and it commonly contains fossil roots (esp. of the genus *Stigmaria*). It is often a fireclay, and some underclays are commercial sources of fireclay. Syn: [underearth](#); [seat earth](#); [seat clay](#); root clay; thill; warrant; coal clay; warrant clay. *AGI* b. A bed of clay, in some cases highly siliceous, in many others highly aluminous, occurring immediately beneath a coal seam, and representing the soil in which the trees of the Carboniferous swamp forests were rooted. *Stigmarian* roots commonly occur as fossils in underclays, many of which are used as fireclays. See also: [fireclay](#)

underclay limestone

A thin, dense, nodular, relatively unfossiliferous fresh-water limestone underlying coal deposits, so named because it is closely related to underclay. *AGI*

undercliff

S. Wales. An argillaceous shale forming the floor of many coal seams.

underconsolidated soil deposit

A deposit that is not fully consolidated under the existing overburden pressure. Not yet in equilibrium with existing physical environment. Still being compacted. *ASCE*

undercurrent

A short sluice much wider than the main sluice and set on a steeper grade, generally at right angles to the main sluice. It is designed to save fine gold that does not readily settle. See also: [table](#)

undercut

a. To remove a horizontal section of kerf in the bottom of a block of coal to facilitate its fall. See also: [underhole](#); [undercutting](#). *BCI* b. To undermine, to hole, or to mine. To cut below or in the lower part of a coalbed by chipping away the coal with a pick or mining machine. Undercutting is usually done on the level of the floor of the mine. See also: [cut](#); [undermine](#). *Fay* c. A machine cut along floor level in a coal seam to ease its removal by hand, machine, or shotfiring. See also: [holding](#) d. Excavation of ore from beneath a larger block of ore to induce settling under its own weight. *Nelson* e. In stoping, removal either of footwall or of the lower part of a flattish lode, bed, or seam of ore or coal, thus facilitating detachment of the portion left hanging. Method used in block caving to induce caving in. *Pryor*, 3 f. To enlarge a drillhole at a depth that has been previously drilled.

undercut atomizer

A device for passing a fine spray of compressed air and water to dilute the combustible gases and allay the coal dust in the track of a coal-cutter jib. The spray is passed through a modified whale-type jib. *Nelson*

undercut ignition

The ignition of an explosive mixture of combustible gases and air in the undercut of a coal cutter due to frictional sparking. Combustible gases in dangerous quantities often exist in a machine undercut. See also: [whale-type jib](#)

undercut quarry

A quarry in which the walls slant outward (overhang the working face) so as to make the floorspace wider with increasing depth. *Fay*

undercutter

a. In salt mining, an electrically driven machine somewhat like a gigantic chain saw. It has a long, thin horizontal bar, about which revolves an endless chain with cutting bits. The most common type is an adaptation of the shortwall coal cutter, a drag-type machine with continuous pick-filled chains to cut at the floor or bottom of the seam. It can make a rapid, continuous cut across the entire width of the face. *Kaufmann* b. See: [machineman](#)

undercutting

a. The process of cutting under the face of a coal seam with a machine so the coal can be shot down readily. b. A quarrying method intermediate between open pit and adit. Channel cuts, or separations made by wire saws or other means along the quarry walls, are slanted outward; thus, the floorspace is enlarged gradually. Wings or buttresses of stone may be left at intervals for wall support. c. The making of a cut, by hand or coal

cutter, along the floor level in a coal seam to ease its working by hand or breaking by explosive. See also: [undercut](#); [floor cut](#); [holing](#). *Nelson*

undercutting machine

An electrically driven machine used to make a cut about 10 ft (3.0 m) deep near the bottom of a coalbed. *Hudson*

undercutting of old workings

A method of mining a vein that has been worked out above and in which the shaft is further sunk, with a crosscut being made to the vein at a depth below the previous workings. *Stoces*

underdrilling

Drilling below the theoretical blasting bottom. Syn: [subdrilling](#)

underearth

A hard fireclay forming the floor of a coal seam. See: [underclay](#) *AGI*

underedge stone

The material that forms the floor of an ironstone mine. *Nelson*

underfeed

To advance a diamond or other type of rock-drilling bit into rock at a lesser rate than that warranted by the condition of the rock and/or the condition of the bit. *Long*

underfeed stoker

A mechanical stoker suitable for small boilers, such as the vertical, water-tube, and locomotive types. Coal is conveyed direct from a bunker or hopper by a feed worm, which forces the fuel up through the bottom of the retort in which it is burned. Volatiles driven off must pass through the ignited fuel, thus eliminating smoke. An underfeed stoker operates most successfully on graded coals with an upper size limit of 1 to 2 in (2.5 to 5.1 cm). See also: [stoker](#); [vibrating grate](#). *Nelson*

underfire

a. In ceramics, to fire (as brick) insufficiently. *Webster 3rd* b. To fire from beneath. *Webster 3rd*

underflow

The oversize material leaving a classifier. *Nelson*

underground bunker

a. Arrangements, such as high-capacity supplementary conveyors, staple pits, hoppers, or standage room for cars, positioned at key points between the faces and pit bottom. The object is to enable costly power-loading machines to operate continuously when there are surface or shaft delays. See also: [bunker conveyor](#); [gate road bunker](#). *Nelson* b. A large-capacity hopper to absorb peak deliveries and provide an even rate of feed to main transport systems, or winding shaft. See also: [bunker](#)

underground cable

A single or multiple conductor cable sheathed in lead or other waterproof materials, carried in a duct beneath the surface of the ground. *Crispin*

underground coal gasification

See: [underground gasification](#)

underground connections

Mines or areas that are connected underground shall be considered as a single mine if the underground connections between previously separate mines or areas subject the workers in the respective mines or areas to a reasonable likelihood of danger from mine fires or the products of fires, explosions or the forces and products of explosions, mine inundations, or personnel accidents.

underground dam

Seal against water or spread of fire. *Pryor, 3*

underground exploration

a. The driving of advance exploring headings and up-and-down boring to establish the continuity and thickness of coal seams or other mineral deposits. See also: [exploratory drilling](#) b. Extensions of a known ore deposit may be probed along its strike or dip in which shafts, drifts, or crosscuts may be driven. A study of the habits of known ore shoots, by mapping, surveying, and sampling, is a desirable preliminary to underground exploration. *Nelson*

underground fires

There are two types of underground fires: (1) those that involve exposed surfaces and are known as open, freely burning fires and (2) those that may be wholly or partly concealed and are invariably caused by spontaneous heating of the coal itself, known as gob fires.

Mason

underground garage

See: [locomotive garage](#)

underground gasification

A method of burning the coal in place to produce a combustible gas that can be burned to generate power or processed into chemicals and fuels. Air and/or steam is blown underground to support the controlled combustion in the coal seam. The resultant gaseous mixture is a low-heating-value fuel gas. See also: [blind borehole process](#) Syn: [underground coal gasification](#)

underground geology

Usually implies direct evidence derived from shafts, wells, and borings, or obtained by geophysical methods. Also called subsurface geology. *Challinor*

underground glory-hole method

A method used in large deposits with a very strong roof. In this method, a deposit is divided by levels and on every level chutes are raised to the next one. Mining starts from the mouth of the chutes in such a way as to develop a funnel-shaped excavation (mill, glory) with slopes so steep that the broken ore falls into the chutes and thus to the cars on the lower level. A sufficiently strong pillar is left for protection at the higher level. Syn: [underground milling](#)

underground haulage

The transportation of coal or minerals from the working face to the shaft bottom. Haulage usually implies trams, tubs, or mine cars drawn by horses, locomotives, electric or compressed-air haulage engines. Conveyors are not generally regarded as a haulage method. See also: [gravity haulage](#); haulage; locomotive haulage; main transport; subsidiary transport. *Nelson*

underground milling

See: [underhand stopping](#); underground glory-hole method.

underground mine conveyor

Sectional conveyor, usually of the troughed belt type, capable of being lengthened or shortened as mining operations advance or retreat, as contrasted to an above-ground conveyor having a fixed length for reasonably permanent installation. According to location in the mine or usage, underground conveyors may be known as face, room, gathering, main haulage, or intermediate haulage conveyors. See also: [belt conveyor](#); conveyor; haulage conveyor; flight conveyor; mother conveyor. Syn: [main conveyor](#); [entry conveyor](#).

underground opening

Natural or manmade excavation under the surface of the Earth. *Obert*

underground ore bin

See: [measuring chute](#)

underground shaft

A shaft sunk from an adit, tunnel, or working level, through which mining operations are conducted. The upper end terminates underground. A winze or raise becomes an underground shaft when equipped and used for hoisting and the conduct of other mining operations. CF: [winze](#)

underground station

a. An enlargement of an entry, drift, or level at a shaft at which cages stop to receive and discharge cars, workers, and material. *Fay* b. An underground station is any location where stationary electric equipment is installed for the utilization of electricity. This includes pump rooms, compressor rooms, hoist rooms, battery-charging rooms, etc. c. Excavation housing special equipment. *Pryor, 3*

underground surveying

Distinctive features of underground surveying are that stations are usually in the roof instead of the floor; the object to be sighted and the crosshairs of the telescope must be illuminated; distances are usually measured on the slope; either the transit tripod has adjustable legs or a trivet is used; and often an auxiliary telescope is attached to the transit, either at one end of the horizontal axis or above the main telescope, with the line of sight of the auxiliary telescope parallel to that of the main telescope. Horizontal and vertical distances are computed from slope distances and vertical angles. The transit is set up at one station, being centered by plumb, and the vertical distance from the station to the horizontal axis of the transit is measured. A plumb bob is hung at the next station, with a point on the plumbline marked by some form of clamping target. The vertical angle to the point so marked is measured, and the distance from horizontal axis to the target is taped. *Urquhart*

underground transformer

A flameproof, air-filled transformer of a size up to 300 kV.A, which can be used in by near the face in safety-lamp mines. A nitrogen-filled transformer for mining use is the latest trend. *Nelson*

underground transportation

The transporting of ore, rock, people, materials, and supplies through shafts and haulageways, including the loading of ore or rock into cars and carrying it to the surface. *Jackson, 3*

underground water

See: [ground water](#); subsurface water.

underground workshop

An underground room prepared at an accessible spot in an underground mine in which repairs can be made on the mining equipment used underground.

underhand longwall

Underground mining technique based on underhand stoping and cut-and-fill stoping with a single advancing face. See also: [underhand stoping](#); cut-and-fill stoping.

underhand stope

A stope made by working downward from a level.

underhand stoping

The working of a block of ore from an upper to a lower level; mining downward. The method is particularly suitable for narrow, highly inclined deposits. Syn: [horizontal-cut underhand](#); [underbreaking](#); underground milling. CF: [overhand stoping](#) See also: [underhand longwall](#)

underhand vertical slice

See: [square-set stoping](#)

underhand work

Picking or drilling downward. *Fay*

underhole

a. To cut away or mine out the lower portion of a coal seam or a part of the underclay so as to win or get the overlying coal. *Craigie* b. To mine out a portion of the bottom of a seam, by pick or powder, thus leaving the top unsupported and ready to be blown down by shots, broken down by wedges, or mined with a pick or bar. In England, the terms jad, hole, undercut, kirve, and bench are synonymous. See also: [undermine](#); undercut. *Fay*

underlay

The extension of a vein or ore deposit beneath the surface; also, the inclination of a vein or ore deposit from the vertical; i.e., hade. Syn: [underlie](#)

underlay shaft

a. A shaft sunk in the footwall and following the dip of a vein. Also called underlier. *Fay*
b. Shaft that slopes at the dip angle of a lode, but is carried below the ore. Also called a footwall shaft. See also: [incline shaft](#) *Pryor, 3*

underlevel

A development level or drift, driven from the surface, in ironstone mining. *Nelson*

underlie

a. The angle at which stulls or posts are set between walls. The setting angle is slightly steeper than the perpendicular to the vein, and the post thus tightens with the downward settlement of the hanging wall. *Nelson* b. To lie or be situated under, to occupy a lower position than, or to pass beneath. The term is usually applied to certain rocks over which younger rocks (usually sedimentary or volcanic) are spread out. Ant: overlie. Syn: [underlay](#)

underloading

Insufficient charging of a ball mill for proper grinding of enamel slip. *ACSB, 2*

underlying

Lying under or beneath; fundamental. See also: [seat earth](#) *Webster 3rd*

underlying beds

The rocks situated under a deposit or other strata. *Stoces*

undermanager

In Great Britain, the underground mining engineer and senior executive official. Everything that has to do with the underground must be subject to his or her control, esp. regarding safety and health of personnel. Also called underlooker. Syn: [under](#)

undermine

To excavate the earth beneath, esp. for the purpose of causing to fall; form a mine under. See also: [undercut](#); [underhole](#). *Webster 3rd*

underpinning

a. Building up the wall of a mine shaft to join that above it. *Fay* b. The act of supporting a superior part of a wall, etc., by introducing a support beneath it. *Fay*

underpoled copper

To reduce to metal the cuprous oxide from blister copper produced in a converter, green poles are pushed into the molten material to bring the percentage of dissolved oxygen below 0.5. If this reaction (which results in flat-topped ingots having a smooth fracture) is incomplete, the ingot fractures too readily and has a darker color. This shows it to have been insufficiently reduced, or underpoled. See also: [tough pitch](#) *Pryor, 3*

underream

To enlarge or ream a borehole below the casing. See also: [underreaming](#) *Long*

underreamer

A tool or device having cutters that can be expanded or contracted by mechanical or hydraulic means and used to enlarge or ream a borehole below the casing or drivepipe. Also called expansion bit; expansion reamer. See also: [hydraulic underreamer](#); [underreamer bit](#). *Long*

underreamer bit

The assembled device consisting of the lugs or jaws attached to an expanding mechanism used to enlarge or ream a borehole below a string of casing. See also: [underreamer](#)

underreamer cutter

See: [underreamer lug](#)

underreamer lug

A diamond set or other type of expansible or contractable jaw on an underreamer bit.

Syn: [underreamer cutter](#) *Long*

underreaming

a. The widening out of the foot of a bored hole or of certain types of foundation piers to increase the load-bearing area. *Hammond* b. See also: [underream](#)

underreaming bit

An expanding bit used to enlarge the diameter of the hole below the casing to allow the casing to be lowered farther down the borehole. *BS, 9*

underrope haulage

An endless rope haulage in which the ropes run under the cars. The cars are attached singly or in short sets by clips. See also: [overrope haulage](#)

undersaturated

a. Said of an igneous rock consisting of unsaturated minerals; e.g., feldspathoids and olivine. *AGI* b. Said of a rock whose norm contains feldspathoids and olivine, or olivine and hypersthene. CF: [unsaturated](#); saturated; [saturated rock](#). *AGI*

underscreen water

Water that is fed into the cells of a washbox below the level of the screen plate. *BS, 5*

undersea prospecting

The driving of exploring headings seaward from landside mine workings combined with up-and-down boring to establish higher or lower seams. Also, a technique developed by the National Coal Board, Great Britain, for exploration drilling from a tower that can be floated out to sea and grounded on the seabed. *Nelson*

undersea workings

See: [submarine mines](#)

undershot wheel

a. A vertical waterwheel into the circumference of which are set blades that are pushed by water passing underneath. *Webster 3rd* b. A waterwheel used for low heads, in which the power is obtained almost entirely from the impulse of the water on the vanes. *CTD*

undersize

a. Particles in a screen overflow that are smaller than the normal dimensions of the screen apertures. *BS, 5* b. The smaller of two classified products. In the case of ore pulp or fine coal, the undersize is the overflow and the oversize is the underflow. See also: [classifier](#) c. A drill hole that is not to size because of gage loss on the bit and/or the reaming shell with which it was drilled. *Long* d. A bit or reaming shell, the diametric dimensions of which are less than specified as standard. *Long* e. That part of a crushed material that passes through a screen. f. Material in a product of size smaller than the reference size; may be expressed as a percentage of the product. *BS, 5*

undersize control screen

A screen used for the removal of undersize from a product. *BS, 5*

undersize core

Core the outside diameter of which is less than standard. *Long*

underthrust

A low-angle reverse fault resulting from the sliding of the footwall beneath a relatively passive hanging wall. CF: [overthrust](#)

undertow

The seaward return flow, near the bottom of a sloping beach, of water that was carried onto the shore by waves. CF: [rip current](#)

undertub system

The endless-rope system generally used on moderate and constant gradients where the floor is good. In this system, the rope runs underneath the tubs or cars in the center of the rails. Curves are negotiated by a series of small vertical pulleys between the rails and are best of large radius. Clips are generally preferred to lashing chains, and the system suits automatic clipping and unclipping. CF: [overtub system](#) *Sinclair, 5*

undervoltage relays

Like undercurrent relays, undervoltage relays indicate when voltage is not up to the level it should be. Undervoltage values result in the breaker tripping and staying out until the undesirable condition is corrected. *Coal Age*, 3

underweight

a. The weight of that portion of the strata overlying a coal seam at the face, which is supported by the timber or steel props. See also: [nether roof](#); [overarching weight](#); [traveling weight](#). *Nelson* b. A diamond bit, the crown of which is inset with diamonds so widely spaced that part of the crown is without cutting points and the bit cannot be made to cut. *Fay*

underwinding

A rope or cable wound and attached so that it stretches from the bottom of a drum to the load. *Nichols*, 2

undeveloped land

Land remaining in its natural state, not disturbed by mineral exploration or extraction activities. *SME*, 1

undiscovered resources

Resources, the existence of which are only postulated, comprising deposits that are separate from identified resources. Undiscovered resources may be postulated in deposits of such grade and physical location as to render them economic, marginally economic, or subeconomic. To reflect varying degrees of geologic certainty, undiscovered resources may be divided into hypothetical resources and speculative resources. *USGS*, 2

undisturbed sample

A sample that is as undisturbed as humanly possible, as distinct from a sample disturbed by boring tools. Special appliances are used to obtain such samples from boreholes, and the material is preserved in its natural state in airtight containers. Undisturbed samples are required so that the in-place (in situ) properties of the soil may be determined. It is difficult to obtain undisturbed samples of sandy soils without considerable preparation. See also: [soil core](#)

undulatory extinction

In polarized-light microscopy, said of a mineral that fails to go extinct as a unit under crossed polars, but exhibits waves of extinction sweeping across the grain upon rotation of the microscope stage. Syn: [wavy extinction](#)

unequal angle

A metal angle section with two legs of unequal length. *Hammond*

uneven fracture

A general type of mineral breakage that produces rough and irregular surfaces. CF: [fracture](#)

unfaced quartz

A name given to defaced masses of raw quartz used in the oscillator industry.

ungemachite

A trigonal mineral, $K_3 Na_8 Fe(SO_4)_6 (NO_3)_2 \cdot 6H_2 O$; in thick, tabular rhombohedral crystals; at Chuquicamata, Chile.

ungotten

Unworked rock of any kind. *Arkell*

uniaxial

In optical crystallography, those anisotropic crystals having one direction of apparent isotropy, i.e., one optic axis, corresponding to the unique direction of axial symmetry in the hexagonal, trigonal, and tetragonal crystal systems. Uniaxial crystals are positive if their extreme refractive index (extraordinary ray) is less than their axial refractive index (ordinary ray), negative if greater. CF: [isotropic](#); isotropy; anisotropy; biaxial.

uniaxial stone

One that has crystallized in the tetragonal, trigonal, or hexagonal crystal system and, therefore, has only one direction or axis of single refraction. CF: [biaxial stone](#)

unicline

An obsolete syn. of monocline. CF: [anticlinal bend](#)

unidimensional consolidation

A test in which the volume change in a soil sample is observed when subjected to increasing increments of load. A soil sample, which may be 3 in (7.6 cm) in diameter and 0.8 in (2 cm) thick, is compressed between two porous stones, and the movement under load is noted. *Hammond*

unidirectional ventilation

a. A form of air travel; the air enters at one point, passes through the workings, and goes out at a distant point. Recirculation is impossible where unidirectional ventilation is used; thus the mine is safer than with recirculated air. *Lewis* b. Ventilation in which air in adjacent openings flows in the same direction and is entirely fresh or exhaust air. *Hartman, 2*

uniformitarianism

The fundamental principle or doctrine that geologic processes and natural laws now operating to modify the Earth's crust have acted in the same regular manner and with essentially the same intensity throughout geologic time, and that past geologic events can be explained by phenomena and forces observable today; the classical concept that the present is the key to the past. The doctrine does not imply that all change is at a uniform rate and does not exclude minor local catastrophes. Syn: [principle of uniformity](#)

uniformity coefficient

An expression of variety in sizes of grains that constitute a granular material. *AGI*

Unifrax

A low-density nitroglycerin powder type of equivalent sheathed explosive. *McAdam, 2*

unilateral transducer

A transducer that cannot be actuated at its outputs by waves in such a manner as to supply related waves at its inputs. *Hy*

un-ionized

a. State of a substance that has dissolved without dissociating into ions; solute retaining its compounded state. *Pryor, 3* b. State of a substance (in solid, gaseous, or liquid state) with atoms that have neither an excess nor a deficiency of electrons, so that they have no net charges.

union shop

A shop or mine run according to the requirements of a trade union. CF: [open shop](#)

unique diameter

A direction in a crystal parallel to the highest symmetry axis; i.e., the *c* axis in trigonal, tetragonal, and hexagonal systems; the three reference axes in the orthorhombic system; and the *b* (or *c* in the first setting) axis in the monoclinic system.

unit

Smelter contracts make frequent use of the work unit. A unit means 1%. Since a short ton contains 2,000 lb (907.2 kg), a unit is equivalent to 20 lb/t (10.0 kg/t) of ore. *Lewis*

unit cell

A parallelepiped unit of atomic dimensions within a crystal structure, containing all the atoms in the chemical unit in definite, fixed positions; and all the symmetry elements of the space lattice from which the whole crystal or crystal structure is built by regular repetitions of this unit in three dimensions. CF: [asymmetric unit](#)

unit coal

a. Applied to prepared coal as for analysis, and being the pure coal substance considered altogether apart from extraneous or adventitious material (moisture and mineral impurities), which may by accident or through natural causes have become associated with the combustible organic substance of the coal. *AGI* b. The pure or actual coal substance as derived from taking into consideration the corrected ash. The differentiation between the noncoal substance of a sample being analyzed and the coal itself. It is expressed by the formula: Unit coal = $1.00 - (W + 1.08 A + 0.55 S)$, where *W* = water, *A* = ash, and *S* = sulfur. *AGI*

united veins

Where two or more veins unite, the oldest or prior location takes the vein below the point of union, including all the space of intersection. *Ricketts*

unit operation

Recognition, study, application, and control of the principles and factors utilized in a distinct and self-contained process (for example, filtration). This avoids the duplication of effort that attends study of filtration of oil, sugar, ore pulp, etc., as though each involved a unique set of principles. *Pryor, 3*

unit pressures

The total pressure divided by the number of area units on which the load is imposed, such as the diamonds in a diamond-bit crown, usually expressed as pounds per square inch, tons per square foot, pounds per diamond, etc. *Long*

unit process

Distinct and self-contained operations that can be studied individually. In mineral processing, unit processes include crushing, grinding, classification, gravity treatment, pulp conditioning, flotation, thickening, leaching, and filtration. *Pryor, 3*

unit retardation plate

See: [selenite plate](#)

unit strain

Unit tensile strain is the elongation per unit length; unit compressive strain is the shortening per unit length; unit shear strain is the change in angle (radians) between two lines originally at right angles to each other. *Roark*

unit stress

The stress or load per unit of area, usually taken per square inch of section. For instance, if a bar is 1 in by 2 in (2.5 cm by 5.1 cm) in section, the unit stress of the bar will be 1,000 divided by 2 (sectional area) or 500 psi (3.4475 MPa). *Zern*

unit train

A system delivering coal more efficiently in which a string of cars, with distinctive markings, and loaded to "full visible capacity," is operated without service frills or stops along the way for cars to be cut in and out, from the loading place to the point of delivery.

unit value

The monetary value of a mineral or rock product per ton or other unit of measurement. See also: [value](#)

unit ventilation

A system of ventilation in which each working face is ventilated by a separate air current. *BS, 8*

unit weight

a. Weight per unit of volume. See also: [dry unit weight](#); effective unit weight; maximum unit weight; saturated unit weight; submerged unit weight; unit weight of water; wet unit weight; zero air voids unit weight. b. The density of a material. See also: [density](#)

unit weight of water

The weight per unit volume of water; normally equal to 62.4 lb/ft³ or 1 g/cm³. See also: [unit weight](#)

univalent

a. Having a valence of one. *Webster 3rd* b. Having one valence; e.g., calcium, which has only a valence of two. *Webster 2nd*

universal arc-shearing machine

A machine with a rotating jib head so that vertical or shearing cuts can be made in addition to the arc wall cut. An arcwall machine will cut a 12-ft (3.7-m) heading to a depth of 6 ft (1.8 m) in 10 min. *Mason*

universal clamp

A clamping device used on a drill column by means of which a horizontal arm can be affixed at any point on the vertical section of a drill column. *Long*

universal coal cutter

A coal cutter with a jib capable of cutting at any height or angle. It may be mounted on crawler tracks. See also: [universal machine](#); turret coal cutter. *Nelson*

universal coupling

Coupling that joins two driving shafts that rotate about differently slanted axes. *Pryor, 3*

universal gas mask

Designed as an all-purpose mask for protection against a great variety of toxic gases, vapors, and smokes, including carbon monoxide. It is equipped with an indicator that shows at a glance the remaining service time of the canister for carbon monoxide. This mask is particularly effective for mines, fire fighting, and general industrial uses where the contaminants are of relatively low content. *Best, 1*

universal-joint couplings

These couplings are used where shafts intersect at any angle or where pivoted members must be driven. If there is an offset in the two shafts, or if one or both shafts must change location during operation, two of these couplings are used, and one is fitted with a splined joint mating with the connecting intermediate shaft to allow axial movement. *Pit and Quarry*

universal lay rope

See: [lang lay rope](#)

universal machine

A power-driven coal cutter that will not only cut horizontal kerfs, but will also cut vertical kerfs at any angle, and is designed for operation either on track, crawler treads, or rubber tires. Syn: [universal coal cutter](#); [arc shear machine](#).

universal motor

An electric motor rated at less than 1 hp (746 W) output that operates on either direct or alternating current. *Hammond*

universal pH indicator

Mixture of several indicator dyes, each of which changes color through a specific pH range, so that by suitably combining a wide color change and pH, a reading can be obtained. *Pryor, 3*

universal plant indicator

Indicator plant that is restricted exclusively to rocks or soils of a definite mineral content and not found under any other conditions. CF: [local indicator plant](#)

universal stage

A stage of three, four, or five axes of rotation, attached to the rotating stage of a polarized-light microscope, that enables a thin section or mineral grain under study to be turned in a precisely controlled fashion about three mutually orthogonal axes. It is used to determine precisely the optical properties and parameters of minerals or their orientation in a set of external coordinates. Syn: [U-stage](#); [Federov stage](#). CF: [goniometer](#); [spindle stage](#).

universal testing machine

An instrument so designed that it is capable of exerting a tensile, compressive, or transverse stress on a specimen under test. Further, it can be adapted for the determination of Brinell hardness, ductility, cold bend, and other properties. The machine consists essentially of three systems: loading, weighing, and indicating, the loading being applied either mechanically or hydraulically. *Osborne*

universal train

A roll train having adjustable horizontal and vertical rolls, so as to produce sections of various sizes. *Fay*

unkeying

In attacking a rock face, the first effort of the miner is directed toward making a cut that will permit the succeeding shots to exert the greatest force with the minimum charge of explosive. In doing this unkeying, the miner takes advantage of any persistent seam in the rock face. *Stauffer*

unlimited pump

A deep-well pump operated from the level of the ground above. *Standard, 2*

unloader

A machine that unloads iron ore from boats and cars, by power, generally electric. *Mersereau, 2*

unloading conveyor

Any of several types of portable conveyors adapted for unloading bulk materials, packages, or objects from conveyances. See also: [portable conveyor](#)

unloading trough

A short section of trough, designed for insertion in a standard shaker trough, which will allow the coal to be unloaded at that point by being diverted to either side by the unloading trough. C-clamps are used to hold the unloading section in place. *Jones, 1*

unlocking

See: [liberation](#)

unmix

Proprietary flotation collector agent based on emulsified tall oil, fuel oil, and water-soluble aryl-alkyl sulfonate used to treat hematite ores. *Pryor, 3*

unmixing

See: [exsolution](#)

unoriented

- a. Said of a rock specimen whose original position in space, when collected, is unknown.
- b. Said of a rock fabric that shows no ordered spatial arrangement. CF: [preferred orientation](#)
- c. Said of a map or surveying instrument whose internal coordinates are not coincident with corresponding directions in space. *Stokes*

unpatented claim

- a. Mining claim to which a deed from the U.S. Government has not been received. A claim is subject to annual assessment work, to maintain ownership. *Weed, 2*
- b. A claim that requires \$100 of work to be done each year. A claim cannot be patented until \$500 has been spent on it. *von Bernewitz*
- c. A mining claim for which the holder has no patent. Under the Multiple Surface Use Act of 1955, discoveries of common varieties of sand, stone, gravel, pumice, cinders, and clay cannot be located as mining claims; however, it does not affect the validity of a discovery in these materials based on the presence of other valuable minerals. *Lewis*

unproductive development

The drifts, tunnels, and crosscuts driven in stone, preparatory to opening out production faces in a coal seam or orebody. Horizon mining is characterized by a heavy outlay on the initial unproductive development. See also: [dead work](#); [in-the-seam mining](#); [productive development](#). *Nelson*

unproven area

An area in which it has not been established by drilling operations whether oil and/or gas may be found in commercial quantities. *Williams*

unreserved mineral

A mineral that belongs to the owner of the land on which or in which it is located. The owner of the land is its exclusive owner and can deal with it freely. Examples include limestone, dolomite, barite, fluorite, fireclay, plastic clay, glass sand, marble, and gypsum. *Stoces*

unrestrained compression apparatus

See: [unconfined compression appliance](#)

unripe diamond

See: [rock crystal](#)

unsaturated

a. Applied to minerals that are incapable of crystallizing from rock magmas in the presence of an excess of silica. Such minerals are said to be unsaturated with regard to silica and include feldspathoids, analcime, magnesian olivine, melanite, pyrope, perovskite corundum, calcite, and perhaps spinel. CF: [undersaturated](#); [saturated rock](#). *AGI* b. Applied to air that contains less water vapor than the maximum or saturation content for the conditions pertaining. *Spalding*

unscreened coal

a. Coal for which no size limits are specified. *BS, 4* b. Aust. Run-of-mine coal.

unsealing

The recovery of a sealed-off mine area that had been sealed to extinguish a fire. Two general systems may be employed: (1) recovering the fire area in successive blocks by means of air locks, and (2) reventilation of the fire area after there is conclusive evidence that the fire has been extinguished. See also: [sealed area](#)

unsoiling

The act or process of removing soil, as in opening a quarry. *Standard, 2*

unsoundness

a. A quarry term that refers to all cracks or lines of weakness, other than bedding planes, that may cause rock to break before or during the process of manufacture. Various types of unsoundness are known locally as joints, headers, cutters, hairlines, slicks, seams, slick seams, dry sewns, dries, and cracks. *Fay* b. The condition of a solid metal that contains blowholes or pinholes due to gases, or cavities resulting from the liquid-to-solid contraction (that is, contraction cavities). See also: [gas evolution](#)

unstable

a. Said of a constituent of a sedimentary rock that does not effectively resist further mineralogic change and that represents a product of rapid erosion and deposition (as in a region of tectonic activity and high relief); e.g., feldspar, pyroxene, hornblende, and various fine-grained rock fragments. *AGI* b. Said of an immature sedimentary rock (such as graywacke) consisting of unstable particles that are angular to subrounded, poorly to moderately sorted, and composed of feldspar grains or rock fragments. CF: [labile](#) *AGI* c. Said of a radioactive substance. CF: [stable](#)

unstable isotope

See: [radioisotope](#)

unstable relict

A relict that is unstable under newly imposed conditions of metamorphism, but persists in a perhaps altered but still recognizable form owing to the low velocity of transformation. A preferable term would be metastable relict. CF: [stable relict](#)

unstratified

Not formed or deposited in strata; specif. said of massive rocks or sediments with an absence of layering, such as granite or glacial till. *AGI*

unwatering

Pumping or draining the water from mines. CF: [dewatering](#)

unweathered

See: [fresh](#)

upcast

a. The opening in a mine through which the return air ascends and is removed. Ant: downcast; intake. See also: [air shaft](#) b. An upward current of air passing through a shaft, or the like. c. Material that has been thrown up, such as by digging. *Webster 3rd* d. Same as upthrow, such as the upcast side of a fault; opposite of downthrow or downcast. *Standard, 2* e. The lifting of a seam or bed by a dike. Syn: [uptake](#)

upcast shaft

a. A shaft through which air leaves the mine. *BS, 8* b. The shaft up which the ventilating current of air returns to the surface or to the fan. The term corresponds to main return or return drift in drift mining. Also called fan shaft. Syn: [uptake](#) See also: [downcast shaft](#)

upconing

See: [coning](#)

upgrade

a. To increase the commercial value of a coal by appropriate treatment. *BS, 5* b. To increase the quality rating of diamonds beyond or above the rating implied by their particular classification. *Long* c. To increase the quality of grades.

upgrading

See: [aggradation](#)

uphill shaker conveyor

Any shaker conveyor that is so designed as to have the proper stroke for shaking the maximum amount of coal up a grade. On certain types of shaker conveyors, this requires the replacement of certain parts of the drive to secure the desired stroke, rather than replacing the entire drive unit. *Jones, 1*

up hole

a. A borehole collared in an underground working place and drilled in a direction pointed above the horizontal plane of the drill-machine swivel head. *Long* b. A shothole drilled in rock at an upward angle. *Pryor, 3*

uphole shooting

In seismic exploration, the setting off of successive shots in a shothole at varying depths to determine velocities and velocity variation of the materials forming the walls of the hole. *AGI*

uphole time

Used to denote the observed travel time of a seismic wave from the point of generation at a given depth in a shothole to a detector at the surface; the observed time equivalent of the corresponding shot depth. Syn: [time at shot point](#)

uplift

a. Any force that tends to raise an engineering structure and its foundation relative to its surroundings. It may be caused by pressure of subjacent ground, surface water, expansive soil under the base of the structure, or lateral forces such as wind. *AGI* b. A structurally high area in the crust, produced by positive movements that raise or upthrust the rocks, as in a dome or arch. CF: [depression](#) *AGI*

up-over

Designating a method of shaft excavation by drifting to a point below and then raising. *Webster 2nd*

upper

a. Pertaining to rocks or strata that are normally above those of earlier formations of the same subdivision of rocks. The adjective is applied to the name of a chronostratigraphic unit (system, series, stage) to indicate position in the geologic column and corresponds to

late as applied to the name of the equivalent geologic-time unit; e.g., rocks of the Upper Jurassic System were formed during the Late Jurassic Period. The initial letter of the term is capitalized to indicate a formal subdivision (e.g., "Upper Devonian") and is lowercased to indicate an informal subdivision (e.g., "upper Miocene"). The informal term may be used where there is no formal subdivision of a system or series (counterpart of lower). CF: [lower](#); [middle](#). *AGI* b. See: [up hole](#)

Upper Barren Coal Measures

The part of the Carboniferous strata of the Appalachian field that is now assigned to the Dunkard group of the Permian series. Obsolete. *Fay*

upper break

The upper bend of a terrace or monocline. Also called head.

upper explosive limit of flammability

The highest quantity of combustible gases that, when mixed with a given quantity of air (or oxygen), will just support a self-propagating flame. *Francis, 2*

Upper Productive Coal Measures

The part of the Carboniferous strata of the Appalachian field that is now assigned to the Monongahela group of the Pennsylvanian series. Obsolete. *Fay*

upraise

An auxiliary shaft, a mill hole, carried from one level up toward another. See also: [rise](#); [raise](#). (These are better terms.) *Fay*

upright

See: [post](#)

upright fold

A fold having an essentially vertical axial surface. Syn: [vertical fold](#) *AGI*

upright joints

Eng. Vertical joints. See also: [thorough joints](#)

upset

a. A narrow passage driven on a slope, leaving a wider pillar which is to be mined by slabbing or otherwise. *Hess* b. A narrow working place driven from one pair of entries to another for the development of a long face in semilongwall or longwall mining. *Hess* c. A tubular part such as a drill rod, the wall thickness of which has been increased by hot forging for a short distance on one or both ends, thereby reinforcing the area in which screw threads are cut. See also: [inside upset](#); [outside upset](#). *Long* d. To increase the diameter of a rock drill by blunting the end. *Fay*

upsetting

A means of increasing the diameter of a red-hot steel bar during forging by striking it on the end, a state that also occurs in riveting. *Hammond*

uptake

See: upcast; upcast shaft.

upthrow

a. The upthrown side of a fault. *AGI* b. The amount of upward vertical displacement of a fault. CF: [downthrow](#); heave. *AGI*

upward-current washer

A washer in which separation takes place under the influence of an upward current of water or dense medium. *BS*, 5

uraconite

A name used for amorphous, yellow, hydrous uranium sulfates of unknown composition. Syn: [uranic ocher](#)

uralborite

A monoclinic mineral, $\text{CaB}_2\text{O}_2(\text{OH})_4$; dimorphous with vimsite; forms radiating fibrous aggregates; at a skarn deposit in the Turinsk area of the Urals, Russia.

Uralian emerald

a. Emerald from near Sverdlovsk in the Ural Mountains, Russia. b. A green variety of andradite garnet (demantoid), occurring as nodules in ultramafic rocks in the Nizhniy-Tagilsk district of the Ural Mountains; may be of semiprecious gem quality, although rather soft. Also known as Bobrovska garnet.

uralite

A fibrous amphibole pseudomorphous after pyroxene. A trade name for a fireproof material, chiefly of asbestos.

uralitization

The development of amphibole from pyroxene; specif. a late-magmatic or metamorphic process of replacement whereby uralitic amphibole results from alteration of primary pyroxene. Also, the alteration of an igneous rock in which pyroxene is changed to amphibole; e.g., the alteration of gabbro to greenstone by pressure metamorphism. *AGI*

uramphite

An orthorhombic(?) mineral, $(\text{NH}_4)(\text{UO}_2)(\text{PO}_4) \cdot 3\text{H}_2\text{O}$; meta-autunite group; forms bottle-green flakes in the oxidation zone of a uranium-coal deposit.

uran

Combining form meaning containing uranium; e.g., uranothorite. Syn: [urano-](#)

urania ceramics

Ceramic products containing appreciable amounts of UO_2 (or thorium) that are used in atomic reactors. They are stable against corrosion.

uranian opal

A variety of opal having an apple-green fluorescence reputedly caused by the presence of minute amounts of uranium. *Crosby*

uranic ocher

See: [uraconite](#)

uraninite

An isometric mineral, UO_2 , commonly impure with actinide and lanthanide rare earths, radium, helium, and zirconium; strongly radioactive; metamict; generally black; sp gr, 10.9; in pegmatites and veins with lead, tin, and copper minerals; a source of uranium called pitchblende where massive and metamict. See also: [pitchblende](#) Syn: [ulrichite](#); [coracite](#).

uranite

A general term for any mineral consisting of uranyl phosphate and arsenate of the autunite, meta-autunite, and torbernite groups.

uranium

A radioactive, silvery-white, metallic element. Symbol, U. Occurs in numerous minerals such as pitchblende, uraninite, carnotite, autunite, uranophane, davidite, and tobernite. It is also found in phosphate rock, lignite, and monazite sands. Uranium and its compounds are highly toxic, both chemically and radiologically. Uranium is of great importance as a nuclear fuel; it is used as ballast for missile reentry vehicles, as a shielding material, and for production of high-energy X-rays. *Handbook of Chemistry and Physics, 3*

uranium borides

Three borides are known: UBr_2 , UBr_3 , and UBr_4 . The most attention has been paid to the tetraboride, the properties of which are: melting point, $>2,100$ degrees C (but oxidizes rapidly above 600 degrees C); sp gr# = 9.38 g/mL; thermal expansion, 7.1×10^{-6} (20 to 1,000 degrees C); modulus of rupture (20 degrees C), 60,000 psi (414 MPa); electrical resistivity, 3×10^{-5} ohm.cm. *Dodd*

uranium disintegration series

The series of nuclides resulting from the decay of uranium-238. The mass numbers of all members of the series are given by $4n+2$, where n is an integer; therefore, the sequence is also known as the $4n+2$ series. It is also known as the uranium-radium series.

Glasstone

uranium galena

Galena containing Pb 206, the lead isotope produced by radioactive decay of U 238.

uranium-lead

See: [radium G](#)

uranium minerals

More than 150 uranium-bearing minerals are known to exist, but only a few are common. The five primary uranium-ore minerals are pitchblende, uraninite, davidite, coffinite, and brannerite. These were formed by deep-seated hot solutions and are most commonly found in veins or pegmatites. The secondary uranium ore minerals, altered from the primary minerals by weathering or other natural processes, are carnotite, tyuyamunite and metatyuyamunite (both very similar to carnotite), torbomite and metatorbomite, autunite and metaautunite, and uranophane. *Pearl*

uranium oxide

The important oxides of uranium are UO_2 , UO_3 , and U_3O_8 . The dioxide (melting point 2,880 degrees C) is used as a nuclear-fuel element. Uranium oxide has been used to produce red and yellow glazes and ceramic colors. *Dodd*

uranium trioxide

Red, orange, and yellow; UO_3 ; an intermediate product in the refining of uranium.

uranmica

See: [torbernite](#); uranite.

urano-

See: [uran](#)

uranocircite

A tetragonal mineral, $\text{Ba}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 10\text{H}_2\text{O}$; autunite group; yellow-green.

uranolite

A meteorite. *Fay*

uranophane

A monoclinic mineral, $\text{Ca}(\text{UO}_2)_2[(\text{SiO}_3)(\text{OH})]_2 \cdot 5\text{H}_2\text{O}$; dimorphous with uranophane-beta; radioactive; soft; yellow; as secondary coatings, commonly associated with autunite and torbernite around uranium deposits; a source of uranium.

uranopilite

A monoclinic mineral, $(\text{UO}_2)_6(\text{SO}_4)(\text{OH})_{10} \cdot 13\text{H}_2\text{O}$; radioactive; yellow; secondary on uraninite; associated with gypsum and metauranopilite.

uranorthorite

A variety of thorium silicate; thorite containing a small percentage of oxide of uranium.
Fay

uranosphaerite

A monoclinic mineral, $\text{BiUO}_3(\text{OH})_3$; radioactive; orange to red; an oxidation product of pitchblende. Also spelled uranospherite.

uranotantalite

See: [samarskite](#)

uranothallite

See: [liebigite](#)

uranothorianite

Thorianite with uranium in partial substitution for thorium. *Crosby*

uranothorite

A uranian variety of thorite.

uranotile

See: [uranophane](#)

uranphyllite

See: [torbernite](#)

uranpyrochlore

An isometric mineral, $(U,Ca,Ce)_2(Nb,Ta)_2O_6(OH,F)$; pyrochlore group; radioactive; yellow-brown; with samarskite in pegmatites in Mitchell County, NC, and at Hybla, ON, Canada. Formerly called hatchettolite. CF: [betafite](#)

urao

A mixture of trona and thermonatrite. See also: [sodium sesquicarbonate](#)

urea

A tetragonal mineral, $CO(NH_2)_2$. Carbonyl diamide; also called carbamide.

