a. Total weight or pressure, expressed in pounds or tons, applied to drilling stem to make the drill bit cut and penetrate the formation being drilled. *Long* b. Pressure, expressed in pounds per square inch, required to force grout into a rock formation. CF: [injection pressure](#)

feed pump

The pump that provides a steam boiler with feedwater. *Nelson*

feed rate

Rate at which a drilling bit is advanced into or penetrates the rock formation being drilled, expressed in inches per minute, inch per bit revolution, number of bit revolutions per inch of advance, or feet per hour. Also called cutting rate; forward speed. Syn: [penetration rate](#); bit feed; cutting speed; drill rate; penetration feed. *Long*

feed ratio

The number of revolutions a drill stem and bit must turn to advance the drill bit 1 in (2.54 cm) when the stem is attached to and rotated by a screw- or gear-feed-type drill swivel head with a particular pair of the set of gears engaged. (E.g., when a screw-feed swivel head of a diamond drill equipped with three pairs of gears, having a feed ratio of 100, 200, and 400, is operated with the 100-pair engaged, the drill stem must revolve 100 times to advance the bit 1 in, if the 200-pair is engaged, the drill stem rotates 200 times/in (508 times/cm) advanced, and if the 400-pair is engaged the stem must rotate 400 times to advance the bit 1 in). *Long*

feed shaft

A short shaft or countershaft in a diamond-drill gear-feed swivel head rotated by the drill motor through gears or a fractional drive and by means of which the engaged pair of feed gears is driven. Syn: [feed spindle](#)

feed speed

Normally used by drillers to denote feed ratios. *Long*

feed spindle

See: [feed shaft](#) and/or feed screw. *Long*

feed travel

The distance a drilling machine moves the steel shank in traveling from top to bottom of its feeding range. *Nichols, 1*

feedwater

Water that is often purified, heated to nearly boiler temperature, and deaerated before being pumped into a steam boiler by the feed pump. *Nelson*

fee engineer

Person (usually an engineer) who looks after the interest of the owner of mineral rights. Specific duties are to check on the amount of ore mined by the lessor (operator), see that no undue waste is permitted, and see that royalties are paid according to contract.

feigh

Refuse or dirt from ore or coal. *CTD*

feinig

A jewel diamond having its grain in regular layers. CF: [naetig](#) *Brady, 2*

feldspar

a. A monoclinic or triclinic mineral with the general formula XZ_4O_8 where (X= Ba,Ca,K,Na,NH₄) and (Z= Al,B,Si); a group containing two high-temperature series, plagioclase and alkali feldspar; colorless or white and clear to translucent where pure; commonly twinned; 90 degrees or near 90 degrees prismatic cleavage; Mohs hardness, 6. Constituting 60% of the Earth's crust, feldspar occurs in all rock types and decomposes to form much of the clay in soil, including kaolinite. Also spelled felspar, feldspath. CF: [sanidine](#) b. The mineral group albite, andesine, anorthite, anorthoclase, banalsite, buddingtonite, bytownite, celsian, hyalophane, labradorite, microcline, oligoclase, orthoclase, paracelsian, plagioclase, reedmergnerite, sanidine, and slawsonite.

feldspar convention

See: [rational analysis](#)

feldspar jig

A small coal washer to deal with the 1/2- to 0-in (1.3- to 0-cm) range. It works on the same basic principle as the Baum washer, but in view of the small-size material a feldspar (sp gr, 2.6) bed is provided on the perforated grid plates to prevent the bulk of the feed from passing straight through the perforations. Stratification of the raw feed takes place in the usual way. *Nelson*

feldspar sunstone

See: [sunstone](#)

feldspar-type washbox

A washbox to clean small coal, in which the pulsating water is made to pass through a layer of graded material, such as feldspar, situated on top of the screen plate. See: [jig](#)

feldspathic

Said of a rock or other mineral aggregate containing feldspar.

feldspathic emery

Emery similar to spinel emery but contains in addition from 30% to 50% plagioclase feldspar. Pure magnetite often is found in streaks within this mass. *AIME, 1*

feldspathic graywacke

A graywacke characterized by abundant unstable materials; specif., a sandstone containing generally less than 75% of quartz and chert and 15% to 75% detrital clay matrix, and having feldspar grains (chiefly sodic plagioclase, indicating a plutonic provenance) in greater abundance than rock fragments (indicating a supracrustal provenance) (Pettijohn, 1954; 1957). CF: [lithic graywacke](#)

feldspathic sandstone

A feldspar-rich sandstone; specif., a sandstone intermediate in composition between an arkosic sandstone and a quartz sandstone, containing 10% to 25% feldspar and less than 20% matrix material of clay, sericite, and chlorite. See also: [arkose](#)

feldspathide

See: [feldspathoid](#)

feldspathization

The introduction of feldspar into a rock, or the replacement of other rock-forming minerals by feldspar. Material for the feldspar may come from the country rock or be introduced by magmatic or other solutions.

feldspathoid

a. A group of comparatively rare rock-forming minerals consisting of aluminosilicates of sodium, potassium, or calcium and having too little silica to form feldspar. Feldspathoids are chemically related to the feldspars, but differ from them in crystal form and physical properties; they take the places of feldspars in igneous rocks that are undersaturated with respect to silica or that contain more alkalis and aluminum than can be accommodated in the feldspars. Feldspathoids may be found in the same rock with feldspars but never with quartz or in the presence of free magmatic silica. See also: [foid](#); [lenad](#). *AGI* b. A mineral of the feldspathoid group, including leucite, nepheline, sodalite, nosean, hauyne, lazurite, cancrinite, and melilite. Syn: [feldspathide](#)

feldstone

A rock having a fine granular structure, and composed chiefly of feldspar and quartz.
Gordon

felite

A constituent of portland cement clinker. Also spelled felith. See: [belite](#); larnite.

fell

a. One of the many names for lead ore. b. The finer pieces of ore that pass through the riddle in sorting.

feloids

A group of minerals comprising the feldspars and feldspathoids. CF: [feldspathoid](#)

felsenmeer

See: [block field](#)

felsic

A mnemonic adj. derived from (fe) for feldspar, (l) for lenad or feldspathoid, and (s) for silica, and applied to light-colored rocks containing an abundance of one or all of these constituents. Also applied to the minerals themselves, the chief felsic minerals being quartz, feldspar, feldspathoid, and muscovite. Syn: [acidic](#); [silicic](#). CF: [mafic](#)

felsite

A general term for any light-colored, fine-grained or aphanitic extrusive or hypabyssal rock, with or without phenocrysts, and composed chiefly of quartz and feldspar; a rock characterized by felsitic texture. Syn: [felstone](#); [aphanite](#). CF: [felsophyre](#)

felsitic

A textural term ordinarily applied to dense, light-colored igneous rocks composed of crystals that are too small to be readily distinguished with the unaided eye; microcrystalline. It may also be used as a microscopic term for the groundmass of porphyritic rocks that are too fine-grained for the mineral constituents to be determined with the microscope; cryptocrystalline.

felsitoid

An informal term applied to any light-colored igneous rock in which the mineral grains are too small to be distinguished by the unaided eye. CF: [felsite](#)

felseobanyaite

An orthorhombic(?) mineral, $\text{Al}_4(\text{SO}_4)(\text{OH})_{11} \cdot 5\text{H}_2\text{O}$; massive; soft; snow white; associated with marcasite, stibnite, and barite at Felseobanya, Romania. Also spelled felseobanyite. CF: [basaluminite](#)

felsophyre

A general term for any porphyritic felsite. Syn: [aphanophyre](#) CF: [vitrophyre](#); [granophyre](#).
AGI

felspar

A British spelling of feldspar following an error by Kirwan. *Hess*

felstone

An obsolete synonym of felsite. *AGI*

felted

See: [felty](#)

felty

Said of the texture of dense, holocrystalline igneous rocks consisting of tightly appressed microlites, generally of feldspar, interwoven in irregular, unoriented fashion. CF: [trachytic](#) felted.

femic

Said of an igneous rock having one or more normative, dark-colored iron-, magnesium-, or calcium-rich minerals as the major components of the norm; also, said of such minerals. Etymol. a mnemonic term derived from ferric + magnesium + ic. CF: [basic](#); [salic](#); [mafic](#); [felsic](#). *AGI*

femmer

Fragile, weak, or slender as in the case of a thin, soft roof bed over a coal seam. *Nelson*

fence diagram

Three or more geologic sections showing the relationship of wells to subsurface formations. The scales diminish with distance from the foreground to give proper perspective. When several sections are used together, they form a fencelike enclosure, hence the name. Similar in some respect to a block diagram, but it has the advantage of transparency, which is not possible in a block diagram. *AGI*

fender

A thin pillar of coal, adjacent to the gob, left for protection while driving a lift through the main pillar.

fenite

A quartzo-feldspathic rock that has been altered by alkali metasomatism at the contact of a carbonatite intrusive complex. The process is called fenitization. Fenite is mostly alkalic feldspar, with some aegirine, subordinate alkali-hornblende, and accessory sphene and apatite. *AGI*

fenster

See: [window](#)

ferberite

A monoclinic mineral, FeWO_4 ; wolframite series with manganese replacing iron toward huebernite; weakly ferrimagnetic; sp gr, 7.5; in quartz veins; an ore of tungsten. Syn: [eisinwolframite](#)

ferganite

A very rare, strongly radioactive, possibly orthorhombic, sulfur-yellow translucent mineral, $U_3(VO_4)_2 \cdot 6H_2O$; found associated with other uranium minerals. Ferganite may be a leached or weathered product of tyuyamunite. A source of vanadium. *Crosby; Osborne*

ferghanite

See: [ferganite](#)

fergusonite

Monoclinic (beta) and orthorhombic minerals $(Ce,Nd,La,Y)NbO_4$, further speciated according to the predominant rare-earth element; dull to vitreous brownish black; in pegmatites associated with euxenite, monazite, gadolinite, and other rare-earth minerals in North Carolina, South Carolina, Virginia, Texas, Norway, Sweden, and Africa.

fermentation

The process of decomposition of carbohydrates with the evolution of carbon dioxide or the formation of acid, or both. *Tomkeieff*

fermorite

A hexagonal mineral, $(Ca,Sr)_5(AsO_4,PO_4)_3(OH)$; apatite group; in veinlets in manganese ore at Sitipar, Chindwara district, India.

fernandinite

a. A vanadium ore. *Osborne* b. A monoclinic mineral, $Ca_3V_{40}O_{100} \cdot 50H_2O$; dull-green, cryptocrystalline to fibrous masses in the oxidized zone of the abandoned Minasrgra vanadium deposit near Cerro de Pasco, Peru.

Ferraris screen

A screening machine, utilizing inclined supports, developed in southern Europe for screening small sizes of ore and sand. The wooden screen frame is set horizontally and supported on flexible wooden staves inclined at about 65 degrees from the horizontal. The connecting rod also is inclined to the screen frame, so as to be approx. at right angles to the supports. *Mitchell*

Ferraris truss

Supporting batten used originally as a slanting support under a shaking screen. When the screen was pushed forward the radial motion of the truss caused it to rise slightly, giving a throwing motion to the load and aiding the gravity-assisted return as the reciprocating action of the screen vibrator was reversed. The principle is used in shaking tables such as the James. *Pryor, 3*

ferrate

Any of various classes of compounds containing iron and oxygen in the anion. *Webster 3rd*

Ferrel's law

The statement that the centrifugal force produced by the rotation of the Earth (Coriolis force) causes a rotational deflection of currents of water and air to the right in the Northern Hemisphere and to the left in the Southern Hemisphere. *AGI*

ferreto zone

Reddish-brown or reddish zone in permeable near-surface material that is produced under conditions of free subsurface drainage by the deposition of secondary iron oxide.

ferric

Of, pertaining to, or containing iron in the trivalent state; e.g., ferric chloride, FeCl_3 . (Standard, 1964)

ferric furnace

A high, iron blast furnace, in the upper part of which crude bituminous coal is converted into coke. *Fay*

ferricopiapite

A triclinic mineral, $\text{Fe}_5(\text{SO}_4)_6(\text{OH})_2 \cdot 20\text{H}_2\text{O}$; copiapite group.

ferricrete

a. A conglomerate consisting of surficial sand and gravel cemented into a hard mass by iron oxide derived from the oxidation of percolating solutions of iron salts. *AGI* b. A ferruginous duricrust. Etymol. "ferr"uginous + con"crete." CF: [calcrete](#); [silcrete](#). *AGI*

ferricrust

a. A general term for an indurated soil horizon cemented with iron oxide, mainly hematite. *AGI* b. The hard crust of an iron concretion. *AGI*

ferride

A member of a group of elements that are similar chemically to iron. The group includes chromium, cobalt, manganese, nickel, titanium, vanadium, and other elements.

ferrierite

Monoclinic and orthorhombic minerals, $(\text{Na,K})_2 \text{Mg}(\text{Si,Al})_{18} \text{O}_{36} (\text{OH}) \cdot 9\text{H}_2\text{O}$, of the zeolite group; transparent to translucent, vitreous to pearly; in spherical aggregates of thin, blade-shaped crystals at Kamloops Lake, BC, Canada and Leavitt Lake, CA.

ferrifayalite

See: [laihunite](#)

ferriferous

Containing iron. Syn: [ferruginous](#)

ferrimagnetism

a. Unbalanced orientation of magnetic moments. Intermediate between ferromagnetism and antiferromagnetism. *Van Vlack* b. Strong magnetic susceptibility caused by the overlap of adjacent d and p orbitals resulting in an unequal number of electrons aligned with spins antiparallel; e.g., magnetite, pyrrhotite, and maghemite. CF: [antiferromagnetism](#); [diamagnetism](#); ferromagnetism; [paramagnetism](#); superexchange.

ferrimolybdate

A possibly orthorhombic mineral, $\text{Fe}_2^3 (\text{Mo}^6 \text{O}_4)_3 \cdot 8\text{H}_2\text{O}$; forms yellow earthy powder, incrustation, or silky, fibrous, and radiating crystals from reaction of pyrite with molybdenite under supergene conditions; relatively common in porphyry copper deposits of Southwestern United States in old mine dumps with jarosite and goethite. Syn: [molybdic ocher](#); [iron molybdate](#); [molybdate](#).

ferrinatriite

A trigonal mineral, $\text{Na}_3 \text{Fe}(\text{SO}_4)_3 \cdot 3\text{H}_2\text{O}$; vitreous; soft; in the Atacama Desert, northern Chile. Formerly called ferronatriite.

ferrisicklerite

An orthorhombic mineral, Li(Fe,Mn)PO_4 ; forms a series with sicklerite; an alteration product of weathered triphylite-lithiophilite in granite pegmatites, Keystone and Custer districts, Black Hills, SD; also Varutriisk, Sweden.

ferrisymplesite

An amorphous mineral, $\text{Fe}_3 (\text{AsO}_4)_2 (\text{OH})_3 \cdot 5\text{H}_2\text{O}$; occurs with erythrite and annabergite at Cobalt, ON, Canada.

ferrite

a. Native iron, such as the terrestrial iron from Disko Island, Greenland. *English* b. A general term applied to grains, scales, and threads of unidentifiable, more or less transparent or amorphous, red, brown, or yellow iron oxide in the groundmass of a porphyritic rock (Johannsen, 1939). CF: [opacite](#) c. A term used by Tieje (1921) for a cemented iron-rich sediment whose particles do not interlock. *AGI*

ferritization

The metasomatic alteration of other minerals into ferrite.

ferritungstite

An isometric mineral, $(\text{K,Ca,Na})(\text{W}^6, \text{Fe}^3)(\text{O,OH})_6 \cdot \text{H}_2\text{O}$; in minute yellow octahedra and platy aggregates; in Uganda, Rwanda, Zaire, Portugal, France, Washington, and Nevada. Syn: [tungstic ocher](#)

ferriturquoise

A variety of crystallized turquoise containing 5% Fe_2O_3 ; from Lynchburg, VA. *Spencer, 2*

ferroactinolite

A monoclinic mineral, $\text{Ca}_2 (\text{Fe}^{2+}, \text{Mg})_5 \text{Si}_8 \text{O}_{22} (\text{OH})_2$; amphibole group; has $\text{Mg}/(\text{Mg}+\text{Fe}^{2+}) = 0$ to 0.5; forms a series with tremolite and actinolite. Formerly called ferrotremolite.

ferroalloy

An alloy of iron and one or more other elements useful for making alloy additions in steel or ironmaking.

ferroalluaudite

A monoclinic mineral, $\text{NaCaFe}(\text{Fe},\text{Mn})_2 (\text{PO}_4)_3$; alluaudite group; forms a series with alluaudite; in granite pegmatites.

ferroan dolomite

a. Dolomite having up to 20% of magnesium replaced by iron or manganese. b. A mineral composition intermediate between those of dolomite and ankerite.

ferroan spinel

See: [ceylonite](#)

ferroantigorite

A hypothetical composition, $(\text{Mg},\text{Fe})_3 \text{Si}_2 \text{O}_5 (\text{OH})_4$, used to describe chlorite compositions; intermediate to antigorite and greenalite.

ferroboron

A boron iron alloy containing 12% to 14% boron. *USBM, 7; USBM, 6*

ferrocarpholite

An orthorhombic mineral, $(\text{Fe},\text{Mg})\text{Al}_2 \text{Si}_2 \text{O}_6 (\text{OH})_4$; forms series with carpholite and magnesiocarpholite; dark green; in quartz veins near Tomata, Celebes Island, Indonesia.

ferrochrome

An alloy of iron and chromium. *Pryor, 3*

ferrocopiapite

See: [copiapite](#)

ferroeckermannite

A monoclinic mineral, $\text{Na}_3 (\text{Fe}^{2+}, \text{Mg})_4 \text{AlSi}_8 \text{O}_{22} (\text{OH})_2$; amphibole group; has $\text{Mg}/(\text{Mg}+\text{Fe}^{2+}) = 0$ to 0.49; forms a series with eckermannite.

ferroedenite

A monoclinic mineral, $\text{NaCa}_2 (\text{Fe},\text{Mg})_5 [\text{Si}_7 \text{AlO}_{22}] (\text{OH})_2$; amphibole group; has $\text{Mg}/(\text{Mg}+\text{Fe}) = 0$ to 0.49; forms a series with edenite.

ferroelectric

Spontaneous electrical polarization with all dipoles in the same direction. The polarity can be reversed by an external electrical field. *Van Vlack*

ferro-ferri-lazulite

See: [barbosalite](#)

ferrogabbro

A gabbro in which the pyroxene or olivine, or both, are exceptionally high in iron.

ferrohexahydrate

A monoclinic mineral, $\text{FeSO}_4 \cdot 6\text{H}_2\text{O}$; hexahydrate group; transparent; forms at Vesuvius, Italy, as fine acicular crystals that are unstable under normal atmospheric conditions.

ferrohortonolite

A mineral in the olivine series composed of 70% to 90% fayalite and 30% to 10% forsterite.

ferrohypersthene

See: [ferrosilite](#)

ferrolite

Black iron slag, said to be satisfactory for fashioning into gemstones.

ferromagnesian

Containing iron and magnesium. Applied to certain dark silicate minerals, esp. amphibole, pyroxene, biotite, and olivine.

ferromagnesian mineral

Any mineral having a considerable portion of iron and magnesium in its composition. CF: [ferrous mineral](#)

ferromagnetic material

a. Material that in general exhibits the phenomena of hysteresis and saturation and whose permeability is dependent on the magnetizing force. Microscopically, the elementary magnets are aligned parallel in volumes called domains. The unmagnetized condition of

a ferromagnetic material results from the overall neutralization of the magnetization of the domains to produce zero external magnetization. *ASM, 1* b. The three substances, iron, nickel, and cobalt, are so considerably more magnetic than any other substances that they are grouped by themselves; they are termed ferromagnetic.

ferromagnetism

a. Spontaneous magnetic orientation of all magnetic moments in the same direction. The orientation can be reversed by an external magnetic field. *Van Vlack* b. Strong magnetic susceptibility caused by overlap of adjacent d orbitals; e.g., iron, nickel, cobalt, and numerous alloys, both ferrous and nonferrous. CF: [antiferromagnetism](#); [ferrimagnetism](#).

ferromanganese

A ferroalloy containing about 80% manganese and used in steelmaking. *McGraw-Hill, 1*

ferromolybdenum

A molybdenum-iron alloy produced in the electric furnace or by a thermite process. It is used to introduce molybdenum into iron or steel alloys and as a coating material on welding rods. *USBM, 7*

ferrosalite

See: [hedenbergite](#)

ferroselite

An orthorhombic mineral, FeSe_2 ; marcasite group; occurs with chalcopyrite and pyrite as a cement in sandstones in the Tuva, Siberia, Russia.

ferrosilicon

Alloy of iron and silicon. *Pryor, 3*

ferrosilite

An orthorhombic mineral, $(\text{Fe,Mg})_2 \text{Si}_2 \text{O}_6$; pyroxene group; dimorphous with clinoferrosilite; forms a series with enstatite. Symbol, Fs. Formerly called iron hypersthene; orthoferrosilite. Syn: [ferrohypersthene](#)

ferrospinel

A synthetic ferrimagnetic substance having spinel structure, containing iron; conducts electricity poorly. See also: [ferrite](#); [hercynite](#).

ferrotschermakite

A monoclinic mineral, $\text{Ca}_2(\text{Fe,Mg})_3\text{Al}_2(\text{Si}_6\text{Al}_2)\text{O}_{22}(\text{OH})_2$; amphibole group, with $\text{Mg}/(\text{Mg} + \text{Fe}) = 0$ to 0.49; forms a series with tschermackite; a fairly common constituent of eclogites and amphibolites.

ferrous

a. The term or prefix used to denote compounds or solutions containing iron in which iron is in the divalent (+2) state. b. Of, relating to, or containing iron.

ferrous metallurgy

The metallurgy of iron and steel. *Newton, 1*

ferrous metals

A classification in the United States of metals commonly occurring in alloys with iron, such as chromium, nickel, manganese, vanadium, molybdenum, cobalt, silicon, tantalum, and columbium (niobium).

ferrous mineral

Any mineral having a considerable portion of iron in its composition. CF: [ferromagnesian mineral](#)

ferrous oxide

This lower oxide, FeO, tends to be formed under reducing conditions; it will react with SiO_2 to produce a material melting at about 1,200 degrees C, hence the fluxing action of ferruginous impurities present in some clays if the latter are fired under reducing conditions. Melting point, 1,420 degrees C; sp gr, 5.7. *Dodd*

ferrovanadium

An alloy of iron and vanadium. *Pryor, 3*

ferroxdure

A sintered oxide consisting mainly of the oxide $\text{BaFe}_{12}\text{O}_{19}$; used for the production of permanent magnets. *Osborne*

ferruccite

An orthorhombic mineral, NaBF_4 ; forms minute crystals with sassolite as a sublimate around fumaroles at Mt. Vesuvius, Italy.

ferruginate

a. Said of a sedimentary rock cemented with iron-bearing minerals, generally limonite; also, said of the iron-bearing cement. b. To stain a rock with an iron-bearing compound. *AGI*

ferruginous

a. Pertaining to or containing iron; e.g., a sandstone that is cemented with iron oxide. CF: [ferriferous](#) b. Said of a rock having a red or rusty color due to the presence of ferric oxide (the quantity of which may be very small). *AGI*

ferruginous chert

A sedimentary deposit consisting of chalcedony or of fine-grained quartz and variable amounts of hematite, magnetite, or limonite.

ferruginous ores

Gangue; principally oxides, silicates, or carbonates of iron. *Newton, 2*

ferruginous rock

Rocks of this group are usually carbonate of iron that has partially or wholly replaced limestone. *Mason*

ferruginous sandstone

A sandstone containing iron oxide as the cementing material, as grains, or both.

Fersman's law

Parallel orientation of feldspar prism edges with the edge between two adjacent rhombohedral planes of quartz in graphic granite so that the c axis of the quartz forms an angle of 42 degrees 16' with the c axis of the feldspar. *Hess*

fersmite

An orthorhombic mineral, $(\text{Ca,Ce,Na})(\text{Nb,Ta,Ti})_2(\text{O,OH,F})_6$; weakly radioactive; in syenites, may be associated with pyrochlore, alkali hornblende, apatite, sphene, magnetite, zircon, xenotime, or allanite; also in some marbles with columbite and monazite.

ferutile

See: [davidite](#)

fervanite

A monoclinic mineral, $\text{Fe}_4(\text{VO}_4)_4 \cdot 5\text{H}_2\text{O}$; golden brown; in uranium-vanadium deposits of the Colorado Plateau.

Fery radiation pyrometer

An instrument in which heat radiated from the hot body is focused, by means of a concave mirror, on a small central hole behind which a small thermocouple is placed in front of two small, inclined mirrors. The instrument is sighted onto the hot body and focused by rotating a screw until the lower and upper halves of the image coincide; the electromotive force generated by the thermocouple is indicated on a galvanometer. The instrument, once focused, gives continuous readings and may be connected to a recording indicator. *Osborne*

fetch

The unobstructed distance that the wind can travel to any point when raising waves. *Hammond*

fetid

Having a disagreeable odor caused by the occurrence of certain bituminous substances or of hydrogen sulfide. This odor is apparent when some varieties of limestone and quartz are broken or are rubbed vigorously.

fetid calcite

A variety of calcite that emits an offensive odor when dissolved in dilute hydrochloric acid. The odor is due to trace sulfides and other impurities. See: [swinestone](#)

fettle

a. To cover or line the hearth of (a reverberatory furnace) with fettling. *Webster 3rd* b. To clean and smooth (as a metal or plastic) after casting or molding. *Webster 3rd* c. To remove fins, mold marks, and rough edges from dry, or nearly dry, ware. *ACSG, 2*

fettling

a. Protecting the bottom of the open-hearth furnace with loose material, such as ore, sand, etc.; also, the material so used. *Henderson* b. The process of repairing a steel-

furnace hearth, with dead-burned magnesite or burned dolomite, between tapping and recharging the furnace. *Dodd*

feverstein

See: [firestone](#)

fey

See: [fea](#)

fiber

The smallest single strand of asbestos or other fibrous material. *Mersereau, 2*

fibril

A single fiber, which cannot be separated into smaller components without losing its fibrous properties or appearance. *Campbell*

fibroblastic

The texture of metamorphic rocks resulting from the development during recrystallization of minerals with a fibrous habit. See also: [nematoblastic](#)

fibroferrite

A monoclinic mineral, $\text{Fe}(\text{SO}_4)(\text{OH}) \cdot 5\text{H}_2\text{O}$; forms fine fibrous crusts or masses associated with melanterite, copiapite, jarosite, and other secondary sulfates.

fibrogenic dust

See: [pulmonary dust](#)

fibrolite

a. A fibrous, felted variety of sillimanite. b. One of three crystalline forms of aluminum silicate, Al_2SiO_5 , the others being andalusite (low temperature) and kyanite (high temperature). Sillimanite occurs commonly as felted aggregates of exceedingly thin fibrous crystals (hence the name fibrolite) in contact metamorphosed aluminous sediments such as mudstones, shales, etc. Crystals of a pale sapphire blue are used as gems. *CTD*

fibrolite cat's-eye

A pale greenish variety of sillimanite having fibrous inclusions; when cut, produces a chatoyant effect, but not a well-defined cat's-eye.

fibrous

a. Applied to minerals that occur as fibers, such as asbestos. Syn: [asbestiform](#) b. Consisting of fine threadlike strands, e.g., satin spar variety of gypsum.

fibrous aggregate

A crystalline aggregate composed of closely packed fibers.

fibrous anthraxylon

Thin strands of anthraxylon having the appearance of threads in thin sections.

fibrous calcite

Translucent calcite composed of fibrous crystals, which, like fibrous gypsum, with which it is often confused, causes a silky sheen. When cut cabochon, it produces a girasol or chatoyant effect, but not a true cat's-eye. Also like fibrous gypsum, it is called "satin spar" but less correctly.

fibrous gypsum

See: [satin spar](#)

fibrous peat

a. Peat composed of the fibrous remains of plants. It is fibrous, spongy, moderately tough, and nonplastic. It does not shrink much on drying. Also called woody peat. See also: [pseudofibrous peat](#); [amorphous peat](#). *Tomkeieff* b. Firm, moderately tough peat in which plant structures are only slightly altered by decay. It shrinks little on drying. *Francis, 1*

fibrous structure

a. If the crystals in a mineral aggregate are greatly elongated and have a relatively small cross section, the structure or texture is fibrous. The fibers may be parallel, as in crocidolite and sometimes in gypsum and cerussite. When the fibers are very fine, they may impart a silky luster to the aggregate, as in crocidolite and satin-spar gypsum. There is also a feltlike type. Fibrous crystals may radiate from a center, producing asteriated or starlike groups, either coarse or fine, as frequently observed in pyrolusite, wavellite, natrolite, and tourmaline, and sometimes in stibnite and other minerals. Also called fibrous texture. *CMD* b. In forgings, a structure revealed as laminations, not necessarily

detrimental, on an etched section or as a ropy appearance on a fracture, not to be confused with the silky or ductile fracture of a clean metal. c. In wrought iron, a structure consisting of slag fibers embedded in ferrite. d. In rolled-steel plate stock, a uniform, fine-grained structure on a fractured surface, free of laminations or shale-type discontinuities. As contrasted with definition b., it is virtually synonymous with silky or ductile fracture. *ASM, 1*

fibrous texture

In mineral deposits, a pattern of finely acicular, rodlike crystals, e.g., in chrysotile and amphibole asbestos. *AGI*

fibrous wax

A fibrous variety of ozocerite, a natural paraffin wax. See also: [ozocerite](#)

fichtelite

A monoclinic mineral, dimethyl-isopropyl-perhydropenanthrene, C₁₉ H₃₄ ; translucent white; in fossil wood or conifers.

fiducial interval

A measure of confidence in precision of a set of sample data. For a given numerical value of fiducial interval, the number of samples required from a given deposit to give an accurate measure of its value can be determined. *Lewis*

fiducial mark

In photogrammetry, an index or point used as a basis of reference; one of usually four index marks connected with a camera lens (as on the metal frame that encloses the negative) that form an image on the negative or print such that lines drawn between opposing points intersect at and thereby define the principal point of the photograph. Syn: [collimating mark](#)

fiducial time

A time marked on a record to correspond to some arbitrary time. Such marks may aid in synchronizing different records or may indicate a reference, such as a datum plane. *AGI*

field

a. A region or area that possesses or is characterized by a particular mineral resource; e.g., goldfield, coalfield. *AGI* b. A broad term for the area, away from the laboratory and esp. outdoors, in which a geologist makes observations and collects data, rock and

mineral samples, and fossils. *AGI* c. That space in which an effect, e.g., gravity or magnetism, occurs and is measurable. It is characterized by continuity; i.e., there is a value associated with every location within the space. *AGI* d. A section of land containing, yielding, or worked for a natural resource; e.g., a coalfield, an oilfield, or a diamond field. A large tract or area, as large as many square miles, containing valuable minerals. See also: [coalfield](#) e. The immediate locality and surroundings of a mine explosion. f. A colliery, or firm of colliery proprietors.

field capacity

The quantity of water held by soil or rock against the pull of gravity. It is sometimes limited to a certain drainage period, thereby distinguishing it from specific retention, which is not limited by time. Syn: [field-moisture capacity](#); [normal moisture capacity](#). *AGI*

field classification of rocks

A classification of rocks made in the field. It is based on features distinguishable in hand specimens by using a hand lens, a knife, an acid bottle, etc. The classification may be refined or modified by subsequent examination with a microscope or other techniques that are generally used in a laboratory. *Stokes*

field compaction trial

Tests carried out under site conditions to determine the best combination of (1) type of compaction equipment; (2) thickness of loose soil layer; (3) number of passes; and (4) moisture content (where variation is possible) in order to achieve the highest possible soil densities. *Nelson*

field geology

Geology as practiced by direct observation in the field; original, primary reconnaissance; field work. *AGI*

field investigation

In reference to experimental-mine tests, the investigation made at a mine when a large sample is taken for testing at the experimental mine; this investigation includes the taking of road dust, rib dust, mine air, and standard coal samples, and the noting of conditions affecting the safety of the mine. *Rice, 2*

fieldite

A zinciferous variety of tetrahedrite. CF: [goldfieldite](#)

field-laboratory operator

Person who analyzes mine water for acid, copper, and iron content by removing samples of water that flow to and from the precipitation drum, and who performs routine chemical tests. *DOT*

field-moisture capacity

See: [field capacity](#)

field work

Work done, observations taken, or other operations, as triangulation, leveling, making geological observations, etc., in the field or upon the ground.

fiery dragon

See: [toadstone](#)

fiery heap

Eng. A deposit of rubbish and waste or unsalable coal that ignites spontaneously. *Fay*

fiery mine

a. A mine in which the seam or seams of coal being worked give off a large amount of methane. *Fay* b. Mine in which there is danger of explosion due to coal dust or flammable gas. *Pryor, 3* c. A gassy mine; a mine where gas ignitions and outbursts have occurred in the past. *Nelson*

fifth wheel

a. The weight-bearing swivel connection between highway-type tractors and semitrailers. *Nichols, 1* b. A wheel used to automatically operate the dump mechanism of mine ore cars.

figure cuts

See: [V-cut](#)

figure stone

See: [agalmatolite](#)

filar micrometer

An instrument, that in its usual form consists of an ocular containing a fine wire that can be moved across the field by means of a thumbscrew for the purpose of measuring size. *Hess*

filiform

Having the shape of a thread or filament; e.g., native silver. Syn: [wiry](#)

filiform texture

Threadlike crystals of one mineral embedded in another mineral; e.g., rutilated quartz.

filigree

a. Delicate ornamental work, used chiefly in decorating gold and silver. *Crispin* b. Naturally occurring native metals (e.g., gold, silver, or copper) in lacelike form.

fill

a. Manmade deposits of natural earth materials (e.g., rock, soil, and gravel) and waste materials (e.g., tailings or spoil from dredging), used (1) to fill an enclosed space, such as an old stope or chamber in a mine, (2) to extend shore land into a lake or bay, or (3) in building dams. See also: [hydraulic fill](#); [backfill](#). *AGI* b. Soil or loose rock used to raise the surface of low-lying land, such as an embankment to fill a hollow or ravine in railroad construction. Also, the place filled by such an embankment. *AGI* c. The depth to which material is to be placed to bring the surface to a predetermined grade. *AGI* d. Any sediment deposited by any agent so as to fill or partly fill a valley, sink, or other depression. *AGI* e. Manmade deposits of natural soils and waste material. *ASCE* f. Material deposited or washed into a cave passageway. Fill is generally prefixed by a word describing its dominant grain size; e.g., sand fill, silt fill, clay fill, gravel fill, etc. *AGI* g. Material used to fill a cavity or a passage. An embankment to fill a hollow or a ravine, or the place filled by such an embankment. Also, the depth of the filling material when it is in place. As a verb, to make an embankment in or to raise the level of a low place with earth, gravel, or rock. *Webster 3rd* h. Tailings, waste, etc., used to fill underground space left after extraction of ore. Termed "hydraulic fill" if flushed into place by water. See also: [pack](#) i. Detrital material partly or completely filling a cave. Syn: [drift](#) *AGI* j. The unit charge of batch into a tank or pot. *ASTM* k. Eng. To load trams in the mine. *Fay* l. An earth or broken rock structure or embankment. *Nichols, 1* m. Soil that has no value except bulk. *Nichols, 1*

filled valley

A wide-basin valley, in an arid or semiarid region, that contains abundant alluvium in the form of fans, flood plains, and lake deposits. *AGI*

filler

See: [mineral filler](#)

filler and drayer

A worker who fills tubs at the coal face and pushes them to the main haulage road. *CTD*

fill factor

The approximate load the dipper is carrying, expressed as a percentage of the rated capacity. The fill factor is commonly called the dipper factor for shovels or the bucket factor for draglines. *Woodruff*

filling

a. The waste material used to fill up old stopes or chambers. *Weed, 2* b. The loading of trams, conveyors, tubs, or trucks with coal, ore, or waste; the place where loading occurs. *CTD* c. Allowing a mine to fill with water. *Weed, 2* d. Clogging of the abrasive coat by swarf. It may be reduced in many operations by using an opencoat construction or a lubricant. See also: [swarf](#) e. Loading of mineral into mine trucks; shoveling onto conveyors; gob stowing; packing old stopes with waste. *Pryor, 3* f. Material such as waste, sand, ashes, and other refuse used to fill in worked-out areas of excavation. *Stoces* g. Backfill.

film

a. A term used in flotation meaning a coating, layer, or thin membrane. b. A thin layer of a substance, at the most a few molecules thick, generally differing in properties from other layers in contact with it. *CTD*

film coefficient

The heat transferred by convection per unit area per degree temperature difference between the surface and the fluid. Also called unit convection conductance; surface coefficient. *Strock, 2*

film flotation

Early stage in development of modern flotation process for concentration of minerals, notably sulfides. The containing pulp was agitated with oil that then floated up, carrying selected minerals. This mineralized film was then overflowed or skimmed off. See also: [froth flotation](#); flotation. *Pryor, 3*

film mica

Knife-trimmed mica split from the better qualities of block mica to any specified range of thicknesses between 0.0012 in and 0.004 in (30.5 μm and 102 μm). *Skow*

film-sizing tables

Tables used in ore dressing for sorting fine material by means of a film of flowing water. These tables may be considered as surface tables, from which the products are removed before they have found a bed, so that the washing is always done on the same surface; also building tables or buddles, on which the products are removed after they have formed a bed. These use the relative transporting power of a film of water flowing on a quiet surface, which may be either rough or smooth, to act upon the particles of a water-sorted product. The smaller grains, of high specific gravity, are moved down the slope slowly or not at all by the slow undercurrent; the larger grains, of lower specific gravity, are moved rapidly down the slope by the quick upper current. *Liddell*

filter

a. A device for separating suspended solid particles from liquids, or fine dust from air. It incorporates a membrane on which the solids are retained. See: [bag filter](#); drum filter; Genter filter; plate-and-frame filter. See also: [vacuum filtration](#) b. To subject to the action of a filter; to pass a liquid or a gas through a filter for the purpose of purifying, or separating, or both. To act as a filter; to remove from a fluid by means of a filter; to percolate. *Webster 3rd* c. An electronic device in seismic instruments that permits selection of frequency characteristics appropriate for the ground motion it is desired to record. *AGI* d. A layer, or a combination of layers, of pervious materials designed and installed in such a manner as to provide drainage and yet prevent the movement of soil particles by flowing water. Also called protective filter. *ASCE* e. To utilize a filter, as to clarify or purify a liquid or gas.

filter aid

a. A low-density, inert, fibrous, or fine granular material used to increase the rate and improve the quality of filtration. *ASM, 1* b. Diatomaceous earth, used either to coat a filter cloth or as a thick filtering layer that can be plowed off with its load of cake from a rotating drum filter. *Pryor, 3*

filter bed

a. A general name for a pond or tank with a bottom or bed used for filtering purposes. *CTD* b. A pond or tank having a false bottom covered with sand, and serving to filter river or pond water. c. A fill of previous soil that provides a site for a septic field. *Nichols, 1*

filter cake

a. The compacted solid or semisolid material separated from a liquid and remaining on a filter after pressure filtration. *Inst. Petrol.* b. The layer of concentrated solids from the drilling mud left behind on the walls of a borehole, or on a filter paper in filtration tests on mud. *Inst. Petrol.*

filter-cake texture

The physical properties of a cake as measured by toughness, slickness, and brittleness. *Brantly, 1*

filter cloth

The fabric used as a medium for filtration; e.g., nylon cloth, blanket cloth, finely woven wire mesh, or finely woven glass thread. Syn: [press cloth](#)

filtered light

Light that has passed through a colored-glass filter, absorbing some hues and permitting others to pass through.

filter feed trough

A tank containing the pulp to be filtered, generally fitted with an agitator to maintain the solids in the pulp in suspension, and in which the drum or disk of a rotary vacuum filter is partially immersed. *BS, 5*

filtering stone

Any porous stone, such as sandstone, through which water is filtered.

filter loss

The amount of fluid delivered through a permeable membrane in a specified time. *Brantly, 1*

filter press

A form of pressure filter, noncontinuous in operation; used in coal preparation for the removal of water from slurries, tailings, and similar products. *BS, 5*

filter pressing

A process of magmatic differentiation wherein a magma, having crystallized to a mush of interlocking crystals in liquid, is compressed by Earth movements and the liquid

moves toward regions of lower pressure, thus becoming separated from the crystals. Syn: [filtration differentiation](#) *AGI*

filter pump

An aspirator for hastening the process of filtering by creating a partial vacuum. *Standard, 2*

filter stick

Short glass tube with filtering septum; used in laboratory sampling. *Pryor, 3*

filter-type respirator

A protective device that removes dispersoids from the air by physically trapping the particles on the fibrous material of the filter. It offers no protection against gases or vapors, or atmospheres deficient in oxygen. Many workers, however, are subjected to dusts, fumes, and mists in sufficient quantity to impair their health. Common examples are the dusts of cement, coal, flour, limestone, silica, and asbestos encountered in mining, grinding, and crushing operations; the metallic fumes of welding, smelting, and refining processes; and the mists formed by the disintegration of a liquid in such work as spray-coating, atomizing, and chromium-plating. *Best, 1*

filtrate

The liquid product from the filtration process. *BS, 5*

filtration

Removal of suspended and/or colloidal material from a liquid by passing the suspension through a relatively fine porous medium, e.g., a canvas or other fabric diaphragm; the process is activated by suction or pressure, and commonly includes filter aids. The products are clear liquid and a filter cake. *AGI*

filtration differentiation

See: [filter pressing](#)

filtration rate

The measure of the amount of filtrate passing through or into a porous medium. Filter loss and cake thickness constitute the determining factors of filtration qualities.

filty

Som. A local term for combustible gases. *Fay*

final controlling element

In process control, the element that directly changes the value of the manipulated variable. *Fuerstenau*

final exploration

The detailed investigation of a coal or mineral area on which a preliminary report was favorable. The final exploration of an area may involve a costly boring program, surveys, and sampling. See also: [preliminary exploration](#)

fine

a. Composed of or constituting relatively small particles; e.g., fine sandy loam. Ant. coarse. *AGI* b. Sometimes used to designate high-quality drill diamonds. *Long* c. A measure of the amount of gold in electrum.

fine aggregate

The portion of an aggregate consisting of particles with diameters smaller than approx. 1/4 in (4.8 mm). CF: [aggregate](#); [coarse aggregate](#). *AGI*

fine gold

a. Almost pure gold. The value of bullion gold depends on its percentage of fineness. See also: [fineness](#); [float gold](#). b. In placer mining, gold in exceedingly small particles. Syn: [greasy gold](#)

fine-grained

a. Said of a crystalline rock, and of its texture, in which the individual minerals are relatively small; specif. said of an igneous rock whose particles have an average diameter less than 1 mm. Syn: [aphanitic](#) *AGI* b. Said of a sediment or sedimentary rock, and of its texture, in which the individual constituents are too small to distinguish with the unaided eye; specif. said of a sediment or rock whose particles have an average diameter less than 1/16 mm (62 μ m, or silt size and smaller). The term is used in a relative sense, and various size limits have been used. CF: [coarse-grained](#); [medium-grained](#). *AGI* c. Said of a soil in which silt and/or clay predominate. *AGI*

fine-grained rocks

Rocks in which the crystals are very fine-grained, or else the whole or part is glass. These are the volcanic rocks. *Mason*

fine grinder

A machine for the final stage of size reduction; i.e., to -100 mesh. See: [fine grinding](#); pulverizer.

fine grinding

Fine grinding is usually performed in a mill rotating on a horizontal axis and containing balls, rods, or pebbles (grinding media), which serve to grind the ore in the mill. The different mills used in fine grinding are known as ball mill, pebble mill, Hardinge mill, tube mill, autogenous, etc. *Newton, 1*

fine industrials

See: [toolstone](#)

fine metal

The higher grades of copper regulus or matte obtained in the English process of copper smelting. Included are the following four varieties, which are distinguished by appearance and copper content: (1) blue, containing about 60% copper; (2) sparkle, about 74% copper; (3) white, about 77% copper; and (4) pimple, about 79% copper. *Fay*

fineness

a. The proportion of pure silver or gold in jewelry, bullion, or coins; often expressed in parts per thousand; American silver coin is nine-tenths or 0.900 fine; English gold coin is eleven-twelfths or 0.9166 fine. *Webster 3rd* b. A measure of specific surface area or particle-size distribution. *Taylor* c. The state of subdivision of a substance. *CTD*

fineness factor

A measure of the average particle size of clay and ceramic material, computed by summing the products of the reciprocal of the size-grade midpoints and the weight percentage of material in each class (expressed as a decimal part of the total frequency). The measure is based on the assumption that the surface areas of two powders are inversely proportional to their average particle sizes. Syn: [surface factor](#) *AGI*

fineness modulus

a. A means of evaluating sand and gravel deposits, consisting of passing samples through standardized sets of sieves, accumulating percentages retained, dividing by 100, and comparing the resultant fineness-modulus number to various specification requirements. *AGI* b. An empirical factor obtained by adding the total percentages of a sample of the aggregate retained on each of a specified series of sieves, and dividing the sum by 100.

AIME, 1 c. One-hundredth of the sum of the cumulative values for the amount of material retained on the series of Tyler or U.S. sieves including half sizes up to 100 mesh. *Dodd*

finer

a. Finely crushed or powdered material, e.g., of coal, crushed rock, or ore, as contrasted with the coarser fragments; esp. material smaller than the minimum specified size or grade, such as coal with a maximum particle size less than 3.2 mm, or ores too pulverulent to be smelted in the ordinary way; or material passing through a given screen or sieve. *AGI* b. An engineering term for the clay- and silt-sized soil particles (diameters less than 0.074 mm) passing U.S. standard sieve No. 200. *AGI* c. See also: [anthracite fines](#)

fine sand

a. A geologic term for a sand particle having a diameter in the range of 0.125 to 0.25 mm (125 to 250 μ m, or 3 to 2 ϕ units). Also, a loose aggregate of sand consisting of fine sand particles. See also: [sand](#) *AGI* b. An engineering term for a sand particle having a diameter in the range of 0.074 mm (retained on U.S. standard sieve No. 200) to 0.42 mm (passing U.S. standard sieve No. 40). *AGI* c. A soil term used in the United States for a sand particle having a diameter in the range of 0.10 to 0.25 mm. *AGI*

fine silt

A geologic term for a silt particle having a diameter in the range of 1/128 to 1/64 mm (8 to 16 μ m, or 7 to 6 ϕ units). In Great Britain, the range 1/100 to 1/20 mm has been used. Also, a loose aggregate of silt consisting of fine silt particles. *AGI*

fine silver

Pure silver, 1,000 parts fine or 100% silver.

finger

a. One of the cutting edges on a finger bit. See also: [finger bit](#) *Long* b. A pair or set of bracketlike projections placed at a strategic point in a drill tripod or derrick, generally at a level with one of the work platforms, to keep a number of lengths of drill rods or casing in place when they are standing in the tripod or derrick. Also one of the flexible prong parts of a basket lifter. *Long* c. A minor structure radiating from a major structure. *AGI*

finger bar

Pivoted length of wood used to support a unit in a stamp battery. See also: [cam stick](#)

finger bit

A steel rock-cutting bit having fingerlike, fixed or replaceable, steel-cutting points affixed. *Long*

finger board

A board with projecting dowels or pipe fingers located in the upper part of the drill derrick or tripod to support stands of drill rod, drill pipe, or casing. CF: [finger](#)

finger chute

Steel rails hinged independently over an ore chute, to control rate of flow of rock. *Pryor, 3*

finger grip

A finishing tool designed to recover a broken drill rod or dropped tool from a borehole. *Long*

finger lifter

A basket-type core lifter. *Long*

finger raise

Steeply sloping openings permitting caved ore to flow down raises through grizzlies to chutes on the haulage level.

finished steel

Steel that has been processed beyond the stages of billets, blooms, sheet bars, slabs, and wire rods, and is ready for the market. *ASM, 1*

finish grade

The final grade required by specifications. *Nichols, 1*

finishing jig

The jig used to save the smaller particles of ore in a concentrator. *Weed, 2*

finishing lime

A type of refined hydrated lime, which has been milled to be suitable for plastering, particularly a finish coat. *Boynton*

finishing rolls

The last roll, or the one that does the finest crushing in ore dressing, esp. in stage crushing. *Fay*

fink truss

A frequently used symmetrical steel roof truss that is effective over a maximum span of 50 ft (15.2 m). *Hammond*

finnemanite

A hexagonal mineral, $Pb_5(AsO_3)_3Cl$; occurs as prisms forming crusts lining crevices in granular hematite at Laangban, Sweden.

fior di persicor

A white marble with veins and clouds of purple or red, from Albania. *Fay*

fiorite

Siliceous sinter, named from Mount Santa Fiora, Tuscany, Italy. Syn: [pearl sinter](#)

fire

a. To explode or blow up. The expression "the pit has fired" signifies that an explosion of combustible gases has taken place. *Fay* b. To blast or explode with ammonium nitrate-fuel oil (ANFO), dynamite, or other explosive. c. A word shouted by miners as warning just before a shot is fired. *Fay* d. Fuel in a state of combustion, as on a hearth, in a grate, or furnace. A manifestation of rapid combustion or combination of materials with oxygen. e. Flashes of different spectral colors seen in diamonds and other gemstones with high birefringence as a result of dispersion. CF: [play of color](#)

fire agate

See: [goldstone](#)

fire assay

The assaying of metallic ores, usually gold and silver, by methods requiring a furnace heat; commonly involves the processes of scorification, cupellation, etc. *Standard, 2*

fireback

The back wall of a furnace or fireplace. *Fay*

fire bank

The spoil heap at the surface of a colliery, when burning or heated by spontaneous combustion. *Nelson*

fireblende

See: [pyrotilpnite](#)

fire boss

a. A person designated to examine the mine for gas and other dangers. In certain states, the fire boss is designated as the mine examiner. See also: [gasman](#) b. A State-certified supervisory mine official who examines the mine for combustible gases and other dangers before a shift comes into it and who usually makes a second examination during the shift; in some States, it is used loosely to designate assistant or section foreman. See also: [fireman](#) c. Also called examiner; mine examiner. See: [gas watchman](#)

firebox

One of the small refractory-lined chambers, built wholly or partly in the wall of a kiln, for combustion of the fuel. *Dodd*

firebreak

A strip across the area in which no combustible material is employed, or in which, if timber supports are used, sand (not waste rock) is later filled and packed tightly around them. Where timber is not used in stope supports, the firebreaks are simply stretches in the levels or winzes in which timber lagging is replaced by some other substance, such as steel or concrete. *Spalding*

fire breeding

S. Staff. Said of any place underground showing indications of a gob fire. *Fay*

firebrick

a. Bricks made from a very refractory clay to withstand intense heat. *Mersereau, 2* b. An aluminosilicate brick of fire-clay composition. *Van Vlack*

fire bridge

The separating low wall between the fireplace and the hearth of a reverberatory furnace.
Fay

fire classification

The following explains the National Fire Protection Association classifications. Class A fires are defined as those in ordinary solid, combustible materials, such as coal, wood, rubber, textiles, paper, and rubbish. Class B fires are defined as those in flammable liquids, such as fuel or lubricating oils, grease, paint, varnish, and lacquer. Class C fires are defined as those in (live) electric equipment, such as oil-filled transformers, generators, motors, switch panels, circuit breakers, insulated electrical conductors, and other electrical devices. *USBM, 3*

fireclay

a. A siliceous clay rich in hydrous aluminum silicates, capable of withstanding high temperatures without deforming, disintegrating, or becoming soft and pasty. It is deficient in iron, calcium, and alkalis, and approaches kaolin in composition, the better grades containing at least 35% alumina when fired. *AGI* b. A term formerly, but inaccurately, used for underclay. Although many fireclays commonly occur as underclays, not all fireclays carry a roof of coal and not all underclays are refractory. Syn: [firestone](#); refractory clay. See also: [sagger](#); [underclay](#). *AGI*

fired

Eng. Said of a mine when an explosion of combustible gases has taken place.

firedamp

a. A combustible gas that is formed in mines by decomposition of coal or other carbonaceous matter and that consists chiefly of methane; also the explosive mixture formed by this gas with air. The term "combustible gases" is now used for firedamp. *Webster 3rd* b. A stone, brick, or concrete airtight stopping to isolate an underground fire, and to prevent the inflow of fresh air and the outflow of foul air. See also: [seal](#); [methane](#). *Nelson*

fire door

a. A fireproof door in a building or in a mine, as a door to enclose an area in which there is a mine fire. *Fay* b. The door or opening through which fuel is supplied to a furnace or stove. *Fay*

fired stone

Certain gems, e.g., zircon, topaz, or corundum, can be heated under controlled conditions to change their color to one that is more attractive. See also: [heated stone](#)

fire feeder

a. An apparatus for feeding the fire of a furnace. *Fay* b. A stoker.

firefighting plan

A plan or chart showing the positions of items of firefighting equipment. Separate plans are used for surface buildings and underground workings. *BS, 7*

fire grate

The grate that holds the fuel in many forms of heaters and furnaces. *Fay*

fire-heavy

Eng. Words marked upon the scale of a mercurial barometer to indicate when considerable combustible gases may be expected to be given off in the mine, and to show that extra vigilance is required to keep the ventilation up to its full strength.

fire kiln

An oven or place for heating anything. *Fay*

fireman

a. In a metal mine, a miner whose duty it is to explode the charges of explosive used in headings and working places. *CTD* b. In a fiery mine, the official who checks the underground explosive risk. *Pryor, 3* c. In a coal mine, an official responsible for safety conditions underground. See also: [deputy](#) d. Eng. A person whose duty it is to examine with a safety lamp the underground workings, (1) to ascertain if gas is present, (2) to see that doors, bratticing, stoppings, etc., are in good order, and (3) generally to see that the ventilation is efficient. See also: [fire boss](#); gas watchman.

fire marble

See: [lumachelle](#)

fire opal

A transparent to translucent yellow, orange, red, or brown variety of opal that gives out fiery reflections in bright light with or without a play of color. CF: [gold opal](#)

fire-refined copper

Copper that has been refined by the use of a furnace process only, including refinery shapes and, by extension, fabricator's products made therefrom. Usually when this term is used alone, it refers to fire-refined, tough pitch copper without elements other than oxygen being present in significant amounts. See also: [fire refining](#)

fire refining

Includes a number of processes used for the removal of impurities from impure metals produced by the smelting process. Impurities are removed by introducing air into the molten metal or exposing the metal to air, and by the addition of various fluxes and the removal of impurities as gases, drosses, or liquid slags. Lead, tin, and some types of impure copper are also fire-refined. *Kirk*

fire rib

S. Staff. A solid rib or wall of coal left between workings to confine gob fires. *Fay*

fire runner

In bituminous coal mining, a person who enters a mine immediately after blasting to search for any fires that might have been started by a blast. Also called shotfirer runner; shot runner. *DOT*

fire sand

a. Refractory oxide or carbide used for furnace linings. *Bennett* b. A sand so free from fluxes that it is highly refractory. See also: [foundry sand](#)

fire seal

A strip across an area through which neither fire nor noxious gases can penetrate. It involves not only sealing of stopes but levels also. Syn: [sealing](#)

fire setting

An ancient method of tunneling through rock. A fire was built against the face of the mineral, which was then quenched with water, thus causing cracking. *Pryor, 3*

fire stink

The smell given off when heating or spontaneous combustion occurs in the waste or elsewhere underground. *Nelson*

firestone

a. Any fine-grained siliceous stone formerly used for striking fire; specif. flint. Syn: [feverstein](#) b. A nodule of pyrite formerly used for striking fire. *AGI* c. A fine-grained siliceous rock that can resist or endure high heat and is used for lining furnaces and kilns, such as certain Cretaceous and Jurassic sandstones in southern England. See also: [fireclay](#) d. In a slag hearth, a plate of iron covering the front of the furnace except for a few inches of space between it and the bedplate. e. Quartz in which cracks have been artificially produced by heating to create diffraction colors. Syn: [iris quartz](#)

fire styth

See: [fire stink](#)

fire up

A command to start operating a drill either to collar a borehole or to restart work on the first working shift of a day. *Long*

firing

a. The igniting of an explosive charge. b. Starting up a furnace or kiln. c. The process of initiating the action of an explosive charge or the operation of a mechanism that results in a blasting action.

firing a mine

Eng. Maliciously setting fire to a coal mine. *Fay*

firing cable

See: [shot-firing cable](#)

firing circuit

See: [shot-firing circuit](#)

firing current

An electric current of recommended magnitude and duration to sufficiently energize an electric detonator or a circuit of electric detonators. *Atlas*

firing expansion

The increase in size that sometimes occurs when a refractory raw material or product is fired; it is usually expressed as a linear percentage expansion from the dry to the fired state. Firing expansion can be caused by a crystalline conversion (e.g., of quartz into cristobalite, or of kyanite into mullite plus cristobalite), or by bloating.

firing impulse

As applied to electric blasting caps, the minimum impulse of current required to fire a detonator. *Fraenkel*

firing key

A special key that fits the exploder used in electric firing of blasting charges; carried by authorized shot firer. *Pryor, 3*

firing line

Scot. An appliance used in former times for clearing a room of combustible gases. A prop was being set up near the face, a ring was fixed in it near the roof, and a cord or wire was passed through the ring. Attaching a lamp to one end of the cord, the miner withdrew to a distance, and by pulling the cord raised the lamp to the height necessary to explode the accumulated combustible gases. *Fay*

firing machine

a. A designation for an electric blasting machine. *Fay* b. An apparatus for feeding a boiler furnace with coal. A mechanical stoker. *Fay*

firing point

Eng. The point or mixture at which combustible gases mixed with atmospheric air explodes. The percentages of gas vary from 6% to 13%, with the maximum explosibility at about 11%. *Fay*

firmament stone

See: [precious opal](#)

first aid

Emergency, crude repair of a bit made by a drill runner at the drill site. *Long*

first arrival

The first energy to arrive from a seismic source. First arrivals on reflection records are used for information about a surficial low-velocity or weathering layer; refraction studies are often based on first arrivals. Syn: [initial impulse](#); [first break](#). *AGI*

first break

See: [weight break](#); first arrival.

first bye

a. A diamond with a faint greenish tint. *Schaller* b. A classification of gem diamond.

first-class lever

A bar having a fulcrum (pivot point) between the points where force is applied and where it is exerted. *Nichols, I*

first-class ore

An ore of sufficiently high grade to be acceptable for shipment to market without preliminary treatment. CF: [second-class ore](#) Syn: [shipping ore](#)

first mining

In the room-and-pillar method, the part of the coal that is won from the rooms, as distinguished from the second part, which is the extraction of the remaining pillars. *Stoces*

first-order red plate

See: [selenite plate](#)

first red plate

See: [gypsum plate](#)

first ripping

The ripping work carried out as the roadway is being formed and driven forward. See also: second ripping. (Nelson, 1965)

first water

Gems, particularly diamonds, of the highest value, irrespective of size. In diamonds, the term applies to stones that are flawless, without color or almost bluish white. A slight amount of color detracts from the value, and the stones are said to be off color.

first way

Rift; reed; cleavage way. See also: [easy way](#)

first weight

The first indication of roof pressure that takes place after the removal of coal from a seam. *CTD*

first working

The removal of the coal in driving the entries and rooms. See also: [advance working](#)

firth

A long, narrow arm of the sea; also, the opening of a river into the sea. Along the Scottish coast, it is usually the lower part of an estuary (e.g., Firth of Forth), but sometimes it is a fjord (e.g., Firth of Lorne) or a strait (e.g., Pentland Firth). Etymol. Scottish. Syn: [frith](#) *AGI*

fir-tree bit

A rotary bit in which a number of cutting edges are arranged behind a pilot bit to enlarge the hole to the required diameter. *BS, 12*

Fischer-Tropsch process

Hydrogenation of carbon monoxide to form hydrocarbons from coal or natural gases. *Pryor, 3*

fish

a. To join two beams, rails, etc., by long pieces at their sides. *Zern* b. The article recovered and/or the act or processes involved in the recovery of lost drilling tools, casing, or other articles from a borehole. Also called fishing. *Long*

fished joint

A rail joint made by means of fishplates. *Hammond*

Fisher subsieve sizer

An apparatus using a gas-permeability method for determination of the average particle diameter of powders. A sample, equal in weight (grams) to the true density of the material, is compacted between two porous plugs in a metal tube, to a known porosity. Air or a suitable gas, under a constant pressure head, is passed through the compressed sample, and rate of flow is measured by a calibrated flowmeter. The average particle diameter of the powder is indicated directly on a self-calculating chart by the liquid height in one arm of the flowmeter tube. No dispersion is required, and the results are unaffected by particle shape. *Osborne*

fisheye

- a. A little-used name for moonstone, also for opal with a girasol effect.
- b. A popular trade term for any transparent faceted stone so cut that its center is lacking in brilliancy.
- c. A diamond cut too thin to present the maximum effect of brilliancy.

fisheye stone

See: [apophyllite](#)

fishing

Searching for and attempting to recover, by the use of specially prepared tools, a piece or pieces of drilling equipment (such as sections of pipe, cables, or casing) that have become detached, broken, or lost from the drill string or have been accidentally dropped into the hole. *AGI*

fishing tap

A thread-cutting tool to cut threads inside a casing or other hollow part that is to be fished from a borehole. *Long*

fishplates

Specially shaped steel plates for joining the end of one rail to the next rail in the track. The fishplates are fixed (one on each side) to overlap the rail ends and bolted through the rails. *Nelson*

fishtail

- a. An abrupt and ragged termination of a coalbed that is considered to have resulted from a washout during the peat stage. The more or less leathery peat is believed to have been separated parallel to its bedding, permitting wedges of sand and silt to be forced into the separations in such a manner that, after the coalification has taken place, a cross section shows splayed and ragged coal separated by sandstone wedges. *Raistrick*
- b. The act or process of rotatively drilling a borehole with a fishtail bit. Also called fishtailing. *Long*

c. In roll forging, the excess trailing end of a forging. It is often used, before being trimmed off, as a tong hold for a subsequent forging operation. *ASM, 1*

fishtail bit

A rotary bit used to drill soft formations. The blade is flattened and divided, the divided ends curving away from the direction of rotation. It resembles a fishtail. Also called drag bit. CF: [noncoring bit](#) *AGI*

fishtail structure

A coal seam structure sometimes observed along the fringe of a washout. It was probably produced by the water forcing open layers of the coaly mass and the injection of fine sand or silt into the splayed partings--the veins of coal branching out like a fishtail. *Nelson*

fissile

a. Capable of being easily split along closely spaced planes; exhibiting fissility. *AGI* b. Said of bedding that consists of laminae less than 2 mm thick. *AGI*

fissility

A general term for the property possessed by some rocks of splitting easily into thin layers along closely spaced, roughly planar, and approx. parallel surfaces, such as bedding planes in shale or cleavage planes in schist; its presence distinguishes shale from mudstone. The term includes such phenomena as "bedding fissility" and "fracture cleavage." Etymol. Latin fissilis, that which can be cleft or split. Adj. fissile. *AGI*

fission

The spontaneous or induced splitting, by particle collision, of a heavy nucleus into a pair (only rarely more) of nearly equal fission fragments plus some neutrons. Fission is accompanied by the release of a large amount of energy. CF: [fusion](#)

fissionable

Said of nuclei, such as uranium and plutonium, that are capable of fission. *AGI*

fissure

A fracture or crack in rock along which there is a distinct separation. It is often filled with mineral-bearing material. See also: [fissure vein](#) *AGI*

fissure system

A group of fissures of the same age and of more or less parallel strike and dip. *AGI*

fissure vein

A mineral mass, tabular in form as a whole but frequently irregular in detail, occupying a fracture in rock. The vein material is different from the country rock and has generally been produced by the filling of open spaces along the fissure. See also: [true vein](#)

fitchered

Said of a drill hold sufficiently crooked to make a drill stick.

fitter

Broadly, a skilled person who can repair and assemble machines in an engineering shop. *Nelson*

fitting

Hand or bench work involved in the assembly of finished parts by a fitter. *CTD*

fittings

Auxiliary and accessory tools and equipment needed to drill a borehole using either percussive, churn, rotary, diamond, or other types of drills. *Long*

fiveling

a. A twinned crystal formed by fivefold cyclic twinning. *AGI* b. A crystal twin consisting of five individuals. CF: [trilling](#); [fouling](#); eightling.

fix

a. A position determined from terrestrial, electronic, or astronomical data. *AGI* b. The act of determining a fix. *AGI* c. To fettle or line the hearth of puddling furnace with a fix or fettling, consisting of ores, scrap, and cinder, or other suitable substances. *Fay*

fixation

a. The act or process by which a fluid or a gas becomes or is rendered firm or stable in consistency, and evaporation or volatilization is prevented. Specif., that process by which a gaseous body becomes fixed or solid on uniting with a solid body, as the fixation of oxygen or the fixation of nitrogen. b. A state of nonvolatility or the process of entering such a state, as the fixation of a metal or the fixation of nitrogen in a nitrate by bacteria. *Standard, 2*

fix-bitumens

A group name for all authigenic, nonfluid bitumens; divided into stabile protobitumens and metabitumens. *Tomkeieff*

fixed carbon

a. In the case of coal, coke, and other bituminous materials, the solid residue, other than ash, obtained by destructive distillation; determined by definite prescribed methods. *ASTM* b. A calculated figure: 100, less the sum of the percentages of moisture, volatile matter, and ash. *BS, 4*

fixed-clip monocable

An aerial ropeway in which a moving endless rope both supports and transports carriers that are permanently fixed to it. The length of the line may be several miles. Individual loads are limited to about 2 hundredweight (91 kg), and total capacity seldom exceeds about 15 st/h (13.6 t/h). *Nelson*

fixed-electrode method

A geophysical surveying method used in the self-potential system of prospecting, in which one electrode remains stationary while the other is grounded at progressively greater distances from it. The method indicates a mineral body directly beneath the greatest anomaly and has been extensively and successfully used.

fixed-flexible-type carrying idler

Consists of a flexible-type carrying idler mounted in a rigid frame, which fixes the position of the points or roll support. *NEMA, 2*

fixed ground water

Ground water in material having interstices so small that the water is held permanently to the walls of the interstices, or moves so slowly that it is not available for withdrawal at useful rates. Outside the zone of saturation, material with infinitely small openings can hold water indefinitely against the pull of gravity, whereas within the zone of saturation there is apparently always movement, even though at very low rates. *AGI*

fixed guides

Wood bars or steel rails fixed vertically to cross buntons in a shaft. The cage shoes travel along the guides and therefore prevent the cage from swinging and doing damage in the shaft. Some skips are fitted with rubber-tired rollers running on 6-in by 4-in (15-cm by 10-cm) steel channel guides. Guide shoes may be fitted to act as alternative guides in

case of breakdown of rollers. Fixed guides are used when shaft space is limited; i.e., when the clearances do not permit the use of flexible or rope guides. See also: [steel guides](#)

fixed screen

A stationary inclined or curved panel, commonly made of wedgewire, which is used to remove fines and a large proportion of water from a suspension of coal in water. *BS*, 5

fizelyite

A monoclinic mineral, $Pb_{14} Ag_5 Sb_{21} S_{48}$ (?); soft; forms deeply striated prisms at Kisbanya, Romania, where it is associated with semseyite, pyrite, galena, and sphalerite.

flag

a. Sandstone or sandy limestone rock, usually more or less micaceous, which is fissile along the bedding planes, splitting into slabs. Sometimes misnamed "slate" because it is used for roofing rather than paving. *Arnell* b. A thin slab of stone. Syn: [flagstone](#) c. A track signal or target. *Zern*

flagger

In bituminous coal mining, a laborer who attaches a flag to the rear car of a loaded train of cars (if the flag is missing at end of a haulage trip, it denotes that the train has lost one or more cars, and all motormen are warned). Also called flagman. *DOT*

flagging

In geophysical work, the use by surveyors of flags of cloth, paper, or plastic to mark instrument or shot locations.

flaggy

a. Splitting or tending to split into layers of suitable thickness for use as flagstones; specif. descriptive of a sedimentary rock that splits into layers from 1 to 5 cm thick (McKee & Weir, 1953). *AGI* b. Said of bedding that consists of layers from 1 to 10 cm thick (Payne, 1942). *AGI* c. Pertaining to a flag or flagstone. *AGI* d. Said of a soil full of flagstone fragments. *AGI*

flagstaffite

An orthorhombic mineral, $C_{10} H_{22} O_3$, cis-terpin hydrate; forms colorless transparent crystals in fossil pine logs near the San Francisco Peaks, north of Flagstaff, AZ.

flagstone

a. A hard sandstone, usually micaceous and fine-grained, that occurs in extensive thin beds with shale partings; it splits uniformly along bedding planes into thin slabs suitable for use in terrace floors, retaining walls, etc. CF: [bluestone](#); [freestone](#). *AGI* b. A flat slab of flagstone used for paving; esp. a thin piece split from flagstone. Also, a surface of such stone. *AGI* c. A relatively thin flat fragment (of limestone, sandstone, shale, slate, or schist) occurring in the soil, having a length in the range of 6 to 15 in (15 to 38 cm). Syn: [flag](#); [slabstone](#); [grayband](#). *AGI*

flail

A hammer hinged to an axle so that it can be used to break or crush material. *Nichols, 1*

flake copper

Very thin scales of native copper. *Weed, 2*

flake graphite

Graphite disseminated in metamorphic rock as thin, visible flakes that are separable from the rock by mechanical means. Syn: [crystalline flake graphite](#)

flake mica

Finely divided mica recovered from mica and sericite schist and as a byproduct of feldspar and kaolin beneficiation. See also: [scrap mica](#) *Skow*

flake sulfur

Pyrite occurring as thin flakes on the natural cleavage surfaces of coal that floats readily on the surface of the wash water in the washing process. Syn: [float sulfur](#)

flake white

A name sometimes given to pure white lead. *Fay*

flamboyant structure

The optical continuity of crystals or grains, as disturbed by a divergent structure caused by slight differences in orientation. *AGI*

flame

A burning mixture of a combustible gas (or vapor) and air. Solid fuels burn with a glow, but with little flame. Flames are normally hot, but under some conditions are relatively cool. Principal types of flame are luminous, nonluminous, long (lazy) flames, and short flames. *Francis, 2*

flame-coloration tests

In mineral identification, qualitative tests made by moistening powdered material with hydrochloric acid, placing a few grains on platinum or nickel-chrome wire, and noting any color imparted to a blue Bunsen flame. Sodium gives a strong yellow flame; calcium, light red; strontium, crimson; barium, green; potassium, lilac; and copper, blue-green. *Pryor, 3*

flame drill method

See: [jet piercing](#)

flame emission spectrometry

See: [flame photometry](#)

flame hardening

A method for local hardening in which the steel is heated by a mechanically operated oxyacetylene blowpipe, which traverses the object to be hardened at a predetermined rate. *Hammond*

flame inhibitor

A substance, such as hexachloroethane, used for coating limestone dust for use in stone-dust barriers. The inhibitor is dissolved in the waterproofing agent. Tests have indicated its effectiveness in preventing or reducing the propagation of coal-dust explosions. See also: [stone-dust barrier](#)

flame kiln

A lime kiln burning wood. *Standard, 2*

flame opal

a. Opal in which red play of color occurs in more or less irregular streaks. b. A flash opal with red as the predominant color.

flame photometry

Measurement of the intensity of the lines in a flame spectrum by a flame photometer.
Syn: [flame emission spectrometry](#)

flameproof

A term descriptive of electrical machines, switches, and fittings demanded legally for use in fiery mines in Great Britain. Enclosing boxes with accurately fitted wide flanges are used. See also: [explosion proof](#) *Pryor, 3*

flameproof construction

A flameproof enclosure for electrical apparatus is one that, under normal working conditions, will withstand the internal explosion of a flammable gas that may exist within it, and which will prevent the transmission of a flame capable of igniting an explosive atmosphere outside the equipment. *Roberts, 2*

flameproof enclosure

An enclosure for electrical apparatus that will withstand, without injury, any explosion of the prescribed flammable gas that may occur within it under practical conditions of operation within the rating of the apparatus (and recognized overloads, if any, associated therewith), and will prevent the transmission of flame such as will ignite the prescribed flammable gas that may be present in the surrounding atmosphere. *BS, 13*

flame recorder

See: [photographic-paper recorder](#)

flame-resistant cable

A portable cable that will meet the flame test requirements of the U.S. Mine Safety and Health Administration.

flame safety lamp

A lamp, the flame of which is so protected that it will not immediately ignite combustible gases. The original flame safety lamp was developed by Sir Humphrey Davy in 1815 and there are several varieties. The flame is generally surrounded by a cylindrical covering of wire gauze. An explosive or flammable mixture of gas entering the lamp will be ignited by the flame, but the flame of combustion will not pass through the cool gauze and ignite the gas outside the lamp. The illuminating power of these lamps is slightly more than 1 cd, and they will burn for an entire shift with one filling. Each lamp is generally provided with a relighting device, and with a magnetic lock to prevent the lamp from being opened in the mine. The chief disadvantage of this lamp is

its low illuminating power. See also: [Davy lamp](#); [safety lamp](#); [electric cap lamp](#). *Fay; Lewis*

flame spectrum

The spectrum of light emitted by a substance by heating it in a flame. *AGI*

flame spinel

Intensely bright orange-red rubicelle (spinel).

flame spread index

The numerical designation that indicates the surface flammability of materials as specified by the ASTM E-162 test method "Surface Flammability of Materials Using a Radiant Heat Energy Source." U.S. Federal regulations require a flame spread index of 25 or less for flame-retardant coatings and sealants used in underground mines.

flame test

A qualitative analysis of a mineral made by intensely heating a powdered or dissolved sample in a flame and observing the flame's color, which is indicative of the element involved; e.g., green from copper. CF: [flame photometry](#)

flammable

Capable of being easily ignited and of burning with extreme rapidity. This adj. is now used technically in preference to inflammable because of the possible ambiguity of the "in" prefix. Certain equipment cannot be used for safety reasons in coal mines in which flammable gases are present. *Webster 3rd*

flammable fringe

In a system where air (or other reactant gas) and a flammable gas are present, that region in which the two gases have mixed to produce a gas capable of propagating flame. *BS, 8*

flammable mixture of gases

A mixture that when once ignited, will allow flame to be self-propagated throughout the mixture, independent of and away from the source of ignition. In coal mines, it is only when methane and air are mixed in certain definite proportions that the mixture is flammable and explosive, and will allow flame to spread in all directions. See also: [limits of flammability](#)

flamper

Derb. Clay ironstone in beds or seams.

flamrich screen

See also: [resonance screen](#)

flange

Applied to a vein widening.

flange wheel

A truck or trolley wheel having a flange or flanges at the edge to keep it from leaving the rail. *Crispin*

flank

A syn. for limb of a fold.

flank hole

a. A hole bored ahead of a working place, when approaching old workings. *CTD* b. A borehole to detect water, gas, or other danger, driven from the side of an underground excavation in a line not parallel with the centerline of the excavation. Also called flank bore; flanking hole. *BS, 10*

flanking hole

A shothole drilled at an acute angle to the coal face for the purpose of trimming it. *BS, 12*

flanking hole method

Holes bored into the face at an angle which may vary from 30 degrees to 60 degrees to the line of face and 6 to 7 ft (1.8 to 2.1 m) long. The distance between shot holes, the angle of the hole, and the charge, depend to a great extent on the hardness of the coal. As the coal grows harder, the burden on each shothole must be reduced by placing the shotholes closer together and reducing the angle of the hole to the face. *McAdam, 2*

flap

a. See: [clack](#) b. The hinged, flat disk mounted inside the lower end of a core barrel that closes and holds the sample when the barrel is withdrawn from a boring.

flapper

A laborer who flattens copper starting sheets by beating them against a rigid steel or copperplate with a wooden paddle to remove folds, buckles, and creases, which tend to cause short circuits during electrolytic copper refining. Syn: [clack](#)

flapper-topped air crossing

Eng. An air crossing fitted with a double door or valve giving direct communication between the two air currents when forced open by the blast of an explosion.

flapping

a. Striking through the slag-covered surface of molten copper with a rabble blade just before the bath is poled to hasten oxidation. *ASM, 1* b. Striking the surface of molten copper with an iron scraper or rabble to increase the surface exposed to the air.

Mersereau, 1

flaps

Eng. Rectangular wooden valves about 24 in by 18 in by 1-1/2 in (61 cm by 46 cm by 3.8 cm) thick, hung vertically to the framework of the air chambers of a ventilator. A flap valve.

flap valve

Nonreturn valve formed by a hinged flap, which rises as fluid is drawn up through a pipe or chamber and falls back on seating to prevent return flow. *Pryor, 3*

flare-type bucket

A dragline bucket with a bowl of aluminum alloy covered top and bottom with steel wearing plates. Sides and back are of steel plates, and manganese steel is used for the lip and teeth. This bucket has no arch; thus weight is minimized. The sides are flared, permitting heaped loading, and the bucket dumps backward, not forward, thereby giving a somewhat longer dumping range. *Lewis*

flaser gabbro

Coarse-grained blastomylonite formed by dislocation metamorphism of a gabbro. Flakes of mica or chlorite sweep around augen of feldspar and/or quartz with much recrystallization and neomineralization. See also: [mylonite gneiss](#)

flaser structure

A structure in dynamically metamorphosed rock in which lenses and layers of original or relatively unaltered granular minerals are surrounded by a matrix of highly sheared and

crushed material, giving the appearance of a crude flow structure; e.g., flaser gabbro. CF: [augen structure](#) *AGI*

flash box

A box in which a light source, an electromagnet, and a telescope are all mounted in the pendulum apparatus of gravitational recording. *AGI*

flash coal dryer

An appliance in which the moist coal is fed into a column of upward-flowing hot gases and moisture removal is virtually instantaneous. Suspension dryers were widely used in the United States for drying coals from 1/2 in (1.3 cm) downwards in size. See also: Cascade coal dryer; Raymond flash dryer; suspension dryer; thermal drying. *Nelson*

flashes

Shallow lakes created by the removal of coal. *Briggs*

flash flood

A local and sudden flood or torrent of relatively great volume and short duration, overflowing a stream channel in a usually dry valley (as in a semiarid area), carrying an immense load of mud and rock fragments, and generally resulting from a rare and brief but heavy rainfall over a relatively small area having steep slopes. It may also be caused by ice jams and by dam failure. See also: [freshet](#)

flash opal

a. An opal in which the play of color is limited to a single hue. b. Opal in which the play of color is pronounced in one direction only.

flash over

a. Sympathetic detonation between explosive charges or between charged blast holes. *Dick, 2* b. The transmission of detonation from a cartridge to another one in line; also, the tendency of a blast hole to be detonated by the shock wave from an adjacent borehole. Syn: [sympathetic detonation](#)

flashpoint

The minimum temperature at which sufficient vapor is released by a liquid or solid to form a flammable vapor-air mixture at atmospheric pressure.

flash roast

Rapid removal of sulfur, as finely divided sulfide mineral is allowed to fall through a heated oxidizing atmosphere. Flash roasting or melting is widely used in the copper industry. *Pryor, 3*

flash smelting

A smelting process in which dried metal sulfide concentrates are blown with oxygen or oxygen-rich air in a hot hearth-type furnace such that the particles react rapidly with the oxygen to generate a large amount of heat, partially (controlled) oxidizing the concentrates and producing a molten matte phase containing the metal values, which will be further processed, and a molten slag.

flask

a. In foundry work, a molding box that holds the sand into which molten metal is poured. The top half or part is its cope, the bottom half is its drag, and it is furnished with locating lugs. *Pryor, 3* b. An iron bottle in which mercury is marketed. It contains 76-1/2 lb (41.3 kg). *Fay* c. A tinned vessel in which a miner carries oil for a lamp or beverage for a lunch. d. A necked vessel for holding liquids; esp., a broad, flattened vessel of metal or sometimes glass. *Webster 3rd*

flat

a. In mine timbering, horizontal crosspiece or cap used in roof support. b. Of a mining lode, one less than 15 degrees from horizontal in its dip. *Pryor, 3* c. A horizontal orebody, regardless of genetic type. *AGI* d. A flat coal seam. *Korson* e. A railroad car of the gondola type for shipping coal. f. A dull diamond bit. See also: [going bord](#)

flat arch

a. An arch in that both outer and inner surfaces are horizontal planes. *Harbison-Walker* b. In furnace construction, a flat structure spanning an opening and supported by abutments at its extremities; the arch is formed by a number of specially tapered bricks, and the brick assembly is held in place by their keying action. Also called a jack arch. *Harbison-Walker*

flat belt conveyor

A type of belt conveyor in that the carrying run of the conveyor belt is supported by flat belt idlers or by a flat surface.

flat belt idler

An idler consisting of one or more rolls supporting the belt in a flat position.

flat cut

A manner of placing the boreholes, for the first shot in a tunnel, in which they are started about 2 to 3 ft (0.6 to 0.9 m) above the floor and pointed downward so that the bottom of the hole is about level with the floor.

flat double cabochon

See: [lenticle](#)

flat drill

A rotary end-cutting tool constructed from a flat piece of material provided with suitable cutting lips at the cutting end. *ASM, 1*

flat ends

Thin cleavages from the faces of a diamond crystal.

flat hole

A borehole following a near horizontal course. *Long*

flat idler

A belt idler that supports the belt in a flat position. *NEMA, 1*

flatiron

One of a series of short, triangular hogbacks forming a spur or ridge on the flank of a mountain, having a narrow apex and a broad base, resembling (when viewed from the side) a huge flatiron; it usually consists of a plate of steeply inclined resistant rock on the dip slope. *AGI*

flat joint

In igneous rock, a joint dipping at an angle of 45 degrees or less. Rarely applied to joints dipping more than 20 degrees. *AGI*

flat lode

A lode which varies in inclination from the horizontal to about 15 degrees.

flatnose shell

A cylindrical tool with a valve at the bottom, for boring through soft clay. *Fay*

flat rods

A series of horizontal or inclined connecting rods, running up upon rollers, or supported at their joints by rocking arms, to convey motion from a steam engine or water wheel to pump rods at a distance. *Fay*

flat rope

A steel rope made up of a number of loosely twisted four-strand ropes placed side by side, the lay of the adjacent strands being in opposite directions to secure uniformity in wear and to prevent twisting during winding. The strands are sewn together with steel wire. *Nelson*

flats

a. Subterraneous beds or sheets of traprock or whin. *Fay* b. Narrow decomposed parts of limestones that are mineralized. *Fay*

flats and pitches

a. A phrase descriptive of the structure of the lead and zinc deposits in dolomite of the Upper Mississippi Valley region of the United States, esp. in Wisconsin. The flats are nearly horizontal solution openings; the pitches are the inclined, interconnecting joints. *AGI* b. A slump structure of both horizontal and steeply inclined cracks in sedimentary strata. Syn: [pitches and flats](#)

flat sheet

a. A steel plate laid on the floor at the face of a tunnel or heading before blasting to provide a smooth floor for shoveling the broken rock into tubs. Syn: [turnsheet](#) b. Blanket deposit.

flattened strand rope

A wire rope designed to give a greater wearing surface than ordinary round ropes and yet have about the same strength and flexibility. They have roughly 50% more wearing surface than ordinary round ropes, owing to the Lang lay of wires. See also: [wire rope](#)

flattening

a. York. Horizontal vein of spar or barytes in the lead mines. Also called flattening bed. *Arkell* b. A process for truing-up handmade fireclay refractories while they are still only partially dry. Handmaking is now little used except for some special shapes.

flatworking

Scot. A working of moderate inclination. See also: [flat](#); [flat lode](#). *Fay*

flaw

a. A general term for any internal or external imperfection of a fashioned diamond or other gemstone. It includes cracks, inclusions, visibly imperfect crystallization, internal twinning, and cleavage. b. An old term for a steep, transverse strike-slip fault.

flawless

Said of a diamond or other gemstone that is free from flaws of any description when observed by a trained eye under efficient illumination with a fully corrected magnifier of not less than 10 power.

flaxseed ore

An iron-bearing sedimentary deposit, e.g., the Clinton ore, composed of disk-shaped hematitic oolites that have been somewhat flattened parallel to the bedding plane. CF: [fossil ore](#)

fleches d'amour

Acicular, hairlike crystals of rutile, TiO_2 , embedded in quartz; a semiprecious gemstone. Also called love arrows, a literal translation. CF: [rutilated quartz](#)

fleck

To scale or peel off suddenly; applies to shaley beds in the roof or to coal slab at the face. *Nelson*

fleckschiefer

Ger. A type of spotted slate characterized by minute flecks or spots of indeterminate material. See also: [fruchtschiefer](#); [garbenschiefer](#). *AGI*

fleet

The movement of a rope sidewise when winding on a drum. See also: [fleet angle](#)

fleet angle

a. The included angle between the rope, in its position of greatest travel across the drum, and a line drawn perpendicular to the drum shaft, passing through the center of the head

sheave or head-sheave groove. b. Of hoisting gear in mine shaft headworks, the angle between the sheave and extreme paying-off position on the winding drum; in good practice the angle is below 3 degrees. *Pryor, 3* c. As used by diamond drillers and miners, the angle between the two ends of a hoist drum as a base and the sheave wheel in a drill tripod or derrick or the headframe pulley as the apex. *Long*

fleet wheel

a. A grooved wheel or sheave that serves as a drum and about which one or more coils of a hauling rope pass. *Zern* b. Surge wheel. *Mason*

fleischerite

An isometric mineral, $Pb_3 Ge(SO_4)_2 (OH)_6 \cdot 3H_2O$; linnaeite group; occurs in fibrous aggregates and crusts associated with cerussite, memetite, and plumbojarosite in the upper oxidation zone of the Tsumeb Mine, Namibia.

Fleissner process

A thermal drying, batch-type process, in which the action of high-pressure steam on a lump of lignite produces the following effects. The lump is heated inside and out to an approx. uniform temperature by its envelope of condensing steam. As the temperature rises and the pressure increases part of the colloidal water is expelled from the lump as a liquid. The lump shrinks as water leaves and the cells collapse, and when the pressure is lowered, more water leaves by evaporation caused by the sensible heat stored in the lump. When the pressure is lowered further by vacuum, additional moisture is evaporated, which cools the lump. *Mitchell*

flexible

a. Capable of being flexed. Capable of being turned, bowed, or twisted without breaking. *Webster 3rd* b. Said of a mineral that can bend without breaking and will not return to its original shape; e.g., talc and chlorite. CF: [elastic](#); [malleable](#).

flexible ducts

See: [ventilation ducts](#)

flexible guides

See: [winding guide](#)

flexible joint

Any joint between two pipes that permits one of them to be deflected without disturbing the other pipe. *Fay*

flexible sandstone

A fine-grained, thin-layered variety of itacolumite. *AGI*

flexible silver ore

See: [sternbergite](#)

flexible-type carrying idler

Consists of one or more idler rolls arranged to form a catenary trough. This may be accomplished by mounting a single roll on a flexible shaft or by linking a series of rolls with individual rigid shafts. *NEMA, 2*

flexing

The bending of the conveyor belt that takes place as it wraps around the pulleys. The ply nearest the face of the pulley is under the minimum stress and the ply farthest from the face is under the maximum stress. Flexing stresses increase with a decrease in pulley diameters.

Flexlok

A patented circle brick, with book ends, used in domestic furnaces, cupola furnaces, and acid tank linings.

flexural center

With reference to a beam, the flexural center of any section is that point in the plane of the section through which a transverse load, applied at that section, must act if bending deflection only is to be produced, with no twist of the section. Also called shear center. CF: [torsional center](#); elastic center; elastic axis. *Roark*

flexural slip

The slipping of sedimentary strata along bedding planes during folding. *AGI*

flexure

A general term for a fold, warp, or bend in rock strata. A flexure may be broad and open, or small and closely compressed. CF: [monocline](#) Syn: [hinge](#)

flexure correction

A correction necessary in pendulum observations of gravity. The vibrating pendulum produces oscillations of the receiver case, of the pillar, and of the surface soil. Rather complex, coupled vibration phenomena arise and the period of the pendulum itself changes. Numerous methods have been suggested to correct for this influence or to eliminate it. Since the correction is of the order of 10×10^{-7} to 40×10^{-7} s on solid rock or cement and may increase to as much as 500×10^{-7} s on marshy ground, it must be determined accurately. *AGI*

flexure-slip fold

A flexure fold in that the mechanism of folding is slip along bedding planes or along surfaces of foliation. There is no change in thickness of individual strata, and the resultant folds are parallel. *AGI*

flight

a. The metal strap or crossbar attached to the drag chain of a chain-and-flight conveyor. *Jones, I* b. A term sometimes applied to one conveyor in a tandem series.

flight conveyor

A type of conveyor comprising one or more endless propelling media, such as chain, to which flights are attached and a trough through which material is pushed by the flights. See also: [grit collector](#); underground mine conveyor. Syn: [bar flight conveyor](#)

flight line

A line drawn on a map or chart to represent the planned or actual track of an aircraft during the taking of aerial photographs. *AGI*

flight pattern

In an aeromagnetic survey or in another airborne geophysical survey, the planned flying route used. *AGI*

flinders diamond

A Tasmanian term for a variety of topaz. *Fay*

flint

a. A term that has been considered as a mineral name for a massive, very hard, somewhat impure variety of chalcedony (minute crystals of quartz with submicroscopic pores). It is

usually black or of various shades of gray, breaking with a conchoidal fracture, and striking fire with steel. Mohs hardness, 7; and sp gr, 2.65. Syn: [firestone](#) b. Pulverized quartz of any type; e.g., "potters' flint" made by pulverizing flint pebbles into powder. c. A term that is widely used as a syn. of chert or for a homogeneous, dark gray or black variety of chert.

flint clay

A smooth, flintlike refractory clay rock composed dominantly of kaolin, which breaks with a pronounced conchoidal fracture and resists slaking in water. It becomes plastic upon prolonged grinding in water, as in an industrial wet-pan unit. *AGI*

flint mill

A device, formerly used to provide light for miners at work, in which flints on a revolving wheel produce a shower of sparks incapable of igniting combustible gases. See also: [steel mill](#)

Flintshire furnace

A reverberatory furnace with a depression, well, or crucible in the middle of the side of the hearth; used for the roasting and reaction process on lead ores. *Fay*

Flintshire process

Method of smelting galena concentrates in a reverberatory furnace with a crucible well in its hearth. *Pryor, 3*

flinty crush rock

See: [ultramylonite](#)

flinty slate

A touchstone consisting of siliceous slate. *AGI*

flipping turn

System of pulleys incorporated in the return-side tracking of a belt conveyor, which turns it through 180 degrees, so that any adherent abrasives do not come in contact with idler pulleys. *Pryor, 3*

flitching

a. Widening of underground roadway by removing rock from sides. *Pryor, 3* b. The working of 2 to 5 yd (1.8 to 4.6 m) or more of the rib side coal in a narrow stall or heading. See also: [skipping](#)

flitter

Collier who moves a coal cutter to a new working place; to flit is to shift equipment. *Pryor, 3*

flitting wagon

A low truck or trolley used in pillar methods of working to transport face machines from one heading or bord to another. *Nelson*

float

a. A general term for loose fragments of ore or rock, esp. on a hillside below an outcropping ledge or vein. Syn: [floaters](#) float ore. b. Fine gold that floats in panning and other operations and is lost. *von Bernewitz* c. A timber platform, faced with boiler iron on both sides, and provided with rings at the corners for lifting. It is used in shaft work to prevent the crushing of the bottom timbers by flying fragments of rock. *Stauffer* d. The tendency of the bit in a flat-angle borehole to follow an increasingly flat course as the depth of the borehole increases. *Long* e. In mineral concentration, the response of a specific mineral to the flotation process. *Pryor, 3* f. The fine dust that does not settle out of the air current in the grinding mills but is filtered out by fine cloth bags. Also, the fine dust collecting on the roof and timbers in a mine. g. Metal particles so fine that they float on the surface of water in crushing or washing, as float gold. h. Various forms of ball-and-seat valves commonly inserted in casing and rod strings in such a manner as to keep drilling fluid out of the casing or rod string when lowered into a borehole. Also called float valve. *Long* i. To lift a material by the buoyant action of a strong current or flow of a liquid medium; also, that material buoyant enough to float on the surface of a liquid medium. *Long* j. The buoyant part of an apparatus for indicating the height of water in a steam boiler or of liquid in a tank.

floatability

In mineral concentration, word used in connection with response of a specific mineral to flotation process. *Pryor, 3*

float-and-sink analysis

Use of a series of heavy liquids diminishing (or increasing) in density by accurately controlled stages for the purpose of dividing a sample of crushed coal into gravimetric fractions either equal-settling or equal-floating at each stage. The floats at a given specific gravity are defined as the percentage floating at that density and the sinks have a

defined higher density. Each product (minus one density and plus another) is analyzed after weighing and the ash sulfur and Btu content is found. From this testing, a washability curve is drawn that relates density with ash sulfur and Btu content, in the form of cumulative float, sink, and specific gravity curves. The ash curve plots ash against density for successive fractions. The densimetric curve plots specific gravity against cumulative weight. The Mayer curve (M-curve) plots cumulative weight against that of a constituent (e.g., ash). *Pryor, 3*

float coal

Small, irregularly shaped isolated deposits of coal imbedded in sandstone or in siltstone. They appear to have been removed from the original bed by washout during the peat stage and to have been carried a short distance and redeposited. Syn: [raft](#)

float copper

Fine scales of metallic copper that do not readily settle in water.

float dust

Fine particles of coal suspended in the air.

floater

A single fragment of float. See also: [float](#)

float gold

Particles of gold so small and thin that they float on water and may be carried off by it.

floating

Said of large particles in a sedimentary rock that are not in contact with each other and are contained in a fine-grained matrix; e.g., quartz grains disseminated in limestone.

floating cable

In seismic operations in a watercovered area, a cable connecting geophones suspended by floats. *AGI*

floating cone

A method of designing optimum extraction sequences for an open pit mine. "Cones" of material are built using an ore block as a base and economic net value of the cone is calculated. The process is repeated for each ore block in a deposit, considering cone

overlaps. The term "floating" is derived from the "movement" of the cone throughout the model.

floating control system

As used in flotation, a system in that the rate of change of the manipulated variable is a continuous function of the actuating signal. *Fuerstenau*

floating pipeline

A pipe supported on pontoons that is used for removing spoil from a suction dredger. *Hammond*

floating reef

An isolated, displaced rock mass in alluvium. CF: [float](#)

floating strainer

A buoyant pump suction end that draws its water from near the surface of the free-water level and thus pumping almost clear water. Serves to decant. A floating strainer may be used in dealing with bodies of water other than in properly constructed sumps. *Nelson*

float mineral

Small fragments of any ore carried away from the ore bed by the action of water or by gravity alone, often leading to the discovery of mines; See also: [floater](#); [float ore](#); float. *Standard, 2*

float ore

Scattered fragments of vein material broken from outcrops and dispersed in soil; a type of float. See also: [float](#); [float mineral](#); [shode](#). *AGI*

floats

Fractions with a defined upper limit of specific gravity and so described; e.g., floats, sp gr, 1.40. *BS, 5*

floatstone

a. A miners' term for cellular or honeycomb quartz detached from a lode. b. A lightweight, porous, friable variety of opal that floats on water and occurs in white or grayish, spongy, and concretionary or tuberous masses; also spelled float stone. Syn: [swimming stone](#) c. A carbonate rock containing a few bioclasts or other fragments more

than 2 mm in diameter, widely spaced, and embedded in sand- or mud-size carbonate sediment that forms over 90% of a rock.

float sulfur

See: [flake sulfur](#)

float valve

a. Syn. for a ball-and-seat type apparatus inserted in a pipe, casing, or drill-rod string being lowered into a borehole. See also: [float](#) *Long* b. A valve operated by a float. *Long*

floc

a. A loose, open-structured mass formed in a suspension by the aggregation of minute (colloidal) particles. *ASCE* b. A small aggregate of tiny sedimentary grains. *AGI* c. A flocculent mass formed by the aggregation of a number of fine suspended particles. Syn: [floccule](#)

flocculate

a. To cause particles to aggregate in large particles. Usually accomplished with polymer, both natural or synthetic. *Webster 3rd* b. To thicken a clay suspension by addition of synthetic polymer. c. The addition of a suitable electrolyte to a clay suspension to cause the clay particles to agglomerate and settle. d. Something that has flocculated; a flocculent particle or mass; a floc; a floccule. *Webster 3rd*

flocculating

a. The thickening of the consistency of a slip by adding a suitable electrolyte. *ASTM* b. The agglomeration of clay particles in a clay suspension by adding an electrolyte.

flocculating agent

A reagent added to a dispersion of solids in a liquid to bring together the fine particles to form flocs. These reagents usually consist of long chain polymers, both natural and synthetic. *BS, 5*

flocculation

The process by which a number of individual, minute suspended particles are tightly held together in clotlike masses, or are loosely aggregated or precipitated into small lumps, clusters, or granules; e.g., the joining of soil colloids into a small group of soil particles, or the deposition or settling out of suspension of clay particles in salt water. See also: [coagulation](#); [floc](#). *AGI*

floccule

A small, loosely aggregated mass of material suspended in or precipitated from a liquid. One of the flakes of a flocculent precipitate. Syn: [floc](#) *Webster 3rd*

flocculent

Coalescing and adhering in flocks. A cloudlike mass of precipitate in a solution. From the Latin floccus, meaning lock of wool.

flocculent deposit

An aggregate or precipitate of small lumps formed by chemical precipitation. *Hy*

flocculent structure

An arrangement composed of flocs of soil particles instead of individual soil particles. See also: [soil structure](#); [honeycomb structure](#); single-grained structure. *ASCE*

Flodin process

A direct process for manufacturing steel, by means of which iron with a carbon content from 0.2% upwards can be produced by smelting, in a specially constructed electrical furnace, a mixture of hematite and coal, or charcoal, the process being continuous. The reduced metal accumulates at the bottom of the furnace, from which it is tapped. Both sulfur and phosphorus are reduced to a low figure without additional refining, while the manganese and silicon contents are controlled in the same way as in the ordinary open-hearth process. *Osborne*

floe rock

Rock occurring in or taken from a body of talus; usually refers to ganister. *ARI*

flohmgig amber

See: [fatty amber](#)

floocan

See: [flucan](#)

flood basalt

See: [plateau basalt](#)

floodgate

a. A gate for shutting out, admitting, releasing, or otherwise regulating a body of water, such as excess water in times of flood; specif. the lower gate of a lock. See also: [sluice](#) b. A stream stopped by or allowed to pass by a floodgate. *AGI*

flood plain

The surface or strip of relatively smooth land adjacent to a river channel, constructed by the present river in its existing regimen and covered with water when the river overflows its banks. It is built of alluvium carried by the river during floods and deposited in the sluggish water beyond the influence of the swiftest current. *AGI*

flookan

See: [flucan](#)

floor

a. The rock underlying a stratified or nearly horizontal ore deposit, corresponding to the footwall of more steeply dipping deposits. b. The bottom of a coal seam or any other mineral deposit. CF: [roof](#) *Arkell* c. Plank-covered, or steel-mesh-covered, level work area at the base of a drill tripod or derrick around the collar of a borehole in front of the drill. See also: [platform](#) d. Loose plank laid parallel with rock drift at the heading before blasting a round of holes to facilitate the loading of broken rock. e. A horizontal, flat orebody. f. The bed or bottom of the ocean. A comparatively level valley bottom; any low-lying ground surface. *AGI* g. That part of any underground gallery upon which a person walks or upon which a tramway is laid. h. A plank platform underground. i. The upper surface of the stratum underlying a coal seam. *CTD*

floor break

The break or crack that separates a block of stone from the quarry floor. Also called floor cut. *Hess*

floor burst

A type of outburst generally occurring in longwall faces and preceded by heavy weighting due to floor lift. Gas that evolved below the seam seems to collect beneath an impervious layer of rock, and a gas blister forms beneath the face, giving the observed floor lift. Later, the floor fractures and the combustible gases escape into the mine atmosphere. See also: [outburst](#)

floor cut

a. A machine cut made in the floor dirt immediately below the coal seam. See also: [undercutting](#); [bottom cut](#). *Nelson* b. A cut by means of which a block of stone is separated from the quarry floor. See also: [floor break](#)

floor lift

The upward heave of the floor beds after a coal seam has been extracted. See also: [creep](#)

floor sill

A large timber laid flat on the ground or in a level, shallow ditch to which are fastened the drill-platform boards or planking. *Long*

floor station

A survey station secured in the floor of a mine roadway or working face. *BS, 7*

flop gate

An automatic gate used in placer mining when there is a shortage of water. This gate closes a reservoir until it is filled with water, when it automatically opens and allows the water to flow into the sluices. When the reservoir is empty the gate closes, and the operation is repeated. See also: [boomer](#)

flora

The entire plant population of a given area, environment, formation, or time span. CF: [fauna](#)

florencite

A trigonal mineral, $(\text{La,Nd,Ce})\text{Al}_3(\text{PO}_4)_2(\text{OH})_6$; crandallite group; further speciated according to which rare-earth element predominates; weakly radioactive; pale yellow; in schists, carbonatites, pegmatites, and placer sands.

florspar

See: [fluorite](#)

flos ferri

An arborescent variety of aragonite occurring in delicate white coralloid masses that commonly encrust hematite, forming picturesque snow-white pendants and branches.

floss

White cast iron for converting into steel. *Webster 2nd*

floss hole

a. A small door provided at the bottom of a flue or chimney for ash removal. *Osborne* b. A tap hole. *Fay*

flot

a. Ore lying between the beds or at certain definite horizons in the strata. *Arkell* b. Eng. Veins that branch off laterally, Alston Moor lead mines. *Arkell*

flotation

a. See: [froth flotation](#) of reagents floats some finely crushed minerals, whereas other minerals sink. Formerly the term flotation with descriptive adjectives was used for all processes of concentration in which levitation in water of particles heavier than water was obtained. Thus, if some particles were retained in an oil layer or at the interface between an oil layer and a water layer, the process was spoken of as bulk-oil flotation; if the particles were retained at a free water surface as a layer one particle deep, the process was skin flotation; and if the particles were retained in a foamy layer several inches thick, the process was froth flotation. Froth flotation is the process that has survived the test of time, and the term flotation is now used universally to describe froth flotation. See also: [bulk oil flotation](#); [film flotation](#); [selective flotation](#); skin flotation. Syn: [flotation process](#)

flotation agent

A substance or chemical that alters the surface tension of water or that makes it froth easily. See also: [surface activity](#); [depressant](#). *Nelson*

flotation cell

Appliance in which froth flotation of ores is performed. It has provision for receiving conditioned pulp, aerating this pulp and for separate discharge of the resulting mineralized froth and impoverished tailings. Types of cell include (1) agitation (impeller, and splashing, now obsolete); (2) pneumatic (in which air blown in agitates pulp), such as Hallimond laboratory cell, Callow, McIntosh, Forrester, Southwestern, and Britannia; (3) vacuum cells (Elmore and Clemens, obsolescent); (4) subaeration with mechanized stirring and pressure-input air (M.S. cell, Agitair); (5) subaeration, self-aerating mechanized cell (Fagergren, Denver, M.S.S.A., Humboldt, Boliden, K.B., etc.) *Pryor, 3*

flotation conditioning time

In ore processing, the period during which pulp is agitated with a given chemical, or combination of chemicals, in the series of conditioning operations that precede separation of various minerals in the ore by froth flotation. *Pryor, 1*

flotation middlings

Intermediate flotation products that may be re-treated. *BS, 5*

flotation of crystals

See: [crystal flotation](#)

flotation oil

Oil, such as creosote oil, pine oil, or turpentine. Used to wet a particular component of a powdered material and cause it to concentrate in an airy froth. *Bennett*

flotation plane

Plane of a liquid surface in which a body floats. *Hess*

flotation process

See: [flotation](#); oil flotation.

flotation reagent

Any of several reagents used in the froth flotation process. They include pH regulators, slime dispersants, resurfacing agents, wetting agents, conditioning agents, collectors, and frothers. *Pryor, 3*

flotation regulator

An acid or an alkali used to control the pH of flotation solutions. *Bennett*

flotation time

The time necessary to make the separation into concentrate and tailing depends on such factors as particle size and reagents used, and must be known for determination of the size and number of flotation cells in the plant. *Fuerstenau*

Flotol

A synthetic reagent of the general nature of pine oil; used as frother in flotation process. *Pryor, 3*

flour agate

a. Any moss agate. b. A term applied to any moss agate or mocha stone with flowerlike markings. c. Translucent chalcedony from Oregon containing inclusions of minerals, some red, brown, or yellow and green, arranged in flowerlike forms, commonly both red and green.

flour copper

Very fine scaly native copper that floats on water and is very difficult to save in milling. See also: [float copper](#)

floured

The finely granulated condition of quicksilver, produced to a greater or lesser extent by its agitation during the amalgamation process. The coating of quicksilver with what appears to be a thin film of some sulfide, so that when it is separated into globules these refuse to reunite. Also called flouring. See: [sickening](#)

flour gold

See: [float gold](#)

flour gypsum

See: [gypsum](#)

flour salt

Very fine-grained vacuum pan salt. *Kaufmann*

floury alumina

Fine-grained, highly calcined, powdery textured alumina; also dusty, easily airborne. Traditionally produced by European Bayer plants.

flow

a. The plastic deformation of solids: flowage; solid flow; rock flowage; plastic flow. CF: [fracture](#) b. That which flows or results from flowing. A mass of matter moving, or that has moved in a stream, such as a lava flow. Syn: [current](#) *Fay* c. The movement of a fluid, such as air, water, or magma (lava). *AGI* d. A tabular-shaped body of lava that consolidated from magma on the surface of the Earth. *AGI* e. In ceramics, the flux used to cause color to run and blend in firing. *Fay* f. A mass movement of unconsolidated material that exhibits a continuity of motion and a plastic or semifluid behavior

resembling that of a viscous fluid; e.g., creep; solifluction; earthflow; mudflow; debris flow; sturzstrom. Water is usually required for most types of flow movement. *AGI* g. The mass of material moved by a flow. The smallest formal lithostratigraphic unit of volcanic flow rocks. A flow is a discrete, extrusive, volcanic body distinguishable by texture, composition, order of superposition, paleomagnetism, or other objective criteria. It is part of a member and thus is equivalent in rank to a bed or beds of sedimentary-rock classification. Many flows are informal units. Designation of flows as formal units should be limited to those that are distinctive and widespread. *AGI*

flowage

See: [flow](#)

flowage differentiation

a. The retarding effect produced by walls on the movement under the influence of pressure of a mush of crystals in a magmatic liquid, which may give rise to magmatic differentiation and also to the concentration of ore minerals. *Schieferdecker* b. The tendency of suspended crystals to concentrate in the high-velocity zone of a magma that is moving by laminar flow. *AGI*

flowage fold

A minor fold that is the result of the flowage of rocks toward a synclinal axis, toward which the minor folds are overturned.

flowage structure

See: [flow structure](#)

flow banding

A structure of igneous rocks that is esp. common in silicic lava flows. It results from movement or flow, and is an alternation of mineralogically unlike layers.

flow breccia

A breccia that is formed contemporaneously with the movement of a lava flow; the cooling crust becomes fragmented while the flow is still in motion. *AGI*

flow characteristic

The rate at which a metal powder will flow through an orifice in a standard instrument, and/or according to a specified procedure. *Rolfe*

flow cleavage

A syn. of slaty cleavage, so called because of the assumption that recrystallization of the platy minerals is accompanied by rock flowage. CF: [fracture cleavage](#)

flower of iron

See: [flos ferri](#)

flowers of sulfur

A light-yellow, pulverulent modification of sulfur formed when sulfur vapor is condensed. *Standard, 2*

flow folding

Folding in incompetent beds that offer so little resistance to deformation that they assume any shape impressed upon them by the more rigid rocks surrounding them or by the general stress pattern of the deformed zone. CF: [ptygmatic folding](#)

flow gneiss

A gneiss with a structure produced by flowage in an igneous mass before complete solidification.

flow gradient

A drainageway slope determined by the elevation and distance of the inlet and outlet, and by required volume and velocity. *Nichols, 1*

flowing film concentration

In metallurgy, a concentration based on the fact that liquid films in laminar flow possess a velocity that is not the same in all depths of the film. There is no flow at the bottom but maximum at or very near the top resulting from the internal friction of one layer upon another. By this principle, lighter particles are washed off while the heavier particles accumulate and are intermittently removed. This is basis of the stationary table, which has been known for thousands of years. Vanners and round tables have been developed from this basic principle, whereas bumping and shaking tables jointly utilize flowing film and other principles. *Gaudin, 1*

flow layer

An igneous-rock layer, differing mineralogically or structurally from the adjacent layers, which was produced by flowage before the complete solidification of the magma. CF: [flow line](#); [schlieren](#).

flow line

A lineation of crystals, mineral streaks, or inclusions in an igneous rock, indicating the direction of flow before consolidation. CF: [flow layer](#)

flowmeter

a. A device installed in a drilling-fluid circulation system that registers the number of gallons (liters) of liquid circulated per minute and also indicates when the flow past the bit ceases. *Long* b. A device which registers rate of flow, and perhaps quantity, of gases, liquids, and fluid pulps. Used in mineral dressing to measure rates and quantities of pregnant solutions in cyanide and to control liquid additions to pulps. *Pryor, 3*

flow rate

Weight of dry air flowing per unit time. Measured in kilograms per second. *Hartman, 2*

flow roll

A rounded, pillowlike body or mass of sandstone occurring within or just above finer-grained sediment or commonly within the basal part of a sandstone overlying shale or mudstone. Its shape approaches that of an elongate, flattened ellipsoid (short axis more or less vertical), and is presumed to have formed by deformation, such as by large-scale load casting or mud flowage accompanied by subaqueous slump or foundering of sand channels. *AGI*

flowsheet

A diagram showing the progress of material through a preparation or treatment plant. It shows the crushing, screening, cleaning, or refining processes to which the material is subjected from the run-of-mine state to the clean and sized products. The size range at the various stages may also be shown. *Nelson*

flow stretching

The orientation and possible deformation of crystals with their long axes in the direction of plastic flow in metamorphic rocks.

flow structure

a. A structure of igneous rocks, generally but not necessarily volcanic rocks, in which the stream lines or flow lines of the magma are revealed (1) by alternating bands or layers of differing composition, crystallinity, or texture, or (2) by subparallel arrangement of prismatic or tabular crystals. Syn: [flow texture](#); [fluidal structure](#); fluxion structure. b. A primary sedimentary structure resulting from subaqueous slump or flow. *AGI*

flow texture

See: [flow structure](#); fluidal texture.

flow unit

One of the nearly contemporaneous subdivisions of a lava flow (usually basaltic) that consists of two or more parts that were poured one over the other during the course of a single eruption.

F.L.P.

In Great Britain, tests of every type of apparatus are made in explosive atmospheres before it is approved and allowed to use the official letters F.L.P. (flameproof). *Mason*

flucan

A narrow band of crushed rock or clayey material found along a fault zone or vein of ore. See also: [breccia](#); [gouge](#); [selvage](#); [pug](#). Also spelled fluccan; flookan; flukan; floocan. *Nelson*

flue

a. S. Wales. A furnace, such as a large coal fire at or near the bottom of an upcast shaft for producing a current of air for ventilating the mine. *Fay* b. A tube or passageway in a steam boiler for hot gases or water (depending on whether the boiler is a fire-tube or water-tube boiler). c. A passage or channel through which the products of combustion of a boiler or other furnace are taken to the chimney. *CTD* d. Lanc. Shale. *Arkell*

flue dust

Dust passing into the flues of a smelter or metallurgical furnace and which, unless caught, passes out into the atmosphere. It is composed of particles of unchanged or oxidized ore, volatilized lead that has been converted into oxide, carbonate and sulfate ash, fuel, and volatilized products of arsenic, zinc, bismuth, etc. *Hess*

fluellite

An orthorhombic mineral, $\text{Al}_2(\text{PO}_4)_2(\text{OH}) \cdot 7\text{H}_2\text{O}$; has one distinct cleavage; occurs with secondary iron phosphate minerals in pegmatites. Formerly called kreuzbergite.

fluid

a. The quality, state, or degree of being fluid: a liquid or gaseous state. CF: [gas](#) b. The physical property of a substance that enables it to flow and that is a measure of the rate at which it is deformed by a shearing stress, as contrasted with viscosity: the reciprocal of viscosity. *Webster 3rd* c. In mineral transport, the term is not confined to liquids and slurries, but is also used for finely divided solids that flow readily in air currents, fluosolids reactors, or through dry ball mills. *Pryor, 3*

fluidal structure

See: [flow structure](#)

fluidal texture

a. See: [flow texture](#) b. A metamorphic texture in which narrow stripes or lenticles of a mineral, present as grains approx. 0.01 mm in diameter, are connected with porphyroclasts of the same mineral and extend across regions in which another mineral shows a dominantly mosaic texture. This texture has been given a specific genetic connotation relating to superplasticity (Harte, 1977). *AGI*

fluid-bed reactor

A single or multi-stage reactor, generally used for gas-solid contacting, in which the solid component is a reactant or a catalyst and is in a continuous fluidized state. The gas is injected into the reactor to provide rapid and uniform mixing for reactants to facilitate heat transfer and completion of the reaction.

fluid column

The number of feet of drilling fluid standing in a borehole while the drill is operating and/or the number of feet of drilling fluid remaining in a borehole with the drill string withdrawn. *Long*

fluid conveyor coupling

A device for overcoming the starting resistance of a conveyor fed by a constant-speed motor. It is used to allow the motor to reach full speed before starting the conveyor. *Nelson*

fluid cut

See: [fluid wash](#)

fluid energy mill

A size-reduction unit depending for its action on collisions between the particles being ground, the energy being supplied by a compressed fluid, (e.g., air or steam) that enters the grinding chamber at high speed. Such mills will give a product of 5 μm or less; they have been used for the fine grinding of frits, kaolin, zircon, titania, and calcined alumina, but the energy consumed per ton of milled product is high. *Dodd*

fluid inclusion

A cavity, with or without negative crystal faces, containing one or two fluid phases, and possibly one or more minute crystals, in a host crystal. If two fluid phases are present, the vapor phase (bubble) may show Brownian motion. See also: [inclusion](#); [negative crystal](#).

fluidized bed dryer

A coal dryer that depends on a mass of particles being fluidized by passing a stream of hot air through it. As a result of the fluidization, intense turbulence is created in the mass, including a rapid drying action. The dry coal is withdrawn from the opposite side of the chamber. Fine particles in the feed become entrained in the air and are recovered in a cyclone, while the finest particles may need removal by dry filters or wet scrubbers. The dryer has a high capacity and many are in use in the United States. See also: [cascade coal dryer](#); [flash coal dryer](#); thermal drying. *Nelson*

fluidized roasting

Oxidation of finely ground ore minerals by means of upward currents of air, blown through a reaction vessel with sufficient force to cause the bed of material to become fluid. Reaction between mineral and air is maintained at a desired exothermic level by control of oxygen entry, by admission of cooling water, or by added fuel. Fluidized beds are used in the mineral industry for a number of concentrates, including copper, lead, zinc, and carbonaceous gold ores.

fluid lubricated

The core barrelhead bearings and/or other rotating members in a drill string cooled and lubricated by water or mud-laden fluid circulated as the drilling fluid. *Long*

fluid pressure

a. The force, expressed in pounds per square inch, exerted by the weight of the column of drilling fluid measured at any given depth in a borehole. CF: [bottom-hole pressure](#) b. The pressure exerted by fluid contained in rock. *AGI*

fluid ton

Thirty-two ft³ (0.9 m³) of fluid. A unit to correspond with the short ton of 2,000 lb (908 kg), and of sufficient accuracy for many hydrometallurgical, hydraulic, and other industrial purposes, it being assumed that the water or other liquid under consideration weighs 62.5 lb/ft³ (1,002.7 kg/m³). *Fay*

fluid volume

The amount of drilling fluid circulated through the drill string, generally expressed in gallons per minute. *Long*

fluid wash

The wearing away of core and parts of a drill string or bit exposed to the erosive forces of the rapid passage of the circulated drilling fluid. Also called fluid cut. *Long*

flukan

See: [flucan](#)

fluke

A rod used for cleaning drill holes before they are charged with explosives. *Fay*

fluken

a. Corn. See: [gouge clay](#) b. A crossvein composed of clay. *Arkell*

flume

a. An artificial inclined channel used for conveying water for industrial purposes, such as irrigation, transportation, mining, logging, or power production; or for diverting the water of a stream from its channel for the purpose of washing or dredging the sand and gravel in the dry bed or to aid in engineering construction. *AGI* b. An inclined channel, usually of wood and often supported on a trestle, for conveying water from a distance to be utilized for power, transportation, etc., as in placer mining, logging, etc. Syn: [sluice](#); race. c. To divert by a flume, such as the waters of a stream, in order to lay bare the auriferous sand and gravel forming the bed. CF: [ditch](#)

flumed

The transportation of solids by suspension or flotation in flowing water.

flummery

A smooth porcellanous rock resembling porridge in color and texture; Carboniferous limestone, Hunts quarry, Porthywaen, and Vale of Clwyd, north Wales. Also called flummery stone.

fluobaryt

A compact mixture of fluorite and barytes. *Hey, 1*

fluoborite

A hexagonal mineral, $Mg_3(BO_3)(F,OH)_3$; colorless; occurs as fibrous masses of small prisms in skarns and veinlets in massive franklinite ore at Sterling Hill, NJ; also at Norberg, Sweden; Nocera, Italy; and Broadford, Scotland. Formerly called nocerite.

fluocerite

A hexagonal mineral, $(Ce,La)F_3$; further speciated on the basis of the dominant rare-earth element; weakly radioactive; in pegmatites associated with gadolinite, allanite, and bastnaesite in the Front Ranges, CO.

fluometry

See: [fluorimetry](#)

fluor

a. The original spelling of fluorite; still used chiefly in Great Britain. b. A prefix to mineral names indicating that some or all of the hydroxyl radical in its composition has been replaced by fluoride; e.g., micas and amphiboles. See also: [fluorite](#); [fluormica](#).

fluoramphibole

Artificial amphibole with fluorine replacing the hydroxyl of hydroxyl amphibole.
English

fluorapatite

A hexagonal mineral, $Ca_5(PO_4)_3F$; apatite group; variably colored; commonly fluorescent or phosphorescent; defines 5 on the Mohs hardness scale; a common accessory mineral in igneous and metamorphic rocks, pegmatites, veins, and carbonate rocks; an ore of phosphate in phosphorites. Syn: [apatite](#)

fluoredenite

See: [fluoramphibole](#)

fluorene

An organic compound formed through the burning of pyritous shale in Bohemia, former Czechoslovakia. Later renamed kratochvilite. *Tomkeieff*

fluorescence

a. The emission of visible light by a substance exposed to ultraviolet light. It is a useful property in examining well cuttings for oil shows and in prospecting for some minerals. *AGI* b. The absorption of radiation at one wavelength, or a range of wavelengths, and its reemission as radiation of longer, visible wavelengths. c. A type of luminescence in which the emission of light ceases when the external stimulus ceases; also, the light so produced. *AGI* d. Quantized electromagnetic radiation as a material drops from a higher to a lower energy state. Fluorescence stops when the excitation energy stops. CF: [phosphorescence](#); [luminescence](#).

fluorescent

Having the property to produce fluorescence. *Long*

fluorescent lamp

a. Commonly and improperly designates an electric lamplike device emitting ultraviolet radiations or black light. CF: [black light, lamp](#) *Long* b. A glass globe or tube, the inner surface of which is coated with a fluorescent substance that produces visible light when excited by an electric current. *Long*

fluorescent penetrant inspection

A type of nondestructive testing wherein a penetrating type of oil or other liquid combined with fluorescent material particles is applied over a surface and flowed into cracks, crevices, or other surface defects or irregularities; the excess is then removed, and the article is examined under ultraviolet light. *Henderson*

fluorhectorite

A variety of hectorite in which fluorine partially replaces hydroxyl. CF: [montmorillonite](#); [smectite](#); [saponite](#).

fluoride

A mineral with fluorine as its chief anion.

fluorimetry

Method of analysis based on the intensity of fluorescence measured when using ultraviolet light. *Pryor, 3*

fluorine

A nonmetallic element, the lightest of the halogens; it is a pale yellow, corrosive gas, that is highly toxic. Symbol, F. It is the most electronegative and reactive of all the elements. Fluorine occurs chiefly in fluorite (CaF_2) and cryolite (Na_2AlF_6), but is widely distributed in other minerals. Used in producing uranium and many high-temperature plastics. *Handbook of Chemistry and Physics, 3*

fluorite

An isometric mineral, CaF_2 ; perfect octahedral cleavage; transparent to translucent; defines 4 on the Mohs hardness scale; in veins as a gangue mineral; in carbonate rocks; an accessory in igneous rocks. Syn: [fluorspar](#); fluor; [Derbyshire spar](#).

fluormica

A group name for the fluorite-rich micas, natural or artificial. See: [fluor](#)

fluorometer

A device for measuring the intensity of fluorescence. *Bennett*

fluoroscope

An instrument consisting of a fluorescent screen and a source of ionizing radiation. Used to examine the image formed by opaque objects placed in the beam. *ASM, 1*

fluoroscopy

An inspection procedure in which the radiographic image of the subject is viewed on a fluorescent screen; normally limited to low-density materials or to thin sections of metals because of the low-light output of the fluorescent screen at safe levels of radiation. *ASM, 1*

fluorphologopite

See: [fluor](#)

fluorspar

See: [fluorite](#)

fluortremolite

See: [fluor](#)

fluosolids system

A method of roasting, applied to finely divided material, in which air with sufficient strength is blown through a heated bed of mineral to keep it fluid, while reaction is controlled by continuous adjustment of rate of feed, cooling water, and added fuel (including oxygen in air). Train of appliances includes instrument controls, air compressor, dust-collecting cyclones, and feed pump. *Pryor, 3*

flush

a. To operate a placer mine, where the continuous supply of water is insufficient, by holding back the water and releasing it periodically in a flood. *Webster 3rd* b. To fill underground spaces, as in coal mines, with material carried by water, which after drainage forms a compact mass. *Webster 2nd* c. See: [hydraulic mine filling](#)

flushing

a. A drilling method in that water or some other thicker liquid, such as a mixture of water and clay, is driven into the borehole through the rod and bit. The water rises along the rod on its outer side, between the walls of the borehole and the rod, with such a velocity that the broken rock fragments are carried up by this water current (direct flushing). Alternatively, water enters the borehole around the rod and issues upwards through the rod (indirect flushing). *Stoces* b. In a colliery, diversion of ventilation to clear foul atmosphere (a dangerous method.) *Pryor, 3* c. See: [hydraulic stowing](#) d. In oil-well production, use of gravitated ground water to force oil or gas to the surface. *Pryor, 3*

flushing fluid

See: [flush](#)

flush-joint casing

Lengths (usually 10 ft or 3 m) of steel tubing provided with a box thread at one end and a matching pin thread on the opposite end. Coupled, the lengths form a continuous tube having uniform inside and outside diameters throughout its entire length. Syn: [casing](#)

flush water

Water used to assist the flow of materials in chutes or launders. CF: [top water](#)

flute

a. A groove parallel or nearly parallel to the axis of a cylindrical piece, such as the grooves of a split-ring core lifter or the grooves in a core-barrel stabilizer ring. Also applied to grooves or webs following a corkscrewlike course around the outside surface of a cylindrical object, like the spiraled webs on an auger stem or rod. *Long* b. A primary sedimentary structure, commonly seen as a flute cast, consisting of a discontinuous scoop-shaped or lobate depression or groove generally 2 to 10 cm in length, usually formed by the scouring action of a turbulent, sediment-laden current of water flowing over a muddy bottom, and having a steep or abrupt upcurrent end where the depth of the mark tends to be the greatest. Its long axis is generally parallel to the current. CF: [facet](#)

fluted core

Core, the outside surface of which is spirally grooved or fluted. Syn: [corkscrew core](#)

fluting

A peculiar method of surface decay by which granite or granite gneisses are left with a corrugated or fluted surface. In a large subangular fragment of granite, one side contains a dozen of these little channels, from 1 to 4 in (2.5 to 10.2 cm) deep and from 3 to 10 in (7.6 to 25.4 cm) apart from center to center. These channels run straight down the face of the rock. *AGI*

fluvial

a. Of or pertaining to a river or rivers. *AGI* b. Existing, growing, or living in or about a stream or river. *AGI* c. Produced by the action of a stream or river; e.g., sand and gravel deposits. Syn: [fluviate](#)

fluviate

See: [fluvial](#) action (e.g., fluviate dam, or fluviate sands) and for river life (e.g., fluviate fauna). *AGI*

fluvioglacial

See: [glaciofluvial](#)

fluvialacustrine

Of or pertaining to sedimentation partly in lake water and partly in streams, or to deposits laid down under alternating or overlapping lacustrine and fluvial conditions.

fluvio-terrestrial

Consisting of or pertaining to the land and its streams. *AGI*

flux

a. See: [fluxstone](#) b. To cause to become fluid; to treat with a flux, esp. to promote fusion; to become fluid. Syn: [flow](#) c. Any chemical or rock added to an ore to assist in its reduction by heat; e.g., limestone with iron ore in a blast furnace. d. In metal refining, a material used to remove undesirable substances; e.g., sand, ash, or dirt, as a molten mixture.

fluxed pellet

An iron-ore pellet made by mixing minor amounts of a ground flux (forsterite, calcite, dolomite, or lime) with the magnetite or hematite concentrate to decrease smelting times and coke consumption.

flux fusion

A method of growing refractory crystals; similar in many respects to crystallization for aqueous solutions, but the fluxes are salts with relatively high melting temperatures.

flux-gate magnetometer

An instrument used for detailed studies of the Earth's magnetic field on a local basis that uses the flux-gate, which consists of two identical saturable cores of high permeability, with identical, but oppositely wound, coils. An alternating current in these coils magnetizes them first with one polarity, then in the opposite sense. If an additional field is present, such as the Earth's field, it will add to the flux in one coil while decreasing that in the other, resulting in different voltage drops across the two coils. This difference is proportional to the unvarying field, which can be measured by noting the average voltage difference between the two halves of the flux gate. In use, a part of the Earth's field is balanced out by an additional winding surrounding both cores and carrying direct current. In airborne use, the recording flux gate is kept aligned with the magnetic field by the use of two additional flux gates. When these are at right angles to the Earth's field, they generate no voltage, but if they depart from this position, they can generate voltages which operate motors returning them to proper alignment. In this fashion, the recording element is held always parallel to the total field. *Hunt*

fluxing

Fusion or melting of a substance as a result of chemical action. *Harbison-Walker*

fluxing lime

Lump or pebble quicklime used for fluxing in steel manufacture. The term may be applied more broadly to include fluxing of nonferrous metals and glass. It is a type of chemical lime. *Boynton*

fluxing ore

An ore containing an appreciable amount of valuable metal, but smelted mainly because it contains fluxing agents that are required in the reduction of richer ores. *Weed, 2*

fluxing stone

Consists of pure limestone or sometimes dolomite and is used in iron blast furnaces and foundries. Usually material below 2 in (5.1 cm) in diameter is eliminated. The most desirable size is between 4 in and 6 in (10 cm and 15 cm). *USBM, 7*

fluxion banding

Banding in rock consisting of flow layers.

fluxion structure

See: [flow structure](#)

flux spoon

A small ladle for dipping up a sample of molten metal for testing. *Fay*

fluxstone

a. Limestone, dolomite, or other rock or mineral used in metallurgical processes to lower the fusion temperature of the ore, combine with impurities, and make a fluid slag. Syn: [flux](#) b. Crushed limestone or dolomite used as a flux in the smelting of iron ore. c. In iron-ore pelletizing, a mixture of ground limestone and dolomite added to the iron ore before the concentrate is rolled into green balls and fired at 1,315 degrees C in a pelletizing furnace. Also spelled fluxing stone; flux stone.

fly gate

a. An opening in a chute that can be opened or closed at will. In a chute for coal, a fly gate may be inserted so that if rock is deposited in the chute, it may be trapped out by opening the fly gate. *Zern* b. An opening or bypass in a chute or hopper that can be

opened or closed at will for diverting ore, rock, or coal from one bin or conveyor to another. Sometimes called "to fly."

Flygt pump

A submersible pump developed in Sweden.

flying cradle

Eng. See: [cradle](#)

flying reef

Aust. A broken, discontinuous, irregular vein.

flying veins

A pattern of mineral-deposit veins overlapping and intersecting in a branchlike pattern.
AGI

flyrock

Rocks propelled from the blast area by the force of an explosion. See also: [throw](#)

flysch

a. A marine sedimentary facies characterized by a thick sequence of poorly fossiliferous, thinly bedded, graded deposits composed chiefly of marls, sandy and calcareous shales, and muds, rhythmically interbedded with conglomerates, coarse sandstones, and graywackes. *AGI* b. An extensive, preorogenic sedimentary formation representing the totality of the facies deposited in different troughs, by rapid erosion of an adjacent and rising mountain belt at a time directly previous to the main paroxysmal (diastrophic) phase of the orogeny; specif., the Flysch strata of late Cretaceous to Oligocene age along the borders of the Alps, deposited before the main phase (Miocene) of the Alpine orogeny. *AGI* c. A term that has been loosely applied to any sediment with most of the lithologic and stratigraphic characteristics of a flysch, such as almost any turbidite. Ethymol. dialectal term of German origin used in Switzerland for a crumbly or fissile material that slides or flows. CF: [molasse](#)

flywheel

A heavy wheel used in a rotating system to reduce surges of power input or demand by storing and releasing kinetic energy as it changes its rate of rotation. *Pryor, 3*

foam drilling

A method of dust suppression in which thick foam is forced through the drill by means of compressed air and the foam and dust mixture emerges from the mouth of the hole in the form of a thick sludge. With this method the amount of dust dispersed into the atmosphere is almost negligible and the amount of water used is about 1 gal/h (3.8 L/h). Approx. 30 to 50 ft (9 to 15 m) of drilling can be done with one filling of the unit.

Mason

foaming agent

A material that tends to stabilize a foam. See: [frothing agent](#) *ASM, 1*

foaming earth

Soft or earthy apphrite. See also: [earth foam](#)

foam injection

The injection of foam into shotholes and connecting breaks to displace any combustible gases present and to minimize further combustible gases emission into the shotholes, thereby reducing the risk of ignition of the gas during shot firing. *BS, 12*

foam plug

A secondary method of fighting underground fires, developed in Great Britain in 1956. It consists of filling the fire area with soap bubbles which are moved forward by the air current. The foam is produced by passing the air current through a cotton net, saturated with a dilute solution of detergent, which is stretched across the mine roadway. The air passing through the net forms bubbles 1/2 to 1-1/2 in (1.3 to 3.8 cm) in diameter which honeycomb and form a plug of foam that tends to quench the fire and reduce its temperature to a point where it can be attacked directly and without protective clothing. See also: [high-expansion foam](#) *Nelson*

foam spar

See: [aphrite](#)

foamy amber

Frothy amber. Almost opaque chalky white amber. Will not take a polish.

f.o.b.

See: [free on board](#)

focal sphere

An arbitrary reference sphere drawn about the hypocenter or focus of an earthquake, to which body waves recorded at the Earth's surface are projected for studies of earthquake mechanisms. *AGI*

focus

a. The initial rupture point of an earthquake, where strain energy is first converted to elastic wave energy; the point within the Earth which is the center of an earthquake. Syn: [hypocenter](#) b. The point at which rays of light converge to form an image after passing through a lens or optical system or after reflection by a mirror. *AGI*

focused logging device

Logging device designed to focus lines of current flow. *Wyllie*

fodder

Eight pigs of cast iron. *Webster 2nd*

fog quenching

Quenching in a fine vapor or mist. *ASM, 1*

foid

A term proposed by Johannsen; derived by contracting the word feldspathoid; used in his classification of igneous rocks to indicate one of the feldspathoidal group of minerals. CF: [feldspathoid](#)

foig

A crack or a break in the roof. *CTD*

fold

a. A curve or bend of a planar structure such as rock strata, bedding planes, foliation, or cleavage. A fold is usually a product of deformation, although its definition is descriptive and not genetic and may include primary structures. CF: [anticline](#); [syncline](#); [monocline](#). *AGI* b. In crystallography, refers to the number of repetitions about a crystallographic axis to return to identity; i.e., equal to a complete rotation of 360 degrees. Modern usage refers to a six-fold axis as a hexad, a four-fold axis as a tetrad, three-fold as triad, two-fold as diad, and one-fold as monad.

fold axis

See: [axis](#)

fold breccia

A local tectonic breccia composed of angular fragments resulting from the sharp folding of thin-bedded, brittle rock layers between which are incompetent ductile beds; e.g., a breccia formed where interbedded chert and shale are sharply folded. CF: [tectonic breccia](#)

fold fault

A fault formed in causal connection with folding.

folding

The formation of folds in rocks. *AGI*

fold mountain

A mountain resulting chiefly from large-scale folding of the Earth's crust.

fold system

A group of folds showing common characteristics and trends and presumably of common origin.

folia

Thin, leaflike layers or laminae; specif., those of gneissic or schistose rocks. Singular form is folium. *AGI*

foliate

A general term for any foliated rock. Adj. of foliation.

foliated

Adj. of foliation.

foliation

A general term for a planar arrangement of textural or structural features in any type of rock; esp., the planar structure that results from flattening of the constituent grains of a metamorphic rock. Adj. foliate; foliated. CF: [schistosity](#)

follower chart

A table showing (1) the size of casing or pipe that should be placed in a borehole drilled with a specific-size bit and (2) which sizes of casing or pipe can be nested inside each other. *Long*

follower rail

The follower rail of a mine switch is the rail on the other side of the turnout corresponding to the lead rail. *Kiser*

following dirt

A thin bed of unconsolidated dirt; a parting between the top of coal seam and the roof. See also: [pug](#)

followup tag

The cardboard tag placed in the cartons, boxes, or cases of blasting supplies; used for identifying the date and place of manufacture. *Fay*

Follsain process

A method for the sintering of the raw materials for the burden of blast furnaces in which continuous sintering is carried out in a rotating tube furnace; at the discharge end a special tuyere is arranged comprising two concentric close-ended tubes parallel to the furnace axis, the outer tube having one nozzle near its closed extremity, the other having a number of nozzles protruding through the outer tube. The inner tube supplies air heated to 650 to 800 degrees C; the outer one carries cold air, which keeps the inner tube from softening and becoming deformed and itself becomes somewhat heated by the time it emerges from the nozzle. These jets are directed upon the material to be sintered. The fine iron-bearing material is mixed with a proportion of fuel; under the intensive action of the hot air blast, the fuel raises the temperature of the mixture sufficiently for sintering to occur, whereupon the material is discharged from the furnace. *Osborne*

fool's gold

See: [pyrite](#)

foot

a. The bottom of a slope, grade, or declivity. The lower part of any elevated landform; e.g., the foot of a hill, the foot of a mountain, etc. *AGI* b. The lower bend of a fold or structural terrace. CF: [head](#) Syn: [lower break](#) c. See: [footwall](#) d. The foot is 12 in (30.5 cm) in length on the vein, including its entire width, whether 6 in (15.2 cm) or 60 ft (18.3

m), and its whole depth down toward the Earth's center. *Standard*, 2 e. Corn. An ancient measure containing 2 gal or 60 lb of black tin. f. That portion of the displaced material of a landslide that lies downslope from the toe of the surface of rupture (Varnes, 1978).

AGI

foot-acre

See: [acre-foot](#)

footage block

See: [marker block](#)

footage per bit

The average number of feet of borehole specific types of drill bits can be expected to drill in a certain rock before the bit becomes dulled and is replaced, discarded, resharpened, or reset. *Long*

foot clamp

See: [safety clamp](#)

footeite

See: [connellite](#)

foot hole

Any of the holes cut in the sides of shafts or winzes to enable miners to ascend and descend. *Zern*

footing

a. A relatively shallow foundation by which concentrated loads of a structure are distributed directly to the supporting soil or rock through an enlargement of the base of a column or wall. Its ratio of base width to depth of foundation commonly exceeds unity. CF: [pier](#) b. The characteristics of the material directly beneath the base of a drill tripod, a derrick, or mast uprights. Also, the material placed under such members to produce a firm base on which they may be set. *Long*

footman

In salt production, a laborer who adjusts the height of the gate in the chute leading from the crusher by means of a lever, to regulate flow of crushed rock salt into vibrating screens that separate salt into various sizes prior to shipment or refining. *DOT*

footmark

See: [marker block](#)

foot rod

Scot. An iron rod at the foot of pump rods to which the bucket is attached. *Fay*

footwall

a. The underlying side of a fault, orebody, or mine working; esp. the wall rock beneath an inclined vein or fault. Syn: [heading wall](#); [heading side](#); lower plate; foot. CF: [hanging wall](#) *AGI* b. The wall or rock under a vein. It is called the floor in bedded deposits. c. Opposite wall from hanging wall. d. S. Afr. The wall on the lower side of a reef, lode, or fault. e. Can. The underside of a vein or lens in relation to the dip of an ore deposit. f. In metal mining, the part of the country rock that lies below the ore deposit.

footwall of a fault

The lower wall of an inclined fault plane. *Ballard*

footwall shaft

See: [underlay shaft](#)

foot-yard

In Pennsylvania, a miner's measurement of length, such as the distance a working face is advanced. With the heel of one foot on a mark, a short step is taken and the tip of the forward toe marks the foot-yard. The next measurement is taken by placing the first foot against the toe of the second and repeating the first step and so on. The foreperson checks measurements with a rule. *Hess*

Foraky boring method

A percussive boring system comprising a closed-in derrick over the crown pulley of which a steel rope is passed from its containing drum. The boring tools are suspended from the end of the rope and are moved in the hole as required by means of the drum. A walking beam, operated by a driving mechanism, gives the boring tools a rapid vibrational motion. *Nelson*

Foraky freezing process

One of the original freezing methods of shaft sinking through heavily watered sands. Although the principle is the same today, the process has been improved in many respects. See also: [freezing method](#) *Nelson*

foram

See: [foraminifer](#)

foraminifer

Any protozoan belonging to the subclass Sarcodina, order Foraminifera, characterized by the presence of a test (shell) of one to many chambers composed of secreted calcite (rarely silica or aragonite) or of agglutinated particles. Most foraminifers are marine but freshwater forms are known. They are important microfossils in well logging. Range, Cambrian to present. Syn: [foram](#)

foraminifera

Plural of foraminifer.

forbesite

A mixture of annabergite and arsenolite.

forble

Four lengths of drill rod or drill pipe connected to form a section, which is handled and stacked in a drill tripod or derrick as a single unit on borehole round trips. Also spelled fourble. CF: [treble](#)

force

That which tends to put a stationary body in motion or to change the direction or speed of a moving body. *AGI*

forced auxiliary ventilation

A system in which the duct delivers the intake air to the face. The forcing system may be used with flexible ducting and simplifies arrangements for protecting the duct from blasting. The forcing system has the added advantage that the fan motor always works in intake air, and no special arrangements about fan drives are necessary. See also: [auxiliary ventilation](#)

forced-caving system

A stoping system in which the ore is broken down by large blasts into the stopes, which are kept partly full of broken ore. The large blasts break ore directly into the stopes and have the further effect of shattering additional ore, part of which then caves.

forced ventilation

A system of ventilation in which the fan forces air through the workings under pressure. *BS, 8*

force lines

Stress fields can be represented by lines, each of which represents a definite force, so that their distance apart is a measure of the intensity of stress. The concept is similar to that of a magnetic field represented by lines of force. *Spalding*

force majeure

a. The clause in a metal supply contract which allows the seller not to deliver or the buyer not to take delivery of the metal concentrate or scrap under the contract because of events beyond the seller's control. *Wolff* b. An unexpected occurrence beyond the control of parties to a contract, such as an earthquake preventing the timely delivery promised by a metal supply contract, that typically relieves a party from contract performance. The language of the contract, as well as applicable State or Federal laws, determine the applicability of this legal mechanism in any given situation. Also called an Act of God. *Padan*

force of blow

The effective diameter of the piston or hammer, its weight, distance of travel, and the air pressure during the forward movement. The energy of the blow in foot-pounds is equal to: $1/2 mv^2 = w X v^2 / 64.4$, where m = the mass; w = the weight in pounds; v = the velocity of the hammer in feet per second. *Lewis*

force of crystallization

See: [crystallizing force](#)

force oscillator

An instrument to determine the mechanical resonant frequency of a whole crystal or cut crystal plate. A slowly varying frequency is applied to the crystal from a signal generator, and the resonant frequency voltage developed across the crystal is measured with a voltmeter. Also called drive oscillator.

force pump

a. A pump consisting of a plunger or ram, the up-stroke of which causes the suction valve to open and the water to rise in the suction pipe. On the down-stroke of the plunger, the suction valve closes and the contained water is forced through the delivery valve into the rising main or discharge pipe. *Nelson* b. A pump that forces water above its valves. *Zern* c. A pump in which the water is lifted by the force due to atmospheric pressure acting against a vacuum. *Crispin*

forcer

a. A small hand pump used in Cornish mining. *Standard, 2* b. The solid piston of a force pump. *Standard, 2*

forcherite

An orange-yellow opal colored with orpiment. *Standard, 2*

forcing fan

A fan which blows or forces the intake air into the mine workings, as opposed to an exhaust fan. A mine exhaust fan may become a forcing fan (with reduced efficiency) when the ventilation is reversed in an emergency. *Nelson*

forcing lift

Scot. A set of pumps raising water by a plunger; a ram pump. Also called forcing set. *Fay*

forcing set

A pump for forcing water to a higher level or to the surface. *CTD*

forebay

a. A reservoir or pond at the head of a penstock or pipeline. *Seelye, 1* b. The water immediately upstream of any structure. *Seelye, 1*

forechamber

An auxiliary combination for gas-fired boilers that provides an incandescent surface for lighting gas instantly when turned on after being shut off for any reason. Also called Dutch oven; doghouse. *Fay*

fore drift

The one of a pair of parallel headings that is kept a short distance in advance of the other.
CTD

forehearth

a. A projecting bay in the front of a blast furnace hearth under the tump. In open-front furnaces, it is from the forehearth that cinder is tapped. *Fay* b. An independent settling reservoir into which is discarded the molten material from a furnace and which is heated from an independent source. The heavy metal settles to the bottom and the light slag rises to the surface. *Fay* c. A section of a furnace, in one of several forms, from which glass is taken for forming. *ASTM*

foreign coal

Coal received at a preparation plant from a source other than that to which the plant is attached. *BS, 5*

foreigner

Dark, ovoid inclusion of country rock in granite. Syn: [furrener](#) *Arkell*

foreign inclusion

A fragment of country rock enclosed in an igneous rock. Syn: [xenolith](#)

foreland

A stable area marginal to an orogenic belt, toward which the rocks of the belt were thrust or overfolded. Generally the foreland is a continental part of the crust, and is the edge of the craton or platform area. *AGI*

forelimb

The steeper of the two limbs of an asymmetrical anticlinal fold. *AGI*

forelimb thrust

A thrust fault cutting strata on the steeply dipping flank of an asymmetrical anticline.

forellenstein

See: [troctolite](#)

Forel scale

The basic scale for measuring seawater color. See also: [water color](#) *Hy*

foreman

The head person; esp., the overseer of a group of workers. See also: [mine foreman](#); [boss](#). *Standard, 2*

forepole

A pointed board or steel strap with a sharp edge, that is driven ahead in loose ground for support purposes. See also: [spile](#); [spill](#). *Nelson*

forepoling

a. A method of advancing a mine working or tunnel in loose, caving, or watery ground, such as quicksand, by driving sharp-pointed poles, timbers, sections of steel, or slabs into the ground ahead of, or simultaneously with, the excavating; a method of supporting a very weak roof. It is useful in tunneling and in extracting coal from under shale or clay. See also: [close timbering](#); [cribbing](#); [poling](#); [running ground](#). *AGI* b. A method of securing loose ground by driving poles, planks, etc., ahead of and on the top and sides of the timbers. See also: [spile](#) *Ballard*

forepoling girder

One of two or more heavy straight girders set over and in advance of the last permanent support in a tunnel. They provide protection to the worker until there is space to erect another support. *Nelson*

foreset

a. To set a prop under the fore or coal-face end of a bar. *TIME* b. Timber set used at the working face for roof support. Also called force piece. *Pryor, 3* c. Temporary forward support; a middle prop under a bar. *Mason*

foreshaft sinking

The first 150 ft (46 m) or so of shaft sinking from the surface, during which time the plant and services for the main shaft sinking are installed. Sometimes, the main sinking contract does not commence until the foreshaft has been completed. *Nelson*

foreshift

a. In coal mining, first or morning shift. *Pryor, 3* b. Eng. The first shift of hewers (miners) who go into the mine from 2 to 3 h before the drivers and loaders. *Fay*

foreshock

a. One of the initiating shocks preceding the principal earthquake. *Schieferdecker* b. An earthquake that precedes a larger earthquake within a fairly short time interval (a few days or weeks), and which originates at or near the focus of the larger earthquake. *AGI* c. A small tremor that commonly precedes a larger earthquake or main shock by an interval ranging from seconds to weeks and that originates at or near the focus of the larger earthquake. CF: [aftershock](#)

foresight

a. A sight on a new survey point, taken in a forward direction and made in order to determine its bearing and elevation. Also, a sight on a previously established survey point, taken to close a circuit. *AGI* b. A reading taken on a level rod to determine the elevation of the point on which the rod rests. Syn: [minus sight](#) *AGI*

foresight hub

A stake or mark placed by a responsible individual some distance in front of a drill; used by a driller to point and line up a drill to drill a borehole in a specific direction. Also called front hub. See also: [picket](#)

forest marble

See: [landscape marble](#)

forest moss peat

Peat formed in forested swamps. *Tomkeieff*

forest peat

Peat consisting mainly of the remains of trees that grew in low wet areas. *Francis, 1*

forfeiture

Penalty incurred in accordance with governing laws and regulations when mining concessions, claims leases, rights, are not adequately, safely, and consistently developed and exploited. CF: [abandonment](#)

forge

a. An open fireplace or hearth with forced draft, for heating iron, steel, etc.; e.g., a blacksmith's forge. *Standard, 2* b. A hearth or furnace for making wrought iron directly from ore; a bloomery. *Standard, 2* c. To form by heating in a forge and hammering; to

beat into some particular shape, as a mass of metal. *Fay* d. A plant where forging is carried out. *CTD* e. Eng. That part of an ironworks where balls are squeezed and hammered and then drawn out into puddle bars by grooved rolls. *Fay*

forge cinder

The dross or slag from a forge. *Fay*

forge iron

Pig iron used for the charge of a puddling furnace. *Mersereau, 2*

forge pigs

Pig iron suitable for the manufacture of wrought iron. *CTD*

forge roll

One of the train of rolls by which a slab or bloom of metal is converted into puddled bars. *Fay*

forge train

In iron puddling, the series of two pairs of rolls by means of which the slab or bloom is converted into bars. *Fay*

forge welding

A group of welding processes in which the parts to be joined are heated to a plastic condition in a forge or other furnace and are welded together by applying pressure or blows. *Hammond*

fork

a. An appliance used in free-fall drilling that serves to hold up the string of tools during connection and disconnection of the rods. b. A double-pronged clip on a tub or wagon for the haulage rope or chain. *CTD* c. A two-pronged lever used to slide the flat belt from a powerdrive over to an idler pulley (loose pulley). *Pryor, 3* d. Corn. Bottom of a drainage sump. *Pryor, 3* e. Derb. A piece of wood supporting the side of an excavation in soft ground, esp. if it has a Y-shaped end. *Fay* f. Scot. A tool used for changing buckets, or for loading lump coal. g. To pump water out of a mine. A mine is said to be in fork, or a pump to have the water in fork, when all the water is drawn out of the mine. *Webster 2nd*

fork-filled

Aust. Coal filled into skips with a fork, having the prongs about 1-1/4 in (3.2 cm) apart. This separates the bulk of the slack from the round coal. The course product should not contain more than 10% of fine coal. See also: [box filling](#)

form

a. In crystallography, all the crystal faces having a like position relative to the elements of symmetry of a point group; e.g., mirror planes and rotation axes. A form is closed if it encloses a volume, such as a cube or a rhombohedron; it is open if additional forms are necessary to enclose a volume, such as a prism or a pinacoid. A single crystal may exhibit faces of two or more crystal forms which supplement one another, such as a prism and a basal pinacoid; or truncate one another's edges or corners, such as a dodecahedron and a trapezohedron. b. In geomorphology, a syn. of landform. c. Those aspects of a particle shape that are not expressed by sphericity or roundness. Form can be described as ratios of the long, intermediate, and short axes, which can be combined into various "form indices," and by terms such as platy, bladed, elongate, or compact.

formanite

A tetragonal mineral, $YTaO_4$; dimorphous with yttrotantalite; forms a series with fergusonite; in granite pegmatites and placer deposits.

format

An informal rock stratigraphic unit bounded by marker horizons believed to be isochronous surfaces that can be traced across facies changes, particularly in the subsurface; useful for correlations between areas where the stratigraphic section is divided into different formations that do not correspond in time value. See also: [marker](#)

formation

a. A persistent body of igneous, sedimentary, or metamorphic rock, having easily recognizable boundaries that can be traced in the field without recourse to detailed paleontologic or petrologic analysis, and large enough to be represented on a geologic map as a practical or convenient unit for mapping and description; the basic cartographic unit in geologic mapping. Syn: [rock formation](#) b. A body of sedimentary rock identified by lithic characteristics and stratigraphic position; it is prevailing but not necessarily tabular, and is mappable at the Earth's surface or traceable in the subsurface. The formation is the fundamental unit in lithostratigraphic classification. *AGI* c. A general term applied by drillers to a sedimentary rock that can be described by certain drilling or reservoir characteristics; e.g. hard formation, cherty formation, or porous formation. *AGI* d. A naturally formed topographic feature, commonly differing conspicuously from adjacent objects or material, or being noteworthy for some other reason; esp. a striking erosional form on the land surface. Syn: [geologic formation](#)

formation drilling

Boreholes drilled primarily to determine the structural, petrologic, and geologic characteristics of the overburden and rock strata penetrated. Also called formation testing. *Long*

formation level

Level of the ground surface after completion of excavation. *Hammond*

formation resistivity factor

a. In geophysical borehole logging, the ratio of the conductivity of an electrolyte to the conductivity of a rock saturated with that electrolyte. Symbol, *F*. *AGI* b. The ratio of the resistivity of the saturated rock to the resistivity of the saturating water in a completely water-saturated clean rock. *Inst. Petrol.*

formation striae

Color bands in synthetic corundum or spinel which, because they are invariably distinctive and generally curved, differ from the straight color zones in natural minerals. Also called formation striations.

formation water

Water present in a water-bearing formation under natural conditions, as opposed to introduced fluids, such as drilling mud. Syn: [native water](#) CF: [connate water](#)

form contour

A topographic contour determined (1) by stereoscopic study of aerial photographs without ground control or (2) by other means not involving conventional surveying.

form energy

The potentiality of a mineral to develop its own crystal form against the resistance of the surrounding solid medium (Eskola, 1939). *AGI*

formosa marble

A high grade of marble; dark gray and white, variously mottled and blotched with yellow and red; from Nassau and Germany. *Fay*

fornacite

A monoclinic mineral, $(\text{Pb,Cu})_3 [(\text{Cr,As})\text{O}_4]_2 (\text{OH})$; forms prismatic crystals on diopside. Also spelled furnacite.

forsterite

An orthorhombic mineral, $4[\text{Mg}_2 \text{SiO}_4]$; olivine group, with magnesium replaced by iron toward fayalite; trimorphous with ringwoodite and wadsleyite; in dunite and metamorphosed dolomitic limestones.

forsterite refractories

Semibasic refractories made from olivine and magnesia; consist essentially of forsterite, including about 50% magnesia, 39% silica, 6% ferrous oxide, and 5% of other oxides.
Henderson

forstid

Derb. Light waste left after washing ore. Also called forstid ore. *Arkell*

forward

The purchase or sale of metal for delivery at a specified future date. Hence "forward price," "forward contract." *Wolff*

forward dealing

Purchase of stocks, notably metals, for delivery at an agreed future date and price. *Pryor*, 3

foshagite

A triclinic mineral, $\text{Ca}_4 \text{Si}_3 \text{O}_9 (\text{OH})_2$; forms compact fibrous vein filling associated with vesuvianite and blue calcite at Crestmore, Riverside County, CA.

foshallassite

A monoclinic mineral, $\text{Ca}_3 \text{Si}_2 \text{O}_7 \cdot 3\text{H}_2 \text{O} (?)$; occurs on the Kola peninsula, Russia, where it is related to foshagite and centrallassite and named from a combination of those names. Also spelled foshallasite.

fossick

a. Aust. To work out the pillars of abandoned claims, or work over waste heaps in hope of finding gold. *Standard*, 2 b. Eng. In gold mining, to undermine another's digging. *Fay*

fossicker

a. Person who searches for small amounts of mineral. *CTD* b. One who picks over old mine workings. Fossicking is casual and unsystematic mining. *Pryor, 3* c. Aust. A sort of mining gleaner who overhauls old workings and refuse heaps for gold that may be contained therein.

fossil

a. Any remains, trace, or imprint of a plant or animal that has been preserved in the Earth's crust since some past geologic or prehistoric time; loosely, any evidence of past life. *AGI* b. Said of any object that existed in the geologic past and of which there is still evidence. *AGI* c. Used in such expressions as fossil generating plant in reference to the use of fossil fuel rather than nuclear fuel. Not recommended usage. *AGI*

fossil copal

See: [copalite](#)

fossil erosion surface

An erosion surface that was buried by younger sediments and was later exposed by their removal. Sometimes used as a syn. of buried erosion surface. *AGI*

fossil flour

See: [diatomite](#)

fossil fuel

Coal, petroleum, or natural gas.

fossil ice

a. Ice formed in, and remaining from, the geologically recent past. It is preserved in cold regions, such as the coastal plains of northern Siberia, where remains of Pleistocene ice have been found. b. Relatively old "ground ice" in a permafrost region. Also, underground ice in a region where present-day temperatures are not low enough to create it. c. Crystal of selenite. *Arkell*

fossiliferous

Containing fossils.

fossilization

All processes involving the burial of a plant or animal in sediment and the eventual preservation of all, part, or a trace of it. *AGI*

fossilize

To turn into a fossil. *Webster 3rd*

fossilized

Preserved by burial in rock or earthy deposits; turned to a fossil.

fossilized wood

See: [silicified wood](#)

fossil ore

An iron-bearing sedimentary deposit, in which shell fragments have been replaced and cemented together by hematite and carbonate. CF: [flaxseed ore](#)

fossil paper

See: [mountain paper](#); mountain leather.

fossil pineapple

Opal pseudomorph after glauberite; from New South Wales. *Schaller*

fossil resin

Any of various natural resins found in geologic deposits as exudates of long-buried plant life; e.g., amber, retinite, and copal.

fossil salt

See: [rock salt](#)

fossil turquoise

See: [odontolite](#)

fossil wax

See: [ozocerite](#)

fother

Any of the various units of weight for lead; esp. a unit equal to 19.5 hundredweight (885 kg). *Webster 3rd*

foul

a. A condition of the atmosphere of a mine so contaminated by gases as to be unfit for respiration. Impure. b. In a coal seam, a place where the seam was washed out during deposition, leaving a barren area. *Pryor, 3*

foul-air duct

A suction line in a tunnel ventilation system. *Nichols, 1*

foul gas

Coke-oven gas or natural gas containing appreciable amounts of hydrogen sulfide and similar contaminants. *CCD, 2*

fouling

The assemblage of marine organisms that attach to and grow upon underwater objects. *Hy*

fouling position

The point on any rail beyond which a wagon or mine car cannot proceed without becoming an obstruction to another wagon or car traveling on the intersecting rail. *Nelson*

fouls

a. Eng. A condition in which seams of coal disappear for a certain space and are replaced by some foreign matter. See also: [fault](#) b. The cutting out of portions of the coal seam by wash outs or barren ground. *CTD*

found

a. To form in a mold, such as articles of cast iron, by melting the metal and pouring; cast. *Standard, 2* b. The name for the melting operation that the raw materials undergo in a furnace. *CTD*

foundation

a. The lower, supporting part of an engineering structure, transmitting the weight of the structure and its included loads to the underlying soil or rock material. It is usually below ground level. *AGI* b. A term that is sometimes applied to the upper part of the soil or rock mass in contact with, and supporting the loads of, an engineering structure; the subsoil. *AGI* c. Mid. The shafts, machinery, building, railways, workshop, etc., of a mine, commonly called a plant. d. The ground upon which a structure or substructure is supported. *Taylor* e. The lower part of a structure that transmits the load to the earth. *ASCE* f. The base and/or the underlying support, either natural or artificial, on which a building, dam, or other structure is constructed. *Long* g. See: [base rock](#)

foundation bolt

A fastener for connecting a structure or machine to a permanent base. See also: [anchor bolt](#)

foundation curb

A construction in a sinking shaft that will provide support for the concrete lining. It consists of a wedge-shaped excavation around the shaft in solid ground that is filled up completely with wet concrete. Steel shuttering is used and the concrete is filled in behind. Also called foundation canch; foundation crib; walling curb. See also: [curb](#); permanent shaft support. *Nelson*

foundation investigation

A branch of soil mechanics involving the drilling and testing of the deposits underlying a proposed foundation. It includes the estimation of bearing capacities, settlements, and the most suitable type of foundation for the prevailing soil conditions. See also: [bearing capacity](#); depth of soil exploration. *Nelson*

foundation testing

Testing in which boreholes are drilled for the purpose of obtaining samples by means of which the characteristics of overburden and/or the rock on which the foundation of a structure will rest can be determined. *Long*

founder breccia

See: [collapse breccia](#)

founding

The act or process of casting metals. *Fay*

foundry sand

Sand used by founders in making molds for castings. See also: [fire sand](#)

four-cutter bit

See: [roller rock bit](#)

fourfold

An axis of symmetry requiring four repetitions to complete 360 degrees and return to identity. Syn: [tetrad](#)

four-high mill

A mill that contains four rolls arranged one above the other; i.e., two small-diameter working rolls supported by larger diameter back-up rolls above and below. *Osborne*

fouling

A crystal twin consisting of four individuals; characteristic twinning exhibited by some varieties of authigenic microcline. CF: [trilling](#); fiveling; eightling.

fourmarierite

An orthorhombic mineral, $PbU_4O_{13} \cdot 4H_2O$; strongly radioactive; in pegmatites as an alteration product of uraninite.

four-piece set

Squared timber frame used in underground driving to give all around support to weak ground. A cap is supported by two posts on a sill-piece or sill. See also: [timber set](#); [three-piece set](#). *Pryor, 3*

four-way dip

In seismic operations, a dip determined by spreads placed in four directions from a shot point. Three are essential, and the fourth serves as a check. *AGI*

fowlerite

A variety of rhodonite containing up to 10% zinc.

foxbench

See: [iron pan](#)

foyaite

A nepheline syenite with predominant orthoclase and a trachytic texture. Not a name in the I.U.G.S. classification of plutonic rocks. Syn: [midalkalite](#)

fraction

A portion of an unconsolidated sediment or of a crushed consolidated rock sample or of a crushed ore or mineral sample that has been separated by some method, and is distinguished in some manner from all the other portions (or fractions) comprising the whole sample being analyzed. Also a fraction may be separated and defined on the basis of its mineral content, its specific gravity or density, its magnetism or lack of magnetism, or its solubility or insolubility in acid.

fractional crystallization

a. Crystallization in which the early-formed crystals are prevented from equilibrating with the liquid from which they grew, resulting in a series of residual liquids of more extreme compositions than would have resulted from equilibrium crystallization. CF: [crystallization differentiation](#) Syn: [fractionation](#) b. Controlled precipitation from a saline solution of salts of different solubilities, as affected by varying temperatures or by the presence of other salts in solution. *AGI*

fractional distillation

A distillation process for the separation of the various components of liquid mixtures. An effective separation can only be achieved by the use of fractionating columns attached to the still. *CTD*

fractional shoveling

A method of sampling sometimes used at points where coal or mineral is loaded or unloaded by shoveling. Every tenth (or other number) shovelful is deposited separately as sampling material. *Nelson*

fractionating column

An apparatus for separating the high-boiling and low-boiling fractions of a substance, whereby the fractions with the lowest boiling point distill over. The efficiency depends on the column length and on the number of bubble plates used.

fractionation

a. The separation of (1) a substance from a mixture, such as the separation of one isotope from another of the same element; (2) one mineral or group of minerals from a mixture;

or (3) one size fraction from a mixture. *AGI* b. Separation of chemical elements in nature, by processes such as preferential concentration of an element in a mineral during magmatic crystallization, or differential solubility during rock weathering. See: [fractional crystallization](#)

fractography

The study of the surfaces of fractures, esp. microscopic study. *AGI*

fracture

a. A general term for any break in a rock, whether or not it causes displacement, due to mechanical failure by stress. Fracture includes cracks, joints, and faults. *AGI* b. The breaking of a mineral other than along planes of cleavage or parting. A mineral can be described in part by its characteristic fracture; e.g., uneven, fibrous, conchoidal, or hackly. CF: [parting](#); uneven fracture. *AGI* c. Deformation due to a momentary loss of cohesion or loss of resistance to differential stress and a release of stored elastic energy. CF: [flow](#) Syn: [rupture](#)

fracture cleavage

A type of cleavage that occurs in deformed but only slightly metamorphosed rocks and that is based on closely spaced, parallel joints and fractures. CF: [flow cleavage](#)

fractured formation

See: [fractured ground](#)

fractured ground

Rock formation shattered and crisscrossed with fissures and fractures. CF: [broken ground](#)

fracture dome

The fracture dome is the zone of loose or semiloose rock which exists in the immediate hanging or footwall of a stope. In some mines it may extend into the walls for a considerable distance. In a rock burst it becomes greatly extended. *Spalding*

fracture porosity

Porosity resulting from the presence of openings produced by the breaking or shattering of an otherwise less pervious rock.

fracture stress

The differential stress at the moment of fracture. Syn: [breaking stress](#)

fracture system

A set or group of contemporaneous fractures related by stress. *AGI*

fragment

a. A rock or mineral particle larger than a grain. *AGI* b. A piece of rock that has been detached or broken from a preexisting mass; e.g., a clast produced by volcanic, dynamic, or weathering processes. *AGI*

fragmental

Formed from fragments of preexisting rocks. See also: [clastic](#)

fragmental rock

See: [clastic rock](#)

fragmental texture

a. A general textural term applied to rocks composed of fine materials or of sandy, conglomeratic, bouldery, and brecciated materials. The texture of clastic rocks. *AGI* b. A texture of sedimentary rocks, characterized by broken, abraded, or irregular particles in surface contact, and resulting from the physical transport and deposition of such particles; the texture of a clastic rock. The term is used in distinction to a crystalline texture. *AGI* c. The texture of a pyroclastic rock, such as a tuff or volcanic breccia. *AGI*

fragmentation

a. The breakage of rock during blasting in which explosive energy fractures the solid mass into pieces; the distribution of rock particle sizes after blasting. See also: [degradation](#) b. Index of the degree of breaking up of rock after blasting. *Fraenkel*

framboidal texture

A texture in which pellets form spheroidal aggregates resembling a raspberry.

frame

a. In trench excavations requiring timbering, the struts separating the boards, together with the walings, which they hold, form a frame. *Hammond* b. Eng. A table composed of boards slightly inclined, over which runs a small stream of water to wash off waste from slime tin; a buddle. Also called rack. *Fay*

frame dam

Eng. A solid, watertight stopping or dam in a mine to keep back and resist the pressure of a heavy head of water.

framed dam

A barrier, generally built of timber framed to form a water face, supported by struts. *Seelye, 1*

frame set

The legs and cap or crossbar arranged so as to support the roof of an underground passage. Also called framing; set. *Fay*

framesite

A variety of black bort from South Africa showing minute brilliant points possibly due to included diamonds. CF: [bort](#)

framing table

An inclined table used in separating ore slimes by running water; a miner's frame. *Standard, 2*

France screen

A traveling-belt screen in which the screen cloth is mounted on a series of separate pallets, thus avoiding bending the screen as it goes over the pulleys. *Liddell*

francevillite

An orthorhombic mineral, $(\text{Ba,Pb})(\text{UO}_2)_2(\text{VO}_4)_2 \cdot 5\text{H}_2\text{O}$; forms a series with curienite; occurs as yellow impregnations in sandstone; from Franceville, Gabon.

Franciscan Complex

Jurassic to Early Cretaceous rocks, characteristic of the Pacific coastal ranges of California, composed primarily of sandstones, cherts, serpentinites, and glaucophane schists. The Franciscan should not be visualized as a formation or sequence with ordinary physical, spatial, and temporal coherence, but rather as a disorderly assemblage of various characteristic rocks that have undergone unsystematic disturbance; a melange. The formation includes deep-water sediments and mafic marine volcanic material, locally accompanied by masses of serpentinite.

Francisci furnace

A furnace for the treatment of roasted blende and other fine ore. It consists of a series of superimposed muffles formed by arches of magnesia brick and built into the walls of the furnace and communicating with a common condensation chamber. *Fay*

franckeite

A triclinic mineral, $(\text{Pb}, \text{Sn})_6 \text{FeSn}_2 \text{Sb}_2 \text{S}_{14}$; forms imperfect, radiated folia. Occurs at Poopo, Llallagua, and several other tin districts of Bolivia; at Coal River, UT; in Canada; and in Inyo and Santa Cruz Counties, CA.

Francois sinking process

The cementation sinking method. The process was introduced into Great Britain in 1911. See also: [cementation sinking](#)

frankdicksonite

An isometric mineral, BaF_2 ; fluorite group.

franklinite

An isometric mineral, $8[\text{ZnFe}_2 \text{O}_4]$; magnetite series; spinel group; forms metallic black octahedra with rounded edges; weakly ferrimagnetic; a source of zinc at the Franklin and the Sterling Hill deposits, NJ.

Frasch process

a. A process for mining native sulfur, in which superheated water is forced into the deposits for the purpose of melting the sulfur. The molten sulfur is then pumped to the surface. *AGI* b. A desulfurizing process that consists of distilling oil over lead oxide, followed by refining with sulfuric acid. See also: [sulfur mining](#) *Fay*

Frasch sulfur

Native sulfur mined by the Frasch hot-water process. *USBM, 7*

Fraser's air-sand process

A dense-media process in which a dry, specific-gravity separation of coal from refuse is achieved by utilizing a flowing dense medium intermediate in density between coal and refuse. The dense medium is formed by bubbling air through a mass of dry sand, 30 to 80 mesh in size. The air dilates and fluidizes the sand mass, causing it to behave

somewhat as a heavy liquid. The coal floats on the aerated sand mass and the refuse sinks. Syn: [air-sand process](#)

Fraunhofer lines

Dark lines in the solar spectrum resulting from absorption of light by chemical elements in the chromosphere.

frautschy bottle

This water-sampling device is messenger actuated. It is designed to allow free flow while in the cocked position on the downward traverse. When the desired sampling point has been reached, the closures are messenger actuated, resulting in isolation of the sample on the return traverse. Frautschy bottles may be attached to the hydrographic wire at intervals and in such a manner that release of a single messenger from the surface will actuate the entire series. In this way samples from several depths may be obtained in a single operation. *Hunt*

freboldite

A hexagonal mineral, CoSe ; nickeline group; in trace amounts with clausenthalite, trogtalite, and hastite in dolomite veinlets in the Trogtal quarries, Harz Mountains, Germany.

free

a. Native; uncombined with other elements, such as free gold or free silver (native gold or native silver). *Fay* b. Chemically uncombined or readily obtainable in uncombined form by heating, as opposed to bound; e.g., free water or free oxygen.

free acidity

Free acidity is considered to be the portion of the total acidity that exists in the form of acid, both ionized and un-ionized. *Felegy*

free air

a. Air under conditions of atmospheric pressure and temperature. The condition of the air at the intake of the compressor, whatever the temperature and barometric pressure may be. *Lewis* b. The total area of open space in a grille through which air can pass. *Strock, 2*

free-air anomaly

A gravity anomaly calculated from a theoretical model and elevation above sea level, but without allowance for the attractive effect of topography and isostatic compensation. See also: [anomaly](#)

free-air correction

a. See: [free-air anomaly](#) b. A correction for the elevation of a gravity measurement, required because the measurement was made at a different distance from the center of the Earth than the datum. The first term of the free-air correction is 0.09406 mgal/ft (0.3086 mgal/m). *AGI*

free-burning coal

a. A bituminous coal having so little fusibility that enough air for rapid combustion can flow between the lumps and high enough in volatiles and fixed carbon to burn readily. *Hess* b. Coal that does not cake in the fuel bed and which has a high volatile matter. *BS, 4*

free cementite

Iron carbide in cast iron or steel other than that associated with ferrite in pearlite. *CTD*

free chalk

Eng. A variety of soft marly chalk; Sussex. *Arnell*

free circulation

The circulation of a drilling fluid, the flow of which is not restricted by obstructing materials in the borehole or inside the drill string. *Long*

free crushing

Crushing under conditions of speed and feed such that there is plenty of room for the fine ore to drop away from the coarser part and thereby escape further fine crushing. CF: [choke crushing](#)

free cyanide

The cyanide not combined in complex ions. *ASM, 1*

free-drainage level

An adit. A level that drains through an adit.

free end

See: [free face](#)

free face

a. A longwall face with no props between the conveyor and the coal. See also: [prop-free front](#) b. A surface in the vicinity of a shothole at which the rock is free to move under the force of the explosion. *BS, 12* c. The exposed surface of a mass of rock, or of coal. Also called free end. *Zern*

free fall

a. An arrangement by which, in deep boring, the bit is allowed to fall freely to the bottom at each drop or downstroke. b. The process of operating the drill. Often called Russian, Canadian, or Galician free fall.

free falling

In ball milling, the peripheral speed at which part of the crop load breaks clear on the ascending side, and falls clear to the toe of the charge. *Pryor, 3*

free-falling device

A sliding piece in percussive boring designed to reduce the vibration and jarring effects when the downward movement of the chisel is suddenly arrested by striking the bottom of the borehole. The lower portion (which is attached to the chisel) is free to slide up and down in a slot provided in the upper part of the joint. When the chisel strikes the bottom of the hole, the slot allows the rods to continue the downward movement without being jarred by the blow of the chisel. See also: [jar](#)

free fed

In comminution, rolls are said to be free fed when fed only enough material to keep a ribbon of ore between the rolls. This results in a remarkably uniform product. CF: [choke fed](#)

free ferrite

Ferrite in steel or cast iron other than that associated with cementite in pearlite. *CTD*

free field stress

The stresses existing in rock before the excavation of any mine opening. In general, these stresses are known to be influenced primarily by the weight of the overlying

material, the relation of the opening of the rock masses around it (depth of overburden, etc.), the physical characteristics to the surrounding rock, and tectonic forces. *Lewis*

free gold

a. Gold uncombined with other substances. b. Placer gold.

free haul

The distance every cubic yard is entitled to be moved without an additional charge for haul. *Nichols, 1*

free-milling

Applied to ores that contain free gold or silver, and can be reduced by crushing and amalgamation without roasting or other chemical treatment. *Fay*

free-milling gold

Gold with so clean a surface that it readily cyanides after liberation by comminution.

free-milling ore

Ore containing gold that can be readily cyanided.

free moisture

a. Moisture in coal that can be removed by ordinary air drying. CF: [combined moisture](#)
b. The part of the total moisture that is lost by a coal in attaining approximate equilibrium with the atmosphere to which it is exposed. *BS, 4* c. Moisture not retained or absorbed by aggregate. *Taylor* d. See: [moisture content](#) e. Moisture removable by air-drying under standard conditions. Also called surface moisture. *BS, 5* f. See: [free water](#)

free on board

a. Price of consignment to a customer when delivered, with all prior charges paid, onto a ship or truck. *Pryor, 3* b. Free on rail (f.o.r.) describes similar delivery to rail. *Pryor, 3*

free particles

Particles of ore consisting of a single mineral. *Gaudin, 1*

free-piston drive sampler

A drive-sample barrel in which a piston is free to move upward with the top of the sample during the actual dry-sampling operation. *Long*

free radical

a. A chemical species that is uncharged and has one or more unpaired electrons. b. An atom or molecule with at least one unpaired electron.

free settling

As opposed to hindered settling in classification, free fall of particles through fluid media. *Pryor, 4*

free share

Som. A certain proportion of a royalty on coal, paid to lessor by lessee. *Fay*

free silica

Quartz occurring in granites. *Mason*

free split

In parallel ventilation flow, the branch or airway that does not require artificial resistance (a regulator) to achieve its design air quantity. See also: [open split](#)

freestone

Any stone (esp. a thick-bedded, even-textured, fine-grained sandstone) that breaks freely and can be cut and dressed with equal ease in any direction without splitting or tending to split. The ease with which it can be shaped into blocks makes it a good building stone. The term was originally applied to limestone, and is still used for such rock. CF: [flagstone](#)

free streaming

A combustible gases roof layer flowing under the action of buoyancy without ventilation. *BS, 8*

free wall

The wall of a vein filling that scales off cleanly from the gouge. *Schieferdecker*

free water

a. Water that is free to move through a soil mass under the influence of gravity. Also called ground water; phreatic water. *ASCE* b. Water in soil in excess of hygroscopic and capillary water; also called gravity water. *Seelye, 1* c. The quantity of water removed in drying a solid to its equilibrium water content.

free-water elevation

See: [water table](#)

free-water level

The surface of a body of water in contact with the atmosphere; i.e., at atmospheric pressure.

free-water surface

See: [water table](#)

free way

A direction of easy splitting in a rock. *Fay*

freeze

a. To permit drilling tools, casing, drivepipe, or drill rods to become lodged in a borehole by reason of caving walls, or impaction of sand, mud, or drill cuttings, to the extent that they cannot be pulled out. Also called bind; seize. *Long* b. The act or process of drilling a borehole utilizing a drill fluid chilled to -30 degrees C to -40 degrees C, as a means of consolidating, by freezing, the borehole wall materials and/or core as the drill bit penetrates a water-saturated formation, such as sand, gravel, etc. *Long*

freeze-in

a. Used in much the same sense as definition a. of "freeze." b. Applicable when drill rods become fastened by solidification or freezing of the drilling fluid in a borehole drilled in permafrost. *Long* c. To become or be fixed in ice. *Long*

freeze proofing

A surface treatment, as with calcium chloride solution, to prevent or reduce cohesion of coal particles by ice formation during freezing weather. *BS, 5*

freeze sinking

Use of circulating brine in a system of pipes to freeze waterlogged strata so that shafts can be sunk through them, established, and lined. *Pryor, 3*

freeze-thaw action

See: [frost action](#)

freeze-up

In ball milling, the theoretical rate of revolution at which the contents of the mill are centrifugally held at the circumference. *Pryor, 3*

freezing

Consolidation of fine-grained waterlogged soil, enabling excavation to proceed, can be effected by freezing. The process, which dates from 1862, is particularly suitable for shaft sinking. *Hammond*

freezing interval

See: [crystallization interval](#)

freezing method

A method of shaft sinking through loose waterlogged sands that are not suitable for the cementation sinking method. Rings of lined boreholes are put down outside the proposed shaft and in them a very cold solution, such as brine, is circulated until an ice wall has been formed sufficiently thick to enable sinking to proceed normally. The method consists of the following stages: (1) forming a protective wall of ice, with its base in an impervious deposit; (2) maintaining the ice wall until the sinking and lining of the shaft has been completed, and (3) thawing out the ground without damage to the shaft. The freezing method has been revived, largely due to the successful use of bulk concrete, backed by corrugated sheets in place of tubing, for lining the shaft through the frozen ground. This is followed by wall grouting. Freezing was introduced originally in 1883 by F. H. Poetsch. See also: [Oetling freezing method](#); chemical soil consolidation; silicatization process. *Nelson*

freibergite

An isometric mineral, $(\text{Ag,Cu,Fe})_{12}(\text{Sb,As})_4\text{S}_{13}$; tetrahedrite group; forms series with argentotennantite and with tetrahedrite; occurs as tetrahedra; in Idaho, Colorado, Nevada, and Germany.

freieslebenite

A monoclinic mineral, AgPbSbS_3 . Occurs with pyrargyrite, argentite, and galena in late-stage silver ores at Hiendelaencina, Spain; Freiberg, Germany; Oruro, Bolivia; and Rosebery, Tasmania, Australia.

Fremont etching reagent

An etchant consisting of 10 g of iodine and 20 g of potassium iodide in 100 mL of water.
Osborne

French chalk

A soft, white variety of talc, steatite, or soapstone finely ground into powder.

French drain

A covered ditch containing a layer of fitted or loose stone or other pervious material.
Nichols, 1

French process

A process in which zinc is distilled and the vapor burned to produce the oxide; the purity of the oxide is controlled by the purity of the metal. *Newton, 1*

Frenier sand pump

Spiral ribbon of steel enclosed between two steel disks, mounted on a horizontal hollow shaft into which pulp picked up peripherally is discharged during slow rotation. *Pryor, 3*

Frenkel defect

A type of "point defect" in a crystal structure where an atom or ion is displaced from its normal position to an interstitial one. CF: [crystal defect](#); [point defect](#); [interstitial](#); [Schottky defect](#).

frenzied

S. Staff. Said of coal crushed by the creep or subsidence of the cover. *Fay*

frequency factor

In crystallography, the number of different families of planes having the same form.
Henderson

frequency rate

The rate of occurrence of accidents as determined by multiplying the actual number of injuries in any given period by 200,000 and dividing the product by the number of man-hours exposure. Syn: [incidence rate](#)

frequency response

a. The percentage response of a seismic amplifier for various frequencies at a given filter setting. *AGI* b. Attenuation as a function of frequency produced by passage of a signal through an element, such as a geophone or filter. *AGI*

fresh

Said of a rock or rock surface that has not been subjected to or altered by surface weathering, such as a rock newly exposed by fracturing. Syn: [unweathered](#)

fresh air

Air free from the presence of deleterious gases. Pure air.

fresh-air base

An underground station, located in the intake airway, that is used by rescue teams during underground fires and rescue operations. The base should be as close to the fire as safety will permit, adequately ventilated, and in constant touch with the surface by telephone. *Nelson*

freshet

a. A great rise in, or a sudden overflowing of, a small stream, usually caused by heavy rains or rapidly melting snow in the highlands at the head of the stream; a rapidly rising flood, usually of minor severity and short duration. See also: [flash flood](#) b. A small clear freshwater stream or current flowing swiftly into the sea; an area of comparatively fresh water at or near the mouth of a stream flowing into the sea. *AGI* c. A small stream flowing swiftly into a lake (as in the spring) and often carrying a heavy silt load during its peak flow. *AGI*

fresh water

a. Water containing less than 1,000 mg/L of dissolved solids; generally, water with more than 500 mg/L is undesirable for drinking and for many industrial uses (Solley et al., 1983). *AGI* b. In general usage, the water of streams and lakes unaffected by salt water or salt-bearing rocks. Syn: [sweet water](#) fresh-water. *AGI*

fresh-water limestone

A limestone formed by accumulation or precipitation in a freshwater lake, a stream, or a cave. It is often algal and sometimes nodular. See also: [underclay limestone](#)

fresnoite

A tetragonal mineral, $Ba_2 TiSi_2 O_8$; yellow with yellow fluorescence; resembles idocrase.

fretwork

A result of honeycomb weathering, consisting of small pits in a rock surface that become fewer as they grow larger and deeper.

freudenbergite

A monoclinic mineral, $Na_2 (Ti,Fe)_8 O_{16}$; forms pseudo-hexagonal crystals in an apatite-rich alkali pegmatite at Katzenbuckel, Odenwald, Germany.

Freudenberg plates

Iron plates suspended in dust chambers for the purpose of settling dust and condensing fumes that escape from the furnace with the gases. *Fay*

freyalite

A rare-earth-rich variety of thorite from Brevik, Norway.

friability

Tendency for particles to break down in size (degrade) during storage and handling under the influence of light physical forces. *Pryor, 3*

friable

a. Said of a rock or mineral that crumbles naturally or is easily broken, pulverized, or reduced to powder, such as a soft or poorly cemented sandstone. *AGI* b. Said of a soil consistency in which moist soil material crushes easily under gentle to moderate pressure (between thumb and forefinger) and coheres when pressed together. *AGI*

friable amber

See: [gedanite](#)

friable formation

A rock that breaks easily or crumbles naturally; hence a formation from which good core cannot be obtained easily. *Long*

friction

Mechanical resistance to the relative motion of contiguous bodies or of a body and a medium. *AGI*

frictional electricity

Electrostatic charge developed by rubbing amber, tourmaline, topaz, diamond, and some plastic imitations with a cloth.

frictional force

The force required to overcome friction when a set of tubs or a run of wagons is hauled along a level track at uniform speed. For ordinary pit tubs the frictional force is about 40 lb/st (20 kg/t) load, and for mine cars or wagons it is about 28 lb/st (14 kg/t) load. This resistance is sometimes called traction. *Morris*

front abutment pressure

The release of energy in the superincumbent strata above the seam, induced by the extraction of the seam. *Sinclair, 2*

front-end equipment

The attachments to a crane that enable it to work as an excavator, a skimmer, a back acter, or a similar machine. See also: [jib](#) *Hammond*

front-end loader

a. A tractor loader with a digging bucket mounted and operated at the front end of the tractor. *Nichols, 1* b. A tractor loader that both digs and dumps in front. See also: [tractor shovel](#)

frontland

See: [foreland](#)

froodite

A monoclinic mineral, PdBi_2 ; forms minute metallic grains in mill concentrates at the Frood Mine, Sudbury, ON, Canada.

frost action

a. The mechanical weathering process caused by repeated cycles of freezing and thawing of water in pores, cracks, and other openings, usually at the surface. *AGI* b. The resulting effects of frost action on materials and structures. Syn: [freeze-thaw action](#); [frost splitting](#). *AGI*

frost-active soil

A fine-grained soil that undergoes changes in volume and bearing capacity due to frost action (Nelson & Nelson, 1967). *AGI*

frost boil

a. A local accumulation of excess water and mud liberated from ground ice by accelerated spring thawing, softening the soil and causing a quagmire. *AGI* b. A break in a surface pavement due to swelling frost action; as the ice melts, soupy subgrade materials issue from the break. *AGI*

frost crack

A nearly vertical fracture developed by thermal contraction in rock or in frozen ground with appreciable ice content. Frost cracks commonly intersect to form polygonal patterns in plan view. *AGI*

frost creep

Soil creep resulting from frost action.