Ure's process

The treatment of quicksilver ores by heating in iron retorts with admixture of lime. *Fay*

Urgonian

A division of the European Lower Cretaceous characteristically developed in certain parts of France and Belgium. *Standard, 2*

urnel

Eng. Kentish term for ragstone. Also spelled urnell or ournal.

urolith

A pathogenic precipitate occurring in humans and other animals. They are very complex and include numerous biominerals, chiefly phosphates and oxalates. Syn: [kidney stone](#)

urtite

A light-colored member of the ijolite series that is composed chiefly of nepheline and 0% to 30% mafic minerals, esp. acmite and apatite. CF: [melteigite](#) (now Lovozero), Kola Peninsula, Russia. *AGI*

Uruguay amethyst

a. A deep violet, very transparent amethyst. b. Any amethyst originating along the border between Uruguay and Brazil.

usable diamond

A resettable salvage diamond. See also: [usable stone](#); [usables](#). *Long*

usable iron ore

The product of a mine, or of a beneficiating or agglomerating plant, which is shipped without further processing to the consumer. *USBM, 7*

usables

Salvaged diamonds considered as being fit for resetting and reuse in another bit or tool. See also: [usable diamond](#)

usable stone

See: [usable diamond](#)

used bit

A diamond bit so dulled by use that it is no longer of any value as a cutting tool. *Long*

useful area

Working area of a screen. The nominal area, less any area occupied by fixings or supports that obstruct the passage of material over or through the screen deck. *BS, 5*

useful pressure

For a mine fan, the natural ventilation pressure deducted from the total ventilation pressure required to circulate air through the mine. *Roberts, 1*

Usspurwies arch

An articulated yielding arch, provided by a single bolted joint at the crown. The joint is so designed that the bolt is not subjected to shear stress. The yield element is a rectangular box in which the foot of the arch rests. The resistance to yield is by means of a piece of crushing timber placed in the box from the bottom before setting. See also: [steel arch](#); [steel support](#); [Toussaint-Heintzmann arch](#). *Nelson*

U-stage

See: [universal stage](#)

ustarasite

A mineral, $Pb(Bi,Sb)_6 S_{10}$; forms gray prismatic crystals in bismuth ore at the Ustarasaisk deposit in western Tyan-shan, Siberia.

usual mining privileges

By this term in a deed, the grantee has and may enjoy the right to go upon the land and explore for, open, and operate mines, take out and sell the products, and do all things incident to that work. *Ricketts*

utahite

A discredited term for jarosite or natrojarosite. See also: [natrojarosite](#)

utahlite

A compact, nodular variscite from Lewiston, Cedar Valley, UT. *English*

U-tube manometer

The vertical U-tube is the simplest type of pressure gage and consists either of a single U-shaped glass tube having a uniform bore with vertical arms or two separate glass tubes

connected to a cistern. The level of the liquid in the vertical U-gage can be read easily to 0.1 in (2.5 mm) and in well-made instruments to 0.05 in (1.3 mm) water gage. See also: [manometer](#)

uvanite

An orthorhombic(?) mineral, $(\text{UO}_3)_2 \text{V}_6 \text{O}_{15} \cdot 15\text{H}_2\text{O}$ (?) ; radioactive; brownish-yellow; in asphaltic sandstone with carnotite, rauvite, hewettite, metatorbernite, hyalite, and gypsum; from Utah; resembles carnotite.

uvarovite

An isometric mineral, $\text{Ca}_3 \text{Cr}_2 \text{Si}_3 \text{O}_{12}$; garnet group; crystallizes in emerald green dodecahedra and trapezohedra; in serpentinite and in skarns. Also spelled ouvarovite or uwarowit. Syn: [chrome garnet](#); [chromium garnet](#).

uvite

The trigonal mineral, $(\text{Ca,Na})(\text{Mg,Fe})_3 \text{Al}_5 \text{Mg}(\text{BO}_3)_3 \text{Si}_6 \text{O}_{18} (\text{OH,F})_4$, of the tourmaline group.

uwarowit

See: [uvarovite](#)

uzbekite

See: [volborthite](#)

V

vacancy

A point defect in a crystal structure where an atom or ion is missing from its expected position. Syn: [Schottky defect](#)

vacant land

As defined by its opposite, land is not vacant when occupied as a mining claim without discovery by one who is diligently prospecting it for minerals that it may contain.

Ricketts

Vacquier-Steenland method

A numerical method used in gravity interpretation for calculating the depth to the source of many typical total field anomalies. The method involves the computation of the curvature of the observed total intensity by superposition of a special grid over the intensity contours. The curvature is proportional to the second vertical derivative of the magnetic intensity. *Dobrin*

vacuole

See: vesicle.

vacuum

A method of producing ventilation by exhausting air from a mine. See also: [vacuum fan](#)

vacuum casting

a. The casting of metals in vacuum. Also called suction casting. See also: [vacuum metallurgy](#) b. Slip casting in which the slip is de-aired before casting.

vacuum common fine salt

VCF; evaporated salt made in vacuum pans; of ordinary purity and ordinary screen analysis. *Kaufmann*

vacuum concrete

Concrete poured into a framework that is fitted with a linen filter in the form of a vacuum mat. As a result of the process ensuing, the concrete attains its 28-day strength in 10 days and has a 25% higher crushing strength. *Hammond*

vacuum deposition

Condensation of thin metal coatings on the cool surface of work in a vacuum. *ASM, I*

vacuum fan

A fan for creating suction or partial vacuum. An exhaust fan. See also: [vacuum](#)

vacuum filter

a. A form of filter in which the air beneath the filtering material is exhausted to hasten the process. b. One in which the pulp is drawn into contact with a porous septum by means of a moderately high vacuum. Solids are arrested and filtrate drawn through. In the drum and disc types, filtration is continuous. Vacuum is produced by means of a pump. See also: [pulp](#)

https://t.me/Geologybooks

vacuum filtration

a. The separation of solids from liquids by passing the mixture through a filter and where, on one side, a partial vacuum is created to increase the rate of filtration. It may be used to extract fine coal from the suspension or cyanide solution for reuse. *Nelson* b. See also: [filter](#)

vacuum lifting

Lifting by a crane fitted with a suction pad, employed for such items as precast concrete components, large panes of glass, and sheet steel. *Hammond*

vacuum metallurgy

The processing of metals at elevated temperatures, usually by induction heating in high vacuum. See also: [vacuum casting](#)

vacuum method

In flotation, a method in which the pulp, saturated with air at atmospheric pressure, is allowed to rise to a height above the normal hydrostatic level of the pulp. In the course of this ascent, the dissolved gases precipitate from solution and form a vast number of very tiny bubbles that attach themselves selectively to the hydrophobic solids. *Gaudin, 2*

vacuum method of testing sand

A method of carrying out a triaxial test on a sand sample by maintaining a partial vacuum in the rubber bag containing the sample. *Hammond*

vacuum pump

a. A centrifugal or reciprocating pump that extracts steam or air from a chamber or pipe to create a partial vacuum. A vacuum pump, hand or power operated, is part of a pump station equipment where gravity flow is absent. *Nelson* b. See: [pulsometer](#) c. A pump for exhausting air or other gas from an enclosed space to a desired degree of vacuum. *Webster 3rd* d. A pump in which water is forced up a pipe by the difference of pressure between the atmosphere and a partial vacuum. CF: [air pump](#)

vacuum system

A two-pipe, steam-heating system equipped with vacuum pumps to permit maintenance of pressure below atmospheric within the radiators. *Strock, 2*

vadose water

Water of the zone of aeration. Syn: [suspended water](#)

vaesite

An isometric mineral, NiS₂ ; pyrite group.

vake

Soft, compact, mixed claylike material with a flat, even fracture, found most often in volcanic terrains. Not recommended. See: wacke

valaite

A pitch-black resin of unknown composition. Found in thin crusts on dolomite and calcite in the Coal Measures of Moravia, Czechoslovakia. *Tomkeieff*

Valantin conveyor cutter

A cutter chain on an armored flexible conveyor that cuts its own stable holes; pushed by pulsating rams; height, 18 in (45.7 cm); minimum workable seam, 20 in (50.8 cm); on gradients 0 degrees to 20 degrees ; maximum length of face, 45 yd (40 m). *Nelson*

valence

The degree of combining power of an element or a radical.

valence bond

Linkage of pairs of electrons so as to unite their atoms as a molecule. When an element has more than one valence, its commonest combination is called the principal valence. *Pryor, 3*

valence crystals

Crystals whose atoms are held in position by covalent bonds; e.g., diamond and silicon. *Newton, 1*

valencianite

A variety of adularia in a silver mine at Valencia, Guanajuato, Mexico.

Valentine scale

Pocket-sized beam scale of Chinese origin used in valuation of alluvial tin gravels. The beam is so calibrated as to read in catties per cubic yard when concentrates from washing of $1/4 \text{ ft}^3$ (0.007 m^3) are weighed. *Pryor, 3*

valentinite

An orthorhombic mineral, $\text{Sb}_2 \text{O}_3$; soft; dimorphous with senarmontite; an oxidation product of antimony ores. Syn: [white antimony](#)

valentite

Antimony trioxide, $\text{Sb}_2 \text{O}_3$, in orthorhombic crystals. Syn: [white antimony](#); [antimony trioxide](#).

valleriite

A hexagonal mineral, $1.53[(\text{Mg,Al})(\text{OH})_2] \cdot [(\text{Fe,Cu})\text{S}]$; an irrational but discrete interlayer complex of hydroxide and sulfide layers; massive; soft; resembles pyrrhotite in color.

vallevarite

A light-colored monzonitic igneous rock composed chiefly of andesine, microcline, and antiperthite, with small quantities of clinopyroxene, biotite, and apatite. The name, given by Gavelin in 1915, is for Vallevåra, Sweden. Obsolete. *AGI*

valley brown ore

A local name for comparatively pure high-grade limonite or brown iron ore in Cambro-Ordovician limestones in the Shenandoah Valley of Virginia. See also: [mountain brown ore](#)

valley fill

A fill structure consisting of any material other than coal waste and organic material that is placed in a valley where side slopes of the existing valley measured at the deepest point are greater than 20 degrees, or the average slope of the profile of the valley from the toe of the fill to the top of the fill is greater than 10 degrees.

Vallum diamond

Rock crystal (quartz) from the Tanjore District, India.

Val separator

A launder used for cleaning buckwheat, rice, and barley sizes of anthracite. It has three distinguishing features: (1) a mixing tank at the head end of the machine, (2) a baffle in the bottom of the machine next to the mixing tank to facilitate the stratification of the solids in specific gravity layers, and (3) the use of a screen and bed of slate in the free discharge boxes. *Mitchell*

valuation

a. The act or process of valuing, or of estimating the value or worth; appraisal. *Webster 3rd* b. The value or estimated price set upon a thing. *Webster 3rd*

value

The valuable constituents of an ore; their percentage in an orebody, or assay grade; their quantity in an orebody, or assay value. See also: [assay grade](#); [assay value](#); [unit value](#).
AGI

valve tower

A tower built up within a reservoir to house the control valves of supply pipes drawing off water at different levels. *Hammond*

vamping

The debris of a stope, which forms a hard mass under the feet of a miner. *Fay*

van

a. To separate, such as ore from veinstone, by washing it on the point of a shovel. *Fay* b. A shovel used in ore dressing. *Fay*

vanadate

A salt or ester of vanadic acid; a compound containing the radical $(VO_4)^{3-}$ (ortho) or $(VO_3)^-$ (meta). CF: [arsenate](#); [phosphate](#).

vanadic ocher

A native yellow vanadium oxide found near Lake Superior. *Standard, 2*

vanadinite

A hexagonal mineral, $Pb_5(VO_4)_3Cl$; apatite group; soft; varicolored; sp gr, 6.7 to 7.1; in oxidized zones of lead ore deposits; in New Mexico, Arizona, Africa, Scotland, and Russia. Syn: [vanadite](#)

vanadite

See: [descloizite](#); vanadinite.

vanadium

A gray or white, malleable, ductile, metallic element. Symbol, V. Found in about 65 different minerals, among which are carnotite, roscoelite, vanadinite, and patronite; also found in phosphate rock, certain iron ores, and some crude oils. About 80% of the vanadium now produced is used as a ferrovanadium or as a steel additive; also used in ceramics, as a catalyst, and in the production of a superconductive magnet. *Handbook of Chemistry and Physics*, 3

vanadium minerals

Those most exploited for industrial use are patronite (MoS₂ with vanadium sulfide), roscoelite (vanadium mica), vanadinite, carnotite, and chlorovanadinite. Metal is silvery and whitish; melting point is 1,720 degrees C; used in high-speed steels and shock-resistant alloys, chemicals, ceramics, and textiles. *Pryor*, 3

vanadium ore

Most vanadium is obtained from vanadium-bearing magnetite (1% to 2.2% V) in South Africa. Other sources include patronite, carnotite, roscoelite, vanadinite, descloizite, and volborthite.

vanadium-zirconium turquoise

See: [zirconium-vanadium blue](#)

vanalite

A monoclinic mineral, NaAl₈ V₁₀ O₃₈ .30H₂ O ; forms bright-yellow incrustations on weathered shales; in northwest Kara-Tau, Kazakhstan.

Van Allen radiation zone

Powerful doughnut-shaped zone of radiation 1,000 to 3,000 miles above the Earth's surface and parallel with the Equator. *AGI*

van Arkel and de Boer process

See: [iodide process](#)

vandenbrandeite

A triclinic mineral, $\text{Cu}(\text{UO}_2)(\text{OH})_4$; radioactive; dark green to black; secondary; associated with kasolite, sklodowskite, malachite, goethite, chalcocite, chalcopyrite, uraninite, curite, uranophane, and cobalt wad; occurs at Karungwe, Katanga, Republic of the Congo. Also spelled vandenbrandite.

vandenbrandite

A very rare, strongly radioactive, triclinic, dark green to almost black mineral, $\text{Cu}^{2+}(\text{UO}_2)(\text{OH})_4$; a secondary mineral found associated with kasolite, sklodowskite, malachite, goethite, chalcocite, chalcopyrite, and uraninite; also found associated with curite, uranophane and cobalt wad; from Karungwe, Katanga, Zaire. Also spelled vandenbrandeite. *Crosby; Hey, 1*

vandendriesscheite

An orthorhombic mineral, $\text{Pb}(\text{UO}_2)_4(\text{OH})_9 \cdot 2\text{H}_2\text{O}$; radioactive; forms small, amber-orange pseudo-hexagonal crystals, commonly barrel shaped; at Katanga, Congo.

van der Kolk method

A test used in microscopy to determine the index of refraction of a mineral grain relative to that of an immersion liquid. When transmitted light is blocked, the grain acts as a lens and the ocular inverts the image of the obstacle, causing a shadow to appear on the same side as the obstacle when the grain has the higher refractive index, but on the opposite side when the grain has the lower index. Syn: [oblique illumination method](#)

van der Waals bond

Weak forces in crystal structures caused by induced dipoles resulting from juxtaposition of molecules; e.g., the bonding between electrostatically neutral layers in the talc structure.

van Dorn sampler

This sediment sampler consists of a Plexiglas cylinder closed at each end by an ordinary rubber force cup. The two cups are connected by a length of surgical rubber tubing inside the cylinder, prestressed enough to permit the force cups to retain the sample in the cylinder. In the armed position, the two cups are pulled outside the cylinder, where they are restrained by a releasing mechanism attached to the outside wall. Two short loops of wire connect the cups to the releasing mechanism. The cups are released underwater by sending a messenger down the hydrographic wire. This sampler does not invert, which prevents use of reversing thermometers in conjunction with sampling. *Hunt*

Vandyke brown

a. A naturally occurring pigment derived from indefinite mixtures of iron oxide and organic matter. Obtained from bog earth and peat deposits, or from ochers containing bituminous matter. *CCD, 2* b. Etymol: its use by the 17th-Century Flemish painter Van Dyck. Syn: [ulmin brown](#)

vane

The target of a leveling staff; one of the sights of a compass or quadrant. *Webster 3rd*

vane anemometer

a. A small windmill-type instrument used to measure air velocity and to infer air volume movement. The vane anemometer has been the primary instrument for airflow measurement since the early 1900's. *Hartman, 2* b. See also: [anemometer](#) c. Consists of several light, flat vanes, usually eight in number, mounted on radial arms that are attached to a horizontal spindle. This rotor drives, through a suitable gear train, a counting mechanism that indicates the revolutions of the rotor. The indicating dial, usually graduated in feet of air, may be located either concentrically with the rotor, or in a plane at right angles to the plane of rotation. By observing the number of revolutions over a timed interval, the velocity of flow is found. The instrument is available in a number of forms to cover velocities ranging from 30 to 6,000 ft/min (9.1 to 1,830 m/min). *Roberts, 1*

vane-axial fan

An airfoil (propeller) or disk fan within a cylinder and equipped with air-guide vanes either before or after the wheel; includes driving-mechanism supports for belt drive or direct connection. *Strock, 2*

vane shear test

An in-place shear test in which a rod with thin radial vanes at the end is forced into the soil and the resistance to rotation of the rod is determined. *ASCE*

vane shear tester

A device used in soil testing, consisting of flat blades affixed to the end of a rod. It is forced into the soil, and the torque required to shear the soil, in situ, is determined as a measure of the shear strength of the zone tested by rotating the device. Syn: [vane tester](#)

vane test

An in-place test to measure the shear strength of fine-grained cohesive soils and other soft deposits. A rod with four flat radial blades, or vanes, projecting at 90 degrees

intervals is forced into the soil and rotated; the torque required to rotate the rod is a measure of the material's shear strength. *AGI*

vane tester

See: [vane shear tester](#)

vanner grease belt

In ore dressing, smelting, and refining, used for separation of valuable mineral from the gangue (waste minerals) in an ore. *DOT*

vanoxite

A mineral, $V_6 O_{13} \cdot 8H_2 O(?)$; a mixed-valence oxide; weakly radioactive; black; in the Colorado Plateau area as a sandstone cement; also a massive wood replacement associated with carnotite, gypsum, hewettite, pintadoite, tyuyamunite, and pyrite. See also: [kentSmithite](#)

vanthoffite

A monoclinic mineral, $Na_6 Mg(SO_4)_4$; colorless; at Wilhelmshall, Stassfurt, Germany.

vanuralite

A monoclinic mineral, $Al(UO_2)_2 (V_2 O_8)(OH) \cdot 8H_2 O$; yellow; at Mounana, Gabon.

vapart mill

A centrifugal grinder for pulverizing ore, coal, and coke. *Fay*

vapor

a. A substance in the gaseous state as distinguished from the liquid or solid state. *Webster 3rd; Zimmerman* b. Foul air in a mine. CF: [gas](#)

vapor barrier

A material intended to prevent the passage of water vapor through a building wall to prevent condensation within the wall. *Strock, 2*

vapor density

The relative density of a gas or vapor as compared with some specific standard (as hydrogen). Abbrev., v d. *Webster 3rd; Zimmerman*

vaporization

See: [evaporation](#)

vapor pressure

The pressure at which a liquid and its vapors are in equilibrium at a definite temperature. If the vapor pressure reaches the prevailing atmospheric pressure, the liquid boils.

Symbol, *p*. *Hackh; Handbook of Chemistry and Physics, 2*

vapor system

A steam-heating system operating at pressure very near that of the atmosphere. *Strock, 2*

vara

Any of various old Spanish units of length used in Latin America and the Southwestern United States, equal in different localities to between 31 in and 34 in (78.7 cm and 86.4 cm); e.g., a unit equal to 33.3333 in (84.666 cm) in Texas, to 33.372 in (84.764 cm) in California, to 33.00 in (83.82 cm) in Arizona and New Mexico, and to 32.9931 in and 32.9682 in (83.802 cm and 83.739 cm) (among others) in Mexico. For other values, see ASCE (1954). *AGI*

V-arching

Rock failure above a tunnel due to ring stresses. These cause rock to crack across a weakness plane and fall. The final shape is a reentrant V rather than a rounded arching.

Syn: [arching to a weakness](#) See also: [arching](#)

Varian nuclear magnetometer

This magnetometer is available in two models, one for airborne surveys and the other for use on the ground. Both measure the total magnetic field of the Earth rather than its components. *Dobrin*

variation

The angle by which the compass needle deviates from the true north; subject to annual, diurnal, and secular changes. Called more properly declination of the needle. See also:

[declination](#) *Standard, 2; Fay*

variation compass

A compass of delicate construction for observing the variation of the magnetic needle. *Webster 2nd*

variegated

Said of a sediment or sedimentary rock, such as red beds or sandstone, showing variations of color in irregular spots, streaks, blotches, stripes, or reticulate patterns. *AGI*

variegated copper ore

Bornite, erubescite. *Pryor, 3*

variegated ore

See: [bornite](#)

varietal mineral

A mineral that is either present in considerable amounts in a rock or characteristic of the rock; a mineral that distinguishes one variety of rock from another. Syn: [distinctive mineral](#)

variety

In mineralogy, a mineral showing differences in color, other physical properties, or minor variations in composition from the material considered typical of the species. An example is emerald, the green-colored gem beryl. *Hess*

variogram

A plot of the variance (one-half the mean squared difference) of paired sample measurements as a function of the distance (and optionally of the direction) between samples. Typically, all possible sample pairs are examined, and grouped into classes (lags) of approx. equal distance and direction. Variograms provide a means of quantifying the commonly observed relationship that samples close together will tend to have more similar values than samples far apart.

variole

A pea-size spherule, usually composed of radiating crystals of plagioclase or pyroxene. This term is generally applied only to such spherical bodies in basic igneous rock, e.g., variolite. CF: [spherulite](#)

variolite

A fine-grained igneous rock of basic composition containing varioles. Not recommended usage. *AGI*

variolitic

Said of the texture of a rock, esp. a basic igneous rock, composed of pea-size spherical bodies (varioles) in a finer-grained groundmass. CF: [spherulitic](#)

variometer

A geophysical device for measuring or recording variations in terrestrial magnetism; a variable inductance provided with a scale. *AGI*

variscite

a. An orthorhombic mineral, $\text{AlPO}_4 \cdot 2\text{H}_2\text{O}$; dimorphous with metavariscite; waxy; forms nodular masses in cavities where phosphate water acts on aluminous rock. Variscite is a popular gem material for cabochons and various carved objects, commonly substituting for turquoise. Syn: [lucinite](#); [utahlite](#). b. The mineral group mansfieldite, scorodite, strengite, and variscite. CF: [amatrice](#)

varislope screen

A suspended multiple deck screen with increased slopes in the second and third deck. It is used principally for coal and other large feed materials and combines scalping and sizing operations. The oversize lump material is removed on the top deck, egg or range size on the second, and nut size on the bottom deck. See also: [trislope screen](#); [vibratory screen](#). *Nelson*

varlamoffite

A mineral that is perhaps a variety of cassiterite.

varulite

A monoclinic mineral, $(\text{Na,Ca})_2(\text{Mn,Fe})_3(\text{PO}_4)_3$; alluaudite group; forms dull olive-green granular masses; at Varutrask, Sweden.

varve

a. A sedimentary bed or lamina or sequence of laminae deposited in a body of still water within 1 yr's time; specif. a thin pair of graded glaciolacustrine layers seasonally deposited, usually by meltwater streams, in a glacial lake or other body of stillwater in front of a glacier. A glacial varve normally includes a lower summer layer consisting of relatively coarse-grained, light-colored sediment (usually sand or silt) produced by rapid melting of ice in the warmer months, which grades upward into a thinner winter layer, consisting of very fine-grained (clayey), often organic, dark sediment slowly deposited from suspension in quiet water while the streams were ice bound. Counting and

correlation of varves have been used to measure the ages of Pleistocene glacial deposits. *AGI* b. Any cyclic sedimentary couplet, as in certain shales and evaporites.--Etymol: Swedish. *AGI*

varve clay

See: [varved clay](#)

varved clay

A distinctly laminated lacustrine sediment consisting of clay-rich varves; also the upper, fine-grained, winter layer of a glacial varve. Syn: [varve clay](#)

varves

Clayey soil containing thin alternate layers of different particle sizes; often combine the undesirable properties of clay and silt; formed from seasonal deposits from glacial streams. *Nelson*

vashegyite

An orthorhombic mineral, $\text{Al}_4(\text{PO}_4)_3(\text{OH})_3 \cdot 13\text{H}_2\text{O}$ (?); at Vashegy, Hungary, and near Manhattan, NV.

vat

a. A vessel or tub in which ore is washed or subjected to chemical treatment, as cyanide vat and chlorination vat. Syn: [tank](#) b. Salt pit. *AGI* c. A term used in the Southwestern United States for a dried and encrusted margin around a waterhole. *AGI*

vaterite

A hexagonal mineral, CaCO_3 ; trimorphous with calcite and aragonite; at Ballycraigy, Larne, Northern Ireland.

vaughanite

A pure, dense, homogeneous, dove-colored, fine-textured limestone that breaks with a smooth and more or less pronounced conchoidal fracture that contains relatively few fossils, and that typically has a white, chalky appearance on weathered surfaces. Named after T. Wayland Vaughan (1870-1952), U.S. paleontologist. *AGI*

vauquelinite

A monoclinic mineral, $\text{Pb}_2\text{Cu}(\text{CrO}_4)(\text{PO}_4)(\text{OH})$; fibrous.

vauxite

A triclinic mineral, $\text{FeAl}_2 (\text{PO}_4)_2 (\text{OH})_2 \cdot 6\text{H}_2\text{O}$; less hydrous than metavauxite or paravauxite; blue.

V-bob

A strong frame shaped like an isosceles triangle, turning on a pivot at its apex and used as a bell crank to change the direction of a main pump rod. It is used with Cornish pumping engines. *Webster 3rd; Fay*

V-box

Sloughing box, used to separate slime (as overflow) from faster-settling portion of solids in pulp. *Pryor, 3*

V-bucket conveyor elevator

See: [gravity-discharge conveyor elevator](#)

VCR

See: [vertical crater retreat](#)

V-cut

a. In mining and tunneling, a cut where the material blasted out in plan is like the letter V; usually consists of six or eight holes drilled into the face, half of which form an acute angle with the other half. *Fay* b. In underground blasting, a type of cut employed in which the cut holes meet in a V to pull the cut to the bottom of the holes properly. A single pair of holes may do in one kind of rock, but in another, two or three sets of V-holes entirely across the face may be needed. Also See also: [wedge cut](#)

veatchite

A triclinic and monoclinic mineral, $\text{Sr}_2 \text{B}_{11} \text{O}_{16} (\text{OH})_5 \cdot \text{H}_2\text{O}$; trimorphous with p-veatchite and veatchite-A.

vector

a. An entity represented as a directed magnitude, such as velocity, which is defined as consisting of a speed and a direction. See also: [scalar](#) *Hy* b. See: [hard vector](#)

vee cut

See: [wedge cut](#); V-cut.

vees

a. A layer of soft clay or earth on the sides of a fault or dike. Syn: [veez](#) b. The acute angle between the fault plane and a coal seam; e.g., working the coal to the vees of the fault. *Nelson*

vee table

A pneumatic table, of U.S. design, for the drycleaning of coal, an improved form of the S.J. table. *Nelson*

veez

See: [vees](#)

vegasite

See: [plumbojarosite](#)

vegetable jelly

Same as fundamental jelly, carbohummin, etc. Syn: [jelly](#) *Tomkeieff*

veil

a. A removable plate to cover a screen, the action of which is not desired. *Zern* b. An aggregate of minute bubbles creating a whitish or cloudlike appearance in quartz. c. A variously formed weblike or netlike film in a radiolarian; e.g., patagium.

vein

a. An epigenetic mineral filling of a fault or other fracture in a host rock, in tabular or sheetlike form, often with associated replacement of the host rock; a mineral deposit of this form and origin. CF: [lode](#) See also: [true vein](#) b. A narrow waterway or channel in rock or earth. Also, a stream of water flowing in such a channel. *AGI* c. A thin, sheetlike igneous intrusion into a fissure. Not recommended usage. *AGI* d. A coal seam or a bed of slate or other rock. Not recommended usage. *BS, 11* e. A zone or belt of mineralized rock lying within boundaries clearly separating it from neighboring rock. It includes all deposits of mineral matter found through a mineralized zone or belt coming from the same source, impressed with the same forms and appearing to have been created by the same processes. *Ricketts* f. A mineral deposit, usually steeply inclined. Used to describe a body that is usually smaller and has better defined walls than a lode. *Nelson* g. A rock fissure filled by intruded mineral matter. Many valuable minerals are codeposited with

gangue stuff in veins. Usually the formation is steep to vertical, unlike a bedded deposit in which values are sandwiched horizontally. Vein is typically long, deep, and relatively narrow. *Pryor*, 3 h. The term lode is commonly used synonymously for vein. i. The filling of a fissure or fault in a rock, particularly if deposited by aqueous solutions. When metalliferous, it is called by miners a lode; when filled with eruption material, a dike. A bed or shoot of ore parallel with the bedding. Also called blanket deposit. *Standard*, 2 j. A comparatively thin sheet of igneous rock injected into a crevice in rock. When this intrusion is large, it is called a dike. k. An irregular, sinuous, igneous injection, or a tabular body of rock formed by deposition from solutions rich in water or other volatile substances. *Holmes*, 2 l. A mineral body, thin in relation to its other dimensions, which cuts across the bedding and in which the minerals are later than the country rock. *BS*, 11 m. Sometimes used for a bed; e.g., a coal seam or a bed of slate. *BS*, 11 n. A layer, seam, or narrow irregular body of material different from surrounding formations. See also: [vein or lode claim](#)

veined gneiss

A composite gneiss with irregular layering. The term is generally used in the field and has no genetic implications (Dietrich, 1960). CF: [venite](#); composite gneiss. *AGI*

vein intersection

a. The depth in the borehole at which the hanging and/or footwall of a vein is encountered. *Long* b. The place where two or more veins cross or meet. *Long*

vein material

See: [veinstuff](#)

vein miner

A miner experienced in the winning and working of mineral veins. See also: [metal mining](#)

vein or lode claim

The terms "vein or lode" and "vein or lode claim" are used indiscriminately and interchangeably, and it follows that the term "vein or lode" is intended to be synonymous with the term "vein or lode claims." See also: [vein](#); [lode](#); [lode claim](#). *Fay*

vein quartz

A rock composed chiefly of sutured quartz crystals of pegmatitic or hydrothermal origin and commonly of variable size. *AGI*

veinstone

The valueless stone that occurs with the valuable minerals in lodes and veins. Also called lodestuff; matrix; vein mineral; veinstuff. Sometimes mistakenly called gangue. *Nelson; Fay*

veinstuff

a. All the minerals occurring in a vein. See also: [lodestuff](#) b. Gangue. Syn: [vein material](#)

vein system

An assemblage of veins of a particular area, age, or fracture system, usually inclusive of more than one lode. *AGI*

velardenite

See: [gehlenite](#)

velikhovite

A variety of pyrobitumen having a shining conchoidal fracture and occurring in the form of veins. It is partly soluble in organic solvent; sp gr, 1.2. In many ways it is similar to grahamite. It is assumed that it represents a weathering product of albertite. From the South Urals, Russia. *Tomkeieff*

velocities in pipes

Experience has proved that the following are allowable velocities in pipes: air, 30 to 50 ft/s (9.1 to 15.2 m/s); compressed air, 25 to 40 ft/s (7.6 to 12.2 m/s); steam, 160 to 250 ft/s (46.8 to 76.2 m/s); water, 5 to 10 ft/s (1.5 to 3.0 m/s). *Hammond*

velocity

a. In explosives, the speed (in meters or feet per second) at which the detonating wave passes through a column of explosives. A high-velocity explosive renders a shattering effect, whereas a low-velocity explosive has a pushing or heaving effect. Syn: [high velocity](#) b. Linear flow rate of air per unit time. Measured in meters per second. *Hartman, 1* c. A vector quantity that indicates a time rate of motion. *AGI*

velocity determination

The determination of velocities and average velocities within the earth by seismic measurements. *AGI*

velocity discontinuity

An abrupt change in the velocity of propagation of seismic waves within the earth, as at an interface. *AGI*

velocity distribution

Relationship between seismic wave velocity and depth. *Schieferdecker*

velocity head

a. The constant difference of height of a liquid between a level surface in a tank and a uniformly flowing jet through an orifice. *Standard, 2* b. The distance a body must fall under the force of gravity to acquire the velocity it possesses. See also: [kinetic energy](#) c. The energy possessed per unit weight of a fluid owing to its velocity. If at a given point the velocity is v feet per second, the velocity head at this point, $v^2/2g$, g being the acceleration due to gravity in feet per second squared. Also called kinetic head. Syn: [velocity pressure](#)

velocity lag

See: [distance lag](#)

velocity meter

A seismometer used to record the velocity of ground motions. *AGI*

velocity of air current

The higher the velocity of the air current, the greater will be the resistance to airflow. The resistance is nearly proportional to the velocity squared. *Mason*

velocity of approach

a. The average velocity of water in a channel at the point where the depth over a flow measuring weir is recorded. *Hammond* b. The mean velocity in the conduit immediately upstream from a weir, dam, Venturi throat, orifice, or other structure. *Seelye, 1*

velocity of detonation

a. The velocity with which the shock wave traverses an explosive charge on detonation. *BS, 12* b. The velocity of detonation of an explosive was previously determined by what is known as the Dautriche test. The basis of this test is that a length of Cordtex detonating fuse detonates at a uniform speed, and if the two ends of a length of Cordtex are detonated simultaneously, the detonation waves will meet at the middle of the length

of fuse. Similarly, if the two ends are detonated at different times, the distance from the middle of the fuse to the point where the two detonation waves meet is directly proportional to the interval of time between the detonations of the two ends of the Cordtex fuse. Furthermore, if the distance can be measured, the interval of time between the detonation can be calculated, since the velocity of detonation of Cordtex is known. Syn: [Dautriche test](#)

velocity of retreat

An average velocity of flow of a liquid just downstream of a measuring weir. *Hammond*

velocity pressure

a. The pressure equivalent of the air velocity at any particular point. This is always positive. *BS, 8* b. The pressure exerted by a moving fluid in the direction of its motion. It is the difference between the total pressure and the static pressure. *Strock, 2* c. In Mine ventilation, the pressure exerted by the kinetic energy of air movement. Syn: [velocity head](#) d. The algebraic difference between the total head and the static pressure. *Roberts, 1*

velocity profile

A linear arrangement of sensors used to record reflections over a large range of shot-to-geophone distances, which is used to determine seismic velocity from the time-distance relationship. *AGI*

velocity ratio

The ratio of the distance through which the force applied to a machine moves, and the distance through which the load moves. See also: [mechanical advantage](#)

velocity reducing collector

This type of collector is designed to remove very large dust particles. It is often used ahead of other collectors to reduce the dust load, and to remove the particles most likely to cause abrasion. The velocity reducing collector has no moving parts and, in most instances, can be installed in front of the induced draft fan, reducing the abrasion of the fan blades. This type of collector also can be used under many high-temperature conditions. *Pit and Quarry*

velometer

A small portable direct-reading instrument used to measure the velocity of air at a point. *Hartman, 2*

velvet

Profit; easily earned money. *Fay*

velvet copper ore

Cyanotrichite in bright blue velvetlike druses and spherical forms. Syn: [lettsomite](#); [cyanotrichite](#).

vend

Products sold by coal mine annually. *Pryor, 3*

vendeennite

A variety of fossil resin from Vendee, France. *Tomkeieff*

Venetian red

A high-grade ferric-oxide pigment of a purer red hue than either light red or Indian red. Obtained either native as a variety of hematite red or more often artificially, by calcining copperas in the presence of lime. The composition ranges from 15% to 40% ferric oxide and from 60% to 80% calcium sulfate. The 40% ferric oxide is the pure grade, and sp gr, 3.45. *CCD, 2*

venite

Migmatite of which the mobile portion(s) were formed by exudation (secretion) from the rock itself (Dietrich & Mehnert, 1961). CF: [veined gneiss](#); [composite gneiss](#). Not widely used. *AGI*

vent

a. In explosives, a small passage made with a needle through stemming, for admitting a squib to enable the charge to be lighted. b. A hole, extending up through the bearing at the top of the core-barrel inner tube, that allows water and air in the upper part of the inner tube to escape into the borehole or into the annular space between inner and outer barrels. *Long*

vent bag

An enclosed airway to direct airflow to a given area or location. *MSHA, 4*

ventilating column

See: [motive column](#)

ventilating current

A current of air traveling in mines. *Peel*

ventilating fan

See: [mine ventilating fan](#)

ventilating pressure

- a. The total head in pascals or kilopascals required to overcome the friction of the air in mines and to provide some final or exit velocity to discharge the air to the atmosphere.
- b. The total pressure exerted on the atmosphere by the mine fan to overcome the resistance of the mine to the passage of a required volume of air throughout the mine necessary for its ventilation. See also: [mine total head](#); [fan total head](#); [total ventilating pressure](#). *Kentucky*

ventilation

Mine workings are usually subdivided to form a number of separate ventilating districts. Each district is given a specified supply of fresh air and is free from contamination by the air of other districts. Accordingly, the main intake air is split into the different districts of the mine. Later, the return air from the districts reunite to restore the single main return air current at or near the upcast shaft. See also: [compound ventilation](#); [fan drift](#); [regulator](#). *Nelson*

ventilation department

A department for the purpose of planning adequate and economic ventilation for all future projects and to provide frequent information on existing ventilation systems. *Nelson*

ventilation doors

A door constructed to restrict the flow of ventilation air while permitting the passage of personnel and equipment. See also: [door](#); separation door.

ventilation ducts

Two kinds are available, flexible and rigid ducts. Flexible ducts generally consist of flexible tubes made from fabrics coated with rubber or polyvinyl chloride, a nonflammable substance. They are available in varying lengths. Flexible ducting is suited for face ventilation in a variety of mining methods. It is suited also to crooked

workings of limited extent. It has a higher resistance and a greater tendency to leak than rigid ducting. Rigid ducts are made of steel or fiberglass in lengths suitable for underground transport. This type of duct does not have to be accurately aligned and is therefore used, in the smaller sizes, in subsidiary work, particularly in crooked headings. For main tunnels where leakage must be minimized, flanged joints are used with suitable gaskets. *Roberts, 1*

ventilation efficiency

One measure of the efficiency of a mine ventilation system is the ratio of the total amount of air actually reaching the working faces to the total amount (volume in cubic feet per minute) of air handled by the fan. See also: [overall ventilation efficiency](#); [thermometric fan test](#); ventilation standards; volumetric efficiency. *Kentucky*

ventilation mason

A worker who erects by rough masonry or cement work, partitions of stone, brick, or concrete blocks to control proper circulation of air through passageways outby working places. *DOT*

ventilation plan

A plan or drawing, required by law, that shows the ventilation air currents in a mine and the means of controlling them. *BS, 7*

ventilation planning

When a new mine is projected or a new seam is to be worked from an existing mine, plans are prepared to show the proposed ventilating system, including the quantities of air and pressures and the principal appliances to control and distribute the air. Investigations and calculations are made to select a fan of the necessary type and size for the ventilation required. All of this important work comes within the general term ventilation planning. See also: [air requirements](#); [pressure survey](#); ventilation survey. *Nelson*

ventilation pressure

a. The pressure or head producing ventilation in a mine and measured by the height of a column of water it will support. The instrument used for this purpose is a water gage. b. Pressure producing the flow of air, measured by a water gage, or the difference in level between the two ends of the water column in a vertical U-shaped tube, one end of which is connected to the air under pressure--for example, in the passageway leading to the fan--the other end being to the atmosphere. In some cases, the ventilating pressure is reported as meters of water in the U-tube; in other cases, the head is given in pascals or kilopascals.

ventilation regulator

See: [regulator](#)

ventilation standards

The standards prescribed by regulations to provide air underground of a certain degree of purity. See also: [ventilation efficiency](#) *Nelson*

ventilation stopping

See: [stopping](#)

ventilation survey

a. Systematic observation of air pressure, quantity and quality, throughout a mine or part of a mine, to allow a detailed analysis of the ventilation system. Syn: [pressure-quantity survey](#) *Sinclair, 1; BS, 8* b. To distribute the air in a mine efficiently and economically, ventilation surveys are conducted. They may be classified as qualitative, quantitative, and pressure surveys. Qualitative surveys determine the proportion of flammable or poisonous gas, or dust, in the air that is being circulated through the mine. In hot and humid mines, they determine the conditions of air temperature and humidity. Quantitative surveys determine the quantity of air being circulated through the mine workings for a variety of reasons. This is done by measuring the volume of air passing at different points in the circuit by means of an anemometer, to investigate the existing air distribution, particularly to the individual faces; the location of leakage; and the possibility of its reduction or elimination. Pressure surveys measure the pressure absorbed and the resistance of the roadways and faces included in the survey. This enables determination of the power required to circulate the air in the different sections of the circuit and that is expended in ventilating individual districts. The total power expended in ventilating the mine may then be summed and the cost estimated. See also: [ventilation planning](#) *Sinclair, 1; BS, 8*

ventilation symbols

A set of standard letters, signs, or marks used on mine ventilation plans to represent certain appliances or constructions to direct and control the flow of air underground. *Nelson*

ventilation tubing

Sheet steel or canvas piping 12 to 24 in (0.3 to 0.6 m) in diameter for conducting air to or from a tunnel, hard heading face, or sinking pit. The tubing extends from an auxiliary fan to within a few yards of the face to be ventilated. See also: [tubing](#); [auxiliary ventilation](#). *Nelson*

ventilator

a. A mechanical apparatus for producing a current of air underground, as a blowing or exhaust fan. b. A furnace for ventilating a mine by heating the upcast air. c. A device for providing fresh air to a room or other space by introducing outside air or by exhausting foul air. *Crispin*

vent pipe

See: [vent tube](#)

vent tube

a. Hose or piping conducting air-ejected drill cuttings from the borehole collar to a point some distance from the drill. *Long* b. An exhaust pipe or tube. *Long* c. Tubing suspended from a wire in a mine opening to supply fresh air to a working place. Syn: [vent pipe](#)

ventubes

Tubes of steel, fiberglass, or coated fabric with thin walls that can be easily connected. They are used in mine ventilation to lead air wherever it is needed. Also called ventilation tubing. *Stoces*

Venturi

A contraction in a tube or duct to accelerate the flow and lower the static pressure. It is used for metering and other purposes.

Venturi blower

a. A device resembling a Venturi meter that directs a jet of compressed air for ventilating short headings. The device is commonly made at a mine, and one well-proved type is called the Modder Deep. These blowers are mainly used in conjunction with ventilation ducting for the ventilation of headings several hundred feet in length. *Roberts, 1* b. An apparatus to induce a flow of air or gas in a duct by means of a jet of compressed air or water from a small nozzle in the duct. *BS, 8*

Venturi flume

a. A type of open flume with a contracted throat that causes a drop in the hydraulic gradeline; used for measuring flow. *Seelye, 1* b. A control flume that comprises a short constricted section followed by one expanding to normal width. See also: [control](#)

Venturi meter

A trademark for a form of the Venturi tube arranged to measure the flow of a liquid in pipes. Small tubes are attached to the Venturi tube at the throat and at the point where the liquid enters the converging entrance. The difference in pressure heads is shown on some form of manometer and from this difference and a knowledge of the diameters of the tubes, the quantity of flow is determined. *Webster 2nd*

Venturi tube

A closed conduit that is gradually contracted to a throat causing a reduction of pressure head by which the velocity through the throat may be determined. The contraction is generally followed, but not necessarily so, by gradual enlargement to original size. Piezometers connected to the pipe above the contracting section and at the throat indicate the drop in the pressure head, which is an index of flow. *Seelye, 1*

vent wire

A wire used by founders to make a hole in a sand mold for the escape of air or gases. *Standard, 2*

venus hairstone

See: [rutilated quartz](#)

Venus's hairstone

Quartz containing needle-shaped crystals of rutile. See also: [Thetis hairstone](#); [sagenitic quartz](#); [sagenite](#). *Standard, 2*

verde antique

A dark-green rock composed essentially of serpentine (hydrous magnesium silicate) usually crisscrossed with white veinlets of marble. Found in California, Georgia, Maryland, Massachusetts, New York, and Virginia. Used as an ornamental stone. In commerce, it is often classed as a marble. *CCD, 2; Sanford*

verdelite

A green variety of elbaite (tourmaline).

verde salt

See: [thenardite](#)

Verdet's constant

The rotation of the plane of polarization per centimeter per unit magnetic field in the Faraday effect. The value of the constant varies with temperature and is approx. proportional to the square of the wavelength of the light. *CTD*

verdite

A deep green, relatively soft metamorphic rock of green fuschite (chromian muscovite) and clay with scattered grains of rutile; occurs in Transvaal and Zimbabwe; is carved for ornamental use.

verdolite

Talcosedolomitic breccia rock from New Jersey. *Schaller*

verifier

a. A tool used in deep boring for detaching and bringing to the surface portions of the wall of the borehole at any desired depth. *Fay* b. In gas testing, an apparatus by which the amount of gas required to produce a flame of a given size is measured; a gas verifier. *Standard, 2*

vermeil

a. An orange-red garnet. Syn: [vermilion](#) b. A reddish brown to orange-red gem variety of corundum. c. An orange-red spinel. Syn: [vermeille](#)

vermeille

See: [vermeil](#)

vermicular quartz

Quartz in wormlike intergrowths with feldspar. See also: [myrmekite](#)

vermiculite

A monoclinic mineral, $(\text{Mg,Fe,Al})_6 (\text{Si,Al})_8 \text{O}_{20} (\text{OH})_4 \cdot 8\text{H}_2\text{O}$; mica group; basal cleavage; soft; pearly; a hydrothermal or weathering alteration of biotite; expands 6 to 20 times by thermal exfoliation; occurs in clay sizes in soils and as crystals and megacrysts in ultramafic rocks; in Montana, North Carolina, South Carolina, Wyoming, Virginia, Colorado, and South Africa. Syn: [lernilite](#)

vermilion

a. A red pigment used in enormous quantities. Usually made from mercuric sulfide, HgS, tinted with puranitriline. Also spelled vermillion. *Crispin* b. A bright-red pigment consisting of mercuric sulfide. Prepared synthetically (as by the reaction of mercury, sulfur, and sodium hydroxide), but formerly obtained from the mineral cinnabar. Color ranges from crimson when coarse grained to nearly orange when finely divided. Both spellings are correct. *Webster 3rd* c. See: [alpha mercuric sulfide](#); cinnabar; vermeil.

vermillion

In the Lake Superior region, the lowest of the stratified schists; the crystalline schists. *Fay*

vernadskite

Antlerite in aggregates of minute crystals or as pseudomorphs after dolerphanite. See also: [antlerite](#)

Verneuil process

A technique developed by Auguste V.L. Verneuil (1856-1913), French mineralogist and chemist, for the manufacture of large crystals of corundum and spinel in which powdered alumina with appropriate oxide dopants is melted in an oxyhydrogen flame to produce boules of synthetic gems. See also: [boule](#)

vernier closure meter

An instrument used to measure strain.

vernier compass

A surveyor's compass with a vernier, used for measuring angles without the use of the magnetic needle by means of a compensating adjustment made for magnetic variation. *AGI*

vernier-reading manometer

This series of manometers covers a range of pressures from 0.001-in (25.4 μ m) water gage to 40-in (1.02-m) water gage. Syn: [micrometer-reading manometer](#)

verrankohle

Rolled fragments of brown coal found on the coast of Norway. *Tomkeieff*

vertical

a. A term used to define a direction that is perpendicular to a horizontal, or level, plane. *AGI* b. Local usage for vertical fractures, esp. in the Black Hills, South Dakota. *AGI* c. Said of deposits and coal seams with a dip of from 60 degrees to 90 degrees. *Stoces* d. In aerial photographic mapping, a vertical line through the exposure station or rear nodal point. *Seelye, 2* e. Orientation of a plumb-bob on a string under the force of gravity. *Seelye, 2*

vertical aerial photograph

A photograph taken from an aircraft for purposes of aerial mapping or aerial geophysical prospecting; special cameras and techniques are employed. See also: [profile flying](#)

vertical angle

Angle of elevation or depression, measured from the true horizontal plane. *Seelye, 2*

vertical auger drill

A mobile-type rotary drill used on opencast sites with no hard rock for drilling vertical blasting holes. It can drill a hole of 5 in or 6 in (12.7 cm or 15.2 cm) in diameter to depths of about 30 ft (9.1 m). Drilling is by means of a rotary cutting head with interchangeable cutting bits, the auger removing the cuttings from the hole. An overall speed of 30 ft/h (9.1 m/h) can be obtained. See also: [horizontal auger](#) *Nelson*

vertical balance

An instrument for measuring variations in the vertical component of the terrestrial magnetic field, usually by balancing the torque on a magnet system by means of a counter gravitational torque acting on counterweights. *AGI*

vertical chain conveyor

Opposed-shelf type that has two or more vertical elevating conveying units opposed to each other. Each unit consists of one or more endless chains whose adjacent facing runs operate in parallel paths. Thus, each pair of opposing shelves or brackets receive objects (usually dish trays) and deliver them to any number of elevations.

vertical circle

a. Graduated circle on theodolite or tacheometer, by use of which the slope of the collimation line through sighting telescope is measured in survey work. *Pryor, 3* b. Any great circle of the celestial sphere passing through the zenith. *AGI*

vertical collimator

An instrument in which the telescope sights vertically (upward or downward); used chiefly for centering a theodolite on a tower exactly over a station mark on the ground. It may be used for any vertical sight. *Seelye, 2*

vertical component

That part, or component, of a vector that is perpendicular to a horizontal or level plane. *AGI*

vertical crater retreat

a. A blasting method employed in underground sublevel mining. Initially a vertical slot extending across the width of the stope is mined. The remaining portion of the stope is then blasted by section into the vertical slot following sublevel procedures. *SME, 1* b. A variation of the sublevel stoping method that uses basic crater blasting models. Blasting is carried out at the base of vertical boreholes, making horizontal cuts and advancing upwards. A spherical charge is placed at an optimal distance from the stope back so that a maximum volume of rock is broken in the shape of an inverted cone. Borehole spacing is determined so that overlapping fragmentation cones do not disturb adjacent explosive charges. Abbrev. VCR.

vertical crater retreat mining

A patented mining method in which large, parallel, vertical drillholes permit placement of nearly spherical explosive charges, such that horizontal slices of ore are then broken into an undercut; applicable to ore of only moderate strength. *SME, 1*

vertical curve

a. The curve between two lengths of a straight roadway that possess different gradients. The curve provides a gradual change for haulages from one inclination to the other. The curve leading to the top or brow of an inclined plane would be convex and at the bottom would be concave. *Nelson* b. The graduated curve connecting two lengths of a railway or road, which are at different slopes. *Hammond* c. The meeting of different gradients in a road or pipe. *Nichols, 1*

vertical cut

See: [shear cut](#)

vertical dip slip

See: [vertical slip](#)

vertical drains

Usually column of sand used to vent water squeezed out of humus by weight of fill.
Nichols, 1

vertical exaggeration

a. A deliberate increase in the vertical scale of a relief model, plastic relief map, block diagram, or cross section, while retaining the horizontal scale, to make the model, map, diagram, or section more clearly perceptible. *AGI* b. The ratio expressing vertical exaggeration; e.g., if the horizontal scale is 1 in to 1 mi and the vertical scale is 1 in to 2,000 ft, the vertical exaggeration is 2.64. Abbrev: VE *AGI* c. The apparent increase in the relief as seen in a stereoscopic image. *AGI*

vertical excavation limited area

This method of excavation is used in loose or wet soils--unconsolidated formations--where the banks must be supported by shoring or sheathing. The material must, out of necessity, be lifted out vertically. *Carson, 1*

vertical fold

See: [upright fold](#)

vertical gradient

The rate of change of a quantity in the direction of the vertical.

vertical gradiometer

An instrument for measuring the vertical gradient of gravity. *AGI*

vertical guide idler

An idler roller of about 3 in (7.6 cm) in diameter so placed as to make contact with the edge of the belt conveyor should the latter run too much to one side. Although vertical guide rollers are effective, they cause edge wear on the belting and their use is not favored. *Nelson*

vertical intensity

The vertical component of the magnetic field; usually considered positive if downward, negative if upward. CF: [horizontal intensity](#)

vertical line

One that is exactly upright, or it points straight up and down. *Jones, 2*

vertical load-bearing test

See: [load-bearing test](#)

vertical mill

A rolling mill in which the rolls are oriented vertically. *Osborne*

vertical photograph

An aerial photograph made with the camera axis vertical (camera pointing straight down) or as nearly vertical as possible in an aircraft. *AGI*

vertical pump

This pump is often of the single-acting bucket or ram type with single or double cylinders and either with or without a flywheel. Vertical pumps may be used where headroom is adequate but area restricted, although horizontal reciprocating pumps are more generally used. *Sinclair, 4*

vertical reciprocating conveyer

A power or gravity-actuated unit that receives objects on a carrier or car bed usually constructed of a power or roller conveyor. The object is then elevated or lowered to other elevations.

vertical sand drain

a. A boring through clay or silty soil that is filled with sand or gravel to facilitate drainage of liquid from the soil. *Hammond* b. See: [perched water table](#)

vertical screw conveyor

A screw conveyor that conveys in a substantially vertical path. See also: [screw conveyor](#)

vertical seismograph

An instrument that registers the vertical component of ground motion. *Schieferdecker*

vertical separation

In a fault, the distance measured vertically between two parts of a displaced marker such as a bed. CF: [horizontal separation](#)

vertical shaft

A shaft sunk at an angle of 90 degrees with the horizon or directly downward toward the center of the Earth. *Weed, 2*

vertical shear

Reference is to a beam, assumed for convenience to be horizontal and to be loaded and supported by forces, all of which lie in a vertical plane. The vertical shear at any section of the beam is the vertical component of all forces that act on the beam to the left of the section. The vertical shear is positive when upward and negative when downward. *Roark*

vertical shift

In a fault, the vertical component of the shift. See also: [shift](#) *AGI*

vertical slip

In a fault, the vertical component of the net slip; it equals the vertical component of the dip slip. CF: [horizontal slip](#) Syn: [vertical dip slip](#)

vertical takeup

A mechanism in which the takeup or the movable pulley travels in a vertical plane. *NEMA, 2*

vertical theory

The earliest view of subsidence in which it was supposed that the lines of break (limiting lines) were more or less vertical. Pillars left for support were accordingly formed immediately under the object to be protected, the question of dip being disregarded. *Briggs*

vertical trace

A trace on the ground motion record representing the component of motion in a vertical plane and in the direction of the seismic wave travel direction.

vesicle

A cavity of variable shape in a lava, formed by the entrapment of a gas bubble during solidification.

vesicular

Said of the texture of a rock, esp. a lava, characterized by abundant vesicles formed as a result of the expansion of gases during the fluid stage of the lava. CF: [cellular](#); [scoriaceous](#). *AGI*

vesuvian

a. Original spelling of vesuvianite. See also: [leucite](#) b. A mixture of calcite and hydromagnesite. *Hey, I*

vesuvianite

A mineral, $\text{Ca}_{10} \text{Mg}_2 \text{Al}_4 (\text{SiO}_4)_5 (\text{Si}_2 \text{O}_7)_2 (\text{OH})_4$. Tetragonal. Common in contact-metamorphosed limestones. A massive light green variety is known as californite. Syn: [idocrase](#)

vesuvian jade

A jadelike variety of vesuvianite (idocrase). Also called californite. *English*

veszelyite

A monoclinic mineral, $(\text{Cu,Zn})_3 (\text{PO}_4)(\text{OH})_3 \cdot 2\text{H}_2\text{O}$; greenish-blue. Formerly called arakawaite.

Vezein's sampler

A mechanical sampling device that automatically selects one twenty-fifth or one sixty-fourth of the ore passing through. *Fay*

V-flume

A V-shaped flume, supported by trestlework and used by miners for bringing down timber and wood from the mountains, at the same time using the water for mining purposes. *Fay*

vibracone

A vibrating ore screen in which the feed is from a saucer-shaped distributor onto a conical surface kept in vibration by a ratchet motion. *Liddell*

vibrate

To have a swinging or oscillating motion; to move or swing back and forth, such as a pendulum does; to have a period of vibration; to fluctuate; to vacillate; to sound, such as a voice vibrates in an ear; to throb. *AGI*

vibrating conveyor

a. A trough or tube flexibly supported and vibrated at relatively high frequency and small amplitude to convey bulk material or objects. See also: [oscillating conveyor](#) b. A metal trough mounted on flexible supports and free to move in a vertical plane. It is vibrated at an angle of about 30 degrees to the horizontal. The material being conveyed moves in a series of gentle pitches and catches that blend to produce continuous, uniform flow. There is no tumbling or sliding of the material to cause wear of the trough. There are two basic types of vibrating conveyors: (1) the natural frequency types (those supported by heavy-duty stiff coil or leaf springs), and (2) forced vibration types (those supported by rocker arms or rods pivoted at the trough and at the base connections). Materials can be moved downward, horizontally, or up to 10 degrees slopes. It can convey coal, limestone, sand, coke, granite, gravel, etc. See also: [shaker conveyor](#)

vibrating coring tube

A sediment coring tube designed to vibrate in such a way as to overcome the resistance of compacted ocean floor sediments, sands, and gravel. *Hunt*

vibrating grate

A stoker developed in Germany and used increasingly in that country and in the United States. The hearth consists of a rigid water-cooled matrix. Coal is fed on to this at one end and is moved across it by the vibrating motion to discharge as ash at the other end. The vibrations, with an amplitude of about 1/8 in (3 mm) and in progress for about 5 s every 2 min give a satisfactory feed rate. The rate of feed is controlled by altering the duration of the vibrations. See also: [stoker](#); [underfeed stoker](#). *Nelson*

vibrating grease table

This type table is used at the Kimberly Mines in South Africa for concentrating the -3.33- to +0.59-mm fraction of pan concentrate and other material of +0.59-mm size. Efficiency is 99%, and the ratio of concentration 50,000:1.

vibrating grizzlies

Bar grizzlies mounted on eccentrics so that the entire assembly is given a forward and backward movement at a speed of some 100 strokes a minute. This is the type of grizzly now generally used ahead of a primary crusher. *Pit and Quarry*

vibrating platform

A loading stage or structure with a double vibrating action that causes the coal or minerals to settle down in a mine car while being loaded. This settlement increases the car-carrying capacity and reduces spillage during transit. Syn: [tram vibrator](#)

vibrating screen

a. A commercial screen in which the cloth, wire, or bar deck is vibrated by solenoid or by magnetostriction, or mechanically by eccentrics or unbalanced spinning weights. *Pryor, 3* b. A screen oscillated either by mechanical or electrical means. The amplitude of movement of the vibrating screen is smaller than that of the jiggling screen and its speed of oscillation is higher. *BS, 5* c. A screen that is vibrated to separate and move pieces resting on it. *Nichols, 1* d. Machines of this type consist of one or more slightly inclined screening surfaces mounted in a robust frame. To increase the capacity and prevent blinding of holes, the screening surfaces are caused to vibrate. This may be done by mounting the screen on powerful springs and causing it to bear down on the underside of the frame. An alternative method used in the Hummer screen is to stretch the wire screen to a high tension and mount an electromagnet actuated by an alternating current at some convenient point on the frame. The magnet works against the springs on which the screen is mounted, and in this way very rapid vibration can be secured and blinding greatly reduced. *Miall*

vibrating screens (heated)

Wire-mesh screens that are vibrated and heated electrically to increase efficiency. See also: [screens](#)

vibrating wire strain gage

This consists of a thin steel wire stretched between knife edges, one being free to move longitudinally. The wire is maintained vibrating at its natural frequency by an electrical method. The knife edges are held firmly against the girder under test, a change of strain in the girder varying tension in the wire and hence its natural frequency. This gage is used in conjunction with a reference instrument of fixed frequency; electrical impulses from both instruments are superimposed to produce beats having a frequency equal to the difference between the frequencies of the two instruments. Changes in the frequency of the test gage caused by variations in strain result in identical changes in the beat frequency. The joint output from these two instruments is applied to the plates of a cathode-ray tube, leading to an oscillation of the electron beam with a frequency equal to that of the higher of the two applied frequencies, with an amplitude that increases and decreases with the same frequency as that of the beats. *Hammond*

vibration

a. The act of vibrating; oscillation. Vibrations may be free or forced; longitudinal, transverse, torsional, or dilatational; also classified according to kind, such as acoustical, electrical, flexural, etc. *AGI* b. The undesirable oscillatory movements of a drill string. *Long*

vibration drilling

Drilling in which a frequency of vibration in the range of 100 to 20,000 Hz is used to fracture rock. Ultrasonic drilling is one of the better known methods of vibration drilling. *Min. Miner. Eng., 1*

vibration gravimeter

A device that measures gravity by observation of the period of transverse vibration of a thin wire tensioned by the weight of a known mass; useful for observation at sea. *AGI*

vibration meter

A seismometer that is used for measuring vibrations of structures from other than seismic causes. *AGI*

vibration method of roof testing

A person's fingertips are placed against the roof, and then the roof is struck a sharp heavy blow. Such a blow usually sets up easily felt vibrations in an unsound roof.

vibration of foundations

The foundations of machinery installed in a building should be so designed that the frequency of the machine is two times the natural frequency of the combined system of machines and foundations. *Hammond*

vibration test

An approximate grading test for coarse-grained soils. A flat paper-covered board is inclined at a slope of 1:24. The dry and powdered sample of soil is spread in a thin layer across the top of the board. The board is tapped sharply and repeatedly. The soil will travel down the board, the largest particles traveling faster and further than the smaller ones. Dependent on the degree in which the soil spreads out, a grading can be allotted to the soil. *Nelson*

vibrator

a. A mechanism imparting vibration to screens, concrete consolidators, and shaking tables. b. A tool that vibrates at 3,000 to 10,000 cycles per minute. It can be inserted into wet concrete or attached to formwork to compact the concrete. c. A device for attachment to bins or chutes to produce vibration and thus assist in gravity flow of contained material.

vibratory screen

A sizing screen similar to the shaking screen, but the reciprocating movement imparted to it is of greater frequency and much smaller amplitude--1,000 rpm and 1/4 in (6.4 mm) being typical. High-frequency vibration is more effective than the slow movement of the shaker in preventing blinding of holes, and the screening is more effective. It may contain one, two, or three screen decks with water sprays for washing products when screening. Five products ranging from plus 3/4 in (19.1 mm) to minus 1/8 in (3.2 mm) are possible from a double-deck screen. In general, the screen is inclined at from 12 degrees to 14 degrees for the coarser sizes and 17 degrees to 21 degrees for the finer sizes with counterflow operation. See also: [pool washing screen](#); [varislope screen](#).
Nelson

Vibrex grease table

A device to concentrate and separate diamonds from gangue material. It is based on the principle that short, sharp vibrations in rapid succession transmitted to a greased surface cause diamonds to become imbedded in the grease, while water washes away other materials.

Vibroflotation

The trade name for a geotechnical process that uses vibration to compact clean sands and gravels. The vibration is combined with a water jet to give a high degree of compaction.
Hammond

vibrograph

An instrument for recording the ground vibrations caused by heavy quarry blasts. The relationship between the amount of vibration, the distance from the blast, and the weight of explosive fired may be expressed thus: $A = (KE)/D$, where A = maximum amplitude in thousandths of an inch; K = constant depending on the quarry site; E = weight of explosive in pounds; and D = distance in feet. The constant K can be determined by firing a specimen blast of a given size at a given distance and measuring the amplitude of the record obtained. Amplitudes in excess of 0.04 in (1 mm) may give rise to damage. A movement of 0.008 in (0.2 mm) can be felt, and if used an excessive number of times may give rise to complaints of nuisance and damage. Short-delay blasting methods with small diameter holes reduce vibration hazards. See also: [falling-pin seismometer](#); seismograph. *Nelson*

vicinal face

a. One of the facets modifying normal crystal faces; they usually lie nearly in the plane of the face they modify. *CMD* b. One of the crystal faces with complex Miller indices in apparent violation of the Bravais law requiring high densities of lattice points parallel to prominent faces. Vicinal faces are small and diverge from major faces by very small angles. Syn: [vicinal form](#)

vicinal form

See: [vicinal face](#)

Vickers' diamond hardness tester

A small impression machine, capable of testing very hard metals, finished components, and very thin sheets. The diamond is similar to that used in the diamond pyramid hardness test. The duration of application of the load is controlled automatically, being always applied and removed in exactly the same manner. This machine may also be used with a ball indenter for the Brinell hardness test. *Hammond*

Vickers hardness test

A test of resistance to deformation of metals or minerals in which a pyramid-shaped diamond is forced into a polished surface of the specimen to be tested under various static loads. The result is a function of the average length of the diagonals of the resulting indentation. CF: [Tukon hardness test](#); [Brinell hardness test](#). *AGI*

victualic coupling

A development in which a groove is cut around each end of a pipe instead of the usual threads. Two ends of pipe are then lined up and a rubber ring is fitted around the joint. A pair of semicircular bands, forming a sleeve, are placed around the ring and are drawn together with two bolts. These have a ridge on both edges that fits into the groove of the pipe. As they are tightened, the rubber ring is compressed, making a watertight joint, while the ridges fitting in the grooves make it strong mechanically. Victualic pipe is faster to lay because in large sizes it does not have to be aligned perfectly and screwed in. *Kentucky*

victualic joint

A proprietary pipe joint that allows the pipes to move through several degrees after fixing but yet to remain watertight. This joint is designed to allow about 12 degrees of movement without causing leakage. The pipes have specially shouldered ends that are contained by a circumferential rubber washer held by a special circumferential-type flange. The water has access to the inner part of the washer, on which it exerts pressure and thereby seals the joint. *Hammond; Mason*

Vielle-Montagne furnace

A mechanical roasting furnace similar to the Ross and Welter type. *Fay*

Vienna turquoise

An amorphous turquoise imitation once manufactured in Austria, Czechoslovakia, France, and England. Having approx. the same chemical composition, hardness, density, and fracture, it is more difficult to detect than the various blue-stained minerals since used as turquoise substitutes.

vierendeel girder

An open-frame N-truss without diagonal members, with rigid joints between the top and bottom chords and the verticals. Known also as open-frame girder. *Hammond*

viese

Scot. The line of fracture of a fault or the soft earth in a fissure or on the sides of a fault. Also spelled vise.

vignite

A magnetic iron ore. *Fay*

vigorite

An explosive resembling dynamite No. 2 and consisting of nitroglycerin with a more or less explosive dope. *Fay*

Vigorite No. 5

Permissible explosive; used in mines. Also called L.F. Vigorite No. 5. *Bennett*

villamaninite

An isometric mineral, $(\text{Cu,Ni,Co,Fe})(\text{S,Se})_2$; pyrite group; forms small iron-black cubo-octahedra and radiating nodular masses; at Villamin, Spain.

Villela's reagent

An etching reagent consisting of 95 ml of ethyl alcohol, 5 ml of hydrochloric acid, and 1 g of picric acid. *Osborne*

villiaumite

An isometric mineral, NaF; soft; deep carmine; forms small crystals and grains in nepheline syenite; in Islands of Los, Guinea.

vinney

Copper ore, with a green efflorescence like verdigris. *Fay*

vinogradovite

A monoclinic mineral, $(\text{Na,Ca,K})_4 \text{Ti}_4 \text{AlSi}_6 \text{O}_{23} (\text{OH}) \cdot 2\text{H}_2 \text{O}$; white to colorless; forms crystals and spherical aggregates in nepheline syenite in the Kola Peninsula, Russia.

vinyl acetal resins

Prepared from polyvinyl acetate. Properties are toughness, adhesiveness, imperviousness to moisture, and stability toward light and heat. Used as an interlayer in safety glass and as a bonding resin. *Crispin*

violaite

A highly pleochroic variety of clinopyroxene found in the Caucasus Mountains, Russia.

violan

A violet variety of diopside found at St. Marcel, Piemont, Italy.

violite

See: [copiapite](#)

virgate

To branch in diverging lines. *Webster 3rd*

virgation

a. A divergent, branchlike pattern of fault distribution. The term is used in Russian literature. *AGI* b. A fold pattern in which the axial surfaces diverge or fan out from a central bundle. *AGI* c. A sheaflike pattern, as shown on a map, of mountain ranges diverging from a common center. Ant: syntaxis. *AGI*

virgin

a. Unworked or untouched; said of areas where there has been no mining. *Mason* b. An unexploited area or rock formation in which boreholes have not been drilled. *Long* c.

See: [primary metal](#)

virgin clay

Fresh clay, as distinguished from that which has been fired. *AGI*

virgin coal

An area of coal that is in place (in situ) and unimpaired by mining activities. *Nelson*

virgin metal

Pure metal obtained directly from ore. See also: [primary metal](#) *ASM, I; Newton, I*

viridine

A green manganese-rich variety of andalusite.

viridite

a. A ferruginous chlorite in chloritic iron ore. b. A general term formerly applied to indeterminable and obscure green alteration products occurring in scales and threads in the groundmass of porphyritic rocks.

virtual value

The calibration of alternating current instruments is based upon what is called the virtual value, and this corresponds to the direct-current value, which would produce the same heating effect in a given resistance. The peak value of alternating voltage or current is 1.4 times greater than the virtual value. *Mason*

viscometer

An instrument used to measure the viscosity. Syn: [viscosimeter](#) *AGI*

viscosimeter

See: [viscometer](#)

viscosity

The property of a fluid to offer internal resistance to flow; its internal friction. Specif., the ratio of the shear stress to the rate of shear strain. *AGI*

viscosity coefficient

A numerical factor that measures the internal resistance of a fluid to flow; it equals the shearing force in dynes per square centimeter transmitted from one fluid to another that is 1 cm away, and generated by the difference in fluid velocities of 1 cm/s in the two planes. The greater the resistance to flow, the larger the coefficient. Syn: [absolute viscosity](#); [dynamic viscosity](#). *AGI*

viscountess

Building slate 18 in by 10 in (45.7 cm by 25.4 cm). *Pryor, 3*

viscous

a. Adhesive or sticky, having a ropy or glutinous consistency. *Webster 3rd b.*
Imperfectly fluid; designating a substance that, like tar or wax, will change its form under the influence of a deforming force, but not instantly, as more perfect fluids do. *Standard, 2*

viscous damping

Viscous damping is the dissipation of energy that occurs when a particle in a vibrating system is resisted by a force the magnitude of which is a constant, independent of displacement and velocity, and the direction of which is opposite to the direction of the velocity of the particle. *Hy*

viscous flow

A type of fluid flow in which there is a continuous steady motion of the particles; the motion at a fixed point always remains constant. Also called streamline flow; laminar flow; steady flow. *CTD*

viscous resistance

The effect of surface friction between a particle and a liquid when the particle moves through the liquid. CF: [turbulent resistance](#) *Newton, 1*

Visean

Upper Lower Carboniferous. *AGI*

viseite

An isometric mineral, $\text{Ca}_{10} \text{Al}_{24} (\text{SiO}_4)_6 (\text{PO}_4)_7 \text{O}_{22} \text{F}_3 \cdot 72\text{H}_2 \text{O} (?)$; white; forms wartlike masses; at Vise, Belgium.

visibility meters

The general principle of such meters is to observe a portion of the visual field against its background and then to bring about a condition such that the observed difference in brightness reaches a threshold value so that it is only just discernible. The instruments differ in their means by which this end is achieved. The threshold may be produced quite simply by interposing a light-absorbing medium, such as an optical wedge, in the field

of view. Other methods include reducing the contrast between the object and its background by superimposing a veiling brightness over the observed field. *Roberts, 2*

visible light

a. The light of the visible spectrum. b. Electromagnetic radiation, with wavelength range approx. 4,000 to 7,000 Å, which a normal human eye can detect. CF: [invisible light](#); ultraviolet; infrared.

visible spectrum

That portion of the electromagnetic spectrum in which the waves normally produce, upon the human eye, color sensations of red, orange, yellow, green, blue, violet, or their intermediate hues, or of white light if the rays are combined. Distinguished from radio, infrared, ultraviolet, gamma, and X-rays.

Vissac jig

An air-operated pulsator jig in which air is alternately compressed and allowed to expand to produce pulsation. This jig has been used principally on sized bituminous coal. *Mitchell*

visual indicator

A device by which the winding or haulage engineman can see on a dial or panel the position of the cages in a shaft or the journey on the haulage plane. See also: [depth indicator](#)

Vitasul

A trade name for a chemical additive that eliminates or reduces considerably the danger of diesel locomotive fumes underground. Tests have established that the chemical, added to diesel fuel, reduces the carbon-monoxide danger from diesel locomotive exhausts to negligible proportions. *Nelson*

vitiated air

Air that has been rendered impure by the breath of workers and horses, or by being mixed with the various gases given off in mines. It is frequently called return air. *Peel*

vitrain

a. Designation of macroscopically recognizable, very bright bands of coals. Very bright bands or lenses, usually a few millimeters (3 to 5) in width; thick bands are rare. Clean to the touch. In many coals, the vitrain is permeated with numerous fine cracks at right

angles to stratification and consequently breaks cubically, with conchoidal surfaces. In other coals, the vitrain is crossed by only occasional perpendicular cracks. In the macroscopic description of seams, only the bands of vitrain having a thickness of several millimeters are usually noted. Examination with the microscope shows vitrain to consist of microlithotypes very rich in vitrinite. After clarain, vitrain is the most widely distributed and common macroscopic constituent of humic coals. Occurs in lenticular bands, each derived from a single piece of original vegetable growth. When it constitutes 30% to 60% of total seam, it is termed abundant; more than 60%, dominant; between 15% and 30%, moderate; below 15%, sparse. *IHCP; Pryor, 3* b. A coal lithotype characterized macroscopically by brilliant, vitreous luster, black color, and cubic cleavage with conchoidal fracture. Vitrain bands or lenticles are amorphous, usually 3 to 5 mm thick, and their characteristic microlithotype is vitrite. CF: [clarain](#); [durain](#); [fusain](#); vitrite. Syn: [pure coal](#)

vitreous

a. In minerals, a luster typical of that of quartz or calcite. CF: [adamantine](#); [pearly](#); [resinous](#). b. That degree of vitrification evidenced by low water absorption. See also: [impermeable](#); [nonvitreous](#); [semivitreous](#). *ASTM* c. Amorphous. d. Noncrystalline, such as volcanic glass. e. Consisting of or resembling glass. *Kinney*

vitreous copper

See: [chalcocite](#)

vitreous copper ore

See: [chalcocite](#)

vitreous fusion

Gradual fusion; having no sharp melting point. *Webster 3rd*

vitreous silica

Silica glass.

vitreous silver

See: [argentite](#)

vitric

Said of pyroclastic material that is characteristically glassy; i.e., contains more than 75% glass. *AGI*

vitrics

a. Fused siliceous compounds, such as glasses and enamels, as distinguished from ceramics, or fused aluminous compounds. *Standard, 2* b. The art or history of glass production. *Standard, 2*

vitric tuff

A tuff that consists predominantly of volcanic glass fragments. CF: [crystal tuff](#); [crystal-vitric tuff](#). *AGI*

vitriufacture

The manufacture of vitreous or vitrified wares, as glass. *Standard, 2*

vitriifiable

Of or pertaining to a substance that can be vitrified. *Webster 3rd*

vitriification

An act, or instance, or the process of vitrifying or making glassy; the condition of being vitrified; a vitrified body. *Webster 3rd*

vitriification spalling

That resulting directly or indirectly from the permanent physical changes caused by vitriification.

vitriified

a. That characteristic of a clay product resulting when the temperature in a kiln is sufficient to fuse all the grains and close all the pores of the clay, making the mass impervious. *ACSG, 1* b. Converted into glass. *Kinney*

vitriified brick

A very hard paving brick burned to the point of vitriification and toughened by annealing. *Crispin*

vitriiform

Having the form or the appearance of glass; glassy. *Webster 3rd*

vitriify

To change into glass or into a glassy substance by heat and fusion. To make vitreous; esp. to produce (as in a ceramic ware) enough glassy phase or close crystallization by high-temperature firing to make nonporous. To undergo vitrification or vitrification; to become vitreous. *Webster 3rd*

vitrifying

A stage in the heating of a clay when some of the ingredients have melted and have partially or completely closed the pores, as in stoneware and porcelain. The completion of this stage occurs at the point of maximum shrinkage without loss of shape. See also: [baking](#); [squotting](#). *Nelson*

vitriertite

A coal microlithotype that contains a combination of vitrinite and inertinite totalling at least 95%, and containing more of each than of exinite. It generally occurs in high-ranking bituminous coals. *AGI*

vitrinite

A group name comprising collinite and telinite. Differentiation between collinite and telinite depends in part on the method of observation. The distinction is more easily made in thin section or after etching a polished surface. Often there is uncertainty of distinction by reflected light, and in such cases, it is proper to use the general term vitrinite. See also: [collinite](#); [telinite](#). *IHCP*

vitriization

The process in coalification that results in the formation of vitrain. See also: [coalification](#)

vitrioid

Vitrain and similar material in coal. *AGI*

vitriol

A sulfate of any of various metals (such as copper, iron, or zinc,); esp. a hydrate (as the heptahydrate) of such a sulfate having a glassy appearance or luster. *Webster 3rd*

vitriol ocher

See: [glockerite](#)

vitrite

A coal microlithotype group that contains vitrinite macerals totalling at least 95%. CF: [liptite](#); [vitrain](#). *AGI*

vitro-

Prefix meaning glassy.

vitroclarain

A rock-type coal consisting of vitrinite (collinite or telinite) and other macerals, mainly exinite, and in which the other macerals exceed vitrinite in quantity. CF: [clarovitrain](#)

vitroclastic

Pertaining to a pyroclastic rock structure characterized by fragmented bits of glass; also, said of a rock having such a structure. *AGI*

vitrodurain

Durain in which much vitrain is present. Judged obsolete by the Heerlen Congress of 1935. CF: [durovitrain](#)

vitrofusain

A coal constituent transitional between vitrain and fusain, and showing plant cell structure. The cell walls are soaked with vitrain, where the cell cavities are empty. It is not a mixture but a transition. Accepted by the Heerlen Congress of 1935 to designate material transitional between vitrain and fusain with fusain being predominant. CF: [fusovitrain](#) *AGI*

vitrophyre

Any porphyritic igneous rock having a glassy groundmass. Adj: vitrophyric. CF: [felsophyre](#); [granophyre](#). Syn: [glass porphyry](#)

vitrophyric

Said of a porphyritic igneous rock having large phenocrysts in a glassy groundmass. *AGI*

vivianite

a. A monoclinic mineral, $2[\text{Fe}_3(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}]$; colorless when fresh; turning blue on oxidation; soft; a secondary mineral found in ore deposits and pegmatites, in clays associated with bone and other organic remains, and in anaerobic lake sediments. Syn:

[blue iron earth](#); [blue ocher](#); [Prussian blue](#). b. The mineral group annabergite, baricite, hoernesite, koettigite, parasymphesite, and vivianite.

vlasovite

A monoclinic and triclinic mineral, $\text{Na}_2 \text{ZrSi}_4 \text{O}_{11}$; forms colorless crystals in the contact zone of the Lovozero massif, Kola Peninsula, Russia. It is related to narsarsukite.

V-method of roasting

The introduction of a supplementary roast heap between each two regular heaps, so that, if left untouched, there would be a continuous and unbroken roast heap the entire length of the roast yard. *Fay*

vogesite

A lamprophyre composed of hornblende phenocrysts in a groundmass of alkali feldspar and hornblende. Clinopyroxene, olivine, and plagioclase feldspar also may be present. Vogesite contains less biotite than minette. The name, given by Rosenbusch in 1887, is for the Vosges Mountains, France. *AGI*

vogle

See: [vug](#)

voglianite

a. A soft, green, basic uranium sulfate, found in nodules or as earthy coatings. *Standard*, 2 b. Validity of species is doubtful. All existing specimens, upon examination, have proved to be cuprosklodowskite. *Crosby; Dana*, 2 c. A variety of zippeite(?).

voglite

A monoclinic mineral, $\text{Ca}_2 \text{Cu}(\text{UO}_2)(\text{CO}_3)_4 \cdot 6\text{H}_2\text{O}$ (?); strongly radioactive; emerald to grass green; an alteration product of uraninite associated with liebigite.

void

a. A general term for pore space or other openings in rock. In addition to pore space, the term includes vesicles, solution cavities, or any primary or secondary openings. Syn: [pore](#); [interstice](#). *AGI* b. That portion of a borehole from which the core could not be recovered. *Long*

void ratio

The ratio of the volume of void space to the volume of solid substance in any material consisting of voids and solid material, such as a soil sample, sediment, or sedimentary rock. Symbol e . Syn: [voids ratio](#) *AGI*

voids ratio

See: [void ratio](#)

vol

See: [vole](#)

volatile

Readily vaporizable. *AGI*

volatile combustibles

See: [volatile matter](#)

volatile fluxes

The volatile constituents of a magma.

volatile matter

In coal, those substances, other than moisture, that are given off as gas and vapor during combustion. Standardized laboratory methods are used in analysis. Syn: [volatiles](#); [volatile combustibles](#). *AGI*

volatile ratio

In coal, the ratio of the volatile matter to the sum of the volatile matter and the fixed carbon. *Federal Mine Safety*

volatiles

The volatile constituents (or rest magma) remaining after the less volatile ores have crystallized as igneous rocks. Syn: [volatile matter](#) *AGI*

volborthite

A monoclinic mineral, $\text{Cu}_3 \text{V}_2 \text{O}_7 (\text{OH})_2 \cdot 2\text{H}_2 \text{O}$; radioactive; has one perfect cleavage; dark olive to yellow-green; a secondary mineral with carnotite in sandstone. Syn: [uzbekite](#)

volcanic

Characteristic of, pertaining to, situated in or upon, formed in, or derived from volcanoes. See also: [extrusive](#)

volcanic ash

See: [ash](#)

volcanic breccia

a. A pyroclastic rock that consists of angular volcanic fragments that are larger than 64 mm in diameter and that may or may not have a matrix. *AGI* b. A rock that is composed of accidental or nonvolcanic fragments in a volcanic matrix. Syn: [alloglastic breccia](#); [lava breccia](#). *AGI*

volcanic clay

See: [bentonite](#)

volcanic conglomerate

A water-deposited conglomerate containing more than 50% volcanic material, esp. coarse pyroclastics. *AGI*

volcanic dust

See: [ash](#)

volcanic earthquake

A seismic disturbance that is due to the direct action of volcanic force, or one whose origin lies under or near a volcano, whether active, dormant, or extinct. *AGI*

volcanic focus

The subterranean seat or center of volcanism of a region or of a volcano. *AGI*

volcanic glass

A natural glass produced by the cooling of molten lava, or a liquid fraction of it, too rapidly to permit crystallization. Examples are obsidian, pitchstone, tachylyte, and the glassy mesostasis of many extrusive rocks. CF: [glass](#)

volcanicity

See: [volcanism](#)

volcanic ore deposits

The major group of ore deposits of magmatic origin, designated as young by European mineralogists, which have been formed under near-surface conditions and very often in Tertiary or younger volcanic rocks. In a strict sense, deposits formed in relation to surface eruptions. *Schieferdecker*

volcanic plain

Surface formed by extensive lava or ash flows that cover topographic irregularities. *AGI*

volcanic rift zone

See: [rift zone](#)

volcanic rock

a. A generally finely crystalline or glassy igneous rock resulting from volcanic action at or near the Earth's surface, either ejected explosively or extruded as lava; e.g., basalt. The term includes near-surface intrusions that form a part of the volcanic structure. Syn: [volcanite](#) *AGI* b. A general term to include the effusive rocks and associated high-level intrusive rocks; they are dominantly basic. *AGI*

volcanics

A general collective term for extrusive igneous and pyroclastic material and rocks.

volcanic water

Water in, or derived from, magma at the Earth's surface or at a relatively shallow level; juvenile water of volcanic origin. *AGI*

volcanism

The processes by which magma and its associated gases rise in the crust and are extruded onto the Earth's surface and into the atmosphere. Also spelled vulcanism. Syn: [volcanicity](#)

volcanite

An obsolete term variously used to denote a volcanic rock and selenian sulfur.

volcano

a. A vent in the surface of the Earth through which magma and associated gases and ash erupt; also, the form or structure, usually conical, that is produced by the ejected material. *AGI* b. Any eruption of material; e.g., mud, that resembles a magmatic volcano. Obsolete var; vulcano. Pl: volcanoes. Etymol: the Roman deity of fire, Vulcan. *AGI*

volchonskoite

See: [volkonskoite](#)

vole

The place where tin ore is stored to be dried before being put into a smelting furnace. Syn: [vol](#)

voler reductol

A lubricant for enclosed gear units; composed of high-quality mineral oil with a suspension of superfine colloidal graphite and silicone foam inhibitor. *Nelson*

volgerite

A discredited term equal to stibiconite. *Am. Mineral., 1*

volkonskoite

A monoclinic mineral, $\text{Ca}_{0.3}(\text{Cr,Mg,Fe})_2(\text{Si,Al})_4\text{O}_{10}(\text{OH})_2 \cdot 4\text{H}_2\text{O}$; smectite group. Also spelled volchonskoite.

volley

The act of exploding blasts in sections. A round of holes fired at any one time. *Standard, 2; Fay*

volt

The practical meter-kilogram-second (mks) unit of electrical potential difference and electromotive force (emf) that equals the difference of potential between two points in a conducting wire carrying a constant current of 1 A when the power dissipated between these two points equals 1 W. It equals the potential difference across a resistance of 1 Ω when 1 A of current is flowing through it; the standard in the United States. *Webster 3rd*

voltage

Electromotive force. *Nichols, 1*

voltaite

An isometric mineral, $K_2 Fe_9 (SO_4)_{12} \cdot 18H_2 O$; has both ferric and ferrous iron.