Frost gravimeter

An astatic gravity meter of the balance type, consisting of a mass at the end of a nearly vertical arm, supported by a main spring inclined to the vertical at about a 45 degrees angle. The beam rises and falls with gravity variation, but is restored to its normal position by a sensitive weighing spring tensioned by a micrometer screw. *AGI*

frost heaving

The uneven upward movement, and general distortion, of soils, rocks, vegetation, and structures such as pavements, due to subsurface freezing of water and growth of ice masses (esp. ice lenses); any upheaval of ground caused by freezing. *AGI*

frosting

a. A lusterless ground-glass or mat surface on rounded mineral grains, esp. of quartz. It may result from innumerable impacts of other grains during wind action or from deposition of many microscopic crystals; e.g., fine silica secondarily deposited on quartz grains. *AGI* b. The process that produces such a surface. *AGI*

frost line

a. The maximum depth of frozen ground in areas where there is no permafrost; it may be expressed for a given winter, as the average of several winters, or as the greatest depth on record. *AGI* b. The bottom limit of permafrost. *AGI* c. The altitudinal limit below which frost never occurs; applied esp. in tropical regions. *AGI*

frost mound

A general term for a knoll, hummock, or conical mound in a permafrost region, containing a core of ice; represents a generally seasonal and localized upwarp of the land surface, caused by frost heaving and/or hydrostatic pressure of ground water. *AGI*

frost pin

A short, heavy iron pin used by surveyors to make a hole in frozen ground so that a wooden peg may be driven without breaking. *Fay*

frost splitting

The breaking of rock by water freezing in cracks. Syn: [frost action](#); frost weathering; frost wedging.

frost weathering

See: [frost splitting](#)

frost wedging

See: [frost splitting](#)

froth

In the flotation process, a collection of bubbles resulting from agitation, the bubbles being the agency for raising (floating) the particles of ore to the surface of the cell. *Hess*

frother

A substance used in a flotation process to make air bubbles sufficiently permanent, principally by reducing surface tension. See also: [frothing agent](#)

froth flotation

a. A flotation process in which the minerals floated gather in and on the surface of bubbles of air or gas driven into or generated in the liquid in some convenient manner. See also: [film flotation](#) b. The separating of finely crushed minerals from one another by causing some to float in a froth and others to remain in suspension in the pulp. Oils and various chemicals are used to activate, make floatable, or depress the minerals. *CTD* c. A process for cleaning fine coal, copper, lead, zinc, phosphate, kaolin, etc. with the aid of a reagent; the coal or minerals become attached to air bubbles in a liquid medium and float as a froth. *BS*, 5

frothing agent

a. A reagent used to control the size and stability of the air bubbles in the flotation process. Syn: [foaming agent](#); [frother](#). *BS*, 5 b. A chemical used in the flotation process to aid collector-coated mineral particles to cling to risen air bubbles. The froth thus formed is transient and should persist only long enough to permit its removal from the flotation cell. Terpenes, pine oil, cresyls, amyl alcohol, and alcohol derivatives are among the agents used. *Pryor*, 3

frothing collector

A collector that also produces a stable foam. *Bennett*

froth promoter

A chemical compound used with a frothing agent. Increases greatly the recovery in a flotation process. *Bennett*

frothy amber

See: [foamy amber](#)

Froude's curve

In surveying a curve with offset y , $y = x^3 / 6 l r$, x being the distance from the tangent point, l the length of transition, and r the radius of circular arc. *Pryor*, 3

frozen

Said of the contact between the wall of a vein and the mineral deposit filling it, in which the vein material adheres closely to the wall; also, said of the vein material and of the wall. *AGI*

frozen coal

Coal that adheres strongly to the rock above or below it. *Fay*

frozen ground

Ground that has a temperature below freezing and generally contains a variable amount of water in the form of ice. CF: [permafrost](#)

fruchtschiefer

A type of spotted slate with spots suggestive of grains of wheat. See also: [fleckschiefer](#); [garbenschiefer](#).

Frue vanner

An ore-beneficiation apparatus consisting essentially of a rubber belt traveling up a slight inclination. The material to be treated is washed by a constant flow of water while the entire belt is shaken from side to side. *Liddell*

frustule

The siliceous cell wall of a diatom, consisting of two valves, one overlapping the other. It is ornate, microscopic, and boxlike. *AGI*

fuchsite

Bright-green chromium muscovite. Syn: [chrome mica](#)

furoid

An informal name applied loosely to any indefinite traillike or tunnellike sedimentary structure identified as a trace fossil but not referred to a described genus. It was once considered to be the remains of the marine alga *Fucus*, and later was regarded as a feeding burrow of a marine animal and assigned to the plantlike genus *Fucoides*. The term has been broadly applied to crustacean tracks, worm burrows, molluscan trails, marks made by the tide or waves, and rill marks. *AGI*

fucosite

Bitumen derived from the hydration of fucose pentosane and found among clays and sands in California. *Tomkeieff*

fuel

A substance that can be economically burned to produce heat energy for domestic or industrial purposes. Fuels include compounds of carbon and hydrogen and exclude other

substances that can be burned. Fuels can be subdivided into recent plant fuels, fossil fuels, such as peat and coal, and products of distillation of plant or fossil fuels. According to their state of aggregation, fuels can be subdivided into solid, liquid, and gaseous fuels. *Tomkeieff*

fuel feeder

A contrivance for supplying a furnace with fuel in graduated quantities. A mechanical stoker. *Fay*

fuel ratio

The ratio of fixed carbon to volatile matter in coal.

fugitive air

Applied to air moving through the fan that never reaches the working faces. It leaks through poor stoppings, around doors and so on, back into the returns without moving anywhere near the active sections. Surveys of some mines show that up to 80% of the air moving through the fan never reaches the working faces. *Coal Age, 3*

fugitive constituent

A substance that was present in a magma but was lost during crystallization, so that it does not commonly appear as a rock constituent.

fugitive dust

The particulate matter not emitted from a duct or stack that becomes airborne due to the forces of wind or surface coal mining and reclamation operations or both. During surface coal mining and reclamation operations it may include emissions from haul roads; wind erosion of exposed surfaces, storage piles, and spoil piles; reclamation operations; and other activities in which material is either removed, stored, transported, or redistributed.

fulcrum

A pivot for a lever. *Nichols, 1*

fulguration

A sudden glistening of molten gold or silver at the close of cupellation. *Standard, 2*

fulgurite

<https://t.me/Geologybooks>

An irregular, glassy, often tubular or rodlike structure or crust produced by the fusion of loose sand (or rarely, compact rock) by lightning, and found esp. on exposed mountain tops or in dune areas of deserts or lake shores. It may measure 40 cm in length and 5 to 6 cm in diameter. Etymol. Latin fulgur, lightning. Syn: [lightning tube](#)

full dip

See: [true dip](#); dip.

fuller's earth

A clay or claylike material with a high adsorptive capacity, consisting largely of the clay minerals montmorillonite and palygorskite. Used originally in England for whitening, degreasing, or fulling (shrinking and thickening by application of moisture) woolen fabrics; fuller's earth now is extensively used as an adsorbent in refining and decolorizing oils and fats; it is a natural bleaching agent. Its color ranges from light brown through yellow and white to light and dark green; it differs from ordinary clay by having a higher percentage of water and little or no plasticity, tending to break down into a muddy sediment in water. Fuller's earth probably forms as a residual deposit by decomposition of rock in place, as by devitrification of volcanic glass. The term is applied without reference to any particular chemical or mineral composition, texture, or origin. Syn: [walker's earth](#)

full-face blast

The standard type of heading blast consists of a straight in or main drive, at right angles to the rock face, and a back drive at right angles to the main drive and parallel to the face. The main drive is normally driven at quarry floor level to a depth of 0.6 times the height of rock above the back drive. Apart from exceptional circumstances, the maximum depth of the main drive should be 50 ft (15 m), so that with faces over 85 ft (26 m) high the 0.6 ratio should not be used, but the main drive limited to 50 ft.

McAdam, 2

full-face firing

With modern drilling equipment, it is now possible, in suitable conditions, to drill small-diameter holes from top to bottom of the face, and where this can be done considerable advantages as to cost and efficiency can be obtained as compared with the bench method. In high faces of 50 ft (15 m) and upward it is not always easy to drill vertical holes to give small burdens because of the breakback of the rock at the crest of the quarry face. It is therefore recommended that larger burdens be taken and that the vertical holes be supplemented by breast holes at quarry floor level. These holes are intended to permit concentrated explosive charges to blow out the toe rock, while the explosive in the vertical holes brings down the rock from the face. *McAdam, 2*

full gage

a. A cylindrical or tubular object, such as a bit or reaming shell, the outside and/or inside diameters of which are the size specified. Also called full size. *Long* b. A borehole the inside diameter of which is uniform enough to allow a new-condition bit to follow portions of the hole drilled by other bits cutting the same X-borehole size without reaming. *Long* c. As applied to deflection drilling, the branch borehole is the same diameter as the parent hole. *Long*

full-seam mining

A mining system, brought on by the advent of mechanical loading and mechanical coal cleaning, in which the entire section is dislodged together and the coal separated from the rock outside of the mine by the cleaning plant. *Kentucky*

full subsidence

The greatest amount of subsidence that can occur as a result of mine workings. See also: [percentage subsidence](#)

full teeter

A condition of teeter in which the maximum degree of fluidization of the suspension is attained but without disruption of the bed. *BS, 5*

full velocity

See: [settling velocity](#)

full-wave rectifier

A rectifier that changes single-phase alternating current into pulsating unidirectional current, utilizing both halves of each cycle. *Coal Age, 1*

fully developed mine

In coal mining, a mine in which all development work has reached the boundaries and further extraction will be done on the retreat.

fulminate

An explosive compound of mercury, $\text{HgC}_2\text{N}_2\text{O}_2$, that is employed for the caps or exploders, by means of which charges of gunpowder, dynamite, etc., are fired.

fuelpite

A monoclinic mineral, $Pb_3 Sb_8 S_{15}$; soft metallic gray; occurs with zinkenite and sphalerite in Romania and Hungary.

fulvurite

An old syn. for brown coal. *AGI*

fumarole

a. A hole or a vent from which fumes or vapors issue; a spring or a geyser that emits steam or gaseous vapor. Usually found in volcanic areas. *AGI* b. The exhalation from a fumarole consists of water vapor, nitrogen, hydrogen, free hydrochloric acid, hydrofluoric acid, and silicon fluoride. CF: [solfatar](#); [mofette](#); [soffioni](#). *Fay* c. A hole in a volcanic region, from which gases and vapors issue at high temperature. *Webster 3rd*

fume

a. The gas and smoke, esp. the noxious or poisonous gases, given off by the explosion or detonation of blasting powder or dynamite. *Fay* b. Consists of very fine particles of metals or metallic compounds that have been volatilized at the high temperatures of furnaces, condensed at lower temperatures, and carried by furnace gases into the flues. In general, all the volatile constituents of the ore charge are represented. See also: [metallurgical fume](#)

fume quality

A measure of the toxic fumes to be expected when a specific explosive is properly detonated. *Dick, 1*

fundamental complex

See: [basement complex](#)

fundamental jelly

Structureless colloidal jelly that forms the base of coals and is assumed to have been produced by the decay of plant materials. See also: [carbohum](#)

fundamental strength

The maximum stress that a substance can withstand, regardless of time, under given physical conditions, without creep.

fundamental substance

See: [fundamental jelly](#); carbohummin.

fungus subterraneus

An old name for elaterite. *Tomkeieff*

funicular railway

A railway that negotiates a steep gradient; the cars are operated by cables and winches. See also: [mountain railway](#)

funnel box

A square funnel forming one of a series of gradually increasing size; for separating metal-bearing slimes according to fineness. See also: [spitzkasten](#)

funnel brick

Funnel-shaped fireclay piece used in the bottom-pour ingot assembly to lead metal to the fountain brick. See also: [bottom-pour ingot assembly](#)

funnel intrusion

See: [lopolith](#)

funnel joint

A joint in a joint set that is concentric, with the joints dipping toward a common center. *AGI*

fun-tso-ka

Coolies working tin mines or other projects, in Malaysia. *Hess*

fur

Eng. A deposit of chemical salts and other material (sediment) upon the inner sides of pumps, boilers, etc. Also called: furring.

furgen

A round rod used for sounding a bloomery fire. Syn: [tempering bar](#) *Fay*

furnace

a. A structure in which, with the aid of heat so produced, (1) the operations of roasting, reduction, fusion, steam-generation, desiccation, etc., are carried on, or, (2) as in some mines, the upcast air current is heated, to facilitate its ascent and thus aid ventilation. *Fay*

b. Structure in which materials are exposed to high temperatures. Fuels used to maintain this include alcohols, paraffins, gas, coal, hydrogen, electricity, wood, and sulfur. A furnace is called batch type if its contents are treated in successive charges, or continuous when a stream of material passes through, being changed during transit. The main types are (1) the arc, which uses the heat of an electric arc; (2) the blast furnace; (3) the crucible furnace, a laboratory appliance for heating small charges, or, if large, for melting metals held in bigger crucibles; (4) the induction furnace, heated by electrically induced currents; (5) the muffle, in which the material is placed in a sleeve not in direct contact with the heating atmosphere, so that close control of entering and departing gas is possible; (6) the reverberatory, in which heat developed on the roof is reflected onto a horizontal bed below; (7) the revolving furnace, a horizontal cylinder; (8) the roasting furnace in which material is oxidized, kilned to drive off carbon dioxide, or heated to remove moisture. See also: [cupola](#); [continuous furnace](#); [converter](#). *Pryor, 3*

furnace bridge

A barrier of firebricks or an iron-plate chamber filled with water thrown across the furnace at the extreme end of the fire bars to prevent fuel from being carried into the flues and to quicken the draft by contracting the section of the current of hot gas. *Fay*

furnace cadmium

The zinc-cadmium oxide that accumulates in the chimneys of furnaces smelting zinciferous ores. See also: [cadmia](#)

furnace charger

a. A weighing apparatus for feeding into a furnace mouth the proper proportions of ore, fuel, etc. *Standard, 2* b. In the iron and steel industry, a laborer who operates a compressed-air-driven arm to push stock steel rails into a heating furnace. See also: [charging person](#)

furnace conveyer

The conveyer that moves material through a furnace.

furnace holding-the-iron

A condition by which the furnace gives much less than the normal amount of iron at casting although the feeding may have been regular. The taphole runs iron slowly, and the amount of cinder is somewhat scanty. CF: [furnace losing-the-iron](#)

furnace linings

Refractory materials used to protect the walls of the furnace from reaction with its molten contents (abrasive, melting, or chemical). Three divisions are (1) acid refractories rich in silica (flint, ganister, fireclay), which react with basic oxides; (2) neutral refractories (chromite, graphite), and (3) basic refractories, rich in oxides of calcium and magnesium and low in silica. *Pryor, 3*

furnace losing-the-iron

Escape of iron from the hearth of a blast furnace into the foundation beneath, indicated by decreased quantity of iron at casting and appearance of slag at the tapping hole. Syn: [losing iron](#)

furnace magnesite

A mortar material prepared from finely ground, dead-burned magnesite; suitable for use as a joint material in laying magnesite brick, and for patching or daubing furnace masonry. *Harbison-Walker*

furnace sprayer

In ore dressing, smelting, and refining, a laborer who sprays the inner surfaces of furnace walls and roof with a slurry of silica, water, and fireclay to protect brick, using a compressed-air gun. Also called slurry man; sprayer. *DOT*

furnace stack

A chimney built over a furnace for increasing the draft. *Fay*

furnacite

Misspelling of fornacite. See: [fornacite](#)

furrener

See: [foreigner](#)

furrowed

Having deep grooves or striations.

fusain

a. A coal lithotype characterized macroscopically by its silky luster, fibrous structure, friability, and black color. It occurs in strands or patches and is soft and dirty where not mineralized. Its characteristic microlithotype is fusite. CF: [vitrain](#); [clarain](#); [durain](#). Syn: [mineral charcoal](#); [mother of coal](#). Obsolete syn. motherham. *AGI* b. Coal material having the appearance and structure of charcoal. It is friable, sooty, generally high in ash content, and consists mainly of fusite. *AGI*

fuse

An igniting or explosive device in the form of a cord, consisting of a flexible fabric tube and a core of low explosive (safety fuse) or high explosive (detonating cord).

fuse auger

An instrument for regulating the time of burning of a fuse by removing a certain portion of the composition. It has a movable graduated scale that regulates the depth to which the auger should penetrate. *Standard, 2*

fuse cutter

A mechanical device for cutting safety fuse clean and at right angles to its long axis. *Atlas*

fused alumina

Aluminum oxide, Al_2O_3 .

fused bath electrolysis

Extraction of metals by electrolytic decomposition of their fused salts; extraction of metals from electrolytically decomposable compounds dissolved in substances inert under the conditions of electrolysis. *Bennett*

fuse detonator

A detonator which is initiated by a safety fuse; also referred to as an ordinary blasting cap. *Atlas*

fused nip

A terminal connection, with a fuse, used on portable electrical mining machinery.

fused quartz

Silica glass made from clear pieces of vein quartz.

fused refractories

Refractories in which the constituents are held together by heating to either the point of fusion or coalescence. *Henderson*

fused trolley tap

A specially designed holder with enclosed fuse for connecting a conductor of a portable cable to the trolley system or other circuit supplying electric power to equipment in mines.

fuse gage

An instrument for cutting time fuses to length. *Standard, 2*

fusehead

That part of an electric detonator consisting of twin metal conductors, bridged by fine resistance wire, and surrounded by a bead of igniting compound that burns when the firing current is passed through the bridge wire. *BS, 12*

fuse lighter

Pyrotechnic devices such as a hot-wire fuse lighter or igniter cords for the rapid and certain lighting of safety fuse. See: [tchesa stick](#)

fuse lock

A friction lock by which a miner may fire the free end of a blasting fuse by a lanyard. *Standard, 2*

fusibility scale

A temperature scale based on the fusibility of a standard group of minerals. Used prior to the development of modern furnaces.

fusible plug

An insert of metal with low melting point placed in boilers, sprinklers, and other devices to melt when the temperature becomes dangerously high, so that the melting will relieve pressure, allow water flow, or otherwise tend to alleviate the dangerous condition. *Strock, 2*

fusing point

The degree of heat at which any substance begins to melt or liquefy. See also: [melting point](#)

fusinite

a. A maceral of coal within the inertinite group with intact or broken cellular structure, a reflectance (except in meta-anthracite) well above that of associated vitrinite, and a particle size generally greater than about 50 μ m except when isolated from other macerals. CF: [fusain](#) *AGI* b. A constituent showing well-defined cellular structure of wood or sclerenchyma. The cell cavities vary in size and shape--round, oval, or elongated. Bogen structure is common. Occurs as discrete lenses, thin partings or bands, and as small dispersed fragments; is widely distributed; common. The physical and chemical properties of fusinite vary only slightly in coals of different rank, and consequently its technological properties are fairly constant. *IHCP* c. The major maceral, or micropetrologic, constituent of fusain. It consists of wood (xylem or lignified tissue) of which very little is left but woody tracheids or thick-walled elements so highly carbonized as to contain only traces of ulmins. A member of the inertite group. *AGI*

fusinization

A process of coalification in which fusain is formed. CF: [incorporation](#); vitrification. Also spelled: fusainisation. *AGI*

fusinoid

Fusain and similar material in coal. *AGI*

fusion

a. A union by or as if by a combination of ingredients achieved by heating, and mixing together. *Webster 3rd* b. The union of atomic nuclei to form heavier nuclei, resulting in the release of enormous quantities of energy when certain light elements unite. Also called nuclear fusion. CF: [fission](#)

fusion button test

See: [button test](#)

fusion method

A method used to remove certain impurities from diamond concentrate with a particle size of 0.5 to 1.0 mm. The material, mixed with 10 times its weight of flake caustic soda, is placed in crucibles and put in a furnace where a temperature of 650 degrees C is maintained for 45 min. After furnacing, the material is rinsed to remove the caustic soda and boiled in a glass beaker containing a solution of 1 part hydrochloric acid and 4 parts

water. After further rinsing, the diamond, free from satellites, is dried on a hotplate.
Chandler

fusion of clay

The stage on heating a clay whůž,he material is changed from the solid to the liquid state, but complete liquefaction occurs so gradually with most clays that a fusion range and not a fusion point is obtained. See also: [squotting](#)

fusion-piercing drill

A machine designed to use the fusion-piercing mode of producing holes in rock. Sometimes incorrectly called a jet drill. Syn: [jet-piercing drill](#) *Long*

fusion point

The temperature at which melting takes place. Most refractory materials have no definite melting points, but soften gradually over a range of temperatures. *Harbison-Walker*

fusion tectonite

Igneous rock consolidated from a flowing magma.

fusion test

See: [pyrometric cone equivalent](#); button test.

fusite

a. A coal microlithotype that contains at least 95% fusinite. It is a variety of inertite. CF: [fusain](#) b. In 1955 the Nomenclature Subcommittee of the International Committee for Coal Petrology resolved to use this term for the microlithotype consisting principally of the macerals fusinite, semifusinite, and sclerotinite. Two varieties of fusite are distinguishable--a fragile and powdery fusite and a hard consolidated fusite in which the cavities are filled by various minerals, carbonates, sulfides, kaolin, and other clay minerals. Widely distributed, but in general not abundant. Occurs in fine bands and lenses of varying thickness. The soft variety of fusite concentrates in the very fine particle sizes. Hard fusite distributes itself in various sizes (depending on the thickness of the original bands or lenticles in the seam), but not in the fines. This form of fusite is usually discarded in the middlings and refuse. *IHCP* c. A coal microlithotype containing 95% or more fusinite, plus semifusinite, plus sclerotinite. *Schieferdecker; AGI*

fusoclarain

A type coal rock consisting of the macerals fusinite and vitrinite; it may contain all other macerals. Fusinite is present in a smaller quantity than in clarofusain. CF: [clarofusain](#)

fusodurain

a. Durain in which much of the microconglomeratic elements consist of fusain. *AGI* b. Judged obsolete by the Heerlen Congress of 1935. *AGI*

fusovitrain

a. Preferred. Coal consisting of material transitional between fusain and vitrain with vitrain being predominant (Heerlen Congress of 1935). CF: [vitrofusain](#) b. Coal consisting of a mixture of vitrain with fusain fragments. *AGI*

fusuline

See: [fusulinid](#)

fusulinid

Any foraminifer belonging to the suborder Fusulinina, family Fusulinidae, characterized by a multichambered elongate calcareous microgranular test, commonly resembling the shape of a grain of wheat. Range, Ordovician to Triassic. Syn: [fusuline](#)

future ore

See: [possible ore](#)

G

Ga

Billions of years before the present. *AGI*

gabbro

A group of dark-colored, basic intrusive igneous rocks composed principally of basic plagioclase (commonly labradorite or bytownite) and clinopyroxene (augite), with or without olivine and orthopyroxene; also, any member of that group. It is the approximate intrusive equivalent of basalt. Apatite and magnetite or ilmenite are common accessory minerals. *AGI*

gabbroid

Said of a rock resembling gabbro. *AGI*

gable-bottom car

See: [mine car](#)

gabrielsonite

An orthorhombic mineral, $\text{PbFe}(\text{AsO}_4)(\text{OH})$; adelite group; forms black adamantine lumps at Laangban, Sweden.

gad

A heavy steel wedge, 6 in or 8 in (15.2 cm or 20.3 cm) long, with a narrow chisel point for cutting samples or breaking out pieces of loose rock. *Hess*

gadder

In quarrying, a small car or platform carrying a drilling machine, so as to make a straight line of holes along its course in getting out dimension stone. Also called gadding car.

Syn: [gadding machine](#) *Standard, 2*

gadding machine

See: [gadder](#)

gadolinite

a. A monoclinic mineral, $(\text{Y,Ce,La,Nd})_2\text{Be}_2\text{Si}_2\text{O}_{10}$; further speciated according to the predominant rare-earth element; weakly radioactive; occurs with fluorite, allanite, and beryl in granites and granite pegmatites; with xenotime in biotite gneisses. b. The mineral group bakerite, datolite, gadolinite-(Ce), gadolinite-(Y), hingganite-(Ce), hingganite-(Y), hingganite-(Yb), homilite, and minasgeraisite-(Y).

gagatite

Jetlike coalified plant material preserving cellular structures. See also: [gagatization](#)

gagatization

In coal formation, the impregnation of wood fragments with dissolved organic substances. See also: [gagatite](#)

gage

a. Spacing of tracks or wheels. *Nichols, 1* b. The nominal size of an aggregate. It is the minimum size of sieve through which at least 95% of an aggregate will pass. Also spelled gauge. *Taylor*

gage cock

A small cock in a boiler at the water line, to determine the water level.

gage door

A wooden door fixed in an airway for regulating the supply of ventilation necessary for a certain district or number of workers. Also called a regulator.

gage factor

The percentage change of resistance divided by the percentage strain. For strain gages in common use, this amounts to about 2.2. *Issacson*

gage loss

The diametrical reduction in the size of a bit or reaming shell caused by wear through use. *Long*

gager

In the iron and steel industry, one who determines whether iron or steel bars, sheets, or wire are being rolled to plant specification, so that the rolls may be adjusted to reduce the metal the desired amount for each pass, using calipers to check the thickness (gage) of the various products. *DOT*

gage size

The width of a drill bit along the cutting edge. *Nichols, 1*

gage stone

Any one of several diamonds set in the crown of a diamond bit in a plane parallel with and projecting slightly beyond the inside and/or outside walls of the bit. Syn: [kicker](#); [kicker stone](#); [reaming diamond](#). CF: [cutting stones](#)

gaging

A heap of rubbish placed at the entrance of a disused roadway underground. *CTD*

gaging station

A particular site on a stream, canal, lake, or reservoir where systematic observations of gage height, discharge, or water quality (or any combination of these) are obtained. *AGI*

gahnite

An isometric mineral, $ZnAl_2O_4$; spinel group; forms series with spinel and with hercynite; Mohs hardness, 7-1/2; forms octahedra or masses in schists, contact-metamorphosed limestones, granite pegmatites; relatively common in replacement ores at Franklin, NJ, and Falun, Sweden. Syn: [zinc spinel](#)

gahnospinel

A blue magnesian variety of gahnite used as a gem, from Sri Lanka.

gain

a. A cutting made in the side of a roadway underground to facilitate the construction of a dam or air stopping. *CTD* b. A crosscut in coal mining. c. See: [closed joint](#) d. A notch, mortise, or groove (as in a timber or wall) for a girder or joist. *Webster 3rd* e. The ratio of the output power, voltage, or current to the input power, voltage, or current. *Hunt*

gaize

a. A siliceous rock containing some clay in the Ardennes and Meuse Valley, France. b. A porous fine-grained micaceous glauconitic sandstone containing much soluble silica among the Cretaceous rocks of France and Belgium; a calcareous sediment cemented by chert or flint.

Gal

A unit of acceleration, used in gravity measurements: $1 \text{ Gal} = 1 \text{ cm/s}^2$. The Earth's normal gravity is 980 Gal. The term is not an abbrev.; it was invented to honor the memory of Galileo. See also: [milligal](#)

galactite

a. A variety of natrolite found as colorless acicular crystals. b. An obsolete syn. of novaculite. c. An unidentified stone (possibly calcium nitrate) whose milky solution gave rise to several medieval legends and superstitions.

galaxite

An isometric mineral, $(Mn^{+2}, Fe^{+2}, Mg)(Al, Fe^{+3})_2O_4$; spinel group; occurs as black grains in Galax, Alleghany County, NC; Ioi Mine, Shiga Prefecture, and Oashi mine, Tochigi Prefecture, Japan.

gale alidade

A lightweight compact alidade, with a low pillar and a reflecting prism through which the ocular may be viewed from above. As used by some geologists, it is commonly equipped with the Stebinger drum. See also: [Stebinger drum](#)

galeite

A trigonal mineral, $\text{Na}_{15}(\text{SO}_4)_5\text{F}_4\text{Cl}$; occurs embedded in clay associated with gaylussite and northupite in drill cores from Searles Lake, CA. CF: [schairerite](#)

galena

An isometric mineral, $4[\text{PbS}]$; cubic cleavage; forms cubes and octahedra, also coarse- or fine-grained masses; sp gr, 7.6; occurs with sphalerite in hydrothermal veins, also in sedimentary rocks as replacement deposits; an important source of lead and silver. Also spelled galenite. Syn: [lead sulfide](#); [galenite](#). See also: [blue lead](#)

galenite

See: [galena](#)

galenobismutite

An orthorhombic mineral, PbBi_2S_4 ; soft; massive, or in needlelike to lathlike crystals in radiating aggregates, commonly intergrown with bismuthinite and other bismuth minerals; sp gr, 7.04 to 7.15; occurs in high-temperature replacement deposits or veins; may be argentiferous (e.g., the variety alaskaite in Colorado) or selenian (e.g., the variety selenbleiwismuthglanz at Falun, Sweden); a source of bismuth.

gallatin

The heavy oil of coal tar used in the Bethell process for the preservation of timber. Also called dead oil. *Standard*, 2

gallery

a. A mine level, drift, tunnel, or passage. b. A large, more or less horizontal, passage in a cave. c. A subsurface collector for intercepting ground water. d. A horizontal or nearly horizontal underground passage, either natural or artificial. *Stokes* e. A subsidiary passage in a cave at a higher level than the main passage. *AGI* f. A drift or adit. g. An underground conduit or reservoir. *Seelye*, 1 h. Underground road. *Mason* i. A passageway, as in a dam. *Seelye*, 1

gallery of efflux

Eng. A drain tunnel or adit.

gallery testing

Testing conditions designed to resemble those existing underground as closely as possible, and to reproduce what was considered to be the most dangerous condition, namely, a blownout shot discharging into the most easily ignited mixture of combustible gases and air.

galliard

A hard, smooth, close-grained, siliceous sandstone; a ganister. Also spelled: calliard.
AGI

galliard balls

Large ironstone concretions in sandstones, Yorkshire, U.K.

gallite

A tetragonal mineral, CuGaS_2 ; chalcopyrite group; forms grains and inclusions in germanite and renierite, and exsolution lamellae in sphalerite and pyrite-sphalerite assemblages at Tsumeb, Namibia, and Shaba Province, Zaire.

gallium arsenide

Dark gray; GaAs; isometric; melting point, 1,240 degrees C. Used in microwave diodes and in high-temperature rectifiers and transistors. *Lee; Handbook of Chemistry and Physics, 2*

gallium oxide

Ga_2O_3 ; melting point, 1,795+ or -15 degrees C. *Dodd*

Galloway stage

Multidecked platform suspended near bottom of shaft during sinking. It carries part of the equipment in use and can be raised or lowered as required during blasting, mucking, wall concreting, etc. See also: [pentice](#)

gallows timber

A timber framework or set for roof support. *CTD*

galmei

See: [calamine](#)

galvanic cell

An electrolytic cell that is capable of producing electric energy by electrochemical action. See also: [cell](#)

galvanic corrosion

a. Corrosion associated with the current of a galvanic cell consisting of two dissimilar conductors in an electrolyte or two similar conductors in dissimilar electrolytes. Where the two dissimilar metals are in contact, the resulting reaction is referred to as couple action. *ASM, 1* b. The corrosion above normal corrosion of a metal that is associated with the flow of current to a less active metal in the same solution and in contact with the more active metal. *Hunt*

galvanic electromagnetic methods

Electrical exploration methods in which electric current is introduced in the ground by means of contact electrodes and in which one determines the magnetic field that is associated with the current. *Schieferdecker*

galvanize

To coat with zinc. *Fay*

galvanizing

Immersion of clean steel or iron in bath of molten zinc for purpose of forming a protective coating. Sherardizing is the process of heating iron articles with zinc dust to a temperature at which a strong adherent coating is formed. Electrolytic galvanizing is the electrodeposition of zinc on the iron. See also: [hot-dip coating](#)

galvanoscope

An instrument employed for detecting an electric current and showing its direction. It differs from a galvanometer in being only qualitative. *Standard, 2*

galvanothermometer

An instrument for measuring the heat generated by an electric current or for measuring the current by the heat that it generates. *Standard, 2*

gamagarite

A monoclinic mineral, $(\text{Ba}_2(\text{Fe,Mn})(\text{VO}_4)_2(\text{OH}))$; brackebuschite group; forms prismatic crystals and aggregates of needles with diaspore, ephesite, and bixbyite in manganese ore at Gamagara ridge, Postmasburg, Republic of South Africa.

gamella

Braz. A wooden bowl, about 2 ft (0.6 m) wide at the mouth, and 5 in or 6 in (12.7 cm or 15.2 cm) deep, used for washing gold out of the auriferous material collected in sluices and in river sand. Syn: [batea](#)

gamma

a. In a biaxial crystal, the largest index of refraction. *AGI* b. The interaxial angle between the a and b crystallographic axes. CF: alpha; [beta](#). *AGI* c. The cgs unit of magnetic field intensity commonly used in magnetic exploration. It is equal to 10^{-5} Oe (7.957747×10^{-4} A/m). Syn: [nanotesla](#) d. adj. Of or relating to one of three or more closely related minerals and specifying a particular physical structure (esp. a polymorphous modification); specif. said of a mineral that is stable at a temperature higher than those of its alpha and beta polymorphs (e.g., gamma quartz or gamma -quartz). *AGI*

gamma-gamma log

A borehole measurement of gamma rays originating in a gamma-ray source in the instrument and scattering back from the rock formation to a detector shielded from the source. The amount of scattering is proportional to electron density and, therefore, proportional to mass concentration so that the measurement, after certain corrections, yields a density log of the formation penetrated. *AGI*

gammagraphy

In the United States a term for inspection by gamma rays. *Osborne*

gamma iron

The face-centered cubic form of pure iron, which is stable from 1,670 to 2,550 degrees F (910 to 1,400 degrees C). *ASM, I*

gamma radiation

Emission by radioactive substances of quanta of energy corresponding to X-rays and visible light but with a much shorter wavelength than light. May be detected by gamma-ray Geiger counters. *AGI*

gamma-ray probe

A gamma-ray counter device built into a watertight case small enough in diameter to be lowered into a borehole. *Long*

gamma rays

High-energy, short-wavelength, electromagnetic radiation emitted by a nucleus. Energies of gamma rays are usually between 0.010 and 10 million eV. X-rays also occur in this energy range but are of nonnuclear origin. Gamma radiation usually accompanies alpha and beta emissions and always accompanies fission. Gamma rays are very penetrating and are best attenuated by dense materials like lead and depleted uranium. *Lyman*

gamma-ray spectrometer

An instrument for measuring the energy distribution, or spectrum, of gamma rays, whether from natural or artificial sources. It is used in airborne remote sensing for potassium, thorium, and uranium. *AGI*

gamma-ray spectrometer log

A log that measures the relative quantities of potassium, thorium, and uranium present in the rocks penetrated by a borehole. *Wyllie*

gamma-ray well log

The radioactivity log curve of the intensity of broad-spectrum, undifferentiated natural gamma radiation emitted from the rocks in a cased or uncased borehole. It is used for correlation, and for distinguishing shales (which are usually richer in naturally radioactive elements) from sandstones, carbonates, and evaporites. CF: [spectral gamma-ray log](#) See also: [radioactivity log](#)

gamma-ray well logging

A method of logging boreholes by observing the natural radioactivity of the rocks through which the hole passes. It was developed for logging holes that cannot be logged electrically because they are cased. *AGI*

gamma sulfur

See: [rosickyite](#)

gamma zircon

A metamict variety of zircon that is nearly amorphous owing to radiation damage; it has lower density than crystalline zircon.

gang

a. A train or set of mine cars or trams. b. A mine. c. A set of miners. d. Gangue.

gang car

A car that may be loaded with a block of stone and placed beneath the blades of a gang saw. It is a substitute for the stationary saw bed. *Fay*

gang drill

A set of drills in the same machine operated together. *Standard, 2*

ganger

A work gang foreman. *Webster 3rd*

gang filler

In the stonework industry, one who attaches and detaches crane slings or hooks to and from blocks or slabs of granite, marble, and stone in loading the stone on gang saw cars or trucks and pulling them under the gang saws. *DOT*

gang miner

In bituminous coal mining, one who works in a group that pools its earnings regardless of the type of work performed (drilling, undercutting, blasting, or loading coal). *DOT*

gangue

The valueless minerals in an ore; that part of an ore that is not economically desirable but cannot be avoided in mining. It is separated from the ore minerals during concentration. CF: [ore mineral](#)

gangway

a. A main haulage road underground. Frequently called entry. *Hudson* b. A passageway driven in the coal at a slight grade, forming the base from which the other workings of the mine are begun. *Korson* c. A passageway or avenue into or out of any enclosed place, as in a mine. d. An elevated roadway. *CTD* e. Pennsylvania. Generally confined to anthracite mines. *Jones, 1* f. Newc. A wooden bridge.

gangway cable

A cable designed to be installed horizontally (or nearly so) for power circuits in mine gangways and entries.

ganister

a. A hard, fine-grained quartzose sandstone or quartzite, used in the manufacture of silica brick. It is composed of subangular quartz particles, cemented with secondary silica, and possessing a characteristic splintery fracture. Ganister is distinguished from chert by its more granular texture and by the relatively small quantity of chalcedonic or amorphous silica. *AGI* b. A mixture of ground quartz and fireclay used as a furnace lining. Also spelled gannister. *AGI* c. See: [quartzite](#)

gannen

N. of Eng. A road (heading) down which coal is conveyed in cars running upon rails. An inclined gangway in a coal mine. *Fay; Standard, 2*

gantlet

A narrowing of two single railway tracks almost into the space of one, as on a bridge or in a tunnel, without breaking the continuity of either track by a switch, the two tracks overlapping each other. *Standard, 2*

gantry

a. A frame erected on a gold dredge for supporting different parts of the machinery. Also spelled: gantry; gauntree. b. A bridge or platform carrying a traveling crane or winch and supported by a pair of towers, trestles, or side frames running on parallel tracks. *Webster 3rd* c. An overhead structure that supports machines or operating parts. *Nichols, 1* d. An upward extension of a shovel revolving frame that holds the boom line sheaves. *Nichols, 1*

Gantt chart

Construction program for major engineering works, set out in graphic form. Down the vertical axis in sequence are set out the items concerned. The abscissa shows the period covered in days, or weeks, and the period allowed for each item marked by a horizontal line. The chart displays the interrelation between the items, and aids in ensuring that no item is so delayed as to impede progress on a later one that depends on it. *Pryor, 3*

gap

In a fault, the horizontal component of separation measured parallel to the strike of the strata, with the faulted bed absent from the measured interval. *AGI*

gape

Maximum aperture at entry to a coarse crushing machine at which the largest piece of rock fed to it can be gripped and acted on by the breaking system. *Pryor, 3*

gap packing

A method of packing for road maintenance that consists of gate side packs 3 to 5 yd (2.7 to 4.6 m) wide, next a gap of at least the width of the road, and finally a large pack 5 to 7 yd (4.6 to 6.4 m) wide. The waste packs are made at least 2 yd (1.8 m) wide and not less in width than twice the thickness of the seam. The gaps provided in strip packing are kept clear of supports and allow the roof to break up and flow toward them. This puts the strata in tension over the roads and reduces fracture and crush. *Mason*

gap sensitivity

The maximum distance for propagation between standard cartridge sizes separated by an air gap. CF: [sympathetic detonation](#)

gap test

The gap is the greatest distance at which, under certain given conditions, a priming cartridge is capable of initiating a receiving cartridge (receptor). The same explosive is usually used both as primer and receptor, although the gap distance in such a case will also be affected by any change in strength that may occur in the explosive. The gap test can be carried out with the cartridges unconfined or confined, for example, in tubes, in air, or in water. The test gives, for example, information about changes in the explosive due to aging, moisture, temperature, etc. *Fraenkel*

garbenschiefer

a. A type of spotted slate characterized by concretionary spots whose shape resembles that of a caraway seed. Etymol: German. CF: [fleckschiefer](#); [fruchtschiefer](#). *AGI* b. See: [feather amphibolite](#)

Gardner crusher

A swing and hammer crusher, the hammers being pieces hung from trunnions between two disks keyed to a shaft. When revolved, centrifugal force throws the hammers out against the feed and a heavy anvil inside the crusher housing. *Liddell*

gargarinite

A hexagonal mineral, NaCaY(F,Cl)_6 ; in albitized granites and associated quartz-microcline veins in Kazakhstan.

gargulho

A Brazilian term used in the plateau region of Bahia for a comparatively coarse, clay-cemented, ferruginous conglomerate in which diamonds are found. *AGI*

garland

a. A channel fixed around the lining within a shaft in order to catch the water draining down the shaft walls and conduct it by pipes or water boxes to a lower level. Also called water curb; water garland. See also: [water ring](#) b. A frame to heighten and increase content of a truck. *CTD*

garnet

a. A group of isometric minerals having the general formula $A_3 B_2 (SiO_4)_{3-2D_x} (OH)_{4x}$ in which $A=(Ca,Fe,Mg,Mn)$ and $B=(Al,Cr,Fe,Mn,Si,Ti,V,Zr)$ with Si partly replaced by (Al,Fe). b. The silicate minerals almandine, andradite, calderite, goldmanite, grossular, hibshite, katoite, kimzeyite, knorringite, majorite, pyrope, schlorlomite, spessartine, and uvarovite. Syn: [granat](#)

garnet doublet

a. A term applied to the most common doublet, that with a very thin top of red garnet, regardless of the color of the doublet. b. Any doublet of dark red color regardless of whether any portion of it is garnet, more correctly called a garnet-top doublet. c. A composite stone made with a garnet top on a glass base. Also called garnet-top doublet, garnet-topped doublet.

garnetite

A metamorphic rock consisting chiefly of an aggregate of interlocking garnet grains. CF: [tactite](#)

garnetization

Introduction of, or replacement by, garnet. This process is commonly associated with contact metamorphism. *AGI*

garnet jade

A light-green variety of grossular garnet closely approaching fine jadeite in appearance, esp. that in Transvaal, South Africa.

garnetoid

A group of nonsilicate minerals that are isostructural with garnet, including the oxide yafsoanite, the arsenates berzeliite and manganberzeliite, and the halide cryolithionite. CF: [hydrogrossular](#); hydrogarnet.

garnierite

A general term for hydrous nickel silicates. Syn: [genthite](#); [noumeite](#).

garrelsite

A monoclinic mineral, $Ba_3 NaSi_2 B_7 O_{16} (OH)_4$; in colorless crystals associated with nahcolite and shortite in core from an oil boring at Ouray, CO.

garronite

An orthorhombic mineral, $Na_2 Ca_5 Al_{12} Si_{20} O_{64} \cdot 27H_2 O$; zeolite group; pseudotetragonal; forms radiating aggregates in amygdules in basalts, commonly associated with other zeolites, e.g., chabazite, thomsonite, and levyne; at the Garron Plateau, County Antrim, Ireland, and 22 localities in eastern Iceland.

gas

a. Combustible gases (methane), a mixture of air and combustible gases, or other explosive gaseous mixture encountered in mining. b. A fluid of low density and of high compressibility. The specific recognition of a gas as distinct from a liquid of the same composition requires the simultaneous presence of both phases at equilibrium. See also: [fluid](#); [vapor](#). *AGI* c. In mining, a mixture of atmospheric air with combustible gases. *Standard, 2* d. The term normally used by miners to designate any impure air, esp. explosive combinations. *BCI* e. The term generally applied to denote combustible gases. *BS, 8* f. Any aeriform liquid other than atmosphere air, such as gaseous carbon dioxide (blackdamp), carbon monoxide (whitedamp), methane (combustible gases), and the common combustible petroleum-product gases. CF: [acetylene](#) g. Abbrev. for gasoline. See also: [manufactured gas](#); [natural gas](#). *Long* h. A fluid (as air) that has neither independent shape nor volume but tends to expand indefinitely. A substance at a temperature above its critical temperature and therefore not liquefiable by pressure alone. *Webster 3rd* i. As a verb, to affect or to treat with gas. To subject to the action of gas. *Webster 3rd*

gas alarm

Device or signal system that warns underground workers of dangerous concentration of combustible gases. *Pryor, 3*

gas analysis

An analysis of mine air to give information regarding the oxygen content of the air and the presence of explosive or otherwise undesirable gas or gases. It is a valuable aid in following the changes in mine air during fires and after explosions. *Lewis*

gas bubble

a. Round inclusion in glass, synthetic corundum, and spinel, which reveal their difference from native corundum, spinel, and most other native gemstones, in which inclusions are negative crystals. Syn: [glass enclosure](#); [gas enclosure](#). b. Relatively rare type of fluid inclusions created where a gas such as carbon dioxide is trapped in minerals growing from gas-saturated or boiling liquids, identified by their tubular gas-filled structures.

gas carburizing

The introduction of carbon into the surface layers of mild steel by heating in a current of gas high in carbon--usually hydrocarbons or hydrocarbons and carbon monoxide. *CTD*

gas centrifuge process

A method of isotope separation in which heavy atoms are separated from light atoms by centrifugal force. *Lyman*

gas classification

The separation of powder into particle-size fractions by means of a gas stream of controlled velocity. *ASTM*

gas concrete

Coke formed in gas retorts as distinguished from that made in a coke oven. *Webster 3rd*

gas conductor

A pipe for leading combustion gases from the mouth of a blast furnace to a hot-blast stove. *Fay*

gas detonation system

A system for initiating blasting caps in which the energy is transmitted through the circuit by means of a gas detonation inside a hollow plastic tube. See also: [nonelectric blasting](#); [shock tube system](#). *Dick, 2*

gas drain

a. Eng. A heading driven in a mine for the special purpose of carrying off methane from any workings. b. A tunnel or borehole for conducting gas away from old workings. *CTD*

gas emission

The release of gas from the strata into the mine workings. *BS, 8*

gas-emission rate

The quantity of methane discharged from the strata and coal seams into the ventilating air of a coal mine. The rate may be expressed on a time or tonnage basis. Gas emission varies with (1) the rate of advance of the workings; (2) the face operation such as cutting, blasting, loading, etc.; and (3) the barometric reading. *Nelson*

gas enclosure

See: [gas bubble](#)

gaseous

a. Having the form of or being gas; of or relating to gases. *Webster 3rd* b. Lacking substance or solidity. *Webster 3rd*

gaseous diffusion

A method of isotope separation based on the fact that atoms or molecules of different masses will diffuse through a porous barrier at different rates. The method is used to enrich uranium with the uranium-235 isotope. *Lyman*

gaseous dispersion pattern

A dispersion pattern that may be detected by analysis of soil, air, or gas dissolved in underground water, or of gas condensed in the rocks and soil. Gaseous dispersion patterns of interest include those of hydrocarbons and some noble gases resulting from nuclear decay of radioactive elements, and gaseous substances such as Hg, H₂, He, SO₂, CO₂, and CS₂. *Hawkes, 2; Lewis*

gaseous fuel

Includes natural gas and the prepared varieties, such as coal gas, oil gas, and iron blast furnace gas, as well as producer gas, etc. *Newton, 1*

gaseous place

A place that is likely to be dangerous from the presence of flammable gas. *Fay*

gaseous transfer

Separation from a magma of a gaseous phase that moves relative to the magma and releases dissolved substances, usually in the upper levels of the magma, when it enters an area of reduced pressure. *AGI*

gas evolution

The liberation of gas in the form of bubbles during the solidification of metals. It may be due to the fact that the solubility of a gas is less in the solid and liquid metal respectively, as when hydrogen is evolved by aluminum and its alloys, or to the promotion of a gas-forming reaction, as when iron oxide and carbon in molten steel react to form carbon monoxide. See also: [blowhole](#); [unsoundness](#). *CTD*

gas explosion

A major or minor explosion of combustible gases in a coal mine, in which coal dust apparently did not play a significant part. See also: [coal-dust explosion](#)

gas firing

The combustion of coal effected by burning in such a way as to produce a combustible gas, which is then burned secondarily in the laboratory or the furnace. *Fay*

gas-flame coal

Coal containing 35% to 40% volatiles (dry, ashless basis). *Tomkeieff*

gas fluxing

a. The addition of gaseous materials as a flux to promote melting. b. A rapid upward streaming of free juvenile gas through a column of molten magma in the conduit of a volcano. The gas acts as a flux to promote melting of the wall rocks. *AGI*

gas grooves

Hills and valleys in electrolytic deposits caused by streams of hydrogen or other gas rising continuously along the surface of the deposit while it is forming. *Henderson*

gash fracture

A small-scale tension fracture that occurs at an angle to a fault and tends to remain open. *AGI*

gash vein

A nonpersistent vein that is wide above and narrow below, and that terminates within the formation it traverses. The term was originally applied to vein fillings in vertical solution joints in limestone. *AGI*

gasification

Conversion of coal to gaseous fuel without leaving a combustible residue. *BS, 4*

gas ignition

The setting on fire of a small or large accumulation of combustible gases in a coal mine. The ignition may be caused by a safety lamp, electrical machinery, explosives, frictional sparking, etc. Syn: [ignition of combustible gases](#)

gas indicator

A pocket device for the rapid determination of the percentage of a specific gas in the atmosphere of mines, boiler rooms, blast furnaces, etc. *Fay*

gas-logged strata

Rock formations, usually in coal mines, that contain a relatively high proportion of methane. In descensional ventilation, the buoyancy pressure of the methane opposes the ventilating pressure, with a tendency for cavities to contain combustible gases of high concentration. The same may apply to waste cavities with no natural exit to the return. *Nelson*

gasman

An underground official who examines the mine for combustible gases and has charge of their removal. See also: [fire boss](#); [gas watchman](#). *Hess*

gas pipe

a. Mid. A short wooden pipe about 4 in by 4 in (10.2 cm by 10.2 cm) inside, having its upper end open to the roof, and the lower end opening into the bratticing so that any gas given off in the roof may be carried away as formed. *Fay* b. Any pipe for conveying gas. *Fay*

gas pocket

A cavity in the rocks containing gas, generally above an oil pocket. *Mersereau, 2*

gas pore

A gas bubble in a mineral. *Standard, 2*

gas pressure

The forces generated from the expansion of gases formed from the reaction of explosive materials after detonation; gas pressures produce the heaving action during rock blasting. Syn: [borehole pressure](#)

gas producer

A furnace in which coal is burned for the manufacture of producer gas. There are two types: (1) the step-grate, natural-draft generator, which is but a development of the ordinary firebox; and (2) the shaft furnace, with or without a grate and worked by a natural or forced draft. The latter type is identical in many respects to a blast smelting furnace. *Fay*

gas ratio

The ratio of the volume at atmospheric pressure of the gas developed by an explosive to the volume of the solid from which it was formed. Many commercial explosives have a gas ratio of about 8. Ammonium nitrate plus fuel oil has a ratio of about 20. *Leet, 2*

gas reverser

In the iron and steel industry, one who reverses gas valves by manipulating levers to throw hot combustion gases from one side of the furnace to the other, to keep the furnace heat evenly distributed, and to prevent burning out on one side. *DOT*

gas rig

A borehole drill, either rotary or churn-drill type, driven by a combustion-type engine using a combustible liquid, such as gasoline, or a combustible gas, such as bottle gas, as the source of the motivating energy. *Long*

gassing

a. Absorption of gas by a metal. *ASM, 1* b. Evolution of gas from a metal during melting operations or on solidification. *ASM, 1* c. The evolution of gas from an electrode during electrolysis. *ASM, 1*

gassing of copper

A process that denotes the brittleness produced when copper containing oxide is heated in an atmosphere containing hydrogen. The hydrogen diffuses into the metal and

combines with oxygen, forming steam that cannot diffuse out. A high steam pressure is built up at the crystal boundaries, and the cohesion is diminished. *CTD*

gas spectrum

a. The spectrum, consisting of bright lines or bands, obtained by dispersing the light from a glowing gas or vapor. *Webster 2nd* b. An absorption spectrum obtained by passing light through a gas or vapor. *Webster 2nd*

gas streaming

A process of magmatic differentiation involving the formation of a gaseous phase, usually during a late stage in consolidation of the magma, that results in partial expulsion, by escaping gas bubbles, of residual liquid from the crystal network. *AGI*

gassy

A mine is said to be gassy when it gives off methane or other gas in quantities that must be diluted with pure air to prevent occurrence of explosive mixtures. *BCI*

gas tracers

Slowly moving air currents can be directly observed by using smokes. These may range from simple dust clouds, through various chemical smokes, to more refined techniques employing gas and radioactive tracers. Various chemicals have been used, including stannic chloride, titanium tetrachloride, and pyrosulfuric acid. These materials give off white fumes when their vapors come into contact with atmospheric moisture. The method in common use is to carry the chemical in sealed glass ampules, which can be broken when an observation is to be made. *Roberts, 1*

gas trap

One of many devices for separating and saving the gas from the flow and lead lines of producing oil wells. The mixture of oil and gas is allowed to flow through a chamber large enough to reduce the velocity of the mixture to the point at which the oil and gas tend to separate. The gas, seeking the top of the chamber, is drawn off free of oil, while the oil is discharged at the bottom. Also called gas tank. *Ash*

gastrolith

A rounded stone or pebble, commonly highly polished, from the stomach of some reptiles, esp. dinosaurs, plesiosaurs, and crocodilians. Gastroliths are thought to have been used in grinding up food, but marine reptiles may have used them to provide body stability while in the water. *AGI*

gastropod

Any mollusk belonging to the class Gastropoda, characterized by a distinct head with eyes and tentacles and, in most, by a single calcareous shell that is closed at the apex, sometimes spiralled, not chambered, and generally asymmetrical; e.g., a snail. Range, Upper Cambrian to present. *AGI*

gastunite

See: [weeksite](#)

gas watchman

In bituminous coal mining, person who makes morning examinations for gas before workers enter the mine. See also: [fireman](#); [fire boss](#); [gasman](#). *DOT*

gas water

Water through which coal gas has been passed and which has absorbed the impurities of the gas. *Fay*

gate

a. Eng. Gateway or gate road. A road or way underground for air, water, or general passage; a gangway. See also: [gate end](#) b. Eng. A road packed out in longwall goaf. When ripped in the waste to provide packing material on a conveyor face, it is called a dummy gate. Also called gate road; gateway; main brow; trail road. *SMRB* c. The apparatus at the bottom of an ore chute for filling cars. Also called a chute. *Spalding* d. Syn: [swivel head](#) diamond drill. *Long* e. The closing piece in a stop valve. *Standard, 2* f. A valve controlling the admission of water to a waterwheel or conduit. *Standard, 2*

gate belt conveyor

Conveyor usually from 26 to 30 in (66.0 to 76.2 cm) wide and troughed so as to centralize the load and minimize spillage. A scraper feeder, consisting of an elevating chain conveyor driven by the gate belt, is often used to transfer the coal from the face belt to the gate belt. *Mason*

gate conveyor

A gate road conveyor that carries coal from one source or face only; i.e., from a single-unit or double-unit face. See also: [conveyor](#); face conveyor; gathering conveyor. *Nelson*

gate end

The coal face or inby end of a gate. See also: [gate](#)

gate-end box

A flameproof enclosure primarily for use at or near the coalface and designed to line up with similar boxes to form a control board. A gate-end box may contain bus bars, isolators, switches, contactors, transformers, and protective devices, for the control of motors, lighting, and other equipment. Syn: [gate-end unit](#)

gate-end feeder

A short conveyor that feeds the coal from the face conveyor onto the gate conveyor. See also: [feeder conveyor](#)

gate-end loader

A short conveyor designed to receive the coal from the face conveyors and elevate it to such a height as to be convenient for delivery into mine cars. See also: [feeder conveyor](#)

gate-end switch

A flameproof motor-starting contactor for use with coal-face machinery. The essential features are a flameproof casing divided into two separate compartments, the smaller of which contains a hand-operated isolating switch and the main bus bars. The isolating switch is interlocked with the cover of the main compartment so that it cannot be removed unless the switch is in the off position; or it may be fitted with contacts enabling the mechanism to be earthed before work is undertaken on it. *Mason*

gate-end unit

See: [gate-end box](#)

gate interlock

A system designed to prevent shaft conveyances from being moved or action signals from being transmitted, unless all shaft gates are closed. *BS, 13*

gate road

a. Eng. A road connecting a stall with a main road. *Standard, 2* b. A road through the goaf used for haulage of coal from longwall working. *Pryor, 3*

gate road bunker

An appliance for the storage of coal from the face conveyors during peaks of production or during a stoppage of the outby transport. It may consist of a length of conveyor chain running in high-capacity pans arranged under the delivery end of the gate conveyor. When the trunk conveyor cannot handle the coal from the gate conveyor, the bunker chain is slowly drawn back carrying about 1 st (0.9 t) of coal per yard of chain. The bunker is later discharged by reversing the process. See also: [underground bunker](#) *Nelson*

Gates canvas table

A large form of inclined canvas table in which the pulp is first classified, then distributed along the upper edge of the table. The concentrates are caught in the warp of the canvas; after this is full, treatment must be stopped while the concentrates are swept or sluiced off. *Liddell*

gate shutter

A paddlelike implement used to shut off the flow of metal from a mold and divert it to other molds. *Standard, 2*

gate side pack

A pillar consisting of tightly rammed material enclosed in walls of stone, built on each side of the gate road. See also: [double packing](#) *Nelson*

gateway longwall

N. of Eng. A continuous coal face served by gateways (in Durham about 12 yd or 11 m apart). A small group works in each gateway down which the coal is removed by tubs. *Trist*

gather

To assemble loaded cars from several production points and deliver them to main haulage for transport to the surface or pit bottom. *BCI*

gathering arm loader

A machine for loading loose rock or coal. It has a tractor-mounted chassis, carrying a chain conveyor the front end of which is built into a wedge-shaped blade. Mounted on this blade are two arms, one on either side of the chain conveyor, which gather the material from the muck pile and feed it onto the loader conveyor. The tail or back end of the conveyor is designed to swivel and elevate hydraulically so that the coal or stone can be loaded into a car or on to another conveyor. See also: [loader](#) *Nelson*

gathering conveyor

Any conveyor that is used to gather coal from other conveyors and deliver it either into mine cars or onto another conveyor. The term is frequently used with belt conveyors placed in entries where a number of room conveyors deliver coal onto the belt. See also: [gate conveyor](#); trunk conveyor. *Jones, I*

gathering ground

See: [catchment area](#)

gathering haulage

That portion of the haulage system immediately adjacent to the face. In longwall mining, the face belt or tubs and track along the face constitute the gathering haulage system. *Wheeler, H.R.*

gathering locomotive

See: [gathering motor](#); electric gathering mine locomotive.

gathering mine locomotive

See: [gathering motor](#); electric gathering mine locomotive.

gathering motor

A lightweight type of electric locomotive used to haul loaded cars from the working places to the main haulage road and to replace them with empties. Syn: [gathering locomotive](#); [gathering mine locomotive](#). See also: [electric gathering mine locomotive](#)

gathering motorman

In bituminous coal mining, a person who operates a mine locomotive to haul loaded mine cars from working places to sidings, for the formation of larger trips (trains) to be handled by a haulage cable or a main-line locomotive. Syn: [relay motorman](#)

gathering pumps

Portable or semiportable pumps that are required when water is encountered while opening a new mine, for extending headings or entries in an operating mine, for pumprooms or rib sections lying in the dip, for collecting water from local pools, or for sinking a shaft. They discharge water at an intermediate pumping station or into a drainage ditch or tunnel carrying water outside a mine.

gatton

Scot. See: [gauton](#)

gaudefroyite

A hexagonal mineral, $\text{Ca}_4 \text{Mn}_3 (\text{BO}_3)_3 (\text{CO}_3)(\text{O},\text{OH})_3$; forms prisms associated with marokite, braunite, and hasumannite in calcite from Tachgagalt, Morocco.

Gaudin's equation

An equation for the particle size distribution that can be expected when a material is crushed in a ball mill or rod mill; it is of the form $P = 100(x/D)^m$, where P is the percentage passing a sieve of aperture x, D is the maximum size of particle, and m is a constant which is a measure of dispersion. The equation holds good only if the ratio of size of feed to size of balls is below a critical value.

gauge

See: [gage](#)

gault

Firm compact clay; brick clay. Also spelled galt, golt.

gauntree

See: [gantry](#)

gauslinite

A local name for burkeite. From Searles Lake, Calif. See also: [burkeite](#) Syn: [teepelite](#)

gauss

Unit of magnetic induction in the electromagnetic and Gaussian systems of units, equal to $1 \text{ Mx}/\text{cm}^2$ ($10 \text{ nWb}/\text{cm}^2$), or $10^{-4} \text{ Wb}/\text{m}^2$. Also known as abtesla (abt). *McGraw-Hill, I*

gaussian model

A function frequently used when fitting mathematical models to experimental variograms, often in combination with a nugget model.

gauton

Scot. A watercourse cut in the floor of a mine or working. Syn: [gatton](#) See also: [hasson](#)

gawl

An irregular or uneven line of coal face. *CTD*

gayet

a. French name for sapropelic coal, such as torbanite or cannel. *Tomkeieff* b. See: [cannel coal](#)

Gayley process

The process for the removal of moisture from the blast of an iron blast furnace by reducing the temperature of the blast current so that the moisture is deposited as snow. See also: [cold blast](#) *Webster 2nd; Fay*

Gay-Lussac's law

When gases react, they do so in volumes that bear a simple ratio to one another, and to the volumes of their products if these are gaseous, temperature and pressure remaining constant. Also called law of gaseous volumes. *Cooper*

Gay-Lussac's tower

In sulfuric acid making, a tower filled with pieces of coke over which concentrated sulfuric acid trickles down. On meeting gas issuing from the lead chambers, the coke absorbs nitrous anhydride, which otherwise would be lost. CF: [Glover's tower](#)

gaylussite

A monoclinic mineral, $\text{Na}_2 \text{Ca}(\text{CO}_3)_2 \cdot 5\text{H}_2\text{O}$; soft; in flattened and elongated crystals in muds from playa lakes in the Mohave Desert, CA, and the Gobi Desert, Mongolia.

geanticline

a. A mobile upwarping of the crust of the Earth, of regional extent. Ant: geosyncline. *AGI* b. More specif., an anticlinal structure that develops in geosynclinal sediments, due to lateral compression. Var: geoanticline. *AGI*

gear

a. The moving parts or appliances collectively that constitute some mechanical whole or set, linked meshing and fitted together, and serving to transmit motion or change its rate or direction. Commonly used in the plural. *Hess* b. A gear wheel. *Hess* c. See: [feed gear](#) d. The accessory tools and equipment required to operate a drill. *Long* e. A set of

enmeshing-toothed rotating parts or cogwheels designed to transmit motion. *Long f.* A toothed wheel, cone, or bar. *Nichols, I*

gearsutite

A monoclinic mineral, $\text{CaAl}(\text{OH})\text{F}_4 \cdot \text{H}_2\text{O}$; occurs with fluorite and barite in hydrothermally altered sedimentary and volcanic rocks.

gearman

In beneficiation, smelting, and refining, one who tends a coarse or primary crusher that breaks large lumps of ore into a smaller size so that it may be run through smaller crushers or shipped to a plant for extraction of the valuable metal or minerals. *DOT*

gear ratio

The relationship between the speeds of the first and last shafts, respectively, of a train of gears. If a certain force drives a machine at a given speed and the output shaft runs at one-tenth of the speed of the input shaft, then the output force will be 10 times the input. If the gear ratio of a motor-driven machine is 10 to 1, then the turning force of the last shaft will be 10 times that of the motor, apart from force used up in friction. *Mason*

gear set

A device that causes one shaft to turn another at reduced speed. *Nichols, I*

Gebhardt survey instrument

A borehole surveying instrument often used to test the verticality of the freezing holes in shaft sinking. A vernier scale is used to determine the positions of the pendulum points at successive points, and by summing the results an accurate plan of the course of the borehole can be prepared. *Nelson*

gedanite

A brittle wine-yellow variety of amber with very little succinic acid; lacks the toughness and ability to take as high a polish as the succinic acid-rich varieties; rarely used as a gem except for beads. Syn: [mellow amber](#)

gediegen

See: [zinn](#)

gedrite

An orthorhombic mineral, $(\text{Mg,Fe})_5 \text{Al}_2 [\text{Si}_6 \text{Al}_2 \text{O}_{22}](\text{OH})_2$; amphibole group, with $\text{Mg}/(\text{Mg} + \text{Fe}) = 0.1\text{-}0.89$; forms series with magnesiogedrite and ferrogedrite; common in schists, gneisses, and metasomatic rocks.

geest

a. Alluvial material that is not of recent origin lying on the surface. An example is the sandy region of the North Sea coast in Germany. *AGI* b. See: [saprolite](#)

gehlenite

A tetragonal mineral, $\text{Ca}_2 \text{Al}(\text{AlSi})\text{O}_7$; melilite group; forms a series with akermanite; a common constituent of feldspathoidal rocks formed by reaction of mafic magmas with carbonate rocks. Syn: [velardenite](#)

Geiger counter

a. An ionization chamber that records the number of radioactive particles impinging upon it per minute, thus detecting radioactive substances. *Bateman, 2* b. An instrument that detects gamma rays given off by radioactive substances. *AGI* c. An ionization chamber with its vacuum and its applied potential so adjusted that a gamma ray or other ionizing particle passing through it causes a momentary current to flow. The surge of current can be amplified and counted so as to measure the intensity of radioactivity in the vicinity of the chamber. *AGI*

Geiger-Mueller counter tube

A gas-filled chamber usually consisting of a hollow cylindrical cathode and a fine wire anode along its axis. It is operated with a voltage high enough so that a discharge triggered by a primary ionizing event will spread over the entire anode until stopped by the reduction of the field by space charge.

Geiger-Mueller counter

An instrument consisting of a Geiger-Mueller tube plus a voltage source and the electronic equipment necessary to record the tube's electric pulses. Also called Geiger counter. *AGI*

Geiger-Mueller probe

A Geiger-Mueller counter encased in a watertight container, which can be lowered into a borehole and used to log the intensity of the gamma rays emitted by the radioactive substances in the rock formations traversed. Syn: [Geiger probe](#)

Geiger-Mueller tube

A radiation detector consisting of a gas-filled tube with a cathode envelope and an axial wire anode. It functions by producing momentary current pulses caused by ionizing radiation. It is a part of the Geiger-Mueller counter. Syn: G-M tube. (AGI, 1987)

Geiger probe

See: [Geiger-Mueller probe](#)

Geiger test

The act or process of using a Geiger-Mueller probe or counter to measure the intensity of the gamma rays emitted by the radioactive substance contained in rocks traversed by a borehole. *Long*

geikielite

A trigonal mineral, $MgTiO_3$; ilmenite group; forms a series with ilmenite; in highly metamorphosed magnesian marbles associated with brucite, spinel, or diopside; in serpentinites with chromium-rich chlorites, and in gem gravels of Sri Lanka.

Geissler tube

a. A sealed and partly evacuated glass tube containing electrodes. Used for the study of electric discharges through gases. *Standard, 2* b. A gas-filled discharge tube having various shapes and usually containing a narrowly constricted portion in which the luminosity is intensified. *Webster 3rd*

gel

a. A translucent to transparent, semisolid, apparently homogeneous substance in a colloidal state, generally elastic and jellylike, offering little resistance to liquid diffusion, and containing a dispersion or network of fine particles that have coalesced to some degree. *AGI* b. A nonhomogeneous gelatinous precipitate; e.g., a coagel. *AGI* c. A liquefied mud, which became firm and then reabsorbed most of the water released earlier. A gel is in a more solid form than a sol, and can sustain limited shear stress. See also: [thixotropy](#)

Gelamite

Trademark for a semigelatin high explosive of relatively high weight strength of 65%; very good water resistance. Used in underground mining, in quarrying, in construction, and in general blasting. *CCD, 2*

gelatin

See: [gelatin dynamite](#)

gelatin borehole tube

A device used in borehole surveying. A tube, containing a compass floating in molten gelatin, is lowered to the point in the borehole at which its verticality is required. It is left in position until the gelatin sets and is then withdrawn. The compass indicates the direction and a small plumb bob shows the angle of dip. *Nelson*

gelatin dynamite

A type of highly water-resistant dynamite, characterized by its gelatinous consistency, containing nitroglycerin and nitrocellulose; straight gelatin dynamite is a series of gelatins that include sodium nitrate, while ammonium gelatin dynamites use ammonium nitrate. Syn: [ammonia gelatin](#) dynamite; gelatin.

gelatin extras

Explosives in which a portion of the nitroglycerin is replaced with ammonium nitrate. The explosive velocity is reduced, but the substantial resistance to water is retained. Less expensive than gelatin dynamites. *Carson, 1*

gelatins

A general term relating to explosives in which a principal constituent, nitroglycerin, is given a gelatinous consistency by mixing it with nitrocotton. *BS, 12*

gelation

The formation of a gel from a sol, as by coagulation or by precipitation with an electrolyte. *AGI*

gel cement

Cement to which a small percentage of bentonite has been added either dry or mixed with water. Such an addition particularly adapts the slurry for use in cementing casing and recovering lost circulation because it reduces loss of slurry to the formation, makes for a more homogeneous mixture, increases the water-cement ratio, reduces loss of water to the formation, and sets in substantially the same volume as occupied when placed. *Brantly, 1*

gelnite

A general term relating to explosives of the gelatin type in which there is a proportion of wood, metal, and oxygen-containing salts. *BS, 12*

gelose

The colloidal product of plant decay that becomes the principal constituent of coal. See also: [carbohummin](#)

gelosite

Constituent of torbanite, consisting of birefringent pale yellow microscopic crushed spheres. CF: [humosite](#) matrosite; retinosite. *Tomkeieff*

gel strength

The ability or the measure of the ability of a colloid to form gels. *Brantly, 1*

gem

A cut-and-polished stone that has intrinsic value and possesses the necessary beauty, durability, rarity, and size for use in jewelry as an ornament or for personal adornment; a jewel whose value is not derived from its setting. Syn: [cut stone](#)

gem crystal

A crystal from which a gem can be cut.

gem gravel

A gravel placer containing an appreciable concentration of gem minerals. *AGI*

gemmary

a. The science of gems. Syn: [gemology](#) b. A collection of gems; gems considered collectively. c. A house or receptacle for gems and jewels.

gem material

Any rough material, either natural or artificial, that can be fashioned into a jewel. CF: [gemstone](#)

gem mineral

Any mineral species that yields varieties with sufficient beauty and durability to be classed as gemstones.

Gemolite

An illuminator used to observe inclusions and other imperfections in gemstones effectively. Employs either a monocular or a binocular microscope.

gemologist

a. One who appraises gems. Also spelled gemmologist (U.K.). b. One who has mastered gemology.

gemology

a. The science of gems. CF: [gemmary](#) b. The study of fashioned minerals, their imitators and substitutes both natural and synthetic, prized for their beauty and durability. It concerns composition, structure, occurrence, origin, fashioning, and identification of gems, some of which are minerals and some of organic origin, e.g., pearls. CF: [descriptive gemology](#); [determinative gemology](#).

gem pearl

a. A term used for those better qualities of fine pearl that possess a rose or other particularly desirable orient. Does not include white pearl. b. An iridescent pearl, perfectly spherical, with maximum luster of even intensity, free from all visible blemishes, and of a decided and desirable orient, such as pink rose.

gem stick

A stick on the end of which a gem is cemented while being cut. *Standard, 2*

gemstone

a. A mineral or petrified material that, when cut and polished, can be used in jewelry. Syn: [precious stone](#) b. A term that includes pearl, amber, coral, jet, or any stone of any variety of gem material, of sufficient beauty and durability for use as a personal ornament. See also: [decorative stone](#); [gem material](#); ornamental stone. Also spelled gem stone.

gem variety

The variety of a mineral species that yields gemstones.

general-crusher foreman

In beneficiation, smelting, and refining, one who directs and coordinates all operations concerned with reducing ore to designated size. *DOT*

general soil survey

<https://t.me/Geologybooks>

A general investigation of superficial deposits. The sampling procedure may include augers, boreholes, and trial pits, and tests are made to cover soil identification. This type of survey aims at establishing soil profiles and locating areas requiring special investigation. See also: [detailed soil survey](#); [preliminary soil survey](#). *Nelson*

generation

All the crystals of the same mineral species that appear to have crystallized at essentially the same time; e.g., if there are olivine phenocrysts in a groundmass containing olivine, there are said to be two generations of olivine. *AGI*

generator

a. A source of electricity, esp. one that transforms heat or mechanical work directly into electric energy, as opposed to a voltaic battery. *Standard, 2* b. A vessel, chamber or machine in which the generation of a gas is effected, as by chemical action. *Standard, 2*

genesis

a. The origin or formation of a natural gem mineral. b. In petrology, the origin and evolution of rocks based on field and textural observation allied with laboratory analyses and experimental studies. CF: [petrogenesis](#) c. In mineralogy, the origin of stable phases in terms of pressure, temperature, and composition of parent materials. d. In ore deposits, determination of specific peculiar and exceptional conditions under which economic minerals have been concentrated. CF: [metallogeny](#)

genetic classification

Any classification based on manner of origin or line of descent. Genetic classifications are set up to deal with fossils, rocks, and minerals. *Stokes*

Geneva ruby

An artificial ruby. *Fay*

Genter filter

A filter utilized in coal-washing plants for the recovery of fine coal particles.

Genter thickener

Cylindrical tank with obtuse conical base around which raking gear moves slowly, pushing settled sludge to a central discharge. In the body of the tank hang radially mounted tube frames covered with filter cloths (socks). These are connected with a central valve and timing mechanism, so set that vacuum is applied for 1 to 10 min to

remove filtrate, after which the gathered solids are displaced by a brief flushback so that they fall to the raking zone. *Pryor, 3*

genthelvite

An isometric mineral, $Zn_4 Be_3 (SiO_4)_3 S$; forms series with danalite and with helvite; in carbonatites and alkaline pegmatites.

genthite

See: [garnierite](#)

gently inclined

Said of deposits and coal seams with a dip of from 5 degrees to 25 degrees. *Stoces*

genus

A category in the hierarchy of plant and animal classification intermediate in rank between family and species. Adj: generic. Plural: genera. *AGI*

geo-

Prefix from the Greek "ge," meaning land, of the land, or Earth. *Pryor, 3*

geobotanical indicators

Some plants develop peculiar diagnostic symptoms that can be interpreted directly in terms of probable excesses of a particular element in the soil. Geobotanical indicators are either plant species or characteristic variations in the growth habits of plant species that are restricted in their distribution to rocks or soils of definite physical or chemical properties. They have been used in locating and mapping ground water, saline deposits, hydrocarbons, and rock types, as well as ores. *Hawkes, 2*

geobotanical prospecting

a. The visual study of plants, their morphology, and their distribution as indicators of such things as soil composition and depth, bedrock lithology, the possibility of orebodies, and climatic and ground-water conditions. CF: [biogeochemical prospecting](#)
See also: [botanical anomaly](#) b. Prospecting in which visual observation of plants is used as a guide to finding buried ore. Whereas biogeochemical methods require chemical analysis of plant organs, the geobotanical methods depend on direct observations of plant morphology and the distribution of plant species. *Hawkes, 2*

geobotany

The study of plants as related specif. to their geologic environment. *Hawkes, 2*

geocerain

See: [geocerite](#)

geocerite

A white, flaky, waxlike resin of approximate composition $C_{27} H_{53} O_2$ in brown coal. Also spelled geocerain, geocerin. CF: [geomyricite](#)

geochemical anomaly

A concentration of one or more elements in rock, soil, sediment, vegetation, or water that is markedly higher or lower than background. The term may also be applied to hydrocarbon concentrations in soils. See also: [significant anomaly](#)

geochemical coherence

The phenomenon of the intimate occurring together of certain chemical elements in nature because of their similar chemical properties, as, for example, the group of the lanthanides, zirconium-hafnium, niobium-tantalum, etc. *Schieferdecker*

geochemical cycle

The sequence of stages in the migration of elements during geologic changes. Rankama and Sahama distinguish a major or endogenous cycle, proceeding from magma to igneous rocks to sediments to sedimentary rocks to metamorphic rocks and possibly through migmatites back to magma, and a minor or exogenic cycle proceeding from sediments to sedimentary rocks to weathered material and back to sediments again. *AGI*

geochemical environment

Pressure, temperature, and the availability of the most abundant chemical components are the parameters of the geochemical environment that determine which mineral phases are stable. On the basis of these variables, it is possible to classify all the natural geochemical environments of the Earth into two major groups--primary and secondary. The primary environment extends downward from the lower levels of circulating meteoric water to the deepest level of the crust and may extend into the mantle. It is an environment of high temperature and pressure, restricted circulation of fluids, and relatively low free-oxygen content. The secondary environment is the environment of weathering, erosion, and sedimentation at the surface of the Earth. It is characterized by low temperatures, nearly constant low pressure, free movement of solutions, and abundant free oxygen, water, and carbon dioxide.

geochemical exploration

The search for economic mineral deposits or petroleum by detection of abnormal concentrations of elements or hydrocarbons in surficial materials or organisms, usually accomplished by instrumental, spot-test, or quickie techniques that may be applied in the field. Syn: [geochemical prospecting](#)

geochemical landscape

The pattern, in any given area, in which the net effect of all the dynamic forces concerned in the movement of earth materials will be reflected in the overall pattern of distribution of the elements. *Hawkes, 2*

geochemical mapping

The systematic collection and processing of a very large number of samples accompanied by the proper presentation and interpretation of the resulting analytical data, usually with reference to a topographic map or other geographic coordinate system. *Hawkes, 2*

geochemical prospecting

See: [geochemical exploration](#)

geochemical relief

A little-used term for the variation in metal values in varied geographic settings. Geochemical contrast.

geochemical survey

A survey involving the chemical analysis of systematically collected samples of rock, soil, stream sediments, plants, or water; this expression may be further modified by indicating specif. the material sampled, as, for example, geochemical soil survey. *Hawkes, 1*

geochemist

An individual who studies the chemistry of earth materials. May be qualified by the term "inorganic" for the study of nonbiological materials, "organic" for the study of plants and hydrocarbons, and "isotope" for the study of nuclides of the elements. Generally, the geochemist is concerned with the distribution of elements in exploration application or with the cycles of elements in basic science.

geochemistry

The study of the relative and absolute abundances of the elements and their nuclides (isotopes) in the Earth; the distribution and migration of the individual elements or suites of elements in the various parts of the Earth (the atmosphere, hydrosphere, lithosphere, etc.), and in minerals and rocks, and also the study of principles governing this distribution and migration. Geochemistry may be defined very broadly to include all parts of geology that involve chemical changes, or it may be focused more narrowly on the distribution of the elements, as in Mason's definition; the latter is commonly understood if the term is used without qualification. *AGI*

geochronic

See: [geochronologic](#)

geochronite

A monoclinic mineral, $Pb_{14}(Sb,As)_6S_{23}$; forms a series with jordanite; soft; sp gr, 6.4 to 6.5; associated with galena, jamesonite, and boulangerite; in lead ores in Bolivia, Germany, Sweden, and the United States. Syn: [kilbrickenite](#)

geochronologic

Pertaining to geochronology.

geochronologic unit

A division of time traditionally distinguished on the basis of the rock record as expressed by a time-stratigraphic unit. Geochronologic units in order of decreasing rank are eon, era, period, epoch, and age. Names of periods and units of lower rank are the same as those of the corresponding time-stratigraphic units; the names of some eras and eons are independently formed. Syn: [geologic time unit](#)

geochronology

The study of time in relationship to the history of the Earth, esp. by the absolute age determination and relative dating systems developed for this purpose. See also: [absolute time](#) Syn: [geologic chronology](#)

geochronometry

Measurement of geologic time by geochronologic methods, esp. radiometric dating. CF: [geochronology](#)

geochrony

An obsolete syn. of geochronology. *AGI*

geode

a. A hollow globular or subspherical body, from 2.5 to 30 cm or more in diameter, found in certain limestone beds and rarely in shales; it is characterized by a thin and sometimes incomplete outermost primary layer of dense chalcedony, by a cavity that is partly filled by a drusy lining of inward-projecting crystals (usually of quartz or calcite and sometimes of barite, celestite, and various sulfides) deposited from solution on the cavity walls. Unlike a druse, a geode is separable (by weathering) as a discrete nodule or concretion from the rock in which it occurs and its inner crystals are not of the same minerals as those of the enclosing rock. *AGI* b. The crystal-lined cavity in a geode. *AGI* c. A term applied to a rock cavity and its lining of crystals that is not separable as a discrete nodule from the enclosing rock. CF: [vug](#) *AGI*

geodesy

a. The science concerned with the determination of the size and shape of the Earth and the precise location of points on its surface. *AGI* b. The determination of the gravitational field of the Earth and the study of temporal variations such as Earth tides, polar motion, and rotation of the Earth. Syn: [geodetics](#)

geodetic coordinates

Quantities defining the horizontal position of a point on an ellipsoid of reference with respect to a specific geodetic datum, usually expressed as latitude and longitude. These may be referred to as geodetic positions or geographic coordinates. The elevation of a point is also a geodetic coordinate and may be referred to as a height above sea level. *AGI*

geodetics

See: [geodesy](#)

geodetic surveying

Surveying in which account is taken of the figure and size of the Earth and corrections are made for Earth curvature; the applied science of geodesy. It is used where the areas or distances involved are so great that results of desired accuracy and precision cannot be obtained by plane surveying. *AGI*

geodimeter

Trade name of an electronic optical device that measures ground distances precisely by electronic timing and phase comparison of modulated light waves that travel from a master unit to a reflector and return to a light-sensitive tube where an electric current is set up. It is normally used at night and is effective with first-order accuracy up to

distances of 3 to 25 miles (5 to 40 km). Etymol: acronym for geodetic-distance meter. CF: [tellurometer](#)

geodynamic

Pertaining to physical processes within the Earth as they affect the features of the crust. *AGI*

geognosy

An 18th-century term for a science accounting for the origin, distribution, and sequence of minerals and rocks in the Earth's crust. The term was superseded by geology as early ideas were abandoned. It has become restricted to absolute knowledge of the Earth, as distinct from the theoretical and speculative reasoning of geology. *AGI*

geographical concentration

The ratio of face length (X) to length of main haulage roads (L) in the same units; i.e., X/L. See also: [concentration of output](#)

geographic cycle

See: [cycle of erosion](#)

Geographic Information System

A computer system for managing spatial data. Abbrev. GIS. A GIS, e.g., can provide a simultaneous consideration of geology, geophysics, geochemistry, and mineral deposits in a region for the purposes of mineral exploration. *Bonham-Carter*

geography

The study of all aspects of the Earth's surface including its natural and political divisions, the distribution and differentiation of areas, and often, people in relationship to their environment. *AGI*

geohydrology

A term, often used interchangeably with hydrogeology, referring to the hydrologic or flow characteristics of subsurface waters. *AGI*

geoid

The figure of the Earth considered as a sea-level surface extended continuously through the continents. It is a theoretically continuous surface that is perpendicular at every point

to the direction of gravity (the plumb line). It is the reference for astronomical observations and for geodetic leveling. See also: [datum](#)

geoisotherm

See: [isogeotherm](#)

geologic

See: [geological](#)

geologic age

a. The age of a fossil organism or of a particular geologic event or feature referred to the geologic time scale and expressed in terms either of time units (absolute age) or of comparison with the immediate surroundings (relative age); an age datable by geologic methods. *AGI* b. The term is also used to emphasize the long-past periods of time in geologic history, as distinct from present-day or historic times. See also: [age](#)

geological

Pertaining to or related to geology. The choice between this term and geologic is optional, and may be made according to the sound of a spoken phrase or sentence. Geological is generally preferred in the names of surveys and societies, and in English and Canadian usage. Syn: [geologic](#) *AGI*

geological horizon

An interface that indicates a particular position in a stratigraphic sequence. In practice it is commonly a very thin bed.

geological province

An area throughout which geological history has been essentially the same or one that is characterized by particular structural or physiographic features.

geological section

See: [geologic section](#)

geological survey

a. A systematic investigation of an area determining the distribution, structure, composition, history, and interrelations of rock units. Its purpose may be either purely scientific or economic with special attention to the distribution, reserves, and potential

recovery of mineral resources. Syn: [geologic survey](#) b. An organization engaged in making surveys; e.g., a state survey or the U.S. Geological Survey.

geologic chronology

See: [geochronology](#)

geologic column

a. A composite diagram that shows in a single column the subdivisions of part or all of geologic time or the sequence of stratigraphic units of a given locality or region (the oldest at the bottom and the youngest at the top, with dips adjusted to the horizontal) so arranged as to indicate their relations to the subdivisions of geologic time and their relative positions to each other. See also: [columnar section](#) b. The vertical or chronologic arrangement or sequence of rock units portrayed in a geologic column. See also: [geologic section](#)

geologic drilling

Drilling done primarily to obtain information from which the geology of the formations penetrated can be determined. *Long*

geologic engineering

See: [engineering geology](#)

geologic formation

See: [formation](#)

geologic log

A written and/or graphic record of the geologic data obtained from drillhole core and/or cuttings. In noncore drilling, the cuttings are separated at depth intervals of about 1 m or 2 m and examined. In core drilling, the core is kept in sequence and examined. The essential description of core includes lithology, alteration, mineralization, and structural discontinuities. CF: [geotechnical log](#)

geologic map

A map on which is recorded geologic information, such as the distribution, nature, and age relationships of rock units (surficial deposits may or may not be mapped separately), and the occurrence of structural features (folds, faults, joints), mineral deposits, and fossil localities. It may indicate geologic structure by means of formational outcrop

patterns, by conventional symbols giving the direction and amount of dip at certain points, or by structure-contour lines. *AGI*

geologic mineralizer

Substance that promotes mineral concentration and crystallization during solidification of rock-forming material, particularly in pegmatite dikes. Syn: [ore-forming fluid](#); [mineralizer](#). *Bennett*

geologic section

Any sequence of rock units found in a given region either at the surface or below it (as in a drilled well or mine shaft); a local geologic column. Syn: [geological section](#); [stratigraphic section](#). See also: [geologic column](#)

geologic survey

See: [geological survey](#)

geologic thermometer

See: [geothermometer](#)

geologic time

The period of time dealt with by historical geology, or the time extending from the end of the formative period of the Earth as a separate planetary body to the beginning of written or human history; the part of the Earth's history that is represented by and recorded in the succession of rocks. The term implies extremely long duration of remoteness in the past, although no precise limits can be set. *AGI*

geologic time scale

An arbitrary chronologic arrangement or sequence of geologic events, used as a measure of the relative or absolute duration or age of any part of geologic time, and usually presented in the form of a chart showing the names of the various rock-stratigraphic, time-stratigraphic, or geologic-time units, as currently understood; e.g., the geologic time scales published by Harland et al. (1982), Odin (1982), Palmer (1983), and Salvador (1985). Syn: [time scale](#)

geologic time unit

The time unit corresponding with a time-stratigraphic unit; e.g., period, epoch, or age. See also: [geochronologic unit](#)

geologist

One who is trained in and works in any of the geological sciences. *AGI*

geologize

To participate in or talk about geology; to practice geology. *AGI*

geology

The study of the planet Earth--the materials of which it is made, the processes that act on these materials, the products formed, and the history of the planet and its life forms since its origin. Geology considers the physical forces that act on the Earth, the chemistry of its constituent materials, and the biology of its past inhabitants as revealed by fossils. Clues on the origin of the planet are sought in a study of the Moon and other extraterrestrial bodies. The knowledge thus obtained is placed in the service of humans--to aid in discovery of minerals and fuels of value in the Earth's crust, to identify geologically stable sites for major structures, and to provide foreknowledge of some of the dangers associated with the mobile forces of a dynamic Earth. See also: [historical geology](#); [physical geology](#). *AGI*

geology system

a. The formal chronostratigraphic unit of rank next lower than "erathem" and above "series". Rocks encompassed by a system represent a time span and an episode of Earth history sufficiently great to serve as a worldwide reference unit. The temporal equivalent of a system is a "period." The system is the fundamental unit of chronostratigraphic classification of Phanerozoic rocks, extended from a type area or region and correlated mainly by its fossil content. System boundaries either have been ratified by the International Union of Geological Sciences or are under review by a working group of the International Commission on Stratigraphy. The Proterozoic systems are related to geologic events with geochronologic boundaries established by the Subcommittee on Precambrian Stratigraphy. b. Some systems initially established in Europe were later divided or grouped elsewhere into units ranked as systems, but these are more appropriately known as "subsystems" or "supersystems".

geomagnetician

One who sets up magnetic observatories and stations in order to chart the Earth's magnetic field and applies data obtained to problems in the fields of telephony, telegraphy, radio broadcasting, navigation, mapping, and geophysical prospecting. Also called terrestrial magnetician. *DOT*

geomagnetic meridian

See: [magnetic meridian](#)

geomorphic

a. Pertaining to the form of the Earth or of its surface features; e.g., a geomorphic province. *AGI* b. Pertaining to geomorphology; geomorphologic. *AGI*

geomorphic cycle

See: [cycle of erosion](#)

geomorphogeny

That part of geomorphology that deals with the origin, development, and changes of the Earth's surface features or landforms. *AGI*

geomorphology

a. The science that treats the general configuration of the Earth's surface; specif., the study of the classification, description, nature, origin, and development of present landforms and their relationships to underlying structures, and of the history of geologic changes as recorded by these surface features. In the United States, it has come to replace the term "physiography" and is usually considered a branch of geology; in Great Britain, it is usually regarded as a branch of geography. *AGI* b. Strictly, any study that deals with the form of the Earth (including geodesy, and structural and dynamic geology). This usage is more common in Europe, where the term has even been applied broadly to the science of the Earth. *AGI* c. The features dealt with in, or a treatise on, geomorphology; e.g., the geomorphology of Texas. *AGI*

geomyricin

See: [geomyricite](#)

geomyricite

A white, waxy resin of approximate composition $C_{32}H_{62}O_2$ in brown coal. Syn: [geomyricin](#)

geophone

A seismic detector that produces a voltage proportional to the displacement, velocity, or acceleration of ground motion, within a limited frequency range. Syn: [jug](#); [seismometer](#); [pickup](#). CF: [seismograph](#); transducer. *AGI*

geophysical exploration

Exploring for minerals or mineral fuels, or determining the nature of Earth materials by measuring a physical property of the rocks and interpreting the results in terms of geologic features or the economic deposits sought. Physical measurements may be taken on the surface, in boreholes, or from airborne or satellite platforms. See also:

[geophysical prospecting](#)

geophysical log

See: [well log](#)

geophysical prospecting

Exploring for minerals or mineral fuels, or determining the nature of earth materials by measuring a physical property of the rocks, and interpreting the results in terms of geologic features or the economic deposits sought. Physical measurements may be taken on the surface, in boreholes, or from airborne or satellite platforms. See also:

[geophysical exploration](#)

geophysical prospecting surveyor

Person who locates and marks sites selected for conducting geophysical prospecting activities concerned with locating subsurface earth formations likely to contain petroleum or mineral deposits. *DOT*

geophysical survey

The exploration of an area in which geophysical properties and relationships unique to the area are mapped by one or more geophysical methods. *AGI*

geophysicist

One who studies seismic, gravitational, electrical, thermal, radiometric, and/or magnetic phenomena to investigate geological phenomena, such as structure and composition of the Earth, forces causing movement and warping of surface, origin and activity of glaciers and volcanoes, and the location and cause of earthquakes; charts ocean currents and tides; takes measurements concerning shape and movements of Earth, and acoustic, optical, and electrical phenomena in the atmosphere; and locates petroleum and mineral deposits. *DOT*

geophysics

A branch of physics dealing with the Earth, including its atmosphere and hydrosphere. It includes the use of seismic, gravitational, electrical, thermal, radiometric, and magnetic phenomena to elucidate processes of dynamical geology and physical geography, and makes use of geodesy, geology, seismology, meteorology, oceanography, magnetism,

and other Earth sciences in collecting and interpreting Earth data. Geophysical methods have been applied successfully to the identification of underground structures in the Earth and to the search for structures of a particular type, as, for example, those associated with oil-bearing sands. *AGI*

georgiadesite

A monoclinic mineral, $Pb_{16}(AsO_4)_4Cl_{14}(OH)_6$ or $Pb_{16}(AsO_4)_4Cl_{14}O_2(OH)_2$; forms stubby tablets; sp gr, 7.1; associated with laurionite, matlockite, and fiedlerite on altered slags at Laurium, Greece.

geosphere

The solid portion of the Earth, including water masses; the lithosphere plus the hydrosphere. Above the geosphere lies the atmosphere, and at the interface between these two regions is found almost all of the biosphere, or zone of life. *Hunt*

geostatic pressure

See: [rock pressure](#)

geostatistics

A methodology for the analysis of spatially correlated data. The characteristic feature is the use of variograms or related techniques to quantify and model the spatial correlation structure. Also includes the various techniques such as kriging, which utilize spatial correlation models.

geosyncline

A mobile downwarping of the crust of the Earth, either elongate or basinlike, measured in scores of kilometers, in which sedimentary and volcanic rocks accumulate to thicknesses of thousands of meters. A geosyncline may form in part of a tectonic cycle, in which orogeny follows. Recognition of the plate structure of the lithosphere has led to appreciation that nearly all geosynclinal phenomena are related to ocean opening and closing. CF: [mobile belt](#) geanticline. *AGI*

geotechnical log

A written and/or graphic record of the data obtained from drillhole core. In addition to the data given in geologic logs, geotechnical logs require more detail on discontinuities such as fractures, joints, bedding, rock quality designation, and hydrologic conditions. CF: [geologic log](#) *Peters*

geotechnics

The application of scientific methods and engineering principles to the acquisition, interpretation, and use of knowledge of materials of the Earth's crust for the solution of engineering problems; the applied science of making the Earth more habitable. It embraces the fields of soil mechanics and rock mechanics, and many of the engineering aspects of geology, geophysics, hydrology, and related sciences. Syn: [geotechnique](#) *AGI*

geotechnique

See: [geotechnics](#)

geotechnology

The application of scientific methods and engineering techniques to the exploitation and use of natural resources. *AGI*

geotectonic

See: [tectonic](#)

geotectonics

See: [tectonics](#)

geotherm

See: [isogeotherm](#)

geothermal

Pertaining to the heat of the interior of the Earth. Syn: [geothermic](#) *AGI*

geothermal gradient

The rate of increase of temperature in the Earth with depth. The gradient differs from place to place depending on the heat flow in the region and the thermal conductivity of the rocks. The average geothermal gradient in the Earth's crust approximates 25 degrees C per kilometer of depth. *AGI*

geothermic

See: [geothermal](#)

geothermic gradient

See: [strata temperature](#)

geothermometer

An indicator of the temperature at which some reaction took place or some geologic process was active. Syn: [geologic thermometer](#)

geotomography

The adaptation of computer aided tomography (CAT) scan technology to tomographic analysis of geologic features such as fractures and differing rock types. In geotomography, the software analyzes the energy ray paths between a transmitter and receiver that are placed in separate drill holes, at various locations along a single drill hole, or along an underground opening. Various types of energy waves, such as seismic, acoustic, electromagnetic, or X-rays, can be analyzed by the computer software to create an image. *Jessop*

gerasimovskite

An amorphous mineral, $(\text{Mn,Ca})_2 (\text{Nb,Ti})_5 \text{O}_{12} \cdot 9\text{H}_2\text{O} (?)$; forms a series with manganbelyankinite; soft; in ussingite pegmatites in the Lovozero massif, Kola Peninsula, Russia.

gerhardite

A basic copper nitrate containing 52.9% copper. Crystallization, orthorhombic. Cleavage, yields flexible laminae. Tenacity, fragile, and sectile. Mohs hardness, 2; sp gr, 3.426; luster, vitreous, brilliant; color, deep emerald-green; streak, light green; transparent; soluble in dilute acids. From Jerome, AZ. *Weed, 1*

gerhardtite

An orthorhombic mineral, $\text{Cu}_2 (\text{NO}_3)(\text{OH})_3$; dark to emerald green; soft; occurs with atacamite, brochantite, malachite, and azurite in oxidized zones of copper deposits in arid and semiarid regions.

german

A straw tube filled with gunpowder and used as a fuse. Not used in coal mines. *CTD*

germanate-pyromorphite

Synthetic $\text{Pb}_5 (\text{GeO}_4)_3 \text{Cl}$; forms apatite structure.

German cupellation

A method of cupellation using a large reverberatory furnace with a fixed bed and a movable roof. The bullion to be cupelled is all charged at once, and the silver is not refined in the same furnace where the cupellation is carried on. *Fay*

German cut

See: [pyramid cut](#)

German gold

Archaic name for amber.

germanite

An isometric mineral, $\text{Cu}_{26}\text{Fe}_4\text{Ge}_4\text{S}_{32}$; associated with tennantite, sphalerite, enargite, pyrite, and bornite; at the Tsumeb Mine in Namibia.

germanium

A grayish-white, metallic element occurring in argyrodite, a sulfide of germanium and silver; and in germanite, zinc ores, and coal. Its presence in coal ensures a large reserve of the element in the future. Symbol, Ge. It is a very important semiconductor material. Also used as an alloying agent, a phosphor, a catalyst, and for infrared detectors and optical equipment. *Handbook of Chemistry and Physics, 3*

germanium dioxide (soluble)

GeO_2 ; melting point, 1,115 degrees C. This oxide is a glass former and provides some unique properties; e.g., greater dispersion, lower melting temperature, and higher transmissivity for infrared radiation. Some germanium oxide complexes and solid solutions have ferroelectric properties. Colorless; sp gr, 4.228 (at 25 degrees C); hexagonal; soluble in alkalis; and slightly soluble in acids and in water. Used as an ingredient of special glass mixtures. *Lee; CCD, 2; Handbook of Chemistry and Physics, 2*

germanium nitride

Ge_3N_4 ; decomposes at 800 degrees C. A special electroceramic of high resistivity. *Dodd*

German lapis

See: [false lapis](#)

German reduction process

This process consists in (1) roasting copper ore, (2) melting and obtaining a matte with 30% to 40% copper called coarse metal, (3) roasting the coarse metal, (4) melting and obtaining a matte with 60% to 70% copper called fine metal, (5) roasting the fine metal, and (6) melting and obtaining black copper. *Fay*

German steel

A metal made from charcoal iron obtained from bog iron or from sparry carbonate of iron. *Fay*

gersdorffite

An isometric mineral, NiAsS ; cobaltite group; massive; sp gr, 5.9 to 6.0; in sulfide veins intergrown with maucherite, nickeline, and chalcopyrite at the Garson and Falconbridge Mines, Sudbury, ON, Can.; with cobaltite and rammelsbergite in the silver-arsenide ores of Cobalt, ON, Can.; a source of nickel.

Gerstenhofer furnace

A shaft furnace, filled with terraces or shelves, through which crushed ore is caused to fall for roasting. *Fay*

gerstleyite

A monoclinic mineral, $\text{Na}_2(\text{Sb,As})_8\text{S}_{13} \cdot 2\text{H}_2\text{O}$; dark red; soft; in fine granular aggregates, groups of small plates, or spherules in clay, with borates at the Baker Mine, Kramer district, Kern County, CA.

get cleanup

Arkansas. To have an opportunity to load out all the coal a miner has loosened. *Fay*

getter

Substance used to combine with the residual oxygen in an electric bulb or tube. Its use is called gettering. *Pryor, 3*

getting

The actual process of digging clay, by hand or by excavator; getting and transporting form the successive stages of winning. *Dodd*

geversite

An isometric mineral, $\text{Pt}(\text{Sb},\text{Bi})_2$; pyrite group; forms tiny grains intergrown with native platinum in concentrates at the Dreikop Mine, eastern Transvaal, Republic of South Africa.

geyerite

See: [loellingite](#)

geyser basin

A valley or other area that contains numerous springs, geysers, and steaming fissures fed by the same ground-water flow. *AGI*

geyserite

Syn: [siliceous sinter](#) scaly, or filamentous incrustation of opaline silica deposited by precipitation from the waters of a geyser. *AGI*

ghost crystal

See: [phantom crystal](#)

ghost reflection

In the seismic reflection method, a special type of multiple reflection. This is the reflection that takes place when the energy traveling upward from the shot is reflected downward by the base of the weathered zone or by the Earth's surface. The reflected pulse follows the primary downgoing pulse by a time interval determined by the depth of the shot below the weathering (or the free surface) and the velocity of the material above the shot. For normal shooting depths this interval will range from 0.010 to 0.020 s.

Dobrin

giant

The nozzle of a pipe used to convey water for hydraulic mining and for the purpose of distributing or properly applying and increasing the force of the water. See also: [hydraulic monitor](#)

giant granite

See: [pegmatite](#)

giant powder

a. A blasting powder consisting of nitroglycerin, sodium nitrate, sulfur, rosin, and sometimes kieselguhr. *Webster 3rd* b. Nitroglycerin absorbed by an inert filler such as kieselguhr. *Pryor, 3*

giant tender

See: [nozzleman](#)

gib

a. A temporary support at the face to prevent coal from falling before the cut is complete. *BCI* b. Scot. A sprag; a prop put in the holing of a seam while being undercut. *Fay*

gibber

An Australian term for a pebble or boulder; esp. one of the wind-polished or wind-sculptured stones that compose a desert pavement or the lag gravels of an arid region. It is pronounced with a hard g. *AGI*

Gibbs adsorption theorem

A solute that lowers the surface tension of its solvent tends to concentrate at the air-liquid interphase, and vice versa. *Pryor, 3*

gibbsite

A monoclinic mineral, $8[\text{Al}(\text{OH})_3]$; pisolitic; in mica-like crystals, or stalactitic and spheroidal forms; a constituent of bauxite associated with boehmite and/or diaspore; formed by weathering of igneous rocks, esp. nepheline syenite; also in veins; a source of aluminum and synthetic abrasives. In emery deposits formed by thermal or regional metamorphism of bauxites, gibbsite occurs as an alteration crust on corundum. Syn: [hydrargillite](#)

Gibbs phase rule

See: [phase rule](#)

Gibraltar stone

A light-colored onyx at Gibraltar. See also: [Mexican onyx](#)

gieseckite

a. An aluminosilicate of magnesium and potassium, sometimes with appreciable FeO. *Hey, 1* b. Green fine-grained micaceous alteration of nepheline.

giessenite

An orthorhombic mineral, $Pb_{13}(Cu,Ag)(Bi,Sb)_9S_{28}$ (?); forms soft, metallic, needles on galena associated with pyrite, rutile, and tennantite; near Giessen in the Binn valley, Valais, Switzerland.

gig

a. A mine cage or skip. *CTD* b. Gravity or self-acting haulage. Also called ginney. *Mason*

Gilbert

The unit of magnetomotive force in the electromagnetic system, equal to the magnetomotive force of a closed loop of one turn in which there is a current of $1/(4\pi)$ abamp. *McGraw-Hill, 1*

gild

To wash over or overlay thinly with gold; coat with gold, either in leaf or powder, or by electroplating; as, to gild a chandelier. To overlay with any other substance for the purpose of giving the appearance of gold. *Standard, 2*

gillespite

A tetragonal mineral, $BaFeSi_4O_{10}$; vitreous; red; translucent; associated with sanbornite, celsian, taramellite, and witherite at Dry Delta, AK, and Fresno and Mariposa Counties, CA.

Gilman heat-treating machine

Used for tempering and hardening of drill bits at the mine. Syn: [automatic heat-treating machine](#)

gilsonite

See: [uintaite](#)

gim peg

A device used in faceting gems; a piece of wood containing a series of holes into which a dop stick (gem stick) can be fixed at various angles, thus regulating the angle of the facet being cut. Syn: [jamb stick](#)

gin

a. A pump worked by a windlass. *Standard, 2* b. A pile-driving machine. *Standard, 2* c. A drum framework and pulleys for hoisting mineral from a shallow shaft. *CTD* d. Horse gear for hoisting through a mine shaft. *Pryor, 3* e. A small, hand-cranked hoist. *Long* f. Eng. A drum and framework carrying pulleys, by which the ore and waste are raised from a shallow pit; a whim. Also called horse gin. A contraction of engine. *Fay* g. An old form of hoisting engine. *Mason*

ginging

The process of lining a shaft with bricks or masonry; the lining itself. *CTD*

ginney

A journey set or train of tubs, trams, or trucks, or a self-acting incline, in a coal mine. *CTD*

ginney tender

A person working on an endless chain haulage. *CTD*

ginny carriage

Eng. A small railway truck for transporting constructive materials. *Standard, 2*

ginorite

A monoclinic mineral, $\text{Ca}_2 \text{B}_{14} \text{O}_{23} \cdot 8\text{H}_2 \text{O}$; transparent to translucent; occurs as pellets embedded in a matrix of sassolite and clay within colemanite-veined basalt at Death Valley, CA; also as minute lozenge-shaped plates aggregated into masses with calcite in veins in sandstone at Sasso Pisano, Tuscany, Italy. CF: [strontioginorite](#)

gin pit

A shallow mine, the hoisting from which is done by a gin. *Fay*

gin race

The circular path that a gin horse travels. Syn: [gin ring](#) *Standard, 2; Fay*

gin ring

See: [gin race](#)

gin wheel

The cylinder of a gin or winch. *Standard, 2*

giobertite

See: [magnesite](#)

gips plate

See: [gypsum plate](#); accessory plate.

giraffe

a. A cagelike mine car esp. adapted for inclines, having the frame higher at one end than at the other. *Standard, 2* b. A mechanical appliance for receiving and tripping a car of ore, etc., when it arrives at the surface. *Fay* c. A multiple-deck skip. *Fay*

girasol

a. A name applied to many gemstones with a girasol effect, e.g., moonstone; specif. a translucent variety of "fire opal" with reddish reflections in bright light and a faint bluish-white floating light emanating from the center of the stone. b. adj. Said of any gem variety, e.g., sapphire, chrysoberyl, that exhibits a billowy, gleaming round or elongated area of light that "floats" or moves about as the stone is turned or as the light source is moved. c. A name for glass spheres used in the manufacture of imitation pearls.

girdle

a. A thin sandstone stratum. *Standard, 2* b. Flattened lenticles or nodules of any hard stone in softer beds. Sometimes extended also to beds. *Arkell* c. In stratigraphy: (1) a thin stratum, particularly said of sandstone or coal, esp. when exposed in a shaft or borehole or (2) flattened lenticles or nodules of any hard stone in softer beds. d. In gemology, the line that encompasses a cut gem parallel to the horizon; or that determines the greatest horizontal expansion of the stone. e. In structural petrology, on an equal-area projection, a belt or concentration of points representing orientations of fabric elements. If this belt coincides approx. with a great circle of the projection, it is referred to as a great-circle girdle. If the belt of concentration coincides approx. with a small circle of the projection, it is called a small-circle or "cleft girdle"

Girond process

In this process, fluorspar, soda ash, carbon, lime, and mill scale were thrown on to the bottom of a hot ladle, and thus sintered. On tapping the steel from the open hearth furnace into the ladle, the resulting boil removed part of the phosphorus. *Osborne*

girth

a. A brace member running horizontally between the legs of a drill tripod or derrick. *Long*
b. In square-set timbering, a horizontal brace running parallel to the drift. *Long*

GIS

See: [Geographic Information System](#)

Gish-Rooney method

An artificial-current conductive direct-current method of measuring ground resistivity which avoids polarization by continually reversing the current with a set of commutators. *AGI*

gismondine

A monoclinic mineral, $\text{Ca}_2 \text{Al}_4 \text{Si}_4 \text{O}_{16} \cdot 9\text{H}_2 \text{O}$; zeolite group; pseudotetragonal; vitreous, transparent to translucent; in cavities in leucitic tephrites and related lavas; also zeolite zones in basaltic lavas where it is associated with chabazite, thomsonite, and phillipsite. Also spelled gismondite.

Gjer's soaking pit

A cavity lined with refractory material used in metal working to enclose large ingots, in order to preserve them at a high temperature, and thus avoid the necessity of reheating. *Fay*

glacial

a. Of or relating to the presence and activities of ice or glaciers, as glacial erosion. *AGI*
b. Pertaining to distinctive features and materials produced by or derived from glaciers and ice sheets, as glacial lakes. *AGI*
c. Pertaining to an ice age or region of glaciation. *AGI*
d. Suggestive of the extremely slow movement of glaciers. *AGI*
e. Used loosely as descriptive or suggestive of ice, or of below-freezing temperature. *AGI*

glacial action

All processes due to the agency of glacier ice, such as erosion, transportation, and deposition. The term sometimes includes the action of meltwater streams derived from the ice. See also: [glacial erosion](#) *AGI*

glacial deposits

See: [glacial drift](#)

glacial drift

Boulders, till, gravel, sand, or clay transported and deposited by a glacier or its meltwater. See also: [glacial overburden](#); [drift](#). Syn: [glacial deposits](#)

glacial epoch

Any part of geologic time, from Precambrian onward, in which the climate was notably cold in both the Northern and Southern Hemispheres, and widespread glaciers moved toward the equator and covered a much larger total area than those of the present day; specif. the latest of the glacial epochs, known as the Pleistocene Epoch. Syn: [glacial period](#); drift epoch. *AGI*

glacial erosion

The grinding, scouring, plucking, gouging, grooving, scratching, and polishing effected by the movement of glacier ice armed with rock fragments frozen into it, together with the erosive action of meltwater streams. See also: [glacial action](#)

Glacialite

Trade name for a white clay from Enid, OK., marketed as a fuller's earth. *English*

glacial overburden

Glacial-drift materials overlying bedrock. See also: [glacial drift](#) *Long*

glacial period

See: [glacial epoch](#)

glacial soil

Soil composed of boulder clays, moraines, etc., which were formed by the action of ice during the Pleistocene age. *Mining*

glacial till

See: [till](#)

glaciated

Said of a formerly glacier-covered land surface, esp. one that has been modified by the action of a glacier or an ice sheet, as a glaciated rock knob. *AGI*

glaciation

a. The formation, movement, and recession of glaciers or ice sheets. *AGI* b. The covering of large land areas by glaciers or ice sheets. *AGI* c. The geographic distribution of glaciers and ice sheets. *AGI* d. A collective term for the geologic processes of glacial activity, including erosion and deposition, and the resulting effects of such action on the Earth's surface. *AGI* e. Any of several minor parts of geologic time during which glaciers were more extensive than at present; a glacial epoch, or a glacial stage. *AGI*

glacier

A large mass of ice formed, at least in part, on land by the compaction and recrystallization of snow, moving slowly by creep downslope or outward in all directions due to the stress of its own weight, and surviving from year to year. Included are small mountain glaciers as well as ice sheets continental in size, and ice shelves that float on the ocean but are fed in part by ice formed on land. *AGI*

glacier theory

The theory, first propounded about 1840 and now universally accepted, that the drift was deposited through the agency of glaciers and ice sheets moving slowly from higher to lower latitudes during the Pleistocene Epoch. *AGI*

glaciofluvial

Pertaining to the meltwater streams flowing from wasting glacier ice and esp. to the deposits and landforms produced by such streams, as kame terraces and outwash plains; relating to the combined action of glaciers and streams. Syn: [fluvioglacial](#)

glaciolacustrine

Pertaining to, derived from, or deposited in glacial lakes; esp. said of the deposits and landforms composed of suspended material brought by meltwater streams flowing into lakes bordering the glacier, such as deltas, kame deltas, and varved sediments. *AGI*

glaciology

a. The study of all aspects of snow and ice; the science that treats quantitatively the whole range of processes associated with all forms of solid existing water. Syn: [cryology](#)
b. The study of existing glaciers and ice sheets, and of their physical properties. This definition is not internationally accepted. *AGI*

glaciomarine

Of, or relating to, processes or deposits that involve the action of glaciers and the sea, or the action of glaciers in the sea. *Fay*

gladite

An orthorhombic mineral, $PbCuBi_5S_9$; occurs in soft, metallic prismatic crystals; sp gr, 6.96; in lead-zinc ores at Gladhammar, Kalmar, Sweden.

glady

a. A term used in Devon, England, for a variegated black and white clay having a slippery or smooth texture and often associated with stoneware clays. Also spelled: *gladii*. *AGI* b. Said of a limestone-outcrop area having shallow soil. *AGI*

glance

a. A mineral having a splendant luster, e.g., chalcocite (copper glance). b. Any of several sulfide minerals that are mostly dark colored, having a metallic luster. Syn: [lead sulfide](#)

gland

a. The outer portion of a stuffing box, having a tubular projection embracing the rod, extending into the bore of the box, and bearing against the packing. *Standard, 2* b. The fixed engaging part of a positive-driven clutch. *Standard, 2*

glare

a. A visual sensation that can result in annoyance, discomfort, loss in visual performance, or reduction of visibility. There are three types of glare: disability, discomfort, and reflected. Glare is a significant factor in determining the design of underground coal mine illumination systems. b. See also: [disability glare](#); [discomfort glare](#).

glass

a. A state of matter intermediate between the close-packed, highly ordered array of a crystal and the poorly packed, highly disordered array of a gas. Most glasses are supercooled liquids, i.e., are metastable, but there is no true break in the change in properties between the metastable and stable states. The distinction between glass and liquid is made solely on the basis of viscosity, and is not necessarily related, except indirectly, to the difference between metastable and stable states. *AGI* b. An amorphous product of the rapid cooling of a magma. It may constitute the whole rock (e.g., obsidian) or only part of a groundmass. CF: [volcanic glass](#)

glass-cloth screens

A device of clothlike material woven from glass fibers that is attached to a metal frame to form a box- or basin-shaped receptacle, for filtering out impurities from the incoming stream of molten aluminum before the metal reaches the molds. *Light Metal Age*

glass electrode

A glass-membrane electrode used to measure pH or hydrogen-ion activity. *ASM, I*

glass enclosure

See: [gas bubble](#)

glassies

Octahedral diamond crystals (transparent). *Hess*

glass meteorite

See: [moldavite](#)

glass opal

See: [hyalite](#)

glass porphyry

See: [vitrophyre](#)

glass sand

A sand that is suitable for glassmaking because of its high silica content (93% to 99%) and its low content of iron oxide, chromium, cobalt, and other colorants. *AGI*

glass schorl

See: [axinite](#)

glass wool

See: [mineral wool](#)

glassy feldspar

Two varieties of potassium feldspar occur as transparent colorless crystals, sanidine and adularia; also transparent yellow orthoclase and transparent colorless albite. Syn: [sanidine](#)

glauberite

A monoclinic mineral, $\text{Na}_2 \text{Ca}(\text{SO}_4)_2$; slightly salty tasting; in evaporite deposits and fumarolic crusts; a source of sodium sulfate.

Glauber salt

See: [mirabilite](#)

glaucozerinite

A hexagonal mineral, $(\text{Zn,Cu})_{10} \text{Al}_6 (\text{SO}_4)_3 (\text{OH})_{32} \cdot 18\text{H}_2 \text{O}$; forms soft, blue, fibrous-botryoidal coating on adamite; associated with malachite, smithsonite, and gypsum at Laurium, Greece.

glaucochroite

An orthorhombic mineral, CaMnSiO_4 ; occurs in prismatic crystals associated with nasonite, willemite, garnet, axinite, and barite at Franklin, NJ. CF: [monticellite](#)

glaucodot

An orthorhombic mineral, $(\text{Co,Fe})\text{AsS}$; pseudocubic, dimorphous with alloclasite; in metallic prismatic crystals, or massive in cobalt ores with cobaltite and pyrite. Also spelled glaukodot.

glaucolite

A blue or green variety of scapolite.

glauconite

a. A monoclinic mineral, $4[(\text{K,Na})(\text{Fe}^{3+}, \text{Al,Mg})_2 (\text{Si,Al})_4 \text{O}_{10} (\text{OH})_2]$; mica group; basal cleavage; dull, light to dark green; soft; a common authigenic mineral in marine sediments, useful for radiometric ages for host rocks. Syn: [greensand](#) b. A general term applied to green hydrous silicates of potassium and iron. CF: [celadonite](#)

glauconitic sandstone

A sandstone containing sufficient grains of glauconite to impart a marked greenish color to the rock; greensand. *AGI*

glaucophane

A monoclinic mineral, $2[\text{Na}_2 (\text{Mg,Fe})_3 \text{Al}_2 \text{Si}_8 \text{O}_{22} (\text{OH})_2]$; amphibole group with $\text{Mg}/(\text{Mg}+\text{Fe}) = 0.5$ to 1.0; prismatic cleavage; bluish-gray to lavender blue; common in low-temperature, high-pressure schists associated with lawsonite, pumpellyite, or epidote. CF: [crossite](#); [riebeckite](#).

glaucophane schist

A type of amphibole schist in which glaucophane rather than hornblende is an abundant mineral. Epidote frequently occurs, and there are quartz and mica varieties. *AGI*

glaucopyrite

A variety of loellingite containing cobalt. See also: [loellingite](#) *Standard, 2*

glazing barrel

A rotating barrel in which gunpowder is glazed with graphite. *Standard, 2*

glebe

a. A tract of land containing mineral deposits or ore. b. Obsolete term for a clod of earth, an ore, or an earthy mineral. *Arkell*

Gleeds

A glowing coal or small coke such as that used in nailmaking. *CTD*

gleet

Slime, ooze, slimy alluvial deposit. Also spelled glet.

glessite

A brown variety of retinite; sp gr, 1.015 to 1.027; found on the shores of the Baltic Sea.

gley soil

Soil developed under conditions of poor drainage, resulting in reduction of iron and other elements and in gray colors and mottles. The term is obsolete in the United States. *AGI*

glide

a. See: [slip](#) b. A noncrystallographic shearing movement, as one grain over another. *ASM, 1* c. See: [glide reflection](#)

glide direction

a. The direction of gliding along glide planes in a mineral. *AGI* b. The crystallographic direction of translation along a glide plane in a space group; may be parallel to a crystallographic axis or along a diagonal. c. The crystallographic direction of slip along a slip plane in a single crystal during plastic deformation. Syn: [slip direction](#)

glide plane

a. In single-crystal deformation, a plane on which translation- or twin-gliding takes place without rupture during plastic deformation. Syn: [slip plane](#) b. The common plane of the two axes of a twin crystal. *Hess* c. Slip plane or parting of mineral specimen. Direction along which slip may occur under suitably directed pressure; due to weakness of bond in crystalline structure along one of the three axes. *Pryor, 3*

glide reflection

See: [glide](#)

gliding

a. A change of form by differential movements along definite planes in crystals without fracture. *Fay* b. The formation of twin crystals. *Hess* c. See: [slip](#)

gliding plane

See: [slip plane](#)

glimmer

See: [mica](#)

glimmerite

See: [biotitite](#)

glimmer plate

See: [mica plate](#); accessory plate.

glimmerton

An early name for illite. Syn: [illite](#)

glinite

A group name for clay minerals from clay deposits. See also: [chasovrite](#) *AGI*

glist

a. A gleam; sparkle. *Fay* b. Eng. A dark, shining mineral resembling black tourmaline. *Standard, 2* c. An early name for mica (Cornish).

glistening

As applied to the degree of luster of a mineral, means those minerals affording a general reflection from the surface, but no image, as talc or chalcopyrite. *Fay*

Global Positioning System

A satellite-based navigational system permitting the determination of any point on the Earth with high accuracy. Abbrev: GPS. GPS is used in mapping, mineral exploration, and GIS data collection. The systems depend on the Navigation Satellite Timing and Ranging (NAVSTAR) GPS developed and operated by the U.S. Department of Defense, which consists of a network of 25 satellites in orbit about the Earth as well as ground operations support. After all the satellites are deployed, GPS will provide all-weather, worldwide, two- and three-dimensional (latitude, longitude, and elevation) positioning capabilities over a 24-h period. *Leick; Bookhout*

globe thermometer

A thermometer in a hollow spherical black globe, the readings from which show a higher value, due to radiation, than those from a conventional thermometer so that the globe device measures the effectual radiation temperature. *Strock, 2*

globigerina ooze

A widespread, deep-sea deposit largely composed of the shells of foraminifera, among which Globigerina is esp. abundant. Other calcareous remains are present (about 10%), together with an inorganic residue (about 3% or 4%) having the composition of red clay. *Holmes, 2*

globular

See: [spherulitic](#)

globular powder

Particles having approx. spherical shape. *Osborne*

globulite

A tiny, spherical, incipient crystal visible in some volcanic glasses examined in thin section under a polarized-light microscope.

glockerite

A cryptocrystalline variety of lepidocrocite; formed by oxidation of iron sulfides as pale yellow to black crusts, stalactites, or earthy masses. Syn: [vitriol ocher](#)

glomerocryst

Distinct clusters of megascopic crystals as in a glomerophyritic rock. See also: [polycrystal](#)

glomeroporphyritic

See: [cumulophyric](#)

glomeroporphyry

A porphyry in which the phenocrysts are gathered in distinct clusters.

gloom

A stove for drying gunpowder; drying oven. *Standard, 2*

glory hole

a. A funnel-shaped excavation, the bottom of which is connected to a raise driven from an underground haulage level. The ore is broken by drilling and blasting in benches around the periphery of the funnel. This process is also called milling, and the excavation is termed a mill hole or simply a mill. *Lewis* b. A vertical pit, material from which is fed by gravity to hauling units in a shaft under the pit bottom. *Nichols, 1* c. A combination opencast and underground mining system, in which quarried material gravitates or is moved to a short shaft, from the bottom of which it is delivered to an underground transport system. *Pryor, 3* d. Can. Large open-pit excavation. *Hoffman* e. An opening through which to observe the interior of a furnace. *Standard, 2*

glory-hole system

A method of mining using a system of haulageways beneath the block of ore, which has had its top surface exposed by the removal of the overburden. Over the haulageways are

chutes that extend up to the surface, and are spaced at intervals of 50 ft (15.2 m) or at any other convenient distance. The excavation of the ore begins at the top of the chute, and broken ore is removed by loading it out from the chutes into cars on the haulage level. The ore block is worked from the top down. The method is similar in principle to underhand stoping. Also called milling system; chute system.

Glover's tower

In sulfuric acid works, a tower through which the acid from the Gay-Lussac tower trickles and yields nitrous anhydride to the gases entering the lead chambers, at the same time cooling them. CF: [Gay-Lussac's tower](#) *Standard*, 2

glow

a. The incandescence of a heated substance, or the light from such a substance; white or red heat. *Standard*, 2 b. The light from a phosphorescent mineral. *Hess*

glucine

$\text{CaBe}_4(\text{PO}_4)_2(\text{OH})_4 \cdot 1/2\text{H}_2\text{O}$, massive and encrusting, with moraesite from a locality in the Urals. Named from the alternative of beryllium-glucinum. *Hey*, 3; *Fleischer*

glushinskite

A monoclinic mineral, $\text{Mg}(\text{C}_2\text{O}_4) \cdot 2\text{H}_2\text{O}$; forms on serpentinite as a reaction between oxalic acid from the lichen *Lecanora atra* and magnesium-rich serpentine minerals; in northeast Scotland.

glycerol

Clear; colorless or pale yellow; syrupy liquid; $\text{CH}_2\text{OHCHOHCH}_2\text{OH}$. Used in explosives, as a binder for cements and mixes, and as a lubricant and a softener; used in the manufacture of munitions and as an antifreeze liquid. *CCD*, 2; *Handbook of Chemistry and Physics*, 2; *Crispin*; *Lee*

glycerol trinitrate

See: [nitroglycerin](#)

glyptic

Of minerals, a natural resemblance to the carving or engraving on precious stones.

glyptogenesis

The sculpture of the Earth's surface by erosion. *AGI*

glyptography

a. The art of engraving upon gems. b. The descriptive science of engraved gems.

G.M.B.

Eng. Good merchantable brand, as applied to metal on the Metal Exchange. *Fay*

gmelinite

A hexagonal mineral, $(\text{Na}_2, \text{Ca})\text{Al}_2 \text{Si}_4 \text{O}_{12} \cdot 6\text{H}_2 \text{O}$; zeolite group; forms transparent to translucent, pyramidal or tabular crystals, with other zeolites, in the amygdules of basaltic lava.

G-M tube

See: Geiger-Mueller tube.

gneiss

A foliated rock formed by regional metamorphism, in which bands or lenticles of granular minerals alternate with bands or lenticles in which minerals having flaky or elongate prismatic habits predominate. Generally less than 50% of the minerals show preferred parallel orientation. Although a gneiss is commonly feldspar- and quartz-rich, the mineral composition is not an essential factor in its definition. Varieties are distinguished by texture (e.g., augen gneiss), characteristic minerals (e.g., hornblende gneiss), or general composition and/or origins (e.g., granite gneiss). *AGI*

gneissic structure

In a metamorphic rock, commonly gneiss, the coarse, textural lineation or banding of the constituent minerals into alternating silicic and mafic layers. Syn: [gneissosity](#)

gneissosity

See: [gneissic structure](#)

goaf

a. That part of a mine from which the coal has been worked away and the space more or less filled up with caved rock. See also: [cundy](#) *Fay* b. The refuse or waste left in the mine. *Fay*

goaves

Old workings.

gob

a. A common term for goaf. *Fay* b. To leave coal and other minerals that are not marketable in the mine. *Fay* c. To stow or pack any useless underground roadway with rubbish. *Fay* d. To store underground, as along one side of a working place, the rock and refuse encountered in mining. *Hudson* e. The space left by the extraction of a coal seam into which waste is packed or the immediate roof caves. *CTD* f. A pile of loose waste in a mine, or backfill waste packed in stopes to support the roof. *Ballard* g. Coal refuse left on the mine floor. *Korson* h. The material so packed or stored underground. *Hudson* i. To fill with goaf, or gob; to choke; as a furnace is gobbled, or gobs up. See also: [gobbing](#)

gobber

a. Any device used for gobbing waste material. *Jones, I* b. A person employed to pack rubbish or waste into the gob. *CTD*

Gobber

Trade name for a cutting machine provided with a conveyor for gobbing the unusable cuttings formed during the cutting operation. *Jones, I*

gobbing

The act of stowing waste in a mine. Also called gobbing-up. See also: [gob](#)

gobbing slate

A thick layer of slate between two seams of coal. The lower seam is mined and the upper seam and the slate are shot down; the coal is loaded out and then the slate is gobbled. *Fay*

gobbing the bone

Cleaning up slate. *Korson*

gob dump

See: [gob pile](#)

gob entry

A wide entry with a heap of refuse or gob along one side.

gob fire

a. Fire originating spontaneously from the heat of decomposing gob. Also called breeding fire. b. A fire occurring in a worked-out area, due to ignition of timber or broken coal left in the gob. *CTD* c. Fire caused by spontaneous heating of the coal itself, and which may be wholly or partly concealed. See also: [oxidation of coal](#); spontaneous combustion. *Mason*

gob heading

a. A roadway driven through the gob after the filling has settled. *CTD* b. Gob road.

gob pile

An accumulation of waste material such as rock or bone, either on the surface or underground. Syn: [gob dump](#)

gob-pile orator

A more or less unflattering term applied to a talkative miner, used much in the same sense as "soapbox orator." *BCI*

gob road

Eng. A gallery or road extended through goaf or gob.

gob-road system

Eng. A form of the longwall system of working coal, in which all the main and branch roadways are made and maintained in the goaves. *Fay*

gob room

Space left for stowing gob.

gob wall

A rough wall of flat stones built to prevent the piles of gob from obstructing the passage of air.

go-devil

a. A device used to scrape and descale pipes carrying solids, pulps, sludges, slurries, and other deposit-forming liquors. *Pryor*, 3 b. A rude sledge upon which one end of a log is borne, the other end trailing on the ground; tieboy; also, a rough, strong wagon used in the woods and about quarries. *Standard*, 2 c. An iron rod dropped down a well to explode a charge of nitroglycerin. *Mersereau*, 2 d. See: [bullet](#)

go-devil plane

In the United States, a term for gravity haulage. *Nelson*

Godfrey furnace

A furnace with an annular hearth for roasting sulfide ores; used in Wales. *Fay*

goethite

An orthorhombic mineral, $\alpha\text{-Fe}^{3+}\text{O(OH)}$; polymorphous with akaganeite, feroxyhyte, and lepidocrocite; dull to adamantine, varicolored with yellow ochre streak; a common weathering product of iron-bearing minerals; precipitates in bogs and springs; a major constituent of limonite and gossans, and a source of iron and a yellow ochre pigment. A hydrous oxide mineral of iron. Also spelled goethite, gothite. Formerly called allcharite; xanthosiderite. CF: [bog iron](#)

goffan

a. Corn. A surface working in which the material is thrown from one platform to another. *Hess* b. Corn. A long narrow surface working. See also: [coffin](#)

Gohi iron

Copper-bearing iron, very low in impurities and in carbon (0.02% maximum), containing about 0.25% copper. *Bennett*

going

Scot. Working, for example, a going place. A room in the course of being worked.

going bord

a. A roadway to the coal face in bord and pillar working. *CTD* b. Eng. The bord or headway used as a main road for conveying the tubs to and from the face to a flat. See also: [flat](#) *SMRB* c. N. of Eng. A bord (room) down which coal is trammed, or one along which the coal from several working places is conveyed into the main haulage. *Fay*

going headway

A headway or bord laid with rails, and used for conveying the coal cars to and from the face. *Zern*

going in

The act or process of lowering the drill string, a string of pipe, or casing into a borehole. *Long*

going off

A borehole, the course of which is deviating from that intended. Also called drifting; walking; wandering. *Long*

going road

A working place in a coal mine which is being pushed forward, as distinct from an old or disused place. *CTD*

Golconda

An ancient and famous group of diamond mines on the Kistna River, India, where the Koh-i-noor and other world-famous diamonds were found. *Hess*

gold

a. An isometric mineral, native $4[\text{Au}]$; commonly alloyed with silver or copper, possibly with bismuth, mercury, or the platinum-group metals; metallic yellow; soft and malleable; sp gr, 19.3 if pure; occurs in hydrothermal veins with quartz and various sulfides; disseminated in submarine massive effusives and in placers or nuggets, fines, and dust. b. Found in nature as the free metal and in tellurides; very widely distributed. Symbol: Au. Occurs in veins and alluvial deposits; often separated from rocks and other minerals by sluicing and panning operations. Good conductor of heat and electricity. Used in coinage, jewelry, decoration, dental work, plating, and for coating certain space satellites. It is a standard for monetary systems in many countries. Syn: [palladium gold](#)

goldamalgam

A variety of native gold containing mercury and silver, with gold averaging approx. 40%, commonly associated with platinum in yellowish-white grains that crumble easily. CF: [amalgam](#)

gold amalgam

Former spelling of goldamalgam. See also: [amalgam](#)

gold argentide

See: [electrum](#)

goldbeaters' skin

The prepared outside membrane of the large intestine of cattle used for separating the leaves of metal in goldbeating and sometimes as the moisture-sensitive element in hygrometers. *Webster 3rd*

gold cupride

See: [cuproauride](#); auricupride.

gold dust

Fine particles, flakes, or pellets of gold, e.g., as obtained in placer mining.

golden beryl

A clear, golden-yellow or yellowish-green gem variety of beryl. CF: [heliodor](#)

golden ocher

a. A native ocher. *Standard, 2* b. A mixture of light yellow ocher, chrome yellow, and whiting. *Standard, 2*

golden stone

Greenish-yellow peridot (olivine). Not to be confused with "goldstone."

gold fever

A mania for seeking gold; applied specif. to the excitement caused by the discovery of gold in California in 1848-49. *Standard, 2*

goldfieldite

An isometric mineral, $\text{Cu}_{12}(\text{Te,Sb,As})_4\text{S}_{13}$; tetrahedrite group; metallic; at the Mohawk Mine, Goldfield, NV.

goldfoil

Gold beaten or rolled out very thin; gold in sheets thicker than goldleaf. *Webster 3rd*

gold glass

A term sometimes applied to goldstone. Also spelled gold fluss.

goldichite

A monoclinic mineral, $\text{KFe}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O}$; in soft, pale-green radiating clusters of prismatic laths and fine-grained crystalline crusts from decomposition of pyrite; associated with coquimbite, halotrichite, and roemerite on Calf Mesa, San Rafael Swell, UT.

Goldich's stability series

Mineral species differ widely in their resistance to weathering processes. This series summarizes the relative resistance to weathering of the common rock-forming silicates, and indicates that the minerals crystallized at the highest temperatures, under the most anhydrous conditions, are more readily weathered than those that crystallized last from the lower temperature, more aqueous magmas. *Hawkes, 2*

goldleaf

Extremely fine layers of gold formed by beating or rolling between layers of goldbeaters' skin; used for gilding works of art, fabrics, and books. *Bennett*

goldmanite

An isometric mineral, $\text{Ca}_3(\text{V,Al,Fe})_2(\text{SiO}_4)_3$; garnet group; forms dark-green dodecahedra and minute grains embedded in vanadium-rich clay; at Laguna uranium mining district, NM.

gold matrix

Gold in a matrix of milky quartz. Syn: [gold quartz](#)

gold milling

A general term applied to the treating of ore to recover gold and silver therefrom.

gold mine

A mine containing or yielding gold. It may be either in solid rock (quartz mine) or in alluvial deposits (placer mine).

gold opal

A fire opal that exhibits only an overall color of golden yellow.

gold pan

See: [pan](#)

gold poachers

Roving and enterprising freelance miners and prospectors. *Hoover*

gold quartz

Milky quartz containing small inclusions of gold; may be cut and polished for jewelry.

Syn: [gold matrix](#)

gold-quartz ores

Gold-bearing ore from which the sulfides have been removed by the leaching of ground waters so that the ore consists almost entirely of quartz gangue, some iron oxides, and free gold. *Newton, 1*

gold sapphire

A misnomer for lapis lazuli containing flecks of pyrite. Not to be confused with golden sapphire.

goldschmidtine

See: [stephanite](#)

goldschmidtite

See: [sylvanite](#)

Goldschmidt's phase rule

See: [mineralogical phase rule](#)

Goldschmidt's process

a. The thermite process of welding. *Fay* b. The removal of tin from scrap tinplate by dry chlorine. *Hess*

goldstone

a. Aventurine spangled close and fine with particles of gold-colored material. CF: [aventurine](#) b. A translucent reddish-brown glass containing a multitude of tiny tetrahedra or thin hexagonal platelets of metallic copper that exhibit bright reflections, producing a popular but poor imitation of aventurine. Syn: [aventurine glass](#); [fire agate](#). CF: [sunstone](#)

gold telluride

a. Minerals containing tellurium forming tellurides of gold and silver; e.g., sylvanite, calaverite, and petzite. *Statistical Research Bureau* b. One of several natural tellurides of gold and silver, e.g., sylvanite, $(\text{Au,Ag})_2\text{Te}_4$; calaverite, AuTe_2 ; and petzite, Ag_3AuTe_2 .

gold topaz

a. A misnomer for heat-treated citrine. b. A misnomer for naturally colored citrine. Syn: [false topaz](#); topaz-quartz.

goliath crane

A portal type of crane having a lifting capacity of 50 st (45 t) or more, with the crab traveling along the horizontal beam. See also: [portal crane](#)

Gommesson method

A specialized method of surveying a borehole, utilized when a magnetic compass cannot be used because of local magnetism. The instrument used is essentially a rigid tube, up to 30 ft (9.2 m) long, which is lowered into a borehole. The tube fits the borehole closely and contains a fine wire under tension. The difference between the arc of the tube, when bent at a crook in the borehole, and the chord of the wire is indicated by a stylus marking, which can be measured. The dip is read by etch tubes, and a directional orientation taken at the surface is carried down the hole by precise alignment of the tube and rods as they are lowered into the borehole. *Long*

gondola

A railroad car with no top, flat bottom, fixed sides, and sometimes demountable ends that is used chiefly for hauling heavy bulk materials. CF: [high side](#)

gondola car

Type of open freight truck used in the United States for mineral transport. *Pryor, 3*

gone off

A borehole that has deviated from the intended course. *Long*

goniometer

a. In crystallography, an instrument for measuring angles between crystal faces. Types are contact, two-circle, and reflection. See also: [contact goniometer](#) b. The part of an X-ray diffractometer that rotates the sample and detector through the Bragg angles of diffraction. c. A specimen holder with three rotation axes for orientation of single crystals relative to the X-ray beam in Laue and Wiessberg photography. Syn: [three-circle goniometer](#) universal stage.

gonnardite

An orthorhombic mineral, $\text{Na}_2 \text{CaAl}_4 \text{Si}_6 \text{O}_{20} \cdot 7\text{H}_2 \text{O}$; zeolite group; forms white, finely fibrous, radiating spherules in cavities in basalt, and as an alteration of nepheline.

gonyerite

A possibly orthorhombic mineral, $(\text{Mn,Mg})_5 \text{Fe}(\text{Si}_3 \text{Fe})\text{O}_{10} (\text{OH})_8$; chlorite group; pseudo-hexagonal with basal cleavage; soft; with barite, berzeliite, and garnet in small hydrothermal veinlets cutting skarn at Laangban, Sweden.

good delivery

Under Metal Exchange rulings, description of metal delivered at an agreed purity or of a defined quality. *Pryor, 3*

goodletite

The green-amphibole or green-pyroxene matrix rock in which rubies are embedded; Australia and New Zealand.

Goodman duckbill loader

The duckbill assembly consists of five major units: (1) a shovel trough to which is attached the shovel head fitting inside the feeder trough, (2) an operating carrier that controls the connection or coupling between the feeder and shovel troughs, (3) a sliding shoe that moves to and fro on the floor of the seam, (4) a swivel trough, and (5) a pendulum jack. The function of the duckbill is to gather the coal and load it into the shaker conveyor pan column. The shovel is forced into the prepared coal by the forward motion of the pan column. As the shovel is propelled forward, the coal is conveyed back along the shovel trough and then to the pan column. *Mason*

Goodman miner

A continuous miner designed for driving coal headings in medium to thick seams. The machine is crawler-mounted and equipped with two triple-arm rotating cutting units and

a chain conveyor. The cut coal is discharged on to the chain conveyor which delivers into shuttle or mine cars. Also called Goodman-type 500 miner. See also: [continuous miner](#) *Nelson*

goods

A trade term for a lot, parcel, or shipment of diamonds without regard to quality, composition, or quantity. *Chandler*

good-shooting coal

Arkansas. Coal that can be shot "off the solid" with a large proportion of lump coal and little slack. *Fay*

gooseberry stone

A yellowish-green variety of grossular.

goose dung ore

An inferior grade of iron sinter containing silver. Also called goose silver ore. *Fay*

gooseneck

a. In drilling, the bent-tube part of a water swivel to which the water hose is connected. *Long* b. A T-shaped connection for supplying water to the top end of wash rods in penetrating overburden. It is fitted with pipe handles by means of which the wash rods may be turned. *Long*

goosing

In hydraulic mining, driving the gravel forward with the stream from the giant. Opposite of drawing.

gopher

An irregular prospecting drift following or seeking the ore without regard to maintenance of a regular grade or section. Also called gopher drift. *Fay*

gopher hole

Horizontal opening in wall of quarry, perhaps chambered or tee-headed in preparation for blasting. Also, an irregular pitting hole made when prospecting. Gophering is random prospecting by such pits or by gopher drift. Also called coyote hole. *Pryor, 3*

gopher hole blasting

Terms applied to the method of blasting in which large charges are fired in small adits driven into the face of the quarry at the level of the floor. See also: [tunnel blasting](#)

gophering

a. A method of breaking up a sandy, medium-hard overburden where blastholes tend to cave in. A series of shallow holes are made by a bar, and an explosive charge is fired in each. The debris is removed, and the holes are deepened and further charges fired until the holes are deep enough to take sufficient explosives to break the entire deposit.

Nelson b. The haphazard working of the easiest and richest portions of an ore deposit by miners with little or no capital. *Nelson*

gopherman

In metal mining, one who extracts ore located in pockets or other parts not accessible for machine drilling in an open pit mine. *DOT*

gor

York. Sticky, dirty clay. Also spelled gore. *Arkell*

gorceixite

A monoclinic mineral, $\text{BaAl}_3(\text{PO}_4)(\text{PO}_3\text{OH})(\text{OH})_6$; crandallite group; pseudotrigonal; forms spheroids in fractured novaculite, Garland County, AR; and as rolled pebbles (favas) in the diamantiferous sands of Brazil and Guyana.

gordonite

A triclinic mineral, $\text{MgAl}_2(\text{PO}_4)_2(\text{OH})_2 \cdot 8\text{H}_2\text{O}$; paravauxite group; in glassy lath-shaped crystals in crusts with variscite; near Fairfield, UT.

Gordon's rule

A rule by which the capacity of hydraulic elevators is computed. It is as follows: $M = H \times N/C$, where M = cubic yards of material lifted per hour, H = available head of water in feet, N = water flow in cubic feet per second, C = the efficient working height of the elevator, taken as head H in hundreds of feet multiplied by 15. *Lewis*

goergeyite

A monoclinic mineral, $\text{K}_2\text{Ca}_5(\text{SO}_4)_6 \cdot \text{H}_2\text{O}$; forms small, tabular crystals with glauberite and minor halite in salt deposits at Ischl, Austria. Syn: [mikheevite](#)

gorgulho

A diamond-bearing quartz and clay gravel of Brazil. *Hess*

gorse

A barrel or tub for carrying water underground. *CTD*

goshenite

A colorless, white, or bluish beryl from Goshen, MA. *Schaller*

goslarite

An orthorhombic mineral, $ZnSO_4 \cdot 7H_2O$; in acicular or hairlike crystals, or massive; a decomposition product of sphalerite on recent mine workings at Butte, MT, and Bingham Canyon, UT. Syn: [copperas](#); white copperas; zinc vitriol.

gossan

An iron-bearing weathered product overlying a sulfide deposit. It is formed by the oxidation of sulfides and the leaching-out of the sulfur and most metals, leaving hydrated iron oxides and rarely sulfates. Syn: [capping](#); [iron hat](#); chapeau de fer. Also spelled gozzan. CF: [oxidized zone](#); [false gossan](#). *AGI*

goth

Staff. Sudden bursting of coal from the face, owing to tension caused by unequal pressure. The term "airblast" is sometimes used in metal mines, esp. in South Africa. *Zern; Fay*

got-on-knobs

S. Staff. A system of working thick coal, being a kind of bord-and-pillar plan, the main roadways being first driven to the boundary. *Fay*

gotten

a. An abandoned or exhausted mine. *CTD* b. Coal ready to be filled underground into tubs or trains. *CTD*

gouge

a. A layer of soft, earthy or clayey, fault-comminuted rock material along the wall of a vein, so named because a miner can "gouge" it out to facilitate the mining of the vein

itself. Syn: [selvage](#); [pug](#). See also: [gouge clay](#); [hulk](#). b. The clay or clayey material along a fault or shear zone. Also called clay gouge. See: [fault gouge](#) c. To work a mine without plan or system.

gouge angle

The angle at which the surface of a cutting edge in a drill bit is inclined in relation to the surface of the material being cut. See also: [negative rake](#); [positive rake](#). *Long*

gouge clay

Clay infillings in a mineral vein. CF: [gouge](#)

gouge rake

See: [positive rake](#)

gouging

a. In placer mining, an operation similar to ground sluicing. Also called booming. b. The formation of "crescentic gouges." *AGI* c. The local basining of a bedrock surface by the action of glacier ice. *AGI* d. The working of a mine without plan or system, by which only the high-grade ore is mined. Syn: [high-grading](#)

gouging shot

A gripping shot or opening shot used to make the first opening in a straight-room face, or to start a breakthrough. See also: [shot](#) *Fay*

goutwater

Forest of Dean. Mine water containing hydrogen sulfide, H₂ S.

Gouy layer

Modification of the Helmholtz concept of the electrical double layer which surrounds a particle immersed in an electrolyte. In Gouy's view there is only one diffuse layer. The ionic atmosphere near the surface of the particle is highly charged, but this ionization diminishes gradually outward into the ambient liquid. *Pryor, 3*

gow caisson

A device for sinking shafts of small diameter through silt or clay without excessive loss of ground. *Hammond*

gozzan

See: [gossan](#)

GPS

See: [Global Positioning System](#)

grab

An instrument for extricating broken boring tools from a borehole. *Fay*

grabbing crane

An excavator consisting of a crane carrying a large grab or bucket in the form of a pair of half-scoops, so hinged as to scoop or dig into the earth as they are lifted. *CTD*

grab bucket

An underwater digging device which, in closing, bites into the sediment and contains it inside the closed shell. The bucket and load are then hoisted to the surface where the shell is opened to dump the load. Includes clamshells, orangepeels, and other variations. *Mero*

grab-camera

An ocean floor sampling system incorporating a large sediment grab with a deep-sea camera. *Hunt*

grab dredger

A dredging appliance consisting of a grab or grab bucket suspended from the jib head of a crane, which does the necessary raising and lowering. Also called a grapple dredger. See also: [dredger](#)

graben

An elongate, relatively depressed crustal unit or block that is bounded by faults on its long sides. It is a structural form that may or may not be geomorphologically expressed as a rift valley. Etymol: Ger., ditch. CF: [horst](#)

grab equipment

A clamshell bucket fitted with teeth to assist digging. *Nelson*

grabhooks

Hooks used in lifting blocks of stone. They are used in pairs connected with a chain, and are so constructed that the tension of the chain causes them to adhere firmly to the rock.

grab iron

A short railing or handle on heavy equipment used to assist operators and other personnel in climbing up or down.

grab sampler

An ocean-bottom sampler that commonly operates by enclosing material from the seafloor between two jaws upon contact with the bottom. See also: [Petersen grab](#)

grab sampling

Collection of specimens of ore more or less at random from a heap, scatter pile, or passing load. Used in connection with examination of the characteristic minerals in the deposit rather than for valuation. *Pryor, 3*

gradall

Essentially a hydraulic backhoe equipped with an extensible boom that performs the three separate functions of excavation, backfill, and grading. *Carson, 1*

gradation

a. The leveling of the land, or the bringing of a land surface or area to a uniform or nearly uniform grade or slope through erosion, transportation, and deposition; specif. the bringing of a streambed to a slope at which the water is just able to transport the material delivered to it. See also: [degradation](#); [aggradation](#). *AGI* b. The proportion of material of each particle size, or the frequency distribution of various sizes, constituting a particulate material such as a soil, sediment, or sedimentary rock. The limits of each size are chosen arbitrarily. *AGI*

grade

a. A coal classification based on degree of purity, i.e., quantity of inorganic material or ash left after burning. CF: [type](#); [rank](#). *AGI* b. The relative quantity or the percentage of ore-mineral or metal content in an orebody. Syn: [tenor](#) c. A degree of inclination, or a rate of ascent or descent, with respect to the horizontal, of a road, railroad, embankment, conduit, or other engineering structure; it is expressed as a ratio (vertical to horizontal), a fraction (such as m/km or ft/mi), or a percentage (of horizontal distance). CF: [gradient](#) d. Height above sea level; actual elevation. Also, the elevation of the finished surface of

an engineering project (such as of a canal bed, embankment top, or excavation bottom). *AGI* e. A particular size (diameter), size range, or size class of particles of a soil, sediment, or rock; a unit of a grade scale, such as clay grade, silt grade, sand grade, or pebble grade. *AGI* f. See: [metamorphic grade](#) g. The classification of an ore according to the desired or worthless material in it or according to value. *Nelson* h. The degree of strength of a high explosive. Those above 40% nitroglycerin are arbitrarily designated as high-grade dynamites, and those below 40% nitroglycerin as low-grade dynamites. i. In assaying, the percentage of the sought value or of each valuable species in the ore. *Pryor*, 3 j. A term used to designate the extent to which metamorphism has advanced. Found in such combinations as high- or low-grade metamorphism. CF: [rank](#) *Leet*, 1 k. A particular occupational classification of employee in a mine. *Nelson* l. To sort and classify diamonds, such as drill diamonds, into quality groupings, each group containing diamonds having somewhat similar characteristics deemed to affect their fitness for use in a specific manner; the least fit are considered as constituting the lowest quality of grade. *Long* m. See: [rank](#)

graded

a. Said of a surface or feature when neither degradation nor aggradation is occurring, or when both erosion and deposition are so well balanced that the general slope of equilibrium is maintained. Syn: [at grade](#) *AGI* b. A geologic term pertaining to an unconsolidated sediment or to a cemented detrital rock consisting of particles of essentially uniform size or of particles lying within the limits of a single grade. Syn: [sorted](#) *AGI* c. An engineering term pertaining to a soil or an unconsolidated sediment consisting of particles of several or many sizes or having a uniform or equable distribution of particles from coarse to fine; e.g., a graded sand containing coarse, medium, and fine particle sizes. The term is rarely used in geology to refer to the sorting of the sediment, although this is common among engineers. Ant: nongraded. *AGI*

graded bedding

A type of bedding in which each layer displays a gradual and progressive change in particle size, usually from coarse at the base of the bed to fine at the top. It may form under conditions in which the velocity of the prevailing current declined in a gradual manner, as by deposition from a single short-lived turbidity current. CF: [grading](#)

graded coal

One of the three main size groups by which coal is sold by the National Coal Board in Great Britain. It consists of coal screened between two screens--with an upper and lower limit ranging from a top size of 1-1/2 to 2 in (38 to 51 mm) to a bottom size of 1/8 to 3/4 in (3.2 to 19 mm). See also: [large coal](#); [smalls](#). *Nelson*

graded sand

A sand containing some coarse, fine, and medium particle sizes. It is not a uniform sand. *Hammond*

graded stream

A stream in equilibrium, showing a balance between its transporting capacity and the amount of material supplied to it, and thus between degradation and aggradation in the stream channel. *AGI*

graded unconformity

See: [blended unconformity](#)

gradeline

a. The baseline from which elevations are measured. b. A line defining the intended grade of a roadway that is being driven. Such a line is used to control the gradient of a roadway. *BS, 7*

grader

a. A self-propelled or towed machine provided with a row of removing or digging teeth and (behind) a blade to spread and level the material. Syn: [towed grader](#) b. A trommel-type airswept circular screen used in asbestos milling where the fine rock and fiber dust are eliminated through medium-size perforated plates. *Arbiter* c. A machine with a centrally located blade that can be angled to cast to either side, with independent hoist control on each side. *Nichols, 1*

grade resistance

The force, due to gravity, that resists the movement of a vehicle up a slope. *Carson, 1*

grade scale

A systematic, arbitrary division of an essentially continuous range of particle sizes (of a soil, sediment, or rock) into a series of classes or scale units (or grades) for the purposes of standardization of terms and of statistical analysis; it is usually logarithmic. Examples include Udden scale and Tyler Standard scale. See also: [Udden grade scale](#); Wentworth scale. *AGI*

grade stake

A stake indicating the amount of cut or fill required to bring the ground to a specified level. *Nichols, 1*

gradient

The inclination of profile gradeline from the horizontal, expressed as a percentage. Syn: [rate of grade](#)

gradienter

An attachment to a surveyor's transit with which an angle of inclination is measured in terms of the tangent of the angle instead of in degrees and minutes. It may be used as a telemeter in observing horizontal distances. *AGI*

gradient of equal traction

The gradient at which the tractive force required to pull an empty tram inby (slightly uphill) is equal to that required to pull a loaded tram outby. This was formerly termed horse haulage gradient. In general, haulage roads are graded about 0.5% in favor of the loaded trams. *Nelson*

grading

a. The relative proportions of the variously sized particles in a batch, or the process of screening and mixing to produce a batch with particle sizes correctly proportioned. b. The commercial operation of sorting coke between two screens such that the ratio of the larger to the smaller screen aperture does not exceed 2.5 to 1; the coke which has been so sorted. *BS, 3* c. The gradual reduction, upward in a sedimentary bed, of the upper particle-size limit. It implies pulsatory turbulent-fluid deposition. CF: [graded bedding](#)

grading test

See: [screen analysis](#)

Graf sea gravimeter

A balance-type gravity meter that is heavily damped in order to attenuate shipboard vertical accelerations. It consists of a mass at the end of a horizontal arm, supported by a torsion-spring rotational axis. The mass rises and falls with gravity variation, but is restored to near its null position by a horizontal reading spring, tensioned with a micrometer screw. The difference between actual beam position and null position gives indication of gravity value after the micrometer screw position has been taken into account. See also: [gravimeter](#)

Graham pressure surveying apparatus

A barometric surveying instrument that is free from the many defects of the aneroid barometer. The apparatus records the change in pressure of a constant volume of air maintained at a constant temperature.

Graham ratio

The ratio of the amount of carbon monoxide produced over the oxygen absorbed varies with the temperature of oxidation of coal and also with the time of coal exposure to oxidation, thereby allowing this ratio to be used as an index of the rate of oxidation in a mine. *Roberts, 1*

grail

Gravel or sand; anything in fine particles. *Standard, 2*

grain

a. A mineral or rock particle having a diameter of less than a few millimeters and generally lacking well-developed crystal faces; e.g., a sand grain. Also, a general term for sedimentary particles of all sizes (from clay to boulders), as used in the expressions grain size, fine-grained, and coarse-grained. *AGI* b. A quarrymen's term for a plane of parting in slate that is perpendicular to the flow cleavage; or for a direction of parting in massive rock, e.g., granite, that is less pronounced than the rift and usually at right angles to it. CF: [rift](#) c. The second direction of easy splitting of a rock, less pronounced than the rift, but more so than the hardway. d. A unit of hardness of water, expressed in terms of equivalent CaCO_3 . A hardness of 1 grain per U.S. gal (17.1 mg/L) equals 17.1 ppm by weight as CaCO_3 .

See also: [anthracite fines](#)

grain boundary

An interface between two crystals putting all adjacent ions in an irregular crystalline environment. CF: [lineage](#)

grainer medium salt

Grainer salt screened to give a mixture of coarse- and medium-size flakes, excluding very coarse and very fine flakes. *Kaufmann*

grainers

Diamonds which in weight will correspond to fourths of a carat; a diamond weighing one-half carat is a two-grainer; one weighing three quarters is a three-grainer; a diamond of one carat in weight is a four-grainer. *Hess*

grainer salt

Salt produced by the grainer process of surface evaporation from brine. Product has a characteristic flaky shape consisting of hoppers and hopper fragments. *Kaufmann*

grain gliding

Movement between individual mineral grains.

grain gold

Gold that has become granular in the process of heating. *Fay*

grain growth

The growth of a crystal, as from solution on the walls of a geode, in open pore space, or in a magma chamber; crystal growth. *AGI*

grain size

a. A term relating to the size of mineral particles that make up a rock or sediment. See also: [particle size](#) b. For metals, a measure of the size of grains in a polycrystalline material, usually expressed as an average when the individual sizes are fairly uniform. Grain sizes are reported in terms of number of grains per unit area or volume, as average diameter, or as a grain-size number derived from area measurements. *ASM, 1* c. The size or size distribution of refractory particles, which is usually determined by sieve analysis. *ARI*

grain-size classification

A scheme of rock classification based upon the average size of certain chosen components; thus, each clan comprises coarse-, medium-, and fine-grained members. *CTD*

grain tin

a. The granular or nodular form of cassiterite, tin oxide, SnO_2 ; also known as stream tin. *Henderson* b. Metallic tin of high grade obtained by charcoal reduction. *Henderson*

graith

A set of tools, picks, shovels, wedges, hammers, etc., used for work underground. *CTD*

gram-atom

The atomic weight of an element expressed in grams. *Hackh*

gram-centimeter

A unit of work; the work done in raising the weight of 1 g vertically 1 cm; 981 ergs. *Standard, 2*

gram-molecule

Molecular weight of a compound in grams, derived from that of hydrogen which, though 2.016, is expressed as the whole number 2. The gram-molecule, e.g., of H₂ SO₄ is 2 + 32 + (4 x 16) = 98. Also called mole. *Pryor, 3*

grampus

The tongs with which bloomery lumps and billets are handled. *Fay*

gram weight

Pull of gravitation on a mass of 1 g. This varies slightly with the acceleration (g) due to gravity differences in various localities, but is approx. 981 dyn. *Pryor, 3*

granat

See: [garnet](#)

Granby car

A type of automatically dumped car for hand- or power-shovel loading. In this type of car, a wheel attached to the side of the car body engages an inclined track at the dumping point. As the side wheel rides up and over the inclined track, the car body is automatically raised and lowered, activating a side door operating mechanism which raises the door, permitting the car to shed its load. See also: [mine car](#) *Pit and Quarry*

grandite

The grossular-andradite series of the garnet group.

granite

a. A plutonic rock in which quartz constitutes 10% to 50% of the felsic components and in which the alkali feldspar/total feldspar ratio is generally restricted to the range of 65% to 90%. Rocks in this range of composition are scarce, and sentiment has been growing to expand the definition to include rocks designated as adamellite or quartz monzonite,

which are abundant in the United States. *AGI* b. Broadly applied, any holocrystalline, quartz-bearing plutonic rock. Syn: [granitic rock](#) c. Commercial granite. *AGI*

granite gneiss

a. A gneiss derived from a sedimentary or igneous rock and having the mineral composition of a granite. *AGI* b. A metamorphosed granite. *AGI*

granite porphyry

A hypabyssal rock differing from a quartz porphyry by the presence of sparse phenocrysts of mica, amphibole, or pyroxene in a medium- to fine-grained groundmass. *AGI*

granite tectonics

The study of the structural features, such as foliation, lineation, and faults, in plutonic rock masses, and the reconstruction of the movements that created them. *AGI*

granite wash

A driller's term for material eroded from outcrops of granitic rocks and redeposited to form a rock having approx. the same major mineral constituents as the original rock; e.g., an arkose consisting of granitic detritus. *AGI*

granitic

Pertaining to or composed of granite. Syn: [granitoid](#) See also: [granular texture](#)

granitic layer

See: [sial](#)

granitic rock

A term loosely applied to any light-colored, coarse-grained plutonic rock containing quartz as an essential component, along with feldspar and mafic minerals. Syn: [granite](#)

granitification

See: [granitization](#)

granitization

An essentially metamorphic process by which a solid rock is converted into a granitic rock by the entry and exit of material, without passing through a magmatic stage. Some authors include in this term all granitic rocks formed from sediments by any process, regardless of the amount of melting or evidence of movement. The precise mechanism, frequency, and magnitude of the processes are still in dispute. Syn: [granitification](#) CF: [transfusion](#)

granitizer

See: [transformist](#)

granitoid

See: [granitic](#)

granoblastic

Pertaining to a homeoblastic type of texture in a nonschistose metamorphic rock upon which recrystallization formed essentially equidimensional crystals with normally well sutured boundaries. Syn: [granular](#) CF: [crystalloblastic](#)

granodiorite

A group of coarse-grained plutonic rocks intermediate in composition between quartz diorite and quartz monzonite (U.S. usage), containing quartz, plagioclase (oligoclase or andesine), and potassium feldspar, with biotite, hornblende, or, more rarely, pyroxene, as the mafic components; also, any member of that group; the approximate intrusive equivalent of rhyodacite. The ratio of plagioclase to total feldspar is at least 2:1 but less than 9:10. With less alkali feldspar it grades into quartz diorite, and with more alkali feldspar, into granite or quartz monzonite. *AGI*

granofels

A field name for a medium- to coarse-grained granoblastic metamorphic rock with little or no foliation or lineation. *AGI*

granolith

An artificial stone of crushed granite and cement. *Webster 3rd*

granophyre

a. An irregular microscopic intergrowth of quartz and alkali feldspar. *AGI* b. A fine-grained granitic rock having a micrographic texture. *AGI* c. A porphyritic rock of

granitic composition characterized by a crystalline-granular groundmass. CF: [felsophyre](#); [vitrophyre](#). *AGI*

granophyric

Of or pertaining to granophyre.

grant

Eng. A tract of land leased or ceded for mining purposes.

grantsite

A monoclinic mineral, $\text{NaCa}(\text{V}^{5+}, \text{V}^{4+})_6 \text{O}_{16} \cdot 4\text{H}_2\text{O}$; in silky, pearly, or subadamantine fibrous aggregates coating fractures or forming thin seams in sandstone or limestone; near Grants, NM, and in Montrose County, CO.

granular

Said of the texture of a rock that consists of mineral grains of approx. equal size. The term may be applied to sedimentary rocks, e.g., sandstones, but is esp. used to describe holocrystalline igneous rocks whose major-phase grain size ranges from 2 to 10 mm. The syn. *granoblastic* is used for metamorphic rocks. *AGI*

granular chert

A compact, homogeneous, hard-to-soft chert, common in insoluble residues, composed of distinguishable and relatively uniform-sized grains, characterized by an uneven or rough fracture surface and by a dull to glimmering luster; it may appear saccharoidal. See also: [granulated chert](#)

granularity

The quality, state, or property of being granular; specif. one of the component factors of the texture of a crystalline rock, including both grain size and grain-size distribution. *AGI*

granular texture

A rock texture resulting from the aggregation of mineral grains of approx. equal size. The term may be applied to a sedimentary or metamorphic rock, but is esp. used to describe an equigranular, holocrystalline igneous rock whose particles range in diameter from 0.05 to 10 mm. See also: [granitic](#)

granular tonstein

This type of tonstein consists predominately of kaolinite grains of lighter or darker shades, often surrounded by collinite. These grains show a cryptocrystalline to finely crystalline structure; the cryptocrystalline material is isotropic. Syn: [Graupen tonstein](#)

granulated blast-furnace slag

The glassy, granular material formed when molten blast-furnace slag is rapidly chilled, as by immersion in water. *ASTM*

granulated chert

A type of granular chert composed of rough, irregular grains or granules tightly or loosely held in small masses or fragments. See also: [granular chert](#)

granulated slag

Molten slag broken up into granules and quick quenches. Three general methods of granulation are: (1) running the molten slag into a pit of water; (2) using a jet of high-pressure water to breakup the stream of molten slag as it falls into the pit; and (3) using a mechanical revolving device with relatively small amounts of water. See also: [slag Camp](#)

granulated steel

Steel made from pig iron by a process in which the first step is the granulation of the iron.

granulating machine

A device for reducing metal or slag in a liquid form to fine grain. *Fay*

granulation

The act or process of being formed into grains, granules, or other small particles; specif. the crushing of a rock under such conditions that no visible openings result. Also, the state or condition of being granulated. *AGI*

granulator

a. A rock breaker which converts large stone into small aggregate. *Hammond* b. A machine that produces body raw material in the form of grains with a minimum of fines. *ACSG, 2*

granule

a. A rock fragment larger than a very coarse sand grain and smaller than a pebble, having a diameter in the range of 2 to 4 mm. The term "very fine pebble" has been used as a syn. *AGI* b. A little grain or small particle, such as one of a number of the generally round or oval, nonclastic (precipitated), internally structureless grains of glauconite or other iron silicate in iron formation; a pseudo-oolith. *AGI*

granule texture

A texture of iron formation in which precipitated or nonclastic granules are separated by a fine-grained matrix. *AGI*

granulite

a. A metamorphic rock consisting of even-sized, interlocking mineral grains less than 10% of which have any obvious preferred orientation. *AGI* b. A relatively coarse, granular rock formed at high pressures and temperatures, which may exhibit a crude gneissic structure due to the parallelism of flat lenses of quartz and/or feldspar. The texture is typically granuloblastic. *AGI*

granulitic

Of, pertaining to, or composed of granulite. *AGI*

granulitization

In regional metamorphism, reduction of the components of a solid rock such as a gneiss to grains. The extreme result of the process is the development of mylonite. *AGI*

graphic

a. Said of the texture of an igneous rock that results from the regular intergrowth of quartz and feldspar crystals. The quartz commonly occupies triangular areas, producing the effect of cuneiform writing on a background of feldspar. Similiar intergrowths of other minerals, e.g., ilmenite-pyroxene, are less common. *AGI* b. A mineral intergrowth, e.g., alkali-feldspar and quartz, with angular planar boundaries resembling cuneiform writing.

graphic gold

Crystals of naturally occurring sylvanite ore; a mixed gold-silver telluride, occurring in regularity so as to give the appearance of written symbols. Syn: [graphic tellurium](#)

graphic granite

a. An intergrowth of potash feldspar (orthoclase or microcline) and quartz. Syn: [corduroy spar](#) b. A pegmatite characterized by graphic intergrowths of quartz and alkali feldspar. CF: [intergrowth](#)

graphic intergrowths

See: [graphic granite](#)

graphic ore

See: [sylvanite](#)

graphic section

A drawing that shows the sequence of strata. *BS, 7*

graphic tellurium

See: [sylvanite](#); graphic gold.

graphite

A hexagonal and trigonal mineral, native carbon $4[C]$, polymorphous with chaoite, diamond, and lonsdaleite; scaly, soft, lustrous, metallic; greasy feel; as crystals, flakes, scales, laminae, or grains in veins or bedded masses or disseminations in carbonaceous metamorphic rocks; conducts electricity well, is soft and unctuous; immune to most acids; extremely refractory. Syn: [plumbago](#); [black lead](#).

graphitic carbon

The portion of the carbon in iron or steel that is present as graphite; distinguished from combined carbon. *Webster 3rd*

graphitic steel

Alloy steel made so that part of the carbon is present as graphite. *ASM, 1*

graphitite

A hard, coallike graphite rock interbedded with Precambrian schists. Syn: [graphitoid](#)

graphitization

Formation of graphite in iron or steel. If graphite is formed during solidification, the phenomenon is called primary graphitization; if formed later by heat treatment, it is called secondary graphitization. *ASM, 1*

graphitoid

a. Meteoritic graphite. b. See: [graphitite](#)

grapple

A clamshell-type bucket having three or more jaws. *Nichols, 1*

grapple dredge

a. A dredge using an orangepeel bucket and operating on the clamshell principle. *Carson, 1* b. See: [grab dredger](#)

grass crop

Scot. The outcrop of a vein. *Fay*

Grassellis

High explosive; used in mines. *Bennett*

grasshopper conveyor

See: [oscillating conveyor](#)

grass roots

A miner's term equivalent to the surface. From grass roots down is from the grass roots to the bedrock.

grass-roots deposit

The old fabulous deposit, discovered in surface croppings, easy of exploitation, and capable of financing its own development as it went along. *Hoover*

grass-roots mining

Inadequately financed operation, depending on hand-to-mouth existence. Mining from surface down to bedrock. At grass; at surface. Also known as mining on a shoestring. *Pryor, 3*

grate

a. A screen or sieve for use with stamp mortars for grading ore. *Webster 3rd* b. A frame, bed, or a kind of basket of iron bars for holding fuel while burning. *Webster 3rd*

grate bar

a. A bar forming part of a fire grate. *Standard, 2* b. One of the bars forming a coarse screen or grizzly. *Fay*

grate coal

Formerly, coal passing through bars 3-1/4 to 4-1/4 in (8.3 to 10.8 cm) apart and over 2-1/4 in (6.7 cm) round holes. In Arkansas, the bars are 7 in (17.8 cm) apart and the holes are 3 to 3-1/4 in (7.6 to 8.3 cm) in diameter. *Fay*

grater

A laborer who replaces grates on conveyors after roasted lead ore has been dumped into cars, using hooks. Lead ore is loaded on grates and conveyed through a furnace in which the sulfur is driven off by roasting prior to the ore being melted to separate and recover the lead in another furnace. *DOT*

graticule

a. A network of lines representing geographic parallels and meridians forming a map projection. b. A template divided into blocks or cells, for graphically integrating a quantity such as gravity. Graticules are used in computing terrain corrections and the gravitational or magnetic attraction of irregular masses. *AGI* c. An accessory to an optical instrument such as a microscope to aid in measurement of the object under study; it is a thin glass disk bearing a scale which is superimposed upon the object. *AGI* d. The network of lines representing meridians of longitude and parallels of latitude on a map or chart, upon which the map or chart was drawn. Not to be confused with grid. *AGI*

grating

a. A coarse screen made of parallel or crossed bars to prevent passing of oversized material. b. A series of parallel and crossed bars used as platform or walkway floors or as coverings for pits and trenches over which traffic can pass; generally removable to permit access to conveying equipment for servicing. c. A series of parallel and/or crossed bar units fastened to or propelled by a conveying medium, used for carrying large lump-size bulk material or objects. They usually permit passage of air for cooling or for heat to maintain temperature. d. The act of sorting ores by means of grates.

Graupen tonstein

See: [granular tonstein](#)

gravel

a. An unconsolidated, natural accumulation of rounded rock fragments resulting from erosion, consisting predominantly of particles larger than sand (diameter greater than 2 mm or 1/12 in), such as boulders, cobbles, pebbles, granules, or any combination of these. See also: [pebble](#) *AGI* b. A popular term for a loose accumulation of rock fragments, such as a detrital sediment associated esp. with streams or beaches, composed predominantly of more or less rounded pebbles and small stones, and mixed with sand that may compose 50% to 70% of the total mass. *AGI* c. An engineering term for rounded fragments having a diameter in the range of 1.87 in (47.5 mm) (retained on U.S. standard sieve No. 4) to 3 in (76 mm). *AGI*

gravel bank

A natural mound or exposed face of gravel, particularly such a place from which gravel is dug; a gravel pit. *Hess*

gravel deposit

See: [alluvium](#)

gravel mine

S. Afr. A mine extracting gold from sand or gravel; also called placer mine. See also: [gravel pit](#)

gravel pit

A pit from which gravel is obtained. See also: [gravel mine](#) *Standard, 2*

gravel plain placer

Placers along the coastal plain of the Seward Peninsula, AK.

gravel powder

Very coarse gunpowder. *Standard, 2*

gravel pump

A centrifugal pump with renewable impellers and lining, suitable for pumping a mixture of gravel and water. Rubber is sometimes used as lining to the pump and pipes owing to its high resistance to abrasion. See also: [sand pump](#)

gravel pumping

A method of alluvial mining that consists of (1) excavating and breaking up the gravel bank by using giants or monitors, (2) washing the disintegrated material into a sump, excavated in the bedrock, (3) elevating the mixture from the sump to an elevated line of sluices by means of a gravel pump, and (4) sluicing the gravel for the recovery of its mineral content. *Griffith*

grave wax

A natural paraffin. See also: [hatchettite](#)

gravimeter

a. An instrument to measure the value of gravity or for measuring variations in the magnitude of the Earth's gravitational field. Measurements of gravity are accomplished generally by one of three methods: dropped ball, pendulum, or spring gravimeter. The latter type of gravimeter, which is based upon the principle of the weighted spring-- where the length or measured variations in the length of the spring are a function of the gravitational field at different locations, is the type widely used today. See also: [Graf sea gravimeter](#); gravitational prospecting. *Hunt* b. An instrument for determining specific gravities, particularly of liquids. See also: [hydrometer](#) c. An instrument that measures variations in the density of underlying rocks. *BS, 9* d. An instrument for measuring variations in the gravitational field, generally by registering differences in the weight of a constant mass as the gravimeter is moved from place to place. Syn: [gravity meter](#) See also: [astatic gravimeter](#)

gravimetric analysis

Quantitative chemical analysis in which the different substances of a compound are measured by weight. *AGI*

gravimetry

The measurement of gravity or gravitational acceleration, esp. as used in geophysics and geodesy. *AGI*

gravitation

The mutual attraction between two masses. See also: [law of gravitation](#) *AGI*

gravitational constant

The constant, gamma, in the law of universal gravitation. Its value is $6.672 \times 10^{-11} \text{ m}^3 / \text{kg} \times \text{s}^2$. *AGI*

gravitational differentiation

See: [crystal fractionation](#)

gravitational method

A geophysical prospecting method that measures irregularities or anomalies in gravity attraction produced by differences in the densities of rock formations, and interprets the results in terms of lithology and structure. *Nelson*

gravitational prospecting

A method of geophysical prospecting, that embraces the mapping of variations in the Earth's gravitational field. See also: [gravimeter](#) *Hammond*

gravity

a. The force by which substances are attracted to each other, or fall to Earth. See also: [law of gravitation](#) b. The effect on any body in the universe of the inverse-square-law attraction between it and all other bodies and of any centrifugal force that may act on the body because of its motion in an orbit. *AGI* c. The force exerted by the Earth and by its rotation on unit mass, or the acceleration imparted to a freely falling body in the absence of frictional forces. *AGI* d. A general term for API gravity or Baume gravity of crude oil. *AGI*

gravity anomaly

The difference between the observed value of gravity at a point and the theoretically calculated value. It is based on a simple gravity model, usually modified in accordance with some generalized hypothesis of variation in subsurface density as related to surface topography. *AGI*

gravity balance

Sensitive weighing system in which a beam rides on a fulcrum, and supports a load of unknown weight at one end which is counterbalanced by known weights at the other end. *Pryor, 3*

gravity bar

A 5 ft (1.5 m) length of heavy half-round rod forming the link between the wedge-orienting coupling and the drill-rod swivel coupling on an assembled Thompson retrievable borehole-deflecting wedge. *Long*

gravity-bar screen

See: [grizzly](#)

gravity classifying

The grading of ores into different sorts and the separation of waste from coal by the difference in the specific gravity of the minerals to be separated. *Stoces*

gravity concentration

Separating grains of minerals by a concentration method operating by virtue of the differences in density of various minerals; the greater the difference in density between two minerals, the more easily they can be separated by gravity methods. The laws of free and hindered settling are important in the theory of gravity concentration. *Newton, 1*

gravity conveyor

Continuous belt, system of rollers, or inclined chute down which loaded material gravitates without the application of power. See also: [roller conveyor](#); [wheel conveyor](#). *Pryor, 3*

gravity corer

a. A sampling device capable of working even under moderately adverse sea conditions. The corer weighs about 650 lb (294 kg) in air and consists essentially of a shaft, weights, and coring tube. *Hunt* b. An oceanographic corer that penetrates the ocean floor solely by its own weight. It is less efficient than a piston corer. There are several varieties, including the Phleger corer and the free corer. *AGI*

gravity-discharge conveyor elevator

A type of conveyor using gravity-discharge buckets attached between two endless chains and which operate in suitable troughs and casings in horizontal, inclined, and vertical paths over suitable drive, corner, and takeup terminals. Syn: [bucket elevator](#) See: [V-bucket conveyor elevator](#)

gravity-discharge conveyor-elevator bucket

An elevator bucket designed to contain material on vertical lifts and scrape material along a trough on horizontal runs. Discharge is effected by gravity.

gravity equipotential surface

See: [equipotential surface](#)

gravity fault

See: [normal fault](#)

gravity feed

Applicable when the weight of the drill rods is great enough to impose an adequate pressure on a bit to make it cut properly. *Long*

gravity gradiometer

An instrument for measuring the gradient of gravity. *AGI*

gravity haulage

A system of haulage in which the set of full cars is lowered at the end of a rope, and gravity force pulls up the empty cars, the rope being passed around a sheave at the top of the incline. The speed of the haulage is controlled by a band brake on the sheave. See also: [brake incline](#); underground haulage. Syn: [jig haulage](#); [self-act](#). *Nelson*

gravity inclines

Openings made in the direction of the dip of the deposit. The gradient of the gravity incline is determined by the dip of the deposit. The ore mined is transported through them, usually to the next lower level drive. *Stoces*

gravity instruments

Devices for measuring the gravitational force or acceleration or its gradient at any point. They are of three principal types: (1) a static type in which a linear or angular displacement is observed or nulled by an opposing force, (2) a dynamic type in which the period of oscillation is a function of gravity and is the quantity directly observed, or (3) a gradient-measuring type, for example, Eotvos torsion balance. *AGI*

gravity meter

a. Sensitive device for measuring gravitational variations. *Bennett* b. See: [gravimeter](#)

gravity plane

A tramline laid at such an angle that full skips running downhill will pull up the empties. *Fay*

gravity plane rope haulage

See: [self-acting rope haulage](#)

gravity prospecting

Mapping the force of gravity at different places with a gravimeter (gravity meter) to determine differences in specific gravity of rock masses, and, through this, the distribution of masses of different specific gravity. *Leet, 1*

gravity railroad

A railroad in which the cars descend by their own weight; an inclined railroad. *Standard, 2*

gravity road

Any road on which cars will descend by gravity. *Jones, 1*

gravity roller conveyor

See: [roller conveyor](#)

gravity screen

A perforated steel plate, set at an angle, over which large coal or other material slides by gravity to effect a primary classification. *Nelson*

gravity separation

Separation of mineral particles, with the aid of water or air, according to the differences in their specific gravities. *AGI*

gravity solution

A solution used to separate the different mineral constituents of rocks by their specific gravities, as the solution of mercuric iodide in potassium iodide having a maximum specific gravity of 3.19. *Standard, 2*

gravity stowing

A method of stowing in inclined conveyor faces, in which the material is brought into the upper gate (usually the tailgate) and arranged to slide down on trays which are moved forward as each track is filled. *Nelson*

gravity takeup

See: [belt tensioning device](#)

gravity wheel conveyor

See: [wheel conveyor](#)

gray antimony

See: [stibnite](#)

grayband

A variety of sandstone for sidewalks; flagstone. See also: [flagstone](#) *Standard, 2*

gray cast iron

A cast iron that gives a gray fracture due to the presence of flake graphite; often called gray iron. See also: [iron](#)

gray cobalt

See: [cobaltite](#); smaltite.

gray copper

See: [tetrahedrite](#)

gray copper ore

See: [tennantite](#); tetrahedrite.

gray hematite

See: [specularite](#)

gray iron

a. Pig iron or cast iron in which nearly all the carbon not included in pearlite is present as graphitic carbon. See also: [mottled iron](#); white iron. *CTD* b. Iron that exhibits a gray fracture surface because fracture occurs along the graphite plates (flakes); it is the result of stable solidification. *McGraw-Hill, 1*

grayite

A thorium phosphate containing a little lead, calcium, and minor uranium and rare earths; gives an X-ray pattern like that of rhabdophane, and when heated above 850 degrees C, a monazite-type pattern. *Am. Mineral., 1*

Gray-King test

Method of assessing the coking property of coal; 20 g is heated in a silica tube to 600 degrees C and the residual product is compared with a standard series ranging from noncoking (type A) to highly coking (G), all of which have the same volume as the original. Cokes that expand (swell) on coking receive a subscript indicating the degree of swelling. *Pryor, 3*

gray manganese ore

See: [manganite](#); pyrolusite.

graywacke

An old rock name that has been variously defined but is now generally applied to a dark gray, firmly indurated, coarse-grained sandstone that consists of poorly sorted, angular to subangular grains of quartz and feldspar, with a variety of dark rock and mineral fragments embedded in a compact clayey matrix having the general composition of slate and containing an abundance of very fine-grained illite, sericite, and chloritic minerals. Graywacke is abundant within the sedimentary section, esp. in the older strata, usually occurring as thick, extensive bodies with sole marks of various kinds and exhibiting massive or obscure stratification in the thicker units but marked graded bedding in the thinner layers. It generally reflects an environment in which erosion, transportation, deposition, and burial were so rapid that complete chemical weathering did not occur, as in an orogenic belt where sediments derived from recently elevated source areas were poured into a geosyncline. Graywackes are typically interbedded with marine shales or slates, and associated with submarine lava flows and bedded cherts; they are generally of marine origin and are believed to have been deposited by submarine turbidity currents. CF: [arkose](#); [subgraywacke](#). Also spelled: greywacke; grauwacke. *AGI*

graywether

One of numerous fragments or blocks of sandstone and conglomerate, covering large tracts in Dorsetshire and Wiltshire, England, supposed to be remnants of decomposed Tertiary strata. Also called druidical stone; sarsen stone; saracen stone. Syn: [sarsen stone](#)

grease

a. A semisolid form of lubricant, composed of emulsified mineral oil and soda or lime soap. Additives may be incorporated for special purposes, for example, colloidal graphite. b. This term should be applied only to fatty or oily matter of animal origin, but mixtures of mineral oil with lime and soda soaps constitute well-known lubricating greases. c. Term used in the flotation process. d. As used in engineering for lubrication or protection of metal surfaces, grease is an emulsified oil or saturated fatty acid

combined with a suitable alkaline base to form a soap. *Pryor, 3* e. Thick oil. *Nichols, 1*
f. A solid or semisolid mixture of oil with soap or other fillers. *Nichols, 1*

greased-deck concentration

A process in which separation is based on selective adhesion of some grains (diamonds) to quasi-solid grease with adhesion of other grains to water. *Gaudin, 1*

greaser

a. A person who oils or greases the mine cars. b. An automatic apparatus that greases the axles of skips as they pass.

grease stone

A name for steatite or soapstone.

grease table

An apparatus for concentrating minerals, such as diamonds, which adhere to grease. It usually is a shaking table coated with grease or wax over which an aqueous pulp is flowed.

greasing truck

An electrically driven service vehicle to transport greases and oil for servicing the underground mine machinery. It may include a compressor, air storage tank, and fittings to place lubricant at the proper points in the mining machinery.

greasy

Applied to the luster of minerals. Having the luster of oily glass, as elaeolite. *Fay*

greasy blaes

Scot. See: [creeshy](#)

greasy feel

Some minerals or rocks are greasy or soapy to the touch, e.g., talc, graphite, steatite, or soapstone.

greasy gold

See: [fine gold](#)

greasy luster

As if covered with a thin film of oil or grease, e.g., nepheline, some diamond crystals, and some varieties of serpentine.

greasy quartz

See: [milky quartz](#)

Great Falls converter

A pear-shaped vessel that resembles the Bessemer converter. It has been largely supplanted by the cylindrical (Peirce-Smith) type converter. *Newton, 1*

Greathead shield

A tunneling device invented by J. H. Greathead, first used in London in 1869, and still widely used today. His invention included a circular cutting edge forced through the ground by hydraulic jacks, a cast-iron lining assembled by bolts, and grouting behind the lining with the aid of compressed air and a special mixer. *Hammond*

great salt

Salt in large lumps or crystals. *Kaufmann*

greave

See: [ditch](#)

green acids

Mixed sulfonation products from oil refinery cracking processes; used in detergency and as main constituent of a series of flotation agents chiefly concerned with the concentration of iron minerals. Also refers to the initial solution generated from the acceleration of phosphate concentrate. *Pryor, 3*

greenalite

A monoclinic mineral, $(\text{Fe}^{2+}, \text{Fe}^{3+})_{2-3} \text{Si}_2 \text{O}_5 (\text{OH})_4$; kaolinite-serpentine group; forms green granules in the taconite of the Mesabi Range, MN, and the Gogebic iron formation of northern Wisconsin.

greenalite rock

A dull, dark green rock, uniformly fine-grained with conchoidal fracture, containing grains of greenalite in a matrix of chert, carbonate minerals, and ferruginous amphiboles. *AGI*

Greenawalt process

A system of sintering powdery metalliferous ores. *Osborne*

Greenburg-Smith impinger

A dust-sampling apparatus evolved by the U.S. Bureau of Mines that makes use of the principle of impingement of the dust-laden air at high velocity on a wetted glass surface, together with that of bubbling the air through a liquid medium. See also: [midget impinger](#)

green chalcedony

Usually some cryptocrystalline variety of quartz stained green. Also may be chalcedony of natural green color. See also: [chrysoprase](#)

green charge

A mixture of ingredients for gunpowder before the intimate mixing in the incorporating mill. *Webster 3rd*

green copperas

The mineral melanterite, hydrous ferrous sulfate, $\text{Fe}^{2+} \text{SO}_4 \cdot 7\text{H}_2\text{O}$. Syn: [green vitriol](#)

green hole

A furnace taphole in which clay is not properly set, and through which the drill may break and let iron out unexpectedly. *Fay*

green iron ore

See: [dufrenite](#)

greenlandite

See: [columbite](#)

Greenland spar

See: [cryolite](#)

green lead ore

See: [pyromorphite](#)

green marble

See: [verde antique](#)

green mud

A deep-sea terrigenous deposit characterized by the presence of a considerable proportion of glauconite and CaCO_3 in variable amounts up to 50%. *Holmes, I*

greenockite

A hexagonal mineral, $2[\text{CdS}]$; forms earthy incrustations and coatings on sphalerite and other zinc ores; rarely in amygdules. See also: [xanthochroite](#)

greenovite

A rose-colored variety of titanite (sphene) containing up to 3% MnO .

green roof

A miner's term for a roof that has not broken down or shows no sign of taking weight. *Fay*

green salt

a. Uranium tetrafluoride. *Lyman* b. A wood preservative consisting of copper, arsenic, and chromium compounds. *Bennett*

greensand

a. An unconsolidated marine sediment consisting largely of dark greenish grains of glauconite, often mingled with clay or sand (quartz may form the dominant constituent), found between the low-water mark and the inner mud line. The term is loosely applied to any glauconitic sediment. *AGI* b. A sandstone consisting of greensand that is often little or not at all cemented, having a greenish color when unweathered but an orange or yellow color when weathered, and forming prominent deposits in Cretaceous and Eocene beds (as in the Coastal Plain areas of New Jersey and Delaware); specif. either or both of the Greensands (Lower and Upper) of the Cretaceous System in England, whether containing glauconite or not. Syn: [glauconite](#); [glauconitic sandstone](#). *AGI*

greensand marl

A marl containing sand-size grains of glauconite. *AGI*

greenschist

A schistose metamorphic rock whose green color is due to the presence of chlorite, epidote, or actinolite. CF: [greenstone](#)

greenstone

a. A field term applied to any compact dark-green altered or metamorphosed basic igneous rock (e.g., spilite, basalt, gabbro, diabase) that owes its color to the presence of chlorite, actinolite, or epidote. CF: [greenschist](#) b. See: [nephrite](#) c. An informal name for a greenish gemstone, such as fuchsite or chiastolite. *AGI* d. Compact, igneous rocks that have developed enough chlorite in alteration to give them a green cast. They are mostly diabases and diorites. Greenstone is partially synonymous with trap. It is often used as a prefix to other rock names. The term is used frequently when no accurate determination is possible. e. Includes rocks that have been metamorphosed or otherwise so altered that they have assumed a distinctive greenish color owing to the presence of one or more of the following minerals: chlorite, epidote, or actinolite. f. Freshly quarried stone containing quarry water. *Arkell* g. Can. Generalized name given to Precambrian lavas. *Hoffman*

green top

Freshly exposed roof that is unknown in quality. *Kentucky*

green vitriol

A ferrous sulfate; copperas. Also called martial vitriol. See also: [melanterite](#); [green copperas](#). *Standard, 2*

Greenwell formula

A formula used for calculating the thickness of tubing: $T = 0.03 + HD/50,000$, where T is the required thickness of tubing in feet, H is the vertical depth in feet, D is the diameter of the shaft in feet, and 0.03 is an allowance for possible flaws or corrosion. *Sinclair, 2*

greet stone

A term used in Yorkshire, England, for a coarse-grained or gritty sandstone. *AGI*

greigite

An isometric mineral, $\text{Fe}^{2+} \text{Fe}^{3+}_2 \text{S}_4$; lineaite group; in minute grains and crystals in clays in the Kramer-Four Corners area, San Bernadino County, CA.

greisen

A pneumatolytically altered granitic rock composed largely of quartz, mica, and topaz. The mica is usually muscovite or lepidolite. Tourmaline, fluorite, rutile, cassiterite, and wolframite are common accessory minerals. See also: [greisenization](#)

greisenization

A process of hydrothermal alteration in which feldspar and muscovite are converted to an aggregate of quartz, topaz, tourmaline, and lepidolite (i.e., greisen) by the action of water vapor containing fluorine. *AGI*

grenatite

See: [leucite](#); staurolite.

grenz

Horizons in coalbeds resulting from temporary halting of the accumulation of vegetal material. They are frequently marked by a bed of clay or sand. *Raistrick*

greve

A ditch or trench.

grid

a. Two sets of uniformly spaced parallel lines, intersecting at right angles, by means of which the surface of an area is divided into squares when a checkerboard placement of boreholes is desired. Elevations may be taken at line intersections. CF: [checkerboarded](#)
b. In surveying, a triangulation scheme that covers its area with a network of acute-angled triangles drawn between mutually visible points. *Pryor, 3*
c. A grated opening, as in a mining sieve. *Zern*
d. A network composed of two sets of uniformly spaced parallel lines, usually intersecting at right angles and forming squares, superimposed on a map, chart, or aerial photograph, to permit identification of ground locations by means of a system of coordinates and to facilitate computation of direction and distance. The term is frequently used to designate a plane-rectangular coordinate system superimposed on a map projection, and usually carries the name of the projection; e.g., Lambert grid. Not to be confused with graticule. *AGI*
e. A systematic array of points or lines; e.g., a rectangular pattern of pits or boreholes used in alluvial sampling. *AGI*

gridaw

The framing at the top of a shaft for the pulley wheels or sheaves for the hoisting rope. *CTD*

grid azimuth

The angle at a given point in the plane of a rectangular coordinate system between the central meridian, or a line parallel to it, and a straight line to the azimuth point. *AGI*

gridiron twinning

See: [crossed twinning](#)

Griffin mill

A grinding mill in which a vertically suspended rolling disk rotates, and under the influence of centrifugal force bears on ore passing between it and a stationary bowl, crushing the passing ore on its way to a peripheral discharge. Syn: [pendulum mill](#)

griffithite

A ferroan variety of saponite.