Volta's list

A list or series of metals, such that any one will be at a higher electrical potential when put in contact with any of those that follow, and at a lower potential if in contact with any metal before it in the series. *Fay*

voltmeter

An instrument for determining voltage. *Crispin*

voltzite

Wurtzite mixed with an organometallic zinc compound.

volume defect

A crystal structure deviating from ideality by having two or more chemical species in one or more crystal sites. CF: [crystal defect](#); [disorder](#).

volume susceptibility

See: [susceptibility](#)

volumetric

Chemical analysis based upon the reaction of a volume of standard solution with the material being analyzed. *ASTM*

volumetric analysis

Quantitative chemical analysis in which known weight of sample is dissolved and reacted with a standard chemical solution of strength proportional to its normality or hydrogen equivalent. Completion of reaction (end point) is judged by change of color, incipient precipitation, or effect on an indicator. See also: [dry assay](#); wet assay. *Pryor, 3*

volumetric efficiency

a. The ratio of the total quantity of air passing along the faces to the quantity flowing in the fan drift. See also: [overall ventilation efficiency](#); [surface air leakage](#). *Roberts, 1* b. The ratio of the volume of air discharged to the displacement for a fan or compressor.

Hartman, 2 c. The volume of water that enters a pump cylinder for each piston stroke divided by the volume swept by the piston (piston area times stroke). *Nelson*

volumetric shrinkage

The decrease in volume, expressed as a percentage of the soil mass when dried, of a soil mass when the water content is reduced from a given percentage to the shrinkage limit. Also called volumetric change. *ASCE*

volute

a. A spiral casing to a mine fan to provide an area of passage, which gradually increases in proportion to the increasing area of discharge from the fan. See also: [evase](#) b. A spiral casing for a centrifugal pump or a fan designed so that speed will be converted to pressure without shock. *Hammond*

volute pumps

This type of centrifugal pump is the most commonly used. The impellers may be open, closed or semienclosed, single suction, double suction, or nonclogging. They discharge into casings that are progressively expanding spiral designs of one or more stages (multistage). The casings housing the rotating elements may be vertically or horizontally split, and a few designs have casings divided on an angle from the horizontal. Pumps in this class usually have a specific speed below 4,000 rpm with single-suction impellers and a specific speed of 5,000 rpm with double-suction impellers. *Pit and Quarry*

von Neumann spike

The pressure peak leading the detonation wave prior to the establishment of the C-J state. *Van Dolah*

vonsenite

An orthorhombic mineral, Fe_3BO_5 ; ludwigite group; contains both ferrous and ferric iron with ferrous iron replaced by magnesium toward ludwigite; black; forms coarse granular masses; at Riverside, CA.

von Sterneck-Askania pendulum

A device for measuring the vertical component of gravity, characterized by the use of four pendulums in a single case. *AGI*

von Wolff's classification

A quantitative chemical-mineralogic classification of igneous rocks proposed in 1922 by F. von Wolff. *AGI*

vooga hole

See: [vug](#)

Voos process

A coal-cleaning process using a heavy suspension, consisting of clay and finely ground barite (-150 or #MG200 mesh) in water. A coal containing as little as 3.3% to 3.4% ash is steadily produced, with a yield practically equal to the theoretical float-and-sink yield. *Gaudin, 1*

vorobievite

A white or rose-colored variety of beryl from the Ural Mountains, Russia, and Madagascar. Syn: [morganite](#)

vortex finder

Tube projecting into central vortex of hydrocyclone or dense medium cyclone through which the classified fines or lighter specific gravity fraction of pulp leaves the system.

vraibite

An orthorhombic mineral, $Tl_4 Hg_3 Sb_2 As_8 S_{20}$; forms gray-black crystals or thin red splinters; commonly intergrown with realgar and orpiment; occurs at Salonika, Macedonia, Greece.

vug

A small cavity in a rock, usually lined with crystals of a different mineral composition than the enclosing rock. Adj: vuggy. CF: [druse](#); miarolitic cavity; geode. Syn: [bug hole](#); [vogle](#); [vooga hole](#). See also: [cavity](#); [vuggy porosity](#); [loch](#). Etymol: Cornish vooga, cavern or cavity.

vugg

A misspelling of vug. *Long*

vuggy

Pertaining to a vug or having numerous vugs. Syn: [vugular](#)

vuggy lode

A lode or vein in which vugs or drusy cavities are of frequent occurrence. *Fay*

vuggy porosity

Porosity due to vugs in calcareous rock. The term vugular is used by some writers but condemned by others. See also: [vug](#)

vugh-arching

When a pocket of rock in the periphery of an excavation is weaker than the remainder, it may fail under the ring stress. Fragments split away or fall out until all the weak rock is removed, forming an artificial vugh. This is called vugh-arching. *Spalding*

vug hole

See: [vug](#)

vugular

See: [vuggy](#)

vulcan coal powder

Explosive; used in mines. *Bennett*

vulcanism

Volcanism.

vulcanite

a. An orthorhombic mineral, $CuTe$; with rickardite and native tellurium, it forms coatings on rocks; occurs at the Good Hope Mine, Vulcan, CO. b. A dark-colored, hard variety of vulcanized India rubber that differs from the softer rubber in having been vulcanized at a high temperature; ebonite. It takes a high polish, and is used for making combs, ornaments, etc., and in electrical work because of its fine insulating properties. *Standard, 2*

vulcanites

A general name for igneous rocks of fine grain size, normally occurring as lava flows, and thus in direct contrast with plutonites. *CTD*

vulcanized rubber

A rubber that has been heated with sulfur to change its properties. *Nelson*

vulcanizing machine

Consists essentially of two heavy metal plattens that are placed one on each side of the previously prepared joint and clamped firmly together. Each platten is heated, and this combined application of heat and pressure over a period completes the joint. These machines are used to vulcanize the belt joints of conveyors.

vulcan powder

High explosive composed of 30% nitroglycerin, 52.5% sodium nitrate, 10.5% charcoal, and 7% sulfur. *Pryor, 3*

vulpinite

A scaly, granular variety of anhydrite; may be admixed with silica; cut and polished for ornamental purposes.

V-vat

a. A funnel box; also, having a groove or grooves of a triangular section. *Webster 2nd* b. See: [spitzkasten](#)

vysotskite

A tetragonal mineral, (Pd,Ni)S ; isomorphous with braggite; in minute grains or prisms; at Norilsk, Russia.

W

W.8 methanometer

A dual-scale, direct-reading instrument for measuring the combustible gases percentage in mine air. It gives combustible gases readings over the range from 0.2% to 5% and is graduated 0.1% per division on the scale. *Nelson*

wabanite

Banded cream to black and gray to purple chocolate-colored slate from Massachusetts. *Schaller*

wacke

a. A dirty sandstone that consists of a mixed variety of angular and unsorted or poorly sorted mineral and rock fragments, and of an abundant matrix of clay and fine silt; specif. an impure sandstone containing more than 10% argillaceous matrix. The term is used for a major category of sandstone, as distinguished from arenite. *AGI* b. A clastic sedimentary rock in which the grains are almost evenly distributed among the several size grades; e.g., a sandstone consisting of sediment poured in to a basin of deposition at a comparatively rapid rate without appreciable selection or reworking by currents after deposition, or a mixed sediment of sand, silt, and clay in which no component forms more than 50% of the whole aggregate. *AGI* c. A term commonly used as a shortened form of graywacke. This usage is not recommended. *AGI* d. Originally, a term applied to a soft earthy variety of basalt, or to the grayish-green to brownish-black claylike residue resulting from the partial chemical decomposition of basalts, basaltic tuffs, and related igneous rocks. Syn: [vake](#) mining term signifying a large stone or stoniness in general. *AGI*

wacken

Rocklike clay, formed by the decomposition of basalts in situ. CF: [graywacke](#)

wad

a. An earthy, dark brown to black mineral material consisting chiefly of an impure mixture of manganese oxides and oxyhydroxides with variable amounts of copper, cobalt, and iron oxides and oxyhydroxides and silica plus 10% to 20% adsorbed water. It is commonly soft (soiling hands), but may be hard and compact, and has a low density. Wad results from the decomposition of other manganese minerals and accumulates in marshy areas or other zones of ground-water emission where it is an ore of manganese. See also: [asbolan](#) earthy manganese; manganese hydrate. b. A general term for massive, fine-grained manganese oxides and oxyhydroxides of low density, but not further identified. c. In drilling, a term applied to rock cuttings that tend to ball and adhere to drill-string equipment and borehole walls in lumps. *Long*

wad coil

Eng. A tool for extracting a pebble or broken tool from the bottom of a borehole. It consists of two spiral steel blades arranged something like a corkscrew. See also: [spiral worm](#)

wadding

Paper or cloth placed over explosives in a hole. *Nichols, 1*

Waddle fan

An earlier type of centrifugal fan. It had no external casing, but delivered directly to the atmosphere all around its periphery. The veins were curved backwards in the direction of rotation and the air was led into the fan by a curved inlet passage or throat. It was usually driven by steam at about 70 rpm; efficiency about 40%; external diameter of about 30 ft (9.1 m). See also: [Sirocco fan](#)

wadeite

A hexagonal mineral, $K_2CaZr(SiO_3)_4$; forms hexagonal plates; in Western Australia.

wad hook

See: [wad coil](#); spiral worm.

wadi

a. A term used in the desert regions of Southwestern Asia and Northern Africa for a stream bed or channel, or a steep-sided and bouldery ravine, gully, or valley, or a dry wash, that is usually dry except during the rainy season, and that often forms an oasis. *AGI* b. The intermittent and torrential stream that flows through a wadi and ends in a closed basin. *AGI* c. A shallow, usually sharply defined, closed basin in which a wadi terminates.---Etymol: Arabic. Variant plurals: wadis; wadies; wadian; widan. See also: [arroyo](#); [nullah](#). Also spelled: wady; waddy. Syn: [oued](#); widiyan. *AGI*

Waelz process

A process by which low-grade ores, slags, or residues from retorts may be treated either for the recovery of zinc alone or for the recovery of zinc, lead, and tin. It employs a rotary kiln, and the zinc-bearing material mixed with fine coal is fed into the kiln and heated, so that the zinc is vaporized and converted to oxide fume. *Newton, I*

wafer

a. A name given to the rough slice obtained by sawing directly from a mother crystal or section. The process of manufacturing wafers is variously known as wafering, wafering from the crystal or slab, wafering from the mother crystal, and baloney slicing. *Am. Mineral.*, 2 b. Small sheet of electroceramic material 0.001 to 0.01 in (0.025 to 0.25 mm) thick for use in electronic equipment, particularly in miniature capacitors, transistors, resistors, and other circuit components.

waggon

See: [wagon](#)

wagnerite

A monoclinic mineral, $(\text{Mg,Fe})_2(\text{PO}_4)_2\text{F}$; magnesium is replaced by ferrous iron or calcium; imperfect cleavage.

wagon

a. An underground coal car. *Korson* b. A mine car. c. Any vehicle for carrying coal or debris. *Mason* d. A trailer with a dump body. *Nichols, 1*

wagon arrester

An appliance that can bring a wagon completely to rest and is usually used near the departure end of mine sidings. It can be rendered inoperative by remote control if required. *Nelson*

wagon booster-retarder

An appliance that reduces the speed of wagons traveling above the design value, but for wagons traveling at speeds less than this, it releases energy by thrusting against the wheel flanges, therefore speeding up the vehicle. See also: [wagon retarder](#)

wagon breast

a. Rooms or wide coal roadways into which mine cars or wagons are taken. *Nelson* b. A pillar method of working a relatively thick, flattish coal seam. *Nelson*

wagon drill

A drilling machine mounted on a light, wheeled carriage. *BS, 12*

wagon pinch bar

A device for moving railway wagons and locomotives short distances by hand. It consists of a cast-steel wedge-shaped tip with a wood handle. The tip is placed over the rail and under the wagon wheel and the up-and-down movement of the handle exerts sufficient pressure on the wheel to move the wagon. *Nelson*

wagon rerailer

A device for bringing a derailed wagon back onto the track. It usually consists of ramp elements, which can be fixed at intervals along the track or temporarily fitted to the track just beyond the end of the wagon. The wagon is then pulled to cause the wheels to ride up the ramp and back on to the rails. *Nelson*

wagon retarder

An appliance that reduces the speed of a wagon traveling in excess of a designed value (e.g., 3-1/2 mph), while having no effect on wagons moving at speeds less than this figure. The appliance is a self-contained hydraulic unit. *Nelson*

wagon rooms

Rooms driven in inclined seams in such a way that an adequate gradient is secured for cars, which are often hauled to the heads of the rooms. *Stoces*

wagon spotter

A wagon spotting appliance. It may be a "bogey" that is hauled backwards and forwards on a separate track installed between the main track rails by a winch. A forward pull on the bogey raises a pair of arms to engage in the wagon axle, and a reverse pull lowers the arms to enable the bogey to be drawn back under the next wagon ready for the next pull. *Nelson*

wagon tippler

A power-operated structure for discharging coal or other material from a railway wagon. *Nelson*

wairakite

A monoclinic mineral, $\text{CaAl}_2\text{Si}_4\text{O}_{12} \cdot 2\text{H}_2\text{O}$; zeolite group; pseudocubic; colorless to white; in tuffaceous rocks in geothermal areas.

wairauite

An isometric mineral, CoFe ; forms minute grains with awaruite in the Red Hills serpentines; at Wairau, South Island, New Zealand.

waiver

Involves the notion of an intention entertained by the holder of some right, to abandon or relinquish instead of insisting on the right. It is a question of fact. Proof of waiver must include proof of knowledge of the facts upon which the waiver is based. *Ricketts*

Wakefield sheet pile

Consists of three boards bolted or spiked together with the center board offset. This arrangement produces a tongue and groove that makes Wakefield sheet piling fairly watertight if the piles are properly driven and tightly fitted together. *Urquhart*

walaite

A variant spelling of valaite. *Tomkeieff*

walchowite

A honey-yellow variety of retinite containing little nitrogen, occurs in brown coal at Walchow, Moravia, Czech Republic.

waling

Eng. Cleaning coals by picking out refuse.

walk

To deviate from the intended course, such as a borehole that is following a course deviating from its intended direction. Also called deviating; war; wandering. Syn: [walking](#)

Walker balance

A type of counterpoised beam balance. CF: [Westphal balance](#)

walker's earth

See: [fuller's earth](#)

walking

a. The movement forward or backward of a dredge by first winding up on one side and then the other, swinging the boat from side to side and thereby advancing with a slight offsetting to the side. *Fay* b. See: [walk](#)

walking bar

A trunnion or walking beam. *Nichols, I*

walking beam

a. The beam used to impart a reciprocating movement to the drilling column in percussive drilling. Syn: [oscillating beam](#); [rocking beam](#). *BS, 9* b. On cable tool and churn drill rigs, the beam that carries the string of drilling tools at one end and is connected to a cranked drive wheel at the other. The rotation of the wheel causes the tool string to lift and drop; thus the hole is drilled by concussion. *Long*

walking crane

A light crane traveling on an overhead channel iron and a single rail vertically beneath this in the floor. *Webster 3rd*

walking dragline

a. A dragline that is equipped with apparatus that permits it to "walk" by the alternate power movement of vertical booms fastened to large outrigger platforms so arranged as to push the equipment forward as work progresses. *BCI* b. An excavator of very large capacity, equipped with walking beams operated by eccentrics in place of crawler tracks. Such machines can excavate 1,650 st/h (1,500 t/h) of overburden to a depth of 100 ft (30 m). *Hammond*

walking miner

See: joy walking miner.

walking props

See: [self-advancing supports](#)

walking support

See: [self-advancing supports](#)

walkout

Act of walking out or leaving; specif., a labor strike. *Webster 2nd*

wall

a. The side of a level or drift. *Fay* b. The country rock bounding a vein laterally. The side of a lode; the overhanging side is known as the hanging wall and the lower lying side as the footwall. See also: [hanging wall](#); [footwall](#). Syn: [walls of a vein](#) *Fay* c. The face of a longwall working or stall, commonly called a coal wall. *Fay* d. A rib of solid coal between two rooms; also, the sides of an entry. *BCI*

wall accretions

Material adhering to the inner walls of a blast furnace between the water jackets and the feed door. *Fay*

Wallace agitator

Mixing device, driven by an impeller, used in pulp mixing and aeration in cyanidation where strong agitation is needed. *Pryor, 3*

wall boss

a. A person who supervises a crew of workers operating a face conveyor. *Hess* b. See: [room boss](#)

wall cake

See: [cake](#)

wall cavitation

The development of enlarged sections in a borehole as the result of caving, erosive action of the circulated liquid, or erosion caused by drill rods rubbing against the borehole walls. *Long*

wall clearance

The distance between the wall of the borehole and the outside of a piece of drill-string equipment when the string is centered in the borehole. *Long*

wall closure

See: [closure](#)

wall-controlled shoots

Ore shoots that occur adjacent to certain favorable wall rocks that presumably influenced deposition from the mineralizing fluids. *Stokes*

wall drag

The amount of friction resulting from the drill rods rubbing against the walls of a borehole or the inside surface of the casing lining a borehole. *Long*

waller

Laborer who builds walls to support backfilling. See: [pack builder](#) *Fay*

wall face

Scot. The face of the coal wall; the working face. *Fay*

wall friction

a. The drag created in the flow of a liquid or gas because of contact with the wall surfaces of its conductor, such as the inside surfaces of a pipe or drill rod or the annular space between a drill string and the walls of a borehole. *Long* b. The drag resulting from compaction of loose materials around the outside surfaces of drive pipe, casing, etc. Also called skin friction. *Long*

walling

a. The brick or stone lining of shafts. *Fay* b. Derb. Stacking or setting up ironstone, etc., in heaps, preparatory to being measured or weighed. *Fay*

walling curb

See: [curb](#); foundation curb; water ring.

walling scaffold

See: [bricking scaffold](#)

walling stage

A movable wooden scaffold suspended from a crab on the surface, upon which the workers stand when walling or lining a shaft. *Fay*

walling up

The building up of a layer of mud cake or compacted cuttings on the borehole sidewalls; the filling of cracks or caved portions of the borehole walls with cement. *Long*

wall off

To seal cracks, crevices, etc., in the wall of a borehole with cement, mud cake, compacted cuttings, or casing. *Long*

wall packing

The compaction of sticky cuttings that collect and adhere to the walls of a borehole. *Long*

wallplate

a. A horizontal timber supported by posts resting on sills and extending lengthwise on each side of a tunnel. Roof supports rest on wallplates. Syn: [pad](#) b. A horizontal member, usually of wood, bolted to a masonry wall to which the frame construction is attached. Also called headplate. *ACSG, 1*

wallplate anchor

A machine-bolt anchor with a head at one end and threaded at the other, and fitted with a plate or punched washer so that when embedded in the masonry it will be securely anchored and will hold a wallplate in place. *ACSG, 1*

wall rock

a. See: [country rock](#) b. The rock forming the walls of a borehole. *Long* c. The rock adjacent to, enclosing, or including a vein, layer, or dissemination of ore minerals. It is commonly altered. The term implies more specific adjacency than host rock or country rock. Syn: [walls of a vein](#) d. The rock mass comprising the wall of a fault. *AGI*

wall-rock halo

A dispersion pattern formed in the rock adjoining mineral deposits where the chemical composition has been modified by the ore-forming fluids. See: [halo](#)

wall-rock pattern

A channel dispersion pattern in which the minor elements of the walls of the channels have been modified. Wall-rock dispersion patterns of importance usually are those formed at the time the orebodies were being deposited. *Lewis*

walls

a. Coal roadways in pillar-and-stall mining. *Nelson* b. The side of an orebody defining where the ore ceases and the country rock begins. Walls may be definite or indefinite. See also: [footwall](#); hanging wall. *Nelson*

wall saltpeter

See: [nitrocalcite](#)

wallscrapers bit

A rotary bit used to enlarge the diameter of a borehole. *BS, 9*

Wallsend

Eng. A grade of coal for household purposes: originally from Wallsend, on the Tyne, but now from any part of a large district in and near Newcastle. *Standard, 2*

walls of a vein

See: [wall](#); wall rock.

walpurkite

A triclinic mineral, $\text{Bi}_4 \text{O}_4 (\text{UO}_2)(\text{AsO}_4) \cdot 2\text{H}_2 \text{O}$; radioactive; yellow-orange; associated with troegerite, zeunerite, uransphaerite, torbernite, and uranospinite. Also spelled walpurgin.

walthерite

A discredited term equal to walpurkite. *Am. Mineral.*, 1

Walton filter

An emerald glass or beryloscope mounted to resemble a hand loupe. Observed through it the filament of an incandescent lamp appears reddish yellow, and this color is not changed when also passing through most genuine emeralds; but a Brazilian emerald from Minas Geraes appears green, an epidote red, and a diopside green. Syn: [emerald loupe](#) See also: [emerald glass](#)

wander

a. An unintentional change in the course of a borehole. CF: [deviate](#); walk; warp. *Long* b. See: [band wander](#)

wane

A defect in a timber or plank. *Crispin*

want

A zone in which the coal of a coal seam is missing, owing to a low-angle normal fault or a washout, squeeze, or roll. CF: [nip](#); [pinch](#). Syn: [cutout](#)

Ward drill

A hand drill that can be used in a river on a barge or on a platform built on two large canoes. Basically, it consists of four straight poles, 5 to 7 in (12.7 to 17.8 cm) in diameter at the large end, which are set into notches in planks to prevent their sinking into the ground. The poles are joined at the top by a shaft that holds the pulley for the drill wire or rope. The walking beam is activated by 8 to 10 persons lining up on the crossarm. They pull down to raise the tools and vary their manner of movement, depending on whether they are driving casing, drilling, or pulling casing. The Ward drill is most efficient in shallow ground, but can be used in depths up to 90 ft (27.4 m).

Mining

warden

- a. A term used in south Wales for a strong massive sandstone associated with coal. *AGI*
- b. In Australia an officer under the Mining Act with magisterial and executive authority over a goldfield.

wardite

A tetragonal mineral, $\text{NaAl}_3(\text{PO}_4)_2(\text{OH})_4 \cdot 2\text{H}_2\text{O}$; bluish-green; forms oolitic or crystalline encrusting layers; in Cedar Valley and near Fairfield, UT.

Ward-Leonard control

- a. A method of controlling the speed of electric winding or other large direct-current motors, employing a variable voltage generator to supply the motor armature, and driven by a shunt motor. See also: [automatic cyclic winding](#); [Ilgner system](#). *Nelson*
- b. In a modification, the Ward-Leonard-Ilgner system incorporates a heavy flywheel on the shaft of the generator, which smooths out surges in the system. *Pryor, 3*

waringtonite

A hydrated sulfate of copper that shows an emerald green color. Syn: [brochantite](#)

wark

Eng. Black slaty stone overlying coal seams, Somerset Coalfields. Also spelled werk.

warning lines

The lines drawn on working plans to indicate the limit beyond which workings should not extend; e.g., because of the proximity of disused or abandoned workings. *BS, 7*

warp

- a. The amount a borehole has wandered off course. CF: [wander](#) *Long*
- b. A general term for a bed or layer of sediment deposited by water; e.g., an estuarine clay, or the alluvium laid down by a tidal river. See also: [warping](#)

warped fault

A fault, usually a thrust fault, that has been slightly folded. *AGI*

warping

The slight flexing or bending of the Earth's crust on a broad or regional scale, either upward (upwarping) or downward (downwarping); the formation of a warp. *AGI*

warrant

a. A general term for the clay floors of coal seams, particularly when hard and tough. See also: [underclay](#) b. The document of title to metal stored in an LME registered warehouse. The warrant is a bearer instrument and states the brand of metal, its weight, the number of pieces, and the rent payable. *Wolff*

warrant clay

See: [underclay](#)

warren earth

See: [fireclay](#)

Warren girder

A triangulated truss made up only of sloping members between the horizontal top and bottom members with no verticals. See also: [N-truss](#) *Hammond*

warrenite

a. A general term for gaseous and liquid bitumens consisting mainly of a mixture of paraffins and isoparaffins: a variety of petroleum rich in paraffins. b. A pink cobaltoan variety of smithsonite. c. A discredited name for owyheeite or jamesonite.

Warrington

Strand construction in which one layer of wires is composed of pairs of large and small wires, thus 6 x 19 (6 and 6/6/1) equal laid. See also: [equal lay](#)

Warrington rope

A wire rope comprising 7 wires of the same size covered by 12 wires alternately large and small. *Lewis*

warwickite

An orthorhombic mineral, $(\text{Mg,Ti,Fe,Al})_2(\text{BO}_3)_2\text{O}$; forms dull, brownish-black prismatic crystals having perfect cleavage.

Warwick safety device

A safety appliance placed near the upper end of an inclined haulage road to stop a tram running wild down the incline. It consists of a heavy beam longer than the height of the roadway and is normally held up entirely at roof level, but is hinged at the lower end. In the event of a tram running away from above, a haulage hand can pull a rope that releases the upper end of the beam that drops and stops the tram. *Nelson*

Warwickshire method

A method of mining contiguous seams. See also: [bord-and-pillar](#) *Fay*

wash

a. Loose or eroded surface material (such as gravel, sand, silt) collected, transported, and deposited by running water, such as on the lower slopes of a mountain range; esp. coarse alluvium. Syn: [wash stuff](#) *AGI* b. An alluvial placer. *AGI* c. In coal mining, a washout. *Nelson* d. The wet cleaning of coal or ores. *Nelson* e. Auriferous gravel. *Fay* f. To clean cuttings or other fragmental rock materials out of a borehole by the jetting and buoyant action of a copious flow of water or a mud-laden liquid. The similar ejection of core or drill spring equipment from a borehole. See also: [alluvial cone](#)

washability

Coal properties determining the amenability of a coal to improvement in quality by mechanical cleaning. *BS, 5*

washability curve

A curve or graph showing the results of a series of float-and-sink tests. A number of these curves are drawn to illustrate different conditions or variables, usually on the same axes, thus presenting the information on one sheet of paper. Washability curves are essential when designing a new coal or mineral washery. There are four main types of washability curves: characteristic ash curve, cumulative float curve, cumulative sink curve, and densimetric or specific gravity curve. *Nelson; BS, 5*

wash boring

a. Drilling by use of jet water applied inside a casing pipe, in unconsolidated ground. *Pryor, 3* b. A test hole from which samples are brought up mixed with water. *Nichols, 1*

wash-boring drill

A drill rig utilizing the jet action of a high-pressure stream of water to produce a borehole in soft or unconsolidated material. *Long*

wash bottle

a. A bottle or flask fitted with two glass tubes passing through the stopper, so that on blowing into one tube a stream of water issues from the other tube. The stream may be directed upon anything to be washed or rinsed. Newer wash bottles are made of flexible plastic with a single tube. *Hess* b. A bottle for washing gases by passing them through liquid contained in it. *Hess*

washbox

In coal preparation, the jig box in which feed is stratified and separated into fractions (heavier below and lighter above). A feldspar washbox has a bedding of that mineral. *Pryor, 3*

washbox air cycle

The valve-timing cycle determining the periods of air admission and exhaust. *BS, 5*

washbox cells

The individual portions into which the part of a washbox below the screen plate is divided by transverse division plates, each being capable of separate control. *BS, 5*

washbox center sill

A sill fitted over a center extraction chamber. *BS, 5*

washbox center weir

An adjustable plate situated between the feed end and the discharge end of a washbox and serving to regulate the forward movement of material through the box. *BS, 5*

washbox compartments

The sections into which a washbox is divided by transverse division plates that extend above the screen plate to form a weir; each compartment usually comprises two or more cells. *BS, 5*

washbox discharge sill

That part of the washbox over which the washed coal passes out of the box. Usually the discharge sill is a part of the discharge-end refuse extraction chamber. *BS, 5*

washbox feed sill

That part of the washbox over which the feed passes when it enters the box. Usually the feed sill is a part of the feed-end refuse extraction chamber. *BS, 5*

washbox screen plate

a. The perforated plate or grid that supports the bed of material being treated. *BS, 5* b. Also called grid plate; sieve plate; bedplate.

washbox slide valve

A washbox air valve operated by means of a reciprocating motion. Also called washbox piston valve. *BS, 5*

wash dirt

a. The tailings or material discarded in the operation of washing an alluvial deposit for gold. *Nelson* b. Gold-bearing earth worth washing. Also called wash stuff; wash gravel. See also: [washing stuff](#)

washed coal

a. Coal from which impurities have been removed by any form of mechanical treatment. *BS, 4* b. Coal produced by a wet-cleaning process. *BS, 5*

washed out

Said of a coal seam when the bed thins out. *Mason*

washery

a. A place at which ore, coal, or crushed stone is freed from impurities or dust by washing. Also called wet separation plant; washing plant. See also: [washing apparatus](#); [wash place](#); [coal-preparation plant](#); dense-medium washer; efficiency of separation. *Webster 3rd* b. A coal preparation plant in which a cleaning process is carried out by wet methods. *BS, 5* c. A building resembling a breaker used in reclaiming culm and fine coal from old banks. *Korson*

washery effluent

Surplus water discharged from a washery, usually to waste (after settlement of solids in suspension). *BS, 5*

washery products

The final products from a washery. *BS, 5*

washery pump

A pump generally of simple construction and heavy design since slurry presents a difficult pumping problem owing to its erosive action. This type pump is generally of the single-stage type as heads are small, with a solid casing of steel or cast iron about twice the normal thickness to provide against erosive action. *Sinclair, 4*

washery refuse

The refuse removed at preparation plants from newly mined coal.

washery water

The water used in the wet separation of coal from shale by differences in density. See also: [recirculation of water](#)

wash gold

See: [placer gold](#)

wash gravel

Gravel washed to extract gold. CF: [wash dirt](#)

washhouse

A building on the surface at a mine where the miners can wash before going to their homes. A changehouse. A dryhouse.

washing

a. That which is retained after being washed; as, a washing of ore. b. The selective sorting, and removal, of fine-grained sediment by water currents. *AGI* c. Erosion or wearing-away by the action of waves or running water. *AGI* d. The act or process of cleaning, carrying away, or eroding by the buoyant action of flowing water. *Long* e. Ore mineral, such as gold dust, that is retained after being washed.

washing apparatus

a. Machinery and appliances erected on the surface at a coal mine, for extracting, by washing with water, the impurities mixed with the coal dust or small slack. *Zern* b. Machinery for removing impurities from coals and ores. See also: [washery](#)

washing drum

See: [trommel](#)

washing hutch

See: [hutch](#)

washing machine

Scot. A machine for separating impurities from coal by means of water. *Fay*

washing plant

See: [washery](#)

washing screen

Flat screen or trommel on which passing ore is exposed to sprays or jets of water to remove as undersize any adherent mud or other fine material. *Pryor, 3*

washing screws

Devices in which continuous helical blades arranged about shafts force the material up an inclined trough against a stream of water introduced at the higher end. This action carries away the soluble material occurring with the material and dumps the washed product over the higher end of the trough. *Pit and Quarry*

washing stuff

An earthy deposit containing gold that may be extracted by washing. See also: [wash dirt](#)

washing trommel

See: [trommel](#)

wash metal

Molten metal used to wash out a furnace, ladle, or other container. *ASM, 1*

Washoe canary

A miner's slang term for a donkey; burro. *Standard, 2*

Washoe process

The process of treating silver ores by grinding in pans or tubs with the addition of mercury, and sometimes of chemicals, such as blue vitriol and salt. Named from the Washoe District, NV, where it was first used. *Webster 3rd*

wash ore

Crude iron ore containing readily liberated particles of pure iron ore, loosely agglomerated with sands from which they can be separated by scrubbing treatment. See also: [natural ore](#)

washout

a. A channel or channellike feature produced in a sedimentary deposit by the scouring action of flowing water and later filled with the sediment of a younger deposit. Syn: [scour and fill](#) b. A channel cut into or through a coal seam at some time during or after the formation of the seam, generally filled with sandstone--or more rarely with shale--similar to that of the roof. See also: [cutout](#); [horseback](#); want; low. *Raistrick; AGI* c. Barren, thin, or jumbled areas in coal seams in which there is no actual disruption and no vertical displacement of the coal and strata. These disturbances may be divided into three main types; namely (1) classical washouts, (2) pressure belts, and (3) tremor tracts. Authentic washouts should be restricted to the first group. Also called rock fault; nip. See also: [roll](#) d. Local thinning or disappearance of a coal seam due to erosion during or shortly after its formation. *BS, 11* e. Channellike features that cut or transgress the stratification of the underlying beds; may be small scour-and-fill structures or large erosional channels. Also called cutout. *Pettijohn, 1*

washout valve

Valve in a pipeline or a dam that can be opened occasionally to clear out sediment. *Hammond*

washover

a. To wash away or remove material from around the outside of casing pipe, drill stem, junk, or tramp materials in a borehole. See also: [washover shoe](#) b. Material deposited by the action of overwash; specif. a small delta built on the landward side of a bar or barrier, separating a lagoon from the open sea, produced by storm waves breaking over low parts of the bar or barrier and depositing sediment in the lagoon. CF: [blowover](#) *AGI*

washover shoe

A casing shoelike bit used to drill downward around a piece of drilling equipment stuck in a borehole. See also: [washover](#)

wash pan

A pan for washing pay dirt in placer mining. *Standard, 2*

wash pipe

The pipe that ejects the jet of water through the bit, used in wash boring. *Long*

wash place

A place where ores are washed and separated from the waste; usually applied to places where the hand jigs are used. See also: [washery](#) *Fay*

wash plain

See: [alluvial plain](#)

washpot

In tin-plate manufacturing, a pot containing melted tin into which the plates are dipped to be coated. *Webster 3rd*

wash rod

A heavy wall pipe used in lieu of drill rods to conduct water downward inside and to the bottom of a drivepipe being sunk through overburden by a wash-and-drive method. Syn: [wash tube](#)

wash sale

A practice in which promoters, through the connivance of brokers who pretend to carry through transactions and thus obtain false quotations, create a fictitious flurry of activity in the stock market. *Hoover*

wash stuff

See: [wash](#); washing stuff.

wash table

An inclined table used for cleaning coal or ore in which the lighter material or gangue is washed away by water. The coal or ore is fed onto the table and water is allowed to flow down the table carrying away the impurities.

wash trommel

Rotating horizontal drum that receives ore at one end and water at the other. Ore is tumbled countercurrent to the water so that coarse solids are discharged continuously while water now charged with mud and fine material overflows at the feed end. *Pryor, 3*

wash tube

See: [wash rod](#)

wash water

Water circulated through the drill string, past the bit, and then out of the borehole between the rods and the walls of the hole while drilling or during washing operations. See also: [water wash](#)

wasite

An altered variety of allanite. *Standard, 2*

waste

a. The part of an ore deposit that is too low in grade to be of economic value at the time of mining, but which may be stored separately for possible treatment later. *Lewis* b. Refuse and impurities removed in mining and treating coal; also, the coal left in a mine as pillars. c. Gangue. d. Tailings. e. Overburden. f. The refuse from ore dressing and smelting plants. Gob; goaf; old workings; also, the fine coal made in mining and preparing coal for market; culm; coal dirt; also used to signify both the mine waste (such as coal left in pillars) and the breaker waste. g. A working or shaft which has been abandoned and filled with refuse (goaf or gob), or with material from the fall of the hanging wall. Syn: [condie](#) h. See: [spoil](#)

waste blasting

On some coal faces, the stone overlying the seam does not always fall in the wastes after withdrawing the supports. To avoid excessive weight on the face, which would cause dangerous roof conditions, it is desirable to blast down the stone in the wastes. Also, in thick seams, the overlying strata requires breaking down to provide sufficient stone for building packs. The holes for waste shots must be drilled from the face side so that the driller is working under a supported roof. Care must be taken to ensure that the holes are not drilled up into the solid strata and that the burden on the shot is not excessive. *McAdam, 2*

waste drainage

The controlled leakage of air through a waste to ensure that large concentrations of mine gases do not accumulate in it. *BS, 8*

waste dump

The area where mine waste or spoil materials are disposed of or piled.

waste edge support

A row of rigid timber or steel props or chocks set along the edge of the waste and parallel to the longwall face to induce the roof beds to break and to secure caving of the waste area. See also: [breaker props](#) *Nelson*

waste-filled stopes

In these methods, support for walls and for workers and machines is furnished by waste rock, tailing sand, etc., called filling or gob. In true waste filling, the orebody is excavated in sections alternating with filling, and it is sometimes referred to as cut-and-fill stoping. *Higham*

waste filling

Material used for support in heavy ground and in large stopes to prevent failure of rock walls and to minimize or control subsidence and to make it possible to extract pillars of ore left in the earlier stages of mining. Material used for filling includes waste rock sorted in the stopes or mined from rock walls, mill tailing, sand and gravel, smelter slag, and rock from surface open cuts or quarries. *Lewis*

waste-heat boiler

A boiler that uses the heat of exit gases from furnaces to produce steam or to heat water. *Pryor, 3*

wasteman

In anthracite and bituminous coal mining, a laborer who looks after and keeps clean the airways, haulageways, or working places of a mine. Also called cleanup man; dirt shoveler; sweeper. See also: [jerry man](#) *DOT*

waster

a. Tinplate below the standard weight and quality. *Standard, 2* b. Spoiled or imperfect casting or machined part that must be discarded although partly processed. *Pryor, 3* c. A brick, structural or refractory, that is defective as drawn from the kiln; wasters in the refractories industry are crushed and reused as grog. *Dodd*

waste raise

An excavation in a mine in which barren rock and other material is broken up for use as filling at the stope. *Stoces*

waste rock

Barren or submarginal rock or ore that has been mined, but is not of sufficient value to warrant treatment and is therefore removed ahead of the milling processes. *Pryor, 4*

wastes

The unfilled or unpacked portions of workings in a mine. *TIME*

waste water

Excess water allowed to run to waste from the water circuit. *BS, 5*

wasteway

a. A channel for carrying off superfluous water. *Webster 3rd* b. The channel required to convey water discharged into it from a spillway, escape, or sluice; a spillway. *Seelye, 1*

wasting asset

Property (as mines or lumber tracts) subject to depletion. *Webster 3rd*

wastrel

Eng. A tract of wasteland, or any waste material. *Fay*

watchmen

Weak coal pillars left in workings to give warning of an impending collapse. *Briggs*

water

a. Clear, colorless liquid. b. A rarely used term referring to the color and clarity of a precious stone or pearl, and esp. of a diamond. *AGI*

water ampule

A fire-resistant plastic container of water that is used as a safety precaution in shotholes. *BS, 12*

water-ampul stemming

A water cartridge for stemming shotholes in coal or rock. The ampul consists of a plastic (polyvinylchloride) bag, 1-1/4 in (3.2 cm) in diameter and 18 in (45.7 cm) in length. When filled with water and the neck of the bag tied off, the filled ampul is about 15 in (38.1 cm) in length and holds slightly over 1/2 pint (0.24 L) of water. Compared with dry clay or sand, the use of water ampuls for stemming effects substantial reductions in

both the airborne dust and the nitrous fumes produced by shot firing. This applies to both coal and rock blasting. Also called a water dummy. Syn: [cushion firing](#)

water-avid surface

A term used to describe a surface that seems to prefer contact with water to contact with air. In flotation, minerals with a water-avid surface will not float, while those with an air-avid surface will. The object of reagent additions in flotation is to form a water-repellent surface on the minerals to be floated and a water-avid surface on the minerals that are not to float (hydrophilic). CF: [air-avid surface](#)

water bailer

See: [bailer](#)

water balance

An obsolete water-raising apparatus consisting of a swinging frame carrying a double series of troughs ascending in zigzag lines, and so adjusted to each other that as the frame rocks in either direction water may be passed to a higher level. *Standard, 2*

water barrel

A barrel-shaped hopper designed to collect and hoist water from the bottom of a sinking shaft. Water barrels are now obsolete. See also: [pneumatic water barrel](#); [sinking pump](#); [water kibble](#). Also called barrel; bailer. *Nelson*

water barrier

a. An area of solid material left unworked to protect a mine, or part of a mine, against entry of secondary water. *BS, 10* b. See: [barrier pillar](#)

water-base mud

A drill mud in which the solids are suspended in water. *Long*

water blast

a. The expulsion of water under pressure, in mine workings, caused by trapped air expanding as the water level is lowered. *BS, 10* b. Explosion caused by a sudden inrush of water. *Mason* c. The discharge of water down a shaft to produce or quicken ventilation. See also: [trombe](#) d. A water-actuated ventilating device. *CTD*

water blasting

Pulsed infusion shot firing. *Nelson*

water block

a. A sudden stoppage of water-flow past the face of a bit while drilling is in progress. *Long* b. A hollow box or block of iron through which water is circulated to protect part of a furnace wall.

water boss

Aust. The owner or holder of water or water rights who sells the same for mining purposes.

waterbound

A general term indicating that water is the medium used to assist in filling the voids between mineral fragments and to improve compaction. *Nelson*

water box

a. A rectangular wooden pipe used in shafts for conveying water between garlands. *BS, IO* b. A square, open, wooden tank car used for removing small amounts of water from low places in a mine. Also, a tank car used for sprinkling the roadways to settle the dust.

water break

A break in the continuity of the water film upon a metal when it is withdrawn from a bath. CF: [wetting](#)

water cage

A special cage running in guides in a special compartment of a shaft with a separate winding engine.

water cartridge

A waterproof cartridge surrounded by an outer case, the space between being filled with water, which is employed to destroy the flame produced when the shot is fired, thereby lessening the chance of an explosion should gas be present in the place.

water chamber

A water reservoir in a mine, usually located at the lowest place, commonly near the shaft station. Also called sump. *Stoces*

water chrysolite

Moldavite. See also: [tektite](#)

water color

The apparent color of the surface layers of the sea caused by the reflection of certain components of the visible light spectrum coupled with the effects of dissolved material, concentration of plankton, detritus, or other matter. Color of oceanic water varies from deep blue to yellow and is expressed by number values that are a variation of the Forel scale. Plankton concentrations may cause a temporary appearance of red, green, white, or other colors. See also: [Forel scale](#)

water content

a. Of a bottom sediment, a ratio obtained by multiplying the weight of the water in the sample by 100 and dividing the results by the weight of the dried sample; expressed as a percentage. *Hunt* b. See: [moisture content](#)

water core

A hollow core through which water circulates in a mold used for cooling the interior of a casting more rapidly than the outside while the metal is solidifying, such as in casting a cannon. *Webster 3rd*

water coupling

See: [water swivel](#)

watercourse

a. A natural or artificial channel for the passage of water, as a river, canal, flume, or drainage tunnel. b. A subsurface opening or passage in rocks through which groundwater flows.

water creep

The movement of water under or around a structure, such as a dam, built on a semipermeable foundation. See also: [piping](#)

water curb

See: [garland](#)

water cushion

A water load pumped into drill pipe during a drill-stem test to retard fillup and prevent collapse of pipe under sudden pressure changes. *Wheeler, R.R.*

water-cutoff core barrel

A core barrel having a device in its head part that closes and stops the flow of drill-circulation liquid when a core block occurs in the inner tube of the core barrel. *Long*

water cycle

See: [hydrologic cycle](#)

water dam

A permanent stopping to seal off a large body or feeder of water. It consists usually of a block of concrete between two brick end walls and these are extended well into the surrounding ground. The contact points and all breaks in the strata are sealed by cement injection. The various pipes, pressure gages, etc., may be left through the stopping. *Nelson*

watered

Eng. Containing much water--full of springs or feeders; e.g., heavily watered mines, heavily watered measures, etc.

waterfinder

See: [divining rod](#)

water flush

A system of well boring in which percussive drills are used in connection with water forced down to the bottom of the hole through the drill rods. This water jet makes the tools cut better and washes the detritus up out of the hole.

water gage

a. An instrument for measuring the difference in pressure produced by a ventilating fan or air current. See also: [manometer](#) b. An instrument for measuring the ventilation pressure. One-inch (2.54-cm) water gage is equivalent to a pressure of $62.5/12 = 5.2$ psi (35.85 kPa). See also: [inclined water gage](#); [total ventilating pressure](#). *Nelson* c. A measure of ventilating pressure, expressed in terms of the height of a column of water. *BS, 8* d. A device that measures the pressure at which water is discharged by a pump or the volume of water flowing through a pipe or other conductor. *Long* e. An instrument

used to measure the depth or quantity of water, such as in a steam boiler or water storage tank. *Long* f. A manometer used with a Pitot tube to indicate air pressure. *Pryor*, 3

water garland

See: [garland](#)

water gel

a. An explosive material containing substantial portions of water, oxidizers, and fuel, plus a cross-linking agent. *FR 249* b. An explosive material containing substantial portions of water, oxidizers and fuel, plus a cross-linking agent. Syn: [slurry](#)

water gin

Scot. A gin actuated by a water wheel.

water glass

A concentrated and viscous solution of sodium silicate or potassium silicate in water. Used as an adhesive, a binder, a protective coating, in waterproofing cement, and in bleaching. Colorless; amorphous; $\text{Na}_2\text{O} \cdot \text{XSiO}_2$, in which X = 3 to 5; deliquescent. Syn: [waterglass](#); soluble glass; liquid glass. *Handbook of Chemistry and Physics*, 2

waterglass

See: [water glass](#)

water grade

a. An entry inclination that is just sufficient to drain off water. b. A grade determined by keeping the working place nearly parallel to the edge of a pool of water standing upon its floor. Water grade is sometimes incorrectly called water level. CF: [water level](#)

water groove

See: [waterway](#)

water hauler

a. One who collects in a water box (car) water that accumulates in low places--at the mine entrance, along haulageways, or at the working face--bailing it into a car with a bucket or using a small hand pump. Also called waterman; water monkey; water tender. *DOT* b. A laborer who hauls water cars into a mine to supply water for sprinkling haulage roads and working places. *DOT*

water hoist

A simple method of disposing of mine water using tanks with an engine or a motor on the surface. The machinery can be easily repaired and the plant is in no danger of being flooded. The high cost of this system and the fact that the shaft cannot be used for other purposes while water is being hoisted are important disadvantages. Water is delivered intermittently and at a decreasing rate as the depth of hoisting increases. This method is less economical than pumping but is useful as an emergency measure in reclaiming a flooded mine. See also: [drainage](#)

water-holding capacity

The smallest value to which the water content of a soil can be reduced by gravity drainage. *ASCE*

water inch

a. The discharge from a circular sharp-edged orifice 1 in (2.54 cm) in diameter with a head of one line above the top edge that is commonly estimated at 14 pints/min (6.6 L/min), and that constitutes an old unit of hydraulic measure. *Webster 3rd* b. See: [miner's inch](#)

water infusion

A technique being used abroad to suppress or prevent the formation of dust, in advance of mining a coal seam. Water (or sometimes foam or steam, which is costlier but more effective) is injected into the coal ahead of the face through long drill holes, as many as four to six per face and 6 to 20 m in length. The liquid infuses into the seam along fractures and cracks and, under pressure, penetrates a considerable distance from the hole radially, wetting the coal well. It has proved very effective in reducing dust concentrations during subsequent mining--in some instances, as much as 80%. Water infusion originated in Great Britain (it is used in 25% of the dusty mines) and has been tried experimentally with some success in the United States. See also: [pulsed infusion](#) [shot firing](#) *Hartman, 1*

water infusion gun

A special tube that acts as a borehole seal in the water infusion process. The tube has two separate passages: one for the infusion water and one for admitting hydraulic fluid, which actuates a piston, expanding the seal in the borehole. The infusion water is supplied by a power pump and the hydraulic fluid is supplied by a hand pump. Syn: [infusion gun](#) *Nelson*

water infusion method

A method of removing methane from mines. It consists of injecting water under pressure into a coal seam to push out the gas. Holes are drilled horizontally into the coal face and water is pumped into some of the holes at pressures varying from 200 to 650 psi (1.4 to 4.5 MPa). This forces the methane out through the other holes and also from the exposed part of the coal seam. Syn: [methane removal](#)

water infusion pump

A power pump, mounted on wheels, used to supply high-pressure water for coal seam infusion. It consists of an oil hydraulic circuit that drives two reciprocating rams, which in turn are directly coupled to the two rams of the water pump. *Nelson*

water inrush

A heavy and sudden inflow of water into mine workings or shafts. See also: [inrush of water](#)

water jacket

Cast- or wrought-iron sections of a furnace so constructed as to allow free circulation of water for keeping the furnace cool. Also called water block and water box.

water-jet drilling

The drilling of boreholes in unconsolidated or earthy formations using the erosive power of a small-diameter stream of water forcefully ejected as the cutting tool. See also: [jet](#)

water kibble

A large iron bucket with a valve in the bottom for self-filling; sometimes used in hoisting the water from a mine. See also: [water barrel](#) *Standard, 2*

water level

a. A level roadway, constructed with an impervious seal or barrier on the dip side, to divert the flow of water along the level and prevent its seepage to workings on the dip side. The level dips slightly outward to allow gravity flow. See also: [drain tunnel](#) b. The level at which, by natural or artificial drainage, water is removed from a mine or mineral deposit. c. A drift at the water level. See also: [water grade](#) d. The level of underground waters in a mine, or the elevation to which water will rise in a mine, when the mine is not being drained. *Statistical Research Bureau*

water leyner

A type of rock drill in which water is fed into the drill hole through the hollow drill steel to remove the drill cuttings and, at the same time, allay the dust. Also known as Leyner-Ingersoll drill. *Fay*

waterlime

See: [hydraulic limestone](#)

water load

S. Wales. The head, or pressure per square inch, of a column of water in pumps, etc.

water lodge

An underground reservoir. *CTD*

waterlogged

a. Said of workings or mines that have become filled with water because of abandonment or stoppage of operations. See also: [inrush of water](#) *Nelson* b. Referring to land where the water table is permanently located at or near ground level. See also: [water table](#)

water loss

The amount of drill water that escapes into porous or fractured borehole wall rocks and hence does not return and overflow at the collar of the borehole. *Long*

water machine

Scot. A pump or other appliance actuated by a water wheel for raising water. *Fay*

water mains

In coal mining, pipes made of cast iron or steel for the conveyance of water. *Mason*

waterman

a. A laborer who quenches coke with water so that it may be drawn from the oven, using a sprinkling system of perforated pipes. *DOT* b. See: [water hauler](#)

watermelon tourmaline

A variety of elbaite in pink, green, and colorless prismatic crystals.

water monkey

See: [water hauler](#)

water of capillarity

The water held in the soil above the standing-water level by reason of capillary attraction. Also called held water. See also: [capillary water](#) *Hammond*

water of compaction

Water furnished by destruction of pore space owing to compaction of sediments.

water of constitution

Water as an essential component in a mineral or other compound, either as water of crystallization; e.g., $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$ gypsum, or water more tightly bound as (OH) groups; e.g., $\text{FeO}(\text{OH})$ goethite. Also called H_2O^+ in wet chemical analyses.

water of crystallization

Water that combines with salts when they crystallize and remains as H_2O molecules in the crystal structure; given off upon heating to 100 to 200 degrees C. Also called H_2O in wet chemical analyses.

water of hydration

Water that is chemically combined in a crystalline substance to form a hydrate, but that may be driven off by heat. *AGI*

water opal

a. See: [hyalite](#) b. Any transparent precious opal.

water packer

An expandable device that is placed in a borehole to bar entry of water into the lower part of a hole or to separate two distinct flows of water from different strata. See also: [packer](#)

water pocket

A small, bowl-shaped depression on a bedrock surface, where water may gather; esp. a water hole in the bed of an intermittent stream, formed at the foot of a cliff by the action of falling water when the stream is in the flood stage. *AGI*

waterpower

a. The power of water derived from its gravity or its momentum as applied or applicable to the driving of machinery. *Standard, 2* b. A descent or fall in a stream from which motive power may be obtained; specif., in law, the fall in a stream in its natural state, as it passes through a person's land or along the boundaries of it. *Standard, 2*

water privilege

a. The right to the use of the water of a certain stream. *Standard, 2* b. The right to the possession and use of a fall of water for mechanical purposes. See also: [water right](#)

waterproofed stone dust

The proofing of stone dust to prevent the particles from caking or becoming sticky in humid atmospheres. Waterproofing is considered essential if stone-dust barriers are to operate effectively at humidities above 85%. *Nelson*

waterproof electric blasting cap

A cap specially insulated to ensure reliability of firing when used in wet work. Syn: [blasting cap](#)

water-quenched

Cooled with water, as in hardening steel. *Standard, 2*

water rate

The weight of dry steam consumed by a steam engine for each horsepower per hour. The result is stated in either indicated horsepower or brake horsepower. *Brantly, 2*

water-repellent surface

See: [air-avid surface](#)

water resistance

A qualitative measure of the ability of an explosive or blasting agent to withstand exposure to water without deteriorating or becoming desensitized.

water right

a. The right to use water for mining, agricultural, or other purposes. See also: [water privilege](#) b. The right to appropriate water granted to miners by Federal laws; however, this right applies only to water on public domain. Rights of way are granted over public lands for ditches, canals, flumes, and for the construction of a reservoir to one who has a

right to water. *Lewis* c. When one has legally acquired a water right, the person has a property right therein that cannot be taken away for public or private use, except by due process of law and upon just compensation being paid therefor. One who has acquired a legal water right can only be deprived of it by the voluntary act of conveying it to another, by abandonment, forfeiture under some statute, or by operation of law. A water right is an independent right and is not a servitude upon some other thing, and is an incorporeal hereditament, being neither tangible nor visible. *Ricketts*

water ring

A special form of cast-iron bricking curb whereby space is provided for building up the walling and also a channel or groove for collecting water running down the shaft sides. Rings are built into the shaft lining at intervals and pipes are arranged to conduct the water to the next lower ring or a sump. See also: [curb](#); [garland](#). Syn: [walling curb](#) *Nelson*

water-rolled

Said of round, smooth sedimentary particles that have been rolled about by water. *AGI*

water sapphire

a. A light-colored blue sapphire. b. An intense blue variety of cordierite occurring in water-worn masses in river gravels (such as in Sri Lanka) that may be used as a gemstone. Syn: [saphir d'eau](#) c. A term applied to water-worn pebbles of topaz, quartz, and other minerals in Sri Lanka.

water seal

A water accumulation in a depression in an underground roadway or in a pipe, sufficient to form a seal. *BS, 10*

water separation

See: [elutriation](#)

water shutoff

The sealing off of salt-water-bearing formations to prevent harmful underground water pollution. This is ordinarily done by cementing. *Williams*

water slot

A groove incised in the face and outside wall of a noncoring bit that serves as a waterway. Syn: [waterway](#)

water smoke

To heat a kiln slowly to dry out the moisture from the bricks, before firing. *Standard, 2*

water softening

Removal of excess calcium and magnesium, from water through precipitation of their carbonates (ion exchange) to remove ionized calcium, magnesium, etc. *Pryor, 3*

water-soluble oils

Oils having the property of forming permanent emulsions or almost clear solutions with water. *Fay*

water stemming bags

Water-filled plastic bags with a self-sealing valve classified as a permissible stemming device by the U.S. Mine Safety and Health Administration. *Atlas*

waterstone

a. A stone whose cutting crystals break away rapidly from its bond. The use of water forms a gritty paste which acts in much the same way as oil when used on an oilstone. The Queer Creek and Hindostan stone are good examples. b. Forest of Dean. A shale, so called in consequence of the wet soil that is found wherever it appears at the surface. c. The formation name for certain flaggy micaceous sandstone and marls in the Keuper of the Midlands. d. Eng. Quarrymen's name for the lowest bed in a Portland stone quarry at Long Crendon, Buckinghamshire. e. A whetstone requiring water instead of oil.

water string

Casing used to shut off water-bearing formations encountered in the drilling of a well. *Williams*

water swivel

A device connecting the water hose to the drill-rod string and designed to permit the drill string to be rotated in the borehole while water is pumped into it to create the circulation needed to cool the bit and remove the cuttings produced. Also called gooseneck; swivel neck; water coupling. CF: [air swivel](#)

water table

The surface between the zone of saturation and the zone of aeration; that surface of a body of unconfined ground water at which the pressure is equal to that of the

atmosphere. Syn: [ground-water surface](#); ground-water table; plane of saturation; saturated surface; level of saturation; phreatic surface; ground-water level; free-water elevation; free-water surface. See also: [waterlogged](#) *AGI*

water-table contour

A line drawn on a map to represent an imaginary line in the water table of a definite level. These contours are constructed from the data provided by the water-table levels, corrected for differences in surface level at the respective boreholes. A site investigation or opencast plan sometimes show water-table contours. *Nelson*

water-table level

Level showing the depth of the water table below the surface; the depth at which water is encountered in trial pits or boreholes. *Nelson*

water-table map

A contour map of the upper surface of the saturated zone. *Stokes*

water-table stream

Concentrated ground water flow at the water table in a formation or structure of high permeability.

watertight

a. A borehole in which the conditions are such that no loss of the circulated drill fluid occurs. *Long* b. A connection, container, or rock strata so tight as to be impermeable to water. *Long*

water-to-cement ratio

The ratio between the weight of water and the weight of cement in mortar or concrete. The lower the water-to-cement ratio, the higher will be the strength of the concrete. *Hammond*

water tower

a. A standpipe or its equivalent, often of considerable height, giving a head to a system of water distribution. *Standard, 2* b. A tower in which a falling spray of water is used to wash gas, etc. *Standard, 2* c. A tower containing tanks in which water is stored, built at or near the summit of an area of high ground in cases where the ordinary water pressure would be inadequate for distribution to consumers in the area. *CTD*

water transport

Water is used for transport in some mines, esp. in placers and in claypits, and generally in mines in an elevated position and with a loose mineral. Also filling material is often transported into the mine by water. The mixture of water and solid material can also be conveyed by pumps horizontally or raised to a small height. *Stoces*

water turbine

A prime mover coupled to an alternator, using a purely rotary motion to generate an alternating current. The main types of water turbines are (1) the Pelton wheel for high heads, (2) the Francis turbine for low to medium heads, and (3) the Kaplan turbine for a wide range of heads. *Hammond*

water tuyere

A water-jacketed tuyere. *Webster 3rd*

water vein

a. Groundwater in a crevice or fissure in dense rock. *AGI* b. A term popularly applied to any body of groundwater, in part because dowsers commonly describe water as occurring in veins. The term is little used among hydrologists. *AGI*

water wash

The use of water to remove the soluble constituents of a mill product before further treatment. See also: [wash water](#)

waterway

a. A groove or slot incised in the surface of a bit or other piece of drill-string equipment to provide a channel through which the circulated drilling fluid can flow. Also called watercourse; water groove; water passage; water slot. *Long* b. A way or channel, either natural (as a river) or artificial (as a canal), for conducting the flow of water. *AGI* c. A navigable body or stretch of water available for passage; a watercourse. *AGI*

water wheel

A wheel so arranged with floats, buckets, etc., that it may be turned by flowing water; used to drive machinery, raise water, etc. The overshot and undershot water wheel, the breast wheel, and the tub wheel are now largely discarded in favor of the turbine. *Standard, 2*

water witch

A device for determining the presence of water, usually electrically. CF: [divining rod](#)

water witching

See: [dowsing](#)

waterworn stone

Gem minerals, esp. crystals, rounded by action of water rolling them against rocks or gravels in beds of rivers, lakes, or the ocean.

water yardage

Extra payment to miners who work in a wet place, either by the yard of progress or the ton of coal mined. *Fay*

watt

The absolute meter-kilogram-second (mks) unit of power that equals 1 absolute joule per second; the standard in the United States; equals 1/746 hp. Abbrev., w and W. *Webster 3rd; Zimmerman*

wattevillite

An orthorhombic or monoclinic mineral, $\text{Na}_2 \text{Ca}(\text{SO}_4)_2 \cdot 4\text{H}_2 \text{O} (?)$; forms hairlike crystals. Also spelled wattevilleite.

watt-hour

A unit of measurement of electrical work that equals 1 W expended for 1 h. Abbrev., whr and wh. *Crispin; Zimmerman*

wattless current

An alternative name for the reactive component of an alternating current. *CTD*

wattmeter

An instrument for measuring electric power in watts, the unit of electrical energy, volt times amperes; therefore, combining the functions of a voltmeter and an ammeter. Abbrev., wm. *Crispin; Zimmerman*

watt-second

A unit of measurement of electrical work that equals the rate of 1 W expended for 1 s. Abbrev., wsec. *Crispin*

Waugh drill

See: [rock drill](#)

wave diffraction

See: [diffraction](#)

wave front

In seismology, the surface of equal time elapse from the source point to the position of the resulting outgoing signal at any given time after the source charge has been activated. In a more restricted sense, the surface along which phase is constant at a given instant. *AGI*

wave-front chart

In seismology, a diagram of a series of lines showing equal times from the point of detonation. In its construction, velocity information must be known or assumed. Charts are usually constructed so that the horizontal and vertical scales are in length, but they can be constructed so that the horizontal scale is in length and the vertical scale is in time. *AGI*

wave interference

The phenomenon that results when waves of the same or nearly the same frequency are superposed, characterized by a spatial or temporal distribution of amplitude of some specified characteristic differing from that of the individual superposed waves. *Hy*

wavelength

a. The linear distance between successive wave crests or other equivalent points in a waveform or harmonic series. It is equal to the velocity divided by the frequency--measured in cycles per second--and may be represented by the wave number in reciprocal units, e.g., cm^{-1} . b. In symmetrical, periodic tectonic fold systems, the distance between adjacent antiformal or synformal axial planes. For asymmetrical and nonperiodic systems, various definitions have been proposed.

wavellite

An orthorhombic mineral, $\text{Al}_3 (\text{PO}_4)_2 (\text{OH},\text{F})_3 \cdot 5\text{H}_2\text{O}$; pearly; forms hemispherical radiating aggregates in low-grade aluminous phosphatic rocks; also occurs in veins; a source of phosphorus.

wave meter

An instrument to measure and record the wave spectra. *Hy*

wave period

The time interval between the appearance of two consecutive wave repetitions at a given point, usually expressed in seconds. The wave segments considered must be the same; i.e., the crests, troughs, etc. *Hy*

wave propagation

Radiation, such as from an antenna of r-f energy into space or of sound energy into a conducting medium. *Hy*

wave refraction

- a. The process by which a water wave, moving in shallow water as it approaches the shore at an angle, tends to be turned from its original direction. The part of the wave advancing in shallower water moves more slowly than the part still advancing in deeper water, causing the wave crests to bend toward parallel alignment with the shoreline. *AGI*
- b. The bending of wave crests by currents. *AGI*

wave spectrum

A concept used to describe the distribution of energy among waves of different period. Wave speed increases with wave length, so distant storms may be detected by the increase of energy in long period waves. Sea is fully developed when all possible wave frequencies possess energies appropriate to the spectrum for the prevailing wind speed. *Hy*

wave velocity

A quantity that specifies the speed with which a wave travels through a medium. *Hy*

wavy extinction

See: [undulatory extinction](#)

wavy vein

A vein that alternately enlarges or pinches at short intervals. *Fay*

wax

a. A solid, noncrystalline hydrocarbon of mineral origin, such as ozocerite and paraffin; composed of the fatty acid esters of the higher hydrocarbons. b. Soft or puddled clay used for dams or stoppings in a mine.

wax opal

An early name for yellow opal with a waxy luster. *Fay*

wax stone

Crude ozokerite associated with earthy matter. *Tomkeieff*

wax wall

A wall of clay built around the gob or goaf to prevent the entry of air or egress of gas. *CTD*

wax walling

The building of clay lumps as a lining to the pack to reduce leakage. If about 15% to 20% of calcium chloride is added to the clay, it will remain plastic. *Sinclair, 1*

way

The rails, sleepers, etc., upon which cars, tubs, or corves run. *Fay*

wayboard

a. Eng. A thin layer or band that separates or defines the boundaries of thicker strata; e.g., thick beds of limestone separated by wayboards of slaty shale, sandstone separated by wayboards of clay. Also spelled weighboard. *Fay* b. Leic. Beds of green marl among sandy shales in the Trias. *Arkell*

waygate

The tailrace of a mill. *Fay*

waylandite

A trigonal mineral, $(B,Ca)Al_3(PO_4)_2(OH)_6$; crandallite group; white; in Uganda.

way shaft

See: [winze](#)

weak ground

Roof and walls of underground excavations that are in danger of collapse unless suitably supported. *Pryor, 3*

wearing strip

A strip of metal applied to any particular device to take the wear of moving parts or objects. In conveyor work, it refers to the strip that is sometimes applied to the chain conveyor troughs and on which the drag chain rides. *Jones, 1*

wear plate

Sections of hardened steel plates of various thicknesses (as desired) which are welded (or bolted) in areas of severe wear, such as the insides of feeders, crushers, transfer chutes, or any other area where mined material passes, creating abrasion, and threatens wearing of these areas.

wear rib

Hard metal ridge applied to the outside surface of bottom-hole equipment and built up as close as practicable to the set-outside-diameter size of a reaming shell, which serves as a wear pad. *Long*

weather

a. To undergo changes, such as discoloration, softening, crumbling, or pitting of rock surfaces; brought about by exposure to the atmosphere and its agents. *AGI* b. To undergo or endure the action of the elements; to wear away, disintegrate, discolor, or deteriorate under atmospheric influences. *Webster 3rd*

weather door

A door in a mine level whose purpose it is to regulate ventilation currents. A trapdoor. *Fay*

weathered layer

a. In seismic work, a zone extending from the surface to a limited depth, usually characterized by a low velocity of transmission, which abruptly changes to a higher velocity in the underlying bedrock. The name is erroneous, and the zone is more

properly called the low-velocity layer. *AGI* b. In seismology, the zone of the Earth that is immediately below the surface, characterized by low seismic-wave velocities. *AGI*

weathered rock

Rock, the character of which has been changed by exposure to decaying conditions found in the zone of weathering. *Long*

weathering

a. The destructive processes by which earthy and rocky materials on exposure to atmospheric agents at or near the Earth's surface are changed in color, texture, composition, firmness, or form, with little or no transport of the loosened or altered material; specif. the physical disintegration and chemical decomposition of rock that produce an in-situ mantle of waste and prepare sediments for transportation. Most weathering occurs at the surface, but it may take place at considerable depths, as in well-jointed rocks that permit easy penetration of atmospheric oxygen and circulating surface waters. *AGI* b. Exposing ore to the atmosphere for long periods in order that a part, at least of the sulfide content, may become oxidized and washed away by the rain. *Osborne* c. See: [seasoning](#)

weathering correction

In seismic exploration, a correction applied to reflection and refraction data for variations in travel time produced by irregularities in a low-velocity or weathered layer near the surface. Syn: [low-velocity-layer correction](#)

weathering index

A measure of the weathering characteristics of coal, according to a standard laboratory procedure. Syn: [slacking index](#)

weathering map

In seismic work, a map on which the low-velocity layer, or weathered layer, is plotted and contoured to show areal variations. *AGI*

weathering of coal

The slow disintegration of coal into fires in surface stockpiles under the action of the weather, particularly frost after a wet period. See also: [spontaneous combustion](#)

weathering of roadways

The disintegration or scaling of exposed surfaces of mine roadways, particularly in the case of clay or shale rocks. Guniting has been used for roadway protection against weathering. See also: [guniting](#) *Nelson*

weathering shot

In seismic exploration, the detonation of a small explosive charge in the weathering or low-velocity layer to determine its velocity characteristics and thickness. *AGI*

web

The slice or thickness of coal taken by a cutter loader when cutting along the face. The thickness of a web varies from a few inches with plow-type machines to up to about 6 ft (1.8 m) with the A.B. Meco-Moore. The term web tends to be restricted to thin or medium slices of coal. See also: [buttock](#)

weber

Magnetic flux equivalent in the meter-kilogram-second (mks) system of the maxwell in the centimeter-gram-second (cgs) system. One weber equals 10^8 maxwells. Abbrev., wb. *Pryor, 3*

weberite

An orthorhombic mineral, $\text{Na}_2 \text{MgAlF}_7$; pale gray; forms grains in cryolite; in Greenland.

Weber process

A method of manufacturing pig iron in which the ore is mixed with a proportionate amount of coal sufficient to smelt it; after adding a binder the mixture is briquetted by means of a roller press into ovoids, which are subjected to low temperature carbonization between 550 degrees C and 600 degrees C, followed by smelting in a low shaft furnace. *Osborne*

weddellite

A tetragonal mineral, $\text{Ca}(\text{C}_2\text{O}_4) \cdot 2\text{H}_2\text{O}$; in mud at the bottom of the Weddell Sea, Antarctica; also as urinary calculi. CF: [whewellite](#)

wedge

a. A wedge-shaped piece of wood used to tighten timber sets against the roof and sides. See also: [lag](#); [lid](#). *Nelson* b. A tapered piece of material used to initiate the deflection of a borehole. See also: [deflecting wedge](#); [Hall-Rowe wedge](#). *Long* c. Tapered piece of core

that tends to bind and block a core barrel. *Long* d. A piece of mica that, on splitting, yields pieces thicker at one end than at the other. *Skow* e. The shape of a stratum, vein, or intrusive body that thins out; specif. a wedge-shaped sedimentary body, or prism. See also: [prism](#)

wedge-and-sleeve bolt

A bolt designed for use in roof bolting. It consists of a rod 1-3/4 in (4.45 cm) in diameter with one end threaded and the other end shaped to form a solid wedge. A loose split sleeve with an outside diameter of 1-1/2 in (3.81 cm) is fitted over the wedge. Anchorage is provided when the bolt is pulled downward in a hole and the sleeve is held by a thrust tube. Split by the wedge head of the bolt, the sleeve expands until it grips the sides of the hole. See also: [bolt](#); [slot-and-wedge bolt](#). *Nelson*

wedge bit

A tapered-nose noncoring bit, used to ream out a borehole alongside a steel deflecting wedge in hole-deflection operations. Also called: bullnose bit; wedge reaming bit. Syn: [wedging bit](#)

wedge capping

A winding rope capping consisting of two tapered iron wedges that encircle the rope, the end of which is prevented from unravelling by casting onto it a small block of white metal. The wedges are contained by a steel bow, over which four or five wrought-iron hoops are driven. The greater the pull on the rope, the more the wedges grip it as they are drawn into the encircling hoops. *Mason*

wedge clinometer

An end clinometer the bottom end of which is shaped to match the wedge-guide pin on the drive wedge; hence the two can be fastened together with copper shear rivets. When a drive wedge is driven into a wooden plug in a borehole the copper rivets break; after the clinometer has been removed from the borehole, the relation of the bearing and inclination readings to the flat face of the projection on the bottom of the clinometer case can be used to orient and place the deflection wedge in a manner so as to direct the deflected hole to follow the desired course. CF: [plain clinometer](#); [line clinometer](#). *Long*

wedge core lifter

A core-gripping device consisting of a series of three or more serrated-face, tapered wedges contained in slotted and tapered recesses cut into the inner surface of a lifter case or sleeve. The case is threaded to the inner tube of a core barrel. As the core enters the inner tube, it lifts the wedges up along the case taper. When the barrel is raised, the wedges are pulled tight, gripping the core. *Long*

wedge cut

a. A cut in which the central holes are positioned to cause the breakout of a wedge-shaped section of strata when fired. *BS, 12* b. A drill-hole pattern with the cut holes converging to form a V or wedge. The other holes are drilled to break to the opening made by the cut holes. See also: [V-cut](#) c. A type of geometry for blasting pattern often used in drifting work. It can be adopted for all strata conditions. A wedge cut consists of pairs of holes, usually drilled horizontally, that meet or finish close together at the back of the cut so that a wedge-shaped section of the rock face will be removed on blasting. The holes should be drilled at an angle of approx. 60 degrees to the face line. Accordingly, the depth of pull that can be obtained with this type of cut is governed by the width of the drift, as this determines the maximum length of drill steel that can be used. Typically, the pull ranges from 5 ft (1.5 m) in a 12-ft-wide (3.7-m-wide) drift up to 6-1/2 ft (1.8 m) in a 15-ft-wide (4.6-m-wide) drift. *McAdam, 2*

wedge guide

One of several implements used collectively to arrest a cage or skip in the event of an overwind using a multirope friction winder. Frictional forces, which gradually increase by virtue of the wedging action of the guides, are relied upon to bring the cage to rest and hold it in a stationary position with the aid of jack catches. See also: [detaching hook](#)

wedge off

To deviate or change the course of a borehole by using a deflecting wedge. See also: [bypass](#)

wedge-out

The edge or line of pinch-out of a lensing or truncated rock formation. *AGI*

wedge out

See: [thin out](#)

wedge pilot

That part of the bottom end of a Hall-Rowe deflecting wedge that matches the guide pin on the upper end of the Hall-Rowe drive wedge and by means of which the deflecting wedge can be oriented to direct the deflected borehole in the intended direction. *Long*

wedge reaming bit

A tapered or bullnose rotary bit used to restart drilling after a deflection wedge has been fitted into a borehole. See also: [wedging reamer](#); [wedge bit](#). *BS, 9*

wedge roaster

Multiple-hearth vertical furnace. Rabblers rotating on each circular horizontal hearth work the continuously fed material across alternately to the periphery and then, on the next hearth below, toward the center, so that it gravitates through either a central or a peripheral opening and is at the same time exposed to rising heat or air blown through rabble arms. *Pryor, 3*

wedge rock

An expression used on the Comstock lode to designate rock better than waste but too poor to be classed as "pay ore" or even "second-class ore." It became a custom to throw a wooden wedge onto a car containing very low grade ore, hence the term wedge rock. Syn: [pin](#)

wedge rose bit

A serrated-face, hardened-metal, noncoring, cone-shaped bit used primarily to mill off part of the stabilizing or rose ring on the top end of a Hall-Rowe deflecting wedge. *Long*

wedge-set

A diamond bit with wedge-shaped configurations in the crown that are inset with diamonds.

wedge shot

See: [wedge cut](#)

wedge socket fitting

A wire rope attachment in which the rope lies in a too-small groove between a wedge and housing, so that pull on the rope tightens the wedge. *Nichols, 1*

wedge theory

The analysis formulated by Coulomb in 1776 of the force tending to overturn a retaining wall. Its basis is the weight of the wedge of earth that will slide forward if the wall fails. *Hammond*

wedge-wire deck

A screen deck comprising wires of wedge-shaped cross section spaced from each other at a fixed dimension; the underflow thus passes through an aperture of increasing cross section. Also called wedge-wire sieve (undesirable usage). *BS, 5*

wedge-wire screen

A screen designed to reduce or eliminate clogging of material. It consists of wedge-shaped parallel wires with their wide edge upward. This type of screen is used for dewatering coal on vibrating, shaking, or stationary screens. *Nelson*

wedging

a. A method used in quarrying to obtain large, regular blocks of building stone, such as syenite, granite, marble, and sandstone. In this method, a row of holes is drilled, either by hand or by pneumatic drill, close to each other to create a longitudinal crevice. A gently sloping steel wedge is driven into this crevice. Usually several wedges are driven, and the block of stone can be detached without shattering. *Stoces* b. The act of changing the course of a borehole by using a deflecting wedge. Syn: [whipstocking](#) c. The lodging of two or more wedge-shaped pieces of core inside a core barrel and therefore blocking it. *Long* d. The material, moss, or wood used to render a shaft lining tight. *Fay* e. The splitting, breaking, or forcing apart of a rock as if by a wedge, such as by the growth of salt or mineral crystal in interstices; specif. frost wedging. *AGI*

wedging and blocking

See: [blocking and wedging](#)

wedging bit

See: [wedge bit](#)

wedging crib

In a circular mine shaft, a steel ring made of segments wedged securely to rock walls for use as a foundation for masonry lining. Also called: wedging ring; wedging curb. *Pryor*, 3

wedging curb

See: [curb](#)

wedging down

Breaking down coal at the face with hammers and wedges instead of by blasting. *Fay*

wedging reamer

A reaming bit used to ream down alongside and pass the deflection wedge when deviating a borehole. Also called wedge bit; wedge reaming bit. *Long*

wedging shot

An opening shot. A center cut. *Fay*

weeksite

An orthorhombic mineral, $K_2(UO_2)_2Si_6O_{15} \cdot 4H_2O$; resembles uranophane; in the Thomas range, Juab County, UT. Syn: [gastunite](#)

weeks manometer

An inclined water gage. *Nelson*

weeper

A small feeder of water. *BS, 10*

weeping rock

A porous rock from which water oozes.

Weg rescue apparatus

Oxygen supply fed automatically to a rescue worker through a valve controlled by the worker's breathing action, forming part of a portable outfit. *Pryor, 3*

wegscheiderite

A triclinic mineral, $Na_5(CO_3)(HCO_3)_3$; forms fibrous aggregates of tiny acicular to bladed crystals; Green River formation, WY.

wehrlite

a. A mixture of pilsenite and hessite. b. A peridotite composed chiefly of olivine and clinopyroxene with accessory opaque oxides common.

weibullite

An orthorhombic mineral, $Pb_6Bi_8(S,Se)_{18}$ (?); differs from galenobismutite in possessing two distinct cleavages; steel-gray.