Griffith's theory

Griffith's theory of failure is based on the assumption that the low order of tensile strength in common materials is due to the presence of small cracks or flaws. Actual stresses may occur around these flaws, which are of the order of magnitude of molecular cohesion values, while the average tensile strength may be quite low. Mohr's theory predicts that failure of materials is due to failure in shear, whereas Griffith's theory postulates that it is due to failure at crack tips. *Lewis*

grike

A joint fracture in limestone, widened by solution.

grindability

a. Grindability of coal, or the ease with which it may be ground fine enough for use as pulverized fuel, is a composite physical property embracing other specific properties, such as hardness, strength, tenacity, and fracture. *Mitchell* b. The effect produced on representative pieces of ore by applying standard methods of comminution, assessed comparatively in terms of size reduction and power used. *Pryor, 4* c. Relative ease of grinding, analogous to machinability. *ASM, 1*

grindability index

A measure of the grindability of a material under specified grinding conditions, expressed in terms of volume of material removed per unit volume of wheel wear. *ASM, 1*

grinder-mill operator

a. In ore dressing, smelting, and refining, one who mixes raw materials, such as bauxite, lime, soda ash, and starch, entering the alumina-extraction process to produce a slurry of proper chemical composition, using a ball mill. Also called ball mill operator. *DOT* b. In ore dressing, smelting, and refining, one who grinds ore and separates fine particles from coarse particles in a ball mill and classifier arranged in continuous series. *DOT*

grinders' asthma

Disease of the lungs consequent upon inhaling the metallic dust produced in grinding operations. Also called grinders' rot; phthisis. *Standard, 2*

grinding

a. Size reduction into fine particles; comminution. See also: [dry grinding](#); [wet grinding](#). b. The process of erosion by which rock fragments are worn down, crushed, sharpened, or polished through the frictional effect of continued contact and pressure by larger fragments. *AGI* c. Abrasion by rock fragments embedded in a glacier and dragged along the bedrock floor. *AGI*

grinding aid

An additive to the charge in a ball mill or rod mill to accelerate the grinding process; the additive has surface-active or lubricating properties. Grinding aids find particular use in the grinding of portland cement clinker but, in the United Kingdom, their use is precluded by the conditions laid down in British Standard 12. *Dodd*

grinding cycle

The sequence of operations in grinding a material, including, for example, the screening of the primary product and the recirculation of the screen overflow. *BS, 5*

grinding mill

A machine for the wet or dry fine crushing of ore or other material. The three main types are the ball, rod, and tube mills. The mill consists of a rotating cylindrical drum; the ore enters one hollow trunnion and the finished product leaves the other. Modern practice indicates ball mill feeds of 1/2 in, 3/4 in, and 1 in (1.27 cm, 1.91 cm, and 2.54 cm) for hard, medium, and soft ores respectively and the products range from 35 to 200 mesh and finer. See also: [open-circuit mill](#)

grinding pebbles

Pebbles, usually of chert or quartz, used for grinding in mills where contamination with iron must be avoided.

griotte marble

A French marble of a beautiful red color and often variegated with small dashes of purple and spots or streaks of white, as in the variety locally known as griotte oeil de perdrix from the French Pyrenees. *Fay*

gripe

A strap brake or ribbon brake on a hoisting apparatus. *Standard, 2*

gripping hole

One whose direction is inclined away from the adjacent free face, or may be defined as one whose width is greater at the toe than at the heel. *Zern*

gripping shot

A shot so placed that the point or inner end of the hole is considerably farther from the face of the coal to be broken than is the heel or outer end of the hole. See also: [shot](#)

grip the rib

When a cut is so made by a mining machine or a shot is so placed by a miner that the cut or shot enters the coal beyond the proper line of the rib, it is said to grip the rib. *Zern*

grisley

See: [grizzly](#)

grit

a. A coarse-grained sandstone, esp. one composed of angular particles; e.g., a breccia composed of particles ranging in diameter from 2 to 4 mm. *AGI* b. A sand or sandstone made up of angular grains that may be coarse or fine. The term has been applied to any sedimentary rock that looks or feels gritty on account of the angularity of the grains. *AGI* c. A sandstone composed of particles of conspicuously unequal sizes (including small pebbles or gravel). *AGI* d. A sandstone with a calcareous cement. The term has been applied incorrectly to any nonquartzose rock resembling a grit; e.g., pea grit or a calcareous grit. *AGI* e. A small particle of a stone or rock; esp. a hard, angular granule of sand. Also, an abrasive composed of such granules. *AGI* f. The structure or grain of a

stone that adapts it for grinding or sharpening; the hold of a grinding substance. Also, the size of abrasive particles, usually expressed as their mesh number. *AGI* g. An obsolete term for sand or gravel, and for earth or soil. The term is vague and has been applied widely with many different connotations. Etymol: Old English grot, gravel, sand. *AGI*

grit collector

An adaptation of any of several types of conveyors used for removing heavy solids from settling tanks or basins. See also: [bucket elevator](#); flight conveyor; reciprocating flight conveyor; screw conveyor.

grit number

See: [mesh number](#)

gritting

In quarrying, a process that gives a smoother surface than rubbing. It is accomplished with silicon carbide or aluminum oxide abrasive bricks attached to revolving buffer heads. *AIME, 1*

grizzly

a. A device comprised of fixed or moving bars, disks, or shaped tumblers or rollers for the coarse screening or scalping of bulk materials. See also: [bar grizzly](#); [grizzly chute](#); [live roll grizzly](#). Syn: [grisley](#); gravity-bar screen. b. A series of iron or steel bars spaced so as to size, sort, or separate the bulk material as it falls into the ore chutes. *Ricketts* c. A rugged screen for rough sizing at a comparatively large size (e.g., 6 in or 15.2 cm); it can comprise fixed or moving bars, disks, or shaped tumblers or rollers. *BS, 5*

grizzly chute

A chute with a bar grizzly which separates the fine from the coarse material as it passes through the chute. See also: [grizzly](#)

grizzly man

See: [grizzly worker](#)

grizzly worker

In metal mining, a laborer who works underground at a grizzly over a chute or raise heading to a storage bin or haulage level, dumping ore from cars through the grizzly, and breaking oversized lumps with a sledge hammer so that they will pass through the grizzly. Also called draw man; grizzly man. *DOT*

grog fire clay mortar

Raw fireclay mixed with calcined fireclay, or with broken fireclay brick, or both, all ground to suitable fineness. *ASTM*

groove

a. The long, tapered, half-round slot in the deflection wedge that acts as a guide in directing the bit to follow a new course in deflecting a borehole. Any of the spiral depressions on a cylindrical object, such as the spiral depression on the surface of fluted core or the rifling in a gun barrel. *Long* b. *Derb.* The place where a miner is working. See also: [grove](#) *Fay* c. A mine, from the German, grube. *Fay*

grooved drum

Drum having a grooved surface to support and guide a rope. *Hammond*

groover

N. of Eng. A miner. *Standard, 2*

groove sample

See: [channel sample](#)

grorolite

A nearly black earthy manganese or wad, streaked with dark red markings, occurring in parts of Europe. *Standard, 2*

gross calorific value

a. The heat produced by combustion of unit quantity of a solid or liquid fuel when burned at constant volume in an oxygen bomb calorimeter under specified conditions, with the resulting water condensed to a liquid. *ASTM* b. The amount of heat liberated by the complete combustion of unit weight of coal under specified conditions; the water vapor produced during combustion is assumed to be completely condensed. *BS, 4* c. At constant pressure, the number of heat units that would be liberated if unit quantity of coal or coke was burned in oxygen at constant pressure in such a way that the heat release was equal to the sum of the gross calorific value at constant volume and the heat equivalent of the work that would have been done by the atmosphere under isothermal conditions had the pressure remained constant. *BS, 1* d. At constant volume, the number of heat units measured as being liberated per unit quantity of coal or coke burned in oxygen saturated with water vapor in a bomb under standard conditions, the residual materials in the bomb being taken (suitable corrections having been made) as gaseous

oxygen, carbon dioxide, sulfur dioxide, nitrogen, liquid water in equilibrium with its vapor and saturated with carbon dioxide, and ash. Syn: [gross heat of combustion](#)

gross cut

The total amount of excavation in a road or a road section, without regard to fill requirements. *Nichols, 1*

gross heat of combustion

See: [gross calorific value](#)

gross recoverable value

The part of the total metal recovered multiplied by the price. The proportion recovered varies with the ore and the method used. See also: [net unit value](#)

gross ton

The long ton of 2,240 avoirdupois pounds. *Webster 3rd*

grossular

An isometric mineral, $8[\text{Ca}_3 \text{Al}_2 \text{Si}_3 \text{O}_{12}]$, rarely pure; garnet group; crystallizes in dodecahedra and trapezohedra; varicolored; in metamorphosed calcareous rocks and skarns. Formerly called grossularite. Syn: [cinnamon stone](#)

gross unit value

The weight of metal per ton (long or short ton), as determined by assay or analysis, multiplied by the market price of the metal. See also: [net unit value](#)

grothite

A variety of titanite containing yttrium or cerium.

grouan

See: [growan](#)

ground

a. Rock at the side of a lode; country rock. *Gordon* b. The mineralized deposit and the rocks in which it occurs, e.g., payground, payable reef; barren ground, rock without value. *CTD* c. A ground is a conducting connection, whether intentional or accidental,

between an electrical circuit or equipment and either the Earth or some conducting body serving in place of the Earth. Also called earth.

ground boss

a. A mine foreman. *Hess* b. See: [mine captain](#)

ground control

a. Maintaining rock mass stability by controlling the movement of excavations in the ground, which can be either rock or soil. *SME, 1* b. Accurate data on the horizontal and/or vertical positions of identifiable ground points so that they may be recognized on aerial photographs. *AGI*

grounded circuit

Electrical system earthed at key points to ensure a common potential and eliminate danger to personnel. *Pryor, 3*

grounded power conductor

An insulated or bare cable that constitutes one side of a power circuit and normally is connected to ground. It differs from a ground wire in that a grounded power conductor normally carries the load current while the equipment it serves is in operation.

ground fault

An electrical contact between part of the blasting circuit and earth. *Atlas*

ground geophysical anomaly

A geophysical anomaly that is mapped instrumentally at the surface of the ground. *Hawkes, 2*

grounding transformer

See: [zigzag transformer](#)

ground log

A device for determining the course and speed made good over the ground in shallow water, consisting of a lead or weight attached to a line. The lead is thrown overboard and allowed to rest on the bottom. The course being made good is indicated by the direction the line tends, and the speed by the amount of line paid out in unit time. *Hunt*

ground magnetometer

A magnetometer primarily suitable for making observations of magnetic field intensity on the surface of the Earth. *AGI*

groundmass

a. The material between the phenocrysts of a porphyritic igneous rock. It is relatively finer grained than the phenocrysts and may be crystalline, glassy, or both. CF: [mesostasis](#) b. A term sometimes used for the matrix of a sedimentary rock. *AGI*

ground movement

a. Subsidence due to the caving or collapse of underground workings. *Pryor, 3* b. Displacement of ground along a fault, bedding plane, or joint caused by mining-induced stress.

ground noise

Seismic disturbance of the ground not caused by the shot. *Schieferdecker*

ground plate

a. A bedplate supporting railroad sleepers or ties. *Standard, 2* b. In electricity, a metal plate in the ground forming the earth connection of a metallic circuit. *Standard, 2*

ground pressure

a. The pressure to which a rock formation is subjected by the weight of the superimposed rock and rock material or by diastrophic forces created by movements in the rocks forming the Earth's crust. Such pressures may be great enough to cause rocks having a low compressional strength to deform and be squeezed into and close a borehole or other underground opening not adequately strengthened by an artificial support, such as casing or timber. Also called rock pressure. CF: [bottom-hole pressure](#) *Long* b. The weight of a machine divided by the area in square inches of the ground directly supporting it. *Nichols, 1*

ground prop

The puncheon between the lowest frame and a foot block in a timbered excavation, used to support the weight of the timbering. *Hammond*

ground roll

a. Low-frequency, low-velocity interface waves encountered in seismic prospecting commonly arising from the ground-air interface, in which case they are known as Rayleigh waves. Ground roll can completely mask desired signals, and means to minimize it commonly must be used. *AGI* b. Seismic surface wave generated by the shot. See also: [ground waves](#) *Schieferdecker*

ground sluice

a. A channel or trough in the ground through which auriferous earth is sluiced for placer mining. *Webster 3rd* b. To wash down a bank of earth with a stream of water.

ground sluicing

To strip ground downslope by means of a directed stream of water to excavate placer material and transport it to a riffled trough in which the valuable mineral is recovered. CF: [hydraulicking](#)

ground spears

Wooden rods (one on each side of the pump) by which a sinking pump is suspended.

ground vibrations

See: [blasting vibrations](#)

ground water

a. That part of the subsurface water that is in the zone of saturation, including underground streams. *AGI* b. Loosely, all subsurface water as distinct from surface water. Also spelled: groundwater; ground-water. Syn: [subterranean water](#); underground water. *AGI*

ground-water discharge

The return of ground water to the surface.

ground-water hydrology

See: [geohydrology](#)

ground-water level

a. See: [water table](#) b. The elevation of the water table at a particular place or in a particular area, as represented by the level of water in wells or other natural or artificial

openings or depressions communicating with the zone of saturation. Syn: [ground-water table](#)

ground-water lowering

The process of lowering the water table so that an excavation can be carried out in the dry. This is done by means of well points. *Hammond*

ground-water province

An area or region in which geology and climate combine to produce ground-water conditions consistent enough to permit useful generalizations. *AGI*

ground-water surface

See: [water table](#)

ground-water table

See: [water table](#); ground-water level.

ground-water tracers

The water seeping into shallow workings or shafts may be traced to the surface source by means of tracer dyes or salts. These substances, however, may be leached out of the water by the soil or strata. Some radioactive isotopes are better tracers because of the high sensitivity with which they can be detected. Tritium, an isotope of hydrogen, is unique because it can be used to label the actual water molecule to be traced and is not chemically removed by the strata. *Nelson*

ground waves

Vibrations of soil or rock. See also: [ground roll](#)

ground wire

A bare or insulated cable used to connect the metal frame of a piece of equipment to the mine track or other effective grounding medium. *MSHA, 1*

group

a. The lithostratigraphic unit next in rank above formation, consisting partly or entirely of named formations. A group name combines a geographic name with the term "group," and no lithic designation is included; e.g., San Rafael Group. *AGI* b. A stratigraphic sequence that will probably be divided in whole or in part into formations in the future.

See also: [analytic group](#) *AGI* c. A general term for an assemblage or consecutive sequence of related layers of rock, such as of igneous rocks or of sedimentary beds. *AGI* d. A more or less informally recognized succession of strata too thick or inclusive to be considered a formation. *AGI* e. A number of shots sufficiently close together to be treated in common in respect to preparation for firing. *BS, 12*

group level

a. A main haulageway drive built in the solid rock underlying the group of seams that it has to serve, or in the floor of a thick deposit. It is preferable to construct the main haulageway as a subdeposit drive, because drives in the deposit suffer from pressure as soon as mining has progressed a certain distance. *Stoces* b. Syn: [subdeposit level](#)

grout

a. A pumpable slurry of neat cement or a mixture of neat cement and fine sand, commonly forced into boreholes or crevices in a rock to prevent ground water from seeping or flowing into an excavation, to seal crevices in a dam foundation, or to consolidate and cement together rock fragments in a brecciated or fragmented formation. Also called cement grout. *Long* b. A cementitious component of high water-cement ratio, permitting it to be poured or injected into spaces within masonry walls. It consists of portland cement, lime, and aggregate, and is often formed by adding water to mortar. *ACSG, 2* c. The act or process of injecting a grout into a rock formation through a borehole or crevice. *Long* d. Applied to waste material of all sizes obtained in quarrying stone. *Fay* e. A coarse kind of plaster or cement usually studded with small stones after application, sometimes used for coating walls of a building. *Webster 3rd*

grout core

Core obtained by drilling into and through formations into which grout has been injected and allowed to set. *Long*

grout curtain

An area into which grout has been injected to form a barrier around an excavation or under a dam through which ground water cannot seep or flow. *Long*

grouter

a. In the stonework industry, a laborer who maintains the floors, equipment, machinery, and yard in a clean and unobstructed condition, using shovels, brooms, buckets, and wheelbarrows to collect and remove stone scraps, dirt, and debris to dump for disposal or to remove steel shot from under gangsaws and store it in suitable containers to be washed and reused. Also called mucker. *DOT* b. See: [box loader](#)

grout hole

A borehole drilled for the express purpose of using it as a means by which grout may be injected into the rock surrounding the borehole. CF: [consolidation hole](#)

grouting

The injection of grout into fissured, jointed, or permeable rocks in order to reduce their permeability or increase their strength. *AGI*

grout injection

An act or process of forcing grout into crevices in rock formations, usually through a borehole, by pressure pumps. *Long*

grout injector

A machine that mixes the dry ingredients for a grout with water and injects it, under pressure, into a grout hole. CF: [grout machine](#) *Long*

groutite

An orthorhombic mineral, $MnO(OH)$; trimorphous with manganite and feitknechtite; in brilliant submetallic to adamantine wedge-shaped crystals in the banded iron formations of the Cuyuna Range, MN.

grout machine

A mechanism by which grout may be pressure-injected into a grout hole. CF: [grout injector](#)

grove

- a. Eng. A drift or adit driven into a hillside from which coal is worked. See also: [groove](#)
- b. Corn. Mine; bal. *Hess*

grovesite

A former name for pennantite.

growan

- a. An old English term for a coarse-grained granite, grit, or sandstone. *AGI*
- b. A grus developed by the disintegration of a granite. Syn: [grouan](#) See: [grus](#)

growler board

A notched or fingered plank or light timber used to align ends of pipe being screwed together, as when laying a waterline. *Long*

grow-on

Quarrymen's term to designate the place where the sheet structure dies out, or the place where two sheets appear to grow onto one another.

growth

a. An increase in dimensions of a compact that may occur during sintering (converse of shrinkage). *ASTM* b. As applied to cast iron, the tendency to increase in volume when repeatedly heated and cooled. *CTD* c. See: [make of water](#)

grubbing

The removal of the root system incident to the surface growth. *Carson, 1*

grube

Ger. A mine.

grub saw

A saw made from a coarsely notched blade of soft iron and provided with a wooden back; it is used, with sand, for sawing stone by hand. *Standard, 2*

grubstake

In the Western United States, supplies or funds furnished to a mining prospector on promise of a share in his discoveries. So called because the lender stakes or risks provisions so furnished. *Webster 3rd*

grubstake contract

An agreement between two or more persons to locate mines upon the public domain by their joint aid, effort, labor, or expense, and each is to acquire by virtue of the act of location such an interest in the mine as agreed upon in the contract. *Fay*

grueso

Sp. Lump ore. The term is used at the mercury mines in California.

gruff

Eng. A pit or shaft.

grunching

Blasting coal out of the solid face as opposed to blasting coal that has been undercut by hand or by coal cutter. *Nelson*

grundy

Granulated pig iron used in making granulated steel. *Webster 2nd*

grunerite

A monoclinic mineral, $(\text{Fe,Mg})_7 \text{Si}_8 \text{O}_{22} (\text{OH})_2$; amphibole group, with $\text{Mg}/(\text{Mg}+\text{Fe})=0-0.3$; forms series with cummingtonite and with magnesiocummingtonite; fibrous or needlelike, commonly in radial aggregates; characteristic of iron formations in the Lake Superior and Labrador Trough regions. Also spelled gruenerite.

grunter

A hooked rod to aid in supporting a crucible. *Standard, 2*

grus

The fragmental products of in situ granular disintegration of granite and granitic rocks. Syn: [grush](#); [residual arkose](#); [growan](#). Etymol: Ger. Grus, grit, fine gravel, debris. Also spelled: gruss. *AGI*

grush

See: [grus](#)

G stone

A name which has been used for pyrophyllite. See also: [pyrophyllite](#) *Dodd*

guag

Corn. A place from which the ore has been extracted. Syn: [gunis](#) *CTD*

guardian angel

A warning device affixed to the roof or back of a mine that automatically displays a visual indication when rock displacement begins. See also: [safety light](#)

guard magnet

Permanent magnet or electromagnet used in crushing system to arrest or remove tramp iron ahead of the crushing machinery. *Pryor, 3*

guardplate

A plate in front of an iron furnace, covering the taphole through which the slag is drawn out. *Standard, 2*

guard screen

See: [oversize control screen](#)

gublin bat

A black, fissible substance, an iron ore, in which a bituminous shivery earth abounds. *Arkell*

gudgeon

a. The bearing of a shaft, esp. when made of a separate piece. *Standard, 2* b. A metallic journal piece set into the end of a wooden shaft. A reinforced bushing or a thrust-absorbing block. *Standard, 2; Nichols, 1*

gudmundite

A silver-white to steel-gray sulfantimonide of iron, FeSbS. Isomorphous with arsenopyrite; elongated crystals; orthorhombic. From Gudmundstrop, Sweden. *English*

guest element

a. A trace element substituting a common element in a rock mineral. b. See: [trace element](#)

gug

Som. A self-acting inclined plane underground; sometimes called a dip incline.

gugiaite

A mineral, $\text{Ca}_2 \text{BeSi}_2 \text{O}_7$, tetragonal, in skarn rocks near Gugia (presumably in China). A member of the melilite family near meliphane but containing little sodium or fluorine; an unnecessary name. Named from the locality. See also: [meliphanite](#) *Hey, 3; Fleischer*

guhr

a. A white (sometimes red or yellow), loose, earthy, water-laid deposit of a mixture of clay or ocher, occurring in the cavities of rocks. *AGI* b. See: [diatomite](#)

guide

a. A pulley to lead a driving belt or rope in a new direction or to keep it from leaving its desired direction. *Long* b. The tracts that support and determine the path of a skip bucket and skip bucket bail.

guide core

See: [dummy](#)

guide fossil

Any fossil that has actual, potential, or supposed value in identifying the age of the strata in which it is found or in indicating the conditions under which it lived; a fossil used esp. as an index or guide in the local correlation of strata. CF: [index fossil](#)

guide frame

A frame designed to be held rigidly in place by roof jacks or timbers, and with provisions for attaching a shaker conveyor panline to the movable portion of the frame, which can be used to prevent jumping or side movement of the panline. *Jones, 1*

guide idler

An idler roll with its supporting structure so designed that when it is mounted on the conveyor frame it guides the belt in a defined horizontal path, usually by contact with the edge of the belt. *NEMA, 1*

guide pulley

A loose pulley used to guide a driving belt past an obstruction or to divert its direction. *CTD*

guide rod

A heavy drill rod coupled to and having the same diameter as a core barrel on which it is used. It gives additional rigidity to the core barrel and helps to prevent deflection of the borehole. Also called core-barrel rod; oversize rod. CF: [drill collar](#)

guide rope

See: [cage guide](#)

guide runner

A runner driven ahead of other runners to guide them. *Hammond*

guides

a. Wood, steel, or wire-rope conductors in a mine shaft, which are engaged by shoes on the cage or skip so as to guide its movement. b. Timber or metal tracks in a hoisting shaft, which are engaged by shoes on the cage or skip so as to steady it in transit. In collieries rope guides are sometimes used. *Pryor, 3* c. The holes in a crossbeam through which the stems of the stamps in a stamp mill rise and fall. d. A pulley to lead a driving belt or rope in a new direction, or to keep it from leaving its desired direction. *Standard, 2*

guillies

Corn. Worked-out cavities in a mine.

guillotine

A machine for breaking iron with a falling weight. *Fay*

guinea bed

War. The shelly, conglomeratic basement limestone bed of the Lower Lias. So called because the stones, if dry, ring when struck. CF: [sun bed](#) *Arkell*

guinea gold

Twenty-two carat gold, of which guineas were coined. *Standard, 2*

gulch

A term used esp. in the Western United States for a narrow, deep ravine with steep sides, larger than a gully; esp. a short, precipitous cleft in a hillside, formed and occupied by a torrent, and containing gold (as in California). *AGI*

Gulf-type (Vacquier) magnetometer

A flux gate or saturable reactor type of recording magnetometer. Used primarily in aircraft and there includes means for keeping the measuring element aligned in the direction of maximum intensity (that is, total field). In this case it records variations in the total field regardless of variations in its direction. Sometimes used for establishing the position of the aircraft as well as the magnetometer itself. *AGI*

gull

A structure formed by mass-movement processes, consisting of widened, steeply inclined tension fissures or joints, resulting from lateral displacement of a slide mass and filled with debris derived from above. Primarily a British usage. *AGI*

gum

a. See: [gummings](#) b. Small coal broken out by a coal cutter. See also: [duff](#) *Pryor, 3* c. Small coal, slack, or duff. *CTD*

gumbo

A term used locally in the United States for a clay soil that becomes sticky, impervious, and plastic when wet. *AGI*

gumbrine

Same as fuller's earth, and similar to floridine from Gumbri, near Kutais, Georgia, Transcaucasia, in the former U.S.S.R. *Spencer, 3*

gum copal

See: [copal](#)

gum dynamite

Explosive gelatin. *Standard, 2*

gummer

A person who clears the fine coal, gum, or dirt from the undercut made by a coal-cutting machine. *CTD*

gummings

The small coal or dirt produced by the picks of a coal cutter. Syn: [gum](#) *Nelson*

gummite

A mixture of yellow or orange secondary uranium oxides formed by alteration of uraninite.

gummy

Applicable when rock or formation being drilled produces cuttings and sludge, which tend to fill the waterways of a bit or to adhere massively to the borehole walls or drill-stem equipment. CF: [balling formation](#); sticky. *Long*

gun

A borehole in which the charge of explosive has been fired with no other effect than to blast off a small amount of material at the mouth of the borehole; also called a bootleg or John Oedges. See also: [blown-out shot](#) *Fay*

gunboat

A self-dumping box on wheels, used for raising (or lowering) coal in slopes; a monitor, a skip. *Fay*

gun drill

A drill, usually with one or more flutes and with coolant passages through the drill body, used for deep-hole drilling. *ASM, 1*

gunis

See: [guag](#)

gunitite

A mixture of portland cement, sand, and water applied by pneumatic pressure through a specially adapted hose and used as a fireproofing agent and as a sealing agent to prevent weathering of mine timbers and roadways. Etymol: Gunitite, a trademark. To apply gunitite; to cement by spraying gunitite. See also: [Aliva concrete sprayer](#)

gunitite gun

See: [cement gun](#)

guniting

Pneumatically applied portland cement mortar, or gunite. The spraying of mine openings with concrete to provide ground support, present a smooth surface to the air current, and prevent weathering with the mortar. See also: [lining](#); [timber preservation](#); [Aliva concrete sprayer](#). *Nelson*

gunk

a. See: [rod dope](#) b. Any gummy substance that collects inside the working parts and hinders the operation of a machine or other mechanical apparatus. *Long* c. A permanent emulsion that forms in liquid-liquid extraction equipment, often containing dust or other solid matter at the core of each globule.

gunned shot

Scot. See: [blown-out shot](#)

gunnie

a. Corn. In mining, measure of breadth or width, a single gunnie being 3 ft (0.91 m) wide. *Standard, 2* b. Corn. The vacant space left where the lode has been removed; a crevice. Plural: gunnies. Also spelled gunniss; gunnice. Syn: [house](#)

gunningite

A monoclinic mineral, $(\text{Zn,Mn})\text{SO}_4 \cdot \text{H}_2\text{O}$; kieserite group; as efflorescences on sphalerite from the Keno Hill and Galena Hill area, central Yukon Territory, Canada.

gunning the pits

Agitation of the drilling fluid in a pit by forcing a portion of the fluid under pressure through a constricted tube or gun, jetting it into the main body of fluid. *Brantly, 1*

gunniss

Corn. See: [gunnie](#)

gun-perforator loader

In petroleum production, one who loads explosive powder into gun perforators used in shooting holes through tubings, casings, and earth formations of oil or gas wells to aid in well drilling or producing operations, working either in shop or at well site. Also called the loader; perforator loader. See also: [loader](#)

gunpowder paper

Paper spread with an explosive compound. It is rolled up for use in loading. *Standard, 2*

gunpowder press

A press for compacting meal powder before granulating into gunpowder. *Standard, 2*

Gunter's chain

A surveyor's chain that is 66 ft (20 m) long, consisting of a series of 100 metal links each 7.92 in (20.1 cm) long and fastened together with rings. It served as the legal unit of length for surveys of U.S. public lands, but has been superseded by steel or metal tapes graduated in chains and links. Named after Edmund Gunter (1581-1626), English mathematician and astronomer, who invented the device about 1620. Syn: [chain](#); pole chain. *AGI*

gurhofite

A snow-white variety of dolomite, containing a large proportion of calcium. *Standard, 2*

gurlet

a. A mason's pickax having one cutting edge and a point. *Standard, 2* b. A pickax having a sharply pointed peen and a bladed peen for cutting. *CTD*

gurmy

A mine level; working. *Standard, 2*

guss

a. A rope used for drawing a basket of coal in a thin seam. *CTD* b. Brist. A short piece of rope by which a boy draws a tram or sled in a mine. *Fay*

gusset

A V-shaped cut in the face of a heading. *Stauffer*

Gusto multiplow

A number of small plows attached to a rope or chain which cut backward and forward on the face. They operate in conjunction with an armored conveyor. See also: [multiplow](#)

Gusto scraper box

An arrangement of scraper boxes with cutting knives attached to the face side. See also: [scraper box plow](#)

gut

To rob, or extract, only the rich ore of a mine. *Weed, 2*

gutter

a. The lowest and usually richest portion of an alluvial placer. The term is used in Australia for the dry bed of a buried Tertiary river containing alluvial gold. Syn: [bottom](#)
b. A gob heading. *Nelson* c. A drainage trench. *Nelson* d. A small airway made through a goaf or gob. *CTD* e. In deep lead mining, the lowest portion of a deep lead filled with auriferous wash dirt. *Eng. Min. J., 1* f. A channel or gully worn by running water. *Webster 3rd*

guttering

a. A channel cut along the side of a mine shaft to conduct the water back into a lodge or sump. b. A process of quarrying stone in which channels, several inches wide, are cut by hand tools, and the stone block detached from the bed by pinch bars. c. The formation of more or less vertical breaks at or toward the centerline of a roadway, as a consequence of which falls occur along the groove or gutter. *TIME*

Gutzkow's process

A modification of the sulfuric acid parting process for bullion containing large amounts of copper. A large excess of acid is used; the silver sulfate is then reduced with charcoal, or, in the original process, ferrous sulfate. *Liddell*

guy

a. A wire line or rope attached to the top of a drill derrick or pole and extending obliquely to the ground, where it is fastened to a deadman or guy anchor. See also: [guy line](#) b. A rope that holds the end of a boom or spar in place. Syn: [guy rope](#) See also: [guy line](#)

guy anchor

The object to which the lower end of a guy is attached. Also called deadman. *Long*

guyed

Held upright and steadied by one or more guys. *Long*

guy line

A guy or several guys. See also: [guy](#)

guyot

A flat-topped submarine mountain rising from the floor of the ocean like a volcano but planed off on top and covered by an appreciable depth of water. *Leet, I*

guy ring

A ring on the head block or top of a drill pole, derrick, or tripod to which guys are attached. *Long*

guy rope

a. A rope holding a structure in a desired position. *CTD* b. See: [guy](#)

gyprock

a. Massive rock gypsum. b. A driller's term for a rock of any kind in which he has trouble in making a hole. *AGI* c. A rock composed chiefly of gypsum. *AGI*

gypsiferous

Containing gypsum. Also spelled gypseous.

gypsification

Development of, or conversion into, gypsum; e.g., the hydration of anhydrite. *AGI*

gypsite

See: [gypsum](#)

gypsum

A monoclinic mineral, $8[\text{CaSO}_4 \cdot 2\text{H}_2\text{O}]$; colorless to white in crystals, but massive beds may range from red to yellow to brown, gray, or black; the most common natural sulfate; defines 2 on the Mohs hardness scale; commonly associated with rock salt (halite) and anhydrite; forms beds and lenses interstratified with limestone, shale, and clay, esp. in rocks of Permian to Triassic age; also in volcanic fumarolic deposits; an accessory mineral in metalliferous veins. Syn: [gypsite](#)

gypsum plate

In polarized-light microscopy, an accessory plate of clear gypsum (replaced by quartz of the appropriate thickness in modern instruments) that gives a first-order red (approx. 1 lambda out of phase for 560 nm) interference color with crossed polars when inserted in the tube with its permitted electric vectors at 45 degrees to those of the polarizer and analyzer. It is used to determine fast and slow directions (electric vectors) of light polarization in crystals under view on the microscope stage by increasing or decreasing retardation of the light. Also called a sensitive-tint plate. CF: [accessory plate](#); [quartz wedge](#). See also: [selenite plate](#)

gyrasphere crusher

Heavy-duty fixed path cone crusher; a variant from the standard cone crusher. See also: [Symon's cone crusher](#)

gyratory

a. More or less eccentric, as certain rock crushers. *von Bernewitz* b. A widely used form of rock breaker in which an inner cone rotates eccentrically in a larger outer hollow cone. *CTD*

gyratory breaker

A primary crusher consisting of a vertical spindle, the foot of which is mounted in an eccentric bearing within a conical shell. The top carries a conical crushing head revolving eccentrically in a conical maw. There are three types of gyratories--those that have the greatest movement on the smallest lump, those that have equal movement for all lumps, and those that have greatest movement on the largest lump. Syn: [gyratory crusher](#) See also: [cone crusher](#)

gyratory crusher

See: [gyratory breaker](#)

gyrocompass

a. A north-seeking form of gyroscope used as a vehicle's or craft's directional reference. Also known as gyroscopic compass. *McGraw-Hill, 1* b. The gyrocompass is used in underground and borehole surveying. Syn: [gyroscopic compass](#); [gyrostatic compass](#). *AGI*

gyroscopic-clinograph method

A method for measuring borehole deviation that photographs time, temperature, and inclination from the vertical on 16 mm film and can take 1,000 readings descending then ascending the hole as a check. The gyroscope maintains the casing on a fixed bearing. *Sinclair, 2*

gyroscopic compass

a. See: [gyrocompass](#) b. A magnetic compass whose equilibrium is maintained by the use of gyroscopes. *AGI*

gyrostatic compass

See: [gyrocompass](#)

H

Haanel depth rule

A rule of thumb for estimating the depth of a magnetic body, which is valid if the body may be regarded as magnetically equivalent to a single pole. The depth of such a pole is equal to the horizontal distance from the point of maximum vertical magnetic intensity to the points where the intensity is one-third of the maximum value. *AGI*

Haarmann plow

See: [scraper box plow](#)

Haase furnace

A muffle furnace of the McDougall type, in which the hearths are separated by suitable flues through which the products of combustion from the fireplace pass.

Haase system

A system of shaft sinking through loose ground or quicksand by piles in the form of iron tubes connected together by webs. Their downward movement is facilitated by water under pressure that is forced down the tubes to wash away the loose material from underneath their points. *Nelson*

habit

a. A general term for the outward appearance of a mineral or rock. *AGI* b. The characteristic or typical crystal form, combination of forms, or other shape of a mineral, including irregularities.

hachure

One of a series of short, straight, evenly spaced, parallel lines used on a topographic map for shading and for indicating surfaces in relief (such as steepness of slopes), drawn perpendicular to the contour lines. Hachures are short, broad (heavy), and close together for a steep slope, and long, narrow (light), and widely spaced for a gentle slope, and they enable minor details to be shown but do not indicate elevations above sea level. Etymol: French. Syn: [hatching](#); [hachure](#). v. To shade with or show by hachures. *AGI*

hachure map

A map that represents the topographic relief by means of hachures.

hack hammer

A hammer resembling an adz, used in dressing stone. *Webster 3rd*

hackiron

A miner's pickax or hack. A chisel or similar tool for cutting metal, as wire, into nails. *Fay*

hackly

The property shown by certain minerals or rocks of fracturing or breaking along jagged surfaces, e.g., broken iron.

hackly fracture

A mineral's habit of breaking along jagged, irregular surfaces with sharp edges. *Leet, 1*

hackmanite

A sulfur-rich variety of sodalite.

hacksaw structure

Irregular, saw-shaped terminations of crystals (such as of augite) or grains due to intrastratal solution.

hade

The complement of the dip; the angle that a structural surface makes with the vertical, measured perpendicular to the strike. It is little used. See also: [dip](#); [rise](#). Syn: [underlay](#) *AGI*

Hadsel mill

Early form of autogenous grinding mill, in which comminution resulted from the fall of ore on ore during the rotation of a large-diameter horizontal cylinder. *Pryor, 3*

Haenisch and Schroeder process

A method for the recovery of sulfur as liquid sulfurous anhydride from furnace gases. *Fay*

hafnium silicate

A compound analogous to zircon, therefore, the suggested name hafnon. It can be synthesized from the oxides at 1,550 degrees C. Thermal expansion (150 to 1,300 degrees C), 3.6×10^{-6} . *Dodd*

hafnium titanate

Special refractory compositions have been made by sintering mixtures of HfO_2 and TiO_2 in various proportions. The melting point of these sintered bodies was approx. 2,200 degrees C; there appeared to be a phase change at about 1,850 degrees C. Some of the compositions had negative thermal expansions. *Dodd*

hag

a. To cut as with an ax; to cut down the coal with the pick. *Fay* b. Scot. A cut; a notch. *Fay* c. N. of Eng. A quagmire or pit in mossy ground; any broken ground in a bog. *Fay*

haeggite

A monoclinic mineral, $\text{V}_2\text{O}_5(\text{OH})_3$; forms black crystals in sandstone, Wyoming.

hag principle

The system under which a skilled miner employs an unskilled helper. *CTD*

haiarn

In Wales, a term for iron.

hailstone bort

Variety of bort built of concentric shells of clouded diamond and cementlike material. See also: [bort](#)

hair copper

See: [chalcotrichite](#)

hair pyrite

See: [millerite](#)

hair salt

Common name for efflorescences of hairlike, acicular, or fibrous crystals of epsomite or other hydrous sulfates in caves and old mine workings. See also: [alunogen](#)

hairstone

Quartz thickly penetrated with hairlike crystals of rutile, actinolite, or some other mineral. CF: [hedgehog stone](#)

hair zeolite

May be natrolite, scolecite, or mesolite. *Fay*

half-and-half plane

Scot. In a direction midway between plane course and end course. See also: [half-course](#)

half bearings

Bearings such as are used on railway cars where the load is constantly in one direction and is sufficiently heavy to hold the journal against the bearing. *Crispin*

half blinded

Scot. Two ends driven off a plane, one on each side and not opposite each other by half their width. *Fay*

half-cell

An electrode immersed in a suitable electrolyte designed for measurements of electrode potential. *ASM, I*

half-course

A drift or opening driven at an angle of about 45 degrees to the strike and in the plane of the seam. See also: [half-and-half plane](#)

half end

York. See: [horn coal](#)

half headers

Term applied to material that amounts to a large cap piece. They are used by sawing a header in two and placing one or more timbers under the half header on the same side of the track. Two timbers are generally placed under the half header and the end allowed to extend out over the haulage. The term half header should not be applied to regular cap pieces. *Kentucky*

half-life

- a. The time in which one-half of the atoms in a radioactive substance disintegrate. *Lyman*
- b. The time in which the quantity of a particular radioactive isotope is reduced to one-half of its initial value. Syn: [half-period](#)

half-marrow

Newc. Youngsters, of whom two do the work of one loader. *Fay*

half-period

See: [half-life](#)

half-round nose

See: [medium-round nose](#)

half set

In mine timbering, one leg piece and a collar. *Fay*

half-value distance

The horizontal distance between the points of maximum and half-maximum values in a symmetrical anomaly, usually either gravity or magnetic. It is useful in estimating the depth of the geologic feature that causes the anomaly. *AGI*

half-wave rectifier

A rectifier that changes single-phase alternating current into pulsating unidirectional current, utilizing only one-half of each cycle. *Coal Age, 1*

half width

Half the width of a simple anomaly (esp. a gravity or magnetic anomaly) at the point of half its maximum value. For simple models the maximum depth at which the body causing the anomaly can lie can be calculated from the half width. *AGI*

halide

A fluoride, chloride, bromide, or iodide.

Halimond tube

Miniature pneumatic flotation cell, operated by hand. Widely used in ore testing, for examination of small samples under closely controllable conditions of flotation. *Pryor, 3*

halite

An isometric mineral, $4[\text{NaCl}]$; cubic cleavage; soft; salty tasting; forms disseminated grains or crystals in sedimentary rocks, or aggregates of large cubic crystals; granular to massive, the latter as extensive sedimentary beds ranging in thickness from less than 1 mm to more than 50 m, also in convoluted masses called salt domes; a typical constituent of playa lake deposits in arid regions. Syn: [rock salt](#); [common salt](#); salt.

halitic

Composed partly or wholly of halite; esp. said of a sedimentary rock containing halite as cementing material, such as halitic sandstone. *AGI*

haelleflinta

Sw. A dense, compact, metamorphic rock consisting of microscopic quartz and feldspar crystals, with occasional phenocrysts and sometimes hornblende, chlorite, magnetite, and hematite. It is associated with gneisses, but is of obscure origin. See also: [porcellanite](#)

Hallett table

A table of the Wilfley type, except that the tops of the riffles are in the same plane as the cleaning planes and the riffles are sloped toward the wash-water side. *Liddell*

Hallinger shield

A tunneling shield of Hungarian design, successfully employed for tunneling at Dortmund and under the Danube. It is valuable for working in very soft ground. It incorporates a mechanical excavator and does not entail the use of timbering to protect the miners. *Hammond*

halloysite

a. A monoclinic mineral, $2[\text{Al}_4 \text{Si}_4 (\text{OH})_8 \text{O}_{10}]$; kaolinite-serpentine group; made up of slender tubes as shown by electron microscopy; a gangue mineral in veins. Syn: [metahalloysite](#) b. Used as a group name to include natural "halloysite minerals" with different levels of hydration, as well as those formed artificially. See also: [alum salt](#)

Hall process

The first commercially successful method for manufacturing aluminum; the purified oxide is dissolved in fused cryolite and then electrolyzed. Syn: [Heroult process](#)

Hall-Rowe wedge

A tapered concave metal plug or wedge that can be set in a drill hole at a predetermined depth and bearing to deflect or straighten an off-course borehole. See also: [wedge](#)

halo

a. A circular or crescentic distribution pattern about the source or origin of a mineral, ore, mineral association, or petrographic feature. It is encountered principally in magnetic and geochemical surveys. Some halos are primary, formed either at the same time as the host rock or at the same time as associated mineral deposits, and some are secondary, formed by surficial alteration of the associated mineral deposit. Syn: [aureole](#) CF: [dispersion pattern](#) b. Discoloration of a mineral, viewed in thin section, in the form of a ring. Most halos of this sort are caused by radiation damage by alpha particles emitted from uranium- and thorium-bearing mineral inclusions.

halocline

A steep ascendent of salinity. This has an effect on refraction of sound waves, since sound velocity increases with increasing salinity. *Hy*

halokinesis

See: [salt tectonics](#)

halotrichite

a. A monoclinic mineral, $4[\text{Fe}^{2+} \text{Al}_2 (\text{SO}_4)_4 \cdot 22\text{H}_2 \text{O}]$; forms a series with pickeringite in which magnesium replaces ferrous iron; soft; a weathering product of pyritic rocks in mines; also in arid regions and around fumaroles. b. The mineral group apjohnite, bilinite, dietrichite, halotrichite, pickeringite, and redingtonite. Syn: [feather alum](#); [iron alum](#).

haloxylin

A mixture of yellow prussiate of potash, niter, and charcoal used as an explosive. *Fay*

hamburgite

An orthorhombic mineral, $8[\text{Be}_2(\text{BO}_3)(\text{OH})]$; in alkali pegmatites and in placers.

hammada

An extensive, nearly level, upland desert surface that is either bare bedrock or bedrock thinly veneered by pebbles, smoothly scoured and polished and generally swept clear of sand and dust by wind action; a rock desert of the plateaus, esp. in the Sahara. The term is also used in other regions, as in Western Australia and the Gobi Desert. Etymol: Arabic, hammadah. *AGI*

hammer

a. Term for drive hammer, a heavy sleeve-shaped weight used for driving drill pipe or casing into overburden or soft rock. *Long* b. To pound or drive with pilehammerlike blows delivered by a drive hammer. *Long*

hammer breaker

An impact type of breaker consisting of a number of swinging bars or steel hammers hinged to a horizontal shaft that rotates at high speed. *Nelson*

hammer drill

a. A light, mobile, and fast-cutting drill in which the bit does not reciprocate but remains against the rock in the bottom of the hole, rebounding slightly at each blow. There are three types of hammer drills; drifter, sinker, and stoper. *Lewis* b. A development of the piston drill in which the drill steel is not attached to the piston but remains in the hole, the piston delivering a rapid succession of light hammer blows. The drill steel is frequently hollow so that air or water may be driven through to cool the bit and clean the hole. Rotation of the bit is automatic. Also known as jackhammer. *Barger* c. A percussive drill. *BS, 12* d. A rock drill powered by compressed air that reciprocates a free piston, causing it to strike the shank of the drill steel. When of light construction, a hand hammer drill, otherwise supported on a tripod or bar. *Pryor, 3*

hammermill

a. A pulverizing unit consisting of a rotor, fitted with movable hammers, that is revolved rapidly in a vertical plane within a closely fitting steel casing. The hammers hit falling rock, which is fractured on impact, or by collision with other rocks or with the casing. When sufficiently reduced in size, the pulverized rock escapes through grids in the casing. Syn: [beater mill](#) b. Coal crusher in which the blow is induced with the aid of

centrifugal force. The coal is broken with the impact and usually dragged across grate bars in the bottom of the unit. See also: [ring crusher](#)

hammerpick

A compressed-air-operated hand machine used by miners to break up the harder rocks in a mine. It consists mainly of a pick and a hammer operated by compressed air. The hammer driving the pick is set in a cylinder, where the compressed air enters and presses the hammer, which in turn drives the wedge-shaped edge of the pick into the rock in short sufficient shocks of from 1,500 to 2,000 blows per minute. See also: [poll pick](#)
Stoces

hammochrysos

A stone, the appearance of which suggested sand veined with gold, perhaps mottled jasper. *Webster 2nd*

hammock structure

The intersection of two vein or fracture systems at an acute angle. *AGI*

hand

Measurement of height of mine haulage animals equivalent to 4 in (10.2 cm).

hand auger

A screwlike tool much like a large carpenters' bit or a short cylindrical container with cutting lips attached to a rod and operated by hand and used to bore shallow holes and obtain samples of soil and other relatively unconsolidated near-surface materials. CF: [auger](#)

hand boring

The drilling of holes by hand for site investigations or for the exploration of shallow mineral deposits. The hand drill is used for depths of about 15 m and where the ground is loose or not too hard. CF: [auger](#) *Nelson*

hand cable

A flexible cable used principally in making electrical connections between a mining machine and a truck carrying a reel of portable cable. Also called head cable; butt cable.

hand cleaning

The removal by hand of impurities from coal, or vice versa. *BS, 5*

hand cobbing

See: [cobbing](#)

hand drilling

A historical method of drilling blastholes in rock by hammer and a hand-held steel or bit. Single-jack drilling was done by one miner. In double-jack drilling, one miner held the steel for one or two strikers with hammers. *Peele*

hand electric lamp

A hand lamp, with battery and fittings similar to a cap lamp except that it forms a self-contained unit. *Nelson*

hand filling

a. Scot. Loading coal from face by hand. *Pryor, 3* b. Eng. Loading coal from face by hand, but small coals are loaded separately from large lumps. *Pryor, 3* c. See: [sublevel stoping](#)

hand frame

An iron barrow used in a foundry. *Fay*

hand gear

The mechanism for opening the valves of a steam engine by hand in starting. *Standard, 2*

hand hammer

Any hammer wielded by hand. A blacksmith's (or miner's) hammer used with one hand as distinguished from a heavier hammer or sledge. *Fay*

hand hammer drill

An ordinary rock drill held in the hand and not mounted on a bar or column. The air leg support is now widely used in tunnels and rock drilling generally. *Nelson*

hand jig

Manually operated moving-screen jig used to treat small batches of ore. The jig box is fixed to a rocking beam and moved up and down in a tank of water. *Pryor, 3*

hand lamp

A portable battery-operated lamp incorporating a tungsten filament light source within a glass of the dome or well-glass type and providing maximum illumination in the horizontal plane. *BS, 13*

hand lead

A lead weight attached to a lead line of up to 100 fathoms (183 m), used in hydrographic surveying. *Hammond*

handling plant

Equipment for the mechanical movement of dirt, ore, coal, or other material either horizontally or up an incline, by some form of conveyor, bucket, chain, or rope. *Nelson*

hand loader

A miner who loads coal by shovel rather than by machine. See also: [loader](#)

hand mining

The working and winning of coal or mineral by hand and not by machines. Broadly, hand coal mining would imply hand holing, shot firing, and hand filling. *Nelson*

handpicked coal

Coal from which all stones and inferior coal have been picked out by hand; large lumps. *Fay*

handpicking

Manual removal of selected fraction of coarse run-of-mine ore, usually performed on picking belts (belt conveyors) after screening away small material, perhaps washing off obscure dirt, and crushing pieces too large for the worker to handle. Hand sorting (Rand) describes picking of banket when up to 30% of waste rock is removed. See also: [sorting](#) *Pryor, 3*

hand sampling

a. In prospecting, valuation, and control, use of manual methods for detaching and reducing to an appropriate size representative samples of ore. *Pryor, 3* b. One of the major breakdowns in ore sampling that includes grab sampling, trench or channel sampling, fractional selection, coning and quartering, and pipe sampling. These methods are used in sampling small batches of ore, etc. CF: [mechanical sampling](#)

hand scraper

See: [stope scraper](#)

hand selection

The selection by hand of pieces of coal with certain specific qualities according to surface appearance. *BS, 5*

handset

A drilling bit in which the diamonds are set into holes drilled into a malleable-steel bit blank and shaped to fit the diamonds. The hand method has been almost completely superseded by mechanical setting methods. CF: [mechanical set](#)

hand specimen

A piece of rock of a size that is convenient for megascopic study and for preserving in a study collection. *AGI*

hand spraying

A method of dust prevention used in hand-won faces, or in conjunction with wet cutting in thick seams. The sprays are controlled by the colliers who wet the face and the broken coal before loading. Sprays must be connected with the pipeline through the face by means of flexible hoses; one spray for every 20 yd (18.3 m) of face is usually sufficient. *Mason*

hand tramming

Pushing of cars by manpower. It is limited to mines of small output, to prospects, and to work where mechanical haulage would not be justified. See also: [manual haulage](#)

hand whip

A counterpoised sweep for raising water from shallow pits.

handyman

A person employed to do various kinds of work. *Fay*

hang

a. To suspend casing or pipe in a borehole in a clamp resting on blocks at the collar of the hole. *Long* b. To suspend drill string or other downhole equipment in the drill

derrick or tripod either on the hoisting line or on hooks provided in the crown block for that purpose. *Long*

hanger

a. See: [hanging wall](#); hanging bolts. b. Scot. The hook of a miner's lamp. *Fay* c. Something that hangs, overhangs, or is suspended. *Webster 3rd* d. A frame containing a bearing for a shafting. *Standard, 2*

hangfire

An explosive charge that is not properly detonated and burns and may eventually result in a detonation at some nondetermined time. See also: [hung shot](#)

hanging bolts

Rods of round iron, used in shaft construction to suspend wallplates. In concrete-lined shafts hanging rods give reinforcement, the top set being concreted into the shaft collar and others hooked on below, with periodic consolidation in strong rock strata as the shaft is deepened. Sometimes called hangers. *Pryor, 3; Fay*

hanging coal

A portion of the coal seam which, by undercutting, has had its natural support removed. *Fay*

hanging deal

Aust. Planks used to suspend a lower curb from the one above it, in cases where backing deals are necessary. *Fay*

hanging its water

Scot. The bucket is said to hang its water when it fails to pump on account of a faulty valve, or air between the bucket and the valve, the column of water above the bucket being sufficient to prevent the opening of the bucket lids.

hanging-on

Eng. The pit bottom, level, or inset at which the cages are loaded. *Fay*

hanging pulley

A small fenced pulley hung from the roof or side of a haulage road in which the tail rope of a main-and-tail haulage is suspended. It keeps the rope (which is not used for direct

haulage of cars) clear of the roadway and minimizes friction while in motion. The swinging of hanging pulleys and ropes is a hazard to people traveling on the roadway. *Nelson*

hanging scaffold

Scot. A movable platform in a shaft attached to a winding rope.

hanging sets

Scot. Timbers from which cribs are suspended in working through soft strata.

hanging wall

a. The overlying side of an orebody, fault, or mine working, esp. the wall rock above an inclined vein or fault. See also: [wall](#); [walls](#); [top wall](#). Syn: [hanger](#) b. Sticking or wedging of part of the charge in a blast furnace. *Fay*

hanging wall drift

In the United States, a horizontal gallery driven in the hanging wall of a vein. *Nelson*

hanging wall of a fault

The upper wall of an inclined fault plane. *Ballard*

hang-up

Underground, blockage of ore pass or chute by rock. *Pryor, 3*

haplite

See: [aplite](#)

hard

a. Containing certain mineral salts in solution, esp. calcium carbonate; said of water having more than 8 to 10 grains/gal (137 to 171 mg/L) of such matter to the gallon. *Standard, 2* b. Solid; compact; difficult to break or scratch. See also: [hardness scale](#)

hard bottom

A condition encountered in some open-cut mines wherein the rock occasionally will not be broken down to grade because of an extra-hard streak of ground or because not enough explosive is used. This is called a "hard bottom"; it interferes with work and puts

undue strain on a shovel. Such unbroken ores usually are drilled with a jackhammer and blasted.

hard coal

a. All coal of higher rank than lignite. *BS, 4* b. In the United States, the term is restricted to anthracite. See also: [anthracite](#)

hard-coal plow

A plow type of cutter loader for cutting the harder coal seams. It consists of stepped kerving bits that precut the coal, leaving the unstressed coal to be cut by the following bits. The kerving bits may be either rigid or swiveling. See also: [rapid plow](#) *Nelson*

hardebank

Unaltered kimberlite below the zone of blue ground. CF: [blue ground](#) *AGI*

hardened steel

Steel that has been hardened by quenching from or above the hardening temperature. *Fay*

hardener

An alloy, rich in one or more alloying elements, added to a melt either to permit closer composition control than is possible by addition of pure metals or to introduce refractory elements not readily alloyed with the base metal. *ASM, 1*

hardening

Metallurgical process in which iron or suitable alloy is quenched by abrupt cooling from or through a critical temperature range. See also: [precipitation hardening](#)

hardening media

Liquids into which steel is plunged in hardening. They include cold water, various oils, and water containing sodium chloride or hydroxide to increase the cooling power. *CTD*

hard ground

Rock that is difficult to work.

Hardgrove number

Empirical index of grindability of ores or minerals, reached as result of comminution of a test sample under stated conditions of control. *Pryor, 3*

Hardgrove test

This test utilizes a special grindability mill of the ring-and-ball type, in which a 50-gm portion of closely sized coal is ground for 60 revolutions. This method is of the constant-work type; i.e., a fixed amount of work is expended on each coal, and a grindability value is determined from the size composition of the ground material. *Mitchell*

hardhat

Slang term for a safety hat. *BCI*

hardhead

a. A hard knob or knot formed by extreme cementation of sandstone. b. A large, smooth rounded stone found esp. in coarse gravel. c. A tunnel in a coal mine driven through rock. Syn: [hard heading](#) d. A hard, brittle, white residue obtained in refining tin by liquation, containing, among other things, tin, iron, arsenic, and copper. Also, a refractory lump or ore only partly smelted. *ASM, 1*

hard heading

A heading driven in rock. In S. Wales and elsewhere, men employed in hard headings have suffered greatly from silicosis. Syn: [hardhead](#) See also: [stone drift](#)

Hardinge mill

Cylindroconical ball mill, made in three sections--a flattish cone at feed end followed by a cylindrical drum, and finishing with a steep cone leading to the discharge trunnion. The tricone mill has wedge-shaped liners in the drum section that turn this into a gentle conic frustrum widest at the feed end. *Pryor, 3*

Hardinge thickener

A machine for removing the maximum amount of liquid from a mixture of liquid and finally divided solids. The solids settle out on the bottom of the thickener tank as a sludge, and the clear liquid overflows at the top of the tank. It is used for processing chemical, metallurgical, and coal-washing slurries. *Nelson*

hard kiln

A muffle kiln fired at a temperature between that of enamel and gloss kilns. *CTD*

hard mica

Mica that, when slightly flexed or distorted with thumb pressure, generally does not show any tendency to delaminate. Such mica, in thick pieces, will give an almost metallic sound when tapped or dropped on a hard surface. *Skow*

hard needles (or inclusions)

A term applied in the grading of quartz crystals to fairly large needlelike inclusions or imperfections that appear to be hard. *Am. Mineral.*, 2

hardness

a. Quality of water based on the presence of dissolved calcium or magnesium. See also: [hard water](#) b. As used by individuals associated with the drilling and bit-setting industry, the relative ability of a mineral to scratch another mineral or to be penetrated by a Knoop indenter. See also: [hardness test](#) *Long* c. Of a brittle mineral, the resistance to scratching or abrasion by another mineral, e.g., the Mohs scale of relative hardness, which ranges from 1 (talc) to 10 (diamond), or the Povarennykh scale from 1 (talc [001]) to 15 (bort diamond [111]). See also: [hardness scale](#) d. Resistance of a metal to plastic deformation by indentors of various shapes as defined by the Brinell, Knoop, Rockwell, and Vickers scales.

hardness gage

See: [hardness points](#)

hardness pencils

See: [hardness points](#)

hardness plates

A series of small pieces of minerals of differing hardness, polished flat, and set side by side in cement, for testing hardness of another mineral, which is drawn across one piece after another, beginning with the hardest, until it scratches one.

hardness points

Small pieces of minerals of differing hardness, with one end pointed and affixed to small handles of wood, metal, or plastic, to be held in hand and used for testing hardness of another mineral, by ascertaining which points will scratch it. Minerals of hardness 6 to 10 are usually used as points for testing gem stones. Syn: [hardness gage](#); [hardness pencils](#).

hardness scale

a. The scale by which the hardness of a mineral is determined as compared with a standard. The Mohs scale is as follows: talc, gypsum, calcite, fluorite, apatite, orthoclase, quartz, topaz, corundum, and diamond. Also called Mohs scale. See also: [hard](#); [hardness](#); [hardness test](#). *Fay* b. Quantitative units by means of which the relative hardness of minerals and metals can be determined, which for convenience is expressed in Mohs, Knoop, or scleroscope units for minerals and Vickers, Brinell, or Rockwell units for metals. *Long*

hardness table

Any listing of substances as to their comparative hardness.

hardness test

A determination of the relative hardness of a mineral, such as scratch hardness, as made on a specimen, using appropriate hardness-testing apparatus and techniques. See also: [hardness](#); [hardness scale](#). *Long*

hardness wheel

A hand instrument in which hardness points are set as equidistant spokes of a rimless wheel, permitting a more rapid selection of points in testing hardness.

hardpan

a. A layer of gravel encountered in the digging of a gold placer, occurring 1 to 2 m below the ground surface and partly cemented with limonite. *AGI* b. A popular term used loosely to designate any relatively hard layer that is difficult to excavate or drill; e.g., a thin resistant layer of limestone interbedded with easily drilled soft shales. *AGI* c. See: [caliche](#)

hard radiation

Ionizing radiation of short wavelength and high penetration. *NCB*

hard rock

a. A term used loosely for igneous or metamorphic rock, as distinguished from sedimentary rock. *AGI* b. A rock that is relatively resistant to erosion. *AGI* c. Rock that requires drilling and blasting for its economical removal. CF: [soft rock](#)

hard-rock drilling

Drilling done in dense and solid igneous or highly silicified rocks, which can be penetrated economically only by diamond bits, as opposed to that done in softer rocks easily cut by roller or wing-type rotary bits. *Long*

hard-rock geology

A colloquial term for geology of igneous and metamorphic rocks, as opposed to soft-rock geology. *AGI*

hard-rock mine

A mine in hard rock; esp. one difficult to drill, blast, and square up. *Hess*

hard-rock miner

A worker competent to mine in hard rock. Usually used to indicate an expert miner as compared with one fit only to mine in soft rocks. *Hess*

hard rock minerals

Solid minerals, as distinguished from oil and gas, esp. those solid minerals found in hard rocks. *Williams*

hard-rock mining

Mining that takes place in igneous and metamorphic rock by means of drilling and blasting to extract the ore. *SME, 1*

hard-rock phosphate

A term used in Florida for pebbles and boulders of a hard massive homogeneous light-gray phosphorite, showing irregular cavities that are usually lined with secondary mammillary incrustations of calcium phosphate. It is essentially equivalent to the term "white-bedded phosphate" that is used in Tennessee. *AGI*

hard-rock tunnel boring

A technique utilizing a machine called a boring machine to bore large horizontal openings in rock or coal.

hards

- a. A commercial term for the larger sizes of dull, hard coal, in contrast to brights. *BS, 4*
- b. See: [durain](#)
- c. In the United States, this term is used for anthracite. *Tomkeieff*

hard seat

See: [seat earth](#)

hard solder

Any solder that melts only at a red heat; used in soldering silver, etc. *Fay*

hard sorting

See: [handpicking](#)

hard spar

A name applied to both corundum and andalusite. *Fay*

hard vector

Due to the arrangement of the molecules within some mineral crystals, such as diamond, the substance is found to be harder in certain planes or directions in relation to the axes of the mineral crystals. These hard planes are referred to as hard vectors. CF: [soft vector](#)
Long

hard water

Water that does not lather readily when used with soap, and that forms a scale in containers in which it has been allowed to evaporate; water with more than 60 mg/L of hardness-forming constituents, expressed as CaCO₃ equivalent. See also: [hardness](#); [total hardness of water](#); temporary hardness of water. CF: [soft water](#)

hard way

a. A term used in slate quarrying to describe the third direction at right angles to both slaty cleavage and rift, in which there is no tendency to split. It is known as the hard way and designated locally as the sculp. b. In granite quarrying, the direction at right angles to both rift and run is called the hard way or head grain. See also: [cutoff](#); [tough way](#). Sometimes spelled hardway. *AIME, 1*

hard white ore

Georgia bauxite containing less than 1% ferric oxide. *Fay*

Hardwick conveyor loader head

A dust collector for belt conveyors used at the loading station. The delivery pulley of the main gate conveyor is used to drive a scraper chain. The latter is arranged to run at half the belt speed by means of chains and sprockets, and the scraper chain runs at the bottom of a long hopper to the point where the coal is delivered into the trams. The underbelt fines are collected on the scraper chain after having been released from the belt by means of a snub pulley. The whole arrangement is housed in a sheet-steel cover to which rubber flaps are attached. Side spillage and the escape of dust over the side of the trams is prevented by means of rubber flaps. *Mason*

hardpick drifting machine

A heavy electric rotary drilling machine for blasting work in mine tunneling. It consists of a chassis mounted on continuous tracks, turntable, boom, drilling machines, and various controls, and can be operated by two people. *Nelson*

Harman process

A method for producing direct from ore an iron in the form of either sinter or pig that is suitable for charging in steel furnaces. Ore, limestone, and carbon in the form of coal, coke, or oil coke in the proportions of 40:8:5 are dried, crushed to about 1/16 in (1.6 mm), intimately mixed, and fed into the upper end of a sloping rotary kiln. *Osborne*

harmful dust

Generally, any airborne particulate matter that is fibrogenic (harmful to the respiratory system), carcinogenic (capable of causing cancer), radioactive, or toxic. *Hartman, 2*

harmless depth theory

A hypothesis based largely on the dome theory, which states that there is a certain harmless depth below which mining could be carried on without risk of damage to the surface. Subsidence observations at present working depths do not support this theory. *Nelson*

harmonic

A sinusoidal quantity having a frequency that is an integral multiple of the frequency of a periodic quantity to which it is related. *Hy*

harmonic crystal

A crystal designed to oscillate at an integral multiple of its fundamental frequency. *Am. Mineral., 2*

harmonic folding

Folding in which the strata remain parallel or concentric, without structural discordances between them, and in which there are no sudden changes in the form of the folds at depth. Ant: disharmonic folding. *AGI*

harmotome

A monoclinic mineral, $(\text{Ba,K})_{1-2}(\text{Si,Al})_8\text{O}_{16}\cdot 6\text{H}_2\text{O}$; zeolite group; in hydrothermal veins, vugs in igneous rocks, manganese ores, saline lakes.

Syn: [cross-stone](#)

harpolith

a. A large, sickle-shaped igneous intrusion that was injected into previously deformed strata and was subsequently deformed with the host rock by horizontal stretching or orogenic forces. *AGI* b. Essentially a phacolith with a vertical axis. *AGI*

harrie

Scot. To rob; to take all the coal that can conveniently be mined without attempting to systematically remove the whole. A variation of harry; to strip; despoil; to rob. *Fay*

harriers

Trammers, putters, or drawers employed to convey trucks or tubs from the working face. They may help load the trucks. *CTD*

harrisite

a. Chalcocite pseudomorphous after galena. *Holmes, 2* b. A phanerocrystalline rock composed essentially of black, lustrous, cleavable olivine with anorthite and a little augite. *Holmes, 2*

Harris process

Process for removing arsenic, antimony, tin, and zinc from virgin or secondary lead by agitating the molten metal with molten caustic soda and salt. All undesirable metals are oxidized, and the oxides are dissolved in the caustic, with the exception of silver, which is removed in a subsequent desilvering operation. *CCD, 2*

harrock

Hard chalk. *Arkell*

harrow

A pole with teeth in it, which revolves in a puddling trough to puddle auriferous clay.
Gordon

hartine

See: [hartite](#)

hartite

Hydrocarbon occurring in brown coal as transparent masses or small, waxy triclinic crystals. Syn: [hartine](#); [josen](#). *Tomkeieff*

Hartley gravimeter

An early form (1932) of stable gravimeter consisting of a weight suspended from a spiral spring, a hinged lever, and a compensating spring for restoring the system to a null position. *AGI*

hartleyite

A variety of oil shale from Hartley, New South Wales. *Tomkeieff*

hartsalz

Hard salt, a mixture of sylvinite and kieserite, with some anhydrite, found in the Stassfurt salt deposits *Kaufmann*

hartschiefer

A strongly banded and partly schistose rock; associated with other rocks of mylonitic habit, in which the alternating bands have been produced from ultramylonite by recrystallization and metamorphic differentiation. *Holmes, 2*

Harvey process

Method of carburizing the surface layers of low-carbon steel, followed by rapid chilling. *Pryor, 3*

harzburgite

A variety of peridotite that consists essentially of olivine and enstatite or bronzite.

Harz jig

A jig in which pulsion is given intermittently with suction; the periods devoted to them are about equal. See also: [hodge jig](#); jig. *Liddell*

Hasenclever turntable

This type of turntable is used as an alternative to the shunt-back or the traverser for changing the direction of mine cars or tubs, either on the surface or underground. A pulley driven by a creeper chain bringing along the cars is on the same vertical axis as the turntable and is so disposed that when a car is on the table two of its wheels rest on its central pulley while the other two rest on the outer edge of the turntable. *Sinclair, 5*

hassing

See: [hasson](#)

hasson

Scot. A vertical gutter between water rings in a shaft. Syn: [hassing](#) See also: [gauton](#)

Hastings beds

A series of clay and sand deposits in the Lower Cretaceous of southeast England; the Fairlight Clays at the base of these deposits have been used for brickmaking near Hastings and Bexhill. *Dodd*

hatch conveyor

Any of several types of conveyors adapted to loading or unloading bulk materials, packages, or objects to or from ships or barges. See also: [belt conveyor](#) CF: [portable conveyor](#)

hatchet stake

A small anvil on which to bend sheet metal. *Standard, 2*

hatchettine

A yellowish-white, wax-yellow, or greenish-yellow paraffin wax usually found inside ironstone nodules and geodes in coalbeds or limestone. It melts at 55 to 65 degrees C, is sparingly soluble in boiling alcohol and cold ether, and is decomposed by concentrated sulfuric acid. Syn: [mineral tallow](#)

hatchettite

A naturally occurring soft paraffin wax; forms veinlike masses in ironstone nodules associated with coal-bearing strata, South Wales; in limestone cavities, France. Syn: [adipocerite](#); [adipocire](#); mineral adipocire; mineral tallow. See also: [grave wax](#) CF: [ozocerite](#)

hatchettolite

A former name for uran-pyrochlore.

hatching

a. Brist. An underground way or self-acting inclined plane, in a thin seam of coal, extending from 60 to 80 yd (55 to 73 m) to the rise. *Fay* b. See: [hachure](#)

hachure

See: [hachure](#)

Hatfield process

Dielectric separation process. *Pryor, 3*

hat rollers

Hat-shaped metal guides for ropeways around bends. *Pryor, 3*

hauchecornite

The mineral group arsenohauchecornite, bismutohauchecornite, hauchecornite, tellurohauchecornite, and tucekite.

haul

a. The distance from the coal face to pit bottom or surface; the distance quarry or opencast products must be moved to the treatment plant or construction site; the distance from the shaft or opencast pit to spoil dump. *Nelson* b. Average haul; the average distance a grading material is moved from cut to fill. *Nichols, 1* c. In the construction of an embankment by depositing material from a cutting, the haul is the sum of the products of each load by its haul distance. *CTD*

haulabout

A steel barge with large hatchways and coal transporters used for coaling ships. *Webster 3rd*

haulage

a. The drawing or conveying, in cars or otherwise, or movement of workers, supplies, ore, and waste both underground and on the surface. *Lewis* b. In dividing the transportation system according to the area served there is (1) primary or face haulage, (2) secondary haulage, and (3) main-line haulage. See also: [transport](#); [intermediate haulage](#); relay haulage; locomotive haulage; underground haulage. *Kentucky* c. Applied generally to track mining as opposed to conveyor mining, although belt conveyor systems are sometimes referred to as belt haulage. *BCI* d. The system of hauling coal out of a mine. *Korson* e. S. Afr. A drive used for mechanical transport. *Beerman*

haulage boss

In bituminous coal mining, a foreperson who supervises mine haulage operations underground or at the surface. *DOT*

haulage brake

See: [brake](#)

haulage cars

Rail haulage cars for surface or mine shaft operations that are used to carry ore and equipment to and from the digging site. *Best, I*

haulage chain

In the early days chains were used in haulage in and around mines. Wire rope has displaced them. *Korson*

haulage clip

A device to effect a secure attachment of tub to the haulage top, chiefly with endless rope haulage. The usual type attains the grip on the rope by two jaws that may be tightened by either a screw or a lever movement. The connection of the clip to the tub is usually made to the drawbar by a hook or link. The clip must maintain a sure grip on the rope and be capable of easy and quick manipulation. See also: [automatic clip](#); clip. *Nelson*

haulage conveyor

Generally 500 to 3,000 ft (152 to 915 m) in length. It is used to transport material between the gathering conveyor and the outside. Haulage conveyors are commonly classified as either intermediate or main haulage conveyors. See also: [underground mine conveyor](#)

haulage curve

A bend in a haulage road, which may be horizontal, vertical, or both. On main haulage roads, curves may be 100 ft (30.5 m) in radius or more. With a good rail track and smooth curves, haulage speeds up to 20 mph (32.2 km/h) can be maintained. A useful rule for determining the minimum radius of curvature for tramming is $R = 12 \text{ to } 15 \times W$; for locomotive haulage $R = 20 \text{ to } 25 \times W$, where W is the maximum wheel base of the rolling stock or locomotive. *Nelson*

haulage drum

A large cylinder on to which the steel haulage rope is coiled. The rope is attached to the drum by passing it inside and looping it about the drum shaft, and securing the loose end to the rope by rope clamps. The excess length of rope is coiled around the drum to provide for recapping during its useful life. *Nelson*

haulage hand

A worker fully employed on the haulage system in a mine. *Nelson*

haulage mine locomotive

See: [electric haulage mine locomotive](#)

haulage plant

A mechanical installation for the tramming of rock, ore, or coal; operated by ropes, compressed air, or electricity. *Weed, 2*

haulage rope

a. A rope used for haulage purposes. *Zern* b. A wire rope composed of six strands of seven wires each. *Lewis*

haulage stage

A mine roadway along which a load is moved by a single form of haulage without coupling or uncoupling of cars and without transfer from one form of haulage to another. *Nelson*

haulageway

The gangway, entry, or tunnel through which loaded or empty mine cars are hauled by animal or mechanical power. *Fay*

haulaway

An excavation method that involves hauling the spoil away from the hole. *Nichols, I*

haulback mining

Method of surface mining in which the overburden is hauled from over the ore or coal in trucks to a holding area and hauled back after the ore or coal has been removed. *SME, I*

haul-cycle time

The time it takes the scraper or truck to haul a load to the dumping area and return to position in the loading area.

haul distance

The distance measured along the center line or most direct practical route between the center of the mass of excavation and the center of mass of the fill as finally placed. It is the distance material is moved. *Nichols, I*

hauling

The drawing or conveying of the product of the mine from the working places to the bottom of the hoisting shaft, or slope. *Zern*

hauling engine

An engine employed to move tubs on an underground engine plane. *Peel*

haul road

A road built to carry heavily loaded trucks at a good speed. The grade is limited on this type of road and usually kept to less than 17% of climb in direction of load movement.

haunt

Coal sold at the pithead. *Nelson*

hausmannite

a. A mineral, $Mn^{2+}Mn_2^{3+}O_4$. In tetragonal octahedrons and twins; also granular massive, particles strongly coherent. Luster submetallic. Color, brownish-black. Syn: [black manganese](#) b. A tetragonal mineral, $Mn^{2+}Mn_2^{3+}O_4$; pseudocubic; in submetallic, commonly twinned crystals in high-temperature hydrothermal veins, contact metamorphic deposits associated with felsic igneous rocks; also an alteration product of

manganese ores by meteoric waters; associated with psilomelane in the Batesville district, Arkansas.

hauyne

An isometric mineral, $[(\text{Na,Ca})_{4-8} \text{Al}_6 \text{Si}_6 (\text{O,S})_{24} (\text{SO}_4, \text{Cl})_{1-2}]$; sodalite group; crystallizes in dodecahedra and octahedra with dodecahedral cleavage; an accessory mineral in alkaline igneous rocks, esp. extrusives, commonly associated with nepheline or leucite. Also spelled haueyne, hauynite.

hauynite

A blue feldspathoid, crystallizing in the cubic system, consisting essentially of silicate of aluminum and sodium with sodium sulfate, $(\text{Na,Ca})_{4-8} \text{Al}_6 \text{Si}_6 (\text{O,S})_{24} (\text{SO}_4, \text{Cl})_{1-2}$. Also spelled haueynite. Also called hauyne. Syn: [sapphirine](#) Dana, 4

haueynitite

A plutonic or hypabyssal rock composed chiefly of hauyne and pyroxene, usually titanite. Small amounts of feldspathoids and sometimes plagioclase and/or olivine are present. Apatite, sphene, and opaque oxides occur as accessories. See also: [haueynophyre](#)

haueynophyre

An extrusive rock similar in composition to a leucitophyre but containing haueyne in place of some of the leucite. Other possible phases include nepheline, augite, magnetite, apatite, melilite, and mica. A partial syn. of haueynitite; some rocks are called haueynophyre when haueyne is a conspicuous mineral but not necessarily a major constituent. See also: [haueynitite](#)

Hauy's law

Every crystal of precise chemical structure and purity has a specific and characteristic shape. *Pryor, 3*

Hauzeur furnace

A double furnace for the distillation of zinc wherein waste heat from one set of retorts is utilized for heating the second set. *Fay*

Hawaiian peridot

A gem-quality variety of olivine (forsterite) in Hawaii; forms phenocrysts in basalt; also in derived sands.

hawaiite

a. A gem variety of olivine from the lavas of the Hawaiian Islands. It contains little iron and is pale green. b. As defined by Iddings in 1913, an olivine basalt with andesine as the normative plagioclase (thus differing from true basalt, in which the normative plagioclase is more calcic). It generally, but not always, lacks normative quartz, and commonly contains normative and modal olivine. Hawaiite is intermediate in composition between alkali olivine basalt and mugearite, and grades into both. See also: [mugearite](#); [trachybasalt](#). *AGI*

hawk's-eye

A transparent colorless quartz containing closely packed, parallel fibers of crocidolite that impart to it a blue color. In form and sheen, it resembles tigereye to which it alters geologically. Differs from sapphire quartz, in which fibers are not parallel. Also spelled hawkeye. CF: [tiger's-eye](#)

hawleyite

An isometric mineral, CdS ; sphalerite group; dimorphous with greenockite; occurs as yellow powder on sphalerite.

hawser

A large rope, varying from 5 to 24 in (12.7 to 61.0 cm) in circumference, of 6 to 9 strands and left-handed twist. *Standard*, 2

hawser laid

a. Of fiber rope, one with three strands of yarn twisted left-handed, these strands being laid up right-handed. *Pryor*, 3 b. If wire rope, it is called cable laid. *Pryor*, 3

Hayden process

A series method of electrolytic refining. Unrefined copper anodes are suspended in an acid electrolyte; one side of each then acts as an anode and the other as a cathode. *Pryor*, 3

Hay mist projector

This projector can be made at any colliery workshop from a few short pieces of piping and an old oil drum. It may be fixed in the drum or in an open tank of larger capacity placed 12 to 15 yd (11.0 to 13.7 m) back from the face of the hard heading. To the water in the drum, powdered washing soda is added at the ratio of 4 oz (113.4 g) to 5 gal (18.9 L) of water. About 2 min before firing, compressed air is turned on and ejections of

water in the form of a coarse mist fill the heading. This continues for a period of 6 min after the firing. In this manner, the heading is filled with a mist of droplets that outnumber the dust particles; the latter are effectively wetted or become attached to the droplets, with the result that the dust rapidly settles out of the air. This mist projector has a high efficiency, particularly where the ventilation current is low. *Mason*

hazel

N. of Eng. In coal mining, a tough mixture of sandstone and shale; also, freestone, flagstone, or chert.

Hazelett process

A method for casting liquid metal or steel continuously into rolls for sheet or plate. The steel is poured on to the outer surface of a broad steel cylinder of very large diameter (up to 6 m) that is supported and revolved by a roller turning inside it. The molten steel is carried a short distance to a roller revolving above the ring, which rolls the almost solidified steel into a thin plate or strip. *Osborne*

head

a. Any road, level, or other passage driven in coal, etc., for the purpose of proving and working the mine. b. The top portion of a seam in the coal face. *CTD* c. The whole falling unit in a stamp battery, or merely the weight at the end of the stem. *CTD* d. The top end of the boring rods above the surface. e. Core-barrel head. f. In gravity separation of a feed, the heads are the concentrates. Opposite of tail. *Pryor, 3* g. Various used as a syn. for core-barrel head; drill head; swivel head. *Long* h. The attitude or direction in a massive crystalline rock along which fracture is most difficult. It is normal to the grain and rift. i. The difference in air pressure producing ventilation. *CTD* j. In mineral processing, the mill head, or grade of ore, accepted by the mill for treatment. Commonly used in the plural. k. The height of water above any point or plane of reference. Used also in various compounds, such as energy head, entrance head, friction head, static head, pressure head, lost head, etc. *Seelye, 1* l. A unit of pressure intensity usually given in inches or feet (millimeters or meters) of a column of the fluid under consideration. Thus, 1 ft (or m) of water head is the pressure from a column of water 1 ft (or m) high. *Strock, 2* m. The upper bend of a fold or structural terrace. CF: [foot](#) Syn: [upper break](#) n. An advance main roadway driven in solid coal. *CTD* o. Development openings in a coal seam. *Pryor, 3* p. Total head (th). Also called head on pump. q. So. Staff. A shift or day's work by the stint in heading-out, or driving of dead work. *Fay* r. To cut or otherwise form a narrow passage or head. *Fay* s. A lift. *Fay* t. As applied to rock, natural planes of cleavage at right angles to the grain and the rift of the rock. *Stauffer* u. Rubble drift on the cliffs of southern England. *Standard, 2*

headache post

A timber set under the walking beam to prevent it from falling on members of the drilling crew when it is disconnected. *Williams*

headblock

a. A stop at the head of a slope or shaft to stop cars from going down the shaft or slope. *Fay* b. A cap piece. *Fay* c. A heavy obstruction placed end-on across the rail to prevent the passage of a runaway mine car. *Hudson* d. The crosstie that supports the toes of the switch. *Zern* e. Commonly used as a syn. for crown block; sheave wheel. *Long*

headboard

a. A wedge of wood placed against the hanging wall, and against which one end of the stull is jammed. *Zern* b. A horizontal board in the roof of a heading, touching the earth above and supported by a headtree at each side. *Hammond*

headbox

A device for distributing a suspension of solids in water to a machine at a constant rate, or for retarding the rate of flow, as to a top-feed filter or for eliminating by overflow some of the finest particles. *BS, 5*

head coal

Scot. Formerly, the stratum of a coal next to the roof. More usually now, the top portion of a coal seam when left unworked, either permanently or afterwards taken down; the top coal on a loaded wagon. *Fay*

head end

a. Usually the ultimate delivery end of a conveyor. b. That part of a mining belt conveyor that includes the head section, a power unit, and, if required, the connecting section and a belt takeup. *NEMA, 2*

header

a. Pieces of plank--longer than a cap--extending over more of the roof and supported by two props, one at each end. *Ricketts* b. An entry-boring machine, called a road header, which bores the entire section of the entry in one operation. *Fay* c. The person in charge of driving a heading. *CTD* d. A rock that heads off or delays progress. *Fay* e. A blasthole at or above the head. *Fay* f. A masonry unit laid flat with its greatest dimension perpendicular to the face of the wall; generally used to tie two wythes of masonry together. *ACSG, 1* g. A large pipe into which one set of boilers is connected by suitable nozzles or tees, or similar large pipes from which a number of smaller ones lead to

consuming points. Headers are essentially branch pipes with many outlets, which are usually parallel. *Strock, 1*

head flat trimmer

In bituminous coal mining, a foreman who is in charge of workers picking impurities from coal as it is dumped into railroad cars at the mine surface. *DOT*

headframe

a. The steel or timber frame at the top of a shaft, which carries the sheave or pulley for the hoisting rope and serves various other purposes. Also called gallows frame; hoist frame; head stocks. *CTD; Hess* b. The shaft frame, sheaves, hoisting arrangements, dumping gear, and connected works at the top of a shaft or pit. Also called headgear. *Pryor, 3* c. Includes all the raised structure around the shaft that is used for loading and unloading cages. *Mason* d. Can. Gallows over the shaft to which cable for hoisting is attached. *Hoffman*

headgear

a. See: [headframe](#) b. That portion of the winding machinery attached to the headframe, or the headframe and its auxiliary machinery. *Fay*

head grain

See: [hard way](#)

headhouse

a. The house or building that encloses the headframe. *Fay* b. The structure on a hillside to control the lowering of coal to the tibble. *BCI*

heading

a. A passage leading from the gangway, commonly at right angles in a coal mine. *Korson* b. A smaller excavation driven in advance of the full-size section; it may also be driven laterally, as a cross heading or side drift. A heading may be driven at the top or the bottom of the full-size face. *Stauffer* c. The vein above a drift. *Fay* d. An interior level or airway driven in a mine. *Fay* e. A road in the solid strata but also in the seam; a road in solid coal. *Mason* f. In a tunnel, a digging face and its work area; the end of a drift or gallery that is being advanced by the mining operation. *Nichols, 1* g. A gangway, entry, or airway. *Hudson* h. The gravel bank above a sluice in a placer. *Standard, 2* i. A continuous passage between two rooms, breasts, or other working places. *Fay* j. A collection of close joints. *Fay* k. Sometimes applied to the preliminary drift or pioneer bench in tunnel driving. *Fay*

heading-and-bench

A method of tunneling in hard rock. The heading is in the upper part of the section and is driven only a round or two in advance of the lower part or bench. *Fraenkel*

heading-and-bench mining

A stoping method used in thicker ore where it is customary first to take out a slice or heading 7 to 8 ft (2.1 to 2.4 m) high directly under the top of the ore and then to bench or stope down the ore between the bottom of the heading and the bottom of the ore or floor of the level. The heading is kept a short distance in advance of the bench or stope. Syn: [heading-and-stope mining](#)

heading and stall

See: [room-and-pillar](#)

heading-and-stope mining

See: [heading-and-bench mining](#)

heading blast

A method of quarry blasting in which the explosive is confined in small tunnel chambers inside the quarry face. The charges are placed at suitable intervals according to the burden to be blasted. In large blasts, several tunnels and cross tunnels may be employed. See also: [chamber](#) Syn: [tunnel blast](#)

heading-overhand bench

The heading is the lower part of the section and is driven at least a round or two in advance of the upper part, which is taken out by overhand excavating. Syn: [inverted heading and bench](#)

headings

a. Coarse gravel or drift overlying placer deposits. *Fay* b. The portion of a vein that is above a level. c. Highly jointed parts of granite. *Arkell* d. In ore beneficiation, the purest ore obtained by washing, as opposed to middlings and tailings. Also called concentrates. See also: [heads](#)

heading seam

See: [joint](#)

heading side

See: [footwall](#)

heading wall

See: [footwall](#)

headline

In dredging, the line that holds the dredge up to its digging front. This line is anchored well ahead of the dredge pond or paddock and attached to a winch on the dredge. Lateral movement is controlled by sidelines similarly led from winches to land anchorages, usually two on each side. See also: [sideline](#)

head motion

Vibrator of shaking table that imparts reciprocating motion to the deck. *Pryor, 3*

head-of-hollow fill

A fill structure consisting of any materials, other than a coal processing waste or organic material, placed in the uppermost reaches of a hollow where side slopes of the existing hollow measured at the steepest point are greater than 20 degrees, or the average slope of the profile of the hollow from the toe of the fill to the top of the fill is greater than 10 degrees. In fills with less than 250,000 yd³ (191,000 m³) of material, associated with steep slope mining, the top surface of the fill will be at the elevation of the coal seam. In all other head-of-hollow fills, the top surface is the fill, which when completed, is at approx. the same elevation as the adjacent ridge line, and no significant area of natural drainage occurs above the fill draining into the fill areas.

head piles

The top poling boards in a heading. *Stauffer*

head pulley

a. The discharge pulley of the conveyor. It may be either an idler pulley or a drive pulley. A head pulley that is mounted on a boom is termed an extended head pulley; a head pulley that is separately mounted is termed a detached head pulley. *NEMA, 2* b. The crowned pulley or idler mounted at the extreme front end or delivery point of a belt conveyor. The belt, after passing around this pulley, begins its travel toward the tail end or foot section of the conveyor. *Jones, 1*

head-pulley-drive conveyor

A conveyor in which the belt is driven by the head pulley without a snub pulley. *NEMA, 2*

head-pulley-snub-drive conveyor

A conveyor in which the belt is driven by the head pulley with a snub pulley. *NEMA, 2*

headrace

Sluice aqueduct, leat, or launder that leads water to head of operation or to waterwheel. A forebay. *Pryor, 3*

headroom

Height between the floor and the roof in a mine opening. *Long*

headrope

In any system of rope haulage, the rope that is used to pull the loaded transportation device toward the discharge point. In scraper loader work, the headrope pulls the loaded scoop from the face to the dumping point. *Jones, 1*

heads

a. In ore dressing, the feed to a concentrating system. CF: [tails](#) b. Low-grade material overlying an alluvial placer. *AGI* c. In New York and Pennsylvania, a local term applied by bluestone quarrymen to the open joints that run north and south. d. See: [headings](#) e. Scot. Large top coal on a loaded hutch. f. Aust. Small faults. g. Low-grade wash overlying the wash proper. *Nelson* h. Can. Material taken from ore in treatment plant and containing the valuable metallic constituents. Opposite of tails. *Hoffman*

head section

A term used in both belt and chain conveyor work to designate that portion of the conveyor used for discharging the coal. *Jones, 1*

head shaft

The shaft mounted at the delivery end of a chain conveyor, on which is mounted a sprocket that drives the drag chain. The shaft, in turn, is driven by means of a drive chain from the speed reducer of the power unit through a sprocket mounted on the shaft end. *Jones, 1*

head sheave

Pulley in headgear of the winding shaft over which the hoisting rope runs. See also: [winding sheave](#)

head side

N. Staff. The rise side of a heading driven on the strike.

headsticks

See: [headgear](#); headframe.

headstocks

See: [headframe](#)

headsword

Corn. Water discharged through the adit level.

head tank

Any tank or vessel in the water circuit that is used to control the delivery pressure of the water to the washing units. *BS, 5*

headtree

a. The horizontal timber at each side of a rectangular heading that supports the headboard. See also: [side trees](#) b. The cap piece of a heading set. *Stauffer*

head value

The assay value of the heads or mill feed. *Nelson*

headwall

a. Retaining wall at both ends of a culvert or similar structure. *Hammond* b. A culvert sidewall; sometimes only the upstream wall. *Nichols, 1*

headway

The second set of excavations in post-and-stall work. See also: [crossheading](#)

headwork

a. Arkansas. The cutting and other work done at the face of an entry. *Fay* b. The headframe with the headgear. *Webster 2nd*

heap

a. Scot. To load up a tub (car) or truck above the top of the sides. *Fay* b. The soil carried above the sides of a body or bucket. *Nichols, 1* c. Newc. The refuse at the pit's mouth.

heap closure

See: [heap decommissioning](#)

heap decommissioning

Legal closure of a heap leaching operation. Depends on individual State regulations, but includes requirements for physical stability and chemical effluent requirements for metals and pH. A monitoring period is included. Syn: [heap closure](#)

heaped capacity

In scraper or truck loading, a term used to describe the volume of material the scraper will hold when the material is heaped. Frequently, sideboards are added to increase the heaped capacity. Heaped capacity will exceed struck capacity by approx. one-third, depending upon the heaping condition assumed. CF: [struck capacity](#)

heap leaching

A process used for the recovery of copper, uranium, and precious metals from weathered low-grade ore. The crushed material is laid on a slightly sloping, impervious pad and uniformly leached by the percolation of the leach liquor trickling through the beds by gravity to ponds. The metals are recovered by conventional methods from the solution.

heap matte

Matte produced by heap roasting. *Fay*

heap rinsing

Method used to remove soluble constituents remaining within a heap leach pile after the metals concentration decreases to levels below economic limits. Simple water rinsing, chemical, or biological techniques or combinations thereof may be employed. *Van Zyl*

heap roasting

Removal of sulfur from pyritic ore by burning in heaps, perhaps with aid of fuel. *Pryor, 3*

heap sampling

Method of reducing a large sample of ore to yield a representative sample. A conical heap is made by shoveling the material accurately on to the apex so that it runs down equally all around. The heap can then be flattened somewhat by rubbing with a spade, and is shoveled into four equal heaps, the same amount being taken from the base of the cone each time the worker goes around. Of the four smaller heaps thus formed, two are discarded and two retained. These may now be crushed to improve the ease of thorough mixing, and are then formed into another cone in the same way as the first. The process is repeated, with periodic size reduction of the retained portions, until the required small sample has been produced. *Pryor, 3*

heapstead

The buildings and surface works around a colliery shaft. *CTD*

hearth

a. The bottom portion of certain furnaces, such as a blast furnace, air furnace, and reverberatory furnace, in which molten metal is collected or held. *ASM, 1* b. The part of a furnace in which heat is developed for the purpose of melting glass. *CTD* c. A plate or table upon which cylinder glass is flattened. *Standard, 2*

hearth and bosh brick

Fireclay brick for use in lining the hearth walls and bosh sections of a blast furnace. *ARI*

hearth furnaces

Furnaces in which the charge rests on the hearth or kiln wall and is heated by hot gases passing over it. Even though hearth furnaces such as the multiple-hearth roasting furnace and rotary kilns operate on the same basis as reverberatory furnaces, they bear little resemblance to them. *Newton, 1*

hearthplate

A cast-iron plate serving as a sole for a refiner's furnace. *Standard, 2*

hearth roasting

A roasting process in which the ore or concentrate enters at the top of a multiple hearth roaster and drops from hearth to hearth in succession until it is discharged at the bottom.

In the downward progress of the ore, the sulfide particles are roasted as they come in contact with the heated air. *Newton, 1*

heart joint

Scot. A particular form of attachment joint between the bucket rod and the foot rod of a pump.

heat

a. One operation in a furnace not operating continuously. *Fay; Newton, 1* b. The energy a body possesses because of the motion of its molecules. *Jones, 2* c. Energy in transit from a higher temperature system to a lower temperature system. The process ends in thermal equilibrium. *AGI* d. The material heated, melted, etc., at one time; as, the foundry runs three heats a day. *Standard, 2* e. Form of energy generated or transferred by combustion, chemical reaction, mechanical means, or passage of electricity, and measurable by its thermal effects. *Pryor, 3*

heat balance

a. In furnaces, heat engines, etc., the distribution of the known input of energy (as heat); also, the method of determining, or the graphical or tabular record of, such distribution. b. In fluidization roasting, the thermodynamic calculation used to control addition or removal of heat in order to maintain the desired temperature in the reacting vessel. *Pryor, 3* c. Equilibrium that exists on the average between the radiation received by the Earth and its atmosphere from the Sun and that emitted by the Earth and its atmosphere. That the equilibrium does exist in the mean is demonstrated by the observed long-term constancy of the Earth's surface temperature. On the average, regions of the Earth nearer the equator than about 35 degrees latitude receive more energy from the Sun than they are able to radiate, whereas latitudes higher than 35 degrees receive less. The excess of heat is carried from low latitudes to higher latitudes by atmospheric and oceanic circulations and is reradiated. *AGI*

heat capacity

That quantity of heat required to increase the temperature of a system by 1 degrees at constant pressure and volume. It is usually expressed in calories per degree Celsius. Syn: [thermal capacity](#)

heat conductivity

See: [thermal conductivity](#)

heated stone

A stone that has been artificially heated to the proper temperature with the intention of improving or completely altering its color. The induced color is permanent in varieties, such as hyacinth, burnt amethyst, etc.; less permanent in blue zircon. See also: [fired stone](#) Syn: [heat-treated stone](#); [burnt stone](#). CF: [stained stone](#)

heat energy

Energy in the form of heat. *Standard, 2*

heat engine

A mechanism (as an external-combustion or an internal-combustion engine) for converting heat energy into mechanical energy. *Webster 3rd*

heater

In the coke products industry, one who regulates the temperature of heating flues and combustion of fuel gas used to heat coal in a byproduct coke oven. *DOT*

heater drain pump

Self-regulating pumps capable of dealing with water at fairly high temperatures and pressures. They are used to return heater condensate to the feed line instead of to waste. *Sinclair, 4*

heat exchanger

Any device that transfers heat from one medium to another or to the environment. *Lyman*

heating back

A chamber back of a forge in which the air intended for the blast is heated. *Standard, 2*

heating medium

A fluid used for conveying heat from a heat source to heat-dissipating devices; includes air, water, and steam. *Strock, 2*

heatings

The heat generated before an actual mine fire occurs. Heatings, or incipient fires, are detected in mines by smell and by analysis of air samples. In mines liable to spontaneous combustion, trained officials and workers are employed to detect and deal with heatings and fires and they become expert in these duties. *Sinclair, 1*

heating surface

a. That surface in a steam boiler or similar apparatus from which heat passes to the liquid to be evaporated or heated; the fire surface. *Standard, 2* b. Broadly, the area intended for transferring heat. *Strock, 2*

heating tendency

The ability of a coal to fire spontaneously. This phenomenon can occur whenever the heat generated from oxidation reactions in a coal exceeds the heat dissipated. This characteristic varies for different types of coals and even for coals of the same classification but of different origin. *Smith*

heat of combustion

The heat of reaction resulting from the complete burning of a substance and expressed variously (as in calories per gram or per mole, or esp. for fuels in British thermal units per pound or per cubic foot). *Webster 3rd*

heat of compression

As air passes down shafts and along inclined workings, it is compressed. Heat is always generated when air is compressed, and although the reverse process of decompression and cooling takes place as the air ascends the upcast shaft, the net effect is to raise the air temperature underground. *Mason*

heat of crystallization

Heat evolved when unit weight of a salt crystallizes from a large amount of a saturated solution. *Osborne*

heat of hydration

The quantity of heat liberated or consumed when a substance takes up water. *Osborne*

heat of ionization

The quantity of heat that is absorbed when 1 g equivalent of a substance is broken up completely into positive and negative ions. *Osborne*

heat of mixture

That quantity of heat evolved when two liquids that do not react together are mixed. It is calculated from the temperature change and the specific heat of the mixture, and expressed in gram-calories per gram of mixture. *Osborne*

heat of reaction

The quantity of heat consumed or liberated in a chemical reaction as heat of combustion, heat of neutralization, or heat of formation. For example, the number of calories of heat absorbed when 1 g at wt of carbon reacts with 1 g mol wt of oxygen to form 1 g mol wt of carbon dioxide. *Hackh; Newton, 1*

heat of transformation

The quantity of heat accompanying a constitutional change in a solid chemical compound or metal, e.g., the change from gamma to alpha iron. The temperature at which one crystalline form of a substance is converted into another solid modification is known as the transition point or transition temperature. *Osborne*

heat of wetting

Heat evolved or absorbed when a liquid and a solid surface are placed in contact. *Osborne*

heat pump

A mechanical refrigerating system used for air cooling in the warm season of the year, which, when the evaporator and condenser effects are reversed, absorbs heat from the outside air or water in the cold season of the year and raises it to a higher potential so that it also can be used for heating. *Strock, 2*

heat recuperation

The recovery of heat from waste gases. *Fay*

heat sensitivity

A test that determines the flammability of explosives brought into contact with flame or heat.

heat transmission coefficient

See: [coefficient of heat transmission](#)

heat-treated stone

A (gem) stone that has been artificially heated to change its color. Syn: [heated stone](#); [burnt stone](#).

heat unit

A unit of quantity of heat; the heat required to raise the unit mass of water through 1 degree of temperature. CF: [calorie](#); British thermal unit. *Standard, 2; Fay*

heat value

The amount of heat obtainable from a fuel and expressed, for example, in British thermal units per pound. *Shell*

heave

a. A rising of the floor of a mine caused by its being too soft to resist the weight on the pillars. See also: [creep](#) b. Upward movement of soil caused by expansion or displacement resulting from such phenomena as moisture absorption, removal of overburden, driving of piles, and frost action. c. Horizontal displacement of strata or other rocks along a fault, as opposed to the throw or vertical displacement. *Arkell* d. The horizontal component of the slip, measured at right angles to the strike of the fault. Used by J.E. Spurr and A. Geikie for offset. Used by Jukes Brown for strike slip. *Fay* e. CF: [upthrow](#) f. Displacement of mineral vein by faulting. Lifting of floor of underground working through rock pressure. *Pryor, 3* g. Fault or throw in a lode. See also: [throw](#)

heavily watered

Scot. Said of a colliery when the escape of water from the strata into the shaft or workings is abundant, requiring powerful pumping machinery.

heaving

Refers to the rising of the bottom after removal of the coal. See also: [creep](#)

heaving shale

An incompetent or hydrating shale that runs, falls, swells, or squeezes into a borehole. *AGI*

heavy crop

Gr. Brit. Collectively, the heavy minerals of a sedimentary rock. *AGI*

heavy gold

Gold occurring as large particles. CF: [nugget](#)

heavy ground

a. Closing or squeezing ground. b. Dangerous hanging wall, which sounds hollow when rapped, indicating the possibility of a rock fall. *Pryor, 3*

heavy joist

Timber over 4 in (10.2 cm) and less than 6 in (15.2 cm) in thickness and 8 in (20.3 cm) or over in width. *Crispin*

heavy liquid separation

Separation of ore particles by allowing them to settle through, or float above, a fluid of intermediate density. *Pryor, 3*

heavy-media ore

See: [natural ore](#)

heavy-media separation

A series of patented processes originally developed for the concentration of ore, but finding increased usage in coal cleaning. Suspension of magnetite (sp gr, 5.0) and ferrosilicon (sp gr, 6.7) are usually used for ore concentration; suspensions of magnetite for coal. The basic features of these processes as applied to coal are in the methods used for handling the magnetic medium. Specifications for magnetite should be somewhat as follows: 100% -100 mesh, 65% to 75% -325 mesh, 85% magnetics, and wet-ground in a ball or rod mill. See also: [dense-media separation](#) *Mitchell*

heavy metals

In exploration geochemistry, principally zinc, copper, cobalt, and lead, but under special conditions including one or more of the following metals: bismuth, cadmium, gold, indium, iron, manganese, mercury, nickel, palladium, platinum, silver, thallium, and tin.

heavy mineral

a. An accessory detrital mineral of a sedimentary rock, of high specific gravity, e.g., magnetite, ilmenite, zircon, rutile. CF: [light mineral](#) b. In igneous petrology, a mafic mineral. c. Resistant minerals that can be concentrated in the panning of alluvium and used as mineralogical and geochemical guides in prospecting. *Peters*

heavy soil

A fine-grained soil, made up largely of clay or silt. *Nichols, 1*

heavy spar

See: [barite](#)

heavy tiff

Barite in southeast Missouri. *Fay*

heavy water

Deuterium oxide, D_2O , in which D is the symbol for deuterium (heavy hydrogen or hydrogen 2). Water in which ordinary hydrogen atoms have been replaced by deuterium atoms. Natural water contains 1 heavy-water molecule per 6,500 ordinary water molecules. Deuterium oxide has a low neutron absorption cross section; hence, it is used as a moderator in some nuclear reactors. *Lyman*

hecatolite

See: [moonstone](#)

hectare

A metric unit of land area equal to 10,000 m², 100 ares, or 2.471 acres. Abbrev. ha. *AGI*

hectorite

A monoclinic mineral, $Na_{0.3}(Mg, Li)_3Si_4O_{10}(F, OH)_2$; smectite group. CF: [montmorillonite](#)

hedenbergite

A monoclinic mineral, $4[CaFeSi_2O_6]$; pyroxene group; forms series with diopside and johannsenite; a common rock-forming mineral in iron-rich metamorphic rocks, limestone skarns, and fayalite-bearing plutonic rocks.

hedgehog stone

Quartz crystals containing needles of goethite or some other iron oxide. CF: [hairstone](#)

hedging

The establishment of an opposite position on a futures market from that held and priced in the physical commodity. Without hedging, the physical position would be at risk to price fluctuations. *Wolff*

hedyphane

A hexagonal mineral, $\text{Pb}_3 \text{Ca}_2 (\text{AsO}_4)_3 \text{Cl}$; apatite group; yellowish-white; at Franklin, NJ, and various localities in Sweden. CF: [mimetite](#)

heel

a. A small body of coal left under a larger body as a support. Known also as heel of coal. *BCI* b. The mouth or collar of a borehole. c. The fixed jaw on an adjustable-wrench safety clamp or on a rock crusher. *Long* d. A floor brace or socket for wall-bracing timbers. *Nichols, 1* e. The trailing edge of an angled blade. *Nichols, 1* f. Any material remaining in a vessel after removal of the main portion of the contents.

heeling in

Temporary planting of trees and shrubs. *Nichols, 1*

heel of a shot

a. In blasting, the face of a shot farthest away from the charge. *Stauffer* b. The distance from the mouth of the drill hole to the corner of the nearest free face; or that portion of the hole that is filled with the tamping; or that portion of the coal to be broken that is entirely outside the powder. *Zern*

heapstead

The entire surface plant of the mine. *Gordon*

height of instrument

A surveying term used in spirit leveling for the height of the line of sight of a leveling instrument above the adopted datum, in trigonometric leveling for the height of the center of the theodolite above the ground or station mark, in stadia surveying for the height of the center of the telescope of the transit or telescopic alidade above the ground or station mark, and in differential leveling for the height of the line of sight of the telescope at the leveling instrument when the instrument is level. Abbrev. HI. *AGI*

heinrichite

The arsenic analogue of uranocircite, $\text{Ba}(\text{UO}_2)_2 (\text{PO}_4)_2 \cdot 12\text{H}_2\text{O}$ and its dehydration product with $\text{Ba}(\text{UO}_2)_2 (\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$ (metaheinrichite); occur near Lakeview, OR, and in the Black Forest, Germany. See also: [arsenuranocircite](#); [metaheinrichite](#). *Hey, 2*

heintzite

A hydrous borate of magnesium and potassium, colorless to white. Occurs in small crystals sometimes aggregated. From Stassfurt, Germany. Syn: [hintzeite](#); [kaliborite](#). *Fay*

helenite

A wax near ozocerite but elastic like caoutchouc; yellow; sp gr, 0.915. It occurs at Ropa in Galicia. Syn: [mineral caoutchouc](#)

helical bag conveyor

See: [double helical bag conveyor](#)

helical conveyor

A conveyor for handling coal, grain, cement, or similar bulk materials. It comprises a horizontal shaft, with helical paddles or ribbons, which turn on its center line inside a stationary tube filled with the material. See also: [worm conveyor](#)

helical steel support

A continuous screw-shaped steel joist lining for staple shafts. The lining is fixed to the ground by strata bolts rigidly fixed every 120 degrees without any yielding device. Developed in Germany and its use is claimed to effect considerable overall savings.
Nelson

helicitic

Pertaining to a metamorphic-rock texture consisting of bands of inclusions that indicate original bedding or schistosity of the parent rock and cut through later-formed crystals of the metamorphic rock. The relict inclusions commonly occur in porphyroblasts as curved and contorted strings. The term was originally, but is no longer, confined to microscopic texture. Also spelled: helizitic. CF: [poikiloblastic](#) *AGI*

helictite

A distorted twiglike lateral projection of calcium carbonate, found in caves, etc. CF: [stalactite](#); [stalagmite](#). See: [anemolite](#) *Standard, 2*

heliodor

A clear yellow variety of beryl found near Rossing, Namibia, and prized as a gemstone. Also spelled helidor. CF: [golden beryl](#)

heliolite

A whitish to reddish-gray aventurine oligoclase with internal yellowish or reddish firelike reflections. Syn: [sunstone](#)

heliotrope

a. A red-spotted, deep-green variety of chalcedony (cryptocrystalline quartz) used as a semiprecious stone. Syn: [bloodstone](#) b. An instrument used in geodetic surveying to aid in making long-distance (as much as 320 km) observations; composed of one or more plane mirrors so mounted and arranged that a beam of sunlight is reflected toward a distant survey station where it is observed with a theodolite.

helium

An inert, monatomic, colorless, odorless element, the lightest of the rare gases. Except for hydrogen, helium is the most abundant element found in the universe. The bulk of the world's supply is obtained from wells. Symbol, He. Widely used in cryogenic research; vital in the study of superconductivity. Helium is used for arc welding, as a cooling medium for nuclear reactors, and as a gas for supersonic wind tunnels; extensively used for filling balloons as it is much safer than hydrogen. One of the recent largest uses for helium has been for pressuring liquid fuel rockets. *Handbook of Chemistry and Physics*, 3

helizitic

See: [helicitic](#)

helks

a. Large detached crags; a confused pile or range of rocks. *Arkell* b. Bare tracts of limestone. *Arkell*

hellyerite

A triclinic mineral, $\text{NiCO}_3 \cdot 6\text{H}_2\text{O}$; occurs with zaraitite at the Lord Brassey nickel mine, Heazlewood, Tasmania.

Helmholtz coil

A pair of similar coaxial coils with their distance apart equal to their radius, which permits an accurate calculation of the magnetic field between the coils. Used in calibration of magnetometers. *AGI*

helper-up

See: [pig tailer](#)

helvite

An isometric mineral, $2[\text{Mn}_4 \text{Be}_3 (\text{SiO}_4)_3 \text{S}]$; manganese may be replaced by iron toward danalite, or by Zn toward genthelvite; forms tetrahedra; Mohs hardness, 6 to 6-1/2; in veins with quartz, hornblende, and iron oxide; in pegmatites, and some alkaline igneous rocks.

hemafibrite

A brownish-red to garnet-red, transparent to translucent, hydrous manganese arsenate, $\text{Mn}_3 (\text{AsO}_4)_2 (\text{OH})_3 \cdot \text{H}_2 \text{O}$; soon turns black; Mohs hardness, 3; sp gr, 3.50 to 3.65; rare; from Nordmark, Sweden. Syn: [aimafibrite](#)

Hematine

A copyrighted, confusing name for an imitation of hematite. Usually in the form of an imitation cuvette. Apparently an artificially processed friable mineral or other substance. Breaks easily. Mohs hardness, about 6.5; sp gr, 4.8; streak, black.

hematite

a. A trigonal mineral, $\alpha\text{-Fe}_2 \text{O}_3$; red if earthy, reddish to bluish gray if massive, or bright metallic steel-gray in thin tablets or mica-like flakes (specular hematite); invariably has red ocher streak. Kidney ore is massive reniform hematite. Commonly associated with quartz, oxyhydroxides such as goethite or limonite, and magnetite, after which it may be pseudomorphic; nonmagnetic when pure, but may appear magnetic due to residual or included magnetite or maghemite; the most widely mined ore of iron; in sedimentary rocks, Precambrian banded iron formations (including their metamorphosed equivalents), oolitic ironstones, contact-metamorphic deposits, commonly by alteration of magnetite; may be of secondary origin, having formed by oxidation and decomposition of iron silicates and carbonates; also occurs as a primary mineral in veins and replacement deposits associated with igneous intrusions, and in fumarolic deposits from volcanic gases. See also: [iron ore](#); [specularite](#). Syn: [specular iron ore](#); [oligist](#); oligist iron. b. The mineral group corundum, eskolite, hematite, and karelianite.

hematite schist

See: [itabirite](#)

hemetite

Any synthetic imitation of hematite.

hemi-

A prefix meaning half.

hemicrystalline

See: [hyalocrystalline](#)

hemidome

The upper or lower two faces of a dome resulting from symmetry lower than that required for a dome in orthorhombic or monoclinic crystal systems.

hemihedral

In crystallography, having lower symmetry, resulting in forms with half the number of faces as the holohedral point group. CF: [holohedral](#); merohedral.

hemimorphic

In crystallography, having no transverse plane of symmetry and no center of symmetry, and composed of forms belonging to only one end of the axis of symmetry. *Fay*

hemimorphism

In crystallography, refers to minerals in crystal classes with merohedral symmetry such that crystal forms are different at opposite ends of the crystallographic axes, thus permitting polar crystal properties; e.g., hemimorphite, zincite.

hemiopal

See: [semiopal](#)

hemipelagic

Sharing neritic and pelagic qualities. *AGI*

hemipelagic-abyssal

Refers to sediments of the deep sea that contain terrestrial detritus. *AGI*

hemiprism

A triclinic crystal form of two parallel faces with intercepts on two crystallographic axes.

hemipyramid

A monoclinic crystal form of two parallel faces with intercepts on three crystallographic axes. See also: [pyramid](#)

hemitropic

Crystals that appear as if composed of two halves of a crystal turned partly round and united. Examples of this structure may often be found in feldspar and cassiterite crystals.
Fay

hemloite

A triclinic mineral, $(\text{As,Sb})_2 (\text{Ti,V,Fe})_{12} \text{O}_{23} (\text{OH})$; metallic to submetallic black; in drill core samples associated with rutile, pyrite, molybdenite, and arsenopyrite at the Hemlo gold deposit, ON, Can.

hendersonite

An orthorhombic mineral, $\text{Ca}_3 \text{V}_{12} \text{O}_{32} \cdot 12\text{H}_2 \text{O}$; in black fibrous crystals in Montrose County, CA, and San Juan County, NM.

Henderson process

The treatment of copper sulfide ores by roasting with salt to form chlorides, which are then leached out and precipitated. *Fay*

hengleinite

A steel-gray iron sulfide with about 20% cobalt and nickel, $(\text{CoNiFe})\text{S}_2$. Minute pyritohedral crystals; isometric. Probably a mixture of siegenite and pyrite. Formerly called cobaltnickelpyrite. From Musen, Westphalia, Germany. Syn: [cobalt-nickel pyrite](#)

henry

Unit of electrical induction. With an electromotive force of 1 V and current of 1 A/s, one henry (H) = 10^9 electromagnetic unit. Symbol H. *Pryor, 3*

henryite

An isometric mineral, $\text{Cu}_4 \text{Ag}_3 \text{Te}_4$; pale blue; associated with hessite, petzite, sylvanite, altaite, rickardite, and pyrite at Bisbee, AZ.

hepatic cinnabar

A mixture of cinnabar, bituminous material, and clay; liver-brown; may be flammable.

hepatic pyrite

a. See: [marcasite](#) b. See: [pyrite](#)

hepatin

An amorphous limonite, of a liver-brown color, and containing a small percentage of copper. *Fay*

hepatite

A variety of barite, so called from the fetid odor it exhales when heated. *Standard, 2*

heptaphyllite

Dioctahedral clay mineral. CF: [octaphyllite](#)

heptavalent

Having a valence of 7. Also called septavalent; septivalent. *Webster 3rd*

hercularc lining

A German method of lining roadways subjected to heavy pressures. It consists of a closed circular arch of specially shaped precast concrete blocks. The blocks, which are wedge-shaped, are made in two sizes for each lining and erected in such a way that alternate blocks offer their wedge action in opposite directions--the larger blocks toward the center of the roadway and the smaller outward. This arrangement gives a double-wedge effect so that part of the lateral pressure exerted by the strata on the lining is diverted axially along the roadway. *Nelson*

Hercules powder

Weak form of dynamite, based on nitroglycerin and a semiactive carrying dope. *Pryor, 3*

Hercules stone

See: [lodestone](#)

hercynite

An isometric mineral, $8[\text{Fe}^{2+} \text{Al}_2 \text{O}_4]$; spinel group; forms series with magnesian spinel, with gahnite, and with chromite; massive or fine grained; Mohs hardness, 7.5 to 8; in metamorphosed argillaceous sediments with andalusite, sillimanite, or garnet; also in contact metamorphic deposits in limestone or marble; in some eruptive mafic rocks; may occur with corundum to form emery. Syn: [ferrospinel](#)

herderite

A monoclinic mineral, $4[\text{CaBe}(\text{PO}_4)\text{F}]$, with OH replacing F toward hydroxylherderite; pseudo-orthorhombic prismatic crystals or radiated fibrous aggregates; in late-stage pegmatites.

Herkimer diamond

Small, exceptionally clear, commonly doubly terminated quartz crystals in Herkimer County, NY; in cavities in sandstone and in loose earth or clay; also in mid-Atlantic beaches. Syn: [Lake George diamond](#)

Heroult process

See: [Hall process](#)

herrerite

Copper-stained blue and green smithsonite from Albarradon, Mexico.

Herreshoff furnace

A mechanical, cylindrical, multiple-deck muffle furnace of the McDougall type for smelting ores. *Fay*

herringbone roller conveyor

A roller conveyor consisting of two parallel series of rolls having one or both series skewed. See also: [roller conveyor](#)

herringbone stoping

Method used in flattish Rand stope panels 500 to 1,000 ft (152 to 305 m) long for breaking and moving ore. Stope is divided into 20-ft (6.1-m) panels, each worked by its own gang. A light tramming system delivers severed rock to a central scraper system. *Pryor, 3*

herringbone table

See: [herringbone roller conveyor](#)

herringbone texture

In mineral deposits, a pattern of alternating rows of parallel crystals, each row in a reverse direction from the adjacent one. It resembles the herringbone textile fabric. *AGI*

hertz

A syn. for "cycles per second." Abbrev. Hz.

hess

S. Staff. Clinker from furnace boilers. *Fay*

hessite

A monoclinic mineral, $4[\text{Ag}_2 \text{Te}]$, with gold replacing silver toward petzite; soft; metallic gray; fine grained, massive, or compact; sp gr, 8.24 to 8.45; in hydrothermal veins associated with quartz, pyrite, and native gold; a source of silver in California, Colorado, Ontario, Mexico, Chile, Romania, and Zimbabwe.

hessonite

An orange to yellow-brown gem variety of grossular. Syn: [essonite](#); cinnamon stone.

hetaerolite

a. A very rare double oxide of zinc and manganese, $\text{ZnMn}_2^{3+} \text{O}_4$, occurring in ore deposits as black tetragonal and fibrous crystals; hausmannite family. *CMD; Hey, 1* b. A tetragonal mineral, $\text{ZnMn}_2 \text{O}_4$; forms bipyramids; may be fibrous; with zinc ores at Franklin, NJ, and near Leadville, CO. Also spelled heterolite.

hetero-

A prefix signifying various, or of more than one kind or form.

heteroblastic

Pertaining to a type of crystalloblastic texture in a metamorphic rock in which the essential mineral constituents are of two or more distinct sizes. CF: [crystalloblastic](#); [homeoblastic](#). *AGI*

heterogeneous

a. Having more than one constituent or phase, thus exhibiting different properties in different portions. *Pryor, 3* b. A term describing metals and alloys with structures composed of more than one constituent. *Rolfe* c. Unlike in character, quality, structure, or composition; consisting of dissimilar elements or ingredients of different kinds; not homogeneous. *Standard, 2*

heterogenite

a. A cobalt mineral, $\text{Co}^{3+} \text{O}(\text{OH})$, containing up to 4% CuO. Syn: [stainierite](#) b. Name suggested for all cobaltocobaltic hydroxides of varying purity. *English*

heterogranular

a. Said of the texture of a rock having crystals of significantly different sizes. b. Said of a rock having such a texture. Syn: [inequiangular](#) c. See: [anisodesmic](#)

heteromorphic

Said of igneous rocks having similar chemical composition but different mineralogic composition. *AGI*

heteromorphism

The crystallization of two magmas of nearly identical chemical composition into two different mineral aggregates as a result of different cooling histories. *AGI*

heteropic

Said of sedimentary rocks of different facies, or said of facies characterized by different rock types. The rocks may be formed contemporaneously or in juxtaposition in the same sedimentation area or both, but the lithologies are different; e.g., facies that replace one another laterally in deposits of the same age. Also, said of a map depicting heteropic facies or rocks. CF: [isopic](#)

heterothrausmatic

A descriptive term applied to igneous rocks with an orbicular texture in which the nuclei of the orbicules are composed of various kinds of rock or mineral fragments. CF: [crystallothrausmatic](#); [isothrausmatic](#); homeothrausmatic. *AGI*

heterotomous

Having a cleavage unlike that characteristic of the mineral in its ordinary form, as a variety of feldspar. *Standard, 2*

heugh

a. Scot. A place where coal or other mineral is worked; a pit or shaft. Also spelled heuch. b. The steep face of a quarry or other excavation. c. A glen with rugged sides; a crag. *Standard, 2* d. An old English term for coal seams or coal workings. *Tomkeieff*

heulandite

A monoclinic mineral, $(\text{Na, Ca})_{2-3} \text{Al}_3 (\text{Al, Si})_2 \text{Si}_{13} \text{O}_{36} \cdot 12\text{H}_2 \text{O}$; zeolite group, with extensive substitution of NaSi for CaAl and K predominant over Na; forms in cavities in basalt and andesite, as skarn druses, as diagenetic product in silicic vitreous tuffs, in bentonitic clays, and as authigenic mineral in limestone or sandstone.

hewer

a. Eng. In the Newcastle coalfield, one who undercuts the coal with a pick. A coal miner. *Fay* b. N. of Eng. One who may use a hand pick but usually uses a pneumatic (windy) pick to win coal. Task consists of breaking in or making a nicking, digging out the coal, and filling onto a conveyor belt or into tubs. *Trist*

hewettite

A monoclinic mineral, $\text{CaV}_6 \text{O}_{16} \cdot 9\text{H}_2 \text{O}$; forms deep red microscopic needles in vanadium deposits near Cerro de Pasco, Peru, and Paradox Valley, CO.

hewing

a. Eng. In the Newcastle coalfield, undercutting or mining the coal. Syn: [breaking in](#) b. The dressing of timber by chopping or by blows from an edged tool. *Crispin*

hewing double

Eng. See: [double working](#)

hexad

A crystallographic axis of rotation of 60 degrees , a sixfold axis. CF: [axis of symmetry](#)

hexagonal

a. A geometrical form of six sides; e.g., hexagonal prism, hexagonal pyramid. b. The crystal system characterized by a unique hexad (sixfold axis of rotation.) CF: [crystal systems](#)

hexagonal close-packed crystals

Crystals having atoms at the corners of the hexagonal unit cells that are right prisms with rhombic bases, and at the corners of those (isosceles) triangular prisms that are similarly located halves of the hexagonal unit cells. The two sets of atoms are not crystallographically equivalent. *Henderson*

hexagonal system

In crystallography, that system of crystals in which the faces are referred to four axes--a principal or vertical axis and three lateral axes perpendicular to the vertical axis and intersecting at mutual angles of 60 degrees . CF: [trigonal](#); [trigonal system](#). *Fay*

hexagonite

A lavender variety of manganoan tremolite.

hexahydrate

The mineral group bianchite, ferroxahydrate, hexahydrate, moorhouseite, and nickel-hexahydrate.

hexavalent

a. Having a valence of 6. *Webster 3rd* b. Having six valences; e.g., manganese with valences of 1, 2, 3, 4, 6, and 7. *Webster 3rd; Handbook of Chemistry and Physics, 2*

Hexhlet sampler

A selective mine dust-sampling instrument. It collects the airborne dust sample in two components. The fraction larger than 5 μ m in size is separated from the total cloud in a size selector. The instrument collects some grams of respirable dust by filtration of the mine air through a fine pore ceramic thimble. See also: [thermal precipitator](#)

Heyn's reagent

An etching reagent containing 10% copper ammonium chloride in water. *Osborne*

hiatal

a. Said of the texture of an igneous rock in which the sizes of the crystals are not in a continuous series but are broken by hiatuses, or in which there are grains of two or more markedly different sizes, as in porphyritic rocks. CF: [seriate](#) b. Pertaining to or involving a stratigraphic hiatus. *AGI*

hiatus

a. A break or interruption in the continuity of the geologic record, such as the absence in a stratigraphic sequence of rocks that would normally be present but either were never deposited or were eroded before deposition of the overlying beds. *AGI* b. A lapse in time, such as the time interval not represented by rocks at an unconformity; the time value of an episode of nondeposition or of nondeposition and erosion together. *AGI*

Hicks' hydrometer

An instrument consisting of a series of colored glass beads of different densities contained in a glass tube for testing the specific gravity of electrolytes. *Osborne*

hiddenite

An emerald-green to yellow-green gem variety of spodumene. See also: [spodumene](#)

hide salt

Coarse sizes of rock salt, usually No. 2 or No. 1. *Kaufmann*

high

a. The crest or culmination of a structure, such as a dome or an anticline. CF: [low](#) b. Name for the coal of a thick seam. *Fay* c. A geophysical anomaly with values greater than normal; e.g., a gravity maximum or a geothermal maximum. *AGI*

high-alumina refractories

Alumina-silica refractories containing 45% or more alumina. *Harbison-Walker*

high-angle fault

A fault with a dip greater than 45 degrees . CF: [low-angle fault](#) *Billings*

high-carbon steel

Carbon steel that contains more than 0.5% carbon. *Hammond*

high-conductivity copper

Metal of high purity, having an electrical conductivity not much below that of the international standard, which is a resistance of 0.15328 Omega for a wire 1 m long and weighing 1 g. *CTD*

high doors

Scot. An upper landing in a shaft. *Fay*

high-expansion foam

A method of fighting underground fires developed in the United States, and somewhat similar to the British foam plug. It involves the formation of a high-expansion noncombustible foam. Large volumes of the foam are drawn or blown over and around the fire until it can no longer be sustained due to lack of oxygen. The foam is made from

ammonium lauryl sulfate and 1 gal (3.8 L) of solution is used for each 250 to 300 ft³ /min (7.1 to 8.5 m³ /min) of air passing through the net. *Nelson*

high explosive

An explosive that is capable of detonating. There are two main types: (1) primary explosives, which detonate no matter what type of stimulus is given--these usually are very sensitive and (2) secondary explosives, which detonate normally only when the stimulus is a strong shock--under other types of stimulus they may merely deflagrate.

high feed

See: [fast gear](#)

high furnace

The ordinary blast furnace. *Fay*

high-grade

a. Said of an ore with a relatively high ore-mineral content. CF: [low-grade](#) b. To steal rich or specimen ore. *AGI* c. An arbitrary designation for dynamite of 40% strength or over. See also: [grade](#)

high-grade mill

A plant for treating high-grade ores.

high-grading

Theft of valuable pieces of ore. See also: [gouging](#)

high-level placer

A placer on an alluvial terrace.

highmoor peat

Peat occurring on high moors and formed predominantly of moss, such as sphagnum. Its moisture content is derived from rain water rather than from ground water and is acidic. Mineral matter and nitrogen content are low, and cellulose content is high. Syn: [moorland peat](#); [moor peat](#); [moss peat](#). *AGI*

high-phosphorus ores

Ores containing from 0.18% to 1.0% phosphorus. *Newton, 1*

high pillar

See: [shaft pillar](#)

high quartz

Phase of quartz stable from 867 to 1,470 degrees C. Also called beta quartz. See also: [quartz](#)

high-raise miner

See: [miner](#)

high-rank coals

Coals containing less than 4% of moisture in the air-dried coal or more than 84% of carbon (dry ash-free coal). All other coals are considered as low-rank coals. *BCI*

high-rank metamorphism

Metamorphism accomplished under conditions of high temperature and pressure. See also: [metamorphic grade](#)

high-ratio resistance controller

This controller gives a high ratio of maximum to minimum resistance, 6,000:1. A high resistance is thus available for reverse-current braking, but the design ensures that there is an ample volume of electrolyte between the electrodes when starting at twice full-load torque. It is similar to the swinging-electrode controller. *Sinclair, 5*

high reef

The bedrock or reef rising from the lowest and richest part of an alluvial placer and forming the slopes of the ancient valley.

high-reef wash

Deposits of wash dirt upon the high reef.

high-resolution seismic technique

A seismic prospecting technique in which a special recording system yields readable reflections from layers less than 10 ft (3 m) thick at depths as little as 100 ft (30 m).

Dobrin

high seas

The entire world's oceans except for the portion lying shoreward of the outer limit of the territorial seas. *United Nations*

high side

A deep coal-mine car, i.e., one with high sides. CF: [gondola](#) *Fay*

high-silica ore

See: [natural ore](#)

high sintering

Synonymous with advanced sintering at high temperatures, usually the final sintering close to the melting point of the material. *Osborne*

high-temperature bonding mortar

A mixture of refractory materials, either raw or calcined, to which other materials not classified as refractory materials have been added for the purpose of increasing the plasticity, giving air-setting properties, and lowering the temperature at which the bond develops. *Henderson*

high-tensile steel

A type of structural steel having a maximum yield point of 23 st/in² as compared with 15.25 st/in² for mild steel. See also: [yield stress](#)

high-tension line

A high-voltage transmission line.

high-tension separation

In mineral processing, the use of high-voltage direct current at between 18,000 V and 80,000 V to charge small particles of dry material as they fall through its field (emanating as a spray or a point discharge). These are then sorted into relatively charge-retaining and charge-losing minerals in accordance with their conducting power. Also called electrostatic separation. *Pryor, 3*

high velocity

See: [velocity](#)

high volatile A bituminous coal

The rank of coal, within the bituminous class of the Classification D 388, such that on the dry and mineral-matter-free basis, the volatile matter content of the coal is greater than 31% (or the fixed carbon content is less than 69%), and its gross calorific value is equal to or greater than 14,000 Btu/lb (32.54 MJ/kg) of coal on the moist, mineral-matter-free basis, and the coal is commonly agglomerating. *ASTM*

high volatile B bituminous coal

The rank of coal, within the bituminous class of Classification D 388, such that, on the moist mineral-matter-free basis, the gross calorific value of the coal in British thermal units per pound is equal to greater than 13,000 (30.24 MJ/kg) but less than 14,000 (32.54 MJ/kg) and the coal commonly agglomerates. *ASTM*

high volatile C bituminous coal

The rank of coal, within the bituminous class of Classification D 388, such that, on the moist, mineral-matter-free basis, the gross calorific value of the coal in British thermal units per pound is equal to or greater than 11,500 (26.75 MJ/kg) but less than 13,000 (30.24 MJ/kg) and the coal commonly agglomerates, or equal to or greater than 10,500 (24.42 MJ/kg) but less than 11,500 (26.75 MJ/kg) and the coal agglomerates. *ASTM*

high-volatile coals

Coals containing over 32% volatile matter with a coal rank code No. 400 to 900. See also: [coal classification](#)

high voltage

a. A high electrical pressure or electromotive force. b. In coal mining, voltages above 1,000 V. CF: [low voltage](#); medium voltage. *Federal Mine Safety*

highwall

The unexcavated face of exposed overburden and coal or ore in an opencast mine, or the face or bank on the uphill side of a contour strip mine excavation.

high-water level

The plane of high water. *Schieferdecker*

highwoodite

A dark-colored intrusive rock composed of alkali feldspar, labradorite, pyroxene, biotite, iron oxides, apatite, and possibly a small amount of nepheline. It is essentially a monzonite. Its name, given by Johannsen in 1938, is derived from the Highwood Mountains, MT. Not recommended usage. *AGI*

hilgardite

Hydrated chloroborate of calcium, $\text{Ca}_2 \text{B}_5 \text{O}_9 \text{Cl} \cdot \text{H}_2 \text{O}$, as colorless monoclinic-domatic crystals in the rock salt of Louisiana. See also: [parahilgardite](#)

hill

a. An arch or high place in a mine. *Fay* b. Scot. The surface at a mine. *Fay* c. N. of Eng.; Mid. An underground inclined plane. *Fay* d. A natural elevation of land of local area and well-defined outline. *Webster 3rd*

hill-and-dale formation

Applied to the ridges and hollows along the surface of dumped material (usually overburden) at an opencast mine. The undulations are leveled out when the land is restored. *Nelson*

hillock

A small, low hill; a mound. Adj: hillocky. *AGI*

hill peat

Peat formed in mountainous districts and characterized by the presence of Sphagnum, Andromeda, heath, pine trees, etc. *Tomkeieff*

hillside

a. Used to describe quarries when located in high slopes. CF: [terrain slope](#) b. A part of a hill between its crest and the drainage line at the foot of the hill. Syn: [hillslope](#)

hillside placers

Gravel deposits intermediate between the creek and bench gravels; their bedrock is slightly above the creek bed, and the surface topography shows no indication of benching.

hillside quarry

A quarry cut into and along the hillside; may comprise a single face or a series of benches. If the depth of face is not more than about 30 ft (9 m) it can be worked in one cut, but deeper faces are usually worked in two or more benches. See also: [pit quarry](#)

hillslope

See: [hillside](#)

Hilt's law

A generalization that states that, in a vertical sequence at any given point in the coalfield, the rank of the coal of the successive seams rises with increasing depth. Although this statement is generally true, there are numerous departures from it. *Tomkeieff; Nelson*

hindered settling

a. In classification, when the minerals settle in a thick pulp, as opposed to free settling in which the free particles fall through fluid media. *Newton, 1* b. Settlement of particles through a crowded zone, usually in a hydraulic column through which their fall is opposed by rising water. *Pryor, 2*

hindered-settling ratio

The ratio of the apparent specific gravities of the mineral against the suspension (not against the liquid) raised to a power between one-half and unity. *Gaudin, 1*

hindostan

A fine-grained sandstone used extensively in the manufacture of very cheap sharpening stones, esp. axstones. Found in Indiana. *Fay*

hinge

The locus of maximum curvature or bending in a folded surface, usually a line. Syn: [flexure](#)

hinged apron

See: [apron conveyor](#)

hinged apron pan

An apron pan that is made with a hinge construction along each edge so that it may be joined to companion pans by a hinge pin or through a rod.

hinged bar

Steel bars placed in contact with the roof and at right angles to the longwall face. They are usually supported by yielding steel props. The bar can be extended to support newly exposed roof by adding another bar, which can be locked onto it by a simple wedge or pin arrangement. The hinged bar is widely used on conveyor faces in continuous mining. *Nelson*

hinged-hammer crusher

See: [Williams' hinged-hammer crusher](#)

hinge fault

A fault on which the movement of one side hinges about an axis perpendicular to the fault plane; displacement increases with distance from the hinge. It is a questionable term. CF: [scissor fault](#); rotational fault. *AGI*

hinterland

a. A subjective term referring to the relatively undisturbed terrain on the back of a folded mountain range; i.e., the side away from which the thrusting and folding appears to have taken place. b. The land that lies behind a seaport or seaboard and supplies the bulk of its exports and absorbs the bulk of its imports.

hintzeite

See: [heintzite](#)

hircite

A yellowish-brown, amorphous hydrocarbon found in Burma, which emits a bad smell on burning. *Tomkeieff*

Hirschback method

A method for draining combustible gases from coal seams in which superjacent entries are developed over the coal seam being mined. The entries are located from about 80 to 138 ft (24 to 42 m) above the seams to be mined and are often supplemented with up or down boreholes drilled perpendicular to the walls of the entries. Also known as the superjacent roadway system. *Virginia Polytechnic*

hisingerite

A monoclinic mineral, $\text{Fe}_2 \text{Si}_2 \text{O}_5 (\text{OH})_4 \cdot 2\text{H}_2 \text{O}$; fine-grained to cryptocrystalline or fibrous; at Hibbing, MN; Blaine County, ID; and in Canada, Greenland, Finland, and Sweden.

histogram

A vertical-bar graph representing a frequency distribution, in which the height of bars is proportional to frequency of occurrence within each class interval and, due to the subdivision of the x-axis into adjacent class intervals, there are no empty spaces between bars when all classes are represented in a sample so graphed. Histograms are used to depict particle-size distribution in sediments. *AGI*

historical geology

A major branch of geology that is concerned with the evolution of the Earth and its life forms from its origins to the present day. The study of historical geology therefore involves investigations into stratigraphy, paleontology, and geochronology, as well as the consideration of paleoenvironments, glacial periods, and plate-tectonic motions. It is complementary to physical geology. Not to be confused with history of geology. See also: [geology](#)

hit

Eng. To find, prove, or cut into a coal seam or fault. *Fay*

hitch

a. Step cut in rock face to hold timber support in underground working. Syn: [stip](#) b. N. of Eng. A minor geological fault or roll in the coal seam. *Trist* c. Scot.; Eng. A minor dislocation of a vein or stratum not exceeding in extent the thickness of the vein or stratum. *Fay* d. A hole cut in the side rock, when this is solid enough to hold the cap of a set of timbers permitting the leg to be dispensed with. *Fay* e. A fault. Fractures and dislocations of strata common in coal measures, accompanied by more or less displacement. *Raistrick* f. A connection between two machines. *Nichols, 1* g. To attach trams to hauling ropes by short chains. *Fay* h. A sudden stoppage of pumping machinery. *Standard, 2* i. To dig or pick holes or places to receive the ends of timbers. *Standard, 2*

hitch-and-step

a. S. Wales. A system of regulating the distance between the faces of stalls in longwall work. *Fay* b. See: [stepped longwall](#)

hitch cutter

A miner who cuts places in the coal, ore, or wall in which to rest or place timbers to prevent rock from falling. *Fay*

hitcher

a. The person who runs trams into or out of the cages, gives the signals, and attends at the shaft when miners are riding in the cage. See also: [cager](#) b. One who works at the bottom of a haulage slope or plane, engaging the clips or grips by means of which mine cars are attached to a hoisting cable or chain used for haulage up a steep incline to the mine surface. Also called hitcher-on. See also: [hitcher-on](#); onsetter. *DOT*

hitcher-on

The person employed at the bottom of a shaft or slope to put loaded cars on, and take empty cars off the cage. See also: [hitcher](#)

hitch timbering

Installing bars in hitches either cut or drilled in the rib, thereby eliminating the need for legs. Hitch holes may be provided for each individual bar. *Coal Age, 3*

Hi-Velocity gelatin

Explosive containing low-density gelatin; used for submarine blasting. *Bennett*

hjelmite

A former name for yttromicrolite.

hod

a. Forest of Dean. A cart or sled for conveying coal in the stalls of thin seams. *Fay* b. A tray or trough with a pole handle that is borne on the shoulder, for carrying mortar, brick, or similar load. *Webster 3rd*

hodge jig

Variation on Harz jig in which the plunger (piston) has differential motion. See also: [Harz jig](#)

hoedown

See: [breakdown](#)

hoegbomite

See: [hoegbomite](#)

hoelite

An orthorhombic mineral, $C_{14}H_8O_2$; forms delicate yellow needles associated with chlorides and sulfur deposited by gases at a burning coalbed on Spitzbergen Island (anthraquinone).

hoernesite

A monoclinic mineral, $(Mg_3(AsO_4)_2 \cdot 8H_2O)$; vivianite group, with Mg replaced by Co toward erythrite; in white crystals resembling gypsum; also columnar; a secondary mineral formed by alteration of arsenate minerals. Syn: [hoernesite](#)

Hoesch process

A method of working the open-hearth furnace in the duplex process so as to reduce as much as possible the amount of manganese lost in the slag in the production of manganese steels. *Osborne*

hoe scraper

In mining, scraper-loader used to gather and transport severed rock. Cables pull a box-sided hoe over the loose ore, which is gathered and dragged (slushed) to the delivery point. *Pryor, 3*

Hoganas process

A method for the production of sponge iron that consists of charging fireclay pots with flat briquettes of a concentrate of iron ore interspersed with layers of carbon, prepared by mixing coal with coke breeze; the pots are charged in batches in a long pit furnace where they are heated to about 1,200 degrees C. *Osborne*

hogback

a. Any ridge with a sharp summit and steep slopes of nearly equal inclination on both flanks, and resembling in outline the back of a hog; specif. a sharp-crested ridge formed by the outcropping edges of steeply inclined resistant rocks, and produced by differential erosion. The term is usually restricted to ridges carved from beds dipping at angles greater than 20 degrees. CF: [cuesta](#) b. A term applied in New England to a drumlin (western Massachusetts) and to a horseback or esker (Maine). *AGI* c. The name given by geologists to the ridgy structure of certain districts, which consist of alternate ridges and ravines, occasioned either by the sharp undulations of the subjacent rocks, or more frequently by the erosive action of mountain torrents that cut out the ravines and leave the ridges or "hog's-backs" standing between. This structure occurs most abundantly on

the lower slopes and flanks of mountain ranges. *AGI* d. A sharp anticlinal, decreasing in height at both ends until it runs out. *AGI* e. A ridge produced by highly tilted strata. *AGI* f. Local term for drumlins in western Massachusetts. *AGI* g. A name applied in the Rocky Mountain Region to a sharp-crested ridge formed by a hard bed of rock that dips rather steeply downward. h. A ridge or lines of high hills with sharp summits and steeply sloping sides. *Long* i. Eng. A sharp rise in the floor of a coal seam. *Fay*

hoegbomite

A trigonal and hexagonal mineral, $(\text{Mg,Fe})_2 (\text{Al,Ti})_5 \text{O}_{10}$; metallic black with imperfect cleavage and conchoidal fracture; with magnetite, ilmenite, corundum, or ferroan spinel in iron ore at Redstand, Norway, and in emery at Whittles, VA. Also spelled hoegbomite.

hoggan

Corn. The food carried by the miner to the mine. *Fay*

hogger

Scot. A leather or canvas delivery pipe at the top of a sinking set of pumps.

hogger pipe

N. of Eng. The upper terminal pipe with delivery hose from the mining pump. *Fay*

hogger pump

The topmost pump in a shaft. *Fay*

hoggin

A material composed of screenings or siftings of gravel or a mixture of loam, coarse sand, and fine gravel, used in making filter beds, as a binder, etc. *Webster 2nd*

hogging moment

A bending moment that tends to cause hog. See also: [sagging moment](#) *Hammond*

hohmannite

Probably amarantite. See also: [metahohmannite](#)

hoist

a. The windlass mechanism incorporated as an integral part of a power-driven drilling machine used to handle, hoist, and lower drill-string equipment, casing, pipe, etc., while drilling, or to snake the drill from place to place. *Long* b. The act or process of lifting drill string, casing, or pipe out of a borehole. *Long* c. A power-driven windlass for raising ore, rock, or other material from a mine and for lowering or raising people and material. Also called hoister. Syn: [mine hoist](#) d. The mechanism by which a bucket or blade is lifted, or the process of lifting it. *Nichols, 1* e. A drum on which hoisting rope is wound in the engine house, as the cage or skip is raised in the hoisting shaft. *Pryor, 3* f. An engine with a drum, used for winding up a load from a shaft. See also: [winding engine](#) g. The amount of ore, coal, etc., hoisted during a shift. *Fay* h. See: [draw works](#); elevator.

hoist back-out switch

A switch that permits operation of the hoist only in the reverse direction in case of overwind. Syn: [back-out switch](#)

hoist boy

In bituminous coal mining for Arkansas and Oklahoma, a general term applied to a hoisting engineer who operates a small hoisting engine, or an oiler who lubricates and cleans the engine. *DOT*

hoist engineer

See: [hoistman](#)

hoist engineman

See: [hoistman](#)

hoister

A machine used in hoisting the product. *Zern*

hoisting

a. Winding in a mine. *Nelson* b. In power-shovel nomenclature, hoisting is a term applied to two operations: (1) the raising or lowering of the boom, and (2) the lifting or dropping of the dipper stick in relation to the boom. *Carson, 1*

hoisting block

a. The lower block of a block and fall, bearing the hoisting hook. *Standard, 2* b. Used incorrectly as a syn. for sheave wheel. *Long* c. A traveling block or sheave. *Long*

hoisting compartment

The section of a mine shaft used for hoisting the mineral to the surface. *Stoces*

hoisting crab

A crab, winch, or windlass for hoisting. *Standard, 2*

hoisting cycle

The periods of acceleration, uniform speed, retardation, and rest. The deeper the shaft, the greater is the ratio of the time of full-speed hoisting to the total hoisting cycle. For shallow shafts there may be very little time at full speed, retardation beginning almost at the end of the accelerating period. *Lewis*

hoisting drum

The flanged cylindrical part of a windlass around and on which the hoist rope or cable is wound. Also called spool. *Long*

hoisting engineer

One who operates a hoisting engine, esp. at a mine or quarry. Also called engineman. See also: [hoistman](#)

hoisting jack

A device for applying hand power to lift an object by means of a screw or lever, or by hydraulic power. *Fay*

hoisting plug

A pin-thread heavy-bodied coupling provided with a swivel-mounted eye in the end opposite the pin-thread end. When attached to the hook on the drill-hoist line, the pin-thread end can be screwed into the rods to hoist and otherwise handle drill-string equipment when making borehole round trips. Also called swivel plug. See also: [plug](#) *Long*

hoisting power

The capacity of the hoisting mechanism on a drill machine. May be expressed in terms of the number of lineal feet of a specific-size drill rod a hoist can lift on a single line or in terms of the total weight it can handle, figured in pounds or tons. *Long*

hoisting rope

A rope composed of a sufficient number of wires and strands to ensure strength and flexibility. Such ropes are used in shafts, elevators, quarries, etc. *Zern*

hoisting sheave

See: [winding sheave](#)

hoistman

In mining, a person who operates steam or electric hoisting machinery used to lower cages (elevators) and skips (large, metal, boxlike containers) into a mine and to raise them to the surface from different levels. May be designated according to type of power used, as electric-hoist person or steamhoist person. Also called cageman; cage runner; hoist engineer; hoist engineman; hoisting engineer; hoisting engineman; hoist operator; operating engineer; shaft driver; shaft engineer; shaft-hoist engineer; shaft hoistman. *DOT*

hoist operator

a. In petroleum production, one who lowers and raises surveying, servicing, or testing instruments in and out of oil or gas wells on electrical conductor cables, using truck-mounted hoisting equipment. Also called winch operator. *DOT* b. See: [hoistman](#)

hoist overspeed device

A device that can be set to prevent the operation of a mine hoist at speeds greater than predetermined values and usually causes an emergency brake application when the predetermined speed is exceeded.

hoist overwind device

A device that can be set to cause an emergency brake application when a cage or skip travels beyond a predetermined point into a danger zone.

hoist signal code

Prescribed signals for indicating to the hoist operator the desired direction of travel and whether people or materials are to be hoisted or lowered in mines.

hoist signal system

A system whereby signals can be transmitted to the hoist operator (and in some instances by the operator to the cager) for control of mine hoisting operations.

hoist slack brake switch

A device for automatically cutting off the power from the hoist motor and causing the brake to be set in case the links in the brake rigging require tightening or the brakes require relining.

hoist trip recorder

A device that graphically records information such as the time and number of hoists made as well as the delays of idle periods between hoists. Syn: [trip recorder](#)

holdback

On an inclined belt conveyor system, a brake that comes automatically into use in the event of power failure, thus preventing the loaded belt from running downward and piling up rock. *Pryor, 3*

Holdcroft thermoscope bar

Temperature indicator that consists of a series of small bars placed horizontally on a refractory stand. On heating, some bars are bent to varying degrees, while others are unaffected. The temperature is indicated by the bar that is just beginning to sag. The bars are numbered 1 to 40, the temperature range being 600 to 1,550 degrees C. See also: [thermoscopic bar](#)

holdenite

An orthorhombic mineral, $(\text{Mn,Mg})_6 \text{Zn}_3 (\text{AsO}_4)_2 (\text{SiO}_4)(\text{OH})_8$; in zinc deposits at Franklin, NJ.

holdfast

Temporary anchorage for guy ropes. *Hammond*

holding

a. See: [take](#) b. Also Syn: [mining claim](#), under General Mining Law of 1872, (Act. of May 10, 1872; 17 Stat. 91) See also: [undercut](#)

holding-down bolt

See: [anchor bolt](#)

holding rope

Support rope for suspension of a grab used for excavating or handling bulk material. *Hammond*

hold out!

Derb. An exclamation by the banksperson down a shaft to the bottomer, when workers are about to descend the shaft, to let them know that they are not to send up a load of coal, but merely the empty rope or chain. *Fay*

hole

a. In Joplin, Missouri, a local term for a mine shaft. *Fay* b. A drill hole, borehole, or well. See also: [borehole](#) c. To undercut a seam of coal by hand or machine. *Fay* d. To make a communication from one part of a mine to another. *Fay* e. To pick out the soft clay beneath a lode or seam of coal preparatory to wedging or blasting the mass out. *Gordon* f. A perforation through the laminae. *Skow*

hole curvature

The amount, expressed in degrees, that a borehole has diverged from its intended course in a distance of 100 ft (30 m). Syn: [hole deviation](#) *Long*

hole deviation

See: [hole curvature](#)

hole-in

To start drilling a borehole. Also called collar; spud; spud-in. *Long*

hole layout

In quarrying, an arrangement consisting of a combination of vertical and horizontal holes. *Streefkerk*

holeman

Pennsylvania. Person who loads holes with explosives; a charger. *Fay*

holers

The workers employed in the operation of holing the coal. *Peel*

hole system

A system of contract work underground by which the pointing of the holes and blasting are done by company personnel and the rest of the work by the miners. *Fay*

hole through

Successful meeting of two approaching tunnel heads, or of winze and raise. *Pryor, 3*

holing

a. Cutting. *Mason* b. The working of a lower part of a bed of coal for bringing down the upper mass. *Fay* c. The final act of connecting two workings underground. See also: [holing-through](#) d. The meeting of two roadways driven expressly to intersect each other. Syn: [thirling](#) e. Eng. Shale partings in which the first charges were inserted for blasting, Wenlock limestone, Dudley. *Arkell* f. See: [undercutting](#) g. Eng. See: [kirving](#)

holing about

Eng. The operation of establishing an air current between the downcast and upcast shafts. *Fay*

holing nog

A kerf wedge. *Nelson*

holing pick

A pick used in holing coal. *Standard, 2*

holings

Eng. Holing dirt or small coal made by kirving with a coal-cutting machine. Also called scuffings. Syn: [cuttings](#)

holing shovel

S. Staff. A short-handled, round-bladed shovel. *Fay*

holing-through

Driving a passage through to make connection with another part of the same workings, or with those in an adjacent mine. See also: [holing](#) *Fay*

Holland-Gaddy formula

A coal pillar design formula that predicts the strength of coal pillars based on laboratory tests of coal cube strength combined with pillar height and width specifications. The Holland-Gaddy formula is generally considered to be overly conservative for large pillar width-to-height ratios (over 5). *SME, 1*

hollandite

A monoclinic mineral, $BaMn_8O_{16}$; cryptomelane group; pseudotetragonal; massive, botryoidal, stalactitic, or prismatic with deeply striated faces; commonly associated with pyrolusite. CF: [romanechite](#)

hollow dam

A dam built of reinforced concrete, mass concrete, or masonry in which the water pressure is resisted by a sloping slab or vault carried by buttresses. *Hammond*

hollow-plunger pump

A pump used for mining and quarrying, as in muddy and gritty water. *Standard, 2*

hollow quoin

Recessed masonry that carries the heel post of a lock gate. *Hammond*

hollow-rod churn drill

A churn drill in which hollow rods replace the steel wire rope. The drilling fluid is pumped down the inside of the rods, and the chipping and fluid return to the surface on the outside. *Nelson*

hollows

Eng. Old abandoned workings. *Fay*

Holman Airleg

A drill support consisting of a cylinder of about 2-in (5.1-cm) bore in which the piston is actuated by compressed air controlled by a twist-grip control valve. This valve is also used to release the air pressure to allow the piston to be lowered. The control valve also regulates the feeding pressure on the drill. The length of feed of the Holman Airleg is 39 in (99 cm), overall length 57 in (145 cm), and weight 25 lb (11.4 kg). A vent hole near the top of the cylinder allows the air to escape when the piston travels past it, so as to warn the operator that the limit of feed has been reached. The leg is then readjusted for drilling to be resumed. The leg gives good support to the drill at all heights within reasonable limits, and one person can comfortably handle a drill when mounted in this way. *Mason*

Holman counterbalanced drill rig

A drill rig consisting of a rail-track carriage on which is mounted a counterbalanced boom 10 ft (3 m) in length. For two-drill mounting, a crossbar is attached to the boom, and drill cradles can be fixed over or under the bar by swinging it through 180 degrees. For a four-drill mounting, two additional vertical columns are used; these are jacked to the floor and the drill carriage clamped to the track. The crossbars can be clamped to any required position on the vertical columns. *Mason*

Holman dust extractor

A dust trap in which the dust and chippings created during percussive drilling are drawn back through the hollow drill rod and out through the rear of the machine and along a hose to a metal container with filter elements. The appliance requires a special type of drilling machine, rods, and bits. See also: [dust trap](#)

Holmberg system

A method of sintering iron ore. Sintering is carried out in a series of pans, 11 ft 6 in (3.5 m) square, with robust chromium vanadium steel grate bars, which have a life of 5 to 6 years. Advantages include low fuel consumption and absence of moving parts in the sintering zones. *Osborne*

Holme mud sampler

A device that takes samples with a scoop rotating on an axle mounted on a heavy frame that rests firmly on the bottom. The device is lowered open with the entire weight taken by a shackle on a balanced arm. Closure is not effected on touching bottom. On hoisting, the pressure of water on a vane attached to the balanced arm tips a lever allowing a pin to slip out, releasing the shackle. The weight is then transferred to a rope rotating around a large drum. This in turn rotates a small pulley and drags the sampling hemisphere through the bottom via a second pulley to which it is attached by a light wire. The maximum volume of the sample is 5« L, and in practice, usually about 3 to 4 L are collected. *Hunt*

Holme suction grab

A sampling device using force provided by a vacuum chamber (containing air at atmospheric pressure) to suck in a sediment sample. On striking the bottom, the chamber is put into communication with the outside. Water pressure forces the sample into the collecting tube. The pressure chamber itself is a strong brass tube closed at the upper end by a lid and held firmly in position by a clamp. A sampling tube is fixed below the chamber and extends upward into it. Between the upper and lower parts of the central tube is a plug held in position by retaining hooks through slots in the wall of the lower tube. When the device strikes the bottom, a mouth tube rises, disengaging the plug, which flies up the tube. The water then forces material up into the collecting tube. *Hunt*

holmquistite

An orthorhombic mineral, $\text{Li}_2 (\text{Fe,Mg})_3 \text{Al}_2 \text{Si}_8 \text{O}_{22} (\text{OH})_2$; amphibole group, with $\text{Mg}/(\text{Mg}+\text{Fe}^{2+}) = 0.1$ to 0.89 ; in granite pegmatites.

Holocene

An epoch of the Quaternary period, from the end of the Pleistocene, approx. 10,000 years ago, to the present time; also, the corresponding series of rocks and deposits. When the Quaternary is designated as an era, the Holocene is considered to be a period. Syn: [Recent](#)

holocrystalline

Said of the texture of an igneous rock composed entirely of crystals, i.e., having no glassy part. Also, said of a rock with such a texture. *AGI*

holohedral

The point group with the highest symmetry of its crystal system. CF: [hemihedral](#); [merohedral](#); [crystallographic system](#).

holohyaline

Said of an igneous rock that is composed entirely of glass. *AGI*

hololeims

Coalified remains of entire plants. *Tomkeieff*

holystone

a. A soft sandstone used to scrub a ship's decks. *Webster 3rd* b. To scrub with a holystone. *Webster 3rd* c. Eng. Limestone full of holes, white limestones of the Great Oolite near Minchinhampton, Gloucestershire, used for megalithic monuments. *Arkell* d. Pumice or friable sandstone used to scrub a ship's deck.

home

N. of Eng. In the direction of, or toward, the shaft, as in an underground mine. Outby. *Fay*

homeoblastic

Pertaining to a type of crystalloblastic texture in a metamorphic rock in which the essential mineral constituents are approx. of equal size. CF: [crystalloblastic](#); [heteroblastic](#). *AGI*

homeothrausmatic

A genetic term applied to igneous rocks with an orbicular texture in which the nuclei of the orbicules are formed of inclusions of the same generation as the groundmass. CF: [isothrausmatic](#); [heterothrausmatic](#); [crystallothrausmatic](#). *AGI*

homocline

A general term for a series of rock strata having the same dip, e.g., one limb of a fold, a tilted fault block, or an isocline. CF: [monocline](#) Adj: homoclinal. *AGI*

homoeomorphism

A near similarity of crystalline forms between unlike chemical compounds. *Fay*

homogeneity

In geochemical prospecting, the homogeneity of a geochemical anomaly is a measure of the smoothness, or absence of strong local variations, in the distribution of the indicator element. *Hawkes, 1*

homogeneous

Made up of similar parts or elements; of the same composition or structure throughout; uniform. Opposite of heterogeneous. *Standard, 2*

homogeneous mass

A mass that exhibits essentially the same physical properties at every point throughout the mass. *ASCE*

homopolar crystal

A crystal characterized by covalent bonding--the type of atomic bonding resulting from the sharing of electrons by neighboring atoms. *ASM, 1*

homoseismal line

Line on the Earth's surface connecting points where the seismic wave arrives, generated by an earthquake, at the same time. *Schieferdecker*

homotropical ventilation

Ventilation by a current of air traveling in the same direction as the flow of mineral out of a mine. See also: [descensional ventilation](#); ascensional ventilation; antitropical ventilation. *BS*, 8

hondurasite

Formerly called selen-tellurium (Se,Te) , a variety of the trigonal mineral form of tellurium, Te .

honeycomb

Any substance, as cast iron, worm-eaten wood, etc., having cells suggesting a honeycomb; also applied to certain rock structures. *Webster 2nd; Fay*

honeycomb structure

An arrangement of soil particles having a comparatively loose, stable structure resembling a honeycomb. See also: [soil structure](#); flocculent structure; single-grained structure. *ASCE*

honeycomb weathering

A type of chemical weathering in which innumerable pits are produced on a rock exposure. The pitted surface resembles an enlarged honeycomb and is characteristic of finely granular rocks, such as tuffs and sandstones, in an arid region. *AGI*

honey stone

A mellate of aluminum, $\text{Al}_2 [\text{C}_6 (\text{COO})_6] \cdot 16\text{H}_2\text{O}$, of yellowish or reddish color, and a resinous aspect, crystallizing in octahedrons with a square base. See also: [mellite](#) *Fay; Tomkeieff*

Honigmann process

A continental method of shaft sinking through sand that is water bearing. The shaft is formed by boring in stages, increasing in size from the pilot hole of about 4 ft (1.2 m) in diameter to the final excavation size. Once the shaft is bored, mud flush circulation continues while the lining is lowered. The lining consists of two steel cylinders, one within the other, and the annular space is filled with concrete. The cylinders are lowered into the shaft, and 10-ft (3-m) lengths are added and welded in position at the shaft top. *Nelson*

hoodoo

A fantastic column, pinnacle, or pillar of rock produced in a region of sporadic heavy rainfall by differential weathering or erosion of horizontal strata, facilitated by joints and by layers of varying hardness, and occurring in varied and often eccentric or grotesque forms. Syn: [rock pillar](#)

hook block

The lower sheave or block, on a crane hoist, to which a swivel hook is attached. *Fay*

Hooke's law

A statement of elastic deformation, that the strain is linearly proportional to the applied stress. See also: [elasticity](#)

hook forward method

A method of lashing on to the rope in which the chain, after lapping two to five times around the rope, depending on the load and the inclination, is brought forward across the laps and threaded through the hook at the front. This method keeps the last lap tight and prevents the laps from spreading. *Sinclair, 5*

hook-on

The worker who adjusts cables or chains about objects to be lifted; places hook of crane block in bucket bails, and hooks winches to objects to be moved, etc. *Fay*

hook tender

In bituminous coal mining, a laborer who attaches the hook at the end of a hoisting cable to the link of the leading or near car of a trip of cars to be hauled up or lowered down an incline in the mine or at the surface. Also called rope cutter. *DOT*

Hoolamite indicator

A carbon monoxide detector consisting essentially of a small glass tube filled with a powdered chemical; when air is drawn through it, if any of the gas is present, the powder will change color, its degree of change depending upon the amount of carbon monoxide present. This device is very sensitive and will detect gas as low as 0.01%. *Kentucky*

Hooper jig

Pneumatic jig, used in regions where water is scarce, or where the ore must be kept dry, to concentrate values from sands. *Pryor, 3*

Hoope's process

An electrolytic process of aluminum refining that utilizes three liquid layers in the reduction cell. An anode of aluminum-copper alloy is used in a fused fluoride bath. The lighter aluminum, about 99.99% purity, collects at the cathode above the fused bath.

Henderson

Hopcalite

Catalytic granules consisting of finely divided manganese dioxide mixed with copper oxide and a small quantity of silver oxide, and used in gas mask canisters to remove carbon monoxide by oxidizing it to carbon dioxide. With the development of Hopcalite, the problem of providing adequate protection against carbon monoxide poisoning was solved.

McAdam, I

hopeite

An orthorhombic mineral, $Zn_3(PO_4)_2 \cdot 4H_2O$; dimorphous with parahopeite; in minute grayish-white crystals with zinc ores, esp. at Broken Hill, Zimbabwe.

Hopfner process

A process for the recovery of copper in which a solution of cuprous chloride in sodium or calcium chloride is used to dissolve copper sulfides. The solution is then electrolyzed in tanks with diaphragms. The anodes are impure copper; the cathodes, pure copper. Copper is deposited from the cuprous chloride solution, and cupric chloride is regenerated.

Liddell

Hopkinson chain machine

An electrically driven chain coal cutter designed and manufactured by Mather and Platt in 1901 with provision for slewing the jib. A large number of these machines were built. For many years the Hopkinson was the only chain coal cutter built in the United Kingdom.

Nelson

hopper

a. A vessel into which materials are fed, usually constructed in the form of an inverted pyramid or cone terminating in an opening through which the materials are discharged (not primarily intended for storage). *BS, 5* b. Surge bin placed at discharge end of intermittent transporting system that handles dry ore or rock; used to smooth out and regulate delivery from that point. A hopper car is one with bottom discharge gear and insloping side walls. *Pryor, 3* c. A storage bin or a funnel that is loaded from the top and discharges through a door or chute in the bottom. *Nichols, 1* d. A container or bin for broken ore. *CTD* e. A place of deposit for coal or ore. *Fay*

hopper car

A car for coal, gravel, etc., shaped like a hopper, with an opening to discharge the contents. *Standard, 2*

hopper crystal

A crystal with edges grown beyond face centers. CF: [skeletal crystal](#)

hopper dredge

A hydraulic dredge that operates in cycles, alternately filling at a dredge site and traveling to and from a disposal or offloading site.

hopperings

In gold washing, gravel retained in the hopper of a cradle.

hoppers

Pockets at the bottom of a breaker through which the processed coal falls as it is loaded into railroad cars; also the cars. *Korson*

hopper salt

Grainer or solar salt produced in characteristic hollow-faced cubes by surface evaporation. *Kaufmann*

hopper table

Early type of pneumatic table used in ore treatment. *Pryor, 3*

hoppet

A vessel for measuring ore. *Standard, 2*

hoppit

A large bucket used in shaft sinking for hoisting men, rock, materials, and tools. Since about 1955, hoppit sizes have increased to about 80 ft³ (2.3 m³) and in some cases to 110 ft³ (2.5 m³) and surface tipping facilities have been brought to a high degree of efficiency to cope with large-diameter shafts and fast sinking rates. See also: [cactus grab](#)

horadial

a. The drilling of a number of horizontal boreholes radiating outward from a common center; a single drill site or drill setup. *Long* b. See: [horizontal-ring drilling](#)

horizon

a. An interface indicative of a particular position in a stratigraphic sequence. In practice it is commonly a distinctive, very thin bed or marker. See also: [marker bed](#) b. One of several lines or planes used as reference for observation and measurement relative to a given location on the Earth's surface and referred generally to a horizontal direction (Huschke, 1959); esp. apparent horizon. The term is also frequently applied to artificial horizon. *AGI* c. One of the layers of the soil profile, distinguished principally by its texture, color, structure, and chemical content, designated as A-horizon; B-horizon; C-horizon. *ASCE* d. An identifiable rock stratum regionally known to contain or be associated with rock containing valuable minerals. CF: [marker](#); marker bed. *Long* e. See: [soil horizon](#)

horizon mining

A system of mine development that is suitable for inclined, and perhaps faulted, coal seams. Main stone headings are driven, at predetermined levels, from the winding shaft to intersect and gain access to the seams to be developed. The stone headings, or horizons, are from 100 to 200 yd (91.44 to 182.88 m) vertically apart, depending on the seams available and their inclination. The life of each horizon ranges from 10 to 30 years. Connections between horizons at inby points are by staple shafts or drivages in the coal. Also called horizontal mining; continental mining. See also: [lateral](#)

horizontal auger

A rotary drill, mechanically driven, for drilling horizontal blasting holes in quarries and opencast pits. See also: [auger](#); vertical auger drill. *Nelson*

horizontal balance

A magnetic-field balance instrument much less commonly used than the vertical type. It is quite similar to it in construction except that the magnet points approx. vertically instead of horizontally. *Dobrin*

horizontal borer

A machine, making holes from 2 to 6 in (5.08 to 15.24 cm) in diameter, used for drilling overburden at opencut coal mines. Bits are of the auger or winged types. *Lewis*

horizontal circle

The circular horizontal plate of a theodolite, accurately divided so that horizontal angles can be precisely measured. *Hammond*

horizontal crosscut

See: [horizontal drive](#)

horizontal cut

See: [drag cut](#)

horizontal-cut underhand

See: [underhand stoping](#)

horizontal departure

The amount, expressed in feet or degrees, a borehole has digressed horizontally from the intended target. *Long*

horizontal dip slip

See: [horizontal slip](#)

horizontal displacement

a. A term used by Tolman to designate strike slip. *AGI* b. The distance two formerly adjacent points moved horizontally. c. See: [strike slip](#)

horizontal drive

An opening with a small inclination (about 2 to 4 mm for 1 m in length) in the direction toward the shaft for draining the water and to facilitate hauling of the full cars to the shaft. Syn: [horizontal crosscut](#) *Stoces*

horizontal fault

A fault in the Earth's crust with no vertical displacement. *Webster 3rd*

horizontal intensity

a. The intensity of the horizontal component of the magnetic field in the plane of the magnetic meridian. *Hy* b. The horizontal component of the vector magnetic-field intensity; it is one of the magnetic elements, and is symbolized by H. CF: [vertical intensity](#)

horizontal load-bearing test

See: [load-bearing test](#)

horizontal pendulum

A pendulum whose mass is constrained to move horizontally. *Schieferdecker*

horizontal prism

See: [macrodome](#)

horizontal-ring drilling

See: [horadial](#)

horizontal screens

Shaking screens with the plates supported in an essentially horizontal position that have been developed to obtain the advantages of low head room requirement. *Mitchell*

horizontal separation

In faulting, the distance between the two parts of a disrupted unit (e.g., bed, vein, or dike), measured in any specified horizontal direction. CF: [vertical separation](#)

horizontal slip

In a fault, the horizontal component of the net slip. CF: [vertical slip](#) Syn: [horizontal dip slip](#)

horizontal takeup

A mechanism in which the takeup or movable pulley travels in an approx. horizontal plane. *NEMA, 2*

horizontal throw

The heave of a fault. *Hess*

hornblende granite

A felsic plutonic rock, generally adamellite or granodiorite, containing an amphibole (often hornblende) as an essential dark-colored constituent; with decreasing quartz it grades through tonalite into normal diorite.

hornblende schist

A schistose metamorphic rock consisting principally of hornblende, with little or no quartz. Unlike amphibolite, it does not need to contain plagioclase. *AGI*

horn coal

a. Eng. Coal worked partly end-on and partly face-on. *Fay* b. A variety of cannel coal from South Wales. *Fay* c. A coal that emits an odor when burning like that of burnt horn. *Fay* d. Term in use in Saxony, Germany, for a variety of pitch coal similar to cannel coal. Syn: [half end](#)

horn coral

Solitary coral. *AGI*

hoernesite

See: [hoernesite](#)

hornfels

A fine-grained rock composed of a mosaic of equidimensional grains without preferred orientation and typically formed by contact metamorphism. Porphyroblasts or relict phenocrysts may be present in the granoblastic matrix. See also: [calc-silicate hornfels](#); [pelitic hornfels](#); magnesian hornfels. *AGI*

horn lead

See: [phosgenite](#)

horn quicksilver

See: [calomel](#)

Hornsey process

A method for the low-temperature reduction of iron ore by means of a series of rotary kilns. The kilns are each about 5 ft (1.5 m) in diameter and 30 ft (9.1 m) in length. The first is used for preheating, the second for reduction, and the third for cooling the product. Pulverized coal is used, which makes it readily possible to control the combustion and to maintain constant temperature. *Osborne*

horn silver

See: [chlorargyrite](#); embolite.

horn socket

A fishing tool specially designed to recover lost collared drill rods or drill pipe. It consists of a smooth-wall, tapered socket, the larger end down, equipped with a spring latch, which grips the drill rod under the collar when it is slid down over the top of the lost drill rod. When the socket is equipped with a flaring (bell-shaped) mouth, it is called a bell-mouth socket. *Long*

horn tiff

In Missouri, calcite stained with carbonaceous material; sometimes dark enough to be mistaken for sphalerite. *Fay*

horse

a. Any irregularity cutting out a portion of the vein. See also: [rock fault](#) b. To split into branches, as a vein of ore in a mine. *Standard, 2* c. Rock occupying a channel cut into a coalbed. See also: [horseback](#) *AGI* d. A body of sandstone or shale occupying a channel in a coal seam. See also: [horseback](#) e. In structure, a large block of displaced wall rock caught along a fault, particularly a high-angle normal fault. *AGI* f. A mass of country rock lying within a vein. See also: [internal waste](#)

horseback

a. See: [cutout](#); swell. b. A bank or ridge of foreign matter in a coal seam. *AGI* c. A large roll in a coal seam. *AGI* d. A clay vein in a coal seam. Syn: [kettleback](#) symon fault; washout; slip. *AGI* e. A name applied by some writers to floor rolls in coal mines. *AGI* f. Applied in some areas to clay veins; i.e., intrusions of clay into coalbeds. See also: [clay vein](#); [sandstone dike](#). *AGI* g. Eng. A mass of stone with a slippery surface in the roof. In shape, it resembles a horse's back. *SMRB* h. Natural channels cut or washed away by water in a coal seam and filled up with shale and sandstone. Sometimes, a bank or ridge of foreign matter in a coal seam. *Fay* i. A portion of the roof or floor that bulges or intrudes into the coal. *Fay* j. A mass of country rock lying within a vein or bed. *Fay* k. A piece of slate, flat underneath, thick in the middle, and running out to a thin edge upon each side. See also: [kettle bottom](#) l. Eng. A tree branch that has been horizontally embedded, carbonized, and compressed into lenticular shape in shale immediately above a coalbed. *Chem. Indust.* m. A term used in Maine for a low and somewhat sharp ridge of sand or gravel; also, but not generally, a ridge of rock that rises for a short distance with a sharp edge. A hogback. *Fay*

horseback excavator

In bituminous coal mining, one who excavates horseback (banks or ridges of dirt or rock in the coal seam) in a strip mine with a power shovel. *DOT*

https://t.me/Geologybooks

horseflesh ore

See: [bornite](#)

horse gear

Bar pulled around by draft animal to actuate winding capstan. Syn: [whim gin](#)

horsepower applied

See: [power upon the air](#)

horsepower-hour

The work performed or the energy consumed by working at the rate of 1 hp for 1 h (2.68 MJ), being equal to 1,980,000 ft.lbf (2.68×10^6 N.m). Abbrev., hp.h. *Webster 3rd*

horsepower of ventilation

The work done in ventilating a mine or part of a mine is measured by the quantity circulated multiplied by the ventilating pressure required, the quantity being measured in cubic feet per minute (cubic meters per minute) and the pressure in pounds per square foot (kilograms per square meter). The horsepower required is, therefore, this product divided by 33,000. *Sinclair, 1*

horsepower pull

The effort necessary to maintain the normal operating speed of a conveyor under a rated capacity load. To this must be added the effort of acceleration, drive losses, etc., to arrive at a final driving effort. Horsepower pull may be referred to in terms such as effective tension, chain pull, turning effort, gear tooth pressure, etc. See also: [effective belt tension](#)

horsetail

Said of a major vein dividing or fraying into smaller fissures; also, said of an ore comprising a series of such veins. *AGI*

horsetail ore

Ore in fractures that diverge from a major fracture.

horse transport

An old method of transportation in mines in which horses were used to pull the mine cars along the roadways. Stables were installed underground in order for the horses to be kept permanently in the mine. Horse transportation has been replaced today by mechanical transport. *Stoces*

horse whim

A device used for raising ore or water from mines, provided with radiating beams to which horses, oxen, or camels may be yoked. *Sandstrom*

horsfordite

A possibly isometric mineral, Cu_3Sb ; silver-white; sp gr, 8.8; reported from Lesbos Island, Greece.

horst

An elongate, relatively uplifted crustal unit or block that is bounded by faults on its long sides. It is a structural form and may or may not be expressed geomorphologically. Etymol: German: no direct English equivalent. CF: [graben](#)

hortonolite

A magnesian variety of fayalite.

hose coupling

A joint between a hose and a steel pipe, or between two lengths of hose. *Hammond*

hoshiite

A nickeloan variety of magnesite.

Hoskold formula

Two-rate valuation formula, once much used to determine present value (Vp) of mining properties or shares, with redemption of capital invested. Largely replaced by Morkill's formula. *Pryor, 3*

host

A rock or mineral that is older than rocks or minerals introduced into it or formed within or adjacent to it, such as a host rock, or a large crystal with inclusions of smaller crystals of a different mineral species; a palasome. Ant: guest. *AGI*

host element

A common element that is substituted by a trace element in a rock mineral.

host rock

A body of rock serving as a host for other rocks or for mineral deposits; e.g., a pluton containing xenoliths, or any rock in which ore deposits occur. It is a somewhat more specific term than country rock. *AGI*

hot

Applied to a mine or part of a mine that generates methane in considerable quantities. *Fay*

hotbed

An area, adjacent to the runout table, where hot rolled metal is placed to cool. Sometimes called the cooling table. *ASM, 1*

hot blast

Air forced into a furnace after having been heated. *Fay*

hot-blast man

A stove tender at blast furnaces. *Fay*

hot-blast system

The plenum system of ventilation. *Webster 2nd*

hot-carbonate process

A process developed by the U.S. Bureau of Mines in which a hot solution of potassium carbonate is used to absorb impurities from gases and is then regenerated for reuse in a continuous cycle with maximum efficiency and minimum wasted heat. Also called hot-potash process; Benfield process.

hot cell

A heavily shielded enclosure in which radioactive materials can be handled remotely through the use of manipulators and viewed through shielded windows so that there is no danger to personnel. *Lyman*

Hotchkiss superdip

Much more sensitive than the common dip needle. The instrument consists of a magnetic needle free to rotate about a horizontal axis and a nonmagnetic bar with a counterweight at the end which is attached to the needle at its pivot, the two axes making an angle that can be varied. It measures changes in the total field and can be used to measure variations in the vertical field if its plane is oriented in a direction perpendicular to the magnetic meridian. See also: [dip needle](#)

hot crushing strength

Compressive strength of brick at high temperature.

hot-dip coating

The process of dipping metal components in molten tin or zinc to protect them against corrosion. See also: [galvanizing](#)

hot-dip galvanizing

Immersion of iron or steel articles in a bath of melted spelter, to produce a zinc coating. *Pryor, 3*

hot-drawn

Elongation of metal wire, tube, or rod by drawing it while heated through a constricting orifice. Opposite of cold-drawn. *Pryor, 3*

hot forming

Working operations such as bending, drawing, forging, piercing, pressing, and heading performed above the recrystallization temperature of the metal. *ASM, 1*

hot laboratory

A laboratory designed for the safe handling of radioactive materials. Usually contains one or more hot cells. *Lyman*

hot-laid type

A bituminous pavement that is mixed and laid at relatively high temperatures, generally above 250 degrees F (121 degrees C). The highest type pavement that can be laid, it has greater durability and lower maintenance than any other type. *Pit and Quarry*

hot material

Any material that, at the time of charging, is at a temperature of 70 degrees C or higher.

hot-metal ladle

A ladle for the transfer of molten iron from a blast furnace to a mixer furnace and from there to a steel furnace; alternatively, the ladle may transfer molten pig iron direct from blast furnace to steel furnace. Such ladles are generally lined with fire clay refractories, but for severe conditions high-alumina and basic refractories have been tried with some success. *Dodd*

hot-metal mixer

A large holding furnace for molten pig iron. The capacity of these furnaces, which are of the tilting type, is up to 1,400 st (1,270 t). Hot metal mixers may be active (that is, the pig iron is partially refined while in the furnace) or inactive (that is, the pig iron is merely kept molten until it is required for transfer to a steelmaking furnace). In either case, the bottom and walls of the furnace are made of magnesite refractories and the roof of silica refractories. *Dodd*

hot miller

A tool operated by compressed air, fitted with cutting wheels that mill the hot cutting edges or rock drill bits to the required angle. See also: [detachable bit](#)

hot-quenching

Quenching in a medium at an elevated temperature. *ASM, 1*

hot rolling

The passing of hot steel bars through pairs of steel rolls to form rolled-steel sections. The final dimension of the product is approached in stages by adjusting the height of the rolls. *Nelson*

hot shortness

Embrittlement of steel or wrought iron when hot, usually due to excessive sulfur content. *Pryor, 3*

hot spot

a. A small portion of a furnace shell that is warmer than the rest. It indicates a thin lining. *Fay* b. The zone of highest temperature within a glass-melting furnace. *ASTM*

Hot Springs diamonds

Quartz crystals found near Hot Springs, AR.

hot top

A refractory-lined steel or iron casting inserted into the tip of a mold and supported at various heights to feed an ingot as it solidifies. *ASM, 1*

hot-wire anemometer

Instrument particularly suited to the measurement of very low air velocities and the fluctuating velocities that occur in turbulent flow. Basically, it consists of a wire or wires, usually platinum, supported in a frame and heated electrically. When exposed to an air current, the heated wire cools, and as a result, its electrical resistance alters. The heated wire forms one arm of a Wheatstone-bridge-type circuit, and measurements of resistance change may be correlated with the velocity of airflow that caused that change. *Roberts, 1*

hot working

Deforming metal plastically at such a temperature and rate that strain hardening does not occur. The low limit of temperature is the recrystallization temperature. *ASM, 1*

hourglass structure

A type of zoning, esp. common in clinopyroxenes and chloritoids, in which a core, distinguished from the outer part by a difference of color or optical properties, has a cross section resembling that of an hourglass. *AGI*

house

a. Corn. A large mass of rich tin ore. Also called a carbona. *Arkell* b. Eng. See: [gunnie](#); turnhouse.

house coal

Coal for use around colliery in miners' houses and for local sale. *BCI*

house of water

Corn. A cavity or space filled with water.

hove

a. Scot. Past participle of heave. The floor of a mine working is said to heave or rise. *Fay*
b. A lode is hove or thrown in a certain direction by a fault. *Gordon*

hovel

A large conical or conoidal brick structure within which a firing kiln is built. *Webster 3rd*

howell

The upper stage in a porcelain furnace. *Standard, 2*

howlite

A monoclinic mineral, $\text{Ca}_2 \text{B}_5 \text{SiO}_9 (\text{OH})_5$; white; earthy or in small nodules; in the Mojave Desert region of California.