Weichbraunkohlen-dopplerit

See: [dopplerite](#)

weigh batcher

Batching plant in which all ingredients for a concrete mix are measured by weight. *Hammond*

weigher-and-crusher man

Person who weighs zinc ore and other materials to be sintered, and crushes sintered ore preparatory to further reduction. *DOT*

weighing feeder

A device that handles the feed continuously over a belt that is balanced to weigh a stream of ore. *Pit and Quarry*

weighing-in-motion system

An electronic system which weighs individually loaded coal wagons as they roll over a rail scale, feeding the information into a totalizing printer, which automatically prints out gross and net weights. It employs hermetically sealed load cells which accurately convert physical weight into electrical impulses. See also: [weightometer](#) Syn: [electronic weighing](#)

weigh larry

A traveling hopper for receiving, weighing or measuring, and distributing bulk materials. Usually fitted with a scale, either manually operated or of the automatic recording type. Weigh larries may be suspended between overhead tracks or carried on rails mounted below them. They may be hand-pushed or power-propelled, and some designs provide a riding platform or cab for the operator. A remote-control device for operating the bunker or bin gates is usually mounted on the larry chassis.

weight

a. Roof movement, esp. when it can be seen or heard. *Mason* b. Fracturing and lowering of the roof strata at the face as a result of mining operations. See also: [crush](#)

weight batching

Weighing and combining the correct proportion of cement and aggregate in a concrete mix. *Nelson*

weight break

Cracks developing from the upper or tension side of a stratum caused by bending moment over a coal seam. Such breaks are induced in the nether roof in consequence of the moment exercised by the weight of the roof-stratum overhanging the face, cantilever fashion. The weight break differs from a shear plane in the more ragged and uneven character of the fracture and in hanging over the waste instead of over the unmined coal seam. Also called first break. *Briggs*

weight dropping

A seismic technique by which energy can be sent downward into the ground without the necessity of drilling shotholes. This technique involves lifting a weight, then permitting it to fall and strike the ground. The waves from the impact are then recorded. In areas where drilling is difficult, otherwise undesirable, or unduly expensive, this technique may be highly advantageous. *Dobrin*

weighted average

Value calculated from a number of samples, each of which has been assigned an importance in accord with its position and general trustworthiness. In this connection a sample which was cross-checked by others would be more reliable than one which was isolated, particularly if the latter showed abnormal values or was for any other reason suspect. The cross-checked sample is sometimes called a weighted sample in mineral valuation of a deposit. *Pryor, 3*

weighted average depth

A method of comparing the average depth of mine workings. It is based on the average depth from which the output is obtained, weighted for the tonnage produced. *Nelson*

weighted flowsheet

A materials flowsheet including a statement of the capacity in tons per hour at principal points in the plant. *BS, 5*

weight indicator

An apparatus for recording and indicating the tension on a drilling line of a diamond or rotary drill. See also: [tension drilling](#)

weighting

The occurrence of fracturing of the upper roof, with consequent rapid increase of the weight carried on the timber and packs supporting the roof; distinct from the fracturing of the nether roof. *TIME*

weightometer

An appliance for the continuous weighing of coal or other material in transit on a belt conveyor. See also: [weighing-in-motion system](#) *Nelson*

weight pit

The pit below the shaft station where heavy weights are attached to the guide ropes to keep them taut. Roughly, the weight needed is 1 st for each 1,000 ft (1.97 t per 1,000 m) of rope. *Higham*

weight strength

The strength of an explosive per unit weight, expressed as a percentage of the value for blasting gelatin as a standard. See also: [absolute weight strength](#)

Weinig flotation cell

Square type of machine in which air is blown down to join pulp entering the cell below a mechanically driven impeller. *Pryor, 3*

weir

a. A small dam in a stream, designed to raise the water level or to divert its flow through a desired channel. *AGI* b. A notch in a levee, dam, embankment, or other barrier across or bordering a stream, through which the flow of water is regulated. *AGI*

weir head

The depth of water in a measuring weir as measured from the bottom of the notch to the surface of the water upstream of the weir. The velocity of approach is not included. *Hammond*

weir table

A device to estimate the quantity of water that flows during a given time over a weir of a given width at different heights of water. *Fay*

Weisbach triangle

a. A configuration used in the surveying of a mine shaft. *Pryor, 3* b. The highly attenuated triangle formed by the plan position of two shaft plumb lines and one observation station. *BS, 7*

weissite

An isometric(?) mineral, Cu_5Te_3 ; bluish-black; at Vulcan, CO.

weiss quadrilateral

The quadrilateral formed by the plane position of two shaft plumb lines and two observation stations. *BS, 7*

welded dike

A term applied to pegmatitic and aplitic dikes, the boundaries of which have been obliterated by continued growth of the minerals of the granite into which the dikes have been injected. *Holmes, 2*

welded tuff

A glass-rich pyroclastic rock that has been indurated by the welding together of its glass shards under the combined action of the heat retained by particles, the weight of overlying material, and hot gases. It is generally composed of silicic pyroclasts and appears banded or streaky. Syn: [tuff lava](#)

weldment

A base or frame made of pieces welded together, as contrasted with a one-piece casting or a bolted or riveted assembly. *Nichols, 1*

Weldon mud

See: [Weldon process](#)

Weldon process

A process used formerly for the recovery of manganese dioxide in making chlorine from hydrochloric acid in a stoneware still, by adding lime to the still liquor and oxidizing with air to precipitate a mud containing calcium manganite and yielding chlorine when recirculated and treated with hydrochloric acid. *Webster 3rd*

well

a. A borehole or shaft sunk into the ground for the following purposes: obtaining water, oil, gas, or mineral solutions from an underground source; introducing water, gas, or chemical reagent solutions under pressure into an underground formation; or removing the leachate from such an operation. See also: [borehole mining](#) b. A slot in the front of a hydraulic dredge hull in which the digging ladder pivots. *Nichols, 1* c. A hollow cylinder of reinforced concrete, steel, timber, or masonry built in a hole as a support for a bridge or building. *Webster 3rd* d. Commonly used as a syn. for borehole or drill hole,

esp. by individuals associated with the petroleum-drilling industry. *Long* e. A wall around a tree trunk that protects it from fire. *Nichols, 1* f. An artificial excavation (pit, hole, tunnel), generally cylindrical in form and commonly walled in, sunk (drilled, dug, driven, bored, or jetted) into the ground to such a depth as to penetrate water-yielding rock or soil and to allow the water to flow or to be pumped to the surface; a water well, originally applied to natural springs or pools, esp. mineral spas. See also: [artesian well](#); [deep well](#). g. The crucible of a furnace or a cavity in the lower part of some furnaces to receive falling metal. h. The small dark nonreflecting area in the center of a fashioned stone, esp. in a colorless diamond cut too thick. i. A vertical opening through the hull of a ship in which drill pipe or mining machinery is lowered to the seafloor, rather than being lowered over the side of the ship. Also called: moonpool.

well-conditioned triangle

A triangle that is equilateral or nearly so. In such a triangle any error in the measurement of an angle will be reduced to a minimum. *Hammond*

well core

A sample of rock penetrated in a well or other borehole obtained by use of a hollow bit that cuts a circular channel around a central column or core. *AGI*

well cuttings

Rock chips cut by a bit in the process of well drilling and removed from the hole by pumping or bailing. Well cuttings collected at closely spaced intervals provide a record of the strata penetrated. *AGI*

well-drill hole

Hole drilled by means of an apparatus known as a well drill, or similar to that, and used in groups for blasting on a comparatively large scale. Such holes are usually 5 in or 6 in (12.7 cm or 15.2 cm) in diameter and from 30 to 150 ft (9.1 to 45.7 m) deep.

wellglass fitting

A transparent lighting device used as a main lighting device in mines. Its distribution characteristics are simple, since there is no control of light other than that provided by the interior of the upper part of the fitting, which absorbs a large proportion of the upward flux component from the lamp and reflects the remainder. It is usually to be found spaced at intervals of 20 to 50 ft (6.1 to 15.2 m), 6 to 7 ft (1.83 to 2.13 m) high, along the centerline of roads 12 to 14 ft (3.66 to 4.27 m) wide. In general, the most noticeable effect of such a layout is glare. *Roberts, 2*

wellhole

a. A large-diameter (about 6 in or 15 cm) vertical hole used in quarries and opencast pits for heavy explosive charges. *Nelson* b. Change room. *Hess*

wellhole blast

A method of quarry blasting in which the explosive charges are placed in rows of vertical holes. The loading ratio varies from about 3 st of rock per pound (6 t/kg) of explosive up to about 7 st (14 t/kg) under favorable conditions. Deck loading is usually employed, and a powerful gelatinous explosive is loaded at the bottom of the holes. *Nelson*

wellhole blasting

This type of blasting is virtually benching on a large scale. The depth and burden of the holes are much greater, and in consequence, the hole diameter must also be increased to ensure sufficient concentration of the explosive charge. Wellhole blasting is used in limestones esp. if the beds are horizontal and well-defined. It is not often used in highly abrasive igneous rocks because of the cost of drilling. *Fraenkel*

Wellington formula

The Engineering News formula for calculating the load-bearing capacity of driven piles. *Hammond*

well log

A graphic record of the measured or computed physical characteristics of the rock section encountered in a well, plotted as a continuous function of depth. Measurements are made by a sonde as it is withdrawn from the borehole by a wire line. Several measurements are usually made simultaneously, and the resulting curves are displayed side by side on a common depth scale. Both the full display and the individual curves are called logs. Well logs are commonly referred to by generic type, such as resistivity log and radioactivity log, or by specific curve type, such as sonic log and gamma-ray log. See also: [borehole log](#); [sample log](#); driller's log. Syn: [borehole survey](#); [geophysical log](#); [wire-line log](#). *AGI*

well logging

a. A widely used geophysical technique that involves probing of the Earth with instruments lowered into boreholes, their readings being recorded at the surface. Among rock properties currently being logged are electrical resistivity, self-potential, gamma-ray generation (both natural and in response to neutron bombardment), density, magnetic susceptibility, and acoustic velocity. *Dobrin* b. In deep bores, measurement of resistivity of the formations drilled through. Electrodes are plunged into the drilling mud at controlled spacings. See also: [electric log](#) c. The lowering of sensors into a borehole and

recording of physical information as a function of depth. Numerous types of geophysical logs can be recorded, the more common being rate of penetration, temperature, gamma-ray, electric, and caliper (for hole diameter). *Nelson*

well point

A hollow vertical tube, rod, or pipe terminating in a perforated pointed shoe and fitted with a fine-mesh wire screen; connected with others in parallel to a drainage pump; driven into or beside an excavation to remove underground water, to lower the water level and thereby minimize flooding during construction, or to improve stability. *AGI*

well-point pump

A centrifugal pump that can handle considerable quantities of air; used for removing underground water to dry up an excavation. *Nichols, 1*

well seismometer

Special type of seismometer that is used when recording in a borehole. *Schieferdecker*

well shooting

In seismic work, a method or methods of logging a well so that average velocities, continuous velocities, or interval velocities are obtained by lowering geophones into the hole. Shots are usually fired from surface shot holes, but may be fired in the well itself, or perforating-gun detonations may be used. In continuous logging, a sound source is lowered in the hole together with recording geophones. *AGI*

well-sorted

As used by geologists, it applies to material composed of grains of approx. uniform size. As used by engineers, it applies to material containing approx. equal amounts of several grain sizes. *Stokes*

well tube

A tube or tubing used to line wells. *Standard, 2*

well-tube filter

A strainer on a driven well tube to keep out grit. *Standard, 2*

well-tube point

A point at the end of a perforated tube used for sinking wells. *Standard, 2*

well-velocity survey

Method of determining the velocity distribution by recording in a borehole.
Schieferdecker

Welshman

A heavy steel ring, about 3 in or 4 in (7.6 cm or 10.2 cm) inside diameter, used in withdrawing a bar stuck or frozen in a skull or iron. The ring is placed on the bar, a wedge inserted, and the bar backed out by sledging on the wedge. *Fay*

Welsh notch

A form of joint between the tubing used to line a collar (or a crossbar) and the arms (or uprights) of a timber set; developed in the Welsh coal mines. A Welsh notch is designed to be equally effective in resisting side and roof pressure. *Nelson*

wem

See: [whim](#)

wenkite

A hexagonal mineral, $Ba_4 Ca_6 (Si, Al)_{20} O_{39} (OH)_2 (SO_4)_3 \cdot nH_2 O (?)$; cancrinite group.

Wentworth grade scale

An extended version of the Udden grade scale, adopted by Chester K. Wentworth (1891-1969), U.S. geologist, who modified the size limits for the common grade terms but retained the geometric interval or constant ratio of 1/2. The scale ranges from clay particles (diameter less than 1/256 mm) to boulders (diameter greater than 256 mm). It is the grade scale generally used by North American sedimentologists. See also: [Udden grade scale](#); [phi grade scale](#); grade scale. *AGI*

Wentworth scale

A logarithmic grade scale for size classification of sediment particles, starting at 1 mm and using the ratio 1/2 in one direction (and 2 in the other), providing diameter limits to the size classes of 1, 1/2, 1/4, etc., and 1, 2, 4, etc. Syn: [grade scale](#) *AGI*

Wenzel's law

Applies to the dissolution of a solid in a liquid. The rate of dissolution is proportional to the surface area of the solid exposed to the action of the solvent. *Newton, I*

wernerian

Of or relating to Abraham G. Werner (1749-1817), German mineralogist and geologist, who classified minerals according to their external characteristics, advocated the theory of neptunism, and postulated a worldwide age sequence of rocks based on their lithology. Also, said of one who is a great, but dogmatic, teacher of geology. n. An adherent of wernerian beliefs; a neptunist.

wernerite

A common scapolite. A mineral of the scapolite group, intermediate in composition between meionite and marialite. Syn: [scapolite](#)

Wesco coal powder

Nongelatinous permissible explosive; used in coal mines. *Bennett*

weslienite

See: [romeite](#)

Westfalia pillar plow

A plow designed for the extraction of coal pillars and for short, rapidly advancing development faces. The plow is guided along a panzer conveyor, but the pulling forces are not transmitted to the conveyor structure. The plow is automatically advanced at each end of its short run, giving a rapid face advance. This requires the use of self-advancing supports in conjunction with hydraulic anchorages. *Nelson*

Westfalia plow

See: [hard-coal plow](#)

Westfalia tandem plow

A plow designed for use in a seam with sticky coal. It consists essentially of two shortened plow bases connected by a heavy tension spring and carrying two adjustable booms fitted with cutting bits and connected at the apex to a cutterhead, which plows at roof level or at any lower level that will bring down the top coal. *Nelson*

westfalite

A blasting explosive composed of ammonium nitrate and resin. *Webster 2nd*

Weston photronic cell

This consists of a small box containing an iron disk thinly coated with the rare element selenium. When electromagnetic radiation in the form of light waves falls on this surface it sets up a potential difference between the iron and the selenium, which in turn causes a minute electric current to flow through the sensitive microammeter connected between them. The magnitude of this current is proportional to the intensity of the light, and it can be used as a measure. For use with miners' hand lamps the cell is mounted in a box, the microammeter being housed in the top or side. The lamp to be tested is placed in the box on a turntable, and the candlepower is read off directly since the instrument is already calibrated. *Standard, 2*

Westphal balance

In mineral analysis, a balance used to determine the specific gravity of heavy liquids which are in turn used to determine the specific gravity of mineral grains by a sink-float method. It is a modification of a Walker steelyard (beam) balance. Also called: Mohr balance. CF: [Jolly balance](#); Walker balance.

West's solution

A liquid consisting of eight parts of white phosphorous and eight parts of sulfur to one part of methylene iodide. Useful in obtaining the refractive index by the Becke method. Refractive index, 2.05.

weta material

A refractory suitable instead of porcelain and quartz glass. Powdered silicon carbide mixed with silicates and certain metals; resists acids, alkalis, and temperature shock; is not easily broken.

wet analysis

A method of estimating the effective diameters of particles smaller than 0.06 mm by mixing a sample in a measured volume of water and checking its density at intervals with a sensitive hydrometer. A test may take several days. *Nelson*

wet- and dry-bulb thermometer

See: [hygrometer](#); wet-bulb thermometer.

wet-and-dry screening

In sizing analysis of fine material, preliminary screening by washing a weighed sample on a 200-mesh screen, perhaps with use of a dispersing agent, such as sodium silicate. Removal of the minus fraction (which is settled and later brought into account) is

followed by drying of the on-size and by standard sizing analysis. Screen action is thus rendered more efficient. *Pryor, 3*

wet assay

Any type of assay procedure that involves liquid, generally aqueous, as a means of separation. CF: [dry assay](#) *AGI*

wet blasting

Shot firing in wet holes. Special explosives are available for wet conditions, and the detonator wires must be well insulated to prevent short-circuiting and misfires. *Nelson*

wet-bulb temperature

a. The temperature of the air as measured by a wet-bulb thermometer; it is lower than the dry-bulb temperature (for all cases except when the air is saturated)--inversely proportion to the humidity. *Strock, 2* b. The lowest temperature which can be produced in a given air by the evaporation of moisture into that air. *Spalding* c. Temperature at which water evaporating into air can bring the air to saturation adiabatically at that temperature--a measure of the evaporating capacity of air. Indicated by a thermometer with a wetted wick. Measured in degrees C. *Hartman, 2*

wet-bulb thermometer

An instrument that measures the evaporating capacity of air. *Lewis*

wet cleaning

A coal-cleaning method that involves the use of washers plus the equipment necessary to dewater and heat-dry the coal. This method is generally used when cleaning the coarser sizes of coal. It is a more expensive method than air cleaning and creates the additional problem of water pollution. Coal can, however, be cleaned more accurately by this method than by air cleaning. See also: [froth flotation](#); [washery](#). *Kentucky*

wet clutch

A clutch that operates in an oil bath. *Nichols, 1*

wet criticality

Reactor criticality achieved with a coolant. *Lyman*

wet cutting

A method of dust prevention in which water is delivered onto a moving cutter chain, through water pipes, and is carried into the cut where it is intimately mixed with the cuttings. This method is successful in seams up to 4 ft (1.22 m) thick. *Mason*

wet cyclone

See: [cyclone](#)

wet drilling

In rock drilling for blasting purposes, injection of water through a hollow drill shank to the bottom of a hole, to allay dust and danger of pneumoconiosis.

wet gold-silver ore

Lead ore with high silver content. During smelting, the lead trickles through the mass and collects gold and/or silver, which are later recovered. *Nelson*

wet grinding

a. Any milling operation carried on in water or a liquid. *Enam. Dict.* b. The practice of applying a coolant to the work and the wheel to facilitate the grinding process. *ACSG*, 2
c. Comminution of ore in aqueous suspension; typically practiced in the ball milling of finely crushed rock. See also: [grinding](#) *Pryor*, 3

Wetherill's furnace

A furnace with a perforated iron bottom, under which a blast is introduced, and upon which zinc ore (red oxide) is reduced. A muffle furnace for roasting zinc ores. *Fay*

Wetherill's magnetic separator

An apparatus for separating magnetic minerals from nonmagnetic minerals. It consists of two flat belts, the upper of which is the wider, run parallel to each other and over long magnets set obliquely to the belts. Consequently, magnetic particles are drawn up against the upper belt, and as they pass beyond the influence of the magnets, fall from the edge past the other belt into a bin. Another form operates by belts moving across the line of travel of the main belt. *Liddell*

Wetherill vacuum casting process

In this process, a mold, arranged for bottom feeding, is placed inside a vacuum bell; the bottom of the mold is connected by a tube to a ladle containing the molten metal, which is sucked into the mold cavity when a vacuum is formed. *Osborne*

Wethey furnace

A multiple-deck, horizontal furnace for calcining sulfide ores. It resembles the Keller furnace. *Fay*

wet metallurgy

See: [hydrometallurgy](#)

wet method

Any hydrometallurgical process, such as the cyanide process, flotation process, etc. See also: [wet process](#)

wet milling

Comminution of ores and materials in the presence of a liquid in a suitable mill, either by rods, balls, or pebbles, or autogenously, by the material itself. See also: [dry milling](#)

wet-milling plant

A mill in which a wet process is employed. *Fay*

wet-mill man

See: [wet-pan operator](#)

wet mining

a. A system of mining in which water is sprayed into the air at all points where dust is liable to be formed, and no attempt is made to prevent the air from picking up moisture. It therefore soon becomes saturated and remains so throughout the ventilation circuit. *Spalding* b. Mining for salt and other water soluble minerals as brine rather than in the dry state. *Kaufmann*

wet mixer

See: [clay maker](#)

wet-pan charger

Person who adds water to mixture, in addition to clay, shale, or brick, in grinding pans in order to make it plastic. May be designated according to clay ground in pans, such as silica-wet-pan charger. Syn: [wet-pan feeder](#)

wet-pan feeder

See: [wet-pan charger](#)

wet-pan operator

Person who tends and supervises loading of wet pans used for grinding and tempering clay, performing essentially the same duties as described under dry-pan operator. Syn: [clay temperer](#); [wet-mill man](#). *DOT*

wet-plant operator

Person who works as a member of a crew performing any one or a combination of duties concerned with extracting cadmium, lead sulfate, and zinc oxide from dust recovered in Cottrell precipitators. *DOT*

wet process

A metallurgical process in which the valuable contents of an ore are dissolved by acid or other solvents; a leaching or lixiviation process. Opposite of dry process. See also: [wet method](#)

wet puddling

The ordinary process of puddling in which a furnace is lined with material rich in oxide of iron. *Fay*

wet rot

a. Timber decay set up when mine props have not been treated with zinc sulfate, etc., and are exposed to alternations of moisture and drying out. *Pryor, 3* b. Timber decay caused by alternating wet and dry periods.

wet screening

The addition of water to a screen to increase its capacity and improve its sizing efficiency. Water may be introduced either by adding it to the feed stock or by spraying it over the material on the screen deck. The latter method is also used in rinsing or washing ores, etc., to recover minerals. *Nelson*

wet separation

A term used in connection with coal washing or other processes using fluid. See also: [coal-preparation plant](#); [washery](#). *Nelson*

wet sieve analysis

An American Society for Testing and Materials standard method of test, recommended for determining the grain sizing of materials in which slaking would occur.

wet sphere device

An instrument for assessing climatic conditions in mines, such as wet- and dry-bulb temperatures, air velocity, barometric pressure, and radiation. The field of usefulness of the instrument is limited to mines where the workers are normally sweating freely and wear few clothes. *Roberts, 1*

wettability

The ability of a liquid to form a coherent film on a surface, owing to the dominance of molecular attraction between the liquid and the surface over the cohesive force of the liquid itself. *AGI*

wettable sulfur

Sulfur treated so that it is easily dispersed in water. *USBM, 7*

wetted perimeter

The total length of surface in a channel or pipe that is in actual contact with water. See also: [hydraulic mean depth](#)

wetterdynamite

Originally, only guhr dynamites to which were added salts containing water of crystallization, such as Glauber's salts, ammonium oxalate, etc., with the view of making them available in mines containing combustible gases. *Fay*

wetting

A phenomenon involving a solid and a liquid in such intimate contact that the adhesive force between the two phases is greater than the cohesive force within the liquid. Thus, a solid that is wetted, on being removed from the liquid bath, will have a thin continuous layer of liquid adhering to it. Foreign substances, such as grease, may prevent wetting. Addition agents, such as detergents, may induce wetting by lowering the surface tension of the liquid. CF: [water break](#)

wetting agent

a. A reagent to reduce the interfacial tension between a solid and a liquid, so facilitating the spreading of the liquid over the solid surface. *BS, 5* b. A chemical promoting adhesion of a liquid (usually water) to a solid surface. *Pryor, 2* c. See: [plasticizer](#) d. Substance that lowers the surface tension of water and thus enables the water to mix more readily with other substances and so facilitates the spread of the liquid over a solid surface. *BS, 5*

wetting coal dust

The spraying of mine roadways with water or treatment with a wetting agent in order to (1) increase the difficulty of raising the dust deposit into the air to take part in an explosion, and (2) reduce the flammability of the dust raised in an explosion. *Nelson*

wetting effect

a. When surface-active agents cause water to displace air at the surface of a solid-water-air system, the surface tension of the solid-water phase has been lowered in comparison with that of the solid-air phase, by adsorption of the wetting agent (adhesional wetting). For a small particle, wetting can be separated into three stages (adhesion, immersion, spread). Wetting is a preliminary step in deflocculation. *Pryor, 3* b. A condition in which the surface tension of the solid-water phase is lowered in comparison with surface tension in the solid-air phase.

wet unit weight

The weight (solids plus water) per unit of total volume of soil mass, irrespective of the degree of saturation. Syn: [mass unit weight](#) See also: [unit weight](#)

whaler

A horizontal beam in a bracing structure. *Nichols, 1*

whale-type jib

A coal-cutter jib that enables water to be taken, during cutting, to the back of the cut for dust suppression and prevention of gas ignition from frictional sparking. With an undercutting jib, it consists of a feed water pipe and four or five distributor pipes terminating in jets all arranged in the top plate of the jib. See also: [undercut ignition](#); dust-suppression jib. *Nelson*

wheal

Corn. A mine. *Nelson*

Wheatstone-bridge-type instrument

An instrument that makes use of electrically heated filaments that burn methane and measure the heat output by resistance pyrometry. One or more filaments form the arms of a Wheatstone bridge circuit, the out-of-balance current being a function of the methane percentage. *Roberts, 1*

wheelbase

The distance between the contact points on the front and back wheels of any vehicle and the surface upon which the vehicle travels. *CTD*

wheel brae

A flat or landing on the top of an incline. *Fay*

wheel conveyor

A series of wheels supported in a frame over which objects are moved manually or flow by gravity. See also: [el conveyor](#); [gravity conveyor](#); gravity wheel conveyor; portable conveyor.

wheel ditcher

a. A wheel equipped with digging buckets, carried and controlled by a tractor unit. *Nichols, 1* b. A machine that digs trenches by rotation of a wheel fitted with toothed buckets. *Nichols, 1*

wheel dresser

A tool for cleaning, resharpening, and truing the cutting faces of grinding wheels. *Crispin*

wheeled tractor

A tractor, fitted with large rubber-tired wheels, which can travel comparatively fast over rough ground. See also: [tractor](#)

wheeler

See: [pusher](#)

wheelerite

a. A yellowish resin, found in the Cretaceous beds of northern New Mexico, filling the fissures of the lignite, or interstratified in thin layers. It is soluble in ether. *Fay* b. A

https://t.me/Geologybooks

yellowish variety of retinite that is soluble in ether and fills fissures in, or is thinly interbedded with, lignite beds in northern New Mexico.

wheel excavator

A large-capacity machine for excavating loose deposits, particularly at opencast coalpits. It consists of a large digging wheel that rotates on a horizontal axle and carries large buckets on its rim. *Nelson*

wheelman

See: [rollerman](#)

wheel ore

See: [bournonite](#)

wheel pit

A pit in which the lower part of a flywheel runs. *Webster 2nd*

wheelrace

The place in which a water wheel is set. *Webster 3rd*

wheel runner

See: [incline man](#)

wheel scraper

A scraper mounted on an axle supported by a pair of wheels. It affords an easy means of conveying a loaded scraper to a dumping ground. See also: [bowl scraper](#)

wherk

Eng. A small unexpected turning in the stone, side, or ore, often accompanied by a small joint; Derbyshire. *Arkell*

wherryite

A monoclinic mineral, $Pb_4 Cu(CO_3)(SO_4)_2(Cl,OH,O)_3$; pale green; finely granular; related to caledonite; at the Mammoth Mine, AZ.

whetstone

Any hard fine grained rock, commonly siliceous, that is suitable for sharpening implements such as razors, knives, and other blades; e.g., novaculite.

Whetwell stove

A firebrick hot-blast stove on a regenerative system. *Fay*

whewellite

A monoclinic mineral, $\text{Ca}(\text{C}_2\text{O}_4) \cdot \text{H}_2\text{O}$; soft; in coal seams, incrustations on marble; also in human urinary tracts. Syn: [oxalcalcite](#)

which-earth

Eng. A whitish earth found at Thame, Waterperry, and Adwell; mixed with straw, and used for sidewalls and ceilings; a natural mixture of lime and sand, flakes in water (like gypsum) without any heat. *Arkell*

whim

a. A large capstan or vertical drum turned by horsepower or steam power. Used to raise coal, water, etc., from a mine. Also called: whimsey; whim gin; horse gin. *Fay* b. Drum on which a hoisting rope is coiled. Also spelled wem. *Pryor, 3*

whim driver

A laborer who drives a draft animal at the surface of a mine to supply power to a whim (large drum on which a cable is wound) used to hoist ore, coal, or rock in a shallow shaft. Becoming obsolete. *DOT*

whim gin

See: [whim](#); horse gear.

whim shaft

A shaft through which coal, ore, water, etc., are raised from a mine by means of a whim. *Zern*

whin

a. Igneous rock. When parallel to the bedding planes, it is called a whinsill; when cutting across the strata, a whin dike. *Nelson* b. A hard, compact rock. *Gordon* c. Whinstone or whinrock. In Nova Scotia, miners apply this term to a thick-bedded rock composed of

grains of quartz with argillaceous or feldspathic matter that resembles graywacke. *Fay*
d. A whim or winch. *Webster 2nd* e. See: [dolerite](#)

whin float

a. Scot. A horizontal sill or lava flow of igneous rock. *Arkell* b. Scot. A kind of greenstone, basalt, or trap, occurring in coal measures. *Fay*

whinny

Resembling or abounding in whinstone. *Fay*

whinstone

A colloquial British term for dolerite, basalt, and other dark fine-grained igneous rocks. The term is derived from the Whin Sill in northern England. CF: [trap](#)

whintin

Cumb. Spotted schist. CF: [calamanco](#); [linsey](#). *Arkell*

whip

a. A rope that passes over a pulley and is pulled by a horse to hoist ore. Modern form occasionally seen has a car or lorry working backward and forward for shallow pitting. Called whip-and-derry when used with a derrick or gin. *Pryor, 3; Fay* b. One who operates such a hoisting apparatus. *Standard, 2* c. See: [rod slap](#)

whip-and-derry

See: [whip](#)

whip gin

A gin block for use as a whip, as in hoisting. *Standard, 2*

whip out

The enlargement of a portion of a borehole caused by the eccentric rotation and slap of the drill rods. *Long*

whipper

Person who raises coal, merchandise, etc., with a whip, as from a ship's hold. *Standard, 2; Fay*

whipping

a. The thrashing about of a moving rope, such as a hoisting cable in a mine shaft. Syn: [surging](#) b. Hoisting ore, coal, or other material by means of a whip. *Fay*

whipping hoist

A hoist worked with a whip, esp. if by steam power. *Standard, 2*

whipstock

Wedge-shaped device used to deflect and guide a drill bit away from vertical; procedure of deflecting a hole. CF: [arc cutter](#) See also: [deflection wedge](#)

whipstocking

A term commonly used by petroleum-field drillers to designate the act or process referred to by diamond drillers as deflecting a borehole. See also: [wedging](#)

whipstock point

The point within a borehole at which a deflection or change in course is desired. *Long*

whirling hygrometer

In mining, a hygrometer used to obtain wet-bulb temperatures. The hygrometer is spun round and round at a speed of about 200 rpm, for at least 1 min, and then read as quickly as possible. See also: [Storrow whirling hygrometer](#)

whirlstone

Eng. Usually applied to sandstone (not a freestone) in the Carboniferous Limestone Series of Cumberland. Sometimes applied to a dolomite, limestone, or shale. *Arkell*

whistler

See: [squealer](#)

white

The color of the mixture of electromagnetic radiation visible to the normal human eye. White is commonly, but incorrectly, applied to colorless minerals and gemstones.

white agate

See: [chalcedony](#)

white alkali

An older term for accumulation of salts with high levels of sodium that may develop as a crust. CF: [black alkali](#)

white antimony

See: [valentinite](#); valentite.

white arsenic

Commercially called arsenic. Arsenic trioxide, As_2O_3 ; the most important compound of arsenic. Obtained from the roasting of arsenical ores. See also: [arsenic trioxide](#)

white Bengal fire

A very brilliant light produced by burning pure metallic arsenic. *Fay*

white cast iron

Cast iron that gives a white fracture because the carbon is in combined form. See also: [iron](#)

white clay

See: [kaolin](#)

white coal

a. See: [tasmanite](#) b. Water power: a French designation (houille blanche). *Standard, 2*

white cobalt

A name frequently applied to smaltite and cobaltite. See also: [cobaltite](#); smaltite. *Fay*

white copper

A white alloy of copper; paktong. Usually German silver. Syn: [domeykite](#) *Webster 2nd; Fay; Hey, 1*

white copperas

See: [coquimbite](#); goslarite.

white copper ore

See: [kyrosite](#)

white-counterered gutta percha

A safety fuse in which the powder is enclosed in a thin tube of gutta percha, which in turn is enveloped in a waterproof textile covering. Abbreviated W.C.G.P. *Higham*

white damp

Carbon monoxide, CO. A gas that may be present in the afterdamp of a gas- or coal-dust explosion, or in the gases given off by a mine fire; also one of the gases produced by blasting. It is an important constituent of illuminating gas, supports combustion, and is very poisonous because it is absorbed by the hemoglobin of the blood to the exclusion of oxygen. See also: [damp](#)

white feldspar

See: [albite](#)

white flat

Small, pale, rough nodule in hard shale in Shropshire. *Arkell*

white garnet

a. See: [leucite](#) b. A translucent variety of grossular resembling white jade in appearance.

white gold

Gold alloyed with nickel or palladium to give it a white color. *CTD*

white gunpowder

A mixture of 2 parts potassium chlorate, 1 part potassium ferrocyanide, and 1 part sugar. Syn: [white powder](#)

white heat

A common division of the color scale, generally given as about 2,800 degrees F (1,540 degrees C).

white horse

A term used by quarrymen to denote a light-colored gneiss, aplite, or pegmatite. *Fay*

white-hot

A state in which a material is heated to full incandescence so as to emit all the rays in the visible spectrum in such proportion as to appear dazzling white. *Fay*

White-Howell furnace

A revolving, cylindrical furnace for calcining calamine. *Fay*

white iron

An extremely hard cast iron, resulting when a casting is chilled in a metallic mold. See also: [gray iron](#)

white iron ore

An early name for siderite. See also: [siderite](#)

white iron pyrites

See: [marcasite](#)

white latten

An alloy of copper, zinc, and tin in thin sheets. *Standard, 2*

white lead

Basic lead carbonate or lead hydroxycarbonate. *CTD*

white lead ore

a. See: [cerussite](#) b. A decomposition product of sphalerite. See also: [white vitriol](#) Syn: [lead carbonate](#)

White Lias

The Upper Rhaetic, as opposed to the overlying Blue Lias. *Arkell*

white limestone

The principal limestone division of the Great Oolite Series. *Arkell*

white metal

a. A general term covering a group of white-colored metals with relatively low melting points (lead, antimony, bismuth, tin, cadmium, and zinc). Includes the alloys based on these metals. *ASM, I* b. A copper matte of about 77% copper obtained from smelting sulfide copper ores. *ASM, I* c. Usually a tin-base alloy (more than 50% tin); used for lining bearings and winding rope cappel. *Nelson*

white-metal cappel

A cappel in which the end of the winding rope (separated into a brush) is embedded in a plug of white metal inside a socket. See also: [capping](#) *Nelson*

white-metal capping

A winding rope capping formed by opening out the wires of the rope for a length equal to that of the socket, cleaning them thoroughly of all grease, cutting out the hemp core, and finally drawing them into the warmed socket and running in the white metal, which is an alloy of lead, antimony, and tin. *Mason*

white mica

See: [muscovite](#)

white mineral press

A machine for briquetting flue dust. *Fay*

white mundic

See: [arsenopyrite](#)

white nickel

See: [rammelsbergite](#); nickel-skutterudite.

white nickel ore

See: [chloanthite](#)

white olivine

The mineral forsterite, Mg_2SiO_4 . *Fay*

white opal

Precious opal of any light color, as distinguished from black opal; e.g., a pale blue-white gem variety of opal.

white ore

See: [cerussite](#)

white powder

See: [white gunpowder](#)

white pyrite

See: [marcasite](#); arsenopyrite.

white salt

a. Salt dried and calcined; decrepitated salt. *Fay* b. Salt refined and prepared mainly for household use. Also, vacuum pan salt used for salting skins; distinguished from rock salt. *Kaufmann*

white sand

Sand that is usually quartzitic and pure enough to resist heat and slags; used for the final layer in Siemen's steel furnaces. *Nelson*

white schorl

See: [albite](#)

white smoker

A plume of hydrothermal fluid issuing from the crest of an oceanic ridge; e.g., the East Pacific Rise at the mouth of the Gulf of California. The fluid is clouded by white precipitates, mostly barite and silica. It issues at rates of tens of cm/second and at temperatures of 100 to 350 degrees C (Macdonald et al., 1980). CF: [black smoker](#)

white tellurium

See: [sylvanite](#); krennerite.

white tin

Metallic tin after smelting, in contradistinction to black tin or cassiterite. *Fay*

white tombac

A variety of brass made white by the addition of arsenic. *Standard, 2*

white vitriol

The mineral goslarite, $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$. Also called: salt of vitriol; zinc vitriol. *CTD; Fay*

whiting substitute

A finely ground calcium carbonate, about 98% pure, contaminated by magnesia, silica, iron, or alumina. This material should not be confused with chalk whiting or precipitated chalk. *USBM, 7*

Whiting system

A system in which two parallel, grooved sheaves are coupled. These sheaves are driven directly from a hoisting engine. One sheave is set at a slight angle to the vertical so that the rope will pass freely from one sheave to the other. The hoisting rope passes around the drive sheaves and then to a takeup sheave, which is mounted on a horizontally movable carriage to take up slack or to change the hoist from one level to another. A tail rope is used in this system, although it may not be absolutely necessary. *Lewis*

whitlockite

A trigonal mineral, $\text{Ca}_9(\text{Mg,Fe})\text{H}(\text{PO}_4)_7$; colorless; forms rhombohedra; at North Groton, NH. Syn: [merrillite](#)

Whitney stress diagram

Diagram showing the stress distribution in a reinforced concrete beam in accordance with the theory of ultimate load. *Hammond*

Whitwell stove

A firebrick, hot-blast stove on a regenerative system. *Fay*

whizzer mill

See: [Jeffrey crusher](#)

whole body counter

A device used to identify and to measure the radiation in the body (body burden) of humans and animals. Uses heavy shielding to keep out background radiation, ultrasensitive scintillation detectors, and electronic equipment. *Lyman*

whole-circle bearing

A bearing that defines the direction of a survey line by its horizontal angle measured clockwise from true north. *Hammond*

whole diamond

A diamond (as mined), the shape of which has not been modified artificially. Syn: [whole stone](#)

whole stone

See: [whole diamond](#)

whole-stone bit

A bit, the crown of which is either surface set or impregnated with whole diamonds, as opposed to an impregnated or surface-set bit in which the inset diamonds are fragmented diamonds. *Long*

wich

Celtic for salt spring; often used in England as the termination of names of places where salt is or has been found; e.g., Droitwich, Nantwich. Syn: [wych](#)

wichert

A subsoillike chalk, Haddenham, near Thame, U.K.

wick

To place a soft twisted-cotton string between rod joints as they are made up or coupled. *Long*

wicket

a. N. Wales. A kind of pillar-and-stall, or bord-and-pillar, system of working a seam of coal, with pillars up to 15 yd (13.7 m) apart and stalls up to 24 yd (22.0 m) wide. Also called wicket work. *Fay* b. A wall built of refractories to close an opening into a kiln or furnace; it is of a temporary nature, serving as a door; e.g., in intermittent or annular kilns. *Dodd*

wicket conveyor

A conveyor comprising two or more endless chains connected by crossbars and to which vertical rods are attached at spaced intervals. The crossbars are also provided with spaced projections at the same level to form in effect a continuous carrying surface through which product cannot fall.

wicking

The soft twisted-cotton string used to wick drill-rod joints; the act of placing the cotton string on the rod joints. See also: [wick](#) *Long*

wide-mouthed socket

A fishing tool similar to a bell-mouth socket, but lacking a latch. *Long*

wide opening

An underground excavation whose width is greater than two or three times its height. *Woodruff*

widiyan

See: [wadi](#)

widowmaker

A rock drill operated without water and hence, produces a lot of dust, leading to silicosis; often fatal to a miner.

width of lode

The thickness of ore measured at right angles to the dip. The term "true width" is often used to describe this value, in which case width of lode is used to denote the thickness passed through, irrespective of the angle of dip. *Nelson*

Wiedgerite

Trade name for a soft bitumen resembling elaterite, but containing much sulfur and water. *Tomkeieff*

wiggle stick

See: [divining rod](#)

wiggle tail

a. A rock-cutting tool or bit, used to deflect a borehole, that has an articulated pilot part, which also can be attached to a knuckle-jointed device and coupled to the bottom end of a drill string. Also called whipstock. *Long* b. Nickname for hand-rotated stoper drill.

wightmanite

A monoclinic mineral, $Mg_5(BO_3)_2O(OH)_5 \cdot 2H_2O$; colorless; forms pseudo-hexagonal prisms; at Commercial quarry, Crestmore, CA.

Wilcoxian

Lower or upper lower Eocene. *AGI*

wildcat

a. A borehole and/or the act of drilling a borehole in an unproved territory where the prospect of finding anything of value is questionable. It is analogous to a prospect in mining. *Long* b. A mining company organized to develop unproven ground far from the actual point of discovery. Any risky venture in mining.

wildcat drilling

The drilling of boreholes in an unproved territory. Also called: cold nosing; wildcatting. *Long*

wildcatter

a. An individual or corporation devoted to exploration in areas far removed from points where actual minerals or other substances of value are known to occur. Also called cold noser. See also: [wildcat](#) b. One who locates a mining claim far from where a deposit has been discovered or developed.

wilderness

a. An area or tract of land that is uncultivated and uninhabited by people. b. North American stage: Middle Ordovician (above Porterfield, below Barnveld; it includes uppermost Black River and Rockland rocks). c. Mottled red and gray grit at Forest of Dean, U.K.

wild heat

A heat of molten steel that is boiling violently, and so, if poured, honeycombs an ingot with contained gases. *Webster 2nd*

wild lead

See: [sphalerite](#)

wild steel

a. Steel in, or made from, a wild heat. *Webster 2nd* b. Said of liquid steel, esp. rimmed steel, that is producing considerable effervescence. *Henderson*

wild work

A type of bord-and-pillar system of coal mining in which the very narrow pillars left to support the roof are not recovered. *Fay*

Wiles' process

A method of reducing iron ores in which an electric furnace is fitted with two or more hollow electrodes, through which the finely divided ore, intimately mixed with reducing materials, is introduced. *Osborne*

Wilfley slimer

A form of shaking canvas table that is given a vanner motion. *Liddell*

Wilfley table

Long-established and widely used form of shaking table; rectangular; mounted horizontally and can be sloped about its long axis. It is covered with linoleum (occasionally rubber) and has longitudinal riffles tapering at the discharge end to a smooth cleaning area, triangular in the upper corner. A compound eccentric is used to create a gentle and rapid throwing motion on the table, longitudinally. Sands, usually classified for size range, are fed continuously and worked along the table with (1) the aid of feedwater, and (2) across riffles downslope by gravity tilt adjustment and added wash water. At the discharge end, the sands have separated into bands: the heaviest and smallest uppermost; the largest and lightest lowest. The Dodd, Cammet, Hallett, and Woodbury are similar types of tables. See also: [Woodbury table](#)

Wilkinite

Trade name for a colloidal bentonite (jelly rock) used in papermaking. Also spelled Wilconite.

willemite

A trigonal mineral, $Zn_2 SiO_4$; white to pale tints; fluoresces bright yellow; in zinc deposits in New Jersey, New Mexico, Africa, and Greenland; a source of zinc. Syn: [belgite](#)

willen stone

a. Eng. An oolitic freestone used for cornices and chimney pieces; also, a good paving stone, Halston, Northamptonshire. *Arkell* b. A massive yellow to green, impure variety of antigorite resembling jade; used for decorative purposes. It commonly contains specks of chromite. c. An old "misspelling" of willemite.

Williams' hinged-hammer crusher

A crusher with a rotating central shaft, carrying a number of hinged hammers that fly out from centrifugal force, crushing the feed against the casing. Syn: [hinged-hammer crusher](#)

williamsite

a. An apple-green impure variety of serpentine. See also: [jade](#) *Sanford* b. A translucent bright green serpentine, usually containing specks of chromite, used as a semiprecious stone. *Dana, 1* c. An old misspelling of willemite. *Dana, 1*

Wilmot jig

A basket-type jig, the basket being suspended in a tank of water. Pulsations are effected by moving this basket upward and downward by means of eccentrics. Has been used extensively in the preparation of anthracite of all sizes and, to a lesser extent, of bituminous coal. *Mitchell*

Wilputte oven

A byproduct coke oven having two outer zones in the heating system and one double inner zone. In this oven, the gas is alternately burned upwards in the two outer zones with the products of combustion being carried down through the double inner zone and, on reversal, burned upwards in the double inner zone with the products of combustion being carried down through the two outer zones. Known as a double-divided oven. *Camp*

wilsonite

a. A purplish-red material consisting of an aluminosilicate of magnesium and potassium; represents an altered scapolite. *AGI* b. A tuff composed of fragments of pumice and andesite in a matrix of vitric and granular material (Holmes, 1928). *AGI*

Wilton stopper

Automatic arrangement that arrests a mine car when it runs away downslope. The car displaces a pendulum beyond its nonactivating limit of swing and a pivoted rail then falls between the rail tracks below. *Pryor, 3*

wiluite

a. A green variety of grossular garnet. b. A greenish variety of vesuvianite.

win

a. To extract ore or coal. To mine, to develop, to prepare for mining. b. To recover (as metal) from ore. *Webster 3rd*

winch

a. A small hand- or power-operated drum haulage used for light-duty work in surface and underground mines. A heavy-duty power winch fitted to the rear of a tractor. See also: [pickrose hoist](#) b. Syn: [hoist](#) of a horizontal drum with rank handles. *Long* c. A drum that can be rotated so as to exert a strong pull while it is winding the attached line. *Nichols, 1* d. A small drum haulage or hoist. A gear train is interposed between the handle and the drum. The handle is turned several revolutions to one revolution of the drum. Two handles and a pawl and ratchet may be fitted to prevent the load from running back should the pressure on the handle be reduced. See also: [monkey winch](#)

winchellite

See: [mesolite](#)

winchman

In metal mining, a person who operates a power-driven winch on a gold dredge to move it from one working position to another during dredging operations, winding up the cables anchored at points in advance of the dredge. *DOT*

winch operator

See: [hoist operator](#)

wind

To hoist or raise coal or ore; to spool rope or cable on the drum of a hoist.

wind beam

A beam incorporated into a structure for the sole purpose of resisting wind pressure. *Hammond*

wind blast

A blown-out or "windy" shot. *Fay*

wind box

In blast furnace operation, the compartment in the bottom of the converter that receives the blast and delivers it to the tuyeres. *Mersereau, 2*

winder

a. An electrically driven winding engine for hoisting a cage or cages up a vertical mine shaft. *CTD* b. See: [card tender](#)

winder brake

An appliance or piece of equipment capable of retarding or stopping cages in a shaft in an emergency. See also: [brake](#); [post brake](#); semiautomatic control. *Nelson*

wind furnace

Any form of furnace using the natural draft of a chimney without the aid of a bellows or blower. *Fay*

wind gage

An anemometer for testing the velocity of air in mines.

wind hatch

In mining, an excavation or opening for removing ore. *Standard, 2*

winding

The operation of hoisting coal, ore, miners, or materials in a shaft. The conventional method is to employ two cages actuated by a drum type of winding engine. Steel ropes are attached at either end of the drum, one over and the other under it, so that as one cage ascends, the other descends. Thus the cages arrive at pit top and bottom simultaneously. See also: [automatic cyclic winding](#); [balanced winding](#); [balance rope](#); deep winding; Koepe winder; winding cycle; winding rope. *Nelson*

winding apparatus

The machinery and equipment used to lower and raise loads through a shaft. *Nelson*

winding cycle

In general, a cycle refers to any series of changes or operations in which any part of the system return to its original state or position. In winding, the term usually refers to a complete wind, which is comprised of three phases: (1) acceleration to full speed; (2) full-speed running; and (3) retardation to rest. The period of the winding cycle is the sum of winding time and decking time in seconds. See also: [winding speed](#) *Nelson*

winding drum

For haulage to the surface through a mine shaft, the surface gear includes a winding drum of cylindrical or cylindroconical form on which the winding rope (hoisting rope) is coiled as the cage, or skip or kibble, is raised, and from which it is paid off as the return journey is made. Two such receptacles are usually worked simultaneously in balanced hoisting, one rising as the other descends, from a compound drum. The drum is driven by the winding engine. See also: [bicylindroconical drum](#); conical drum; Koepe sheave; parallel drum; winding engine. *Pryor, 3*

winding engine

a. A steam or electric engine at the top of a shaft that powers the winding drum, thus hoisting and lowering a cage or skip by means of a winding rope. In metal mining, the winding engine is usually called a hoist. Also called: winder. See also: [hoist](#) b. See: [winding drum](#)

winding engineman

A skilled person in charge of the steam or electric winding engine at a mine. Also called hoistman. *Nelson*

winding guide

The purpose of a winding guide is to permit winding to proceed safely at relatively high speeds by preventing collisions between the cages and between cages and the side of, or fittings in, a shaft. It must be (1) rigid enough to prevent material deviation of the cages or skips from the vertical; (2) strong, since a broken guide causes danger from damage; (3) smooth, so as to offer as little resistance to the movement of a cage as possible; and (4) firmly supported and maintained vertical. Guides may be of two types, rigid or flexible. The former may be of timber, and in new shafts have generally been replaced by steel channels, steel rails or angles; the latter are steel ropes of round or semilocked section steel rods. Rigid guides are adopted in shafts of rectangular cross section; these and the shaft sides and fittings are small. Rope guides are used in circular and elliptical shafts where adequate clearances can be provided. Rope guides maintain the vertical

automatically, and expand and contract with temperature variation without complication. *Sinclair, 5*

winding pulley

See: [winding sheave](#)

winding rope

The rope that carries a cage, skip, or hopper in a shaft. The wires are twisted together symmetrically according to a definite geometrical pattern. See also: [wire rope](#); [winding drum](#). Syn: [lay of rope](#) *Nelson*

winding sheave

A grooved pulley wheel, mounted on plunger blocks, at the top of the headgear. The winding rope passes from a cage or skip around the sheave and onto the winding drum. For normal loads, the sheave rim and boss are made of cast iron, and the spokes are made of round, mild steel. Winding sheaves range up to about 24 ft (7.32 m) in diameter. Sheaves up to 8 ft (2.44 m) in diameter are usually made in one piece, but above this size, they are built in halves and bolted together. To give efficient service, the sheave diameter should be at least 96 times the winding rope diameter. See also: [head sheave](#); [Koepe sheave](#). Syn: [hoisting sheave](#) *Nelson*

winding speed

The velocity at which a winding engine lifts a cage or skip in a shaft. Winding speeds reach up to 6,000 ft/min (1.8 km/min) for deep mines. The normal maximum speed for deep shafts is 3,500 to 4,000 ft/min (1.1 to 1.2 km/min) and for geared winders, 1,500 to 3,000 ft/min (0.46 to 0.91 km/min). *Nelson*

windlass

a. A device used for hoisting; limited to small-scale development work and prospecting because of its small capacity. *Lewis* b. A drum or a section of tree trunk set horizontally on rough bearings above a shallow pit or shaft; used to raise or lower buckets of spoil in exploratory work. Handles at each end of the drum allow for manual rotation. *Pryor, 3*

wind method

An air-blowing system of separating coal into various sizes, and extracting waste from it, which in principle depends on the specific gravity or size of the coal and the strength of the current of air.

windmill anemometer

An anemometer in which a windmill is driven by the air stream, and its rotation is transmitted through gearing to dials or other recording mechanism. In some instruments, the rotating vanes and dials are in the same plane; i.e., both vertical, while in others the dial is horizontal. In the windmill type, the operation of air measurement involves readings of dials at the beginning and end of a measured period. Windmill instruments may be fitted with an extension handle, providing a form of remote control; used to measure air speed in an otherwise inaccessible spot. *Mason*

window

An eroded area of a thrust sheet that displays the rocks beneath it. Syn: [fenster](#)

window pipe

A dredge discharge pipe with one or more openings in the bottom. *Nichols, 1*

window-type sample

See: [door-type sampler](#)

wind pressure

The pressure on a structure due to wind, which increases with wind velocity approx. in accordance with the formula $p = 0.003 v^2$, where p is the pressure in pounds per square feet of area affected, and v is the wind velocity in miles per hour. *Hammond*

wind road

Underground ventilation road. See also: [airway](#)

wind rose

A diagram which shows the proportion of winds blowing from each of the main points of a compass at a given locality, recorded over a long period. The prevailing wind with its average strength is thereby revealed at a glance. *Hammond*

windrow

a. A row of peats or sod set up to dry, or cut in paring and burning. *Standard, 2* b. A ridge of soil pushed up by a grader or bulldozer. *Hammond*

winds

See: [winze](#)

windup

The amount of twist occurring in a string of drill rods when the string is rotated during drilling. There can be as many as several complete revolutions of the rod at the collar before the bottom member of the string begins to rotate. Also called wrap-up. *Long*

windy shot

A blast in a coal mine which--due to improperly placed charges, the wrong kind or quantity of explosives, or insufficient stemming--expends most of its force on the mine air; it sometimes ignites a gas mixture, coal dust, or both, thus causing a secondary explosion, which may or may not spread throughout the mine; a shot that blows out without disturbing the coal; a shot that is not properly directed or loaded; a blown-out shot. *Fay*

wing

a. The side or limb of an anticline. *Fay* b. See: [catch](#); chair; dog; rests; wing.

wing belt tripper

A belt conveyor tripper having auxiliary conveyors extending laterally to one or both sides to provide wider distribution of bulk material being discharged.

wing dam

See: [pier dam](#)

winged pillar

Scot. Pillar of coal that has been reduced in size. *Fay*

wingwall

A wall that guides a stream into a bridge opening or a culvert barrel. *Nichols, I*

winklestone

Warty, elongate pyrite nodule, Essex, U.K.

winning

a. The excavation, loading, and removal of coal or ore from the ground; winning follows development. *Nelson* b. The operation of mining an ore and opening up a new portion of a coal seam. *CTD* c. The portion of a coalfield laid out for working. *Fay* d. The

combined process of excavating and transporting a raw material such as clay to a brickworks or stockpile. *Dodd*

winning heading

A development heading off which oblique headings and conveyor panels are formed and worked (longwall); any of the development drivages in the solid coal, about 15 yd (13.7 m) apart, and of which bords and pillars are formed (pillar method of working). *Nelson*

winnowing gold

Air blowing. Tossing up dry powdered auriferous material in air, and catching the heavier particles not blown away. *Fay*

winter dumps

A term used in Alaska to describe gold-bearing gravel mined during the winter and stored on the surface for sluicing in the spring and summer. *Fay*

winze

a. A vertical opening driven downward connecting two levels in a mine. When one is standing at the top of a completed connection the opening is referred to as a winze, while when standing at the bottom, the opening is a raise, or rise. Syn: [winds](#) b. A subsidiary shaft that starts underground. It is usually a connection between two levels. Syn: [way shaft](#) c. Can. Interior mine shaft. *Hoffman*

wire

a. A continuous length of metal drawn from a rod. *Hammond* b. War. A haulage rope. *Fay* c. See: [capillary](#)

wirebar

A cast shape, particularly of tough pitch copper, which has a cross section approx. square with tapered ends; designed for hot rolling into a rod for subsequent drawing into wire. *ASM, I*

wire cloth

Screen composed of wire or rod woven or crimped into a square or rectangular pattern. *Nichols, I*

wired glass

A form of sheet glass produced by rolling wire mesh into a ribbon of glass so that it acts as a reinforcement and holds the fragments together in the event of the sheet being fractured. *CTD*

wire drag

A buoyed wire towed by a ship at a given depth to determine whether any isolated rocks, small shoals, etc., extend above that depth, or for determining the least depth of an area. *Hunt*

wire gage

a. A gage for measuring the diameter of wire. *Fay* b. A standard series of sizes used in the manufacture of wire (diameter) or sheet metal (thickness) and indicated by arbitrary numbers. *Fay* c. A notched plate having a series of gaged slots, numbered according to the sizes of the wire and sheet metal manufactured; used for measuring the diameter of wire. The gage most widely used in the United States is the U.S. Standard Steel Wire, which name has official sanction, without legal effect. The Birmingham gage is recognized in acts of Congress for tariff purposes. Two gages (American Gage; Browne and Sharpe's) are used for copper wires and all nonferric metal wires. *Crispin*

wire gauze

A gauzelike texture of fine wire, such as that used for the chimneys of flame safety lamps. *Fay*

wire hanger

The hanger from which wire or cable is suspended.

wire line

a. As used in a general sense, any cable or rope made of steel wires twisted together to form the strands. Specif., a steel wire rope 5/16 in (7.9 mm) or less in diameter. See also: [cable](#) b. A general term for any flexible steel line or cable drill connecting a surface winch to a tool assembly lowered in a well bore. Also spelled wireline. *AGI*

wire-line barrel

See: [wire-line core barrel](#)

wire-line cable

A wire rope 3/16 in or 1/4 in (4.8 mm or 6.4 mm) in diameter; used to handle the inner tube of a wire-line core barrel. See also: [cable](#) *Long*

wire-line core barrel

Double-tube, swivel-type core barrel; available in various outside diameters corresponding to sizes of diamond- and rotary-drill boreholes; designed so that the inner-tube assembly is retractable. At the end of a core run, the drill string is broken at the top joint so that an overshot latching device can be lowered on a cable through the drill-rod string. When it reaches the core barrel, the overshot latches onto the retractable inner-tube assembly, which is locked in the core barrel during the core run. The upward pull of the overshot releases the inner tube and permits it to be hoisted to the surface through the drill rods; it is then emptied and serviced and dropped or pumped back into the hole, where it relocks itself in the core barrel at the bottom. Syn: [wire-line barrel](#) *Long*

wire-line coring

The act or process of core drilling with a wire-line core barrel. See also: [wire-line core barrel](#)

wire-line dredging

In this method, digging tools or buckets are suspended on a steel cable and lowered to the sediment surface, where they are loaded and retrieved. Includes the use of drag-bucket and clamshell dredges, and generally to a depth of not more than 500 ft (152 m) below sea level. *Mero*

wire-line drilling

The drilling of boreholes with wire-line core-barrel drill-string equipment. *Long*

wire-line drill rod

Drill rod having couplings that are nearly flush on the inside and designed so that the inner tube of a wire-line core barrel and overshot assembly can be run inside the rod. *Long*

wireline drill-rod coupling

A rod coupling designed for use on wire-line drill rods. See also: [wire-line drill rod](#); [wire-line core barrel](#). *Long*

wire-line drum

A winding drum or hoist on which the wire line is wound when handling the inner tube and overshot assemblies of a wire-line core barrel. Syn: [wire-line hoist](#)

wire-line hoist

See: [wire-line drum](#)

wire-line log

See: [well log](#)

wire-line socket

The socket connecting the wire line to a wire-line core barrel overshot assembly. *Long*

wireman

In mining, a person who installs and repairs underground power, light, and trolley lines, making extensions into new working places as openings advance. Also called lineman; mine wireman; wire hanger. *DOT*

wireman helper

In mining, one who assists a wireman in installing and repairing underground power, light, telephone, and trolley lines. Also called wire-hanger helper. *DOT*

wire-mesh conveyor belt

A woven-wire conveyor belt composed of various combinations of flattened-helical coils of wire, which may or may not be joined by straight or crimped members.

wire-mesh reinforcement

Expanded metal, wire, or welded fabric used as reinforcement for concrete or mortar. See also: [mesh](#)

wire pack

A circular pack consisting of waste stone built within woven fencing fixed to light props. The pack is still effective as support after the props have failed. Wire packs, e.g., are used for small openings in the Rand mines in South Africa. *Nelson*

wire rod

Hot-rolled coiled stock that is to be cold-drawn into wire. *ASM, I*

wire rope

a. A rope made of twisted strands of wire for winding in shafts and underground haulages. Wire ropes are made from medium carbon steels. See also: [cable](#); [flattened](#)

[strand rope](#); [locked coil rope](#); multiple-strand rope; winding rope. *Long* b. Various constructions of wire rope are designated by the number of strands in the rope and the number of wires in each strand. The following are some common terms encountered: airplane strand; cable-laid rope; crane rope; elevator rope; extra-flexible hoisting rope; flat rope; flattened-strand rope; guy rope; guy strand; hand rope; haulage rope; hawser; hoisting rope; Lang lay rope; lay; left lay rope; left twist; nonspinning rope; regular lay; reverse-laid rope; rheostat rope; right lay; right twist; running rope; special flexible hoisting rope; standing rope; towing hawser; transmission rope. *Hunt*

wire-roper anchor

A device for tying off and securing the tension in the wire ropes of a wire-rope, side-framed, intermediate section. *NEMA, 2*

wire-rope side-framed intermediate section

An intermediate section consisting of interchangeable increments or parts in which the carrying idlers are supported by one or more steel wire ropes. Return idlers may or may not be supported from the ropes. *NEMA, 2*

wire-rope spreader

That part of a wire-rope, side-framed intermediate section that maintains a horizontal plane a fixed distance between wire ropes but does not support the wire ropes. (NEMA, 1961)

wire-rope support

That part of a wire-rope, side-framed intermediate section that positions the wire rope or ropes with respect to the roof or floor. It may or may not have provisions for mounting a return idler. *NEMA, 2*

wire ropeway

A ropeway using a wire cable or cables. Used for conveying ore and supplies in rough mountainous districts; a wire tramway. See also: [aerial tramway](#)

wire saw

A saw consisting of one- and three-strand wire cables up to 16,000 ft (4.9 km) long running over pulleys. When fed by a slurry of sand and water and held against rock by tension, the saw cuts narrow, uniform channels by abrasion. This saw is used for cutting granite, slate, marble, limestone, or sandstone blocks. *USBM, 7*

wire-saw operator

See: [wire sawyer](#)

wire sawyer

In a stonework industry, a person who operates a wire saw to cut very large blocks of granite, limestone, marble, slate, or sandstone into smaller blocks that can be handled on gang or circular saws. Also called wire saw operator. *DOT*

wire setter

Person who tends electrically powered unwinding machine that supplies wire netting to be embedded in sheet glass. *DOT*

wire silver

Native silver in the form of wires or threads. *AGI*

wire strand

Several steel wires twisted together to form one strand of a wire rope or cable. *Long*

wire-strand core

A core in which the number of wires shall not be less than the number of wires in a main strand of the wire rope, and the individual wires shall be of an appropriate grade of steel in accordance with the best practice and design, either bright (uncoated), galvanized, or drawn galvanized wire. See also: [independent wire rope core](#)

wiry

Occurring as thin wires, often twisted like the strands of a rope; e.g., native copper.

witching stick

See: [divining rod](#)

withamite

A red to yellow variety of epidote with a little manganese; in andesites at Glencoe, Scotland. CF: [piemontite](#)

withdraw

To draw off; to take out supports. *Mason*

withdrawal

Segregation of particular lands from the operation of specified public land laws, making those laws inapplicable to those lands. Lands may be withdrawn from all or any part of the public land laws, including the mineral location and mineral leasing laws. *SME, 1*

witherite

An orthorhombic mineral, BaCO_3 ; aragonite group; colorless to milky; in low-temperature hydrothermal veins. Syn: [carbonate of barium](#)

witness corner

A marker set on a property line leading to a corner; used where it would be impracticable to maintain a monument at the corner itself. *Seelye, 2*

witness mark

A mark or stake set to indicate the position (approximate or exact) of a property corner, instrument station, or other survey point. A witness may be a rock, tree, or other object; e.g., a blazed tree on the bank of a river to indicate a corner at the intersection of some survey line with the center line of the stream, which, therefore, cannot be marked directly; a stake driven so as to stand out; and a stake marked with a station number, driven flush with or below the surface of the ground. *Seelye, 2*

witness post

Satellite beacon used to mark a claim when the correct boundary post is inaccessible. *Pryor, 3*

wittichenite

An orthorhombic mineral, $\text{Cu}_3 \text{BiS}_3$; gray to tin-white; at Wittichen, Baden, Germany. Also called wittichite.

wittite

A monoclinic mineral, $\text{Pb}_9 \text{Bi}_{12} (\text{S,Se})_{27}$; lead-gray; at Falun, Sweden.

Witton-Kramer magnet

A circular magnetic separator suspended over a conveyor head pulley to extract small pieces of tramp iron. *Nelson*

Witwatersrand

The gold-mining district, now usually called the Rand, in South Africa. *Nelson*

wobble wheel roller

A skip body mounted on nine or more oscillating, smooth, rubber-tired wheels for compaction and fine rolling of soil. *Nelson*

wodginite

A monoclinic mineral, $(\text{Ta,Nb,Sn,Mn,Fe})_{16}\text{O}_{32}$; dimorphous with ixiolite; occurs in granite pegmatites; named for Wodgina, Australia.

woehlerite

a. A monoclinic mineral, $\text{Ca}_2\text{NaZr}(\text{Si}_2\text{O}_7)(\text{O,OH,F})_2$. b. The organic matter in carbonaceous chondrites. Also spelled woehlerite.

Woehler test

A fatigue test in which one end of a specimen is held in a chuck and rotated in a ball bearing placed on the other end. The ball bearing carries a weight and, as the specimen rotates, the stress at each point on its surface passes through a cycle from a maximum in tension to a maximum in compression. *CTD*

wold

A range of hills produced by differential erosion from inclined sedimentary rocks; a cuesta. CF: [cuesta](#)

Wolf

a. The name of a naphtha-burning flame safety lamp. *Jones, I* b. The name of carbide and electric lamps.

wolfachite

A mineral (not established as a species), $\text{Ni}(\text{As,Sb})\text{S}$, intermediate between gersdorffite and ullmannite; occurs at Wolfach, Baden, Germany.

wolf cut point

See: [equal-errors cut point](#)

wolfeite

A monoclinic mineral, $(\text{Fe,Mn})_2(\text{PO}_4)(\text{OH})$; forms a series with triplodite; dimorphous with satterlyite.

Wolf nickel-cadmium battery

While other nickel-cadmium batteries generally adopt either tubular or pocketed positive plate construction, the Wolf battery has individual features of interest. The supporting medium for the active materials consists of strips of compressed corrugated nickel foil. The method of construction is to perforate strips of the foil, which are pasted with active material. The strips are folded into corrugations and compressed into a cake. Two or more cakes are mounted in a pure nickel frame to form the finished plate. This method of construction results in a plate of satisfactory electrical conductivity, and no admixture of graphite or flake nickel in the active material is necessary. *Roberts, 2*

Wolf process

A flotation process invented by Jacob D. Wolf in 1903. He used sulfochlorinated or other oils and aimed to secure a high extraction with a low grade of concentrate in the first step, and by washing with hot water to concentrate the concentrate in a second step. Apparently no commercial use was made of it. *Liddell*

wolfram

See: [wolframite](#); tungsten.

wolframine

See: [tungstite](#); tungstic ocher; wolframite.

wolframite

A monoclinic mineral, $(\text{Fe,Mn})\text{WO}_4$; within the huebnerite-ferberite series; pseudo-orthorhombic due to twinning. See also: [tungsten](#) Syn: [wolfram](#)

wolfram lamp

A tungsten lamp. *Webster 3rd*

wolfram ocher

See: [tungstic ocher](#)

wolfsbergite

See: [chalcostibite](#); jamesonite.

wollastonite

A triclinic mineral of the pyroxenoid group: CaSiO_3 . It is dimorphous with parawollastonite. Wollastonite is found in contact-metamorphosed limestones, and occurs usually in cleavable masses or sometimes in tabular twinned crystals; it may be white, gray, brown, red, or yellow. It is not a pyroxene. Symbol, Wo. Syn: [tabular spar](#) *AGI*

wollongite

See: [wollongongite](#)

wollongongite

A coallike shale similar to torbanite. It is named from its type locality, Wollongong, New South Wales, Australia. Also spelled wollongite; wallongite. *AGI*

woelsendorfite

An orthorhombic mineral, $(\text{Pb,Ca})\text{U}_2\text{O}_7 \cdot 2\text{H}_2\text{O}$; forms bright red crusts on fluorite; at Woelsendorf, Bavaria, Germany.

Wommer safety clamp

A type of foot operated drill-rod safety clamp, the operation of which is similar to a bulldog safety clamp. Also called automatic spider. *Long*

wonder metal

Applied to metals, such as beryllium, magnesium, titanium, and zirconium, that were put into expanded use following World War II. *Pearl*

wood agate

A term used for agatized wood, esp. agate formed by siliceous permineralization of wood. *AGI*

Woodbury jig

A jig with a plunger compartment at the head end, so that the material is given a classification in the jig. *Liddell*

Woodbury table

A table of the general Wilfley-Overstrom-Card type, with riffles parallel to the tailings side, and a hinged portion without riffles (unlike the Card). The table top is a rhomboid, and the riffles gradually shorten as they near the tailings side. See also: [Wilfley table](#)

wood chain

S. Staff. A hoisting chain, the iron links of which are filled with small blocks of wood. *Fay*

Wooddell scale

A scale of resistance to abrasion based on the following method: if specimens of different materials are mounted so that they present surfaces substantially in the same plane, and if the surfaces are subjected to a lapping operation with a properly selective abrasive, the harder materials will stand out in relief, whereas the softer ones will be cut or worn to a depth, depending upon their hardness. By averaging several readings, a scale of hardness was established by which the quantitative values of the hardness of various materials could be determined. On the Wooddell scale, diamond has approx. 2 times the hardness of boron carbide, 3.5 times that of tungsten carbide, and nearly 5 times that of corundum. *Chandler*

wooden tubbing

Consists of wooden staves driven down in soft ground during sinking to keep back water. The lining is stated to be capable of withstanding pressures up to a maximum of 130 psi (896 kPa). The lining resembles the sides of a wooden tub and the word tubbing is doubtless derived from this similarity. See also: [tubbing](#)

wood hematite

A finely radiated variety of hematite exhibiting alternate bands of brown or yellow of varied tints. *Fay*

woodhouseite

A trigonal mineral, $\text{CaAl}_3(\text{SO}_4)(\text{PO}_4)(\text{OH})_6$; beudantite group; forms small colorless rhombohedra.

wood iron

A fibrous variety of chalybite (siderite), FeCO_3 . *Fay*

wood iron ore

Corn. Fibrous limonite; Land's End district. *Arkell*

wood opal

A variety of opal with woody texture by replacement. Syn: [opalized wood](#); xylopal; lithoxyl.

wood piling

A method of sinking a shaft through loose surface deposits by driving a ring of wood piles down vertically. As the piles are rammed downward, the loose material is removed. Frames are set to prevent the piles being forced inward. Each new set of piles reduces the dimensions of the excavation. To avoid this reduction in size, the piles are driven at an angle away from the shaft space. *Nelson*

Wood process

A flotation process utilizing the surface tension of water, either fresh, acid, or salt.

woodrock

A variety of asbestos resembling wood. *Standard, 2*

woodruffite

A monoclinic mineral, $(\text{Zn,Mn})\text{Mn}_3\text{O}_7 \cdot \text{H}_2\text{O}$; related to todorokite; at Sterling Hill, NJ.

woodstave piping

Piping formed from wood boards fitted and strapped together by encircling steel bands. *Pryor, 3*

wood stilt

A piece of wood attached to the leg of steel girders to provide a measure of yield and prevent premature distortion and damage to the ring. See also: [arch girder](#); [stilt](#). *Nelson*

woodstone

See: [silicified wood](#)

wood tin

A nodular variety of cassiterite, or tinstone, of a brownish color and fibrous structure, and somewhat resembling dry wood in appearance. Syn: [dneprovskite](#)

woodwardite

A mineral, $\text{Cu}_4^{2+} \text{Al}_2 (\text{SO}_4)(\text{OH})_{12} \cdot 2-4\text{H}_2 \text{O} (?)$; greenish-blue; closely akin to cyanotrichite.

Worden gravimeter

A compact temperature-compensated gravity meter, in which a system is held in unstable equilibrium about an axis, so that an increase in the gravitational pull on a mass at the end of a weight arm causes a rotation opposed by a sensitive spring. The meter weighs 5 lb (2.25 kg) and has a sensitivity of less than 0.1 mgal. *AGI*

work

a. The process of mining coal. *BCI* b. To crumble and yield under the action of a squeeze. Applied to pillars or roof of a coal mine. c. To be slowly closing under the action of a squeeze. Applied to portions of mine workings. d. Denoting that creep or squeeze is taking place. *Hudson* e. The product of a force in terms of weight and the lineal distance through which it acts. *Hammond* f. To undergo gradual movement, such as heaving, sliding, or sinking; said of rock materials. *AGI* g. Ore before it is beneficiated. *Fay* h. A place where industrial labor of any kind is carried on. Usually in the plural as saltworks, ironworks, etc. *Webster 3rd* i. Objects that are to be, are being, or have been treated, such as in cleaning or finishing. *ASM, 1*

workable

A coal seam or orebody of such thickness, grade, and depth as to make it a good prospect for development. In remote and isolated locations, other factors influence minability, such as access, water supply, transport facilities, etc. See also: [economic coal reserves](#)

workable bed

Any bed or vein that is capable of being mined, but usually applied to a coal seam or ore deposit that can be mined profitably.

workable tonnage

See: [probable reserves](#)

work arm

The part of a lever between the fulcrum and the working end. *Nichols, 1*

work capacity

The limit of energy expended or absorbed, within which a body is not unduly fatigued. *Brantly, 2*

worked out

a. A mine, or large section of a mine, from which all minable coal or ore has been taken. *BCI* b. Exhausted; said of a coal seam or ore deposit.

worker cage

A special cage for raising and lowering workers in a mine shaft. See also: [worker car](#)

worker car

A type of car for transporting miners up and down mine shafts; also cars used to transport miners from the shaft to working areas. See also: [worker cage](#)

worker door

a. A small door in a stopping to allow the passage of workers. *Nelson* b. Scot. A small trapdoor on a traveling road. *Fay*

worker-hoist engineer

In mining, a person who operates the hoisting engine that serves the shaft in which only workers are raised from and lowered into a mine. *DOT*

worker trip

a. A trip made by mine cars and locomotives to take workers, rather than mined material or supplies, to and from the working places. *BCI* b. A similar trip made by a worker cage in a shaft.

work index

See: [Bond's third theory](#)

working

a. When a coal seam is being squeezed by pressure from the roof and floor it emits creaking noises and is said to be "working." This noise often serves as a warning to miners that additional support is needed. Sagging roof emitting noises and requiring additional timbering. *BCI* b. A working may be a shaft quarry, level, opencut, or stope, etc. Usually in the plural. See also: [labor](#); [workings](#). *Fay*

working a claim

Activities such as extracting ore, building structures, and otherwise developing a mining claim after ore is discovered. *Ricketts*

working capital

The amount of money available to finance the operations of a company beyond the amount required for the purchase of fixed assets, such as property. *Truscott*

working cycle

A complete set of operations. In excavation, it usually includes breaking, loading, moving, dumping, and returning to the loading point. *Nichols, 1*

working face

The place at which mining is being done in a breast, gangway, airway, chute, heading, drift, adit, crosscut, etc. See also: [face](#)

working gullet

The immediate excavation needed for opencast working of ore. *Nelson*

working-hole

In glassmaking, a small opening over pots enabling workers to introduce or withdraw material required.

working home

Mining toward the main shaft while extracting ore or coal, such as in longwall retreating. See also: [longwall](#)

working interest

The operator's mineral ownership involving the costs of drilling, completion, equipment, and producing in contrast to the (free) royalty interest. *Wheeler, R.R.*

working level (WL)

Any combination of radon daughters in one liter of air that result in the ultimate emission of 1.3×10^5 million electrons volts (MeV) of alpha energy. *NSC, 2*

working load

The maximum weight a hoist line or other rope or cable can carry under working conditions without danger of straining. *Long*

working on air

A pump is said to be working on air when air is sucked up with the water. *Fay*

working-on-the-walls

The eroding or corroding of blast furnace linings. *Fay*

working out

Mining away from the main shaft while extracting ore or coal, such as in longwall advancing. See also: [advancing](#)

working pit

A mine shaft through which ore and miners are carried, as distinguished from one used only in pumping. *Standard, 2*

working place

- a. A place in a mine at which coal or ore is actually being mined. See also: [working face](#)
- b. A miner's room or chamber. *Hudson*

working room

Generally the space between the working face and the area being backfilled. *Stoces*

workings

- a. Any area of development; usually restricted in meaning to apply to breasts, etc., in contradistinction to gangways and airways. Often used in a broader sense to mean all underground developments. See also: [working](#) *Fay*
- b. The entire system of openings in a mine. Typical usage restricts the term to the area where coal, ore, or mineral is actually being mined. *Nelson*
- c. Colloquial term for an anthracite mining operation. *Korson*

working section

All areas of a coal mine from the loading point of the section to and including the working faces. *FR 95*

working stress

a. The stress considered to be a safe maximum for a particular material under ordinary conditions. See also: [yield stress](#); [load factor](#). *Hammond* b. The maximum unit stress to which the parts of a structure are to be subjected. *Zern* c. See: [allowable stress](#)

working the broken

The extraction of coal pillars in a pillar method of mining. See also: [pillar extraction](#); [broken working](#); [second working](#); robbing pillars. *Nelson*

working the whole

The driving of the narrow coal headings to form pillars in a pillar method of working. *Nelson*

work lead

a. Impure pig lead that is to be desilverized or refined. See also: [base bullion](#) b. The electrical conductor connecting the source of arc welding current to the work. Also called welding ground; ground lead. *ASM, 1*

workplace protection factor

A measure of the protection provided in the workplace by a properly functioning respirator when correctly worn and used. *NIOSH*

work platform

A board or small platform placed at a suitable height in a drill tripod or derrick so that a worker standing on it can handle the drill rod stands. *Long*

work shaft

A shaft that is in daily use for hoisting coal, ore, or miners. See also: [air shaft](#)

work stone

A plate in the bottom of a blast hearth or ore hearth having a groove down its center for conducting away the molten lead. *Standard, 2*

work study

Techniques for analyzing methods used in performing an operation and measuring the work involved. Work study fosters better use of materials, plant, and labor, thus ensuring higher productivity. See also: [method study](#)

worm

A spiral tool, shaped like a carpenter's wood-boring auger, with the bottom end shaped like the cutting end of a diamond point or mud bit. The tool is rotated inside a casing to loosen and clean out debris or to loosen and drill through tough clay at the bottom of a borehole. Also called worm auger; worm-type auger. *Long*

worm auger

See: [worm](#)

worm conveyor

a. A conveyor consisting of a spiral plate encircling and fastened to a shaft lying longitudinally within a trough; rotation of the spiral pushes the material forward. Also called screw conveyor. *BS, 5* b. See: [helical conveyor](#)

worm wheel

A modified spur gear with curved teeth that meshes with a worm. *Nichols, 1*

wough

The side of a mineral vein.

wound rotor motor

A wound rotor induction motor differs from a squirrel cage induction motor only in the construction of its rotor. The rotor, instead of having short-circuited copper bars, has a definite winding connected for the same number of poles as the stator with the leads brought out to slip rings. The stator and rotor are commonly called the primary and secondary, respectively, because under locked rotor conditions, the motor becomes a transformer with a given ratio. This ratio depends upon motor design and is not standardized. Frequently called a slip ring motor. *Pit and Quarry*

woven-wire vibrating screen

Ore screening machine whose screen is woven of steel wire and stretched tightly on a metal frame. Near the center of the screen is fastened the vibrating element of a high-speed vibrator, which produces a vibratory motion at right angles to the plane of the screen. *Newton, 1*

WP-cut

A tunnel blasting method in which holes are arranged in a geometrical figure as an incomplete pyramid and not parallel in the planes of the sides. For tunnel widths less than 25 ft (7.5 m), the WP-cut provides a greater advance than V-cuts and fan cuts.

wracking force

A horizontal force tending to distort a rectangular shape into a parallelogram. *Hammond*

wrap-drive conveyor

A conveyor in which the return strand of the belt is driven by a wrap drive which combines a drive pulley with a snub pulley. *NEMA, 2*

wrap-up

Same as windup, as applied to the twist in a drill-rod string. See also: [windup](#)

wreath

In glassmaking, a wavy appearance in glass, esp. flint glass, due to defective manufacture. *Standard, 2*

wrecking bar

A steel bar usually from 1 to 2 ft (0.3 to 0.6 m) in length, with one end drawn to a thin edge, the other curved to a claw. *Crispin*

wrench fault

A transverse strike-slip fault that is more or less vertical.

wrist action

In a bucket, the ability to change its digging or dumping angle by power. *Nichols, 1*

wrought alloy

Type of alloy suitable for forming by mechanical means at temperatures below the melting point. *Light Metal Age*

wrought iron

a. A low-carbon iron containing a relatively high proportion of residual slag that gives it ductility and toughness. *Strock, 2* b. A commercial form of iron containing less than 0.3%, and usually less than 0.1%, carbon; also carrying 1.0% or 2.0% of slag

mechanically mixed with it and originally made directly from ore (as in the Catalan forge) but subsequently by puddling. See also: [iron Webster 3rd](#)

wrought metal

A metal that has been worked by cold rolling, forging, pressing, drawing, or extension. *Hammond*

Wuensch process

In metallurgy, a heavy suspension method for the concentration of ores in which the waste has a specific gravity of 2.7 or more. Minerals having a specific gravity in excess of 5.25 must be used, since a suspension containing over 40% solids by volume is too plastic for use. Galena (sp gr, 7.4 to 7.6) and ferrosilicon (sp gr, 6.7 to 7.0) have been used. *Hess*

wulfenite

A tetragonal mineral, PbMoO_4 ; prismatic cleavage; soft; resinous; yellow to brown; sp gr, 6.5 to 7.0; in oxidized zones of lead-molybdenum veins; a source of molybdenum. Syn: [yellow lead ore](#)

wurtzilite

A black, massive, asphaltic pyrobitumen; sectile and infusible; closely related to uintahite; insoluble in turpentine; derived from metamorphosed petroleum; occurs in veins in Uinta County, UT. See also: [elaterite](#)

wurtzite

A trigonal and hexagonal mineral, $(\text{Zn,Fe})\text{S}$; dimorphous with sphalerite; resinous; brownish black; forms hemimorphic pyramidal crystals or radiating needles and bundles within lamellar sphalerite. See also: [alpha zinc sulfide](#); zinc sulfide.

wurtzite-8H; wurtzite-10H

Two polytypes, 8ZnS and 10ZnS , respectively, of wurtzite found at Joplin, MO; hexagonal. The wurtzite polytypes evidently form a homologous series (2H, 4H, 6H, etc.) resulting from growth phenomena based on screw dislocations. *Am. Mineral.*, 1

wuestite

A mineral, FeO . Artificially prepared specimens are characteristically deficient in iron. Also spelled wustite. Syn: [iozite](#)

wyartite

An orthorhombic mineral, $\text{Ca}_3 \text{U}(\text{UO}_2)_6 (\text{CO}_3)_2 (\text{OH})_{18} \cdot 3-5 \text{H}_2 \text{O}$; violet-black; occurs with ianthinite altered from uraninite; at Shinkolobwe, Katanga, Republic of the Congo.

wych

See: [wich](#)

wye

a. Cumb. The beam-end connection above the pump rods of a winding and pumping engine. *Fay* b. A cast or wrought fitting that has one side outlet at any angle other than 90 degrees. The angle is usually 45 degrees, unless another angle is specified. The fitting is usually indicated by the letter Y. *Strock, I*

Wyoming bentonite

A swelling type of bentonite that absorbs about eight times its dry volume of water to form a gel. See also: [bentonite](#)

X

xalostocite

A rose-pink variety of grossularite garnet. Also called rosolite; landerite. From Xalostoc, Morelos, Mex. *English*

xanthate

Common specific promoter used in flotation of sulfide ores. A salt or ester of xanthic acid made of an alcohol, carbon disulfide, and an alkali.

xanthiosite

A monoclinic mineral, $\text{Ni}_3 (\text{AsO}_4)_2$; sulfur-yellow.

xanthitane

a. An alteration product of titanite (sphene). b. See: [anatase](#)

xanthochroite

Amorphous cadmium sulfide. See also: [greenockite](#)

xanthoconite

A monoclinic mineral, $\text{Ag}_3 \text{AsS}_3$; dimorphous with proustite; brilliant red, orange-yellow to brown. Syn: [rittingerite](#)

xanthophyllite

See: [clintonite](#)

xanthorthite

A yellow altered variety of allanite that contains considerable water. *Standard*, 2

xanthoxenite

A triclinic mineral, $\text{Ca}_4 \text{Fe}_2 (\text{PO}_4)_4 (\text{OH})_2 \cdot 3\text{H}_2 \text{O}$; wax-yellow; forms thin plates; at Rabenstein, Bavaria, Germany.

xanthus

An early name for heliotrope. *Hey*, 3

x-axis

a. The axis of abscissas in a plane Cartesian coordinate system. Commonly written x-axis. (Webster 3rd, 1966) b. One of the three optic axes (x, y, and z) in a biaxial crystal. The x-axis is the axis of a greatest ease of vibration. Light vibrating parallel to the x-axis travels with maximum velocity and is called the fast ray, the x-ray (not to be confused with the penetrating X-rays of extremely short wavelength), and the alpha -ray. The lowest index of refraction n_{α} . in biaxial minerals is the index of the fast ray vibrating parallel to the x-axis. c. One of three axes in a three-dimensional coordinate system. Crystallographers customarily use a right-handed system with the z-axis oriented positive upward, the y-axis positive to the right, and the x-axis positive toward the viewer. For mineral parameters the x-axis is labeled a with periodic translations t_1 .

x-coordinate

a. An abscissa in a plane Cartesian coordinate system. *Webster 3rd* b. One of the three coordinates in a three-dimensional rectangular coordinate system. *Webster 3rd*

x-direction

One of three orthogonal optic directions in biaxial crystals. Light with its electric vector (vibration direction in early terminology) parallel to the x-direction has the lowest refractive index (n_{α}) for a given crystal and is called the fast ray. In orthorhombic crystals, the x-axis is constrained by symmetry to correspond to one of the crystallographic directions, the correspondence determined empirically. In monoclinic crystals, one optic direction, commonly the y-direction, is constrained by symmetry to correspond to the unique diad. In triclinic crystals, there is no symmetrical constraint relating optic directions to crystallographic axes.

xeno-

A prefix meaning strange or foreign.

xenoblast

A crystal that has grown during metamorphism without the development of its characteristic faces. CF: [idioblast](#)

xenoblastic

Applied to a texture of metamorphic rocks in which the constituent mineral grains lack proper crystal faces.

xenocryst

A crystal in an igneous rock that is foreign to the body of rock in which it occurs. CF: [xenolith](#)

xenogenous

A little-used syn. of epigenetic. *AGI*

xenolite

A silicate of aluminum, related to fibrolite. *Fay*

xenolith

A foreign inclusion in an igneous rock. CF: [autolith](#); [xenocryst](#). Syn: [inclusion](#); [exogenous inclusion](#); [accidental inclusion](#). *AGI*

xenomorph

a. Said of the holocrystalline texture of an igneous or metamorphic rock, characterized by crystals not bounded by their own faces but with their forms impressed upon them by

adjacent mineral grains. Also said of a rock with such a texture. *AGI* b. (Syn: [anhedral](#) in European usage.) Syn: allotriomorphic; anidiomorphic; xenomorphic-granular. CF: [automorphic](#). *AGI*

xenomorphic-granular

See: [xenomorphic](#)

xenon

A zero-valent, very heavy, inert gaseous element; one of the so-called noble gases. Symbol, Xe. Obtained by the fractional distillation of liquid air. The gas is used in making electron tubes, stroboscopic lamps, and bactericidal lamps; also used in the atomic energy field in bubble chambers, probes, and other applications where its high molecular weight is of value. *Handbook of Chemistry and Physics, 3*

xenothermal

Said of a hydrothermal mineral deposit formed at high temperature but shallow depth; also, said of that environment. CF: [telethermal](#); epithermal; mesothermal; hypothermal deposit; leptothermal. *AGI*

xenotime

A tetragonal mineral, YPO_4 ; commonly includes small quantities of thorium, uranium, and rare-earth elements; resembles zircon in form, structure, and occurrence; shows pale tints; an accessory in granites and pegmatites; also occurs in placers.

X-frame brace

A brace of a square set in which two diagonal pieces of timber cross to form an X. *Fay*

xonotlite

A monoclinic and triclinic mineral, $\text{Ca}_6 \text{Si}_6 \text{O}_{17} (\text{OH})_2$; light-gray to pink; fibrous; in serpentinites in Santa Barbara, CA, and on Isle Royale, MI.