H-piece

That part of a plunger lift in which the valves or clacks are fixed. *Fay*

HQ

A letter name specifying the dimensions of bits, core barrels, and drill rods in the H-size and Q-group wireline diamond drilling system having a core diameter of 63.5 mm and a hole diameter of 96 mm. *Cumming, 2*

hsiaghualite

An isometric mineral, $\text{Ca}_3 \text{Li}_2 \text{Be}_3 (\text{SiO}_4)_3 \text{F}_2$; occurs with taaffeite in metamorphosed limestone in Hunan Province, China.

huanghoite

A trigonal mineral, $\text{BaCe}(\text{CO}_3)_2 \text{F}$; as yellow platy masses in hydrothermal deposits near the Huang-Ho River, China. Also spelled huangeite-(Ce).

huascolite

A variety of galena in which part of the lead is replaced by zinc. *Standard, 2*

hub

A survey point marked with a stake or metal pin and used as a reference point for locating a specific spot in a predetermined direction. *Long*

hub-and-groove diameter

The outside diameter of the hub, or the diameter at the base of a groove cut in the hub to provide clearance for the link plates. *Jackson, 1*

Hubbard distributor

A continuous distributor consisting of a steel open-topped box filled with stone dust. Resting on the surface of the stone dust is a steel plate 1/4 in (0.64 cm) in thickness fitting loosely into the box and perforated with holes 3/16 in (0.48 cm) in diameter. The plate is connected by a series of chains and levers to a lever between the rails on either the loaded or empty side of the roadway. Each tub passing along depresses the lever and causes the steel plate to be lifted. A counterweight restores the track lever to vertical and the plate falls, causing a puff of stone dust to be ejected through each hole into the ventilating current. Thus stone dusting keeps pace with output. *Sinclair, 1*

huebnerite

A monoclinic mineral, $2[\text{MnWO}_4]$, with Mn replaced by Fe toward ferberite in the series commonly known as wolframite; one perfect cleavage; resinous; sp gr, 7.12; in granitic rocks, including pegmatites; in high-temperature quartz veins, and in placers; may be alone or associated with cassiterite, or with sulfides of iron, lead, or zinc. Also spelled huebernite. See also: [sanmartinite](#); [huebnerite](#).

hudge

a. A small box or tram without wheels, running on timber slides, drawn by a boy, in thin and steep seams. *Fay* b. An iron bucket for hoisting ore or coal. See: [bowk](#)

huebnerite

A brownish-red tungstate of manganese, $\text{Mn}^{+2}\text{WO}_4$, one of the end-members of a variable series, commonly known as wolfram or wolframite, $(\text{Fe}, \text{Mn})\text{WO}_4$; monoclinic. Syn: [huebnerite](#); wolframite. *CMD*

huel

Corn. A mine; a variant of wheal. *Fay*

Huff separator

Type of electrostatic separator used in ore treatment. *Pryor, 3*

hugger

a. N. of Eng. In coal mining, a back or cleat. *Fay* b. Northumb. The principal cleat in coal. See also: [backs](#) *Arkell*

hugger belt conveyor

Two belt conveyors whose conveying surfaces combine to convey loads up steep inclines or vertically.

hugger drive

A drive employing an auxiliary belt that bears against the surface of the conveying belt as it passes around the drive pulley to increase the pressure between the conveyor belt and the drive pulley.

hulk

a. Corn. To take down and remove the softer part of a lode, before removing the harder part. See also: [gouge](#) b. The removal of the soft gouge. c. The excavation made by this operation.

Hull cell

A special electrodeposition cell giving a range of known current densities for test work. *ASM, 1*

hulsite

A monoclinic mineral, $(\text{Fe,Mg})_2(\text{Fe,Sn})\text{BO}_5$; forms small black crystals or tabular masses at the contact of granite and metamorphosed limestone.

humacite

A group name for bitumens that vary from gelatinous to hard resinous or elastic. Believed to represent an emulsion of highly acidic (humic acids) hydrocarbons with a varying amount of water (as high as 90%). Insoluble in organic solvents. *Tomkeieff*

humboldtine

A hydrous ferrous oxalate, $\text{Fe}^{2+} \text{C}_2 \text{O}_4 \cdot 2\text{H}_2 \text{O}$, occurring in capillary or botryoidal forms and black shale. Syn: [humboltite](#); [oxalite](#). *Tomkeieff*

humboldtite

See: [datolite](#); humboldtine.

Humboldt jig

Movable-screen type of ore jig. *Pryor, 3*

humboltite

See: [datolite](#); humboldtine.

humic acid

Black acidic organic matter extracted from soils, low-rank coals, and other decayed plant substances by alkalis. It is insoluble in acids and organic solvents. *AGI*

humic coals

a. A group of coals, including the ordinary bituminous varieties, that have been formed from accumulations of vegetable debris that have maintained their morphological organization with little decay. The majority of them are banded and have a tendency to develop jointing or cleat. Chemically, humic coals are characterized by hydrogen varying between 4% to 6%. *Tomkeieff* b. Coals in which the attritus may be composed predominately of transparent humic degradation matter. *AGI* c. Introduced in 1906 by H. Potonie to describe coals, the original organic matter of which underwent change chiefly by humification; i.e., through the process of peat formation in the presence of oxygen. Most seams of coal consist principally of humic coal and the technological properties vary with their rank, with their petrographic composition, and with the manner of distribution of mineral inclusions. *IHCP*

humic degradation matter

Finely comminuted degradation matter in coal, largely but not altogether derived from the woody tissues of plants, and like anthraxylon, largely derived from lignin. *AGI*

humid heat

Ratio of the increase in total heat per kilogram of dry air to the rise in temperature, with constant pressure and humidity ratio.

humidifying effect

The quantity of water evaporated per unit of time (usually 1 h) times the latent heat of vaporization at the evaporating temperature. *Strock, 2*

humidity

The water-vapor content of the atmosphere. The unmodified term often signifies relative humidity. See also: [absolute humidity](#); specific humidity. *AGI*

humidostat

An instrument for regulating the humidity in the atmosphere. Syn: [hygrostat](#)

humins

In coal, amorphous brown to black substances formed by natural decomposition from vegetable substances; insoluble in alkali carbonates, water, and benzol. *Hess*

humite

The mineral group alleghanyite, chondrodite, clinohumite, humite, jerrygibbsite, leucophoenicite, manganhumite, norbergite, ribbeite, and sonolite; monoclinic and orthorhombic fluosilicates of magnesium, iron, and/or manganese, with hydroxyl commonly replacing fluorine; similar physical properties, and structures closely related to those of the olivines; in metamorphosed dolomitic limestones, or skarns associated with ore deposits; commonly as chondrodite and clinohumite; at the Tilly Foster iron mine near Brewster and at Franklin, NJ.

humite group

A group of isomorphous minerals consisting of olivine, chondrodite, humite, and clinohumite, and closely resembling one another in chemical composition, physical properties, and crystallization. *Webster 3rd*

Hummer screen

Screen used to size moderately small material, vibrated electrically by solenoid action. *Pryor, 3*

humocoll

Peat derived from humic material and in rank corresponding to saprocoll. *Tomkeieff*

humonigritite

A type of nigritite that occurs in sediments. CF: [polynigritite](#); keronigritite. *AGI*

humopel

An organic mud composed of humic material corresponding in rank to sapropel. *Tomkeieff*

humosite

A microscopical constituent of torbanite; translucent; dark brownish-red; isotropic. See also: [gelosite](#); [matrosite](#); [retinosite](#). *Tomkeieff*

humper

See: [booster conveyor](#)

Humphrey's spiral

A concentrating device that exploits differential densities of coal and its associated impurities by a combination of sluicing and centrifugal action. The material gravitates down through a stationary spiral trough with six turns (five for ore treatment) of mean radius 8 in (20.32 cm) with a fall per turn of 11 in (27.94 cm). Heavy particles stay on the inside, the lightest ones climb to the outside, and the resulting bands are separated at convenient points.

humus

Dark-colored, organic, well-decomposed soil material consisting of the residues of plant and animal materials together with synthesized cell substances of soil organisms and various inorganic elements. *Stokes*

humus coal

a. Coal composed of anthraxylon in varying proportions and of varying thicknesses, associated with transparent attritus. *AGI* b. Amorphous brown to black coal formed from vegetable matter and insoluble under continuous boiling in caustic alkalies; also insoluble in water and benzol. *Hess*

hundredweight

A weight commonly reckoned in the United States, and for many articles in England, at 100 avoirdupois lb, but commonly in England, and formerly in the United States, at 112 avoirdupois lb. There is also an older hundredweight, called the long hundredweight, of 120 avoirdupois lb. Abbrev., cwt. *Standard, 2*

Hungarian cat's eye

An inferior greenish cat's eye obtained in the Fichtelgebirge in Bavaria. No such stone occurs in Hungary. *CMD*

Hungarian mill

A rotating, grinding mill used in Hungary for removing small portions of gold from quartz by mixing with mercury; one of the many forms of pan amalgamators.

Hungarian opal

a. A white opal, with a fine color play; found in Slovakia. b. A name used by the importing trade for any white opal regardless of origin.

Hungarian riffles

Riffles used in undercurrents that are small angle irons or pieces of wood shod with iron. Syn: [transverse riffles](#)

hung fire

Delay in a blasting explosion caused by dampness of the powder or by too slow combustion of the fuse. *Korson*

hungry

a. Said of a rock, lode, or belt of country that is barren of ore minerals or of geologic indications of ore, or that contains very low-grade ore. Ant: likely. *AGI* b. Said of a soil that is poor or not fertile. *AGI*

hung shot

a. A shot that does not explode immediately upon detonation or ignition. See also: [hangfire](#) b. A delayed shot. *Hudson*

Hunt and Douglas process

Consists of roasting matte carrying copper, lead, gold, and silver at a very low temperature, forming copper sulfate and oxide, but not silver sulfate. This product is leached with dilute sulfuric acid for copper. The resulting solution is treated with calcium chloride, and the copper is precipitated as subchloride by passing SO₂ through the solution. The cuprous chloride is then reduced to cuprous oxide by milk of lime, regenerating calcium chloride, and the cuprous oxide is smelted. *Liddell*

huntelite

A silver arsenide occurring with native silver at Silver Islet, Lake Superior, MI. *Fay*

hunting

a. Unstable conditions occur with all fans when they are working against too high a resistance, and with forward-bladed radial-flow fans over most of their range, including the point of maximum efficiency. In these conditions, a drop in volume causes only a slight rise in fan pressure and conditions are only slowly restored to normal. This leads to continual and heavy fluctuations in load, a phenomenon known as "hunting." In extreme cases, a fan may hunt to the point where there is no rise in pressure with

decreasing volume. It can then lose its load entirely and never recover it. *Roberts, 1 b.*
Abnormal time lag in automatic control system, in which a corrective change is so much exceeded that overmodulation ensues, the result being oscillation above and below the desired norm. Also called cycling; oscillation. *Pryor, 3*

hunting coal

York. Ribs and posts of coal left for second working. *Fay*

Huntington-Heberlein process

A sink-float process employing a galena medium and utilizing froth flotation as the means of medium recovery. *Chem. Eng.*

Huntington mill

A cylindrical vertical tub from 3-1/2 to 6 ft (1.07 to 1.83 m) in diameter, with screen-guarded peripheral apertures through which ore pulp can be discharged after passing through the comminuting zone. Grinding is done by four rolling mullers, which hang inside from a yoke and which press outward when rotating, thus bearing an ore caught between them and the inner wall of the tub. Syn: [pendulum mill](#)

hunting tooth

Extra tooth designed for driven wheel so that its total number of teeth is not a multiple of those of the driving pinion. *Pryor, 3*

huntite

A trigonal mineral, $\text{CaMg}_3(\text{CO}_3)_4$; in white chalky masses in caves; as a weathering product in vugs and veins in magnesium-rich rocks; in magnesite deposits in Nevada.

Hunt's process

Treatment of precious metal ores containing copper or zinc, using an ammoniacal cyanide solution and recovering ammonia by boiling. *Liddell*

hurdle

A temporary screen or curtain to deflect the air upwards against the roof to disperse gas. *BS, 8*

hurdle screen

a. Scot. A temporary screen or curtain for clearing gas out of a pit. Used esp. where gas has collected in potholes or caves in the roof. *Fay* b. Scot. A screen used in underground firefighting that pushes the smoke back toward the fire and allows the firefighting team to advance within striking distance of the fire. *McAdam, 1*

hurdle sheet

A screen of brattice cloth erected across a roadway below a roof cavity or at the ripping lip to divert the air current upwards to dilute and remove an accumulation of combustible gases. See also: [pocket of gas](#) *Nelson*

hurdy-gurdy

a. See: [hurdy-gurdy wheel](#) b. A dance house in a mining camp. *Standard, 2*

hurdy-gurdy drill

A hand auger used to drill boreholes in soft rock or rock material, such as soil, clay, coal, etc. *Long*

hurdy-gurdy wheel

A water wheel operated by the direct impact of a stream upon its radially placed paddles. Syn: [hurdy-gurdy](#)

hureaulite

A monoclinic mineral, $Mn_5(PO_4)_2[PO_3(OH)]_2 \cdot 4H_2O$; in pegmatites.

hurlbarrow

Scot. A wheelbarrow. *Standard, 2*

hurricane air stemmer

A mechanical device for the rapid stemming of shotholes. It consists of a sand funnel connected by a T-piece to the charge tube, one end of which is provided with a valve and fittings to the compressed air column. The funnel is filled with sand, which is held uppermost, and the charge tube is inserted into the shothole. The sand is injected by the compressed air, and the tube is gradually withdrawn as the hole is being filled. *Nelson*

hurry

a. Scot. A screen or sieve. b. To haul, pull, or push cars of coal in a mine. *Fay* c. A chute, slide, or pass as for ore in a mine, or for coal discharged from cars into vessels.

Webster 2nd d. Gr. Brit. A wooden staging on a navigable river from which to load vessels with coal. *Standard, 2*

hurry gum

Scot. The fine material that passes through a screen or sieve.

hush

Eng. To clear away (soil) from ore with a rush of water. *Standard, 2*

hushing

See: [hydraulic prospecting](#); booming. *AGI*

hutch

a. Corn. A cistern or box for washing ore. See also: [jig](#) Syn: [washing hutch](#) b. Scot. A basket for coal. *Standard, 2* c. The bottom compartment of a coal or ore-dressing jig. *Webster 3rd* d. The part of a jig below the screen plate, in which the washbox rests and the pulsating movement of the water takes place. *BS, 5* e. A car on low wheels in which coal is drawn and hoisted out of a mine pit. *Webster 3rd* f. To wash ore in a box or jig. g. A basket for measurement and transport of coal. h. A small train or wagon for removing coal or ore from a mine. i. An old and varying English measure, as (for coal) 2 Winchester bushels (70.5 L). *Webster 2nd* j. Scot. Two hundredweight (91 kg or 96 kg) of pyrites. *Standard, 2* k. The bottom compartment of an ore-dressing jig and/or the mineral product that collects there. *Webster 3rd* l. The part of a washbox situated below the screenplate in which the controlled pulsating movement of the water takes place. *BS, 5*

hutch cleading

The boards that form the sides, bottom, and ends of a mine car, or hutch. *Standard, 2*

hutcher

One who runs hutches. *Webster 2nd*

hutching

N. of Eng. Term used for tramming. *Nelson*

hutch mender

A repairer of tubs or hutches broken in a mine. *CTD*

hutch mounting

Scot. The ironwork on the frame and box of a wooden hutch. *Fay*

hutch product

The fine, heavy materials that pass through the meshes of the screen in a jig. *Newton, 1*

hutch road

a. A road through a mine. *Standard, 2* b. Scot. A hutch tramway. *Fay*

hutchwork

In mineral processing, the concentrates passing down through the ore jig into the hutch. *Pryor, 3*

huttonite

A very rare, strongly radioactive, colorless to pale cream, monoclinic mineral, ThSiO_4 , found in sands and gravels with scheelite, cassiterite, uranothorite, zircon, ilmenite, and gold. *Crosby*

Huwood loader

This machine comprises a number of horizontal rotating flight bars working near the floor of the seam and driven through gearing by an electric motor. These bars push into the coal in their extended position and are almost completely concealed inside the loader casing in their retracted position. They push prepared coal up a ramp on to a low, bottom-loaded conveyor belt. The machine is hauled along the face by means of two steel ropes wound on separate drums on the loader; one rope passes up the front of the coal and is held by means of an anchor prop; the other rope is threaded under the cut coal by means of a threader pipe attached to the rear of the coal cutter. Lengths of rope equal to the drum capacity are joined by figure-8 links and are detached and unwound from the drum as the loader proceeds along the face. *Mason*

Huwood slicer

A cutter-loader based on the plow principle and designed to cut coal that is too hard for the ordinary plow. Two vertical blades, fitted one at each end of the machine, carry cutting picks that shear the coal from the face by an oscillating motion. The machine is hauled backward and forward along the face by a chain haulage mounted on the tail end of the conveyor. The conveyor and slicer are held up to the coal by pneumatic rams spaced along the goaf side of the conveyor. The sheared coal is forced from the face by the wedge shape of the machine and is loaded on to the armored conveyor by means of

specially shaped ramps. The machine has been designed for seams with a minimum thickness of 4 ft (1.22 m) and has a maximum cutting depth of 14 in (35.56 cm). Syn: [activated plow](#)

Huygen's principle

A very general principle applying to all forms of wave motion that states that every point on the instantaneous position of an advancing phase front (wave front) may be regarded as a source of secondary spherical wavelets. The position of the phase front a moment later is then determined as the envelope of all of the secondary wavelets (ad infinitum). This principle is useful in understanding effects due to refraction, reflection, diffraction, and scattering, of all types of radiation, including sonic radiation as well as electromagnetic radiation, and applying also to ocean wave propagation. *Hunt*

HW

Letter name specifying the dimensions of bits, core barrels, and drill rods in the H-size and W-group wireline diamond drilling system having a core diameter of 76.2 mm and a hole diameter of 99.2 mm. Syn: [HX](#) *Cumming, 2*

H wave

See: [hydrodynamic wave](#)

HX

Letter name specifying the dimensions of core, core barrels, and casing in the H-size and X-series wireline diamond drilling system having a core diameter of 76.2 mm and a hole diameter of 99.2 mm. The HX designation for coring bits has been replaced by the HW designation. Syn: [HW](#) *Cumming, 2*

hyacinth

A red-orange variety of zircon; also applied to similarly colored garnet, quartz, and other minerals. Syn: [cinnamon stone](#); [essonite](#); [jacinth](#).

hyaline

a. Sometimes used as a prefix ("hyalo-") to names of volcanic rocks with a glassy texture, e.g., hyalobasalt. *AGI* b. Said of a mineral that is amorphous. *AGI*

hyalite

A variety of globular or botryoidal opal that shows greenish-yellow fluorescence under ultraviolet light and can be mistaken for uranium-bearing minerals such as autunite. Syn: [glass opal](#); [water opal](#).

hyalo-

A prefix meaning glassy. *AGI*

hyalocrystalline

Said of the texture of a porphyritic igneous rock in which crystals and glassy groundmass are equal or nearly equal in volumetric proportions, the ratio of phenocrysts to groundmass being between 5:3 and 3:5. Syn: [semicrystalline](#); [hemicrystalline](#). *AGI*

hyalophane

A monoclinic or triclinic mineral, $4[(K,Ba)Al(Si,Al)_3 O_8]$; feldspar group, intermediate in the series orthoclase-celsian; prismatic cleavage; in manganese ore deposits, or veins and pegmatites.

hyalophitic

Said of the texture of an igneous rock in which the mesostasis is glassy and makes up a proportion of the rock intermediate in texture between hyalophilitic and hyalocrystalline. CF: [intersertal](#)

Hybinette process

A process used for refining of crude nickel anodes. These are placed in reinforced concrete tanks lined with asphalt. The nickel anodes are dissolved electrochemically and the impurities, such as copper and iron, pass into solution. The cathodes are surrounded by bags of closely woven canvas duck, fastened on wooden frames, and pure nickel electrolyte is passed continuously into them to maintain a higher solution level inside the cathode compartment than outside. By this means, the pure solution flows through the pores of the bags, thus preventing the ions of copper, etc., in the solution in the anode compartment from migrating into the cathode compartment, depositing on the cathode, and preventing the refining process from taking place. The electrolyte in the anode compartments is drawn off continuously and is purified in the copper cementation and iron precipitation departments before being returned to the cathode compartments of the nickel deposition tanks. *Osborne*

hybrid

a. Pertaining to a rock whose chemical composition is the result of assimilation. *AGI* b. A rock whose composition is the result of assimilation. See also: [hybridization](#)

hybridization

The process whereby rocks of different composition from that of the parent magma are formed, by assimilation. See also: [hybrid](#); [assimilation](#); contamination. *AGI*

hydatogenesis

The crystallization or precipitation of salts from normal aqueous solutions; the formation of an evaporite. *AGI*

hydatogenic

Derived from or modified by substances in a liquid condition; said of the genesis of ores and other minerals; opposite of pneumatogenic. CF: [hydatopneumatogenic](#)

hydatopneumatogenic

Said of a rock or mineral deposit formed by both aqueous and gaseous agents. CF: [hydatogenic](#); [pneumatogenic](#). *AGI*

hydrabrake retarder

A mine car retarder, based on the principle of the dashpot, consists of individual braking units that can be fastened to the rails at spacings according to need over any desired distance. The unit offers no resistance to motion at very low car speeds, but as the speed increases, the braking force exerted upon it increases accordingly, following the usual oil dashpot characteristic. See also: [dashpot](#)

hydrargillite

See: [gibbsite](#)

hydrate

a. A compound or complex ion formed by the union of water with some other substance and represented as actually containing water. *Webster 3rd* b. A hydroxide, such as calcium hydrate (hydrated lime). *Webster 3rd*

hydrated lime

A dry powder, $\text{Ca}(\text{OH})_2$, obtained by hydrating quicklime.

hydration

a. The chemical combination of water with another substance. *AGI* b. The process of adding water, or the elements of water (oxygen and hydrogen combined in the hydroxyl radical), to any substance.

hydraulic

a. Conveyed, operated, effected, or moved by means of water or other fluids, such as a hydraulic dredge, using a centrifugal pump to draw sediments from a river channel. *AGI* b. Pertaining to a fluid in motion, or to movement or action caused by water. *AGI* c. Hardening or setting under water; e.g., hydraulic lime or hydraulic cement. *AGI*

hydraulic action

The mechanical loosening and removal of weakly resistant material solely by the pressure and hydraulic force of flowing water, as by a stream surging into rock cracks or impinging against the bank on the outside of a bend, or by a jet of water impacting a gravel bank. *AGI*

hydraulic blasting

Fracture using a hydraulic cartridge, a ram-operated device used to split coal. *Pryor, 3*

hydraulic cartridge

a. A device used in mining to split coal, rock, etc., having 8 to 12 small hydraulic rams in the sides of a steel cylinder. *Fay* b. See: [coal burster](#)

hydraulic cement

A cement that can set and harden under water.

hydraulic cementing

A borehole-cementing operation using a downhole cement injector. *Long*

hydraulic chock

A steel face support structure consisting of from one to four hydraulic legs or uprights. The four-leg chock is mounted in a strong fabricated steel frame with a large head and base plate. It is controlled by a central valve system that operates either on the four legs simultaneously or on the front and rear pairs separately. See also: [chock](#); yielding prop; self-advancing supports. *Nelson*

hydraulic chuck

A diamond-drill rod chuck having jaws with clamping and unclamping movements actuated hydraulically instead of by hand-turned setscrews. *Long*

hydraulic circulating system

A method used to drill a borehole wherein water or a mud-laden liquid is circulated through the drill string during drilling. See also: [diamond drill](#)

hydraulic classifier

Tank into which ore pulp is fed steadily and subjected to the sorting effect of a stream of hydraulic water that rises at controlled rate. Heavier or coarser equal settling particles gravitate down and away via a bottom discharge, while lighter ones are carried up and out. Syn: [hydrosizer](#)

hydraulic conveying

Use of flowing water or slow settling fluids based on water mixed with suitable heavy minerals to convey rock, coal, etc., in pipes. *Pryor, 3*

hydraulic conveyor

A type of conveyor in which water jets form the conveying medium for bulk materials through pipes or troughs.

hydraulic cylinder

As applied to a diamond drill, a syn. for feed cylinder. *Long*

hydraulic discharge

The direct discharge of ground water from the zone of saturation, as via springs, wells, or infiltration ditches or tunnels.

hydraulic dredge

a. A dredge consisting of a hull on which is mounted a suction pipe and support, a pump with motors and controls, and a discharge line. Commonly used in dredging canals and in providing fill for the creation of land in near-shore or low-lying areas and in sand and gravel dredging operations. *Mero* b. A floating pump that sucks up a mixture of water and soil, and usually discharges it on land through pipes. *Nichols, 1*

hydraulic dredger

A suction dredger. *CTD*

hydraulic drill

A hand-held or machine-mounted rotary drill for boring shot-firing holes in coal or rock and operated by hydraulic fluid. The drill outfit includes a skid-mounted powerpack comprising a 5-hp (3.73-kW) flameproof electric motor, pump, and tank. The coal drill weighs about 32 lb (14.5 kg). *Nelson*

hydraulic elevator

An arrangement for lifting gravel and sand up to the drainage level. A jet of water is used to create a powerful suction in a hopper, and the water and gravel are carried up a pipeline and then run down the sluice boxes. This appliance was widely used in various goldfields toward the end of the 19th century. *Nelson*

hydraulic excavation

Excavation by means of a high-pressure jet of water, the resulting waterborne excavated material being conducted through flumes to the desired dumping point. *Hammond*

hydraulic extraction

A term that has been given to the processes of excavating and transporting coal or other material by water energy. Also called hydroextraction or hydraulic mining. See also: [hydromechanization](#)

hydraulic feed

A method of imparting longitudinal movement to the drill rods on a diamond or other rotary-type drill by a hydraulic mechanism instead of mechanically by gearing. *Long*

hydraulic fill

Waste material transported underground and flushed into place by use of water. Syn: [mine fill](#)

hydraulic-fill dam

A dam composed of earth, sand, gravel, etc., sluiced into place; generally the fines are washed toward the center for greater imperviousness. *Seelye, I*

hydraulic filling

Washing waste material, such as mill tailings and ground waste rock, into stopes with water to prevent failure of rock walls and subsidence. Problems involved in its use are stope preparation, choice and mixing of material, its particle size distribution, wear on

pipe, and removal of water that transports the material into the mine. Compressed air may be used to force the filling through pipes. *Lewis*

hydraulic fluid

A fluid supplied for use in hydraulic systems. Low viscosity, low rate of change of viscosity with temperature, and low pour point are desirable characteristics. Hydraulic fluids may be of petroleum or nonpetroleum origin. *Hammond*

hydraulic fluid coupling

A hydraulic fluid coupling transmits power from the driving member to the driven member through oil. A rotating impeller attached to the drive shaft throws oil directly against a turbine converter, which always delivers the same torque as the engine or motor produces. Fluid couplings are particularly advantageous in starting heavy loads since the motor or engine is permitted to run at high efficient speeds while the coupling output shaft gradually accelerates the load to running speed. *Pit and Quarry*

hydraulic flume transport

The transport of coal, pulp, or mineral by the energy of flowing water in semicircular or rectangular channels. The gradient should not be less than 3 degrees. Coal movement in flumes commences at a water velocity of about 3 ft/s (0.9 m/s), but in practice a velocity of at least 6 ft/s (1.8 m/s) is arranged. See also: [hydromechanization](#)

hydraulic flushing

See: [hydraulic stowing](#)

hydraulic friction

The resistance to flow exerted on the perimeter or contact surface between a stream and its containing conduit, due to the roughness characteristic of the confining surface, which induces a loss of energy. Energy losses arising from excessive turbulence, impact at obstructions, curves, eddies, and pronounced channel changes are not ordinarily ascribed to hydraulic friction. *AGI*

hydraulic giants

Used for working large placer deposits. Also called hydraulic monitors and water cannons. *Lewis*

hydraulic gradeline

In a closed conduit, a line joining the elevations to which water could stand in risers. In an open conduit, the hydraulic gradeline is the water surface. *Seelye, 1*

hydraulic gradient

a. A line joining the points of highest elevation of water in a series of vertical, open pipes rising from a pipeline in which water flows under pressure. *Webster 3rd* b. Loss of hydraulic head per unit distance of flow. *ASCE* c. The slope of the hydraulic grade-line. The slope of the surface of water flowing in an open conduit. *Seelye, 1*

hydraulic gravel-pump mining

Consists of the use of high-pressure water jets to disintegrate ore-bearing ground, together with gravel pumps to elevate the spoil to a treatment plant. Initial mining operations consist of the establishment of the mine hole or paddock. This is achieved by sinking or cutting downwards with monitors and removing the spoil by pumping, the pump being lowered as the hole deepens. *Mining*

hydraulic hoisting

See: [hydraulic transport](#)

hydraulic jack

A jack in which the lifting head is carried on a plunger working in a cylinder, to which oil or water is supplied under pressure from a small hand-operated pump. See also: [hydrostatic press](#)

hydraulic jack operator

See: [track-moving machine operator](#)

hydraulic jump

In fluid flow, a change in flow conditions accompanied by a stationary, abrupt turbulent rise in water level in the direction of flow. It is a type of stationary wave. *AGI*

hydraulicking

Excavating alluvial or other mineral deposits by means of high-pressure water jets. See also: [hydraulic mining](#); [hydromechanization](#); [monitor](#). CF: [ground sluicing](#)

hydraulic lime

Lime that is combined with silica, alumina, and iron oxide and will set and harden underwater.

hydraulic limestone

An impure limestone that contains silica and alumina (usually as clay) in varying proportions and that yields, upon calcining, a cement that will harden underwater. See also: [cement rock](#)

hydraulic load cell

A safety device developed by the U.S. Bureau of Mines for sensing pressure changes, thereby warning in advance of bumps. The cells are embedded in the walls and roofs of coal mines.

hydraulic loading

The flushing or slicing of coal or other material broken down by water jets along the floor and into flumes. Coal will flow back toward the flume if sufficient water is available and the gradient is not less than 6 degrees to 7 degrees in favor of the flow. Flexible low-pressure hoses (150 to 200 psi or 1.0 to 1.4 MPa) are sometimes used to assist in the flushing operations. See also: [hydromechanization](#)

hydraulic machine

A borehole-drilling machine on which the bit-feeding mechanism is hydraulically actuated. *Long*

hydraulic main

A main (pipe) for collecting and condensing the volatile matter given off in carbonization of coal in the coking process. *Mersereau, 2*

hydraulic mean depth

The cross section of water flowing through a channel or pipe divided by the wetted perimeter of the conduit. Syn: [hydraulic radius](#) *Hammond*

hydraulic mine filling

Filling a mine with material transported by water. CF: [silting](#); [slush](#). See: [flush](#)

hydraulic miner

In metal mining, one who tends riffles, sluices, and does other work in connection with the hydraulic placer mining of gold. In this type of mining, gold bearing gravel, usually in a bank, is excavated by the erosive action of a high-pressure stream of water being directed at the bank through a nozzle. The gravel is then forced into sluices where the gold particles sink and are caught by riffles (cleats) along the sluice bottom. *DOT*

hydraulic mining

a. Mining by washing sand and dirt away with water that leaves the desired mineral. See also: [hydraulicking](#) b. The process by which a bank of gold-bearing earth and rock is excavated by a jet of water, discharged through the converging nozzle of a pipe under great pressure, the earth or debris being carried away by the same water, through sluices, and discharged on lower levels into the natural streams and watercourses below; where the gravel or other material of the bank is cemented, or where the bank is composed of masses of pipe clay, it is shattered by blasting with powder. Also used for other ores, earth, anthracite culm, etc. Made unlawful and prohibited in certain river systems where it obstructs navigation and injures adjoining landowners. See also: [placer mining](#) c. In underground hydraulic mining, the extraction of coal by high-velocity water jets, directed at the seam from a monitor or powerful jet, which can withstand high water pressures. The jets are also used to impel the broken coal along the floor to the point of collection. See also: [hydromechanization](#); [jet-assisted cutting](#). *Nelson*

hydraulic monitor

A device for directing a high-pressure jet of water in hydraulicking. It is essentially a swivel-mounted, counterweighted nozzle attached to a tripod or other type of stand and so designed that one person can easily control and direct the vertical and lateral movements of the nozzle. See also: [giant](#); [monitor](#).

hydraulic motor

A multicylinder reciprocating engine, generally of radial type, driven by water under pressure. *CTD*

hydraulic permeability

The ability of a rock or soil to transmit water under pressure. It may vary according to direction. *AGI*

hydraulic pipe transport

The conveyance of coal by means of water flowing in pipes. Coal may be pumped to the surface in shallow mines, but beyond 150 ft (46 m) or so of depth, there are technical difficulties. Solids handling pumps rarely deliver against heads exceeding about 200 ft

(61 m). Two such pumps, placed in series, have been used in Trelewis Drift, Wales, to pump out slurry. See also: [hydromechanization](#); [transport](#).

hydraulic power

The use of pressure oil or soluble oil and water for operating face machines and steel supports. The fluid is supplied by rotary pumps driven by electricity located at points near the face. Hydraulic power has an advantage in that the space required is considerably less than that for conventional drives. See also: [power pack](#)

hydraulic pressure

The total thrust, expressed in pounds or tons, that the hydraulic-feed mechanism on a drill can impose on a drill string; also, the pressure of the fluid within the hydraulic cylinders, generally expressed in pounds per square inch. *Long*

hydraulic profile

A vertical section of the potentiometric surface of an aquifer. *AGI*

hydraulic prop

A prop consisting of two telescoping steel cylinders that are extended by hydraulic pressure that may be provided by a hand-operated pump built into the prop. The prop holds about half a gallon of mineral oil and is fitted with a yield valve that relieves the pressure when the load exceeds that for which the prop is set. A hydraulic prop enables quicker setting and uniform initial loading, and it can be withdrawn from a remote, safe position. The hydraulic prop was first used in a British coal mine in 1947. See also: [steel prop](#)

hydraulic prospecting

The use of water to clear away superficial deposits and debris to expose outcrops, for the purpose of exploring for mineral deposits. Syn: [hushing](#)

hydraulic radius

In a stream, the ratio of the area of its cross section to its wetted perimeter. Symbol: *R*. Syn: [hydraulic mean depth](#)

hydraulic ram

a. A pump that forces running water to a higher level by utilizing the kinetic energy of flow, only a small portion of the water being so lifted by the velocity head of a much larger portion when the latter is suddenly checked by the closing of a valve. Also called

ram. *Webster 3rd* b. A device for lifting water by the water hammer produced by checking the flow periodically. *Seelye, 1* c. The plunger of a hydraulic press. *CTD* d. A device whereby the pressure head produced when a moving column of water is brought to rest is caused to deliver some of the water under pressure. *CTD*

hydraulic rotary drilling

Method of drilling that uses rotating bits lubricated by a stream of mud. *Mersereau, 2*

hydraulics

A branch of science that deals with practical applications, such as the transmission of energy or the effects of flow of water or other liquid in motion. *Webster 3rd*

hydraulic set

The set obtained by the addition of water to hydraulic setting materials.

hydraulic sluicing

The process of moving materials by water; colloquially, hydraulicking. *Seelye, 1*

hydraulic stowing

The filling of the waste in mines by waterborne material by pipeline. See also: [pneumatic stowing](#)

hydraulic stowing pipe

A steel or iron pipe used for transporting the material in hydraulic stowing. Ordinary pipes wear very rapidly owing to the chippings in the water; therefore, they are lined with abrasion-resistant material. This lining gives a very much longer life to the pipe. *Nelson*

hydraulic stripping

The excavation and removal of overburden by hydraulicking. *Nelson*

hydraulic transport

Movement of ore by water flowing through pipelines. Includes hydraulic hoisting. See also: [pipeline transport](#)

hydraulic underreamer

An underreamer with cutting lugs that can be expanded or retracted by a hydraulically actuated device. See also: [underreamer](#)

hydraulic valve

A valve for regulating the distribution of water in the cylinders of hydraulic elevators, cranes, etc. *Crispin*

Hydrik process

A commercial process for the production of hydrogen by reaction of caustic soda on aluminum. *Osborne*

hydrite

Denotes a very common microlithotype in Japanese Tertiary coal. It consists of the macerals vitrinite, degradinite, and exinite. The dull bands of many Japanese Tertiary humic coals consist largely of hydrite and generally occurs alternating with vitrite as microfine bands, one or the other predominating.

hydrobarometer

An instrument for determining the depth of sea water by its pressure. *Crispin*

hydrobiotite

A monoclinic mineral, 1:1 interstratified biotite and vermiculite; in clay.

hydrocarbon

Any organic compound, gaseous, liquid, or solid, consisting solely of carbon and hydrogen. They are divided into groups of which those of special interest to geologists are the paraffin, cycloparaffin, olefin, and aromatic groups. Crude oil is essentially a complex mixture of hydrocarbons. *AGI*

hydrocarbon anomaly

Very weak oil or gas seeps, so weak that the deposition of material at the surface cannot be recognized without chemical analysis. *Hawkes, 2*

hydrocerussite

A basic carbonate of lead, $Pb_3(CO_3)_2(OH)_2$. It occurs as a secondary mineral found associated with leadhillite, matlockite, cerussite, mendipite, and paralaurionite. *Dana, 2*

hydrochemical anomaly

Anomalous patterns of elements contained in ground or surface water. See: [anomaly](#)

hydrochemical prospecting

See: [hydrogeochemical prospecting](#)

hydrocyanic acid

Unstable; volatile; colorless; extremely poisonous; gas or liquid; HCN; soluble in water, in alcohol, and in ether; only slightly dissociated with water; and an odor resembling that of bitter almonds. Formed by decomposing metallic cyanides with hydrochloric acid.

Syn: [hydrogen cyanide](#); [prussic acid](#). *Standard, 2; Handbook of Chemistry and Physics, 2*

hydrocyclone

A cyclone separator in which a spray of water is used. *ASM, 1*

hydrodynamic computer codes

Computer codes or models that compute the properties or predicted behavior of explosives or materials subjected to supersonic (dynamic) forces.

hydrodynamics

The aspect of hydromechanics that deals with forces that produce motion. CF: [hydrostatics](#)

hydrodynamic wave

An obsolete term for a type of surface wave that is similar to a Rayleigh wave but has an opposite particle motion. Syn: [H wave](#)

hydrodynamometer

An instrument for determining the velocity of a fluid in motion by its pressure. *Standard, 2*

hydroextraction

See: [hydraulic extraction](#)

hydroextractor

See: [centrifuge](#)

hydrofranklinite

See: [chalcophanite](#)

hydrogarnet

A member of the garnet group having SiO_4 partly replaced by $(\text{OH})_4$.
CF: [hydrogrossular](#); [garnetoid](#).

hydrogenation of coal

See: [coal liquefaction](#)

hydrogen cyanide

See: [hydrocyanic acid](#)

hydrogen embrittlement

A condition of low ductility in metals resulting from the absorption of hydrogen. *ASM, 1*

hydrogen ion

The stripped (naked) proton of hydrogen, H^+ , or the proton combined with one or more molecules of water, as H_3O^+ or $\text{H}(\text{H}_2\text{O})^+$. The latter is sometimes called oxonium, hydroxonium, or hydronium ion. H^+ is usually spoken of as the proton. H-ion concentration is the pH value. *Pryor, 3*

hydrogenous

a. Said of coals high in moisture, such as brown coals. *AGI* b. Said of coals high in volatiles, such as sapropelic coals. *AGI*

hydrogen sulfide

Colorless; flammable; gas; H_2S . It is readily decomposed. Reacts with bases forming sulfides and with some metals to produce metal sulfides and to liberate hydrogen. Poisonous. Syn: [hydrosulfuric acid](#) *Handbook of Chemistry and Physics, 2*

hydrogeochemical prospecting

Prospecting guided by the composition of ground or surface water. Syn: [hydrochemical prospecting](#)

hydrograph

A graph showing stage, flow, velocity, or other characteristics of water with respect to time. A stream hydrograph commonly shows rate of flow; a ground-water hydrograph, water level or head. *AGI*

hydrography

a. The science that deals with the physical aspects of all waters on the Earth's surface, esp. the compilation of navigational charts of bodies of water. *AGI* b. The body of facts encompassed by hydrography. *AGI*

hydrogrossular

A group name for the series of hydrogarnets encompassing the series hibschite, katoite, and grossular. Water content ranges from about 1.5% in hibschite to 13% in katoite; grossular is anhydrous. Syn: [hydrogarnet](#) CF: [garnetoid](#); [hydrogarnet](#).

hydrohematite

A mineral, $\text{Fe}_2\text{O}_3 \cdot n\text{H}_2\text{O}$, probably a mixture of the two minerals haematite and goethite, the former being in excess. It is fibrous and red in mass, with an orange tint when powdered. Also called turgite. See also: [turgite](#)

hydrologic cycle

The constant circulation of water from the sea, through the atmosphere, to the land, and its eventual return to the atmosphere by way of transpiration and evaporation from the sea and the land surfaces. Syn: [water cycle](#)

hydrology

a. The science that deals with global water (both liquid and solid), its properties, circulation, and distribution, on and under the Earth's surface and in the atmosphere, from the moment of its precipitation until it is returned to the atmosphere through evapotranspiration or is discharged into the ocean. In recent years, the scope of hydrology has been expanded to include environmental and economic aspects. *AGI* b. The sum of the factors studied in hydrology; the hydrology of an area or district. *AGI*

hydrolysis

a. The formation of an acid and a base from a salt by interaction with water, caused by the ionic dissociation of water. *CTD* b. The decomposition of organic compounds by interaction with water; either cold, or on heating alone, or in the presence of acids or alkalies. *CTD*

hydromagnesite

A monoclinic mineral, $Mg_5(CO_3)_4(OH)_2 \cdot 4H_2O$; pseudo-orthorhombic; in low-temperature veins in serpentinite.

hydromechanics

The mechanics of fluids, including hydrostatics, hydrodynamics, hydrokinetics, and pneumatics. *Standard, 2*

hydromechanization

A term applied to hydraulic methods of excavating and transporting coal and other products underground. See also: [hydraulic extraction](#); hydraulic flume transport; hydraulic loading; hydraulic mining; hydraulic pipe transport; hydraulicking. *Nelson*

hydrometallurgy

The treatment of ores, concentrates, and other metal-bearing materials by wet processes, usually involving the solution of some component, and its subsequent recovery from the solution. Syn: [wet metallurgy](#)

hydrometamorphism

Alteration of rock by material that is added, removed, or exchanged by water solutions, without the influence of high temperature and pressure. Syn: [hydrometasomation](#); [hydrometasomatism](#). CF: [pyrometamorphism](#) *AGI*

hydrometasomation

See: [hydrometamorphism](#)

hydrometasomatism

See: [hydrometamorphism](#)

hydrometer

An instrument used for determining the density or specific gravity of fluids, such as drilling mud or oil, by the principle of buoyancy. See also: [gravimeter](#); [Marsh funnel](#); [specific-gravity hydrometer](#). *Long*

hydrometer method

The method employed for the determination of the apparent specific gravity of coal and coke. *Kentucky*

hydrometrograph

An instrument for determining and recording the quantity of water discharged from a pipe, orifice, etc., in a given time. *Osborne*

hydromica

a. See: [illite](#) b. A general term for brammallite, hydrobiotite, and illite.

hydromorphic anomaly

An anomaly where the dynamic agents are aqueous solutions, which brought the elements to the site of deposition.

hydromuscovite

See: [illite](#)

hydronium jarosite

A trigonal mineral, $(\text{H}_3\text{O})\text{Fe}_3(\text{SO}_4)_2(\text{OH})_6$; alunite group.

hydrophilic

a. Of, relating to, having, or denoting a strong affinity for water. *Webster 3rd* b. Applied to such easily dispersed colloidal clay minerals as montmorillonite that swell in water as the result of water attraction and hydration and that are not easily coagulated. c. Substance attracted to a water phase rather than to air in an airwater interphase. A group tending to bind water is hydrophilic (opposite of hydrophobic). The hydroxyl (OH) groups in hydroxides are typical, and their hydrophilic solutions in water are hydrosols. See also: [lyophilic](#) *Pryor, 3*

hydrophobic

(a) Lacking a strong affinity for water. Opposite of hydrophilic. (*Webster 3rd, 1966*)
(b) Applied to water-repelling substances and surfaces and to easily coagulated colloids.

hydrophone

A pressure-sensitive detector that responds to sound transmitted through water. It is used in marine seismic surveying, or as a seismometer in a well. Syn: [pressure detector](#)

hydrophotometer

A sensitive instrument used in water transparency and light absorption measurements at sea. The instrument, which contains its own light source, can measure fine graduations of transparency of an individual water mass. *Hunt*

hydroscope

An instrument for detecting moisture, esp. in the air. *Standard, 2*

hydroseparator

Essentially, a shallow tank, usually cylindrical, which is kept agitated by hydraulic water and/or stirring devices. Pulp fed to the tank is separately discharged as a free-settling fraction containing the coarser and heavier particles and an overflowing fraction containing the finer, lighter material. *Pryor, 3*

hydrosizer

See: [hydraulic classifier](#)

hydrosphere

The waters of the Earth, as distinguished from the rocks (lithosphere), living things (biosphere), and the air (atmosphere). Includes the waters of the ocean; rivers, lakes, and other bodies of surface water in liquid form on the continents; snow, ice, and glaciers; and liquid water, ice, and water vapor in both the unsaturated and saturated zones below the land surface. Included by some, but excluded by others, is water in the atmosphere, which includes water vapor, clouds, and all forms of precipitation while still in the atmosphere. *AGI*

hydrostat

A contrivance or apparatus to prevent the explosion of steam boilers. *Webster 2nd*

hydrostatic

Relating to the pressure or equilibrium of fluids.

hydrostatic balance

A balance for weighing a substance in water to ascertain its specific gravity. *Webster 3rd*

hydrostatic head

The height of a vertical column of water whose weight, if of unit cross section, is equal to the hydrostatic pressure at a given point; static head as applied to water. See also: [static head](#)

hydrostatic joint

Used in large water mains, in which sheet lead is forced tightly into the bell of a pipe by means of the hydrostatic pressure of a liquid. *Strock, 1*

hydrostatic press

A large ram, the surface of which is acted on by liquid in contact with a small ram. See also: [hydraulic jack](#)

hydrostatic pressure

a. Stress that is uniform in all directions, e.g., beneath a homogeneous fluid, and causes dilation rather than distortion in isotropic materials. *AGI* b. The pressure exerted by the water at any given point in a body of water at rest. The hydrostatic pressure of ground water is generally due to the weight of water at higher levels in the zone of saturation. *AGI*

hydrostatic roller conveyor

A section of roller conveyor having rolls suitably weighted with liquid to control the velocity of the moving objects. See also: [roller conveyor](#)

hydrostatics

A branch of physics that deals with the characteristics of fluids at rest and esp. with the pressure in a fluid or exerted by a fluid on an immersed body. CF: [hydrodynamics](#)

hydrostatic stress

A state of stress in which the normal stresses acting on any plane are equal and where shearing stresses do not exist in the material. *AGI*

hydrostatic test

On a boiler, the closing of all openings and pumping water into the boiler at a pressure (such as 50%) greater than the normal operating pressure. The purpose is to locate leaks or prove that there are no leaks. *Strock, 2*

hydrosulfuric acid

See: [hydrogen sulfide](#)

hydrotalcite

The mineral group desautelsite, hydrotalcite, pryaurite, reevesite, stichtite, and takovite.

hydrotasimeter

An electrically operated apparatus showing at a distance the exact level of water, as in a reservoir; an electric high- and low-water indicator. *Standard, 2*

hydrotator

A coal washer of the classifier type whose agitator or rotator consists of hollow arms radiating from a central distributing manifold or center head. There may be four or more of these radiating arms, each with one or more downwardly inclined nozzles. When water is discharged from these nozzles, the impulse has the effect of rotating the agitator in a manner similar to a lawn sprinkler. This agitator is suspended in a cylindrical tank and water is pumped through it under pressure, thereby creating a controlled upward current uniform over the entire area of the tank. *Mitchell*

hydrothermal

Of or pertaining to hot water, to the action of hot water, or to the products of this action, such as a mineral deposit precipitated from a hot aqueous solution, with or without demonstrable association with igneous processes; also, said of the solution itself. Hydrothermal is generally used for any hot water but has been restricted by some to water of magmatic origin. *AGI*

hydrothermal alteration

Alteration of rocks or minerals by the reaction of hydrothermal water with preexisting solid phases. *AGI*

hydrothermal deposit

A mineral deposit that originated from hot, ascending aqueous solutions derived from a magma. CF: [hypothermal deposit](#)

hydrothermal solution

A hot-water solution originating within the Earth and carrying dissolved mineral substances. Syn: [ore-bearing fluid](#); [ore-forming fluid](#). *AGI*

hydrothermal stage

That stage in the cooling of a magma during which the residual fluid is strongly enriched in water and other volatiles. The exact limits of the stage are variously defined by different authors, in terms of phase assemblage, temperature, composition, and/or vapor pressure; most definitions consider it as the last stage of igneous activity, coming at a later time, and hence at a lower temperature, than the pegmatitic stage. *AGI*

hydrothermal synthesis

Mineral synthesis in the presence of water at elevated temperatures. *AGI*

hydrous

a. Containing water; watery; specif., hydrated. *Webster 3rd* b. Minerals that contain water chemically combined. *Gordon*

hydrous salts

Salts containing water of crystallization.

Hydrox

A permitted device, used in some English coal mines, that resembles Cardox in that a steel cylinder with a thin shearing disk is used. However, the charge is not liquid carbon dioxide but rather a powder composed chiefly of ammonium chloride and sodium nitrate. It is proportioned to give water, nitrogen, and salt as the products of combustion. On being ignited, this powder is gasified and shears the steel disk, with the gas escaping into the hole. *Lewis*

Hydrox steel tube

An alternative to explosives for breaking down coal in safety lamp mines. The gasification of the Hydrox charge generates sufficient pressure within the shothole to break down the coal. The original plastic disc attached to the charge has been replaced by a metal disc separately seated. The gaseous products from the Hydrox charge are mainly carbon dioxide, nitrogen, and water vapor. The tubes can be recharged underground. The method gives a high yield of +2 in (5.1 cm) in size of coal. *Nelson*

hydroxybenzene

See: [phenol](#)

hydroxyl

OH; the characteristic radical of bases, consisting of one atom of hydrogen and one atom of oxygen. The valence of this radical or anion is -1. *Crispin*

hydroxylapatite

A hexagonal mineral, $\text{Ca}_5(\text{PO}_4)_3(\text{OH})$; apatite group; an uncommon apatite in which hydroxyl predominates over fluorine and chlorine. Formerly spelled hydroxyapatite.

hydrozincite

A monoclinic mineral, $2[\text{Zn}_5(\text{CO}_3)_2(\text{OH})_6]$; forms massive, fibrous, earthy, or compact encrustations with blue luminescence; a secondary mineral in weathered zones of zinc deposits commonly associated with smithsonite or sphalerite; a source of zinc. Syn: [zinc bloom](#)

hyetometer

See: [rain gage](#)

hygrometer

Any of several instruments for measuring the humidity of the atmosphere. See also: [psychrometer](#)

hygrometry

Measurement of atmospheric humidity.

hygroscopic water content

The water content of an air-dried soil. *ASCE*

hygrostat

A device sensitive to humidity changes and arranged to actuate other equipments when a predetermined humidity is attained. Syn: [humidostat](#) *Strock, 2*

hypabyssal

Pertaining to an igneous intrusion, or to the rock of that intrusion, whose depth is intermediate between that of abyssal or plutonic and the surface. This distinction is not considered relevant by some petrologists. CF: [abyssal](#); [plutonic](#). Syn: [subvolcanic](#)

hypabyssal rock

An igneous rock that has risen from the depths as magma but solidified mainly as such minor intrusions as dikes and sills.

hyper-

A prefix from the Greek meaning over, above, or abnormally great.

hyperfusible

Any substance capable of lowering the melting ranges in end-stage magmatic fluids. *AGI*

hypermelanic

Said of igneous rocks that consist of 90% to 100% mafic minerals. CF: [melanocratic](#); [ultramafic](#). *AGI*

hyperon

A class of short-lived elementary nuclear particles with masses greater than that of the neutron. *Lyman*

hypersthene

An orthorhombic mineral series, $8[(\text{Mg,Fe})_2 \text{Si}_2 \text{O}_6]$; pyroxene group, intermediate between enstatite and ferrosilite; prismatic cleavage; a common rock-forming mineral in intermediate to mafic igneous rocks and high-grade metamorphosed iron formations of the Lake Superior type; abundant in host rocks of copper-nickel ores of Sudbury, ON, Canada, and of chromite deposits of the Bushveld complex, South Africa. See also: [pyroxene](#)

hypersthenite

Originally defined as a syn. of norite, but now commonly used to mean a rock composed entirely of hypersthene; an orthopyroxenite. Not recommended usage. *AGI*

hypidiomorphic

See: [subhedral](#)

hypidiomorphic texture

A texture of igneous rocks in which the greater proportion of the crystallized minerals have subhedral forms. *Hess*

hypnum peat

Peat composed mostly of disintegrated plants of hypnum, often associated with other mosses and with intermingled rootlets of sedges and other flowing plants. It is formed

chiefly in areas where the ground is only slightly acid, neutral, or slightly alkaline; it is brownish or drab, light, spongy, and matted, and often laminated and porous. *USBM*, 5

hypobatholithic deposit

A mineral deposit found in a deeply eroded mass of intrusive rock with few roof pendants remaining.

hypocenter

See: [focus](#)

hypocrystalline

Said of the texture of an igneous rock that has crystalline components in a glassy groundmass, the ratio of crystals to glass being between 7:1 and 5:3. Syn: [merocrystalline](#)

hypogeal

See: [hypogene](#)

hypogeic

See: [hypogene](#)

hypogene

a. Said of a geologic process, and of its resultant features, occurring within and below the crust of the Earth. CF: [epigene](#); [endogenetic](#). Syn: [hypogenic](#); [hypogeal](#); [hypogeic](#). *AGI* b. Said of a mineral deposit formed by ascending solutions; also, said of those solutions and of that environment. CF: [supergene](#); [mesogene](#). *AGI* c. A rarely used syn. of plutonic. *AGI*

hypogene ore

Ore deposited from ascending hydrothermal solutions of magmatic origin.

hypogene rock

A rock that was formed deep within the Earth under the influence of heat and pressure. *Hess*

hypogenic

See: [hypogene](#)

hypohyaline

Said of the texture of an igneous rock that has crystalline components in a glassy groundmass, with a ratio of crystals to glass between 3:5 and 1:7. CF: [hypocrystalline](#)

hypothermal deposit

Said of a hydrothermal mineral deposit formed at high temperatures and pressures. CF: [epithermal](#); [hydrothermal deposit](#); [leptothermal](#); mesothermal; telethermal; xenothermal.

hypothesis

A conception or proposition that is tentatively assumed, and then tested for validity by comparison with observed facts and by experimentation; e.g., the planetesimal hypothesis to explain the evolution of the planets. It is less firmly founded than a theory. *AGI*

hypothetical resources

Undiscovered resources that are similar to known mineral bodies that may be reasonably expected to exist in the same producing district or region under analogous geologic conditions. If exploration confirms their existence and reveals enough information about their quality, grade, and quantity, they will be reclassified as identified resources. *USGS, 2*

hypsonometer

An instrument for measuring the elevation above sea level by determining the atmospheric pressure through observing the boiling point of water. *Standard, 2*

hypsonometric map

Any map showing relief by means of contours, hachures, shading, tinting, or any other convention. *AGI*

hypsonometry

The science of determining, by any method, elevations on the Earth's surface with reference to sea level; e.g., barometric hypsonometry in which elevations are determined by means of mercurial or aneroid barometers. *AGI*

hysteresis

a. A lag in the return of an elastically deformed body to its original shape after the load has been removed. *AGI* b. The property that a rock is said to exhibit when its magnetization is nonreversible. Syn: [magnetic hysteresis](#) c. A phase lag of dielectric displacement behind electric-field intensity, due to energy dissipation in polarization processes. *AGI*

hysteresis loop

Entire pattern of magnetization showing how a body with magnetic susceptibility can remain polarized after the disappearance of the original magnetizing force.

hysteretic repulsion

Separation by alternating current that depends on magnetic properties of coercive force and remanence.

I

ianthinite

An orthorhombic mineral, $(\text{UO}_2)_6 \text{O}_2 (\text{OH})_8 \cdot 6\text{H}_2\text{O}$; acicular with perfect basal cleavage; in cavities, as an alteration product of uraninite at Kasolo, Congo, and Wolsendorf, Bavaria.

ice

Water in the solid state; specif. the dense substance formed in nature by the freezing of liquid water, by the condensation of water vapor directly into ice crystals, or by the recrystallization or compaction of fallen snow. It is colorless to pale blue or greenish blue, usually white from included gas bubbles. At standard atmospheric pressure, it is formed at and has a melting point of 0 degrees C; in freezing it expands about one eleventh in volume. Ice commonly occurs in hexagonal crystals, and in large masses is classed as a rock. *AGI*

iceberg

A large, massive piece of floating or stranded glacier ice of any shape, detached (calved) from the front of a glacier into a body of water. An iceberg extends more than 5 m above sea level and has the greater part of its mass (four-fifths to eight-ninths) below sea level. It may reach a length of more than 80 km. *AGI*

ice concrete

A dense frozen mixture of sand, rock fragments, and ice. *AGI*

ice-laid drift

See: [till](#)

Iceland agate

See: [obsidian](#)

Iceland crystal

See: [Iceland spar](#)

Iceland spar

A transparent, pure, optically clear variety of calcite principally in Iceland in vugs and cavities in basalt; formerly used in optical instruments such as nicol prisms, but has been replaced by artificial materials such as polaroid plates. Syn: [Iceland crystal](#); optical calcite.

ice period

The period of time from freezeup to breakup of ice. *AGI*

ice plug

An ice obstruction formed by a circulation medium freezing inside the drill-rod couplings while the rods are racked up or standing in the drill derrick or tripod in extremely cold weather. Such plugs may loosen when rods are lowered into the borehole and may be ejected from the open end of the rod with enough force to injure drill crewmembers severely. *Long*

ice run

See: [debacle](#)

ice sheet

A glacier of considerable thickness and more than 50,000 km² in area, forming a continuous cover of ice and snow over a land surface, spreading outward in all directions and not confined by the underlying topography; a continental glacier. Ice sheets are now confined to polar regions (as on Greenland and Antarctica), but during the Pleistocene Epoch they covered large parts of North America and northern Europe. *AGI*

https://t.me/Geologybooks

ice spar

A white transparent variety of orthoclase. Syn: [sanidine](#)

ice stone

See: [cryolite](#)

icositetrahedron

See: [trapezohedron](#)

idaite

A hexagonal mineral, $\text{Cu}_3 \text{FeS}_4$ (?); soft; metallic copper red to brown; a decomposition product of bornite or chalcopyrite at the Ida Mine, Kahn, Namibia.

iddingsite

An outdated term for a reddish-brown mixture of the kaolinite-serpentine group and iron oxides formed by the alteration of olivine.

ideal gas

The nonexistent norm of a gas, which perfectly obeys Boyle's law of gases, in which the pressure of the gas times its volume equals a constant.

ideal section

A geologic cross section that combines observed evidence on stratigraphy and/or structure with interpretation of what is not present. It may be the summation or average of several successive cross sections. *AGI*

identified resources

Resources whose location, grade, quality, and quantity are known or estimated from specific geologic evidence. Identified resources include economic, marginally economic, and subeconomic components. To reflect varying degrees of geologic certainty, these economic divisions can be subdivided into measured resources, indicated resources, and inferred resources. *USGS, 2*

identity

a. In X-ray crystallography, the distance along a crystallographic between like points in a lattice. b. In geometrical crystallography, the completion of a sequence of symmetry operations, e.g., four rotations of 90 degrees each about a tetrad.

idioblast

A mineral constituent of a metamorphic rock formed by recrystallization and bounded by its own crystal faces. It is a type of crystalloblast. The term was originated by Becke in 1903. CF: [xenoblast](#)

idioblastic

Pertaining to an idioblast of a metamorphic rock. It is analogous to the term idiomorphic in igneous rocks. *AGI*

idiochromatic

Minerals in which a specific coloring agent is an essential constituent, e.g., copper in malachite, iron in olivine, manganese in rhodochrosite. CF: [allochromatic](#)

idiochromatic mineral

Mineral in which the color is due to some essential constituent of the stone, for example, malachite, peridot, and almandine. In contrast to allochromatic minerals, idiochromatic minerals have a limited range of color. See also: [allochromatic mineral](#)

idiogenite

Suggested by Posepny for those ore deposits that are contemporaneous in origin with the wall rock. The word means of the same origin.

idiomorphic

A syn. of automorphic, originally proposed by Rosenbusch in 1887 to describe individual euhedral crystals. Though the term lacks priority, it is now commonly applied to the igneous-rock texture characterized by such euhedral crystals, esp. in U.S. usage. *AGI*

idler disk

A device used for holding the belt in proper position on certain types of boxcar loaders. See also: [boxcar loader](#)

idler gear

a. A gear meshed with two other gears that does not transmit power to its shaft; used to reverse direction of rotation in a transmission. *Nichols, 1* b. Same as neutral gear. *Long*

idle wheel

a. A wheel interposed in a gear train, either to reverse rotation or to obtain the required spacing of centers, without affecting the ratio of the drive. Also called idler. *CTD* b. A pulley to guide a driving belt, to increase its tension, or to increase its arc of contact on one of the working pulleys. *Standard, 2*

idocrase

See: [vesuvianite](#)

idrialite

An orthorhombic hydrocarbon mineral, $4[C_{22}H_{14}]$; soft; greenish yellow to light brown with bluish fluorescence; mixed with clay, pyrite, and gypsum associated with cinnabar in the Idria region, Yugoslavia. Its combustibility gave rise to the term "inflammable cinnabar." Syn: [inflammable cinnabar](#)

igdloite

See: [lueshite](#)

Igewsky's reagent

A solution consisting of 5% picric acid in absolute alcohol used as an etching reagent for carbon steels. *Osborne*

igneous

Said of a rock or mineral that solidified from molten or partly molten material, i.e., from a magma; also, applied to processes leading to, related to, or resulting from the formation of such rocks. Igneous rocks constitute one of the three main classes into which rocks are divided, the others being metamorphic and sedimentary. Etymol: Latin ignis, fire. See also: [magmatic](#); [plutonic](#); [pyrogenic](#); [hypabyssal](#); [extrusive](#). *AGI*

igneous breccia

a. A breccia that is composed of fragments of igneous rock. *AGI* b. Any breccia produced by igneous processes; e.g., volcanic breccia, intrusion breccia. *AGI*

igneous complex

An assemblage of intimately associated and roughly contemporaneous igneous rocks differing in form or in petrographic type; it may consist of plutonic rocks, volcanic rocks, or both. See also: [complex](#)

igneous cycle

The sequence of events in which volcanic activity is followed by major plutonic intrusions, and then minor intrusions (e.g., dikes). *AGI*

igneous metamorphism

A high-temperature metamorphic process that includes the effects of magma on adjacent rocks as well as those due to injection pegmatitization (Lindgren, 1933). The term is no longer in common use. CF: [pyrometamorphism](#)

igneous rock

Rock formed by the solidification of molten material that originated within the earth.

igneous-rock series

An assemblage of temporally and spatially related igneous rocks of the same general form of occurrence (plutonic, hypabyssal, or volcanic), characterized by possessing in common certain chemical, mineralogic, and textural features or properties so that the rocks together exhibit a continuous variation from one extremity of the series to the other. Syn: [rock series](#)

ignescent

Applied to a mineral that sparks when struck with steel or iron; e.g., pyrite.

ignimbrite

The rock formed by the widespread deposition and consolidation of ash flows and neues ardentes. CF: [trass](#); [welded tuff](#). *AGI*

ignitability

An assessment of the ease with which a coal can be ignited. *BS, 4*

ignitability (dust cloud)

The relative ignitability of a dust cloud may be defined as the degree of ease with which it can be ignited. *Sinclair, 1*

igniter

a. A blasting fuse or other contrivance used to fire an explosive charge. *CTD* b. In mining, a metal cylinder that connects a main fuse with separate fuses that are only limited by the number of blasts to be fired. *Standard, 2* c. A device to relight safety lamps internally by friction. One type uses a waxed strip with igniting matches at intervals, while another type has a small burred wheel operating against a piece of cerium or something of a similar nature. Electrical devices are sometimes employed. *Fay* d. One that ignites as (1) a charge, usually of black gunpowder, used to facilitate the ignition of a propelling charge and sometimes of a bursting charge; (2) a device for igniting fuel mixture (as in an internal combustion engine, a jet engine, or a rocket engine); (3) a separately energized electrode used for restriking the arc in an ignitron. *Webster 3rd*

igniter cord

a. A cord that passes an intense flame along its length at a uniform rate to light safety fuses in succession. *BS, 12* b. Two types are manufactured: a fast cord having a nominal burning speed of 1 s/ft (3.3 s/m) and a slow cord having a nominal burning speed of 10 s/ft (33 s/m). The burning speeds are reliable and consistent even under adverse conditions, as, e.g., when burning underwater or in a direction opposite to a strong wind. *McAdam, 2*

ignition

a. Percussion material or detonating powder. *Standard, 2* b. The firing of an explosive mixture of gases, vapors, or other substances by means of an electrical or frictional spark. *CTD* c. An outburst or fire or an explosion. *Mason* d. The act of igniting, or the state of being ignited; specif., in mechanics, the act of exploding the charge of gases in the cylinder of an internal combustion engine. *Standard, 2*

ignition arch

A flat or curved refractory roof over a furnace at the point of fuel entrance that promotes ignition by reflection of heat. *AISI*

ignition charge

A small charge, usually of black powder, used to facilitate the ignition of the main charge. *Webster 3rd*

ignition delay

Time interval between contact of an oxidant and a combustible and ignition. *Van Dolah*

ignition of combustible gases

See: [gas ignition](#)

ignition point

a. Of solids and liquids, the minimum temperature at which combustion can occur, but at which it is not necessarily continuous. *Pryor, 3* b. Of combustible gases, the flashpoint. *Pryor, 3*

ignition temperature

a. The ignition temperature of a substance is the temperature at which that substance starts to burn. The temperature of ignition varies greatly with different substances. All solid fuels must be heated to their ignition temperature before they will burn continuously by the process known as combustion. *Morris; Nelson* b. The temperature required to effect ignition of a combustible-oxidant system at a specified pressure; in general, the minimum temperature is implied. *Van Dolah*

ignition tube

A heavy-walled test tube of hard glass for examining the behavior of heated substances. *Webster 3rd*

ihleite

See: [copiapite](#)

ijolite

A series of plutonic rocks containing nepheline and 30% to 60% mafic minerals, generally clinopyroxene, and including sphene, apatite, and melanite; also, any rock of that series. Melteigite and jacupirangite are more mafic members of the series; urtite is a type rich in nepheline. Named by Ramsay in 1891 for Ijola (Iivaara), Finland. *AGI*

ikunolite

A trigonal mineral, $\text{Bi}_4(\text{S,Se})_3$; the selenium-rich analog of laitakarite, similar to josephite but containing no tellurium; at the Ikuno Mine, Hyogo Prefecture, Japan.

ilesite

A monoclinic mineral, $(\text{Mn,Zn,Fe})\text{SO}_4 \cdot 4\text{H}_2\text{O}$; rozenite group; a green, friable crystalline aggregate in Hall Valley, Park County, CO.

ilesmannite

An amorphous mineral, $\text{Mo}_3 \text{O}_8 \cdot n\text{H}_2 \text{O} (?)$.

Ilgner flywheel

A heavy flywheel used in the Ward-Leonard control of winding engines in mine hoists. It is mounted on the shaft of a motor generator, which draws on this source of energy as the hoist starts to move. *Pryor, 3*

Ilgner system

A modification of the Ward-Leonard system of speed control, in which a heavy flywheel is carried on the motor-generator shaft to smooth out peak loads, which would otherwise be taken from the power supply. The system is used on mine winding engines, etc. See also: [Ward-Leonard control](#) *Nelson*

ill air

Scot. Noxious gas, as from underground fires or chokedamp; a stagnant state of the atmosphere underground. *Fay*

illegal mine

A mine that has not obtained the necessary permits and licenses from the appropriate State and Federal agencies before commencement of mining.

illinition

A thin extraneous crust formed on minerals. *Standard, 2*

illiquation

a. Melting or infusing. *Webster 2nd* b. Mixture of metallic and earthen substances. *Webster 2nd*

illite

A general term for a group of three-layer (14Aa), micalike clays $(\text{K}, \text{H}_3 \text{O})(\text{Al}, \text{Mg}, \text{Fe})_2 (\text{Si}, \text{Al})_4 \text{O}_{10} [(\text{OH})_2, \text{H}_2 \text{O}]$; widely distributed in argillaceous sediments and derived soils; intermediate in composition and structure between muscovite and montmorillonite; contains less potassium and more water than muscovite, but more potassium than kaolinite or montmorillonite; potassium is generally replaced by calcium and/or magnesium; named from studies by Grimm of shales and clays in Illinois. See also: [muscovite](#). CF: [pholidoide](#); [phyllite](#). Syn: [hydromica](#); [hydromuscovite](#); [glimmerton](#).

ilmenite

- a. A trigonal mineral, FeTiO_3 ; ilmenite group; forms two series with geikielite and with pyrophanite. Iron-black. Also called menaccanite; titanite iron ore. See also: [zircon group](#)
b. The mineral group geikielite, ilmenite, and pyrophanite. See also: [basanmelane](#)

ilmenitite

A hypabyssal rock composed almost entirely of ilmenite, with accessory pyrite, chalcopyrite, pyrrhotite, hypersthene, and labradorite. CF: [nelsonite](#)

ilmenorutile

A tetragonal mineral, $(\text{Ti,Nb,Fe})_3\text{O}_6$; forms a series with strueverite in which tantalum substitutes for niobium; black; sp gr, 5.14. Syn: [iserine](#)

ilvaite

An orthorhombic and monoclinic mineral, $\text{CaFe}_2\text{FeSi}_2\text{O}_7\text{O}(\text{OH})$; in prisms with vertically striated faces; compact, massive, or fibrous; in some magnetite orebodies, in zinc and copper ores, in contact deposits in dolomitic limestone, and in sodalite syenite near Julianehaab, Greenland. Syn: [elbaite](#); [lievrite](#).

imandrite

A rock composed of quartz and albite, formed by interaction between a nepheline-syenite magma and graywacke. *Holmes, 2*

imbibition

- a. Formation of feldspathic minerals by penetration of alkaline solutions of magmatic origin into aluminum-rich metamorphic rocks. *AGI* b. The absorption of a fluid, usually water, by a granular rock or any other porous material, under the force of capillary attraction, and in the absence of pressure. *AGI*

imbricate structure

- a. A sedimentary structure characterized by imbrication of pebbles all tilted in the same direction, with their flat sides commonly displaying an upstream dip. Syn: [shingle structure](#) b. A tectonic structure displayed by a series of nearly parallel and overlapping minor thrust faults, high-angle reverse faults, or slides, and characterized by rock slices, sheets, plates, blocks, or wedges that are approx. equidistant and have the same displacement and that are all steeply inclined in the same direction (toward the source of stress). *AGI*

imitation

See: [synthetic stone](#); assembled stone.

Inlay table

See: [end-bump table](#)

immediate roof

Lowest layer or layers of rock immediately above an underground opening. See also: [roof](#); [nether roof](#).

immersion cup

An accessory for a gemological microscope containing a liquid of high refractive index and designed to eliminate reflections from highly polished facets and thus to expedite the observation of determinative inclusions, growth lines, etc.

immersion method

In optical mineralogy, the determination of the refractive indices of a mineral by matching them with liquids of known refractive index. See also: [index of refraction](#)

immersion objective

Oil-immersion lens used in microscopy to help concentrate light on the object under examination. *Pryor, 3*

imminent danger

The existence of any condition or practice that could reasonably be expected to cause death or serious physical harm before such condition or practice can be abated.

immiscible

Said of two or more phases that, at mutual equilibrium, cannot dissolve completely in one another; e.g., oil and water. *AGI*

impact

Collision between bodies, the velocity of one or both being changed. In direct impact, the velocity of the moving bodies is perpendicular to the bodies at the point of contact. The impact coefficient, known as the coefficient of restriction, is the ratio of the

differences of velocities of the two bodies after impact to the same differences before impact. *Hammond*

impact breakers

The impact breaker or double impeller breaker uses the energy contained in falling stone, plus the power imparted by the massive impellers for complete stone reduction. *Pit and Quarry*

impact cast

Cast of marking produced by object striking the mud bottom. The steeply raised end of impact casts are always oriented downcurrent. Syn: [prod mark](#); [prod cast](#). See also: [bounce cast](#)

impact crusher

Machine in which material is broken by sharp blows. See also: [hammermill](#)

impact factor

The factor of from 1 to 2 by which the weight of a moving load is multiplied to calculate its full effect on the structural design of a floor or bridge. *Hammond*

impact glass

See: [impactite](#)

impact grinding

Shattering of particles by direct fall upon them of crushing bodies or the use of a device that vibrates a metal object such as a shutter box.

impactite

a. A vesicular, glassy to finely crystalline material produced by fusion or partial fusion of target rock by the heat generated from the impact of a large meteorite, and occurring in and around the resulting crater, typically as individual bodies composed of mixtures of melt and rock fragments, often with traces of meteoritic material; a rock from a presumed impact site. Syn: [impact slag](#); [impact glass](#). *AGI* b. A term used incorrectly for any shock-metamorphosed rock. *AGI*

impact loss

The head lost as a result of the impact of particles of water; included in and scarcely distinguishable from eddy loss. *Seelye, 1*

impact mill

A crushing unit in which a rapidly moving rotor projects the charged material against steel plates; impact mills find use in the size reduction of such materials as coal, feldspar, perlite, etc. CF: [disintegrator](#); hammermill. *Dodd*

impact screen

One in which the loaded screen is so suspended that it can be caused to swing or rock forward until it is abruptly checked on hitting a stop. *Pryor, 3*

impact sensitivity

Sensitivity of an explosive to detonate when impacted. See: [fallhammer test](#)

impact slag

Glassy material produced mainly by the melting of local sediment or rock where a meteorite has struck the earth. See also: [impactite](#)

impalpable

Extremely fine, so that no grains or grit can be felt. *Webster 3rd*

impedance

The complex ratio of voltage to current in an electrical circuit, or the complex ratio of electric-field intensity to magnetic-field intensity in an electromagnetic field. It is the reciprocal of admittance. See also: [acoustic impedance](#)

imperfect combustion

A term meaning that not all of the fuel is oxidized to its highest degree; e.g., if carbon monoxide is formed instead of carbon dioxide. CF: [incomplete combustion](#)

imperial jade

A high-quality, semitransparent variety of jadeite. *Hess*

Imperial screen

An oscillating or vibrating screen on which the ore is thrown upward, as well as moved forward on the screen. *Liddell*

impermeable

Said of a rock that does not permit the passage of fluids under the pressure conditions ordinarily found in the subsurface. Ant: permeable. Syn: [impervious](#)

impervious

See: [impermeable](#)

impinger

Dust-sampling apparatus into which a measured volume of dusty mine air is drawn through a jet in such a way as to strike a wetted glass plate, to which dust particles adhere. *Pryor, 3*

implosion

A bursting inward; sudden collapse; opposite of explosion. *Standard, 2*

impound

a. A reservoir for impounding. Used in connection with the storage of tailings from ore-dressing plants and hydraulic mines. *Webster 3rd* b. To collect in a reservoir or sump provided near a borehole the water, drill cuttings, etc., ejected therefrom. *Long*

impounding dam

One in which tailings are collected and settled; also, a water-storage dam. *Pryor, 3*

impregnated

a. Said of a mineral deposit (esp. of metals) in which the minerals are epigenetic and diffused in the host rock. CF: [interstitial](#) b. Said of timber that has been soaked in various fluids to enable it better to resist the decomposing influences of the atmosphere. *Crispin* c. A metallic material in which fragments of diamond or other hard substances (in unflocculated distribution) are intermixed and embedded. See also: [impregnated bit](#)

impregnated bit

A sintered, powder-metal matrix bit with fragmented bort or whole diamonds of selected screen sizes uniformly distributed throughout the entire crown section. As the matrix

wears down, new, sharp diamond points are exposed; hence, the bit is used until the crown is consumed entirely. CF: [multilayer bit](#)

impregnated timber

Timber that has been treated either to make it flame resistant or to protect it from destruction by fungi and insects. Cover boards used with steel arches are often vacuum-pressure impregnated with a flame-retardant preservative for safety and to comply with the flame-proofing requirements covering escape roadways. *Nelson*

impression block

A bell-shaped or hollow, tubular device filled with wax or other water-resistant plastic materials, which is lowered onto an article resting on the bottom of a borehole. The plastic material molds itself about the lost article, and by inspecting the impression so formed, the driller can determine which fishing tool is best fitted to recover the lost article. *Long*

improper

In crystallography, any element or operation of symmetry involving a mirror or inversion resulting in a change of chirality of an asymmetric unit. CF: [chirality](#); [proper](#).

improved dial

A miner's dial in which a telescope replaces the usual sighting vanes. *BS, 7*

Improved paragon

Trade name for nonrotating wire rope of 18 by 4 over 3 by 24 construction. *Hammond*

impulse turbine

a. A water turbine, such as the Pelton wheel, in which the driving force is provided more by the speed of the water than by a fall in its pressure. See also: [Pelton wheel](#) b. A turbine in which the steam is expanded in a series of stationary nozzles that it leaves at a very high velocity, perhaps 4,000 ft/s (1.2 km/s), and then gives up its kinetic energy to blades or buckets attached to the revolving disk that furnishes the power. *Mason*

impurity

Any undesirable substance not normally present in air, water, coal, or other materials or present in an excessive amount. Syn: [contaminant](#)

inby

a. Eng. Toward the working face, or interior, of the mine; away from the shaft or entrance; from Newcastle coalfield. Also called in-over; inbye; inbyeside. *Fay* b. In a direction toward the face of the entry from the point indicated as the base or starting point. *Rice, 1* c. The direction from a haulage way to a working face. *CTD* d. Opposite of outby. *BCI*

incandescent

Made luminous by heat; white or glowing with heat. *Standard, 2*

incarbonization

See: [coalification](#)

incendivity

The property of an igniting agent (e.g., spark, flame, or hot solid) whereby the agent can cause ignition. *Atlas*

inches of pressure

The height in inches of a column of water or of mercury as a measure of hydrostatic pressure. *Standard, 2*

inching starter

In one form, electrical gear that allows power to be applied gently to a stationary ball mill so as to avoid a high starting strain. The mill is said to be inched over as it begins slowly to rotate. *Pryor, 3*

inch of water

A unit of pressure equivalent to 0.036136 psi (248.84 Pa). *Hartman, 1*

inch pennyweights

In valuation of gold lodes, the product of the width of the exposure of ore, measured normal to the containing host rock, and the assay value in pennyweights of a true sample of the ore, cut evenly along the measured line. In evaluation of ore tonnages in base-metal mining, the equivalent measurement is the assay-foot or similar convenient combination across the exposed lode. Abbrev., in. dwt. *Pryor, 3*

inch-pound

The work done in raising 1 lb, 1 in (0.179 kg, 1 cm); a unit of work or of energy. Abbrev., in.lb. *Standard*, 2

incidence rate

a. The rate of occurrence of accidents as determined by multiplying the actual number of injuries in any given period by 200,000 and dividing the product by the number of man-hours exposure. Syn: [frequency rate](#) *CFR*, 1 b. A statistic used by the mining industries to measure safety performance and compare the performance of different groups or employers. The formula for determining the rate is: the number of injuries or illnesses times 200,000 h divided by employee hours worked. The 200,000 hours represents 100 employees working 40 h/wk and 50 wk/yr. This number keeps the value that results from the formula small. The number of employee hours comes from company records. They represent hours worked; not vacation, sick leave, or holiday time. *Brauer*

incidental vein

A vein discovered after the original vein on which a claim is based. *AGI*

inclination

a. The angular dip of a vein, a bed, etc., measured in degrees from the horizontal plane. *Fay* b. Angle between the direction of the magnetic field and the horizontal plane. Syn: [declination](#)

inclinometer

Instrument to determine the inclination of the magnetic field. *Schieferdecker*

incline

a. A shaft not vertical; usually on the dip of a vein. See also: [slope](#) *Fay* b. Any inclined plane, whether above or beneath the surface; usually applied to self-acting planes above ground, as in the bituminous coalfields. *Fay* c. In mines, an inclined drift driven upwards at an angle from the horizontal. *Fraenkel* d. A sloping tunnel along which rails are laid from one level to another; a mechanically worked inclined haulageway in a coal mine. *CTD* e. A slanting shaft. *Gordon* f. An opening driven up or down the pitch. Syn: [inclined shaft](#) *Hudson*

incline bogie

Scot. A wheeled carriage for inclines, constructed with a horizontal platform so that cars can be run on it and be conveyed up and down the incline or slope. *Fay*

inclined bedded formation

Any bedded formation of rock where the dip of the bedding planes is greater than 10 degrees .

inclined bedding

A type of bedding appearing commonly in sandy deposits; the strata, essentially intraformational, dip in the direction of the current flow. Syn: [crossbedding](#); [cross lamination](#); [current bedding](#). *AGI*

inclined borehole

A borehole drilled at an angle from the vertical not exceeding 45 degrees. The drilling technique is called angle drilling. *Nelson*

inclined cableway

A monocable cableway in which the track cable has a slope of about 1 in 4 over its whole length, sufficiently steep to allow the carrier to run down under its own weight. *Hammond*

inclined drilling

Drilling blastholes at an angle from the vertical. Also called angle drilling. *Woodruff*

inclined extinction

Alignment of optical extinction at some angle other than 0 degrees , 45 degrees , or 90 degrees to a crystal face or cleavage trace. CF: [extinction](#); [extinction angle](#).

inclined fold

A fold, the axial plane of which is not vertical. *AGI*

inclined gage

A common type of gage used with the pitot tube. A straight glass tube with connections at each end is mounted in an inclined position on an aluminum frame, and a scale is placed under the tube. In place of water, a colored oil is used, and the scale is graduated to read directly in inches of water. *Lewis*

inclined magnetic polarization

The inclination angle of the geomagnetic field.

inclined plane

a. A natural or artificial slope used for facilitating the ascent, descent, or transfer from one level to another of vehicles or other objects. See also: [incline](#) b. A slope used to change the direction and speed-power ratio of a force. *Nichols, I*

inclined polarization

Polarization that is inclined to the linear dimensions of a magnetized body, or to the plumb line or the horizon. *AGI*

inclined railroad operator

See: [inclined railway operator](#)

inclined railway operator

In metal mining, one who operates the machinery that drives the haulage cable along a power incline railway used for hauling cars, supplies, workers, and materials to and from one level to another on a steep slope. Also called inclined railroad operator; tramway operator. *DOT*

inclined shaft

See: [incline](#)

inclined traverser

A traverser that moves mine cars laterally and vertically by traveling on an inclined plane. It is sometimes used at the pit bottom for the transfer of cars from a higher decking level to a lower decking level on the opposite side rail track. The cars are held upright in a frame and can handle loaded or empty cars to and from the two levels. See also: [traverser](#)

inclined water gage

A sensitive form of water gage, giving readings of greater accuracy. It is used mainly for ventilation surveys. See also: [water gage](#) *Nelson*

incline engine

A stationary haulage engine at the top of an incline. *CTD*

incline hole

See: [angle hole](#)

incline man

In mining, a laborer who controls the movement of cars on a self-acting incline (loaded car going down one track pulls empty cars up on other), hooking cable to loaded or empty cars, starting them down the incline, and applying brake to cable drum by a lever to control their speed of descent. Also called dilly boy; drum runner; monitor operator; plane man; wheel runner; jinnier. *DOT*

incline repairman

In mining, a person who oils, greases, repairs, and replaces pulleys or rollers which support the cable on a haulage slope or plane (incline) underground and at the mine surface. Also called roley man. Syn: [incline trackman](#)

incline shaft

A shaft sunk at an inclination from the vertical, usually following the dip of a lode. See also: [turned vertical shaft](#); [underlay shaft](#). *Nelson*

incline trackman

See: [incline repairman](#)

inclinometer

a. An instrument for measuring the inclination or slope, as of the ground, Syn: [clinometer](#) b. Any of various instruments for measuring the departure of a drill hole from the vertical; a driftmeter. *AGI* c. An instrument that measures magnetic inclination. *AGI*

included angle

Either of the two angles formed at the station by the intersection of the two survey lines. *Mason*

inclusion

a. Any size fragment of another rock enclosed in an igneous rock. Syn: [xenolith](#) b. A particle of nonmetallic material retained in a solid metal or alloy. Such inclusions are generally oxides, sulfides, or silicates of the host metal, but may also be particles of refractory materials picked up from a furnace or ladle lining. c. A crystal, aggregate, or minute cavity filled with one or two fluid phases and with or without a crystal phase enclosed in a host crystal. See also: [fluid inclusion](#); [three-phase inclusion](#); [negative crystal](#).

inclusions

a. A term applied to crystals and anhedral of one mineral involved in another; and to fragments of one rock included in another, as when a volcanic flow picks up portions of its conduit. b. Particles of foreign matter, solid, liquid, or gaseous, enclosed within a gem stone. The nature of such inclusions provides a powerful clue to the origin of a stone and enables natural stones to be distinguished from their synthetic counterparts. *Anderson*

incohalation

a. The process of coal formation that begins after peat formation is completed without there being any sharp boundary between the two processes. From the German *inkohlung*. *AGI* b. See: [coalification](#)

incoherent

a. Said of a rock or deposit that is loose or unconsolidated. *AGI* b. Said of electromagnetic radiation (EMR) having a broad spectrum of frequencies; e.g., incoherent (sunlight) EMR vs. coherent (laser) EMR. *AGI*

incombustible

a. Applies to substances that will not burn. *Mersereau, 2* b. Any building material that contains no matter subject to rapid oxidation within the temperature limits of a standard fire test of not less than 2-h duration. Materials that continue to burn after this time period are termed combustible. *ACSG, 1* c. See: [noncombustible](#)

incompetent

a. Applied to strata, a formation, a rock, or a rock structure not combining sufficient firmness and flexibility to transmit a thrust and to lift a load by bending; consequently, admitting only the deformation of flowage. See also: [competent](#) b. Soft or fragmented rocks in which an opening, such as a borehole or an underground working place, cannot be maintained unless artificially supported by casing, cementing, or timbering. *Long*

incompetent bed

A bed that, in a particular case of folding, has yielded to the lateral pressure by plastic adjustment and flow. This may result in the bedding being thrown into complex structures or in the development of more regular internal structures, particularly drag folds and fracture cleavage. The bed tends to thicken toward the hinges, and to thin in the limbs, of the folds. See also: [competent bed](#)

incompetent folding

See: [flow folding](#)

incomplete combustion

A term applied to combustion in which all of the fuel is not burned; e.g., leaving unburned carbon in ashes. CF: [imperfect combustion](#) *Newton, 1*

incongruent melting

a. Melting accompanied by decomposition or by reaction with the liquid, so that one solid phase is converted into another; melting to give a liquid different in composition from the original solid. An example is orthoclase melting incongruently to give leucite and a liquid richer in silica than the original orthoclase. CF: [congruent melting](#) b. A crystalline compound that dissociates into another compound and a melt of different composition upon heating. CF: [congruent melting](#)

incorporation

A process by which material contributing to coal formation responds to diagenetic and metamorphic agencies of coalification and becomes a part of the coal without undergoing any material modification. See also: [coalification](#)

increment

The quantity of coal or coke taken by a single sweep of the sampling instrument. *BS, 2*

incrop

A former outcrop concealed by or buried beneath younger unconformable strata. *AGI*

incrustation

See: [encrustation](#)

independent subsidence

The condition in sedimentation in which each floc or particle settles freely; i.e., its movement is not influenced in any way by other flocs or particles in suspension. *Mitchell*

independent wire rope core

This core may be 6 by 7, 7 by 7, 6 by 19, or 7 by 19 (number of strands laid together and ropes twisted together) construction, and the individual wires shall be of an appropriate grade of steel in accordance with the best practice and design, either bright (uncoated), galvanized, or drawn galvanized wire. See also: [wire-strand core](#)

inderborite

Hydrous calcium and magnesium borate mineral, $\text{CaMg}[\text{B}_3\text{O}_3(\text{OH})_5]_2 \cdot 6\text{H}_2\text{O}$, as monoclinic crystals from the Inder borate deposits, Kazakhstan. Named from locality. See also: [metahydroboracite](#)

inderite

A monoclinic mineral, $\text{MgB}_3\text{O}_3(\text{OH})_5 \cdot 5\text{H}_2\text{O}$; forms nodular aggregates or acicular crystals; named from the locality, Inder, Kazakhstan.

index bed

See: [key bed](#)

index contour

A contour line shown on a map in a distinctive manner for ease of identification, being printed more heavily than other contour lines and generally labeled with a value (such as figure of elevation) along its course. It appears at regular intervals, such as every fifth or sometimes every fourth contour line (depending on the contour interval). Syn: [accented contour](#)

index fossil

A fossil that, because of its wide geographic distribution and restricted time range, can be used to identify and date the strata in which it occurs. CF: [guide fossil](#)

index horizon

A structural surface used as a reference in analyzing the geologic structure of an area. *AGI*

index mineral

A mineral developed under a particular set of temperature and pressure conditions, thus characterizing a particular degree of metamorphism. When dealing with progressive metamorphism, it is a mineral whose first appearance (in passing from low to higher grades of metamorphism) marks the outer limit of the zone in question. CF: [typomorphic mineral](#) *AGI*

index of liquidity

This is found by the formula: $\frac{\text{water content of test sample} - \text{water content at plastic limit}}{\text{index of plasticity}}$. This gives a value of 100% for clay at the liquid limit, and zero at the plastic limit, and is the reverse of the consistency index. *Hammond*

index of plasticity

The difference between the water content of clay at its liquid and plastic limits, showing the range of water contents over which the clay is plastic. *Hammond*

index of refraction

A number n found by dividing the velocity of light in a vacuum c by the velocity of light in a transparent substance. Isometric crystals are isotropic and have one index of refraction; all other symmetries are anisotropic. Hexagonal, trigonal, and tetragonal crystals have two principal indices; orthorhombic, monoclinic, and triclinic crystals have three principal indices. Determination of indices of refraction of a mineral is a major means of mineral identification. See also: [dispersion](#); interference. Syn: [immersion method](#); [optical mineralogy](#); refractive index. CF: [transmitted light](#)

index properties

Properties that can be used to identify the soil type. The properties are of two kinds: (1) soil grain properties and (2) soil aggregate properties. *Nelson*

index property tests

Tests to determine index properties that in turn serve to identify the soil type and indicate its consistency. *Nelson*

indialite

A hexagonal mineral, $Mg_2 Al_4 Si_5 O_{18}$; the high-temperature polymorph of cordierite; in sediments fused by a burning coal seam in India. Named for the locality.

Indian-cut

A style of diamond cutting, usually of Indian or other Oriental origin, in which the table is usually double the size of the culet; such stones are generally recut for European or American requirements. *Hess*

Indian jade

Aventurine quartz containing inclusions of chromian muscovite. Syn: [regal jade](#)

Indian title

An Indian's right to occupancy of land, and that right recognized by the United States, constitutes Indian title. *Ricketts*

India steel

A fine natural steel from southern India made directly from the ore; wootz.

indicated ore

Ore for which tonnage and grade are computed from information similar to that used for measured resources, but the sites for inspection, measurement, and sampling are farther apart or otherwise less adequately spaced. The degree of assurance is high enough to assume continuity between points of observation. *USGS, 2*

indicated resources

Resources from which the quantity and grade and/or quality are computed from information similar to that used for measured resources, but the sites for inspection, sampling, and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for measured resources, is high enough to assume continuity between points of observation. *USGS, 2*

indicator

a. A geologic or other feature that suggests the presence of a mineral deposit, such as a geochemical anomaly, a carbonaceous shale indicative of coal, or a pyrite-bearing bed that may lead to gold ore at its intersection with a quartz vein. A plant or animal peculiar to a specific environment, which can therefore be used to identify that environment. See also: [pencil mark](#) b. See: [marker bed](#); marker. *Long*

indicator plant

a. Some plants develop peculiar diagnostic symptoms that can be interpreted directly in terms of probable excesses of a particular element in the soil. Geobotanical indicators are either plant species or characteristic variations in the growth habits of plant species that are restricted in their distribution to rocks or soils of definite physical or chemical properties. They have been used in locating and mapping ground water, saline deposits, hydrocarbons, and rock types, as well as ores. *Hawkes, 2* b. A plant whose occurrence is broadly indicative of the soil of an area; e.g., its salinity or alkalinity, level of zone of saturation, and other soil conditions. *AGI*

indicator vein

A vein that is not metalliferous itself, but may lead to an ore deposit.

indices of a crystal face

The numbers that define the position of a crystal face in space with reference to crystallographic axes. Miller and Bravais-Miller indices, those in current use, are the reciprocals, cleared of fractions, of the intercepts the face makes with the crystallographic axes. Syn: [Miller indices](#)

indicolite

A blue variety of elbaite tourmaline.

indigenous limonite

Sulfide-derived limonite that remains fixed at the site of the parent sulfide, often as boxworks or other encrustation. CF: [exotic limonite](#); relief limonite. *AGI*

indigo copper

See: [covellite](#); copper sulfide.

indirect flushing

Flushing in which the water enters the borehole around the rod and issues upwards through the rod. *Stoces*

indirect initiation

See: [inverse initiation](#)

indirect priming

Placement of the blasting cap in the first cartridge going into the borehole with the business end pointing toward the collar. Recommended method of priming charges of permissible dynamite.

indite

An isometric mineral, FeIn_2S_4 ; linnaeite group; in minute iron-black grains in cassiterite from the Dzhalind deposit, Little Khingan ridge, the former U.S.S.R.

indium

a. A tetragonal mineral. Symbol, In; native; metallic silvery white; sp gr, 7.31; in meteorites and as a trace constituent in the minerals of other metals, principally zinc, lead, tin, tungsten, and iron minerals; principal source is sphalerite concentrates that may contain up to 10,000 ppm. b. Used in making bearing alloys, germanium transistors, rectifiers, thermistors, and photoconductors. *Handbook of Chemistry and Physics*, 3

individually screened trailing cable

A trailing cable with a screen of metallic covering over each power conductor. This is the type now adopted in British coal mines. See also: [trailing cable](#)

individual reduction ratio

In crushing practice, this term may be expressed as: Size most abundant in feed/mean size of grading band concerned. *South Australia*

indoor catches

Beams that catch the walking beam of the Cornish pump or engine on its down piston stroke if the string of tools being moved should break. The indoor stroke is the lifting stroke of such a pump. *Pryor, 3*

indoor stroke

Eng. That stroke of a Cornish pump that lifts the water at the bottom or drawing lift.

indraft

The act of drawing in, or that which is drawn in; an inward flow; such as an indraft of air. *Standard, 2*

induced breaks

The fine breaks or cracks that occur in the nether roof of a coal seam following the holing of the coal or its removal, and having the same general direction as that of the coal face itself. *TIME*

induced bursts

Rock bursts caused by stoping operations to distinguish them from development bursts, which are called inherent. *Spalding*

induced caving

In the block caving mining method, the ore zone is undercut until the ore material breaks apart and falls under gravity load into draw points. If the ore zone is reluctant to fall under gravity loading, the fall is sometimes induced with explosives set in boreholes drilled into the orebody. This induced caving is generally accomplished from drifts above the ore zone. *SME, 1*

induced cleavage

See: [induced fracture](#)

induced current

See: [induction](#)

induced fracture

Fracture formed in a roof bed as a result of mining operations. For example, on longwall faces fractures are formed in a shale roof parallel to and along successive lines of face. They are induced after coal cutting and become intensified at the end of the loading shift. The distance between the fractures coincides, roughly, with the depth of cut. See also: [break](#)

induced magnetization

The magnetic field spontaneously induced in a volume of rock by the uniform action of an applied field. Its direction and magnitude are parallel and proportional, respectively, to the applied field. In the absence of remanent magnetization, induced magnetization is the magnetic moment per unit volume. See also: [remanent magnetization](#)

induced polarization

The production of a double layer of charge at a mineral interface, or production of changes in double-layer density of charge, brought about by application of an electric or magnetic field (induced electrical or magnetic polarization). Induced electrical polarization is manifested either by a decay of voltage in the Earth following the cessation of an excitation current pulse, or by a frequency dependence of the apparent resistivity of the Earth. Abbrev: IP. *AGI*

induction

The production of magnetization or electrification in a body by the mere proximity of magnetized or electrified bodies, or of an electric current in a conductor by the variation of the magnetic field in its vicinity. Syn: [induced current](#)

induction balance

An apparatus for measuring changes of conductivity, detecting the proximity of metallic bodies, etc., by noting extremely minute changes in an electric current. *Standard, 2*

induction furnace

An alternating-current electric furnace in which the primary conductor is coiled and generates, by electromagnetic induction, a secondary current that develops heat within the metal charge. *ASM, 1*

induction hardening

Quench hardening in which the heat is generated by electrical induction. *ASM, 1*

induction log

A continuous record of the conductivity of strata traversed by a borehole as a function of depth.

induction period

A term used with reference to instantaneous caps to describe the time between the bridge break and the detonation of the base charge. *Streefkerk*

induction time

The interval between the bursting and lag times of a detonator. *BS, 12*

inductively coupled plasma spectroscopy

An atomic emission spectroscopy analytical technique where liquid solutions are passed through a quartz tube surrounded by a high-frequency induction coil for heating the sample to high temperatures. It is an important method for measuring trace element concentrations.

inductive method

An electrical exploration method in which electric current is introduced into the ground by means of electromagnetic induction and in which the magnetic field associated with the current is determined. *AGI*

indurated

Said of a rock or soil hardened or consolidated by pressure, cementation, or heat. *AGI*

induration

a. The hardening of a rock or rock material by heat, pressure, or the introduction of cementing material; esp. the process by which relatively consolidated rock is made harder or more compact. See also: [lithification](#) b. The hardening of a soil horizon by chemical action to form a hardpan. *AGI*

industrial calorific value

The calorific value obtained when coal is burned under a boiler. *Kentucky*

industrial degree-day

A degree-day unit based on a (usually) 45 degrees F or 55 degrees F (7.2 degrees C or 12.9 degrees C) mean daily temperature so as to be applicable to industrial buildings maintained at relatively low temperatures. *Strock, 2*

industrial diamonds

a. Crystalline and/or cryptocrystalline diamonds having color, shape, size, crystal form, imperfections, or other physical characteristics that make them unfit for use as gems. Industrial diamonds usually are grouped as toolstones, drill diamonds, fragmented bort, ballas, and carbons. Also called industrials; industrial stones. See also: [diamond](#) b. Impure diamond used in borehole drilling and the grinding industry. Also called black diamond; bort; boart; carbonado. *Pryor, 3*

industrial minerals

Rocks and minerals not produced as sources of the metals, but excluding mineral fuels. See also: [non-metallic minerals](#)

inequigranular

See: [heterogranular](#)

inequilibrium

Uranium is soluble in acid waters and tends to be removed in solution, but radium is much less soluble and its compounds tend to remain behind in the leached outcrop. Therefore, the outcrop may be radioactive due to the presence of the gamma-emitting elements RaC and RaD, even though much of the uranium has been lost in solution. In this case a radiometric assay may indicate a high counter reading, but the uranium content may be low. Uranium minerals deposited less than a million years ago may be in inequilibrium because daughter products have not accumulated in their equilibrium amounts. Hence, counter readings may indicate less uranium than is actually present. See also: [radiometric assay](#)

inert anode

An anode that is insoluble in the electrolyte under the conditions obtained in the electrolysis. *Lowenheim*

inert dust

a. Any dust that contains only a small amount of combustible material. *Rice, 1* b. Dust that has no harmful effect. *Hartman, 1*

inert gas

a. A gas that is normally chemically inactive, esp. in not supporting combustion. *Webster 3rd* b. One of the helium group of gases comprising helium, neon, argon, krypton, xenon, and sometimes radon. Also called a noble gas; a rare gas. *Webster 3rd*

inertia

The reluctance of a body to change its state of rest or of uniform velocity in a straight line. Inertia is measured by mass when linear velocities and accelerations are considered and by moment of inertia for angular motions (that is, rotations about an axis). *CTD*

inertinite

A coal maceral group including micrinite, macrinite, sclerotinite, fusinite, semifusinite, and inertodetrinite. They are characterized by a relatively high carbon content and a reflectance higher than that of vitrinite. They are relatively inert during the carbonization process. Syn: [inerts](#)

inert primer

A cylinder of inert material that enshrouds a detonator, but that does not interfere with the detonation of the explosive charge. *BS, 12*

inerts

Constituents of a coal that decrease its efficiency in use; e.g., mineral matter (ash) and moisture in fuel for combustion or fusain in coal for carbonization. Syn: [inertinite](#)

inesite

A triclinic mineral, $\text{Ca}_2 \text{Mn}_7 \text{Si}_{10} \text{O}_{28} (\text{OH})_2 \cdot 5\text{H}_2 \text{O}$; forms small prismatic crystals, fibers, or radial aggregates; associated with some manganese deposits; although related to zeolites, contains no aluminum.

infective jaundice

Mine workers served by drifts and adits are subject to occasional attacks of this disease, which is often fatal. It is caused by a micro-organism, the principal carrier of which is the sewer rat. If the skin is scratched, the germ can enter the bloodstream of the miner.

Preventive measures include clearing up of all stores, food, and other waste to deprive the rats of food and of a systematic extermination by a pest control officer. Also known as Weil's disease. See also: [mining disease](#) *Sinclair, 1*

inferred ore

Ore for which estimates are based on an assumed continuity beyond measured and/or indicated ore. Inferred resources may or may not be supported by samples or measurements.

inferred reserve base

The in-place part of an identified resource from which inferred reserves are estimated. Quantitative estimates are based largely on knowledge of the geologic character of a deposit for which there may be no samples or measurements. The estimates are based on an assumed continuity beyond the reserve base, for which there is geologic evidence. *USGS, 2*

inferred resources

Resources from which estimates are based on an assumed continuity beyond measured and/or indicated resources, for which there is geologic evidence. Inferred resources may or may not be supported by samples or measurements. *USGS, 2*

infilling

a. Material used for filling in; filling. *Standard, 2* b. Material, such as hardcore, used for making up levels; e.g., under floors. *CTD*

infiltration

The flow of a fluid into a solid substance through pores or small openings; specif. the movement of water into soil or porous rock. CF: [percolation](#)

infiltration vein

An interstitial mineral deposit formed by the action of percolating waters. CF: [segregated vein](#)

inflammable cinnabar

See: [idrialite](#)

inflatable seal

A seal made from polyvinyl chloride reinforced with glass fiber. It is inflated by compressed air and can cover or seal roadways up to 12 ft wide and 10 ft in height (about 4 m wide and 3 m in height). It is used to isolate a fire, or heating, and reduce the volume of smoke and gases so that erection of stoppings can proceed in respirable air without workers being hampered by breathing apparatus. *Nelson*

inflation

See: [tumesence](#)

influence line

An influence line usually pertains to a particular section of a beam, and is a curve so drawn that its ordinate at any point represents the value of the reaction, vertical shear, bending moment, or deflection produced at the particular section by a unit load applied at the point where the ordinate is measured. An influence line may be used to show the effect of load position on any quantity dependent thereon, such as the stress in a given truss member, the deflection of a truss, the twisting moment in a shaft, etc. *Roark*

in fork

a. Eng. When pumps are working after the water has receded below some of the holes of the windbore, they are said to be in fork. b. Of mine pumps, sucking air and water. *Pryor, 3*

infrared

Pertaining to or designating that part of the electromagnetic spectrum ranging in wavelength from 0.7 μm to about 1 mm. CF: [visible light](#) *AGI*

infrared gas analyzer

An instrument used for routine gas analysis for the determination of methane and other gases. The results are accurate to 0.1%. *Sinclair, 1*

infrared photography

This technique is employed in air survey during misty weather, using special film that is more sensitive to infrared rays than to light rays. See also: [photogrammetry](#)

infrasizer

An apparatus for sizing air elutriation of very fine particles. See also: [air classification](#)

infrastructure

a. Structure produced at a deep crustal level, in a plutonic environment, under conditions of elevated temperature and pressure, which is characterized by plastic folding, and the emplacement of granite and other migmatitic and magmatic rocks. This environment occurs in the internal parts of most orogenic belts, but the term is used esp. where the infrastructure contrasts with an overlying, less disturbed layer, or superstructure. *AGI* b. The basic facilities, equipment, roads, and installations needed for the functioning of a system. *AGI*

infusible

Said of a mineral crystal or fragment that will not melt in the hottest flame produced by a hand-held blowpipe or blowtorch, i.e., around 1,500 degrees C. The bronzite variety of pyroxene, e.g., has a melt point of approx. 1,400 degrees C and is said to be practically infusible; quartz, with a melt point of about 1,710 degrees C, is infusible.

infusion gun

See: [water infusion gun](#)

infusion shot firing

A technique of shot firing in which an explosive charge is fired in a shothole, which is filled with water under pressure and in which the strata around the shothole have been infused with water. *BS, 12*

infusorial earth

An obsolete syn. of diatomite. Syn: [infusorial silica](#)

infusorial silica

See: [infusorial earth](#)

ingate

The point of entrance from a shaft to a level in a coal mine. See also: [inset](#)

ingot

a. A mass of cast metal as it comes from a mold or crucible; specif., a bar of gold or silver for assaying, coining, or export. CF: [pig Standard, 2](#) b. A mold in which an ingot may be cast. *Standard, 2* c. A casting suitable for working or remelting. *ASM, 1*

ingot header

In ore dressing, smelting, and refining, one who pours molten aluminum, copper, or other nonferrous metals into solidifying ingots to compensate for shrinkage that occurs when ingots cool in their molds. Also called billet header; casting header; header; ingot pipe filler; pipe-out man. *DOT*

ingot iron

Iron of comparatively high purity, produced, in the same way as steel, in the open-hearth furnace, but under conditions that keep down the carbon, manganese, and silicon content. See also: [iron](#) *CTD*

ingotism

A defect common to almost all metal ingots in which metal crystals (dendrites) tend to grow at right angles to the walls of the mold and form planes of weakness at their junctions; these make the ingot tender and it tends to tear apart when rolled. *Newton, 1*

ingot mold

The mold or container in which molten metal is cast and allowed to solidify in order to form an ingot. *CTD*

ingot pitch

The chemical condition in which metal is fit to be cast into ingots. *Standard, 2*

ingot saw

A saw that is run at a high rate of speed and has a fusing action at its cutting edge; used in cutting hot ingots. *Standard, 2*

ingot structure

The general arrangement of crystals in an ingot, which consists typically of chill, columnar, and equiaxed crystals. According to the relations between the mass and the temperature of the molten metal and mold, respectively, one or two types of crystals may be absent. *CTD*

ingredient

The primary and higher order reactants of the resins and the chemical constituents of the molding compound, such as plasticizer, lubricant, solvent, catalyst, stabilizer, fire retardant, hardener, and coloring material.

ingress

a. A place for entering; a way of entrance. *Webster 2nd* b. In underground bituminous mining there are three methods of ingress--by drift, shaft, or slope. Drift mines are opened by driving horizontally from the side of an elevation into the seam; shaft mines by sinking a vertical shaft through the overlying strata into the seam; and slope mines by driving an inclined entry through the overlying strata through the surface into the seam. *BCI*

inhabited building

(As in the American Table of Distances for storage of explosives). A building regularly used in whole or in part as a habitation for human beings, or any church, schoolhouse, railroad station, store, or other structure where people are accustomed to assemble, except any building or structure occupied in connection with the manufacture, transportation, storage, or use of explosive materials. *Cote*

inhaul cable

In a cable excavator, the line that pulls the bucket to dig and bring in soil. Also called digging line. *Nichols, 1*

inherent ash

Widely used to designate the part of the ash content of a coal that is structurally part of the coal itself and cannot be separated from it by any mechanical means, usually amounts to about 1%. Also called dirt; fixed ash; constitutional ash. Opposite of free ash. See also: [ash](#); [ash yield](#); extraneous ash. *Mitchell; Pryor, 3*

inherent floatability

Property considered by some physicists to be possessed by certain naturally occurring minerals, which readily respond without pretreatment to levitation by the froth-flotation process; by other workers considered due to slight surficial contamination during mining and transport. *Pryor, 3*

inherent mineral matter

The portion of the mineral matter of coal organically combined with the coal. It contains elements that have been assimilated by the living plant, such as iron, phosphorus, sulfur, calcium, potassium, and magnesium. *AGI*

inherent moisture

a. In general, the moisture that is present in the coal in the bed. *Mitchell* b. Of coal, that remaining after natural drying in air. *Pryor, 3* c. Maximum moisture that a sample of

coal will hold at 100% humidity and atmospheric pressure. *Bennett* d. See: [moisture content](#)

inherited structure

An original structural feature of the country rock that has been faithfully preserved after replacement by ore. *Schieferdecker*

inhibitor

a. In drilling, a substance that, when added to cement, has the capacity to slow down or lengthen the normal time required for that specific cement to set; also, a substance added to drilling mud to check or slow down organic or chemical deterioration or change in the physical characteristics of the drilling mud. *Long* b. A substance that when present in an environment substantially decreases corrosion.

initial depression

The total water gage actually produced by a mine fan. See also: [theoretical depression](#)

initial dip

See: [original dip](#)

initial face

In quarrying, the face formed by the blasting of the slope. *Streefkerk*

initial impulse

See: [first arrival](#)

initiation

The process of causing a high explosive to detonate. The initiation of an explosive charge requires an initiating point, which is usually a primer and electric detonator, or a primer and a detonating cord or fuse. *Nelson*

initiator

A detonator or detonating cord used to start detonation or deflagration in an explosive material; can refer to a blasting cap or primer.

injected hole

A borehole into which a cement slurry or grout has been forced by high-pressure pumps and allowed to harden. *Long*

injection

a. The process of emplacement of magma in preexisting rocks; magmatic activity; also, the igneous rock mass so formed. b. The forcing, under abnormal pressure, of sedimentary material (downward, upward, or laterally) into a preexisting deposit or rock, either along some plane of weakness or into a crack or fissure, producing structures such as sandstone dikes. *AGI*

injection gneiss

A composite rock whose banding is wholly or partly caused by *lit-par-lit* injection of granitic magma into layered rock. See also: [composite gneiss](#)

injection metamorphism

Metamorphism accompanied by intimate injection of sheets and streaks of liquid magma (usually granitic) in zones near deep-seated intrusive contacts. CF: [plutonic metamorphism](#); [lit-par-lit](#). *AGI*

injection pressure

The total amount of pressure required to force a liquid or grout into cracks, cavities, and pores in rocks or other substance. *Long*

injector

a. Any apparatus used to force, under pressure, material into an opening in another material. *Long* b. A device used to force-feed water into a boiler by the direct action of steam. See also: [inspirator](#) c. Mechanism used for spraying fuel oil into the combustion-type engine or to spray a fine oil mist into a stream of air or steam. See also: [air mover](#)

inkstone

a. Native copperas (melanterite), or a stone containing it. Used in inkmaking. *Webster 2nd* b. A stone slab used in preparing India ink for use. *Webster 2nd*

inlier

An area or group of rocks surrounded by rocks of younger age; e.g., an eroded anticlinal crest. CF: [outlier](#)

in-line valve

A valve that proves the cage is in the correct position relative to the decking level. *Sinclair, 5*

inmost

Being at a point, place, or position farthest from the exterior; deepest within; innermost; such as, the inmost depths of a mine. *Standard, 2*

inner core

The central part of the Earth's core, extending from a depth of about 5,100 km to the center (6,371 km) of the Earth; its radius is about one-third of the whole core. The inner core is probably solid, as evidenced by the observation of S waves that are propagated in it, and because compressional waves travel noticeably faster through it than through the outer core. Density ranges from 10.5 to 15.5 g/cm³. It is equivalent to the G layer. CF: [outer core](#) *AGI*

inner mantle

The lower part of the mantle. *Schieferdecker*

innermost isoseismal

The isoseismal line surrounding the area experiencing the greatest damage to manmade structures during an earthquake.

inoculation

The addition of a material to molten metal to form nuclei for crystallization. *ASM, 1*

inorganic

Pertaining or relating to a compound that contains no carbon. CF: [organic](#)

in-over

See: [inby](#)

in-pit crusher

A crushing system that can be a fully mobile unit or a permanently fixed unit at the point of mining so that the mined material can be transported out of the pit by a conveyor system. *SME, 1*

inquartation

In bullion assay, dissolution of silver from associated gold by use of nitric acid. *Pryor, 3*

inrush of water

A sudden and often overwhelming flow of water into mine workings. Inrushes of water may be caused by striking unsuspected waterlogged old workings that possibly were shown inaccurately on the mine plans. Faults have also been responsible for serious inflows of water. A fault may retain large volumes of water above or at the same level as workings approaching it. It is usual to drive exploring headings in the direction of the suspected water danger. See also: [mud rush](#); [old working](#); [inundation](#); [stopping](#); tapping; tapping old workings; water inrush; waterlogged. *Nelson*

inselberg

A prominent isolated residual knob, hill, or small mountain rising abruptly from an extensive erosion surface in a hot, dry region (as in the deserts of southern Africa or Arabia), generally bare and rocky, although partly buried by the debris derived from its slopes. Etymol: German Inselberg, island mountain. CF: [monadnock](#)

insert

Formed pieces of sintered cobalt-tungsten carbide mixture (in which diamonds may be inset), brazed into slots or holes in drilling bits or into grooves on the outside surface of a reaming shell to act as cutting points, reaming surfaces, or wear-resistant pads or surfaces of reaming shells or outside surfaces of other pieces of drilling equipment or fittings. Also called inserts. See also: [insert bit](#); [insert set](#). CF: [slug](#)

insert bit

A bit into which inset cutting points of various preshaped pieces of hard metal (usually a sintered, tungsten carbide-cobalt powder alloy) are brazed or hand-peened into slots or holes cut or drilled into a blank bit. Hard-metal inserts may or may not contain diamonds. Also called slug bit. See also: [insert](#)

inserted rod-type pick

See: [sintered carbide-tipped pick](#)

insert reaming shell

A reaming shell, the reaming diamonds of which are inset in shaped, hard, metal plates brazed into grooves cut into the outside surface of the shell. *Long*

insert set

Bits or reaming shells set with inserts. See also: [insert](#)

inset

a. The entrance to underground roads from the shaft; a landing. See also: [ingate](#) b. See: [phenocryst](#) c. The opening from the mine shaft to a seam of coal. *CTD* d. A surface into which diamonds or other cutting points are embedded or set; also, the act or process of embedding such materials in a surface. *Long*

inside

A term often used to designate the interior of a mine. *Fay*

inside angling

See: [angling](#)

inside clearance

The difference between the outside diameter of a core and the inside diameter of the core-barrel parts through which the core passes or enters; also, the annular space between the inner and outer tubes in a double-tube core barrel. See also: [clearance](#)

inside face

That part of the bit crown nearest to and/or parallel with the inside wall of an annular or coring bit. *Long*

inside gage

The inside diameter of a bit as measured between the cutting points, such as between inset diamonds on the inside-wall surface of a core bit. *Long*

inside-gage stone

A diamond set in the inside-wall surface of the crown of a diamond core bit so that it cuts sufficient inside clearance to permit the core to pass through the bit shank and into the core barrel without binding. Syn: [inside kicker](#); [inside reamer](#); [inside stone](#). *Long*

inside-haulage engineer

In bituminous coal mining, one who operates a mine locomotive to haul trains of cars along underground haulageways in a mine. *DOT*

inside kicker

See: [inside-gage stone](#)

inside parting

A side track or parting some distance from the beginning of a long entry, at which cars are left by a gathering driver. Also called a swing parting. *Fay*

inside reamer

See: [inside-gage stone](#)

inside slope

a. A slope on which coal is raised from a lower to a higher entry, but not to the surface. *Fay* b. An inside slope is a passage in the mine driven through the seam by which coal is brought up from a lower level. *Korson*

inside stone

See: [inside-gage stone](#)

inside upset

A tubular piece having ends that are thickened for a short distance on the inside. See also: [upset](#)

inside work

a. The drilling of boreholes in underground workplaces; also applied to work done on the surface with the drill machine and tripod completely housed. *Long* b. Any work in the mines. Most commonly used in bituminous coal mining.

in situ

a. In the natural or original position. Applied to a rock, soil, or fossil occurring in the situation in which it was originally formed or deposited. See also: [place](#) b. Said of tests done on a rock or soil in place, as compared with collecting discrete samples for testing in the laboratory. c. See: [solution mining](#)

in situ autoclave

A six-sided in situ vat containing liquid or gas for ore treatment and recovery of mineral values requiring elevated temperatures and pressure, usually for long periods of time. *Lombardi*

in situ gasification

Process that can recover the energy of coal seams without the extensive use of traditional mining operations. The primary product brought from underground is hot fully combusted flue gas, 1,100 to 1,800 degrees F (approx. 600 to 1,000 degrees C), whose sensible heat contains most of the heating value of the coal, 5,000 to 13,000 Btu/lb (11.6 to 30.2 MJ/kg). Particularly applicable to coal deposits that are not economically or technically feasible to mine by conventional methods because of seam quality or quantity, depth, dip, strata integrity, overburden thickness, etc. *SME, 1*

in situ leaching

a. A hydrometallurgical process that treats ore for the recovery of mineral values while the ore is in place. It is a true mining technique in that the ore is not extracted from the ground and no mine waste piles or tailings impoundments are created. *SME, 1* b. A leaching technique in which ore is leached in place by solution injected into the deposit through wells. CF: [solution mining](#) *Aplan*

in situ liner

A water, gas, or aqueous, chemically impermeable material placed in artificially constructed underground channels, crevices, or slices. *Lombardi*

in situ origin theory

The theory of the origin of coal that holds that a coal was formed at the place where the plants from which it was derived grew. See also: [autochthonous coal](#)

in situ processes

Activities conducted on the surface or underground in connection with in-place distillation, retorting, leaching, or other chemical or physical processing of coal or ore. The term includes, but is not limited to, in situ gasification, in situ leaching, slurry mining, solution mining, borehole mining, and fluid recovery mining.

in situ soil tests

Tests carried out on the ground, in a borehole, trial pit, or tunnel, as opposed to a laboratory test. An in situ soil test may be a vane test, dynamic penetration test, etc. *Nelson*

in situ vat

A five- or six-sided enclosure constructed in the earth by backfilling cuts around an orebody or orebody zone with material that is impervious to solutions so that aqueous

leaching can be conducted for the extraction of mineral values from the isolated ore.
Lombardi

insoluble

a. Incapable of being dissolved in a particular liquid. *Shell* b. Term used of solid that does not dissolve under specified attack. No known substance is completely insoluble, so the term refers to systems characterized by very low solubility. *Pryor, 3* c. As used in smelter contracts, the terms "insoluble" and "silica" are often used interchangeably, but they are different things. Silica is determined by a special fusion assay. Insoluble is the residue left after the ore has been digested with acid in the course of assaying for some of the metals. The insoluble is generally silica plus something else, often alumina, since this substance is not always dissolved by acids. *Lewis*

insoluble anode

An anode that does not dissolve during electrolysis. *ASM, 1*

inspector

One employed to make examinations of and to report upon mines and surface plants relative to compliance with mining laws, rules and regulations, safety methods, etc. State inspectors have authority to enforce State laws regulating the working of the mines. Federal inspectors have authority to enforce Federal laws in coal mines. See also: [mine inspector](#) *Fay*

inspirator

A kind of injector for forcing water by steam. See also: [injector](#) *Webster 2nd*

instantaneous charge weight

The weight of explosive detonated at any one precise time.

instantaneous cuts

Cuts characterized by the drilling and ignition being done so that all the holes can cooperate and break smaller top angles. They are called instantaneous cuts because they are preferably ignited by instantaneous detonators to ensure a simultaneous detonation of all the charges in the cut. Some examples are Blasjo cut; WP-cut. *Langefors*

instantaneous detonator

A detonator in which there is no designed delay period between the passage of an electric current through the detonator and its explosion. *BS, 12*

instantaneous fuse

Term used to distinguish rapid burning from slow fuse. Ignition rate is several thousand feet per minute, but slower than that of detonating fuse. *Pryor, 3*

Institution of Mining and Metallurgy

The London Institution of Mining and Metallurgy is the central British organization for regulating the professional affairs of suitably qualified mining engineers engaged in production and treatment of nonferrous metals and rare earths. Related bodies are those of Canada (Can. I.M.M.), Australia (Aust. I.M.M.), and Republic of South Africa (Rep. S. Af. I.M.M.). *Pryor, 3*

Institution of Mining and Metallurgy screen scale

Laboratory screens of usual 8-in-round (20-cm-round) size, in which the diameter of each new wire is equal to the distance between successive parallel wires. Therefore, in a 60-mesh screen (having 60 wires/in (152 wires/cm) measured along either the warp or the woof) the aperture is a square measuring 1/120 in (0.21 mm) on the side. The meshes used are 5, 8, 10, 12, 16, 20, 30, 40, 50, 60, 70, 80, 90, 100, 120, 150, and 200. *Pryor, 3*

instroke

The right to raise or take ore from a leased mine through the shaft or tunnel of an adjoining mine. *Ricketts*

instrumentalities of mining

The true meaning of such expressions as shafts, tunnels, levels, uprisers, crosscuts, inclines, and sump when applied to mines signifies instrumentalities whereby and through which such mines are opened, developed, prospected, and worked. *Ricketts*

instrumentation

Control by servomechanisms. Use of signaling devices originating with the process to indicate, vary, or regulate performance.

insufflator

An injector for forcing air into a furnace. *Webster 3rd*

insular shelf

The zone surrounding an island extending from the line of permanent immersion to about 100 fathoms (600 ft or 183 m) of depth, where a marked or rather steep descent toward the great depths occurs. *AGI*

insular slope

The declivity from the offshore border of the insular shelf at depths of from 50 to 100 fathoms (300 to 600 ft or 91 to 183 m) to oceanic depths. It is characterized by a marked increase in gradient. *AGI*

insulate

To separate or to shield (a conductor) from conducting bodies by means of nonconductors, so as to prevent transfer of electricity, heat, or sound. *Webster 3rd*

insulating water bottle

In oceanography, an instrument used for the accurate determination of the temperature of the sea at moderate depths. Also called Nansen-Pettersson water bottle. *CTD*

insulator-tube header

One who forms heads on porcelain tube insulators by means of hand capping press, inserting clay tube in machine and pulling lever to form the head. *DOT*

insurance and freight cost

Term showing that these items have been paid by the shipper of concentrates, metal, etc. *Pryor, 3*

intake

a. The ventilating passage in an underground mine through which fresh air is conducted via an adit, drill hole, or downcast shaft to the workings. b. The passage by which the ventilating current enters a mine. See also: [downcast](#) for an adit or entry. *Fay* c. Scot. Person who works underground at odd work. *Fay* d. N. of Eng. Any roadway underground through which fresh air is conducted to the working face. *Trist* e. The passage and/or the current of ventilating air moving toward the interior of a mine. *Long* f. The suction pipe or hose for a pump. *Long* g. In hydraulics, the point at which the water or other liquid is received into a pipe, channel, or pump. *Long* h. The headworks of a conduit; the place of diversion. *Seelye, 1*

intake area

That part of the land surface where water passes downward on its way to the zone of saturation in one or more aquifers. See also: [recharge](#)

integral pilot

A pilot-type noncoring bit having a pilot section that is an integral, nonreplaceable part of the bit. *Long*

integrated producer

A producer of metal who owns mines, smelters, and refineries, and sometimes also fabricating plants. *Wolff*

integrated train

A long string of cars, permanently coupled together, that shuttles continuously back and forth between one mine and one generating plant, not even stopping to load and unload, since rotary couplers permit each car to be flipped over and dumped as the train moves slowly across a trestle.

integrating meter

A meter that records the total quantity of liquid or electricity passing through it. *Hammond*

integration

In petrology, the formation of larger crystals from smaller ones by recrystallization. *Goldman*

integrator

A circuit whose output is substantially proportional to the time integral of the input. *NCB*

intense anomaly

An anomaly whose elemental values rise sharply to one or more well-defined peaks.

intensity

As applied to color, the comparative brightness (vividness) or dullness or brownishness of a color; its comparative possession or lack of brilliance; therefore, the variation of a hue on a vivid-to-dull scale. See also: [tone](#)

intensity of magnetization

The magnetic moment per unit volume. *AGI*

intensity of pressure

The pressure per unit area. *Seelye, 1*

intensity of radiation

The energy per unit time entering a sphere of unit cross-sectional area centered at a given place. The unit of intensity is the erg per square centimeter second or the watt per square centimeter. *NCB*

intensity scale

A standard of relative measurement of earthquake intensity. Four such systems are the Mercalli scale, the modified Mercalli scale, the Richter scale, and the Rossi-Forel scale.

interbedded

Occurring between beds, or lying in a bed parallel to other beds of a different material.

Syn: [interstratified](#) *Fay*

interburden

Material of any nature that lies between two or more bedded ore zones or coal seams. Term is primarily used in surface mining. *Federal Mine Safety*

intercalated

Said of layered material that exists or is introduced between layers of a different character; esp. said of relatively thin strata of one kind of material that alternates with thicker strata of some other kind, such as beds of shale intercalated in a body of sandstone. CF: [interbedded](#) *AGI*

intercept

a. The distance along a crystallographic axis to its intersection with a crystal face. This intercept is a rational number because the axial unit length of each mineral is selected to make it so. The ratio of these intersections of a face with each of the crystallographic axes constitutes a parameter, such as Miller indices, that defines the crystal face. CF: [indices of a crystal face](#); [crystallographic axis](#); [Miller indices](#). b. The part of the rod seen between the upper and lower stadia hairs of a transit or telescopic alidade; e.g., a stadia interval.

intercepting channel

A channel excavated at the top of earth cuts, or at the foot of slopes, or at other critical places to intercept surface flow; a catch drain. *Seelye, 1*

intercepting drain

A drain that intercepts and diverts water before it reaches the area to be protected. Also called curtain drain. *Nichols, 1*

intercepts

a. That portion included between two points in a borehole, as between the point where the hole first encounters a specific rock or mineral body and where the hole enters a different or underlying rock formation. *Long* b. In crystallography, the distances cut off on axes of reference by planes. *Fay*

intercept time

See: [delay time](#)

intercooler

a. A radiator in which air is cooled while moving from low-pressure to high-pressure cylinders of a two-stage compressor. See also: [two-stage compression](#) b. In multistage compression of air, a cooling arrangement between stages. See also: [aftercooler](#) c. A cooling device used on a turbocharged diesel engine to reduce the air volume between the turbocharger and the cylinders.

intercooling

Extraction of heat from a compressed gas between two stages of compression in order to improve the efficiency of compression. *Strock, 2*

interfacial angle

The internal or dihedral angle between two faces of a crystal. It is also the "angle of dip" between faces.

interfacial energy

Tension at interfaces between the various phases of a system; may include solid, liquid, and gas interfaces, varying in their combinations and qualities. *Pryor, 3*

interfacial tension

The contractile force of an interface between two phases. *ASM, 1*

interference

The meeting of two wave systems resulting in increased amplitude (constructive interference) if they are in phase, i.e., crest to crest, and decreased amplitude (destructive interference) if they are out of phase, i.e., crest to trough. In polarized-light microscopy (PLM), phase differences are generated when white light passes through an anisotropic (i.e., doubly refracting) crystal or crystal fragment, these differences being determined primarily by birefringence, light wavelength, and crystal thickness. Waves of light in different parts of the visible spectrum interfere both constructively and destructively when resolved in the microscope analyzer to give an interference color. Since anisotropic minerals have a range of birefringence, interference colors are useful as an aid to their identification. See also: [optic sign](#); index of refraction.

interference color

One of the spectral colors produced by the strengthening or the weakening of certain wavelengths of a composite beam of light in consequence of interference. This is an important characteristic in determining minerals in thin section or in fragments under the polarizing microscope. *Webster 3rd*

interference figure

a. An optical figure composed of a series of spectrally colored rings combined with a blank cross (if uniaxial) or a series of spectrally colored curves or rings with two black parabolic curves called isogyres (if biaxial). The figure is observed when a properly oriented thin section or fragment of a mineral is examined in convergent light through the polarizing microscope. The interference figure, which is caused by the birefringence of the mineral and by the orientation of the mineral so that it presents an optic axis in the field of the microscope, is one of the most valuable optical aids in identifying minerals. Also called the direction image. b. An optical pattern produced by conoscopic illumination of anisotropic crystals which appears on a spherical focal surface located above the objective lens of a polarized-light microscope. CF: [melatope](#)

interference methanometer

A combustible-gas detector based on the velocity of light. A beam of light is split into two parts that pass respectively through chambers containing pure air and the test air at velocities characteristic of the gases. When methane is present, the light beams are out of step and this movement becomes a measure of the methane concentration. See also: [refractometer](#) *Nelson*

interfluve

The area between two rivers flowing in the same general direction. Syn: [interstream area](#)

interformational

Between formations, such as an interformational unconformity. CF: [intraformational](#)

intergranular corrosion

Corrosion that occurs preferentially at grain boundaries of a metal or alloy.

intergrown

a. Of coal and mineral matter, naturally associated and separable only by crushing or grinding. *BS, 5* b. In crystallography, a descriptive term for mineral species that have crystallized simultaneously and therefore become intertwined or interlocked. *Pryor, 3*

intergrowth

The state of interlocking of grains of two different minerals as a result of their simultaneous crystallization. CF: [graphic granite](#)

interior angle

Horizontal angle between adjacent sides of a polygon, measured within the polygon. *Seelye, 2*

interior coalfields

U.S. Includes Eastern Interior Field, Illinois, Indiana, and Kentucky; Western Interior Field, Great Plains States from Iowa to Arkansas; Southwestern Field, Texas; and Northern Field, Michigan. *Bateman, 1*

interior span

A continuous beam or slab, both supports of which are continuous with adjacent spans. *Hammond*

interleaved

a. Intercalated in very thin layers. b. A term used in remote sensing to describe a technique of storing digital image data (pixel interleaved, line interleaved, or band interleaved.)

interlock

The clutch in steel sheet piles. *Hammond*

interlocking controls

A system of electrical controls for a system of conveyors that maintains a controlled relationship between the units of the system. Sometimes applied to sequence-starting controls.

interlocking wedge-type capping

This type of wire-rope capping is simple to apply. The sleeves are first threaded on the rope, a white metal bob is then formed on the end of the rope by untwisting the wires and cutting out the hemp core, if present, and white metal is run into a mold around the wires. The bob is allowed to cool. Two tapered interlocking steel wedges are then fitted on to the rope clear of the bob so that wedges can move forward toward the bob and grip the rope as the load is applied to the capping. The rope is cleaned of lubricant where the wedges will grip, and the groove in the wedges must be of such a size that a gap is left between the wedges so that they can grip the rope firmly. The edges of the wedges should come opposite a valley between the strands of the rope. The outer socket is now placed over the wedges and the sleeves are lightly tapped into position to hold the parts together. *Sinclair, 5*

intermediate

a. A secondary or auxiliary horizontal passage driven between levels in a mine, which may extend from a raise or stope and, depending upon its orientation, may be either an intermediate drift or a crosscut. Syn: [sublevel](#) b. Said of an igneous rock that is transitional between basic and silicic (or between mafic and felsic), generally having a silica content of 54% to 65%; e.g., syenite and diorite. "Intermediate" is one subdivision of a widely used system for classifying igneous rocks on the basis of their silica content; the other subdivisions are acidic, basic, and ultrabasic. Syn: [mediosilicic](#)

intermediate constituent

A constituent of alloys that is formed when atoms of two metals combine in certain proportions to form crystals with a different structure from that of either of the metals. The proportions of the two kinds of atoms may be indicated by formula, e.g., CuZn; hence, these constituents are also known as intermetallic compounds. *CTD*

intermediate cooler

In a blast furnace, a water-cooled casting, usually of copper, that is installed inside the cinder cooler. *Henderson*

intermediate cut

See: [middle cut](#)

intermediate-duty fireclay brick

A fireclay refractory having a pyrometric cone equivalent not lower than No. 29, or having a refractoriness of not more than 3.0% deformation as measured by the load test at 2,460 degrees F (1,349 degrees C) (ASTM requirements). *ARI*

intermediate electrode

See: [bipolar electrode](#)

intermediate gate

A gate between the central gate and the end gates, particularly in double-double unit layouts. *Nelson*

intermediate haulage

a. The transportation of mined coal or ore from the face haulage to that point where it is accessible to the main line. It is accomplished by conveyors, belts, or locomotives and mine cars. *Woodruff* b. Mine haulage used to collect loads and deliver empties from and to the sections. These are taken to and from central sidetracks served by the main line motor. Locomotives and track are frequently lighter than those on the main line. See also: [haulage](#)

intermediate haulage conveyor

Generally 500 to 3,000 ft (152 to 915 m) in length. It is used to transport material between the gathering conveyor and the main haulage conveyor. *NEMA, 2*

intermediate layer

See: [sima](#)

intermediate loading station

See: [loading station](#)

intermediate microcline

See: [mesomicrocline](#)

intermediate packs

Packs built between gates with wastes on each side and usually supported by packwalls. *TIME*

intermediate principal plane

The plane normal to the direction of the intermediate principal stress. *ASCE*

intermediate principal stress

The principal stress whose value is neither the largest nor the smallest (with regard to sign) of the three. *ASCE*

intermediate section

The part of a mining belt conveyor that consists of the framing and the belt idlers supported by the framing, both of which guide and support the belts between the head end and the tail end. There are two general types of intermediate sections: rigid side framed and wire-rope side framed. *NEMA, 2*

intermediate shaft

A shaft that is driven by one shaft and drives another. *Nichols, 1*

intermediate transfer point

The point along a conveyor, which may already be carrying a load, at which coal is delivered from another panel conveyor. *Nelson*

intermediate vein zone deposit

A deposit thought to have been formed at a depth ranging from 4,000 to 12,000 ft (1.2 to 3.7 km) below the surface and at a temperature between 175 degrees C and 300 degrees C. Such a deposit may take the form of a fissure vein, a series of parallel fissures called a sheeted zone, a replacement of the wall rock of fissures, or a large disseminated deposit. Much of the gold, silver, copper, lead, and zinc of the Western United States comes from these deposits. *Lewis*

intermetallic compound

An intermediate phase in an alloy system, having a narrow range of homogeneity and relatively simple stoichiometric proportions, in which the nature of the atomic binding can vary from metallic to ionic. See also: [intermediate constituent](#)

intermittent cutter

Coal-cutting machine of the pick machine and breast machine type. They are called intermittent cutters because they must be frequently reset, whereas with continuous

cutters, a continuous cut can be made the full width of the face without stopping the machine. *Kiser*

intermittent filters

These usually consist of a number of filtering leaves that are simply rectangular frames carrying filter cloth on the outer surface. A number of these leaves are mounted in a suitable tank, and the clear liquid passes through the filter cloth and out through pipes leading from the interior of each filter leaf. The solid material forms a cake on the outside of the leaf. *Newton, I*

intermontane

Lying between mountains.

internal-discharge bucket elevator

A type of bucket elevator having continuous buckets abutting, hinged, or overlapping; designed for loading and discharging along the inner boundary of the closed path of the buckets. Syn: [internal elevator](#) See also: [bucket elevator](#)

internal drainage

Drainage that does not reach the ocean by surface streams, such as drainage toward the lowermost or central part of an interior basin. It is common in arid and semiarid regions, as in western Utah. *Stokes*

internal elevator

See: [internal-discharge bucket elevator](#)

internal ribbon conveyor

A trunnion-supported, revolving cylinder, the inner surface of which is fitted with continuous or interrupted ribbon flighting.

internal stress

Residual stress existing between different parts of metal products, as a result of the differential effects of heating, cooling, or working operations, or of constitutional changes in the solid metal. *CTD*

internal waste

a. Barren rock between two or more bands (veins) or reef which are mined simultaneously. *Beerman* b. See: [horse](#)

international ampere

The electric current that, when passed through a solution of silver nitrate in water, will deposit silver at the rate of 0.001118000 g/s. The unit of current in common use. *CTD*

International Ellipsoid of 1930

Equation relating variation of gravity with latitude, adopted by an international commission as best expressing the normal gravity field of the Earth to the approximation of an ellipsoid of revolution.

international metric carat

See: [carat](#)

interpenetration twin

Two or more individual crystals twinned into such a position that they penetrate one another. See also: [penetration twin](#) juxtaposition twin. *Fay*

interphase

In physical chemistry, the transition layer, zone of change, zone of shear, or zeta layer, through which the characteristic qualities of each contacting phase diffuse outward with diminishing strength toward the adjoining phase. Not an interface, since the division is not sharp. *Pryor, 3*

interpolation

Estimation of a statistical value from its mathematical or graphical position intermediate in a series of determined points.

interpolation of contours

The process of drawing contour lines by inferring their plan position and trend from spot levels or from other contours, assuming the intervening ground to have uniform slope. Where the spot levels are sparse, the process requires knowledge of the land or lie of the seams. See also: [contour plan](#)

interrupter

A device, usually automatic, for rapidly and frequently breaking and making an electric circuit, as in an induction coil. *Standard, 2*

intersect

a. To cut across or meet, as a borehole cuts through a stratum of rock or encounters a vein. *Long* b. In mining, to cut across or meet a vein or lode with a passageway; also, the point at which a vein or lode cuts across an earlier formation. *Long*

intersection

a. The point at which a deliberate deflection of the trend of a borehole is made. *Long* b. The point at which a drill hole enters a specific orebody, fault, or rock material. *Long* c. Meeting of two orebodies or veins, or the point at which a vein or orebody meets a fault, dike, or rock stratum. *Long* d. The point at which two underground workings connect. *Long* e. A method in surveying by which the horizontal position of an unoccupied point is determined by drawing lines to that point from two or more points of known position. Syn: [resection](#)

intersection angle

The angle of deflection, as measured at the intersection point, between the straights of a railway or highway curve. *CTD*

intersection point

That point at which two straights or tangents to a railway or road curve would meet if produced. See also: [tangent distance](#)

intersection shoot

An ore shoot located at the intersection of one vein or vein system with another. It is a common type of ore deposit. *AGI*

intersertal

Said of the texture of a porphyritic igneous rock in which the groundmass, composed of a glassy or partly crystalline material other than augite, occupies the interstices between unoriented feldspar laths, the groundmass forming a relatively small proportion of the rock. CF: [hyalophitic](#); hyalocrystalline. *AGI*

interspersed carbide

Small-size (1/8 inch or 3 mm and larger), irregular-shaped fragments of tungsten carbide slugs mixed with a suitable matrix metal; applied to cutting faces of bits or other cutting tools as a weldment. Also called clustered carbide. *Long*

interstice

a. An opening or space, as in a rock or soil. Syn: [void](#); [pore](#). Adj. interstitial. *AGI* b. Small void in the body of a metal. *ASM, 1*

interstitial

Said of a mineral deposit in which the minerals fill the pores of the host rock. CF: [Frenkel defect](#); [impregnated](#). *AGI*

interstitial water

Subsurface water in the voids of a rock. Syn: [pore water](#) CF: [connate water](#)

interstratification

The state or condition of occurring between strata of a different character. *AGI*

interstratified

a. Interbedded; strata deposited between or alternatingly with other strata. *Fay* b. Of coal and mineral matter, associated in random horizontal layers, usually with a natural cleavage. *BS, 5*

interstream area

See: [interfluve](#)

intertrappean

Lying between beds of trap. *Standard, 2*

interval

a. The distance between two points or depths in a borehole; core intersection. b. The vertical distance between strata or units of reference. *AGI* c. The contour interval is the vertical distance between two successive contour lines on a topographic, structural, or other contour map. Syn: [contour interval](#)

interwoven conveyor belt

A construction of conveyor belt similar to the solid woven type of belt and having the plies interwoven to the extent that it is impossible to separate them.

in-the-seam mining

The conventional system of mining in which the development headings are driven in the coal seam. CF: [horizon mining](#) See also: [unproductive development](#)

into the house

Newc. The upstroke of a pump engine. *Fay*

into the solid

Said of a shot that goes into the coal beyond the point to which the coal can be broken by the blast. *Fay*

intracrystalline

Within or across the crystals or grains of a metal. Syn: [transgranular](#) *ASM, 1*

intrados

The interior curve of an arch, as of a tunnel lining. *Sandstrom*

intradosal

The fractured ground within the fracture zone. CF: [extradosal](#) *Lewis*

intraformational

a. Formed within a geologic formation, more or less contemporaneously with the enclosing sediments. The term is esp. used in regard to syndepositional folding or slumping; e.g., intraformational deformation or intraformational breccia. *AGI* b. Existing within a formation, with no necessary connotation of time of origin. CF: [interformational](#)

intraformational breccia

A rock formed by brecciation of partly consolidated material, followed by practically contemporaneous sedimentation. It is similar in nature and origin to an intraformational conglomerate, but contains fragments showing greater angularity. *AGI*

intraformational conglomerate

a. A conglomerate in which the clasts are essentially contemporaneous with the matrix, developed by the breaking up and rounding of fragments of a newly formed or partly consolidated sediment (usually shale or limestone) and their nearly immediate incorporation in new sedimentary deposits; e.g., an edgewise conglomerate. *AGI* b. A conglomerate occurring in the midst of a geologic formation, such as one formed during a brief interruption in the orderly deposition of strata. It may contain clasts external to the formation. The term is used in this sense esp. in England. *AGI*

intraformational contortion

Intricate and complicated folding, resulting from the subaqueous slumping or sliding of unconsolidated sediments under the influence of gravity. *AGI*

intratelluric

a. Said of a phenocryst, of an earlier generation than its groundmass, that formed at depth, prior to extrusion of a magma as lava. *AGI* b. Said of the period of crystallization occurring deep within the Earth just prior to the extrusion of a magma as lava. *AGI* c. Located, formed, or originating deep within the Earth. *AGI*

intrinsically safe apparatus

Apparatus that is so constructed that, when installed and operated under the conditions specified by the certifying authority, any electrical sparking that may occur in normal working, either in the apparatus or in the circuit associated therewith, is incapable of causing an ignition of the prescribed flammable gas or vapor. *BS, 13*

intrinsically safe circuit

A circuit in which any electrical sparking that may occur in normal working under the conditions specified by the certifying authority, and with the prescribed components, is incapable of causing an ignition of the prescribed flammable gas or vapor. *BS, 13*

intrinsically safe machine

A machine that is safe in itself, without having to be placed inside a flameproof enclosure. It implies that the machine cannot produce any spark that is capable of igniting mixtures of combustible gases and air in mines. *Nelson*

intrinsic safety

In a circuit, safety such that any sparking that may occur in that circuit in normal working, or in reasonable fault conditions, is incapable of causing an explosion of the prescribed inflammable gas. *NCB*

introductory column

In casing a borehole, the highest and first column that is inserted. *Stoces*

intrusion

a. In geology, a mass of igneous rock that, while molten, was forced into or between other rocks. *Fay* b. A mass of sedimentary rock occurring in a coal seam. *BS, 11*

intrusion breccia

See: [contact breccia](#)

intrusion displacement

Faulting coincident with the intrusion of an igneous rock.

intrusion grouting

A method of placing concrete by intruding the mortar component in position; it is then converted to concrete by intruding the mortar component into its voids. One of the chief advantages of the method is that it permits the placing of concrete underwater. *Carson, 2*

intrusive

Of or pertaining to intrusion--both the processes and the rock so formed. n. An intrusive rock. CF: [extrusive](#)

intrusive vein

An igneous intrusion resembling a sheet, apparently formed from a magma rich in volatiles. *AGI*

intumescence

The property of some silicate minerals (e.g., stilbite, vermiculite, scapolite) or rocks (e.g., perlite) to expand permanently when heated to form an irregular or vesicular structure. CF: [exfoliation](#)

inundation

An inrush of water, on a large scale, that floods the entire mine or a large section of the workings. See also: [tapping old workings](#) *Nelson*

Invar

An alloy of nickel and iron, containing about 36% nickel, and having an extremely low coefficient of thermal expansion. It is used in the construction of surveying instruments, such as pendulums, level rods, first-order leveling instruments, and tapes. *AGI*

invasion

a. Mex. A mining trespass. *Fay* b. See: [transgression](#)

inverse distance squared

A method for interpolating spatial sample data and determining values between data points. A value interpolated for any spatial point is determined by applying a weighting factor based on distance between the spatial point and surrounding sample data. Selection of sample points to include in the calculation may be determined by minimum and/or maximum distance, azimuth orientation, and the minimum and/or maximum number of the nearest sample data points. Abbrev. IDS.

inverse initiation

The placing of the detonator at the back of the shothole. This is the usual practice when using delay detonators to minimize the danger of cutoff holes. See also: [direct initiation](#) priming. Syn: [indirect initiation](#)

Inverse Square Law

Law that governs the distance-dependence of physical effects, such as intensity of light, magnetism, and gravitational force. The effect at a point due to an emitting source varies as the square of the distance between them. *Pryor, 3*

inversion

a. Construction of a geophysical model from a set of measurements; e.g., using numerous gravity measurements to infer subsurface density distributions, or using slip vectors and spreading rates to define global plate motions. Inversion models are inherently ambiguous. *AGI* b. A change of crystalline phase brought about by a change in temperature or pressure; e.g., the inversion between alpha quartz and beta quartz at 573 degrees C. c. See: [center of symmetry](#)

inversion point

a. A point representing the temperature at which one polymorphic form of a substance, in equilibrium with its vapor, reversibly changes into another under invariant conditions. *AGI* b. The temperature at which one polymorphic form of a substance inverts reversibly to another under univariant conditions and a specific pressure. *AGI* c. More loosely, the lowest temperature at which a monotropic phase inverts at an appreciable

rate into a stable phase, or at which a given phase dissociates at an appreciable rate, under given conditions. *AGI* d. A single point at which different phases are capable of existing together at equilibrium. Syn: [transition point](#); [transition temperature](#). *AGI*

invert

The floor or bottom of the internal cross section of a closed conduit, such as an aqueduct, tunnel, or drain. The term originally referred to the inverted arch used to form the bottom of a masonry-lined sewer or tunnel. *AGI*

inverted

See: [overturned](#)

inverted fold

See: [overturned](#)

inverted heading and bench

See: [heading-overhand bench](#)

inverted pendulum

An instrument in which the acceleration of gravity is determined by measuring the swinging period of a mass that is supported on top of a spring. *Schieferdecker*

inverted plunge

The plunge of folds, or sets of folds, whose inclination has been carried past the vertical, so that the plunge is now less than 90 degrees in a direction opposite from the original attitude. It is a rather common feature in excessively folded or refolded terranes. *AGI*

inverted relief

A topographic configuration that is the inverse of the geologic structure, as where mountains occupy the sites of synclines and valleys occupy the sites of anticlines. *AGI*

inverted siphon

a. A pipeline crossing over a depression or under a highway, railroad, canal, etc. The term is common but inappropriate, as no siphonic action is involved. The term "sag pipe" is suggested as a substitute. *Seelye, 1* b. A pipe or tube in the shape of a siphon, but inverted, as for carrying water across the depression of a ravine to a lower level. *Standard, 2* c. See: [drowned level](#)

invert level

The datum level of the lowest part of an invert. *Hammond*

invert strut

Flat strut that sometimes is used instead of an arch on the bottom of a tunnel cross section.

invisible light

Wavelengths in the electromagnetic spectrum too short or too long to be detected by the human eye; e.g., ultraviolet and infrared light. CF: [visible light](#)

inwall

a. The refractory lining of the stack of a blast furnace. See also: [stack](#) b. The interior walls or lining of a shaft furnace. *Fay*

inwall brick

Fireclay brick for use in lining the inwall section of a blast furnace. *ARI*

inyoite

A monoclinic mineral, $\text{Ca}_2 \text{B}_6 \text{O}_6 (\text{OH})_{10} \cdot 8\text{H}_2 \text{O}$; forms large, soft, colorless, tabular crystals associated with colemanite and other boron minerals in Inyo County, CA; dehydrates to meyerhoffite.

iodargyrite

A hexagonal mineral, AgI; soft, sectile, waxy; normally a secondary mineral; in the oxidized zone of silver deposits from primary ores containing argentite, tennantite or tetrahedrite, and native silver; a source of silver; in arid regions where volcanic rocks are common--Southwestern United States, Mexico, Chile, and Broken Hill, New South Wales, Australia. Formerly called iodyrite or iodite. CF: [chlorargyrite](#); [bromargyrite](#).

iodembolite

A name to replace iodobromite whose composition is not definite. Used to designate minerals of the cerargyrite group containing chlorine, bromine, and iodine, Ag(Cl,Br,I). *English*

iodide metal

Hafnium produced by the van Arkel and de Boer process. *Thomas*

iodide process

The process developed by van Arkel and de Boer; used for refining zirconium and hafnium by the decomposition of iodide on a hot wire. Syn: [van Arkel and de Boer process](#) *Thomas*

iodide process for producing titanium

Process involving the reaction of impure titanium metal with iodine to form the volatile tetraiodide, which is then decomposed on a hot wire at temperatures between 2,000 degrees F and 2,730 degrees F (1,093 degrees C and 1,500 degrees C) to form high-purity titanium and iodine.

iodimetry

Volumetric analysis involving either titration with a standardized solution of iodine, or the release by a substance under examination of iodine in soluble form, so that its concentration can be determined by titration, using starch as an indicator. The method is used with substances that can oxidize potassium iodide to release free iodine, or conversely with substances which combine with free iodine. The basis of reaction is $I_2 + 2Na_2S_2O_3 \rightarrow 2NaI + Na_2S_4O_6$. Also called iodometry. *Pryor, 3*

iodine

A nonmetallic, bluish-black, lustrous solid element, volatilizing at ordinary temperatures into a blue-violet gas with an irritating odor. Symbol, I. Occurs sparingly in sea water, in saltpeter and nitrate-bearing earth (known as caliche), in brines, and in brackish waters from oil and salt wells. Its compounds are used in medicines, photography, and organic chemistry. *Handbook of Chemistry and Physics, 3*

iodine pentoxide method

Accurate determinations of very low concentrations of carbon monoxide are required of samples from pits troubled with spontaneous combustion and those in which diesel locomotives are operating. This method involves the passage of a known volume of the sample first through a train of reagents for purifying and drying and then through a heated tube of iodine pentoxide; if carbon monoxide is present, proportional amounts of iodine and carbon dioxide are formed, either of which may be determined. *Sinclair, 1*

iodine pentoxide test

An iodine pentoxide (Hoolamite) test consists of a glass tube filled with a reagent mixed with fuming sulfuric acid and carried by crushed pumice through which a known volume

of the air to be sampled is discharged from a rubber bulb after preliminary drying. The bulb is squeezed 10 times; the carbon monoxide present changes the color of the reagent from grey to green, and the concentration is obtained by reference to a color chart supplied with the instrument. The instrument reads down to about 0.07% carbon monoxide. *Sinclair, 1*

iodobromite

See: [iodembolite](#)

iodyrite

See: [iodargyrite](#)

iolite

See: [cordierite](#)

ion

An atom or a group of atoms combined in a radical or molecule that carries a positive or a negative electric charge as a result of having lost or gained one or more electrons. It may exist in solution, usually in combination with molecules of the solvent, or out of solution; it may be formed during electrolysis and migrate to the electrode of opposite charge, or it may be formed in a gas and be capable of carrying an electric current through the gas. *Webster 3rd*

ion exchange

Reversible exchange of ions contained in a crystal for different ions in solution without destruction of crystal structure or disturbance of electrical neutrality. The process is accomplished by diffusion and occurs typically in crystals possessing one- or two-dimensional channelways where ions are relatively weakly bonded. Also occurs in resins consisting of three-dimensional hydrocarbon networks to which many ionizable groups are attached. Syn: [base exchange](#)

ion-exchange column

A tube packed with particles or beads of resin chosen for their ability to capture specific ions from an aqueous solution as it passes through the column.

ionic activity measurement

Use of an electrode reversible to the ion under test to form a half cell. This is connected by a salt bridge to a reference electrode, and the resulting electromotive force is measured. *Pryor, 3*

ionic bond

a. Electrostatic force holding ions together in a crystal. *Hurlbut* b. A chemical bond between atoms, one of which is an electron donor and the other is an electron acceptor. *Gaudin, 2*

ionic equilibrium

The situation when, for a prescribed temperature, pressure, concentration of reactants, and pH, the rate of dissociation of molecules into ions is approx. in balance with that of their recombination. *Pryor, 3*

ionic migration

Movement of a charged particle through an electrolyte toward an electrode of opposite charge sign. The losses in a neutral salt around two electrodes during the passage of electric current are in ratio to velocities of ions migrating from these electrodes. Ionic velocities are stated in centimeters per second for a potential gradient of 1 V/cm. *Pryor, 3*

ionic mobility

Velocity in a dilute solution of an ion where the potential difference across this is 1 V/cm. For hydrogen ions, the velocity is 0.00326 cm/s. *Pryor, 3*

ionic transport number

Fraction of total current carried by one ion during electrolysis (ion migration). *Pryor, 3*

ionite

A term referring to two different materials found in the Ione Valley of northern California: (1) a clay mineral, possibly a variety of kaolinite, found as scales in the Ione sandstone formation, and (2) an impure fossil hydrocarbon found in lignite, which is brownish-yellow, dissolved by chloroform, and yields a brown, tarry oil on destructive distillation.

ionization

The process of adding electrons to, or knocking electrons from, atoms or molecules, thereby creating ions. High temperatures, electrical discharges, and nuclear radiation can cause ionization. *Lyman*

ionization chamber

An instrument that detects and measures ionizing radiation by observing the electrical current created when radiation ionizes gas in the chamber, making it a conductor of electricity. *Lyman*

ionization constant

The ratio of the product of the activities of the ions produced from a given substance to the activity of the undissociated molecules of that substance. See also: [activity](#)

ionizing radiation

Any radiation that directly or indirectly displaces electrons from the outer domains of atoms; e.g., alpha, beta, or gamma radiation. *Lyman*

ionosphere

The outer part of the Earth's atmosphere, beginning at an altitude of about 25 miles (40 km) and extending to the highest parts of the atmosphere: it contains several regions that consist of a series of constantly changing layers characterized by an appreciable electron and ion content. *Webster 2nd*

ion sieve separation

Separation of ions by filtering them through the intermediately sized lattice of a suitable aluminosilicate zeolite, chosen to permit passage only of undersized ions through its rigid structure. *Pryor, 3*

iozite

See: [wuestite](#)

iranite

A triclinic mineral, $\text{Pb}_{10}\text{Cu}(\text{CrO}_4)_6(\text{SiO}_4)_2(\text{F},\text{OH})_2$; forms a series with hemihedrite in which zinc substitutes for copper; at the Sebarz Mine, northeast of Anarak, Iran.

iridescence

The exhibition of interference colors from the surface or interior of a mineral, caused by light interference from thin films or layers of different refractive index. Labradorite and some other feldspars show it. The tarnish on the surface of coal, copper pyrites, etc., is sometimes iridescent. Adj. iridescent.

iridic gold

Said to be a native alloy of gold and iridium carrying 62.1% gold, 30.4% iridium, 3.8% platinum, and 2.1% silver. *Hess*

iridioplatinum

An alloy usually containing 90% or more of platinum. The remaining percentage is of iridium, which is necessary to produce an alloy sufficiently stiff for use in gem mountings.

iridium

a. An isometric mineral, native Ir ; Mohs hardness, 6 to 7; sp gr, 22.2 if pure; occurs native (>80% Ir) and alloyed with osmium (iridosmine) or platinum in mafic to ultramafic rocks and derived alluvial deposits; in rare arsenides and sulfides, such as irarsite (Ir,Ru,Rh,Pt)AsS , iridarsenite (Ir,Ru)As₂ , and iridisite-beta (Ir,Cu)₃ S₈ ; placer deposits may include gold. b. The most corrosion-resistant metal known. Symbol, Ir. It is mainly used as a hardening agent for platinum. *Handbook of Chemistry and Physics, 3*

iridosmine

A natural alloy of iridium and osmium, (Ir,Os). Analyses show 43% to 77% iridium, 17% to 49% osmium, and a little rhodium, ruthenium, platinum, iron, and copper. Rhombohedral. Syn: [osmite](#)

iriginite

A canary-yellow mineral, (UO₂)(Mo₂⁶⁺O₇).3H₂O ; luster, vitreous; uneven fracture; does not fluoresce. Syn: [prigunite](#)

Irish coal

Slate, shale, or rock loaded out from a colliery as coal. *Pryor, 3*

Irish dividend

An assessment on mining stock. *Fay*

iris quartz

A transparent quartz crystal containing minute air-filled or liquid-filled internal cracks that produce iridescence by interference of light. The cracks may occur naturally or be caused artificially by heating and sudden cooling of the specimen. Syn: [firestone](#); [rainbow quartz](#).

iron

a. Iron-base materials not falling into the steel classifications. See also: [gray cast iron](#); [ingot iron](#); [malleable cast iron](#); nodular cast iron; white cast iron; wrought iron. *ASM, 1*
b. Colloquially, all derrick and drilling equipment above the heads of the workers on the drill platform. *Long*
c. Any ferrous metal tool or part that must be fished from a borehole. Also called junk. *Long*
d. An isometric mineral, native alpha-Fe; metallic steel gray to black; sp gr, 7.3 to 7.9. Occurs as grains in basalt in Disko Island, Greenland; in meteorites, and in placers on South Island, New Zealand; and in Oregon and British Columbia. Nickel is commonly reported in iron in quantities up to several percent; meteoric iron generally contains at least 5%, and up to 25% to 65%, nickel. Because of the instability of iron under oxidizing conditions and the abundance of oxygen in the Earth's crust and atmosphere, practically all terrestrial iron occurs in the divalent (ferrous) or trivalent (ferric) state combined with other metals and nonmetallic elements in silicates, oxides, sulfides, etc.
e. Fourth most abundant element, by weight, making up the crust of the Earth. Symbol, Fe. The most common ore is hematite, Fe_2O_3 , from which the metal is obtained by reduction with carbon. Iron is the cheapest and most abundant, useful, and important of all metals. *Handbook of Chemistry and Physics, 3*

iron alum

See: [halotrichite](#)

iron black

Finely divided antimony. *Standard, 2*

iron clay

See: [clay ironstone](#)

iron formation

A chemical sedimentary rock, typically thin-bedded and/or finely laminated, containing at least 15% iron of sedimentary origin, and commonly but not necessarily containing layers of chert. Various primary facies (usually not weathered) of iron formation are distinguished on the basis of whether the iron occurs predominantly as oxide, silicate, carbonate, or sulfide. Most iron formation is of Precambrian age. In mining usage, the term refers to a low-grade sedimentary iron ore with the iron mineral(s) segregated in

bands or sheets irregularly mingled with chert or fine-grained quartz. CF: [ironstone](#); [jaspilite](#). Essentially synonymous terms are itabirite; banded hematite quartzite; taconite; quartz-banded ore; banded iron formation; calico rock; jasper bar. *AGI*

iron froth

A fine spongy variety of hematite. *Fay*

iron furnace

A furnace in which iron is smelted or worked in any way. *Standard, 2*

iron glance

A variety of hematite; specular iron. See also: [specularite](#)

iron hat

a. See: [gossan](#) b. See: [safety hat](#); hardhat. c. A weathered ironstone outcrop. *Pryor, 3*

iron hypersthene

See: [ferrosilite](#)

iron man

a. An iron worker; a manufacturer of iron; esp. one engaged in the processing of iron. *Webster 3rd* b. A worker who weighs out ground iron ore and adds it to slurry or dry-ground rock as it goes into the cement kiln. *Webster 3rd* c. An apparatus on wheels for supporting a glassblower's pontil while blowing large cylinders, as for window glass. *Standard, 2*

ironmaster

Person who conducts or manages the founding or manufacture of iron, esp. on a large scale. *Webster 3rd*

iron mica

A micaceous hematite. See: [biotite](#)

iron molybdate

See: [ferrimolybdate](#)

iron monarch

An important iron ore (chiefly hematite) deposit in the Middleback Ranges area of South Australia. *Nelson*

iron olivine

See: [fayalite](#)

iron ore

Ferruginous rock containing one or more minerals from which metallic iron may be profitably extracted. The chief ores of iron consist mainly of the oxides: hematite, Fe_2O_3 ; goethite, $\alpha\text{-FeO(OH)}$; magnetite, Fe_3O_4 ; and the carbonate, siderite or chalybite, FeCO_3 . See also: [bog iron ore](#); [limonite](#); kidney iron ore; magnetite; siderite; hematite; prereduced iron-ore pellet. *AGI*

iron oxide

a. A common ore of iron, sometimes prepared as a fine powder for use by drillers as a drill-mud heavy loader. *Long* b. A common compound of iron and oxygen; e.g., rust. *Long*

iron oxides

The basic constituent of the ferromagnetic spinels or ferrites. FeO , Fe_2O_3 , and Fe_3O_4 have melting points ranging from that of FeO at 1,420 degrees C to that of Fe_2O_3 at 1,565 degrees C. Used extensively for producing colors in glasses, glazes, and enamels. Iron and iron oxides produce brown or reddish colors in ceramic mixtures if they are fired in an oxidizing atmosphere, and greenish or bluish colors if fired in a reducing atmosphere. Iron oxides are fluxing and coloring materials. Larger particles produce brown or black spots, which, particularly in whiteware, are undesirable. Much care is taken to remove iron and iron oxides from the raw materials and from the bodies used for whiteware manufacture. *Lee; Handbook of Chemistry and Physics, 2*

iron pan

A general term for a hardpan in a soil in which iron oxides are the principal cementing agents; several types of iron pans are found in dry and wet areas and in soils of widely varying textures. *AGI*

iron phosphate

See: [vivianite](#)

iron piler

A laborer who removes iron from cars, sometimes breaks it, and piles and classifies it according to grade. *Fay*

iron portland cement

Mixture of portland cement and granulated blast furnace slag. *Bennett*

iron pyrite

See: [pyrite](#)

iron-reduction process

A process used in the treatment of lead ores. See also: [precipitation process](#)

iron refining

The reduction of prepared ores of iron to metallic iron, as in the blast furnace. The reduction and purification of semirefined iron, such as pig iron, or a mixture of pig iron, scrap iron, and scrap steel, to form substantially pure iron or steel, as in the electric furnace, open-hearth furnace, puddling furnace, or Bessemer converter. *Henderson*

iron runner

The spout by which iron flows from the taphole of a blast furnace. *Fay*

iron sampler

In the iron and steel industry, a laborer who obtains samples of iron ore as it is brought into the plant, or samples of semifinished or finished metal products, such as iron and steel sheets, rails, rods, or bars, and carries them to the laboratory for routine tests. Also called sampler; test carrier. *DOT*

iron sand

A sand containing particles of iron ore (usually magnetite), as along a coastal area. *AGI*

iron schefferite

See: [pyroxene](#)

iron series

See: [magnetite](#)

ironshot

a. Said of a mineral that is streaked, speckled, or marked with iron or an iron ore. *AGI* b. Containing small nodules or oolitic bodies of limonite or hematite; e.g., an ironshot rock in which the ooliths are essentially composed of limonite. A limonitic oolith in an ironshot rock. *AGI*

ironsmith

A worker in iron, as a blacksmith. *Standard, 2*

iron spar

See: [siderite](#)

iron stain

Strongly colored yellowish, reddish, or brownish deposit of iron oxides. *Skow*

iron steel

A material formed of iron between steel surfaces, or of steel-located iron. *Standard, 2*

ironstone

Any rock containing a substantial proportion of an iron compound, or any iron ore from which the metal may be smelted commercially; specif., an iron-rich sedimentary rock, either deposited directly as a ferruginous sediment or resulting from chemical replacement. The term is customarily applied to a hard, coarsely banded or nonbanded, and noncherty sedimentary rock of post-Precambrian age, in contrast with iron formation. The iron minerals may be oxides (limonite, hematite, magnetite), carbonate (siderite), or silicate (chamosite); most ironstones containing iron oxides or chamosite are oolitic. See: [clay ironstone](#); banded ironstone. CF: [iron formation](#)

ironstone cap

A surficial or near-surface sheet or cap of concretionary clay ironstone. *AGI*

ironstone clay

See: [argillaceous hematite](#); red hematite.

iron sulfides

See: [chalcopyrite](#); pyrite; marcasite; pyrrhotite.

iron talc

See: [minnesotaite](#)

iron vitriol

See: [melanterite](#)

ironworker

Person engaged in manufacturing iron or ironwork. *Standard, 2*

ironworks

An establishment for the manufacture of iron or of heavy ironwork. *Standard, 2*

irradiation

Exposure to radiation, as in a nuclear reactor. *Lyman*

irregular polygon

Polygon in which neither the sides nor the angles are equal. *Jones, 2*

irrespirable

Not respirable; not fit to be breathed. Said of mine gases. *Standard, 2; Fay*

irrespirable atmosphere

In a coal mine, atmosphere containing poisonous gases or a lack of sufficient oxygen as a result of combustible gases explosions, coal-dust explosions, combined gas and dust explosions, or mine fires, and which can only be entered by persons wearing breathing apparatus. *McAdam, 1*

irrotational wave

See: [P wave](#); compressional wave.

irruption

A nearly obsolete syn. of intrusion. *AGI*

isanomalic line

Line of equal value of an anomaly. *Schieferdecker*

Isbell table

Obsolete type of shaking table. *Pryor, 3*

iserine

See: [ilmenorutile](#)

ishikawaite

An orthorhombic mineral, $(U,Fe,Y,Ca)(Nb,Ta)_4$ (?); opaque black; at Ishikawa, Iwaki Province, Japan.

isinglass

Transparent sheet mica, commonly muscovite, principally from pegmatite dikes. See also: [mica](#); [muscovite](#).

island arc

A group of islands having a curving, arclike pattern. Most island arcs lie near the continental masses, but inasmuch as they rise from the deep ocean floors, they are not a part of the continents proper. *Stokes*

isoanthracite lines

a. A term for lines of equal volatile content (now called isovols) drawn on a map or diagram. *Tomkeieff* b. Lines of equal C:H ratio in coal drawn on the map or diagram. *Tomkeieff*

isobar

An imaginary line or a line on a map or chart connecting or marking places on the surface of the Earth where the height of the barometer reduced to sea level is the same either at a given time or for a certain period. *Webster 3rd*

isobase

A term used for a line that connects all areas of equal uplift or depression; it is used esp. in Quaternary geology as a means for expressing crustal movements related to postglacial uplift. *AGI*

isobath

a. A line on a map or chart that connects points of equal water depth. Syn: [bathymetric contour](#); [depth contour](#). *AGI* b. An imaginary line on a land surface along which all points are the same vertical distance above the upper or lower surface of an aquifer or above the water table. *AGI*

isocals

Lines of equal calorific value in coal drawn on a map or diagram. *Tomkeieff*

isocarb

On a map or diagram, a line connecting points of equal fixed-carbon content in coal. See also: [isocarbon map](#)

isocarbon map

A map showing, by contours, the areas having an equal quantity of carbon within an assumed interval of stratigraphic section. See also: [isocarb](#) *Ballard*

isochore

a. A line drawn on a map through points of equal drilled thickness for a specified subsurface unit. Thickness figures are uncorrected for dip in vertical wells, and corrected for hole angle, but not for dip, in deviated wells. CF: [isopach](#) b. In a phase diagram, a line connecting points of constant volume. *AGI*

isochore map

A map showing drilled thickness of a given stratigraphic unit by means of isochores. Syn: [convergence map](#)

isochromatic lines

In stress analysis by the photoelastic method, lines of equal difference of principal stress, appearing as colored streaks. See also: photoelasticity. (Hammond, 1965)

isochrome map

A contour map that depicts the continuity and extent of color stains on geologic formations. *AGI*

isochronal

See: [isochronous](#)

isochrone lines

Lines connecting points of equal times. When the relative seismic velocities are known, the isochrones can be translated into depth contours. See also: [refraction shooting](#)

isochronous

a. Equal in duration or uniform in time; e.g., an isochronous interval between two synchronous surfaces, or an isochronous unit of rock representing the complete rock record of an isochronous interval. *AGI* b. A term frequently applied in the sense of synchronous, such as an isochronous surface having everywhere the same age or time value within a body of strata. Syn: [isochronal](#)

isoclinal

Adj. of isocline. *AGI*

isoclinal fold

A fold whose limbs are parallel. Syn: [isocline](#)

isocline

See: [isoclinal fold](#)

isoclinic

A line (in a stressed body) at all points on which the corresponding principal stresses have the same direction. *Roark*

isoclinic line

a. A line drawn through all points on the Earth's surface having the same magnetic inclination. The particular isoclinic line drawn through points of zero inclination is given the special name of aclinic line. *Hunt* b. An isomagnetic line connecting points of equal magnetic inclination. *AGI*

isodesmic

Characteristic of a crystal structure with bond strengths roughly equal in all directions.

isodiametric

Refers to the hexagonal, trigonal, and tetragonal crystal systems; i.e., having the lateral crystal axes a_1 and a_2 of equal length. CF: [isometric](#); [anisometric](#).

isodimorphous

In mineralogy, both isomorphous and dimorphous; said of certain groups of minerals.
Fay

isodynamic line

Any line joining points of equal magnetic intensity. Applicable to the total intensity or the vertical, horizontal, north-south, or east-west components. So used in terrestrial magnetism literature, esp. in British and Canadian writings. *AGI*

isoelectric point

Zero potential or point of electrical neutrality; the hydrogen-ion exponent at which particles in aqueous suspension are neutral and best able to flocculate. Also called zero point of change. *Pryor, 4*

isofacial

a. Pertaining to rocks belonging to the same metamorphic facies and having reached equilibrium under the same set of physical conditions. Syn: [isograde](#) b. Pertaining to rocks belonging to the same sedimentary facies; e.g., an isofacial line on a map, along which the thickness of stratum of the same lithologic composition is constant. *AGI*

isogal

In gravity prospecting, a contour line of equal gravity values. *AGI*

isogam

In magnetic prospecting, a contour line of equal magnetic values. *AGI*

isogam map

A chart showing contour lines of equal magnetic field intensity and employed in the magnetic methods of geophysical prospecting. Also called isogal map in gravity surveys.
Nelson

isogeotherm

A line or surface within the Earth connecting points of equal temperature. Syn: [isogeothermal](#) line; geotherm; [geoisotherm](#). *AGI*

isogeothermal line

See: [isogeotherm](#)

isogon

See: [isogonic line](#)

isogonic line

An isomagnetic line connecting points of equal magnetic declination. See also: [agonic line](#)

isograd

A line on a map joining points at which metamorphism proceeded at similar values of pressure and temperature as indicated by rocks belonging to the same metamorphic facies. Such a line represents the intersection of an inclined surface with the Earth's surface corresponding to the boundary between two contiguous facies or zones of metamorphic grade, as defined by the appearance of specific index minerals; e.g., garnet isograd, staurolite isograd. *AGI*

isograde

See: [isofacial](#)

isogram

A general term for a line on a map or chart connecting points having an equal numerical value of some physical quantity (such as temperature, pressure, or rainfall); an isopleth. *AGI*

isohume

A line constructed on a map, somewhat similar to a contour line, but connecting points of equal moisture content of coal in the bed. *AGI*

isohyet

A line connecting points of equal precipitation. *AGI*

isolate

A culture of an organism isolated by selection procedures. *Rogoff*

isolated consignment

A particular case of a single consignment where the sampling is to be carried out without prior knowledge of a coal's sampling characteristics other than its presumed ash content and size. *Nelson*

isolator

Part of a circuit that can be removed from it in order to break the circuit when there is no current flowing. *Hammond*

isoline

See: [isopleth](#)

isolith

a. An imaginary line connecting points of similar lithology and separating rocks of differing nature, such as of color, texture, or composition. *AGI* b. An imaginary line of equal aggregate thickness of a given lithologic facies or particular class of material within a formation, measured perpendicular to the bedding at selected points (which may be on outcrops or in the subsurface). *AGI*

isolith map

A map that depicts isoliths; esp. a facies map showing the net thickness of a single rock type or selected rock component in a given stratigraphic unit. *AGI*

isomagnetic line

A line connecting points of equal value of some magnetic element; e.g., isogonic line; isodynamic line; isoporic line. *AGI*

isomer

a. One of two or more substances composed of the same molecular formula, but differing in chemical or physical properties owing to the arrangement of the atoms in the molecule. *Hess* b. In nuclear science, one of two or more nuclides with the same numbers of neutrons and protons in the nucleus, but having different energy. *Lyman*

isomeric

Of, relating to, or exhibiting isomerism. *Webster 3rd*

isometric

a. A system of crystallization with three axes at right angles and of equal length; nine planes of symmetry; singly refracting. CF: [anisodesmic](#) b. Characterized by equality of measure. c. The crystal system characterized by three orthogonal axes of equal length. Syn: [cubic](#); [equant](#). CF: [anisometric](#); [isodiametric](#).

isometric line

See: [isopleth](#)

isometric projection

In technical drawing, a three-dimensional view of an object can be drawn to scale with three perpendicular edges at 120 degrees to each other, and with the vertical edges vertical. See also: [oblique projection](#); axonometric projection. *Hammond*

isomorphism

The name given to chemical compounds that have analogous composition, similar crystal structures, and closely related crystal forms; e.g., carbonate minerals of the aragonite group--aragonite, witherite, strontianite, and cerussite--in which the metal ions are different but the several minerals crystallize in the orthorhombic system in closely similar forms. Adj. isomorphous. Noun, isomorph. CF: [polymorphism](#)

isomorphous

Originally defined (Mitscherlich, 1819) as having similar crystalline form, but now generally restricted to compounds that form solid solutions by isomorphous substitution; i.e., by the replacement of one ion for another in a crystal structure without alteration in the crystal form. CF: [isotypic](#)

isomorphous mixture

a. A solid solution of two or more isomorphous substances. *Fay* b. A type of solid solution in which mineral compounds of analogous chemical composition and closely related crystal habit crystallize together in various proportions. CF: [solid solution](#) *Harbison-Walker*

isomorphous replacement

A characteristic of some minerals where substitution for one or more elements by others does not change the crystal structure. An example is the substitution of iron for zinc in sphalerite, wherein the iron content can range up to more than 15% without changing the sphalerite structure. Similarly, iron, manganese, and magnesium ions can replace each other in the calcite structure common to siderite, rhodochrosite, and magnesite.

isomorphous series

Descriptive of two minerals with the same crystal structure but different end-member compositions which may show partial or complete crystal miscibility (solid solution) between them. One mineral may belong to more than one isomorphous series; e.g., the garnet grossular forms a series with andradite, with hibschite and katoite, and with uvarovite. There are many isomorphous series among minerals; e.g., plagioclase feldspars, monoclinic pyroxenes, and the spinel and garnet groups. CF: [solid solution](#)

isontic line

See: [isopleth](#)

isopach

A line drawn on a map through points of equal true thickness of a designated stratigraphic unit or group of stratigraphic units. CF: [isochore](#) thickness contour. *AGI*

isopach map

A map indicating, usually by means of contour lines, the varying thickness of a designated stratigraphic unit. Also called isopachous map. *AGI*

isopachous

Of, relating to, or having an isopach; e.g., an isopachous contour. Not recommended usage. *AGI*

isopachous line

See: [isopach](#)

isopachous map

A nonrecommended syn. of isopach map. *AGI*

isopachyte

British term for isopach. *AGI*

isophysical series

A series comprising rocks of different chemical composition that were metamorphosed under identical physical conditions.

isopic

Said of sedimentary rocks of the same facies, or said of facies characterized by identical or closely similar rock types. The rocks may be formed in different sedimentation areas or at different times or both, but the lithologies are the same; e.g., a facies repeated in vertical succession. Also, said of a map depicting isopic facies or rocks. CF: [heteropic](#)

isopical

Relating to synchronous deposits that exhibit the same facies.

isopiestic

Constant value of pressure on a surface of the sea. *Hy*

isopiestic line

See: [equipotential line](#)

isopleth

a. In a strict sense, a line or surface on which some mathematical function has a constant value. It is sometimes distinguished from a contour by the fact that an isopleth need not refer to a directly measurable quantity characteristic of each point in the map area; e.g., maximum temperature of a particular point. *AGI* b. A general term for a line, on a map or chart, along which all points have a numerically specified constant or equal value of any given variable, element, or quantity (such as abundance or magnitude), with respect to space or time; esp. a contour. Etymol. Greek isos, equal, + plethos, fullness, quantity, multitude. Syn: [isogram](#); [isoline](#); isontic line; isometric line. *AGI*

isopor

See: [isoporic line](#)

isoporic line

A line drawn through points whose annual change in magnetic declination is equal. Syn: [isopor](#)

isopycnic

A line connecting points of equal density, particularly of ocean water. A line connecting points of equal atmospheric density may be called an isostere. *Hunt*

isorads

Lines joining points of equal radioactivity, drawn from geiger- or scintillation-counter data to form an isorad map. *AGI*

isoresistivity plan

A plan showing lines of equal resistivity at a certain selected depth. It is prepared from data obtained by the resistivity method of geophysical prospecting. *Nelson*

isoseism

See: [isoseismal line](#)

isoseismal

A line on the surface of the Earth joining points of equal seismic disturbance due to any single earthquake. Syn: [isoseismal line](#) *AGI*

isoseismal line

A line connecting points on the Earth's surface at which earthquake intensity is the same. It is usually a closed curve around the epicenter. Syn: [isoseism](#); [isoseismal](#). *AGI*

isostannite

See: [kesterite](#)

isostasy

The condition of equilibrium, comparable to floating, of the units of the lithosphere above the asthenosphere. Crustal loading, as by ice, water, sediments, or volcanic flows, leads to isostatic depression or downwarping; removal of load leads to isostatic uplift or upwarping. Two differing concepts of the mechanism of isostasy are the Airy hypothesis of constant density and the Pratt hypothesis of constant thickness. See also: [isostatic compensation](#)

isostatic

Subjected to equal pressure from every side; being in hydrostatic equilibrium; relating to or characterized by isostasy. See: [stress trajectory](#)

isostatic adjustment

See: [isostatic compensation](#)

isostatic anomaly

a. The difference between the observed value of gravity at a point after applying to it the isostatic correction and the normal value of gravity at the point. *AGI* b. Anomaly on a map of observed gravity anomalies after applying the isostatic correction. Negative isostatic anomalies indicate undercompensation, implying a tendency to rise; positive isostatic anomalies connote overcompensation and a tendency to sink. *AGI* c. A gravity anomaly calculated on a hypothesis that the gravitational effect of masses extending above sea level is approx. compensated by a deficiency of density of the material beneath those masses; the effect of deficiency of density in ocean waters is compensated by an excess of density in the material under the oceans. See also: [anomaly](#)

isostatic compensation

The adjustment of the lithosphere of the Earth to maintain equilibrium among units of varying mass and density; excess mass above is balanced by a deficit of density below, and vice versa. See also: [isostasy](#) Syn: [isostatic adjustment](#); [isostatic equilibrium](#). *AGI*

isostatic correction

The adjustment made to values of gravity, or to deflections of the vertical, observed at a point, to take account of the assumed mass deficiency under topographic features for which a topographic correction is also made. *AGI*

isostatic equilibrium

The shifting of the rock beneath the Earth's crust in response to the shifting in the weight above the Earth's crust. Syn: [isostatic compensation](#)

isostructural

a. Refers to minerals that are closely similar in crystallographic, physical, and chemical properties but have little tendency for isomorphous substitution; same as isotypic. *AGI*
b. Said of minerals that have the same ionic or molecular crystal structure. Isostructure is more rigorous than isomorphism; the latter requires similar crystal forms, the former a one-to-one correspondence of atomic particles. Isostructural minerals may differ markedly in chemical composition and physical properties, e.g., fluorite and uraninite, or may be closely similar, e.g., the calcite group of carbonates.

isotherm

A line connecting points of equal temperature. Isotherm maps are often used to portray surface temperature patterns of water bodies. *AGI*

isothermal

a. A change taking place at a constant temperature. *Strock, 2* b. Pertaining to the process of changing the thermodynamic state of a substance, such as its pressure and volume, while maintaining the temperature constant. *AGI*

isothermal compression

a. Reduction in the volume of a fluid without any change in its temperature. *Standard, 2*
b. Compression in which there is no change in the temperature of the air; used as a standard against which the conditions of actual compression may be checked. *Lewis*

isothermal expansion

The expansion of air under constant temperature. Since the air does work on expanding, it loses heat; consequently, heat must be added to the air to maintain it at constant temperature. *Lewis*

isothermal layer

A water column through which a constant temperature exists. *Hy*

isothrausmatic

A descriptive term applied to igneous rocks with an orbicular texture in which the nuclei of the orbicules are composed of the same rock as the groundmass. CF: [crystallothrausmatic](#); [homeothrausmatic](#); heterothrausmatic. *AGI*

isotropic

Said of a medium with properties the same in all directions; in crystal optics, said of a crystal with refractive index that does not vary with crystallographic direction. Isometric crystals and amorphous substances, such as glass, are generally isotropic. Noun, isotropy. CF: [uniaxial](#); anisotropic.

isotropic mass

A mass having the same property (or properties) in all directions. *ASCE*

isotropy

a. The condition of having properties that are uniform in all directions. Adj. isotropic. CF: [uniaxial](#) b. Refers to matter with properties the same in all directions; in optics, a crystal with an index of refraction that does not vary with crystallographic direction. Isometric crystals and amorphous substances, e.g., glass, are generally isotropic. CF: [anisotropy](#)

isotypic

Having analogous composition and closely similar crystal structure, but not capable of intercrystallizing to form solid solutions. Examples are calcite and soda niter; galena and NaBr. CF: [isomorphous](#)

isotypy

One-dimensional polymorphism; e.g., alternate stacking of identical layers of micas or clays. Also called isotypism. CF: [polymorphism](#)

isovelocity

The phenomenon of sound being the same in all parts of a given water column. *Hy*

isovol

Lines constructed on a map of a coalbed connecting points of equal volatile matter, delineating the distribution of volatile matter of the coal. *AGI*

Istrian stone

A marble found near Trieste, from which Venice is largely built. *Fay*

itabirite

A laminated, metamorphosed oxide-facies iron formation in which (1) the original chert or jasper bands have been recrystallized into megascopically distinguishable grains of quartz and (2) the iron is present as thin layers of hematite, magnetite, or martite (Dorr & Barbosa, 1963). The term was originally applied in Itabira, Brazil, to a high-grade, massive specular-hematite ore (66% iron) associated with a schistose rock composed of granular quartz and scaly hematite. The term is now widely used outside Brazil. CF: [jacutinga](#); [canga](#). Syn: [banded-quartz hematite](#); [hematite schist](#). *AGI*

itacolumite

A micaceous sandstone or a schistose quartzite that contains interstitial, loosely interlocking grains of mica, chlorite, and talc; exhibits flexibility when split into thin slabs. Type locality is Itacolumi Mountain in Minas Gerais, Brazil. Syn: [flexible sandstone](#); [articulite](#). *AGI*

Italian asbestos

A name often given to tremolite asbestos to distinguish it from Canadian or chrysotile asbestos; extensively quarried in Piedmont and Lombardy, Italy. *CMD*

ivory

The fine-grained, calcareous creamy-white dentine forming most of the tusks of elephants and the teeth or tusks of certain other large animals, such as the walrus; it has long been esteemed for a wide variety of ornamental articles. Elephant ivory is now illegal to use. It is often simulated by bone.

ivory turquoise

Odontolite; fossil tooth or bone colored by a blue phosphate of iron. Syn: [bone turquoise](#)

Iwan-pattern earth auger

A dry sampler equipped with an Iwan auger shoe or cutterhead. See: [post-hole digger](#)

Ixiolite

A monoclinic mineral (Ta,Nb,Sn,Fe,Mn)₄ O₈ .

J

jacinth

See: [essonite](#); hyacinth; zircon.

jack

a. A name for zinc ore; blackjack. See: [sphalerite](#) b. Cannel coal interstratified with shale. c. Coaly shale, commonly canneloid. d. To drill a rock by hand, using a 4-lb (1.8-kg) hammer in one hand and a steel drill in the other ("single jacking"). "Double jacking" is to use a two-handed (sledge) hammer with the steel drill held by another worker. e. A portable device used for exerting great pressure or for lifting a heavy body through a small distance. Syn: [anchor jack](#)

jack boom

a. A boom that supports sheaves between the hoist drum and the main boom in a pull shovel or a dredge. *Nichols, I* b. A boom whose function is to support sheaves that carry lines to a working boom. *Nichols, I*

jack catch

Safety catch in the rail track to stop tubs running back on inclines. *Mason*

jack engine

Eng. A donkey engine; a small engine employed in sinking a shallow shaft. *Fay*

jacket

An outer casing or cover constructed around a cylinder or pipe, the annular space being filled with a fluid for either cooling, heating, or maintaining the cylinder contents at constant temperature; e.g., the water jackets of an internal combustion engine. *CTD*

jacket set

a. Set of timbers used in a shaft outside the regular shaft set, as extra protection in heavy ground. *Pryor, 3* b. Set like the larger shaft set with dividers omitted, except that the wall and end plates are broken at all joints to facilitate renewing. Used in heavy ground to protect the regular shaft timbers. The jacket set is placed outside the regular timbers, separated from them by short blocks, and is blocked and wedged against the rock. *Lewis*

jackhammer

A percussive type of automatically rotated rock drill that is worked by compressed air. It is light enough to be used without a tripod and to be hand held. *Pryor, 3*

jackhead

See: [delivery drift](#)

jackhead pit

a. A small pit without hoisting appliances, frequently serving as a ventilation shaft. *Standard, 2* b. A small shaft sunk within a mine. A winze. *Fay*

jackhead pump

A subordinate pump in the bottom of a shaft, worked by an attachment to the main pump rod. *Fay*

jackhead set

Newc. The set of pumps in the jackhead staple. *Fay*

jackhead staple

Eng. A small mine for the supply of coal for the boilers. *Fay*

jack hole

Eng. In coal mining, a bolthole. See also: [cut-through](#) *Standard, 2; Fay*

jacking pressure

The amount of pressure exerted by a jack to force a cone penetrometer into a soil being tested. *Long*

jacking up

The raising up of masses of machinery and heavy structures by means of jacks. *Crispin*

jackknife

The collapse of a drill tripod or derrick. *Long*

jackknife rig

A truck-mounted diamond or small rotary drill equipped with a hinged derrick. *Long*

jackknifing

A collapsing of square-set timbers by wall pressure or through poor placement. *Fay*

jackleg

a. Light supporting bar for use with a jackhammer. *Pryor, 3* b. An outrigger post. *Nichols, 1*

jackpipe

A hollow iron pipe large enough to slip over the end of the front jack of a cutting machine to make it hold more firmly against the coal. *Fay*

jack pit

N. of Eng. A shallow shaft in a mine communicating with an overcast. See also: [jackshaft](#); [overcast](#). Syn: [jacky pit](#)

jack post

This timber is used where the coal seam is separated by a rock band and one bench is loaded out before the other. If the top bench is worked off first, the jack posts are set between the bottom bench of the coal and the roof. If the bottom bench is cleaned up

first, the jack posts are set between the bottom and the top bench. At least two jack posts should be used and as many more as is necessary to keep the top bench of coal or the roof from coming down while the coal is being loaded out. *Kentucky*

jackroll

A windlass worked by hand. *Fay*

jackscrew

a. A jack in which a screw is used for lifting or exerting pressure; also, the helical-screw part of a jackscrew. Syn: [screwjack](#) b. A heavy screw set in the base or frame of a drill machine for the purpose of leveling the drill. *Long*

jack setter

A miner who assists in the operation of an auger-type underground mining machine; duties include seeing that the roof of the mine at or near the machine is in a safe condition. See also: [machine helper](#) *Fay; DOT*

jackshaft

An intermediate driving shaft. See also: [jack pit](#)

jacky pit

See: [jack pit](#)

jacobsite

An isometric mineral, $8[\text{MnFe}_2 \text{O}_4]$; spinel group; occurs with manganese ores.

Jacobs process

A method in which bauxite is fused in an electric furnace to form a synthetic corundum.

Jacob staff

A straight rod or staff pointed and shod with iron at the bottom for insertion in the ground, having a socket joint at the top, and used instead of a tripod for supporting a compass. *Webster 3rd*

Jacquet's method

Use of electrolytic polishing to complete the finish on metal surfaces. After mechanical polishing they are made the anodes in a suitable electrolyte. *Pryor, 3*

jacupirangite

An ultramafic plutonic rock that is part of the ijolite series; composed chiefly of titanite and magnetite, with a smaller amount of nepheline; a nepheline-bearing clinopyroxenite. Its name, given by Derby in 1891, is derived from Jacupiranga, Brazil. *AGI*

jacutinga

A term used in Brazil for disaggregated, powdery itabirite, and for variegated thin-bedded, high-grade hematite iron ores associated with and often forming the matrix of gold ore. Etymol. from its resemblance to the colors of the plumage of *Pipile jacutinga*, a Brazilian bird. CF: [itabirite](#)

jad

a. Som. A long and deep holing, cutting, or jud, made for the purpose of detaching large blocks of stone from their natural beds. b. Prov. Eng. To undercut (coal or rock). *Standard, 2*

jade

A microcrystalline gem variety of jadeite or nephrite (actinolite) with a toughness (resistance to breakage) exceeded only by that of carbonado diamond; ranges from nearly white to emerald-green, the latter being the most valuable; finest quality is reported to come from northern Burma (Myanmar) and the Yunnan Province of south China. The emerald-green color is attributed to jadeite and to trace amounts of chromium. There are many imitations of jade, including green-dyed onyx (Mexican jade), aventurine quartz containing fuchsite mica (Indian jade), vesuvianite (California jade), green hydrogrossular from South Africa, green organic or inorganic dyes or substitutes inserted under white jade, glass, dyed quartz, and bowenite or williamsite varieties of serpentine. "Jade cat's-eye" is a contradiction in terms. See: [jadeite](#); nephrite; toughness.

jadeite

A monoclinic mineral, $4[\text{NaAlSi}_2\text{O}_6]$; pyroxene group; apple green to emerald green, white, lavender, tomato red, or brown; tough; associated with albite from high-pressure, low-temperature metamorphosed plagioclase; an ornamental stone called "jade" (along with nephrite).

jadeitite

A metamorphic rock consisting principally of jadeite, commonly associated with small amounts of feldspar or feldspathoids. It is probably derived from an alkali-rich igneous rock by high-pressure metamorphism. *AGI*

jadeolite

A deep-green chromiferous syenite cut as a gemstone and resembling jade in appearance. Obsolete. *AGI*

jag bolt

An anchor bolt with a barbed flaring shank, which resists retraction when leaded into stone or set in concrete. Also called hacked bolt; rag bolt. *Webster 3rd*

jager

A bluish-white diamond of modern cut. *Schaller*

jagging board

An inclined board on which ore slimes are washed, as in a buddle. *Standard, 2*

jagoite

A trigonal mineral, $Pb_3 FeSi_4 O_{12} (Cl,OH)$; in yellow-green micaceous plates associated with another lead-iron silicate (melanotekite) in iron ore at Laangban, Sweden.

jailer

Som. A small tub or box in which water is carried in a mine.

jalpaite

A tetragonal mineral, $Ag_3 CuS_2$; forms intergrowths with argentite in the Black Hawk District, Grant County, NM.

jam

The blocking of a core barrel or core bit with core, sometimes deliberately. *Long*

jamb

a. A vein or bed of earth or stone, that prevents miners from following a vein of ore; a large block. *Fay* b. A projecting columnar part (as of a masonry wall) or mass (as of ore). *Webster 3rd* c. A vertical structural member forming the side of an opening in a

furnace wall. *Harbison-Walker* d. A type of brick shape intended for use in the sides of wall openings. *Harbison-Walker* e. Sidewall of port of furnace superstructure carrying port crown load. *ASTM*

jamb cutter

In the coke products industry, a laborer who chips carbon and mud from the edges of coke-oven doors with a steel bar prior to the discharge of the coke. *DOT*

jamb stick

See: [gim peg](#)

jamb wall

See: [breast wall](#)

James jig

Movable sieve box supported on a rubber diaphragm and jiggged mechanically up and down. *Pryor, 3*

jamesonite

A monoclinic mineral, $2[\text{Pb}_4 \text{FeSb}_6 \text{S}_{14}]$; metallic gray to black; in acicular crystals or capillary forms of featherlike appearance, thus the term "feather ore;" in low- to medium-temperature veins with other lead sulfosalts, galena, and carbonates. Syn: [wolfsbergite](#); [feather ore](#).

James table

Shaking table used in concentration of ground ores by gravity. *Pryor, 3*

jam out

S. Staff. To cut or knock away the coal between holes. *Fay*

jam riveter

A riveting hammer provided with an air-operated telescopic casing to hold the hammer against the work. *Hammond*

jar

a. An appliance to permit relative movement between the rope and rods in a cable drill. It reduces shocks and the risk of rod or chisel breakages. See also: [free-falling device](#) b. To loosen or free stuck drill-stem equipment or tools by impacts delivered by quick, sharp, upward-traveling blows delivered by a drive hammer or jars. *Long*

jar collar

A swell coupling, attached to the upper exposed end of a drill rod or casing string, to act as an anvil against which the impact blows of a drive hammer are delivered and transmitted to the rod or casing string; also, sometimes used as a syn. for drive hammer. Also called drive collar; jar head. Syn: [bell jar](#)

jargon

A colorless, yellow, or smoky gem variety of zircon.

jarlite

A monoclinic mineral, $\text{NaSr}_3 \text{Al}_3 (\text{F}, \text{OH})_{16}$; in brownish crystals and spherulites at Ivigtut, Greenland.

jar mill

a. A small batch mill of ceramic material used in ore-testing laboratories in investigation of grinding problems. *Pryor, 3* b. Any of the stoneware-lined pebble mills used in milling enamels on a small scale. *Enam. Dict.* c. See: [ball mill](#)

Jarno taper

This taper of 0.6 in/ft (4.2 cm/m) is used by a number of manufacturers for taper pins, sockets, and shanks used on machine tools. *Crispin*

jarosite

A trigonal mineral, $\text{KFe}_3 (\text{SO}_4)_2 (\text{OH})_6$; alunite group; amber yellow to dark brown; forms druses of minute crystals, crusts, and coatings; may be fibrous or fine-grained and massive; associated with volcanic rocks; thought to form under solfataric conditions at elevated temperatures and pressures; in some places with alunite; at many localities in the Western United States, Bolivia, Europe, and Russia. See also: [cuprojarosite](#); [kirovite](#).

jaspagate

See: [agate jasper](#)

jasper

A red variety of chalcedony. See also: [chert](#); [chalcedony](#). Syn: [jasperite](#)

jasper bar

See: [jaspilite](#)

jasperine

Banded jasper of varying colors.

jasperite

See: [jasper](#)

jasperization

The conversion or alteration of igneous or sedimentary rocks into banded rocks like jaspilite by metasomatic introduction of iron oxides and cryptocrystalline silica. See also: [jaspilite](#)

jasperoid

a. A dense, usually gray, chertlike siliceous rock, in which chalcedony or cryptocrystalline quartz has replaced the carbonate minerals of limestone or dolomite; a silicified limestone. It typically develops as the gangue of metasomatic sulfide deposits of the lead-zinc type, such as those of Missouri, Oklahoma, and Kansas. *AGI* b. Resembling jasper. *AGI*

jasper opal

An almost opaque common opal; commonly yellow-brown, reddish brown to red owing to iron oxides; resembles opal but has the luster of common opal. Also called jaspopal.

jaspidean

Resembling or containing jasper; jaspery. *AGI*

jaspilite

Interbedded jasper and iron oxides. CF: [iron formation](#) Syn: [jasper bar](#)

jasponyx

An opaque onyx, part or all of whose bands consist of jasper.

jaw

a. In a crusher, one of a pair of nearly flat or ribbed faces separated by a wedge-shaped opening. *Nichols, 1* b. One or a set of two or more serrate-faced members between which an object may be grasped and held firmly, as in a vise, drill chuck, foot clamp, or pipe wrench. *Long* c. In a clutch, one of a pair of toothed rings, the teeth of which face each other. *Nichols, 1*

jaw breaker

See: [jaw crusher](#)

jaw crusher

a. A primary crusher designed to reduce large rocks or ores to sizes capable of being handled by any of the secondary crushers. *Enam. Dict.* b. A crushing machine consisting of a moving jaw, hinged at one end, which swings toward and away from a stationary jaw in a regular oscillatory cycle. *ACSG, 2* c. A machine for reducing the size of materials by impact or crushing between a fixed plate and an oscillating plate, or between two oscillating plates, forming a tapered jaw. Syn: [jaw breaker](#)

jedding ax

A stonecutter's ax with a flat face and a pointed peen. *Webster 3rd*

jeffersite

A kind of vermiculite from West Chester, Chester County, PA. *Fay*

jeffersonite

A variety of monoclinic pyroxene, commonly augite or diopside, containing manganese and zinc; forms large, coarse crystals having rounded edges and uneven faces; at Franklin, NJ.

Jeffrey crusher

Crusher used to break softish materials; e.g., limestone and coal. See also: [swing-hammer crusher](#)

Jeffrey diaphragm jig

A plunger-type jig with the plunger beneath the screen. May be either single or multiple compartments. Its distinguishing features are (1) the stroke is produced with a cam operated by a lever and rocker-arm mechanism, (2) the weight of the column of water

above the plunger is balanced by means of compressed air, (3) automatic operation is obtained by means of a submerged float that measures the specific gravity of the mass of coal, refuse, and water at the peak of the pulsion stroke, (4) refuse is withdrawn through a star gate extending the full width of the overflow lip, and (5) the slope of the screen plate is readily adjustable by means of heavy screws at the feed end. It is widely used on bituminous coal on sizes ranging up to a maximum of 6 in (15 cm). *Mitchell*

Jeffrey molveyor

An arrangement to keep a continuous miner in full operation at all times. It consists of a series of short conveyors, each mounted on driven wheels and coupled into a train to run alongside the heading or room conveyor. *Nelson*

Jeffrey-Robinson cone

A cone for coal washing; similar to the Callow and Caldecott cones. See also: [cone classifier](#)

Jeffrey single-roll crusher

A simple type of crusher for coal, with a drum to which are bolted toothed segments designed to grip the coal, forcing it down into the crushing opening.

Jeffrey swing-hammer crusher

A crusher enclosed in an iron casing in which a revolving shaft carries swinging arms having a free arc movement of 120 degrees. The rotation of the driving shaft causes the arms to swing out and strike the coal, ore, or other material, which, when sufficiently fine, passes through the grated bottom. *Liddell*

Jeffrey-Traylor vibrating feeder

A feed chute vibrated electromagnetically in a direction oblique to its surface. Rate of movement of material depends on amplitude and frequency of vibration.

Jeffrey-Traylor vibrating screen

An electric vibrating screen operated by action on an oscillating armature and a stationary coil. *Gaudin, 1*

jelly

See: [carbohumins](#); vegetable jelly.

jenkin

a. A drivage at right angles to the main cleat. *Mason* b. Eng. A road driven bordways in a pillar of coal. A jud driven bordways along a pillar of coal with goaf or an old bord on one side is called a "loose end jenkin." *SMRB* c. N. of Eng. A variation of "junking." *Fay*

jenkinsite

A ferroan variety of antigorite.

Jeppe's tables

A series of tables esp. compiled for mining work that includes tables of density, vapor pressure, and absolute humidity. *Roberts, 1*

Jeppetown shales

S. Afr. Part of the Jeppetown Series forming the footwall of the Main Reef on the Central and East Rand. *Beerman*

jerking table

See: [shaking table](#)

jerry man

An employee in a mine whose duty it is to clean up falls or refuse, or to make a miner's working place safe. See also: [wasteman](#)

Jersey fire clay brick

A highly siliceous clay brick, semisilica brick. *AISI*

jeso

Beds of decomposed gypsum. *Standard, 2*

jet

a. A hard black variety of cannel coal or brown coal, compact in texture, having a rough fracture and dull luster that takes a good polish and is thus used in the jewelry trade. Syn: [black amber](#) b. A sudden and forceful rush or gush of fluid through a narrow or restricted opening; e.g., a stream of water or air used to flush cuttings from a borehole. *AGI* c. A black variety of marble. d. Jet piercing, a thermal method of drilling large-diameter blast holes in hard cherty iron formation (taconite); formerly used mainly on the Mesabi Range in Minnesota, but also on the Marquette Range in Michigan. The rotating drill

head is fed a mixture of kerosene and oxygen, ignited to direct a high-temperature flame against the rock, causing the rock to spall into fine particles by thermal expansion. Method has been almost totally replaced by rotary drills using tricone bits. See also: [jet hole](#)

jetair flotation machine

A multiple-cell machine of the mechanical agitation type.

jet-assisted cutting

a. Cutting rock by the very high force of a water jet against the ore so that the material could be processed for mineral recovery. *SME, 1* b. Penetration of high-pressure water into material cracks such that the cracks between the grains are propagated and cutting occurs. See also: [hydraulic mining](#)

jet coal

See: [cannel coal](#)

jet corer

Consists of a length of pipe that is lowered from a vessel to obtain samples. High-velocity water is pumped through the pipe, and the jetting action of this water issuing from the lower end of the pipe very effectively cuts a hole in the unconsolidated overburden sediments. Once at bedrock, the pipe is rammed into the rock with sufficient force to obtain a plug several inches in length. *Mero*

jet drilling

Piercing of rock strata by use of high-temperature flame to fuse the rock, together with jets of water to cause decrepitation and to flush the fragments out. *Pryor, 3*

jet grinding mill

Enclosed chamber of relatively small cross section in which gas, at substantially high atmospheric pressures, is circulated at high speed, 400 to 700 ft/s (120 to 210 m/s).

jet hole

a. A borehole drilled by use of a directed, forceful stream of fluid or air. See also: [jet](#) b. A small hole in a nozzle. See also: [jet](#)

jet hydraulic

Stream of water used in alluvial mining. *Pryor, 3*

jet impact mill

See: [fluid energy mill](#)

jetloader

A powder loader for loading horizontal drill holes with a diameter of more than 2 in (5.1 cm). It is intended for AN-prills and oil, and is also employed to blow sand into the holes for stemming. *Langefors*

jet mill

Differs from other mills in that the material is not ground against a hard surface. Instead, a gaseous medium is introduced. The gas may convey the feed material at high velocity in opposing streams or it may move the material around the periphery of the grinding and classifying chamber. The high turbulence causes the particles and feed material to collide and grind upon themselves. *Cote*

jet mixer

An apparatus that utilizes the mixing action of a water stream jetted into dry drill-mud ingredients to form a mud-laden fluid. CF: [atomizer](#) *Long*

jetonized wood

A name given to vitrain lamellae in coal. Synonymous with vitrain. *Tomkeieff; AGI*

jet piercing

The use of high-velocity jet flames to drill holes in hard rocks, as taconite, and to cut channels in granite quarries. It involves combustion of oxygen and a fuel oil fed under pressure through a nozzle to produce a jet flame generating a temperature above 2,600 degrees C. A stream of water joins the flame, and the combined effect is a thermodynamic spalling and disintegration of the rock into fragments that are blown from the hole or cut. Syn: [thermic drilling](#)

jet-piercing drill

See: [fusion-piercing drill](#)

jet pump

Consists of a centrifugal pump and motor at the ground surface and a jet down in the well below the water level, discharging at high velocity through a contracted section into the lift pipe. The centrifugal pump has two discharge pipes; one leads down to the jet, the other carries the water into the distribution system or into a storage tank. Syn: [jet impact mill](#)

jet rock

a. A coallike shale containing jet. *Standard, 2* b. See: [jet shale](#)

jet shale

Bituminous shale containing jet. See also: [jet](#)

jetstone

A term for black tourmaline (schorl) in New South Wales, Australia.

jettors

Corn. The horizontal rods or poles connecting the water wheel and the pumps.

jetting

The process of sinking a borehole, or of flushing cuttings or loosely consolidated materials from a borehole, by using a directed, forceful stream (jet) of drilling mud, air, or water. *AGI*

jetting drill

A percussive drill for prospecting through superficial deposits. The drill is given a short stroke, 10 to 20 cm, and rotated by hand. Water is pumped down through the hollow steel rods and escapes through openings in the chopping bit. Casing is used, and the drilling rate is from 6 to 12 m per shift. *Nelson*

jetting pump

A water pump that develops very high discharge pressure. *Nichols, 1*

jetty

a. An engineering structure (such as a breakwater, groin, seawall, or small pier) extending out from the shore into a body of water, designed to direct and confine the current or tide, to protect a harbor, or to prevent shoaling of a navigable passage by littoral materials. Jetties are often built in pairs on either side of a harbor entrance or at

the mouth of a river. *AGI* b. A British term for a landing wharf or pier used as a berthing place for vessels. *AGI*

jeweler's shop

a. Corn. Miner's expression for a rich section of ore. *Pryor, 3* b. Aust. A very rich patch of gold in either a reef or an alluvial formation.

jews' tin

Ancient slabs of tin found in Cornwall, England; so called from the belief that they were made by Jewish merchants and miners from Asia Minor before the present era of mining. *Hess*

jib

The lifting arm of a crane or derrick having a pulley at its outer end over which the hoisting rope passes. See also: [front-end equipment](#) *Hammond*

jibbing-in

The operation of gradually working the jib of a shortwall coal cutter into the cutting position in the coal seam. Jibbing-in is the first operation before starting the cutting run across the face. Syn: [sumping-in](#) *Nelson*

jib crane

A crane having a swinging boom or jib. *Crispin*

jib end

In conveyor systems, the delivery end when a jib is fitted to deliver the load in advance of and remote from the drive. *Nelson*

jib holeman

A person whose work is to make recesses for the cutting disk at the end of coal-cutting machine faces. *CTD*

jib in

The process of starting a cut by swinging the jib of the coal cutter (while the chain is cutting) from the front of the face to the full cutting position. See: [sump](#)

jig

a. A device that separates coal or ore from foreign matter, by means of their difference in specific gravity, in a pulsating water medium. Also spelled gig. See also: [Baum jig](#); [Bendelari jig](#); [conset jig](#); [Denver jig](#); Harz jig; hutch; jigger; jig washer; Pan-American jig; stripping a jig. b. A link or coupling connecting mine wagons.

jig bed

The agent used in a jig that consists of the heavy fractions in the coal that behave in some respects like a dense fluid. The pulsation of the water or the motion of the screen keeps the bed open or in suspension during part of the cycle so that heavy minerals entering the jig can settle into the bed. Lighter materials cannot penetrate the jig bed and therefore are forced to remain in the upper part of the jig and eventually discharge over the top. Other agents in use are lead shot, iron punchings, iron shot, pyrite, and magnetite. *Newton, 1*

jig brow

Self-acting inclined track used to lower filled coal tubs and raise empty ones. *Pryor, 3*

jig bushing

Hardened-steel bushing inserted in the face of a jig to serve as a guide for drills. *Crispin*

jig chain

S. Staff. A chain hooked to the back of a skip and running around a post to prevent its too rapid descent on an inclined plane. CF: [snub](#) *Fay*

jig dips

N. Staff. See: [crossgate](#)

jigger

a. See: [pan conveyor](#); shaker conveyor; jiggling conveyor. b. Scot. An apparatus for attaching hitches to a haulage rope. *Fay* c. A mechanism that operates with quick up-and-down motion; a jolting device. See also: [jig](#) d. A machine for dressing small ore in which a sieve is dipped or moved about under water. e. Leic. A coupling hook used between coal cars. *Standard, 2* f. Person that concentrates ore by jiggling. *Webster 3rd*

jigger work

Eng. Dressed or partly dressed ore obtained from jiggling.

jiggling

a. The separation of the heavy fractions of an ore from the light fractions by means of a jig. b. Up-and-down motion of a mass of particles in water by means of pulsion. *Pryor, 4* c. See: [skimming](#)

jigging conveyor

A series of steel troughs suspended from roof of stope or laid on rollers on its floor and given reciprocating motion mechanically to move mineral. Syn: [jigger](#); [pan conveyor](#). *Pryor, 3*

jigging machine

A machine to jig ore. See also: [jig](#)

jigging screen

A screen or pair of screens to which a combined horizontal and vertical motion is imparted, normally by a crankshaft and connecting rod, the screen decks being horizontal or inclined at a small angle. See also: [shaking screen](#)

jiggling in

A technique for transferring a surface survey down a mine shaft in such a manner as to tie it in to an underground mine survey. See also: [coplaning](#)

jig haulage

See: [gravity haulage](#)

jig indicator

An apparatus resembling a steam engine indicator; used for drawing curved lines illustrating the action of jigs in ore beneficiation. *Webster 2nd*

jig pin

A pin used to prevent the turning of the turn beams. *Standard, 2*

jig washer

A coal or mineral washer for relatively coarse material. The broken ore, supported on a screen, is pulsed vertically in water; the heavy (valuable) portion passes through the screen into a conical receptacle (hutch), and the gangue goes over the side. In coal washing, the heavy (worthless) shale passes downwards, and the lighter coal remains on top. See also: [plunger jig](#) washer; jig. *Nelson*

jimboite

An orthorhombic mineral, $Mn_3 B_2 O_6$; the manganese analog of kotoite; with other manganese minerals at the Kaso Mine, Kanuma, Tochigi Prefecture, Japan.

Jim Crow

A portable hand-operated appliance for bending or curving rails. It incorporates a strong buttress screw thread. *Nelson*

jinny road

Underground gravity plane. *Pryor, 3*

jitty

Leic. A short heading along which empties, horses, or workers travel. *Fay*

joaquinite

A monoclinic mineral, $Ba_2 NaCe_2 Fe(Ti,Nb)_2 Si_8 O_{26} (OH,F).H_2 O$; dimorphous with orthojoaquinite; forms minute honey-colored crystals; with benitoite and neptunite in San Benito County, CA.

jock

Scot. An iron rod, usually pronged, attached to the rear end of a train of hitches or cars being drawn up an incline; used to stop their descent in the event of the rope breaking. *Fay*

jockey

a. Aust. A Y-shaped grip placed in sockets at the end of a skip. The endless rope rests on this when used above the skip. *Fay* b. Mid. A self-acting apparatus on the front of a car, for releasing it from the hauling rope at a certain point. *Fay*

joggle

a. A joint of trusses or sets of timber for receiving pressure at right angles or nearly so. *Zern* b. Notches cut in round timbers set above other round pieces in underground timbering. *Pryor, 3* c. An offset in a flat plane consisting of two parallel bends in opposite directions by the same angle. *ASM, 1* d. A slight step-shaped offset formed into a flat piece of metal (as for providing a flange). *Webster 3rd*

johachidolite

An orthorhombic mineral, CaAlB_3O_7 ; forms transparent grains and lamellar masses; fluoresces an intense blue owing to traces of rare-earth elements; in nepheline dikes, cutting sandstone in the Johachido District, Kenkyohokuco Prefecture, Korea.

johannite

A triclinic mineral, $[\text{Cu}(\text{UO}_2)_2(\text{SO}_4)_2(\text{OH})_2 \cdot 8\text{H}_2\text{O}]$; radioactive; forms soft, bitter-tasting crystals that are polysynthetically twinned in two directions; in druses and reniform masses; at Joachimsthal, Czech Republic, and Gilpin County, CO; associated with gypsum.

johannsenite

A monoclinic mineral, $4[\text{CaMnSi}_2\text{O}_6]$; pyroxene group; forms series with diopside and hedenbergite; shows clove-brown to grayish-green columnar, radiating, and spherulitic aggregates of fibers and prisms with black tarnish; in metasomatized limestones with manganese ore. Occurs at Puebla and Hildago, Mexico; Lane County, OR; Franklin, NJ; and Schio, Venetia, Italy.

Johannsen number

A number, composed of three or four digits, that defines the position of an igneous rock in Johannsen's classification. The first digit represents the class, the second the order, and the third and fourth the family. CF: [Johannsen's classification](#)

Johannsen's classification

A quantitative mineralogic classification of igneous rocks developed by the petrographer Albert Johannsen (1939). CF: [Johannsen number](#) *AGI*

John Odges

See: [gun](#)

Johnson concentrator

A cylindrical shell lined with grooved rubber set parallel to its axis, which is inclined, peripheral riffles thus being formed. Used to arrest heavy particles such as metallic gold as auriferous pulp flows gently through while the cylinder revolves slowly and the arrested material rises and drops on to a separate discharge launder. *Pryor, 3*

Johnston vanner

Modified form of Frue vanner. *Pryor, 3*

johnstrupite

See: [rinkite](#)

joint

a. A divisional plane or surface that divides a rock and along which there has been no visible movement parallel to the plane or surface. *Ballard* b. A standard length of drill rod, casing, or pipe equipped with threaded ends by which two or more pieces may be coupled together; also, two or more standard lengths of drill rods or pipe coupled together and handled as a single piece in round trips. *Long* c. A fracture or parting that cuts through and abruptly interrupts the physical continuity of a rock mass. Not to be confused with bedding or cleavage. *Long* d. A line of cleavage in a coal seam. Syn: [heading seam](#) See also: [joint plane](#)

joint box

A cast iron box surrounding an electric cable joint, often filled with insulation after the joint between cables has been made. *Hammond*

jointing

a. In quarrying, the process of cutting to specified sizes and shapes, with smooth unchipped edges. *AIME, 1* b. The condition or presence of joints in a body of rock. *AGI*

jointing sleeves

Insulating thimbles placed over the connected ends of detonator leads coupled in large rounds of shots, and also over the connections between the detonator leads and the shot-firing cable. *BS, 12*

joint line

A visible line on imperfect glassware reproducing the line between separate parts of the mold in which the glass was made. Also called parting line; match mark; miter seam; mold mark; mold seam. Syn: [seam](#) *Dodd*

joint plane

A plane along a joint fracture or parting. Not to be confused with bedding and/or cleavage. See also: [joint](#)

joint rose

A rose diagram that shows the azimuth and intensity of jointing in an area.

joints

Natural cracks or fractures in rocks. They tend to occur in more or less parallel systems, and when quarry walls are maintained parallel and at right angles to them, they may be utilized as natural partings in the process of block removal. *AIME, 1*

joint set

A group of more or less parallel joints. *Billings*

joint system

Consists of two or more joint sets or any group of joints with a characteristic pattern, such as a radiating pattern and a concentric pattern. *Billings*

jointy

Full of joints; specif. in mining, full of minute cracks or crevices, as rock. *Standard, 2*

Jolly balance

a. A spring balance used to measure specific gravity of mineral specimens by weighing a specimen both in the air and immersed in a liquid of known density. *McGraw-Hill, 1* b. A spiral-spring balance with two specimen pans, one for measuring weight in air and one for weight in water, used to determine specific gravity. CF: [Westphal balance](#)

Jominy test

A hardenability test in which a standard test piece, 4 in (10.2 cm) long and 1 in (2.54 cm) in diameter, is heated to a predetermined temperature, rapidly transferred to a jig fixture, and quenched, under standard conditions, by a jet of water impinging at one end. When the specimen is cool, determinations of hardness are made along it from the quenched end. The diagram relating hardness to distance from the quenched end of the specimen is known as a hardenability curve. *Hammond*

Jones riffle

An apparatus used for cutting the size of a sample. It consists of a hopper above a series of open-bottom pockets, usually 1/2 in or 3/4 in (1.27 cm or 1.91 cm) wide, which are so constructed as to discharge alternately, first into a pan to the right, and then into another pan to the left. Each time the sample is passed through the riffle, it is divided into two equal parts; the next pass of one of those parts will give a quarter of the original sample, and so on, until the sample is reduced to the desired weight. *Pearl*

Jones splitter

A device used to reduce the volume of a sample consisting of a belled, rectangular container, the bottom of which is fitted with a series of narrow slots or alternating chutes designed to cast material in equal quantities to opposite sides of the device. Also called sample splitter. CF: [riffle](#)

Joosten process

Method of soil consolidation used in tunneling through sands and gravels. Solutions of calcium chloride and sodium silicate are forced into the ground, where they mingle and produce a watertight gel. *Pryor, 3*

Joplin jig

A device used for jiggling the shaker products of the diamond washer. The products are fed to the jigs, one at a time, and jiggled, with frequent stoppages for scraping off the top layer of tailings; more sand is added, and the process is repeated until a product is obtained that consists entirely of concentrates. *Griffith*

jordanite

A monoclinic mineral, $Pb_{14}(As,Sb)_6S_{23}$; pseudohexagonal; forms a series with geochronite in which antimony increases relative to arsenic.

joren

A scoop-shaped bamboo basket used in Japan for carrying auriferous gravel.

jose#1.ite

A trigonal mineral, Bi_4TeS_2 ; sp gr, 7.9; at San Jose, Minas Gerais, Brazil. A related mineral, jose#1.ite-B, contains more tellurium and less sulfur.

josen

See: [hartite](#)

josephinite

A gray, nickeliferous iron, Fe_2Ni_5 or $FeNi_3$. Massive, granular, and forms the metallic portion of rolled pebbles. From Josephine County, OR. Syn: [native nickel-iron](#)

joule

a. The absolute meter-kilogram-second (mks) unit of work or energy that equals 10^7 erg or approx. 0.7377 ft.lb or 0.2390 g (caloric); the standard in the United States. *Webster 3rd* b. The gram-degree centigrade thermal unit; the small calorie. *Standard, 2*

Joule's law

The rate at which heat is produced by a steady current in any part of an electric circuit is jointly proportional to the resistance and to the square of the current. *Webster 3rd*

jough holes

Derb. Hollows in a vein.

jourado diamond

A colorless synthetic spinel used as a simulated diamond.

journal

That part of a rotating shaft resting in a bearing. *Long*

journey

a. Welsh term for train of mine cars moved mechanically. Also called gang; set; rake. *Pryor, 3* b. A cycle of work done in glass manufacturing in converting a quantity of material into glass or glass products. *Webster 3rd*

Joy double-ended shearer

A cutter loader for continuous mining on a longwall face. It consists of two cutting heads fixed at each end of a continuous-track-mounted chassis. The heads are pivoted and controlled hydraulically for vertical movement. Each head comprises two bores and a frame or loop cutter that trims the bottom, face, and top. A cross conveyor delivers the coal to the adjacent face conveyor. The machine cuts a web of 5 ft (1.5 m) in seams from 37-1/2 in (95 cm) to 5 ft high. With an overall length of 18 ft (5.5 m), it weighs 15 st (13.6 t). *Nelson*

Joy extensible conveyor

A belt conveyor to serve between a loader or continuous miner and the main transport. It consists of two main units, a head and a tail section, each mounted on crawler tracks and independently driven. In operation, the tail unit (i.e., the receiving end) moves forward with the loading machine, and belting is automatically released from a loop takeup. Fifty feet (15 m) of advance is possible before additional belting has to be inserted into the conveyor run. Capacity equals 280 st/h (254 t/h) with a 30-in (76-cm) belt. *Nelson*

Joy extensible steel band

An arrangement to provide a link between a continuous miner and the main transport. The equipment is hydraulically driven, and the steel band is coiled on the drivehead. *Nelson*

Joy loader

Loading machine for coal or ore that uses mechanical arms to gather mineral onto an apron pressed into the severed material. A built-in conveyor then lifts it into tubs or onto a conveyor. *Pryor, 3*

Joy microdyne

A wet-type dust collector for use at the return end of tunnels or hard headings. It may be either 6,000 ft³ /min or 12,000 ft³ /min (2.8 m³ /s or 5.7 m³ /s) in capacity. It wets and traps dust as it passes through the appliance, and releases it in the form of a slurry, which is removed by a pump. The microdyne is bolted to the outby end of the exhaust pipe, and the auxiliary fan is bolted to the outby end of the dust collector. *Nelson*

Joy transloader

A rubber-tired, self-propelled loading, transporting, and dumping machine.

Joy walking miner

A continuous miner with a walking mechanism instead of crawler tracks. The walking mechanism was adopted to make the machine suitable for thin seams. The lowest crawler-track-mounted machine can operate in a minimum seam height of 4 ft (1.2 m), whereas the walking type can work in a 2.5-ft (0.76-m) seam. Syn: [walking miner](#)

jubilee wagon

A small wagon, running on rails, which tips sideways. *Hammond*

jubs

Eng. Top jubs and bottom jubs, soft marly limestone, coarsely oolitic in places, in the Great Oolite at Kingsthorpe, Northamptonshire; also in the same formation at Bedford. *Arkell*

jud

a. N. of Eng. A block of coal about 4 yd (3.7 m) square, holed and cut ready for breaking down. *Fay* b. In whole working, a portion of the coal laid out and ready for extraction;

in pillar working (i.e., the drawing or extraction of pillars), the yet unremoved portion of a pillar. *Fay* c. Applied to a working place, usually 6 to 8 yd (5.5 to 7.3 m) wide, driven in a pillar of coal. When a jud has been driven the distance required, the timber and rails are removed, and this is termed "drawing a jud." *Zern* d. Som. See: [jad](#); lift.

judge

a. *Derb.*; *Newc.* A measuring stick to measure coal work underground. See also: [judge rapper](#) b. *Eng.* Formerly a youth who proved the holing. *Fay*

judge rapper

The upper end of the vertical arm of a judge. See also: [judge](#) *Fay*

Judson powder

A blasting explosive containing sodium nitrate, sulfur, coal, and a little nitroglycerin. *Webster 2nd*

jug

A colloquial equivalent of seismic detector, geophone, etc. See also: [geophone](#)

jugglers

Timbers set obliquely against pillars of coal to carry a plank partition, making a triangular air passage or manway. *Fay*

julienite

Possibly a tetragonal mineral, $\text{Na}_2 \text{Co}(\text{SCN})_4 \cdot 8\text{H}_2 \text{O}$; a blue thiocyanate that may be an artifact.

jumble

Derb. The place where veins intersect. *Fay*

jumbler

Big Jumbler, a bed of limestone in the Lower Lias at Rugby, United Kingdom.

jumbles

The thickest oolitic bed in the Carboniferous limestone of the Clee Hills, Shropshire, United Kingdom.

jumbo

a. In mining, a drill carriage or mobile scaffold on which several drills of drifter type are mounted. It is used in tunnels and large headings. *Pryor, 3* b. An asbestos-fiberizing machine that is effective for moderately soft ore where crushing or breaking is not required. *Sinclair, 7* c. A mobile scaffold to assist drilling in large headings. *BS, 12* d. A number of drills mounted on a mobile carriage and used in tunnels. *Nichols, 1* e. Drilling platform used in tunneling. *Sandstrom*

jump

a. See: [jumping a claim](#) b. A sudden rise in the dip of a coal seam. *Arkell*

jump correlation

Identification of events on noncontiguous seismic records as involving the same interfaces in the Earth. *AGI*

jumper

a. The borer, steel, or bit for a compressed-air rock drill. *CTD* b. A long steel bar, or light aluminum tube with a steel end, used to dress rock faces, pry off loose rock, etc. *Pryor, 3* c. Person who jumps a claim; i.e., takes possession of another's mining property. *Pryor, 3* d. A steel bar used in manual drilling. *Sandstrom*

jumper bar

A weighted steel bar with a cutting edge; raised and dropped by hand. *CTD*

jumping a claim

a. Taking possession of a mining claim liable to forfeiture owing to the requirements of the law being unfulfilled. b. Taking possession of a mine or claim by stealth, fraud, or force. Syn: [jump](#) c. The act of locating a mining claim on supposed excess ground within staked boundaries of an existing claim on the theory that the law governing the manner of making the original location had not been complied with. *Fay*

jump sheet

A flat metal plate used as a turnsheet on which to turn the empty cars. *Lewis*

junckerite

See: [siderite](#)

junction

a. The point where two or more passageways intersect horizontally or vertically. *AGI* b. In ventilation surveys, where three or more airways meet. *Roberts, I* c. The union of two lodes. *Gordon*

junction box

In mining, a stationary piece of enclosed apparatus from which one or more electric circuits for supplying mining equipment are connected through overcurrent protective devices to an incoming feeder circuit.

junk

a. Any foreign metallic material accidentally introduced into a borehole. *Long* b. Very poor or low-grade drill diamond. *Long*

junkerite

See: [siderite](#)

junket

a. Eng. A bucket used for raising rock or ore in a shaft. *Hess* b. Eng. See: [kibble](#)

junking

a. The process of cutting a passage through a pillar of coal. *CTD* b. N. of Eng. An opening cut into, or a narrow slice taken off, a pillar in the room-and-pillar system of working coal. A fast junking is a narrow place driven lengthwise in a pillar of coal, but unholed into the room on either side of the pillar. A loose junking is a similar place driven along the side of the pillar and open to the room along that side. *Fay*

junk mill

A bit designed to grind or cut foreign metallic material or junk in a borehole into pieces small enough to be washed out of the hole or recovered by a basket. CF: [milling bit](#); [rose bit](#). *Long*

junks

a. Dev. Limestone concretions in slate. b. Corn. Joints in rocks.

Jupiter process

A patented process for making cast steel by melting wrought-steel scrap with about 2.0% ferrosilicon, up to about 0.5% ferromanganese, and about 3.0% aluminum, then casting in molds of a special composition.

Jupiter steel

A steel produced by the Jupiter process; it is about as strong and as ductile as forged steel.

Jurassic

The second period of the Mesozoic Era (after the Triassic and before the Cretaceous), thought to have covered the span of time between 190 million years and 135 million years ago; also, the corresponding system of rocks. It is named after the Jura Mountains between France and Switzerland, in which rocks of this age were first studied. *AGI*

jury rig

Any temporary or makeshift device, rig, or piece of equipment. *Hunt*

jutty

A small tub or truck used for gathering coal in thin seams. *CTD*

juvenile

a. Said of an ore-forming fluid or mineralizer that is derived from a magma, via fractional crystallization or other plutonic mechanism, as opposed to fluids of surface, connate, or meteoric origin. *AGI* b. A term applied to water and gases that are known to have been derived directly from magma and are thought to have come to the Earth's surface for the first time. *AGI* c. In the classification of pyroclastics, the equivalent of essential; derived directly from magma reaching the surface. *AGI*

juvenile water

Water from the interior of the Earth that is new or has never been a part of the general system of ground water circulation. CF: [magmatic water](#)

juxtaposition twin

See: [contact twin](#)

K

kaemmererite

Chromian clinocllore. Alternate spelling of kaemmererite.

kaersutite

A monoclinic mineral, $\text{NaCa}_2 (\text{Mg,Fe})_4 \text{Ti}(\text{Si}_6 \text{Al}_2) \text{O}_{22} (\text{OH})_2$; amphibole group with $\text{Mg}/(\text{Mg}+\text{Fe})= 0.5$ to 1.0; forms a series with ferrokaersutite; a typical constituent of alkaline volcanic rocks.

kahlerite

A tetragonal mineral, $\text{Fe}(\text{UO}_2)_2 \text{AsO}_4 \cdot 10-12\text{H}_2\text{O}$; autunite group; forms lemon-yellow plates; at Carinthia, Austria.

kalamin

See: [calamine](#)

Kaldo steel process

A steelmaking process in which oxygen is fed into a large inclined rotating vessel through water-cooled lances, but at velocities somewhat lower than in the L.D. steel process, so that the jet does not completely or continuously penetrate the slag layer. In some respects, it is like a continuously rotating open hearth. It gives better heat utilization than the L.D. steel process but is slower. *Nelson*

kale

Eng. Surface-weathered ironstone or oolite; rottenstone; in Northamptonshire, Rutland, and Lincolnshire. Also spelled keale. *Arkell*

kaliborite

A monoclinic mineral, $\text{KHMg}_2 \text{B}_{12} \text{O}_{16} (\text{OH})_{10} \cdot 4\text{H}_2\text{O}$; formerly called heintzite, hintzeite, paternoite. See also: [heintzite](#)

kalicine

See: [kalicinite](#)

kalicinite

A monoclinic mineral, KHCO_3 ; colorless, white, or yellow. Also spelled kalicine; kalicite.

kalinite

A possibly monoclinic mineral, $\text{KAl}(\text{SO}_4)_2 \cdot 11\text{H}_2\text{O}$. Syn: [potash alum](#)

kaliophilite

A hexagonal mineral, KAlSiO_4 ; polymorphous with kalsilite, panunzite, and trikalsilite. Syn: [facellite](#); [phacellite](#).

kaliphite

A mixture of limonite with oxides of manganese and silicates of zinc and lime. *Osborne*

kalistrontite

A trigonal mineral, $\text{K}_2\text{Sr}(\text{SO}_4)_2$; occurs in prisms and plates with anhydrite and dolomite in a drill core from Alshtan, Bashkir, Russia.

Kalling's solution

An etching reagent for developing the microstructure of chromium steels with more than 5% of chromium. It contains 5 g copper chloride, 100 mL hydrochloric acid, 100 mL alcohol, and 100 mL water. *Osborne*

kalsilite

A hexagonal mineral, $2[\text{KAlSiO}_4]$; polymorphous with kaliophilite, panunzite, and trikalsilite; forms a partial series toward nepheline; in groundmasses of potassium-rich, silica-poor lavas and as an alteration of blast furnace brick.

kamacite

A meteorite mineral consisting of the body-centered cubic alpha-phase of a nickel-iron alloy, with a fairly constant composition of 5% to 7% nickel. It occurs in iron meteorites as bars or girders flanked by lamellae of taenite. See also: [nickel iron](#)

kamarezite

A grass-green, hydrated, basic copper hydrate and sulfate, $\text{Cu}_3(\text{OH})_4\text{SO}_2 \cdot 6\text{H}_2\text{O}$. Syn: [brochantite](#)

kaemmererite

A chromian variety of clinocllore.

kammerling furnace

A modification of the Belgian zinc smelting furnace wherein there are two combustion chambers separated by a central longitudinal wall. In principle, the furnace is similar to the Hauzeur, a compound furnace.

kanase

Burma (Myanmar). A local custom in the gem mines at Mogok that permits women to work without licenses in streambeds, tailraces, and dumps from mines and washeries and to keep any gems they find. *Hess*

Kanawhan

Upper Lower Pennsylvanian. *AGI*

Kanawha series

A group of productive coal measures occurring in the Pennsylvanian of the Appalachian Region and completely developed in Virginia. Sometimes known as the Upper Pottsville series. *CTD*

kandite

See: [kaolin](#)

kankar

a. A term used in India for (1) masses or layers of calcium carbonate, usually occurring in nodules, found in the older alluvium or stiff clay of the Indo-Gangetic plain; or (2) precipitated calcium carbonate in the form of cement in porous sediments or as a coating on pebbles. *AGI* b. A limestone containing kankar and used for making lime and building roads. Etymol. Hindi. The term is occasionally applied in the United States to a residual calcareous deposit, such as caliche. Also spelled kunkur. *AGI*

kaoleen

A colloquial term used in south-central Missouri for a chalky, porous, weathered chert with a white to tan or buff color. Etymol. corruption of kaolin, to which the material bears a slight resemblance. *AGI*

kaolin

Former name for kaolinite. The aluminous minerals of the kaolinite-serpentine group. Syn: [bolus alba](#); [kaoline](#); [kandite](#); [kaolinite](#); white clay.

kaoline

See: [kaolin](#)

kaolinic

Of, relating to, or resembling kaolin. *Webster 3rd*

kaolinite

a. A monoclinic mineral, $2[\text{Al}_2 \text{Si}_2 \text{O}_5 (\text{OH})_4]$; kaolinite-serpentine group; kaolinite structure consists of a sheet of tetrahedrally bonded silica and a sheet of octahedrally bonded alumina with little tolerance for cation exchange or expansive hydration; polymorphous with dickite, halloysite, and nacrite; soft; white; formed by hydrothermal alteration or weathering of aluminosilicates, esp. feldspars and feldspathoids; formerly called kaolin. b. Kandites in general. c. Individual kandites not specif. designated. See also: [alum salt](#); kaolin.

kaolinite-serpentine

The mineral group amesite, antigorite, berthierine, brindleyite, clinochrysotile, cronstedite, dickite, endellite, fraiponite, greenalite, halloysite, kaolinite, kellyite, lizardite, manandonite, nacrite, nepouite, orthochrysotile, parachrysotile, and pecoraite. CF: [serpentine](#)

kaolinization

Replacement or alteration of minerals, esp. feldspars and micas, to form kaolin as a result of weathering or hydrothermal alteration. CF: [argillation](#); [argillization](#). *AGI*

kapel

See: [capel](#)

kappa carbide

A carbide of iron, $\text{Fe}_{23} \text{C}_6$, in which all or part of the iron may be replaced by chromium, molybdenum, and/or tungsten, $(\text{Fe}, \text{Cr}, \text{Mo}, \text{W})_{23} \text{C}_6$. *Osborne*

karang

Term used in the Malay States for the pay streaks of cassiterite. *Lewis*

karat

One-twenty-fourth part. It is used to designate the fineness of gold; thus, 18-karat gold is 18/24 (or 75%) pure gold and 6/24 (or 25%) other alloying metal or metals. Not to be confused with carat.

karelianite

A trigonal mineral, $V_2 O_3$; hematite group; black; in boulders from the Outokumpu orebody in the Karelian schist belt, Finland.

Karlsbad twin

See: [Carlsbad twin](#)

karnasurtite

A possibly hexagonal mineral, $(Ce,La,Th)(Ti,Nb)(Al,Fe)(Si,P)_2 O_7 (OH)_4 .3H_2 O(?)$; metamict; at Mt. Karnasurt, Kola Peninsula, Russia.

karpatite

A monoclinic mineral (coronene), $C_{24} H_{12}$. Also spelled carpathite. Syn: [pendletonite](#)

karpinskite

A possibly monoclinic mineral, $(Mg,Ni)_2 Si_2 O_5 (OH)_2 (?)$; greenish blue; with talc in serpentinite from the Ural Mountains, Russia. (Not karpinskyite.)

karpinskyite

A mixture of leifite and a zinc-bearing smectite. (Not karpinskite.)

karst

A type of topography that is formed on limestone, gypsum, and other rocks by dissolution, and that is characterized by sinkholes, caves, and underground drainage. Etymol. German, from the Yugoslavian territory Krs; type locality, a limestone plateau in the Dinaric Alps of northwestern Yugoslavia and northeastern Italy. First published on a topographic map, Ducatus Carnioliae, in 1774. Adj. karstic. Syn: [karst topography](#) *AGI*

karst topography

See: [karst](#)

kasoite

A potassian variety of celsian.

kasolite

A monoclinic mineral, $\text{Pb}(\text{UO}_2)_2\text{SiO}_4 \cdot \text{H}_2\text{O}$; radioactive; an oxidation product of uraninite; at Kasolo, Katanga, Zaire. Formerly called droogmansite.

Kast furnace

A small, circular shaft furnace with three or four tuyeres, for lead smelting. *Fay*

kata-

See: [cata-](#)

kataclastic

See: [cataclastic](#)

kata cooling power

A measure of the cooling effect of the ambient air as determined by the kata thermometer. This instrument may be used wet or dry. *BS, 8*

katamorphism

Destructive metamorphism in the katamorphic zone, at or near the Earth's surface, in which complex minerals are broken down and altered through oxidation, hydration, solution, and allied processes to produce simpler and less dense minerals. The term was introduced by Van Hise in 1904. Also spelled catamorphism. CF: [anamorphism](#)

kata thermometer

A type of alcohol thermometer used to determine the cooling power of the ambient air and sometimes to measure low air velocities. *BS, 8*

katazone

According to Grubenmann's classification of metamorphic rocks (1904), the lowermost depth zone of metamorphism, which is characterized by high temperatures (500 to 700 degrees C), mostly strong hydrostatic pressure, and low or no shearing stress. It produces rocks such as high-grade schists and gneisses, granulites, eclogites, and amphibolites. The concept includes effects of high-temperature contact metamorphism and metasomatism. Modern usage stresses temperature-pressure conditions (highest

metamorphic grade) rather than the likely depth of zone. Also spelled catazone. CF: [mesozone](#); [epizone](#). See also: [katamorphism](#) *AGI*

katoptrite

A monoclinic mineral, $(\text{Mn, Mg})_{13} (\text{Al, Fe})_4 \text{Sb}_2 \text{Si}_2 \text{O}_{28}$; in jet-black crystals in limestone at Nordmark and Laangban, Sweden.

katungite

A volcanic rock composed chiefly of melilite, with subordinate olivine and magnetite and minor leucite and perovskite; a pyroxene-free melilitite. *AGI*

kauk

A very heavy substance, common in the mines, Derbyshire, U.K. Also spelled cauk.

kayserite

See: [diaspore](#)

K-bentonite

See: [potassium bentonite](#)

kearsutite

Misspelling of kaersutite.

keatite

Synthetic tetragonal silica, SiO_2 ; crystallized hydrothermally at high pressure.

keeleyite

See: [zinkenite](#)

keel wedge

A long iron wedge for driving over the top of a pick hilt. *Fay*

keen sand

Forest of Dean. Sand forming poor rye soil.

keeper

Person in charge of opening and closing the taphole of a blast furnace and who runs iron at cast. *Fay*

Keewatin

A division of the Archeozoic rocks of the Canadian Shield. It is older than the Timiskamian. Also spelled Keewatinian. *AGI*

keg

A cylindrical container made of steel or some other substance, which contains 25 lb (11.4 kg) of blasting powder or gunpowder. Any small cask or barrel having a capacity of 5 to 10 gal (18.9 to 37.9 L). *Fay*

kehoite

Amorphous $(\text{Zn,Ca})\text{Al}_2(\text{PO}_4)_2 \cdot 5\text{H}_2\text{O}$; a doubtful mineral species.

keldyshite

A triclinic mineral, $\text{Na}_{2-2D_x}\text{H}_x\text{ZrSi}_2\text{O}_7 \cdot n\text{H}_2\text{O}$; forms irregular grains in the Lovozero massif, Kola Peninsula, Russia.

kell

A variation of kiln. *Fay*

Keller automatic roaster

A six-deck horizontal furnace for calcining sulfide ores. *Fay*

Keller furnace

A multiple-deck roasting furnace for sulfide ore. It is a modification of the Spence furnace. *Fay*

kellerite

A cuprian variety of pentahydrate.

kellow

Black lead or wad, Cumberland, U.K.

kelly

The rod attached to the top of the drill column in rotary drilling. It passes through the rotary table and is turned by it, but is free to slide down through it as the borehole deepens. Also called grief stem. *BS, 9*

kelly bar

A hollow bar attached to the top of the drill column in rotary drilling; also called grief joint; kelly joint; kelly stem. *Meyer*

Kelly filter

An intermittent, movable pressure filter. The leaves are vertical and are set parallel with the axis of the tank. Pulp is introduced into the tank (a boilerlike affair) under pressure, and the cake is formed. The head is then unlocked, the leaves are run out of the tank chamber by means of a small track, and the cake is dropped. The carriage and leaves are then run back into the tank, and the cycle begins again. *Liddell*

kelp

The ashes of seaweeds, formerly the source of soda as used in glassmaking and soapmaking; now a source of potash, iodine, and char. *Standard, 2*

kelvin

a. Board of Trade unit of energy (1 kW/h). *Pryor, 3* b. See: [Kelvin temperature scale](#)

Kelvin temperature scale

The absolute temperature scale in which the temperature measure is based on the average kinetic energy per molecule of a perfect gas. The zero of the Kelvin scale is -273.16 degrees C. The temperature scale adopted by the International Bureau of Weights and Measures is that of the constant volume hydrogen gas thermometer. The magnitude of the degree in both these scales is defined as one one-hundredths the difference between the temperature of melting ice and that of boiling water at 760 mm pressure. See also: [temperature](#) *Handbook of Chemistry and Physics, 2*

kelyphite

See: [corona](#)

kelyphitic rim

See: [corona](#)

kelyphytic

A term applied to the rims or borders consisting of microcrystalline aggregates of pyroxene or amphibole occurring around olivine, where it would otherwise be in contact with plagioclase, or around garnet, where it would otherwise be in contact with olivine or other magnesium-rich minerals.

kelyphytic rim

See: [corona](#)

Kema plow

A scraper-box type of plow for use on longwall faces. See also: [scraper box plow](#)

kempite

An orthorhombic mineral, $Mn_2 Cl(OH)_3$; forms minute emerald-green prismatic crystals; at Alum Rock Park, CA.

kennel coal

A coal that can be ignited with a match to burn with a bright flame. Syn: [candle coal](#)

kentrolite

An orthorhombic mineral, $Pb_2 Mn_2 Si_2 O_9$; forms a series with melanotekite; massive or in sheaflike prismatic crystals; at Laangban and Nordmark, Sweden, and Sassari, Sardinia, Italy.

Kent roller mill

A revolving steel ring with three rolls pressing against its inner face. The rolls are supported on springs, and the rings support the roll, so that there is some freedom of motion. The material to be crushed is held against the ring by centrifugal force. *Liddell*

kentsmithite

A local name used in the Paradox Valley, Colorado, for a black, vanadium-bearing sandstone. Syn: [vanoxite](#)

kep

a. One of the steel supports on which a cage rests at the pithead during unloading or loading so that the rail track is always at the proper level. During this period, the rope is

released from the weight of the cage. The ordinary type of keel gear consists of four steel arms, two for each end of the cage, carried on shafts that are connected to and operated by levers. Normally, the cage must be raised from the keel arms before the latter can be withdrawn to allow the cage to descend the shaft. See also: [Beien keel gear](#); [cage stop](#). *Nelson* b. One of the retractable rests on which the mine cage is supported during its stop at a shaft landing. Also called catch; chair; keel; landing chair; stop. *Pryor*, 3 c. One of the bearing-up stops for supporting a cage or load at the beginning or end of hoisting in a shaft. *CTD*

keel

Corn. Spar or hard stone on each side of the lode.

kerargyrite

See: [cerargyrite](#)

keratophyre

A name generally applied to all salic extrusive and hypabyssal rocks characterized by the presence of albite or albite-oligoclase and chlorite, epidote, and calcite, generally of secondary origin. Some varieties of keratophyre contain sodic orthoclase, sodic amphiboles, and pyroxenes. Keratophyres commonly are associated with spilitic rocks and interbedded with marine sediments. *AGI*

kerf

a. The undercut usually made in the coal to facilitate its fall. *BCI* b. A horizontal cut in a block of coal, as opposed to a shearing, which is a vertical cut. *BCI* c. Undercut in a coal seam from 3 to 7 in (7.6 to 18 cm) thick and entering the face to a depth of up to 4 ft (1.2 m), made by a mechanical cutter. Also called kirve. *Pryor*, 3 d. The undercut made in a coalbed to assist the action of explosives in blasting. *Hudson* e. The annular groove cut into a rock formation by a core bit. See also: [kerve](#) f. The space that was occupied by the material removed during cutting. *ASM*, 1 g. The thickness of the wall of the diamond-insert part of the crown of a core bit. *Long* h. Sometimes incorrectly used as a syn. for nose, as applied to a diamond core bit. *Long*

kerf stone

One of the diamonds inset in the kerf of the crown of a diamond bit. Also called face stone. *Long*

kermesite

A triclinic mineral, $Sb_2 S_2 O$; pseudomonoclinic; occurs as soft tufts of cherry-red capillary crystals with one perfect cleavage; an alteration product of stibnite. Syn: [antimony blende](#); [pyrostibite](#); pyrostibnite; red antimony; pyroantimonite.

kerned stone

Corn. Sand blown off the seashore into the country and concreted there.

kernel

Atom that has lost the valence electrons of its outermost shell. *Pryor, 3*

kernel roasting

See: [roasting](#)

kernite

A monoclinic mineral, $4[Na_2 (H_2 O)_3 B_4 O_6 (OH)_2]$; soft, colorless to white; in the Mojave Desert and Kern County, CA; a major source of borax and boron compounds in the United States. See also: [Rasorite](#)

kerogen

a. A term generally used for organic matter in sedimentary rocks that is insoluble in common organic and inorganic solvents. b. The solid, organic substance in shales that yields oil when the shales undergo destructive distillation.

kerogen shale

See: [oil shale](#)

kerolite

A variety of talc with randomly stacked structure; forms a series with nickel-kerolite. Also spelled cerolite.

keronigritite

A type of nigritite that is derived from kerogen. CF: [polynigritite](#); humonigritite. *AGI*

kerosine flotation

As sometimes practiced, this method is a combination of bulk oil flotation and froth flotation. By adding large quantities of kerosine to a pulp plus a small amount of frother

and agitating vigorously, surfaces of the amenable mineral (coal) are attracted to both the oil and air bubbles, forming heavy flocs. This type of concentrate is more readily dewatered than ordinary froth and therein lies its advantage, plus the fact that coarser particles (6 to 10 mesh) can be handled than in ordinary froth flotation. Also called granulation. Syn: [agglomeration](#)

kerosine shale

Substance originally described as a variety of oil shale but later proved to be similar to torbanite. See also: [boghead coal](#); [torbanite](#). *Tomkeieff*

kerrite

A variety of vermiculite.

kersantite

A lamprophyre containing biotite and plagioclase (usually oligoclase or andesine), with or without clinopyroxene and olivine. Defined by Delesse in 1851; named for the village of Kersanton, France. *AGI*

kerve

N. of Eng. In coal mining, to cut under. See also: [kerf](#) kirve. *Zern*

kesterite

A mineral, (Cu,Sn,Zn)S, containing 30.36% copper, 25.25% tin, 11.16% zinc, and 23.40% sulfur. In quartz sulfide ore from Kester, Magadan, Yakutia, northeast Siberia, Russia. Named from locality. Syn: [isostannite](#); khinganite. *Spencer, 6*

kettle

A depression in the ground surface formed by the melting of a large, detached block of stagnant ice wholly or partly buried by glacial drift. *AGI*

kettleback

See: [horseback](#); slip.

kettle bottom

a. A smooth, rounded piece of rock, cylindrical in shape, which may drop out of the roof of a mine without warning, sometimes causing serious injuries to miners. The surface usually has a scratched, striated, or slickensided appearance and frequently has a slick,

soapy, unctuous feel. The origin of this feature is thought to be the remains of the stump of a tree that has been replaced by sediments so that the original form has been rather well preserved. Sometimes spelled kettlebottom. Also called bell; pot; camelback; tortoise. Syn: [caldron](#) pot bottom. CF: [black bat](#) b. See: [horseback](#); caldron bottom.

kettle dross

Skimmings resulting from the desilverization of lead bullion. It consists principally of lead oxides mixed with metallic lead. *Fay*

kettleman

In ore dressing, smelting, and refining, a person who (1) refines lead in a series of oil-fired kettles, and (2) removes silver and copper from black mud in a gas-fired kettle, preparatory to the separation of gold. *DOT*

kettle operator

In ore dressing, smelting, and refining, a person who melts and fumes antimony in oil-fired kettles to make antimony oxide. *DOT*

kettnerite

A tetragonal mineral, $\text{CaBi}(\text{CO}_3)\text{OF}$; in pegmatite from Krupka, Czech Republic.

kevell

Calcspar from Derbyshire lead mines, United Kingdom. Also spelled kebble.

kevil

a. *Derb.* A veinstone, consisting of a mixture of calcium carbonate and other minerals. *Fay* b. *N. of Eng.* The amount of coal sent out by the various miners during a certain period. *Fay*

Keweenawan

A provincial series of the early Proterozoic in Michigan and Wisconsin. *AGI*

key

The pieces of core causing a block in a core barrel, the removal of which allows the rest of the core in the core barrel to slide out. See: [legend](#)

key bed

a. A well-defined, easily identifiable stratum or body of strata that has sufficiently distinctive characteristics (such as lithology or fossil content) to facilitate correlation in field mapping or subsurface work. *AGI* b. A bed, the top or bottom of which is used as a datum in making structure-contour maps. Syn: [key horizon](#); [index bed](#); [marker bed](#). *AGI*

key blocks

The first blocks that are removed in opening up a new quarry floor.

keyhole slot

A slot enlarged at one end to allow entrance of a chain or bolt that can then be held by the narrow end. *Nichols, 1*

key horizon

See: [key bed](#)

keystone

a. A symmetrically tapered piece at the center or crown of an arch. b. A filling-in block of cast iron used in some lead smelting furnaces. *Webster 2nd*

keystoneite

Blue chalcedony colored by chrysocolla.

K-feldspar

The mineral microcline, orthoclase, or sanidine. Syn: [potassium feldspar](#)

K-Fuel process

In this process, the feed coal is heated sufficiently to remove all the moisture from the coal and to mildly carbonize it. The carbonized hot coal, in a plastic state, flows to an extruder which agglomerates the product into pellets.

Khari salt

A native mineral salt of India, predominantly sodium chloride with large amounts of sodium sulfate, the composition varying greatly with locality where obtained. Synthetic Khari salt has 40% anhydrous sodium sulfate. *Kaufmann*

khinganite

See: [kesterite](#)

khlopinite

A titanian variety of samarskite.

kibbal

See: [kibble](#)

kibble

a. Steel bucket used during shaft sinking. *Pryor*, 3 b. To carry in a hoisting bucket, such as ore. Syn: [junket](#); [kibbal](#). *Standard*, 2

kibble rope

Eng. A rope or chain for hoisting a kibble or bucket. *Standard*, 2

kick

a. Assay with metal values. Also, a geophysical indication of ore. As opposed to background values. (Slang only.) *Hoffman* b. A small sidewise displacement or offset in a borehole caused by the sidewise deviation of a bit when entering a hard, tilted rock stratum underlying a softer stratum. *Long* c. A quick snap of the drill stem caused by the core breaking in a blocked core barrel or sudden release of a momentary bind. CF: [step](#)
Long

kick back

a. Arkansas. To break the coal on both sides of the auger hole that contains the powder, usually along a joint in the coal. *Fay* b. A track arrangement for reversing the direction of travel of cars moving by gravity. *Fay*

kicker

a. Ground left, in first cutting a vein, for support of its sides. b. Also, a gage stone handset in the outside surface or wall of the metal shank of a diamond bit. Syn: [gage stone](#)

kicker stone

See: [gage stone](#)

kicking pieces

Short struts to prevent a sill or other member from being pushed out of place. *Stauffer*

kickoff point

The place in a borehole where the first intentional deviation starts. Sometimes abbreviated KOP. *Long*

Kick's law

The amount of energy required to crush a given quantity of material to a specified fraction of its original size is the same no matter what the original size. CF: [Rittinger's law](#)

kidney iron ore

A reuniform variety of hematite with concentric or radiating structure. Syn: [kidney stone](#); [kidney ore](#). See also: [iron ore](#)

kidney ore

See: [kidney iron ore](#)

kidneys

A mineral zone that contracts, expands, and again contracts downwards. *AGI*

kidney stone

a. See: [nephrite](#); kidney iron ore; urolith. b. Any reniform nodule.

kidney sulfur

See: [lense](#)

kies

A general term for the sulfide ores, adopted into English from the original German.

kieselguhr

See: [diatomite](#)

kieserite

a. A monoclinic mineral $4[\text{MgSO}_4 \cdot \text{H}_2\text{O}]$; in evaporite salt deposits from dehydration of epsomite or decomposition of kainite. Syn: [martinsite](#) b. The mineral group dwornikite, gunningite, kieserite, poitevinite, szmikite, and szomolnokite.

kilbrickenite

See: [geochronite](#)

kilchoanite

A orthorhombic mineral, $\text{Ca}_3\text{Si}_2\text{O}_7$; dimorphous with rankinite, which it replaces at Kilchoan, Ardnamurchan, Scotland.

kilkenny coal

See: [anthracite](#)

kill

To mix atmospheric air with combustible gases or other gases so as to make them harmless. *Fay*

killas

a. Corn. The slates or schists that form the country rock of the Cornish tin veins. b. Corn. Term used in the china-clay mines for the altered schistose or hornfelsic rocks in contact with the granite and often considerably modified by emanations from the latter. *Dodd*

killed steel

Steel treated with a strong deoxidizing agent, such as silicon or aluminum, to reduce the oxygen content to such a level that no reaction occurs between carbon and oxygen during solidification. *ASM, 1*

killing

a. Allowing the molten steel to remain in the crucible for about 45 min for the escape of the gases. *Mersereau, 2* b. In metallurgy, esp. in foundry terminology, a term for deoxidation. *Gaynor*

kiln

a. A large furnace used for baking, drying, or burning firebrick or refractories, or for calcining ores or other substances. *ASM, 1* b. A furnace or oven, which is usually made from refractory brick, used to dry and fire various types of ceramic ware.

kiln burner

A worker who is responsible for firing kilns to produce ceramic products. Type of product produced is often attached to the term as, brick kiln burner, tile burner, pipe burner, etc. Also called kiln fireman; kiln operator; baker; kiln tender; kiln firer, etc.

kiln-burner helper

Person who assists kiln burner in firing kiln, supplying coal and wood to fireboxes, and cleaning ashes from ashpits. *DOT*

kiln-car unloader

A worker who removes fired ceramic ware from kiln cars.

kiln cleaner

Person who prepares kilns for burning. *DOT*

kiln-dry

To dry in a kiln. *Webster 3rd*

kilneye

An opening for removal of lime from a vertical lime kiln.

kilnman

A worker who tends a kiln. *Standard, 2*

kiln placer

A worker who places clayware in kiln for drying or firing. Also called kiln setter; sagger filler; kiln loader; kiln stacker.

kilo-

One thousand units. The kilodyne is 1,000 dyn; kilogram is 2.2046 lb avoirdupois; kilometer is 1,093.6 yd; kilowatt is 1.341 hp. *Pryor, 3*

kilocusec

A unit of volumetric rate of air flow, expressed in thousands of cubic feet per second. *BS, 8*

kilocycle

One thousand cycles. Abbrev. kc. *Crispin*

kilometer

A length of 1,000 m; equals 3,280.8 ft or 0.621 mile. The chief unit for long distances in the metric system. Abbrev. km. *Standard, 2*

kiloton

A unit for measuring the energy of a nuclear explosion. A 1-kiloton explosion releases energy equal to that in the explosion of 1,000 st (907 t) of TNT. Abbrev. kton. *Lyman*

kilowatt-hour

A unit of work or energy equal to that expended in 1 h at a steady rate of 1 kW or 3.6×10^6 J. *Webster 3rd*

Kimberley method

See: [combined top slicing and shrinkage stoping](#)

kimberlite

A highly serpentized porphyritic peridotite, commonly brecciated, which occurs in vertical pipes, dikes, and sills. It is the principal original environment of diamond, but only a small percentage of the known kimberlite occurrences are diamondiferous. See also: [blue ground](#); yellow ground. The name is derived from Kimberley, South Africa.

kimzeyite

An isometric mineral, $\text{Ca}_3(\text{Zr,Ti})_2(\text{Si,Al,Fe})_3\text{O}_{12}$; garnet group.

kind

Eng. Generally signifies tender, soft, or easy to work; said of certain ores.

Kind-Chaudron process

A method of sinking a deep shaft of large diameter in which a pilot bore of smaller diameter is first cut, after which the cut is enlarged to the final diameter, the debris falling into the pilot bore. When water is encountered, a lining with a moss box at the bottom is forced into place. CF: [Triger process](#)

kindly

See: [likely](#)

kindly ground

Eng. Those rocks in which lodes become productive of mineral of value.

kindred

See: [rock association](#)

kinematic viscosity

Ratio of absolute viscosity to mass density. Measured in square meters per second.
Hartman, 2

kinetic energy

The form of mechanical energy a body possesses by virtue of its velocity. The kinetic energy of a body, or the energy of motion, is the work done by it, or against it, in coming to rest. Water flowing through pipes or air flowing through a mine roadway possesses kinetic energy. See also: [velocity head](#)

kinetic head

The energy of flowing water that is a function of its velocity.

kinetic metamorphism

A type of metamorphism that produces deformation of rocks without chemical reconstitution or recrystallization to form new minerals. *AGI*

kingbolt

a. The bolt with which a cage is attached to the hoisting cable. It supports the suspended cage. b. A large bolt that holds the upper end of the tripod legs together and from which the sheave-wheel clevis is suspended. *Long*

king brick

Special, hollow, cylindrical fireclay brick, between the bottom fountain brick and the first lateral brick in a bottom-pour ingot assembly. See also: [bottom-pour ingot assembly](#)

king pile

In a wide excavation where strutting is required, this is a long pile driven at the strut spacing in the center of the trench before excavation is started. *Hammond*

king post

A vertical member of a stamp battery frame that carries the camshaft. *CTD*

king screen

A drum-type screen in which the pulp to be screened is delivered on the outside, the undersize passing through the screen and discharging through the open end. *Liddell*

kink

a. A sharp angular deflection in a borehole. *Long* b. A deflection in a vein or lode that does not interrupt its continuity. c. Scot. A twist in a rope; a doubling and interlocking of several links in a chain. *Fay*

kink bands

Microscopic to macroscopic deformation lamellae in mineral grains; e.g., quartz, pyroxene, mica, kyanite, resulting from plastic flow under tectonic strain. Also called translation gliding.

kinradite

Orbicular jasper containing spherical inclusions of colorless or nearly colorless quartz.

kinzigite

A coarse-grained metamorphic rock of pelitic composition occurring in the granulite facies. Essential minerals are garnet and biotite, with which occur varying amounts of quartz, K-feldspar, oligoclase, muscovite, cordierite, and sillimanite. The name is from Kinzig, Schwarzwald, Germany. *AGI*

kip

a. N. of Eng. A level or gently sloping roadway, at the extremity of an engine plane, upon which the full cars stand ready to be sent up the shaft. The tubs, or cars, usually go to the shaft by gravity. *Fay* b. A load of 1,000 lb (454 kg). *ASM, I*

kir

Natural asphalt at the surface, Russia.

Kirkup table

A machine for dry cleaning coal. Raw coal is fed onto a perforated plate inclined at 12.5 degrees to 15 degrees to the horizontal. A pulsating air current is applied to the underside of the inclined plate, which stratifies the material, the coal forming the upper layer with the dirt below, which then passes into separate compartments. The Kirkup table gives a three-product separation; i.e., coal, middling, and reject. See also: [pneumatic jig](#); [pneumatic table](#); S.J. table. *Nelson*

kirovite

A magnesian variety of melanterite. CF: [jarosite](#)

Kiruna method

A borehole-inclination survey method whereby the electrolytic deposition of copper from a solution is used to make a mark on the inside of a metal container. CF: [acid-dip survey](#)

kirve

N. of Eng. To undercut. See also: [kerve](#); [kerf](#). *Fay*

kirving

a. Newc. The cutting made at the bottom of the coal by the miner. See also: [holing](#) b. Eng. Undercutting the coal horizontally, usually by hand. Also called laying-in; ligg-ing-in; holing. *SMRB*

kirvings

N. of Eng. Small coal, fragments, or cuttings lying in the undercut made by a cutting machine jib. *Trist*

kish

Free graphite that forms and floats out of molten hypereutectic cast iron as it cools. *ASM, I*

kishly

York. Hard, dry vein matter, poor in ore; in lead mines. *Arkell*

kist

a. Eng. The wooden box or chest in which the deputy keeps tools at the flat or inspection station; the station is said to be at the kist. *SMRB* b. N. of Eng. The meeting place in a district where workers assemble. (Strictly, the box in which the deputy keeps papers, etc.) *Trist*

kit

A wooden vessel. *Fay*

kladnoite

A monoclinic mineral (phthalimide), $C_6 H_4 (CO)_2 NH$; results from burning waste at the Kladno coal basin, Czech Republic.

klaprothine

See: [lazulite](#)

klaprothite

A discredited mineral since it is a mixture of wittichenite and emplectite. *Am. Mineral.*, 1

klebelsbergite

An orthorhombic mineral, $Sb_4 O_4 (OH)_2 (SO_4)$; forms pale-yellow to orange-yellow platy or acicular crystals on stibnite; at Baia Sprie, Romania.

kleinite

A hexagonal mineral, $Hg_2 N(Cl,SO_4).nH_2 O$; yellow to orange; occurs as short prisms darkening on exposure; sp gr, 8.0; in Brewster County, TX.

Klein solution

A solution of cadmium borotungstate; sp gr, 3.6; used as a "heavy liquid" for mineral separation. CF: [Clerici solution](#); [methylene iodide](#); Sonstadt solution.

kliachite

See: [cliachite](#)

klinkstone

See: [phonolite](#)

klintite

A reef limestone, particularly the massive core.

klippe

An isolated rock unit that is an erosional remnant or outlier of a nappe. The original sense of the term was merely descriptive; i.e., included any isolated rock mass, such as an erosional remnant. Plural, klippen. See also: [nappe](#) floor. *AGI*

klockmannite

A hexagonal mineral, CuSe ; slate gray to reddish violet, tarnishing to blue-black; basal cleavage. Occurs at Sierra de Umango, Argentina; Harz Mountains, Germany; and Skrikerum, Sweden.

kloof

S. Afr. A mountain pass or cleft; a gorge or narrow valley.

kmaite

A former name for celadonite. See: [celadonite](#)

Knapp bottom pressure gage

An instrument designed for studying harbor surging. A strain gage unit, used in connection with pressure sensitive bellows, comprises the transducer of the pressure head. The four strain gages in the unit are connected to form a bridge circuit that is linked to the recorder by an electrical cable. A direct current voltage is applied to the bridge, and the record is obtained by recording the unbalanced current from a magnetic oscillograph. Any standard strain gage recorder can be used for the recording system. *Hunt*

knapping machine

An instantaneous stonecrushing machine; a stonebreaker. *Standard, 2*

kneading

A filling material composed of clayey rock from which balls are made by a special machine. These balls are driven by an air current through a tube resembling a gun barrel into the excavated area to be filled. By impact and weight, the soft balls are squashed and perfectly fill the excavation. *Stoces*

knebelite

A manganoan variety of fayalite.

knee brace

A stiffener between a stanchion or column and a roof truss, to ensure greater rigidity in a building frame under wind load. *Hammond*

kneeler

a. The triangular connection by which a horizontal motion is changed to a vertical one, as in certain mine pumps. *Standard, 2* b. A stone cut to provide a change of direction. *Crispin* c. The return of the dripstone at the spring of an arch. *CTD*

knee pad

A protective cushion, usually made of sponge rubber, that can be strapped to the miner's knee.

knee piece

a. A bent piece of piping. *Fay* b. An angular piece of timber used in a roof (mine) to strengthen a joint where two timbers meet. *Fay*

knee timber

a. Timber with natural knees or angles in it. *Webster 3rd* b. A piece of timber with an angle or knee in it. *Webster 3rd*

knell stone

N. of Eng. Freestone (sandstone).

knife dog

A tool that fits around and grips drill rods or any tubular drilling equipment so they can be pulled or lifted from a borehole where workspace in narrow underground openings is too confined to allow the use of a hoisting plug. *Long*

knife edge

a. The girdle of a brilliant, cut to a sharp edge and polished. *Hess* b. A narrow ridge of rock or sand. Syn: [feather edge](#)

knife switch

A switch that opens or closes a circuit by the contact of one or more blades between two or more flat surfaces or contact blades. *Crispin*

knipovichite

A chromian variety of alumohydrocalcite.

knistersalze

Crystals of salt mined at Wieliczka, Poland, that decrepitate violently upon heating, due to excessive enclosed water or gases. *Kaufmann*

knitted texture

A texture typical of the mineral serpentine in rocks where it replaces a clinopyroxene. CF: [lattice texture](#)

knobbing

The act of roughdressing stone in the quarry by knocking off the projections and points. *Fay*

knobbing fire

A bloomery for refining cast iron. *Fay*

knobellite

An intergrowth of galena with bismuthinite or stibnite. *Hess*

knock

To sound the mine roof for competence by rapping.

knockbark

Crushed lead ore. *Arkell*

knocking

a. S. Wales. Signals made underground by knocking on the coal. *Fay* b. Eng. Ore broken with a hammer, esp. the large lumps. *Webster 2nd*

knockoff bit

See: [detachable bit](#)

knockout man

A laborer who frees solidified metal castings from inverted molds of a casting wheel by prying the castings from the molds with a long steel bar to drop them into a water pit (bosh) for cooling. *DOT*

knockstone

Eng. Stone bench on which lead ore is buckered or broken small for the hotching tubs; Yorkshire lead mines. Also called binkstone. *Arkell*

knogging

Eng. Small refuse stones used for the inside of walls; Northamptonshire and Worcestershire. *Arkell*

Knoop hardness

Microhardness determined from the resistance of metal to indentation by a pyramidal diamond indenter, having edge angles of 172 degrees 30' and 130 degrees, and making a rhombohedral impression with one long and one short diagonal. CF: [Mohs scale](#)

knot

A small concretion; e.g., of galena in sandstone, or a segregation of darker minerals in granite and gneiss. *AGI*

knots

a. Nodules or concretions of pyrite. b. Any hard inclusions in a rock. c. Quarrymen's term for dark gray to black masses, more or less oval or circular in cross section, which are segregations of biotite or hornblende in granite. English quarrymen call them heathen. d. Diamonds with included small diamond crystals that cause trouble in cutting.

knotted schist

See: [spotted slate](#)

knotted slate

See: [spotted slate](#)

known mine

Land cannot be held to be a "known mine" unless at the time the rights of the purchaser accrued, there was upon the ground an actual and open mine that either had been worked or was capable of being worked.

known to exist

A vein or lode is known to exist when it could be discovered by anyone making a reasonable and fair inspection of the premises for the purpose of a location.

known vein

A vein or lode is known to exist within the meaning of the mining act when it could be discovered by or is obvious to anyone making a reasonable and fair inspection of the premises for the purpose of making a location of a placer mining claim. This term is not to be taken as synonymous with located vein and refers to a vein or lode whose existence is known as distinguished from one that has been appropriated by location. Hence, a regular location is not necessary before a vein or lode can be a known vein or lode. The time at which a vein or lode must be known to exist to except it from a placer patent is the time at which the application for a patent is made and to contain minerals in such quantity and quality as to justify expenditure for the purpose of extracting them. *Ricketts*

knox hole

A circular drill hole with two opposite vertical grooves that direct the explosive power of the blast. *Fay*

knox system

A system of separating masses of rock by blasting with black blasting powder in reamed drill holes, a considerable air space being left between the charge and the stemming. *Fay*

knoxvillite

See: [copiapite](#)

knuckle

The place on an incline where there is a sudden change in grade. The top of a grade or hill on a track over which mine cars are hauled. *Fay*

knuckle joint

A mechanism consisting of some form of two forks coupled together by means of a cube or sphere provided with projecting pins extending through holes provided in the outer end of each branch of the fork. When inserted between the bit and the drill rods, the mechanism can be used to deflect a borehole. A similar mechanism often is used as a connection between two shafts on a machine when the ends of the shafts are placed at an angle to each other. *Long*

knuckle man

In bituminous coal mining, a person who works at the knuckle (top) of a haulage slope, coupling trains of cars and attaching and detaching cars to and from a haulage cable by which they are raised or lowered. Also called knuckle boy. *DOT*

knurs and fundlers

Eng. Two words always used together and applied to lumps of gypsum in marl, Nottinghamshire. *Arkell*

knurs and knots

The stony nodules found lodged in the strata; commonly harder than the rest of the mass of the strata. *Arkell*

kobeite

An amorphous mineral, $(Y,U)(Ti,Nb)_2(O,OH)_6(?)$; forms black metamict crystals at Kobe, Japan.

kobellite

An orthorhombic mineral, $Pb_{22}Cu_4(Bi,Sb)_{30}S_{69}$; forms a series with tintinaite.

kochenite

A fossil resin, like amber. From Kochenthal, Tirol, Austria. *English*

Koch freezing process

A freezing method of shaft sinking, in which a solution of magnesium chloride, $MgCl_2$, is circulated through the freezing tubes instead of brine. The magnesium chloride is

cooled to about -30 degrees C at the refrigerating plant, and this temperature is capable of freezing the ground without the solution itself freezing and choking the tubes. Anhydrous ammonia, carbon dioxide, or sulphur dioxide is used as the refrigerating agent. *Nelson*

koechlinite

An orthorhombic mineral, Bi_2MoO_6 ; forms minute tabular crystals; at Schneeberg, Saxony, Germany.

koehler lamp

A naphtha-burning flame safety lamp for use in gaseous mines. *Fay*

Koepe hoist

Winding system in which both cages in a mine shaft are connected to the same rope, via the drum. *Pryor, 3*

Koepe sheave

The wheel that is used in the Koepe winder instead of a winding drum. It usually consists of a cast-steel hub with steel arms and rim of welded construction. The diameter of the sheave varies from about 16 to 26 ft (4.9 to 7.9 m), depending on the size and type of winding rope and the total load. It is recommended that the ratio of the diameter of the sheave to the diameter of the rope should be 100:1 and that of the sheave to the largest wire in the rope, 2,000:1. A Koepe sheave is fitted with renewable friction linings. See also: [sheave](#); [winding sheave](#). *Nelson*

Koepe system

a. A system of hoisting without using drums, the rope being endless and passing over pulleys instead of around a drum. *Zern* b. In this system, the hoisting drum is replaced by a large driving sheave 15 to 20 ft (4.6 to 6.1 m) in diameter. The angle of contact of the rope with the sheave is from 190 degrees to 200 degrees or a little over a half circle. Driving is done through the friction grip of the sheave on the rope; therefore, a tail rope is used around a sheave at the bottom of the shaft to give the necessary pull on the slack side. *Lewis*

Koepe winder

A system where the winding drum is replaced by a large wheel or sheave. Both cages are connected to the same rope, which passes around some 200 degrees of the sheave in a groove of friction material. The Koepe sheave may be mounted on the ground adjacent to the headgear or in a tower over the shaft. The drive to the rope is the frictional

resistance between the rope and the sheave. It requires the use of a balance rope. It is often used for hoisting heavy loads from deep shafts and has the advantage that the large inertia of the ordinary winding drum is avoided. The system has been widely used in Europe for many years, and some large projects in Great Britain are being equipped with winders of this type. See also: [multirope friction winder](#)

Koepe winder brake

A brake which acts directly on the Koepe sheave and can be applied by the winding engine operator's brake lever and the other safety devices. *Nelson*

koettigite

See: [koettigite](#)

kohlenhobel

See: [coal plow](#)

kolbeckite

A monoclinic mineral, $\text{ScPO}_4 \cdot 2\text{H}_2\text{O}$; blue to gray. Syn: [sterrettite](#)

Kollen garnet

Almandine from Kollen, Bohemia, Czech Republic. See also: [Bohemian garnet](#)

kolm

a. A variety of cannel coal occurring locally as lenticles in Swedish alum shales and containing 30% of ash rich in rare metals, including uranium and radium. *Tomkeieff* b. See: [culm](#) c. A variety of anthraxolite; a hydrocarbon that resembles oil shale. *Crosby* d. A shale impregnated with asphaltite. *Hess*

kolovraite

The mineral hydrous vanadate of Ni and Zn; in yellow botryoidal crusts; at Ferghana, Uzbekistan.

komatiite

Magnesium-rich ultramafic volcanic rock of high temperature origin. The term was originally applied by Viljoen and Viljoen (1969) to basaltic and ultramafic lavas near the Komati river, Barberton Mountain Land, Transvaal, South Africa. Nickel-copper sulfide mineral deposits may be associated with komatiites.

kong

Barren bedrock underlying tin-bearing gravel. *Pryor, 3*

konimeter

Apparatus used to measure dust in mine atmosphere. A measured volume of air is drawn through a jet so as to impinge on a glass surface coated with glycerin jelly. The adherent dust is then examined and the particles are counted under the microscope. Also called Zeiss konimeter. See also: [dust sampling](#)

koninckite

A tetragonal mineral, $\text{FePO}_4 \cdot 3\text{H}_2\text{O}$ (?); occurs in yellow spheroidal aggregates; at Liege, Belgium.

Kootenai series

Part of the Comanchean, of the continental facies, including coal seams, occurring in western Canada. *CTD*

Korfmann arch saver

A machine for withdrawing steel arches by means of a controlled hydraulic system instead of drawing them by hand or winches. *Nelson*

Korfmann power loader

A double-ended cutter loader; i.e., it can cut and load in both directions. It consists of four milling heads and one cutter chain surrounding them; guided by armored conveyor; rope-hauled; cuts at 2.3 ft/s (0.7 m/s) and flits at 10 ft/s (3.0 m/s). The minimum workable seam thickness is 26 in (66 cm) on gradients from 0 degrees to 12 degrees; maximum length of face is 165 yd (151 m); takes 3-1/2 ft (1.07 m) per cut, continuous mining. *Nelson*

kornelite

A monoclinic mineral, $\text{Fe}_2(\text{SO}_4)_3 \cdot 7\text{H}_2\text{O}$; forms rose to violet prisms; an alteration of pyrite.

kornerupine

An orthorhombic mineral, $\text{Mg}_4(\text{Al,Fe})_6(\text{Si,B})_4\text{O}_{21}(\text{OH})$; forms columnar crystals with prismatic cleavage; in high-grade metamorphic aluminous rocks.

korzhinskite

A mineral, $\text{CaB}_2\text{O}_4 \cdot \text{H}_2\text{O}$; in skarns with other calcium borate minerals.

koettigite

A monoclinic mineral, $\text{Zn}_3(\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; vivianite group; forms a series with parasymphesite; carmine-red with one perfect cleavage; occurs with smaltite at Schneeberg, Saxony, Germany. Also spelled koettigite.

kotulskite

A hexagonal mineral, $\text{Pd}(\text{Te},\text{Bi})$.

Kotze konimeter

A dust-sampling instrument consisting of an air cylinder and piston actuated by a spring, and so arranged that on release of the piston a known volume of air is impinged at high velocity against a plate coated with vaseline. The dust spot so produced is examined under the microscope, and a count is made of the number of particles. *Greenburg*

Kourbatoff's reagent

An etchant for steel; it consists of seven parts of a solution containing 20% methyl alcohol, 20% ethyl alcohol, 20% iso-amyl alcohol, and 10% butyl alcohol added to three parts of a solution of 4% nitric acid in acetic anhydride. This etchant colors sorbite and troostite, leaving the other constituents unaffected. *Osborne*

koutekite

A hexagonal mineral, Cu_5As_2 .

kramerite

See: [probertite](#)

krantzite

A fossil resin resembling amber and found in small yellowish grains disseminated in brown coal. *Tomkeieff*

kratochvilite

An orthorhombic mineral, $\text{C}_{13}\text{H}_{10}$.

kraurite

See: [dufrenite](#)

krausite

A monoclinic mineral, $\text{KFe}(\text{SO}_4)_2 \cdot \text{H}_2\text{O}$; forms soft yellowish-green prismatic crystals and crusts.

kremersite

An orthorhombic mineral, $(\text{NH}_4, \text{K})_2 \text{FeCl}_5 \cdot \text{H}_2\text{O}$; forms red pseudo-octahedra around fumaroles in Sicily, Italy.

krennerite

One of the gold telluride group of minerals, $(\text{Au,Ag})\text{Te}_2$; corresponds to the same general formula as sylvanite and calaverite. Silver-white to pale yellow color; sp gr, 8.35. Found in Colorado and Romania. Syn: [white tellurium](#)

kriging

a. A weighted, moving-average interpolation method in which the set of weights assigned to samples minimizes the estimation variance, which is computed as a function of the variogram model and locations of the samples relative to each other, and to the point or block being estimated. b. In the estimation of ore reserves by geostatistical methods, the use of a weighted, moving-average approach both to account for the estimated values of spatially distributed variables, and also to assess the probable error associated with the estimates. *SME, 1*

kriging standard deviation

The standard error of estimation computed for a kriged estimate. By definition, kriging is the weighted linear estimate with the particular set of weights that minimizes the computed estimation variance (standard error squared). The relationship of the kriging standard deviation to the actual error of estimation is very dependent on the variogram model used and the validity of the underlying assumptions; therefore, kriging standard deviations should be interpreted with caution.

Krohnke process

The treatment of silver ores preparatory to amalgamation, by humid chloridization with copper dichloride. *Fay*

kroehnkite

A monoclinic mineral, $\text{Na}_2 \text{Cu}(\text{SO}_4)_2 \cdot 2\text{H}_2\text{O}$; azure; in Chilean copper deposits. Also spelled kroehnkite.

Kroll process

Process in which purified titanium tetrachloride is reduced to the metallic state with magnesium in an inert atmosphere of helium or argon.

Krupp process

a. See: [Krupp washing process](#) *Fay* b. A cementation process designed for the hardening of surface steel, as for armor plates, where the object is to strengthen the outer portion of the mass from the surface toward the interior. *Standard, 2*

Krupp-Renn

The process for the production of iron and steel from medium-grade ores, such as those containing 44% to 57% iron and having a high silicon content. The process involves a continuous reduction and is carried out in a revolving tube furnace, which is designed for the production of iron. The iron is reduced into a sponge and then converted into low-carbon metallic grains, which are called pellets.

Krupp washing process

The removal of silicon and phosphorus from molten pig iron by running it into a Perrot furnace lined with iron oxides. Iron ore may also be added, and the bath is agitated by rotation for 5 to 8 min only. See: [Krupp process](#) *Fay*

kryptomere

See: [aphanite](#)

kryzhanovskite

An orthorhombic mineral, $\text{MnFe}_2(\text{PO}_4)_2(\text{OH})_2 \cdot \text{H}_2\text{O}$; an oxidation product of phosphoferrite; forms a series with garyansellite.

K-spar

See: [potassium feldspar](#)

K.T.A.M. auger tube

See: K.T.A.M. double-tube auger.

K.T.A.M. double-tube auger

A double-tube soil-sampling device designed to be rotated by hand to obtain soil samples from relatively shallow depths. The inner tube is a swivel type, and its cutting end leads the bottom of the spiral on the outside of the outer tube. *Long*

kua

Specially shaped hoe used for working gravel in the sluice in Japan. *Fay*

kulm

See: [culm](#)

kundaite

A variety of grahamite from Estonia. Distinguished by the brown color of its powder and its greater solubility in turpentine and chloroform. *English; Tomkeieff*

kunkur

See: [kankar](#)

kunzite

A gem variety of spodumene; lilac, transparent. Syn: [lithia amethyst](#)

kupferschiefer

A dark-colored shale once worked for copper in Germany.

kupletskite

A triclinic mineral, $(K,Na)_3 (Mn,Fe)_7 (Ti,Nb)_2 Si_8 O_{24} (O,OH)_7$; astrophyllite group; forms series with astrophyllite and with cesium kupletskite.

kuprojarosit

See: [cuprojarosite](#)

kurnakovite

A triclinic mineral, $MbB_3 O_3 (OH)_5 \cdot 5H_2 O$; dimorphous with inderite.

kuroko

In Japan, black ore. The kuroko deposits consist of intimately mixed zincblende, galena, and barite, associated (in places) with large masses of pyrite and gypsum. *Hess*

kurtosis

In statistics, the technical name describing peakedness of a frequency distribution. It is statistically measured as the coefficient of quartile kurtosis.

kutnohorite

A trigonal mineral, $2[\text{Ca}(\text{Mn},\text{Mg},\text{Ca},\text{Fe})(\text{CO}_3)_2]$; dolomite group; in carbonate veins. Also spelled kutnahorite.

kyack

A packsack to be swung on either side of a packsaddle. *Webster 3rd*

kyanite

A triclinic mineral, $4[\text{Al}_2\text{SiO}_5]$; trimorphous with andalusite and sillimanite; in blades that are distinctly harder across than along; a common rock-forming mineral in schist and gneiss. Also spelled cyanite. Syn: [disthene](#); [sappare](#).

kyanophyllite

A mixture of paragonite plus muscovite.

kyrosite

A variety of marcasite. Syn: [white copper ore](#)

L

labeled atom

Atom rendered radioactive and thus traceable through a chemical process or a flow line. Also called tagged atom. *Pryor, 3*

labile

Said of rocks and minerals that are mechanically or chemically unstable; easily decomposed. CF: [unstable](#)

labile protobitumens

Easily decomposable plant and animal products such as fats and oils or proteins that are found in peat and sapropels. *Tomkeieff*

lability

The property of bituminous emulsions, relating to the ease with which they break when put into use. Labile emulsions are quick breaking. *Nelson*

labor

a. A shaft, cavity, or other part of a mine from which ore is being or has been extracted; a working, as a labor in a quicksilver mine. See also: [working](#) b. The annual assessment work required on claims calls for \$100.00 of labor and improvements. In Australia, claims have continuous labor or are manned throughout the year. *von Bernewitz* c. A Spanish term used in early land surveys in Texas for unit of area equal to about 177.14 acres (representing a tract 100 varas square). Pronounced la-bore. *AGI*

laboratory

In the iron and steel industry, the space between the fire and flue bridges of a reverberatory furnace in which the work is performed. Also called "kitchen and hearth." *Fay*

La Bour centrifugal pump

A self-priming centrifugal pump containing a trap, which always ensures sufficient water for the pump to function, and also a separator to remove the entrained air in the water. *Lewis*

labradorescence

Optical diffraction of monochromatic light, commonly blue, caused by exsolution lamellae in some labradorite samples; appears to come from within the sample. CF: [labrador moonstone](#)

labrador hornblende

See: [orthopyroxene](#)

labradorite

A triclinic mineral, $(Ca,Na)[(Al,Si)AlSi_2O_8]$; CaAl 70 to 50 mol % and NaSi 30 to 50 mol %; plagioclase series of the feldspar group; a common rock-forming mineral in basalt, gabbro, and anorthosite; also in hornfels and siliceous marble.

Labrador moonstone

A variety of labradorite displaying an internal play of colors. See: [labradorescence](#)

Labrador rock

See: [labradorite](#)

labuntsovite

A monoclinic mineral, $(K,Ba,Na)(Ti,Nb)(Si,Al)_2(O,OH)_7 \cdot H_2O$. Also spelled labuntzovite; labountsovite.

labyrinth

a. A series of canals through which a stream of water is directed for sorting crushed ore according to its specific gravity. *Fay* b. A pipe or chamber of many turnings, for condensing metal vapors or fumes. *Standard, 2*

laccolite

See: [laccolith](#)

laccolith

A concordant igneous intrusion with a known or assumed flat floor and a postulated, dikelike feeder commonly thought to be beneath its thickest point. It is generally plano-convex in form and roughly circular in plan, less than 5 miles (8 km) in diameter, and from a few feet to several hundred feet in thickness. See also: [phacolith](#) *AGI*

lace

Eng. Line cut, with the point of a pick, on slickensides.

lacing

a. The timber or other material placed behind and around the main supports. See also: [lagging](#); [lofting](#). *Nelson* b. Strips or light bars of wrought iron bent over at the ends and wedged between the bars and the roof. *Fay* c. Small boards or patches that prevent dirt from entering an excavation through spaces between sheeting or lagging planks. *Nichols, 1* d. Bars placed diagonally to space and stiffen members, as in a built-up column.

Crispin e. Eng. Wood placed inside the sets of timber as a tie from prop to prop. Also called stringing piece. See also: [bracing](#) f. N. Staff. Timbers placed across the tops of bars or caps to secure the roof between the timbers. *Fay*

lack clay

Ire. A thin pan under the moors. *Arkell*

LaCoste-Romberg gravimeter

A long-period vertical seismograph suspended system adapted to the measurement of gravity differences. Sensitivity is achieved by adjusting the system to proximity to an instability configuration. *AGI*

lacroixite

A monoclinic mineral, $\text{NaAl}(\text{PO}_4)\text{F}$; isostructural with durangite; in cavities in granite pegmatites.

lactic acid

In flotation, a depressant sometimes used to depress iron minerals. *Pryor, 3*

lacustrine

Pertaining to, formed in, growing in, or inhabiting lakes.

ladder

a. The arm that carries the tumblers and bucket line of a dredge. *Fay* b. The continuous line of mud buckets, carried on an oblique endless chain, in a bucket ladder excavator or dredger. *CTD* c. The digging boom assembly in a hydraulic dredge or chain-and-buckets ditcher. *Nichols, 1*

ladder-bucket dredge

See: [bucket-ladder dredge](#)

ladder ditcher

An excavator that digs ditches by means of a chain of traveling buckets supported by a boom.

ladder drilling

Arrangement used in large-scale rock tunneling. Retractable drills with pneumatic power legs are mounted on prefabricated steel ladders in tiers, connected into a holding frame or jumbo. As many as 22 drills can be worked simultaneously by a small labor force.

Pryor, 3

ladder lode

See: [ladder vein](#)

ladder sollar

A platform at the bottom of each ladder in a series. *Standard, 2*

ladder vein

One of a series of mineral deposits in transverse, roughly parallel fractures that have formed along foliation planes perpendicular to the walls of a dike during its cooling or along shrinkage joints in basaltic rocks or dikes. Syn: [ladder lode](#)

ladderway

a. See: [manway](#) b. Mine shaft, raise, or winze between two main levels, equipped with ladders. *Pryor, 3* c. The particular shaft or compartment of a shaft containing ladders. Also called ladder road. *Fay*

lade

a. Scot. A load. b. A watercourse, ditch, or drain. c. The mouth of a river.

laded metal

Molten glass dipped from a melting pot to a casting table. Also called gathered metal. *Standard, 2*

lading hole

In glassmaking, an orifice through which melted glass is ladled or taken out by a cuvette. *Standard, 2*

ladle

a. In a smelter or foundry, a steel-holding vessel used in the transfer and transport of molten metal, matte, or slag. *Pryor, 3* b. A long-handled, cup-shaped tool for ladling glass out or from one spot to another. Also used for filling open pots. *ASTM*

ladle addition

In foundry work, addition of special metals (e.g., granulated nickel) or compounds (e.g., ferrosilicon) to molten iron in ladle to produce special qualities in castings. *Pryor, 3*

ladle craneman

In the iron and steel industry, a person who places ladles under the tapholes of furnaces and holds them in position while the metal is poured into them. Also called charging floor crane operator; ladle crane operator; steel charger. *DOT*

ladle filler

In metallurgy, a person who transfers molten metal from the furnace into a ladle and skims and fluxes metal preparatory to casting. *DOT*

ladle furnace

A small furnace for calcining or melting substances in a ladle. *Standard, 2*

ladle liner

In ore dressing, smelting, and refining, a person who repairs and relines pouring ladles used to transport molten metals, such as iron, steel, and copper. Also called ladle cleaner; ladle dauber; ladle houseman; ladle mender; ladle patcher; ladle repairman. *DOT*

ladle lip

A concave projection at the upper edge of a ladle to guide the metal in pouring. *Mersereau, 2*

ladler

Worker who pours molten glass from a suspended ladle on casting table for rolling into sheet glass. *DOT*

Lafond's tables

A set of tables and associated information for correcting reversing thermometers and computing dynamic height anomalies; compiled by E.C. Lafond and published by the U.S. Navy Hydrographic Office as H.O. Pub. No. 617. *Hunt*

lag

a. To place planks, slabs, or small timbers over horizontal, or behind upright, members of mine timber sets to form a ceiling or wall. *Long* b. In flotation, any retardation of an output with respect to the causal input. *Fuerstenau* c. A flattish piece of wood or other material to wedge the timber or steel supports against the ground and to secure the area between the supports. See also: [lid](#); [wedge](#). *Nelson* d. To protect a shaft or level from falling rock by lining it with timber (lagging). *CTD* e. Time required for circulation liquid to travel downward from the drill pump through the drill string to the bit or upward from the bottom of the borehole to the collar. *Long* f. The lapse of time between the occurrence of an event or condition and its detection on a recording device. *Long* g. To provide or cover with lags; as, to lag a boiler with a nonconductor; to lag timbers in a mine. See also: [lags](#); [lagging](#). *Standard, 2; Fay* h. A distance class interval used for variogram computation.

lag deposit

See: [lag gravel](#)

lagergestein

Ger. The enclosed pieces of older rocks in a sedimentary ore deposit. *Schieferdecker*

lag fault

An overthrust, the thrust rocks of which move differentially so that the upper part of the geologic section is left behind; the replacement of the upper limb of an overturned anticline by a fold fault. Syn: [tectonic gap](#)

lagged liner

A metal plate with raised areas, to be inserted in the bottom of shaker conveyor troughs and held in place by spot welding. The raised areas assist coal travel on steep grades or under wet conditions. *Jones, 1*

lagging

a. Lagging wedges and secures the roof and sides behind the main timber or steel supports in a mine and provides early resistance to pressure. If concrete slabs are used, they are made in lengths to fit between the arch webs. The lagging behind steel arches in tunnels may be pyrolith-treated, fire-resisting boards. Also called lacing. *Nelson* b. Pieces of timber about 4 ft 6 in by 6 in by 2 in (1.4 m by 15 cm by 5 cm) with one end sharpened or beveled to give the lath an upward trend when being driven into the roof gravels. A number of laths driven into the roof form a protective shield for the miners working in the face. Sometimes called laths. *Eng. Min. J., 1* c. In shafts, planks, usually 2 in, placed on the outside of sets. Coeur D'Alene lagging has 2-in by 2-in cleats nailed to the top and bottom of the wall and end plates about 2 in back from the outer edge. The

lagging is then cut to fit between the plates and is placed against the cleats and flush with the plates on the outside. *Lewis* d. Narrow boards, generally planed, placed horizontally on the arch frames of a center. On this lagging the arch of masonry is built. The term is also applied to poling boards. *Stauffer* e. Planks, slabs, or small timbers placed over the caps or behind the posts of the timbering, not to carry the main weight, but to form a ceiling or a wall, preventing fragments or rock from falling through. See also: [lag](#) f. Heavy planks or timbers used to support the roof of a mine, or for floors of working places, and for the accumulation of rock and earth in a stope. *Fay* g. Long pieces of timbers closely fitted together and fastened to the drum rings to form a surface for the rope to wind on. *Fay* h. The narrow strips supporting an arch of masonry while in construction. *Standard*, 2 i. The surface or contact area of a drum or flat pulley, esp. a detachable surface or one of special composition. *Nichols*, 1 j. Boards fastened to the back of a shovel for blast protection. *Nichols*, 1 k. Covering on boilers, tanks, and pipes used to provide thermal insulation. *Pryor*, 3 l. Material applied to pulleys to increase traction between the pulley and belt and to decrease wear on both. See also: [backing deals](#) m. Verb. To install lagging. *AGI*

lagging bar

See: [roof stringer](#)

lag gravel

- a. A residual accumulation of rock fragments remaining on a surface after the finer material has been blown away by winds. See also: [desert pavement](#); [pebble armor](#). *AGI*
- b. Coarse-grained material that is rolled or dragged along the bottom of a stream at a slower rate than the finer material, or that is left behind after currents have winnowed or washed away the finer material. Syn: [lag](#); lag deposit. *AGI*

lagre

Fr. In sheet glass manufacture, a sheet of perfectly smooth glass, interposed between the flattening stone and the cylinder that is to be flattened. *Standard*, 2

lags

Eng. Long pieces of timber closely fitted together and fastened to oak curbs or rings forming part of a drum used in sinking through quicksand or soft ground. CF: [lag](#)

lag screw

- a. A square-headed, heavy wood screw. It must be tightened down with a wrench because its head is not slotted. *Crispin* b. A flat-headed machine screw by which to fasten wood lagging, as on a curve surface. *Standard*, 2

lag time

The total time between the initial application of current and the rupture of the circuit within the detonator. *BS, 12*

lahar

See: [mudflow](#)

laihunite

Black monoclinic mineral, $\text{Fe}^{2+} \text{Fe}_2^{3+} (\text{SiO}_4)_2$.

lair

Clay; mud; mire. *Arkel*

laitakarite

A trigonal mineral, $\text{Bi}_4 (\text{Se,S})_3$. Syn: [selenjoseite](#)

lake-bed placer

In Alaska, a placer in the bed of a present or ancient lake; generally formed by landslides or glacial damming.

Lake copper

Copper produced from the Lake Superior ores in which the metal occurs native and is of high purity. *CTD*

Lake George diamond

See: [Herkimer diamond](#)

lake ore

a. See: [bog iron](#); bog iron ore. b. A disklike or irregular concretionary mass of ferric oxyhydroxide less than 1 m thick; or a layer of porous, yellow bedded limonite formed along the borders of certain lakes. See also: [bog ore](#)

Lake Superior agate

a. Any agate from the Lake Superior region. b. Thompsonite marked or banded like agate from the Lake Superior region.

Lake Superior greenstone

See: [pumpellyite](#)

lambda plate

See: [mica plate](#)

Lambert's Law

See: [translucency](#)

lamella

A thin scale, leaf, lamina, or layer; e.g., one of the units of a polysynthetically twinned mineral, such as plagioclase. Plural, lamellae. *AGI*

lamellar

Composed of or arranged in lamellae; disposed in layers like the leaves of a book. Syn: [lamellate](#)

lamellar flow

Flow of a liquid in which layers glide over one another. CF: [laminar flow](#)

lamella roof

A vault or large span built up with short structural members of timber or pressed steel, joined together in a diamond pattern by bolting or other suitable connections. This system, which is a type of stressed-skin construction, was patented in 1925 by a German engineer. *Hammond*

lamellar pyrite

See: [marcasite](#)

lamellar stellate

In mineralogy, having or consisting of lamellae arranged in groups resembling stars. *Standard, 2*

lamellar twinning

Multiple parallel twins; e.g., albite twinning in plagioclase. Syn: [polysynthetic twinning](#)

lamellate

See: [lamellar](#)

lame-skirting

Widening a passage by cutting coal from the side of it. Also called skipping; slicing. *Fay*

lamina

The thinnest recognizable layer in a sedimentary rock. Plural, laminae. CF: [stratum](#)

laminar flow

Water flow in which the stream lines remain distinct and the flow direction at every point remains unchanged with time. It is characteristic of the movement of ground water. CF: [turbulent flow](#); [lamellar flow](#). Syn: [streamline flow](#); [sheet flow](#). *AGI*

laminar velocity

That velocity below which, in a particular conduit, laminar flow will always exist, and above which the flow may be either laminar or turbulent, depending on circumstances. Also known as lower critical velocity. *Seelye, 1*

laminated

In very thin parallel layers.

laminated iron

Iron in the form of thin sheets; used as cores of transformers, etc. The losses due to eddy currents with laminated iron cores are lower when compared with solid cores. *Nelson*

laminated quartz

Vein quartz containing slabs, blades, or laminar films of other material. *AGI*

laminating machine

A set of rolls or any apparatus for making thin plates of metal, such as gold, preliminary to beating. *Standard, 2*

laminating roller

The adjustable roller in a rolling mill whereby the thickness of rolled metal sheets is regulated. *Standard, 2*

lamination

a. The formation of a lamina or laminae. *AGI* b. The state of being laminated; specif. the finest stratification of bedding, typically exhibited by shales and fine-grained sandstones. *AGI* c. A laminated structure. *AGI*

laminations

Of rocks, bedding in layers less than 1 cm thick; formation with thin layers that vary in grain or composition. *Pryor, 3*

lamings

a. Partings in coal seams. *Arkell* b. N. of Eng. A collier's term for accidents of almost every description to people working in and about the mines. A variation of lame, to cripple or disable. *Fay*

lamp

a. See: [safety lamp](#) b. A small handheld electrical device that produces an intense ultraviolet radiation, called "black light." See: [black light](#); fluorescent lamp. *Long* c. An electrical lamplike device producing intense ultraviolet radiations for visually examining drill cores or rock specimens for the presence and/or abundance of fluorescent minerals. *Long*

lampadite

Wad containing 4% to 18% copper oxide and commonly cobalt. Syn: [cupreous manganese](#)

lamp cabin

a. A place above ground where the safety and cap lamps are maintained, before being handed to the workers. b. See: [lamp room](#)

lamp cleaner

See: [lampman](#)

lamp cup

A means for supporting a flame safety lamp on a tripod to provide a sight for surveying. *BS*, 7

lamp house

See: [lamp cabin](#)

lamping

In prospecting, use of a portable ultraviolet lamp to reveal fluorescent minerals. *Pryor*, 3

lamp keeper

See: [lampman](#)

lampman

a. The person in charge of the lamp room at a mine responsible for the maintenance of the safety lamps. *Nelson* b. In mining, one who cleans, tests, and repairs lamps used underground by miners. Also called battery charger; lamp cleaner; lamp-house man; lamp keeper; lamp repairer; safety-lamp keeper. *DOT*

lamp rack

A rack upon which electric cap lamp batteries are placed to be charged.

lamp repairer

See: [lampman](#)

lamprobolite

See: [oxyhornblende](#)

lamproite

A group name for dark-colored hypabyssal or extrusive rocks rich in potassium and magnesium; also, any rock in that group, such as madupite, orendite, fitzroyite, verite, cedricite, or wyomingite. *AGI*

lamp room

A room or building at the surface of a mine provided for charging, servicing, and issuing all cap, hand, and flame safety lamps held at the mine. See also: [self-service system](#)

lamprophyllite

A monoclinic mineral, $\text{Na}_2 (\text{Sr,Ba})_2 \text{Ti}_3 (\text{SiO}_4)_4 (\text{OH,F})_2$. Syn: [molengraafite](#)

lamprophyre

A group of dark-colored, porphyritic, hypabyssal igneous rocks characterized by panidiomorphic texture, a high percentage of mafic minerals (esp. biotite, hornblende, and pyroxene), which form the phenocrysts, and a fine-grained groundmass with the same mafic minerals in addition to feldspars and/or feldspathoids; also, any rock in that group. Most lamprophyres are highly altered. They are commonly associated with carbonatites. CF: [leucophyre](#)

lamprophyric

Said of the holocrystalline-porphyritic texture exhibited by lamprophyres, in which phenocrysts of mafic minerals are contained in a fine-grained crystalline groundmass. *AGI*

lamproschist

Metamorphosed lamprophyre with a schistose structure containing brown biotite and green hornblende. *AGI*

lamp station

a. Fixed places in the intake airway of a coal mine where the miners' safety lamps are externally examined by a deputy before the workers proceed to their working places. In a safety lamp mine, the lamp station is the only place where flame safety lamps may be opened and relighted. *Nelson* b. Locations in gaseous mines where safety lamps are opened, cleaned, and refilled or charged by a qualified attendant. *Hudson* c. A place underground, appointed for the examination, by an official, of safety lamps in use. *BS, 13* d. A lamp room. *Fay*

Lanarkian

A subdivision of the Coal Measures--based mainly on plant fossils. It represents in part, the millstone grit of South Wales; well developed in South Scotland, where coal seams are present. *Nelson*

lanarkite

A monoclinic mineral, $\text{Pb}_2 (\text{SO}_4)_2 \text{O}$; perfect basal cleavage; named for Lanarkshire, Scotland.

Lancashire bord-and-pillar system

See: [bord-and-pillar method](#)

Lancashire method

A method of working moderately inclined coal seams. The first stage consists of splitting a panel of coal into pillars and as a second stage the pillars are extracted on the retreat by a longwall face. *Nelson*

lanchut

A short sluice used for cleaning tin concentrate. *Hess*

land

a. To set or allow the bottom end of a drivepipe or casing to rest at a preselected horizon in a borehole. *Long* b. For reamers, drills, and taps, the solid section between the flutes. *ASM, 1*

land accretion

Reclamation of land from the sea or other low-lying or flooded areas by draining and pumping, dumping of fill, or planting of marine vegetation. *AGI*

land chain

A surveyor's chain of 100 links.

land compass

A surveyor's compass.

lander

a. A worker stationed at one of the levels of a mine shaft to unload rock from the bucket or cage and load drilling and blasting supplies to be lowered to the crew. *Webster 3rd* b. In the quarry industry, one who supervises and assists in guiding, steadying, and loading, on trucks or railroad cars, blocks of stone hoisted from the quarry floor. Syn: [top hooker](#) c. In metal mining, a laborer who (1) cleans skips by directing a blast of compressed air into them through a hose; (2) records number of loaded skips hoisted to surface; and (3) loads railroad cars with ore from bins by raising and lowering chute doors. *DOT* d. In anthracite coal mining, bituminous coal mining, or metal mining, one who works with shaft sinking crew at top of shaft or at a level immediately above shaft bottom, dumping rock into mine cars from a bucket in which it is raised. Also called bucket dumper;

landing tender; top lander. *DOT* e. Eng. The person who receives the loaded bucket or tub at the mouth of the shaft. Also called banksman. *Fay*

landerite

A pink or rose variety of grossular in dodecahedra. Syn: [rosolite](#); xalostocite.

landesite

An orthorhombic mineral, $(\text{Mn,Mg})_9 \text{Fe}_3 (\text{PO}_4)_8 (\text{OH})_3 \cdot 9\text{H}_2 \text{O}$.

landform

Any physical, recognizable form or feature of the Earth's surface, having a characteristic shape, and produced by natural causes; it includes major forms such as plain, plateau, and mountain, and minor forms such as hill, valley, slope, esker, and dune. Taken together, landforms make up the surface configuration of the Earth. Syn: [relief feature](#)

landform system

A group of related natural features, objects, or forces; e.g., a drainage system or a mountain system. See also: [mountain system](#)

landing

a. The top or bottom of a slope, shaft, or inclined plane. *Fay* b. The mouth of a shaft where the cages are unloaded; any point in the shaft at which the cage can be loaded with people or materials. *Nelson* c. The brow or level section at the top of an inclined haulage plane where the loaded tubs are exchanged for empty tubs, or vice versa. See also: [apex](#) d. A preselected and prepared horizon in a borehole on or at which the bottom end of a drivepipe or casing string is to be set. *Long* e. A platform from which to charge a furnace. *Standard, 2* f. Level stage in a shaft at which cages are loaded and discharged. *Pryor, 3*

landing box

Scot. The box into which a pump delivers water. *Fay*

landing shaft

S. Wales. A shaft through which coal is raised. *Fay*

landing tender

See: [lander](#)

land pebble

See: [land-pebble phosphate](#)

land-pebble phosphate

A term used in Florida for a pebble phosphate occurring as pellets, pebbles, and nodules in gravelly beds a few feet below the ground surface. It is extensively mined. Syn: [land pebble](#); [land rock](#); [matrix](#). *AGI*

land plaster

Finely ground gypsum used as a fertilizer.

land rock

A syn. used in South Carolina for land-pebble phosphate. *AGI*

Landsat

Multispectral data from satellite remote sensing imagery that provides landscape patterns reflecting geologic structures, types of rocks, and vegetation. *SME, I*

landscape agate

See: [moss agate](#)

landscape marble

A close-grained limestone characterized by dark conspicuous dendritic markings that suggest natural scenery (woodlands, forests); e.g., the argillaceous limestone in the Cotham Marble near Bristol, England. Syn: [forest marble](#)

landslide

A general term covering a wide variety of mass-movement landforms and processes involving the downslope transport, under gravitational influence, of soil and rock material en masse. Usually the displaced material moves over a relatively confined zone or surface of shear. The wide range of sites and structures, and of material properties affecting resistance to shear, result in a great range of landslide morphology, rates, patterns of movement, and scale. Landsliding is usually preceded, accompanied, and followed by perceptible creep along the surface of sliding and/or within the slide mass. Terminology designating landslide types generally refers to the landform as well as the process responsible for it; e.g., rockfall, translational slide, block glide, avalanche, mudflow, liquefaction slide, and slump. Syn: [landsliding](#); [slide](#); landslip. *AGI*

landsliding

See: [landslide](#)

landslip

A British syn. of landslide. *AGI*

land subsidence

See: [subsidence](#)

lands valuable for minerals

As used in the mining law, applies to all lands chiefly valuable for nonmetalliferous deposits, such as alum, asphaltum, borax, guano, diamonds, gypsum, marble, mica, slate, amber petroleum, limestone, and building stone, rather than for agricultural purposes. Such lands are subject to disposition by the United States under the mining laws only.

Ricketts

land weight

Lanc. The pressure exerted by the subsidence of the cover or overburden.

Lane mill

A slow-speed roller mill of the Chilean type. A horizontal spider carrying six rollers revolves slowly in a pan 10 ft (3 m) or more in diameter, making about 8 rpm. *Liddell*

langbanite

A trigonal mineral, $(\text{Mn,Ca})_4 (\text{Mn,Fe})_9 \text{SbSi}_2 \text{O}_{24}$; in skarns. Also spelled laangbanite. (Not langbeinite.)

langbeinite

An isometric mineral, $\text{K}_2 \text{Mg}_2 (\text{SO}_4)_3$; associated with halite and sylvite in marine evaporite deposits; a source of potash. (Not langbanite.)

langite

A monoclinic mineral, $\text{Cu}_4 (\text{SO}_4)(\text{OH})_6 \cdot 2\text{H}_2 \text{O}$; in blue-green concretionary crusts; in Cornwall, U.K., and Stredoslovensky, Slovakia.

lang lay rope

A rope in which the wires are twisted in the same direction as the strands and the wires are thus exposed to wear for a much greater length than in round rope. The smoother lang lay resists wear to better advantage and is frequently preferred for haulage ropes. Syn: [universal lay rope](#) *Lewis; Sinclair, 5*

Langmuir's adsorption isotherm

The equation for calculating a gas monolayer on a flat surface. *Pryor, 3*

Langmuir trough

Rectangular tank used to measure the surface tension of a monolayer adsorbed at the surface of a liquid. *Pryor, 3*

Lang's lay rope

See: [winding rope](#)

lansfordite

A monoclinic mineral, $\text{MgCO}_3 \cdot 5\text{H}_2\text{O}$; forms small stalactites that alter to nesquehonite in mines near Lansford, PA.

lantern

Enclosed light (candle or oil) carried by a mine worker. *Hess*

lanthanite

An orthorhombic mineral, $(\text{Ce,La,Nd})_2(\text{CO}_3)_3 \cdot 8\text{H}_2\text{O}$; further speciated according to its predominant rare-earth element; in pegmatites and carbonate-rich sediments.

lanyon shield

An iron curtain, stiffened by ribs of angle iron, suspended from trolley wheels running on a rail parallel with and in front of a furnace to protect the worker from the furnace heat. *Fay*

lap

a. One coil of rope on the winding drum of the mine hoist. *Pryor, 3* b. Polishing cloth used in preparing polished mineral specimens by abrasive grinding. *Pryor, 3* c. A surface defect, appearing as a seam, caused by folding over hot metal, fins, or sharp corners and then rolling or forging them into the surface, but not welding them. *ASM, 1* d. To dimension, smooth, or polish (as a metal surface or body) to a high degree of

refinement or accuracy. *Webster 3rd e.* An imperfection; a fold in the surface of a glass article caused by incorrect flow during forming. *ASTM* f. A tool used for polishing glass. *ASTM* g. A rotating disk of soft metal or wood, used to hold polishing powder for cutting or polishing gems or metal.

laper

Impure sandy green limestone with shaly partings in the Middle Purbeck beds, Swanage, U.K. Also spelled leaper; leper.

lapidary

a. An artificer who cuts, polishes, or engraves gems or precious stones. b. Person who is skilled in the nature and kind of gems or precious stones; a connoisseur of lapidary work.

lapilli

Pyroclastics that may be either essential, accessory, or accidental in origin, of a size range that has been variously defined within the limits of 2 mm and 64 mm. The fragments may be either solidified or still viscous when they land (though some classifications restrict the term to the former); thus there is no characteristic shape. An individual fragment is called a lapillus. CF: [cinder](#)

lapilliform

Having the form of small stones.

lapis lazuli

a. A lazurite-bearing rock; contains lazurite or hauyne (possibly zeolitized), diopside, edenitic amphibole (koksharovite), muscovite, calcite, and pyrite; occurs in various shades of blue; possibly the original sapphire of the ancients; Syn: [azure](#); [lazuli](#). b. Gem-quality lazurite. (Not lazulite.) c. An ultramarine-colored serpentine in India. See also: [ultramarine](#)

lapis matrix

Lapis lazuli (lazurite) containing prominent patches of calcite. See also: [Chilean lapis](#); [lazurite](#).

LaPointe picker

Miniature belt conveyor, on which small ore particles move singly past a Geiger-Mueller tube that is set to operate a sorting device. This removes from the passing stream each

particle of radioactive ore that reaches the required intensity, therefore sorting out the valuable material. *Pryor, 3*

lapped

a. Overlapped and fitted together. *Nichols, 1* b. The act of polishing or grinding on a lap.

Laramide orogeny

A time of deformation, typically recorded in the eastern Rocky Mountains of the United States, whose several phases extended from late Cretaceous until the end of the Paleocene. It is named for the Laramie Formation of Wyoming and Colorado, probably a synorogenic deposit. *AGI*

Laramide revolution

See: [Laramide orogeny](#)

lardalite

See: [laurdalite](#)

larderellite

A monoclinic mineral, $(\text{NH}_4)_5\text{B}_5\text{O}_6(\text{OH})_4$.

lardite

a. White hydrated silica, probably a variety of opal; occurring in clay in central Russia.
b. Massive talc. Syn: [steatite](#); [agalmatolite](#). c. A massive variety of muscovite and/or pyrophyllite. See also: [pagodite](#)

lard oil

An oil produced from animal fats. This oil is an efficient lubricant for use on metal-cutting tools. *Crispin*

lardstone

Massive talc; steatite.

lard stone

A kind of soft stone found in China. See also: [steatite](#); [agalmatolite](#). *Fay*

large

Eng. The largest lumps of coal sent to the surface, or all coal that is handpicked or does not pass over screens; also the largest coal that passes over screens. *Fay*

large coal

a. One of the three main size groups by which coal is sold by the National Coal Board of Great Britain. Large coal has no upper size limit and has a lower size limit of 1-1/2 to 2 in (3.8 to 5.1 cm) and embraces large screened coal, cobbles, and treble sizes. See also: [graded coal](#); [smalls](#). *Nelson* b. Coal above an agreed size without any upper size limit. Also called lump coal. *BS, 5*

large colliery

Gr. Brit. In general, a colliery producing more than 1,500 st/d (1,360 t/d). *Nelson*

large-diameter boring machine

An auger-type coal-cutting machine developed by the U.S. Bureau of Mines for use in anthracite mining. It can drill holes 1 ft (31 cm) in diameter, 300 ft (91 m) long, and larger holes for shorter distances.

large knot

A large knot is one whose average diameter exceeds one-third the width of the surface on which it appears; but such a knot may be allowed if it occurs outside the sections of the mine track tie between 6 in and 18 in (15 cm and 46 cm) from each end.

large shake

A large shake is one that exceeds one-third the width of the mine track tie. A shake not exceeding this limitation and that does not extend nearer than 1/2 in (1.3 cm) to any surface shall be permissible.

large split

A term applying to mine track ties. A large split is a split exceeding 5 in (13 cm) in length. Splits not longer than 5 in are permissible providing satisfactory antisplitting devices have been properly applied.

larnite

A monoclinic mineral, $4[\text{beta-Ca}_2\text{SiO}_4]$; gray; in contact metamorphosed limestone. CF: [bredigite](#)

larsenite

An orthorhombic mineral, PbZnSiO_4 ; forms colorless to white prisms; in veins at Franklin, NJ.

Larsen's pile

A type of pile consisting of hollow cylinders that increase resistance against bending and crumpling. They are esp. useful in shaft sinking in sand and gravel. *Stoces*

Larsen's spiles

Steel sections of various forms, made esp. to resist bending, that are used in place of wooden spiles in forepoling. *Stoces*

Larson ledge finder

A tool used to reach bedrock when the driven pipe has failed.

larvikite

An alkalic syenite, grading to monzonite, composed of phenocrysts of two feldspars (esp. oligoclase and alkali feldspar), often intimately intergrown, which comprise up to 90% of the rock, with diopsidic augite and titanite as the chief mafic minerals, and accessory apatite (generally abundant), ilmenite, and titaniferous magnetite, and less commonly olivine, bronzite, lepidomelane, and quartz or feldspathoids (less than 10% by volume). Its name, given by Broegger in 1890, is derived from Larvik, Norway. Also spelled laurvikite. Syn: [blue granite](#) *AGI*

laser

An active electron device that converts input power into a very narrow, intense beam of coherent visible or infrared light; the input power excites the atoms of an optical resonator to a higher energy level, and the resonator forces the excited atoms to radiate in phase. Derived from "light amplification by stimulated emission of radiation." See also: [maser](#)

lash

To attach a chain to a haulage rope by wrapping or lapping the end of the chain around the rope, the other end being attached to a mine wagon. *Mason*

lasher

a. A native employed to do lashing. See also: [lashing](#) b. See: [mucker](#)

lasher-on

A person employed to lash the chains from the tubs to the endless rope, in underground mechanical haulage. *CTD*

lashing

a. Any of a number of planks nailed inside of several frames or sets in a shaft to keep them in place. Also called listing. *Webster 2nd* b. A binding, generally of light line around the end of a rope. c. In South Africa, loading broken rock or ore with shovels. *Nelson* d. Shoveling rock downstope to ore passes--work performed by a lasher. A "lasher-on" connects tubs or trucks to a rope haulage. Also called mucking. *Pryor, 3*

lashing chain

A short chain to attach tubs to an overrope in endless rope haulage by wrapping it around the rope. The chain may be about 12 ft (3.7 m) long, of low manganese steel, with 3/8-in-diameter (9.5-mm-diameter) standard links. At one end of the chain, a ring 4 in (10.2 mm) in diameter is attached to the drawbar hook of the tub, and to a hook about 3/8 in in diameter to secure it to the rope at the lashing end. On an undulating road, two lashing chains may be necessary--one forward and one rear of the tub. *Nelson*

lash-up

Extemporized engineering rig for a temporary job. *Pryor, 1*

lasque

A thin, flat diamond with a simple facet at the side; used by Indian cutters to cover miniature paintings. Also spelled lask. Also called portrait stone.

last lift

N. of Eng. The last rib or jud to come off a pillar. *Fay*

latch

a. The locking device on a hoist hook, elevator, lifting bail, etc. *Long* b. The inner-tube locking and unlocking device in the head of a wire-line core barrel. *Long*

latches

a. Applied to the split rail and hinged switches. Syn: [switch](#) *Fay* b. Hinged switch points, or short pieces of rail that form rail crossings. *Fay*

late magmatic mineral

A mineral formed during the late stages of magmatic activity, between the main stage of crystallization and the pegmatitic stage.

latent heat

Thermal energy absorbed or emitted in a process (as fusion or vaporization) other than change of temperature. CF: [sensible heat](#) *Webster 3rd*

latent heat of fusion

The amount of heat required to change 1 g of a substance at the temperature of its melting point from the solid to the liquid state without changing temperature. *Morris*

lateral

a. A hard heading that branches off a horizon, in horizon mining, along the strike of the seams. It may be from 14 to 20 ft (4.3 to 6.1 m) wide. At intervals of 1,000 to 1,500 yd (910 to 1,400 m) along the lateral, crosscut roads are driven at right angles to intersect and develop the coal seams. From the crosscuts, conveyor panels are opened out in the seams. In general, the term lateral is also applied to any coal heading driven in a sideways direction. *Nelson* b. Belonging to the sides, or to one side. *Fay* c. A horizontal mine working. *Fay* d. Situated on or at, or pertaining to, a side. *CTD* e. A conduit diverting water from a main conduit, for delivery to distributaries. *Seelye, 1* f. A secondary ditch. *Seelye, 1*

lateral cleavage

Cleavage parallel to the lateral planes. *Webster 3rd*

lateral development

Any system of development in coal seams or thick orebodies in which headings are driven horizontally across the coal or ore and connected to main haulage drifts, entries, or shafts. There are many variations and modifications depending on the thickness, shape, and inclination of the deposit. See also: [horizon mining](#)

lateral deviation

The horizontal distance by which a borehole misses its intended target. *Long*

lateral draw

The angle of draw over a strike face or over workings in a flat seam. *Briggs*

lateral secretion

A theory of ore genesis formulated in the 18th century and passing in and out of use since. It postulates the formation of ore deposits by the leaching of adjacent wall rock. In current usage, convectively driven fluids associated with cooling plutons are thought to have abstracted metals from adjacent host rocks and transported them to new sites of deposition, as in the formation of certain porphyry base-metal deposits. See also: [lithogene](#); [segregated vein](#). *AGI*

lateral support

Means whereby walls are braced either vertically or horizontally by columns, pilasters, or crosswalls, or by floor or roof constructions, respectively. *ACSG, 1*

later arrival

A signal that is recorded on a seismogram later than the first arrival of energy. *Schieferdecker*

laterite

Red residual soil developed in humid, tropical, and subtropical regions of good drainage. It is leached of silica and contains concentrations particularly of iron oxides and hydroxides and aluminum hydroxides. It may be an ore of iron, aluminum, manganese, or nickel. Adj. lateritic. Syn: [latosol](#)

laterlog

The electrical resistivity of coal appears to decrease with ash content. The laterlog measures what is virtually the true resistivity of the coal and may ultimately provide information on seam quality. The laterlog uses a sheet of current that is focused on each formation in succession and so measures the resistivity of that formation only. The mud column or a salty mud has no effect on the measured resistivity. The laterlog may be measured by a seven- or three-electrode arrangement but the former is preferred. *Sinclair, 3*

latex cement

A specialized cementing material consisting of a portland-type cement, latex, a surface-active agent, and water, having a setting time equivalent to a neat portland-cement slurry. Latex cement shrinks less and is tougher, stronger, less permeable, and more durable than portland cement. *Long*

Latex spray

Trade name for a synthetic rubber fluid, which, when sprayed onto underground stoppings, forms a tough nonflammable coating thus preventing air feeding fires or heatings, or air leakages through doors, surface air locks, and air crossings. Also called Latex sealant. *Nelson*

lath

a. A board or plank sharpened at one end, like sheet piling, used in roofing levels or in protecting the sides of a shaft through a stratum of unstable earth. See: [spill](#) b. A long, thin mineral crystal. *AGI*

lath frame

A weak lath frame, surrounding a main crib, the space between being for the insertion of piles. *Fay*

lathlike

Refers to crystals with three distinctly different dimensions. CF: [acicular](#); [tabular](#); [rodlike](#); [equant](#).

laths

a. Corn. The boards or lagging put behind a frame of timber. *Fay* b. Corn. Pieces of timber about 4 ft 6 in by 6 in by 2 in (1.4 m by 15 cm by 5 cm) with end sharpened or beveled to give the lath an upward trend when being driven into the roof gravels. A number of laths driven into the roof form a protective shield for the miners working in the face. Also called lagging. *Eng. Min. J., 1*

latite

A porphyritic extrusive rock having phenocrysts of plagioclase and potassium feldspar in nearly equal amounts, little or no quartz, and a finely crystalline to glassy groundmass, which may contain obscure potassium feldspar; the extrusive equivalent of monzonite. Latite grades into trachyte with an increase in the alkali feldspar content, and into andesite or basalt, depending on the presence of sodic or calcic plagioclase, as the alkali feldspar content decreases. It is usually considered synonymous with trachyandesite and trachybasalt, depending on the color. The name, given by Ransome in 1898, is derived from Latium, Italy. *AGI*

latitude correction

a. The north-south correction made to observed magnetic-field intensity in order to remove the Earth's normal field (leaving, as the remainder, the anomalous field). *AGI* b. A correction of gravity data with latitude, because of variations in centrifugal force

owing to the Earth's rotation and because of differences in the radius owing to polar flattening. The correction for latitude ϕ amounts to $1.308 \sin^2 \phi \text{ mgal/mi} = 0.813 \sin^2 \phi \text{ mgal/km}$. *AGI*

latosol

See: [laterite](#)

latrobite

A pink anorthite from Amitok Island, LB, Canada. *Standard, 2*

latten

Metal in thin sheets, esp. (and originally) brass, which in this form is also called latten brass. *Standard, 2*

lattice

An array of points in space such that each point is in an identical point environment. Thus, any straight line drawn between any two points in a lattice and continued will pass at equal intervals through a succession of similar points. Fourteen possible lattices exist. Syn: [Bravais lattice](#); space lattice. CF: [net](#); [row](#).

lattice constant

See: [lattice parameter](#)

lattice energy

Energy required to separate the ions of an ionic crystal to an infinite distance from each other. *Pryor, 3*

lattice girder

An open girder, beam, or column in timber, steel, or aluminum alloy, built up from structural members joined and braced together by intersecting diagonal bars. See also: [space lattice](#)

lattice parameter

Lattice parameters are the unit lengths along each crystallographic axis and their interaxial angles. See also: [axial element](#)

lattice texture

a. In mineral deposits, a texture produced by exsolution in which elongate crystals are arranged along structural planes. *AGI* b. A texture that is typical of the mineral serpentine in a rock where it replaces an amphibole. CF: [knitted texture](#)

lattice water

a. Water that is an integral part of the clay structure. This structural water (OH lattice water) is not to be confused with interlayer water. The lattice water can be removed by heating in the range of about 450 to 600 degrees C. *ACSG*, 2 b. Molecular water at specific lattice sites. *Van Vlack*

laubanite

See: natrolite.

laubannite

Alternate spelling of laubanite.

Laue diagram

See: [Laue photograph](#)

laueite

A triclinic mineral, $\text{MnFe}_2(\text{PO}_4)_2(\text{OH})_2 \cdot 8\text{H}_2\text{O}$; dimorphous with stewartite.

Laue photograph

A collection of X-ray diffraction spots made by a crystal using a Laue camera and white radiation. Syn: [Laue diagram](#)

launder

a. A flume, trough, channel, or chute by which water or powdered ore is conveyed in a mining operation. *AGI* b. An inclined channel, lined with refractory material, for the conveyance of molten steel from the furnace taphole to a ladle. Also spelled lander. *Dodd*

launder man

In ore dressing, smelting, and refining, a laborer who maintains and repairs the launders (long boxes), used to convey water and mill pulp between the various units of ore-treating equipment in a mill. *DOT*

launder screen

A screen used for the sizing and dewatering of small sizes of anthracite. *Mitchell*

launder separation process

In this process, a stream of fluid carries the material to be separated down a channel provided with draws for separating a heavy-gravity product and means for overflowing a lighter one. If properly constructed and operated, a comparatively solid bed of material will form on the bottom of the launder. Above this bed, a layer of particles will move along by the stream at a comparatively slow speed. Above this, successive layers will move with greater and greater velocity. *Mitchell*

launder washer

A type of coal washer in which the coal is separated from the refuse by stratification due to hindered settling while being carried in aqueous suspension through a trough. Modern launder washers have various mechanisms for continuously removing refuse from the bottom of the trough. Early launder washes were intermittent in operation.

laundry box

The box at the surface receiving the water pumped up from below. *Fay*

Laurasia

Hypothetical continent in the Northern Hemisphere that broke up about the end of the Carboniferous Period to form the present northern continents.

laurdalite

An alkalic syenite containing more than 10% modal feldspathoids and characterized by porphyritic texture. Also spelled lardalite. The name, given by Broegger in 1890, is for Laurdal, Norway. *AGI*

Laurentian granite

A name that was originally applied to Precambrian granites of the Laurentian Highlands, eastern Canada, and later to the oldest granites near the U.S.-Canadian border northwest of Lake Superior.

laurionite

An orthorhombic mineral, $PbCl(OH)$; dimorphous with paralaurionite; in ancient lead-ore slags.

laurite

An isometric mineral, RuS_2 ; pyrite group; occurs with other platinum-group minerals in ultramafic and placer deposits.

lauroleic acid

Unsaturated fatty acid, $\text{C}_{12} \text{H}_{22} \text{O}_2$. *Pryor, 3*

laurvikite

See: [larvikite](#)

lausenite

A monoclinic mineral, $\text{Fe}_2 (\text{SO}_4)_3 \cdot 6\text{H}_2 \text{O}$.

lautarite

A monoclinic mineral, $\text{Ca}(\text{IO}_3)_2$.

Lauth mill

Mill with three rolls, the middle roll being much smaller than the other two. Only the two larger rolls are driven, work being performed between the bottom and middle and middle and top rolls alternately; the roll setting is adjusted between passes. *Osborne*

lautite

An orthorhombic mineral, CuAsS .

lava breccia

See: [volcanic breccia](#)

lava dome

A dome-shaped mountain of solidified lava in the form of many individual flows, formed by the extrusion of highly fluid lava, e.g., Mauna Loa, HI. See also: [shield volcano](#)

lavatory

A place where gold is obtained by washing. *Standard, 2*

lavendine

See: [amethystine quartz](#)

lavenite

A monoclinic mineral, $(\text{Na,Ca})_2 (\text{Mn,Fe})(\text{Zr,Ti})\text{Si}_2 \text{O}_7 (\text{O,OH,F})_2$. Also spelled laavenite.

lavialite

A metamorphosed basaltic rock with relict phenocrysts of labradorite in an amphibolitic groundmass. The term was originated by Sederholm in 1899, who named it after Lavia, Finland. *AGI*

lavrovite

A chromian variety of diopside. Also spelled lavroffite; lawrowite.

lawn

A fine-mesh gauze used as a sieve for clay. *Crispin*

law of cosines

In trigonometry, a law stating that in any triangle the square of one side equals the sum of the squares of the two other sides minus twice the product of these two other sides multiplied by the cosine of the included angle. *Jones, 2*

law of equal volumes

In ore genesis, the statement that during the formation of ore by replacement there is no change in rock volume or form. Syn: [Lindgren's volume law](#)

law of extralateral rights

See: [apex law](#)

law of gravitation

The law, discovered by Sir Isaac Newton, that every particle of matter attracts every other particle of matter, and the force between them is proportional to the product of their masses divided by the square of their distance apart. See also: [gravitation](#); [gravity](#). *Standard, 2*

law of mass action

The rate of a chemical reaction is directly proportional to the molecular concentrations of the reacting substances.

law of motion

A statement in dynamics that a body at rest remains at rest and a body in motion remains in uniform motion in a straight line unless acted upon by an external force. The acceleration of a body is directly proportional to the applied force and is in the direction of the straight line in which the force acts. For every force there is an equal and opposite force or reaction. *Webster 3rd*

law of refraction

a. When a wave crosses a boundary, the wave normal changes direction in such a manner that the sine of the angle of incidence between wave normal and boundary normal divided by the velocity in the first medium equals the angle of refraction divided by the velocity in the second medium. *AGI* b. Light, upon crossing a boundary between two transparent substances of different optical densities, changes direction according to $n_2/n_1 = \sin i$, where n_1 is the refractive index (RI) for the incident light ray making an angle i , and n_2 is the RI for the refracted light ray making an angle r with the boundary ($n_1 < n_2$). Light rays refracted according to this law are called "ordinary" rays. CF: [critical angle](#); [extraordinary ray](#); ordinary ray; total reflection. Syn: [Snell's law](#)

law of sines

In trigonometry, a law stating that in any triangle (either right or oblique) the sides are proportional to the sines of their opposite angles. *Jones, 2*

law of superposition

A general law upon which all geologic chronology is based: In any sequence of sedimentary strata (or of extrusive igneous rocks) that have not been overturned, the youngest stratum is at the top and the oldest at the base; i.e., each bed is younger than the bed beneath, but older than the bed above it. The law was first clearly stated by Steno (1669). *AGI*

lawsonite

An orthorhombic mineral, $4[\text{CaAl}_2\text{Si}_2\text{O}_7(\text{OH})_2 \cdot \text{H}_2\text{O}]$; dimorphous with partheite; pale blue; Mohs hardness, 8; in high-pressure, low-temperature schists.

laxmannite

See: [vauquelinite](#)

lay

a. The direction, or length, of twist of the wires and strands in a rope. *Zern* b. The length of lay of wire rope is the distance parallel to the axis of the rope in which a strand makes one complete turn about the axis of the rope. The length of lay of the strand, similarly, is the distance in which a wire makes one complete turn about the axis of the strand. c. To close or withdraw from work; said of collieries. *Standard*, 2 d. The pitch or angle of the helix of the wires or strands of a rope, usually expressed as the ratio of the diameter of the strand or rope to the length required for one complete twist. *Hunt* e. Prov. Eng. A standard of fineness for metals; possible from the Spanish *ley*. *Hess*

lay-by

a. Siding in otherwise single-track underground tramming road. *Pryor*, 3 b. A term used for an underground siding at or near a shaft for storing empty mine cars. c. See: [bank](#)

layer

a. A bed or stratum of rock. b. One of a series of concentric zones or belts of the Earth, delineated by seismic discontinuities. A classification of the interior of the Earth that designates layers A to G from the surface inward. *AGI*

layer depth

Thickness of the mixed surface layer of water. *Hy*

layered

N. of Eng. Choked up with sediment or mud.

layering

See: [bedding](#)

layering number

A dimensionless number, the value of which, taken in conjunction with inclination, roughness, and whether the ventilation is ascensional or descensional, determines the mixing and movement of combustible gases roof layers. *BS*, 8

layering of combustible gases

The formation of a layer of combustible gases at the roof of a mine working and above the ventilating air current. *BS*, 8

layer-loading

Procedure for loading coal in railroad cars in horizontal layers. Layer-loading is a simple and inexpensive method for smoothing out the irregularities in coal and consists in shuttling two to six railroad cars, hooked together, past the loading boom two or more at a time. This results in a more uniform product. *Mitchell*

laying out

See: [setting out](#)

lay of rope

See: [winding rope](#)

lay of the land

See: [topography](#)

layout

- a. The design or pattern of the main roadways and workings. The proper layout of mine workings is the responsibility of the manager aided by the planning department. *Nelson*
- b. The map of a mine or part of a mine, usually including future workings arrangement. *BCI*
- c. Diagram showing disposition of machines in a mill's flow line. *Pryor, 3*

lay rope

Ordinary lay rope has the wires twisted in a direction opposite to the twist of the strands in the rope. The pitch of wire is from 2-1/2 to 3 times the diameter of the rope, and the pitch of the strands is from 6-1/2 to 9 times the diameter of the rope, the wires being exposed only in short lengths at intervals. *Lewis*

lazarevicite

See: [arsenosulvanite](#)

lazuli

See: [lapis lazuli](#)

lazulite

- a. A monoclinic mineral, $2[\text{MgAl}_2(\text{PO}_4)_2(\text{OH})_2]$; forms a series with scorzalite; azure blue; in granite pegmatites and quartz veins; may be a blue gemstone. Syn: [azure spar](#);

[blue spar](#); false lapis; berkeleyite; klaprothine. (Not lazurite.) b. The mineral group barbosalite, hentschelite, lazulite, and scorzalite.

lazulitic

Of, pertaining to, or having the characteristics of lazulite. *Standard, 2*

lazurite

a. An isometric mineral, $(\text{Na,Ca})_8 (\text{Al,Si})_{12} (\text{O,S})_{24} [(\text{SO}_4), \text{Cl}_2, (\text{OH})_2]$ of the sodalite group; deep blue to greenish blue; a contact metamorphic product in limestone; may be a blue gemstone (lapis lazuli). Also spelled lasurite. (Not lazulite.) See also: [Chilean lapis](#)
b. See: [azure](#); azurite.

lazy balk

a. Eng. A timber placed at the top of a hopper, against which the top of the car strikes in dumping, to prevent the car from falling into the hopper. *Fay* b. Eng. The balk or girder held in position by a banger. Also called lazy girder. *SMRB*

lazy bench

The bench to one side of the drill tripod or derrick floor where visitors and workers can sit while observing the drilling operation. *Long*

lazy girder

See: [lazy balk](#)

lazy tong conveyor

See: [accordion roller conveyor](#)

L.D. steel process

Process in which oxygen is blown downwards at high velocity through a watercooled lance onto the surface of the hot metal contained in a basic lined vessel. To offset the intense heat produced, coolant materials are added with the original charge. These may be iron ore, sinter, or roll scale, but usually steel scrap is the main material used. As much as 26% of scrap may be used. After about 20 min, the charge is converted into liquid steel. During the process, tests and analyses are made and materials may be added to bring the metal to the required grade and temperature. See also: [open-hearth process](#); O.L.P. steel process. *Nelson*

leachate

A solution obtained by leaching; e.g., water that has percolated through soil containing soluble substances and that contains certain amounts of these substances in solution.

Syn: [lixivium](#)

leach dump

Low-grade ores that are dumped loosely in piles on soil surfaces so that fluids may be sprinkled on the piles to leach recoverable metals. *SME, 1*

leached zone

The part of a lode above the water table, from which some ore has been dissolved by down-filtering meteoric or spring water.

leacher

In ore dressing, smelting, and refining, one who dissolves valuable metal out of ore or slime, using chemical solution. *DOT*

leach hole

See: [sinkhole](#)

leaching

a. The separation, selective removal, or dissolving-out of soluble constituents from a rock or orebody by the natural action of percolating water. *AGI* b. Dissolution from ore or concentrates after suitable comminution to expose the valuable minerals, by aqueous and chemical attack. If heat and pressure are used to intensify or speed this, the work is called pressure leaching. See also: [chemical extraction](#); [hydrometallurgy](#). *Pryor, 3* c. The removal in solution of nutritive or harmful constituents (such as mineral salts and organic matter) from an upper to a lower soil horizon by the action of percolating water, either naturally (by rainwater) or artificially (by irrigation). *AGI* d. The extraction of soluble metals or salts from an ore by means of slowly percolating solutions; e.g., the separation of gold by treatment with a cyanide solution. Syn: [lixiviation](#)

leaching rate test

A test designed to assess the value of antifouling compositions by measuring the rate of loss of toxic ingredients from a painted surface during immersion in seawater. *Osborne*

leach material

Material sufficiently mineralized to be economically recoverable by selectively dissolving the wanted mineral in a suitable solvent. See also: [leaching](#)

leach pile

Mineralized materials stacked so as to permit wanted minerals to be effectively and selectively dissolved by application of a suitable solute.

leach precipitation float

A mixed method of chemical reaction plus flotation developed for such copper ores as chrysocolla and the oxidized minerals. The value is dissolved by leaching with acid, and the copper is reprecipitated on finely divided particles of iron, which are then recovered by flotation, yielding an impure concentrate in which metallic copper predominates.

Abbrev., L.P.F. *Pryor*, 3

lead

a. A bluish-white metal of bright luster, very soft, highly malleable, ductile, and a poor conductor of electricity; very resistant to corrosion; a cumulative poison. Symbol, Pb. Rarely occurs in native form; chiefly obtained from galena (PbS). Lead is used in storage batteries, cable covering, plumbing, ammunition, antiknock gasoline, radiation shielding, and to absorb vibration. Other lead compounds are used in paints, fine glass, and lenses. Environmental concern with lead poisoning has resulted in a U.S. national program to reduce the concentration of lead in gasoline. *Handbook of Chemistry and Physics*, 3 b. An open watercourse, usually artificial, leading to or from a mill, mine, or reservoir. Syn: [leat](#) c. See: [ledge](#); lode. CF: [blind lead](#) d. A placer deposit. CF: [blue lead](#); [deep lead](#). Pron. leed. e. A defined gutter of auriferous wash. Pron. leed. *Gordon* f. A track haulage term for the distance from the point of a frog to the point of the switch. Pron. leed. *Kentucky* g. A term sometimes used for the distance between the sheave and the winding drum centers. The greater the lead, other things being equal, the smaller the fleeting angle. Too great a lead results in vibration and whipping of the rope between sheave and drum. Idler or sag rollers are frequently installed where long leads are necessary. Pron. leed. *Nelson* h. The distance a bit is held suspended off bottom in a borehole before rotation and downward movement of the drill string is started. Pron. leed. *Long* i. Commonly used synonym for ledge or lode. Many mining location notices describe the locator's claim as extending a certain number of feet along and so many feet on each side of the lode, lead, vein, or ledge. Thus Lead, S. Dak., was so named because of the Homestake lead. Blind lead: A lead or vein that does not outcrop or show at the surface. Used esp. at Virginia City, NV. CF: [lode](#) j. Properly, placer gravels. Blue lead: A Tertiary river channel at Placerville, CA. So called because of the bluish-gray color of the gravels. Deep lead: Goldbearing gravels deeply covered with debris or lava applied particularly to those of Victoria, Australia. Pron. leed. *Fay* k. The longitudinal distance traveled in one revolution by a spiral thread or screw. Pron. leed. *Long*

lead-acid accumulator

A secondary cell battery with an electromotive force of about 2 V. It is suitable for work where a steady voltage is required, and extensively used for motor car lighting, miners' safety lamps, shuttle cars, and battery locomotives. *Morris*

leadage

The distance coal has to be hauled from the mine to its place of shipment. *Standard, 2*

lead azide

A nitrite of lead, $\text{Pb}(\text{N}_3)_2$, used as an initiating explosive in blasting caps.

lead bath

A furnace in which gold or silver ores are smelted with lead. *Standard, 2*

lead button

In the separation of the noble metals from their impurities, lead is fused with the ore. The bullion so formed drops to the bottom of the crucible in the lead button from which the precious metal is extracted by cupellation. Syn: [crucible assay](#)

lead carbonate

See: [cerussite](#); white lead ore.

lead edge

The surfaces or inset cutting points on a bit that face in the same direction as the rotation of the bit. *Long*

leader

a. A narrow vein branching upwards at an angle from a much larger vein. See also: [dropper](#) b. A thin layer of coal, coaly shale, or ironstone that serves as a guide or datum toward workable beds in a mine.

leaders

Guides in a pile frame to take the drop hammer of a pile driver. *Hammond*

lead feldspar

Synthetic $\text{PbAl}_2\text{Si}_2\text{O}_8$.

lead fume

The fume escaping from lead furnaces and containing both volatilized and mechanically suspended metalliferous compounds. *Fay*

lead glance

See: [galena](#)

leadhillite

A monoclinic mineral, $8[\text{Pb}_4(\text{SO}_4)(\text{CO}_3)_2(\text{OH})_2]$; trimorphous with macphersonite and susannite; soft; may fluoresce yellow; in oxidized zones of lead-ore deposits.

leading heading

The one of a pair of parallel headings that is kept a short distance in advance of the other. This may be adopted to drain the water and thus secure one dry heading. The term is also applied to a heading that is driven in the solid coal in advance of the general line of face. *Nelson*

leading place

Scot. A working place in advance of the others, such as a heading or a level. *Fay*

leadings

Derb. Small sparry veins in the rock. Syn: [leader](#)

leading stone

See: [lodestone](#)

leading winning

Aust. A heading in advance of the ordinary bords. A leading bank. *Fay*

leading wire

An insulated wire strung separately or as a twisted pair, used for connecting the two free ends of the circuit of the blasting caps to the blasting unit. See also: [leads](#)

lead lap

a. A gem cutter's lap, of lead, copper, or iron; also, the entire machine. *Standard*, 2 b. In mechanics, a lap of lead charged with emery and oil. *Fay*

lead metacolumbate

$\text{Pb}(\text{CbO}_3)_2$; a ferroelectric material with a Curie temperature of 570 degrees C. The material can be polarized to obtain piezoelectric properties. Uses include high-temperature transducer applications, sensing devices, and accelerometers. Syn: [lead metaniobate](#)

lead metaniobate

See: [lead metacolumbate](#)

lead metasilicate

See: [alamosite](#)

lead motorman

In ore dressing, smelting, and refining, a person who operates a small electric locomotive (motor) to haul pots of molten lead bullion from a blast furnace to refining kettles for the separation of copper, antimony, silver, and other metals contained in the lead bullion. *DOT*

lead niobate

$\text{Pb}(\text{NbO}_3)_2$; a ferroelectric compound having properties that make it useful in high-temperature transducers and in sensing devices. The Curie temperature is 570 degrees C. *Dodd*

lead ocher

See: [massicot](#); litharge.

lead of a switch

The distance measured on the main line from the point of switch to the point of frog. Also called frog distance. *Kiser*

lead rail

The lead rail of an ordinary mine switch is the turnout rail lying between the rails of the main track. *Kiser*

leads

The wires, forming part of an electric detonator, to which the shot-firing cable is attached. *BS, 12*

lead selenide

See: [clausthalite](#)

lead silicate

See: [alamosite](#)

lead spar

See: [cerussite](#); anglesite.

lead sulfide

See: [galena](#); glance.

lead tantalate

PbTa_2O_6 ; a compound believed to have ferroelectric properties and of possible interest as a special electroceramic. The Curie temperature is 260 degrees C. *Dodd*

lead tree

A crystalline deposit of metallic lead on zinc that has been placed in a solution of acetate of lead. *Standard, 2*

lead-uranium ratio

The ratio of lead-206 to uranium-238 and/or lead-207 to uranium-235, formed by the radioactive decay of uranium within a mineral. The ratios are frequently used as part of the uranium-thorium-lead age method. *AGI*

lead vitriol

See: [anglesite](#)

lead-well man

In ore dressing, smelting, and refining, a person who maintains flow of molten lead from the blast furnace to the lead pot for removal to refinery. *DOT*

lead wires

a. In blasting, the heavy wires that connect the firing current source or switch with the connecting or cap wires. *Nichols, 1* b. Two insulated copper wires leading from the battery or igniting apparatus to the primer cartridge in an explosive charge. Also called connecting wires. *Stauffer*

lead works

A place where lead is extracted from the ore. *Fay*

lead zirconate

PbZrO_3 ; a ferroelectric material. It is also used in lead titanate-zirconate (P.Z.T) piezoelectric ceramics. *Dodd*

leaf

A very thin sheet or plate of metal, as gold. *Standard, 2*

leaf clay

See: [book clay](#)

league

a. Any of various linear units of distance, ranging from about 2.42 to 4.6 statute miles (3.89 to 7.4 km); esp. land league (an English land unit equal to 3 statute miles or 4.83 km) and marine league (a marine unit equal to 3 nmi or 5.56 km). *AGI* b. Any of various units of land area equal to a square league; esp. an old Spanish unit for the area of a tract 5,000 varas square, equal to 4,428.4 acres (1,792.1 ha) in early Texas land descriptions or equal to 4,439 acres (1,796 ha) in old California surveys. *AGI*

leak

Low-grade mineralized rock into which an orebody degenerates. *Hess*

leakage

An unintentional diversion of ventilation air from its designed path. *BS, 8*

leakage coefficient

A numerical expression of a duct's liability to leak. The National Coal Board of Great Britain defines this as the volume of air in cubic feet per minute that would leak from

100 ft (30 m) of a ventilation duct under a uniform pressure of 1 in (2.54 cm) of water gage. *Roberts, 1*

leakage halo

A dispersion pattern formed by the movement of ore-forming fluids in the rock overlying a mineral deposit.

leakage intake

An additional intake that is a component part of a system of controlled leakage. *BS, 8*

leakage intake system

A ventilation circuit with two adjacent intake roadways leading to the coalface. The method has been criticized because the air flow may become so sluggish as to cause combustible gases layers. See also: [two intakes](#) *Nelson*

leakage resistance

The resistance between the blasting circuit, including lead wires, and the ground. *Atlas*

leak vibroscope

An instrument that detects leaks in water, oil, gas, steam, and air lines by amplifying the sound produced by the escaping fluid. *Osborne*

lean

a. Of ore, low-grade; submarginal; unpay; of doubtful exploitable value. *Pryor, 3* b. A rock in which the minerals sought occur in much less than exploitable amounts. *Long* c. See: [hang](#) d. See: [low-grade](#)

lean clay

A clay of low to medium plasticity owing to a relatively high content of silt or sand. CF: [fat clay](#)

lean ore

A low-grade ore. See also: [lean](#); [natural ore](#). *Nelson*

leap

Eng. A dislocation of strata by faulting.

leapfrog system

A system employed with self-advancing supports on a longwall face in which alternate supports are advanced on each web of coal removed. To do this, alternate units have to be moved a distance equal to twice the web thickness--half before snaking and half after snaking. *Nelson*

lear

See: [lehr](#)

learies

Eng. Empty places; old workings. *Fay*

leasable minerals

A legal term that for Federally owned lands, or Federally retained mineral interest in lands in the United States, defines a mineral or mineral commodity that is acquired through the Mineral Lands Leasing Act of 1920, as amended; the Geothermal Steam Act of 1970, as amended; or the Acquired Lands Act of 1947, as amended. These Acts are found in Title 30 of the United States Code - Mineral Lands and Mining. The leasable minerals include oil, gas, sodium, potash, phosphate, coal, and all minerals within Acquired Lands. Acquisition is by application for a Government lease and permits to mine or explore after lease issuance. *SME, 1*

lease

a. A contract between a landowner and another, granting the latter the right to search for and produce oil or mineral substances upon payment of an agreed rental, bonus, and/or royalty. *AGI* b. The instrument by which such grant is made. c. A piece of land leased for mining purposes. See also: [claim](#); concession system; royalty.

leaser

A Western colloquialism meaning lessee.

Leasing Act Minerals

Deposits of coal, phosphate, oil, oil shale, gas, sodium, potassium and sulfur that can be leased from the U.S. Government under the Mineral Leasing Act for acquired lands. *SME, 1*

leat

a. A mill stream used by small mines for power generation. *Nelson* b. A ditch that leads water to mineral workings. *Pryor, 3*

leatherstone

See: [mountain leather](#)

leaving

Corn. The mineral left after the good ore has been removed; tailings.

lechatelierite

Naturally fused gray siliceous glass; actually a minor rock type varying in composition according to the original sand type, typically 90% to 99.5% silica. CF: [fulgurite](#); [impactite](#). Also spelled lechatelierite.

lechosos opal

A variety of precious opal exhibiting a deep green play of color; esp. a Mexican opal exhibiting emerald-green play of color and flashes of carmine, dark violet, dark blue, and purple.

lecontite

An orthorhombic mineral, $(\text{NH}_4, \text{K})\text{Na}(\text{SO}_4) \cdot 2\text{H}_2\text{O}$; occurs in bat guano.

led

N. of Eng. A spare tub, or one that is being loaded while another is being emptied. *Fay*

ledge

a. A narrow shelf or projection of rock, much longer than wide, formed on a rock wall or cliff face. *AGI* b. A rocky outcrop; solid rock. *AGI* c. An underwater ridge of rocks, esp. near the shore; also, a nearshore reef. *AGI* d. A quarry exposure or natural outcrop of a mineral deposit. *AGI* e. A bed or several beds in a quarry or natural outcrop, particularly those projecting in a steplike manner. *AGI* f. The surface of such a projecting bed. *AGI* g. In mining, a projecting outcrop or vein, commonly of quartz, that is supposed to be mineralized; also, any narrow zone of mineralized rock. *AGI* h. A mass of rock that constitutes a valuable mineral deposit. *Webster 3rd* i. A colloquial syn. of bedrock, used in northern Michigan. *Long* j. The only true ledges are deposits of oil-shale, slate, or the like. A ledge is a horizontal layer, therefore a vein or lode is not a ledge. *von Bernewitz* k. A rocky formation continuous with and fringing the shore. Syn: [lead](#) *Hunt*

ledge rock

True bedrock. CF: [false bottom](#)

Leebar separator

A dense medium washer consisting of a static bath. The floats, or clean coal, are removed by means of paddles or chains suspended from bars connected to rotating spokes. The sinks, or shale, are extracted by a scraper device. The bath can be fed directly from the raw coal screens. The separator has been developed for the treatment of large coal. See also: [Nelson Davis separator](#)

Lee configuration

a. An electrical resistivity measuring method using two current electrodes and three equispaced potential electrodes. *AGI* b. A configuration employing electrodes, the outer two of which are the current and the inner three of which are the potential electrodes. Syn: [partitioning method](#)

leelite

A reddish variety of potassium feldspar.

Lee-Norse miner

A continuous miner, developed in the United States, for driving headings in medium or thick coal seams. It weighs about 26 st (23.6 t), and makes a cut 8-1/2 ft (2.6 m) wide, gathers the cut coal and loads it into cars or conveyor at a rate up to about 4 st/min (3.6 t/min). It can work in seam heights from 3 ft 8 in (1.1 m) up to about 10 ft (3 m). It consists, mainly, of a boom carrying the cutting head; the gathering head, and at the rear the jib support frame on which the jib can be slewed. The machine is operated by hydraulic motors. *Nelson*

leer

See: [lehr](#)

leering

In glassmaking, the process of treating in the annealing oven or leer. *Standard, 1*

Leet seismograph

A portable three-component seismograph designed primarily for registration of vibrations from blasts, traffic, machinery, and general industrial sources. *Leet, 2*

lefkasbestos

A bleached-white variety of asbestiform chrysotile from Mt. Troodos, Cyprus.

left bank

The bank of a stream that is to the left of an observer facing downstream.

left lang lay

Wire or fiber rope or cable in which the wires or fibers in a strand and the strands themselves are twisted to the left. *Long*

left-lateral fault

A fault on which the displacement is such that the side opposite the observer appears displaced to the left. CF: [right-lateral fault](#) Syn: [sinistral fault](#)

left long lay

See: [left lang lay](#)

left regular lay

Wire or fiber rope or cable in which the individual wires or fibers in the strands are twisted to the right and the strands to the left. Syn: [regular-lay left lay](#)

left twist

See: [right lay](#)

leg

a. In mine timbering, a prop or upright member of a set or frame. Also called upright; post; arm. *Pryor, 3; Nelson* b. One of the main upright members of a drill derrick or tripod. *Long* c. A term sometimes applied to a centrifugal discharge bucket elevator. Usually a double leg bucket elevator. d. See: [draft](#) e. A side post in tunnel timbering. *Nichols, 1*

legend

A brief explanatory list of the symbols, cartographic units, patterns (shading and color hues), and other cartographic conventions appearing on a map, chart, or diagram. On a geologic map, it shows the sequence of rock units, the oldest at the bottom and the

youngest at the top. The legend formerly included a textual inscription of, and the title on, the map or chart. Syn: [key](#)

leg piece

The upright timber that supports the cap piece in a mine. CF: [legs](#) *Fay*

legrandite

A monoclinic mineral, $8[\text{Zn}_2(\text{AsO}_4)(\text{OH})\cdot\text{H}_2\text{O}]$.

legs

a. The wires attached to and forming a part of an electrical blasting cap. *Fay* b. The uprights of a set of mine timbers. See also: [dap](#); [leg piece](#). *Fay*

legua

Sp. Land league used in the original surveys of the Philippines, California, and Texas. It is equal to 2.63 miles or 4.24 km. See also: [league](#)

leg wire

One of the two wires attached to and forming a part of an electric blasting cap or squib.

Lehigh jig

A plunger-type jig with the following distinguishing characteristics: (1) the plunger contains check valves that open on the upstroke to reduce suction; (2) the makeup water is introduced with the feed; (3) the screen plate is at two levels, which have different perforations, to keep the water distribution uniform; (4) the bottom of the discharge end of the jig is hinged. This jig has been used extensively in washing anthracite. *Mitchell*

lehiite

A mixture of crandallite with other minerals.

Lehmann process

A process for treating coal by disintegration and separation of the petrographic constituents (fusain, durain, and vitrain). It consists of subjecting the coal to resilient disintegrating or shattering action for a sufficient length of time to break the constituents into granules of various sizes by reason of their respective resistances to shattering impacts and separating the granules into different sizes by screening or equivalent means. *Mitchell*

lehr

An enclosed oven or furnace used for annealing, or other form of heat treatment; particularly used in glass manufacture. It is a kind of tunnel down which glass, hot from the forming process, is sent to cool slowly, so that strain is removed, and cooling takes place without additional strain being introduced. Lehrs may be of the open type (in which the flame comes in contact with ware), or of the muffle type. Syn: [leer](#); [lear](#). *CTD*

lehr man

Person who regulates temperature of a reheating oven (lehr) used to fire-glaze glass articles. Arranges glass articles according to size and shape on lehr conveyor so that maximum quantity will be carried in oven on a long paddle. Also called leer man; lehr operator, glass; lehr tender. *DOT*

lehrnerite

See: [ludlamite](#)

leightonite

A triclinic mineral, $K_2 Ca_2 Cu(SO_4)_4 \cdot 2H_2 O$; pseudo-orthorhombic; blue; at Chuquicamata, Chile.

Leitz tyndallometer

Measures the intensity of the light scattered at an angle from the incident beam by a dust cloud, and correlates well with the concentration determined by the thermal precipitator or the surface area calculated from such a count. However, it needs to be calibrated for each type of dust cloud, owing to difference in mineralogical content, against the thermal precipitator. *Sinclair, 1*

Lemberg's solution

Logwood digested in an aqueous solution of aluminum chloride; used to distinguish calcite and dolomite. Calcite and aragonite are stained violet after treatment for about 10 min, but dolomite remains unchanged.

lenad

A contracted form of the names leucite and nephelite; suggested as an alternative group name for the feldspathoid minerals. CF: [feldspathoid](#)

lengenbachite

A triclinic mineral, $Pb_6 (Ag,Cu)_2 As_4 S_{13}$.

lengthening rod

A screwed extension rod for prolonging a well-boring auger or bit. *Standard, 2*

length fast

See: [negative elongation](#)

length of lay

The distance measured along a straight line parallel to the rope in which the strand forms one complete spiral around the rope or the wires around the strand. See also: [lay](#)

length of shot

a. The depth of the hole in which the powder is placed, or the size of the block of coal to be loosened by a single blast measured parallel with the hole. b. In open pit mining, the distance from the first drill hole to the last drill hole along the bank.

lengths

Eng. In tunnel construction, the successive sections in which a tunnel is executed. Shaft lengths are directly under the working shaft; side lengths are on each side of the shaft length; leading lengths are prolongations of the tunnel from the side lengths; and junction lengths complete the portion of the tunnel extending between two shafts, or between a shaft and an entrance.

length slow

See: [positive elongation](#)

lennilite

a. A green variety of orthoclase at Lenni Mills, Delaware County, PA. Syn: [delawarite](#) b. A variety of vermiculite.

lens

a. A geologic deposit bounded by converging surfaces (at least one of which is curved), thick in the middle and thinning out toward the edges, resembling a convex lens. A lens may be double-convex or plano-convex. See also: [lentic](#); [lenticular](#). ---v. To disappear laterally in all directions; e.g., a unit is said to lens out within a mapped area. *AGI* b. In optics, a device that modulates the direction taken by a transient beam of light. *Pryor, 3*

lense

Pyrite, round or oval in plan and lenticular in section, ranging up to 2 to 3 ft (0.6 to 0.9 m) in thickness and several hundred feet in the greatest lateral dimension, that is found in coalbeds. Sometimes called kidney sulfur. *Mitchell*

lens grinding

The process of grinding pieces of flat sheet glass (or pressed blanks) to the correct form of the lens. Cast-iron tools of the correct curvature, supplied with a slurry of abrasive and water, are used. *CTD*

lensing

The thinning-out of a stratum in one or more directions.

lenticle

a. A large or small lens-shaped stratum or body of rock; a lentil. *AGI* b. A lens-shaped rock fragment of any size. *AGI*

lenticular

a. Resembling in shape the cross section of a lens, esp. of a double-convex lens. The term may be applied, e.g., to a body of rock, a sedimentary structure, or a mineral habit. *AGI* b. Pertaining to a stratigraphic lens or lentil. Syn: [lentifform](#) *AGI*

lenticular iron ore

Impure concretionary hematite.

lenticule

A small lentil. *AGI*

lentifform

See: [lenticular](#)

lentil

a. A minor rock-stratigraphic unit of limited geographic extent, being a subdivision of a formation and similar in rank to a member, and thinning out in all directions; a geographically restricted member that terminates on all sides within a formation. *CF:*

[tongue](#) b. A lens-shaped body of rock, enclosed by strata of different material; a geologic lens. See also: [lenticule](#); [lenticle](#). *AGI*

lentil ore

See: [lironite](#)

leonardite

a. A soft, earthy, medium-brown coallike substance associated with lignitic outcrops in North Dakota. It is a naturally oxidized form of lignite with variations in color and properties depending upon the extent of weathering. Usually, the material occurs at shallow depths, overlying or grading into the harder and more compact lignite. Of little value as a fuel, it has been used in oil-drilling muds, in water treatment, and in certain wood stains. It is frequently referred to as "slack" because of its texture; however, the term leonardite is finding common usage. b. A weathering product of subbituminous coal or lignite, rich in humic and fulvic acids and soluble in alkaline water. It is a byproduct of mining near-surface coal seams, and is used as a soil conditioner, additive to drilling mud, and binder for taconite iron ore (Fowkes & Frost, 1960). Not to be confused with leonhardtite or leonhardtite. *AGI*

Leon combustible gases tester

A combustible gases detector developed in 1902. A form of Wheatstone bridge is used and changes in electrical resistance due to temperature differences are measured. The combustible gases/air sample flows over one set of wires and the gas burns catalytically while the other wires do not come into contact with the sample. *Nelson*

leonhardtite

A partially dehydrated variety of laumontite. (Not leonhardtite.)

leonhardtite

See: [starkeyite](#)

leonite

A monoclinic mineral, $K_2 Mg(SO_4)_2 \cdot 4H_2O$; in marine evaporite deposits. Syn: [magnesium leonite](#)

leopardite

A variety of quartz porphyry containing small phenocrysts of quartz in a microgranitic groundmass of quartz, orthoclase, albite, and mica. The rock has a characteristically spotted or streaked appearance due to staining by hydroxides of iron and manganese.

leopard rock

a. Can. Pegmatitic rocks associated with the apatite veins of Ontario and Quebec. b. Syenite gneiss consisting of ellipsoidal lumps measuring several inches across and separated by material that is mainly greenish pyroxene. The rock may be slightly schistose.

Leopard stone

Dolomite full of worm castings set in a gray matrix and containing chert nodules, near the base of the Upper Cambrian, Scotland.

Leopoldi furnace

A furnace for roasting mercury ores in a batch process, differing from the Bustamente furnace in having a series of brick condensing chambers. *Fay*

leopoldite

See: [sylvite](#)

lepidoblastic

Pertaining to a flaky schistosity caused by an abundance of minerals like micas and chlorites with a general parallel arrangement.

lepidocrocite

An orthorhombic mineral, $4[\gamma\text{-FeO(OH)}]$; polymorphous with akaganeite, feroxyhyte, and goethite; yellow to orange-red; the weathering product of iron-bearing minerals; forms the pigment brown ocher; such iron oxyhydroxides constitute the rock limonite.

lepidolite

a. A monoclinic, trigonal, or orthorhombic mineral; $1, 2, \text{ or } 3[\text{K}_2 \text{Li}_4 \text{Al}_2 (\text{Si}_8 \text{O}_{20} (\text{OH})_4]$; mica group; forms a series with muscovite; perfect basal cleavage; pink to purple; in lithium-rich granite pegmatites; a source of lithium. Syn: [lithia mica](#); lithionite. b. A group name for lithium-rich micas.

lepidomelane

A black ferrian variety of biotite.

lepidomorphite

A variety of phengite, a siliceous variety of muscovite.

lepolite

See: [anorthite](#)

leptothermal

Said of a hydrothermal mineral deposit formed at temperature and depth conditions intermediate between mesothermal and epithermal; also, said of that environment. CF: [hypothermal deposit](#); [xenothermal](#); [telethermal](#). *AGI*

leptynolite

A fissile or schistose variety of hornfels containing mica, quartz, and feldspar, with or without accessories, such as andalusite and cordierite. The term was originated by Cordier in 1868. CF: [cornubianite](#) *AGI*

Lerchs-Grossmann optimization

A mathematical method based on a block model of an orebody used for determining the most profitable optimum shape for an open pit.

lernilite

See: [vermiculite](#)

lesleyite

a. A mixture of a hydromica and corundum. b. A potassian variety of margarite.

Lessing process

A heavy-fluid coal-cleaning process in which a calcium chloride solution having a specific gravity of approx. 1.4 is used for the separation, which takes place in a cylindrical tank 6 to 10 ft (1.8 to 3 m) in diameter with a conical bottom, the total height being nearly 30 ft (9.1 m). The cleaned coal rises to the top where it is removed by a chain scraper and delivered to draining towers. *Gaudin, 1*

lethal dose

A dose of ionizing radiation sufficient to cause death. Median lethal dose (abbreviated MLD or LD₅₀) is the dose required to kill half of the individuals in a group similarly exposed within a specified period of time. The median lethal dose for humans is about 400 rads. *Lyman*

let into

Eng. The recessing of supports into the floor, side, or roof. *SMRB*

letovicite

A triclinic mineral, (NH₄)₃H(SO₄)₂; a decomposition product of pyrite in coal.

letter and tracing cutter

In the stonework industry, a person who cuts incised or raised letters and simple designs on monumental stones with pneumatic and hand tools. Also called letter cutter; letterer. *DOT*

letter stone

An igneous rock with sheath and core structure giving the appearance of letters on its surface.

lettsonite

See: [cyanotrichite](#); velvet copper ore.

leuchtenbergite

A pale iron-poor variety of clinocllore.

leucite

A tetragonal mineral, 16[KAlSi₂O₆]; a pseudocubic feldspathoid; forms white to gray trapezohedra in potassium-rich, silica-poor lavas. Syn: [amphigene](#); [grenatite](#); [white garnet](#); [vesuvian](#). CF: [pseudoleucite](#)

leucitite

A fine-grained or porphyritic extrusive or hypabyssal igneous rock chiefly composed of pyroxene (esp. titanagite) and leucite, with little or no feldspar and without olivine. *AGI*

leucitohedron

See: [trapezohedron](#)

leucitophyre

A porphyritic extrusive rock composed chiefly of leucite, nepheline, and clinopyroxene. CF: [haueynophyre](#)

leucochalcite

See: [olivinite](#)

leucocratic

Light-colored; applied to igneous rocks that are relatively poor in mafic minerals. The percentage of mafic minerals necessary for a rock to be classified as leucocratic varies among petrologists, but is usually given as less than 30% to 37.5%. CF: [melanocratic](#); [mesocratic](#). Noun, leucocrate. Syn: [light-colored](#)

leucomanganite

See: [fairfieldite](#)

leucoperthite

A loamlike substance, between a resin and wax in character; $C_{50}H_{84}O_3$; very impure and sandy as found in a brown coal at Gesterwitz, near Weissenfels, Germany. It crystallizes in white needles from ether and boiling absolute alcohol, and melts above 100 degrees C. *AGI*

leucophane

A green to pale-yellow sodium calcium silicate containing beryllium. One of the sources of beryllium. See also: [leucophanite](#)

leucophanite

A triclinic mineral, $(Na,Ca)_2BeSi_2(O,OH,F)_7$; pseudo-orthorhombic; a source of beryllium. Syn: [leucophane](#)

leucophoenicite

A monoclinic mineral, $Mn_7(SiO_4)_3(OH)_2$; humite group; pseudo-orthorhombic; purple-pink to raspberry-red; in veins associated with manganese ore deposits.

leucophyllite

A variety of muscovite. *Dana, 1*

leucophyre

A term originally applied to altered diabase in which the feldspar has been altered to saussurite, kaolin, and chlorite. This usage is obsolete, but the term is occasionally used for a light-colored hypabyssal rock, being the antithesis of lamprophyre. Not recommended usage. *AGI*

leucopyrite

An oxidized variety of loellingite. See also: [loellingite](#)

leucosphenite

A monoclinic mineral, $\text{BaNa}_4 \text{Ti}_2 \text{B}_2 \text{Si}_{10} \text{O}_{30}$; in alkali pegmatites and the Green River Formation of Utah and Wyoming.

leucoxene

a. Fine-grained, opaque white alteration products of ilmenite, mainly finely crystalline rutile. b. A variety of sphene.

levee

An embankment beside a river or an arm of the sea, to prevent overflow. *Standard, 2*

level

a. A main underground roadway or passage driven along a level course to afford access to stopes or workings and to provide ventilation and a haulageway for the removal of coal or ore. Levels are commonly spaced at regular depth intervals and are either numbered from the surface or designated by their elevation below the top of the shaft. See also: [level interval](#) b. See: [mother gate](#) c. An instrument for establishing a horizontal line or plane. *Long* d. The act or process of adjusting something with reference to a horizontal line. *Long* e. In pitch mining, such as anthracite, there may be a number of levels driven from the same shaft, each being known by its depth from the surface or by the name of the bed or seam in which it is driven. *Jones, 1* f. Applied to seams that run like floors in an office building. Under and above the seam lie the rock strata. *Korson* g. All openings at each of the different horizons from which the orebody is opened up and mining is started. *Higham* h. N.S.W. A drive in a mine. *New South Wales* i. In speleology, a series of related passageways in a cave, occurring at the same relative, vertical position. *AGI* j. A gutter for the water to run in. *Fay*

level course

a. A direction along the strike of an inclined coal seam; a coal seam contour line. The productive faces in a coal mine, such as stalls and conveyor faces are, in general, advanced on level course or slightly to the rise. *Nelson* b. Scot. In the direction of the strike of the strata, or at right angles to the dip and rise. See also: [strike](#); [true dip](#). *Fay*

level crosscut

A horizontal crosscut. See also: [crosscut](#)

level drive

A drive that opens up a deposit and makes it accessible along its length and forms the basis for the division of the deposit into levels. *Stoces*

leveler

A buck scraper, drag, or any other form of device for smoothing land. *Seelye, I*

level-free

a. War. Old coal or ironstone workings at the outcrop, worked by means of an adit driven into the hillside. b. A mine that discharges water by gravitation.

leveling

The operation of determining the comparative altitude of different points on the Earth's surface, usually by sighting through a leveling instrument at one point to a level rod at another point. Also, the finding of a horizontal line or the establishing of grades (such as for a railway roadbed) by means of a level. Also spelled levelling. *AGI*

leveling instrument

A surveyor's level bearing a telescope. See also: [level](#) *Standard, 2*

leveling practice

In leveling, the station is the point at which the staff is held and not the position of the instrument. The operation is one of carrying forward a known level, hence the backsight is a reading taken on the staff at a known elevation and the last sight from each station is called the foresight. All other readings refer to intermediate sights. Leveling sections may be referred to bench marks or to arbitrary levels, but in all cases they must be checked either by closing on the starting point or by starting and finishing on convenient bench marks. *Mason*

leveling rod

A graduated rod used in measuring the vertical distance between a point on the ground and the line of sight of a surveyor's level. *Webster 3rd*

level interval

a. The vertical distance between the levels turned off the shaft in metal mines for ore intersection and development. The interval varies but may be about 150 ft (46 m). *Nelson*
b. The horizontal distance between levels turned off main development drifts and varies from 200 to 600 yd (180 to 550 m). Levels are usually designated by numbers, names, or depth from the surface. *Nelson*

level-luffing crane

A crane embodying an automatic device that causes the load to move horizontally with any alteration of the operating radius. *Hammond*

levelman

Person who operates a surveyor's level. *Crispin*

level of control

A measure of mastery over a process of production; in concrete work, it is measured by cube crushing strength and the standard deviation therefrom. See also: [statistical uniformity](#)

level of saturation

See: [water table](#)

levels

See: [level](#)

level surface

See: [equipotential surface](#)

leverman

Person who operates brakes, or levers, at the top of an inclined plane. A brakeman. *Fay*

levigation

a. Separating fine powder from coarser material by forming a suspension of the fine material in a liquid. *ASM, 1* b. A means of classifying a material as to particle size by the rate of settling from a suspension. CF: [trituration](#)

levitation

In the mineral process of froth flotation, raising of acrophilic particles to the surface of a pulp, by so activating them that they cling to the air-water interface of a rising or coursing air bubble. *Pryor, 3*

levyne

A trigonal mineral, $(Ca,Na_2,K_2)_3 Al_6 Si_{12} O_{36} \cdot 18H_2 O$; zeolite group; in cavities in basalts with other zeolites. Also spelled levynite; levynine; levynite.

lewis hole

A series of two or more holes drilled as closely together as possible, then connected by knocking out the thin partition between them, forming thus one wide hole, having its greatest diameter in a plane with the desired rift. Blasts from such holes are wedgelike in their action, and by means of them larger and better-shaped blocks can be taken out than would otherwise be possible. *Fay*

Leyner-Ingersoll drill

See: [water leyner](#)

lherzolite

A peridotite containing both clinopyroxene and orthopyroxene in addition to olivine.

liberation

Freeing by comminution, or crushing and grinding, of particles of a specific mineral from their interlock with other constituents of the coal or ore. Also called severance. Syn: [unlocking](#)

liberation of intergrown constituents

Crushing of intergrown material to free the constituent materials. *BS, 5*

liberator cells

In electrolytic refining of metals, tanks in which the electrolytic solution is reconstituted. *Pryor, 3*

Liberty-Gel

Gelatinous permissible explosive; used in mining. *Bennett*

libethenite

An orthorhombic mineral, $\text{Cu}_2(\text{PO}_4)(\text{OH})$; olive-green; forms small crystals and druses in copper deposits.