X-ray diffraction

Reflection at definite and characteristic angles from space lattices of crystals of X-rays that have been caused to bombard them, thus giving data for identification of characteristic lattice structure of a given species of mineral. See also: [reciprocal lattice](#); [diffraction](#). *Pryor, 3*

xylain

a. A subvariety of provitrain in which the woody origin of the cellular structure is microscopically visible. CF: [periblain](#); [suberain](#). *AGI* b. Those constituents of coal derived from lignified tissues in which structures were retained. *AGI*

xylanthite

A variety of fossil resin. *Tomkeieff*

xyleneite

A maceral composed of xylain. *Tomkeieff*

xylinite

a. A variety of provitrinite. The micropetrological constituent, or maceral, of xylain. It consists of wood (xylem or lignified tissues) almost jellified in bulk but still showing faint traces of cell walls and resin contents under the microscope. *AGI* b. A distinction of telinite, based on botanical origin (xylem or lignified tissues). To be used if desired but considered unnecessary by the Heerlen Congress of 1935. CF: [suberinite](#); [telinite](#). *AGI*

xylocryptite

See: [scheererite](#)

xyloidin

An explosive compound produced by the action of nitric acid on starch or woody fiber. Resembles guncotton. *Fay*

xylopal

See: [wood opal](#)

xyloretinite

A white hydrocarbon similar to hartite found in fossil wood. *Tomkeieff*

Y

YAG

Acronym and abbrev. for yttrium-aluminum garnet. *USBM, 7*

yard

The British standard of length, equal to 36 in, 3 ft, or 0.9144 m. *Hammond*

yardage

a. The extra compensation a miner receives in addition to the mining price for working in a narrow place or in deficient coal. Usually at a certain price per yard (or meter) advanced. b. A system of payment to workers in accordance with the number of yards (or meters) driven, repaired, or packed; the length in yards (or meters) of a drivage or face which a miner or contractor has excavated in a week or from one measuring day to the next. Also called yard work. See also: [piecework](#) c. Relates to cubic yards (or meters) of earth excavated. *Crispin* d. Price paid per yard (or meter) for mining or cutting coal, usually by contract agreement, not on a tonnage basis. *BCI*

yardage man

In bituminous coal mining, a laborer who pries down loose roof rock with a bar after coal has been blasted from the working face; the worker picks out seam partings (layers of rock) in the coal working face prior to blasting, using a long handled pick. *DOT*

yard price

The price paid per yard driven (in addition to tonnage prices) for roads of certain widths and driven in certain directions. See also: [yardage](#). *Fay*

yard work

See: [yardage](#)

yavapaiite

A monoclinic mineral, $\text{KFe}(\text{SO}_4)_2$; at the United Verde copper mine, Jerome, AZ. Named for the local Yavapai Native Americans.

y-axis

a. One of the three optic axes (x,y, and z) in a biaxial crystal. The y-axis is the intermediate optic axis, at right angles to the plane containing optic axes x and z. Light vibrating parallel to the y-axis is called the intermediate ray, the y-ray, and the beta -ray. The middle-value index of refraction n_{beta} in biaxial minerals is the index of the intermediate ray vibrating parallel to the y-axis. b. One of three axes in a three-dimensional coordinate system. Crystallographers customarily use a right-handed system with the z-axis oriented positive upward, the y-axis positive to the right, and the x-axis positive toward the viewer. For mineral parameters, the y-axis is labelled b with periodic

translations t_2 . In monoclinic crystal systems, mineralogists conventionally adopt the second setting and designate the unique diad y .

y-coordinate

a. An ordinate in a plane Cartesian coordinate system. *Webster 3rd* b. One of the three coordinates in a three-dimensional rectangular coordinate system. *Webster 3rd*

y-direction

a. One of three orthogonal optic directions in biaxial crystals. Light with its electric vector (vibration direction in early terminology) parallel to the y -direction has a unique intermediate refractive index (n_{beta}) for a given crystal and is called the fast ray, relative to light with its electric vector parallel to the z -direction, and the slow ray, relative to light with its electric vector parallel to the x -direction. In orthorhombic crystals, the y -direction is constrained by symmetry to correspond to one of the crystallographic directions, the correspondence determined being empirically. In monoclinic crystals, one optic direction, commonly the y -direction, is constrained by symmetry to correspond to the unique diad. In triclinic crystals, there is no symmetrical constraint relating optic directions to crystallographic axes. b. One of three orthogonal optic directions in biaxial crystals. Light with its electric vector (vibration direction) parallel to the y -direction has a unique intermediate index of refraction (n_{beta}) for a given crystal and is fast or slow depending on crystal orientation.

yeast

Fungi belonging to the ascomycetes, in which the usual and dominant growth form is unicellular. *Rogoff*

yeatmanite

A triclinic mineral, $\text{Mn}_9 \text{Zn}_6 \text{Sb}_2 \text{Si}_4 \text{O}_{28}$; forms brown crystals; at Franklin Furnace, NJ.

yellow antimony

a. Yellow allotropic form of antimony. Obtained by oxidizing antimony hydride at a low temperature. *Bennett* b. An unstable form of antimony. It can be obtained during the electrolysis of antimony trichloride, SbCl_3 . As yellow antimony (alpha antimony) is deposited on an electrode, it forms a solid solution in the antimony chloride. When this solution is scratched or heated, metallic antimony (beta antimony) and clouds of antimony chloride form instantaneously, giving rise to the term explosive antimony. There are four allotropic forms of antimony: yellow antimony; black antimony; explosive antimony; and metallic antimony or ordinary antimony. These allotropic forms are also designated alpha antimony (yellow antimony); beta antimony (metallic antimony); and gamma antimony. *CCD, 2; Handbook of Chemistry and Physics, 2*

yellow arsenic

See: [orpiment](#)

yellow boy

Deposit from the acid waters of a mine or partial neutralization. Ferrous anhydride and other impurities including fine clay carried down with it. *Zern*

yellow cake

a. Applied to certain uranium concentrates produced by mills. It is the final precipitate formed in the milling process. Usually considered to be ammonium diuranate or sodium diuranate, but the composition is variable and depends on the precipitating conditions. *USBM, 7* b. A common form of triuranium octoxide, the powder obtained by evaporating an ammonia solution of the oxide. *CCD, 2*

yellow coal

See: [tasmanite](#)

yellow copper

See: [chalcopyrite](#)

yellow copperas

See: [copiapite](#)

yellow copper ore

See: [chalcopyrite](#)

yellow dog

Field name for a drill tripod or derrick lamp, consisting of a metal container with two spouts holding cotton wicks, on which burning oil gives a very yellow light. *Long*

yellow earth

a. Impure yellow ocher. *Webster 3rd* b. Loess of northern China.

yellow gravel

Eng. The lower subdivision of the Aptian sponge gravel; Faringdon, Berkshire. *Arkell*

yellow ground

Oxidized kimberlite of yellowish color found at the surface of diamond pipes (e.g., South Africa), above the zone of blue ground. *AGI*

yellow heat

A division of the color scale. generally given as about 2,000 degrees F (1,090 degrees C).

yellow lead ore

See: [wulfenite](#)

yellow ocher

a. A mixture of limonite usually with clay and silica. Used as a pigment. *Webster 3rd* b. A moderate orange yellow that is yellower and darker than deep chrome yellow. *Webster 3rd* c. See: [goethite](#); limonite.

yellow ore

See: [carnotite](#); chalcopyrite.

yellow ozokerine

A product resembling vaseline, but less homogeneous; produced from crude ozokerite. *Fay*

yellow pyrite

See: [chalcopyrite](#)

yellow ratsbane

See: [orpiment](#)

yellow sands

Eng. The basal part of the Permian, Durham. *Arkell*

yellow tellurium

See: [sylvanite](#)

yenite

A rejected syn. for ilvaite. *CTD*

yield

a. The proportion of coal or ore obtained in mining; the product of a metallurgical process; extraction; recovery. *Fay* b. The percentage of "run-of-mine" material that is marketable. *Hudson* c. The amount of a product obtained from any operation expressed as a percentage of the feed material. *BS, 5*

yielding arch

Steel arch installed in an underground mine. Arches are employed to support loads caused by changing ground movement or faulted and fractured rock. They are designed so that when the ground load exceeds the design load of the arch as installed, yielding takes place in the joint of the arch, permitting the overburden to settle into a natural arch of its own, thus tending to bring all forces into equilibrium. *Lewis*

yielding floor

A soft floor that heaves and flows into open spaces when subjected to heavy pressure from packs or pillars. See also: [creep](#)

yielding prop

An adjustable steel prop that incorporates a sliding or flexible joint that comes into operation when roof pressure exceeds a set load or value. See also: [hydraulic chock](#); [hydraulic prop](#). *Nelson*

yielding support

A support that incorporates a sliding or flexible joint or stilt to accommodate early pressure and thus delays damage and distortion of the support. Friction or hydraulic devices may be used so that a support, when subjected to a load above its set load, yields mechanically rather than by distorting. See also: [stilt](#)

yield loss

The difference between the actual yield of a product and the yield theoretically possible (based on the reconstituted feed) of a product with the same properties (usually percentage of ash). Also called washing error. *BS, 5*

yield-pillar system

A method of roof control whereby the natural strength of the roof strata is maintained by relieving pressure in working areas and controlling transference of load to abutments that

are clear of workings and roadways. The method consists of causing certain coal pillars to yield in small amounts. See also: [double packing](#)

yield point

The differential stress at which permanent deformation first occurs in a material. Syn: [yield stress](#); [yield strength](#). *Roark*

yield strength

The stress at which a material exhibits a specified deviation from proportionality of stress and strain. An offset of 0.2% is used for many metals. See also: [yield point](#)

yield stress

a. The lowest stress at which extension of a tensile test piece increases without increase in load. It is determined by observing the fall of the testing lever and checked by a pair of dividers on the original gage length. Many materials do not indicate a defined yield stress and in such cases the proof stress is used. See also: [working stress](#); high-tensile steel; mild steel; yield point. *Hammond* b. Minimum stress required to shear (that is, exceed elastic recovery) a suspension, such as the dense media used in mineral concentration. *Pryor, 3*

YIG

Acronym and abbrev. for yttrium-iron garnet. *USBM, 7*

yoderite

A monoclinic mineral, $(\text{Mg,Al})_8 \text{Si}_4 (\text{O,OH})_{20}$; purple; highly pleochroic; in a quartz-yoderite-kyanite-talc schist at Mautia Hill, Kongwa, Tanzania.

Yogo sapphire

Dark-blue corundum from Yogo Gulch, MT. *Schaller*

yoke

a. An interconnecting link between the twin cylinders of a hydraulic-feed diamond drill through which the action of the hydraulic-feed cylinders is transmitted to the drill rods and bit. *Long* b. A clamp fitted to the casing at the collar of a drill hole, which when anchored by means of wedge bolts prevents grout pressure from forcing the casing out of the hole. *Long*

yolk

Nodule; occurs at Forest of Dean, U.K.

Yorkian

A term which has been proposed (instead of Westphalian) for the Coal Measures strata between the Lanarkian and the Staffordian. *Nelson*

yoshimuraite

A triclinic mineral, $(\text{Ba,Sr})_2 \text{TiMn}_2 (\text{SiO}_4)_2 (\text{PO}_4, \text{SO}_4)(\text{OH,Cl})$; forms orange-brown tabular crystals or stellate groups; occurs in an alkali pegmatite at the Noda-Tamagawa Mine, Iwate prefecture, and the Taguchi Mine, Aichi Prefecture, Japan.

yowah nut

Walnut-to almond-size pebble with an opal center; ironstone covered with a thin band of opal, or hollow; near Yowah station, western Queensland, Australia. A subvariety of boulder opal.

ytterbite

See: [gadolinite](#)

ytterbium

A rare-earth element that has a bright silvery luster, is soft, malleable and quite ductile. Symbol, Yb. Occurs with other rare-earths in a number of rare minerals. Commercially recovered from monazite sand. Has a possible use in improving the mechanical properties of stainless steel; few other uses have been found. *Handbook of Chemistry and Physics, 3*

yttergranat

A calcium-iron garnet containing a small amount of yttria. A variety of andradite. *Fay*

yttrialite

A possibly hexagonal mineral, $(\text{Y,Th})_2 \text{Si}_2 \text{O}_7$; olive green tarnishing to orange-yellow; occurs in Texas.

yttrium

A rare-earth element that has a silvery-metallic luster. Symbol, Y. Occurs in nearly all of the rare-earth minerals. Recovered commercially from monazite sand and from bastnasite. Widely used: in color television tubes; to reduce the grain size in chromium, molybdenum, zirconium, and titanium; to increase the strength of aluminum and

magnesium alloys; as a deoxidizer for vanadium and other nonferrous metals; in nuclear technology for its high neutron transparency. *Handbook of Chemistry and Physics, 3*

yttrium-aluminum garnet

Synthetic; $Y_3 Al_5 O_{12}$; has useful magnetic properties. Actually not a true garnet and should not be confused with any of the silicate minerals called garnets in the garnet group of minerals. Manufacture of yttrium-aluminum garnets is a commercial use of yttrium. Used in lasers and in microwaves and other electronic applications. Acronym and abbrev., yag. *Handbook of Chemistry and Physics, 2*

yttrium garnet

A variety of garnet containing a small amount of yttrium earths. Syn: [yttrogarnet](#)

yttrium-iron garnet

Synthetic; $Y_3 Fe_5 O_{12}$; has useful magnetic properties. Actually not a true garnet and should not be confused with any of the silicate minerals called garnets in the garnet group of minerals. Manufacture of yttrium-iron garnets is a leading commercial use of yttrium. Used as electronic transmitters, as filters for selecting or tuning microwaves, and as transmitters and transducers of acoustic energy. Acronym and abbrev., yig. *Bennett; CCD, 2; Handbook of Chemistry and Physics, 2*

yttrocrasite

An orthorhombic mineral, $(Y,Th,Ca,U)(Ti,Fe)_2 (O,OH)_6$; also contains Th, U, Fe; radioactive; black altering to a dull brown coating; in granite pegmatites.

yttrogarnet

See: [yttrium garnet](#)

yttromicrolite

A discredited mineral name for an amorphous mixture of calcium sulfate, tantalite, and heterogeneous microlite.

yttro-orthite

See: [allanite](#)

yttrotantalite

An orthorhombic mineral, $(Y,U,Fe)(Ta,Nb)O_4$; radioactive; black to brown: in pegmatites.

yttrotungstite

A monoclinic mineral, $YW_2O_6(OH)_3$. Syn: [thorotungstite](#)

yugawaralite

A monoclinic mineral, $CaAl_2Si_6O_{16} \cdot 4H_2O$; zeolite group; colorless to white; in low-grade metamorphosed tuffs near the Yugawara hot spring, Kanagawa, Japan.

yukonite

a. A noncrystalline mineral: $Ca_2Fe_3(AsO_4)_4OH \cdot 12H_2O$. *AGI* b. An obsolete term originally assigned to an igneous rock intermediate in composition between a tonalite and an aplite. It is named after the Yukon River, Alaska. *AGI*

Z

zaffer

Mixed arsenates and oxides of cobalt produced by roasting sulfide ores. *Pryor, 3*

zanthochroite

Amorphous cadmium sulfide; greenockite is the crystalline form. *Am. Mineral., 1*

zaratite

An isometric mineral, $Ni_3(CO_3)(OH)_4 \cdot 4H_2O$; emerald green; forms incrustations and compact masses in mafic and ultramafic rocks.

zarnec

See: [zarnich](#)

zarnich

Native sulfide of arsenic, including sandarac and orpiment. Syn: [zarnec](#). *Webster 2nd*

zavaritskite

A tetragonal mineral, BiOF ; at Sherlova Gory, East Transbaikal, Russia.

z-axis

a. One of the three optic axis (x, y, and z) in a biaxial crystal. The z-axis is the axis of least ease of vibration. Light vibrating parallel to the z-axis travels with minimum velocity and is called the slow ray, the z-ray, and the gamma -ray. The highest index of refraction n_{gamma} , in biaxial minerals is the index of the slow ray vibrating parallel to the z-axis. b. One of three axes in a three-dimensional coordinate system. Crystallographers customarily use a right-handed system with the z-axis oriented positive upward, the y-axis positive to the right, and the x-axis positive toward the viewer. For mineral parameters, the z-axis is labelled c with periodic translations t_3 . If one crystallographic axis is symmetrically unique, it is labelled z, except in the monoclinic system, where mineralogic convention uses the second setting labelling the unique diad y.

z-coordinate

One of the three coordinates in a three-dimensional rectangular coordinate system.
Webster 3rd

z-direction

One of three orthogonal optic directions in biaxial crystals. Light with its electric vector (vibration direction in early terminology) parallel to the z-direction has the highest refractive index (n_{gamma}) for a given crystal and is called the slow ray. In orthorhombic crystals, the z-direction is constrained by symmetry to correspond to one of the crystallographic directions, the correspondence determined empirically. In monoclinic crystals, one optic direction, commonly the y-direction, is constrained by symmetry to correspond to the unique diad. In triclinic crystals, there is no symmetrical constraint relating optic directions to crystallographic axes.

zeasite

Wood opal, formerly a name for fire opal.

zebra dolomite

A term used in the Leadville district of Colorado for an altered dolomite rock that shows conspicuous banding (generally parallel to bedding) consisting of light-gray coarsely textured layers alternating with darker finely textured layers. See also: [zebra rock](#)

zebra rock

a. A term used in the Colville district of NE Washington State for a dolomite that shows narrow banding consisting of black layers (indicative of organic matter) alternating with

white, slightly coarse-grained, and somewhat vuggy layers. See also: [zebra dolomite](#) b. A term used in Western Australia for a banded quartzose rock of Cambrian age. *AGI*

Zeiss konimeter

A portable dust-sampling instrument. See also: [konimeter](#)

Zellweger furnace

A long-hearth reverberatory furnace used at Iola, KS. *Fay*

Zemorrian

Lower Lower Miocene. *AGI*

zeolite

A generic term for class of hydrated silicates of aluminum and either sodium or calcium or both, of the type $\text{Na}_2\text{O} \cdot \text{Al}_2\text{O}_3 \cdot n\text{SiO}_2 \cdot x\text{H}_2\text{O}$. The term originally described a group of naturally occurring minerals. The natural zeolites are analcite, chabazite, heulandite, natrolite, stilbite, and thomsonite. Artificial zeolites are made in a variety of forms, ranging from gelatinous to porous and sandlike, and are used as gas adsorbents and drying agents as well as water softeners. Both natural and artificial zeolites are used extensively for water softening. The term zeolite now includes such diverse groups of compounds as sulfonated organics or basic resins, which act in a similar manner to effect either cation or anion exchange. *CCD, 2*

zeolite mimetics

The dachiardite group of zeolites.

zeolite process

a. A base exchange method of treating hard water, in which zeolites, contained in a tank, remove salts. The zeolite layer is regenerated by backflushing with brine. *Nelson* b. See: [base exchange](#)

zeolitic deposit

A deposit, particularly of native copper, that occurs in basalt accompanied by minerals of the zeolite group.

zeolitization

Introduction of, alteration to, or replacement by, a mineral or minerals of the zeolite group. This process occurs chiefly in rocks containing calcic feldspars or feldspathoids, and is sometimes associated with copper mineralization. *AGI*

zeophyllite

A triclinic mineral, $\text{Ca}_4 \text{Si}_3 \text{O}_8 (\text{OH}, \text{F})_4 \cdot 2\text{H}_2 \text{O}$; pseudo-hexagonal; forms white spherical, radiated folia; at Cross-Preisen, Bohemia, Czech Republic.

zero air voids curve

The curve showing the zero air voids unit weight as a function of water content. Syn: [saturation curve](#)

zero air voids unit weight

The weight of solids per unit volume of a saturated soil mass. See also: [unit weight](#)

zero-length spring

Special type of gravimeter spring for which the length is proportional to the applied force. *Schieferdecker*

zero-point energy

The kinetic energy remaining in a substance at a temperature of absolute zero. *Webster 3rd*

zero potential

The actual potential at the surface of the Earth taken as a point of reference. *Webster 3rd*

zero time

When conducting a mine ventilation pressure survey, zero time is the time of the commencement of the survey from the base station, and the reading of the control barometer there is taken as the pressure datum to which subsequent pressures are referred. *Sinclair, 1*

zero-zero gel

A condition wherein a drilling fluid fails to form measurable gels during a quiescent 10-min time interval. *Brantly, 1*

zeta potential

The potential difference across an electric double layer, usually between a solid surface and a liquid. Syn: [electrokinetic potential](#) See also: [surface](#)

zeta-potential layer

The zone of shear surrounding a particle immersed in an electrolyte. *Pryor, 4*

zeunerite

A tetragonal mineral, $\text{Cu}(\text{UO}_2)_2(\text{AsO}_4)_2 \cdot 10\text{H}_2\text{O}$; autunite group.

zeylanite

See: [ceylonite](#)

zhemchuzhnikovite

A trigonal mineral, $\text{NaMg}(\text{Al,Fe})(\text{C}_2\text{O}_4) \cdot 8\text{H}_2\text{O}$; an oxalate occurring in green crystals that appear violet in artificial light; in veinlets in coal in the Chaitumusuk deposits, Siberia, Russia.

Ziervogel process

The extraction of silver from sulfide ores or matte by roasting in such a way as to form sulfate of silver, leaching this out with hot water, and precipitating the silver by means of metallic copper. *Fay*

zietrisikite

Incorrect spelling of pietricikite, a waxlike hydrocarbon similar to ozokerite. *Tomkeieff*

zigzag car loader

A form of vertical chute in which the chute is divided into independent sections that can be raised or lowered on a track arrangement. It is flexible and can be lowered to the bottom of the car, giving a solid stream of coal from loading pocket to car. *Mitchell*

zigzag fold

See: [chevron fold](#)

zigzag rule

A wooden rule (generally 2 m or 6 ft long, folded zigzag fashion in 15-cm or 6-in lengths), used by drillers, craftsmen, etc., to measure short distances. The rule usually is

graduated in centimeters or in feet, inches, and fractions of an inch (sometimes in feet, tenths of a foot, and hundredths of a foot). *Long*

zigzag transformer

A zigzag transformer is a transformer intended primarily to provide a neutral point for grounding purposes. Syn: [grounding transformer](#). *USBM, 2*

ziment water

Water impregnated with copper; found in copper mines. *Standard, 2*

Zimmermann's rule

A graphical method for finding the lost part of a vein on the other side of a fault. *Nelson*

zinc

a. The native metallic element, Zn. b. A bluish-white, lustrous metal. Employed to form numerous alloys with other metals including brass, nickel silver, commercial bronze, spring brass, soft solder, and aluminum solder. Used extensively by the automotive, electrical, and hardware industries. *Handbook of Chemistry and Physics, 3*

zincaluminite

A light-blue mineral, $Zn_6 Al_6 (SO_4)_2 (OH)_{26} \cdot 5H_2 O$.

zinc blende

See: [sphalerite](#)

zinc bloom

See: [hydrozincite](#); zinc oxide.

zinc box

Wooden or enamel-ware rectangular box, with a bottom grid that supports zinc shavings. Used in the cyanide process to precipitate dissolved gold from a pregnant solution. Its place was taken by use of zinc dust. See also: [Merrill-Crowe Process](#)

zinc carbonate

White; $ZnCO_3$; soluble in acids, in alkalis, and in ammonium salt solutions; insoluble in water; and dissociates losing carbon dioxide at 300 degrees C. Used in ceramics and as a

pigment. Also used less accurately to refer to any of several basic carbonates of zinc, which include the zinc-ore mineral hydrozincite, $Zn_5(CO_3)_2(OH)_6$ or $Zn_5(OH)_6(CO_3)_2$ and synthetically prepared pigments of the same or similar composition. Syn: [smithsonite](#); [calamine](#); [zinc spar](#). *Handbook of Chemistry and Physics*, 2

zinc chloride

White; hexagonal; $ZnCl_2$; poisonous. Obtained by the solution of zinc, or zinc oxide, in hydrochloric acid, or by burning zinc in chlorine. Used in galvanizing iron, as a catalyst, as a dehydrating agent, as a condensing agent, as a wood preservative, as an ingredient in soldering fluxes, in burnishing and polishing compounds for steel, in electroplating, in glass-etching compositions, in petroleum refining, and in pigments. *Handbook of Chemistry and Physics*, 2

zinc chromate

$ZnCrO_4$; a golden-yellow pigment. Of variable composition; the chemically pure zinc chromate, a yellow crystalline powder is said to be zinc chromate heptahydrate, $ZnCrO_4 \cdot 7H_2O$. Called zinc yellow, but this term is also applied to hydrated zinc chromate and to hydrated zinc-potassium chromate. Another zinc chromate is dark green to black and has a different composition; isometric. $ZnCr_2O_4$. Syn: [zinc chrome](#); [zinc yellow](#). *Handbook of Chemistry and Physics*, 2

zinc chrome

See: [zinc chromate](#); zinc yellow.

zinc dust

Finely divided zinc that usually contains small amounts of zinc oxide and impurities. Also called powdered zinc; zinc gray. *Fay*

zinc gray

See: [zinc dust](#)

zinc hydrosulfite

White; amorphous; ZnS_2O_4 ; and soluble in water. Used as a depressant in flotation. *CCD*, 2

zincite

A red to yellow brittle mineral; $(\text{Zn},\text{Mn})\text{O}$. It is an ore of zinc, as in New Jersey where it is associated with franklinite and willemite. Syn: [red zinc ore](#); [red zinc oxide](#); [ruby zinc](#); [spartalite](#). *AGI*

zinckenite

See: [zinkenite](#)

zinckiferous

Carrying zinc. *Weed, 2*

zinc-magnesia chalcantinite

A variant of chalcantinite with the formula, $(\text{Cu},\text{Zn},\text{Mg})\text{SO}_4 \cdot 5\text{H}_2\text{O}$. *Hey, 1*

zinc melanterite

A member of the monoclinic melanterite group, in which iron is partially replaced by zinc. *English*

zinc-melanterite

A monoclinic mineral, $(\text{Zn},\text{Cu},\text{Fe})\text{SO}_4 \cdot 7\text{H}_2\text{O}$.

zinc minerals

The principal ore is sphalerite, ZnS ; other important ore minerals are smithsonite, ZnCO_3 ; hemimorphite, $\text{Zn}_4\text{Si}_2\text{O}_7(\text{OH})_2 \cdot \text{H}_2\text{O}$; franklinite, $(\text{Zn},\text{Mn},\text{Fe})(\text{Mn},\text{Fe})_2\text{O}_4$; willemite, Zn_2SiO_4 ; and zincite, ZnO .

zinc oxide

White or yellowish-white; white turns yellow on heating; ZnO ; odorless; absorbs carbon dioxide from the air; used in pigments, ceramic glazes, and opaque glass and in the manufacture of magnetic ferrites and specialized ceramics. Zinc oxide is a common constituent in high-grade fluoride opal glass, in tank-window glass, and in some optical glass. Commonly used in dry-process, cast-iron enamels. Syn: [zincite](#); [zinc bloom](#); [zinc white](#). *Handbook of Chemistry and Physics, 2*

zincrosasite

A monoclinic mineral, $(\text{Zn},\text{Cu})(\text{CO}_3)(\text{OH})_2$; rosasite group; at Tsumeb, Namibia.

zinc scum

The zinc-silver alloy skimmed from the surface of the bath in the process of desilverization of lead by zinc. *Fay*

zincsilite

A monoclinic mineral, $Zn_3 Si_4 O_{10} (OH)_2 \cdot 4H_2 O(?)$; smectite group; in Batystau, Kazakhstan.

zinc spar

See: [smithsonite](#); zinc carbonate.

zinc spinel

See: [gahnite](#)

zinc sulfate

Orthorhombic $ZnSO_4$; used in flotation.

zinc sulfate heptahydrate

Colorless; needles; $ZnSO_4 \cdot 7H_2 O$; odorless; astringent, metallic taste; effloresces in air; sp gr, 1.9661; melting point, 50 degrees C if heated rapidly; soluble in water and in glycerol; insoluble in alcohol; and its solutions are acid to litmus. Used in preparing zinc chemicals. Orthorhombic; molecular weight, 287.54; sp gr, 1.957 (at 25 degrees C, referred to water at 4 degrees C) and ranges from 1.9 to 2.1; Mohs hardness, 2.0 to 2.5; melting point, 100 degrees C; loses $7H_2 O$ on heating to 280 degrees C; and slightly soluble in alcohol and in glycerol. Occurs as the mineral goslarite, which is white or yellowish; formed by the oxidation of sphalerite (ZnS) in damp locations, esp. in the presence of iron sulfides. *CCD, 2; Handbook of Chemistry and Physics, 2*

zinc sulfide

a. Alpha zinc sulfide is the hexagonal mineral wurtzite. See also: [alpha zinc sulfide](#); [wurtzite](#). b. Beta zinc sulfide is the isometric mineral sphalerite. See also: [beta zinc sulfide](#)

zinc sulfide monhydrate

Colorless, white, or yellowish; crystalline; $ZnSO_4 \cdot H_2 O$; molecular weight, 115.45; sp gr, 3.98; melting point, 1,049 degrees C; insoluble in water; and soluble in acids. Used as a pigment and in white glass and in opaque glass. *Handbook of Chemistry and Physics, 2; CCD, 2*

zinc vitriol

See: [goslarite](#)

zinc white

Used as a pigment. It is the whitest of all pigments; permanent, not poisonous, but lacks the opacity and covering power of white lead or titanium dioxide. See also: [zinc oxide](#)

zinc yellow

A greenish-yellow pigment. See also: [zinc chromate](#). *Webster 3rd*

zinkazurite

A mineral found in small, blue crystals; probably a mixture of sulfate of zinc and carbonate of copper. *Fay*

zinkenite

A hexagonal mineral, $Pb_9 Sb_{22} S_{42}$; in steel-gray crystals or exceptionally thin folia in fibrous masses. Also spelled zinckenite. Syn: [keeleyite](#)

zinkite

See: [zincite](#)

zinkosite

Orthorhombic $ZnSO_4$.

zinn

Native tin. Syn: [gediegen](#)

zinnwaldite

A monoclinic mineral, $KLiFeAl(AlSi_3)O_{10}(F,OH)_2$; mica group; basal cleavage; pale violet, yellowish or grayish brown; in granites, pegmatites, and greisens.

zippeite

An orthorhombic mineral, $K_4(UO_2)_6(SO_4)_3(OH)_{10} \cdot 4H_2O$; radioactive; orange-yellow to bright yellow; an alteration product of uraninite occurring with gypsum, uranopilite, and limonite. Formerly called dauberite.

Zipper

Trade term for a conveyor belt lacing or fastening appliance, which can be applied to any thickness and width of belt. A lever mechanism is used to supply the pressure. The appliance is totally enclosed and grease-filled to protect against dust and damage. *Nelson*

zircon

A tetragonal mineral, $ZrSiO_4$; occurs widely in granite, granite pegmatite, other felsic igneous rocks, and placers; the chief source of zirconium; a refractory; if cut and polished, the colorless varieties provide exceptionally brilliant gemstones. Syn: [azorite](#); [zirconite](#); hyacinth; jacinth.

zircon flour

Finely milled zircon sand. *CCD, 2*

zircon group

Zircon, along with rutile, ilmenite, and monazite, constitutes a group of heavy minerals that are usually considered together because of their occurrence as black sands in natural beach and dune concentrations. For marketing, complete separation of the rutile and zircon as high-grade products is necessary. Separation is effected by combinations of electromagnetic and electrostatic processes, together with gravity concentration.

zirconia brick

Brick containing zirconium oxide; used in metallurgical furnaces. *Bennett*

zirconiferous

a. Containing zircon or yielding zircon. *Webster 3rd* b. Containing zirconium or yielding zirconium. *Webster 3rd*

zirconite

A gray or brownish variety of zircon.

zirconium

A grayish-white lustrous metallic element. Symbol, Zr. Occurs widely, but only in combined form, esp. in the minerals zircon, ($ZrSiO_4$), and baddeleyite, (ZrO_2). Uses include resisting corrosion, as a structural material in nuclear reactors, as an alloying agent, deoxidizer, bonding agent, refractory material, and in low-temperature superconductive magnets. *Handbook of Chemistry and Physics, 3*

zirconium minerals

Principal ore minerals are zircon and baddeleyite. Main uses are as refractories, ceramics, opacifiers, abrasives, enamels, insulators, and alloys. They are also a source of hafnium. Transparent zircon is a gemstone.

zirconium phosphate

Normal zirconium phosphate, ZrP_2O_7 , has a reversible inversion at 300 degrees C and at 1,550 degrees C dissociates into zirconyl phosphate, $(ZrO)_2P_2O_7$, with loss of P_2O_5 as vapor. Zirconyl phosphate is stable up to about 1,600 degrees C and has a very low thermal expansion-- 1×10^{-6} (20 to 1,000 degrees C). *Dodd*

zirconium silicate

$ZrSiO_4$, natural silicate of zirconium found in Brazil and elsewhere. One such deposit known as brazilite is said to contain about 80% zirconium oxide in a semimanufactured form. This product is employed as a refractory in the making of "zirkite" bricks and cement. In rare cases, used as a cobalt groundcoat constituent. Zirconium silicate is used in formulation of zircon enamels that depend upon crystallization of zircon compounds for opacity development. See also: [zircon sand](#). *Enam. Dict.*

zirconium-vanadium blue

A pigment for use in ceramic glazes. The composition is (parts by weight): ArO_2 , 60% to 70%; SiO_2 , 26% to 36%; V_2O_5 , 3% to 5%. Alkali must also be present; e.g., 0.5% to 5% Na_2O . In the absence of alkali, a green color is produced. Syn: [vanadium-zirconium turquoise](#)

zirconolite

A discredited syn. of zirkelite.

zircon sand

a. A very refractory mineral, composed chiefly of zirconium silicate, having low thermal expansion and high thermal conductivity. *ASM, I* b. A natural zircon-bearing material found in Australia, India, and Florida. See also: [zirconium silicate](#)

zirkelite

a. A monoclinic mineral, $(Ca,Th,Ce)Zr(Ti,Nb)_2O_7$; pseudocubic; dimorphous with calciobetafite of the pyrochlore group; radioactive; occurs in pyroxenite and alluvial deposits. b. An obsolete name for altered basaltic glass.

Zirkite

A trade name for a mixture of zircon and baddeleyite. *USBM*, 7

zirklerite

A trigonal mineral, $(\text{Fe,Mg})_9 \text{Al}_4 \text{Cl}_{18} (\text{OH})_{12} \cdot 14\text{H}_2\text{O}$; massive fine granular; at Hanover, Germany.

zoisite

An orthorhombic mineral, $\text{CaAl}_3 (\text{SiO}_4)_3 (\text{OH})$; epidote group; dimorphous with clinozoisite; vitreous or pearly; varicolored; a common rock-forming mineral in medium-grade metamorphic rocks. The rose-red variety has been called thulite.

zonal axis

See: [zone axis](#)

zonal structure

A term used esp. in microscopic work to describe those minerals whose cross sections show their successive concentric layers of growth. *Fay*

zonal theory

A theory of hypogene mineral-deposit formation, and the spatial distribution patterns of mineral sequences to be expected from change in a mineral-bearing fluid as it migrates away from a magmatic source. It also deals with thermal-chemical gradients associated with the genesis of ore deposits, whether of direct magmatic origin or not, and with metallogenic zoning on a regional scale. *AGI*

zone

a. A belt, band, or strip of earth materials, however disposed; characterized as distinct from surrounding parts by some particular property or content; e.g., zone of saturation, fault zone, or a zone of secondary enrichment. CF: [belt](#) b. See: [aureole](#) c. A minor interval in any category of stratigraphic classification. There are many kinds of zones, depending on the characteristics under consideration--biozones, lithozones, chronozones, mineralized zones, metamorphic zones, zones of reversed magnetic polarity, etc. The term should always be preceded by a modifier indicating the kind of zone to which reference is made. *AGI* d. A metal zone is equivalent to a mineral zone, yet the terms mineral and metal are not synonymous. *Ricketts* e. The ground or mass bounded by horizontal or inclined planes or curved surfaces in which given chemical or physical conditions exist, such as zone of saturation or zone of weathering. *Nelson* f. A group of

beds characterized by the presence of one or more specific fossils; e.g., zonal fossil or fossils. *BS, 11 g.* Geologically, a distinctively mineralized area, region, or level. In a specific lode or other deposit, the progressive change from upper to lower horizons. At the top is outcrop or gossan, oxidized or weathered. Next is the leached zone, impoverished by dissolution of its values (or part of them), which may be redeposited below in the zone of secondary enrichment. Below this is the primary, or unaltered zone, which consists of the original sulfide formation. *Pryor, 3 h.* An area or region more or less clearly set off or characterized as distinct from surrounding or adjoining parts; e.g., the mineral zone in a metalliferous region. *Webster 2nd i.* A series of faces of a crystal whose intersection lines with each other are all parallel. *Webster 3rd j.* See: [zones](#)

zone axis

That crystallographic direction through the center of a crystal which is parallel to the intersection edges of the crystal faces defining the "crystal zone." Syn: [crystal axis](#); [zonal axis](#).

zone melting

Highly localized melting, usually by induction heating, of a small volume of an otherwise solid piece. By moving the induction coil along the rod, the melted zone can be transferred from one end to the other. In a binary mixture where there is a large difference in composition on the liquidus and solidus lines, high purity can be attained by concentrating one of the constituents in the liquid as it moves along a rod. *ASM, 1*

zone of accumulation

See: [B-horizon](#)

zone of aeration

A subsurface zone containing water under pressure less than that of the atmosphere, including water held by capillarity, and containing air or gases generally under atmospheric pressure. This zone is limited above by the land surface and below by the water table. It contains vadose water. CF: [zone of capillarity](#)

zone of capillarity

A subsurface zone that overlies the zone of saturation in which capillary voids hold water above the zone of saturation by molecular attraction acting against gravity. CF: [zone of aeration](#)

zone of cementation

The layer of the Earth's crust below the zone of weathering in which percolating waters cement unconsolidated deposits by the deposition of dissolved minerals from above. *AGI*

zone of discharge

A term suggested for that part of the zone of saturation having a means of horizontal escape. *AGI*

zone of enrichment

See: [zone of secondary enrichment](#)

zone of faces

All faces, belonging to one or more forms, the normals to which lie in one plane (the zone plane) and whose edges of intersection are parallel to the zone axis. See also: [zone axis](#)

zone of flow

See: [zone of plastic flow](#)

zone of fracture

a. The outer, rigid part of a glacier, in which the ice is much fractured. *AGI* b. The upper, brittle part of the Earth's crust in which deformation is by fracture rather than by plastic flow; that region of the crust in which fissures can exist. CF: [zone of plastic flow](#). Syn: [zone of rock fracture](#)

zone of illuviation

See: [B-horizon](#)

zone of influence

The zone of rock surrounding an excavation, in which the additional stresses caused by the excavation are above a certain arbitrary value, is termed the zone of influence. *Spalding*

zone of mobility

See: [asthenosphere](#)

zone of oxidation

https://t.me/Geologybooks

See: [oxidized zone](#)

zone of plastic flow

That part of the Earth's crust that is under sufficient pressure to prevent fracturing, i.e., is ductile, so that deformation is by flow. CF: [zone of fracture](#). *AGI*

zone of rock flowage

See: [zone of plastic flow](#)

zone of rock fracture

The upper part of the lithosphere in which rocks are under stresses less than the stresses required to close their interstices by deformation of the walls of the interstices. *AGI*

zone of saturation

A subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. This zone is separated from the zone of aeration (above) by the water table. Syn: [saturated zone](#); phreatic zone. *AGI*

zone of secondary enrichment

The zone in which supergene enrichment has taken place.

zone of substantial deformation

See: [distressed area](#)

zone of weathering

The superficial layer of the Earth's crust above the water table that is subjected to the destructive agents of the atmosphere and in which soils develop. CF: [zone of cementation](#)

zone refining

A purification technique in which a molten or high-temperature zone is moved along a length of material to be purified to bring about impurity segregation; the impurities become concentrated in the slowly moving hot zone, leaving behind the cooler solidified material that has a higher purity than the original material. The technique depends on differences in composition of liquids and solids in equilibrium and may be repeated to attain high degrees of purity. It usually is applied to crystalline materials, such as germanium or silicon.

zones

In a shaft furnace, the different portions (horizontal sections) are called zones, and are characterized according to the reactions that take place in them, as the zone of fusion or smelting zone, the reduction zone, etc. *Fay*

zones of lode

A lode may be divided into three main zones: (1) unaltered ore at depth; (2) gossan or altered surface portion of the lode, which contain native metals, oxides, and oxysalts that result from weathering of the ore; and (3) secondary enrichment which lies between the first two zones, where interaction between waters from the gossan and the unaltered ore have produced new materials, often of considerable economic value. *Nelson*

zone time

Standard time applied at sea in which the surface of the globe is divided into 24 zones of 15 degrees, or of 1 h, each. The "0 zone" extends 7.5 degrees east and west of the meridian of Greenwich (England), (the Prime Meridian); the zones are designated by the number of hours that must be applied to the local time to obtain Greenwich time. Abbrev., ZT. *Webster 3rd*

zoning

a. In ore deposits, the spatial distribution patterns of elements, minerals, or mineral assemblages. *AGI* b. A variation in the composition of a crystal from core to margin, due to a separation of the crystal phases during its growth, by loss of equilibrium in a continuous reaction series. The higher-temperature phases of the isomorphic series form the core, with the lower-temperature phases toward the margin. Syn: [zonal structure](#) c. Concentric layering parallel to the periphery of a crystal, shown by color banding, such as in tourmaline, and by differences in optical reactions to polarized light, such as in plagioclase feldspar. CF: [undulatory extinction](#) d. In a mineral deposit, the occurrence of successive minerals or elements outward from a common center. e. The development of areas of metamorphosed rocks that may exhibit zones in which a particular mineral or suite of minerals is predominant or characteristic, reflecting the original rock composition, the pressure and temperature of formation, the duration of metamorphism, and whether or not material was added or removed.

zoning of ore deposits

Spatial distribution patterns of elements, minerals, or mineral assemblages; paragenetic sequences, either syngenetic or epigenetic. Zoning is esp. well developed in the mineralization-alteration assemblages about subvolcanic occurrences such as porphyry base-metal deposits. See also: [zonal theory](#)

zonite

A name that has been used in Arizona for locally occurring jasper or chert of various colors.

zonochlorite

A light and dark green variety of pumpellyite in green pebbles of banded structure; occurs in the Lake Superior region, MI.

Zonolite

A trade name for a light, flaky material obtained by roasting vermiculite, which swells to 15 times its original volume, forming golden yellow scales; from Libby, MT. A titanium-bearing jefferisite from Westcliffe, CO., is similar. *English*

zooplankton

The animal forms of plankton, e.g., jellyfish. They consume phytoplankton. *AGI*

zorgite

A brass-yellow metallic mineral with dark yellow streak; possibly clausthalite with umangite.

Z reagent

Any of the Dow series of xanthate flotation reagents. *Pryor, 3*

zunyite

An isometric mineral, $\text{Al}_{13} \text{Si}_5 \text{O}_{20} (\text{OH}, \text{F})_{18} \text{Cl}$; occurs in transparent tetrahedral crystals, also minute cubes; at the Zuni Mine, Silverton, CO. Also spelled zungite.

zurron

A rawhide sack that holds about 150 lb (68.1 kg); used by miners for carrying ore. *Nelson*

zwieselite

A monoclinic mineral, $(\text{Fe}, \text{Mn})_2 (\text{PO}_4)_2 \text{F}$; forms a series with triplite; clove-brown.