LICADO process

A selective agglomeration process under development, in which the liquid carbon dioxide-water interface is used for the differentiation and separation between coal and mineral matter. The resultant clean coal is a low-sulfur and low-ash content product of relatively low moisture content.

licensed material

Source material, special nuclear material, or byproduct material received, possessed, used, or transferred under a general or special license issued by the Nuclear Regulatory Commission. *Lyman*

licensed store

A place or building licensed by the local authority for the storage of explosives. See also: [magazine](#); [registered premises](#). *BS, 12*

lid

a. A short, flattish piece of wood or steel plate wedged over a post, timber set, or steel arch. A lid is used to tighten the support against the ground and also to increase the area supported. See also: [clog](#); wedge. *Nelson* b. A cap piece used in timbering. CF: [lag](#)

lidman

In the coke-products industry, a laborer who lifts lids of charging holes of ovens and chips carbon from edges of holes, using bars with hook-and-chisel ends. Syn: [charger](#)

lie!

Scot. In mine haulage, a command to stop. *Fay*

lie

a. Scot. The line, direction, or bearing; as of a vein, lode, or fault. *Fay* b. Pass-by; shunt; a storage or bypass arrangement in haulage track. Also spelled lye. *Mason* c. To become quiet or inactive; said of a mine that is idle. *Fay*

liebigite

An orthorhombic mineral, $\text{Ca}_2(\text{UO}_2)(\text{CO}_3)_3 \cdot 11\text{H}_2\text{O}$; olive-green; forms soft, scaly, or granular crystalline aggregates with one cleavage. Syn: [uranothallite](#)

lien

Right to legal claim on goods or property. *Pryor, I*

liesegang banding

Banding in color and composition of ores caused by diffusion. *AGI*

lievrite

See: [ilvaite](#)

lifeline

A slide wire or cable extending from a work platform in a drill tripod or derrick at an oblique angle downward to an anchor on the ground, which the derrick or tripod worker could grasp and use when sliding to safety in an emergency. *Long*

life of mine

The time in which, through the employment of the available capital, the ore reserves--or such reasonable extension of the ore reserves as conservative geological analysis may justify--will be extracted. *Hoover*

life of property

Theoretically, the mineral or coal reserves divided by the actual or projected average annual production. *Nelson*

lift

a. The vertical height traveled by a cage in a shaft. *Fay* b. The distance between the first level and the surface or between any two levels. *Fay* c. Any of the various gangways from which coal is raised at a slope colliery. *Fay* d. A certain thickness of coal worked in one operation. *Fay* e. To break up, bench, or blast coal from the bottom of the seam upward. *Fay* f. The plane approx. parallel with the floor of the quarry, along which the

stone is usually split in quarrying. *Fay* g. The quantity of ore between one haulage level and the next above or below. *Nelson* h. A step or bench in a multiple layer excavation. *Nichols*, 1 i. The amount a bit is raised off the bottom of a drill hole by excessive pressure created by pump surges or the forcing of too great a volume of circulation fluid through the bit. *Long* j. In churn drilling, the vertical movement of the drill tools while drilling. *Long* k. In pumping, the difference in the elevation between the surface of the liquid being pumped and the elevation at which the pump stands or the elevation at which the liquid is discharged. *Long* l. A certain vertical thickness of coal seams and measures, having considerable inclination, between or in which the workings are being carried on to the rise, all the coal being raised from one shaft bottom. *Fay* m. The upheaval of the floor in coal mines. See also: [creep](#) *Nelson* n. The extraction of a coal pillar in lifts or slices. See also: [jud](#) *Nelson*

lifter

a. In mining, a shothole drilled near the floor when tunneling and fired subsequently to the cut and relief holes. *Pryor*, 3 b. See: [core lifter](#) c. In ore grinding, a projection, rib or wave profile on the horizontal liners (body liners) of a ball, tube, or rod mill, designed to aid the crop load in the mill to rise. In a drum-washer or dense-medium separator, a perforated plate, projecting radially inward from the circumference of a horizontal cylindrical vessel, used to stir, lift, or remove material. *Pryor*, 3

lifter holes

Shotholes drilled along the floor of a tunnel for lifting the rock to floor level. They are fired after the cut holes, or by delay detonators in the round. *Nelson*

lifters

See: [lifter holes](#)

lifter spring

See: [core lifter](#)

lift gate

A lock gate that is raised vertically to open. *Hammond*

lift hammer

See: [tilt hammer](#)

lifting

Scot. Drawing hutches or cars out of the working places into the main roads. *Fay*

lifting block

An arrangement of pulleys and rope that enables heavy weights to be lifted with least effort. *Hammond*

lifting capacity

a. The weight that the hydraulic cylinders in the swivel head of a diamond drill can raise or lift. *Long* b. See: [drill capacity](#)

lifting guard

Fencing placed around the mouth of a shaft, and lifted out of the way by the ascending cage. *Fay*

lifting magnet

An electromagnet that is hung from a crane and used instead of a hook for lifting iron or steel components. *Hammond*

lifting set

A series of pumps or sets of pumps by which water is lifted from the mine in successive stages. See: [lift](#)

lifting wicket

S. of Wales. See: [lifting guard](#)

lift joint

A horizontal tension fracture observed in massive rocks, such as granite; thought to originate from the removal of load in quarrying. CF: [sheeting](#)

lift pump

A pump for lifting to its own level, as distinguished from a force pump. A suction pump. Also called bucket pump. See also: [suction head](#) *Standard, 2; Fay*

light alloys

The general term for alloys of aluminum and magnesium used for structural purposes. *Hammond*

light blasting

Includes loosening up of shallow or small outcrops of rock and breaking boulders. It may constitute the entire job, be done in connection with dirt excavation, or follow heavy blasting that has failed to cut gradelines or slope lines, or has left chunks too large to load. *Nichols, 1*

light burden

See: [burden](#)

light-colored

See: [leucocratic](#)

lightening

A peculiar brightening of molten silver, indicating that maximum purity has been attained. Occurs in cupellation. *Standard, 2; Fay*

light-extinction method

See: [turbidimeter](#)

light figure

The visible geometric figure observed when an etched flat surface of quartz is placed over a pinhole-focused light source. *Am. Mineral., 2*

lighting

In metallurgy, annealing. *Standard, 2*

lightman

Person who uses an electric extension light as an aid in detecting blisters and flaws in the inside of green pipe. *DOT*

light mineral

a. A rock-forming mineral of a detrital sedimentary rock, having a specific gravity lower than a standard (usually 2.85); e.g., quartz, feldspar, calcite, dolomite, muscovite, feldspathoids. CF: [heavy mineral](#) b. A light-colored mineral. *AGI*

lightning explosion

Eng. An explosion of combustible gases caused by electric current, during a thunderstorm, entering a mine and igniting the gas. *Fay*

lightning gap

A lightning gap is a break about 6 ft (1.8 m) long made at the mine entrance in blasting circuits, used in firing blasts from the outside, to prevent lightning discharges from following the circuits into the mine.

lightning protection

A system to enable high electrical discharge from the atmosphere to be conducted safely to earth by one or more conductors. The provision is very important in the case of mine explosive stores and also headgears, tower winders, and chimneys. *Nelson*

lightning tube

See: [fulgurite](#)

light railway

A railway built to narrow gage. *Hammond*

light red silver ore

See: [proustite](#)

light ruby ore

See: [proustite](#)

light ruby silver

See: [proustite](#)

light water

Ordinary water, H_2O , as distinguished from heavy water, D_2O , D being the symbol for deuterium (heavy hydrogen or hydrogen 2). *Lyman*

lightweight aggregate

An aggregate with a relatively low specific gravity; e.g., pumice, volcanic cinders, expanded shale, foamed slag, or expanded perlite or vermiculite. CF: [aggregate](#)

lightweight concrete

A concrete made with lightweight aggregate. *AGI*

light-yellow heat

A division of the color scale, generally given as about 2,400 degrees F (1,316 degrees C).

lignin sulfonic acids

Chemicals produced during the sulfite treatment of wood pulps. Of interest in flotation process as a deflocculating agent and protective colloid. *Pryor, 3*

lignite

a. A brownish-black coal in which the alteration of vegetal material has proceeded further than in peat but not so far as subbituminous coal. *Fay* b. Coal of low rank with a high inherent moisture and volatile matter; in this general sense, lignite may be subdivided into black lignite, brown lignite, and brown coal. *BS, 4*

lignite A

The rank of coal, within the lignitic class of Classification D 388, such that, on the moist, mineral-matter-free basis, the gross calorific value of the coal in British thermal units per pound is equal to greater than 6,300 (14.65 MJ/kg but less than 8,300 (19.31 MJ/kg), and the coal is nonagglomerating. *ASTM*

lignite B

The rank of coal, within the lignitic class of Classification D 388, such that, on the moist, mineral-matter-free basis, the gross calorific value of the coal in British thermal units per pound is less than 6,300 (14.65 MJ/kg), and the coal is nonagglomerating. *ASTM*

lignitic

Containing lignite. *Fay*

lignitic coal

See: [subbituminous coal](#)

ligurite

An apple-green variety of titanite. *Standard, 2*

likasite

An orthorhombic mineral, $\text{Cu}_3 (\text{NO}_3)(\text{OH})_5 \cdot 2\text{H}_2 \text{O}$; sky blue; at Likasi, Kutanga, Zaire.

likely

Said of a rock, lode, or belt of ground that gives indications of containing valuable minerals. Syn: [kindly](#)

lill

Eng. Greenish-gray shale; weathering yellow; Wenlock Limestone, Dudley. *Arkell*

lillianite

An orthorhombic mineral, $\text{Pb}_3 \text{Bi}_2 \text{S}_6$.

Lilly controller

A controller used on both steam and electric winding engines that protects against overspeed, overwind, too rapid acceleration, delayed retardation, and against starting in the wrong direction. It also gives warning of overspeed and indicates by a bell signal when retardation should commence. *Sinclair, 5*

limb

a. That area of a fold between adjacent fold hinges. It generally has a greater radius of curvature than the hinge region and may be planar. Syn: [flank](#) b. The graduated margin of an arc or circle in an instrument for measuring angles, such as the part of a marine sextant carrying the altitude scale. *AGI* c. The graduated staff of a leveling rod. See also: [tribrach](#) *AGI*

lime

a. Calcium oxide, CaO ; specif. quicklime and hydraulic lime. The term is used loosely for calcium hydroxide (as in hydrated lime) and incorrectly for calcium carbonate (as in agricultural lime). *AGI* b. A cubic mineral, CaO . *AGI* c. A term commonly misused for calcium in such deplorable expressions as carbonate of lime or lime feldspar. *AGI* d. A limestone. The term is sometimes used by drillers for any rock consisting predominantly of calcium carbonate. *AGI*

lime boil

A reaction in an open-hearth furnace caused by the decomposition of limestone and the escape of the carbon dioxide gas. This reaction begins before the ore boil is completed. See also: [ore boil](#)

limeburner

Person who burns limestone or shells to make lime. *Webster 3rd*

lime feldspar

Misnomer for calcium feldspar. See also: [anorthite](#)

lime mica

See: [margarite](#)

lime mortar

A mortar in which lime is used as a binding agent instead of cement. *Nelson*

lime pan

a. A playa with a smooth, hard surface of calcium carbonate, commonly tufa. *AGI* b. A type of hardpan cemented chiefly with calcium carbonate. Also spelled limepan. *AGI*

lime pit

a. A limestone quarry. *Webster 3rd* b. A pit where lime is made. *Webster 3rd*

lime rock

A term used in the Southeastern United States (esp. Florida and Georgia) for an unconsolidated or partly consolidated form of limestone, usually containing shells or shell fragments, with a varying percentage of silica. It hardens on exposure and is sometimes used as road metal. Also spelled limerock. *AGI*

lime set

An infusible slag, too high in lime, in an iron blast furnace.

lime shells

Scot. Calcined limestone.

lime-silicate rock

See: [calc-silicate rock](#)

lime slaker

Person who mixes lime and water in rotary slaker or open batch tank to make milk of lime (slaked lime). Also called lime mixer; milk-of-lime slaker; slaker. *DOT*

lime-soda sinter process

A process for manufacturing alumina, Al_2O_3 . The raw material, such as clay or anorthosite, is sintered with limestone and soda ash to form sodium aluminate and calcium silicate. This sinter is then leached with water, caustic soda solution, or sodium aluminate liquor to dissolve the soluble sodium aluminate. The resulting slurry is then filtered, and the liquor is decomposed as in the Bayer process or is treated with carbon dioxide to precipitate hydrated alumina. When operated in conjunction with the Bayer process to recover alumina and soda from red mud, it is called the combination process.

limestone

a. A sedimentary rock consisting chiefly (more than 50% by weight or by areal percentages under the microscope) of calcium carbonate, primarily in the form of the mineral calcite, and with or without magnesium carbonate; specif. a carbonate sedimentary rock containing more than 95% calcite and less than 5% dolomite. Common minor constituents include silica (chalcedony), feldspar, clays, pyrite, and siderite. Limestones are formed by either organic or inorganic processes, and may be detrital, chemical, oolitic, earthy, crystalline, or recrystallized; many are highly fossiliferous and clearly represent ancient shell banks or coral reefs. Limestones include chalk, calcarenite, coquina, and travertine, and they effervesce freely with any common acid. Abbrev. ls. *AGI* b. A general term used commercially (in the manufacture of lime) for a class of rocks containing at least 80% of the carbonates of calcium or magnesium and which, when calcined, gives a product that slakes upon the addition of water. *AGI*

limestone dust

Dust prepared by grinding limestone; used to dilute the coal dust accumulation in a mine so that the dust does not form explosive mixtures with air. *Rice, 2*

limewater

Natural water with large amounts of dissolved calcium bicarbonate or calcium sulfate. *AGI*

limit charge

A charge that gives a complete loosening of the rock without throwing it excessively.

limiting creep stress

A somewhat loose term used to denote the maximum stress at which a material will not creep by more than a certain amount within the working life of the part. It is also used in some short-time creep tests; e.g., the Hatfield time yield. *Hammond*

limiting current density

The maximum current density that can be used to get a desired electrode reaction without undue interference, such as may come from polarization. *ASM, 1*

limiting gradient

The maximum railway gradient that can be climbed without the help of a second power unit. Syn: [ruling gradient](#)

limiting mixture

The mixture of coal and rock dusts that will not permit the propagation of an explosion. *Rice, 2*

limit line

The line joining the coal face underground and the surface limit of draw; the boundary of a mine. *Nelson*

limit of draw

The point on the surface beyond which no movement occurs. *Nelson*

limit of proportionality

The point on a stress-strain curve at which the strain ceases to be proportional to the stress. Its position varies with the sensitivity of the extensometer used in measuring the strain. *CTD*

limits of flammability

a. Extreme concentration limits of a combustible in an oxidant through which a flame, once initiated, will continue propagating at a specified temperature and pressure. *Van Dolah* b. Usually expressed as the limiting percentages of methane in air, beyond which the mixture is no longer flammable. The lowest percentage of methane in air that yields a flammable mixture is called the lower limit of flammability, and the highest percentage of methane in air to yield a similar mixture is called the higher limit of flammability. These limiting percentages depend on a number of factors, such as the initial temperature

and pressure; whether the mixture is at rest or moving; the manner in which the mixture is confined, etc. With methane mixtures at ordinary mine pressures and temperatures, the widest limits of flammability are (1) lower limit of flammability about 5.4% of methane in air; (2) higher limit of flammability about 14.8% of methane in air. See also: [methane](#)
Nelson

limit switch

a. A device fitted to an electrically driven hoist or winding engine that becomes effective at the end of a wind to prevent the cage overwinding or underwinding. *Nelson* b. A control to limit some function. *Strock, 2*

limnic

a. Said of coal deposits formed inland in freshwater basins, peat bogs, or swamps, as opposed to paralic coal deposits. CF: [paralic](#) b. Said of peat formed beneath a body of standing water. Its organic material is mainly planktonic. *AGI*

limnic coal basin

A coal basin formed inland from the seacoasts, as opposed to a paralic coal basin. *AGI*

limnite

See: [bog iron](#); bog iron ore.

limonite

A rock composed of cryptocrystalline and amorphous hydrated iron oxyhydroxides, generally predominantly goethite with or without adsorbed water, but also akaganeite, ferrihydrite, or lepidocrocite; may be yellow, red, brown, or black; hardness variable; an oxidation product of iron (rust) or iron-bearing minerals and may be pseudomorphous after them; as a precipitate, both inorganic and biogenic, in bogs, lakes, springs, or marine deposits; and as a variety of stalactitic, reniform, botryoidal, or mammillary deposits. It colors many yellow clays and soils and is a minor ore of iron. See also: [iron ore](#); [brown hematite](#); [brown umber](#). CF: [bog iron ore](#) meadow ore; yellow ocher.

limonitic

Consisting of or resembling limonite.

limurite

A metasomatic rock found at the contact of calcareous rocks with intruded granite and consisting of more than 50% axinite. Other minerals include diopside, actinolite, zoisite, albite, and quartz. See also: [calc-silicate hornfels](#)

linarite

A monoclinic mineral, $2[\text{PbCu}(\text{SO}_4)(\text{OH})_2]$; azure blue; in oxidized zones of lead, copper, and silver deposits.

lindackerite

A monoclinic mineral, $\text{H}_2\text{Cu}_5(\text{AsO}_4)_4 \cdot 8-9\text{H}_2\text{O}$; green; forms rosettes and reniform masses with one perfect cleavage.

Lindblad-Malmquist gravimeter

See: [Boliden gravimeter](#)

lindgrenite

A monoclinic mineral, $\text{Cu}_3(\text{MoO}_4)_2(\text{OH})_2$; green; in tabular crystals from Chuquicamata, Chile.

Lindgren's volume law

See: [law of equal volumes](#)

lindstroemite

An orthorhombic mineral, $\text{Pb}_3\text{Cu}_3\text{Bi}_7\text{S}_{15}$. Also spelled lindstroemite.

line

a. The limit of a surface; a length without breadth; an outline; a contour. *Fay* b. The course in which anything proceeds, or which anyone takes; direction given or assured. *Fay* c. A cable, rope, chain, or other flexible device for transmitting pull. *Nichols, I* d. To line pieces up in order to couple them together. *Nichols, I* e. See: [plumbline](#)

lineage

An imperfection in a crystal structure characterized by a series of line defects, but not extensive enough to form a grain boundary. CF: [grain boundary](#); [crystal defect](#).

lineal foot

A foot in length as distinguished from square foot or cubic foot. *Crispin*

lineal travel

Commonly used as a syn. for peripheral speed, as applied to bit rotation; also, a syn. for rope or cable speed, as applied to hoisting. *Long*

lineament

a. A significant line of landscape that reveals the hidden architecture of the rock basement. Lineaments are character lines of the Earth's physiognomy. *AGI* b. A topographic feature; esp., one that is rectilinear. *Webster 3rd* c. A topographic line that is structurally controlled. Lineaments are studied esp. on aerial photographs. Sometimes inappropriately called a linear. *Billings*

linear

Arranged in a line or lines; pertaining to the linelike character of some object or objects.-n. Not recommended as a syn. of lineament. *AGI*

linear alkylbenzene sulfonate

A high-quality, biodegradable detergent, obtained from lignite tar, which is derived from carbonizing coal at low temperatures.

linear element

A fabric element having one dimension that is much greater than the other two. Lineations are the common linear elements. CF: [planar element](#); equant element. *AGI*

linear expansion

The increase in one dimension of a soil mass, expressed as a percentage of that dimension at the shrinkage limit to any given water content. *ASCE*

linear model

A function frequently used when fitting mathematical models to experimental variograms, often in combination with a nugget model.

linear parallelism

See: [lineation](#)

linear schistosity

A schistosity due to the parallel alignment of columnar or acicular crystals in rocks.

linear shrinkage

Decrease in one dimension of a soil mass, expressed as a percentage of the original dimension, when the water content is reduced from a given value to the shrinkage limit.
ASCE

linear structure

See: [lineation](#)

lineation

A general, nongeneric term for any linear structure in a rock; e.g., flow lines, slickensides, linear arrangements of components in sediments, or axes of folds. Lineation in metamorphic rocks includes mineral streaking and stretching in the direction of transport, crinkles and minute folds parallel to fold axes, and lines of intersection between bedding and cleavage, or of variously oriented cleavages. Syn: [linear structure](#); linear parallelism. *AGI*

line brattice

A partition placed in an opening to divide it into intake and return airways. See also: [brattice](#)

line clinometer

A borehole-survey clinometer designed to be inserted between rods at any point in a string of drill rods. CF: [clinometer](#); [end clinometer](#); plain clinometer; wedge clinometer.
Long

line defect

An imperfection in crystal structure characterized by an atomic layer extending part way into a crystal structure. CF: [crystal defect](#); edge dislocation.

lined gold

Gold foil backed with other metal.

line drilling

A term used in quarrying to describe the method of drilling and broaching for the primary cut. In this method, deep holes are drilled close together in a straight line by

means of a reciprocating drill mounted on a bar. The webs between the holes are removed with a drill or a flat broaching tool; thus a narrow continuous channel cut is made. See also: [broaching](#); controlled blasting. *AIME, 1*

line drop

Loss in voltage owing to the resistance of conductors conveying electricity from a power station to the consumer. *Hammond*

line electrode

A series of electrodes put out along a straight line on the surface and electrically interconnected, approx. the condition of continuous electrical contact with the Earth along that line. *Schieferdecker*

line lubricator

See: [line oiler](#)

line map

See: [planimetric map](#)

line of bearing

a. The compass direction of the course a borehole follows. *Long* b. A syn. for strike as applied to a rock stratum. *Long* c. The direction of the strike. See: [strike](#)

line of collimation

The line of sight of the telescope of a surveying instrument, defined as the line through the rear nodal point of the objective lens of the telescope and the center of the reticle when they are in perfect alignment. See also: [line of sight](#)

line of creep

The path that water follows along the impervious surface of contact between the foundation soil and the base of a dam or other structure. Syn: [path of percolation](#)

line of dip

a. The direction in which an inclined borehole is pointed. *Long* b. The line of greatest inclination of a stratum from the horizontal plane. c. The direction of the angle of dip, measured in degrees by compass direction. It generally refers to true dip, but can be said of apparent dip as well. Syn: [direction of dip](#)

line of force

a. The straight line in which a force acts. *Standard, 2* b. A curve in a field of force drawn so that at every point it has the direction of resultant force; specif., a line of magnetic force. *Standard, 2*

line of least resistance

The shortest distance between the center line of a drill hole and the free rock face. *Fraenkel*

line of outcrop

The intersection of a stratum with the ground surface. *Schieferdecker*

line of seepage

The upper free-water surface of the zone of seepage. Syn: [seepage line](#); phreatic line. *ASCE*

line of sight

The sighting or pointing line of a telescope, defined by the optical center of the objective and the intersection of crosshairs. See also: [line of collimation](#)

line of thrust

Locus of the points through which the resultant forces in an arch or retaining wall pass. *Hammond*

line of tunnel

The width marked by the exterior lines or sides of a tunnel.

line oiler

An apparatus inserted in a line conducting air or steam to an air- or steam-actuated machine that feeds small controllable amounts of lubricating oil into the air or steam. Also called lubricator; potato. Syn: [air-line lubricator](#); line lubricator; [oil pot](#); [oiler](#); [pineapple](#); pot. See also: [atomizer](#)

liner

a. A foot piece for uprights in timber sets. *Nelson* b. Timber supports erected to reinforce existing sets that are beginning to collapse due to heavy strata pressure. *Nelson* c. A string of casing in a borehole. *Long* d. See: [lining](#)

lines

Plumblines, not less than two in number, hung from hooks driven in wooden plugs. A line drawn through the center of the two strings or wires, as the case may be, represents the bearing or course to be driven on. *Fay*

linesman

An assistant to a surveyor. *BS*, 7

lines up

The number of lines strung through the traveling block and crown block. *Brantly*, 2

line timbers

Timbers placed along the sides of the track of a working place in rows on some predetermined plan. *Kentucky*

line up

a. A command signifying that the drill runner wants the hoisting cable attached to the drill stem, threaded through the sheave wheel, or wound on the hoist drum. *Long* b. To reposition a drill so that the drill stem is centered over and parallel to a newly collared drill hole. *Long* c. Regular linear pattern of peaks or troughs on a seismogram, such as occurs when a reflection comes in. *Schieferdecker*

lingot

An iron ingot mold. *Standard*, 2

lining

a. A casing of brick, concrete, cast iron, or steel, placed in a tunnel or shaft to provide support. See also: [tunnel lining](#) b. In grinding of rocks and ores, a layer of wear-resistant material, used to protect rock breakers, shells of ball mills, chutes, launders, and other areas subject to abrasion. Special plastics, rubber, and acid-resistant alloys are used in vats, piping, and autoclaves, and for pump impellers exposed to abrasion and chemical attack. See also: [scour protection](#) c. A cover of clay, concrete, synthetic film, or other material, placed over all or part of the perimeter of a conduit or reservoir, to resist erosion, minimize seepage losses, withstand pressure, and improve flow. *AGI* d.

Supporting the rock sides of a mine gallery is known as lining, and the material used in so doing is called the lining. *Spalding* e. The planks arranged against frame sets. *Zern* f. Refractory brickwork of furnace used to protect hearth, bosh, roof, or walls. *Pryor*, 3 g. The brick, concrete, cast iron, or steel casing placed around a tunnel or shaft as a support. Timber sets are not viewed as a lining. See also: [brick walling](#); [guniting](#); [liner](#); [permanent shaft support](#). *Nelson*

lining mark

Eng. A drill hole in the mine roof with a wooden plug driven into it from which to hang a plumbline. *Fay*

lining sight

An instrument consisting essentially of a plate with a longitudinal slot in the middle, and the means of suspending it vertically. It is used in conjunction with a plumbline for directing the courses of underground drifts, headings, etc. *Webster 2nd*

lining up a mine

In surveying, placing the sights for driving entries, drifts, or rooms nearer the working face. *Fay*

linishing

The operation of polishing as carried out on a linisher. This machine is designed for the polishing of flat objects and carries a flat revolving cloth belt whose surface is impregnated with a suitable abrasive material. *Osborne*

link bar

A lightweight steel bar extending faceward from the steel supports behind the conveyor. It supports the area between the conveyor and the coal on longwall faces where cutter loaders are carried on armored flexible conveyors. The joint and locking device may consist of a hinge pin and wedge. The standard bar can carry in cantilever a maximum tip load of about 2 st (1.8 t). In general, linked bars are stronger than corrugated straps and wooden bars, and their use is increasing. *Nelson*

link conveyor

A chain conveyor. *Nelson*

linked veins

An ore-deposit pattern in which adjacent, more or less parallel veins are connected by diagonal veins or veinlets. *AGI*

Linkenbach table

In mineral processing, a stationary round table onto which finely divided pulp (slimes) is fed from the center from a revolving feed box. A light wash of water follows, and lighter particles are washed downslope to a peripheral discharge launder. Behind this a heavier water flush displaces the settled heavier material (concentrates) and flushes it down to a bridging arrangement that delivers it to a separate discharge. *Pryor, 3*

link-plate belt

A grizzly type of belt consisting of two strands of endless chain connected by through rods at each articulation, on which are carried a series of plates or bars mounted in a vertical plane for the purpose of rough screening while conveying. Syn: [belt](#)

linnaeite

- a. An isometric mineral, $8[\text{Co}_3\text{S}_4]$; commonly has small amounts of Ni, Fe, Cu; forms a series with polydymite; crystallizes in octahedra with cubic cleavage; metallic; steel gray tarnishing to copper red; in quartz sulfide veins; a source of cobalt. Also spelled linneite.
- b. The mineral group bornhardtite, carrollite, daubreelite, fletcherite, greigite, indite, linnaeite, polydymite, siegenite, truedstedite, tyrellite, and violarite.

linneite

Alternate spelling of linnaeite.

linoleic acid

An unsaturated fatty acid, $\text{CH}_3(\text{CH}_2)_4\text{CH}=\text{CH}(\text{CH}_2)_7\text{COOH}$, used as a collector in the flotation process. *Pryor, 3; SME, 2*

linolenic acid

An unsaturated fatty acid, $\text{CH}_3\text{CH}_2\text{CH}=\text{CHCH}_2\text{CH}=\text{CHCH}_2\text{CH}=\text{CH}(\text{CH}_2)_7\text{COOH}$. *Pryor, 3; SME, 2*

linophytic

Pertaining to porphyritic rocks in which the phenocrysts are arranged in lines or streaks.

linseed fatty acid

Byproduct of manufacture of linseed oil. Flotation agent used as collector, emulsifier, or stabilizer for davidite, a uranium mineral. *Pryor, 3*

linsey

Lanc. A strong, striped shale and a streaky, banded sandstone or siltstone, interbedded in such a manner as to resemble a mixed linen and woolen fabric (linsey-woolsey). CF: [whintin](#)

lintel

A horizontal supporting member spanning a wall opening. *Harbison-Walker*

Linz-Donawitz process

A process for making steel from cast iron; it resembles the Bessemer process except for two important differences: (1) oxygen is used rather than air and (2) instead of blowing the gas through tuyeres submerged in the bath (as in the Bessemer converter), the oxygen stream impinges on the surface of the molten iron. *Newton, 1*

lionite

See: [tellurium](#)

lip

a. The digging edge of a dredge bucket. *Fay* b. The cutting edge of a fixed-wing bit, such as the cutting edge on a fishtail bit. *Long*

lip-and-gate builder

One who constructs lips and gates that support and regulate flow of molten glass from furnace to glass-rolling machine. *DOT*

liparite

A syn. of rhyolite used by German and Soviet authors. Its name, given by Roth in 1861, is derived from the Lipari Islands, in the Tyrrhenian Sea. Not recommended usage; the much more widely used syn. rhyolite has priority by 1 yr. *AGI*

lip of shaft

Eng. The bottom edge of a shaft circle where it is open to the seam workings. *Fay*

lip screen

a. A common term applied to stationary screens installed in the loading chutes over which the coal flows as it is loaded into railroad cars for market. *Mitchell* b. A small screen or screen bars, placed at the draw hole of a coal pocket to take out the fine coal.

liptinite

See: [exinite](#)

liptite

Term used to describe a microlithotype consisting mainly of the exinite group of macerals and esp. of sporinite. Contains not less than 95% of exinite (liptinite) with thickness (bands) of exinite greater than 50 μm recorded as liptite (sporite). Liptite (sporite) is a rare constituent of hard coal. CF: [vitrite](#)

Liqnipel process

A process for reducing high-moisture-content lignite from up to 40% moisture to about 10% moisture by pulverizing the raw coal, pelletizing the 14-mesh top size, thermally drying, and then mixing with a binder. The final product exhibits good handling and storage properties, and resists spontaneous combustion.

liquation

a. A method of recovering sulfur by liquefying it under pressure and heat, drawing off the molten sulfur, and allowing it to solidify. *Fay* b. The heating of a solid mixture until one of the constituents melts and can be separated from the solid remaining. *Nelson*

liquid air

Air in the liquid state but usually richer in oxygen than gaseous air. A faintly bluish, transparent, mobile, intensely cold liquid. Obtained by compressing purified air and cooling it by its own expansion to a temperature below the boiling points of its principal components, nitrogen (-195.8 degrees C, at 760 mm) and oxygen (-182.96 degrees C, at 760 mm). Used chiefly as a refrigerant and as a source of oxygen, nitrogen, and inert gases (as argon). *Handbook of Chemistry and Physics, 2*

liquidation grade

The amount paid by the smelter or other purchaser per ton of ore mined. *McKinstry*

liquid bituminous material

Material having a penetration at 77 degrees F (25 degrees C), under a load of 50 g applied for 1 s, of more than 350. *Urquhart*

liquid glass

See: [water glass](#)

liquid inclusion

A partial syn. of fluid inclusion. *AGI*

liquid-liquid extraction

See: [solvent extraction](#)

liquid measure

Includes the following: 4 gills (gi) equal 1 pint (pt) or 0.47 L; 2 pt equal 1 quart (qt) or 0.95 L; 4 qt equal 1 gal or 3.785 L; 3 1-1/2 gal equal 1 bbl or 119.2 L; and 2 bbl equal 1 hogshead (hhd) or 238.5 L. *Crispin*

liquid-phase sintering

Sintering of a compact or loose powder aggregate under conditions where a liquid phase is present during part of the sintering cycle. *ASTM*

liquid pressure

The pressure of a liquid on the surface of its container or on the surface of any body in the liquid is equal to the weight of a column of the liquid whose height equals the depth of the liquid at that certain point. *Kentucky*

liquids flowsheet

A flowsheet to indicate the flow of liquids throughout a series of operations. *BS, 5*

liroconite

A monoclinic mineral, $\text{Cu}_2 \text{Al}(\text{AsO}_4)(\text{OH})_4 \cdot 4\text{H}_2\text{O}$; soft; blue to green; occurs with malachite in the oxidized zone of copper deposits. Syn: [lentil ore](#)

liskeardite

A possibly orthorhombic mineral, $(\text{Al,Fe})_3(\text{AsO}_4)(\text{OH})_6 \cdot 5\text{H}_2\text{O}$; forms thin encrustations at Liskeard, Cornwall, U.K.

list

a. Mid. Dull coal, sometimes dirty. *Tomkeieff* b. Derb. and Leic. A hard parting between coal seams. *Arkell* c. York. A weak shale or a thin bed of any kind of rock. *Arkell* d. Eng. A mine inspector's term for the schedule of particulars of accidents. *Fay*

listing

a. Fine shale or clay with glossy surfaces or slickensides due to crushing and relative movement. The rock may form a layer over a coal seam as clod; also applied to leather bed. *Nelson* b. See: [lashing](#)

list mill

In gem cutting, a wheel covered with list or cloth on which gems are polished. Also called list wheel. *Standard, 2*

list pan

A perforated skimmer for skimming molten tin. *Standard, 2*

listric fault

A curved downward-flattening fault, generally concave upward. Listric faults may be characterized by normal or reverse separation. *AGI*

listy bed

Soft freestone between the Chert Vein and House Cap in the Portland beds at Winspit, Purbeck, U.K.

lith-

A prefix meaning stone or stonelike.

litharge

A tetragonal mineral, PbO ; red; dimorphous with massicot, which is yellow. Syn: [lead ocher](#); [lithargite](#).

lithargite

See: [litharge](#)

lithia amethyst

See: [kunzite](#); spodumene.

lithia emerald

See: [hiddenite](#); spodumene.

lithia mica

See: [lepidolite](#)

lithic

a. A syn. of lithologic, as in lithic unit. *AGI* b. Said of a medium-grained sedimentary rock, and of a pyroclastic deposit, containing abundant fragments of previously formed rocks; also said of such fragments. *AGI* c. Pertaining to or made of stone; e.g., lithic artifacts or lithic architecture. *AGI*

lithic arenite

a. A sandstone containing abundant quartz, chert, and quartzite, less than 10% argillaceous matrix, and more than 10% feldspar, and characterized by an abundance of unstable materials in which the fine-grained rock fragments exceed feldspar grains. The rock is roughly equivalent to subgraywacke. *AGI* b. See: [lithic sandstone](#)

lithic graywacke

A graywacke characterized by abundant unstable materials; specif. a sandstone containing a variable amount (generally less than 75%) of quartz and chert and 15% to 75% detrital-clay matrix, and having rock fragments (primarily of sedimentary or low-rank metamorphic origin) in greater abundance than feldspar grains (chiefly sodic plagioclase, indicating a plutonic provenance). *AGI*

lithic sandstone

A sandstone containing rock fragments in greater abundance than feldspar grains. Syn: [lithic arenite](#)

lithic tuff

An indurated deposit of volcanic ash in which the fragments are composed of previously formed rocks; e.g., accidental particles of sedimentary rock, accessory pieces of earlier lavas in the same cone, or small bits of new lava (essential ejecta) that first solidify in the vent and are then blown out. CF: [crystal tuff](#)

lithidionite

Alternate spelling of litidionite. See: [litidionite](#)

lithifaction

See: [lithification](#)

lithification

a. A compositional change in a coal seam from coal to bituminous shale or other rock; the lateral termination of a coal seam due to a gradual increase in impurities. *AGI* b. The conversion of a newly deposited, unconsolidated sediment into a coherent, solid rock, involving processes such as cementation, compaction, desiccation, and crystallization. It may occur concurrent with, soon after, or long after deposition. *AGI* c. A term sometimes applied to the solidification of a molten lava to form an igneous rock. See also: [consolidation](#); [induration](#). Syn: [lithifaction](#)

lithionite

See: [lepidolite](#)

lithiophilite

An orthorhombic mineral, $4[\text{LiMnPO}_4]$; forms a series with triphylite; in granite pegmatites; an ore of lithium.

lithiophorite

A hexagonal or monoclinic mineral, $(\text{Al,Li})\text{MnO}_2(\text{OH})_2$; powdery; black; occurs with other supergene manganese oxide minerals.

lithiophosphate

An orthorhombic mineral, Li_3PO_4 ; in white to colorless masses in pegmatite; Kola Peninsula, Russia.

lithium

A soft, silvery-white metallic element of the alkali group, the lightest of all metals. Symbol, Li. Does not occur free in nature; is found combined in small amounts in nearly all igneous rocks and in the waters of many mineral springs. Lepidolite, spodumene, petalite, and amblygonite are the more important minerals containing it. The metal is corrosive and requires special handling. Used as an alloying agent, in the synthesis of organic compounds, and for nuclear applications. *Handbook of Chemistry and Physics*, 3

lithium borosilicate

LiBSiO₄ . Used in low-temperature enamels and as a component of high-temperature, corrosion-resistant coatings. *Lee*

lithium mica

See: [lepidolite](#)

lithium niobate

LiNbO₃ ; a ferroelectric compound having the ilmenite structure and of potential interest as an electroceramic. *Dodd*

lithium tantalate

LiTaO₃ ; a ferroelectric compound of potential value as a special electroceramic. The Curie temperature is above 350 degrees C. *Dodd*

lithodeme

A body of intrusive, pervasively deformed, or highly metamorphosed rock, generally nontabular and lacking primary depositional structures, and characterized by lithic homogeneity. It is mappable at the surface and traceable in the subsurface. For cartographic and hierarchical purposes, it is comparable to a formation. The name of a lithodeme combines a geographic term with a lithic or descriptive term, e.g., Duluth Gabbro. CF: [suite](#)

lithofacies

The rock record of any sedimentary environment, including both physical and organic characters. It is a mappable subdivision of a designated stratigraphic unit, distinguished from adjacent subdivisions on the basis of lithology. See also: [facies](#)

lithofracteur

Nitroglycerine mixed with siliceous earth, charcoal, sodium, and sometimes barium, nitrate, and sulfur. *Fay*

lithogene

Said of a mineral deposit formed by the process of mobilization of elements from a solid rock and their transportation and redeposition elsewhere. On a local scale, the process may be called a product of lateral secretion; on a larger scale, the deposit may be called a product of regional metamorphism. *AGI*

lithogenesis

The origin and formation of rocks, esp. of sedimentary rocks. Also, the science of the formation of rocks. CF: [petrogenesis](#) Adj: lithogenetic. *AGI*

lithogenesis

The science of the origin of minerals and the causes of their modes of occurrence. *Standard, 2*

lithogenetic

Of or pertaining to the origin or formation of rocks.

lithogeny

See: [lithogenesis](#)

lithoglyph

A carving or engraving on a stone or gem; also, a stone or gem so engraved. *Standard, 2*

lithoglyphics

The art of gem cutting; the cutting or engraving of precious stones or gems. *Standard, 2*

lithographic limestone

A compact, dense, homogeneous, exceedingly fine-grained limestone having a pale creamy yellow or grayish color and a conchoidal or subconchoidal fracture. It was formerly much used in lithography for engraving and the reproduction of colored plates. See also: [Solnhofen stone](#) Syn: [lithographic stone](#)

lithographic stone

See: [lithographic limestone](#)

lithographic texture

A sedimentary texture of certain calcareous rocks, characterized by uniform particles of clay size and by an extremely smooth appearance resembling that of the stone used in lithography. *AGI*

lithoid

Rocklike or stonelike.

lithoidal

Said of the texture of some dense, microcrystalline igneous rocks, or of devitrified glass, in which individual constituents are too small to be distinguished with the unaided eye. *AGI*

lithologic

Adj. of lithology. Syn: [lithic](#)

lithologic correlation

The matching or linking up of identical rock formations, veins, or coal seams, exposed some distance apart, by lithology. See also: [correlation](#) *Nelson*

lithology

a. The character of a rock described in terms of its structure, color, mineral composition, grain size, and arrangement of its component parts; all those visible features that in the aggregate impart individuality to the rock. Lithology is the basis of correlation in coal mines and commonly is reliable over a distance of a few miles. *Nelson* b. The study of rocks based on the megascopic observation of hand specimens. In French usage, the term is synonymous with petrography. *Holmes, 2*

lithomarge

A smooth, indurated variety of common kaolin, consisting at least in part of a mixture of kaolinite and halloysite. *AGI*

lithophile

a. Said of an element that is concentrated in the silicate rather than in the metal or sulfide phases of meteorites. Such elements concentrate in the Earth's silicate crust in Goldschmidt's tripartite division of elements in the solid Earth. CF: [chalcophile](#); [siderophile](#). *AGI* b. Said of an element with a greater free energy of oxidation per gram of oxygen than iron. It occurs as an oxide and more often as an oxysalt, esp. in silicate minerals. Examples are Se, Al, B, La, Ce, Na, K, Rb, Ca, Mn, U. Syn: [oxyphile](#)

lithophosphor

A mineral, such as barite, that becomes phosphorescent when heated. Syn: [lithophosphore](#)

lithophosphore

See: [lithophosphor](#)

lithophysae

Hollow, bubblelike, or roselike spherulites, usually with a concentric structure, that occur in rhyolite, obsidian, and related rocks. Sing: lithophysa.

lithopone

A white pigment composed of a mixture of barium sulfate, zinc sulfide, and zinc oxide. *Hess*

lithospar

A naturally occurring mixture of spodumene and feldspar. *USBM, 6*

lithosphere

a. The solid outer portion of the Earth, as compared with the atmosphere and the hydrosphere. *AGI* b. In plate tectonics, an outer layer of great strength relative to the underlying asthenosphere for deformation at geologic rates. It includes the crust and part of the upper mantle and is about 100 km thick. *AGI*

lithotope

An area or surface of uniform sediment, sedimentation, or sedimentary environment, including associated organisms. CF: [lithofacies](#) *AGI*

lithotype

a. A rock defined on the basis of certain selected physical characters. *AGI* b. This term was proposed by C.A. Seyler in 1954 in a communication to the Nomenclature Subcommittee of the International Committee for Coal Petrology to designate the different macroscopically recognizable bands of humic coals. These bands were described by M.C. Stopes in 1919 as the four visible ingredients in banded bituminous coal. The following macroscopic bands are distinguished in humic coals: vitrain, clarain, durain, and fusain. *IHCP*

lithoxyl

Wood opal in which the original woody structure is observable; also petrified (opalized) wood. Also spelled lithoxyle; lithoxylite; lithoxylon. See also: [wood opal](#)

litidionite

Blue triclinic mineral, $\text{KNaCuSi}_4\text{O}_{10}$.

litmus

A blue dyestuff that turns red when treated by an acid and remains blue when treated by an alkali. *Crispin*

litmus paper

Absorbent paper dipped into a solution of litmus. Used to test solutions to determine whether they are acid or alkaline. *Standard, 2*

lit-par-lit

Having the characteristic of a layered rock, the laminae of which have been penetrated by numerous thin, roughly parallel sheets of igneous material, usually granitic. Etymol: French, bed-by-bed. CF: [injection gneiss](#); [injection metamorphism](#). *AGI*

Little Demon exploder

Trade name for a small exploder that employs a manually operated electromagnetic generator as its source of power. It is approved for firing single shots in gassy mines and is in widespread use. Syn: [one-shot exploder](#)

little giant

A jointed iron nozzle used in hydraulic mining. See also: [hydraulic monitor](#)

little winds

a. Corn. A sump. *Fay* b. An underground shaft, sunk from a horizontal drift. A winze. *Fay*

littoral

Of or pertaining to a shore. A coastal region. *Webster 2nd*

littoral current

A current generated by waves breaking at an angle to the shoreline and that usually moves parallel to and adjacent to the shoreline within the surf zone. See also: [longshore current](#)

littoral drift

a. Applied to the movement along the coast of gravel, sand, and other material composing the bars and beaches. *AGI* b. Material moved in the littoral zone under the influence of waves and currents. *AGI*

littoral zone

In mine subsidence, the zone that embraces the disturbed strata lying round about and outside the mined strata. *Briggs*

live boom

A shovel boom that can be lifted and lowered without interrupting the digging cycle. *Nichols, 2*

liveingite

A monoclinic mineral, $Pb_9 As_{13} S_{28}$. Syn: [rathite-II](#)

live load

a. In drilling, a variable load suspended on the hoist line. *Long* b. In mechanics, a load that is variable, as distinguished from a load that is constant. Also called dynamic load. *Long* c. A load on a structure that may be removed or its position altered. See also: [dead load](#) d. It may not be a dynamic load, and it does not include wind load or earthquake shocks. *Hammond*

live lode

A lode containing valuable minerals.

liverite

Utah. A variety of bitumen, probably elaterite. *Tomkeieff*

live roll grizzly

A device for screening and scalping that consists of a series of spaced rotating, parallel rolls so constructed as to provide openings of a fixed size. See also: [grizzly](#)

liver opal

See: [menilite](#)

liver ore

A miners' term for cinnabar.

liver pyrites

A massive form of iron sulfide (marcasite and sometimes also pyrite and pyrrhotite) having a dull liver-brown color.

liver rock

A sandstone that breaks or cuts as readily in one direction as in another and that can be worked without being affected by stratification; a dense freestone that lacks natural division planes. *AGI*

liverstone

A variety of barite that gives off a fetid odor when rubbed or heated.

livesite

A clay mineral intermediate to kaolinite and halloysite; a disordered kaolinite.

live steam

Steam direct from the boiler and under full pressure. Distinguished from exhaust steam, which has been deprived of its available energy. *Webster 3rd; Fay*

livingstonite

A monoclinic mineral, HgSb_4S_8 ; metallic lead gray.

lixiviant

A liquid medium that selectively extracts the desired metal from the ore or material to be leached rapidly and completely, and from which the desired metal can then be recovered in a concentrated form. *SME, 1*

lixiviation

See: [leaching](#)

lixivium

See: [leachate](#)

lizardite

A trigonal and hexagonal mineral, $Mg_3 Si_2 O_5 (OH)_4$; kaolinite-serpentine group; polymorphous with antigorite, clinochrysotile, orthochrysotile, and parachrysotile; forms a series with nepouite; in platy masses as an alteration product of ultramafic rocks; the most abundant serpentine mineral.

L-joint

An approx. horizontal joint plane in igneous rocks. Syn: [primary flat joint](#)

llano

A term for an extensive tropical plain, with or without vegetation, applied esp. to the generally treeless plains of northern South America and the Southwestern United States. Etymol: Spanish. *AGI*

load

a. See: [bit load](#) b. The act or process of placing an explosive in a borehole; also, the explosive so placed. See also: [charge](#)

load-bearing test

Load-bearing tests may be divided into two types, horizontal and vertical. Both types require excavation of a test pit into the region that is being investigated. This test pit must be excavated with a minimum of blasting, with particular attention to the bearing surfaces to avoid disturbance of the foundation rock. Load-bearing tests are being used to an increasing extent as a source of information for the design of heavily loaded surface structures and have supplanted seismic tests where the foundation rock is highly shattered. Syn: [horizontal load-bearing test](#)

load-bearing wall

A wall carrying any load put upon it together with its own weight and the wind load. *Hammond*

load binder

A lever that pulls two grabhooks together, and holds them by locking over center. *Nichols, 1*

load cell

Consists essentially of a hollow steel cylinder capped top and bottom by a steel plate. Strain gages are cemented on the inner wall of the cylinder in such a way that, as the cylinder is compressed, the strain gages will be distorted, with a resultant change in

resistance. This instrument is designed for measuring the load transferred from the hanging wall onto props or other units used for support. *Issacson*

load controller

A device to control the load and prevent spillage on a gathering conveyor receiving coal or mineral from several loading points or subsidiary conveyors. The device is a simplified weightometer and is installed on the main belt a short distance before the intermediate loading point. When the main belt is fully loaded, the scale registers this fact and causes a break in the electrical circuit of the intermediate conveyor, which is stopped. Immediately after that, the flood loading on the main conveyor is finished, and the load controller operates and starts up the subsidiary conveyor. *Nelson*

load dropper

See: [car runner](#); car dropper.

loaded filter

A graded filter placed at the foot of an earth dam or other construction, stabilizing the foot of the structure by virtue of its weight and permeability. *Hammond*

loaded hole

A drilled borehole in which explosive materials are loaded without priming the hole or including an initiator.

loaded wheel

A grinding wheel that has a glazed or clogged surface from particles of the material being ground. *Crispin*

loader

a. A mechanical shovel or other machine for loading coal, ore, mineral, or rock. Syn: [mechanical loader](#) scraper loader; shaker-shovel loader; shovel loader; cutter loader; gathering arm loader. *Nelson* b. The worker who loads coal, either by hand or by operating a loading machine, at the working face after the coal has been shot down; also keeps the working place in order. Syn: [loader operator](#) See also: [hand loader](#) c. In anthracite and bituminous coal mining, a laborer who shovels coal or rock, blasted from the working face in a mine, into cars or onto a conveyor belt from which cars are loaded at some point removed from the working place. May be designated as car loader; conveyor loader. Also called coal loader. d. In metal and nonmetal mining, one who shovels ore or rock, caved or blasted from the working face in a mine, into cars or onto a conveyor belt from which cars are loaded at some point removed from the working

place. *DOT* e. See also: [gun-perforator loader](#); [tractor shovel](#). Syn: [loader engineer](#); [loader runner](#); [loader operator](#)..

loader boss

a. In bituminous coal mining, a foreperson who supervises a crew of loaders loading coal onto a conveyor or into cars at working places in a mine. Also called loading boss; loading-unit boss. *DOT* b. In anthracite coal mining, a foreperson who supervises the loading of railroad cars with prepared coal. *DOT*

loader engineer

See: [loader](#); boxcar loader.

loader gate

A gate road equipped with a gate conveyor or a gate-end loader; the gate to which the face conveyors deliver their coal. *Nelson*

loader-off

Eng. A man who regulates the sending out of the full cars from a longwall stall, or gate. *Fay*

loader operator

See: [loader](#)

loader runner

See: [boxcar loader](#); loader.

load-extension curve

A line plotted from the results of a tensile test on metal, the loads being shown as ordinates and the elongations of the gage length as abscissae, thus relating the extension of the material under test to the applied load. See also: [stress-strain curve](#)

load factor

a. The ratio of the average compressor load during a certain period of time to the maximum rated load of the compressor. *Lewis* b. The ratio of the collapse load to the working load on a structure or section. *Taylor* c. In electric power engineering, the ratio of average electrical load to peak electrical load, usually calculated over a 1-h period. *Lyman* d. Average load carried by an engine, machine, or plant, expressed as a

percentage of its maximum capacity. *Nichols, 1* e. Ratio of average output during a period to maximum output during the period. Sometimes the ratio of output to maximum capacity. *Strock, 2*

load fold

A plication of an underlying stratum, believed to result from unequal pressure and settling of overlying material. *AGI*

load indicator

A measuring device used to indicate the load or weight suspended on a drill hoisting line or cable. *Long*

loading

In ion exchange, sorption onto resins of metallic ions from a pregnant solution in loading cycle. *Pryor, 3*

loading boom

a. In coal preparation, an overhanging steel chute for loading coal into rail wagons or lorries; usually capable of vertical movement as loading proceeds to minimize breakage. *Nelson* b. An adjustable conveyor used for lowering coal into cars with little breakage. Widely used for handling domestic sizes of bituminous coal. *Mitchell* c. A hinged portion of a conveyor that is designed to receive materials at a fixed level and to discharge them at varying levels; usually employed for loading coal into wagons. *BS, 5*

loading-boom operator

See: [conveyor man](#)

loading boss

See: [loader boss](#)

loading chute

a. A three-sided tray for loading or for transfer of material from one transport unit to another. See also: [chute](#) b. A gravity chute used to convey coal from the pocket or the screen to the railroad car. *Mitchell* c. Used to direct material onto a conveyor.

loading conveyor

Any of several types of conveyors adapted for loading bulk materials, packages, or objects into cars, trucks, or other conveyors. See also: [portable conveyor](#)

loading density

The number of pounds of explosive per foot length of drill hole. *Nelson*

loading equipment

Mechanical shovels or other machines singly or in combination used to load excavated or stockpiled materials into trucks, mine cars, conveyors, or other transportation or haulage units.

loading head

That part of a loading machine that gathers the coal or rock and places it on the machine's elevating conveyor.

loading-head man

One who operates the loading device of any type of conveyance equipped with a self-loading head for the mechanical underground loading of coal or other mineral. *Hess*

loading hopper

A hopper used to receive and direct material to a conveyor.

loading machine

a. A generic term for any power-operated machine for loading mined coal or any other material into mine cars, conveyors, road vehicles, or bins. b. A machine for loading materials, such as coal, ore, or rock, into cars or other means of conveyance for transportation to the surface of the mine. See also: [loader](#)

loading machine operator

A person who operates a mobile loading machine. Syn: [loading-machine runner](#)

loading-machine runner

See: [loading machine operator](#)

loading pan

A box or scoop into which broken rock is shoveled in a sinking shaft while the hoppit is traveling in the shaft. A small hoist is used to lift and discharge the pans into the hoppit on its return to the shaft bottom. See also: [box filling](#)

loading pick

Eng. A pick for cleaning coal. *Fay*

loading point

a. The point where coal or ore is loaded into cars or conveyors, where a conveyor discharges into mine cars, or where a wagon or lorry is loaded. See also: [transfer point](#) b. N. of Eng. Where coal is transferred from a mother gate or trunk belt conveyor into tubs. *Trist*

loading pole

A nonmetallic pole used to assist the placing and compacting of explosive charges in boreholes. *Atlas*

loading ramp

A surface structure, often incorporating storage bins, used for gravity loading bulk material into transport vehicles. *Nelson*

loading ratio

In quarrying, the number of tons of rock blasted per 1 lb (0.454 kg) of explosive. The harder the rock, the lower the ratio. See also: [explosive factor](#); [explosive ratio](#). Also called powder factor. *Streefkerk*

loadings

Eng. Pillars of masonry carrying a winding drum or pulley. *Fay*

loading shovel

A mechanical shovel able to operate as a forklift truck, a crane, or a loader. See also: [shovel loader](#)

loading station

A device consisting of one or more plates, or a hopper receiving and placing material on the conveyor belt for transport. When such a loading station is located at the tail end, it is

known as a tail-end loading station; when it is located along the intermediate section, it is known as an intermediate loading station. *NEMA, 2*

loading-unit boss

See: [loader boss](#)

loading weight

Weight of a powder that is filled into a container under stated conditions. See also: [bulk density](#)

load metamorphism

A type of static metamorphism in which pressure due to deep burial has been a controlling influence, along with high temperature. CF: [thermal metamorphism](#)

load-out

To load coal or rock that is to be taken out of the mine. *Fay*

loadstar

See: [lodestone](#)

loadstone

Alternate spelling of lodestone. See also: [lodestone](#)

load transfer

The weight of the strata above every excavation is largely transferred to the coal pillars or packs in the vicinity. Attempts are made to control and facilitate this load transfer in the yield-pillar system and in double packing. See also: [abutment](#); [pressure arch](#). *Nelson*

loam beater

A rammer used in making a loam mold. *Standard, 2*

loam cake

A disk of dried loam used to cover a loam mold; it has holes through which melted metal is poured and air escapes. *Standard, 2*

loaming

A method of geochemical prospecting in which samples of soil or other surficial material are tested for traces of the metal desired, its presence presumably indicating a near-surface orebody. *AGI*

Lobbe Hobel

An earlier type of rapid plow traveling at 70 ft/min (21.3 m/min) across the face. *Nelson*

Lobbert lagging

A lagging consisting of galvanized steel wire frames fastened to underground haulageway supports by special wire fasteners to provide a continuous lining. *Nelson*

lobs

Steps in a mine. *Hess*

local cell

A galvanic cell resulting from inhomogeneities between areas on a metal surface in an electrolyte. The inhomogeneities may be of physical or chemical nature in either the metal or its environment. See also: [cell](#) *ASM, I*

local current

A natural earth current of local origin, such as one arising from the oxidation of a sulfide deposit. A term used in electrical prospecting. *AGI*

local extension

The extension produced in a tensile test after the ultimate tensile stress has been passed and concentrated on part of the gauge length where a neck is formed. *CTD*

local indicator plant

Plants of wide geographic distribution having an affinity for absorbing certain metallic elements from the soil and which can be used in geochemical exploration to indicate presence of local concentrations of metals. CF: [universal plant indicator](#)

local metamorphism

Metamorphism caused by a local process; e.g., contact metamorphism or metasomatism near an igneous body, hydrothermal metamorphism, or dislocation metamorphism in a fault zone. CF: [regional metamorphism](#) *AGI*

local shear failure

Failure in which the ultimate shearing strength of the soil is mobilized only locally along the potential surface of sliding at the time the structure supported by the soil is impaired by excessive movement. *ASCE*

local unconformity

An unconformity that is strictly limited in geographic extent and that usually represents a relatively short period, such as one developed around the margins of a sedimentary basin or along the axis of a structural trend that rose intermittently while continuous deposition occurred in an adjacent area. It may be similar in appearance to, but lacks the regional importance of, a disconformity. CF: [regional unconformity](#)

local vent

A pipe or shaft to convey foul air from a plumbing fixture or a room to the outer air. *Crispin*

local ventilation

Ventilation of the drives and headings in mines by use of the pressure gradient of the main air current. *Stoces*

locatable minerals

A legal term that, for public lands in the United States, defines a mineral or mineral commodity that is acquired through the General Mining Law of 1872, as amended (30 U.S.C. 22-54, 161, 162, 611-615). These are the base and precious metal ores, ferrous metal ores, and certain classes of industrial minerals. Acquisition is by staking a mining claim (location) over the deposit and then acquiring the necessary permits to explore or mine. *SME, 1*

located

Delimited by having the boundaries ascertained and monumented on the ground, identified by having a notice of location posted upon the land, and further proclaimed to the public by having such notice of location recorded in the manner customary under the rules for recording mining claims. *Ricketts*

location

a. The act of fixing the boundaries of a mining claim, according to law. b. The claim itself. c. The act of taking or appropriating a parcel of mineral land. It includes the posting of notices, the record thereof when required, and marking the boundaries so that

they can be readily traced. The terms "location" and "mining claim" are synonymous, though a mining claim may consist of several locations. See also: [mining claim](#) d. Selecting or defining, on a map or in the field, the alignment of a road, rail track, or site of a shaft or mine; the actual route or site as fixed. See also: [location plan](#); [location survey](#). *Nelson* e. A spot or place where a borehole is to be drilled; a drill site. *Long*

location and patent

The location of a mining claim and patent for a mining claim are not governed by the same rules. The mining statutes expressly provide for the location of surface ground that must include the lode or claim as discovered; and a patent cannot grant any greater extent of surface ground than the location as made and marked by the surface boundaries. *Ricketts*

location notice

A written notice prominently posted on a claim, giving name of locator and description of its extent and boundaries. *AGI*

location plan

A map, drawn to a suitable scale, showing the proposed mine development, shafts, works, etc., in relation to existing surface features. See also: [location](#)

location survey

See: [location](#)

location work

Labor required by law to be done on mining claims within 60 days of location, in order to establish ownership. Syn: [assessment work](#) *Weed, 2*

loch

An unfilled cavity in a vein. See also: [vug](#)

lockage

Water consumed in passing from the upper reach of a canal when a vessel passes through a lock. *Hammond*

locked coil rope

Made of specially formed wires assembled in layers of alternate lay about a wire core, which gives a smooth rope, and the entire surface is available for resisting wear. Such ropes are used in the United States for track cables on aerial tramways, and in England as hoisting ropes in collieries. See also: [wire rope](#)

locked-cycle test

A series of repetitive batch tests in which the middling products generated in one test are added to the subsequent test to simulate the operations of a continuous process in which intermediate-grade materials are recycled. Each test is referred to as a "cycle." When equilibrium is reached in two or more cycles, depending on the sensitivity of the separation, the test is said to be "locked" or "balanced." *SME, 2*

locked particles

Particles of coal or ore consisting of two or more minerals. *Gaudin, 1*

locked test

In laboratory tests on small quantities of ore, a method in which any selected fraction of the product is added to a fresh batch of the sample, so that the cumulative effect of its retention can be studied under conditions that simulate a continuous process in which middlings are recirculated or partly used water or leach liquor is returned. See also: [cyclic test](#)

locked-wire rope

A rope with a smooth cylindrical surface, the outer wires of which are drawn to such shape that each one interlocks with the other and the wires are disposed in concentric layers about a wire core instead of in strands. Particularly adapted for haulage and rope-transmission purposes. *Zern*

locker

A short piece of round timber or iron rod for inserting between the spokes of a tram wheel to retard its movement. Also called lolley; sprag. *Nelson*

locking bolts

Bolts of any type used for locking parts in position. *Crispin*

locknut

The nut securing the feed gears in the feeding mechanism in a gear-feed swivel head on a diamond drill; also, any extra nut used to secure a principal nut. Also called jamnut; jambnut. *Long*

lock paddle

A sluice whereby a lock chamber is emptied or filled. *Hammond*

lockpin

Any pin or plug inserted in a part to prevent play or motion in the part so fastened. *Crispin*

lock sill

A raised portion of the floor of a lock chamber, forming a stop against which the lock gates bear when they are shut. *Hammond*

lockup clutch

A clutch that can be engaged to provide a nonslip mechanical drive through a fluid coupling. *Nichols, I*

locomotive

An electric engine, operating either from current supplied from trolley and track or from storage batteries carried on the locomotive. The locomotive may be powered by battery, diesel, compressed air, trolley, or some combination such as battery-trolley or trolley-cable reel. Used to move empty and loaded mine cars in and out of the mine. *BCI*

locomotive arches

Arches built of special refractory shapes, supported by water-circulating members.

locomotive brakeman

In anthracite and bituminous coal mining, one who works on trains or trips of cars hauled by locomotive or motor, as distinguished from rope haulage. Also called locomotive helper; locomotive patcher; motor brakeman; motor nipper; poleman. *DOT*

locomotive garage

An elongated recess in an intake airway of a mine for servicing locomotives. It contains two or three rail tracks (with pit space under one), good lighting, lifting equipment, oils,

benches, and tools. Where battery locomotives are used, the garage will serve as a charging station. Syn: [underground garage](#); [battery charging station](#). *Nelson*

locomotive gradient

The statutory maximum gradient for locomotive haulage is 1:15, but ordinarily the practical limit is about 1:25. Roads driven specially for locomotives are normally graded about 1:400 in favor of the load, unless a steeper gradient is required for drainage. *Nelson*

locomotive haulage

The transport of coal, ore, workers, and materials underground by means of locomotive-hauled mine cars. The locomotive may be powered by battery, diesel, compressed air, trolley, or some combination such as battery-trolley or trolley-cable reel. See also: [compressed-air locomotive](#); [haulage](#); [underground haulage](#). *Nelson*

locomotive helper

See: [locomotive brakeman](#)

locomotive pan brick

Shapes, used to build a burner enclosure, flash wall, and protecting walls for the water legs.

locomotive patcher

See: [locomotive brakeman](#)

locomotive resistance

The combined resistance caused by the friction of the journal and the wheel tread. It can range from 12 to 20 lb (5.44 to 9.07 kg), but for practical purposes may be taken as 15 lb (6.8 kg), as the locomotive represents only a small portion of the total tractive effort. *Kentucky*

lode

A mineral deposit consisting of a zone of veins, veinlets, disseminations, or planar breccias; a mineral deposit in consolidated rock as opposed to a placer deposit. Syn: [lead](#)
See also: [vein or lode claim](#)

lode claim

a. That portion of a vein or lode, and of the adjoining surface, that has been acquired by a compliance with the law, both Federal and State. Any dispute as to whether a given parcel of land is a vein or a lode is a question of fact to be determined by those experienced in mining, and it cannot be determined as a matter of law. *Ricketts* b. See: [vein or lode claim](#) c. A mining claim on an area containing a known vein or lode. CF: [placer claim](#)

lode plot

A horizontal lode.

lodestone

a. A variety of magnetite showing spontaneous magnetization because of preferential alignment of magnetic domains within a crystal or mass of crystals. If permitted to do so, lodestone will align its polarity with the geomagnetic field, e.g., floating on a piece of wood in water as an early type of compass for navigation. Also spelled loadstone. Syn: [leading stone](#); [Hercules stone](#); [loadstar](#). b. An intensely magnetized rock or ore deposit. See also: [magnetite](#)

lodestuff

Minerals included in a lode or vein, including economically valueless gangue. See also: [veinstuff](#)

lode tin

Tin ore (cassiterite) occurring in veins, as distinguished from stream tin or placer tin. CF: [stream tin](#)

lodge

a. A reservoir of any size used for holding water in a mine. A sump or standage. Also called lodgement. See also: [pound](#) b. Eng. A subterranean reservoir for the drainage of the mine made at the shaft bottom, in the interior of the workings, or at different levels in the shaft. *Fay* c. Scot. A cabin at the mine shaft for workers. *Fay* d. The room or flat at the shaft into which the pushers or trammers empty their loads. *Standard, 2* e. S Wales. The local branch of the coal miners' union. *Nelson* f. A pump room, near the pit bottom or other main pumping station. *Nelson*

lodgment level

Scot. A room driven from a level a short distance to the dip and used for storage of water. A sump. *Fay*

loellingite

See: [loellingite](#)

loess

A widespread, nonstratified, porous, friable, usually highly calcareous, blanket deposit (generally less than 30 m thick), consisting predominantly of silt with subordinate grain sizes ranging from clay to fine sand. It covers areas extending from north-central Europe to eastern China as well as the Mississippi Valley and Pacific Northwest of the United States. Loess is generally buff to light yellow or yellowish brown; often contains shells, bones, and teeth of mammals; and is traversed by networks of small narrow vertical tubes (frequently lined with calcium carbonate concretions) left by successive generations of grass roots, which allow the loess to stand in steep or nearly vertical faces. Loess is now generally believed to be windblown dust of Pleistocene age. CF: [adobe](#)
AGI

loeweite

Alternate spelling of loeweite.

Loewinson-Lessing classification

A chemical classification of igneous rocks (into the four main types--acid, intermediate, basic, and ultrabasic) based on silica content. *AGI*

Lofco car feeder

An appliance for controlling mine cars at loading points, for marshalling trains, and for loading cars into cages, tipplers, and other points. It consists of a carrying chain running between the rails. The dummy or live axles of the cars are held firmly by the chain's profile, and an overload slipping action is provided. See also: [feeder](#)

lofthead

An overhead cavity caused by a fall of roof. *Nelson*

lofting

a. S. Wales. An old or disused heading over the top of another one. *Fay* b. N. of Eng. See: [lacing](#) c. Scot. Wood filling up vacant space on top of crowns or gears. *Fay* d. Timbers, usually old, laid across the caps of steel frames or sets in a working to support the roof. *Webster 2nd*

log

The record of, or the process of recording, events or the type and characteristics of the rock penetrated in drilling a borehole, as evidenced by the cuttings, core recovered, or information obtained from electric, sonic, or radioactivity devices. Also called logged; logging. See also: [well log](#)

Logan slabbing machine

This machine consists essentially of two horizontal cutting chains, one working at the base of the coal seam and the other at a distance from the floor; a third cutter chain is mounted vertically on a shearing jib at right angles to the other two and shears off the coal at the back of the cut. The upper jib breaks the coal up into loadable size, and a short conveyor transfers it to the face conveyor. Similar in principle to the A.B. Meco-Moore cutter-loader. *Mason*

logbook

A book in which the official record of events or the type and characteristics of the rock penetrated by the borehole is entered. Also called journal; journal book. CF: [log](#)

logging chain

A chain composed of links of round bar pieces curved and welded to interlock, with a grabhook at one end and a round hook at the other. *Nichols, I*

logging tongs

Tongs with end hooks that dig in when the tongs are pulled. *Nichols, I*

log washer

A slightly slanting trough in which revolves a thick shaft or log, carrying blades obliquely set to the axis. Material is fed in at the lower end, water at the upper. The blades slowly convey the lumps of material upward against the current, while any adhering clay is gradually disintegrated and floated out the lower end. *Liddell*

Lohmannizing

A process by which a protective zinc coating is amalgamated to a base-metal sheet. *Liddell*

loipon

A term proposed by Shrock (1947) for a residual surficial layer produced by intense and prolonged chemical weathering and composed largely of certain original constituents of the source rock. Typical accumulations of loipon are the gossans over orebodies, bauxite

deposits in Arkansas, terra rossa deposits of Europe, and duricrust of Australia. Etymol: Greek, residue. Adj: loiponic. *AGI*

lok batanite

Variety of bituminous material derived from a mud volcano. *Tomkeieff*

loellingite

a. An orthorhombic mineral, $2[\text{FeAs}_2]$; basal cleavage; metallic; sp gr, 7.45; in quartz veins; a source of arsenic. Also spelled loellingite, lollingite. Syn: [leucopyrite](#); [glaucopyrite](#); [geyerite](#). b. The mineral group costibite, loellingite, nisbite, rammelsbergite, safflorite, and seinajokite.

loma

A term used in the Southwestern United States for an elongated, gentle swell or rise of the ground (as on a plain), or a rounded, broad-topped, inconspicuous hill. Etymol: Spanish, hillock, rising ground, slope. *AGI*

lomonosovite

A triclinic mineral, $\text{Na}_2 \text{Ti}_2 \text{Si}_2 \text{O}_9 \cdot \text{Na}_3 \text{PO}_4$; in alkalic pegmatites and sodalite syenites; Kola Peninsula, Russia.

long awn

A direction of less than 45 degrees to the main natural line of cleat or cleavage in the coal. Also spelled horn. CF: [short awn](#)

long clay

A highly plastic clay. Syn: [fat clay](#)

long column

A column that fails by buckling, as distinct from crushing, when overloaded. CF: [short column](#)

long hole

Underground boreholes and blastholes exceeding 10 ft (3.05 m) in depth or requiring the use of two or more lengths of drill steel or rods coupled together to attain the desired depth. CF: [long-hole drill](#)

long-hole blasting

Method of blasting, employing diamond drills or extension steel drills with tungsten carbide bits, applied to ore-winning operations where conditions are suitable. The essential requirements from the practical and economic points of view are (1) a large orebody or wide regular vein, (2) a strong country rock, and (3) a good parting between the ore and the rock to avoid undue contamination of the ore. Holes to take cartridges up to 2 in (5.1 cm) in diameter may be drilled. Since the drilling of long holes is relatively expensive, high-strength, high-density gelatinous explosives are usually employed so that the maximum burden can be placed on each hole. For this reason also, the largest diameter of explosive cartridge that can be loaded into the holes should be used to obtain the greatest possible loading density. *McAdam, 2*

long-hole drill

A rotary- or percussive-type drill used to drill underground blastholes to depths exceeding 3 m. CF: [long hole](#)

long-hole infusion

There are two methods: (1) Long holes are drilled parallel to the coal face. Charges of Hydrobel explosive are spaced along the holes and fired under water pressure. The object is to loosen the coal and allay the dust along the entire face in one operation. See also: [pulsed infusion shot firing](#) about 40 ft (12.2 m) long in the line of advance of the workings. The holes are not charged with explosive and fired but only subjected to water pressure up to 3,000 psi (20.7 MPa) to loosen the coal and allay the dust in the cleats. The holes may be drilled during weekends and of a length about equal to the weekly advance of the face. *Nelson*

long-hole jetting

A hydraulic mining system consisting essentially of drilling a hole down the pitch of the vein, replacing the drilling head with a jet cutting head, and then retracting the drill column with the jets in operation to remove the coal. Coal cut loose by the jets drops to a flume drift and is carried by water to a screening and loading plant. *Coal Age, 3*

longitudinal fault

A fault whose strike is parallel with that of the general structural trend of the region. *AGI*

longitudinal fissure

A fissure that is parallel with the strike of the deposit. *Stoces*

longitudinal joint

A steeply dipping joint plane in a pluton that is oriented parallel to the lines of flow. Syn: [S-joint](#); [bc-joint](#). *AGI*

longitudinal trace

A trace on the ground motion record representing the component of motion in a horizontal plane and in the direction of the seismic wave travel direction. Syn: [radial axis](#)

longitudinal valley

See: [strike valley](#)

longitudinal velocity

See: [modulus of elasticity](#)

longitudinal wave

An elastic wave in which the displacements are in the direction of wave propagation. Syn: [P wave](#); [primary wave](#). *AGI*

long (lazy) flames

Partially aerated flames, particularly when aerated in stages. Nonturbulent flow. *Francis, 2*

Longmaid-Henderson process

Method of recovering copper from burned sulfides, by roasting with rock salt and using the issuing gases, after condensation, to leach the chloridized residue. Copper then dissolved is precipitated from the leach liquor onto scrap iron. *Pryor, 3*

long piggyback conveyor

An appliance to provide a constant flow of coal from a continuous miner to the main haulage system. It consists of a conveyor slung under the tail end of the loader and running on a bogey straddling the heading conveyor so that it can telescope over it. *Nelson*

long-pillar work

Coal winning in three stages in underground mining. First, large pillars are left as the face is advanced by means of drives. Second, parallel drives connect these drives and form large blocks. Finally, the pillars so formed are mined. *Pryor, 3*

long-range order

The property of crystal structures wherein atomic particles show periodicity over large numbers of atomic diameters and each atomic particle has specific relationships with lattice points. CF: [short-range order](#); [disorder](#). See: [superlattice](#); superstructure.

long run

To fill or nearly fill the core barrel with core on a single trip into the borehole. CF: [short run](#)

long-running thermal precipitator

A dust-sampling instrument designed by the Mining Research Establishment of Great Britain that operates over periods of up to 8 h and collects only respirable dust that is selected aerodynamically during the sampling process. The respirable fraction is selected by drawing the dust through a horizontal duct elutriator that simulates the acting principle of the human nose and respiratory passages in that the larger and faster-falling particles are caught by the processes of settlement and impingement. *Roberts, 1*

long section

A section of land that contains more than 640 acres (256 ha). *Williams*

long-shank chopping bit

A steel chisel-edged chopping bit having a longer and heavier-than-normal shank, designed to give added weight and directional stability when chopping an angle hole through overburden. *Long*

longshore current

A current in the surf zone, moving generally parallel to the shoreline, generated by waves breaking at an angle with the shoreline. Syn: [littoral current](#)

longshore drift

See: [beach drift](#)

long tom

A trough for washing gold-bearing earth. It is longer than a rocker. *Webster 3rd; Fay*

longues tailles

Fr. See: [longwall](#)

longwall

a. A long face of coal. *Stoces* b. A method of working coal seams believed to have originated in Shropshire, England, toward the end of the 17th century. The seam is removed in one operation by means of a long working face or wall, thus the name. The workings advance (or retreat) in a continuous line, which may be several hundred yards in length. The space from which the coal has been removed (the gob, goaf, or waste) either is allowed to collapse (caving) or is completely or partially filled or stowed with stone and debris. The stowing material is obtained from any dirt in the seam and from the ripping operations on the roadways to gain height. Stowing material is sometimes brought down from the surface and packed by hand or by mechanical means. See also: [longwall advancing](#); [longwall retreating](#). Also known as longwork; Shropshire method; combination longwall; and Nottingham or Barry system. Syn: [combination longwall](#) *Nelson*; *Fay* c. Opposite of shortwall. See also: [longwall mining](#)

longwall advancing

A system of longwall working in which the faces advance from the shafts toward the boundary or other limit lines. In this method, all the roadways are in worked-out areas. See also: [longwall](#)

longwall coal cutter

Compact machine, driven by compressed air or electricity, that cuts into the coal face with its jib at right angles to its body. See also: [longwall machine](#)

longwall machine

A power-driven machine used for shearing coal on relatively long faces. See also: [longwall coal cutter](#)

longwall miner

In bituminous coal mining, one who extracts coal from seams by a specialized method known as longwall mining. In this method, all coal is extracted as the work progresses, and the roof caves behind the working face.

longwall mining

a. A full-extraction method for mining large panels of coal. b. A system of mining in which all the minable coal is recovered in one operation. *Hudson* c. A method of mining flat-bedded deposits, in which the working face is advanced over a considerable width at one time. See also: [longwall](#) *Pryor*, 3

longwall peak stoping

A method of underland stoping in which rapid advance of the face is maintained, and by working the faces at an angle of 60 degrees to the strike, the peak travels down the dip at twice the rate of the face advance. This method was introduced on the Witwatersrand for stoping below 5,000 ft (1,524 m), where rapid face advance resulting from the closer spacing of holes reduces the incidence of rock bursts. *Higham*

longwall pillar working

The extraction of the coal pillars formed by a pillar method of working, by a longwall face, which can be advancing or retreating. Where the crush is not excessive, this method is more efficient and often safer than extracting each pillar individually. *Nelson*

longwall retreating

A system of longwall working in which the developing headings are driven narrow to the boundary or limit line and then the coal seam is extracted by longwall faces retreating toward the shaft. In this method, all the roadways are in the solid coal seam and the waste areas are left behind. See also: [longwall](#); [mechanized heading development](#). *Nelson*

lonkey

Eng. The best Yorkshire sandstone, Rossendale District. CF: [lunker](#) *Arkell*

loodwin

Burma. Ruby mines in which fissures, caves, and hollows in the limestone, filled with detritus from its disintegration, are followed, and their contents, often cemented or buried under recent travertine, are extracted and washed. *Hess*

looking-glass ore

Lustrous hematite, Fe_2O_3 . Specular iron ore; iron glance. Mohs hardness, 6; sp gr, 5.2. *Pryor, 3*

lool

A vessel to receive ore washings. *Standard, 2*

loom

Eng. A variant of loam, esp. in the Thames Valley; applied to Thanet sand and dredged mud used for cement. *Arkell*

loop circuit

A term used when two positive wires are installed in divergent directions but later come close enough together to be connected. They then form a series or so-called loop circuit. CF: [parallel blasting circuit](#) *Kentucky*

loop drag

An eye at the end of a rod through which tow is passed for cleaning boreholes.

looper

In ore dressing, smelting, and refining, a laborer who attaches loops (folded copper sheets or strips) to starting sheets so that sheets can be suspended in electrolytic tanks. Also called looper puncher. *DOT*

loop haulage

A system used when a continuous supply of cars must be supplied to a loading station. In this system, the empty cars are simply coupled to one end of the standing cars, which are pulled forward by a hoist with the rope attached to a clip fixed to the side of the cars. The rope is pulled back by hand for a distance of three or four car-lengths, and the process is repeated frequently as the end of the rope approaches the hoist. *Wheeler, H.R.*

looping

The running together of ore matter into a mass when the ore is only heated for calcination. CF: [loup](#)

looping mill

Consists of one or more trains of alternating two-high stands. As the piece being rolled emerges from one stand, it is turned through 180 degrees and entered into the next stand and similarly into the succeeding stands. In some mills, the looping is performed by hand, while in others it is done mechanically by means of repeaters or looping channels. *Osborne*

loop-type pit bottom

A pit bottom layout in which the loaded cars are fed to the cage from one side only and the empties are returned to the same side by means of a loop roadway. The loop arrangement provides more standage room for cars and is more suitable for multideck cages. When the coal reaches the pit bottom from two sides, a double-loop layout may be adopted. *Nelson*

loopway

A double-track loop in a main single-track haulage plane at which mine cars may pass. A loopway located close to the face or loading machine enables a train of empty cars to be stationed in the loop, while the loaded cars are run straight out on the main single track. *Nelson*

loose

Loose, or crick, is a vertical joint affecting only the lower strata in a oolite quarry, Northamptonshire, U.K. Syn: [crick](#)

loose end

a. A gangway in longwall working, driven so that one side is solid ground while the other opens upon old workings. CF: [fast end](#) b. Coal prepared by cutting, or that coal that is certain to be loosened by a shot. *Fay* c. The limit of a stall next to the goaf, or where the adjoining stall is in advance. *Fay*

loose goods

Industrial diamonds as purchased from a diamond supplier in bulk. CF: [loose stone](#)

loose ground

a. Broken, fragmented, or loosely cemented bedrock material that tends to slough from sidewalls into a borehole. Also called broken ground. CF: [breccia](#) b. As used by miners, rock that must be barred down to make an underground workplace safe; also fragmented or weak rock in which underground openings cannot be held open unless artificially supported, as with timber sets and lagging. CF: [broken ground](#) c. A shattered rock formation, or a formation crisscrossed with numerous, closely spaced, uncemented joints and cracks. *Long*

loose-needle traversing

A method of traversing in which the magnetic bearings of survey lines are separately obtained by reference to the magnetic needle. *BS, 7*

loosening bar

An implement for loosening a pattern from a sand mold. *Standard, 2*

loose rails

Aust. Rails that can be lifted and placed across a permanent line when desired to run skips across it. *Fay*

loose rock

See: [loose ground](#)

looses

Vertical joints affecting only the lower strata in the oolite quarries, Northamptonshire, U.K. Also called cricks.

loose stone

a. A diamond insecurely bonded in a bit matrix. *Long* b. A diamond detached from a bit and lying on the bottom of a drill hole. *Long* c. An unset industrial diamond. CF: [loose goods](#)

loose yards

Measurement of soil or rock after it has been loosened by digging or blasting. *Nichols, I*

loosing

S. Staff. Lowering a cage, etc., into a shaft or pit. *Fay*

loparite

A possibly orthorhombic mineral, $(\text{Ce,Na,Ca})_2(\text{Ti,Nb})_2\text{O}_6$; perovskite group; pseudocubic; Kola Peninsula, Russia.

lopezite

A triclinic mineral, $\text{K}_2\text{Cr}_2\text{O}_7$; forms minute orange-red balls in nitratine in Chile.

lopolith

A large, concordant, typically layered igneous intrusion, of planoconvex or lenticular shape, that is sunken in its central part owing to sagging of the underlying country rock. Syn: [funnel intrusion](#)

loran

Any of various long-range radio position-fixing systems by which hyperbolic lines of position are determined by measuring the difference in arrival times of synchronized

pulse signals from two or more fixed transmitting radio stations of known geographic position. Loran fixes may be obtained at a range of 1,400 nmi (2,593 km) at night. CF: [shoran](#) Etymol: long-range navigation. *AGI*

lorandite

A monoclinic mineral, TlAsS_2 ; red; forms modified tabular or prismatic crystals with one perfect cleavage.

loranskite

A mineral, $(\text{Y,Ce,Ca})\text{ZrTaO}_6$ (?).

lorettoite

A tetragonal artifact, $\text{Pb}_7\text{O}_6\text{Cl}_2$.

lorry

a. York. A movable bridge over a shaft top upon which the bucket is placed after it is brought up for emptying. *Fay* b. A car used on mine tramways, or at coke ovens. *Fay* c. Gr. Brit. A long wagon having a very low platform and four very small wheels. *Standard, 2*

Los Angeles abrasion testing machine

A machine for measuring abrasion resistance or toughness. It consists of a closed hollow steel cylinder 28 in (71.12 cm) in diameter and 20 in (50.8 cm) long mounted for rotation with its axis horizontal. The sample being tested and a charge of steel spheres are tumbled during rotation by an internal shelf. *AIME, 1*

lose

a. Eng. To work a seam of coal, etc., up to where it dies out or is faulted out of sight. This is called "losing the coal." *Fay* b. To be unable to work out a pillar on account of thrust, creep, gob fire, etc. *Fay* c. A pit shaft is said to be "lost" when it has run in or collapsed beyond recovery. *Fay*

loseyite

A monoclinic mineral, $(\text{Mn,Zn})_7(\text{CO}_3)_2(\text{OH})_{10}$; soft; bluish white; at Franklin, NJ.

losing iron

See: [furnace losing-the-iron](#)

loss of vend

Difference between weight of raw coal and that of salable products, expressed as a percentage. *Pryor, 3*

loss on ignition

As applied to chemical analyses, the loss in weight that results from heating a sample of material to a high temperature, after preliminary drying at a temperature just above the boiling point of water. The loss in weight upon drying is called free moisture; that which occurs above the boiling point of water, loss on ignition. *Harbison-Walker*

lost circulation

The condition during rotary drilling when the drilling mud escapes into porous, fractured, or cavernous rocks penetrated by the borehole and does not return to the surface. *AGI*

lost closure

The amount of closure of the walls of a stope that occurs before supports have been placed and begin to oppose that closure. *Spalding*

lost core

The portion of a core that is not recovered. It may be the soft rock that crumbles and falls from the core barrel or the solid piece or pieces of core that drop to the bottom of a borehole after slipping out of the core barrel while the drill string is being pulled from the drill hole. *Long*

lost corner

A corner whose position cannot be determined, beyond reasonable doubt, either from traces of the monument, or by reliable testimony relating to it; and whose location can be restored only by surveying methods and with reference to interdependent existent corners, by mutual agreement of abutters, or by court decision. *Seelye, 2*

lost hole

A borehole in which the target could not be reached because of caving, squeezing, loose ground, or inability to recover lost tools or junk. *Long*

lost level

Corn. A level or gallery driven with an unnecessarily great departure from the horizontal.
Fay

lost river

a. A dried-up river in an arid region. b. A river in a karst region that drains into an underground channel.

lost thread method

See: [string survey](#)

lost water

See: [lost circulation](#)

loudspeaker face telephone

An intrinsically safe public address system developed for coal face communications. Up to 20 individual units, each containing a telephone handset and speaker, can be coupled together along the face and gate roads by a five-way cable. Instructions, requests, etc., made into any one of the handsets are broadcast simultaneously over all the loudspeakers. See also: [signaling system](#)

loup

The pasty mass of iron produced in a bloomery or puddling furnace. CF: [looping](#)

loupe

Any small magnifying glass or lens mounted for use in the hand, held in the eye socket, or attached to spectacles and used to study minerals and rocks. Also spelled lupe, loup, loop.

louver cleaner

In ore dressing, smelting, and refining, one who trims carbon anodes and cleans louvers to minimize electrical resistance in magnesium refining cells. *DOT*

louvers

Overlapping and sloping slats arranged to prevent entrance or exit of a portion of an air stream. Louvers are sometimes used as a regulator in place of a sliding or other adjustable door.

love arrows

See: [fleches d'amour](#)

love stone

See: [aventurine](#)

Love wave

a. A transverse wave propagated along the boundary of two elastic media that both have rigidity; i.e., both media must be capable of propagating transverse waves. *AGI* b. A surface seismic wave in which the particles of an elastic medium vibrate transverse to the direction of the wave's travel, with no vertical component. *AGI* c. A type of surface wave having a horizontal particle motion that is transverse to the direction of propagation. Its velocity depends only on density and rigidity modulus, and not on bulk modulus. It is named after A.E.H. Love, the English mathematician who discovered it. Syn: [Q wave](#); Querwellen wave. *AGI*

lovozerite

The mineral group imandrite, kazakovite, koashvite, lovozerite, petarasite, tisinialite, and zirsinalite.

low

a. A former stream channel in a coalbed, filled with sandstone, clay, and shale. CF: [cutout](#) b. A general term for such features as a structural basin, a syncline, a saddle, or a sag. CF: [high](#) c. Indicates that a crystal structure is the low-temperature dimorph for the crystal compound.

low-alumina silica brick

Special brick in which the total alumina, titania, and alkali are significantly lower than in regular silica brick.

low-angle fault

A fault with a dip of 45 degrees or less. CF: [high-angle fault](#) *AGI*

low bed

A machinery trailer with a low deck. *Nichols, I*

low blast

A blast delivered to a smelting furnace at low pressure. *Standard, 2*

low coal

Coal occurring in a thin seam or bed. *Fay*

low-deflagrating explosive

Another name for black powder. *Kentucky*

Lowden drier

Mechanized drying floor used for ores or concentrates. Reciprocating rakes move the material gently over steel plates heated from below. *Pryor, 3*

low-density explosive

Explosive designed for use in mining, where it is required to blast with the least amount of shattering and/or to reduce explosive cost. The density of ordinary explosives may be decreased by (1) loose packing, (2) an alteration in the granular state of the ammonium nitrate, and (3) the impregnation of woodmeal or suitable substitutes. By decreasing the density of an explosive the same weight of explosive is used, but owing to its greater bulk the explosive effects are distributed over a greater area, thus producing a less shattering effect.

low-discharge ball mill

One with a substantial downslope between the trunnion-high feed end and the peripheral discharge end. This facilitates the brisk movement of ore through the mill. *Pryor, 3*

low doors

Scot. The lowest of two or more landings in a shaft. *Fay*

low-duty fire clay brick

A fire-clay refractory having a pyrometric cone equivalent not lower than 19 and a minimum modulus of rupture of 600 psi (4.1 MPa). *ARI*

loeweite

A trigonal mineral, $\text{Na}_{12} \text{Mg}_7 (\text{SO}_4)_{13} \cdot 15\text{H}_2 \text{O}$; white; water soluble. Also spelled loeweite.

lower

Pertaining to rocks or strata that are normally below those of later formations of the same subdivision of rocks. The adj. is applied to the name of a chronostratigraphic unit (system, series, stage) to indicate position in the geologic column and corresponds to early as applied to the name of the equivalent geologic-time unit; e.g., rocks of the Lower Jurassic System were formed during the Early Jurassic Period. The initial letter of the term is capitalized to indicate a formal subdivision (e.g., Lower Devonian) and is lowercased to indicate an informal subdivision (e.g., lower Miocene). The informal term may be used where there is no formal subdivision of a system or of a series. CF: [upper](#); [middle](#). *AGI*

lower break

The lower bend of either a terrace or a monocline, also known as the foot or the lower change of dip. See also: [foot](#)

lowering conveyor

Any type of vertical conveyor for lowering objects at a controlled speed. See also: [arm conveyor](#); [suspended tray conveyor](#); vertical reciprocating conveyor.

lowering skips

Used in some river tipples to let the coal down into the barges. Also known as weigh pans. *Mitchell*

lowering tongs

Long-handled, plierlike device similar to a certain type of blacksmith tongs used to handle wash or drill rods in place of a safety clamp in shallow borehole drilling. Syn: [brown tongs](#); [knife dog](#).

lower leaf

Scot. The lower portion of a seam of coal that is worked in two sections or leaves. *Fay*

lower limit of flammability

The smallest quantity of combustible gas that, when mixed with a given quantity of air (or oxygen), will just support a self-propagating flame. *Francis, 2*

lower liquid limit

In soil mechanics, the moisture content at which soil changes from plastic to liquid. *Pryor, 3*

lower plastic limit

Moisture content of soil at which it changes from a plastic to a semisolid state. *Pryor, 3*

lower plate

See: [footwall](#)

lowest visible red-heat

Common division of the color scale--about 887 degrees F (475 degrees C).

low explosive

An explosive in which the change into the gaseous state is effected by burning and not by detonation as with high explosives. Blasting powder (black powder or gunpowder) is the only low explosive in common use. It requires no detonator but is ignited by means of a safety fuse. Also called propellant. *Nelson*

low-freezing dynamites

Dynamites made by replacing part of the nitroglycerin of straight dynamites with some ingredient to render the dynamite incapable of freezing under ordinary conditions of use. The freezing point is depressed by adding nitro substitution compounds, such as nitrated sugars, nitrotoluene, nitrated polymerized glycerin, or ethylene glycol dinitrate. *Lewis*

low-freezing explosive

See: [polar explosive](#)

low gear

a. See: [slow gear](#) b. Mining and/or drilling operations carried on at a leisurely pace and at less-than-normal output per worker shift. *Long* c. When applied to a screwfeed-type drill, the pair of feed gears in the feed mechanism that advances the bit the least amount for each revolution of drill drive rod and/or coupled drill stem. d. When applied to speed at which the drill motor rotates the drill stem, the transmission-gear position giving the lowest number of bit revolutions per minute per engine revolutions per minute; corresponds to low gear in an automobile.

low-grade

a. An arbitrary designation of dynamites of less strength than 40%. It has no bearing on the quality of the materials, as they are of as great purity and high quality as the ingredients in a so-called high-grade explosive. *Fay* b. Sometimes applied to poor- or

low-quality drill diamonds. *Long* c. Pertaining to ores that have a relatively low content of metal compared with other richer material from the same general area. Also designates coal high in impurities. Low-grade metamorphism refers to metamorphism at a relatively low temperature and/or pressure. CF: [high-grade](#) *Stokes* d. See: [lean ore](#)

low-grade coal

Combustible material that has only limited uses owing to undesirable characteristics (for example, ash content or size). *BS*, 5

low-heat cement

A cement in which there is only limited generation of heat during setting, achieved by modifying the chemical composition of normal portland cement. *Hammond*

low-heat-duty clay

A clay that fuses between 1,520 degrees C and 1,590 degrees C. *Osborne*

low-iron magnesite brick

A burned magnesite brick, containing 90% or more of magnesia, and 1.5% to 2.5% iron oxide.

low level

Scot. The drift or working that is farthest to the dip; also called laigh level.

low-nitrate barren

In uranium leach treatment, the bulk of the barren solution after some 75,700 L of high-nitrate solution have been run through the ion-exchange (IX) column. Low in nitrate and uranium and contains some backwash water. *Pryor*, 3

low powders

Explosives containing a small portion of nitroglycerin and a base similar to blasting powder. Intermediate between blasting powder and dynamite in action. See: [low-grade](#)

low-pressure air stower

The filling of the waste by means of compressed-air blower. The blower is usually located close to the stowing machine and operated at a pressure below 15 psi (103.4 kPa). For light duties, only one blower is required to operate one stowing machine. For heavier work, or very long lengths of pipeline, two blowers are used in series. The

maximum horsepower for two blowers in series does not commonly exceed 200 (149 kW) at large installations. See also: [pneumatic stowing](#)

low-pressure limit

The lowest pressure at which flame propagation can be obtained through a combustible-oxidant system at a fixed temperature in a particular chamber. *Van Dolah*

low quartz

Low-temperature quartz; when formed below 573 degrees C, SiO₂ tetrahedra are less symmetrically arranged than at higher temperatures; inversion is reversible. Syn: [alpha quartz](#)

low-rank coals

See: [rank](#)

low-rank metamorphism

Metamorphism that is accomplished under conditions of low to moderate temperature and pressure. CF: [high-rank metamorphism](#)

low red-heat

Temperature of iron at which redness is observable in subdued daylight (525 to 700 degrees C). Bright red heat is in the range 700 to 1,000 degrees C and is followed by orange at 1,000 degrees C, white at 1,300 degrees C, and blue-white at 1,500+ degrees C. *Pryor, 3*

low shaft furnace

A short shaft-type blast furnace that can be used to produce pig iron and ferroalloys from low-grade ores, using low-grade fuel. The air blast is often enriched with oxygen. It can also be used for making a variety of other products such as alumina, cement-making slags, and ammonia synthesis gas. *ASM, 1*

low-temperature carbonization

Carbonization carried out at a low temperature (between 500 degrees C and 700 degrees C). During the process, the smoke-producing compounds are driven off as tars and oils and collected as valuable byproducts, leaving a coke with about 10% volatile matter. The coke yield is about 1,400 lb/st (700 kg/t) and is used as a domestic fuel. *Nelson*

low-temperature coke

A solid fuel produced by the low-temperature carbonization of coal. *Nelson*

low-temperature incineration method

In this method for the determination of incombustible matter, the mine roadway dust (dust containing carbonates) is incinerated at a temperature of not less than 500 degrees C and not more than 530 degrees C until it is constant in weight. This temperature is sufficient to complete the combustion of the organic matter in the dust, but is not high enough to decompose the carbonates. However, this method is unsuitable for dust containing magnesium carbonate because this substance decomposes below 500 degrees C, and therefore a low result for the incombustible matter would be obtained. The moisture content of the sample may be calculated so that an allowance can be made for the weight loss attributed to moisture. *Cooper*

low-tension detonator

A detonator requiring a minimum current of 1 A for firing and having a resistance of about 1 Omega . *BS, 12*

low-terrace drift

Aust. Gravel and shingle in terraces.

low velocity

See: [velocity](#)

low-velocity-layer correction

See: [weathering correction](#)

low volatile bituminous coal

The rank of coal, within the bituminous class of Classification D 388, such that, on the dry and mineral-matter-free basis, the volatile matter content of the coal is greater than 14% but equal to or less than 22% (or the fixed carbon content is equal to or greater than 78% but less than 86%), and the coal commonly agglomerates. CF: [bituminous coal](#)
ASTM

low voltage

In coal mining, 660 V or less. Also called low potential. CF: [high voltage](#); [medium voltage](#). *Federal Mine Safety*

low working voltage

Low working voltage in coal mines is one of the many conditions that must be given continual attention. Loss of voltage means a proportional loss in power. Since the quantity of dc power is obtained by multiplying the number of amperes times the number of volts, it follows that for a given amount of power if the volts are lowered the amperes are increased, and the increase in amperes results in an increase in power loss in the mine circuit. Lower operating voltages result in heavier currents in the dc motor circuits, thus heating the motors, cables, and circuit wiring and causing loss in motor speed, inefficient operation, and increased maintenance cost. *Kentucky*

lozenge

A form of cut stone produced by the meeting of the skill and star facets on the bezel of brilliants; or by the meeting of the facets in the horizontal ribs of the crown. *Hess*

lpb

To determine the horizontal compass direction that a borehole is trending at a specific depth by means of one of several borehole surveying instruments. *Long*

LP delays

Long period delays used in delay blasting underground and generally available in intervals of seconds.

lublinite

A fibrous variety of calcite.

lubrication

The act of applying lubricants. There are two main types of lubricants, solid and liquid. Examples of the solid type are graphite, French chalk, and sulfur. Liquid lubricants are by far the more important, and among these, oils and greases are the most common. *Crispin; Morris*

Luce and Rozan process

A modification of the Pattinson process whereby the molten lead is stirred by the injection of steam; used in desilverizing base bullion. *Fay*

lucianite

An expansive clay of the smectite(?) group at Santa Lucia, near Mexico, D.F.

lucid attrite

Variety of attritus that is transparent in thin section. *Tomkeieff*

lucinite

A variety of variscite from Lucin, UT.

Luckiesh-Moss visibility meter

This instrument has been used over a wide range of lighting applications. It consists of a pair of similar photographic gradient filters, which increase in density as they are rotated together before the eyes. The filters therefore reduce the apparent brightness of the observed field and at the same time lower the contrast between the object of view and its background. *Roberts, 2*

luckite

A manganoan variety of melanterite at the Lucky Boy Mine, Salt Lake County, UT.

lucky stone

See: [stauroelite](#)

Lueders line

Surface markings that result from strain. Sometimes called Hartmann lines; Piobert lines; stretcher strains. See also: [slip line](#)

ludlamite

A monoclinic mineral, $(\text{Fe}, \text{Mg}, \text{Mn})_3 (\text{PO}_4)_2 \cdot 4\text{H}_2\text{O}$; green; in small tabular crystals at Truro, Cornwall, U.K. Syn: [lehrnerite](#)

ludwigite

An orthorhombic mineral, $\text{Mg}_2 \text{FeBO}_5$; forms a series with vosenite; forms finely fibrous masses. Includes magnesioludwigite, ferroludwigite. Syn: [collbranite](#)

lue

Prov. Eng. To sift; a miner's term. *Standard, 2*

lueneburgite

Alternate spelling of lueneburgite.

lueshite

A monoclinic mineral, NaNbO_3 ; perovskite group; pseudocubic; dimorphous with natroniobite. Syn: [igdloite](#)

luffing cableway mast

A cableway tower hinged at the base and sustained by adjustable guys so that its inclination can be varied. *Hammond*

lug

a. A replaceable cutting member on an expansion reamer. *Long* b. One of a set of cutting lugs used to cut off a length of casing in a borehole at any desired point below the collar of the hole. Syn: [jaw](#)

lug down

To slow down an engine by increasing its load beyond its capacity. *Nichols, 1*

lugeon test

Single-hole in situ test of formation permeability performed by measuring the volume of water taken in a section of test hole when the interval is pressurized at 10 bars (150 psi). Used primarily in variably permeable formations under evaluation for grouting. *Houlsby*

Luhrig vanner

Vanning machine with side feed and end shake--a hybrid between the true vanner and the shaking table. *Pryor, 3*

lumachelle

a. A compact, dark-gray or dark-brown limestone or marble, composed chiefly of fossil mollusk shells, and characterized by a brilliant iridescence or chatoyant reflection from within. Syn: [fire marble](#) *AGI* b. Any accumulation of shells (esp. oysters) in stratified rocks. Etymol: French, coquina, oyster bed, from Italian lumachella, little snail. *AGI*

lumber

Timber that has been sawed into boards, planks, staves, or other pieces of comparatively small dimensions. In mines, timber is used in the construction of coal chutes, mine cars, mine doors, forms for concrete structures, surface buildings, and for many other purposes. *Jones, 2*

lumber scale

A graduated measuring scale for determining the number of board feet in rough-sawed lumber. *Crispin*

luminance

A measure of surface brightness that is expressed as luminous flux per unit solid angle per unit projected area. *ASM, 1*

luminance of a surface

Luminous intensity per unit of apparent area; i.e., the area as projected on a plane normal to the direction of viewing. It is determined by the incident light flux falling upon the surface, the reflection factor of the surface, and the angle that the surface makes with the direction in which it is viewed. It is independent of distance; i.e., a surface appears equally bright no matter what the distance from which it is seen. *Roberts, 2*

luminescence

a. The emission of light by a substance that has received energy or electromagnetic radiation of a different wavelength from an external stimulus; also, the light so produced. It occurs at temperatures lower than those required for incandescence. See also: [phosphorescence](#); fluorescence. *AGI* b. Quantized electromagnetic emissions resulting from electrons in a crystal structure dropping from a higher excited state to a lower one. CF: [thermoluminescence](#); [triboluminescence](#).

luminosity

a. The quality of emitting or of giving out light; shining. *Crispin* b. Subjective brightness sensation. *Roberts, 2*

luminous

Radiating or emitting light; bright; clear. *Crispin*

Lumnite

Well-known brand of quicksetting cement for sealing rock cavities, plugging drill holes, etc. Is made from bauxite ore and limestone and is highly resistant to acids and heat. *Cumming, 1; Hess*

lump coal

Bituminous coal in the large lumps remaining after a single screening that is often designated by the size of the mesh over which it passes and by which the minimum size lump is determined. Also, the largest marketable size. *Webster 3rd; Fay*

Lump Coal

Trademark for permissible dynamites (types C and CC) with very low velocity of detonation. Are used in coal mining where maximum production of large-size coal is desired. *CCD, 2*

lump ore

See: [natural ore](#)

lumpy

Describes a gemstone cut with too great a depth in proportion to its width.

lunar crater

See: [crater](#)

lunker

Scot. A lenticular mass of sandstone or clay ironstone; a big nodule. CF: [lonkey](#)

Lurgi process

This process consists of roasting iron ore in a reducing atmosphere, thus forming magnetic oxide of iron that is separated by crushing followed by magnetic separation. The internal structure of the kiln is so designed that the ore falls in a continuous veil through the current of reducing gases. Burners are distributed throughout the periphery of the kiln, so that roasting and reduction can be controlled in the various zones to the required temperature. Blast furnace gas for reduction passes into the center of the lower end of the kiln, while the gas and air for heating pass in from the circumference of the drum, nearer to the center and upper end of the furnace. The ingoing ore is crushed to give a maximum size of 20 mm, while the outgoing concentrate is crushed to 3.8 mm after cooling. *Osborne*

Lurmann front

An arrangement of water-cooled castings through which iron and cinder are tapped from the blast furnace, thus avoiding the use of a forehearth. See also: [dam](#)

lurry

a. York. A weighted tram to which an endless rope is attached, fixed at the inby end of the plane, forming part of an appliance for taking up the slack rope. *Fay* b. A movable platform on wheels, the top of which is level with the bank or surface. It is run over the mouth of a shaft to receive the bucket when it reaches the top. A variation of lorry. *Fay*

lusakite

A cobaltoan variety of staurolite.

lussatite

A fibrous variety of silica, possibly tridymite.

luster

a. The character of the light reflected by minerals; it constitutes one of the means for distinguishing them. There are several kinds of luster: metallic, the luster of metals; adamantine, the luster of diamonds; vitreous, the luster of broken glass; resinous, the luster of yellow resin, as that of eleolite; pearlylike pearl; and silkylike silk. These lusters have different degrees of intensity, being either splendid, shining, glistening, or glimmering. When there is a total absence of luster, the mineral is characterized as being dull. *Fay* b. In ceramics, a glaze, varnish, or enamel applied to porcelain in a thin layer, and giving it a smooth, glistening surface. *Standard, 2*

luster mottling

a. The macroscopic appearance of poikilitic rocks. *AGI* b. The shimmering appearance of a broken surface of a sandstone cemented with calcite, produced by the reflection of light from the cleavage faces of conspicuously large and independently oriented calcite crystals, 1 cm or more in diameter, incorporating colonies of detrital sand grains. It may also develop locally in barite, gypsum, or dolomite cements. *AGI*

lutaceous

Said of a sedimentary rock formed from mud (clay- and/or silt-size particles) or having the fine texture of impalpable powder or rock flour; pertaining to a lutite. Also said of the texture of such a rock. CF: [argillaceous](#); [pelitic](#). *AGI*

lutcite

A fibrous variety of chalcedony with fiber elongation perpendicular to the c crystallographic axis (opposite to normal chalcedony) and showing other optical anomalies.

luthos lazuli

A violet variety of fluorite.

luting

Sealing the joint of a retort with fire clay. *Pryor, 3*

lutite

A general name used for consolidated rocks composed of silt and/or clay and of the associated materials which, when mixed with water, form mud; e.g., shale, mudstone, and calcilutite. The term is equivalent to the Greek-derived term "pelite." Etymol: Latin lutum, mud. Also spelled lutyte. See also: [rudite](#); [arenite](#). *AGI*

lutose

Covered with clay; miry. *Webster 2nd*

luxullianite

A granite characterized by phenocrysts of potassium feldspar and quartz that enclose clusters of radially arranged acicular tourmaline crystals in a groundmass of quartz, tourmaline, alkali feldspar, brown mica, and cassiterite. Its name is derived from Luxulyan, Cornwall. Also spelled: luxulianite; luxulyanite. Var: luxuliane. *AGI*

luzonite

A tetragonal mineral, $\text{Cu}_3 \text{AsS}_4$; stannite group; dimorphous with enargite. Formerly considered an arsenian variety of famatinite.

lyddite

High explosive based on picric acid, $(\text{NO}_2)_3 \text{C}_6 \text{H}_2 \text{OH}$, with 10% nitrobenzene and 3% vaseline. *Pryor, 3*

Lydian stone

A touchstone consisting of a compact, extremely fine-grained, velvet- or gray-black variety of jasper. Etymol: Greek Lydia, ancient country in Asia Minor. Syn: [lydite](#); [touchstone](#); [basanite](#). *AGI*

lydite

See: [Lydian stone](#)

lye

See: [double parting](#)

lying money

An allowance to miners on piecework who are rendered idle during a shift owing to circumstances beyond their control, such as a breakdown in power services, or supplies of empty cars. *Nelson*

lying wall

See: [footwall](#)

lynx eye

Green iridescent labradorite.

lynx sapphire

a. Dark blue iolite variety of cordierite. b. Dark blue sapphires in Sri Lanka.

lyophilic

a. Condition of solid-liquid mixture in which surface-active molecules that contain two or more groups have both an affinity for the phase in which one group is dissolved, and a repulsion from this phase for another group or ion. See also: [hydrophilic](#) b. Having the property of attracting liquids. *Pryor, 4*

lyophobic

Of, relating to, or having a lack of strong affinity between a dispersed phase and the liquid in which it is dispersed; systems such as colloidal metals in water are easily coagulated. Opposite of lyophilic. *Webster 3rd*

lyosorption

Adsorption of liquid to a solid surface. *Pryor, 3*

lype

Scot. An irregularity in the mine roof. A projecting rock in a mine roof that may fall at any time. Usually used in the plural, and sometimes spelled lipe. *Fay*

Lyster process

A flotation process that separates galena and zinc blende by treatment, at a low temperature, with eucalyptus oil or other frothing agent, and with agitation or aeration in a neutral or alkaline, but not acid, solution of the sulfates, chlorides, or nitrates of calcium, magnesium, sodium, potassium, or mixtures of these substances. *Fay*

lyway

This term is commonly used in and around mines in Indiana and Illinois to describe a mine sidetrack or a passing track. *Hess*

M

maacle

See: [macle](#)

macadam

Crushed stone of regular sizes below 3 in (7.6 cm) for road construction, commonly with tar or asphalt binder. The sizes below 1 in (2.54 cm) are more specif. defined as chippings. See also: [penetration macadam](#); tarmacadam. *Nelson*

MacArthur and Forest cyanide process

A process for recovering gold by leaching the pulped gold ore with a solution of 0.2% to 0.8% potassium cyanide, KCN, and then with water. The gold is obtained from this solution by precipitation on zinc or aluminum, or by electrolysis. See also: [Elsner's equation](#)

macedonite

a. A tetragonal mineral, $PbTiO_3$; black; in irregular grains in quartz-syenite veins near Prilep, Macedonia. b. A bluish-black aphanitic igneous rock composed of alkali feldspars and biopyriboles; related to mugearite, a trachyandesite, Macedon district, Victoria, Australia. The name is not part of the IUGS classification of extrusive igneous rocks.

maceral

Applied to all petrologic units seen in microscopic sections of coal, as distinct from the visible units seen in the hand specimens. Comparable in rank to mineral as used in petrography. Thus, macerals are organic units composing the coal mass, being the

descriptive equivalent of the inorganic units composing rock masses and universally called minerals. Individual macerals have the termination -inite; i.e., vitrinite, as the organic unit making up the lithologic specimen, vitrain. Three groups are recognized: (1) vitrinites; (2) exinites; and (3) inertinites. *AGI*

macfarlanite

A silver ore consisting of a mixture of sulfides, arsenides, etc., and containing cobalt, nickel, and lead. CF: [animikite](#)

macgovernite

See: [mcgovernite](#)

machine boss

In bituminous coal mining, a foreperson who is in charge of machine workers who undercut the working face of coal prior to blasting, and machine loaders who load the coal into cars after it is blasted down. *DOT*

machine cut

A slot or groove made horizontally or vertically in a coal seam by a coal cutter, as a preliminary step to shot firing. See also: [cutting horizon](#) *Nelson*

machine-cutter helper

See: [machine helper](#)

machined

a. A smooth surface finish on metal. *Nichols, 1* b. Shaped by cutting or grinding. *Nichols, 1*

machine design

The application of scientific principles to the practical constructive art of engineering, with the object of expressing original ideas in the form of drawings. See also: [theory of machines](#)

machine driller

In mining, one who operates any one of several types of heavy, mounted or unmounted, compressed-air drilling machines to drill holes into the working face of ore or rock into

which explosives are inserted and set off to blast down the mass. Also called drill engineer; drillman; drill operator; power driller. *DOT*

machine helper

In anthracite and bituminous coal mining, one who assists the machineman in moving and setting up the coal-cutting machine in position for cutting a channel under or along the sides of the coal working face prior to breaking the coal down with explosives. Also called chain-machine helper; coal-cutter helper; cutter helper; cutting-machineman helper; jack setter; machine-cutter helper; machineman helper; miner; assistant; mining-machine-operator helper. *DOT*

machine holings

The small coal or dirt produced by a coal cutter. *Nelson*

machine loader

a. In anthracite and bituminous coal mining, person who operates an electric loading machine that digs, elevates, and loads coal blasted from the working face into cars by means of a conveyor loaded by a scraping device, a digging conveyor, or a shoveling mechanism. May be designated according to machine used, as Joy loader. Also called loader engineer; loader operator; loader runner; loading-machine man; loading-machine operator; loading-machine runner. *DOT* b. Machine loader I is used in anthracite coal mining, bituminous coal mining, and metal mining, to designate one who operates a small electric or air-power shovel in underground working places to load ore or rock into cars after it has been blasted from the working face. Also called loader operator; loading-machine operator; mechanical-shovel operator; shovel operator. *DOT* c. Machine loader II is used in anthracite coal mining, bituminous coal mining, and metal mining, to designate one who operates a loading machine consisting of a small hoisting engine and a cable-drawn scraper, or scoop, to load ore or rock into cars after it has been blasted from the working face in underground or open-pit mines. Also called scraper-loader hoistman; scraper-loader operator; scraper operator. *DOT*

machine loader helper

In anthracite coal mining and bituminous coal mining, a laborer who assists a machine loader in loading coal into cars. *DOT*

machineman

a. A coal-cutter operator. See also: [coal-cutter team](#) b. A person who sets up and operates an electrically driven or compressed-air-driven coal-cutting machine that is used to cut out a channel along the bottom or side of the working face of coal so that it may be blasted down without shattering the mass. Also called coal cutter; coal-cutting machine

operator; machine cutter; cutter operator; cutting machine operator; holer; undercutter. *DOT* c. Eng. One who weighs coal, etc., and keeps an account of the number of cars sent to the surface. *Fay*

machineman helper

See: [machine helper](#)

machine miner

In bituminous coal mining, a general term applied to workers who are capable of operating one or more coal mining machines used for drilling, loading, and undercutting. Usually designated as machine driller; machine loader I; machine loader II; machineman. Also called machine operator; machine runner; mining machine operator. *DOT*

machine mines

Mines in which coal is cut by machines. *Kiser*

machine mining

a. Implies the use of power machines and equipment in the excavation and extraction of coal or ore. In coal mines, the term almost invariably signifies the use of coal cutters and conveyors and perhaps some type of power loader working in conjunction with face conveyors. See also: [face mechanization](#) b. Mechanized mining. *CTD*

machine nog

Eng. A wedge-shaped wood block for supporting machine-cut coal. *SMRB*

machine operator

See: [machine miner](#)

machine rating

a. The amount of power a machine can deliver without overheating. *Crispin* b. Also, work capacity of a machine.

machine runner

See: [machine miner](#)

machine screw

A very commonly used type of screw with clear-cut threads and of a variety of head shapes. It may be used either with or without a nut. *Crispin*

machine set

See: [mechanical set](#)

machine sumper

See: [sumper](#)

machine tool

Any machine used for cutting metal, such as a boring machine, drill, grinder, planing machine, hobber, shaper, or lathe. *Hammond*

machine wall

The face at which a coal-cutting machine works. *Fay*

machinist

Aust. The person in charge of a coal cutter. *Fay*

mackintoshite

See: [thorogummite](#)

Mac-Lane system

This system consists essentially of an inclined rail track with the haulage gear and the loading station at the base. The haulage rope passes round a return sheave in the extending frame at the top of the heap. The tipping gear may consist of a carriage with a portable tippler that conveys a tub of dirt to the top of the heap, where a trigger operates the tippler, thus discharging the tub. For a greater quantity, the carriage incorporates a revolving frame carrying two or three tubs; this gives a broader top to the heap. The main disadvantages of this system are the unsightly conical heaps produced and the tendency to segregation of material, with the large pieces at the base of the heap, which increases the danger of spontaneous combustion. *Sinclair, 5*

macle

a. A twin crystal; esp. octahedral diamond twins flattened parallel to the twin plane. Also spelled maacle, maccle, mackle. b. A variety of andalusite with tessellated cross section resulting from segregation of carbonaceous impurities. Syn: [chiastolite](#)

Maclean separator

A revolving disk-type magnetic separator widely used for the separation of large quantities of ilmenite from tin ore. *Harrison*

macled

a. Twinned. b. See: [tessellated](#) c. Spotted. Also spelled mackled.

macro-

A prefix meaning large, long; visibly large, e.g., macrocrystalline. CF: [micro-](#)

macro-axis

In the orthorhombic and triclinic systems, an obsolete term for the longer lateral crystallographic axis, the b axis in orthorhombic and mostly the b axis in triclinic minerals.

macrocrystalline

Said of the texture of a rock consisting of or having crystals that are large enough to be distinctly visible to the unaided eye or with the use of a simple lens; also, said of a rock with such a texture. Syn: [eucrystalline](#)

macrodiagonal

In crystallography, the longer lateral axis in the orthorhombic and triclinic systems. *Standard, 2*

macrodome

a. In crystallography, a dome parallel to the macrodiagonal. CF: [dome](#) *Standard, 2* b. In the orthorhombic system, an obsolete term for a form of four faces parallel to the macro-axis, but intercepting the other two. Syn: [horizontal prism](#) c. In the triclinic system, an obsolete term for a form of two faces parallel to the macro-axis, but intercepting the other two.

macroetch

Etching of a metal surface for accentuation of gross structural details and defects for observation by the unaided eye or at magnifications not exceeding 10 diameters. *ASM, 1*

macrograph

A graphic reproduction of the surface of a prepared specimen at a magnification not exceeding 10 diameters. When photographed, the reproduction is known as a photomicrograph. *ASM, 1*

macromeritic

See: [phaneritic](#)

macroporosity

Porosity visible without the aid of a microscope, such as pipes and blowholes in ingots. *Newton, 1*

macroscopic

a. Visible at magnifications of from 1 to 10 diameters. *ASM, 1* b. Visible without a microscope or in a hand specimen. See also: [megascopic](#)

macrostructure

a. The general arrangement of crystals in a solid metal (for example, an ingot) as seen by the naked eye or at low magnification. The term is also applied to the general distribution of impurities in a mass of metal as seen by the naked eye after certain methods of etching. *CTD* b. The structure of metals as revealed by examination of the etched surface of a polished specimen at a magnification not exceeding 10 diameters. *ASM, 1* c. A structural feature of a rock that is discernible to the unaided eye, or with the help of a simple magnifier. *Fay* d. The arrangement of crystals in a metal or in a rock that, with or without etching or other chemical treatment, is discernible to the unaided eye or with the help of a simple magnifier (generally less than 10X).

maculose

Applied to the group of contact-metamorphic rocks represented by spotted slates, to denote its spotted or knotted character. The term may be applied either to the rock or to its structures. See also: [spotted slate](#)

maculose rock

See: [spotted slate](#)

Madagascar aquamarine

A strongly dichroic variety of blue beryl obtained, as a gemstone material, from Malagasy Republic. *CTD*

https://t.me/Geologybooks

Madaras system

A method of obtaining pig iron, consisting of charging a retort with a mixture of iron ore, coal, and enough water to form a paste; and injecting compressed air at 2 to 4.2 kg/cm² pressure and at 815 to 930 degrees C to burn the coal. In a few minutes the entire mineral charge is heated to 980 to 1,095 degrees C, which is the optimum range for hydrogen reduction; then hydrogen is injected at a temperature of 815 to 923 degrees C at 2 to 8 kg/cm² pressure so that it penetrates the entire mass and reacts with the iron oxide to produce steam and metallic iron. About 50% of the injected hydrogen reacts with the ore to produce sponge iron. Sulfur is oxidized by the hot air and is eliminated by the hydrogen. *Osborne*

made ground

a. A recent deposit, as of river silt. *Fay* b. Ground formed by filling in natural or artificial pits with hardcore or rubbish. *CTD*

Madeira topaz

Citrine variety of quartz. CF: [false topaz](#); [Spanish topaz](#).

made up

Coupled; the assembled component parts of a drill string or pipe system. *Long*

madogram

A plot of mean absolute difference of paired sample measurements as a function of distance and direction. Madograms are not true variograms, and generally should not be used in kriging. If used, the kriged estimates might be "reasonable," but the kriging standard deviations will be meaningless.

madrepore marble

A fossiliferous limestone occurring in a variety of colors. It takes a high polish, is used as a marble, and derives its name from its most characteristic fossil, a species of coral.

maenite

An intrusive trachytic rock, regarded as a differentiation product of a gabbroic magma. Maenite is a bostonite relatively high in calcium and low in potassium.

mafelsic

Said of igneous rocks containing roughly equal amounts of felsic and mafic minerals, color index 40 to 70. *AGI*

mafic

Pertaining to or composed dominantly of the ferromagnesian rock-forming silicates; said of some igneous rocks and their constituent minerals. CF: [basic](#); [felsic](#). See also: [mafite](#)

mafic front

See: [basic front](#)

mafite

Any dark mineral in Johanssen's classification of igneous rocks. See also: [mafic](#)

magazine

a. A storage place for explosives. *Jones, 1* b. A building specially constructed and located for the storage of explosives. CF: [powder chest](#)

maghemite

An isometric mineral, $\gamma\text{-Fe}_2\text{O}_3$; magnetite series; spinel group; dimorphous with hematite; strongly ferrimagnetic. Syn: [oxymagnite](#)

magistral

Roasted copper pyrites. *Pryor, 3*

magma

Naturally occurring molten rock, generated within the Earth and capable of intrusion and extrusion, from which igneous rocks are derived through solidification and related processes. It may or may not contain suspended solids (such as crystals and rock fragments) and/or gas phases. Adj: magmatic. *AGI*

magmatic

Of, pertaining to, or derived from magma. See also: [igneous](#)

magmatic assimilation

See: [assimilation](#)

magmatic blister

The swelling up by differential heating of magma; e.g., by local concentrations of radioactive matter. *Schieferdecker*

magmatic corrosion

A process of re-solution in which an early formed phase, such a quartz phenocryst, later becomes corroded or embayed as the result of some change in the conditions affecting the solubility of the phase; sometimes corrosion rims result. Syn: [corrosion](#)

magmatic cycle

See: [igneous cycle](#)

magmatic deposit

See: [magmatic ore deposit](#)

magmatic differentiation

The process by which more than one rock type is derived from a parent magma. CF: [assimilation](#)

magmatic disseminated ore deposit

See: [disseminated deposit](#)

magmatic dissolution

See: [assimilation](#)

magmatic injection deposit

Straight magmatic mineral (ore) deposit, the formation of which has often been ascribed to injection into the older country rock of liquefied crystal differentiates, of residual liquid segregations, or of immiscible liquid separations and accumulations. An older term. *Schieferdecker*

magmatic ore deposit

An ore deposit formed by magmatic segregation, generally in mafic rocks and layered intrusions, as crystals of metallic oxides or from an immiscible sulfide liquid. Syn: [magmatic deposit](#)

magmatic segregation

Concentration of crystals of a particular mineral (or minerals) in certain parts of a magma during its cooling and crystallization. Some ore deposits (i.e., magmatic ore deposits) are formed in this way. See also: [differentiation](#)

magmatic stoping

A process of magmatic emplacement or intrusion that involves detaching and engulfing pieces of the country rock. The engulfed material presumably sinks downward and/or is assimilated. See also: [piecemeal stoping](#) *AGI*

magmatic water

Water contained in or expelled from magma. CF: [juvenile water](#) *AGI*

magmatist

One who believes that much granite is a primary igneous rock produced by differentiation from basaltic magma. CF: [transformist](#)

Magnafloat

Trademark for iron oxide heavy media systems for the purification of coal, sand, gravel, and other similar materials. *CCD, 2*

Magnedisc

A widely used medium for magnetic recording. It consists of a circular platter of magnetically coated plastic material that rotates on a turntable in the same way as a phonograph record. The magnetic channels, each in contact with a fixed head aligned along a radius from the center, are on concentric circular bands extending inward from the outer edge of the disk. *Dobrin*

magnesia

Magnesium oxide, MgO. A constituent of lime made from dolomitic limestone. *Barger; AGI; Mersereau, 2*

magnesia alum

See: [pickeringite](#)

magnesia covering

Hydrated magnesium carbonate containing about 15% asbestos, used for heat insulation. Also referred to as 85% magnesia. *Osborne*

magnesia glass

Glass containing usually 3% to 4% of magnesium oxide. Electric lamp bulbs have been mainly made from this type of glass since fully automatic methods of production were adopted. *CTD*

magnesia mica

See: [biotite](#)

magnesian hornfels

A fine-grained metamorphic rock derived from a high-magnesium igneous rock; e.g., serpentine. See also: [hornfels](#)

magnesian limestone

A limestone containing from 5% to 35% $MgCO_3$. CF: [dolomitic limestone](#)

magnesian marble

A crystalline variety of limestone containing not less than 5% nor more than 40% of magnesium carbonate as the dolomite constituent.

magnesian schist

A schistose metamorphic rock derived from a rock high in content of magnesium; e.g., serpentine. See also: [schist](#)

magnesian spar

See: [dolomite](#)

magnesia ramming materials

Granular, airsetting mixtures, containing 70% to 80% MgO , used for monolithic furnace linings.

magnesiochromite

An isometric mineral, MgCr_2O_4 ; chromite series; spinel group; forms series with spinel and with chromite; crystallizes in black octahedra, but commonly massive. Also spelled magnochromite. Syn: [picrochromite](#)

magnesioferrite

An isometric mineral, MgFe_2O_4 ; magnetite series; spinel group; strongly ferrimagnetic. Also spelled magnoferrite.

magnesiolaumontite

A magnesian variety of laumontite.

magnesite

A trigonal mineral, MgCO_3 ; calcite group; rhombohedral cleavage; in veins in serpentinite and peridotite, magnesium-rich schist, and altered dolomitic marbles. Syn: [giobertite](#); [magnesium carbonate](#).

magnesite cement

Common term for ground magnesite.

magnesite refractory

A refractory material, fired or chemically bonded, consisting essentially of dead-burned magnesite; the MgO content usually exceeds 80%. Such refractories are used in the hearths and walls of basic steel furnaces, mixer furnaces, and cement kilns. *Dodd*

magnesium

A light, silvery-white, and fairly tough metal. Symbol, Mg. It does not occur uncombined, is found in large deposits in the form of magnesite, dolomite, and other minerals. Readily ignites upon heating. Used in flashlight photography, flares, and pyrotechnics, including incendiary bombs. Its alloys are essential for airplane and missile construction. *Handbook of Chemistry and Physics, 3*

magnesium aluminate

MgAl_2O_4 ; melting point, 2,135 degrees C; sp gr, 3.6; thermal expansion (100 to 1,000 degrees C), 9.0×10^{-6} . This compound is the type mineral of the spinel group. See also: [spinel](#) *Dodd*

magnesium-aluminum garnet

See: [pyrope](#)

magnesium bentonite

A smectite with exchangeable magnesium.

magnesium blodite

See: [bloedite](#)

magnesium carbonate

See: [magnesite](#)

magnesium chalcantite

See: [pentahydrate](#)

magnesium-chlorophoenicite

A monoclinic mineral, $(\text{Mg},\text{Mn})_3 \text{Zn}_2 (\text{AsO}_4)(\text{OH},\text{O})_6$; associated with manganese silicates at Franklin, NJ.

magnesium front

See: [basic front](#)

magnesium kaolinite

See: [amesite](#)

magnesium leonite

See: [leonite](#)

magnesium mica

See: [phlogopite](#)

magnesium minerals

Chiefly magnesite, dolomite, and brucite.

magnesium orthite

A magnesian variety of allanite.

magnesium titanate

MgTiO₃. Used in ceramic dielectric bodies. Although relatively low in dielectric constant, it has a positive temperature coefficient of capacity. Thus, it can be used in conjunction with a negative coefficient material; e.g., titania, to produce a near 0 temperature coefficient product. *Lee*

magnesium zirconate

MgZrO; melting point, 2,150 degrees C. This compound is sometimes added in small amounts (up to 5%) to other electroceramic bodies to lower their dielectric constant at the Curie point. *Dodd*

magnetic

Of or pertaining to a mineral, object, area, or locale possessing the properties of a magnet. *Long*

magnetic alloys

Alnico is an alloy of aluminum, nickel, and cobalt, with strong magnetic properties similar in all directions. Alcomax is anisotropic, with maximum flux along preferred axis. Hycomax is also anisotropic. Platinax, a cobalt-platinum alloy containing 23.3% cobalt, is isotropic. *Pryor, 3*

magnetic anomaly

Variation of the measured magnetic pattern from a theoretical or empirically smoothed magnetic field. *Hy*

magnetic azimuth

The azimuth measured clockwise from magnetic north through 360 degrees; the angle at the point of observation between the vertical plane through the observed object and the vertical plane in which a freely suspended magnetized needle, influenced by no transient artificial magnetic disturbance, will come to rest. *AGI*

magnetic bearing

The bearing expressed as a horizontal angle between the local magnetic meridian and a line on the Earth; a bearing measured clockwise from magnetic north. It differs from a true bearing by the amount of magnetic declination at the point of observation. *AGI*

magnetic bort

See: [bort](#)

magnetic bottle

A magnetic field used to confine a plasma in controlled-fusion experiments. *Lyman*

magnetic circuit

The closed path taken by the magnetic flux in an electric machine or other piece of apparatus. *CTD*

magnetic clutch

One in which connection between drive and driven member is provided by electromagnetic force. *Pryor, 3*

magnetic correlation

The orientation of an underground survey, using the Earth's magnetic field. *BS, 7*

magnetic crack detection

The part to be examined is magnetized either by passing a heavy current through it or by making it the core of a coil through which a heavy current is passed. Small cracks, or nonmagnetic phases such as inclusions, cause the magnetic flux to break the surface, thus forming small magnets. When the part is sprayed with a suspension of iron oxide particles in paraffin, the particles cling to the small magnets and thereby reveal defects. *Hammond*

magnetic declination

In nautical and aeronautical navigation, the continually changing acute angle between the direction of the magnetic and geographic meridians. The term "magnetic variation" is preferred. *AGI*

magnetic detector

An electrical device for indicating the presence of magnetic material in an area.

magnetic dip

Vertical angle through which a freely suspended magnetic needle dips from horizontal. *Pryor, 3*

magnetic domain

Aggregation of ferromagnetic atoms into a group, usually a fraction of a micrometer in size, which lies among similar groups with random group orientation. This cancels out any magnetic moment until or unless they all are oriented by an applied magnetic field. *Pryor, 3*

magnetic elements

a. These are declination, dip, and magnetic intensity in the horizontal plane. *Pryor, 3* b. The characteristics of a magnetic field that can be expressed numerically. The seven magnetic elements are declination D, inclination I, total intensity F, horizontal intensity H, vertical intensity Z, north component X, east component Y. Typically, only three elements are needed to give a complete vector specification of the magnetic field. *AGI*

magnetic feeder

Any feeder that uses magnetism to pick up, hold, separate, and deliver objects.

magnetic field

a. Space surrounding a magnet or current-carrying coil, in which appreciable magnetic force exists. Its intensity (H) is the force exerted on a unit pole. *Pryor, 3* b. A region in which magnetic forces would be exerted on any magnetized bodies or electric currents present; the region of influence of a magnetized body or an electric current. *AGI*

magnetic field strength

The force exerted on a unit pole is the field strength at that point. *AGI*

magnetic flocculation

Phenomenon that results from residual magnetism of ferromagnetic particles that have bunched together under the influence of their individual polar forces. *Pryor, 3*

magnetic flowmeter

A device used for the flow measurement of abrasive slurries. The calibration is affected by the presence of magnetic constituents in the slurry, and therefore, a pipe coil is also used to compensate the magnetic flowmeter calibration for varying amounts of magnetic material in the slurry. *Nelson*

magnetic flux

a. Induced strength or flux density in a magnetic field, measured in maxwells: $B = 4\pi /A + H$, where B = the flux density, P = the strength of each magnetic pole, A = the cross-sectional area of a cylinder through which the flux flows, and H = the magnetic intensity in oersteds. See also: [magnetic intensity](#) b. The surface area times the normal component of magnetic induction B; the number of magnetic field lines crossing the surface of a given area. Expressed in maxwells in the cgs system. *AGI*

magnetic gradiometer

An instrument, designed but not applied, for measuring the gradient of the magnetic intensity. *AGI*

magnetic hoist

A hoisting device that does its lifting by means of an electromagnet. *Crispin*

magnetic hysteresis

See: [hysteresis](#)

magnetic induction

a. Magnetic-flux density, symbolized by B. In a magnetic medium, it is the vector sum of the inducing field H and the magnetization M. B is expressed in teslas in SI and in gauss or gammas in the cgs system. Syn: [magnetic field](#) b. In a magnetic medium, the vector sum of the inducing field H and the corresponding intensity of magnetization I, according to the relationship $B = H + 4\pi I$. *AGI* c. A nonrecommended syn. of electromagnetic induction. *AGI* d. The process of magnetizing a body by applying a magnetic field. This usage is not recommended. *AGI*

magnetic intensity

A vector quantity pertaining to the condition at any point under magnetic influence (as of a magnet, an electric current, or an electromagnetic wave) measured by the force exerted in a vacuum upon a free unit north pole placed at the point in question. Also called magnetic force. *Webster 3rd*

magnetic iron ore

See: [magnetite](#)

magnetic level coil

A device for measuring the liquid level in sumps and other vessels. It consists of a loop of wire that is encased in a fiber glass protective sheath. The loop is inserted in a sump of

thickener containing a magnetite or ferrosilicon slurry, and the electrical signal given off represents the level of the slurry surrounding the loop. *Nelson*

magnetic meridian

The horizontal line that is oriented, at any specified point on the Earth's surface, along the direction of the horizontal component of the Earth's magnetic field at that point; not to be confused with isogonic line. Syn: [geomagnetic meridian](#)

magnetic method

A geophysical prospecting method that maps variations in the magnetic field of the Earth that are attributable to changes of structure or magnetic susceptibility in certain near-surface rocks. Sedimentary rocks generally have a very small susceptibility compared with igneous or metamorphic rocks, and most magnetic surveys are designed to map structure on or within the basement, or to detect magnetic minerals directly. Most magnetic prospecting is now carried on with airborne instruments. *Dobrin*

magnetic mirror

A magnetic field used in controlled-fusion experiments to reflect charged particles back into the central region of a magnetic bottle. *Lyman*

magnetic moment

a. That vector associated with a magnetized mass; the vector product of it and the magnetic field intensity in which the mass is immersed (ignoring the field distortion thereby produced) is a measure of the resulting torque. Also called moment of a magnet. *AGI* b. A vector quantity characteristic of a magnetized body or an electric-current system; it is proportional to the magnetic-field intensity produced by this body and also to the force experienced in the magnetic field of another magnetized body or electric current. The magnetic moment per unit volume is the magnetization. *AGI*

magnetic permeability

Ratio of magnetic induction (B) to the inducing field of magnetic intensity (H). With magnetic intensity lines of force per square centimeter in air, and flux density lines in a substance placed in that field, B/H is the magnetic permeability. When this is less than 1.0, the substance is diamagnetic; above 1.0, paramagnetic; and when high, ferromagnetic. *Pryor, 3*

magnetic plug

A drain or inspection plug magnetized for the purpose of attracting and holding iron or steel particles in a lubricant. *Nichols, 1*

magnetic polarity

The orientation of the constituent minerals within the rocks of the Earth's crust conforming to the Earth's magnetic field as it existed at the time the strata were deposited. See also: [core orientation](#) *Long*

magnetic pole

a. Either of two points on the Earth's surface where the lines of magnetic force are vertical; an end of the axis of the Earth's magnetic polarity, not coincident with a geographic pole, and continually changing its position. The north magnetic pole is in northern Canada. *Standard, 2* b. Either of two nonstationary regions on the Earth that sometimes move many miles in a day, toward which the isogonic lines converge, and at which the dip is + or -90 degrees. *Webster 3rd* c. The area on a magnetized part at which the magnetic field leaves or enters the part. It is a point of maximum attraction in a magnet. *ASM, 1*

magnetic prospecting

See: [magnetic method](#)

magnetic pyrite

See: [pyrrhotite](#)

magnetic recording

Any process by which the output of a detector-amplifier system is recorded on a magnetic recording medium. The advantages of such a system are that the resulting records may be played back and converted into conventional records with phase shifting, mixing, etc., between traces and with filtering variations. Most modern magnetic recording is in digital form. *AGI*

magnetic roasting process

Heating ferrous iron ore in the presence of air in order to oxidize the iron content, present in whatever form, to the magnetic oxide so that in a subsequent operation it can be separated from the gangue by means of a magnetic separator. Also, roasting a hematitic ore with scrap iron to reduce it to magnetite. *Osborne*

magnetic roll feeder

A feeder that uses magnetized, power-operated rolls for separating and delivering objects.

magnetics

Branch of science that deals with magnetic phenomena. *Osborne*

magnetic separation

a. The separation of magnetic materials from nonmagnetic materials, using a magnet. This is an esp. important process in the beneficiation of iron ores in which the magnetic mineral is separated from nonmagnetic material; e.g., magnetite from other minerals, roasted pyrite from sphalerite, etc. *Newton, 1; Henderson* b. The use of permanent magnets or electromagnets to remove relatively strongly ferromagnetic particles from paramagnetic and diamagnetic ores. *Pryor, 2*

magnetic separator

a. A device used to separate magnetic from less magnetic or nonmagnetic materials. The crushed material is conveyed on a belt past a magnet. *ASM, 1* b. For medium solids recovery. A device in which medium solids are caused to adhere, by magnetic means, to a conveying belt or drum, while a current of water removes nonmagnetic particles that contaminate the medium. *BS, 5*

magnetic storm

A worldwide disturbance of the Earth's magnetic field, commonly with amplitude of 50 to 200 gammas. It generally lasts several days, and is thought to be caused by charged particles ejected by solar flares. Magnetic prospecting usually has to be suspended during such periods. *AGI*

magnetic susceptibility

A measure of the degree to which a substance is attracted to a magnet; the ratio of the intensity of magnetization to the magnetic field strength. See: [susceptibility](#)

magnetic unit in prospecting

The gamma (Gamma), which equals 10^{-5} Oe (7.9577×10^{-4} A/m). *AGI*

magnetic variation

See: [declination](#)

magnetic variometer

A geophysical instrument similar to the gravimeter in that absolute values are not measured, but only the differences in vertical magnetic force between field stations and a selected base station. *Nelson*

magnetism

a. That property of iron, steel, and some other substances, by virtue of which they exert forces of attraction and repulsion according to fixed laws. *Crispin* b. The science that is concerned with the conditions and laws of magnetic force. *Crispin*

magnetite

a. An isometric mineral, $8[\text{FeOFe}_2\text{O}_3]$; spinel group; forms series with jacobsonite and with magnesioferrite; crystallizes in octahedra; metallic; black; strongly ferrimagnetic; an accessory mineral in many igneous rocks; a common detrital mineral; a major mineral in banded iron formations and magmatic iron deposits; an ore of iron. Syn: [black iron ore](#); [lodestone](#); [magnetic iron ore](#); [octahedral iron ore](#). See also: [iron ore](#) b. The mineral series magnesioferrite, magnetite, maghemite, franklinite, jacobsonite, and trevorite in the spinel group. Syn: [iron series](#)

magnetite

An igneous rock consisting essentially of magnetite and having an iron content of 65% to 70% or more. Apatite may accompany the magnetite. *Johannsen*

magnetite olivinite

A dunite high in content of titaniferous magnetite and containing shreds of biotite. *Holmes, 2*

magnetite spinellite

An eruptive iron ore occurring at Routivara, Sweden, and consisting of magnetite (in part titaniferous), spinel, and smaller amounts of olivine, pyroxene, apatite, and pyrrhotite. The ore contains about 14% titanite oxide.

magnetized

A body is said to be magnetized when it possesses or can be made to possess that peculiar property whereby, under certain circumstances, it will naturally attract or repel a similar body in accordance with magnetic laws; e.g., drill rods become magnetized in use and will strongly attract other iron or steel articles. *Long*

magnetizing force

a. The phenomenon associated with a magnetic flux density at a point. Theoretically, measured by the mechanical force on a unit magnetic pole in an evacuated tunnel along the direction of the magnetic flux; the magnetomotive force per centimeter in this direction. *CTD* b. A force field, resulting from the flow of electric currents or from magnetized bodies, that produces magnetic induction. *ASM, I*

magnetizing roast

A process in which an ore containing pyrite is heated and the magnetic iron oxide so formed is removed by a magnetic separator. In many cases the iron oxide is extracted as gangue. *Nelson*

magnetometer

a. An instrument for measuring magnetic intensity. In ground magnetic prospecting, an instrument for measuring the vertical magnetic intensity; in airborne magnetic prospecting, an instrument for measuring the total magnetic intensity. Also, an instrument used in magnetic observatories for measuring various components of the magnetic field of the Earth. *AGI* b. A sensitive instrument for detecting and measuring changes in the Earth's magnetic field, used in prospecting to detect magnetic anomalies and magnetic gradients in rock formations. See also: [airborne magnetometer](#)

magnetoplumbite

a. A hexagonal mineral, $Pb(Fe,Mn)_{12}O_{19}$; black; ferrimagnetic; at Laangban, Sweden.
b. The mineral group hawthorneite, hibonite, magnetoplumbite, and yimengite.

magnetorque

A form of transmission based on the principle that a magnetic field of force is produced whose strength is varied so as to transmit a torque of corresponding magnitude. With a system of this kind, control of any particular operation is effected through the agency of the magnetorque clutch, while the motor runs continuously at constant speed. *Mining*

magnetostriction

The characteristic of a material that is manifest by strain when it is subjected to a magnetic field; or the inverse. Some iron-nickel alloys expand; pure nickel contracts. *ASM, I*

magnetotelluric method

a. An electrical prospecting technique based on an application of telluric currents in which the magnetic fields induced by the alternations in earth currents would be measured simultaneously with the voltage fluctuations between electrodes at the surface.

The ratio between the amplitudes of these alternating voltages and the associated magnetic fields would be plotted as a function of frequency. *Dobrin* b. An electromagnetic method of surveying, in which natural electric and magnetic fields are measured. Usually the two horizontal electric-field components plus the three magnetic-field components are recorded; orthogonal pairs yield elements of the tensor impedance of the Earth. This impedance is measured at frequencies within the range 10^{-5} Hz to 10 Hz. *AGI*

magniotriplite

A monoclinic mineral, $(\text{Mg,Fe,Mn})_2(\text{PO}_4)_2\text{F}$; yellow.

magnochromite

A variety of chromite that contains magnesium. Alternate spelling of magnesiochromite. *Standard, 2*

magnocolumbite

An orthorhombic mineral, $(\text{Mg,Fe,Mn})(\text{Nb,Ta})_2\text{O}_6$. CF: [columbite](#)

magnoferrite

Original form of magnesioferrite. *Dana, 1*

magnussonite

An isometric and tetragonal mineral, $\text{Mn}_5\text{As}_3\text{O}_9(\text{OH,Cl})$; green; forms crusts at Laangban, Sweden, and green to brown selvages at Sterling Hill, NJ.

mahogany ore

Compact mixture of oxides of iron and copper. *Schaller*

mailly stone

A softer sort of limestone, very dusty. *Arkell*

main airway

a. The road along which the principal ventilating current passes. *Peel* b. Underground ventilation channel directly connected with a shaft or other entry to a mine. *Pryor, 3*

main-and-tail haulage

A single-track haulage system operated by a haulage engine with two drums, each with a separate rope. The engine is usually located at the out end of the system. The main rope is attached to the out end of the set of tubs, and the tail rope passes around a sheave in, and is then attached to, the rear end of the set. To draw the full set out, the main rope is wound in, the tail rope being allowed to run free. To draw the empty set in, the tail rope is wound in, the main rope being allowed to run free. The tail rope is equal to twice the length of the haulage road. The main-and-tail haulage is adopted when the gradient is irregular and the empty set will not run in by gravity. See also: [rope haulage](#)

main arch

a. The refractory blocks forming the part of a horizontal gas retort comprising the division walls and the roof that covers the retorts and the recuperators. *Dodd* b. General term for the central part of a furnace roof, particularly used as a syn. for the crown of a glass tank furnace. *Dodd*

main bord gate

York. The heading that is driven slightly to the rise from the shaft. *Fay*

main bottom

Hard rock below alluvial deposits.

main break

In mine subsidence, the break that occurs over the seam at an angle from the vertical equal to half the dip. *Lewis*

main brow

Eng. See: [gate](#)

main conveyor

See: [underground mine conveyor](#)

main crosscut

The crosscut that traverses the entire mining field and penetrates all deposits. There is such a crosscut at each level, and it is the main one for the level in question. It serves the same purpose as the shaft and thus must have correct cross section, and be particularly well constructed, as repairs to its support would hold up the transport of the entire level. *Stoces*

main drive

A main tunnel driven in the rock underlying a lead and about 50 ft (15.2 m) below the wash dirt. It is used as a drainage tunnel for carrying the water from the drainage holes to the shaft sump and also for the transport of cars from the raises. *Eng. Min. J., 1*

main endings

Pairs of narrow coal headings with crosscuts at intervals, driven to form large pillars of coal in panel working. See also: [narrow work](#) *Nelson*

main engine

N. of Eng. The surface pumping engine, usually of the Cornish type. *Fay*

main entry

a. The principal entry or set of entries driven through the mine from which cross entries, room entries, or rooms are turned. *Federal Mine Safety* b. A term used in the United States for the principal horizontal gallery giving access to an underground mine and used for haulage, ventilation, etc. Where two entries are driven in parallel, the term "double entry" is used. With three parallel entries, the term "triple entry" is used. *Nelson* c. An entry driven at right angles with the face slips of the coal. See also: [entry](#) d. A main haulage road. See also: [main road](#)

Maine sampler

A drive-type, split-tube soil-sampling device, usually equipped with a flap or clack valve near the cutting shoe. Usually produced in sizes having outside diameters ranging from 4 to 6-5/8 in (10 to 17 cm). *Long*

Maine-type sampler

A soil-sampling device that works essentially on the same principle as a Maine sampler. *Long*

main facets

a. The bezel and pavilion facets. b. Any facet extending from the girdle to the table or from the girdle to the cutlet.

main fans

Main fans produce the general ventilating current of the mine, and are generally of large capacity and permanently installed. They are assisted by natural ventilation, if present,

and, if necessary, by booster fans. They are installed to perform a certain duty, and great attention is paid to their efficiency since this governs the cost of performing the duty.

Roberts, 1

main firing

The firing of a round of shots by means of current supplied by a transformer fed from a main power supply. *BS, 12*

main gate

The principal or central heading along which the coal is conveyed from two or more conveyor panels. Normally, the main gate is also the intake airway to the face. See also: [double-unit conveyor](#); [bottom gate](#); [mother gate](#). *Nelson*

main haulage

a. That portion of the haulage system that moves the coal from the secondary haulage system to the shaft or mine opening. The method employed is the same for either longwall or room-and-pillar mining. Any one of four methods may be used: (1) mine cars and battery or trolley locomotives, (2) mine cars and a direct rope haulage, (3) a combination of methods 1 and 2, or (4) belt conveyors. *Wheeler, R.R.* b. The system by which coal is transported in trains in or out of a slope or drift entry or from the bottom of a shaft. *BCI*

main haulage conveyor

Generally 500 to 3,000 ft (approx. 150 to 1,000 m) in length. It is used to transport material between the intermediate haulage conveyor and a car-loading point or the outside. *NEMA, 2*

main haulageway

The principal transportation road, drift, tunnel, etc. *BCI*

main hole

The first or primary borehole from which secondary or branch holes are drilled. Also called original hole; parent hole. CF: [branch](#) *Long*

main intake

The trunk or principal intake airway of a mine. The main intake air current is usually split into two or more air currents before reaching the workings. *Nelson*

main levels

The first and leading excavations in mines that are made for the purpose of opening out or winning the material being mined, and that are intended to be the principal roadways of the mine. *Peel*

main-line locomotive

A large, high-powered locomotive that hauls trains of cars over the main haulage system. *BCI*

main-line motorman

In bituminous coal mining, a person who operates a mine locomotive to haul cars over the main haulage tracks underground or at the surface, as distinguished from the branch lines. *DOT*

main return

The principal return airway of a mine. The main return air current represents the total quantity of air; i.e., after the air splits have reunited. *Nelson*

main road

The principal underground road in a district along which mined material is conveyed to the shafts, generally forming the main intake air course of each district. See also: [main entry](#)

main rod

Corn. See: [pump rod](#)

main roof

The rock above the immediate roof. *Obert*

main rope

The rope that pulls a train of loaded cars out along a haulage plane, as opposed to a tail rope that pulls a train of empty cars in, as in main-and-tail haulage. See also: [pull rope](#)

main-rope haulage system

This system of haulage is used for hauling loaded trains of tubs or cars up, or lowering them down, a comparatively steep gradient that is not steep enough, in the latter case, for

a self-acting incline. In the normal system, a single track only is required. The electrically driven or compressed-air-driven engine has a single drum that runs loose on the forged-steel drum shaft; it is controlled by the brake when lowering the empty train, and is clutched to the shaft by means of a dog clutch when hauling the loaded train up the gradient. *Sinclair, 5*

main-rope rider

In bituminous coal mining, one who has charge of and rides trips (trains) of cars hauled in and out of the mine along the main cable haulageway. *DOT*

main-rope system

A system of underground haulage in which the weight of the empty cars is sufficient to draw the rope in. *Fay*

main separation door

A wooden or steel door erected near the pit bottom to prevent the intake air leaking into the main return airway or upcast shaft; a door to direct the main intake air in toward the workings. It may be fitted with an appliance, or shutter, to ease the opening for traveling purposes. See also: [fan drift doors](#)

mains firing

Firing blasts from a mains supply. *McAdam, 2*

main shaft

The line of shafting that receives its power directly from the engine or motor and transmits power to other parts. *Crispin*

mains lighting

A system of underground mine lighting in which the lamps are fed from the main electrical supply. It is used principally at the pit bottom, using filament lamps in either transparent well glass or prismatic bulkhead fittings. *Nelson*

main-slope engineer

In bituminous coal mining, one who operates the hoisting engine for raising or lowering workers, material, coal, and rock along the main haulage slope (incline) of a mine having one or more auxiliary or relay slopes. *DOT*

maintaining levels

In quarrying, consists of the removal by blasting of rock protruding above the level of the quarry floor or bench, to allow the movement of loading and transport equipment. *Streefkerk*

maintenage

Fr. The face of workings in inclined or vertical seams consisting of a series of steps each about 6 ft (1.8 m) high, and forming the working place for one person. *Fay*

maintenance

Proper care, repair, and keeping in good order. *Crispin*

main tie

Tension member connecting the feet of a roof truss, usually at the level of bearing on the wall plate or padstone. *Hammond*

main transport

The conveying or haulage of mined material from the mining area subsidiary transport to the shaft bottom or surface. For the main transport of coal, the trend is toward trunk conveyors or locomotive haulage. See also: [subsidiary transport](#); [underground haulage](#). *Nelson*

main way

A gangway or principal passage. *Fay*

maitlandite

See: [thorogummite](#)

Majac mill

A mill for dry-grinding mica by means of fluid energy. It consists of a chamber containing two horizontal directly opposed jets. Mica is fed continuously from a screw conveyor into this chamber. The particle size of the product from this mill can be controlled over a broad range down to the micrometer sizes. *USBM, 7*

major diameter

Formerly called outside diameter. It refers to the largest diameter of a thread on a screw or nut. *Crispin*

major face

Used in widely different meanings in different manufacturing plants; the meaning of the term depends on the special process of cutting used. Thus, the faces of the major rhombohedron r 1011 are spoken of as the major face when BT wafers are cut directly from a faced mother crystal. Also applied to the prism faces that terminate in the faces of the major rhombohedron, etc. *Am. Mineral.*, 2

major mine disaster

Defined by the Mine Safety and Health Administration, U.S. Department of Labor, as any accident that results in the death of five or more persons. *Federal Mine Safety*

major principal plane

The plane normal to the direction of the major principal stress. *ASCE*

major principal stress

The largest (with regard to sign) principal stress. *ASCE*

make

A wide portion of a lode. CF: [pinch](#)

make gas

Mid. To yield or produce gas. A seam of coal that gives off combustible gas is said to make gas. *Fay*

make of water

The rate of entry of water into a mine or part of a mine. Also called growth. *BS, 10*

makeup

To assemble; to couple or screw together. Usually applied to the process of assembling the component parts of a drill string or pipe system. *Long*

makeup bunker

See: [makeup shed](#)

makeup medium

Medium or medium solids added to the circuit to replace losses during the separating operation. *BS, 5*

makeup shed

A surface building at which explosives, drawn from the magazine, are issued and where the charges are prepared or made up. Syn: [makeup bunker](#)

makeup time

The time required to couple together the component parts of a drill or casing string and the lowering of such a string to the working position in a borehole. *Long*

makeup water

a. Water supplied to a washery to replace that lost from the circuit. *BS, 5* b. Water supplied to replenish that lost by leaks, evaporation, etc. *Strock, 2*

making hole

a. The depth gained in the day's drilling. *Hess* b. The act of, or portion of work time spent in, actual drilling and advancement of a bore or drill hole.

makings

Newc. The small coal hewn out in undercutting or channeling. Also, in some localities, called bug dust. *Fay*

malachite

A monoclinic mineral, $\text{Cu}_2 \text{CO}_3 (\text{OH})_2$; dimorphous with georgeite; bright green; occurs with azurite in oxidized zones of copper deposits; a source of copper. Syn: [Atlas ore](#)

malacolite

a. A pale-colored, translucent variety of diopside with good (001) parting; also diopside from Sala, Sweden. b. See: [diopside](#)

malacon

A metamict variety of zircon. Also spelled malakon, malacone.

maldonite

An isometric mineral, $\text{Au}_2 \text{Bi}$; pink to silver-white; intermetallic compound. Syn: [black gold](#)

male thread

See: [pin thread](#)

maletra furnace

A hand reverberatory furnace for roasting finely divided ore entirely without the aid of extraneous heat. *Fay*

malignite

A mafic nepheline syenite. Fifty percent of the rock is composed of aegirine-augite; the remainder is nepheline and orthoclase in about equal amounts. Accessories include apatite, biotite, titanite, and opaque oxides.

malinite

An aluminous variety of halloysite.

malinowskite

A variety of tetrahedrite that contains lead and silver. *Standard, 2*

mall

Eng. A heavy hammer. A drawing or prop mall is a long-handled mall used when withdrawing timber. *SMRB*

malladrite

A trigonal mineral, $\text{Na}_2 \text{SiF}_6$. (Not mallardite.)

mallan

Soft turf containing lumps of ore, Derbyshire, U.K.

mallardite

A monoclinic mineral, $\text{MnSO}_4 \cdot 7\text{H}_2 \text{O}$; melanterite group. (Not malladrite.)

malleability

a. The characteristic of metals that permits plastic deformation in compression without rupture. See also: [plastic deformation](#) *ASM, 1* b. Minerals are malleable when slices cut from them may be flattened out under a hammer. Examples are native gold; silver; copper; platinum. *Nelson*

malleable

a. Said of a mineral, e.g., gold, silver, copper, platinum, that can be plastically deformed under compressive stress, e.g., hammering. *AGI* b. A mineral that can be sliced and the slices hammered flat without breaking, e.g., gold, copper. CF: [sectile](#); [flexible](#).

malleable cast iron

A cast iron made by a prolonged anneal of white cast iron in which decarburization or graphitization, or both, take place to eliminate some or all of the cementite. The graphite is in the form of temper carbon. If decarburization is the predominant reaction, the product will have a light fracture, (whiteheart malleable); otherwise, the fracture will be dark (blackheart malleable). Pearlitic malleable is a blackheart variety having a pearlitic matrix along with, perhaps, some free ferrite. See also: [iron](#)

malleable mineral

A mineral that may be flattened or deformed by hammering without breaking, for example, native copper or gold. *Stokes*

malleable nickel

Nickel obtained by remelting and deoxidizing electrolytic nickel and casting it into ingot molds. It can be rolled into sheet and used in equipment for handling food, and for coinage, condensers, and other purposes where resistance to corrosion, particularly by organic acids, is required. *CTD*

malleablizing

Annealing white cast iron in such a way that some or all of the combined carbon is transformed to graphite or, in some instances, part of the carbon is removed completely. *ASM, 1*

malleate

To shape into a plate or leaf by beating or hammering; said of metal. *Standard, 2*

malmstone

a. A hard, cherty, grayish-white sandstone, specif. the Malmstone from the upper part of the Upper Greensand (Cretaceous) of Surrey and Sussex in England, used as a building and paving material. *AGI* b. A marly or chalky rock. *AGI*

malpais

A term used in the Southwestern United States and Mexico for a region of rough and barren lava flows. The connotation of the term varies according to the locality. Etymol: Spanish, mal pais, bad land. *AGI*

maltesite

A variety of andalusite, resembling chiastolite, showing in cross section a maltese cross of pure material separated by areas of impure material. *English*

maltha

a. Various natural tars resulting from the oxidation and drying of petroleum. See also: [mineral tar](#); [pittasphalt](#). *AGI* b. A black viscid substance intermediate between petroleum and asphalt. Also called malthite. *Webster 3rd* c. A variety of ozocerite. *Webster 2nd*

malthacite

A scaly, sometimes massive, white or yellowish clay related to fuller's earth, having a Si-Al ratio of about 4. *AGI*

mammillary

Of, or pertaining to, smoothly rounded masses resembling breasts or portions of spheres; descriptive of the shape of some mineral aggregates, such as malachite or limonite; similar to but a larger size than botryoidal. *Fay*

mammillary structure

See: [pillow structure](#)

mammillated

Said of a mineral displaying large spheroidal surfaces, e.g., malachite. *Nelson*

managerial organization

Coordination of functional units and presentation of the results of their achievements in policy-guiding form as facts, conclusions, and recommendations. Efficient integration of the operations managed. *Pryor, 3*

manandonite

An orthorhombic mineral, $\text{Li}_2 \text{Al}_4 (\text{Si}_2 \text{AlB})\text{O}_{10} (\text{OH})_8$; kaolinite-serpentine group.

manasseite

a. A hexagonal mineral, $\text{Mg}_6 \text{Al}_2 (\text{CO}_3)(\text{OH})_{16} \cdot 4\text{H}_2 \text{O}$; dimorphous with hydrotalcite. b. The mineral group barbertonite, chlormagaluminite, manasseite, and sjogrenite.

manchado

a. Spotted ore, Spain. b. A commercial grade of mica which is stained to very slightly spotted, Brazil.

Manchurian jade

See: [soapstone](#)

mandelstone

See: [amygdaloid](#)

mandrel

a. A miner's pick. *Webster 3rd* b. A usually tapered or cylindrical axle spindle, or arbor that is inserted into a hole in a piece of work so as to support the work during machining. *Webster 3rd* c. A metal bar that serves as a core around which metal or other material may be cast, molded, forged, bent, or otherwise shaped. *Webster 3rd* d. Any of a train of jointed units intended to be pulled through an underground duct as each joint is made to ensure perfect alinement, or through a steel pipe in process of welding to ensure a smooth interior. *Webster 3rd* e. The shaft and bearings on which a tool (as a grinding disk or circular saw) is mounted. *Webster 3rd* f. A temporary interior support for a thin-walled tube (as a tubular steel pile to be filled later with concrete) being driven into something. *Webster 3rd*

mandril

A miner's pick. *Nelson*

Manebach law

A type of twinning in the monoclinic crystal system. The basal pinacoid is the twinning plane. *Hess*

Manebach twin

A monoclinic crystal twinned across the basal pinacoid, according to the Manebach law, e.g., orthoclase.

man engine

See: [man machine](#)

manganandalusite

A variety of andalusite containing 6.91% Mn_2O_3 . It differs from ordinary andalusite in its grass-green color and strong pleochroism. From Vestana, Sweden. *English*

manganberzeliite

An isometric mineral, $(Ca,Na)_3(Mn,Mg)_2(AsO_4)_3$; forms a series with berzeliite and is yellow to orange.

manganblende

See: [alabandite](#)

mangandalusite

Variety of andalusite containing manganese. Alternate spelling of manganandalusite.

manganepidote

See: [piemontite](#)

manganese

A gray-white, hard, brittle metallic element. Symbol, Mn. Manganese does not occur uncombined in nature, but its minerals are widely distributed. Pyrolusite (MnO_2) and rhodochrosite ($MnCO_3$) are the most common minerals. The discovery of large quantities of manganese nodules on the ocean floor, containing about 24% manganese, holds promise as a source of manganese. Used to form many important alloys, esp. with steel, aluminum, and antimony; used in dry cells and glass, and in the preparation of oxygen, chlorine, and medicines. *Handbook of Chemistry and Physics, 3*

manganese-aluminum garnet

See: [spessartine](#)

manganese bronze

Alloy of 59% copper, 1% tin, and up to 40% manganese. Practically a brass with high tensile strength and toughness. Used for ship's impellers and such fittings as must withstand corrosion by seawater. *Pryor, 3*

manganese garnet

See: [spessartite](#)

manganese glance

See: [alabandite](#)

manganese-hoernesite

A monoclinic mineral, $(\text{Mn,Mg})_3 (\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; vivianite group.

manganese hydrate

See: [wad](#)

manganese minerals

Those in commercial production are pyrolusite, psilomelane, braunite, and manganite. Manganese is used chiefly in steel manufacture.

manganese nodules

The concretions, primarily of manganese salts, covering extensive areas of the ocean floor. These vary in size from extremely small to some 6 in (15.2 cm) in diameter. They have a layer configuration and may prove a useful source of minerals. *Hy*

manganese ore

A term used for ore containing 35% or more manganese; it may include concentrate, nodules, or synthetic ore.

manganese oxide

There are several manganese oxides, the commonest being MnO_2 (pyrolusite). It is used as a coloring oxide (red or purple); mixed with the oxides of cobalt, chromium, and iron, it produces a black. This oxide is also used to color facing bricks, and to promote adherence of ground-coat vitreous enamels to the base metal. See also: [manganite](#); psilomelane. *Dodd*

manganese sicklerite

See: [sicklerite](#)

manganese silicate

See: rhodonite.

manganese spar

See: rhodonite; rhodochrosite.

manganiferous iron ore

A term used for iron ores containing 5% to 10% manganese.

manganiferous ore

A term used for any ore of importance for its manganese content containing less than 35% manganese but not less than 5%. See also: [natural ore](#)

manganite

A monoclinic mineral, $MnO(OH)$; trimorphous with feiknechtite and groutite; a hydrothermal vein mineral; an ore of manganese. Syn: [gray manganese ore](#); [sphenomanganite](#).

mangan-neptunite

A monoclinic mineral, $KNa_2 Li(MN,Fe)_2 Ti_2 Si_8 O_{24}$; forms a series with neptunite. See also: [neptunite](#)

manganocalcite

A variety of calcite that contains manganese carbonate and is closely related to rhodochrosite. Syn: [kutnohorite](#)

manganolangbeinite

An isometric mineral, $K_2 Mn_2 (SO_4)_3$; rose-red; forms tetrahedra in cavities in recent lavas on Mt. Vesuvius, Italy.

manganolite

a. See: rhodonite. b. A general term for rocks composed of manganese minerals, esp. manganese oxides such as wad and psilomelane. *AGI*

manganophyllite

A manganoan variety of biotite.

manganosiderite

An intermediate member of the rhodochrosite-siderite series.

manganosite

An isometric mineral, MnO ; periclase group; emerald-green; forms octahedra that blacken on exposure to air.

manganotantalite

An orthorhombic mineral, $MnTa_2 O_6$; dimorphous with manganotapiolite; forms series with manganocolumbite and with ferrotantalite.

manganpyrosmalite

A hexagonal mineral, $(Mn,Fe)_8 Si_6 O_{15} (OH,Cl)_{10}$; dimorphous with brokenhillite; forms a series with ferropyrosmalite.

mangrove coast

A tropical or subtropical low-energy coast with a shore zone overgrown by mangrove vegetation. Such coasts are common in Indonesia, Papua New Guinea, and other tropical regions. The marine coast of southern Florida is the only significant U.S. example. *AGI*

manhole

a. A safety hole. *Hudson* b. Cubicles cut into the solid strata or built into the gob pile along haulageways in which miners can be safe from passing locomotives and cars. Also called refuge hole. *BCI* c. A refuge hole constructed in the side of a gangway, tunnel, or slope. *Fay* d. A small and generally very short passage used only for the ingress and egress of the miners. *Fay* e. A hole in cylindrical boilers through which a worker can get into the boiler to examine and repair it. *Fay* f. A small passage connecting a level with a stope, or with the level next above. *Webster 2nd*

manhole cover

A movable cast-iron plate fitting a cast-iron frame bedded on a rebated concrete slab or kerb over a manhole. Covers over foul drains are formed to prevent escape of foul air. *Hammond*

manila rope

Broadly, rope or cordage formed from twisted fibers obtained from abaca, agave, or hemp plants. *Long*

manipulated variable

In mineral processing, a quantity or condition that is varied as a function of the actuating signal so as to change the value of the controlled variable. *Fuerstenau*

manipulator

a. A machine for moving and turning over hot billets or blooms of iron or steel in the process of rolling. *Standard, 2* b. A mechanical device used for safe handling of radioactive materials. Frequently, it is remotely controlled from behind a protective shield. *Lyman*

manless coal face

A coal face mined by remotely controlled equipment that eliminates the need for workers in dangerous places. *Encyclopaedia Britannica*

manless coal mining

Longwall coal faces equipped for the automatic starting, stopping, and steering of power-loading machines as well as the manipulation of electric trailing cables, including air and water hoses; controlled automatic advancing of face conveyors as well as advancing and setting of roof supports. Each and all operations are correctly phased and accomplished from a remote point. With the advent of electronics and automation techniques, the prospects of manless coal mining are very promising. *Nelson*

manless face

A longwall face on which the coal is cut and brought out to the gate road mechanically, without the aid of miners on the face. The face is unsupported. In general, the coal seam is thin but of high grade, and some type of rapid plow is employed. See also: [coal-sensing probe](#); ram scraper. *Nelson*

manlock

An air lock through which workers pass to a working chamber that is under air pressure. *Hammond*

man machine

Corn.; Derb. An obsolete term for a mechanical lift for lowering and raising miners in a shaft by means of a reciprocating vertical rod of heavy timber with platforms at intervals, or of two such rods moving in opposite directions. In the former case, stationary platforms are placed in the shaft, so that the miner in descending, for instance, can step from the moving platform at the end of the downstroke and step back upon the next platform below at the beginning of the next downstroke. When two rods are employed, the miner steps from the platform on one rod to that on the other. Syn: [man engine](#); [movable ladder](#). *Fay*

manmade diamond

Diamond produced synthetically. Also called MM diamond. See also: [diamond](#); [synthetic diamond](#). *Long*

Mannheim process

Contact method of catalyzing SO₂ to SO₃ in two stages, using first iron oxide and second platinized asbestos as catalysts. *Pryor, 3*

Manning's formula

An empirical formula for the value of the coefficient, C, in the Chezy formula, the factors of which are the hydraulic radius and a coefficient of roughness; a simplification of the Kutter formula. *Seelye, 1*

man-of-war

Staff. A small pillar of coal left in a critical spot; also, a principal support in thick coal workings. *Fay*

manometer

a. Any instrument that measures gaseous pressure. *Nelson* b. Measures pressure or a pressure difference by balancing the applied pressure against the hydrostatic head of a column of liquid of known density. In practice, most manometers measure a pressure difference, so that if an absolute pressure is to be measured, it is essential to have access to an accurate barometer to determine the atmospheric pressure. *Roberts, 1* c. An instrument designed to give a continuous record of the pressure of an explosion at the point where the instrument is located. See also: [micromanometer](#); [piezometer](#); [two-liquid differential manometer](#); U-tube manometer; vernier-reading manometer; water gage. *Rice, 2; Roberts, 1*

manometer calibration

Many manometers require calibration, and this may be carried out by the (1) static method in which simultaneous readings of the manometer under test and the primary standard are taken when one limb of the manometer and the standard are connected to a variable pressure source, the other limbs being connected to a source of constant pressure, or (2) the dynamic method in which the difference in pressure obtained between a low-speed atmospheric wind-tunnel hole (static pressure) and the atmospheric static pressure is used to carry out the calibration. One limb of the manometer and the low-pressure side of the Chattock-Fry are connected to the tunnel-wall hole (reference variable pressure), while the other limb of the manometer is connected to the atmospheric outlet of the Chattock-Fry. *Roberts, 1*

manometric efficiency

a. The ratio of the actual head developed to the velocity pressure of air moving at the fan-tip speed, equal to one-half the theoretical head of a radial-tip fan. *Hartman, 1* b. An indication of the capability of the fan to produce pressure. It is the ratio of the initial depression to the theoretical depression. $\text{Manometric efficiency} = \frac{\text{total water gage}}{U^2}$, where U = tip speed in feet per second of fan blades. *Nelson* c. The chief value of the manometric efficiency lies in its being a rough check on the mechanical efficiency of the fan. See also: [theoretical depression](#)

manoscope

See: [manometer](#)

manoscopy

The science of determining the density of gases and vapors. *Standard, 2*

man-riding car

A car or carriage designed for the riding of miners to and from the workings. The car body has a low center of gravity to avoid the risk of overturning and is fitted with track brakes and an overspeed clutch. The train set is arranged to brake from the rear to avoid pileup, and the brakes are applied immediately on overspeed from a preset velocity. *Nelson*

man-riding conductor

A worker appointed by the mine manager to be in charge of the running of a train of man-riding cars. This worker is the responsible person for starting and stopping the vehicles, for giving the proper signals, and for seeing that the safe seating capacity is not exceeded. During the shift this worker is employed on other duties. *Nelson*

mansfieldite

An orthorhombic mineral, $\text{AlAsO}_4 \cdot 2\text{H}_2\text{O}$; variscite group; forms a series with scorodite.

manshift

The output or work done by a worker in one shift; a basis for assessing the magnitude of a job to complete. *Nelson*

Man-Ten steel alloy

An alloy containing 0.35% carbon as maximum, from 0.25% to 1.75% manganese, 0.10% to 0.30% silicon, 0.01% to 0.25% copper, 0% to 0.40% molybdenum, and 0% to 0.20% vanadium. Used for bodies and doors of stripping shovel dippers, which have manganese steel for bail, lip, and renewable teeth. *Lewis*

mantle

a. The soil or other unconsolidated rock material commonly referred to as overburden. See: [surface](#) b. A sheath of manganese steel that fits over the iron or steel cone of the breaking (gyrating) head of a gyratory crusher. *Pryor, 3* c. That part of a blast furnace that carries the weight of the stack, continuing up from the bosh. *Pryor, 3* d. See: [mantle rock](#); regolith. e. The outer zone in a zoned crystal; an overgrowth. *AGI* f. The zone of the Earth below the crust and above the core, which is divided into the upper mantle and the lower mantle, with a transition zone between. *AGI*

mantle rock

See: [regolith](#)

manto

A flat-lying, bedded deposit; either a sedimentary bed or a replacement strata-bound orebody. Etymol: Spanish, vein, stratum. CF: [bed vein](#) *AGI*

manual haulage

The practice of pushing tubs, trams, etc., by hand. See also: [hand tramming](#)

manual takeup

A hand-operated mechanism for adjusting the takeup or movable pulley. *NEMA, 2*

manual-type belt-tensioning device

A hand-operated mechanism for adjusting a takeup pulley to vary the tension in a conveyor belt. The most common types are chain-jack, sylvester, rack, and screw. *NEMA, 1*

manual winding control

A system in which the winder is controlled in the conventional manner by the driver, following the usual bell signals from the onsetter and the banksman. The system of control ensures that the speed of the winder follows closely the position of the driver's level, driving or dynamic braking being applied automatically to the motor as needed to preserve the chosen speed. See also: [automatic cyclic winding](#)

manufactured gas

A mixture of gaseous hydrocarbons produced from coal or oil. See also: [gas](#)

manufactured marble

a. A mixture of marble dust and plastics. b. A mixture of powdered stone and plastics.

manufactured sand

Fine aggregate produced by crushing rock. *AIME, 1*

manway

a. A compartment, vertical or inclined, for the accommodation of ladders, pipes, and timber chutes. The drivage may be a winze or a raise and its purpose is to give convenient access to a stope. Also called ladderway. *Nelson* b. A passageway for the use of miners only; an airshaft; a chute. *Standard, 2* c. Eng. See: [manhole](#) d. A passage in or into a mine used as a footpath for workers. *Korson* e. A short heading between two chutes.

map

a. A horizontal projection of surface plants, mine workings, or both, drawn to a definite scale, upon which is shown all the important features of the mine; a plan; a plat. b. The act of preparing such plans of a mine. c. A representation to a definite scale on a horizontal plane of the physical features of a portion of the Earth's surface (natural or artificial or both) by means of symbols, which may emphasize, generalize, or omit certain features as conditions may warrant. A map may be derived from ground surveys made by transit, plane table, or camera, or from aerial photographic surveys, or both. *Seelye, 2*

map projection

A method of representing the curved surface of the Earth on a flat map. As the true shape of the Earth is a globe, it is impossible to make a map of large areas of the Earth's surface without some distortion. *Hammond*

marathon mill

A form of tube mill used in the cement industry, in which the pulverizing is done by long pieces of hardened steel shafting. *Liddell*

marbella

A Spanish magnetite with a siliceous gangue. *Osborne*

marble

a. A metamorphic rock composed essentially of calcite, dolomite, or a combination of the two, with a fine- to coarse-grained crystalline texture. b. In commerce, any crystalline carbonate rock that will take a polish, including true marble, certain coarse-grained limestones, alabaster, and onyx. c. See: [verde antique](#)

marble handsaw

A toothless blade fitted at the back with a block handle, used with sand, for cutting slabs of marble into pieces. *Fay*

marble saw

A toothless blade used with sand in marble cutting. *Standard, 2*

Marble's reagent

An etchant for stainless steels, consisting of 4 g of copper sulfate in 20 mL of hydrochloric acid and 20 mL of water. *Osborne*

marcasite

a. White iron pyrites, FeS_2 , the orthorhombic dimorph of pyrite, having a lower specific gravity, less stability, and a paler color. Often called white iron pyrites, coxcomb pyrites, and spear pyrites. *AGI* b. In the gemstone trade, marcasite is either pyrite, polished steel (widely used in ornamental jewelry in the form of small brilliants), or even white metal. *CTD* c. An orthorhombic mineral, FeS_2 ; dimorphous with pyrite; metallic; bronze-yellow to white; an authigenic or supergene mineral from acid solutions. Syn: [white iron pyrites](#); [white pyrite](#); [cockscomb pyrite](#); spear pyrite; lamellar pyrite. d. The mineral group ferroselite, frobergite, hastite, kullerudite, marcasite, and mattagamite. e. A

gemstone with a metallic luster, esp. pyrite, but including polished steel and white metal.
Syn: [radiated pyrite](#)

marcus

A patented shaker screen with a nonharmonic or quick-return motion. *Zern*

Marcy mill

A ball mill in which a vertical-grate diaphragm is placed near the discharge end. Between this perforated diaphragm and the end of the tube, there are arranged screens for sizing the material, oversize being returned for further grinding while undersize is discharged. *Liddell*

mare ball

York and Lanc. Spherical ferruginous concretions. CF: [caballa ball](#) *Arkell*

marekanite

Obsidian that occurs as rounded to subangular bodies, usually less than 2 in (5.1 cm) in diameter and having indented surfaces. These bodies occur in masses of perlite and are of special interest because of their low water content as compared with the surrounding perlite. The name is from the Marekanka River, Okhotsk, Siberia, Russia. *AGI*

margarite

a. A beadlike string of globulites, commonly found in glassy igneous rocks. *AGI* b. A monoclinic mineral, $4[\text{CaAl}_2(\text{Al}_2\text{Si}_2\text{O}_{10})(\text{OH})_2]$; mica group; forms brittle folia; associated with corundum. Syn: [brittle mica](#); [pearl mica](#).

margarodite

A pearly variety of muscovite.

margarosanite

A triclinic mineral, $\text{Pb}(\text{Ca},\text{Mn})_2\text{Si}_3\text{O}_9$.

marginal deposit

a. A magmatic segregation at the bottom and periphery of an intrusive rock; e.g., nickel-copper-sulfide deposits at Sudbury, ON, Canada. b. Marginal ore deposit.

marginal fissure

A fracture, bordering an igneous intrusion, that has become filled with magma. *AGI*

marginal ore deposit

A deposit near the lower limit of commercial workability. *Bateman, 2*

marginal reserves

That part of the reserve base that, at the time of determination, borders on being economically producible. Its essential characteristic is economic uncertainty. Included are resources that would be producible, given postulated changes in economic or technologic factors. *USGS, 2*

marginal sea

An adjacent sea that is widely open to the ocean. See also: [adjacent sea](#)

marginal thrust

A thrust fault along the margin of an intrusive that dips toward the intrusive. *AGI*

marginal trench

See: [trench](#)

maria glass

An early name for both mica and selenite (gypsum).

marialite

A tetragonal mineral, $3\text{NaAlSi}_3\text{O}_8 \cdot \text{NaCl}$; scapolite group; forms a series with meionite.

Marietta miner

Trade name for a heavy track-mounted continuous miner for operation in thick seams. The front end contains two cutter arms that rotate in opposite directions to sweep the coal it cuts inwards toward the center. The broken coal is taken back through the machine to a chain conveyor. Two cutter chains are arranged at roof and floor level behind the arms to cut down the coal left between the rotating arms. The machine cuts an area 12 ft (3.7 m) wide and 7 ft (2.1 m) high. Power is supplied by two motors, one of 70 hp (52.2 kW) and the other of 25 hp (17.4 kW). It has a continuous capacity from 3 to 3-1/2 st/min (2.7 to 3.2 t/min). This machine has been subject to several modifications.

See also: [continuous miner](#)

marine biology

Science that treats of the living organisms of the sea, the chemical and physical characteristics of their environment, and factors affecting their distribution. *Hy*

marine core drill

Used for investigating strata beneath the seabed and taking sample and cores from which dredging conditions may be assessed. *Hammond*

marine deposit

A sedimentary deposit laid down in the sea, usually beyond the seaward edge of the littoral belt. *Stokes*

marine erosion

Erosion by moving seawater, the action of which is largely intensified by detritus carried by it. *Schieferdecker*

marine geology

The marine science that treats of the topographical features of the sea bottom, the phenomena that have developed it, and the types, processes, and distribution of sedimentation. *Hy*

marine humus

Organic matter deposited on the sea bottom. *Tomkeieff*

marine invasion

The spreading of the sea over a land area. *AGI*

marine mining

The mining of marine mineral deposits, classified as unconsolidated deposits such as gravel, mineral sands, or nodules; consolidated deposits such as outcrops, veins, or crusts; and fluid that is seawater or hydrothermal fluids; from, on, or beneath the seabed, whether on the continental shelf or in the deep ocean basins. *SME, 1*

marine transgression

See: [transgression](#)

mariposite

A chromian variety of phengite, a siliceous variety of muscovite.

maritime plants

Plants that grow naturally under salty conditions on a foreshore and that may materially help to prevent scour and stabilize sand dunes. *Hammond*

marker

a. An easily recognized stratigraphic feature having characteristics distinctive enough for it to serve as a reference or datum or to be traceable over long distances, esp. in the subsurface, as in well drilling or in a mine working; e.g., a stratigraphic unit readily identified, or any recognizable rock surface such as an unconformity or a corrosion surface. See also: [format](#) marker formation. CF: [horizon](#) b. A layer that yields characteristic reflections over a more or less extensive area. *AGI* c. A layer that accounts for a characteristic segment of a seismic-refraction time-distance curve and can be followed over reasonably extensive areas. *AGI* d. S. Afr. See: [outcrop](#) e. See: [marker block](#)

marker bed

a. See: [marker](#) b. A stratigraphic bed selected for use in preparing structural, paleogeologic, and other maps that emphasize the nature or attitude of a plane or a surface. It is generally selected for lithologic characteristics, but biologic factors and unconformities may control. Syn: [indicator](#); [key bed](#); [marker horizon](#). See also: [horizon](#); [marker](#). CF: [indicator](#)

marker block

A small block on which the footage below the collar of a borehole is marked and inserted between pieces of core at its appropriate place in a core box to indicate the depth in the borehole at which the core was obtained. Also called footage block; footmark; marker. The marker block is placed in the core box on completion of each drilled interval. See also: [marker](#)

marker formation

See: [marker](#)

marker horizon

See: [marker bed](#); marker.

market pot

In silver refining, the pot at the end of the series of pots used in the Pattinson process, in the direction in which the amount of silver left in the lead is diminishing. It contains the market lead. *Fay*

markovnikovite

Variety of petroleum found in Russia. *Tomkeieff*

marl

a. An old term loosely applied to a variety of materials, most of which occur as loose, earthy deposits consisting chiefly of an intimate mixture of clay and calcium carbonate, formed under marine or esp. freshwater conditions; specif. an earthy substance containing 35% to 65% clay and 65% to 35% carbonate. Marl is usually gray; it is used esp. as a fertilizer for acid soils deficient in lime. In the Coastal Plain area of Southeastern United States, the term has been used for calcareous clays, silts, and sands, esp. those containing glauconite (greensand marls); and for newly formed deposits of shells mixed with clay. *AGI* b. A soft, grayish to white, earthy or powdery, usually impure, calcium carbonate precipitated on the bottoms of present-day freshwater lakes and ponds, largely through the chemical action of aquatic plants, or forming deposits that underlie marshes, swamps, and bogs that occupy the sites of former (glacial) lakes. The calcium carbonate may range from 90% to less than 30%. Syn: [bog lime](#) c. A term occasionally used (as in Scotland) for a compact, impure, argillaceous limestone. Etymol: French marle. *AGI*

marlite

See: [marlstone](#)

marl slate

An English term for calcareous shale; it is not a true slate. *AGI*

marlstone

a. An indurated rock of about the same composition as marl. It has a blocky subconchoidal fracture, and is less fissile than shale. Syn: [marlite](#) b. A term originally applied by Bradley (1931) to slightly magnesian calcareous mudstones or muddy limestones in the Green River Formation of the Uinta Basin, UT, but subsequently applied to associated rocks (including conventional shales, dolomites, and oil shales) whose lithologic characters are not readily determined. Picard (1953) recommended abandonment of the term as used in the Uinta Basin. *AGI* c. See: [marlstone ore](#)

marlstone ore

A stratified ironstone located in the Midlands (England) and occurring at the top of the Middle Lias series. *Nelson*

marly

Pertaining to, containing, or resembling marl; e.g., marly limestone containing 5% to 15% clay and 85% to 95% carbonate, or marly soil containing at least 15% calcium carbonate and no more than 75% clay (in addition to other constituents). *AGI*

marmorization

See: [marmorization](#)

marmarosh diamond

Rock crystal variety of quartz.

marmatite

A ferroan variety of sphalerite.

marmolite

A thinly foliated variety of serpentine.

marmorization

The conversion of limestone into marble by metamorphism. Syn: [marmorization](#); [marmorosis](#).

marmorosis

See: [marmorization](#)

marm stone

Obsolete term for marble. *Arkell*

marokite

An orthorhombic mineral, CaMn_2O_4 ; opaque black with dark red internal reflection; in Morocco.

Marriner process

A modification of the cyanide process in which the ore is deadroasted, after which all of it is ground to slime, and the resulting product is treated by agitation. *Liddell*

marrow

a. Well sinkers' term for a fine-grained floury rock, Oxfordshire, U.K. b. Up to six workers who pool and share earnings equally, all at the same workplace but not necessarily on the same shift.

Marsaut lamp

An earlier type of miners' flame safety lamp fitted with two or three conical gauzes, thus adding to the safety of the lamp when used in high air velocities. The Marsaut lamp is the basis of modern flame safety lamps. *Nelson*

marsh buggy

A special, self-propelled geophysical vehicle designated to operate over marsh or extremely soft ground, usually having wheels with very wide tread or buoyant wheels that will float the vehicle in water. *AGI*

Marsh funnel

An appliance for measuring viscosity. It consists of a copper funnel, about 30 cm long with a 15-cm diameter at the top, that has a 10-mesh screen over half its diameter to remove debris and a 6-mm-diameter exit tube at the bottom through which the rate of flow is timed. It takes 26 s for a quart of clean water to flow through and correspondingly longer for muds of greater viscosity. Gel strength is measured by comparing the rate of flow of freshly agitated mud with that of mud that has been allowed to remain quiescent for 10 min. See also: [hydrometer](#); specific-gravity hydrometer. *Nelson*

marsh gas

a. Methane, CH₄. If the decaying matter at the bottom of a marsh or pond is stirred, bubbles of methane rise to the surface, thus the name marsh gas. *Nelson* b. It is nonexplosive until met with air or oxygen. In miners' language synonymous with firedamp. See also: [methane](#); [firedamp](#). *BCI; Fay*

marshite

An isometric mineral. CuI ; soft; oil brown; dodecahedral cleavage; at Broken Hill, New South Wales, Australia.

marsh ore

See: [bog iron](#); bog iron ore.

marsh pan

A salt pan in a marsh. *AGI*

martenite

A synthetic fettling material, used for sintering open-hearth furnace bottoms. The approximate composition (variable) is 5.2% silica, 2.1% alumina, 10.5% ferric oxide, 13.4% lime, 66.5% magnesia (ignition loss, 2.3%). Martenite sinters more rapidly than magnesite, thereby reducing repair time; moreover, it is suitable for hot patching. Martenite is as wear resistant as magnesite and has no deleterious effect on the slag.
Osborne

martensite

Alpha-iron supersaturated with carbon as a result of quenching austenite (gamma-iron) below 150 degrees C. (Not martinsite.)

martic

A mixture of bituminous matter, such as asphalt, and some foreign material, such as sand. *Mersereau, 2*

Martin process

Used in the manufacture of steel. Also called Siemens-Martin and open-hearth process.
Fay

martinsite

See: [kieserite](#)

martite

Hematite pseudomorphous after magnetite octahedra.

martourite

See: [berthierine](#)

marundite

A coarse-grained pegmatite consisting of corundum and margarite with accessory biotite, plagioclase, apatite, tourmaline, garnet, and kyanite. Allied to plumasite grading into normal pegmatite. *Hess*

mascagnite

An orthorhombic mineral, $(\text{NH}_4)_2 \text{SO}_4$; occurs around fumaroles and in guano deposits.

mascot emerald

A beryl triplet that simulates emerald.

maser

Contracted version of microwave amplification by simulated emission of radiation. A class of amplifier from which the optical laser was developed. See also: [laser](#)

mask

a. A screen, usually made of tracing cloth, to subdue and diffuse the light behind a plumbline or other sighted object. *BS*, 7 b. See: [respirator](#)

maskeeg

See: [muskeg](#)

maskelynite

A plagioclase glass in some chondrites and irons formed by preterrestrial impact between meteorites in space.

mason's hammer

A square-faced hammer with a peen in line with handle. *Standard*, 2

mass

a. The quantity of matter in a body, obtained by dividing the weight of the body by the acceleration due to gravity. b. A large irregular deposit of ore, which cannot be recognized as a vein or bed. See also: [nontabular deposit](#)

mass aqua

Borosilicate glass imitative of aquamarine (beryl).

mass copper

In the Lake Superior region, a term for native copper occurring in large masses.

mass density

Mass of air per unit volume. Measured in kilograms per cubic meter. *Hartman, 2*

mass detonation

A term applied to the unintentional detonation of all or a part of a large quantity of explosive material (bulk truckload, shipload, or caseload) by the explosion of a smaller quantity of explosives or a flame.

mass diagram

A plotting of cumulative cuts and fills used for engineering computation of highway jobs. *Nichols, 1*

mass effect

The tendency for hardened steel to decrease in hardness from the surface to the center, as a result of the variation in the rate of cooling throughout the section. Becomes less marked as the rate of cooling required for hardening decreases; i.e., as the content of alloying elements increases. *CTD*

mass fiber

a. One of the three recognized forms in which asbestos fiber is found in rock deposits. In this form the fibers are usually found intermixed in a matrix, which forms the orebody. Found mostly in the matrix of the deposits of the amphibole varieties of asbestos. The rock forming the orebody is sometimes inclined to be soft, and the fibers intermingled in such a mass deposit consist of patches of apparent slip-fiber forms. Indications of disturbed cross-fiber disposition are often discernible. *Sinclair, 7* b. A mass aggregate of interlaced, unoriented, or radiating fibers of chrysotile serpentine asbestos.

mass haul diagram

Diagram used in construction work to show the location of digging and filling sites, and the distances over which earth and materials are to be transported. *Pryor, 3*

massicot

An orthorhombic mineral, PbO ; dimorphous with litharge; prismatic cleavage; soft; yellow; occurs in oxidized zones of lead ore deposits. Syn: [lead ocher](#)

massif

A massive topographic and structural feature, esp. in an orogenic belt, commonly formed of rocks more rigid than those of its surroundings. These rocks may be protruding bodies of basement rocks or younger plutonic bodies. Examples are the crystalline massifs of the Helvetic Alps, whose rocks were deformed mainly during the Hercynian orogeny, long before the Alpine orogeny. *AGI*

massifs long

Fr. Pillar in longwall workings. *Fay*

massive

a. Said of a mineral deposit (esp. of sulfides) characterized by a great concentration of ore in one place, as opposed to a disseminated or vein deposit. b. Said of any rock that has a homogeneous texture or fabric over a wide area, with an absence of layering, foliation, cleavage, or any similar directional structure. See also: [massive rock](#) c. Said of a mineral that is physically isotropic; i.e., lacking a platy, fibrous, or other structure. CF: [amorphous](#)

massive bedding

Very thick homogeneous stratification in sedimentary rocks.

massive eruption

Outpouring of lava from a line or system of fissures, so that vast areas have become covered by nearly horizontal sheets of extrusive flows.

massive mineral

If the crystalline grains are so small that they cannot be distinguished except under the high magnification of a microscope, the structure is described as compact and the mineral as massive. *CMD*

massive pluton

Any pluton that is not tabular in shape.

massive rock

Isotropic, homogeneous rock with a strength that does not vary appreciably from point to point. Typical examples are igneous rocks such as granite and diorite; metamorphic

rocks such as marble and quartzite; and some thick-bedded sedimentary rocks. See also: [massive](#)

mass movement

The unit movement of a portion of the land surface; specif. the gravitative transfer of material down a slope. Syn: [mass-wasting](#) *AGI*

mass number

The sum of the neutrons and protons in a nucleus. It is the nearest whole number to the actual atomic weight of the atom. *Lyman*

mass profile

A road profile showing cut and fill in cubic yards or meters. *Nichols, 1*

mass shooting

Simultaneous exploding of charges in all of a large number of holes, as contrasted with sequential firing with delay caps. *Nichols, 1*

mass spectra

Positive ray spectra obtained by means of a mass spectrograph. In such spectra the images due to positive ray particles of different masses are spaced according to the masses of the particles; i.e., according to their atomic weights. *CTD*

mass spectrometer

An instrument for producing and measuring, usually by electrical means, a mass spectrum. It is esp. useful for determining molecular weights and relative abundances of isotopes within a compound. *AGI*

mass unit weight

See: [wet unit weight](#)

mass-wasting

See: [mass movement](#)

mast

a. A drill derrick or tripod mounted on a drill unit, which can be raised to its operating position by mechanical means. *Long* b. A single pole, used as a drill derrick, supported in an upright or operating position by guys. *Long* c. A tower or vertical beam carrying one or more load lines at its top. *Nichols, 1*

master alloy

An alloy, rich in one or more desired addition elements, that can be added to a melt to raise the percentage of a desired constituent. *ASM, 1*

master hauler

S. Wales. The person in charge of haulers in a coal mine and who controls the horse haulage traffic and the allocation of trams. *Nelson*

master joint

A persistent joint plane of greater-than-average extent. *AGI*

master lode

The main productive lode of a district. CF: [mother lode](#)

master pin

The only pin in an integrated crawler track that will open the track when driven out. *Nichols, 1*

mastershifter

N. of Eng. Official responsible for the working of a seam during the third (night) shift of the day. *Trist*

master station

A position in the ventilation circuit of a mine specially chosen for the regular and accurate estimation of the total quantity of air circulating. *Spalding*

mat

a. An accumulation of broken mine timbers, rock, earth, etc., coincident with the caving system of mining. As the ore is extracted, the mat gradually settles and forms the roof of the working levels, slopes, etc. b. Lusterless or dull surface in a metal, produced by a method of finishing. *Standard, 2*

match

The part of a detonator that is most easily ignited. *Mason*

materials flowsheet

A flowsheet principally concerned with solid materials. See also: [operational capacities](#)

materials handling

The art and science involving movement, packaging, and storage of substances in any form.

materials lock

An air lock through which materials are passed into or out of a pneumatic caisson or a shaft being driven under air pressure. See also: [manlock](#) *Hammond*

Mathewson's device

An apparatus for separating matte and slag at lead-silver blast furnaces where matte is of secondary importance. *Fay*

matildite

A hexagonal mineral, AgBiS_2 ; forms prismatic crystals; sp gr, 6.9 . Syn: [schapbachite](#); [plenargyrite](#).

matlockite

A tetragonal mineral, $2[\text{PbFCI}]$; basal cleavage; an alteration of galena or lead-bearing slags.

mat pack

Small pack of timber consisting of a number of timbers laid side by side to form a solid mass 2 to 2-1/2 ft square by 4 to 6 in thick (approx. 0.7 m square by 10 to 15 cm thick). Holes are drilled edgeways through the mat, and wires are threaded through to hold it together. Mats are transported underground and built up to form very effective supports. *Spalding*

matraite

A trigonal mineral, ZnS ; trimorphous with sphalerite and wurtzite.

matrix

a. The nonvaluable minerals in an ore; the gangue. b. The rock material in which a fossil, crystal, or mineral is embedded. Syn: [groundmass](#) c. A local term for the phosphate-bearing gravel in the land-pebble deposits of Florida. *AGI* d. The metal in which the diamonds inset in the crown of a bit are embedded. *Long* e. The material that forms a cushion or binder in the construction of pavement. f. The finer-grained material between the larger particles of a rock or the material surrounding a fossil or mineral. *BS, II* g. The principal phase or aggregate in which another constituent is embedded. *ASM, I* h. In electroforming, a form used as a cathode. *ASM, I*

matrix metal

The continuous phase of a polyphase alloy or mechanical mixture; the physically continuous metallic constituent in which separate particles of another constituent are embedded. *ASTM*

matrosite

A microscopical constituent of torbanite; opaque, black mass forming its groundmass. CF: [gelosite](#); [humosite](#); [retinosite](#). *Tomkeieff*

matte

A metallic sulfide mixture made by melting the roasted product in smelting sulfide ores of copper, lead, and nickel. *ASM, I*

matte fall

Weight of matte expressed as a percentage of the total charge. *Newton, I*

matte smelting

The smelting of copper-bearing materials, usually in a reverberatory furnace. The valuable product is a liquid, copper-iron sulfide called matte. *Kirk*

matting

The process of smelting sulfide ores into matte. *Weed, 2*

mattock

a. A miner's pickax. *Fay* b. An implement that combines the features of an adz, ax, and pick, and is used for digging, grubbing, and chopping. *Webster 3rd*

Matura diamond

Colorless to faintly smoky gem-quality zircon from the Matara (Matura) district of Sri Lanka; any smokiness is removable by heating.

mature

a. Pertaining to the stage of maturity of the cycle of erosion; esp. said of a topography or region having undergone maximum development and accentuation of form; or of a stream (and its valley) with a fully developed profile of equilibrium; or of a coast that is relatively stable. *AGI* b. Said of a clastic sediment that (1) has been differentiated or evolved from its parent rock by processes acting over a long time and with a high intensity and (2) is characterized by stable minerals (such as quartz), deficiency of the more mobile oxides (such as soda), absence of weatherable material (such as clay), and well-sorted but subangular to angular grains. Example: a clay-free mature sandstone on a beach. *AGI*

maturity

a. A stage in the development of a coast that is characterized by straightening of the shoreline by bridging of bays and cutting back of headlands so as to produce a smooth, regular shoreline consisting of sweeping curves; and, eventually, retrogradation of the shore beyond the bayheads so that it lies against the mainland as a line of eroded cliffs throughout its course. *AGI* b. The extent to which a clastic sediment texturally and compositionally approaches the ultimate end product to which it is driven by the formative processes that operate upon it. *AGI* c. The stage in the development of a stream at which it has reached its maximum efficiency, having attained a profile of equilibrium and a velocity that is just sufficient to carry the sediment delivered to it by tributaries. *AGI* d. The second of the three principal stages of the cycle of erosion in the topographic development of a landscape or region, intermediate between youth and old age (or following adolescence), lasting through the period of greatest diversity of form or maximum topographic differentiation, during which nearly all the gradation resulting from operation of existing agents has been accomplished. *AGI*

maturity index

A measure of the progress of a clastic sediment in the direction of chemical or mineralogic stability; e.g., a high ratio of alumina-soda, of quartz-feldspar, or of quartz + chert-feldspar + rock fragments indicates a highly mature sediment. *AGI*

maucherite

A tetragonal mineral, $Ni_{11}As_8$; forms tabular crystals; occurs in nickel-cobalt-native-silver ore deposits. Syn: [placodine](#); temiskamite.

Mawco cutter loader

A cutter loader similar to an Anderton shearer except that the drum is replaced by a frame jib 42 in (107 cm) high and 20 in (51 cm) deep. The machine travels on an armored flexible conveyor at a speed of about 4-1/2 ft/min (1.4 m/min). It cuts a 20-in (51-cm) web on the cutting run, and the plow deflector loads the cut coal onto the conveyor. On the reverse run, the deflector loads all the loose coal left on the track, and the conveyor is snaked over behind the machine. The loader is suitable for medium-thickness seams, and the yield of large coal is good. *Nelson*

maximum and minimum densities

In soil tests, the maximum density is found by compacting soil with a Kango hammer; the minimum density is measured by pouring soil into a container of known capacity. This test is useful for determining the relative density of sands, by comparison with field tests. *Hammond*

maximum angle of inclination

The maximum angle at which a conveyor may be inclined and still deliver a predetermined quantity of bulk material within a given time. As the maximum angle is approached, the rate of handling of bulk material is usually decreased.

maximum belt slope

The slope beyond which the material on a conveyor tends to roll downhill. The maximum slope on which a conveyor can operate depends on (1) the material carried, (2) the loading or feeding efficiency, (3) the size and type of belt, and (4) the environment. In general, in the case of run-of-mine coal and ore, belt conveyors can operate up to about 18 degrees. If the material conveyed contains large lumps, spillage may result if the belt is too narrow. *Nelson*

maximum belt tension

The total of the starting and operating tensions. In the average conveyor this is considered to be the same as the tight side tension.

maximum carbon dioxide content

The recommended maximum allowable concentration of carbon dioxide in mine air is 0.5%. *Hartman, 1*

maximum charge weight per delay

The maximum quantity of explosive charge detonated on one interval (delay) within a blast. The charge detonated within any 8-ms interval over the entire duration of the blast.

maximum demand

Upper limit of electric power that may be drawn at any time from the mains without penalty, as agreed by contract. *Pryor, 3*

maximum density

See: [maximum unit weight](#)

maximum dry density

The dry density obtained by the compaction of soil at its optimum moisture content. *Hammond*

maximum microcline

Microcline with the most complete ordering possible of aluminum and silicon ions in the tetrahedral sites and the smallest angle for beta (maximum triclinicity). CF: [mesomicrocline](#)

maximum operating belt tension

The tension in the carrying run necessary to maintain the normal operating speed of a loaded belt.

maximum per delay

The maximum vibration at distant points is that which has been generated by the greatest amount of explosive fired at any one instant. *Leet, 2*

maximum-pressure arch

See: [pressure arch theory](#)

maximum-pressure gage

An instrument for registering the maximum pressure occurring during an explosion at the point where the instrument is located. *Rice, 2*

maximum subsidence

The maximum amount of subsidence in a subsidence basin. The value of maximum subsidence for a given seam thickness depends on the underground geometry and the thickness and character of the overburden. See also: [subsidence factor](#)

maximum unit weight

The dry unit weight defined by the peak of a compaction curve. Syn: [maximum density](#)

Maxton screen

A screening machine of the trommel class, rotating on rollers that support the tube. There are radial elevating ribs to prevent wear of screen cloth and to elevate the oversize. Unscreened material is delivered on the inside screen surface, undersize passes through, and oversize is elevated and discharged into a separate launder. *Liddell*

maxwell

The cgs (centimeter-gram-second) unit of magnetic flux. One maxwell = 10^{-8} Wb, or the flux through 1 cm^2 normal to a field of magnetic induction of 1 Gs. *AGI*

Maxwell's rule

A law stating that every part of an electric circuit is acted upon by a force tending to move it in such a direction as to enclose the maximum amount of magnetic flux. *CTD*

Mayari iron

Pig iron made from Cuban ores that contain vanadium and titanium, or pig iron made to duplicate the Cuban iron. *Brady, I*

mayenite

An isometric mineral, $\text{Ca}_{12} \text{Al}_{14} \text{O}_{33}$; occurs in metamorphosed marly limestone; an important constituent of portland cement clinker.

mboziite

A potassian variety of taramite amphibole.

McGinty

Three sheaves over which a rope is passed so as to take a course somewhat like that of the letter M. The resulting friction causes the rope to slide with difficulty. It is used for lowering loaded cars from the face to the mouth of a room on a steep roadway. *Zern*

mcgovernite

A trigonal mineral, $(\text{Mn,Mg,Zn})_{22} (\text{AsO}_3)(\text{AsO}_4)_3 (\text{SiO}_4)_3 (\text{OH})_{20}$; reddish-bronze; forms granular masses with perfect basal cleavage. Also spelled macgovernite.

McKelvey diagram

A graphical classification of mineral resources according to economic viability and certainty of existence. Used by the U.S. Bureau of Mines and the U.S. Geological Survey in their definitions of mineral resources and reserves, USGS Circular 831. Named after Vincent E. McKelvey, ninth director of the U.S. Geological Survey. *Barton*

McLuckie gas detector

This nonautomatic detector, or portable air analysis apparatus, can be used underground, or samples of air can be brought out of the mine in small rubber bladders and analyzed at the surface. This apparatus depends for its action on the fact that when methane is burned in air (oxygen) a definite chemical action takes place. When the resulting steam condenses to water there is a reduction in pressure and in the McLuckie detector this reduction of pressure, which is proportionate to the methane present, is indicated by the height of the liquid in one limb of the U-tube which rises up the side of the scale: the scale is graduated from 0% to 3% in steps of 0.1%. *Cooper*

McNally-Carpenter centrifuge

A fine-coal dewatering machine consisting of a conical rotating element with a vertical axis, built up of three rows of perforated stainless steel screen plates or stainless steel wedge or round-wire sections cut and rolled to conform to the surface of the cone. Wet feed is deposited by gravity into the top of the cone-shaped dryer onto a distributing disk that throws the material by centrifugal force onto the stepped screen or basket. The rapid circular movement of the basket forces the water through the screen, while the coal moves toward the bottom. Peripheral velocity and centrifugal force become greater for each particle, breaking down the surface tension of water film on each piece, increasing drying action directly in ratio to the cone circumference and peripheral speed. The most effective drying area is at the bottom of the cone just before the material is discharged from the machine. See also: [dewatering Kentucky](#); *Mitchell*

McNally-Norton jig

In this jig, raw coal is conveyed to a wash box through sluices. Air pulsations are transmitted through valves to water in a compartment adjacent to the washing bed, causing the water in the wash box to rise. Pulsating water causes the incoming fuel to be loosely suspended in the water and permits heavier refuse to sink to the screen plate while suspended coal spills over into the second compartment. In the second

compartment the process is repeated with the remaining refuse sinking to the screen and clean coal discharging to the dewatering screens. *Kentucky*

McNally-Vissac dryer

A convection dryer of the forced-draft type. The heat source is a coal-fired furnace. It consists essentially of a declined reciprocating screen over which the coal travels. Two balanced tandem decks are used. They are suspended from the supporting structure by inclined flexible hangers and actuated in opposition through flexible pitmans from a common eccentric shaft. The removal of moisture is accomplished by passing hot furnace gases, tempered with cold air, downward through the bed of coal as it travels along the screen. An induced-draft fan at the exhaust end provides the motive force for the gases. See also: [thermal drying](#) *Mitchell*

McNamara clamp

A drill-rod safety clamp somewhat similar to a Wommer's safety clamp. *Long*

M-design core barrel

Standard-design, double-tube, swivel-type core barrel made in sizes to be used with appropriate standard ranges of diamond-drill fittings. Its distinguishing features are that a 2-1/2 degrees taper core lifter is carried inside a short tubular sleeve (called a lifter case) coupled to the bottom end of the inner tube, and that the lifter case extends downward inside the bit shank to within a very short distance behind the face of the core bit. *Long*

M-discontinuity

See: [Mohorovicic discontinuity](#)

M.E. 6 exploder

An exploder approved for firing six shots simultaneously in British coal mines. It contains a 67-1/2-V high-tension dry battery, used to charge a 150-mu F condenser, which in turn is discharged through the shotfiring circuit by a firing key. The test circuit and an ohmmeter are incorporated in the exploder, the ohmmeter pointer moving over a scale to indicate whether or not the external circuit is in order. A pushbutton disconnects the test circuit from the external circuit and makes connection with the firing circuit. See also: [blasting machine](#)

meadow ore

See: [bog iron](#); bog iron ore; limonite.

meager feel

Moistureless; dry and rough to the touch, such as chalk and magnesite. *Nelson*

mean

An arithmetic average of a series of values; esp. arithmetic mean. CF: [mode](#)

mean birefringence

The numeral that represents the average between the greatest strength of double refraction and the least strength of double refraction possessed by a species or variety. The refractive index of sphene, e.g., is 1.885 to 1.990 and 1.915 to 2.050; hence the birefringence ranges from 0.105 to 0.135. The average, or mean, is 0.120. Syn: [refractive index](#)

mean calorie

One-hundredth of the heat required to raise 1 g of water from 0 degrees C to 100 degrees C. *Newton, 1*

mean depth

The cross-sectional area of a stream divided by its width at the surface. *AGI*

meander

a. One of a series of regular, freely developing sinuous curves, bends, or loops in the course of a stream. It is produced by a mature stream swinging from side to side as it flows across its floodplain or shifts its course laterally toward the convex side of an original curve. Etymol: Greek maiandros, from Maiandros River in western Asia Minor (now known as Menderes River in SW Turkey), proverbial for its windings. *AGI* b. To wind or turn in a sinuous or intricate course; to form a meander. *AGI*

meander belt

That part of a floodplain between two lines tangent to the outer bends of all the meanders. It is the zone within which channel migration occurs, as indicated by abandoned channels, accretion topography, and oxbow lakes.

meander line

A line run in a survey of a mining claim bordering on a stream or other body of water, not as a boundary of the tract surveyed, but for the purpose of defining the sinuosities of the bank or shore of the water, and as a means of ascertaining the quantity of land within the surveyed area. *Ricketts*

https://t.me/Geologybooks

mean effective pressure

In an air compressor, the equivalent average pressure exerted by the piston throughout a stroke. *Lewis*

mean radiant temperature (mrt)

Single temperature of all enclosing surfaces that would result in the same heat emission as the same surface with various different temperatures. *Strock, 2*

mean refractive index

a. The index of refraction measured for the D line of sodium. b. For uniaxial crystals: $(2n_{\text{omega}} + n_{\text{epsilon}})/3$. For biaxial crystals: $(n_{\text{alpha}} + n_{\text{beta}} + n_{\text{gamma}})/3$.

mean size

The weighted average particle size of any sample, batch, or consignment of particulate material. *BS, 5*

mean sphere depth

The uniform depth to which water would cover the Earth if the solid surface were smoothed off and parallel to the surface of the geoid. Generally accepted as a depth of 2,440 m. *Hy*

mean stress

a. In fatigue testing, the algebraic mean of the maximum and minimum stress in one cycle. Also called the steady-stress component. *ASM, 1* b. In any multiaxial stress system, the algebraic mean of three principal stresses; more correctly called mean normal stress. *ASM, 1*

measured depth

See: [measured drilling depth](#)

measured drilling depth

The apparent depth of a borehole as measured along the longitudinal axis of the borehole. The measured drilling depth is always equal to the unoverlapped drilled footage in a borehole. Also called measured depth. Sometimes abbreviated md. *Long*

measured resources

Resources from which the quantity is computed from dimensions revealed in outcrops, trenches, workings, or drill holes; grade and/or quality are computed from the results of detailed sampling. The sites for inspection, sampling, and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth, and mineral content of the resource are well established. See also: [reserves](#)

measurement

The finding of the number of units of measure in a line, area, space or volume, period of time, etc. *Jones, 2*

measurement of concentration

Gr. Brit. At the National Coal Board collieries, in order to assess the degree of concentration, certain basic data are collected, involving the pithead output, length of main haulage roads, and length of coalface in production. See also: [face concentration](#); [geographical concentration](#); overall concentration. *Nelson*

measures

A group or series of sedimentary rocks having some characteristic in common; specif. coal measures. The term apparently refers to the old practice of designating the different seams of a coalfield by its measure or thickness. *AGI*

measures head

A heading or drift made in various strata. *Fay*

measuring chain

A surveyor's chain, containing 100 links of 7.92 in (20.12 cm) each.

measuring chute

A bin installed adjacent to the shaft bottom in skip winding. The capacity of the chute is equal to that of the skip used, ranging from 4 to 10 st (3.6 to 9.1 t). Bin-feeding arrangements differ but may be by a steelplate conveyor from a surge bunker that in turn receives the ore or coal from the mine cars or a trunk conveyor. A measuring chute ensures a quick and correct loading of skips without spillage. Immediately the skip is positioned in line, the measuring chute bottom door opens and material is discharged into the skip. See also: [pocket](#) *Nelson*

measuring day

The day when face or other work is measured and recorded for assessing wages. *Nelson*

measuring element

In flotation, that portion of the feedback elements that converts the signal from the primary detecting element to a form compatible with the reference input. *Fuerstenau*

measuring pocket

Storage space near an entry from underground workings to a hoisting shaft; laid out so as to deliver a measured volume into a hoisting skip and to be refilled before the skip returns empty. *Pryor, 3*

measuring tape

A graduated tape, steel or linen, usually in 50-ft or 100-ft (15-m or 30.4-m) lengths; used by engineers, builders, surveyors, etc. *Crispin*

measuring weir

A device for measuring the flow of water. It generally consists of a rectangular, trapezoidal, triangular, or other shaped notch in a thin plate in a vertical plane through which the water flows. The weir head is an index of the rate of flow. See also: [notch](#)

mechanical advantage

Ratio between the resistance or load raised by a machine, and the applied force. Mechanical advantage divided by velocity ratio gives the efficiency of the machine. *Hammond*

mechanical air machine

A flotation machine that utilizes pulp-body concentration by the agitation froth method and bubble-column action by pneumatic and cascade means. *Taggart, 1*

mechanical analysis

Determination of the particle-size distribution of a soil, sediment, or rock by screening, sieving, or other means of mechanical separation; the quantitative expression of the size-frequency distribution of particles in granular, fragmental, or powdered material. It is usually expressed in percentage by weight (and sometimes by number or count) of particles within specific size limits. See also: [particle-size analysis](#) *AGI*

mechanical classifier

One of the machines, such as the Dorr classifier, that are commonly used to classify a ball-mill or rod-mill discharge into finished product and oversize. *Newton, 1*

mechanical clay

A clay formed from the products of the abrasion of rocks.

mechanical cleaning

The removal of impurities by mechanical units as compared with hand picking. Broadly, mechanical cleaning may be subdivided into dry cleaning and wet cleaning. *Mitchell; Nelson*

mechanical efficiency

The ratio of the air-indicated horsepower to the indicated horsepower in a power cylinder, in the case of compression driven by steam or internal-combustion engines, and to the brake horsepower delivered to the shaft in the case of a power-driven machine. *Lewis*

mechanical equivalent of heat

Amount of mechanical energy that can be transformed into a single heat unit; the equivalent of 778 ft.lbf/Btu (1,000 N.m/kJ). *Hammond*

mechanical extensometer

An appliance for measuring strain; often used in roof control investigations. It employs a micrometer dial gage actuated through a lever giving initial magnification of the movement. See also: [acoustic-strain gage](#); [electrical resistance strain gage](#). *Nelson*

mechanical flotation cell

A cell in which the solids-water pulp feed is kept agitated, and is circulated by means of an impeller mounted at the bottom of a vertical shaft. The rotating impeller creates vacuum enough to draw air down the standpipe surrounding the impeller shaft, and the impeller disperses the air throughout the pulp in the form of small bubbles. The floatable minerals are carried upward by the bubbles and eventually collect in the froth above the pulp in the machine. Automatic scrapers remove the mineral-laden froth that contains the concentrate, and after the values have been removed, the barren pulp containing the tailing flows out of the cell. *Newton, I*

mechanical loader

A power machine for loading materials. See also: [loader](#).

mechanical mixture

A composition of two or more substances, each remaining distinct, and generally capable of separation by mechanical means. *Standard, 2*

mechanical properties

Of metals: the elastic limit, elongation, fatigue range, hardness, maximum stress, reduction in area, shock resistance, and yield point. *Pryor, 3*

mechanical puddler

A wrought-iron (rocking) furnace in which puddling is done by mechanical motion instead of by hand. *Mersereau, 2*

mechanical puddling

See: [mechanical puddler](#)

mechanical rabble

A rabble worked by machinery. See also: [rabble](#)

mechanical rammer

A machine embodying a weight that is lifted and dropped upon the material being rammed. See also: [power rammer](#)

mechanical sampling

Mechanical sampling systematically removes a portion of the stream of material for a sample. Mechanical sampling is widely used in cone preparation plants and concentrators where large quantities of materials are to be sampled, while hand sampling is used for smaller amounts. CF: [hand sampling](#)

mechanical sediment

Sediment that has been brought to its places of deposition as separate particles by mechanical means. Water, wind, and ice are the agents commonly involved; the resulting rocks are conglomerate, sandstone, siltstone, shale, and certain limestones. *Stokes*

mechanical set

Bits produced by the various means in which diamonds are set in a bit mold into which a cast or powder metal is placed, embedding the diamonds and forming the bit crown, as opposed to handsetting. Also, the act or process of producing diamond bits in such a manner. Also called cast set; machine set; sinter set. CF: [handset](#)

mechanical-set bit

A diamond bit produced by mechanical methods as opposed to handsetting methods. See also: [mechanical set](#)

mechanical shovel

A loader limited to level or only slightly graded drivages. The machine operates a shovel in front of it and pushes itself forward; when full, the shovel is swung over the machine and delivers into a mine car or tub behind. It will shunt, pull, and push its own cars, delivering them into a shunt or passby when full. See also: [shovel loader](#)

mechanical stabilization

Mixing two or more poorly graded soils to obtain a well-graded one. *Nelson*

mechanical weathering

The process of weathering by which frost action, salt-crystal growth, absorption of water, and other physical processes break down a rock to fragments, involving no chemical change. CF: [chemical weathering](#) Syn: [disintegration](#)

mechanical working

Subjecting metal to pressure exerted by rolls, presses, or hammers, to change its form or affect the structure, and therefore the physical properties. *Rolfe*

mechanical yielding prop

A steel prop in which yield is controlled by friction between two sliding surfaces or telescopic tubes. Although crude when compared with the hydraulic prop, the friction yield prop is very robust, is cheap, and requires little maintenance. *Nelson*

mechanics

The branch of physics that treats of the phenomena caused by the action of forces on material bodies. It is subdivided into statics, dynamics, or kinetics; or into the mechanics of rigid bodies and hydromechanics (including hydrostatics and hydrodynamics). *Standard, 2*

mechanization

Essentially, the introduction of power machines to replace manual labor. In coal mining, it may denote the introduction of conventional machine mining to replace hand mining, or continuous mining to replace conventional machine mining. *Nelson*

mechanization engineer

Usually a qualified mining engineer with first-hand experience and knowledge of the various mining machines and the physical conditions most suitable for them. In general, the National Coal Board, Great Britain, appoints a mechanization engineer for each group of collieries. *Nelson*

mechanization scheme

A plan or project to convert a handmining or a conventional machine mining face to mechanized mining; i.e., the use of machines that either load prepared coal or cut and load coal simultaneously (cutter loaders). The scheme may also include the introduction of locomotives, skip winding, etc. *Nelson*

mechanized

Term descriptive of a mine that has a high percentage of machinery for all steps of mining and handling mineral product, from the face to the mine working place, and on to the tipple or treatment plant. *BCI*

mechanized heading development

A pillar method of working suitable for seams 4 ft (1.2 m) and over in thickness. Three or more narrow headings are driven rapidly with machines at about 30-yd (10-m) centers with crosscuts for ventilation. The headings are 10 ft (3 m) or more wide and 5 to 6 ft (approx. 2 m) high or seam thickness. Upon reaching the boundary, the pillars formed by the headings are extracted, again with machines, on the retreat. This method is favored in the United States and the heading work is quite as productive, if not more so, than pillar working. See also: [entry](#); [longwall retreating](#). *Nelson*

mechanized output

The coal produced by all coal face machinery that either loads prepared coal or cuts and loads coal simultaneously. Also includes all coal obtained by hand filling on faces where an armored flexible conveyor is used on a prop-free front. *Nelson*

Meco-Moore cutter loader

A heavy 120-hp (89.5-kW) cutter loader. The first Meco-Moore was used in a Lancashire, England, colliery in 1934. See also: [A](#) *Nelson*

medfordite

See: [moss agate](#)

median diameter

An expression of the average particle size of a sediment or rock, obtained graphically by locating the diameter associated with the midpoint of the particle-size distribution; the middlemost diameter that is larger than 50% of the diameters in the distribution and smaller than the other 50%. *AGI*

medical lock

An air chamber comprising steel cylinder 18 ft (5.5 m) long and about 6 ft (1.8 m) in diameter, which has airtight doors at one end and is closed at the other. It is used for immediate treatment of sufferers from caisson disease. *Hammond*

Medina emerald

Green glass emerald simulant.

mediosilicic

A term proposed by Clarke (1908) to replace intermediate. CF: [subsilicic](#); persilicic. See also: [intermediate](#)

Mediterranean suite

A major group of igneous rocks, characterized by high potassium content. This suite was so named because of the predominance of potassium-rich lavas around the Mediterranean Sea; specif. those of Vesuvius and Stromboli. CF: [Atlantic suite](#); [Pacific suite](#). *AGI*

medium

Any suspension of medium solids in water. *BS, 5*

medium band

A field term that, in accordance with an arbitrary scale established for use in describing banded coal, denotes a vitrain band ranging in thickness from approx. 1/12 to 1/5 in (2 to 5 mm). *AGI*

medium draining screen

A screen for draining the separating medium from dense-medium bath products. *BS, 5*

medium-grained

a. Said of an igneous rock, and of its texture, in which the individual crystals have an average diameter in the range of 0.04 to 0.2 in (1 to 5 mm). *AGI* b. Said of a sediment or sedimentary rock, and of its texture, in which the individual particles have an average diameter in the range of 1/16 to 2 mm (62 to 2,000 μ m, or sand size). CF: [coarse-grained](#); [fine-grained](#). *AGI*

medium-inclined

Said of deposits and coal seams with a dip of 25 degrees to 40 degrees. *Stoces*

medium pressure

When applied to valves and fittings, means suitable for a working pressure of 125 to 175 psi (860 to 1,200 kPa). *Strock, 1*

medium-recovery screen

A composite screen for draining and spraying the product from a dense-medium bath to remove adherent medium solids. *BS, 5*

medium-round nose

A diamond bit the cross-sectional outline of which is partially rounded but not as fully rounded as a double-round nose bit. Syn: [half-round nose](#); [modified-round nose](#). *Long*

medium solids

The solid component of a dense-medium suspension. *BS, 5*

medium-solids preparation

Any purification or grinding of the raw dense-medium solids to make them suitable for use. *BS, 5*

medium-solids recovery

See: [dense-medium recovery](#)

medium-solids recovery plant

The equipment used to remove adherent medium solids from a product from a dense-medium bath (after drainage of surplus medium), usually by spraying, and to remove contaminating coal and clay from these medium solids. *BS, 5*

medium-stone bit

A bit with diamonds ranging from 8 to 40 per carat in size. *Long*

medium-thickness seam

In general, a coal seam over 2 ft (0.6 m) and up to 4 ft (1.2 m) in thickness. *Nelson*

medium-volatile bituminous coal

The rank of coal, within the bituminous class of Classification D 388, such that, on the dry and mineral-matter-free basis, the volatile matter content of the coal is greater than 22% but equal to or less than 31% (or the fixed carbon content is equal to or greater than 69% but less than 78%), and the coal commonly agglomerates. CF: [bituminous coal](#)
ASTM

medium voltage

In coal mining, voltage from 661 to 1,000 V. CF: [high voltage](#); low voltage. *Federal Mine Safety*

medmontite

A mixture of chrysocolla and mica. See also: [cupromontmorillonite](#)

meehanite

High-duty cast iron produced by ladle addition of calcium silicide. *Pryor, 3*

meerschaum

See: [sepiolite](#)

meet

a. Eng. To keep pace with; e.g., to keep sufficient supply of coal at the pit bottom to supply the winding engine. *Fay* b. To come together exactly, as in survey lines from opposite directions. *Fay*

meeting

a. A siding or bypass on underground roads. *Fay* b. Newc. The place at middle-depth of a shaft, slope, or plane, where ascending and descending cars pass each other. *Fay*

meeting post

A vertical timber at the outer edge of each of a pair of lock gates, mitered so that the gates fit tightly when closed. *Hammond*

mega-

a. A prefix meaning large. As a prefix to petrological and other geologic terms, it signifies parts or properties that are recognizable by the unaided eye. Opposite of micro-. *Stokes* b. A combining form meaning 1 million times; e.g., megavolt for 1 million volts. *AGI*

megabar

A unit of pressure equal to 1 Mdyn/cm². *Standard, 2*

megacycle

A unit of 1 million cycles. *CTD*

megaphenocryst

A phenocryst that is visible to the unaided eye. *AGI*

megascopic

Said of an object or phenomenon, or of its characteristics, that can be observed with the unaided eye or with a hand lens. Syn: [macroscopic](#) CF: [microscopic](#)

megaseismic region

The most disturbed earthquake area. *Schieferdecker*

megaspore

Female spore; part of the reproduction organs of many coal measures plants. See also: [spore](#)

Megator

A displacement type of pump operating on the eccentric principle. *Mason*

megger

An electrical measuring instrument comprising a hand-operated generator equipped with a governor, a moving measuring system consisting of a voltage, and a current coil so disposed that the deflection of the moving system is proportional to the ratio of voltage

to current. Used to measure insulation resistance and resistance to ground. It has been used to some extent in electrical prospecting. *AGI*

Meigen's reaction

A test to distinguish calcite from aragonite. After boiling for 20 min in a cobalt nitrate solution, aragonite becomes lilac, the color showing in thin section, while calcite and dolomite become pale blue, the color not showing in thin section.

meionite

A tetragonal mineral, $3\text{CaAl}_2\text{Si}_2\text{O}_8 \cdot \text{CaCO}_3$; scapolite group; forms a series with marialite.

meizoseismal

Of or pertaining to the maximum destructive force of an earthquake. *Standard, 2*

meizoseismal area

The most disturbed area within the innermost isoseismal line. *Schieferdecker*

meizoseismal curve

A curved line connecting the points of the maximum destructive energy of an earthquake shock around its epicenter. *Standard, 2*

mela-

A prefix meaning dark-colored. *AGI*

melaconite

An earthy variety of tenorite. See also: [black copper ore](#); [tenorite](#).

melanasphalt

An early name for albertite. *Tomkeieff*

melanchyme

A bituminous substance found in masses in the brown coal of Zweifelsruth, Bohemia, former Czechoslovakia. That part of this substance that is soluble in alcohol is termed rochlederite, the residue melanellite. Also spelled melanchym. *Fay*

melanellite

That portion of melanchyme that is insoluble in alcohol; it is black and gelatinous. *Fay*

melange

a. Diamonds of mixed sizes. *Hess* b. An assortment of mixed sizes of diamonds weighing more than 1/4 carat; e.g., larger than those of a mele. c. A body of rock mappable at a scale of 1:24,000 or smaller, characterized by a lack of internal continuity of contacts or strata and by the inclusion of fragments and blocks of all sizes, both exotic and native, embedded in a fragmental matrix of finer-grained material. Neither matrix composition and fabric nor genesis is significant for the definition.

melanic

See: [melanocratic](#)

melanite

A titanian variety of andradite. Syn: [black andradite garnet](#); [pyreneite](#).

melanocratic

Applied to dark-colored rocks, esp. igneous rocks, containing between 60% and 100% dark minerals; i.e., rocks, the color index of which is between 60 and 100. CF: [hypermelanic](#); [leucocratic](#); [mesocratic](#). *AGI*

melanostibite

A trigonal mineral, $Mn_2 SbFeO_6$. Originally named melanostibian.

melanotekite

An orthorhombic mineral, $Pb_2 Fe_2 Si_2 O_9$; forms a series with kentrolite.

melanovanadite

A triclinic mineral, $CaV_4 O_{10} \cdot 5H_2 O$; a natural vanadium bronze with perfect prismatic cleavage; at Cerro de Pasco, Peru, and on the Colorado Plateau.

melanterite

a. A monoclinic mineral, $FeSO_4 \cdot 7H_2 O$; green; tastes slightly sweet, astringent, and metallic; from the decomposition of pyrite. b. The mineral group bieberite, boothite, mallardite, melanterite, and zincmelanterite. Syn: [copperas](#); [green vitriol](#); [iron vitriol](#).

melatope

The narrowest part of an isogyre in an interference figure representing the point of emergence of an optic axis. CF: [interference figure](#)

melee

a. A collective term for small round faceted diamonds, such as those mounted in jewelry. The term is sometimes applied to colored stones of the same size and shape as the diamonds. *AGI* b. A small diamond cut from a fragment of a larger size. *AGI* c. In diamond classification, a term for small round-cut diamonds weighing more than 1/4 carat. CF: [melange](#)

melilite

a. A tetragonal mineral in the series akermanite, $\text{Ca}_2\text{MgSi}_2\text{O}_7$ - gehlinites, $\text{Ca}_2\text{Al}(\text{AlSi})\text{O}_7$. b. The mineral group akermanite, gehlinites, hardystonite, and melilite. Jeffreysite, leucophanite, and meliphanite are structurally similar. Also spelled mellilite.

melilitite

A generally olivine-free extrusive rock composed of melilite and clinopyroxene (or other mafic mineral) usually comprising more than 90% of the rock, with minor amounts of feldspathoids and sometimes plagioclase. *AGI*

melinite

a. A high explosive similar to lyddite; said to be chiefly picric acid. *Webster 2nd* b. A species of soft, unctuous clay, common in Bavaria, and probably identical with bole. *Standard, 2*

meliphanite

A tetragonal mineral, $(\text{Ca},\text{Na})_2\text{Be}(\text{Si},\text{Al})_2(\text{O},\text{OH},\text{F})_7$; structurally similar to the melilites. Also spelled meliphane. Syn: [gugiaite](#)

melle

Small cut diamonds, usually about one-eighth carat. Generally refers to stones used in jewelry. *Hess*

mellilite

See: [melilite](#)

mellite

A tetragonal mineral, $\text{Al}_2 [\text{C}_6 (\text{COO})_6] \cdot 16\text{H}_2 \text{O}$; resinous; honey yellow; forms nodules in brown coal. Also spelled melinite, mellilite. (Not melite.) Syn: [honey stone](#)

mellorite

A silicate of ferric iron, calcium, etc., approaching garnet in composition, but with optical properties similar to those of an orthorhombic pyroxene. Formed by the action of basic slag on silica brick in a steel furnace. *Spencer, 2; AGI*

mellow amber

See: [gedanite](#)

melonite

a. A trigonal mineral, NiTe_2 ; forms a series with merenskyite; one perfect cleavage; metallic reddish white; soft; sp gr, 7.3. b. The mineral group berndtite, kitkaite, melonite, merenskyite, and moncheite. Syn: [tellurnickel](#)

melteigite

A dark-colored plutonic rock that is part of the ijolite series and contains nepheline and 60% to 90% mafic minerals, esp. green pyroxene. The name is from Melteig farm, Fen complex, Norway. *AGI*

melting hole

The opening in the floor to a furnace in a melting house. *Mersereau, 2*

melting house

The building in which crucible furnaces for steel making are located. *Mersereau, 2*

melting point

That temperature at which a single, pure solid changes phase to a liquid or to a liquid plus another solid phase, upon the addition of heat at a specific pressure. Unless otherwise specified, melting points are usually stated in terms of 1 kPa. The term can also be used for the isothermal melting of certain mixtures, such as eutectic mixtures. Erroneously used also to refer to the temperature at which some appreciable but unspecified amount of liquid develops in a complex solid mixture that possesses a melting range; e.g., the melting point of granite. Abbrev.: mp or MP. *AGI*

melting pot

A crucible. *Standard, 2*

melting shop

Open-hearth plant. *Newton, 1*

melting zone

The hottest part of a furnace, where melting takes place. *Mersereau, 2*

member

A division of a formation, generally of distinct lithologic character and of only local extent.

membrane filter

See: [molecular filter sampler](#)

membrane theory

An advanced theory of design for thin shells, based on the premise that a shell cannot resist bending because it deflects. The only stresses that exist, therefore, in any section are shear stress and direct compression or tension. *Hammond*

menaccanite

a. A variety of ilmenite found as sand at Menaccan, Cornwall, Eng. b. A black, magnetic sand from Cornwall, England, from which the element, titanium, was first isolated. Also spelled menachanite; manaccanite; menachite. *Hess*

mend

Eng. To load, or reload, trams at the gate ends out of smaller trams used only in the working faces of thin seams.

mendipite

An orthorhombic mineral, $Pb_3 Cl_2 O_2$; white; in the Mendip Hills, United Kingdom.

mendozite

A monoclinic mineral, $NaAl(SO_4)_2 \cdot 11H_2 O$. See also: [soda alum](#)

meneghinite

An orthorhombic mineral, $Pb_{13}CuSb_7S_{24}$; forms slender prismatic blackish lead-gray crystals.

Menevian

European stage: Middle Cambrian (above Solvan, below Maentwrogian). *AGI*

menilite

A concretionary, opaque, dull, grayish variety of opal. Syn: [liver opal](#) *Fay*

meniscus

a. The curved top surface of a liquid column. It is concave upwards when the containing walls are wetted by some liquid (such as water in a vertical glass tube) and convex upwards when wetted with other liquids (such as mercury in a vertical glass tube).

Webster 3rd b. A concavoconvex lens; esp., one of true crescent-shaped cross section. *Webster 3rd*

men on!

Scot. A brief expression to indicate that workers are on the cage to be raised, or lowered, in a shaft. *Fay*

Menzies cone separator

Consists of a 60 degrees cone with a short cylindrical top section. It is provided with a stirring shaft, located in its vertical axis, carrying several sets of horizontal arms with rings of nozzles projecting through the sides of the cone for the admission, at several horizons, of the required water currents. At the base of the cone, a classifier column several feet long is fitted, through which refuse discharges continuously to an inclined refuse conveyor. Water is supplied by a centrifugal pump. See also: [cone classifier](#)

mephitic air

a. Carbon dioxide. *Webster 3rd* b. Air exhausted of oxygen and containing chiefly nitrogen. *Webster 3rd*

mephitic gas

See: [mephitic air](#)

mephitis

A noxious exhalation caused by the decomposition of organic remains; applied also to gases emanating from deep sources, such as mines, caves, and volcanic regions.

Standard, 2

merchant

A metal merchant, as distinct from a producer's agent or broker, often acts as a principal, buying metal or concentrate from producers and others and selling it to others. The merchant will often hold metal on personal account while waiting for a buyer. *Wolff*

merchant iron

Iron in the common bar form, which is convenient for the market. Also called merchant bar. *Standard, 2*

mercurial horn ore

See: [calomel](#)

mercury

a. A liquid mineral, (trigonal below -38.87 degrees C); metallic silver to tin white; sp gr, 13.6; occurs as minute droplets in cinnabar and in some hot-spring deposits; amalgamates with many metals. b. Symbol: Hg. Rarely occurs free in nature. Chief ore is cinnabar, HgS. Used in laboratory work for making thermometers, barometers, diffusion pumps, mercury-vapor lamps, advertising signs, and pesticides. Mercury is a virulent poison and is readily absorbed through the respiratory tract, gastrointestinal tract, or unbroken skin. *Handbook of Chemistry and Physics, 3*

mercury gatherer

A stirring apparatus that causes mercury, which has become floured or mixed with sulfur in amalgamating, to resume the fluid condition, through the agency of mechanical agitation and rubbing. *Fay*

mercury ore

Native mercury; same as cinnabar (sulfide). *Dana, 3*

mercury switch

A glass tube employing mercury to establish electrical contact between circuits when the tube is tilted so that the mercury bridges the gap between contacts, and conversely.

Strock, 2

mercury-vapor lamp

Consists essentially of a sealed glass tube provided with two electrodes and containing a gas. When an electrical potential difference is applied, a current passes and with a suitable gas, light will be emitted. In the case of mercury vapor, this light is of a bluish color and has proven effective in distinguishing dirt from coal. A special starting electrode close to one of the main electrodes initiates the discharge, and a choke coil in series with the lamp serves to limit the current passing, since the resistance tends to fall with increasing current. *Mason*

mero-

A prefix signifying part or portion. *AGI*

merocrystalline

See: [hypocrystalline](#)

merohedral

Any crystal form with fewer faces than the holohedral equivalent for the crystal system. CF: [hemihedral](#); [holohedral](#). See also: [tetartohedral](#)

meroleims

Coalified remains of parts of plants. *Tomkeieff*

merosymmetric

Any crystal class with less symmetry than the distribution of points in its lattice.

meroxene

Biotite with its optic axial plane parallel to its b crystallographic axis.

Merrill-Crowe process

Removal of gold from pregnant cyanide solution by deoxygenation, followed by precipitation on zinc dust, followed by filtration to recover the resultant auriferous gold slimes. *Pryor, 3*

Merrill filter

A type of plate and frame pressure filter.

merrillite

a. High-purity zinc dust used to precipitate gold and silver in the cyanide process. b.

See: [whitlockite](#)

Merrit plate

See: [bloomery](#)

mersey yellow coal

See: [tasmanite](#)

merwinite

A monoclinic mineral, $\text{Ca}_3 \text{Mg}(\text{SiO}_4)_2$; colorless to pale green.

mesa

An isolated, nearly level landmass standing distinctly above the surrounding country, bounded by abrupt or steeply sloping erosion scarps, and capped by a layer of resistant, nearly horizontal rock (often lava). CF: [plateau](#)

Mesabi non-Bessemer ore

See: [natural ore](#)

mesa-butte

See: [butte](#)

Mesa Grande tourmaline

Fine-quality tourmaline from a pegmatite near Mesa Grande, San Diego County, CA.

mesh

a. In ventilation, a series of airways that form a closed loop. *Roberts, 1* b. The screen number of the finest screen of a specified standard screen scale. c. The number of apertures per unit area of a screen (sieve).

mesh aperture

The dimension or dimensions of the aperture in a screen deck, usually with a qualification as to the shape of aperture; e.g., round-hole, square-mesh, and long-slot. *BS, 5*

mesh fraction

That part of a material passing a specified mesh screen and retained by some stated finer mesh. *Henderson*

mesh liberation size

The particle size at which substantially all of the valuable minerals are detached from the gangue minerals. *Fuerstenau*

mesh number

The designation of size of an abrasive grain, derived from the openings per linear inch in the control sieving screen. Syn: [grit number](#) *ACSG, 2*

mesh of grind

Optimum particle size resulting from a specific grinding operation, stated in terms of percentage of material passing (or alternatively being retained on) a given size screen. The mesh of grind is the liberation mesh decided on as correct for commercial treatment of the material. Abbrev., m.o.g. *Pryor, 3*

mesh structure

A structure resembling network or latticework that is found in certain alteration products of minerals. Also called net structure; lattice structure. *Standard, 2; Fay*

mesh texture

a. A texture resembling a network, caused by the alteration of certain minerals; e.g., the serpentinization of olivine. Syn: [reticulate texture](#) b. An interlacing network of microveinlets of fibrous serpentine enclosing cores of more weakly birefringent cryptocrystalline serpentine in which relict remnants of olivine may survive. Also called net structure; lattice structure.

meso-

A prefix meaning middle. CF: [cata-](#); [meta-](#). *AGI*

mesocratic

Applied to igneous rocks that are intermediate between leucocratic and melanocratic rocks; they contain 30% to 60% dark minerals. CF: [melanocratic](#); [leucocratic](#). *CTD*

mesocrystalline

Said of the texture of a rock intermediate between microcrystalline and macrocrystalline; also, said of a rock with such a texture. *AGI*

mesogene

Said of a mineral deposit or enrichment of mingled hypogene and supergene solutions; also, said of such solutions and environment. CF: [hypogene](#); supergene. *AGI*

mesokaites

Group name for brown coals. *Tomkeieff*

mesolite

A monoclinic mineral, $\text{Na}_2 \text{Ca}_2 [\text{Al}_2 \text{Si}_3 \text{O}_{10}]_3 \cdot 8\text{H}_2 \text{O}$; zeolite group; pseudo-orthorhombic; in cavities in basalt and andesite, geodes, and hydrothermal veins. Syn: [cotton stone](#); [winchellite](#).

mesomicrocline

Microcline intermediate in structural state between orthoclase and maximum microcline. Syn: [intermediate microcline](#)

mesostasis

The last-formed interstitial material between the larger mineral grains in an igneous rock or in a microcrystalline groundmass. CF: [groundmass](#)

mesothermal

Said of a hydrothermal mineral deposit formed at considerable depth and in the temperature range of 200 to 300 degrees C. Also, said of that environment. CF: [hypothermal deposit](#); [epithermal](#); [leptothermal](#); telethermal; xenothermal. *AGI*

mesothermal deposit

A mineral deposit formed at moderate temperature and pressure, in and along fissures or other openings in rocks, by deposition at intermediate depths, from hydrothermal fluids. Mesothermal deposits are believed to have formed mostly between 175 degrees C and

300 degrees C at depths of 4,000 to 12,000 ft (1,220 to 3,660 m). Many valuable metalliferous deposits of western North America are of this type. *Stokes*

Mesozoic

An era of geologic time, from the end of the Paleozoic to the beginning of the Cenozoic, or from about 225 million years to about 65 million years ago. *AGI*

mesozone

According to Grubenmann's classification of metamorphic rocks (1904), the intermediate-depth zone of metamorphism, which is characterized by temperatures of 300 to 500 degrees C and moderate hydrostatic pressure and shearing stress. Modern usage stresses temperature-pressure conditions (medium to high metamorphic grade) rather than the likely depth of zone. CF: [katazone](#); [epizone](#). *AGI*

messelite

A triclinic mineral, $\text{Ca}_2(\text{Fe,Mn})(\text{PO}_4)_2 \cdot 2\text{H}_2\text{O}$; fairfieldite group. Syn: [neomesselite](#); [parbigite](#). (Not mesolite.)

mestre

Port. Mine boss. *Hess*

meta

a. In petrology, indicates a metamorphosed protolith. b. In mineralogy, indicates a mineral species that is a dehydration product of another mineral species or is a polymorph.

meta-

A prefix that, when used with the name of a sedimentary or igneous rock, indicates that the rock has been metamorphosed, e.g., metabasalt. CF: [cata-](#); [meso-](#). *AGI*

meta-alunogen

A monoclinic mineral, $\text{Al}_4(\text{SO}_4)_6 \cdot 27\text{H}_2\text{O}$. See also: [alunogen](#)

meta-anthracite

The rank of coal, within the anthracite class of Classification D-388, such that, on the dry and mineral-matter-free basis, the volatile matter content of the coal is equal to or

less than 2% (or the fixed carbon is equal to or greater than 98%), and the coal is nonagglomerating. *ASTM*

meta-argillite

An argillite that has been metamorphosed. *AGI*

meta-arkose

Arkose that has been welded or recrystallized by metamorphism so that it resembles a granite or a granitized sediment. CF: [recomposed granite](#) *AGI*

meta-autunite

a. A tetragonal mineral, $\text{Ca}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 2-6\text{H}_2\text{O}$; yellow; an alteration product of uraninite and other uranium-bearing minerals. b. The mineral group abernathyite, bassetite, chernikovite, meta-ankoleite, meta-autunite, metaheinrichite, metakahlerite, metakirchheimerite, metalodevite, metanovacekite, metatorbernite, meta-uranocircite, meta-uranospinite, metazeunerite, sodium uranospinite, and uramphite.

metabasite

A collective term, first used by Finnish geologists, for metamorphosed mafic rock that has lost all traces of its original texture and mineralogy owing to complete recrystallization. *AGI*

metabentonite

a. Metamorphosed, altered, or somewhat indurated bentonite; characterized by clay minerals (esp. illite) that no longer have the property of absorbing or adsorbing large quantities of water; nonswelling bentonite, or bentonite that swells no more than do ordinary clays. The term has been applied to certain Ordovician clays of the Appalachian region and upper Mississippi River Valley. See also: [potassium bentonite](#) b. A mineral of the montmorillonite group with SiO_2 layers in the montmorillonite structure. *AGI*

metabitumite

Hard black lustrous variety of hydrocarbon found in proximity of igneous intrusions. *Tomkeieff*

metabolism

A term proposed by Barth (1962) for the redistribution of granitizing materials within sediments by mobilization, transfer, and reprecipitation, as opposed to metasomatism involving addition of new materials. *AGI*

metabolite

a. An old term for altered glassy trachyte. b. Iron meteorite with the composition of an octahedrite but lacking Widmaenstätten figures.

metaborite

An isometric mineral, HBO_2 ; in crystalline aggregates in rock salt in Kazakhstan(?).

metabrushite

See: [brushite](#)

metachemical metamorphism

A term proposed by Dana to describe metamorphism that involves a chemical change in the affected rocks.

metacinnabar

An isometric mineral, HgS ; forms black tetrahedra; sp gr, 7.7; a source of mercury. Also called metacinnabarite. Also spelled: metacinnibar

metacinnabarite

A mineral of the same composition as a cinnabar, but black in color, and crystallizing in isometric forms (tetrahedral). Used as a source of mercury. *Sanford*

metaclase

Leith's term for a rock possessing secondary cleavage, or cleavage in its modern meaning (1905). CF: [protoclase](#)

metacryst

Any large crystal developed in a metamorphic rock by recrystallization, such as garnet or staurolite in mica schists.

metacrystal

See: [porphyroblast](#)

metadiabase

A contraction of metamorphic diabase, suggested by Dana for certain rocks simulating diabase, but which were possibly produced by the metamorphism of sedimentary rocks. CF: [metadiorite](#)

metadiorite

a. A contraction of metamorphic diorite that was proposed for certain metamorphic rocks that resemble diorite, but which may have been the result of the metamorphism of sedimentary rocks. CF: [metadiabase](#) *Fay* b. Metamorphosed gabbro, diabase, or diorite. *AGI*

metadolomite

A metamorphic dolomite, or dolomite marble.

metadurite

Durain of a high-rank bituminous coal. See also: [durain](#) *Tomkeieff*

metaglyph

A hieroglyph formed during metamorphism. *Pettijohn, 1*

metahalloysite

Dehydrated halloysite. See also: [halloysite](#)

metaheinrichite

A tetragonal mineral, $\text{Ba}(\text{UO}_2)_2(\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; meta-autunite group; yellow; a secondary mineral. Syn: [arsenuranocircite](#); metasandbergite. CF: [heinrichite](#)

metahewettite

A monoclinic mineral, $\text{CaV}_6\text{O}_{16} \cdot 3\text{H}_2\text{O}$; dark-red to yellow-brown; forms tabular crystals impregnating sandstone in southwest Colorado and southeast Utah. CF: [hewettite](#)

metahohmannite

A mineral, $\text{Fe}_2(\text{SO}_4)_2(\text{OH})_2 \cdot 3\text{H}_2\text{O}$. See also: [hohmannite](#)

metahydroboracite

A hydrous calcium and magnesium borate, $\text{CaMgB}_6\text{O}_8(\text{OH})_6 \cdot X\text{H}_2\text{O}$; like hydroboracite but with more water. Syn: [inderborite](#)

metakahlerite

A tetragonal mineral, $\text{Fe}(\text{UO}_2)_2(\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; meta-autunite group.

metakirchheimerite

A possibly tetragonal mineral, $\text{Co}(\text{UO}_2)_2(\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; meta-autunite group.

metal

In most cases, an opaque, lustrous, elemental substance that is a good conductor of heat and electricity. It is also malleable and ductile, possesses high melting and boiling points, and tends to form positive ions in chemical compounds.

metal bath

A bath, such as of mercury or tin, employed for chemical processes requiring high temperatures.

metal drift

A drift or heading driven in barren and hard rock. *Nelson*

metaleucite

A name for isometric leucite that is stable above 625 degrees C. CF: [pseudoleucite](#)

metalimestone

A metamorphosed carbonate rock not suitable for use as polished dimension stone (Brooks, 1954). CF: [metamarble](#); [ortholimestone](#).

metalist

A metallurgist. *Standard, 2; Fay*

metalized slurry blasting

The breaking of rocks, etc., using slurried explosive medium containing a powdered metal, such as powdered aluminum.

metallic

a. A term used to describe metal particles, such as gold in ores. *Newton, 1* b. (adj.) The adj. indicates that the noun it modifies possesses metallic properties. These properties often include a metallike luster, conduction of electricity, tensile strength, opacity, and malleability, although some metallic materials may possess only a few such characteristics. c. When used with "mineral" in the context of resources, e.g., metallic mineral, it has a different and special meaning; it refers to the product, not the mineralogy. Thus chalcopyrite, CuFeS_2 , is metallic (in the sense above), and the copper and iron it contains are metallic minerals in the resource sense. A single mineral, such as chalcopyrite, may also be the source of a nonmetal, sulfur. Adding to the confusion, rutile (TiO_2) is the source of both titanium, which is used as metallic titanium, and titanium oxide, which is used as a nonmetallic mineral pigment. Because many industrial minerals (in a resource sense) tend to be nonmetallic (in either the mineralogical or the resource sense), the terms "industrial minerals" and "nonmetallic minerals" are sometimes carelessly used interchangeably. CF: [mineral](#); [nonmetallic mineral](#); industrial minerals. Syn: [metalliferous](#)

metallic element

Element that is generally distinguishable from nonmetallic elements by its luster, malleability, and electrical conductivity, and its usual ability to form positive ions. *Henderson*

metallic iron

Metal iron, as distinguished from iron ore.

metallic luster

The ordinary luster of metals. When feebly displayed, it is termed submetallic. Gold, iron pyrites, and galena have a metallic luster, e.g., while chromite and cuprite have a submetallic luster. *Nelson*

metallic minerals

Minerals with a high specific gravity and metallic luster, such as titanium, rutile, tungsten, uranium, tin, lead, iron, etc. In general, the metallic minerals are good conductors of heat and electricity. See also: [nonmetallic minerals](#)

metallic ore

From a strictly scientific point of view, the terms metallic ore and ore deposits have no clear significance. These are purely conventional expressions, used to describe those metalliferous minerals or bodies of mineral having economic value, from which useful metals can be advantageously extracted. In one sense, rock salt is an ore of sodium, and

limestone an ore of calcium, but to term beds of those substances ore deposits would be quite outside of current usage. *Ricketts*

metalliferous

Metal-bearing; specif., pertaining to a mineral deposit from which a metal or metals can be extracted by metallurgical processes. See also: [metallic](#)

metalliferous mud

Marine deposit of mud formed under anoxic conditions and containing anomalously high quantities of zinc, silver, and copper, and lesser amounts of lead and gold. The term has most often been applied to deposits of muds in the Red Sea which have been formed by submarine precipitation of metallic sulfides from hydrothermal vents. These vents occur along the axis of a spreading center which forms the Red Sea Basin. *Cruickshank*

metallify

To convert into metal. *Fay*

metallites

A word used to embrace all ores or metalliferous material.

metallization

The process or processes by which metals are introduced into a rock, resulting in an economically valuable deposit; the mineralization of metals. *AGI*

metallogenetic epoch

The time interval favorable for the genesis or deposition of certain useful metals or minerals. Syn: [minerogenetic epoch](#)

metallogenetic province

See: [minerogenetic province](#)

metallogenic element

An element normally forming sulfides, selenides, tellurides, arsenides, antimonides, and/or sulfosalts, or occurring uncombined as a native element; i.e., an element of primary ore deposits. *Schieferdecker*

metallogenic province

a. An area characterized by a particular assemblage of mineral deposits, or by one or more characteristic types of mineralization. A metallogenic province may have had more than one episode of mineralization. Syn: [metallographic province](#) b. See: [minerogenetic province](#)

metallogeny

The study of the genesis of mineral deposits, with emphasis on its relationship in space and time to regional petrographic and tectonic features of the Earth's crust. The term has been used for both metallic and nonmetallic mineral deposits. Adj: metallogenic. Syn: [ore geology](#) CF: [genesis](#)

metallograph

An optical instrument designed for both visual observation and photomicrography of prepared surfaces of opaque materials, at magnifications ranging from about 25 to about 1,500 diameters. The instrument consists of a high-intensity illuminating source, a microscope, and a camera bellows. On some instruments, provisions are made for examination of specimen surfaces with polarized light, phase contrast, oblique illumination, dark-field illumination, and customary bright-field illumination. *ASM, 1*

metallographic province

See: [metallogenic province](#)

metallography

a. The science dealing with the constitution and structure of metals and alloys as revealed by the unaided eye or by tools, such as low-power magnification, optical microscope, electron microscope, and diffraction or X-ray techniques. See also: [reflected-light microscope](#) b. The study of the constitution and structure of metals and alloys.

metalloid

a. A nonmetal, such as carbon or nitrogen, that can combine with a metal to form an alloy. *Webster 3rd* b. An element--such as boron, silicon, arsenic, or tellurium--intermediate in properties between the typical metals and nonmetals. *Webster 3rd*

metalloidal luster

a. Reflecting light, somewhat like a metal, but less than metallic luster. b. Having the luster of a semimetal; e.g., native bismuth or arsenic.

metallometric surveying

Geochemical prospecting term used by Russian authors for soil surveys or for the chemical analysis of systematically collected samples of soil and weathered rock. *Hawkes, 2*

metallometry

The geochemical determination of metals. *AGI*

metallo-organic compound

A compound in which a metal combines with organic compounds to form metallo-organic complexes, such as porphyrins and salts of various organic acids. Some metallo-organic compounds are soluble in water, others are not. *Hawkes, 2*

metallurgical balance sheet

Material balance of a process.

metallurgical coke

A coke with very high compressive strength at elevated temperatures, used in metallurgical furnaces, not only as a fuel, but also to support the weight of the charge. *ASM, 1*

metallurgical engineer

One who applies engineering principles to the science and technology of metallurgy. CF: [metallurgist](#)

metallurgical fume

A mixture of fine particles of elements and metallic and nonmetallic compounds either sublimed or condensed from the vapor state. *Fay*

metallurgical smoke

A term applied to the gases and vapors, and fine dust entrained by them, that issue from the throats of furnaces; consists of three distinct substances: gases (including air), flue dust, and the fume. *Fay*

metallurgist

One who is skilled in, or who practices, metallurgy. CF: [metallurgical engineer](#)

metallurgy

a. The science and art of separating metals and metallic minerals from their ores by mechanical and chemical processes; the preparation of metalliferous materials from raw ore. b. Study of the physical properties of metals as affected by composition, mechanical working, and heat treatment.

metal mining

The industry that supplies the community with the various metals and associated products. Similar to coal mining, it is an extractive industry, and once the raw material, the orebody, is depleted it is not replenishable. See also: [vein miner](#)

metal notch

See: [taphole](#)

metal pickling

The immersion of metal objects in an acid bath to remove scale, oxide, tarnish, etc., leaving a chemically clean surface for galvanizing or painting. *Nelson*

metal powder

a. Metallic elements or alloys in finely divided or powder form. *Henderson* b. A general term applied by drillers, bit setters, and bit manufacturers to various finely ground metals, which, when mixed, are commonly used to produce sintered-metal diamond bit crowns. Also called powdered metal; powder metal. *Long*

metal stone

a. Newc. An argillaceous stone, shale, and sandstone. b. Staff. See: [ironstone](#)

metamarble

A marble suitable for use as polished dimension stone; e.g., the Vermont metamarble. CF: [orthomarble](#); [metallimestone](#).

metamic

A metal ceramic consisting of high Cr.Al₂O₃. *Osborne*

metamict

a. A mineral that has become virtually amorphous owing to the breakdown of the original crystal structure by internal bombardment with alpha particles (helium nuclei) emitted by radioactive atoms within the mineral. Many green zircons, esp. those from Sri

Lanka, which are Precambrian in age, and have thus had over 800 million years of this internal bombardment, owe their low refractive index and density to this cause, and may be termed metamict zircons. *Anderson* b. Said of a mineral containing radioactive elements in which various degrees of lattice disruption and changes have taken place as a result of radiation damage, while its original external morphology has been retained. Examples occur in zircon, thorite and several other minerals. Not all minerals containing radioactive elements are metamict; e.g., xenotime and apatite are not. *AGI*

metamictization

The process of disruption of the structure of a crystal by radiations from contained radioactive atoms, rendering the material partly or wholly amorphous. *AGI*

metamict mineral

A mineral whose crystal structure has been disrupted by radiation from contained radioactive particles. *AGI*

metamontmorillonite

a. The product of dehydration of montmorillonite at 400 degrees C. *Hey, 2* b. A dehydrated smectite.

metamorphic

Pertaining to the process of metamorphism or to its results. *AGI*

metamorphic aureole

See: [aureole](#)

metamorphic deposit

An ore deposit that has been subjected to great pressure, high temperature, and alteration by solutions. It may have become warped, twisted, or folded, and the original minerals may have been rearranged and recrystallized.

metamorphic differentiation

A collective term for the various processes by which minerals or mineral assemblages are locally segregated from an initially uniform parent rock during metamorphism; e.g., garnet porphyroblasts in fine-grained mica schist. *AGI*

metamorphic diffusion

Migration, by diffusion, of materials from one part of a rock mass to another during metamorphism. Diffusion may involve chemically active fluids from magmatic sources, hot pore fluids, or fluids released from hydrous minerals or carbonates. Ionic diffusion in the solid state may also occur. *AGI*

metamorphic facies

A set of metamorphic mineral assemblages, repeatedly associated in space and time, such that there is a constant and therefore predictable relation between mineral composition and chemical composition. It is generally assumed that the metamorphic facies represent the results of equilibrium crystallization of rocks under a restricted range of externally imposed physical conditions; e.g., temperature, lithostatic pressure, and water pressure. Syn: [mineral facies](#)

metamorphic grade

The intensity or rank of metamorphism, measured by the amount or degree of difference between the original parent rock and the metamorphic rock. It indicates in a general way the pressure-temperature environment or facies in which the metamorphism took place. For example, conversion of shale to slate or phyllite would be low-grade dynamothermal metamorphism (greenschist facies), whereas its continued alteration to a garnet-sillimanite schist would be high-grade metamorphism (almandine-amphibolite facies). Syn: [metamorphic rank](#) See also: [high-rank metamorphism](#)

metamorphic overprint

See: [overprint](#)

metamorphic rank

See: [metamorphic grade](#)

metamorphic rock

Any rock derived from preexisting rocks by mineralogical, chemical, and/or structural changes, essentially in the solid state, in response to marked changes in temperature, pressure, shearing stress, and chemical environment, generally at depth in the Earth's crust. *AGI*

metamorphic water

Water driven out of rocks by metamorphism. *Stokes*

metamorphism

The mineralogical, chemical, and structural adjustment of solid rocks to physical and chemical conditions that have generally been imposed at depth below the surface zones of weathering and cementation, and that differ from the conditions under which the rocks in question originated. *AGI*

metarossite

A triclinic mineral, $\text{CaV}_2\text{O}_6 \cdot 2\text{H}_2\text{O}$; pearly to dull yellow; a dehydration product of rossite.

metasandbergite

See: [metaheinrichite](#)

metasapropel

Compact sapropel rock. *Tomkeieff*

metaschoderite

A monoclinic mineral, $\text{Al}_2(\text{PO}_4)(\text{VO}_4) \cdot 6\text{H}_2\text{O}$.

metaschoepite

Formerly called schoepite II. See also: [schoepite](#); [paraschoepite](#).

metasediment

A sediment or sedimentary rock that shows evidence of having been subjected to metamorphism. *AGI*

metashale

Shale altered by incipient metamorphic reconstitution but not recrystallized and without the development of partings or preferred mineral orientation. *AGI*

metasomasis

See: [metasomatism](#)

metasomatic

Pertaining to the process of metasomatism and to its results. The term is esp. used in connection with the origin of ore deposits. *AGI*

metasomatism

The process of practically simultaneous capillary solution and deposition by which a new mineral of partly or wholly different chemical composition may grow in the body of an old mineral or mineral aggregate. The presence of interstitial, chemically active pore liquids or gases contained within a rock body or introduced from external sources is essential for the replacement process, that often, though not necessarily, occurs at constant volume with little disturbance of textural or structural features. Syn:

[metasomosis](#)

metasomatite

A rock produced by metasomatism.

metasome

a. A replacing mineral that grows in size at the expense of another mineral (the host or palasome); a mineral grain formed by metasomatism. *AGI* b. The newly formed part of a migmatite or composite rock, introduced during metasomatism. *AGI*

metasomosis

See: [metasomatism](#)

metastrengite

Monoclinic $\text{FePO}_4 \cdot 2\text{H}_2\text{O}$, dimorphous with orthorhombic strengite; named to correspond with metavariscite and variscite $\text{AlPO}_4 \cdot 2\text{H}_2\text{O}$. Syn: [phosphosiderite](#); [clinostrengite](#). *Spencer, 4*

metatorbernite

A tetragonal mineral, $\text{Cu}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}$; meta-autunite group; strongly radioactive; emerald to apple green; occurs in granite pegmatites. CF: [torbernite](#)

metatyuyamunite

An orthorhombic mineral, $\text{Ca}(\text{UO}_2)_2\text{V}_2\text{O}_8 \cdot 3\text{H}_2\text{O}$; yellow; radioactive; a secondary mineral.

meta-uranocircite

A monoclinic mineral, $\text{Ba}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}$; meta-autunite group; yellow green; radioactive; a secondary mineral in quartz veins.

meta-uranopilite

A mineral, $(\text{UO}_2)_6(\text{SO}_4)(\text{OH})_{10} \cdot 5\text{H}_2\text{O}$; radioactive.

meta-uranospinite

A tetragonal mineral, $\text{Ca}(\text{UO}_2)(\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; meta-autunite group.

metavariscite

A monoclinic mineral, $\text{AlPO}_4 \cdot 2\text{H}_2\text{O}$; green; dimorphous with variscite.

metavauxite

A monoclinic mineral, $\text{FeAl}_2(\text{PO}_4)_2(\text{OH})_2 \cdot 8\text{H}_2\text{O}$; dimorphous with paravauxite; forms acicular crystals or radiating fibrous aggregates.

metavermiculite

The product of dehydration of vermiculite at 400 degrees C. *Hey, 2*

metavolcanic

Said of partly metamorphosed volcanic rock. *Stokes*

metavoltine

A hexagonal mineral, $\text{K}_2\text{Na}_6\text{Fe}_7(\text{SO}_4)_{12}\text{O}_2 \cdot 18\text{H}_2\text{O}$.

metaxite

a. A fibrous serpentine mineral; a variety of chrysotile. *AGI* b. See: [micaceous sandstone](#)

metazeunerite

A tetragonal mineral, $\text{Cu}(\text{UO}_2)_2(\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; meta-autunite group; grass to emerald green.

meteoric iron

a. Iron of meteoric origin. *AGI* b. An iron meteorite. *AGI*

meteoric stone

a. A stone of meteoric origin; a stony meteorite. *AGI* b. A meteorite having the appearance of a stone. *AGI*

meteoric water

Ground water of atmospheric origin.

meteorite

A stony or metallic body that has fallen to the Earth's surface from outer space. Adj: meteoritic.

meter

a. An instrument, apparatus, or machine for measuring fluids, gases, electric currents, etc., and recording the results obtained; e.g., a gasmeter, a watermeter, or an air meter. *Standard, 2* b. The fundamental unit of length in the metric system equal to 39.37079 in or 3.2808 ft. *Standard, 2; Fay*

metering pin

A valve plunger that controls the rate of flow of a liquid or a gas. *Nichols, 1*

methane

CH₄ ; carbureted hydrogen or marsh gas or combustible gases; formed by the decomposition of organic matter. The most common gas found in coal mines. It is a tasteless, colorless, nonpoisonous, and odorless gas; in mines the presence of impurities may give it a peculiar smell. It weighs less than air and may therefore form layers along the roof and occupy roof cavities. Methane will not support life or combustion; with air, however, it forms an explosive mixture, CH₄ +2O₂ -->CO₂ .2H₂ O. The gases resulting from a methane explosion are irrespirable. Methane is often referred to as combustible gases because it is the principal gas composing a mixture that, when combined with proper proportions of air, will explode when ignited. Breathing methane causes ill effects only where the air is so heavily laden with it that oxygen is supplanted. See also: [colliery explosion](#); [marsh gas](#); [firedamp](#); limits of flammability. *Nelson; Webster 2nd; BCI*

methane drainage

a. Capture of the concentrated methane through boreholes drilled into a coalbed or associated strata. *SME, 1* b. Outside the United States three main systems of methane drainage have been developed: (1) the cross-measure borehole method, (2) the superjacent roadway system and (3) the pack cavity system. The cross-measure borehole method which consists of boring holes from 2-1/4 to 3-1/4 in (5.7 to 8.3 cm) in diameter and 150 to 300 ft (45 to 90 m) in length, into the strata above or below the seam,

generally close to the working face. This method has the advantage of being suited to a wide variety of conditions and does not require another seam within reasonable distance above or below the seam to be drained, or the use of solid stowing. Syn: [cross-measure borehole system](#) Boreholes are drilled from a roadway situated above the seam being worked, the drainage of the methane then taking place from this roadway. In the pack cavity system, corridors are left and supported in the goaf as the face advances, and from these combustible gases is drawn off. Syn: [combustible gases drainage](#); [corridor system](#). *Sinclair, 1; Roberts, 1 c.* In contrast to the above, methane drainage technology in the United States is conducted from the surface as well as underground. Underground methane drainage is primarily by means of horizontal boreholes drilled into the coalbed to be extracted. Surface methane drainage methods include vertical gob gas vent holes on longwall panels and hydraulically stimulated vertical wells generally drilled several years in advance of mining into virgin coalbeds.

methane monitoring system

A system whereby the methane content of the mine air is indicated automatically at all times. When the content reaches a predetermined concentration, the electric power is cut off automatically from each machine in the affected area. The mechanism is so devised that its setting cannot be altered. The system is used, mainly, in conjunction with the operation of continuous miners and power loaders. *Nelson*

methanophone

An instrument for detecting methane in mine air. It contains an electric battery that sustains a small electric glow light. As soon as a certain percentage of methane enters the workings, a tiny explosion occurs in the fuse head, where a fine wire filament is melted and starts a bell ringing continuously. *Fay*

methane recorder

An instrument that gives a continuous record of the methane concentration over a period of time. *Roberts, 1*

methane removal

See: [water infusion method](#)

methane tester

A methane detector. See also: [methanometer](#)

methane tester type S.3

A nonautomatic methane detector approved under the regulations for use in coal mines. The instrument is normally calibrated at 1% methane, and this provides an accuracy of + or -0.05% over the most important part of the scale; i.e., 0.75% to 1.5%. It weighs 3-1/2 lb (1.6 kg), and the source of power is an Edison cap lamp battery. *Nelson*

methanometer

An instrument for determining the methane content in mine air. See also: [sampling instrument](#); [catalytic methanometer](#). *Nelson*

methenyl tribromide

See: [bromoform](#)

method of working

The system adopted to work or extract material in a mine. It includes all the operations involved in the cutting, handling, and transport of valuable material and waste rock, support of ground, ventilation of workings, and provision of supplies. The term does not include winding or hoisting, surface handling, and preparation or dressing. See also: [coal mining methods](#)

method study

A study to provide the essential data on which mine management can operate in making the most effective use of workpower, machines, and materials. Method study has been applied in the mining industry for many years, although sometimes under different names. See also: [time study](#); work study. *Nelson*

methyl acetone

A mixture of methyl acetate and acetone. Used as a solvent. *Crispin*

methylene iodide

A heavy liquid used for mineral separation (sp gr, 3.33); also for refractive index determination (R.I.=1.74). CF: [Clerici solution](#); Sonstadt solution; Klein solution; bromoform.

metore

Both capping and gossan. *AGI*

metra

A pocket implement combining the uses of many instruments, such as thermometer, level, plummet, and lens. *Standard, 2*

metric carat

An international unit equal to 200 mg that had been adopted in most European countries and in Japan when it was made the standard in the United States in 1913. Abbrev.: M.C. and cm. See also: [carat](#) *Webster 3rd*

Mexican diamond

Rock crystal (quartz).

Mexican onyx

Yellowish brown or greenish brown banded calcite. See also: [onyx marble](#); Gibraltar stone.

Mexican turquoise

Turquoise from the central part of Baja California, Mexico.

Mexican water opal

A fire opal from Mexico.

meyerhofferite

A triclinic mineral, $\text{Ca}_2 \text{B}_6 \text{O}_6 (\text{OH})_{10} \cdot 2\text{H}_2 \text{O}$; forms prismatic, commonly tabular, crystals or is fibrous; an alteration product of inyoite from Inyo County, CA.

meymacite

An amorphous mineral, $\text{WO}_3 \cdot 2\text{H}_2 \text{O}$; resinous; yellow brown.

miargyrite

A monoclinic mineral, AgSbS_2 ; soft; metallic; in low-temperature hydrothermal veins; an ore of silver.

miarolite

A granite having miarolitic cavities; a textural modification of normal granite. *Johannsen*

miarolithite

A chorismite having miarolitic cavities or remnants thereof; a variety of ophthalmite. *AGI*

miarolitic

A term applied to small irregular cavities in igneous rocks, esp. granites, into which small crystals of the rock-forming minerals protrude; characteristic of, pertaining to, or occurring in such cavities. Also, said of a rock containing such cavities. CF: [drusy](#)

miarolitic cavity

A cavity of irregular shape in certain plutonic rocks. Crystals of the rock constituents sometimes project into the cavity. CF: [druse](#); [yug](#). *Schieferdecker*

miascite

A mixture of strontianite and calcite. *Hey, 1*

mica

a. A group of phyllosilicate minerals having the general composition, $X_2 Y_{4-6} Z_8 O_{20} (OH,F)$ where $X=(Ba,Ca,Cs,H_3 O,K,Na,NH_4)$, $Y=(Al,Cr,Fe,Li,Mg,Mn,V,Zn)$, and $Z=(Al,Be,Fe,Si)$; may be monoclinic, pseudo-hexagonal or pseudo-orthorhombic; soft; perfect basal (micaceous) cleavage yielding tough, elastic flakes and sheets; colorless, white, yellow, green, brown, or black; excellent electrical and thermal insulators (isinglass); common rock-forming minerals in igneous, metamorphic, and sedimentary rocks. See also: [brittle mica](#). Syn: [glimmer](#); [isinglass](#). b. The mineral group andrite, annite, biotite, bityite, celadonite, chernykhite, clintonite, ephesite, ferri-annite, glauconite, hendricksite, kinoshitalite, lepidolite, margarite, masutomilite, montdorite, muscovite, nantingite, norrishite, paragonite, phlogopite, polyolithionite, preiswerkite, roscoelite, siderophyllite, sodium phlogopite, taeniolite, tobelite, wonesite, and zinnwaldite.

micaceous

a. Consisting of or containing mica; e.g., a micaceous sediment. b. Resembling mica; i.e., thinly foliated.

micaceous iron ore

Hematite in which the texture is foliated or micaceous; some micaceous varieties are soft and unctuous. *Rice, 1*

micaceous sandstone

A sandstone containing conspicuous layers or flakes of mica, usually muscovite. Syn: [metaxite](#)

mica house

A shop where hand-cobbed mica is rifted, trimmed, graded, and qualified. Syn: [trimming shed](#)

Micanite

Trade name for a form of built-up mica used for insulating.

mica peridotite

A peridotite consisting principally of altered olivine and biotite.

mica plate

An accessory introduced into the optic path of a polarized-light microscope to produce a first-order gray interference color. Syn: [glimmer plate](#); [lambda plate](#). See also: [accessory plate](#)

mica powder

A dynamite in which the dope consists of fine scales of mica. *Fay*

mica schist

A schist whose essential constituents are mica and quartz, and whose schistosity is mainly due to the parallel arrangement of mica flakes.

michenerite

An isometric mineral, (Pd,Pt)BiTe ; pyrite group; metallic; at Sudbury, ON, Canada and Monchegorsk, Kola Peninsula, Russia.

Michigan cut

a. In the United States, a cut that consists of drilling a hole with a large diameter or a number of holes of smaller diameter at the center of the heading and parallel to the direction of the tunnel. These holes are not charged. The remaining bench holes are then broken out towards these holes. *Fraenkel* b. See: [burned cut](#)

Michigan slip

A very plastic, tough, fine-grained impure clay, similar to Albany slip clay; used as a bonding and plasticizing agent in grinding wheels, refractories, etc., and as a suspension agent for glassy frit in vitreous enamels. *CCD, 1*

micrinite

a. A maceral of the inertinite group consisting of granular material without cellular structure; one of the principal components of durain and clarain. *AGI* b. Proposed by the Heerlen Congress, 1935, as a substitute for micronite. *Tomkeieff*

micrinoid

A coal constituent similar to material derived from finely macerated vegetation. *AGI*

micrite

a. A descriptive term originally used for the semiopaque crystalline matrix of limestones, consisting of chemically precipitated carbonate mud with crystals less than 4 μm in diameter, and interpreted as a lithified ooze. The term is now commonly used in a descriptive sense without genetic implication. *AGI* b. A limestone consisting dominantly of micrite matrix; e.g., lithographic limestone. *AGI*

micro-

a. A prefix that divides a basic unit by 1 million or multiplies it by 10^{-6} . Abbrev., μ . *Lyman* b. A prefix meaning small. When modifying a rock name, it signifies fine-grained hypabyssal, as in microgranite. CF: [macro-](#)

microampere

One-millionth of an ampere; 10^{-6} A; abbrev., μa . *Crispin*

microaphanitic

See: [cryptocrystalline](#)

microballoon

One of the tiny hollow spheres of glass or plastic that are added to explosive materials to enhance sensitivity and control density by assuring an adequate content of entrapped air. *Atlas*

microbar

A unit of pressure commonly used in acoustics. One microbar is equal to 1 dyn/cm^2 .
Hunt

microbreccia

- a. A poorly sorted sandstone containing large angular particles of sand set in a fine silty or clayey matrix; e.g., a graywacke. It is somewhat less micaceous than a siltstone. *AGI*
b. A breccia within fragments of a coarser breccia. *AGI* c. A well-indurated, massive rock that has been crushed to very fine grain size through cataclastic flow, commonly in detachment faults. *AGI*

microchemical

Applied to chemical reactions conducted on the stage of a microscope and viewed through the microscope.

microclastic

- a. Applied to a clastic or fragmental rock composed of very small particles. b. Said of coal that is composed mainly of fine particles; e.g., cannel coal. *AGI*

microcline

A triclinic mineral, KAlSi_3O_8 ; feldspar group; pseudomonoclinic; dimorphous with orthoclase; a major rock-forming mineral in granites, pegmatites, and metamorphic rocks; may be a detrital mineral in arkoses and graywackes. CF: [orthoclase](#)

microconglomerate

A sedimentary rock composed of relatively coarse sand grains in a very fine silt or clay matrix. *AGI*

microcosmic salt

See: [stercorite](#)

microcryptocrystalline

See: [cryptocrystalline](#)

microcrystalline

Said of the texture of a rock consisting of or having crystals that are small enough to be visible only under the microscope; also, said of a rock with such a texture. Syn: [cryptocrystalline](#); [micromeritic](#). *AGI*

microelement

See: [trace element](#)

microfacies

Those characteristic and distinctive aspects of a sedimentary rock that are visible and identifiable only under the microscope (low-power magnification). *AGI*

microfarad

A unit of capacitance; one-millionth of a farad; symbol, mu F. *Crispin*

microfelsitic

See: [cryptocrystalline](#)

microfluidal

Having a microscopic flow texture. *Standard, 2*

microgeology

a. The study of the microscopic features of rocks. b. The study of the relationships of microorganisms to geologic and geochemical processes.

microgranitoid

Having a microscopic granitoid structure. *Standard, 2*

microgranular

a. Said of the texture of a microcrystalline, xenomorphic igneous rock. Also, said of a rock with such a texture. *AGI* b. Minutely granular; specif. said of the texture of a carbonate sedimentary rock wherein the particles are mostly 10 to 60 mu m in diameter and are well-sorted, and the finer clay-sized matrix is absent. Also said of a sedimentary rock with such a texture. *AGI*

micrograph

A graphic reproduction of a magnified object as seen through a microscope. When it is a photograph, it is called a photomicrograph. *Stokes*

micrographic

Said of the graphic texture of an igneous rock that is distinguishable only with the aid of a microscope; also, said of a rock having such texture. *AGI*

microhardness

The hardness of microscopic areas or of the individual microconstituents in a metal, as measured by means such as the Tukon, Knoop, or scratch methods. *ASM, I*

microhm

One microhm equals 10^{-6} Omega , which equals 10^3 electromagnetic units. Symbol, μ Omega . *Webster 2nd*

microite

Microite is found in many coals and occurs in large quantities in Gondwana coals and in Permocarbiniferous coals of the former U.S.S.R. It is most abundant in coals with little exinite, or coals of high rank in which exinite cannot be recognized, and may occur in very persistent thick bands. It is present in small amounts in Carboniferous coals of the Northern Hemisphere. *IHCP*

microlaterolog

A well log obtained with an arrangement of electrodes similar to a miniature laterolog but disposed in concentric fashion in an insulating pad. The current from a central electrode is focused and flows out in a pattern that resembles the shape of a trumpet. As in the microlog, the electrodes are mounted on a pad that is held against the wall of the hole by springs. The microlaterolog serves a purpose similar to that of a microlog, investigating only a small volume of rock immediately adjacent to the hole. Syn: [trumpet log](#)

microlite

a. A microscopic crystal that polarizes light and has some determinable optical properties. CF: [crystallite](#); [crystalloid](#). Syn: [microlith](#) *AGI* b. A pale-yellow, reddish, brown, or black isometric mineral of the pyrochlore group: $(Ca,Na)_2 Ta_2 O_6 (O,OH,F)$. It is isomorphous with pyrochlore, and it often contains small amounts of other elements (including uranium and titanium). Microlite occurs in granitic pegmatites and in pegmatites related to alkalic igneous rocks, and it constitutes an ore of tantalum. Syn: [djalmaite](#)

microlith

See: [microlite](#)

microlithotype

A typical association of macerals in coals, occurring in bands at least 50 μm wide. Microlithotype names bear the suffix "-ite". See also: [lithotype](#)

microlitic

Said of the texture of a porphyritic igneous rock in which the groundmass is composed of an aggregate of differently oriented or parallel microlites in a glassy or cryptocrystalline mesostasis. *AGI*

micromanometer

Essentially a U-type gage employing a micrometer to measure the change in inclination of the gage from its zero or datum position. Normally, micromanometers are used in the laboratory for such purposes as the calibration of secondary manometers and, in conjunction with pressure measurement, in low-speed atmospheric wind tunnels. See also: [manometer](#) *Roberts, 1*

micromeritic

An obsolete syn. of microcrystalline. See also: [microcrystalline](#) *AGI*

micrometer

a. An instrument for measuring very small dimensions or angles. Used in connection with a microscope or a telescope. There are a great variety of forms, but in nearly all, the measurement is made by turning a very fine screw, which gives motion to a scale, a spider line, a lens, a prism, or a ruled glass plate. *Standard, 2* b. A unit of length, equal to one-millionth of a meter. Symbol, μm . ($1 \mu\text{m} = 10^{-6} \text{m}$). Formerly called micron. c. A micrometer caliper. *Standard, 2*

micrometer caliper

A caliper with a graduated screw attachment for measuring minute distances. *Crispin*

micrometer-reading manometer

See: [vernier-reading manometer](#)

micrometrics

The study of very fine particles. *AGI*

micromillimeter

One-millionth of a millimeter; abbrev., mmu . *AGI*

micron

Former term for micrometer.

micronized mica

An ultrafine material produced in a disintegrator that has no moving parts but depends on jets of high-pressure superheated steam to reduce the mica to micrometer sizes. Micronized mica is produced in particle size ranges of 10 to 20 μm and 5 to 10 μm . *USBM, 7*

Micronizer

A special type of dry-grinding machine in which micronized mica is produced. It consists of a disintegrator that has no moving parts but depends on jets of high-pressure superheated steam for reducing the mica to micrometer sizes. *USBM, 7*

micronizer mill

Disintegrator, in which feed particles are entrained in a pressure jet (steam or air) and whirled through a cylindrical chamber with sufficient force to break them. *Pryor, 3*

micropegmatite

A less-preferred syn. of granophyre. See also: [granophyre](#)

micropertthite

Exsolution lamellae in alkali feldspar visible only with the aid of a microscope. See also: [cryptopertthite](#); perthite.

micropetrological unit

See: [maceral](#)

microphotograph

See: [photomicrograph](#)

microporosity

Porosity visible only with the aid of a microscope. *ASM, 1*

microscope

An instrument used to produce enlarged images; it consists of a lens (or lenses) of the objective and an ocular set into a tube, with or without other accessories, and held by an adjustable arm over an object stage.

microscopic

a. Of, relating to, or conducted with a microscope or microscopy. *Webster 3rd* b. So small or fine as to be invisible or not clearly distinguishable without the use of a microscope. CF: [macroscopic](#); [megascopic](#). *Webster 3rd*

microscopy

The art and practice of using a microscope for identification and analysis of objects. See also: [ore microscopy](#); [reflected-light microscope](#).

microsecond

One-millionth of a second; abbrev.: mu sec, mu s. *Webster 3rd*

microsection

a. Any thin section used in microscopic analysis. *AGI* b. A polished section. *AGI*

microseism

A collective term for small motions in the Earth that are unrelated to an earthquake and that have a period of 1.0 to 9.0 s. They are caused by a variety of natural and artificial agents, esp. atmospheric events. Syn: [seismic noise](#)

microseismic instrument

An instrument for observing the behavior of roof strata and supports. The device is inserted in 4-ft (1.2-m) long 1-1/2-in (3.8-cm) diameter holes, drilled at selected points, for listening to subaudible vibrations which are known to precede rock failure. *Nelson*

microseismic movement

See: microseism.

microseismic rate

The number of microseisms per unit of time. *Issacson*

microseismic region

Area in which an earthquake is registered by instruments only. *Schieferdecker*

microseismometer

An apparatus for indicating the direction, duration, and intensity of microseisms. Also called microseismograph. *Standard, 2*

microspar

Calcite matrix in limestones, occurring as uniformly sized and generally loaf-shaped crystals ranging from 5 μm to more than 20 μm in diameter. *AGI*

microspherulitic

Said of the spherulitic texture of an igneous rock that is distinguishable only with the aid of a microscope, owing to the small size of the spherules. Also, said of a rock having such texture. *AGI*

microstriation

Microscopic scratch developed on the polished surface of a rock or mineral as a result of abrasion. *AGI*

microstructure

a. Structural features of rocks that can be discerned only with the aid of the microscope. *AGI* b. The structure of polished and etched metals as revealed by a microscope at a magnification greater than 10 diameters. *ASM, 1*

microstylolite

A type of grain boundary indicating differential solution between two minerals and characterized by fine interpenetrating teeth; often marked by a little opaque material. See also: [stylolite](#)

microvitrain

The thin vitrainlike bands present in clarain, having a maximum thickness of about 1/10 in (2.5 mm) with a tolerance of 1 mm, and a minimum thickness of 0.05 mm (50 μm). *AGI*

microvolt

One-millionth of a volt; 10^{-6} V; symbol, μ V. *Crispin*

microwatt

One-millionth of a watt; symbol, μ W. *Webster 3rd*

midalkalite

See: [foyaite](#); nepheline syenite.

Mid-Atlantic Ridge

A mountain range that extends parallel to the continental margins in mid-ocean in both the North and South Atlantic Oceans. It rises 6,000 ft above the ocean floor and surfaces as the Azores, Ascension Island, Saint Helena, and Tristan da Cunha islands. *AGI*

middle

Pertaining to a segment of geologic time intermediate between Late and Early, or to rocks intermediate between Upper and Lower. Thus, rocks of the Middle Jurassic Series were formed during the Middle Jurassic Epoch. CF: Upper; Lower.

middle cut

A machine cut in the midsection of a coal seam; sometimes adopted in thick seams (over 4 ft or 1.2 m) with a layer of dirt or inferior coal in the middle. A middle cut would be made with a turret coal cutter. See also: [bottom cut](#); [top cut](#). Syn: [intermediate cut](#)

middle man

A stratum of rock dividing or separating two seams or beds of coal. *Fay*

middle prop

See: [center prop](#)

middles

See: [middlings](#)

middletonite

A brown, resinous, brittle mineral found between layers of coal at the Middleton collieries, near Leeds, England, and also at Newcastle. *Fay*

middlings

a. That part of the product of a washery, concentration, or preparation plant that is neither clean mineral product nor reject (tailings). It consists of fragments of coal ore mineral and gangue. The material is often sent back for crushing and/or retreatment. Syn: [middles](#) *Nelson* b. In two-component ore, particles incompletely liberated by comminution into concentrate or gangue. In complex ores, in addition to incomplete liberation, there may be multiphased particles of middling or intermediate species that react too feebly to treatment to report as concentrate or tailing. *Pryor*, 2

middlings elevator

An elevator that removes material for further treatment or for disposal as an inferior product. *BS*, 5

middoor

Scot. The middle one of three landing places in a shaft. *Fay*

midfeather

In mining, a support to the center of a tunnel. *Standard*, 2

midge

N. of Eng. Lamp (not safety) carried by trammers, etc. *Fay*

midge stone

Moss agate with inclusions resembling a swarm of mosquitoes. Also called gnat stone; mosquito agate.

midget impinger

A dust-sampling apparatus almost identical in principle and design with the regular Greenburg-Smith impinger, the main difference being its smaller size and the fact that only a 12-in (30.5-cm) head of water is required for its operation. See also: [Greenburg-Smith impinger](#)

mid-ocean ridge

A continuous, seismic, median mountain range extending through the North and South Atlantic Oceans, the Indian Ocean, and the South Pacific Ocean. It is a broad, fractured swell with a central rift valley and usually extremely rugged topography; it is 1 to 3 km in elevation, about 1,500 km in width, and over 84,000 km in length. According to the

hypothesis of sea-floor spreading, the mid-ocean ridge is the source of new crustal material. See also: [rift valley](#) *AGI*

midocean rift

See: [rift valley](#)

mid-ocean rise

See: [mid-ocean ridge](#)

midworkings

a. Scot. Mine workings above or below in the same mine or colliery. *Fay* b. See: [middoor](#)

miemite

A variety of dolomite from Miemo, Tuscany, Italy.

miersite

An isometric mineral, (Ag,Cu)I ; canary yellow.

miesite

A brown variety of pyromorphite containing calcium from Mies, Czech Republic.

migma

Mobile, or potentially mobile, mixture of solid rock material(s) and magma, the magma having been injected into or melted out of the rock material. Etymol: Greek, mixture. *AGI*

migmatite

A composite rock composed of igneous or igneous-appearing and/or metamorphic materials that are generally distinguishable megascopically. See also: [composite gneiss](#) *AGI*

migmatization

Formation of a migmatite. The more mobile, typically light-colored, part of a migmatite may be formed as the result of anatexis, lateral secretion, metasomatism, or injection. *AGI*

migration

a. The movement of oil, gas, or water through porous and permeable rock. Parallel (longitudinal) migration is movement parallel to the bedding plane. Transverse migration is movement across the bedding plane. *AGI* b. The process by which events on a reflection seismogram are mapped in an approximation of their true spatial positions. It requires knowledge of the velocity distribution along the raypath. Also, the seismic correction that is applied. *AGI; Schieferdecker* c. The movement of a topographic feature from one locality to another by the operation of natural forces; specif. the movement of a dune by the continual transfer of sand from its windward to its leeward side. *AGI* d. The slow downstream movement of a system of meanders, accompanied by enlargement of the curves and widening of the meander belt. *AGI* e. A broad term applied to the movements of plants and animals from one place to another over long periods of time. *AGI*

migration of oil

The movement or seepage of oil through rocks wherever they are sufficiently permeable to allow such passage; of considerable importance in oil geology. *Nelson*

mikheevite

See: [goergeyite](#)

milarite

A hexagonal mineral, $K_2 Ca_4 Al_2 Be_4 Si_{24} O_{60} \cdot H_2 O$; osumilite group; forms colorless to greenish prisms. (Not millerite.)

mild and tough

Mellowed or ripened by weathering; said of brick clay; opposite of short and rough. *Standard, 2*

mild earth

Eng. Soft, loamy clay suitable for brickmaking, as opposed to stiffer clay below, which is suitable for making tiles and drainpipes. Kimeridge clay, Brill, Buckinghamshire. *Arkell*

mild steel

Steel that contains from 0.12% to 0.25% carbon. Also called low-carbon steel; soft steel. See also: [yield stress](#)

mil-foot

A standard of resistance in wire. The resistance of 1 ft (30.5 cm) of wire that is 1 mil (25.4 μ m) in diameter. *Crispin*

milk of sulfur

See: [colloidal sulfur](#)

milk-opal

A translucent, milk-white to green, yellow, or blue variety of common opal.

milky quartz

A milk-white, nearly opaque variety of quartz, commonly with a greasy luster. The milkiness is due to the presence of minute, fluid-filled inclusions. Syn: [greasy quartz](#)

mill

a. A mineral treatment plant in which crushing, wet grinding, and further treatment of ore is conducted. Also, separate components, such as ball mill, hammer mill, and rod mill. See also: [ball mill](#); [hammermill](#); rod mill; grinding mill; pug mill. b. A passage connecting a stope or upper level with a level below, intended to be filled with broken ore that can then be drawn out at the bottom as desired for further transportation; an opening in the floor or bottom of a stope, through which the ore or mineral is passed or thrown downward along the footwall to the level. See also: [glory hole](#) *Fay* c. To fill a winze, or interior incline, with broken ore, to be drawn out at the bottom. *Fay* d. A finishing plant where blocks of stone are sawed and trimmed. e. In quarrying, usually applied to the finishing plant where blocks are sawed into slabs; all other manufacturing processes are classed as shop work. *AIME, 1* f. An excavation made in the country rock, by a crosscut from the workings on a vein, to obtain waste for filling. It is left without timber so that the roof may fall in and furnish the required rock. *Fay* g. Can. Reducing plant where ore is concentrated and/or metals are recovered. *Hoffman* h. A single machine or a complete plant for rolling metals. i. See: [cogging mill](#) j. To grind or cut away steel or iron with a toothed or serrated face bit; also, the tool so used. *Long* k. Eng. That part of an ironworks where puddle bars are converted into merchant iron; i.e., rolled iron ready for sale in bars, rods, or sheets. See also: [forge](#) l. A preparation facility within which metal ore is cleaned, concentrated, or otherwise processed before it is shipped to the customer, refiner, smelter, or manufacturer. A mill includes all ancillary operations and structures necessary to clean, concentrate, or otherwise process metal ore, such as ore and gangue storage areas and loading facilities. *SME, 1* m. By common usage, any establishment for reducing ores by other means than smelting. More strictly, a place or a machine in which ore or rock is crushed. *Fay*

mill bar

A rough bar rolled or drawn directly from a bloom or puddle bar for conversion into merchant iron in the mill.

mill car

A car without a roof for carrying hoisting apparatus. *Standard, 2*

milled

A metal object lost in a borehole that has been cut or ground away with a milling bit.
Long

Miller-Bravais indices

A four-index type of Miller indices, useful but not necessary in order to define planes in crystal lattices in the hexagonal system; the symbols are $hkil$, in which $i = -(h + k)$. CF: [Miller indices](#)

Miller indices

Integers used to designate crystallographic planes. They are found as follows: (1) Determine where the plane intercepts each crystallographic axis in terms of multiples of the axial parameters; (2) take the reciprocals of these numbers and clear of fractions and common factors. These three numbers, designated (hkl) , are the Miller indices for that plane. CF: [Bragg indices](#); [Miller-Bravais indices](#); [crystal face](#); crystal indices; intercept. See also: [symbols of crystal faces](#); indices of a crystal face.

millerite

A brass-yellow to bronze-yellow rhombohedral mineral: NiS . It usually has traces of cobalt, copper, and iron, and is often tarnished. Millerite generally occurs in fine hairlike or capillary crystals of extreme delicacy, chiefly as nodules in clay ironstone. Syn: [capillary pyrite](#); nickel pyrite; hair pyrite. (Not milarite.) *AGI*

mill feeder

In ore dressing, smelting, and refining, a laborer who regulates flow of ore, coke, flue scrapings, or other materials from bins, chutes, or belts into crushers, furnaces, or other equipment, or onto conveyor belts leading to equipment. Syn: [conveyor-feeder operator](#)

mill furnace

A furnace for reheating iron that is to be rerolled, or welded, under a hammer. *Standard*, 2

millgrit rock

Som. Triassic dolomitic conglomerate.

mill head

a. Ore accepted for treatment in a concentrator, after any preliminary rejection such as waste removal. *Pryor*, 4 b. Assay value, or units of value per ton, in ore accepted for treatment in a concentrating plant or mill. *Pryor*, 3

mill-head grade

The grade of ore as it comes from a mine and goes to a mill. *McKinstry*

mill-head ore

See: [run-of-mill](#)

mill hole

An auxiliary shaft connecting a stope or other excavation with the level below. See also: [mill](#); [glory hole](#). *Lewis*

milli-

A prefix meaning one thousandth of. It divides a basic unit by 1,000, or multiplies it by 10^{-3} ; abbrev., m. Commonly applied to units of measure in the metric and cgs systems; e.g., 1 mg = 0.001 g. *Lyman*

milliampere

One-thousandth of an ampere; abbrev., mA. *Crispin*

milliangstrom

One-thousandth of an angstrom; abbrev., mAa. *Webster 3rd*

millibar

A unit of atmospheric pressure equal to one-thousandth of a bar or 1,000 dyn/cm²; abbrev., mb. *Webster 3rd*

millicurie-hour

A measure of gamma-ray exposure expressed as the product of the source in millicuries and the time of exposure in hours. *NCB*

millidarcy

The customary unit of measurement of permeability, equal to one-thousandth of a darcy. See also: [permeability](#) *AGI*; *Webster 3rd*

millidegree

A unit of temperature equal to one-thousandth of a degree; abbrev., mdeg. *Webster 3rd*

millifarad

One-thousandth of a farad; abbrev., mF. *Webster 3rd*

milligal

a. A unit employed in the gravitational method of geophysical prospecting. It is about one millionth of the average value of the acceleration due to gravity at the Earth's surface; i.e., 1 milligal = 1 cm/s^2 . *Nelson* b. A unit of acceleration used with gravity measurements; $10^{-3} \text{ Gal} = 10^{-5} \text{ m/s}^2$. Abbrev: mGal. *AGI*

milligauss

One-thousandth of a gauss; abbrev., mG. *Standard, 2*

milligram-hour

A measure of gamma-ray exposure expressed as the product of the equivalent radium content of the source, in milligrams, and the time of exposure in hours. *NCB*

millihenry

One-thousandth of a henry; a unit of inductance; abbrev., mH. *Webster 3rd*

millimeter screw micrometer

A precision caliper gage that measures the overall dimensions of unmounted fashioned gems more accurately but less conveniently than dial gages.

milling

a. The grinding or crushing of ore. The term may include the operation of removing valueless or harmful constituents and preparation for market. *Nelson* b. A combination of open-cut and underground mining, wherein the ore is mined in open cut and handled underground. It is underhand stoping applied to large deposits, wherein the ore is mined near the mouth of winzes or raises, and dropped by gravity to working levels below for transportation to the surface. Usually called glory-hole system. See also: [mill](#) c. The act or process of cutting or grinding away a metal object lost in a borehole with a mill or milling bit. *Long*

milling bit

A bit equipped with hardened serrations or teeth used to grind or cut away metallic materials or junk obstructing a borehole. Also called rose bit. CF: [junk mill](#)

milling grade

a. Ore containing sufficient recoverable value to warrant treatment. *Pryor, 3* b. S. Afr. An assumed average value of the ore sent to a mill, expressed as a percentage, or in pennyweights per short ton. *Beerman*

milling ore

a. Any ore that contains sufficient valuable minerals to be treated by any milling process. Syn: [mill ore](#) b. A dry ore that can be amalgamated or treated by leaching and other processes; usually these ores are low grade and free, or nearly so, from base metals.

milling width

Width of a lode that is designated for treatment in a mill, as calculated with regard to daily tonnage. Any excess broken during mining (stopping width) should be rejected before milling. *Pryor, 3*

milling yield

S. Afr. The valuable material obtained from milling, expressed as a percentage or in pennyweights per short ton. *Beerman*

millisecond

One-thousandth of a second; abbrev.: msec; ms. *Webster 3rd*

millisecond delay

A type of delay cap with a definite but extremely short interval between the passing of current and the explosion. *Nichols, 1*

millisecond-delay cap

A detonating cap that fires from 0.02 to 0.5 s after the firing current passes through it. *Nichols, 1*

millisecond-delay detonator

See: [short-delay detonator](#)

millivolt

One-thousandth of a volt; abbrev., mV. *Crispin*

millman

One who is employed in a mill, such as in an ore-dressing plant. *Fay*

mill ore

See: [milling ore](#)

mill roll

One of the rolls through which puddled iron is run prior to being marketed. *Standard, 2*

mill run

a. A given quantity of ore tested for its quality by actual milling; the yield of such a test. *Craigie* b. Average, not esp. selected. *Craigie* c. In intermittent treatment of ore, with periodic cleanup, the period of such a run. Bulk test on a sample of ore during development of a treatment process. *Pryor, 3*

mill sampler

A laborer who removes samples of crushed ore, concentrates, or tailings at various stages of processing, and puts them in labeled containers for laboratory analysis. Also called sampler. *DOT*

mill scale

The scale of ferric oxide that peels from iron during rolling. *Standard, 2*

Mills-Crowe process

Method of regeneration of foul cyanide liquor from the gold leaching process. The barren solution is acidified, and gaseous hydrocyanic acid (HCN) is liberated, separated, and reabsorbed in an alkaline solution, such as lime water. *Pryor, 3*

mill shoe

a. A shoe equipped with a hardened serrated cutting edge used to mill downward over and around a piece of drill-stem equipment lost in a borehole. See also: [mill](#) b. A shoe designed either to dress the down-hole tools for access to retrieve them, or to grind up the tool in a drill hole so that drilling can continue.

millstock

Term used in the slate industry to include all forms of structural slate used in exterior or interior construction.

millstone

A buhrstone; e.g., a coarse-grained sandstone or a fine-grained quartz conglomerate. Also, one of two thick disks of such material used for grinding grain and other materials fed through a center hole in the upper stone. Quarried underground in Virginia; also, produced in New York and (of granite) in North Carolina. See also: [buhrstone](#)

millstone grit

Any hard, siliceous rock suitable for use as a material for millstones; specif. the Millstone Grit of the British Carboniferous, a coarse conglomeratic sandstone. *AGI*

mill test

The determination of the metallic contents and recoverable metal in any given ore by the milling of a sufficient quantity to afford average milling conditions. See also: [mill run](#)

milltons

Net tonnage of ore available for milling after eliminating waste and unpayable material. *Beerman*

mill value

S. Afr. The calculated value of ore before crushing. After treatment, there remains a residue of the valuable metal in the sands, slimes, or tailings, which, added to the yield obtained by treatment, should be equal to the mill value. *Beerman*

mimetene

See: [mimetite](#)

mimetesite

See: [mimetite](#)

mimetic

a. Said of crystals appearing to have a higher symmetry than their internal structure due to twinning, distortion, or interfacial angles at or close to a more symmetric form. b. Said of crystals showing highly complex pseudosymmetry. CF: [pseudosymmetry](#) c. A tectonite with a deformation fabric influenced by preexisting structural anisotropy; also the fabric itself.

mimetite

A monoclinic mineral, $Pb_5 Cl(AsO_4)_3$; apatite group, with arsenate replaced by phosphate; pseudohexagonal; resinous; sp gr, 7.3; in oxidized zones of lead-ore deposits. Syn: [mimetesite](#); [campylite](#); mimetene. CF: [hedyphane](#)

minal

See: [end member](#)

minasragrite

A monoclinic mineral, $VO(SO_4) \cdot 5H_2O$; a blue efflorescence at Minasragra, near Cerro de Pasco, Peru.

mine

a. An opening or excavation in the ground for the purpose of extracting minerals; a pit or excavation from which ores or other mineral substances are taken by digging; an opening in the ground made for the purpose of taking out minerals, and in case of coal mines, commonly a worked vein; an excavation properly underground for digging out some usual product, such as ore, metal, or coal, including any deposit of any material suitable for excavation and working as a placer mine; collectively, the underground passage and workings and the minerals themselves. *Ricketts* b. A work for the excavation of minerals by means of pits, shafts, levels, tunnels, etc., as opposed to a quarry, where the whole excavation is open. In general, the existence of a mine is determined by the mode in which the mineral is obtained, and not by its chemical or geological character. The term also includes only excavations for their minerals or valuable mineral deposits. *Ricketts* c. An excavation beneath the surface of the ground from which mineral matter of value is extracted. The word carries the sense of laborers working beneath a cover of ground and thus excludes oil, brine, and sulfur wells. Excavations for the extraction of ore or

other economic minerals not requiring work beneath the surface are designated by a modifying word or phrase as: (1) opencut mine--an excavation for removing minerals that is open to the weather; (2) steam shovel mine--an opencut mine in which steam shovels or other power shovels are used for loading cars; (3) strip mine--a stripping; an opencut mine in which the overburden is removed from a coalbed before the coal is taken out; (4) placer mine--a deposit of sand, gravel, or talus from which some valuable mineral is extracted; and (5) hydraulic mine--a placer mine worked by means of a stream of water directed against a bank of sand, gravel, or talus; soft rock similarly worked. A quarry from which rock is extracted becomes a mine when it is carried under cover. Mines are commonly known by the mineral or metal extracted such as bauxite mines, copper mines, silver mines, coal mines, etc. *Hess* d. The terms mine and coal mine are intended to signify any and all parts of the property of a mining plant, either on the surface or underground, that contribute directly or indirectly to the mining or handling of coal or ore. *Fay* e. The term mine, as applied by quarrymen, is applied to underground workings having a roof of undisturbed rock. It is used in contrast with the open pit quarry. *Fay* f. To dig a mine; to get ore, metals, coal, or precious stones out of the earth; to dig into, as the ground, for ore or metal; to work in a mine. *Webster 3rd* g. An active mining area, including all land and property placed under, or above the surface of such land, used in or resulting from the work of extracting metal ore or minerals from their natural deposits by any means or method, including secondary recovery of metal ore from refuse or other storage piles, wastes, or rock dumps and mill tailings derived from the mining, cleaning, or concentration of metal ores. *CFR*, 7

mine atmosphere

The concentration of gases, including oxygen, that are present in a mine. Safe levels are maintained through ventilation. Measured at any point at least 12 in (30.5 cm) away from the back, face, rib, and floor in any mine. *CFR*, 1

mine bank

a. An area of ore deposits that can be worked by excavations above the water level. *Craigie* b. The ground at the top of a mining shaft. *Craigie*

mine cage

Elevator used to transport workers in a lined shaft; available in open, semienclosed or fully enclosed models with a choice of sliding, folding, or rollup doors. Cages are used in either vertical or incline mine shafts. All cages are required to contain necessary safety features. *Best*, 1

mine captain

a. A superintendent of a mine. *Standard*, 2 b. The director of work in a mine, with or without superior officials or subordinates. *Fay* c. In metal mining, a foreman who

supervises the extraction, hauling, and hoisting of ore in a mine. Also called ground boss. *DOT*

mine car

One of the cars that are loaded at production points and hauled to the pit bottom or surface in a train by locomotives or other power. They vary in capacity, and are either of wood or steel construction or combinations of both. Mine cars have been classified into six kinds: (1) the solid or box type, which requires a rotary dump at the unloading terminal; (2) the rocker dump type, which has a V-shaped body rounded at the bottom; (3) the gable-bottom car, which is shaped like a capital W in cross section; (4) the Granby car, a special form of a side-dumping car; (5) bottom-dump cars; and (6) end-dump cars, which are commonly used for hand tramping in small mines. See also: [drop-bottom car](#); [endgate car](#); [gable-bottom car](#); Granby car; solid car. *BCI; Kentucky; Lewis*

mine-car repairman

In anthracite coal mining; bituminous coal mining; metal mining; nonmetal mining, a person who repairs or replaces damaged parts of mine (pit) cars, such as axles, wheels, bodies, and couplings, by straightening, bolting, riveting, refitting, or making new parts as required. Also called car whacker; pit-car repairer. *DOT*

mine characteristic

The relation between pressure, p , and volume, Q , in the ventilation of a mine. If the resistance, R , of the mine is known, then the mine characteristic can be expressed as $p=RQ^2$. The curve of this equation for a particular mine may thus be plotted on the same axes as the characteristics of a fan. The point of intersection of this curve, termed the mine characteristic, with the pressure characteristic of the fan, indicates the pressure and volume at which the fan would work in ventilating that mine. Knowing the volume and pressure, the power and efficiency are obtained. The suitability of any fan to any mine can be studied, and the effect of possible changes in mine resistance may be predicted. *Roberts, 1*

mine characteristic curve

As a graphical aid to the solution of problems in mine ventilation, the mine head (static and/or total) is often plotted against the quantity. This is called the mine characteristic curve, or simply the mine characteristic. *Hartman, 2*

mine circulating fan

Mines create special problems in proper ventilation by their isolation from fresh air sources, and the presence of dangerous gases and dusts. Large fans are used for the stationary systems, while small portable types provide fresh air in dead-ends and other

inaccessible locations. These fans may be driven by electricity or compressed air, and in addition to mine operations, are useful for work in manholes, pipe galleries, silos, tanks, vats, plane fuselages, ship holds, etc. The Mine Safety and Health Administration, Department of Labor can furnish specific recommendations concerning special problems. *Best, 1*

mine committee

Representatives chosen by the union employees to confer with the representatives of the company; corresponds in mining to shop committees in manufacturing. Also called pit committee. *BCI*

mine conveyor

See: [underground mine conveyor](#)

mine cooling load

The total amount of heat, sensible and latent, which must be removed by the air in the working places. *Hartman, 2*

mine development

The term employed to designate the operations involved in preparing a mine for ore extraction. These operations include tunneling, sinking, crosscutting, drifting and raising. *Jackson, 3*

mine dial

See: [miner's dial](#)

mine door

See: [trapdoor](#); door.

mine drainage

See: [drainage](#); drain tunnel; water hoist.

mined strata

In mine subsidence, the strata lying over the excavated area. *Briggs*

mine dust

a. Dust from rock drills, blasting, or handling rock. *Fay* b. In the quantity inhaled by workers, dust may be classified as dangerous, harmless, and borderline, although the classification is purely arbitrary. Silica is a dangerous dust and aluminum hydroxide is borderline. *Lewis* c. Scot. Calcined ironstone screenings. *Standard, 2* d. See: [coal dust](#)

mined volume

In mine subsidence, the mined area multiplied by the mean thickness of the bed, or of that part of the bed that has been extracted. *Briggs*

mine examiner

See: [fire boss](#)

mine expert

See: [mining engineer](#)

mine fan

a. The main fan for a mine; normally situated at the surface. *BS, 8* b. A radial- or axial-flow ventilator. See also: [fan](#); [ventilation](#). *Nelson*

mine fan signal system

A system that indicates by electric light or electric audible signal, or both, the slowing down or stopping of a mine ventilating fan.

mine feeder circuit

A conductor or group of conductors, including feeder and sectionalizing switches or circuit breakers, installed in mine entries or gangways and extending to the limits set for permanent mine wiring, beyond which limits portable cables are used.

mine fill

See: [hydraulic fill](#)

mine fire

This very dangerous occurrence may arise as the result of spontaneous combustion, the ignition of timbers by gob fires, electric cable defects, or the heating and ignition of conveyor belts due to friction. *Nelson*

mine fire truck

Designed to fight underground fires in mining operations, this low slung railcar is equipped with a water supply and pressure equipment for its fire hoses. When a fire occurs, the car can be sped to the scene along existing rails. The truck is capable of delivering hundreds of gallons of water, depending upon the size and model used. *Best, I*

mine foreman

a. The person charged with the responsibility of the general supervision of the underground workings of a mine and the persons employed therein. In certain states, the mine foreman is designated as the mine manager. See also: [foreman](#) b. Generally used to designate that company representative in complete 24-h charge of underground workings and legally held responsible for the safety and welfare of all underground employees. The foreman is generally State certified for competency. *BCI* c. A deputy in metal mines. *Nelson* d. An official in charge of plant and associated labor on the surface, e.g., screen foreman. *Nelson*

mine ground

A stratum or group of strata containing layers of ironstone.

minehead

See: [pithead](#)

mine head

In a mine ventilation system, the cumulative energy consumption is called the mine head. A head is in reality a pressure difference, determined in accordance with Bernoulli's principle. *Hartman, I*

mine hoist

A device for raising or lowering ore, rock, or coal from a mine and for lowering and raising workers and supplies. See also: [hoist](#)

mine hoist control

This mechanism is designed to prevent accidents in mine cages caused by overspeeding in hoisting and lowering. It also prevents hoisting or lowering beyond the limits for which the controller is set. On electric hoists, it can apply a brake in case of power failure and may regulate brake speed in the event of an emergency stop. *Best, I*

mine inspector

- a. Person who checks mines to determine the safety condition of working areas, equipment, ventilation, and electricity, and to detect fire and dust hazards. *Webster 3rd*
b. Generally used as denoting the State mine inspector as contrasted to the Federal mine inspector. See also: [inspector](#)

mine iron

Pig iron made entirely from ore; distinguished from cinder pig. *Standard, 2*

mine jeep

A special electrically driven car for underground transportation of officials, inspectors, repair, maintenance, and surveying crews and rescue workers.

mine lamp

Battery operated lamp; may be attached to a miner's cap to provide illumination in poorly lighted mine areas. Lamps are designed to focus on working areas when attached. A unit consists of a rechargeable battery, bulb, reflector, wires, etc. Mine lamps may be purchased outright or leased. Models include cap lamps, hand lamps, and trip lamps.
Best, 1

mine land reclamation

The process of transforming mine land into usable conditions; e.g., with regard to residential, recreational, agricultural, commercial or forestry purposes. *SME, 1*

mine locomotive

A low, heavy, haulage engine, designed for underground operation; usually propelled by electricity, gasoline, or compressed air. See also: [electric mine locomotive](#); [trolley locomotive](#). *Fay*

mine mason

Mineworker who lines the galleries and other rooms with masonry, works on the repair of mine supports, and builds ventilation doors and dams. *Stoces*

mine motorman

See: [motorman](#)

mine opening

See: [opening](#)

mine power center

A mine power center is a combined transformer and distribution unit complete within a metal enclosure, usually of explosion-proof design, from which one or more low-voltage power circuits are taken.

mine prop

Section of wood, generally part of a small tree trunk, used for holding up rock in the roof of a mine. *Mersereau, 2*

miner

a. In anthracite and bituminous coal mining, one who performs the complete set of duties involved in driving underground openings to extract coal, slate, and rock, with a hand or machine drill, into which explosives are charged and set off to break up the mass. Also called coal digger; coal getter; coal hewer; digger; faceman. *DOT* b. In nonmetal mining, such as limestone, one who drills holes in working face of a limestone mine, and inserts and sets off charges of explosives in holes. May be designated as development miner when working in new areas to drive drifts, shafts, sumps, and entry areas into stopes; high-raise miner when working in vertical areas to gain access into new development areas; or stope miner when working in horizontal openings in limestone strata. Syn: [stope miner](#) c. In mining, one who performs the complete set of duties involved in driving underground openings to extract ore or rock: drills holes in working face of ore or rock, with a hand or machine drill; inserts explosives in drill holes and sets them off to break up the mass; shovels ore or rock into mine cars or onto a conveyor, and pushes mine cars to haulageways, where they are hauled by draft animals, mine locomotive (motor), or haulage cable to the surface, or to the shaft bottom for hoisting; and installs timbering to support the walls and roof, or for chutes or staging. Due to standardization of mining methods and development of mining machinery, these jobs may be performed by several workers. Where conditions are favorable, loading is done by machine. *DOT* d. One who mines; such as (1) a person engaged in the business or occupation of getting ore, coal, precious substances, or other natural substances out of the earth; (2) a machine for automatic mining (as of coal); and (3) a worker on the construction of underground tunnels and shafts (as for roads, railways, waterways). *Webster 3rd* e. A worker in a coal mine who is paid a certain price for each ton of coal he or she digs or blasts from the solid seam, as distinguished from the laborer who loads the cars, etc. The miner's helpers load the coal; they are also called laborers. *Fay* f. Includes all laborers who work in a mine, whether digging coal, timbering, or making places safe. *Fay* g. Loosely used to designate all underground employees; technically, and in many cases legally, only those who have served an apprenticeship as helpers or those who are State licensed as miners. *BCI* h. A worker who cuts coal in a breast or chamber by contract; the highest-skilled worker of a colliery. *Korson* i. One who mines; a digger for metals and other minerals; is not necessarily a mechanic, handcraftsman, or

artisan, and the term imports neither learning nor skill. *Ricketts* j. Abbrev. for continuous miner. *Nelson*

mineragraphy

See: [ore microscopy](#)

mineral

a. A naturally occurring inorganic element or compound having an orderly internal structure and characteristic chemical composition, crystal form, and physical properties. CF: [metallic](#) b. In miner's phraseology, ore. See also: [ore](#) c. See: [mineral species](#); mineral series; mineral group. d. Any natural resource extracted from the earth for human use; e.g., ores, salts, coal, or petroleum. e. In flotation, valuable mineral constituents of ore as opposed to gangue minerals. f. Any inorganic plant or animal nutrient. g. Any member of the mineral kingdom as opposed to the animal and plant kingdoms.

mineral acre

The full mineral interest in 1 acre (0.4 ha) of land. *Williams*

mineral adipocire

See: [hatchettite](#)

mineral assessment

a. The process of appraisal of identified and undiscovered mineral resources within some specified region, and the product of that appraisal. *Barton* b. The estimation of mineral endowment, meaning the number of deposits or the tonnage of metal that occurs in the region, given some minimum size of accumulation (deposit), minimum concentration (grade), and maximum depth of occurrence. Syn: [predictive metallogeny](#)

mineral association

A group of minerals found together in a rock, esp. in a sedimentary rock. *AGI*

mineral belt

An elongated region of mineralization; an area containing several mineral deposits. *AGI*

mineral blossom

Drusy quartz. *Fay*

mineral bruto

Sp. Raw ore. *Hess*

mineral caoutchouc

See: [elaterite](#); helenite.

mineral carbonatado

Sp. Carbonate ore. *Hess*

mineral charcoal

a. A pulverulent, lusterless substance, showing distinct vegetal structure, and containing a high percentage of carbon with little hydrogen and oxygen, occurring in thin layers in bituminous coal. Called mother of coal by miners. *Fay* b. Another name for fusain. *BS*, 4

mineral claim

A mining claim. *Mathews*

mineral cleavage

Mineral breakage along specific crystallographic planes in all specimens due to fewer or weaker chemical bonds in those directions. CF: [mineral parting](#)

mineral deed

A conveyance of an interest in the minerals in, on, or under a described tract of land. The grantee is given operating rights on the land; easements of access to the minerals are normally implied unless expressly negated. *Williams*

mineral de fusion propia

Sp. Self-fluxing ore. *Hess*

mineral deposit

a. A mass of naturally occurring mineral material; e.g., metal ores or nonmetallic minerals, usually of economic value, without regard to mode of origin. Accumulations of coal and petroleum may or may not be included; usage should be defined in context. Syn: [orebody](#) b. A mineral occurrence of sufficient size and grade that it might, under

https://t.me/Geologybooks

favorable circumstances, be considered to have economic potential. See also: [ore](#); [ore deposit](#). *USGS, 1*

mineral deposit model

The systematically arranged information describing the essential attributes (properties) of a class of mineral deposits. The model may be empirical (descriptive), in which instance the various attributes are recognized as essential even though their relationships are unknown; or it may be theoretical (genetic), in which instance the attributes are interrelated through some fundamental concept. See also: [model](#) *SME, 1*

mineral dresser

A machine for trimming or dressing mineralogical specimens. *Standard, 2*

mineral dressing

a. Physical and chemical concentration of raw ore into a product from which a metal can be recovered at a profit. *ASM, 1* b. Treatment of natural ores or partly processed products derived from such ores in order to segregate or upgrade some or all of their valuable constituents, and/or remove those not desired by an industrial user. Mineral dressing processes are applied to industrial wastes to retrieve useful byproducts. See also: [mineral processing](#); [ore dressing](#). *Pryor, 2*

mineral economics

Study and application of the technical and administrative processes used in management, control, and finance connected with the discovery, development, exploitation, and marketing of minerals. *Pryor, 3*

mineral endowment

The physical aggregate of mineral occurrences in a region above some lower cutoff. *Shanz*

mineral engineering

Term covers a wide field in which many resources of modern science and engineering are used in discovery, development, exploitation, and use of natural mineral deposits. *Pryor, 3*

mineral entry

The filing of a claim for public land to obtain the right to any minerals it may contain. *Craigie*

mineral facies

See: [metamorphic facies](#)

mineral fat

See: [ozocerite](#)

mineral fiber

a. Fibrous mineral whose fibers are longer than 5 μm and with an aspect ratio (length over width) equal to or greater than 3:1 as determined by the membrane filter method at 400X to 500X magnification (4-mm objective) phase contrast illumination. *ACGIH, 1 b*. The smallest elongated crystalline unit that can be separated from a bundle or appears to have grown individually in that shape, and that exhibits a resemblance to organic fibers. *Campbell*

mineral field

Scot. A tract of country in which workable minerals are found; a mineral leasehold.

mineral filler

A finely pulverized inert mineral or rock that is included in a manufactured product--e.g., paper, rubber, and plastics--to impart certain useful properties, such as hardness, smoothness, or strength. Common mineral fillers include asbestos, kaolin, and talc. *AGI*

mineral fuel

Coal or petroleum. See also: [fossil fuel](#)

mineral group

Two or more mineral species having identical or closely related structures; e.g., hematite group or zeolite group. See also: [mineral](#)

mineral interests

Mineral interests in land means all the minerals beneath the surface. Such interests are a part of the realty, and the estate in them is subject to the ordinary rules of law governing the title to real property. *Ricketts*

mineral inventory

An accounting of the mineral reserves and resources contained in known mineral deposits including inactive mines, operating mines, and undeveloped sites. *Shanz*

mineralization

The process or processes by which a mineral or minerals are introduced into a rock, resulting in a valuable or potentially valuable deposit. It is a general term, incorporating various types; e.g., fissure filling, impregnation, and replacement. *AGI*

mineralize

To convert to a mineral substance; to impregnate with mineral material. The term is applied to the processes of ore formation and also to the process of fossilization. *AGI*

mineralized bubble

In flotation, one of the bubbles that rise from the pulp loaded with particles of desired mineral. *Pryor, 3*

mineralizer

See: [ore-forming fluid](#); geologic mineralizer.

mineralizing agent

See: [ore-forming fluid](#); geologic mineralizer.

mineral land

Land that is worth more for mining than for agriculture. The fact that the land contains some gold or silver would not constitute it mineral land if the gold and silver did not exist in sufficient quantities to pay to work. Land not mineral in character is subject to entry and patent as a homestead, however limited its value for agricultural purposes. CF: [stone land](#)

Mineral Lands and Mining

The leasable minerals include oil, gas, sodium, potash, phosphate, coal, and all minerals within acquired lands. Acquisition is by application for a Government lease and permits to mine or explore after lease issuance. *SME, 1*

mineral lease

See: [mining lease](#)

mineral occurrence

a. The presence of useful minerals or rocks in an area under examination. *Shanz* b. A concentration of a mineral (usually, but not necessarily, considered in terms of some commodity, such as copper, barite, or gold) that is considered to be valuable or that is of scientific or technical interest. In rare instances (such as titanium in a rutile-bearing black sand), the concentration of the commodity might be less than its average crustal abundance. *USGS, 1*

mineralogical guide

A mineral that is present near an orebody and is related to the processes of ore deposition. Guides help locate ore and may constitute targets for ore search.

mineralogical phase rule

Any of several modifications of the fundamental Gibbs phase rule, taking into account the number of degrees of freedom consumed by the fixing of physical-chemical variables in the natural environment. The most famous such rule, that of Goldschmidt, assumes that two variables (taken as pressure and temperature) are fixed externally and that consequently the number of phases (minerals) in a system (rock) will not generally exceed the number of components. The Korzhinskii-Thompson version takes into account the external imposition of chemical potentials of perfectly mobile components, and thereby reduces the maximum expectable number of minerals in a given rock to the number of inert components. Syn: [Goldschmidt's phase rule](#)

mineralogist

Person who studies the formation, properties, use, occurrence, composition, and classification of minerals; a geologist specialized in mineralogy. Syn: [oryctologist](#) ([obsolete](#))

mineralography

See: [ore microscopy](#)

mineralogy

The study of minerals: formation, occurrence, use, properties, composition, and classification. Adj. mineralogic, mineralogical.

mineraloid

Minerallike constituent of rocks which is not definite enough in chemical composition or in physical properties to be considered a mineral. Hydrocarbons, volcanic glass, and palagonite are classed as mineraloids. *Hess*

mineral paint

See: [mineral pigment](#)

mineral parting

Mineral breakage along specific crystallographic planes in some specimens due to twinning, exsolution lamellae, or chemical alteration. See also: [parting](#)

mineral pigment

A mineral material used to give color, opacity, or body to a paint, stucco, plaster, or similar material. See also: [ocher](#); [sienna](#); [umber](#).

mineral processing

The dry and wet crushing and grinding of ore or other mineral-bearing products for the purpose of raising concentrate grade; removal of waste and unwanted or deleterious substances from an otherwise useful product; separation into distinct species of mixed minerals; chemical attack and dissolution of selected values. Among the methods used are hand sorting (including radioactivation and fluorescence); dense media separation; screening and classification; gravity treatment with jigs, shaking tables, Humphries spirals, Frue vanners, or sluices; magnetic separation at low or high intensity; leach treatment, perhaps using pressure and heat; and (universally) froth flotation. Also called beneficiation; ore dressing; mineral dressing.

mineral province

A region in which the source, age, and regional distribution of a complex of minerals in a sediment are related. *Schieferdecker*

mineral reserves

See: [reserves](#)

mineral resin

Any of a group of resinous, usually fossilized, mineral hydrocarbon deposits; e.g., bitumen and asphalt. See also: [resin](#)

mineral right

The ownership of the minerals under a given surface, with the right to enter thereon, mine, and remove them. It may be separated from the surface ownership, but, if not so separated by distinct conveyance, the latter includes it.

mineral rubber

See: [uintaite](#)

mineral salt

Mined rock salt, halite.

mineral sequence

The sequential order of mineral deposition during formation of an ore deposit. CF: [paragenesis](#)

mineral series

Mineral species showing continuous variation in their properties with change in composition. A series may be complete; e.g., tennantite-tetrahedrite, or partial; e.g., iron replacing zinc in sphalerite. Syn: [crystal solution](#); [solid solution](#). See also: [mineral](#)

mineral species

a. Any mineral that can be distinguished from all other minerals by current determinative methods. *Stokes* b. A naturally occurring homogeneous substance of inorganic origin, in chemical composition either definite or ranging between certain limits, and possessing characteristic physical properties and usually a crystalline structure. See also: [mineral](#)

mineral spring

A spring whose water contains enough mineral matter to give it a definite taste, in comparison to ordinary drinking water, esp. if the taste is unpleasant or if the water is regarded as having therapeutic value. This type of spring is often described in terms of its principal characteristic constituent; e.g., salt spring. *AGI*

minerals separation process

A flotation process based on surface-tension phenomena, accelerated by means of addition to the pulp of small quantities of oil and air in minute subdivision. Only about 0.1% oil is added, and the pulp is violently agitated for 1 to 10 min. Innumerable small bubbles of air are thus mechanically introduced, which join the oil-coated particles. These are then removed in a spitzkasten. Exposure to the air after this treatment then

aerates any mineral that has not already taken up its oil film, after which a second spitzkasten treatment removes this. An early name for froth flotation. *Liddell; Pryor, 3*

mineral stabilizer

A fine, water-insoluble, inorganic material, used in admixture with solid or semisolid bituminous materials. *ASTM*

mineral streaking

In metamorphic rocks, lineation of grains of a mineral. Syn: [streaking](#) *AGI*

mineral tallow

See: [hatchettine](#); hatchettite. Also called mountain tallow.

mineral tar

a. Tar derived from various bituminous minerals, such as coal, shale, peat, etc. Shale tar. Syn: [mountain tar](#) b. See: [maltha](#); pittasphalt.

mineral turquoise

Term to distinguish true turquoise from odontolite (bone turquoise).

mineral variety

Specimens of a mineral species with distinctive physical properties due to: (1) specific history; e.g., Iceland spar, a coarsely crystalline variety of calcite of optical grade, or (2) small chemical variation; e.g., amalgam, a mercurian variety of native silver.

mineral vein

See: [vein](#)

mineral water

Water that contains an unusually high percentage of some mineral substance that gives the water a distinctive taste and sometimes other properties. Considered to be beneficial in the treatment of various ailments. Also called spa water. *Cooper*

mineral wax

See: [ozocerite](#)

mineral wedging

A form of chemical weathering resulting in the formation of new minerals that have greater aggregate volumes than the old ones. These expanding minerals then act as wedges to split adjacent minerals and rocks apart. *AGI*

mineral wool

A substance outwardly resembling wool, presenting a mass of fine interlaced filaments. It is made by subjecting furnace slag or certain rocks, while molten, to a strong blast. Being both insect proof and fireproof, it forms a desirable packing for walls, a covering for steam boilers, etc. Also called mineral cotton, silicate cotton, and slag wool. Syn: [glass wool](#)

mineral zoning

See: [zoning of ore deposits](#)

mine refuse

a. Waste material in the raw coal that has been removed in a cleaning or preparation plant. b. Notably used to describe colliery rejects; also called tailings. *Pryor, 3*

mine rescue apparatus

The rescuing of miners overcome by a mine fire, or trapped in workings by an explosion, necessitates the use of apparatus that will enable the rescue team to work in irrespirable or poisonous gases. The equipment used is known as mine rescue apparatus. See also: [rescue apparatus](#) *Nelson*

mine rescue car

One of a number of railway cars specially equipped with mine rescue apparatus, safety lamps, first-aid supplies, and other materials, maintained by the Mine Safety and Health Administration in various sections of the United States. These cars serve as movable stations for the training of miners in the use of mine rescue apparatus, and in first aid to the injured; as centers for the promotion of mine safety; as emergency stations for assisting at mine fires, explosions, or other disasters. Similar cars are maintained by a number of mining companies. Syn: [mine-safety car](#)

mine rescue crew

A crew consisting usually of five people who are thoroughly trained in the use of mine rescue apparatus, and are capable of wearing it in rescue or recovery work in a mine following an explosion, or to combat a mine fire. *Fay*

mine rescue lamp

A name given to a particular type of electric safety hand lamp used in rescue operations. It is equipped with a lens for concentrating or diffusing the light beam as occasion may require. *Fay*

mine resistance

a. The resistance offered by a mine to the passage of an air current. The mine resistance is due to the friction of the air rubbing along the sides, top, and bottom of the air passages. To overcome this friction, the total ventilating pressure must be applied against the airway and this pressure must be equal to the mine resistance. Mine resistance is caused by the dragging of the air against the mine surfaces and other obstructions. The rougher the mine surfaces and the more the obstructions, the greater the resistance to the flow of air. *Kentucky* b. Includes any natural ventilation effect present and is calculated from air volume and total pressure. The standard practice in the United Kingdom is to express the resistance of a mine in square feet of equivalent orifice. *Roberts, 1*

mine road

Any mine track used for general haulage. *Fay*

mine roadway area measurement

See: [tape-triangulation method](#)

mine rock

A more or less altered rock found in ore channels. Gangue.

minerocoenology

The study of mineral associations in the broadest sense, such as the correlation of igneous rocks or magmatic provinces with their ore deposits. *AGI*

minerogenesis

The origin and growth of minerals. *Challinor*

minerogenetic epoch

See: [metallogenetic epoch](#)

minerogenetic province

a. An area in which mineralization has been active at one or more periods. If the mineralization has been chiefly metalliferous, the term *metallogenetic* is applicable. Syn: [metallogenetic province](#) b. A region characterized by relatively abundant mineralization dominantly of one type. *AGI*

miners

The row of drill holes in a tunnel face, located below the breaking-down holes. *Stauffer*

miner's bar

An iron bar pointed at one end, chisel-edged at the other, used in coal mining. *Standard, 2*

miner's box

A wood or iron box located in or near the working place of a miner in which tools, supplies, etc. are kept. Required by law in some States. *Fay*

miner's dial

An underground surveying instrument for measuring and setting out angles and determining magnetic north. Syn: [mine dial](#)

miner's dip needle

A portable form of dip needle used for indicating the presence of magnetic ores. Also called dipping compass. *CTD*

miner's electric cap lamp

a. A lamp for mounting on a miner's cap and receiving electric energy through a cord which connects the lamp with a small battery. b. An electric lamp designed for fixing to a miner's helmet. Its principal parts are: (1) the battery, either lead acid or alkaline; (2) the headpiece, of plastic or aluminum alloy, with switch; and (3) a length of twin-cord cable covered with tough rubber or with neoprene--a fire- and acid-resisting substitute. The lead-acid lamps commonly use either a 4-V, 1.0-A bulb with a light output of about 47.5 lumens or else a 4-V, 0.8-A bulb of 38 lumens output. The headpiece is equipped with an auxiliary, 4 V, 0.46-A bulb. *Nelson*

miner's hammer

A hammer for breaking ore. *Standard, 2*

miner's hand lamp

A self-contained mine lamp with a handle for convenience in carrying.

miner's hard cap

Cap made of rigid, strong materials such as vulcanized fiber, glass fiber or plastic, which protects a worker from injury caused by falling objects, large chips, or by striking the head against projecting materials. The cap has a cradle to cushion the shock of blows and a sweat band to absorb perspiration; it is water resistant and nonconductive. A front visor shields the face and eyes from overhead glare, and makes the cap suitable for wear in close, confined spaces where a full brim might interfere. *Best, 1*

miner's helmet

A hat designed for miners to provide head protection and for holding the cap lamp. See also: [miner's hard cap](#)

miner's horn

A horn or metal spoon used to collect ore particles in gold washing. *Standard, 2*

miner's inch

a. The rate of flow of water through an aperture 1 in (2.54 cm) square under a given pressure, generally taken to be that of water standing 6 in (15.2 cm) above the top of the aperture. It is not a universal value but is fixed by statute in several States. A commonly accepted rate is 90 ft³ /h (2.5 m³ /h), or 1-1/2 ft³ /min (0.042 m³ /min). CF: [sluice head](#) b. A unit used in California, around 1900, for measuring water flow in hydraulicking. It represented the outflow from a 1-in² (6.5-cm²) opening in the side of a box. It varied from 2,000 to 2,600 ft³ /per day (56.6 to 73.6 m³ /d), according to the height of water, etc. *Nelson* c. The term is not definite without specification of the head or pressure. It has no fixed meaning and in one locality sometimes is a very different quantity according to miner's measurement in another locality. It has been defined as the amount of water that will pass in 24 hours through an opening 1 in (2.54 cm) square under a head of 6 in. *Ricketts*

miner's inch day

Flow of 1 miner's inch for 24 hours. *Mining*

miner's lamp

a. In nongassy mines, acetylene lamps and various electric lamps; in gassy mines, approved flame safety lamps, electric hand or cap lamps. *Nelson* b. Any one of a variety of lamps used by a miner to furnish light; e.g., oil lamps, carbide lamps, flame safety lamps, electric cap lamps, etc. *Fay*

miner's lung

See: [pneumoconiosis](#)

miner's needle

A long, slender, tapering, metal rod left in a hole when tamping and afterwards withdrawn, to provide a passage, to the blasting charge, for the squib. *Fay*

miners' nystagmus

An occupational disease that occurs among coal miners, usually those of middle age or elderly, who have worked for a period of 25 to 30 years underground. Its physical symptoms consist of difficulty of seeing in the dark or in poor light, excessive sensitivity to and intolerance of glare, and a rhythmic oscillation of the eyeballs. As a result of these oscillations, there may be apparent movement of the objects looked at and defective visual acuity. Associated with these ocular symptoms are other general disorders, such as headaches and dizziness, particularly after stooping or bending, and the development of psychoneurotic symptoms is common in the later stages of the disease. If the disease is not checked, the nervous disorders may become so severe as to render the miner totally disabled. *Roberts, 2*

miners' oil

An oil, producing little smoke, used in miners' wick-fed open lamps. *Fay*

miner's pan

See: [pan](#)

miner's pick

See: [pick](#)

miners' rescue party

A team of trained mine rescue workers, from five to eight strong; they operate after explosions, and during and after mine fires. See also: [rescue team](#)

miner's right

a. An annual permit from the Government to occupy and work mineral land. b. In California, the right of a miner to dig for precious metals on public lands, occupied by another for agricultural purposes.

miners' rules

Rules and regulations proclaimed by the miners of any district relating to the location, recording, and the work necessary to hold possession of a mining claim. It was the miners' rules of the early days of the mining industry that were the basis of the present laws. The local mining laws and regulations of 1849 and later are given in vol. 14, 10th Census of the United States, 1880, compiled by Clarence King. *Fay*

miner's self-rescuer

A small form of breathing apparatus for protection against carbon monoxide, worn on a miner's belt. It consists of a canister with a mouthpiece directly attached to it. The wearer breathes through the mouth, the nose being closed by a clip. The canister contains a layer of fused calcium chloride to absorb the water vapor in the air which destroys the efficiency of the other chemical called hopcalite. The self-rescuer affords protection for 30 min, so that miners surviving an explosion may walk out through a mine atmosphere that contains sufficient oxygen but also a fatal percentage of carbon monoxide.

miner's wedge

A metallic wedge or plug for splitting off masses of coal. *Standard, 2*

miner's weight

The term used in a coal mining lease as the basis for the price per ton to be paid for mining. It is not a fixed, unvarying quantity of mine-run material, but is such a quantity of material as operators and miners may, from time to time, agree as being necessary or sufficient to produce a ton of prepared coal. *Ricketts*

mine run

a. The entire unscreened output of a mine. Also called run-of-mine. *Zern* b. The product of the mines before being sized and cleaned. *Hudson* c. A product of common or average grade. *Webster 3rd*

mine-run coal

Ungraded coal of mixed sizes as it comes from the mine. *Hess*

mine-run mica

See: [book mica](#)

mine-safety car

See: [mine rescue car](#)

mine signal system

Designed esp. for use in mines, these signal lights at individual switches immediately indicate to the motorman whether or not it is safe to proceed. Green and amber lights work automatically with the movement of the switches. May be used with locally controlled switches, or with those operated by a central dispatcher. *Best, 1*

mine skip

Skip used to bring mined material to the surface of a mine shaft; manufactured in various sizes and designs for both vertical and incline shafts, including tipover models and bottom door dump models. *Best, 1*

mine static head

The energy consumed in the ventilation system to overcome all flow head losses. It includes all the decreases in total head (supplied from static head) that occur between the entrance and discharge of the system. *Hartman, 2*

mine superintendent

A mine manager or group manager. *Nelson*

mine surveyor

The official at a mine who periodically surveys the mine workings and prepares plans for the manager. Formerly, the mine surveyor carried out many of the duties now performed by the planning department. See: [surveyor](#); mine. *Nelson*

mine tin

Tin obtained from veins or lodes, as distinguished from stream tin.

mine tons

Gross tonnage of ore including waste and unpayable material. *Beerman*

mine total head

The sum of all energy losses in the ventilation system. Numerically, it is the total of the mine static and velocity heads. See also: [total ventilating pressure](#); ventilating pressure. *Hartman, 2*

mine track device

One of a variety of track devices to provide maximum safety for haulage trains in mines. Designed to be used in conjunction with switch signals, these devices include electric switch throwers operated by hand contractors on a copper plate, overhead hand controllers, remote control, or trolley contractors. Other safety equipment includes mechanical switches for gaseous or hot mines, derailing switches for trains out of control, and automatic mine-door opening devices. *Best, 1*

mine tractor

A trackless, self-propelled vehicle used to transport equipment and supplies and for general service work. See also: [tractor](#)

mine valuation

Properly weighing the financial considerations to place a present value on mineral reserves. *Nelson*

mine velocity head

The velocity head at the discharge of the ventilation system. Throughout the system, the velocity head changes with each change in duct area or number and is a function only of the velocity of airflow. It is not a head loss. The velocity head for the system must technically be counted a loss, because the kinetic energy of the air is discharged to the atmosphere and wasted. Therefore, it must be considered a loss to the system in determining overall energy loss. *Hartman, 2*

mine ventilating fan

A motor-driven disk, propeller, or wheel for blowing (or exhausting) air to provide ventilation of a mine. See also: [ventilation](#) Syn: [ventilating fan](#)

mine ventilation auxiliary fan

A small fan installed underground for ventilating coal faces or hard rock headings that are not adequately ventilated by the air current produced by the mine-ventilation fan. An auxiliary fan is usually from 0.5 to 1.0 m in diameter. It is driven by compressed air or electricity. The auxiliary fan can be used to force or exhaust ventilate the workplace.

mine-ventilation fan

A machine possessing rotating air-moving blades to exhaust or push the air volume necessary to ventilate mine workings. See also: [aerofoil-vane fan](#); axial-flow fan.

mine-ventilation fan characteristics

The behavior of a fan under various conditions cannot be expressed in simple mathematics but may be shown graphically by suitable curves, known as the fan's characteristic curves or characteristics. The curves of interest are generally head versus air quantity, power versus air quantity, and efficiency versus air quantity. *Hartman, 2*

mine ventilation system

An arrangement of connecting airways in a mine together with the pressure sources and control devices that produce and govern airflow. *Hartman, 2*

mine water

Water pumped from mines usually contains impurities, some of which are in suspension, but the majority, which are soluble, cause the water to be hard. The water often contains corrosive agents, such as acids or alkalis. *Cooper*

mine wireman

See: [wireman](#)

mineworks

Ancient subterranean passages or mine excavations. *Standard, 2*

mingled ground

Mixed clay and sand or rock. *Arkell*

minguzzite

A monoclinic mineral, $K_3 Fe(C_2 O_4)_3 \cdot 3H_2 O$; green; an oxalate.

miniature current meter

A device used to measure the passage of current past a probe on each blade of a propeller type, or each cup of a price-type meter by detecting the change of electrical resistance between that probe and a distant electrode. *Hunt*

minimum deviation

A method for measuring the refractive index of a prism or a liquid in a hollow prism by determining the minimum deflected angle of a light beam.

minimum firing current

As applied to electric blasting caps, the limit below which firing will not occur. *Fraenkel*

minimum ignition energy

The minimum ignition energy required for the ignition of a particular flammable mixture at a specified temperature and pressure. *Van Dolah*

minimum oxygen content

The U.S. Mine Safety and Health Administration and other recognized safety and health agencies recommend 19.5% as the minimum oxygen content allowable. *Hartman, 1*

minimum product firing temperature

The lowest product temperature at which an explosive or explosive unit is approved for use. *CFR, 4*

mining

The science, technique, and business of mineral discovery and exploitation. Strictly, the word connotes underground work directed to severance and treatment of ore or associated rock. Practically, it includes opencast work, quarrying, alluvial dredging, and combined operations, including surface and underground attack and ore treatment. CF: [mining geology](#); [mining engineering](#). *Pryor, 3*

mining advancing

A method of mining by which the ore or coal is mined as the excavation advances from the shaft or main opening. CF: [mining retreating](#) *Fay*

mining camp

a. A colony of miners settled temporarily near a mine or a goldfield. *Standard, 2* b. A term loosely applied to any mining town. *Fay*

mining captain

Person in charge of mining operations. *Craigie*

mining case

A frame of a shaft, or gallery, composed of four pieces of plank. *Standard, 2*

mining claim

a. That portion of the public mineral lands that a miner, for mining purposes, takes hold of and possesses in accordance with mining laws. b. A mining claim is a parcel of land containing valuable minerals in the soil or rock. A location is the act of appropriating such a parcel of land according to law or to certain established rules. See also: [claim](#); placer claim; location. c. In the General Mining Law of 1872, that portion of a vein or lode and of the adjoining surface, or of the surface and subjacent material to which a claimant has acquired the right of possession by virtue of a compliance with such statute and the local laws and rules of the district within which the location may be situated. Independent of acts of the U.S. Congress providing a mode for the acquisition of title to the mineral lands of the United States, the term has always been applied to a portion of such lands to which the right of exclusive possession and enjoyment by a private person or persons, has been asserted by actual occupation, and compliance with the mining laws and regulations. Syn: [holding](#) *Ricketts* d. Distinction between mining claim and location is that they are not always synonymous and may often mean different things; a mining claim may refer to a parcel of land containing valuable mineral in its soil or rock, while location is the act of appropriating such land according to certain established rules. A mining claim may include as many adjoining locations as the locator may make or purchase, and the ground covered by all, though constituting what is claimed for mining purposes, will constitute a mining claim and will be so designated. *Ricketts* e. Title issued by the Government concerned to an individual or group, which grants that individual or group the right to exploit mineral wealth in a specified area by approved methods in accordance with the ruling laws and regulations. *Pryor, 3* f. A claim on mineral lands. *AGI*

mining compass

An instrument giving qualitative indications of anomalies in the magnetic field. *Schieferdecker*

mining dial

See: [dial](#)

mining disaster

An accident in a mine in which a large number of people are killed. See also: [major mine disaster](#)

mining disease

See also: [anthracosis](#); [infective jaundice](#); [nystagmus](#); [pneumoconiosis](#); silicosis; simple silicosis.

mining district

A section of country usually designated by name, having described or understood boundaries within which minerals are found and worked under rules and regulations prescribed by the miners therein. There is no limit to its territorial extent and its boundaries may be changed if vested rights are not thereby interfered with. *Ricketts*

mining ditch

A ditch for conducting water used in mining. CF: [mining sluice](#) *Craigie*

mining engineer

a. A person qualified by education, training, and experience in mining engineering. *Nelson* b. If qualified and of standing in the profession, a trained engineer with knowledge of the science, economics, and arts of mineral location, extraction, concentration and sale, and the administrative and financial problems of practical importance in connection with the profitable conduct of mining. Usually a specialist in one or more branches of work. Activities may include prospecting, surveying, sampling and valuation, technical underground management, milling, assaying, ventilation control, layout of workings and plant, geological examination, and company administration. *Pryor, 3* c. One versed in, or one who follows, as a calling or profession, the business of mining engineering. Graduates of technical mining schools are given the degree of engineer of mines and authority to sign the letters E.M. after their names.

mining engineering

The planning and design of mines, taking into account economic, technical, and geologic factors; also supervision of the extraction, and sometimes the preliminary refinement, of the raw material. CF: [mining](#); mining geology. *AGI*

mining explosive

One of the high explosives used for mining and quarrying. They can be divided into four main classes: gelatins; semigelatins; nitroglycerin powders, and non-nitroglycerin explosives, including water gels, emulsions, and ANFO.

mining geology

a. The study of geologic structures and particularly the modes of formation and occurrence of mineral deposits and their discovery. Syn: [ore geology](#) b. In coal mining, the study of: rock formations, particularly with reference to the Carboniferous System; the mode of formation of coal seams, their discovery and correlation. See also: [geology](#) *Nelson* c. The study of the geologic aspects of mineral deposits, with particular regard to problems associated with mining. CF: [mining](#); mining engineering. *AGI*

mining ground

No land can be a mining claim unless based upon a location; otherwise it may be mining ground or a mine. For instance, the bed of a navigable river is not subject to mining location, but if mining is conducted thereon by dredging, it is mining ground; or, where land is covered by an agricultural patent and worked for its mineral deposits, it is mining ground and not a mining claim. Hence, land from which a mineral substance is obtained from the earth by the process of mining may, with propriety, be called mining ground or mining land. See also: claim; location. (Ricketts, 1943)

mining hazard

Any of the dangers peculiar to the winning and working of coal and minerals. These include collapse of ground, explosion of released gas, inundation by water, spontaneous combustion, inhalation of dust and poisonous gases, etc. *Nelson*

mining head

The mechanism on a continuous mining machine that breaks down the coal.

mining lease

A legal contract for the right to work a mine and extract the mineral or other valuable deposits from it under prescribed conditions of time, price, rental, or royalties. Syn: [mineral lease](#)

mining locomotive

A small locomotive for use in underground haulage, sometimes consisting of a car bearing a powerful electric motor, built very low and operated through a trolley. May also be operated by electricity from batteries. *Standard, 2*

mining machine

A coal-cutting machine. *Standard, 2*

mining machine operator

See: [machine miner](#)

mining-machine-operator helper

See: [machine helper](#)

mining machine truck

A truck used for transporting shortwall mining machines. Track-mounted trucks are necessarily limited in use to sections employing track. Crawler-type trucks are capable of transporting the cutting machine without need of track and without benefit of ropes.

Jones, I

mining method

Any of the systems employed in the exploitation of coal seams and orebodies. The method adopted depends on a large number of factors, mainly, the quality, shape, size, and depth of the deposit; accessibility and capital available. See also: [coal mining methods](#); [metal mining](#); stoping methods. *Nelson*

mining ore from top down

See: [top slicing and cover caving](#)

mining property

Property, esp. land, valued for its mining possibilities. *Craigie*

mining purposes

The term "mining purposes" as used in connection with mill-site locations, is very comprehensive, and may include any reasonable use for mining purposes that the quartz lode mining claim may require for its proper working and development. This may be very little, or it may be a great deal. The locator of a quartz lode mining claim is required to do only \$100 worth of work each year until obtaining a patent. *Ricketts*

mining recorder

In a mining camp, a person selected to keep a record of all mining claims and properties. *Mathews*

mining retreating

A process of mining by which the ore, or coal, is untouched until after all the gangways, etc., are driven, when the work of extraction begins at the boundary and progresses toward the shaft. CF: [mining advancing](#) *Fay*

mining right

Upon a specific piece of ground, a right to enter upon and occupy the ground for the purpose of working it, either by underground excavations or open workings, to obtain from it the mineral ores which may be deposited therein. *Ricketts*

mining shield

A cover or canopy developed by the U.S. Bureau of Mines for the protection of mine workers and machines at the face of a mechanized coal heading. Hydraulic rams telescope and steer the shield forward as the face advances. It enables continuous miners to operate with greater safety. *Nelson*

mining sluice

An artificial channel or passage for water used in mining. CF: [mining ditch](#)

mining system

Work, as it is commenced on the ground, is such that, if continued, will lead to a discovery and development of the veins or orebodies that are supposed to be in the claim, or, if these are known, that the work will facilitate the extraction of the ores and minerals.

mining theodolite

A theodolite having particular features of design that make it suitable as an underground surveying instrument; e.g., incorporating an arrangement for the centering movement to be above the foot screws. *BS, 7*

mining title

A claim, exclusive prospecting license, concession, right, or lease. A grant under laws and mining regulations to a person or group of approved persons of the right to develop and exploit a properly delineated area for its mineral wealth. *Pryor, 3*

mining-type visibility meter

An instrument to facilitate observation of the essential elements of visual tasks in coal mines. It is a brightness meter in which the comparison field is illuminated by a cap lamp headpiece attached outside the instrument. No internal electrical circuit exists other than that which connects the photocell to the microammeter and the meter can therefore be used anywhere in a safety-lamp mine without restrictions. *Roberts, 2*

mining under

The act of digging under coal or in a soft strata in coal seams.

mining width

The minimum width necessary for the extraction of ore regardless of the actual width of ore-bearing rock. See also: [stopping width](#)

minion

The siftings of iron ore after calcination. *Standard, 2*

minium

A tetragonal mineral, $Pb_3 O_4$; red; an alteration product of galena or cerussite. Syn: [red lead](#)

minnesotaite

A monoclinic mineral, $(Fe,Mg)_3 Si_4 O_{10} (OH)_2$; talc-pyrophyllite group; in the banded iron formations of Minnesota. Syn: [iron talc](#)

minor element

a. Trace element or accessory element. See also: [trace element](#) b. Less commonly, any of the elements present in the range of 0.1% to 1%, between major elements in concentrations greater than 1% and trace elements in concentrations less than 0.1%, or occasionally less than 0.01%.

minus sieve

In powder metallurgy, the portion of a powder sample that passes through a standard sieve of specified number. Contrast with plus sieve. *ASM, 1*

minus sight

See: [foresight](#)

minus station

Stakes or points on the far side of the zero point from which a job was originally laid out. *Nichols, 1*

minute of arc

A unit of angular measure equal to the 60th part of a degree and containing 60 s of arc. *Webster 3rd*

minyulite

An orthorhombic mineral, $\text{KAl}_2(\text{PO}_4)_2(\text{OH},\text{F})\cdot 4\text{H}_2\text{O}$; in phosphate rock in Western Australia and South Australia.

Miocene

An epoch of the later Tertiary period, after the Oligocene and before the Pliocene; also, the corresponding worldwide series of rocks. It is considered to be a period when the Tertiary is designated as an era. *AGI*

mirabilite

A monoclinic mineral, $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$; one perfect cleavage; tastes cool, then saline and bitter; in evaporite deposits, where it is mined as Glauber salt, and as an efflorescence. Syn: [Glauber salt](#)

mire

Mud.

mirror plane

See: [plane of symmetry](#)

mirror stone

See: [muscovite](#)

mischio marble

A violet-red breccia from Serravezza, Italy. Also known as African breccia (breche Africaine).

mischmetal

A natural mixture of the rare-earth metals cerium, lanthanum, and didymium; e.g., the waste matter from monazite sand after the extraction of thoria may contain large quantities of ceria, lanthana, didymia, yttria, and other substances. This is reduced to the metallic state by converting the oxides to chlorides, and then recovering the metal by electrolysis. The material obtained is an alloy containing about 50% cerium and 45% lanthanum and didymium. *Henderson*

misenite

A monoclinic mineral, $\text{K}_2\text{SO}_4 \cdot 6\text{KHSO}_4$ (?) ; in silky white fibers at Cape Miseno, Italy. (Not mizzonite.)

miser

A tubular well-boring bit, having a valve at the bottom, and a screw for forcing the earth upward. Also spelled mizer. *Standard, 2; Fay*

misfire

An explosive charge in a drill hole that has partly or completely failed to explode as planned. Causes include unskilled charging; defective explosive, detonator, or fuse; broken electric circuit or--most dangerous--cutting off of part or all of the charge through lateral rock movement as other holes in the vicinity are fired. Stringent safety precautions cover procedure in minimizing these risks and in dealing with known or suspected misfires. A smoldering fuse may delay explosion, causing a hangfire, so return to workings after a suspected failure is necessary. Another main cause of accident is drilling into or dangerously near a socket--an apparently empty drill hole. See also: [missed hole](#); hangfire. *Pryor, 3*

misfire hole

See: [missed hole](#)

mispickel

See: [arsenopyrite](#)

misplaced material

a. In mineral processing, material, particularly screen products and tailings, that has been reported in the wrong section. *Pryor, 3* b. Material wrongly included in the products of a sizing or density separation; i.e., material that has been included in the lower size or specific gravity product but which itself has a size or specific gravity above that of the cut point, or vice versa. Its weight may be expressed as a percentage of the product or of the feed. Also called tramps (undesirable usage). *BS, 5* c. In sizing and screening, undersize contained in the overflow, or oversize contained in the underflow. *BS, 5* d. In cleaning, material of specific gravity lower than the separation density that has been included in the high density product, or material of specific gravity higher than the separation density that has been included in the low density product. *BS, 5*

missed hole

A drill hole charged with explosives, in which all or part of the explosive has failed to detonate. Syn: [misfire](#); [misfire hole](#). *Fraenkel*

missed round

A round in which all or part of the explosive has failed to detonate. *Fraenkel*

Mississippian

A period of the Paleozoic era (after the Devonian and before the Pennsylvanian), thought to have covered the span of time between 345 and 320 million years ago; also, the corresponding system of rocks. It is named after the Mississippi River valley, in which there are good exposures of rocks of this age. It is the approximate equivalent of the Lower Carboniferous of European usage. *AGI*

misy

An old term for copiapite and related minerals.

Mitchell system for underhand quarrying of panel cores

See: [underhand stoping](#)

miter gear

See: [bevel gear](#)

mitridaite

A monoclinic mineral, $\text{Ca}_2 \text{Fe}_3 (\text{PO}_4)_3 \text{O}_2 \cdot 3\text{H}_2 \text{O}$; forms red crystals, green stains in granite pegmatites.

M.I.T. sampler

A single-tube, drive-type, soil-sampling barrel esp. adapted to sampling deposits of plastic clay where a minimum 5-in (12.7-cm) diameter sample is required. A loop or snare of piano wire is inserted in a groove inside the cutting shoe with the free end of the wire extending through a slot on the side of the sampler to the surface. When pulled, the wire cuts the sample off at the bottom of the cutting shoe. *Long*

mitscherlichite

A tetragonal mineral, $\text{K}_2 \text{CuCl}_4 \cdot 2\text{H}_2 \text{O}$; greenish blue.

mix-crystal

See: [solid solution](#)

mixed

Drill diamonds ranging from 23 to 80 per carat in size. *Long*

mixed blast process

A modification of the basic Bessemer process in which all the nitrogen is removed from the blast, it being made up of a mixture of oxygen and carbon dioxide or oxygen and superheated steam. The oxygen and superheated steam blast is claimed to be the more efficient, the final nitrogen content of the metal being brought to a mean level of 0.0028%. *Osborne*

mixed cements

A product obtained by mixing, or blending, either portland, natural, or pozzolana cement with one another or with other inert substances. *Zern*

mixed crystal

See: [solid solution](#)

mixed dust

Dust prepared for testing in a mine by mixing coal dust and inert dust in predetermined proportions. The mixture may also contain water, and different sizes of coal dust may be mixed to produce some desired intermediate size. *Rice, 2*

mixed explosion

Occurs when both combustible gases and coal dust are present below their lower limits, but in combination produce sufficient heat of combustion to propagate an explosion. *Sinclair, 1*

mixed explosive

Explosive consisting of an intimate mechanical mixture of substances which consume and generate oxygen but are not in themselves explosive. Inorganic nitrates, chlorates, and perchlorates. Most important is ammonium nitrate. *Fraenkel*

mixed face

In tunneling, digging in dirt and rock in the same heading at the same time. *Nichols, 1*

mixed-feed kiln

Upright lime kiln in which the fuel (coal) is mixed and burned with the limestone charge. *Mersereau, 2*

mixed-flow fan

A mine fan in which the flow is both radial and axial. The Schicht fan is of this type and has the advantage that it can produce a high water gage with a single stage. This fan, however, is not well suited to mines where a large change in equivalent orifice may occur. CF: [axial-flow fan](#); radial-flow fan. *Nelson*

mixed-flow turbine

An inward flow, reaction-type water turbine, in which the runner vanes are so shaped that they are acted on by the water pressure both axially and radially. *Hammond*

mixed-layer mica

a. See: [clay mineral](#) b. Layered silicates, generally of the smectite group, in which different layered mineral species are stacked in an ordered or random fashion.

mixed-layer mineral

A mineral whose structure consists of alternating layers of clay minerals and/or mica minerals; e.g. chlorite, made up of alternating biotite and brucite sheets. *AGI*

mixed ore

Ore containing both oxidized and unoxidized minerals. See also: [oxidized ore](#); [sulfide ore](#). *Nelson*

mixer

a. An apparatus used to thoroughly mix drilling fluid water with drilling ingredients. May be cement, mud, or lost circulation materials. Also called atomizer; mud mixer. *Long* b. See: [agitator](#)

mixer cone

A funnel-shaped hopper attached to the body of a mud mixer into and by means of which the dry, powdered, drill-mud and/or cement ingredients are fed into the mud mixer. *Long*

mix-house person

One who mixes sintered lead or zinc ore with such materials as pulverized coal and coke, salt, skimmings, water, and chemical solutions preparatory to smelting. Also called mixer operator. *DOT*

mixing

a. In powder metallurgy, the thorough intermingling of powders of two or more different materials (not blending). *ASM, 1* b. An instrumentation technique used in seismograph recording in which a certain portion of the energy from each amplifier channel is fed to the adjacent channels, giving results somewhat analogous to those obtained from the use of multiple geophones to attenuate noise. *AGI*

mixing pit

A pit in which drill mud is mixed and stored until the mud is cured and needed for use as a drill circulation fluid. *Long*

mix-in-place

A common soil stabilization method in which the soil on the site is first pulverized, then mixed with an admixture or stabilizing agent, compacted and, if necessary, surfaced. All the work is carried out on the site. CF: [plant mix](#)

mixite

a. A hexagonal mineral, $\text{BiCu}_6(\text{AsO}_4)_3(\text{OH})_6 \cdot 3\text{H}_2\text{O}$. CF: [chlorotile](#) b. The mineral group agardite, goudeyite, mixite, and petersite.

mix-metal

Cerium alloy (55% to 65%) containing rare-earth metals and iron. *Bennett*

mixture

A commingling in which the ingredients retain their individual properties or separate chemical nature. See also: [mechanical mixture](#) *Standard, 2*

mizzonite

One of the series of minerals forming the scapolite groups, consisting of a mixture of the meionite and mariolite molecules. It includes those minerals with 54% to 57% silica, and occurs in clear crystals in the ejected masses on Mount Somma, Vesuvius, Italy. Also called dipyrite. See also: [dipyre](#)

MM diamond

Synthetic manufactured diamond. *Long*

moat

a. A ditch or deep trench. b. To surround with a ditch.

moating

A backing of clay, as for the masonry lining of a shaft. *Standard, 2*

mobile belt

An elongated zone of the Earth's crust subjected to relatively great structural deformation. CF: [geosyncline](#)

mobile conveyor

A hand-loaded, hoist-operated hauler used principally in certain central Pennsylvania coal mines. It is essentially a chain-and-flight conveyor of exceptional width, with high sideboards, mounted on wheels for operation on mine track, with motive power supplied by a hoist mounted on the chassis of the machine. The conveyor chain and flights can be moved in the bed of the machine to assist in loading or unloading. The hoist rope can be attached to props at the face and near the dumping point to provide anchorage when the conveyor is moved. *Jones, 1*

mobile crane

A crane driven by gasoline, diesel, or electric motor, traveling on crawler tracks, pneumatic tires or solid rubber tires, and capable of moving in any direction under its own power. *Hammond*

mobile drill

A drill unit mounted on wheels or crawl-type tracks to facilitate moving. *Long*

mobile equipment

Applied to all equipment that is self-propelled or that can be towed on its own wheels, tracks, or skids. See also: [transportable equipment](#) *Nelson*

mobile hoist

A platform hoist which is mounted on a pair of pneumatic-tired road wheels, so that it can be towed from one site to another. This type of hoist has been developed for use in house and flat construction. See also: [platform hoist](#)

mobile loader

A self-propelling machine capable of lifting material off the bottom and placing it in a mine car, conveyor, or other means of transportation. *Jones, 1*

Mocha stone

Syn: [moss agate](#)

mock lead

A Cornish term for zinc blende; also called wild lead. See: [sphalerite](#) *Fay*

mock ore

See: [sphalerite](#)

mock vermilion

A basic chromate of lead.

mode

a. The mineral composition of a rock, usually expressed in weight or volume percentages. Adj: modal. CF: [norm](#) b. The value or group of values that occurs with the greatest frequency in a set of data; the most typical observation. CF: [mean](#)

model

a. A facsimile in three dimensions--a reproduction in miniature of the surface and underground workings of a mine, showing the shafts, tunnels, crosscuts, etc., in all their details. From its very nature, it does not fall within any definition of the word map and it is a misapplication of the term to call it a map, though it may far better serve the purpose in hand. *Ricketts* b. A unifying concept that explains or describes a complex phenomenon. See also: [mineral deposit model](#)

model analysis

The comprehensive testing of scale models of various structures, including harbors and rivers to determine the behavior of the actual structure under consideration. See also: [photoelasticity](#)

modeler

a. Person who shapes plaster of Paris, clay, etc., to form original models used to make molds for producing ceramic ware. b. Person who builds models used in model analysis.

modeling clay

Fine, plastic clay, esp. prepared for artists in modeling by kneading with glycerin, or by other methods. *Fay*

moderate vitrain

A field term that, in accordance with an arbitrary scale established for use in describing banded coal, denotes a frequency of occurrence of vitrain bands comprising from 13% to 30% of the total coal layer. CF: [sparse vitrain](#); [abundant vitrain](#); [dominant vitrain](#). *AGI*

modified longwall

A method used in room-and-pillar mining where the lease requires at least 80% of recovery. Basically it consists of turning the rooms on 70-ft (21.3-m) centers then working the room up 30 ft (9.1 m) wide and butting it off at its completion, then withdrawing the remaining 40 ft (12.2 m) of pillar immediately. *Kentucky*

modified room-and-pillar working

See: [bord-and-pillar method](#)

modified-round nose

See: [medium-round nose](#)

modifier

In froth flotation, reagent used to control alkalinity and to eliminate harmful effects of colloidal material and soluble salts. See also: [modifying agent](#)

modifying agent

In flotation, a chemical that increases the specific attraction between collector agents and particle surfaces, or conversely, that increases the wettability of those surfaces. *Pryor, 3*

modulating

A control adjusting by increments. *Strock, 2*

modulus of elasticity

The ratio of stress to its corresponding strain under given conditions of load, for materials that deform elastically, according to Hooke's law. It is one of the elastic constants. See also: [modulus of rigidity](#); bulk modulus. Syn: [elastic modulus](#); [longitudinal velocity](#). *AGI*

modulus of incompressibility

The ratio between the pressure in the mass of a soil and the change of volume caused by such pressure. CF: [Poisson's ratio](#)

modulus of rigidity

a. The rate of change of unit shear stress with respect to unit shear strain, for the condition of pure shear within the proportional limit. For nonisotropic materials such as wood it is necessary to distinguish between the moduli of rigidity in different directions. *Roark* b. A modulus of elasticity in shear. Symbol: μ or G . Syn: [shear modulus](#); rigidity modulus; coefficient of rigidity. *AGI*

modulus of rupture

a. Nominal stress at fracture in a bend test or a torsion test. In bending, modulus of rupture is the bending moment at fracture divided by the section modulus. In torsion, modulus of rupture is the torque at fracture divided by the polar-section modulus. *ASM, I* b. The load required to break a piece of material, such as a refractory brick, supported on two spaced and parallel flat bearing edges with the load applied through a third bearing edge placed midspan and on top of the piece. *ARI*

Moebius process

A method of electrolytic refining of silver. Silver plate of 95% to 98% pure forms the anodes, and thin silver plate forms the cathodes. The electrolyte consists of a weak, acidulated solution of silver nitrate. *Fay*

Moe gage

A diamond-weight calculator which estimates to within a few hundredths the weights of brilliant-cut diamonds only, by simple measurements of width and depth of both set or unset diamonds. *Hess*

mofette

The exhalation of carbon dioxide in an area of late-stage volcanic activity; also, the small opening from which the gas is emitted. Occurs in Yellowstone National Park. Etymol: French, noxious gas. *AGI*

moganite

Monoclinic silica, SiO_2 (silica-G), with quartz in chert from dry lake beds; also cavity fillings in rhyolitic ignimbrites. Named for Mogan, Canary Islands.

mogensenite

Titaniferous magnetite with exsolved ulvoespinel. CF: [titanomagnetite](#)

mohavite

A dull white hydrous borate of sodium, $\text{Na}_2 \text{B}_4 \text{O}_7 \cdot 5\text{H}_2 \text{O}$. Rhombohedral. An alteration film on borax. Locally, octahedral borax (same as tinalconite). From the Mohave Desert, CA. See also: [octahedral borax](#)

Moho

Short name for the Mohorovicic discontinuity separating the Earth's crust from the mantle. *Mather*

mohole

The never-completed program to drill through the Earth's crust under the ocean to the Mohorovicic discontinuity in order to provide scientific knowledge of the Earth's mantle. *Hy*

Mohorovicic discontinuity

The boundary surface or sharp seismic-velocity discontinuity that separates the Earth's crust from the subjacent mantle. It marks the level in the Earth at which P-wave velocities change abruptly from 6.7 to 7.2 km/s (in the lower crust) to 7.6 to 8.6 km/s or average 8.1 km/s (at the top of the upper mantle); its depth ranges from about 5 km beneath the ocean floor to about 35 km below the continents, although it may reach 60 km or more under some mountain ranges. The discontinuity probably represents a chemical change from basaltic or simatic materials above to peridotitic or dunitic materials below, rather than a phase change (basalt to eclogite); however, the discontinuity should be defined by seismic velocities alone. It is variously estimated to be between 0.2 and 3 km thick. It is named in honor of its discoverer, Andrija Mohorovicic (1857-1936), Croatian seismologist. Abbrev. Moho. Syn: [M-discontinuity](#)
AGI

Mohr balance

See: [Westphal balance](#)

Mohr circle

A graphical representation of the stresses acting on the various planes at a given point. *ASCE*

Mohr-Coulomb criterion

The most popular of numerous rock failure criteria. It assumes that there is a functional relationship between the normal and shear stresses acting on a potential failure surface. *SME, 1*

Mohr envelope

The envelope of a series of Mohr circles representing stress conditions at failure for a given material. According to Mohr's rupture hypotheses, a rupture envelope is the locus of points, the coordinates of which represent the combination of normal and shearing stresses that will cause a given material to fail. Syn: [rupture envelope](#); [rupture line](#). *ASCE*

Mohr's salt

A ferrous-ammonium sulfate, $\text{FeSO}_4 (\text{NH}_4)_2 \text{SO}_4 \cdot 6\text{H}_2\text{O}$; a light green crystalline salt.

Mohr's theory

Mohr's theory of failure utilizes the well-known stress circle and the envelope of a family of circles as criteria for failure of materials subject to biaxial or triaxial stress. Thus Mohr's theory predicts that failure of materials is due to failure in shear, whereas Griffith's theory postulates that it is due to failure at crack tips. *Lewis*

mohsite

A plumboan variety of crichtonite.

Mohs scale

Arbitrary quantitative units by means of which the scratch hardness of a mineral is determined. The nonlinear units of hardness are expressed in numbers ranging from 1 through 10, each of which is represented by a mineral that can be made to scratch any other mineral having a lower-ranking number; hence the minerals are ranked from the softest, as follows: talc (1) ranging upward in hardness through gypsum (2), calcite (3), fluorite (4), apatite (5), orthoclase (6), quartz (7), topaz (8), corundum (9), to the hardest, diamond. CF: [hardness](#); [Knoop hardness](#). *Long*

moil point

A solid bar of casehardened steel, pointed at one end, with a shank and upset collar at the other. Themoil point, hammered into rock or concrete, produces a small hole that gradually deepens and widens until the sides of the point are in full contact with the rock. The effect is then that of wedging, similar to plug-and-feathering. *Carson, 1*

moissanite

A hexagonal mineral, alpha-SiC (Carborundum); in meteorites. See also: [Carborundum](#)

Moissan process

A process for the reduction of chromic oxide with carbon in an electric furnace, the hearth of which is lined with a calcium chromite prepared by heating together lime and chromic oxide. *Fay*

moisture

a. Agreed percentage of water content to be allowed in mineral products that are sold. b. Essentially water, quantitatively determined by definite prescribed methods which may vary according to the nature of the material.

moisture allowance

A deduction from the initial weight of washed coal to allow for the expected loss of water by drainage. *BS, 4*

moisture content

The percentage moisture content equals the weight of moisture divided by the weight of dry soil multiplied by 100. The moisture content of a coal or mineral sample consists of two portions, namely, the free or surface moisture which can be removed by exposure to air, and the inherent moisture which is entrapped in the fuel, and is removed by heating at 200 degrees F (93.3 degrees C). Syn: [inherent moisture](#); [water content](#). *Nelson*

moisture-density curve

See: [compaction curve](#)

moisture-density test

See: [compaction test](#)

moisture equivalent

The ratio of the weight of water--which soil, after saturation, will retain against a centrifugal force 1,000 times the force of gravity--to the weight of the soil when dry. The ratio is stated as a percentage. *AGI*

moisture-holding capacity

The quantity of moisture (not removable by mechanical means) contained by a coal in equilibrium with an atmosphere saturated with water vapor. This is employed in some systems of classification as a criterion of rank. *BS, 4*

moisture man

Person who determines the moisture content of ores or concentrates by removing a sample from pile or conveyor, using a metal paddle, and weighing the sample before and after drying. *DOT*

moisture meter

An instrument for determining the percentage of moisture in a substance such as timber or soil, usually by measuring its electrical resistivity. See also: [atomic moisture meter](#)

moisture sample

A sample taken for the determination of moisture content. *Newton, 1*

mojavite

See: [tincalconite](#)

molasse

a. A partly marine, partly continental sedimentary facies consisting of a thick sequence of fossiliferous conglomerates, sandstones, shales, and marls, characterized by primary sedimentary structures and sometimes by coal and carbonate deposits. It is more clastic and less rhythmic than the preceding flysch facies. *AGI* b. An extensive sedimentary formation representing the totality of the molasse facies resulting from the wearing down of elevated mountain ranges during and immediately after the main paroxysmal (diastrophic) phase of an orogeny, and deposited considerably in front of the preceding flysch. Adj: molassic. CF: [flysch](#)

molasses/AN explosive

An explosive mixture consisting of about 80 lb (36.5 kg) of ammonium nitrate mixed with 10 pints (4.7 L) of molasses and 5 pints (2.37 L) of water, for quarry and opencast blasting. The molasses and water may be used instead of fuel oil and give a denser mixture with improved fragmentation. *Nelson*

mold

A body of molding sand or other heat-resisting material containing a cavity which when filled with molten metal yields a casting of the desired shape. See also: [die](#)

moldavite

a. A tektite from the Moldau valley, Czech Republic. Syn: [glass meteorite](#) b. A variety of ozocerite from Moldavia. See also: [bouteillenstein](#)

moldboard

a. A board on which to ram a pattern. *Standard, 2* b. A curved surface of a plow, dozer, or grader blade, or other dirt mover, which gives dirt moving over it a rotary, spiral, or twisting movement. *Nichols, 2*

molded cameo

A cameo produced by casting in a mold material such as ceramics, metals, glass, plastics, or sealing wax. CF: [pressed cameo](#)

moldering

An obsolete term for decomposition of organic matter under conditions of insufficient oxygen. *AGI*

molders' rule

A ruler, with measurements sufficiently elongated to compensate for the heat expansion and contraction of a metal. Such rules are used in metal casting to correct dimensions to normal temperatures. *Bennett*

molding

a. The practice of pouring molten metal into suitable molds. *Hansen* b. The pressing of powder to form a compact. *ASTM*

molding compound

A mixture of resins, ingredients, and fillers before processing into the finished product. *Jessop*

molding frame

A template to shape a loam mold. *Standard, 2*

molding hole

An excavation in a foundry floor for large castings. *Standard, 2*

moldings

Derb. Weathered ore at the surface of an outcrop. *Arkell*

mold plug

A truncated-cone-shaped refractory piece which sits in the bottom of an ingot mold. *AISI*

mole

a. A massive, solid-fill nearshore structure of earth, masonry, or large stone that may serve as either a breakwater or a pier. *Hy* b. An egg-shaped device pulled behind the tooth of a subsoil plow to open drainage passages. Also called mole ball. *Nichols, 1* c. Weight in grams of a compound in terms of its molecular weight. *Pryor, 3*

molecular crystal

Loosely bound aggregate of stable molecules; e.g., dry ice, solid iodine, sulfur, paraffin, and most of the other crystalline organic solids. *Newton, 1*

molecular filter sampler

Using a porous membrane filter of very small openings, this sampler achieves nearly 100% efficiency at moderate rates of flow. Membranes of three different porosities are used to permit the sampling of dusts of varying concentrations and particle sizes. Flow rate is controlled by the use of calibrated orifices. Syn: [membrane filter](#)

molecular sieve

A microporous structure of either crystalline aluminosilicates, such as zeolites, or crystalline aluminophosphates, created by dehydration so that the empty cavities in the structure where water molecules were previously present will accept any material that can penetrate the cavity. The sieving action is a function of the pore size of the structure.

molecule

a. The smallest part of a substance that can exist separately and still retain its composition and characteristic properties. b. The smallest combination of atoms that will form a given chemical compound.

mole mining

A method of working coal seams about 30 in (76.2 cm) thick, using a small continuous miner type of machine, which is remotely controlled from the roadway and without any associated supports. The machine is used to cut and extract sections of coal about 6 ft

(1.8 m) wide for a distance of 100 yd (91 m) or so from pillars alongside the roadway. Small ribs of coal, 3 to 6 ft (approx. 1 to 2 m) wide, are left between the sections extracted by the machine. The accurate steering of the machine is a critical feature of this system of mining. See also: [coal auger](#)

molengraafite

See: [lamprophyllite](#)

moler

A deposit of diatomite of marine origin occurring on the island of Mors, Denmark. It has been worked since 1912 for use as a heat insulating material, as a constituent of special cements, and for other purposes. *Dodd*

molten slag

A waste product of smelting; usually a mixture of silicates. *Kirk*

moluranite

An amorphous mineral, $H_4 U(UO_2)_3 (MoO_4)_7 \cdot 18H_2 O$.

molybdenite

A hexagonal and trigonal mineral, MoS_2 ; polymorphous with jordanite; foliated; soft; metallic lead gray; an accessory in granites and deep veins; an ore of molybdenum.

molybdenum

A silvery-white, very hard, metallic element. Symbol, Mo. Does not occur native, but is obtained principally from molybdenite. Wulfenite ($PbMoO_4$), and powellite ($Ca(MoW)O_4$) are also minor commercial ores. Valuable as an alloying agent with steel and nickel. Used for electrodes in electrically heated glass furnaces, in nuclear energy applications, and for missile and aircraft parts. *Handbook of Chemistry and Physics, 3*

molybdenum aluminide

$Mo_3 Al$; melting point, 2,150 degrees C. Although its oxidation resistance is poor compared to other aluminides and silicides, it is good compared to molybdenum metal. It is a refractory crucible material for melting certain metals. *Lee*

molybdenum anhydride

See: [molybdenum trioxide](#)

molybdenum borides

Five compounds have been reported: Mo_2B , melting point, 2,120 degrees C, and sp gr, 9.3; Mo_3B_2 , dissociates at 2,250 degrees C; MoB, exists in two crystalline forms: alpha MoB, melting point, 2,350 degrees C, sp gr, 8.8; and beta MoB, melting point, 2,180 degrees C, sp gr, 8.4; Mo_2B_5 , dissociates at approx. 1,600 degrees C, sp gr, 7.5; and MoB_2 , melting point, 2,100 degrees C, sp gr, 7.8, and thermal expansion, 7.7×10^{-6} .
Dodd

molybdenum carbides

MoC, melting point 2,692 degrees C, sp gr, 8.5; Mo_2C , melting point 2,687 degrees C, sp gr, 8.9. *Dodd*

molybdenum disilicide

MoSi_2 ; gray; metallic; tetragonal; and melting point, 2,000 degrees C. It has good oxidation resistance at elevated temperatures; maintains fairly good strength; and has refractory applications. Molecular weight, 152.11; sp gr, 6.31 (at 20.5 degrees C); insoluble in acids and in aqua regia; and soluble in hydrofluoric acid plus nitric acid.
Syn: [molybdenum silicide](#)

molybdenum mineral

Most molybdenum is a byproduct of mining porphyry copper deposits.

molybdenum silicide

See: [molybdenum disilicide](#)

molybdenum trioxide

MoO_3 ; white at ordinary temperatures; yellow at elevated temperatures; molecular weight, 143.94; orthorhombic; sp gr, 4.69 (at 21 degrees C); melting point, 795 degrees C; boiling point, 1,264 degrees C or sublimates at 1,155 degrees C, at 1 atmosphere (101 kPa); sparingly soluble in water; very soluble in excess alkali with the formation of molybdates; and soluble in concentrated mixtures of nitric and hydrochloric acids and in mixtures of nitric and sulfuric acids. *CCD, 2; Handbook of Chemistry and Physics, 2*

molybdic ocher

See: [ferrimolybdite](#)

molybdic oxide

See: [molybdenum trioxide](#)

molybdite

See: [ferrimolybdite](#); molybdenum trioxide.

molybdomenite

A monoclinic mineral, PbSeO_3 .

molybdophyllite

A trigonal mineral, $\text{Pb}_2 \text{Mg}_2 \text{Si}_2 \text{O}_7 (\text{OH})_2$.

moment distribution

A method of calculating bending moments, in redundant frames and continuous beams, using successive approximations. *Hammond*

moment of force

The turning effect on a body about a point called a pivot or fulcrum. In practice, the turning effect is commonly called leverage. Syn: [turning effect](#)

moment of inertia

Resistance by a body to angular acceleration about a specific axis of rotation. *Pryor, 3*

moment of resistance

The couple produced by the internal forces in a beam subjected to bending under the maximum permissible stress. *Hammond*

momentum

Mass times velocity. *Pryor, 3*

momentum grade

Grade so situated that the kinetic energy of a train (due to its speed at the foot of the grade) will enable the locomotive to haul the train to the top without a reduction of speed below 10 or 12 mph (16.1 to 19.3 km/h). *Urquhart*

Momertz-Lintz system

A unique winding arrangement where two winding engines are arranged alongside the shaft, the shaft collar forming a common foundation. The ropes are practically vertical and there is less rope oscillation. *Sinclair, 5*

M.O. Mine safety indicator

A system showing, by means of lights, the position of all switchgear underground, with a master control that would show up if a section of a mine had been switched off at the substation, leaving switches going into the mine in the on position. A recorder gives a complete operating picture of a power-loading face. *Nelson*

monad

An axial rotation of 360 degrees, one-fold. See also: [axis of symmetry](#)

monadnock

A residual hill rising above a peneplain, representing an isolated remnant of a former erosion surface. It is named after Mt. Monadnock, NH. CF: [inselberg](#)

monazite

a. A monoclinic mineral, $(\text{Ce,La,Y,Th})\text{PO}_4$; waxy yellow to brown; an accessory in granites; pegmatites, and placers; a source of thorium and rare earths; further speciated according to the dominant rare-earth element. See also: [zircon group](#) b. The mineral group brabantite, cheralite, huttonite, monazite, and rooseveltite.

monazite sand

See: [monazite](#)

moncheite

A trigonal mineral, $(\text{Te,Bi})_2$; melonite group; steel-gray; in chalcopyrite on the Kola Peninsula, Russia.

monchiquite

A lamprophyre containing phenocrysts of olivine, clinopyroxene, and typically biotite or amphibole (barkevikite), in a groundmass of glass or analcime, often highly altered. Nepheline or leucite may be present. Its name is derived from Serra de Monchique, Portugal. *AGI*

Mond process

A process for extracting and purifying nickel. The main features consist of forming nickel carbonyl by reaction of the finely divided reduced metal with carbon monoxide, and decomposing the nickel carbonyl, with deposition of nickel on small nickel pellets. *ASM, 1*

monetite

A triclinic mineral, CaHPO_4 ; yellowish-white; in phosphorites.

mongrel

Eng. Irregular gray limestone, Lower Lias, Lyme Regis. *Arkell*

monheimite

A variety of smithsonite containing iron carbonate. *Fay*

monitor

a. A high-pressure nozzle, mounted in a swivel on a skid frame, used to direct high-pressure water (hydraulic water) on unconsolidated gravels and sands in alluvial mining to break down, wash, and transport them. Syn: [hydraulic monitor](#) b. A self-dumping car, holding from 5 to 8 tons of coal. It is filled by emptying the mine car into it at the foot of the slope or top of the incline. See also: [gunboat](#) c. A gas sampler for continuous sampling of the atmosphere in a mine, usually sounding an alarm when the gas threshold is exceeded. *Hartman, 1* d. An instrument that measures ambient conditions in an area. *Lyman* e. In hydraulicking, a high-pressure nozzle mounted in a swivel on a skid frame. *Nichols, 2*

monitor operator

See: [incline man](#)

monkey

a. The word monkey prefixed to a technical term means small, thus: monkey chute, a small chute; monkey drift, a small drift, usually driven in for prospecting purposes. *Fay* b. An appliance for mechanically gripping or letting go the rope in rope haulage. *Fay* c. A block placed between the rails on an incline to prevent cars from running back. Syn: [monkey chock](#); [bobbin](#). *Standard, 2*

monkey board

A single, unrailed, heavy plank, mounted above the drill platform in the derrick or tripod and serving as a walkway or work platform. *Long*

monkey chock

Aust. See: [monkey](#); bobbin.

monkey drift

A small drift driven in for prospecting purposes, or a cross-cut driven to an airway above the gangway. *Zern*

monkey face

A term applied to a chain bracket to be inserted between adjacent shaker conveyor troughs to permit suspension of the trough line from the roof. *Jones, I*

monkey gangway

a. Pennsylvania. An air course driven parallel with a gangway and heading at a higher level. Used where a seam has considerable pitch or dip. *Fay* b. A small gangway parallel to a main gangway. *Hudson*

monkey hair

Caotchouc, or rubber, derived from a milk juice of plants and which fills latex cells and tubes. It is resistant to decomposition and found in many brown coals as a woolly mass. *Stutzer*

monkey heading

A narrow and low passage driven in the coal where miners take refuge while coal is being blasted. Chiefly in mines where seams pitch sharply. *Korson*

monkey hole

See: [doghole](#)

monkey roll

Any of the smaller rolls in an anthracite breaker.

monkey shaft

A small shaft raise extending from a lower to a higher level. *Fay*

monkey winch

A device for exerting a strong pull; may be used to withdraw steel arches from disused roadways. It consists of a framework containing a hand-operated drum, around which a steel rope 50 ft (15.24 m) in length is wound. To hold the drum in position a ratchet device is used with both gears. A simple reversing mechanism that disengages the ratchet is also attached. The winch is firmly anchored when in use. See also: [winch](#); sylvester. *Nelson*

monkey wrench

An adjustable wrench named for its inventor, Thomas Monkey. *Crispin*

Monnier process

The treatment of copper sulfide ores by roasting with sodium sulfate, and subsequent lixiviation and precipitation. *Fay*

monobasic

Containing one hydrogen atom replaceable by a metal with the formation of a salt. *CTD*

monocable

A form of aerial ropeway in which the same rope is used both to support and haul along the overturning skips in which the debris is carried. These rest upon the rope and obtain a sufficient frictional grip on it to be carried up moderate gradients and over pulleys by means of an inverted Vee-shaped saddle lined with wood, rubber, or composition. The rope is driven by a surge wheel in a similar manner to an endless-rope haulage. See also: [aerial ropeway](#); [fixed-clip monocable](#). *Sinclair, 5*

monochromatic

Having or consisting only of one color or frequency.

monochromatic light

Electromagnetic radiation of a single wavelength or frequency.

monoclinal

Adj. of monocline.

monocline

A local steepening in an otherwise uniform gentle dip. CF: [anticlinal bend](#); [homocline](#); [flexure](#). Adj: monoclinal. Obsolete syn: uniclinal. *AGI*

monoclinic block

A quarryman's term for blocks with two parallel sets of sides at right angles and one parallel set not at right angles.

monoclinic system

All point groups characterized by lattices with two crystallographic axes at right angles and one axis inclined. See also: [crystal systems](#)

monogene

a. See: [monogenetic](#) b. Said of an igneous rock (such as dunite) composed essentially of a single mineral. Syn: [monomineralic](#)

monogenetic

a. Resulting from one process of formation or derived from one source, or originating or developing at one place and time; e.g., said of a volcano built up by a single eruption. *AGI* b. Consisting of one element or type of material, or having a homogeneous composition; e.g., said of a gravel composed of a single type of rock. CF: [polygenetic](#)

monograin

A free-flowing high explosive widely used for charging bulled holes and large-diameter (well drill) holes. *Nelson*

monolith

a. A piece of unfractured bedrock, generally more than a few meters across; e.g., an unweathered joint block moved by a glacier. *AGI* b. A large upstanding mass of rock, such as a volcanic spine. *AGI* c. One of many large blocks of stone or concrete forming the component parts of an engineering structure, such as a dam. *AGI* d. A vertical soil section, taken to illustrate the soil profile. *AGI*

monolithic refractory

Furnace lining made in one piece or formed by casting, ramming, or tamping into position. *Osborne*

monomaceral

Coal microlithotype consisting of a single maceral; i.e., fusite or vitrite. *AGI*

monomineralic

See: [monogene](#)

Monongahelan

Upper Pennsylvanian geologic time. *AGI*

Monongahela series

The Upper Productive Coal Measures of the Pennsylvanian, of which they constitute the highest member. *CTD*

Mono pump

This pump consists essentially of a rubber stator in the form of a double internal helix and a single helical rotor which rolls in the stator with a slightly eccentric motion. The rotor maintains a constant seal across the stator and this seal travels continuously through the pump, giving a positive uniform displacement. The Mono pump is manufactured to meet mining conditions. The rotor is made of special abrasion-resisting or noncorroding steel. The length of the stator and rotor provides for a twist of slightly more than 360 degrees to provide for a complete seal. For greater heads the length of stator and rotor are increased so as to provide two or more complete seals in series and the head is then developed in stages. Syn: [progressing cavity pump](#)

monopyroxene

See: [clinopyroxene](#)

monorail

A relatively new underground transport system in which the carriages, or buckets, are suspended from, and run along, a single continuous overhead rail or taut wire rope. The monorail is used in coal mines to transport supplies to the workings. It may be installed alongside the gate conveyor and worked by endless or main rope. See also: [overhead monorail](#); overhead-rope monorail; Becorit system. *Nelson*

monorail crane

A traveling crane suspended from a single rail. *Crispin*

monoschematic

Said of a body of rock or a mineral deposit, the fabric of which is identical throughout.

monotower crane

A tower crane that rotates through a full circle and is erected on a fixed base. *Hammond*

monotron

An indentation hardness testing machine by which measurements are obtained by the pressure required to indent a specimen with a diamond 5/8 mm in diameter, the depth of indentation remaining constant. *Henderson*

monotron hardness test

A method of determining the indentation hardness of metals by measuring the load required to force a spherical penetrator into the metal to a specified depth. *ASM, 1*

monovalent

a. Having a valence of 1. *Webster 3rd* b. Having one valence; e.g., calcium, which has only one valence of 2. *Webster 2nd*

montana

a. Sp. Mountain. b. Mex. Ores scattered through country rock and not found in deposits of any appreciable size.

Montana agate

Moss agate from Montana.

Montana ruby

Red garnet, pyrope or almandine.

Montana sapphire

Electric or steel-blue sapphire from Montana.

montanite

A possibly monoclinic mineral, $\text{Be}_2 \text{TeO}_6 \cdot 2\text{H}_2 \text{O}$; yellow to white; forms earthy encrustations.

montan wax

A solid bitumen that may be extracted by solvents from certain lignites or brown coals. It is white to brown and melts at 77 to 93 degrees C. *AGI*

montasite

A variety of amosite; an asbestiform variety of amphibole.

Mont Blanc ruby

Rose quartz from Mont Blanc, southeastern France.

montbrayite

A triclinic mineral, $(\text{Au,Sb})_2 \text{Te}_3$; forms tin-white crystals at Montbray, Quebec. Named for the locality.

montebrasite

A triclinic mineral, $\text{LiAl}(\text{PO}_4)(\text{OH}_1 \text{F})$; amblygonite group; perfect cleavage; occurs in granite pegmatites where it may be a source of lithium.

Montgomery jig

A plunger-type jig with the plunger beneath the screen. The distinguishing feature of this jig is the use of two sets of valves beneath the screen plate. Used in washing bituminous coal, both closely sized and slack sizes. *Mitchell*

Montian

European stage: Paleocene (above Danian, below Thanetian). *AGI*

monticellite

An orthorhombic mineral, MgCaSiO_4 ; olivine group; in contact-metamorphosed limestones, rarely in ultramafic rocks. CF: [glaucocroite](#)

monticule

A small hill, knob, or mound; esp., a minor volcanic cone.

montiform

Mountainlike; having the shape of a mountain.

montmorillonite

A monoclinic mineral, $(\text{Na,Ca})_{0.33} (\text{Al,Mg})_2 \text{Si}_4 \text{O}_{10} (\text{OH})_2 \cdot n\text{H}_2 \text{O}$; smectite group; expansive and cation exchangeable; perfect basal cleavage; in bentonite clays formed by

alteration of volcanic ash or mafic igneous rocks. The chief constituent of bentonite and fuller's earth. CF: [beidellite](#); [hectorite](#). Syn: [amargosite](#)

montre

An opening in a kiln wall to permit inspection of the contents. *Standard, 2*

montroseite

An orthorhombic mineral, (V,Fe)O(OH) ; black; a primary mineral in sandstone-type uranium-vanadium ores associated with roscoelite, pitchblende, coffinite, and secondary uranium and vanadium minerals.

montroydite

An orthorhombic mineral, HgO ; sectile; perfect cleavage; sp gr, 11.2; a rare secondary mineral; in the oxidized zone of some mercury deposits.

monument

a. The structure erected to mark the position of a corner. Permanence is implied. In a legal sense, a monument is any physical evidence of a boundary of real property. *Seelye, 2* b. Survey point; e.g., a pile of stones indicating the boundary of a mining claim. *AGI*

monzonite

A granular plutonic rock containing approx. equal amounts of orthoclase and plagioclase, and thus intermediate between syenite and diorite. Quartz is minor or absent. Either hornblende or diopside, or both, are present and biotite is a common constituent. Accessories are apatite, zircon, sphene, and opaque oxides. The intrusive equivalent of latite. Syn: [syenodiorite](#)

mooihoekite

A tetragonal mineral, $\text{Cu}_9\text{Fe}_9\text{S}_{16}$; in magmatic sulfide deposits; a significant copper ore mineral at Noril'sk, Russia.

moonstone

a. A semitransparent to translucent variety of alkali feldspar (adularia) or cryptoperthite that exhibits a bluish to milky-white pearly or opaline luster; an opalescent variety of orthoclase; a gemstone if flawless. CF: [sunstone](#) b. A name incorrectly applied to peristerite or to opalescent varieties of plagioclase (esp. albite). c. A name incorrectly applied (without proper prefix) to milky or girasol varieties of chalcedony, scapolite, corundum, and other minerals.

moonstone glass

A type of opal glass resembling the mineral moonstone. *ASTM*

moor

a. A more or less elevated tract of barren land, having, as a rule, a rather broad, flat, and poorly drained surface, commonly diversified by peat bogs and patches of heath. b. A common term for peat unfit for use, as opposed to turf, which is dug for fuel. *Tomkeieff*

moorband

See: [moorband pan](#)

moorband pan

Eng. A hard ferruginous crust that forms at the bottom of boggy places above a stiff and impervious subsoil.

Moore and Neill sampler

A sediment coring device containing a protected glass tube through which water flows freely during descent and which is forced by impact into the sediment. On hauling, a simple valve mechanism closes the top of the tube and the sample may be brought to the surface. The body of the sampler is a brass cylinder into which fits a thinner metal tube holding the glass sampling tube. When the glass tube is in position, it is closed by a rubber bung that comes hard against the upper surface of the main body of the sampler in the center of which is a hole. *Hunt*

Moore filter press

A movable, intermittent vacuum filter consisting of a series, or basket, of leaves fastened together in such a way that it may be dropped in a pulp tank and kept submerged until a cake is formed; it is then transferred by crane to an adjoining wash-solution tank and washed; the basket is then lifted out of the tank and the cake dropped. *Liddell*

Moore free corer

A sediment sampler designed to drop free from a ship to the sea floor, obtain a core, and return to the surface, leaving its expendable weight and casing embedded in the bottom. The free corer consists of two basic assemblies: (1) a recoverable core barrel, check valve, buoyant chamber assembly filled with gasoline; and (2) an expendable weight and casing assembly. When these two assemblies are combined, the core barrel fits loosely inside the casing. The device is dropped over the side of the ship and allowed to fall free

to the bottom. A simple release-delay timer made of magnesium releases the core barrel and its buoyant float rises from the weight and casing assembly. *Hunt*

moorland peat

See: [highmoor peat](#)

moorlog

a. Remains of a submerged forest, composed of a tangled mass of brushwood and tree trunks and forming a layer from 3 to 8 ft (0.9 to 2.4 m) thick. *Tomkeieff* b. Hard, brown peat dredged by fishing boats from the bed of the North Sea. *Arkell*

moor peat

See: [highmoor peat](#)

moose pasture

Can. Derisive term applied to mining country that is largely muskeg. *Hoffman*

mor

In contrast to "mull", a type of forest soil in which the humus layer forms a dense carpet over the soil. Synonymous with raw humus. *Tomkeieff; AGI*

morainal apron

See: [apron](#)

moraine

A mound, ridge, or other distinct accumulation of unsorted, unstratified glacial drift, predominantly till, deposited chiefly by direct action of glacier ice, in a variety of topographic landforms that are independent of control by the surface on which the drift lies. See also: [boulder clay](#); till. *AGI*

Moran and Proctor sampler

A simple, split-tube, drive-type soil-sampling barrel. The sampler is equipped with a thin-walled unsplit brass liner, which can be capped and sealed to act as a watertight shipping container for the sample. *Long*

morass ore

See: [bog iron](#); bog iron ore.

Morcol

A semigelatinous permitted explosive possessing both high power and good water-resisting properties. It has a density about midway between Dynobel No. 2 and Ajax. *Nelson*

mordant

A substance used in dyeing to fix the coloring matter, as a metallic compound that combines with a organic dye to form an insoluble colored compound, or lake, in the fiber of a fabric. *Webster 3rd*

mordenite

A white, yellowish, or pinkish member of the zeolite group of minerals with the formula $(Ca, Na_2 K_2) Al_2 Si_{10} O_{24} \cdot 7H_2 O$. *Larsen*

morenosite

An orthorhombic mineral, $NiSO_4 \cdot 7H_2 O$; may contain appreciable magnesium; apple-green; in secondary incrustations from the oxidation of nickel-bearing sulfides. Syn: [nickel vitriol](#)

morganite

A rose-colored, alkali-bearing, gem-quality variety of beryl identical with vorobievite. Syn: [vorobievite](#)

morgen

The South African measure of land, equal to 640.25 square rods, 92,196 ft² (8,565 m²), 1.44 claims, or 2.1165 English acres (0.857 ha). There are 284 morgens to a square mile and 735.5 morgens/km². *Beerman*

Morisette expansion reamer

A reaming device equipped with three tapered lugs or cutters designed so that the drilling pressure necessary to penetrate rock with a noncoring pilot bit forces the diamond-faced cutters of the reamer to expand outward, thereby enlarging the pilot hole sufficiently to allow the casing to follow the reamer as drilling progresses. The casing is rotated with a pipe wrench while the noncoring and expansion bit is turned by the drill, and the casing is allowed to follow down the reamed-out pilot hole about 1-1/2 to 2 in (4 to 5 cm) behind the upper end of the reamer lugs. *Long*

Morkill's formula

Valuation formula used to ascertain present value (Vp) of a mining share. *Pryor, 3*

morlop

A mottled variety of jasper found in New South Wales, Australia; much sought by miners, it commonly occurs with diamonds.

morphological crystallography

The study of the external shapes of crystals. *Hurlbut*

morphologic unit

a. A rock stratigraphic unit identified by its topographic features; e.g., a Pleistocene glacial deposit. b. A surface, either depositional or erosional, recognized by its topographic character.

morphology

a. The observation of the form of lands. *Standard, 2* b. The study of the form and structure of organisms. *AGI* c. The form or shape of a crystal or mineral aggregate. Adj. morphological.

mortar

a. The receptacle beneath the stamps in a stamp mill, in which the dies are placed, and into which the rock is fed to be crushed. *Fay* b. A vessel in which rock is crushed by hand with a pestle for sampling or assaying. *Fay*

mortar bed

Lime-cemented, valley-flat deposit of clay, silt, sand, and gravel, found in Nebraska and Kansas; a type of caliche. *AGI*

mortar box

The large, deep, cast-iron box into which the stamps fall and the ore is fed in a gold or silver stamp mill; also called stamper box. *Fay*

mortar structure

A structure in crystalline rocks characterized by an aggregate of small grains of quartz and feldspar occupying the interstices between, or forming borders on the edges of,

much larger, rounded grains of the same minerals. Long considered a product of cataclasis, the structure may actually be the result of plastic deformation and dynamic recrystallization (Harte, 1977). Syn: [porphyroclastic structure](#) See also: [cataclastic](#)

mortice

See: [mortise](#)

mortification

Destruction of active qualities, as in mercury amalgamation. *Standard, 2*

mortise

A rectangular hole cut in one member of a framework to receive a corresponding projection on the mating member. Syn: [mortice](#)

morts terrains

a. Fr. Barren or dead ground. b. The water-bearing strata overlying the Coal Measures.

mosaic

a. An assembly of aerial or space photographs or images whose edges have been feathered and matched to form a continuous photographic representation of a part of the Earth's surface; e.g., a composite photograph formed by joining together parts of several overlapping vertical photographs of adjoining areas of the Earth's surface. See also: [controlled mosaic](#) b. A textural subtype in which individual mineral grains are approx. equal (Harte, 1977). *AGI*

mosaic silver

An amalgam of mercury, tin, and bismuth, used for imitating silverwork. *Standard, 2*

mosaic structure

Slight irregularity of orientation of small, angular, and granular regions of varying sizes in a crystal.

mosaic texture

a. A granoblastic texture in a dynamically metamorphosed rock in which the individual grains meet with straight or only slightly curved, but not interlocking or sutured, boundaries. *AGI* b. A texture in a crystalline sedimentary rock characterized by more or less regular grain-boundary contacts; e.g., a texture in a dolomite in which the mineral

dolomite forms rhombs of uniform size so that in section contiguous crystals appear to dovetail, or a texture in an orthoquartzite in which secondary quartz is deposited in optical continuity on detrital grains. *AGI*

moschellandsbergite

An isometric mineral, Ag_2Hg_3 ; a silver-white amalgam; sp gr, 13.5. Named for the locality in Bavaria, Germany.

mosesite

An isometric mineral, $\text{Hg}_2\text{N}(\text{Cl}, \text{SO}_4, \text{MoO}_4, \text{CO}_3) \cdot \text{H}_2\text{O}$; yellow; secondary. See also: [kleinite](#)

moss

a. adj. A fine dendritic growth having the texture of moss; e.g., moss gold. b. A term used for fractures or fissures in gem stones which produce the appearance of moss, such as in many emeralds.

moss agate

A general term for any translucent chalcedony containing inclusions of any color arranged in dendritic patterns resembling trees, ferns, leaves, moss, and similar vegetation; specif. an agate containing brown, black, or green mosslike markings due to visible inclusions of oxides of manganese and iron. See also: [agate](#); [Mocha stone](#); [tree agate](#). Syn: [landscape agate](#); [medfordite](#).

Mossfield loader

A scraper-box type of coal loader developed at the Mossfield colliery (Great Britain) in 1953. It consists of a hinged front, scooplite plate which elevates and deflects the broken coal onto an armored conveyor. On inclined faces, the loader is hauled by a double-drum Pikrose haulage. *Nelson*

moss form

A material in dendritic forms.

mossing

During low water in the Salmon River, CA, the algae and other plants growing in the stream are gathered, dried, and burned. The ashes are washed, and some gold is obtained. This process is called mossing. *Hess*

mossite

A tantalum-bearing variety of ferrocolumbite or tapiolite named for the locality in Norway.

moss peat

Peat derived from water-loving mosses, chiefly sphagnum. See also: [highmoor peat](#)

mossy zinc

Granulated zinc obtained when the molten metal is poured into cold water.

mother

a. Gouge clay in a mineral vein. *Arkell* b. Shale adhering to quarried limestone. *Arkell* c. See: [mother crystal](#)

mother conveyor

A term frequently used in connection with conveyors used in gathering service. The mother conveyor receives coal from other conveyors or gathering machines, such as shuttle cars, and delivers it to some central loading point. See also: [underground mine conveyor](#)

mother crystal

A name given to a mass of raw quartz, either faced or rough, as found in nature. Syn: [mother](#)

mother gate

a. N. of Eng. The main roadway to a coal face up which miners travel; air, power, and supplies pass; and down which coal from the face travels on a conveyor belt. *Trist* b. Eng. The main road of a district off which crossheadings are set away in longwall working. See also: [level](#); [main gate](#). *SMRB*

Mother Hubbard bit

A heavy drag-type or fishtail-like bit having a long grooved shank, the diameter of which is only slightly less than the width of the cutting edges; it is designed for drilling boreholes in formations that mud-up excessively. *Long*

mother liquor

a. The magmatic rest solution from which a mineral deposit has received its metal content. *Schieferdecker* b. In crystallization, the liquid that remains after the substances readily and regularly crystallizing have been removed. *AGI*

mother lode

a. A main mineralized unit that may not be economically valuable in itself but to which workable veins are related; e.g., the Mother Lode of California. CF: [master lode](#) b. An ore deposit from which a placer is derived; the mother rock of a placer. *AGI*

mother of coal

See: [fusain](#); mineral charcoal.

mother-of-emerald

See: [prase](#)

mother-of-pearl

Iridescent portion of mollusk shells, made of the mineral aragonite. See also: [nacre](#)

mother rock

A general term for the rock in which a secondary or transported ore deposit originated; mother lode. *AGI*

motion driver

In bituminous coal mining, one who operates the engine that moves an endless cable by which cars are raised or lowered along an inclined haulageway. Syn: [motioner](#)

motioner

See: [motion driver](#)

motion study

A technical investigation of the essential movements of a worker when performing a specific task, and assessing the results with the objective of reducing labor and increasing work performance. The study may also include the layout tasks, availability of tools or materials, and the design of new methods. See also: [time study](#)

motive column

The height of a column of air, of the same density as the air in the downcast shaft, which exerts a pressure equal to the ventilating pressure. It is the ventilating pressure expressed in meters of air column. Also called head. Syn: [column](#); [ventilating column](#). *Nelson*

motive power

An agency (such as water, steam, wind, or electricity) used to impart motion to machinery. *Webster 3rd*

motive zone

In mine subsidence, that portion of the mined strata which, being still in the process of sinking, goes far to furnish the motive power producing the phenomena. *Briggs*

motometer

A speed counter, as for a steam engine; also a speedometer. *Crispin*

motor body

The boxlike portion at the lower end of a coal-cutting machine. *Fay*

motor boss

In mining, a foreperson who directs locomotive (motor) haulage operations underground and at the surface of a mine. Also called car dispatcher; car distributor; dispatcher; passing boss; traffic man; train dispatcher. Syn: [turn keeper](#)

motor brakeperson

See: [locomotive brakeman](#)

motor-change man

In anthracite and bituminous coal mining, a person who in addition to charging and repairing batteries, removes spent storage batteries from electric mine locomotives and replaces them with freshly charged ones. *DOT*

motor driver

In bituminous coal mining, one who operates a small electric haulage locomotive to haul mine cars underground and at the surface of a mine. *DOT*

motor hammer drill

Usually has a built-in gasoline engine as prime mover, flushing being provided by the exhaust gases or by compressed air produced in the machine. Total weight varies between 50 lb and 120 lb (22.7 kg and 54.4 kg). Motor hammer drills are used for odd-job operations, on forest roads, in prospecting, etc., where it is not worthwhile to lay air supply lines on account of transport difficulties or insufficient volume of work.

Fraenkel

motorized grader

See: [grader](#)

motorman

The person who operates a haulage locomotive. *Jones, 1*

motor nipper

See: [locomotive brakeman](#)

mottle

The spotted, blotched, or variegated appearance of any mottled surface, such as of wood or marble; esp., in metallurgy, the appearance of pig iron of a quality between white and gray. *Standard, 2*

mottled iron

Pig iron in which the majority of the carbon is combined with iron in the form of cementite, Fe_3C , but in which there is also a small amount of graphite. The fractured pig has a white crystalline fracture with clusters of dark spots, indicating the presence of graphite. See also: [gray iron](#)

mottled limestone

Limestone with narrow branching fucoidallike, cylindrical masses of dolomite, often with a central tube or hole; a variegated limestone. It may be organic or inorganic in origin.

mottled silica brick

A silica brick having harmless areas of dark cream to reddish brown.

mottled slate

Slate in which blotches of red or purplish colors appear on a generally green surface; ascribed chiefly to different forms of iron oxide.

mottled structure

Discontinuous lumps, tubes, pods, and pockets of a sediment, randomly enclosed in a matrix of contrasting textures, and usually formed by the filling of animal borings and burrows). *AGI*

mottramite

An orthorhombic mineral, $\text{PbCu}(\text{VO}_4)(\text{OH})$; descloizite group; zinc replaces copper toward descloizite; conchoidal fracture; a supergene mineral associated with base-metal deposits. Formerly called cuprodescloizite, psittacinite.

mountain brown ore

Limonite or brown iron ore. A local name applied in Virginia to the low-grade siliceous variety, which commonly occurs in hard lumps and is found on the mountain slopes at or near the contact of the Cambrian shale and sandstone with the Cambro-Ordovician limestone. CF: [valley brown ore](#)

mountain building

See: [orogeny](#)

mountain chain

A complex, connected series of several more or less parallel mountain ranges and mountain systems grouped together without regard to similarity of form, structure, and origin, but having a general longitudinal arrangement or well-defined trend; e.g., the Mediterranean mountain chain of southern Europe. See also: [cordillera](#) *AGI*

mountain cork

a. A white or gray variety of asbestos consisting of thick interlaced fibers and resembling cork in texture and lightness (it floats on water). Syn: [rock cork](#); [mountain leather](#). b. A fibrous clay mineral such as sepiolite or palygorskite.

mountain flax

A fine silky asbestos.

mountainite

A monoclinic mineral, $(\text{Ca}, \text{Na}_2, \text{K}_2)_2 \text{Si}_4 \text{O}_{10} \cdot 3\text{H}_2\text{O}$; zeolitelike; white; fibrous. See also: [rhodesite](#)

mountain leather

a. A tough variety of asbestos occurring in thin flexible sheets made of interlaced fibers. Syn: [rock leather](#); [mountain cork](#); [mountain paper](#). b. A fibrous clay mineral such as sepiolite or palygorskite. Syn: [leatherstone](#)

mountain meal

See: [diatomite](#)

mountain milk

A very soft, spongy variety of calcite. *Standard*, 2

mountain paper

A paperlike variety of asbestos occurring in thin sheets; specif. mountain leather or mountain cork. *AGI*

mountain pediment

A plain of combined erosion and transportation at the foot of a desert mountain range, similar in form to an alluvial plain but beveling solid rock.

mountain railway

A railway having such steep gradients that trains are hauled up them by ropes or by a rack locomotive. See also: [funicular railway](#) *Hammond*

mountain range

A single, large mass consisting of a succession of mountains or narrowly spaced mountain ridges, with or without peaks, closely related in position, direction, formation, and age; a component part of a mountain system or of a mountain chain. *AGI*

mountain soap

An unctuous variety of halloysite containing some iron oxide and about 24% water. See also: [saponite](#)

mountain system

A group of mountain ranges exhibiting certain unifying features, such as similarity in form, structure, and alignment, and presumably originating from the same general causes; esp. a series of ranges belonging to an orogenic belt. CF: [mountain chain](#) *AGI*

mountain tar

See: [mineral tar](#)

mountain wood

A variety of asbestos that is compact, fibrous, and gray to brown in color, resembling wood. Syn: [rockwood](#)

mounting

In power shovel nomenclature, the mounting consists of a frame on which the entire shovel is supported and on which it moves. *Carson, I*

mounting pipe

See: [column pipe](#)

mourite

A monoclinic mineral, $U_2O_5 \cdot 12(OH)_2$; forms spherulitic masses of radiating purple fibers in incompletely oxidized uranium ores.

mousetrap

A cylindrical fishing tool, fitted with an inward-opening flap valve at the bottom end, used to recover small metal fragments from the bottom of a borehole. *Long*

mouth

a. The surface outlet of an underground conduit, as of a volcano. *AGI* b. The collar of a borehole. *Long* c. An opening resembling or likened to a mouth, such as one affording entrance or exit. *Webster 2nd* d. The entrance to a mine. *BCI* e. The top of a mine shaft or the point of entrance to a slant, drift, or adit. *Nelson* f. The end of a shaft, adit, drift, entry, tunnel, etc., emerging at the surface. *Fay* g. The opening in a metallurgical furnace through which it is charged; also, the taphole. *Fay* h. The place of discharge of a stream, as where it enters a larger stream, a lake, or the sea. *AGI* i. The entrance or opening of a geomorphic feature, such as a cave, valley, or canyon. *AGI*

mouthing

See: [shaft inset](#)

mouth of pit

Aust. The top of a shaft. *Fay*

movable conveyor

Any of several types of conveyors designed to be moved in a defined path. See also: [portable conveyor](#); [shuttle conveyor](#).

movable jaw

The jaw or slip of a safety or foot clamp; it can be raised or lowered into or out of the body or frame of the clamp either to engage or to disengage the drill rods being run into or pulled out of a borehole. Syn: [movable slip](#)

movable ladder

See: [man machine](#)

movable sieve-type washbox

A washbox in which the screen plate supporting the bed of material under treatment is moved up and down in water. *BS, 5*

movable slip

See: [movable jaw](#)

move-up

Extension; move to a forward position. Syn: [turnover](#)

moving annual total

In a study of process costs (in large or in detail) a series of costs-per-unit observed and recorded at regular intervals (usually in monthly financial summaries cross referenced to analyzed detail cost). Twelve months are covered and each month the new month's figures are added and those for the corresponding month of the previous year are removed. Therefore, like periods are always compared and seasonal fluctuations are smoothed out. Abbrev., MAT. *Pryor, 3*

moving grizzly

Grizzly in which alternate bars rise and then fall gently, any required lateral (conveying) movement being built into the mechanism, therefore reducing loss of headroom in conveying and screening. Other types are traveling bar, ring-roll, and chain grizzlies.

Pryor, 3

moya

S. Am. Volcanic mud, sometimes carbonaceous.

moyle

An iron with a sharp steel point, for driving into clefts when levering off rock. *Zern*

M.P.F.M. jet auger

An auger equipped with cutting blades; designed so that fluid, under pressure, passing through inclined holes just above the blades, washes away the material loosened by the blades, thereby cleaning the inside of the casing without disturbing the material below the bottom of the casing that is to be sampled. *Long*

MRE

The Mining Research Establishment of the National Coal Board, Great Britain. Its prime purpose is to carry out tests and investigations aimed at increasing the efficiency of coal production while maintaining a high level of safety. *Nelson*

MSA distributor

A high-air-pressure directional machine which operates in the manner of a whitewashing machine and displaces coal dust from the roof and sides. This machine carries 2 st (1.8 t) of stone dust, and traveling at 11 ft/min (3.4 m/min) distributes over 26 lb/min (11.8 kg/min) of dust. *Sinclair, 1*

MSA methanometer

This methane indicator is one in which the sample is made to flow continuously over the filaments while the determination is being made. In this case, two matched filaments form the adjacent arms of the bridge. One of these is specially activated in order to burn the methane while the other filament is inactive and operates at a somewhat lower temperature. This arrangement is designed to compensate for changes in barometric pressure, temperature, humidity, and the presence of carbon dioxide. Facilities for adjustment are provided to compensate for zero drift and change in battery voltage. The meter is provided with two shunts so that two ranges are provided on the scale: 0% to 5% by 0.1% divisions and 0% to 2% by 0.02% divisions. *Roberts, 1*

MS connector

Nonelectric, short-interval (millisecond, ms) delay device for use in delaying a blast; initiated by detonating cord.

mscp

Apprev. for mean spherical candlepower. *Mason*

M-series core barrel

See: [M-design core barrel](#)

muck

a. Unconsolidated soil, sand, clay, or loam encountered in surface mining; generally, earth which can be moved without blasting. *Pryor, 3* b. Useless material produced in mining. Syn: [mullock](#) c. A layer of earth, sand or sediment lying immediately above the sand, or gravel containing, or supposed to contain, gold in placer mining districts; it may itself contain some traces of gold. *Fay d.* Finely blasted rock, particularly from underground. *Nichols, 1* e. To excavate or remove muck from. *Webster 2nd*

muck bar

Gray, forge pig iron melted in a puddling furnace, then balled, squeezed, and rolled. *Mersereau, 1*

muck boss

In bituminous coal mining, a person who is in charge of a crew of loaders shoveling rock into cars during the driving of new underground passageways from one part of the mine to another. *DOT*

mucker

In mining and quarrying, a laborer who (1) shovels ore or rock into mine cars or onto a conveyor from which mine cars are loaded and at some point are removed from the working face or surfaces of natural stone deposits; or (2) works in a stope shoveling ore into chutes from which it is loaded into cars on haulage level below. Also called car filler; rock passer; shoveler. *DOT*

mucking

The operation of loading broken rock by hand or machine, usually in shafts or tunnels. *Nelson*

muck iron

Crude puddled iron ready for squeezing or rolling. *Fay*

muckle

Soft clay overlying or underlying coal.

muckle hammer

A scaling or spalling hammer. *Standard, 2*

muck saw

A saw using an uncharged blade, usually steel, which runs in a bath or stream of carborundum abrasive. Also known as a mud saw.

muck shifting

Operations concerned with stripping overburden, valuable gravels, or sands in exploitation of opencast mineral deposits. *Pryor, 3*

muck soil

A soil that contains at least 50% organic matter that is well decomposed. *AGI*

mucky hole

In a furnace, a taphole from which the iron is so pasty that it does not run freely. *Fay*

mud

a. A sticky or slippery mixture of water and silt- or clay-sized earth material, with a consistency ranging from semifluid to soft and plastic; a wet, soft soil or earthy mass; mire, sludge. *AGI* b. An unconsolidated sediment consisting of clay and/or silt, together with material of other dimensions (such as sand), mixed with water. *AGI* c. A suspension made by mixing the drill circulation fluid (water) with the fine cuttings produced by the bit when drilling a borehole. *Long*

mud auger

A diamond-point bit with the wings of the point twisted in a shallow, augerlike spiral. Also called clay bit; diamond-point bit. See also: [mud bit](#)

mud balance

An instrument used to measure the density of drill mud. *BS, 9*

mud barrel

a. A double-tube core barrel with a greater-than-normal clearance between the inner and outer tubes, for use with mud-laden circulation liquids. *Long* b. A bailing device to bring to the surface the cuttings formed by the action of the bit at the bottom of a borehole in free-fall or churn drilling. *Long* c. A small bailer. *Long*

mud belt

The belt of marine deposits composed largely of detrital clay, and lying between the coarser terrigenous sediments to the landward and the deep oceanic organic oozes on the seaward side. At present, the inner boundary of the inner mud belt is the edge of the continental shelf. *AGI*

mud bit

A pointed-edge, chisel-like tool used for boring drill holes through clay or claylike overburden materials. Also called clay bit; diamond-point bit. See also: [mud auger](#)

mud blasting

In this method, sticks of explosive are stuck on the side of a boulder with a covering of mud, and when detonated, very little of the energy of the explosive is used in breaking the boulder. *Higham*

mud bucket

The bucket attached to a dredger. *Standard, 2*

mud cake

The material filling the cracks, crevices, pores, etc., of the rock or adhering to the walls of a borehole. The cake may be derived from the drill cuttings, circulating drill mud, or both; it is formed when the water in the drilling mud filters into porous formations, leaving the mud ingredients as a caked layer adhering to the walls of the borehole. Syn: [cake](#); [mud wall cake](#). *Long*

mudcap

A charge of dynamite, or other high explosive, fired in contact with the surface of a rock after being covered with quantity of wet mud, wet earth, or sand, no borehole being used. The slight confinement given the dynamite by the mud or other material permits part of the energy of the dynamite being transmitted to the rock in the form of a blow. A

mudcap may be placed on top or to one side, or even under a rock, if supported, with equal effect. Also called adobe; dobie; sandblast.

mudcap method

See: [secondary blasting](#)

mudcapping

Method for blasting rock without drilling, in which an explosive is placed on top of the rock and covered by a cap of mud or earth. Syn: [adobe charge](#)

mud cast

See: [mud crack](#)

mud column

The length in feet (meters), as measured from the bottom of a borehole of a drill-mud liquid standing in a borehole either while being circulated during drilling operations or when the drill string is not in the hole. Syn: [column of mud](#)

mud crack

a. The filling of desiccation cracks in mud, customarily in sandstone; generally preserved as raised ridges (casts) arranged in polygonal patterns on the underside of a sandstone bed. *Pettijohn, 1* b. An irregular fracture in a crudely polygonal pattern, formed by the shrinkage of clay, silt, or mud, generally in the course of drying. Syn: [sun crack](#); [mud cast](#); [shrinkage crack](#); [desiccation crack](#). *AGI*

mudding

Filling voids with clay in limestone from which sulfur has been extracted. *Bennett*

mudding off

In petroleum production, commonly thought of as reduced productivity caused by the penetrating, sealing, or plastering effect of a drilling fluid. Actually there is little penetration into the capillaries of an ordinary producing formation, and a slight amount of differential back pressure will remove even thick filter cakes. *Brantly, 1*

mudflow

A general term for a mass-movement landform and a process characterized by a flowing mass of predominantly fine-grained earth material possessing a high degree of fluidity

during movement. The water content of mudflows may range up to 60%. With increasing fluidity, mudflows grade into loaded and clear streams; with a decrease in fluidity, they grade into earthflows. Syn: [lahar](#)

mud gun

An apparatus for pushing a clay stopper into the taphole of a blast furnace. A steam cylinder operates a plunger inside a steel tube into which clay is fed from a hopper tube as the plunger is worked back and forth, and is thus forced into the taphole at the end of a cast. See also: [clay gun](#)

mud hog

a. A pump used to circulate mud-laden drill fluid during borehole drilling operations. See also: [mud pump](#); [sludge pump](#). *Long* b. Pressure tunnel worker. c. A machine for the disintegration of dry or moist plastic clay. It consists of a rotating swing hammer operating close to a series of anvils linked together to form a steeply inclined slat conveyor. *Dodd*

mud-laden

Said of a liquid (usually water) mixed with finely ground earthy or clayey materials. *Long*

mud-laden fluid

The water or oil in which mudlike solids are suspended; used to support the open bore and cool and clear the cuttings from a drill bit. The fluid is circulated while rotary- and/or diamond-drilling a borehole. See also: [drilling mud](#)

mudline

Line of demarcation between fairly clear supernatant water and settling solids in a thickener or other sedimentation vessel. *Pryor, 3*

mud log

A continuous analysis of the drilling mud and well cuttings during rotary drilling for entrained oil or gas. Visual observation, ultraviolet fluoroscopy, partition gas chromatograph, and hydrogen-flame ionization analyzer may be used. A drilling-time log is kept concurrently. *AGI*

mud logging

a. A method of determining the presence or absence of oil, gas, and salt water in the various formations penetrated by a drill bit. The drilling fluid and the cuttings are continuously tested on their return to the surface, and the results of these tests are correlated with the depth of origin. *Brantly, 1* b. A mud log is a recording vs. depth of the parameters being monitored. Basic parameters monitored are: bit weight, rotary speed, rotary torque, mud weight, gas content (trip and background) cutting analysis, pit volume, flow rate, pump pressure (strokes), hole depth, and chlorides. This is a common service used to obtain data from the mud system and drilling parameters.

mud mixer

A machine, pump, hopper, or other apparatus used to mix dry ingredients with water or other liquids to prepare a drill mud. Also called atomizer; jet mixer; mixer. Syn: [emulsifier](#)

mud pot

a. A type of hot spring containing boiling mud, usually sulfurous and often multicolored, as in a paint pot. Mud pots are commonly associated with geysers and other hot springs in volcanic areas, esp. Yellowstone National Park, WY. *AGI* b. A geyser that throws up mud. Also called mud geyser. *Standard, 2; Fay*

mud pump

a. The circulating pump that supplies fluid to a rotary drill. Also called slush pump. See also: [mud hog](#) b. See: [circulating pump](#)

mud ring

a. The section of a boiler where scale, alkalis, and sediment collect. b. The ring or frame forming the bottom of a water leg in a steam boiler. *Webster 3rd*

mud rush

The more or less sudden inflow of peat, moss, sand, gravel, silt, or any other waterlogged material into shallow mine workings. The manager has a duty to take steps to prevent such intrushes as laid down in the Precautions against Intrushes Regulations, 1956. Also called mud run. See also: [intrush of water](#); [running ground](#). *Nelson*

mud scow

A flatboat or barge for the transportation of mud, generally used in connection with dredges.

mud snapper

An 11-in-long (28-cm-long), 3-lb (1.4-kg) clamshell-type snapper attached to the bottom of a sounding lead by means of a hole drilled in the lead. The jaws are cast bronze and are actuated by a spring. The jaws are held open by engaging two trigger pins within the jaws. The mud snapper and sounding lead may be operated in shallow water by hand lowering or by lowering from a bathythermograph or oceanographic winch. *Hunt*

mud socket

A device attached to drill rods and used to remove sand from a borehole. CF: [mule shoe](#)

mudstone

a. An indurated mud having the texture and composition of shale, but lacking its fissility; a blocky or massive, fine-grained sedimentary rock in which the proportions of clay and silt are approx. equal; a nonfissile mud shale. See also: [claystone](#); [siltstone](#). *AGI* b. A general term that includes clay, silt, claystone, siltstone, shale, and argillite. *AGI*

mudstone ratio

A uranium prospector's term, esp. on the Colorado Plateau, for the ratio of the total thickness of red mudstone to that of green mudstone within an assumed stratigraphic interval. Its value is based upon the premise that uranium-bearing solutions will bleach red mudstone containing ferric iron to green mudstone containing ferrous iron in the course of depositing uranium minerals. *AGI*

mudstone trap

A place where uranium mineralization has been trapped at a mudstone-sandstone interface. *Ballard*

mud sump

In drilling operations, a mud pit. *Long*

mud up

a. The act or process of filling, choking, or clogging the waterways of a bit with consolidated drill cuttings. Also called sludging; sludging up. *Long* b. The act or process of filling the pores or cracks in the rock surrounding a borehole; also, to cause mud to adhere to the walls of a borehole. *Long*

mud viscosity

The property of a mud-laden fluid to resist flow due to internal friction and the combined effects of adhesion and cohesion; e.g., a Marsh funnel (used to measure the viscosity of

mud) will discharge 1 quart (0.95 L) of water in about 36 s, whereas an equal volume of an average drilling mud is discharged in 40 to 55 s or more from the same funnel. *Long*

mud volcano

An accumulation, usually conical, of mud and rock ejected by volcanic gases; also, a similar accumulation formed by escaping petroliferous gases. *AGI*

mud wall cake

a. See: [mud cake](#) b. The formation of mud in the drilling fluid by adhering to the wall of the hole. When the drilling mud particles comes in contact with porous, permeable formation, solid particles immediately enter the openings. This sealing property is dependent upon the amount and physical state of the colloidal material in the mud.

muffle

a. A semi-cylindrical or long, arched oven (usually small and made of fireclay), heated from outside, in which substances may be exposed at high temperature to an oxidizing atmospheric current, and kept at the same time from contact with the gases from the fuel. Cupellation and scorification assays are performed in muffles; on a larger scale, copper ores were formerly roasted in muffle furnaces. *Fay* b. An enclosure in a furnace to protect the ware from the flame and products of combustion. *ASTM*

muffle furnace

a. A furnace with an externally heated chamber, the walls of which radiantly heat the contents of the chamber. *McGraw-Hill, 1* b. A furnace in which heat is applied to the outside of a refractory chamber containing the charge. The charge may be held in a muffle, crucible retort, or other enclosure that is enveloped by the hot flame gases, and the heat must reach the charge by flowing through the walls of the container. *CTD; Newton, 1*

muffle kiln

a. An arched fireclay-lined furnace in which seggars are placed. *CTD* b. A kiln in which combustion of the fuel takes place within refractory muffles, which, in turn, conduct heat into the ware chamber. *ACSG, 2*

muffler

A muffler that concentrates on suppressing sound waves vibrating 200 to 2,000 times a second--the loudest and most objectionable ones created by rock drills. Because the muffler bypasses the lower frequencies, it does not interfere with the column of air that makes a pneumatic drill function.

mugearite

Orthoclase-bearing oligoclase basalt, with major olivine, accessory apatite, and opaque oxides. Pyroxene may or may not be present. See also: [trachyandesite](#)

mule

a. A small car, or truck, used to push cars up a slope or inclined plane. *Fay* b. See: [pusher](#) c. An extra worker who helps push the loaded cars out in case of an upgrade, etc.; from Joplin, Mo. *Fay*

mule's foot

Kansas. An extension bit used in boring coal. *Hess*

mule shoe

A short length of tubing coupled to the bottom of a drill string to wash and clean out sand or mud from a borehole, the washing action being aided by cutting off the bottom end of the tubing at an angle of 45 degrees to its longitudinal axis. Also called mud socket. *Long*

mule skinner

A mule driver. *Fay*

muleway

Heavily timbered passage between levels in a mine for the transfer of unattached mules from one level to the other. *Korson*

muller

a. Stone, iron shoe, or heavy steel rubbing disk, used to bear down upon rock in comminution. *Pryor, 3* b. A heavy grinding wheel that is the crushing and mixing member in a dry or wet pan. *ARI* c. See: [bucking iron](#)

mulling

Mixing sand and clay particles by a rolling, grinding, rubbing, or stirring action. *ASM, 1*

mullion structure

A wavelike pattern of parallel grooves and ridges, measuring as much as several feet from crest to crest, and formed on a folded surface or along a fault surface. CF: [slickensides](#)

mullite

An orthorhombic mineral consisting of an aluminum silicate that is resistant to corrosion and heat; used as a refractory. Also known as porcelainite. *McGraw-Hill, 1*

mullock

See: [muck](#)

multibucket excavator

A machine similar to a dredger used for excavating cuttings for roads, railways, or canals. One large machine of this type can dig 100 yd/h (91.4 m/h) on a slope 25 ft (7.62 m) high. *Hammond*

Multicut chain

Trade name for a coal-cutter chain designed for use with curved jibs. It is short pitch and of high flexibility. See also: [curved jib](#) *Nelson*

multideck cage

A cage containing two or more compartments or platforms to hold the mine cars supplies or workers. Every effort is made to keep the number of decks as low as possible for a given output in order to cut down the decking time and equipment at shaft top and bottom. See also: [deck](#) *Nelson*

multideck screen

A screen with two or more superimposed screening surfaces mounted rigidly within a common frame. *BS, 5*

multideck sinking platform

A sinking platform consisting of several decks to enable various shaft-sinking operations to be performed simultaneously. The bottom deck, in a three-deck platform, is usually suspended from four winch ropes which also act as guides for the kibles, and the middle and top decks are supported above the bottom deck by rigid supports. The top deck is used for the manipulation of the concrete buckets and for fixing the shuttering. The center deck is used by the workers when placing the concrete, while the bottom deck

carries telephone, blasting, lighting, and signaling cable drums. The lower side of the bottom deck may carry the equipment for manipulating the cactus grab. *Nelson*

multideck table

Shaking table with two or more superposed decks, independently fed and discharged but worked by one vibrating mechanism. *Pryor, 3*

multifuse igniter

A device employed to reduce the number of fuses to be lit by the miner before retiring to safety. By means of a multifuse igniter, it is possible to remotely fire stopes or headings primed with plain detonators and safety fuse. *Nelson*

multihearth furnace

Roasting furnace with several hearths vertically superposed. Material is raked downward by horizontally rotating rabblers, so as to work alternately to the periphery and center of successive hearths, encountering roasting heat as it gravitates downward. *Pryor, 3*

multijib cutter

A cutter loader with a number of horizontal jibs similar to a coal cutter. Loose coal is diverted onto the conveyor by gummer and plow plate. The machine is usually used in seams up to about 3 ft (0.9 m) in thickness with a clean roof parting. The depth of cut varies up to 4 ft (1.2 m). Coal degradation is considerable. *Nelson*

multilayer bit

A bit set with diamonds arranged in successive layers beneath the surface of the crown. CF: [impregnated bit](#); [surface-set bit](#). *Long*

multilock lode

Lode that occupies a shear zone. Such a zone has no definite walls, the ore gradually shading off into country rock. It is probable that the gold of some rich alluvial fields came from shear zones. *Nelson*

multilouvre dryer

A dryer whose moving element consists of two strands of roller chain with specially designed flights, suspended in such a way as to provide means for keeping the bed in a constantly flowing mass. The material flows in a shallow bed over the ascending flights and at the same time is gradually moved across the dryer from the feed point to the discharge point. The gases are pulled from the furnace and through the flowing bed of

coal. The entire area of the dryer is covered by suction from the exhaust fan. See also: [thermal drying](#)

multiphase

See: [polyphase](#)

multiple-arch dam

A lightweight dam constructed of repeated arches with axes sloping at about 45 degrees to the horizontal, the arches being carried on parallel buttress walls. *Hammond*

multiple-bench quarrying

The method of quarrying a rock ledge in a series of successive benches or steps. *Fay*

multiple detectors

Two or more seismic detectors whose combined output energy is fed into a single amplifier-recorder circuit. This technique is used to cancel undesirable near-surface waves. Syn: [multiple geophones](#); multiple recording groups. *AGI*

multiple dike

A dike made up of two or more intrusions of the same kind of igneous rock. *Billings*

multiple-entry system

A system of access or development openings, generally in bituminous coal mines, involving more than one pair of parallel entries, one for haulage and fresh air intake and the other for return air. Multiple-entry systems permit circulation of large volumes of air.

multiple-expansion engine

An engine driven by steam or compressed air expanding in two or more stages. *Hammond*

multiple fault

A structure consisting of several parallel faults in close proximity with no distortion. See also: [step fault](#)

multiple firing

Firing electrically with delay blasting caps in a number of holes at one time. *Mitchell*

multiple fuse-igniter cartridge

Consists of a cardboard cartridge about 2 in long with a 3/4-in (1.9-cm) outside diameter. The closed end is coated with black powder, and the ends of eight fuses are inserted in the cartridge, in contact with the powder. A master fuse is then inserted, which, when lit, burns to the powder and ignites it. The powder flares brightly and lights the eight fuses.
South Australia

multiple geophones

See: [multiple detectors](#)

multiple intersections

a. The intercepts that cross a vein, orebody, or other geologic feature, accomplished by drilling several auxiliary boreholes from a single, main, or parent borehole with the aid of wedges and similar deflecting devices. *Long* b. Intercepting a steeply dipping vein at various depths by changing the angle of the drill head.

multiple intrusion

Any type of igneous intrusion that has been produced by several injections separated by periods of crystallization. Chemical composition of the various injections is approx. the same. CF: [composite intrusion](#) *AGI*

multiple lines

A single line reeved around two or more sheaves so as to increase pull at the expense of speed. *Nichols, 1*

multiple openings

Any series of underground openings separated by rib pillars or connected at frequent intervals to form a system of rooms and pillars. *Obert*

multiple-ply plate

Steel plate made up of thicknesses of other plates of steel or steel and wrought iron welded together. *Mersereau, 2*

multiple recording groups

See: [multiple detectors](#)

multiple ribbon belt conveyor

A belt conveyor having a conveying surface of two or more spaced strands of narrow flat belts.

multiple-row blasting

The drilling, charging, and firing of several rows of vertical holes along a quarry or opencast face. The holes may be spaced in the square pattern with delay detonators in the rows as well as row by row. The spacing of the holes will vary according to their depth, diameter, and the type of rock. See also: [small-diameter blastholes](#)

multiple-seam mining

Mining two or more seams of coal, frequently close together, that can be mined profitably where mining one alone would not be profitable. *Coal Age*, 3

multiple seismometers

See: [bunched seismometers](#)

multiple series

A method of wiring a large group of blasting charges by connecting small groups in series and connecting these series in parallel. Syn: [parallel series](#)

multiple shooting

The firing of an entire face at one time. The holes are connected in a single series and all the holes shoot at the same instant. *Kentucky*

multiple shot

See: [battery of holes](#)

multiple-shot blasting unit

A multiple-shot blasting unit is designed for firing simultaneous explosive charges in mines, quarries, and tunnels. Syn: [blasting unit](#)

multiple shotholes

Two or more shotholes that are shot almost simultaneously. They are so spaced as to minimize near-surface interferences that mask desired signals if only one shothole is used. *AGI*

multiple-shot instrument

A borehole-survey instrument capable of taking and recording a series of inclination and bearing readings on a single trip into a borehole. CF: [single-shot instrument](#)

multiple-shot survey

A borehole survey using a multiple-shot instrument. *Long*

multiple sill

A sill made up of two or more intrusions composed of the same kind of igneous rock. *Billings*

multiple-speed floating control system

As used in flotation, a form of floating control system in which the manipulated variable may change at two or more rates each corresponding to a definite range of values of the actuating signal. *Fuerstenau*

multiple splitting

The parting or separation of a thick seam into more than two layers of coal. See also: [simple split seam](#)

multiple-strand chain

A roller chain made up of two or more strands assembled as a single structure on pins extending through the entire assembly. *Jackson, I*

multiple-strand conveyor

a. Any conveyor which employs two or more spaced strands of chain, belts, or cords as the load-supporting medium. b. Any conveyor in which two or more strands are used as the propelling medium connecting pans, pallets, etc.

multiple-strand rope

A wire rope designed to obviate spinning due to untwisting. It is formed by a series of layers of strands built around a center fiber core. Each layer of strands is given a lay opposite to that on which it is built, each layer thus tending to impart its own twist that is cancelled by the next layer. Therefore, this rope can be used for sinking or where a free load is to be lifted. The stretch with a multiple strand rope is not so great as with round strand and flattened strand ropes. See also: [multistrand rope](#); [wire rope](#). *Nelson*

multiple twin

See: [repeated twinning](#)

multiple-vent basalt

See: [shield basalt](#)

multiple wedge

See: [plug-and-feather method](#)

multiplow

A layout consisting of six or more plows, 220 lb (100 kg) each, 20 yd (18.3 m) apart on one rope or chain, feeding onto an armored conveyor; the load on the conveyor is well distributed. A driving unit is arranged at both ends of the face and operated alternately to impart a to-and-fro movement to the plows. The minimum workable seam thickness is 20 in (50.8 cm) at gradients from 0 degrees to 20 degrees ; maximum length of face is about 190 yd (174 m). See also: [Gusto multiplow](#)

multiplying constant

The constant, used in stadia work, by which the staff intercept is multiplied to determine the distance between the staff and the theodolite. The value is generally taken as 100. See also: [tachymeter](#) *Hammond*

multirope friction winder

A winding system based on the principles of the Koepe winder. The drive to the winding ropes is the frictional resistance between the ropes and the driving sheaves. Multirope friction winders are usually tower mounted, with either cages or skips, and provided with a counterweight. The sheaves are from about 6 to 12 ft (1.8 to 3.7 m) in diameter with a direct coupled or geared drive. Four ropes are favored and these operate in parallel and share the total suspended load. The system was introduced partly because of the difficulty of winding heavy loads from deep shafts with a single large-diameter winding rope. Modern winding ropes have become large and heavy, being 2-1/4 in (5.72 cm) in diameter locked coil, weighing 16.5 st (15 t) for a 1,000-yd (915-m) shaft; therefore, the introduction of the friction winder, with its counterweight, and using four smaller ropes side by side in place of one. Such ropes need be only 1-1/4 in (3.2 cm) in diameter to give equivalent breaking strain. See also: [Koepe winder](#) *Nelson*

multishot firing

The firing of a number of shots simultaneously. See also: [M](#)

multishot gyroscopic instrument

A borehole surveying instrument that can take a number of readings during its descent and ascent in the borehole. It comprises gyroscopic and photographic recording units; direction and inclination indicators; a timing clock, and other accessories. A movie film enables numerous records to be taken throughout the depth of the borehole. See also: [gelatin borehole tube](#)

multispectral scanner

A remote sensing device that is capable of recording data in the ultraviolet, visible, and infrared portions of the spectrum. Syn: [shuttle multispectral infrared radiometer](#) See also: [thematic mapper](#)

multistage fan

A fan having two or more impellers working in series. *BS, 8*

multistrand rope

A flexible, nonspinning rope; composed of concentric layers of strands of relatively fine wires, alternate layers of strands being wound in opposite directions over a hemp core. See also: [multiple-strand rope](#) *Sinclair, 5*

multiwheel roller

A heavy roller with pneumatic tires used to consolidate embankments. *Hammond*

mummification

The process of preservation of plant tissues under the influence of arrested decay. *Tomkeieff*

mun

Corn. Any fusible metal.

mundic

A drillers' term for pyrite. See also: [pyrite](#)

Munroe effect

The concentration of explosive effect (i.e. jetting) which occurs at a cavity at the end of an explosive charge; this effect is the basis of the design and performance of shaped charges.

muon

Contraction of mu-meson. An elementary particle with 207 times the mass of an electron. It may have a single positive or negative charge. *Lyman*

Murakami's reagent

An etching reagent developed for use in the investigation of the structure of iron-carbon-chromium alloys. It consists of a solution of 10 g potassium ferricyanide, 10 g potassium hydroxide, and 100 mL water. *Osborne*

murakite

A schistose rock composed of piedmontite and quartz. See also: [ollenite](#) *AGI*

murdochite

An isometric mineral, $\text{PbCu}_6\text{O}_8(\text{Cl,Br})_2$; rare; secondary; forms minute black octahedra.

Murex process

A flotation process that is not strictly of the same class as others, but still makes use of the principle of selective oiling of sulfide particles. The crushed ore is fed into an agitator and mixed with 4% to 5% of its weight of a paste made of one part of oil or thin tar with three or four parts of magnetic oxide of iron. This oxide must be ground to an impalpable powder. These ingredients, with enough water to make a pulp, are agitated for 5 to 20 min. The paste preferentially adheres to the sulfides because of the oil. The ore is then fed over magnets, and oxide of iron, with the mineral adhering to it, is pulled out. The oil and magnetite are then recovered. *Liddell*

Muschamp coal miner

A cutter loader which is essentially a conversion unit for Anderton shearer machines and designed to produce a reasonable percentage of large coal. The top and bottom of the seam are cut by rotating drums of small diameter while shearing the back of the cut with a narrow-kerf jib and chain. *Nelson*

muscovado

A term applied in Minnesota to rusty-colored outcropping rocks, such as gabbros and quartzites, that resemble brown sugar. Etymol: Spanish, brown sugar. *AGI*

muscovite

A monoclinic mineral, $\text{KAl}_2(\text{Si}_3\text{Al})\text{O}_{10}(\text{OH},\text{F})_2$; mica group; pseudo-hexagonal; perfect basal cleavage; forms large, transparent, strong, electrically and thermally insulating, stable sheets; a common rock-forming mineral in silicic plutonic rocks, mica schists, gneisses, and commercially in pegmatites; also a hydrothermal and weathering product of feldspar and in detrital sediments. Also spelled: muscovite. Syn: [isinglass](#); [white mica](#); [potash mica](#); [common mica](#); Muscovy glass; mirror stone. Sericite is fine-grained muscovite, commonly in connection with hydrothermal alteration, but sericite also includes paragonite and illite. Illite is a common syn. for fine-grained muscovite in clay mineralogy.

Muscovy glass

See: [muscovite](#)

mushroom jib

A standard form of coal cutter jib with a sprocket at the end remote from the machine. The sprocket carries a vertical turret or bar and is driven by the cutting chain. The bar makes a vertical cut at the back of the normal horizontal cut. See also: [turret jib](#)

muskeg

A bog, usually a sphagnum bog, frequently with grassy tussocks, growing in wet, poorly drained boreal regions, often areas of permafrost. Tamarack and black spruce are commonly associated with muskeg areas. Syn: [maskeeg](#)

mussel bed

A band containing or chiefly composed of mussel-like shells, very valuable in the correlation of Coal Measures strata. *Mason*

Musso process

A mixture of iron ore and fuel is reduced in an externally heated rotary retort. The gases are exhausted and constitute the fuel when the process has been started. The gases, after purification, are passed through combustion rings surrounding the retort and are burned according to the method of catalytic combustion. After reduction, the charge is cooled when it is poured through a layer of fluxing material; it is then transferred to a steelmaking furnace. *Osborne*

mustard gold

A spongy type of free gold found in the gossan above gold-silver-telluride deposits. *AGI*

mutabilite

A soft corklike bitumen of porous or resinous consistency. Partly soluble in organic solvents. *Tomkeieff*

muthmannite

A mineral, (Ag,Au)Te ; soft; heavy; gray-white; in tabular crystals with perfect cleavage; an ore mineral.

mutu

A Malayan term denoting the degrees of fineness of gold.

mutual boundary texture

A rock texture showing smooth, regular, curved contacts between minerals.
Schieferdecker

mvb

Abbrev. for medium-volatile bituminous. See also: [medium-volatile bituminous coal](#)

mylonite

A compact, chertlike rock without cleavage, but with a streaky or banded structure, produced by the extreme granulation and shearing of rocks that have been pulverized and rolled during overthrusting or intense dynamic metamorphism. Mylonite may also be described as a microbreccia with flow texture. See also: [cataclasite](#); [protomylonite](#); [mylonite gneiss](#); ultramylonite. *AGI*

mylonite gneiss

A mylonitic rock that has been partly recrystallized. See also: [augen schist](#); [cataclasite](#); [flaser gabbro](#); [mylonite](#); phyllonite. *AGI*

mylonitization

Deformation of a rock by extreme microbrecciation, due to mechanical forces applied in a definite direction, without noteworthy chemical reconstitution of granulated minerals. Characteristically the mylonites thus produced have a flinty, banded, or streaked appearance, and undestroyed augen and lenses of the parent rock in a granulated matrix. Also spelled mylonization. *AGI*

mylonization

See: [mylonitization](#)

myrickite

a. A white or gray chalcedony, opal, or massive quartz unevenly colored by, or intergrown with, pink or reddish inclusions of cinnabar, the color of which tends to become brown. The opal variety is known as opalite. b. Cinnabar intergrown with common white opal or translucent chalcedony.

myrmekite

An intergrowth of plagioclase feldspar (commonly oligoclase) and vermicular quartz, generally replacing potassium feldspar; formed during the later stages of consolidation in an igneous rock or during a subsequent period of plutonic activity. The quartz occurs as blobs. See: [vermicular quartz](#)

myrmekite antiperthite

Myrmekitelike intergrowth of predominant plagioclase and vermicular orthoclase. The wormlike forms of orthoclase are, as a rule, broader than those of quartz in the typical myrmekite. *Schieferdecker*

myrmekite perthite

Myrmekitelike intergrowth of microcline and vermicular plagioclase. *Schieferdecker*

N

N

A Diamond Core Drill Manufacturer's Association letter name for a range of diamond drill fittings intended to be used together with the appropriate casing having an inside diameter of 81 mm or somewhat less. *Cumming, 2*

nablock

A rounded mass, as of flint in chalk, or of ironstone in coal. *Standard, 2*

nacre

The hard, iridescent internal layer of various mollusk shells, having unusual luster and consisting chiefly of calcium carbonate in the form of aragonite deposited as thin tablets normal to the surface of the shell and interleaved with thin sheets of organic matrix. Syn: [pearly](#); mother-of-pearl. *AGI*

nacreous

Adj. Applied to the luster of certain minerals, usually on crystal faces parallel to a good cleavage, the luster resembling that of pearls. *CMD*

nacrite

A monoclinic mineral, $\text{Al}_2\text{Si}_2\text{O}_5(\text{OH})_4$; kaolinite-serpentine group; differs from other kaolinites, such as triclinic kaolinite and monoclinic dickite, in the stacking order of its layers (polytypy); fine-grained, massive; commonly associated with hydrothermal alteration.

nadir

a. The point on the celestial sphere that is directly beneath the observer and directly opposite the zenith. *AGI* b. The point on the ground vertically beneath the perspective center of an aerial-camera lens. *AGI*

nadorite

An orthorhombic mineral, PbSbO_2Cl ; an uncommon secondary mineral; in resinous to adamantine crystals in some base-metal deposits.

naetig

Industrial diamond having a grain in all directions instead of in regular layers. CF: [feinig](#)

nagyagite

A possibly orthorhombic mineral, $\text{Pb}_5\text{Au}(\text{Te,Sb})_4\text{S}_{5-8}$; occurs with other tellurides in lamellar, soft, heavy, lead-gray crystals; one perfect cleavage but may form anhedral masses. Syn: [black tellurium](#)

nahcolite

A monoclinic mineral, NaHCO_3 ; forms small, white, highly soluble, prismatic crystals; in nonmarine evaporite deposits; esp. abundant in parts of the Green River lake beds of Colorado.

naif

adj. Said of a gemstone having a true or natural luster when uncut; e.g., of the natural, unpolished faces of a diamond crystal. Also spelled naife.

nail

a. See: [shooting needle](#) b. A slender piece of metal, one end of which is pointed, the other end having a head, either flattened or rounded. It is a common means of fastening together several pieces of wood or other material by striking the head with a hammer. The term penny as applied to nails refers to the number of pounds per 1,000 nails; e.g., six-penny nail means 6 lb (2.7 kg) per 1,000; three-penny means 3 lb (1.4 kg) per 1,000, etc. *Crispin*

nailhead spar

A composite variety of calcite having the form suggested by the name. *Fay*

naked

See: [bare](#); blank hole.

name of lode

The name by which a lode is designated in the notice of location, and subsequent addition thereto is immaterial. The same vein or lode may have different names in different mining locations. *Ricketts*

nanotesla

See: [gamma](#)

Nansen bottle

An oceanographic water-sampling bottle, made of a metal alloy that is little reactive with seawater, equipped with a rotary valve at each end so that when it is rotated at depth the valves close and lock shut, entrapping a water sample and setting the reversing thermometers. This bottle is named for its designer, Fridtjof Nansen. *Hy*

nantokite

An isometric mineral, CuCl ; granular, massive; cubic cleavage; adamantine luster; an uncommon secondary mineral in copper deposits.

naphtha

a. An archaic term for liquid petroleum. *AGI* b. Designates those hydrocarbons of the lowest boiling point (under 250 degrees C) that are liquid at standard conditions, but easily vaporize and become flammable. They are used as cleaners and solvents. *AGI*

naphtha gas

Illuminating gas charged with the decomposed vapor of naphtha. *Standard, 2*

naphthode

Concretion of bituminous limestone rich in carbonaceous matter. *Tomkeieff*

Napierian logarithm

A natural logarithm. *Webster 3rd*

napoleonite

A variety of hornblende. *Standard, 2*

nappe

a. A sheetlike, allochthonous rock unit, which has moved on a predominantly horizontal surface. The mechanism may be thrust faulting, recumbent folding, or both. The term was first used for the large allochthonous sheets of the western Alps, and it has been adopted into English. The German equivalent, *decke*, is also sometimes used in English. Etymol: French, cover sheet, tablecloth. Syn: [decke AGI](#) b. Belg. See: [aquifer](#)

naphthoid

Liquid petroleumlike product found in cavities of igneous rocks and assumed to be a product of thermal distillation of bituminous substances contained in the country rocks. *Tomkeieff*

narrow

a. A roadway driven in the solid coal with rib sides. All roadways when opening out a pillar method of working are narrow. See also: [working the whole](#) b. N. of Eng. A gallery, or roadway, driven at right angles to a drift, and not quite so large in area. *Fay*

narrow gage

A railway gage narrower than the standard gage of 4 ft 8-1/2 in (1.44 m). *Hammond*

narrow place

Aust. Working place that is less than 6 yd (5.5 m) wide; these are paid for by the yard in length. *Fay*

narrow stall

A stall driven in solid coal, usually from 6 to 9 ft (1.8 to 2.7 m) wide; it has rib sides in coal. See also: [rib-side](#); [solid road](#). *Nelson*

narrow work

a. The driving of narrow stalls to form coal pillars as the first stage in the pillar-and-stall method of working. *Nelson* b. A system of mining in which narrow coal roadways, called endings, are driven along the strike of the seam, from 12 to 15 yd (11.0 to 13.7 m) apart, to a limit line. The long narrow coal pillars between the endings are extracted on the retreat. It has been adopted in parts of Yorkshire and Lancashire, England. See also: [endings](#); [main endings](#). *Nelson* c. All work for which a price per yard of length driven is paid, and which, therefore, must be measured. Any dead work. *Fay* d. Penn. Headings, chutes, crosscuts, gangways, etc., or the workings previous to the removal of the pillars. *Fay* e. A working place in coal only a few yards in width. *Fay*

narrow working

See: [bord-and-pillar method](#); narrow work.

nascent

Just formed by a chemical reaction, and therefore very reactive. Nascent gases are probably in an atomic state. *CTD*

Nasmyth hammer

A steam hammer, having the head attached to the piston rod, and operated by the direct force of the steam. *Fay*

Na-spar

See: [soda spar](#)

National coarse thread

The screw thread of common use, formerly known as the United States Standard thread. *Crispin*

National Electrical Code

A set of rules to guide electricians when installing electrical conductors, devices, and machinery. *Crispin*

national grid

Gr. Brit. A system of rectangular coordinates used by the Ordnance Survey and based upon the Transverse Mercator Projection (which is also known as the Gauss Conformal Projection). *BS*, 7

national grid coordinates

Gr. Brit. Coordinates, referred to the National Grid of the Ordnance Survey, which are specified in meters and consist of two components, an Easting and a Northing. *BS*, 7

Nationalization Act

The Coal Industry Nationalization Act, 1946, which brought all coal mines in the United Kingdom under public ownership. It was passed through Parliament in July 1946 and put into operation on January 1, 1947. *Nelson*

National Physical Laboratory

British government organization that, among other things, tests and certifies calibration of scientific glassware, weights, and measures. Abbrev. NPL. *Pryor*, 3

native

- a. Occurring in nature, either pure or uncombined with other substances. Usually applied to metals, such as native mercury, native copper. Also used to describe any mineral occurring in nature in distinction from the corresponding substance formed artificially.
- b. Adj. Applied to earth materials occurring in elemental form; e.g., nugget gold, metallic copper. Syn: [native element](#)

native copper

- a. Metallic copper, sometimes containing a little silver and bismuth, that occurs as a metasomatic deposit filling cracks and forming the cement of sandstone and conglomerate. Such deposits have been found in the Keweenaw Peninsula, Lake Superior, MI, USA; Chile; Queensland, Australia; and Zimbabwe. Native copper is also found in the upper workings of copper mines.
- b. A mineral in the form of particles and nuggets of very pure metallic copper associated (but not alloyed) with small amounts of silver and arsenic minerals. It is found in small amounts in many copper ores but occurs in commercial quantities in only one place in the world, the Upper Peninsula in Michigan. See also: [copper](#)

native element

Element that occurs in nature uncombined, such as nugget gold, metallic copper, etc. See also: [native](#)

native mercury

See: [quicksilver](#)

native nickel-iron

See: [awaruite](#); josephinite.

native water

See: [formation water](#)

natrite

A monoclinic mineral, NaCO_3 ; occurs in very soluble, white, granular masses; a rare mineral in the alkalic complexes of the Kola peninsula, Russia.

natrium

See: [sodium](#)

natrochalcite

A monoclinic mineral, $\text{NaCu}_2(\text{SO}_4)_2(\text{OH})\cdot\text{H}_2\text{O}$; bright emerald-green; forms steep pyramidal crystals; a secondary copper mineral at Chuquicamata, Chile.

natrojarosite

A trigonal mineral, $\text{NaFe}^{3+}_3(\text{SO}_4)_2(\text{OH})_6$; alunite group; in earthy masses and minute scales; a common alteration product in pyrite-bearing deposits. Formerly called utahite.

natrolite

An orthorhombic mineral, $\text{Na}_{16}[\text{Al}_{16}\text{Si}_{24}\text{O}_{80}]\cdot 16\text{H}_2\text{O}$; zeolite group, which may contain appreciable calcium; dimorphous with tetranatrolite; forms acicular to slender prismatic crystals in cavities and veins, esp. in mafic and alkaline igneous rocks. Syn: [laubanite](#)

natromontebrasite

A triclinic mineral, $(\text{Na,Li})\text{Al}(\text{PO}_4)(\text{OH,F})$; amblygonite group; in granitic pegmatites associated with other lithium minerals. Formerly called fremontite.

natron

A monoclinic mineral, $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$; very soluble; forms earthy or granular crusts and efflorescences; in nonmarine evaporites and on lavas.

natrona

See: [sodium sesquicarbonate](#)

natron granite

Granite abnormally high in soda, presumably from the presence of a soda-rich orthoclase or of anorthoclase. It is also called soda granite.

nattle

Eng. To make a slight rattling or tapping noise. Said of a mine when movement or settling is taking place. *Webster 3rd; Fay*

natural air crossing

An air crossing in which two airways are separated by rock in its natural state. *BS, 8*

natural asphalt

Asphalt before crushing or refining, as mined or quarried in the case of natural rock asphalt, or surface-excavated in the case of lake deposits. *Hammond*

natural carbon

Carbon found in a shape that has not been artificially modified. Also called natural stone. *Long*

natural cement

A hydraulic cement produced by pulverizing and then heating naturally occurring rock (cement rock) containing appropriate proportions of limestone, clay, magnesia, and iron. Ignition temperatures are usually lower than for portland cement. Final pulverizing is necessary as with portland cement.

natural coke

Coke made by natural processes, usually by the intrusion of an igneous dike. See also: [cinder coal](#); [clinker](#); [coke coal](#); [cokeite](#). *Hess*

natural convection

See: [convection](#)

natural diamond

This abrasive is the densest form of crystallized carbon, the hardest substance known. It occurs most commonly as well-developed crystals in volcanic pipes or in alluvial deposits. Bort (boart or borts) sometimes refers to all diamonds not suitable for gems, or it may refer to off-color, flawed, or impure diamonds not fit for use for gems or most other industrial applications, but suitable for the preparation of diamond grain and powder for use in lapping or the manufacture of most diamond grinding wheels. This type of bort is also called crushing bort or fragmented bort. *ACSG*, 2

natural Earth current

Electric current in the Earth not due to human activity. *Schieferdecker*

natural face

A name given to the X direction as pencilled on Z sections of unfaced quartz and whose position is determined by X-ray measurements or etching. The name is also given to the artificial prism face (parallel to 1120) thus located, and produced by sawing the section in the YZ plane. Also applied to the natural growth faces on faced raw quartz crystals. *Am. Mineral.*, 2

natural floatability

See: [inherent floatability](#)

natural frequency

The frequency of free oscillation of a system. For a multiple-degree-of-freedom system, the natural frequencies are the frequencies of the normal modes of vibration. *Hy*

natural frequency of a foundation

The frequency of free vibration of a complete soil-foundation oscillating system. This frequency must differ distinctly from that of any machinery carried by the foundation if resonance is to be avoided. *Hammond*

natural frequency vibrating conveyor

A vibrating conveyor in which the rate of free vibration of the trough on its resilient supports is approx. the same as the rate of vibration induced by the driving mechanism.

natural gamma radiation detector

This is a type of sensor that measures bursts of high-energy electromagnetic waves that are emitted spontaneously by some naturally occurring radioactive elements, such as potassium-40, thorium-232, and uranium-238, that are commonly present in shales and clays. *Mowrey*

natural gamma-ray logging

A process whereby gamma rays naturally emitted by formations traversed by a borehole are measured. A tool containing a radiation detector is lowered into the borehole and gamma ray measurements are transmitted to the Earth's surface. The signals are utilized to produce a record of gamma rays detected in correlation with the depth of the detector in the borehole. The record thus obtained in the form of a curve indicating relative number per unit of time of natural gamma rays at different depths, is a conventional natural gamma-ray log, sometimes simply called a gamma-ray log. *Williams*

natural gas

A mixture of the low-molecular-weight paraffin series hydrocarbons methane, ethane, propane, and butane, with small amounts of higher hydrocarbons; also frequently containing small or large proportions of nitrogen, carbon dioxide, and hydrogen sulfide, and occasionally small proportions of helium. Methane is almost always the major constituent. Natural gas accompanying petroleum always contains appreciable quantities of ethane, propane, butane, as well as some pentane and hexane vapors, and is known as wet gas. Dry gas contains little of these higher hydrocarbons. The exact composition of natural gas varies with locality. The heating value of natural gas is usually over 1,000 Btu/ft³ unless nitrogen or carbon dioxide are important components of the gas. See also: [gas](#); [sour gas](#). *CCD, 2*

natural glass

A vitreous, amorphous, inorganic substance that has solidified from magma too quickly to crystallize. Granitic or acid natural glass includes pumice and obsidian; an example of a basaltic natural glass is tachylite. *AGI*

natural logarithm

A logarithm with e as a base. *Webster 3rd*

naturally bonded molding sand

A term used by foundrymen to refer to a sand that, as mined, contains sufficient bonding material for molding purposes. *Osborne*

natural ore

a. In iron mining, the term given to naturally occurring high-grade iron ore; consists of: (1) soft ore, such as porous hematite and limonite (goethite) with minor magnetite and manganese oxides; and (2) hard ores, such as compact, fine-grained, steel-gray hematite, specular hematite, magnetite, or martite. Syn: [direct shipping ore](#) b. Iron ore that contains moisture, in contrast to "dry ore" that has been dried but not calcined. *USBM, 7* c. A term used in the U.S. Lake Superior mining district to indicate iron ore formed by natural processes, as distinguished from iron ore products (such as pellets) produced artificially from hard, low-grade ores of the taconite type. Published prices for natural ores from this district usually specify iron content as "natural," meaning that the analysis is based on gross weight including moisture. Syn: [lump ore](#); [silicious ore](#); high-silica ore; wash ore; heavy-media ore; manganese ore; natural ore concentrate; lean ore; paint-rock ore; Mesabi non-Bessemer ore.

natural ore concentrate

See: [natural ore](#)

natural paper

Brownish paperlike deposit formed from the filaments of *Conferva*. *Tomkeieff*

natural resin

See: [resin](#)

natural sand

Sand derived from a rock, in which the grains separate along their natural boundaries. This includes unconsolidated sand or a soft sandstone where little pressure is required to separate the individual grains. *Osborne*

natural scale

Applied to a drawing made to equal vertical and horizontal scales. *Hammond*

natural slope

The maximum angle at which loose material in a bank or spoil heap will stand without slipping. See also: [angle of rest](#); [angle of slide](#). *Nelson*

natural splitting

In mine ventilation, a practice that allows the airflow to divide among the branches of its own accord and without regulation, in inverse relation to the resistance of each airway. CF: [controlled splitting](#) *Hartman, 2*

natural stress relief

The failure of the skin rock of an excavation by crushing, shear, or plastic flow. It can occur on free surface rock with explosive force. See also: [arching](#)

natural ventilating pressure

a. In a mine, air returning from the workings to the surface via the upcast shaft can be of a higher temperature than the air in the downcast shaft because of heat added to the ventilation current from the strata exposed in the mine. Thus, even in a mine with the fan stopped, the upcast air density is less than the downcast air density. This lack of balance in the two vertical air columns produces a pressure difference across the shaft bottom doors known as natural ventilating pressure. *Roberts, 1* b. The ventilating pressure that produces natural ventilation. *BS, 8*

natural ventilation

The ventilation produced in a mine as a result of a difference in density of the air in the upcast and downcast shafts, brought about by natural causes. Natural ventilation is feeble, seasonal, and inconstant. *Nelson*

nauckite

A variety of resin. *Tomkeieff*

naumannite

An orthorhombic mineral, Ag_2Se ; pseudocubic; black; lustrous; forms heavy, sectile granular masses; also in thin plates; epithermal; a major source of silver in some deposits.

nautical chart

A representation on a horizontal plane, and according to a definite system of projection, of a portion of the navigable waters of the Earth, including the shorelines, the topography of the bottom, and aids and dangers to navigation; it may be derived from hydrographic, topographic, or aerial surveys, or a combination thereof. *Seelye, 2*

nautical measure

One nautical mile or knot equals 6,080.20 ft (1,853.248 m); 3 nmi equal 1 league; and 60 nmi equal 1 degree of longitude (at the equator). *Crispin*

nautical mile

Any of various units of distance, used for sea and air navigation, based on the length of a minute of arc of a great circle of the Earth and differing because the Earth is not a perfect sphere: (1) a British unit that equals 6,080 ft or 1,853.2 m; also called Admiralty mile; (2) a U.S. unit, no longer in official use, that equals 6080.20 ft or 1,853.248 m; and (3) an international unit that equals 6,076.1033 ft or 1,852 m; used officially in the United States since July 1954. *Webster 3rd*

navajoite

A monoclinic mineral, $(V,Fe)_{10}O_{24} \cdot 12H_2O$; rare; weakly radioactive; soft; a fibrous mineral with a silky luster; associated with corvusite, hewettite, tyuyamunite, rauvite, steigerite, and limonite.

Navier's hypothesis

An assumption in the design calculation of beams. It states that the stress at any point due to bending is assumed as being proportional to its distance from the neutral axis. *Hammond*

NCB

The National Coal Board of the United Kingdom. *Nelson*

NCB boring tower

A boring tower developed by the National Coal Board of the United Kingdom to make test drillings for coal from positions off the coast. When drilling is in progress, the tower is resting on the seabed. The base is divided into four airtight sections, which are filled with water when the tower is in position for drilling. The water is pumped out to give buoyancy when the tower is refloated for towing to a new drilling site. The tower is designed to withstand gales of 80 mph (128 km/h) and waves of 30 ft (9.1 m) from crest to trough, and it can be used in any depth of water up to 120 ft (36.6 m). The overall height of the tower is 189 ft (57.6 m), and its total weight is about 570 st (517 t). It has reached over 3,000 ft (915 m) drilling depth with core recovery. The first borehole was put down in the Firth of Forth, Scotland. *Nelson*

NCB recorder

This butane combustible gases recorder has a small flame of burning butane gas, which is controlled to give constant heat output with varying ambient temperature and humidity, and with varying butane gas pressure. The heat output is measured by means of a group of thermocouples in a chimney above the flame. The presence of methane in the atmosphere, which has access to the flame via suitable gauzes, increases the voltage generated by the thermocouples. These changes are recorded on a rotating chart calibrated in percentage methane. *Roberts, I*

neap tide

In oceanography, a high tide occurring at the moon's first or third quarter, when the sun's tidal influence is working against the moon's, so that the height of the tide is below the maximum in the approximate ratio of 3:8. *CTD*

nearest neighbor interpolation method

A method of assigning a sample value to a point in space. The value assigned is equal to the value of the spatially nearest sample data point. This method is sometimes used as a computer equivalent of the polygonal method of interpolation.

near-gravity material

A washability term popularly defined as the percentage of material in the raw coal within + or -0.1 of the separating specific gravity. *Nelson*

near-mesh

Near-sized; grains close in cross section to a specified screening mesh, which tend to blind apertures and slow down sizing. Syn: [near-mesh material](#)

near-mesh material

Material approximating in size to the mesh aperture. *BS, 5*

neat

Cement slurries containing no aggregate, such as sand or gravel. Syn: [neat cement](#)

neat cement

A slurry composed of any cement and water. Syn: [neat cement](#) *Brantly, 1*

neat lines

The excavation lines of a tunnel within which the rock removed is paid for at the agreed contract rate. See also: [overbreak](#)

nebulite

A type of mixed rock whose fabric is characterized by indistinct, streaky inhomogeneities or schlieren and in which no sharp distinction can be made between the component parts of the fabric. Adj: nebulitic. *AGI*

neck

a. A lava-filled conduit of an extinct volcano exposed by erosion; also called chimney rock or plug. See also: [plug](#) b. A pipe of igneous rock crossing bedding planes. *Mason* c. The narrow entrance to a room next to the entry, or a place where the room has been narrowed on account of poor roof. *Fay* d. A narrow stretch of land, such as an isthmus or a cape. *Webster 3rd* e. A narrow body of water between two larger bodies; a strait. *Webster 3rd*

needle

a. A piece of copper or brass about 0.5 in (1.3 cm) in diameter and 3 ft or 4 ft (0.9 m to 1.2 m) long, pointed at one end, and turned into a handle at the other, tapering from the handle to the point. It is thrust into a charge of blasting powder in a borehole, and while in this position the borehole is tamped solid, preferably with moist clay. The needle is then withdrawn carefully, leaving a straight passageway through the tamping for the miner's squib to shoot or fire the charge. *Fay* b. A timber set on end to close an opening for the control of water; it may be either vertical or inclined; a form of stop plank. *Seelye, I* c. A small metal rod for making the touchhole in the powder used for blasting. d. A hitch cut in the side rock to receive the end of a timber. e. A needle-shaped or acicular mineral crystal.

needle bearing

An antifriction bearing using very small-diameter rollers between wide faces. *Nichols, I*

needled

Pocketed, as when face bars are set with the face end of the bar pocketed into the coal adjacent to the roof. *TIME*

needle instrument

Any surveying instrument controlled by a magnetic needle. See also: [compass](#)

needle ore

a. Iron ore of very high metallic luster, found in small quantities, which may be separated into long, slender filaments resembling needles. *AGI* b. See: [aikinite](#)

needles

Elongated crystals, tapering at each end to a fine point, as those typical of martensite. *Rolfe*

needle traverse

In a survey with a dial (compass), use of a magnetic needle to read the bearing of lines. Opposite is fast needle traverse or work, and refers to the use of a dial as in traversing with a theodolite, where proximity of iron might deflect the needle. Systems can be combined, using needle readings where iron is absent. Also called swinging needle traverse; loose needle traverse. *Pryor, 3*

negative crystal

a. A birefringent crystal in which the refractive index of the extraordinary ray is less than that of the ordinary ray. b. A cavity within a crystal bounded by the crystal faces of that crystal. See also: [inclusion](#); [three-phase inclusion](#).

negative element

A large structural feature or portion of the Earth's crust, characterized through a long period of geologic time by frequent and conspicuous downward movement (subsidence, submergence), extensive erosion, or an uplift that is considerably less rapid or less frequent than those of adjacent positive elements. *AGI*

negative elongation

Lathlike, rodlike, or acicular crystals in which the slow polarized light ray lies across the long direction of the crystal. CF: [positive elongation](#)

negative moment

See: [hogging moment](#)

negative rake

a. The orientation of a cutting tool in such a manner that the angle formed by the leading face of the tool and the surface behind the cutting edge is greater than 90 degrees. Syn: [drag rake](#) See also: [gouge angle](#) b. Describes a tooth face in rotation whose cutting edge lags the surface of the tooth face. CF: [rake](#)

negligence

In a legal sense, a failure upon the part of a mine operator to observe for the protection of the interests of the miner that degree of care, precaution, and vigilance that the circumstances justly demand, whereby the miner suffers injury. *Ricketts*

neighborite

An orthorhombic mineral, NaMgF_3 ; insoluble; forms rounded grains or pseudo-octahedral crystals; associated with dolomite and quartz in oil shale within the Green River Formation, UT.

nekton

A biological division made up of all the swimming animals found in the pelagic division.
Hy

Nelson Davis separator

A cylindrical dense-medium washer developed in the United States. It uses a magnetite water suspension as medium. The bath resembles a drum in shape, its longitudinal axis being horizontal; within the stationary outer casing there is a rotor divided into compartments. Raw coal is fed near the top of the separator, and separation takes place as the rotor revolves. The machine produces clean coal and shale; the magnetite is recovered. It can handle coal up to 10 in (254 mm) in size, the lower limit being about 1/4 in (6.4 mm). Magnetite consumption runs at about 1/2 lb/st (0.25 kg/t) of feed. See also: [Leebar separator](#)

nelsonite

A rock composed essentially of ilmenite and apatite, with or without rutile. The ratio of ilmenite to apatite varies widely. CF: [ilmenite](#)

nematoblastic

Pertaining to the texture of a recrystallized rock in which the shape of the grains is threadlike. See also: [fibroblastic](#)

neokerogen

Organic debris deposited among marine sediments and modified by bacterial action in such a way as to form the source material of petroleum, or, under certain conditions, to form the kerogen of oil shales. *Tomkeieff*

neolite

A silky, fibrous, stellated, green, hydrous magnesium-aluminum silicate. *Standard, 2*

Neolithic

In archaeology, the last division of the Stone Age, characterized by the development of agriculture and the domestication of farm animals. Correlation of relative cultural levels

with actual age (and, therefore, with the time-stratigraphic units of geology) varies from region to region. Adj: pertaining to the Neolithic. *AGI*

neomesselite

See: [messelite](#)

neomineralization

Chemical interchange within a rock whereby its mineral constituents are converted into new mineral species; a type of recrystallization. *AGI*

neomorphic

Said of the mineral grains of a rock that have been regenerated by zones of secondary growth in crystalline continuity. The new material may have been deposited from solutions or from molten fluids.

neoprene plug closure

The function of the neoprene plug is to provide a completely waterproof seal at the open end of the detonator. Moisture penetration could cause desensitization of the explosive charge in the detonator, and in the case of copper-tubed detonators, moisture could produce a potentially dangerous chemical reaction between the lead azide and the copper. *McAdam, 2*

nepheline

A hexagonal mineral, $(\text{Na,K})\text{AlSiO}_4$; feldspathoid group; greasy luster; forms glassy crystals, colorless grains, coarse crystals with prismatic cleavage, or masses without cleavage; occurs in alkalic igneous rocks; an essential constituent of some sodium-rich rocks, e.g., nepheline syenite. Formerly called nephelite; eleolite.

nepheline syenite

A plutonic rock composed essentially of alkali feldspar and nepheline. It may contain an alkali ferromagnesian mineral, such as an amphibole (riebeckite, arfvedsonite, barkevikite) or a pyroxene (acmite or acmite-augite); the intrusive equivalent of phonolite. Sodalite, cancrinite, hauyne, and nosean, in addition to apatite, sphene, and opaque oxides, are common accessories. Rare minerals are also frequent accessories. Syn: [foyaite](#); [eleolite syenite](#); [midalkalite](#). *AGI*

nephelinite

A fine-grained or porphyritic extrusive or hypabyssal rock, of basaltic character, but primarily composed of nepheline and clinopyroxene, esp. titanaugite, and lacking olivine and feldspar. *AGI*

nephelinitoid

A nepheline-rich groundmass in an igneous rock; the glassy groundmass in nepheline rocks. *AGI*

nephelinization

The process of introduction of or replacement by nepheline. *AGI*

nephelometry

The measurement of the cloudiness of a medium; esp. the determination of the concentration or particle sizes of a suspension by measuring, at more than one angle, the scattering of light transmitted or reflected by the medium. CF: [turbidimetry](#)

nephrite

An exceptionally tough, compact, fine-grained, greenish or bluish variety of amphibole (specif. tremolite or actinolite) constituting the less rare or valuable kind of jade. Syn: [kidney stone](#); [greenstone](#).

neptunian dike

A dike filled by sediment, generally sand, in contrast to a plutonic dike filled by volcanic materials. See also: [sand dike](#)

neptunian theory

See: [neptunism](#)

neptunism

The theory, advocated by A. G. Werner in the 18th century, that the rocks of the Earth's crust all consist of material deposited sequentially from, or crystallized out of, water. Etymol: Neptune, Roman god of waters. CF: [plutonism](#)

neptunite

A monoclinic mineral, $\text{KNa}_2 \text{Li}(\text{Fe},\text{Mn})_2 \text{Ti}_2 \text{Si}_8 \text{O}_{24}$; forms red to black prismatic crystals; occurs in late stages of reduced, silica-deficient environments; e.g., alkaline igneous rocks and veins in serpentinite. See also: [mangan-neptunite](#)

neritic

Pertaining to the shallow seas; for accumulations of shells, but sometimes for the whole environment of deposition on the continental shelf. *Challinor*

neritic zone

That part of the sea floor extending from the low tide line to a depth of 200 m.

Nernst film

In ion exchange, the diffusion-layer supposed to surround a bead of resin. This static film is reduced, or diffusion through it is accelerated, if agitation of the ambient liquor is increased, if temperature is raised, or if concentration of ions in solution is made greater. *Pryor, 3*

nero-antico

A black marble found in Roman ruins, probably from the Taenarian peninsula, Greece.

nesquehonite

An orthorhombic mineral, $Mg(HCO_3)(OH) \cdot 2H_2O$; forms low-temperature efflorescences, particularly as an alteration product of lansfordite. Named for a coal mine at Nesquehoning, PA.

ness

A British term used esp. in Scotland for a promontory, headland, or cape, or any point or projection of the land into the sea; commonly used as a suffix to a place name, e.g., Fifeness. Also called nose. *AGI*

nest

a. A concentration of some relatively conspicuous element of a geologic feature, such as a nest of inclusions in an igneous rock or a small, pocketlike mass of ore or mineral within another formation. *AGI* b. A fitting of the next-smaller-size casing inside the casing already set in a borehole, or of one tube inside another.

nested variogram model

A model that is the sum of two or more component models, such as nugget, spherical, etc. Adding a nugget component to one of the other models is the most common nested model, but more complex combinations are occasionally used.

net

a. Scot. Strapping used for lowering or raising horses in shafts. *Fay* b. A plane of points each with identical point surroundings. CF: [space lattice](#); lattice.

net calorific value

The heat produced by combustion of unit quantity of a solid or liquid fuel when burned, at a constant pressure of 1 atm (0.1 MPa), under conditions such that all the water in the products remains in the form of vapor. Net heat of combustion at constant pressure is expressed as Q_p (net). *ASTM*

net-corrected fill

Net fill after making allowance for shrinkage during compaction. *Nichols, 1*

net cut

The amount of excavated material to be removed from a road section, after completing fills in that section. *Nichols, 1*

net drilling time

The rotating time actually spent in deepening a borehole. (Long, 1960)

net fill

The fill required, less the cut required, at a particular station or part of a road. *Nichols, 1*

nether

The lower part of, as in nether roof; opposite of the term "upper." *TIME*

nether roof

a. The strata directly over a coal seam. The props set at the face hold only the nether roof. E.g., if the props carry a load of 20 st (18.1 mt) each and are set 4 ft (1.2 m) apart each way, the supported weight is 1.5 st/ft² (14.6 t/m²). See also: [underweight](#); absolute roof; overarching weight; immediate roof. *Nelson* b. In mine subsidence, the immediate roof of limited depth, such as timber might be expected to support. *Briggs*

nether strata

The roof and strata immediately above the coal. *Mason*

net slip

On a fault, the distance between two formerly adjacent points on either side of the fault, measured on the fault surface or parallel to it. It defines both the direction and relative amount of displacement. *AGI*

net texture

See: [network structure](#)

Nettleton method

An indirect means of density determination in which a closely spaced gravity traverse is run over some topographic feature, such as a small hill or valley. When the profile of observed values is plotted, the gravitational effect of the feature itself is calculated at each observation point along the profile and removed from the observed value for that point. The calculation is repeated a number of times, different densities being assumed for each computation. The density value at which the hill is least conspicuous on the gravity profile is considered to be most nearly correct. *Dobrin*

net unit value

The difference between the gross unit recoverable value and the cost of mining, treating, and marketing ore; in other words, the net operating profit. See also: [gross recoverable value](#); [gross unit value](#). *Nelson*

network

a. Esp. in surveying and gravity prospecting, a pattern or configuration of stations, often so arranged as to provide a check on the consistency of the measured values. *AGI* b. In ventilation surveys, the multiple development openings, haulage ways, and working faces that constitute the ventilation system of a mine. *Hartman, 2*

network deposit

See: [stockwork](#)

network structure

A structure in which one constituent occurs primarily at the grain boundaries, thus partially or completely enveloping the grains of the other constituent. Syn: [net texture](#)

Neuenburg saw

A plow consisting of a 2-in (5.1-cm) steel plate 6 ft by 20 in (1.8 m by 50.8 cm) of seven pieces hinged together to follow floor rolls; picks on the face edge cut in both directions. The minimum workable seam is 14 in (35.6 cm) on gradients of 35 degrees to 70 degrees. Maximum face length is 80 yd (73.2 m). The machine is used in the Ruhr. *Nelson*

neuk

The tailgate corner of a face behind the face conveyor tension end. *Trist*

Neumann lamellae

Straight, narrow bands parallel to the crystallographic planes in the crystals of metals that have been subjected to deformation by sudden impact. They are actually narrow twin band, and are most frequently observed in iron. *CTD*

neuropteris

A large tree-fern of the coal forest, with trunks about 2 ft (0.6 m) thick, containing several cylinders of wood inside the stem instead of one column of wood as in modern trees. *Nelson*

neutral atmosphere

Atmosphere in which there is neither an excess nor a deficiency of oxygen.

neutral axis

The line of zero fiber stress in any given section of a member subject to bending; it is the line formed by the intersection of the neutral surface and the section. *Roark*

neutral equilibrium

A body is said to be in neutral equilibrium if on being slightly displaced it remains in its new position; e.g., a ball placed on a horizontal surface or a cone supported on its side on a horizontal surface. *Morris*

neutralize

To add either an acid or alkali to a solution until it is neither acid nor alkaline. *Gordon*

neutral lining

Furnace lining of neutral refractories. *Osborne*

neutral point

a. A neutral point in a wye-connected alternating-current power system means the connection point of transformer or generator windings from which the voltage to ground is nominally zero, and which is the point generally used for system grounding. b. In titration, the point at which hydrogen ions and hydroxyls are approx. balanced, each at about 1×10^{-7} molar. Since color-change-indicating dyes do not all react at this point, selection for a given titration must be made with regard to the required point of change. *Pryor, 3*

neutral pressure

The hydrostatic pressure of the water in the pore space of a soil. See also: [pore-water pressure](#); [pore pressure](#); [neutral stress](#). *Hammond*

neutral refractory

a. A refractory that is neither strongly basic nor strongly acid, such as chrome, mullite, or carbon. *ARI* b. A refractory that is resistant to chemical attack by both acid and basic slags, refractories, or fluxes at high temperatures. *ASTM*

neutral salt

A salt in which all the hydrogen of the hydroxyl groups of an acid is replaced by a metal. *Standard, 2*

neutral salt effect

Reduction of ionization of a weak acid or base by addition of ionizing salt that contains one of the ions already present; form of common ion effect. *Pryor, 3*

neutral stress

The stress transmitted by the fluid that fills the voids between particles of a soil or rock mass; e.g., that part of the total normal stress in a saturated soil caused by the presence of interstitial water. Syn: [pore pressure](#); [pore-water pressure](#); [neutral pressure](#). *AGI*

neutral surface

The longitudinal surface of zero fiber stress in a member subject to bending; it contains the neutral axis of every section. *Roark*

neutral zone

A strain-free area. CF: [compression zone](#); [tension zone](#). *Nelson*

neutron

An uncharged elementary particle with a mass that nearly equals that of the proton. An isolated neutron is unstable and decays with a half-life of about 13 min into an electron, a proton, and a neutrino. Neutrons sustain the fission chain reaction in a nuclear reactor. *Lyman*

neutron density

The number of neutrons per cubic centimeter. *Lyman*

neutron-gamma log

A radioactivity log employing both gamma and neutron-log curves. The neutron log should respond best to porous fluid-filled rock and the gamma best to shale markers. *AGI*

neutron log

Strip recording of the secondary radioactivity arising from the bombardment of the rocks around a borehole by neutrons from a source being caused to move through the borehole. Used, generally in conjunction with other types of logs, for the identification of the fluid-bearing zones of rocks. See also: [radioactivity log](#); [neutron logging](#). *Inst. Petrol.*; *AGI*

neutron logging

A radioactivity logging method used in boreholes in which a neutron source provides neutrons that enter rock formations and induce additional gamma radiation, which is measured by use of an ionization chamber. The gamma radiation so induced is related to the hydrogen content of the rock. *AGI*

Nevadan orogeny

Late Jurassic-Early Cretaceous diastrophism in Western North America.

nevyanskite

A former name for iridosmine. See also: [iridosmine](#)

Newark Supergroup

Continental strata of Lower Jurassic or Upper Triassic age in the Eastern United States, consisting essentially of red sandstone, shale, arkose, and conglomerate, some 14,000 to 18,000 ft (4.3 to 5.5 km) thick. The series includes black shales with fish remains, thin coal seams in Virginia and North Carolina, and basaltic flows and sills. *CTD*

Newaygo screen

A slanting screen in which the material to be screened passes down. The screen is kept in vibration by the impact of a large number of small hammers. *Liddell*

newjersite

Variety of resin. *Tomkeieff*

Newlyn datum

The mean sea level now used as the British Ordnance Datum for leveling. It was determined as the result of several years' observations at Newlyn, Cornwall, England, and differs at various places by more than 0.3 m from levels based on the Liverpool datum, which it supersedes. *Hammond*

Newmann hearth

A modified Scotch hearth in which poking or rabbling is done mechanically. *CTD*

new miner training

In mining, mandatory training given the miners having no previous mining experience; includes instruction in the statutory rights of miners and their representatives, use of self-rescue devices and respiratory devices where appropriate, hazard recognition, emergency procedures, electrical hazards, first aid, walk around training, and other health and safety aspects of the tasks to which the person will be assigned. CF: [refresher training](#); [task training](#). *Federal Mine Safety*

new sand

Newly mixed, but not unused, molders' sand. *Standard, 2*

new scrap

The material generated in the manufacturing process of articles for ultimate consumption; it includes defective castings, clippings, turnings, borings, drosses, slags, etc., that are returned directly to the manufacturing process or sold directly for reprocessing.

Newtonian fluid

Term marking the distinction, made in mineral processing that involves agitation, between a truly viscous (Newtonian) liquid and one in which shear or apparent viscosity (pseudoviscosity) varies with the dimensions of the containing system and the speed of agitation. The latter type of fluid is said to be non-Newtonian. *Pryor, 3*

Newton's law of gravitation

See: [law of gravitation](#)

New York rod

A leveling rod marked with narrow lines, ruler fashion. *Nichols, 1*

N-frame brace

A diagonal brace in a square set. *Fay*

ngavite

A chondritic stony meteorite composed of bronzite and olivine in a friable, breccialike mass of chondrules. *AGI*

niccolite

A former name for nickeline. Also spelled nicolite. Syn: [arsenical nickel](#); [copper nickel](#).

Nicholls' technique

A technique used in the determination of elastic constants of rock in situ. Longitudinal and shear waves are generated in rock by small explosive charges in shallow drill holes. Accelerometers and strain gages are employed to measure arrival times for both waves. From wave velocities and measured density, Poisson's ratio, modulus of elasticity, modulus of rigidity, Lamé's constant, and bulk modulus can be calculated. *Lewis*

nickel

a. An isometric mineral, elemental Ni; hard; metallic; silver-white; a native metal, esp. in meteorites; also alloyed with iron in meteorites. b. A silvery white, hard, malleable, ductile, somewhat ferromagnetic element. Symbol: Ni. It takes on a high polish and is a fair conductor of heat and electricity. Used for making stainless steel and other corrosion-resistant metals and is chiefly valuable for the alloys it forms. Also used extensively in coinage, in desalination plants for converting sea water into fresh water, and in making nickel steel for armor plate and burglar-proof vaults. *Handbook of Chemistry and Physics, 3*

nickel antimony glance

Sulfantimonide of nickel, crystallizing in the cubic system. Also called ullmannite. *CMD*

nickel bloom

A green hydrated and oxidized patina on rock outcrops indicating the existence of primary nickel minerals; specif. annabergite (a nickel arsenate). The term is also applied to zaraitite (a nickel carbonate) and to morenosite (a nickel sulfate). See also: [annabergite](#)

nickel carbonyl

A volatile compound of nickel, $\text{Ni}(\text{CO})_4$, formed by passing carbon monoxide over the heated metal. The compound is decomposed into nickel and carbon monoxide by further heating. It is used on a large scale in industry for the production of nickel from its ores by the Mond process. *CTD*

nickel glance

See: [gersdorffite](#)

nickel green

See: [annabergite](#)

nickeliferous

Containing nickel.

nickeline

a. A hexagonal mineral, $2[\text{NiAs}]$; commonly contains antimony, cobalt, iron, and sulfur; one of the chief ores of nickel. Formerly called: niccolite; nickelite; arsenical nickel; copper nickel; kupfernickel. b. The mineral group breithauptite, frebaldite, imgreite, langisite, nickeline, sederholmite, sobolevskite, stempflite, and sudburyite.

nickel iron

a. A mineral, NiFe , containing about 76% nickel and found in meteorites. Isometric. *Dana, 4* b. The native alloy of nickel with iron in meteorites. See also: [kamacite](#); [taenite](#).

nickelite

A former name for nickeline. See also: [nickeline](#)

nickel ocher

An early name for annabergite. *Fay*

nickelous oxide

a. NiO; green, becoming yellow. Found in nature as the mineral bunsenite. Soluble in acids and in ammonium hydroxide; insoluble in water; sp gr, 6.6 to 6.8. NiO absorbs oxygen at 400 degrees C forming Ni₂O₃ which is reduced to NiO at 600 degrees C. Used in nickel salts and in porcelain painting. *CCD*, 2 b. Isometric; green to black; molecular weight, 74.71; melting point, 1,990 degrees C; sp gr, 6.67. Used for painting on china. *Bennett; Handbook of Chemistry and Physics*, 2

nickel oxide

Comprises the two nickel oxides, nickelous oxide (NiO) and nickelic oxide (Ni₂O₃), which are used extensively as colorants in glasses, glazes, and enamels. The use of nickel oxide in enamels is generally in the ground coat, in which it is used with cobalt and manganese. It is also used in cover coat enamels to give what is known as a daylight shade for reflector units. Nickelic oxide imparts a color to glass which is dependent upon the character of the alkali present. Nickelous oxide is used in glazes to produce blues, greens, browns, and yellows. Nickel oxide is also one of the principal components of certain type of ferrites, e.g, the nickel-zinc ferrite. See also: [nickelous oxide](#)

nickel plating

The deposition of a coating of metallic nickel by electrolysis. *Nelson*

nickel pyrite

See: [millerite](#)

nickel-skutterudite

An isometric mineral, NiAs₂₋₃; isostructural with skutterudite; tin white; in intermediate-temperature hydrothermal veins, particularly in association with Co, Ni, Fe arsenides, sulfarsenides, and native silver. Syn: [white nickel](#)

nickel vitriol

See: [morenosite](#)

nicking

a. The cutting of a vertical groove in a seam to liberate coal after it has been holed or undercut. *Nelson* b. Used in wire-rope terminology to describe the internal crosscutting of wires within a rope. *Sinclair*, 5 c. The chipping of coal along the rib of an entry or room, which is usually the first indication of a squeeze. *Fay* d. A vertical cutting or shearing one side of a face of coal. Also called cut; cutting. *Fay*

nickings

Newc. The small coal produced in making a nicking. See also: [bug dust](#); makings. *Fay*

nicol

a. Nicol prism. b. Any apparatus that produces polarized light, e.g., Nicol prism or Polaroid. See also: [polar](#); [polarizer](#).

nicolite

A former name for nickeline. See also: [nickeline](#)

Nicol prism

A special prism for producing polarized light, made from two pieces of Iceland spar (calcite) cemented together with Canada balsam. Light entering the prism is split into two polarized rays; of these, the ordinary ray is totally reflected at the balsam layer while the extraordinary ray is able to pass through the prism. In a petrological microscope two Nicol prisms are incorporated. See also: [polarizing prism](#)

Niggli's classification

a. A classification of igneous rocks on the basis of their chemical composition, similar in some respects to the norm system. It was proposed in 1920 by the Swiss mineralogist Paul Niggli. *AGI* b. A classification of ore deposits, the major groups being plutonic, or intrusive, and volcanic, or extrusive. It was proposed in 1929. *AGI*

night emerald

See: [evening emerald](#)

night pair

Corn. Miners who work underground during the night. The night shift. *Fay*

night shift

The coal miners' shift from about 12:00 p.m. to 8:00 a.m. It may be a coal-winning shift, but in general it is a preparation or maintenance shift. *Nelson*

nigritite

A product of the coalification of fix bitumens rich in carbon; insoluble or only slightly soluble in organic solvents. It is subdivided into polynigritite, humonigritite, exinonigritite, and keronigritite. *Tomkeieff*

nil

Nothing; zero. Often used in reporting gold and silver assays. *Webster 3rd; Fay*

nine-inch straight

A standard 9-in by 4-1/2-in by 2-1/2-in (22.9-cm by 11.4-cm by 6.4-cm) straight brick.

nine-point sample

Final sample taken for test when a small quantity of finely ground mineral is required for assay. A suitable quantity of dry material is thoroughly mixed on glazed cloth or paper, if necessary, being rolled lightly with a round bottle to break down any floccules. It is then flattened to a disk and eight equal segments are marked out diametrically with a spatula. Approx. equal quantities are taken from each segment and from the center, making the nine points of withdrawal. *Pryor, 3*

ningyoite

An orthorhombic mineral, $(U,Ca,Ce)_2(PO_4)_2 \cdot 1-2H_2O$; rhabdophane group; occurs in an unoxidized zone of the Ningyo-toge Mine, Tottori prefecture, Japan.

niobite

See: [columbite](#)

niobium

A shiny, white, soft, and ductile metallic element. Symbol, Nb (niobium) or Cb (columbium). The name niobium was adopted by the International Union of Pure and Applied Chemistry. Many chemical societies and government organizations refer to it as niobium, but most metallurgists, metals societies, and commercial producers still refer to the metal as columbium. Found in niobite (or columbite), niobite-tantalite, pyrochlore, and euxenite. Used as an alloying agent in carbon and alloy steels, in nonferrous metals, and in superconductive magnets. Syn: [columbium](#) *Handbook of Chemistry and Physics, 3*

niobium boride

One of several compounds that have been reported, including the following: NbB_2 ; melting point, 3,050 degrees C; sp gr, 7.0; thermal expansion, 5.9×10^{-6} parallel to a and 8.4×10^{-6} parallel to c; NbB , melting point, 2,300 degrees C; sp gr, 7.6; Nb_3B_4 melts incongruently at 2,700 degrees C; sp gr, 7.3. *Dodd*

niobium nitride

One of three nitrides that have been reported: NbN, Nb₂N, and Nb₄N₃. During reaction between niobium and N₂ at 800 to 1,500 degrees C the product generally consists of more than one compound. Most of the phases are stable at least to 1,500 degrees C. *Dodd*

nip

a. Where the roof and the floor of a coal seam come close together pinching the coal between them. CF: [want](#) b. The contact ends of a cable for quick attachment to a power cable. *BCI* c. The device at the end of the trailing cable of a mining machine used for connecting the trailing cable to the trolley wire and ground. *Jones, I* d. To move a machine along a track by sliding the nip along the trolley wire. *Hess* e. The seizing of material between the jaws or rolls of a crusher. *Nichols, I* f. See: [angle of nip](#) g. To cut grooves at the end of a bar, to make it fit more evenly. h. An undercutting notch in rock, particularly limestone, along a seacoast between high- and low-tide levels produced by erosion or possible solution. *AGI*

niperyth

See: [penthrite](#)

nipple

A tubular pipe fitting usually threaded on both ends and under 12 in (30.5 cm) in length. Longer pipe is regarded as cut pipe. See also: [close nipple](#)

Ni-resist

A cast iron consisting of graphite in a matrix of austenite. It contains 3.0% carbon, 14.0% nickel, 6.0% copper, 2.0% chromium, and 1.5% silicon; it has a high resistance to growth, oxidation, and corrosion. *CTD*

nital

See: [Boylston's reagent](#)

niter

An orthorhombic mineral, 4[KNO₃]; water soluble; has a cooling salty taste; a product of nitrification in most arable soils in hot, dry regions, and in the loose earth forming the floors of some natural caves. CF: [nitratine](#)

niter cake

Crude sodium sulfate, a byproduct in the manufacture of nitric acid from sodium nitrate. *Fay*

nitrate

a. A salt of nitric acid; e.g., silver nitrate or barium nitrate. *Standard, 2* b. A mineral compound characterized by a fundamental anionic structure of NO_3^- . Soda niter, NaNO_3 , and niter, KNO_3 , are nitrates. CF: [carbonate](#); [borate](#). *AGI* c. Salts formed by the action of nitric acid on metallic oxides, hydroxides, and carbonates. Readily soluble in water and decompose when heated. The nitrates of polyhydric alcohols and the alkyl radicals explode violently. *CTD*

nitratine

A trigonal mineral, NaNO_3 ; rhombohedral cleavage; water soluble with a cooling taste; occurs only in very arid regions. Formerly called soda niter.

nitrification

The formation of nitrates by the oxidation of ammonium salts to nitrites (usually by bacteria) followed by oxidation of nitrites to nitrates. It is one of the processes of soil formation. *AGI*

nitro

An abbrev. for nitroglycerin or dynamite.

nitrocalcite

A monoclinic mineral, $\text{Ca}(\text{NO}_3)_2 \cdot 4\text{H}_2\text{O}$; water soluble; soft; occurs as an efflorescence, e.g., on walls and in limestone caves. Syn: [wall saltpeter](#)

nitrocellulose

Nitric acid esters of cellulose formed by the action of a mixture of nitric and sulfuric acids on cellulose. The cellulose can be nitrated to a varying extent, ranging from two to six nitrate groups in the molecule. Nitrocellulose having a low nitrogen content, up to the tetranitrate, is not explosive. They dissolve in ether-alcohol mixtures and in so-called lacquer solvents, such as butyl acetate. A nitrocellulose having a high nitrogen content is guncotton, an explosive. The principal nitrocellulose plastic is celluloid. Syn: [cellulose nitrate](#)

nitrocotton

A chemical combination of ordinary cotton fiber with nitric acid. It is explosive, highly inflammable, and in certain degrees of nitration, soluble in nitroglycerin.

nitrogelatin

See: [gelatin dynamite](#)

nitrogen

Colorless, tasteless, odorless, relatively inert element. Symbol, N. Nitrogen makes up 78% of the air, by volume. From this inexhaustible source it can be obtained by liquefaction and fractional distillation. Used in the production of ammonia and nitric acid, as a blanketing medium in the electronics industry, as a refrigerant, in annealing stainless steel, in drugs, and for forcing crude oil from oil wells. *Handbook of Chemistry and Physics, 3*

nitrogen fixation

a. Extracting nitrogen from the air in commercial quantities for use in agriculture or industry. b. In a soil, the conversion of atmospheric nitrogen to a combined form by the metabolic processes of some algae, bacteria, and actinomycetes. *AGI*

nitroglycerin

$\text{CH}_2 \text{NO}_3 \text{CHNO}_3 \text{CH}_2 \text{NO}_3$; pale yellow; flammable; explosive; thick liquid; soluble in alcohol; soluble in ether in all proportions; slightly soluble in water; melting point, 13.1 degrees C; and explosion point, 256 degrees C. Used as an explosive, in the production of dynamite and other explosives, as an explosive plasticizer in solid rocket propellants, and as a possible liquid rocket propellant. Molecular weight, 227.09; triclinic or orthorhombic when solid; sp gr, 1.5918 (at 25 degrees C, referred to water at 4 degrees C); soluble in methanol and in carbon disulfide; very soluble in chloroform; and slightly soluble in petroleum ether. This highly explosive liquid is made by mixing sulfuric acid and nitric acid in a steel tank and then adding glycerin. Its great shattering effect has made it esp. suitable for shooting oil wells. Because of its sensitiveness to shock, liquid nitroglycerin is dangerous to transport and unsuitable for use in mining and quarrying operations. Syn: [glycerol trinitrate](#); [trinitrate glycerol](#); [trinitrin](#); explosive oil. *CCD, 2; Handbook of Chemistry and Physics, 2; Lewis*

nitroglycerin explosive

An explosive containing, principally, nitroglycerin, nitrocotton, and inorganic nitrates, with a suitable combustible absorbent giving a balanced composition. *Nelson*

nitroglycerin powder

Explosive usually characterized by a low nitroglycerin content, up to 10% , and a high ammonium nitrate content of 80% to 85%, with carbonaceous material forming the remainder of the composition. This composition produces a powdery consistency and, consequently, nitroglycerin powders have relatively poor water-resistance properties, so that they should be used only in dry conditions. Their storage properties are fairly good,

but this is largely dependent on the protection given after manufacture, for example, in the methods of cartridgeing and packing. The main application of these explosives is in quarrying and mining where the ground to be blasted is relatively soft. *McAdam, 2*

nitrohydrochloric acid

See: [aqua regia](#)

nitrolite

An excellent and cheap explosive in powder form, consisting of the constituents ammonium nitrate + trotyl + nitroglycerin + silicon. *Fraenkel*

nitromagnesite

A monoclinic mineral, $Mg(NO_3)_2 \cdot 6H_2O$; water soluble; white; an efflorescence in limestone caverns.

nitromuriatic acid

See: [aqua regia](#)

nitrostarch explosive

Nitrostarch explosives have been used to a limited extent for over 50 years. When these explosives were first introduced, nitrostarch was the principal explosive ingredient in their composition. Of recent years, because of the trend toward the low-sensitivity, noncap sensitive nitrocarbonitrates and ammonium nitrate-oil mixtures, certain grades of explosives are being produced with low amounts of sensitizers. Some of these explosives today contain a very large percentage of ammonium nitrate, and nitrostarch is used only in small quantities to act as a sensitizer. *Pit and Quarry*

nitrosubstitution

The act or process of introducing by substitution the nitryl radical, NO_2 , in place of one or more replaceable hydrogen atoms, such as in an organic compound. Nitrosubstitution compounds are used in the manufacture of some explosives. *Standard, 2*

nitrosulfuric acid

An exceedingly corrosive mixture of one part by weight of nitric acid and two parts by weight of sulfuric acid. Used in the manufacture of nitroglycerin. *Standard, 2*

nitrous oxide

A gas with the chemical formula, N_2O ; molecular weight, 46; sp gr, 1.6. This gas is produced by the blasting of certain nitroglycerine explosives, esp. if there is incomplete detonation. It is also produced in the exhaust of diesel locomotives. It is used as an anesthetic in dentistry and is commonly known as laughing gas. *Morris*

niveau surface

See: [equipotential surface](#)

noble

a. A term used to express great value or purity, as in a noble metal (e.g., platinum); or inertness, as in a noble gas (e.g., helium). See also: [noble gas](#); [noble metal](#). b. An adj. usually modifying "metal" or "gas" and referring to those elements which do not normally combine with oxygen or other non-metallic elements under near-surface conditions; thus they commonly occur as native elements (or alloys). The metals usually included are gold, silver, platinum, palladium, ruthenium, iridium, rhodium, and osmium; the gases are helium, neon, argon, krypton, xenon, and radon. Other elements found in their native states, such as sulfur, copper, or mercury, are not noble because they spontaneously (even though slowly) oxidize.

noble gas

A rare inert gas: helium, neon, argon, krypton, xenon, and radon. Syn: [inert gas](#)

nobleite

A monoclinic mineral, $CaB_6O_9(OH)_2 \cdot 3H_2O$; tabular or mammillary; transparent; formed by the weathering of colemanite and priceite in Death Valley, CA.

noble metal

A metal with marked resistance to chemical reaction, particularly to oxidation and to solution by inorganic acids. The list includes mercury and the precious and platinum-group metals. CF: [base metal](#) See also: [noble](#)

no-cut rounds

In blasting underground, drilling all holes straight into the face. *Lewis*

nodular

a. Composed of nodules; e.g., nodular bedding consisting of scattered to loosely packed nodules in matrix of like or unlike character. *AGI* b. Having the shape of a nodule, or

occurring in the form of nodules; e.g., nodular ore such as a colloform mineral aggregate with a bulbed surface. *AGI* c. Orbicular. *AGI*

nodular cast iron

A cast iron that has been treated while molten with a master alloy containing an element, such as magnesium or cerium, to produce primary graphite in the spherulitic form. See also: [iron](#)

nodular structure

See: [orbicular structure](#)

nodule

a. A small, irregularly rounded knot, mass, or lump of a mineral or mineral aggregate, normally having a warty or knobby surface and no internal structure, and usually exhibiting a contrasting composition from the enclosing sediment or rock; e.g., a nodule of pyrite in a coalbed, a chert nodule in limestone, or a phosphatic nodule in marine strata. Nodules can be separated as discrete masses from the host material. *AGI* b. One of the widely scattered concretionary lumps of manganese, cobalt, iron, and nickel found on the floors of the world's oceans; esp. a manganese nodule. Etymol: Latin nodulus, small knot. CF: [concretion](#) *AGI* c. A rounded material accretion built of successive layers, of easily handled size. *Pryor*, 3 d. A small, rounded, irregularly shaped mass, as those of graphite in malleable cast iron. *Rolfe*

nodulizing

a. The forming of rounded shapes by the application to fine coal of a gyratory, rotary, or oscillatory motion, without the use of pressure. *BS*, 5 b. See: [balling](#)

noise

a. Any undesired sound. *NCB* b. By extension, any unwanted disturbance such as undesired electric waves in any transmission channel or device. *NCB* c. In gravity and magnetic prospecting, disturbances in observed data due to more or less random inhomogeneities in surface and near-surface material. *AGI* d. In seismic prospecting, all recorded energy not derived from the explosion of the shot. Sometimes loosely used for all recorded energy except events of interest. *AGI*

noise level

In observed or recorded data, the fluctuations not attributable to signals. *AGI*

noise reduction rating

A measure of a hearing protector's effectiveness in reducing noise such as results from mining operations where drilling, cutting, blasting, etc. create high noise levels. Abbrev. NRR. *MSHA*, 2

nolanite

A hexagonal mineral, $(V,Fe,Ti)_{10}O_{14}(OH)_2$; rare; forms tabular prisms and plates; associated with uranium ores at Beaverlodge, SK, Canada, and with native gold and various tellurides at Kalgoorlie, Western Australia.

nominal area

Of a screen, the total area of the screen deck exposed to the flow of the material feed. *BS*, 5

nominal bandwidth

In a filter, the difference between the nominal upper and lower cutoff frequencies. This difference may be expressed in cycles per second, as a percentage of the pass-band center frequency, or as the difference between the upper and lower cutoffs in octaves. *Hy*

nominal capacity

A notional figure expressed in tons per hour used in the title of a flowsheet and in general descriptions of the plant, applying to the plant as a whole and to the specific project under consideration. It may be taken as representing the approximate tonnage expected to be supplied to the plant during the hour of greatest load. *BS*, 5

nominal price

An estimate of the price for a future month date which is used to designate a closing price when no trading has taken place in that date. Also used for current price indications in similar circumstances in physical trading. *Wolff*

nominal screen aperture

- a. A nominal mesh aperture used to designate the result of a screening operation. *BS*, 5
- b. A notional size at which it is intended to divide a feed by a screening operation. Syn: [nominal screen size](#)

nominal screen size

See: [nominal screen aperture](#)

nominal size

The limit or limits of particle size used to describe a product of a sizing operation. *BS, 5*

nomogram

A type of line chart that graphically represents an equation of three variables, each of which is represented by a graduated straight line. It is used to avoid lengthy calculations; a straight line connecting values on two of the lines automatically intersects the third line at the required value. Syn: [nomograph](#)

nomograph

See: [nomogram](#)

nonangular unconformity

See: [disconformity](#)

nonasphaltic pyrobitumen

Any of several species of pyrobitumens, including dark-colored, comparatively hard and nonvolatile solids, composed of hydrocarbons containing oxygenated bodies, infusible and largely insoluble in carbon disulfide. This includes peat, coal, and nonasphaltic pyrobitumen shales. *Tomkeieff*

nonbanded coal

Coal that does not display a striated or banded appearance on the vertical face. It contains essentially no vitrain and consists of clarain or durain, or of material intermediate between the two. *AGI*

non-Bessemer ore

Ore containing up to about 0.18% phosphorus. *Newton, 1*

noncaking coal

Coal that does not form cake; namely hard, splint, cherry, and durain coal. *Tomkeieff*

noncaving method

Any of several stoping methods, including open stopes, sublevel, shrinkage, cut-and-fill, and square set. *Lewis*

noncoal mine

A mine in which the material being mined is incombustible or contains at least 65% by weight of incombustible material, and in which the underground atmosphere in any open workings contains less than 0.25% by volume of flammable gas. *CFR, 2*

noncoking coal

A bituminous coal that burns freely without softening or any appearance of incipient fusion. The percentage of volatile matter may be the same as for coking coal, but the residue is not a true coke. *Fay*

noncombustible

Any material that will neither ignite nor actively support combustion in air at 1,200 degrees F (649 degrees C) when exposed to fire. See also: [incombustible](#)

nonconformable

Pertaining to the stratigraphic relations shown by a nonconformity. *AGI*

nonconformity

a. An unconformity developed between sedimentary rocks and older rocks (plutonic igneous or massive metamorphic rocks) that had been exposed to erosion before the sediments covered them. The restriction of the term to this usage was proposed by Dunbar & Rodgers (1957). Although the term is well known in the classroom, it is not commonly used in practice (Dennis, 1967). *AGI* b. A term that formerly was widely, but is now less commonly, used as a syn. of angular unconformity, or as a generic term that includes angular unconformity. Term proposed by Pirsson (1915). *AGI*

nonconsumable-electrode arc melting

A method of arc melting in which a carbon or tungsten electrode is used and the sponge metal to be melted is fed into the arc at the proper rate. *Newton, 1*

noncore bit

See: [plug bit](#)

noncore drilling

Drilling a borehole without taking core. *Long*

noncoring bit

A general type of bit made in many shapes that does not produce a core and with which all the rock cut in a borehole is ejected as sludge. Used mostly for blasthole drilling and in the unmineralized zones in a borehole where a core sample is not wanted. Also called blasthole bit; plug bit. CF: [fishtail bit](#); [roller bit](#). Syn: [blind bit](#)

nondestructive testing

Methods of examination, usually for soundness, which do not involve destroying or damaging the material or part being tested. It includes radiological examination, magnetic inspection, etc. Also called nondestructive inspection. *Rolfe*

nondiamond core drill

A rotary or percussive-type drill equipped with core-cutting tools or bits, the cutting points of which are not inset with diamonds. *Long*

nonel

See: [nonelectric blasting](#)

nonelectric blasting

The firing of one or more charges using safety fuse, igniter cord, detonating cord, shock or gas tubing, or similar nonelectric materials to initiate a blasting cap. Syn: [nonel](#) shock tube system. *Federal Mine Safety*

nonelectric delay blasting cap

A detonator with an integral delay element and capable of being initiated by miniaturized or regular detonating cord. *CFR, 1*

nonferrous

Of, or relating to, a metal or compound that does not contain appreciable quantities of iron; ores that are not processed primarily for their iron content.

nonferrous alloy

Specif., an alloy containing no iron. Generically, any alloy that has as its base any element other than iron. Common commercial nonferrous alloys are based upon aluminum, copper, lead, magnesium, nickel, tin, and zinc. *Henderson*

nonferrous metallurgy

That branch of metallurgy that deals with the broad field of metals other than iron, or alloys other than of iron base. CF: [ferrous metallurgy](#) *Henderson*

nonferrous metals

a. Classification of metals that are not commonly associated with alloys of iron, including base metals, precious metals, and light metals. b. In singular form, an alloy that has as its base metal a metal other than iron, e.g., copper, lead, aluminum, etc.

nonflowing well

A well that yields water at the ground surface only by means of a pump or other lifting device. See also: [artesian well](#)

nonfreezing explosive

Explosive to which 15% to 20% of nitroethylene glycol has been added. This acts as a freezing-point depressant and prevents freezing at ordinary temperatures. Polar or Arctic explosives are nitroglycerin explosives of this type. *Higham*

nongraded sediment

a. In geology, detrital sediment, loose or cemented, containing notable amounts of more than one grade; e.g., loam or boulder clay. Syn: [poorly sorted](#) b. In engineering, sediment in which the constituent particles are all of nearly the same size. *Stokes*

nonhardening salt

Salt containing substantial quantities of impurities such as calcium and/or magnesium chloride, which are highly deliquescent and prevent caking. *Kaufmann*

nonluminous flame

Hydrogen, carbon monoxide, or aerated coal gas flames. *Francis, 2*

nonmagnetic rod

A drill rod made of brass, aluminum, or other metal unaffected by magnetism. *Long*

nonmagnetic steel

Steel alloyed with 12% or more of manganese, chromium, or nickel. Such an alloy cannot be removed from a passing stream of ore by an ordinary guard magnet. Magnetic permeability is below 1.05. *Pryor, 3*

nonmetal

A chemical element (as boron, carbon, phosphorus, nitrogen, oxygen, sulfur, chlorine, or argon) that is not classed as a metal because it does not exhibit most of the typical metallic properties. An element that, in general, is characterized chemically by the ability to form anions, acidic oxides and acids, and stable compounds with hydrogen. *Webster 3rd*

nonmetallic

a. Of or pertaining to a nonmetal. *AGI* b. Said in general of mineral lusters other than metallic luster. CF: [submetallic luster](#) c. An industrial mineral; usually used in the plural. *AGI*

nonmetallic armor

A tough outer covering or cable sheath of rubber, rubber compound, or thermoplastic, designed to protect cable conductors and insulation from abrasion or other damage from external sources. *USBM, 2*

nonmetallic mineral

a. In resource usage, "nonmetallic mineral" refers to the nonmetallic character of the product, not the mineralogy. Thus graphite is a nonmetallic mineral and molybdenite is "metallic" even though the minerals graphite and molybdenite are so similar in appearance that they may be confused in a casual inspection. Examples include: asbestos, barite, cement, feldspar, gem stones, helium, kyanite, perlite, salt, soda ash, and vermiculite, and even extending to mineral fuels. CF: [metallic](#) b. In mineral usage, the luster of a nonopaque mineral, which transmits light at least through the thinnest edges and in thin section.

nonmetallic minerals

Minerals are conveniently divided into metallic and nonmetallic groups, and then arranged in subdivisions according to the elements which form their main constituents. The nonmetallic minerals (carbon, diamond, coals, bitumen, asphalt, boron, sulfur, rock salt, etc.) lack the properties of the metallic minerals such as a bright metallic luster, hardness, density, and good conduction of heat and electricity. *Nelson*

non-metallic minerals

Rocks, minerals, and select naturally occurring and synthetic materials of economic value, exclusive of fuel and metallic ore minerals. The select materials include peat, mineral-derived materials such as lime and cement, and synthetic versions of gemstones, abrasives, graphite, and calcite. Generally, non-metallic minerals undergo no chemical or

mineralogical alteration for and in their end-uses; are low-price, high-volume commodities such as construction materials; are higher-priced and large-volume commodities that are raw materials in the chemical and agricultural industry; and very high price but very low volume materials such as gemstones. A characteristic of non-metallic minerals is that, in most cases, they maintain their form and physical properties through processing to final end use. See also: [industrial minerals](#) *AGI; Indust. Miner.*

non-Newtonian flow

Flow in which the relationship of the shear stress to the rate of shear strain is nonlinear; i.e., flow of a subsurface in which viscosity is not constant. *AGI*

nonnitrolycerin explosive

Explosive containing TNT instead of nitrolycerin to sensitize ammonium nitrate; a little aluminum powder may also be added to increase power and sensitiveness. Straight TNT-ammonium nitrate explosives usually contain 15% to 18% TNT and 82% to 85% ammonium nitrate. TNT-ammonium nitrate explosives have densities between 1.0 g/cm³ and 1.2 g/cm³ and velocities of detonation between 3,200 m/s and 4,000 m/s. They are reasonably free from noxious fumes. This type of explosive is susceptible to moisture and should be used only in dry conditions unless packed in sealed containers. The main use of non-nitrolycerin explosives is in primary blasting in quarries and opencast mining, although they are used in some underground work, particularly in ironstone mining. The combination of high strength and relatively high velocity of detonation also makes them applicable for secondary blasting by plaster shooting. *McAdam, 2*

nonpareil brick

An insulating brick.

nonpermissible explosive

An explosive that is not approved in law for use in gassy mines.

nonpolarizable electrode

Electrode in which the phenomenon of polarization cannot occur. *Schieferdecker*

nonproductive formation

a. A rock unit that, because of its stratigraphic position, is presumed to contain no valuable mineral deposits. *Long* b. A rock unit in which no minerals of interest are found. *Long*

nonrotating rope

A wire rope composed of 18 strands of 7 wires each; the inner 6 strands are left lay and outer 12 strands are right lay. It is esp. fabricated for use where loads are handled in free suspension, as in lifting of loads with a single line. *Lewis*

nonsegregating chute

A chute, usually used to charge stoker hoppers, so designed as to deliver coal in a mixed state rather than having the large lumps tend to be deposited separate from the fine.

nonselective mining

The object of nonselective mining is to secure a low cost, generally by using a cheap stoping method combined with large-scale operations. This method can be used in deposits where the individual stringers, bands, or lenses of high-grade ore are so numerous and so irregular in occurrence and separated by such thin lenses of waste that a selective method cannot be employed. Nonselective methods of stoping include caving, top slicing, some forms of open stoping, and shrinkage stoping under most conditions. *Jackson, 2*

nonsequence

A diastem or other relatively unimportant sedimentary or stratigraphic interruption. CF: [unconformity](#); [paraconformity](#).

nonsignificant anomaly

An anomaly that is superficially similar to a significant anomaly but is unrelated to ore. Formerly called false anomaly. *Hawkes, 2*

nonsparking tool

Tool, made from beryllium-copper or aluminum-bronze, that produces no sparks, or low energy sparks, when used to strike other objects. *NSC, 1*

nonspin cable

A wire or fiber cable so constructed as to reduce twisting to a minimum. *Long*

nonspin differential

A differential that will turn both axles, even if one offers no resistance. *Nichols, 1*

nonspinning rope

A rope wire consisting of 18 strands of 7 wires each, in 2 layers; the inner layer consists of 6 strands lang lay rope and left lay around a small hemp core, and the outer of 12 strands regular lay, right-hand lay. Will carry a load on a single end without untwisting.

Hunt

nonstranded rope

A rope in which the wires are not laid up in strands but in concentric sheaths, and in opposite directions in the different sheaths, which gives the rope nonspinning properties. The outer sheaths are composed of specially shaped interlocking wires, and there is no hemp core in the rope. *Sinclair, 5*

nonstructural

A phase transformation not involving structural rearrangement, e.g., Curie point in magnetism.

nontabular deposit

A mineral deposit of irregular shape. See also: [mass](#)

nontectonite

Any rock whose fabric shows no influence of movement of adjacent grains; e.g., a rock formed by mechanical settling. Some rocks are transitional between a tectonite and a nontectonite. *AGI*

nontronite

A monoclinic mineral, $\text{Na}_{0.33} \text{Fe}^{3+}_2 (\text{Si,Al})_4 \text{O}_{10} (\text{OH})_2 \cdot n\text{H}_2\text{O}$; smectite group; expansive, a swelling clay; earthy; occurs in vesicles and veins in weathered basalt and as an alteration product of volcanic glass. Syn: [pinguite](#). Called chloropal; gramenite; morencite.

nonuniform flow

A flow the velocity of which is undergoing a positive or negative change. If the flow is constant it is referred to as uniform flow. *Seelye, 1*

nonvitreous

A relative term as applied to ceramic products based on the water absorbing characteristics; i.e., brick, tile, etc., which absorb water in excess of that given by the specifications would be described as nonvitreous. See also: [impervious](#); [vitreous](#); [semivitreous](#).

nonvitrified

See: [nonvitreous](#)

nonweathering coal

Coal having a weathering index, as defined by U.S. Bureau of Mines standards, of less than 5%. *AGI*

nonwetted

a. A term used in the flotation process and applied to certain metallic minerals that are not wetted with water but are easily wetted with oil. *Fay* b. As used by diamond-bit setters, a diamond inset in a metal or alloy that has not adhered to or wetted the surface of the diamond. *Long*

Norbide

Trade name for boron carbide, an artificial abrasive; chemical formula, BC . It is markedly harder than silicon carbide and second only to diamond. *AIME, 1*

nordite

An orthorhombic mineral, $(La,Ce)(Sr,Ca)Na_2(Na,Mn)(Zn,Mg)Si_6O_{17}$; forms pale brown crystals on the Kola Peninsula, Russia.

norite

A coarse-grained plutonic rock containing basic plagioclase (labradorite) as the chief constituent and differing from gabbro by the presence of orthopyroxene (hypersthene) as the dominant mafic mineral. CF: [hypersthene](#)

norm

a. The theoretical mineral composition of a rock expressed in terms of normative mineral molecules that have been determined by specific chemical analyses for the purpose of classification and comparison; the theoretical mineral composition that might be expected had all chemical components crystallized under equilibrium conditions according to certain rules. Adj: normative. See also: [normative mineral](#); [norm system](#). CF: [mode](#) *AGI* b. Optimum operating condition of one or more controlled characteristics in a process such as continuous ore treatment. *Pryor, 3*

normal

a. Of or pertaining to a solution having a concentration of 1 g-equivalent weight of solute per liter of solution; commonly used term in analytical chemistry. See also: [normal solution](#) b. Used to designate aliphatic hydrocarbons, their derivatives, or alkyl radicals, the molecules of which contain a single unbranched chain of carbon atoms.

normal air

A mixture of dry air and water vapor, varying from 0.1% to 3% by volume (usually over 1% in mines). *Hartman, 2*

normal arc

A term specif. intended to differentiate between the arcs that are commonly observed and the low-pressure skittering arcs.

normal calorie

The quantity of heat required to raise 1 g of water from 14.5 degrees C to 15.5 degrees C. *Newton, 1*

normal corrosion

When used in connection with galvanic corrosion, it may refer to corrosion of the anodic metal when there is no contact with the dissimilar metal. *Schlain*

normal depth

The depth of water in an open conduit that corresponds to uniform velocity for the given flow. It is a hypothetical depth under conditions of steady nonuniform flow, the depth for which the surface and bed are parallel; also termed the neutral depth. *Seelye, 1*

normal dip

See: [regional dip](#)

normal displacement

See: [dip slip](#)

normal fault

A fault in which the hanging wall appears to have moved downward relative to the footwall. The angle of the fault is usually 45 degrees to 90 degrees. There is dip separation, but there may or may not be dip slip. CF: [reverse fault](#); [thrust fault](#). Syn: [gravity fault](#)

normal field

In magnetic prospecting, the smoothed value of a magnetic field component as derived from a large-scale survey, worldwide or of continental scope. The normal field of the Earth varies slowly with time, and maps of it are as of a certain date. *AGI*

normal fold

See: [symmetrical fold](#)

normal haul

A haul whose cost is included in the cost of excavation, so that no separate charge is made for it. *Nichols, I*

normalized steel

Steel that has been given a normalizing heat treatment intended to bring all of a lot of samples under consideration into the same condition.

normalizing conveyor

A conveyor that moves material through a normalizing furnace under heat.

normally consolidated

Said of a soil deposit that has never been subjected to an effective pressure greater than the existing overburden pressure and one that is also completely consolidated by the existing overburden. *ASCE*

normal moisture capacity

See: [field capacity](#)

normal pressure

Usually equal to the weight of a column of mercury 760 mm in height. Approx. 14.7 psi (101.4 kPa). Syn: [standard pressure](#) *Webster 3rd; Fay*

normal price

As applied to metal prices, it is the average over a long term--sometimes a period greater than the life of a mine. See also: [basic price](#)

normal scale

See: [effective temperature](#)

normal shift

In a fault, the horizontal component of the shift, measured perpendicular to the strike of the fault. See also: [offset](#); [shift](#). *AGI*

normal solution

A solution made by dissolving 1 g-equivalent weight of a substance in sufficient distilled water to make 1 L of solution. See also: [normal](#) *CTD*

normal stress

The stress component at right angles to a given plane. See also: [stress](#) *ASCE*

normal stress component

That component of the stress in a rock mass that acts perpendicular to the lode plane or any other reference plane. *Spalding*

normal temperature

a. Normal temperature and pressure are taken as 0 degrees C (273 degrees absolute) and 30 in (760 mm) of mercury pressure. Also called standard temperature. *Cooper* b. As applied to laboratory observations of the physical characteristics of bituminous materials, it is 77 degrees F (25 degrees C). *Urquhart*

normal theory

A theory claiming that the removal of a coal seam caused the overlying strata to fracture at right angles to the inclination of the beds. Subsidence observations do not support this theory. See also: [dome theory](#)

normal travel-time curve

In fan shooting, a time-distance curve obtained along a profile in some nearby area that does not contain geologic structures of the type being sought. *AGI*

normative

The adj. of norm.

normative mineral

A mineral whose presence in a rock is theoretically possible on the basis of certain chemical analyses. A normative mineral may or may not be actually present in the rock. See also: [norm](#) *AGI*

norm system

A system of classification and nomenclature of igneous rocks based on the norm of each rock. It is used in detailed petrologic studies rather than in ordinary geologic or mining work. Syn: [CIPW system](#)

Norsk-Staal process

A process for the direct production of iron sponge. A mixture of carbon monoxide and hydrogen is used as the reducing agent. The equipment consists of three vertical ovens, for preheating, reducing, and cooling the charge, and apparatus for regenerating the spent gases. The ore is contained in a series of muffle trays, each tray holding about 3 tons of ore. These trays pass down through the preheating oven, where the ore is heated to 1,000 degrees C, and are then transferred to the reducing oven, where they are raised through and against the downward gas current, then transferred to the cooling shaft, and slowly lowered down it. The transfer of a tray from one oven to another is made without contact with air. The ore is preheated in the first oven by part of the gases from the reduction oven, and the sponge iron is cooled in the third oven to 50 degrees C by cold gas from a gas holder. *Osborne*

norstrandite

A triclinic mineral, $\text{Al}(\text{OH})_3$; cryptocrystalline; a constituent of strongly weathered soils, of laterites and bauxites.

north end

York. The rise side of the coal in North Yorkshire.

north-seeking pole

The end of a magnet that points approx. north. The other end is the south-seeking pole. *Morris*

Norwalt separator

Trade name for a dense-medium washer for treating coal lump size down to about 1/8 in (3.2 mm). It comprises a shallow circular tank with a flat base and a conical inner shell containing the driving mechanism. The clean coal floats and passes over a weir while the shale sinks to the bottom and is conveyed to an outlet chute. Its capacity ranges from

about 50 st/h (45.4 t/h) to over 500 st/h (454 t/h), depending on the size of the vessel.
Nelson

Norwegian cut

A variation of the ordinary cut that may be said to represent a combination of the latter and the fan cut. The first drill holes are formed with a sharper angle toward the working face, which facilitates breaking. This type of cut has been employed successfully in headings of small section, the cut hole being blasted first, followed by the bench holes. In order to obtain the maximum possible advance the cut may also be deepened after blasting, during the first pause in working, e.g, the whole section then being broken out simultaneously. *Fraenkel*

nose

a. Scot. A point; a projecting angle of coal or other mineral. Also called *ness*. *Fay* b. The lead face of the crown of a diamond bit. *Long* c. A short plunging anticline without closure. d. To dip or run in the form of a geological nose. *Webster 3rd*

nosean

An isometric mineral, $\text{Na}_8 \text{Al}_6 \text{Si}_6 \text{O}_{24} (\text{SO}_4)_2 \cdot \text{H}_2 \text{O}$; sodalite group; occurs in silica- and lime-deficient igneous rocks. Formerly called noselite, nosin, nosite.

nose in

Eng. A stratum is said to nose in when it dips beneath the ground into a hillside in a V-form or nose form.

noselite

See: [nosean](#)

nose out

a. Eng. A nose-shaped stratum cropping out. *Fay* b. To diminish by losing stratum after stratum and getting into the lower part of the measure; said of a coal seam. *Standard, 2*

nose pipe

The inside nozzle of a tuyere. *Standard, 2*

nosin

See: [nosean](#)

nosite

See: [nosean](#)

notch

a. An angular recess cut in the ends of a crossbar of a timber set to fit over a corresponding wedge in the upright posts. With the advent of steel arches, the craft of notching is becoming extinct. See also: [Welsh notch](#) b. Eng. See: [let into](#) c. A small weir made for use in measuring flow in laboratory models of hydraulic structures. See also: [measuring weir](#) d. A hollow formed by the undermining of a cliff, as a result of wave erosion and/or solution. *Schieferdecker*

notch effect

Locally increased stress at that point in a structural load-bearing member where the section changes at a sharp angle. *Hammond*

notcher

A machine tool in a steel-fabrication shop used to strip the flanges from the ends of rolled steel joists. *Hammond*

notching

a. A method of excavating in a series of steps. *Standard, 2* b. Cutting out various shapes from the edge of a strip, blank, or part. *ASM, 1*

notch sensitivity ratio

Alternative term for factor of stress concentration in fatigue or fatigue strength reduction factor. *Roark*

not previously known to exist

These words refer to the time of the location and commencement of the tunnel and not to the respective times of the discoveries of the various veins in the tunnel. *Ricketts*

Nottingham system

A longwall method of working coal seams in which the trams run on a rail track along the face and are hand loaded at the sides. It follows that the system can be adopted only in relatively thick seams where the trams can travel along the face without any roof ripping. The method is now replaced by face conveyors. Syn: [Barry mining](#)

noumeite

See: [garnierite](#)

novackite

A monoclinic mineral, $(\text{Cu,Ag})_{21} \text{As}_{10}$; pseudotetragonal; forms steel-gray granular aggregates; at Cerny Dul, Czech Republic.

novaculite

a. A dense, hard even-textured, light-colored cryptocrystalline siliceous sedimentary rock, similar to chert but characterized by dominance of microcrystalline quartz over chalcedony. It was formerly believed to be the result of primary deposition of silica, but in the type occurrence (Lower Paleozoic of the Ouachita Mountains, Arkansas and Oklahoma) it appears to be a thermally metamorphosed bedded chert, distinguished by characteristic polygonal triple-point texture. The origin of novaculite has also been ascribed to crystallization of opaline skeletal material during diagenesis. The rock is used as a whetstone. See also: [Arkansas stone](#) ouachita stone. *AGI* b. A term used in southern Illinois for an extensive bedded chert. *AGI* c. A general name formerly used in England for certain argillaceous stones that served as whetstones. *AGI*

nowel

- a. The inner part of a large mold, corresponding to the core in small work. *Standard, 2*
- b. The bottom or drag of a molding flask, as distinguished from the cope. *Standard, 2*

noxious gas

A gas that is injurious to health. *BS, 8*

nozzle brick

A tabular refractory shape used in a ladle, with a hole through which steel is teemed at the bottom of a ladle, the upper end of the shape serving as a seat for the stopper. *ARI*

nozzleman

In metal mining, one who operates a hydraulic giant or monitor (nozzle) used to direct a high-pressure stream of water against a bank of gold-bearing gravel to erode and force the gravel into sluiceboxes, where the gold separates out and is caught by riffles (cleats).
Syn: [giant tender](#)

NPN process

A modification of the basic Bessemer process. The main feature is the shortening of the blow by increasing the pressure of the blast as much as possible. Normally, the melt is cooled by the addition of scrap or iron ore, but it is claimed that a fairly high temperature can be maintained without an undue increase of the nitrogen content, so that ladle skulls can be avoided. *Osborne*

NQ

A letter name specifying the dimensions of bits, core barrels, and drill rods in the N-size and Q-group wireline diamond drilling system having a core diameter of 47.6 mm and a hole diameter of 75.7 mm. *Cumming, 2*

N rod bit

A Canadian standard noncoring bit having a set diameter of 2.940 in (74.7 mm). More commonly called a 2-15/16 N drill-rod bit. *Long*

N-truss

A bridge or roof truss that has parallel upper and lower chords and an arrangement of web members consisting of tension diagonals and compression verticals, with the vertical struts separating the panels. Also known as a Pratt truss. See also: [Warren girder](#)

nubber

a. Mid. A block of wood about 12 in (30.5 cm) square, for throwing mine cars off the road in case the couplings or ropes break. *Fay* b. See: [stopblocks](#)

nuclear-assisted mining

The use of a nuclear explosive for fracturing and fragmenting large volumes of ore underground into rubble chimneys, in preparation for block-cave-type mining or in-situ leaching. *SME, 1*

nuclear log

See: [radioactivity log](#)

nuclear magnetism log

Primarily a hydrogen log, useful for the following purposes: (1) provides valuable correlating curve to replace the S.P. in holes containing oil or invert muds; (2) provides a means of qualitatively distinguishing zones containing hydrocarbons from zones containing only water; (3) provides a means of measuring quantitatively what proportion of the total fluid-filled porosity in a formation is sufficiently free from the influence of

chemical binding forces to be considered mobile and thus potentially recoverable; and (4) provides a means of estimating the permeabilities of formations. *Wyllie*

nuclear magnetometer

See: [nuclear resonance magnetometer](#)

nuclear powerplant

Any device, machine, or assembly thereof that converts nuclear energy into some form of useful power, such as mechanical or electric power. In a nuclear electric powerplant, heat produced by a reactor is used to make steam, and the steam drives a turbine generator in the conventional way. *Lyman*

nuclear reaction

A reaction involving the nucleus of the atom, such as fission, neutron capture, radioactive decay, or fusion; and distinct from a chemical reaction, which is limited to changes in the electron structure surrounding the nucleus. *Lyman*

nuclear resonance magnetometer

An instrument that measures the Earth's magnetic field, depending on the magnetic moment of the atom. Hydrogen atoms are generally used, and these can be in a compound such as water. Each hydrogen atom can be viewed as a tiny electromagnet whose strength and direction are determined by the revolution of the electron of the atom about its nucleus. In a magnetic field, atoms of hydrogen have a tendency to align themselves in opposition to the field. If the direction of the field is suddenly changed, there will be a moment pulling the atoms toward the new direction. But each atom is a midge gyroscope, and instead of shifting directly to the new field direction, it will precess about this direction. The frequency of this precession will be a function only of the strength of the magnetic field. Syn: [nuclear magnetometer](#)

nucleation

The beginning of crystal growth at one or more points. *AGI*

nucleometer

A Geiger counter employing 20 Geiger tubes to increase the sampling area and overcome the inefficiency of a 1-tube counter. *Ballard*

nucleon

A constituent of the atomic nucleus; i.e., a proton or a neutron. *Lyman*

nucleus

The central point about which matter accumulates to form a larger mass, esp. of a growing crystal or pearl. Plural: nuclei.

nuclide

Any species of atom that exists for a measurable length of time. A nuclide can be distinguished by its atomic weight, atomic number, and energy state. The term is used synonymously with isotope. A radionuclide is the same as a radioactive nuclide, a radioactive isotope, or a radioisotope. *Lyman*

Nuflex

Trade name for a nonrotating rope of 17 X 7 or 34 X 7 strand construction. *Hammond*

nugget

A large lump of placer gold or other metal. CF: [heavy gold](#)

nugget effect

Anomalously high precious metal assays resulting from the analysis of samples that may not adequately represent the composition of the bulk material tested due to nonuniform distribution of high-grade nuggets in the material to be sampled. *SME, 1*

nugget model

A constant variance model most often used in combination with one or more other functions when fitting mathematical models to experimental variograms.

nuisance dust

Dust with a long history of little adverse effect on the lungs; does not produce significant organic disease or toxic effect when exposures are kept at reasonable levels.

Nujol

In flotation, any of a group of nonionizing hydrocarbon oils that act as collector agents by smearing action, giving aerophilic quality to the surface they selectively coat. *Pryor, 3*

Nullagine Series

Local name in Western Australia for the formation consisting essentially of pre-Cambrian rocks made up mainly of jasperoid quartzites and dolomite. Crocidolite asbestos occurs in this formation as cross-fiber seams in lodes in stratified ferruginous quartzites and shales with occasional bands of dolomite. *Sinclair, 7*

nullah

a. A term used in the desert regions of India and Pakistan for a sandy river bed or channel, or a small ravine or gully, that is normally dry except after a heavy rain. *AGI* b. The small, intermittent, generally torrential stream that flows through a nullah. Etymol: Hindi nala. See also: [wadi](#); [arroyo](#). Also spelled: nulla; nallah; nalla. *AGI*

Numidian marble

A general name for marbles of cream, yellow, pink, and red color, found in northern Africa. The quarries were worked by the ancient Romans.

Nummulite limestone

A thick bed of limestone, of Eocene age, composed mainly of the remains of the foraminifer Nummulites. The formation stretches from the Alps through Iran to China. It is the stone of which the Great Pyramid is built.

Nusse and Grafer PIV/6 drilling machine

A rotary machine used for drilling the holes in combustible gases drainage. It is a two-speed, 150- to 250-rpm machine, drill-rod rotation being operated by a 6-hp (4.47-kW) motor. Traversing is done by a 2-hp (1.5-kW) motor, a pinion of which engages a toothed rack that runs the length of the drill frame. A forward drilling thrust of 4 st (3.6 t) is possible. The machine measures 10 ft (3 m) overall and weighs about 1,000 lb (454 kg). With an improved high-speed gearbox, 100 to 130 ft (30 to 40 m) of coal measures strata can be drilled in a shift. *Nelson*

nut coal

a. An abbrev. for chestnut coal. Also called nuts. *Fay* b. Prepared bituminous coal that passes through 2- to 3-in (5.1- to 7.6-cm) round holes and over 3/4-, 1-, or 1-1/8-in (1.9-, 2.54-, or 3.2-cm) holes, depending on the screening practice. Anthracite, through 1-5/8-in (4.1-cm) and over 3/16-in (4.8-mm) round holes. *Jones, 1*

nutcracker

See: [boulder buster](#)

NW

Letter name specifying the dimensions of bits, core barrels, and drill rods in the N-size and W-group wireline diamond drilling system having a core diameter of 54.7 mm and a hole diameter of 75.7 mm. The NW designation has replaced the NX designation.

Cumming, 2

NX

The NX designation for coring bits has been replaced by the NW designation. See also:

[NW](#)

nylon

A generic term for a group of synthetic fiber-forming polyamides. The polymer is melted, extruded, stretched, and finally processed to turn it into a textile yarn having a very high strength, great powers of energy absorption, and high resistance to abrasion and rotting. Its major uses in mining are as a reinforcement for conveyor belting and ventilation ducting. *Nelson*

nylon belt

A rubber belt containing nylon fiber reinforcing. It is stronger than cotton-duck belts of equivalent size and possesses better troughability and fastener holding strength. Nylon belt has the advantage of a long flex life, and the thinner carcass means easier bending. *Nelson*

nystagmus

An eye disease suffered by some miners, in which there is a spasmodic oscillatory movement of the eyeballs; in severe cases, the victim finds difficulty in walking straight. Bad lighting is generally believed to be the main cause, and is possibly aggravated by the workers lying on their sides in thin seams. See also: [mining disease](#)

O

oakum

Loosely twisted fiber usually of hemp or jute impregnated with tar or with a tar derivative (such as creosote or asphalt); used in caulking seams (such as the wood hulls and decks of ships) and in packing joints (in pipes, caissons, etc.). *Webster 3rd*

Oamaru stone

A white, granular limestone found in large quantities in Oamaru, New Zealand, and valued as a building stone.

obduction

The overriding or overthrusting of oceanic crust onto the leading edges of continental lithospheric plates; plate accretion. See also: [subduction](#) *AGI*

object glass

See: [objective](#)

objective

The lens (or lenses) that gives an image of an object in the focal plane of a microscope or telescope eyepiece. Syn: [objective lens](#); object glass.

objective glass

See: [objective](#)

objective lens

See: [objective](#)

oblique block

A quarry term applied to a block of stone bounded by 3 pairs of parallel faces--4 of the 12 interfacial angles being right angles, 4 obtuse, and 4 acute.

oblique fault

A fault that strikes oblique to, rather than parallel or perpendicular to, the strike of the constituent rocks or dominant structure. CF: [oblique-slip fault](#); [strike fault](#); [dip fault](#).
Syn: [diagonal fault](#) *AGI*

oblique illumination method

See: [van der Kolk method](#)

oblique joint

a. A joint whose strike is oblique to the strike of the strata or metamorphic rocks in which it occurs. b. A joint that forms an acute angle with dip joints and strike joints.
Lewis

oblique offset

The distance of a point from a main survey line measured at an angle to the latter that is not a right angle. See also: [offset](#)

oblique projection

A pictorial view of an object showing its elevation, plan, or section to scale with parallel lines projected from the corners, at 45 degrees or any other angle, indicating the other sides. See also: [axonometric projection](#); [isometric projection](#). *Hammond*

oblique slip

In a fault, movement or slip that is intermediate in orientation between the dip slip and the strike slip. CF: [strike slip](#)

oblique-slip fault

A fault in which the net slip lies between the direction of dip and the direction of strike. Syn: [diagonal-slip fault](#)

obra

The narrow prismatic part of a blast furnace immediately above the crucible. *Fay*

obsequent fault-line scarp

A scarp along a fault line, where the topographically low area is on the upthrown block. CF: [resequent fault-line scarp](#)

observer

a. In seismic prospecting, the person in charge of the recording crew, including the shooters and linemen. The observer must maintain the electronic equipment and decide on the best shooting and detector arrangement as well as the best instrumental settings for getting records of optimum quality. The observer operates the recording equipment in the field, often with the help of an assistant. In conventional recording, or in tape recording when photographic monitors are run, the observer or an assistant develops the record in the recording truck immediately after it is shot. Also called operator. *Dobrin* b. In gravity and magnetic prospecting, a person who secures the instrument readings, e.g., on a torsion balance or magnetometer. *AGI*

obsidian

A black or dark-colored volcanic glass, usually of rhyolite composition, characterized by conchoidal fracture. It is sometimes banded or has microlites. Usage of the term goes back as far as Pliny, who described the rock from Ethiopia. Obsidian has been used for making arrowheads, other sharp implements, jewelry, and art objects. Syn: [Iceland agate](#)
AGI

obsidianite brick

Lightweight, siliceous fireclay, acid-resisting brick, burned to a glasslike mass.

obtuse bisectrix

a. That axis that bisects the obtuse angle of the optic axes of biaxial minerals. *Fay* b. The angle >90 degrees between the optic axes in a biaxial crystal, bxo. CF: [optic angle](#)

occidental cat's-eye

See: [cat's-eye](#); tiger's-eye.

occlude

To take in and retain (a substance) in the interior rather than on an external surface; to sorb. Used esp. of metals sorbing gases; e.g., palladium occludes large volumes of hydrogen. *Webster 3rd*

occluded

Contained in pores (said of gas occluded in coal). *Mason*

occluded gas

Any of several gases that enter a mine atmosphere from pores, as feeders and blowers, and also from blasting operations. These gases pollute the mine air chiefly by the absorption of oxygen by the coal, and in addition by chemical combination of oxygen with carbonaceous matter, for example, from decaying timbers, rusting of iron rails, burning of lights, and breathing of humans and animals. These gases include oxygen, nitrogen, carbon dioxide, and methane. *Kentucky*

occlusion

a. Taking up or incorporation of liquids in solids or of gases in liquids. *AGI* b. See: [absorption](#)

occupant

An occupant of a tract of land, as the word ordinarily is used, is one who has the use and possession thereof, whether he resides upon it or not. *Ricketts*

occupation

As used in the mining law, it is equivalent to possession, and the right to locate is included in the right to occupy, and incident to a location is the right of possession; but mere occupancy of the public lands and making improvement thereon gives no vested right therein as against a location made in pursuance of law. *Ricketts*

occurrence

See: [mineral occurrence](#)

ocean current

a. The name current is usually restricted to the faster movements of the ocean, while those movements that amount to only a few miles a day are termed drifts. *AGI* b. A nontidal current constituting a part of the great oceanic circulation. Examples are gulf stream, kuroshio, and equatorial currents. *AGI*

oceanic ridge

See: [Mid-Atlantic Ridge](#); mid-ocean ridge.

oceanic trench

See: [trench](#)

oceanographic dredge

Apparatus used aboard ships to bring up quantity samples of the ocean bottom deposits and sediments. *Hunt*

oceanography

The broad field of science that includes all fields of study that pertain to the sea. This includes the studies of boundaries of the ocean, its bottom topography, the physics and chemistry of seawater, the characteristics of its motion, and marine biology. *Hy*

ocher

A name given to various native earthy materials used as pigments. They consist essentially of hydrated ferric oxide admixed with clay and sand in varying amounts and in impalpable subdivision. When carrying much manganese ochers grade into umbers.

They are either yellow, brown, or red. The best reds are sometimes obtained by calcining the yellow varieties. They are called burnt ochers. Others are obtained by calcining copperas or as a residue from roasting pyrite. In general, the native yellows and browns are varieties of limonite and the native reds are varieties of hematite. One variety of red ocher is known as scarlet ocher. Their value as pigments depends not only on the depth of color but also on the amount of oil required as a vehicle. Syn: [terra sienna CCD](#), 2

octagon

A polygon having eight sides. *Jones*, 2

octahedral borax

A rhombohedral form of hydrous sodium borate, $\text{Na}_2\text{B}_4\text{O}_7 \cdot 5\text{H}_2\text{O}$, simulating regular octahedrons. From the Lagoong of Tuscany, Italy. See also: [tincalconite](#)

octahedral cleavage

In the isometric system, cleavage parallel to the faces of an octahedron. *Fay*

octahedral copper

See: [cuprite](#)

octahedral iron ore

See: [magnetite](#)

octahedrite

a. A class of meteorites. *Hey*, 1 b. The most common iron meteorite contains 6% to 18% nickel in the metal phase; on etching, shows Widmanstaetten structure owing to the presence of intimate intergrowths (of plates of kamacite with narrow selvages of taenite) oriented parallel to the octahedral planes. c. A former name for anatase. See also: [titanium dioxide](#)

octahedron

a. A closed crystallographic form with isometric symmetry and eight faces, each an equilateral triangle; sometimes called a regular octahedron to distinguish it from the more general usage defined below. Commonly observed in isometric minerals, such as fluorite, pyrite, magnetite, and diamond. b. Less precisely, a closed crystallographic form composed of (or bounded by) eight triangular surfaces (a bipyramid), such as in some samples of anatase. Plural: octahedra. Adj.: octahedral.

octant

Each eighth of crystal space divided by three noncoplanar axial planes. CF: [dodecant](#)

octant search

Used to limit the number of sample data points used for estimating intermediate spatial values. The search neighborhood is divided into eight equal-angle sectors. Constraints on selection of data values to include in the estimation include: minimum and maximum of samples or the number of consecutive empty sectors. If either criteria is below minimum, an interpolated value is not calculated. Applies to any interpolation method where a limited number of sample data points are used to estimate intermediate values.

octaphyllite

a. A trioctahedral clay mineral. *AGI* b. A group of mica minerals that contains eight cations per ten oxygen and two hydroxyl ions. c. Any mineral of the octaphyllite group, such as biotite; a trioctahedral clay mineral. CF: [heptaphyllite](#)

octopus

A bin or tank to facilitate the concrete lining of circular shafts. The concrete is mixed on the surface, taken down the shaft in buckets, and discharged into the octopus. The concrete is then led away through flexible rubber pipes to different points around the shaft. *Nelson*

ocular

Eyepiece of a microscope. *Pryor, 3*

O'Donaghue formula

A formula used for calculating the thickness of tubing: $t = hdF/2C + A$, where: t is the required thickness of tubing in inches; h is the pressure of water in pounds per square inch; d is the diameter of the shaft in inches; C is the crushing strength of cast iron in pounds per square inch, which may be taken as 95,000; F is the factor of safety adopted between 5 and 10; and A is the allowance for possible flaws and corrosion and may vary from 1/4 to 1 in (6.4 to 25.4 mm), averaging 1/2 in (12.7 mm). *Sinclair, 2*

O'Donahue's theory

A mine subsidence theory based on an extension of the theory of the normal. In it, subsidence is regarded as taking place in two stages. There is, first, a breaking of the rocks in which the lines of fracture tend to run at right angles to the stratification. This is

followed by an aftersliding, or inward movement from the sides, resulting in a pull or draw beyond the edges of the workings. *Briggs*

odontolite

A fossil bone or tooth colored deep blue by iron phosphate (vivianite), and rarely green by copper compounds, and resembling turquoise, such as that from the tusks of mammoths found in Siberia. It is cut and polished for jewelry. Syn: [bone turquoise](#); [fossil turquoise](#). *AGI*

oersted

a. The practical, cgs electromagnetic unit of magnetic intensity. A unit magnetic pole, placed in a vacuum in which the magnetic intensity is 1 Oe (79.577 A/m), is acted upon by a force of 1 dyn in the direction of the intensity vector. *AGI* b. Commonly used as the cgs unit of magnetic-field intensity. Except in magnetized media, a magnetic field with an intensity (H) of 1 Oe has an induction (B) of 1 Gs (0.1 mT). *AGI*

Oetling freezing method

A method of shaft sinking by freezing wet ground in sections as the sinking proceeds. The permanent lining is also inserted as the shaft is sunk. The freezing equipment is a cylinder equal in diameter to the shaft and 44 in. (1.12 m) in height, with the lower end closed by a plate. The cylinder is in sections, each of which can be removed. Each section is provided with freezing coils. After freezing the ground, two sections are removed, the ground is thawed locally and removed, and a segment of the permanent lining is inserted. The process is repeated. See also: [Dehottay process](#); [freezing method](#). *Nelson*

offcenter waterway

A waterway port in a noncoring diamond bit, not located in the center of the bit face. *Long*

off gate

N. of Eng. One of the goaf roadways in longwall workings, which are set about 120 yd (110 m) apart. *Fay*

off-highway truck

A truck of such size, weight, or dimensions that it cannot be used on public highways.

official plat of survey

The expression in a patent according to the official plat of survey of the land returned to the general land office by the surveyor general refers to the description of the land as well as to the quantity conveyed. *Ricketts*

off line

a. A condition existing when the drive rod of the drill swivel head is not centered and parallel with the borehole being drilled. *Long* b. A borehole that has deviated from its intended course. *Long* c. A condition existing wherein any linear excavation (shaft, drift, borehole, etc.) deviates from a previously determined or intended survey line or course.

off-peak load

Electricity drawn at a period when the power station that supplies it is not fully loaded. *Pryor, 3*

offretite

A hexagonal mineral, $(K_2, Ca)_5 Al_{10} Si_{26} O_{72} \cdot 30H_2O$; zeolite group; commonly intergrown with erionite and levyne as a vein or cavity filling in mafic lavas.

offset

a. A short drift or crosscut driven from a main gangway or level. *Fay* b. The horizontal distance between the outcrops of a dislocated bed. *Fay* c. Of a fault, the horizontal component of displacement, measured perpendicular to the disrupted horizon. See also: [normal shift](#) *AGI* d. A side (horizontal) measurement of distance perpendicular to a line, usually a transit line. *Seelye, 2* e. To collar and drill a borehole at some distance from the designated site to avoid a difficult setup. *Long* f. To drill a borehole near one previously drilled, which may have been lost, for purposes of correlation or to determine the lateral extent of mineralization. *Long* g. An abrupt change in the trend of a drill hole, usually caused by a small shelflike projection of rock alongside one wall of the drill hole. *Long* h. A well drilled near the boundary of a lease opposite a completed well on an adjacent lease. Syn: [offset hole](#); [offset well](#). *Long* i. To offset a well by drilling the next adjoining location in accordance with a spacing pattern. *Wheeler, R.R.* j. A spur or minor branch from a principal range of hills or mountains. k. The distance along the strain coordinate between the initial portion of a stress-strain curve and a parallel line that intersects the stress-strain curve at a value of stress which is used as a measure of the yield strength. It is used for materials that have no obvious yield point. A value of 0.2% is commonly used. *ASM, 1*

offset deposit

a. A mineral deposit, esp. of sulfides, formed partly by magmatic segregation and partly by hydrothermal solution, near the source rock. *AGI* b. At Sudbury, ON, Canada, the

term refers to dike-like bodies radiating from the Sudbury Complex, thought to have been filled from above by xenolithic rock fragments and massive pyrrhotite-chalcopyrite-pentlandite. *AGI*

offset digging

In a ladder ditcher, digging with the boom not centered in the machine. *Nichols, 1*

offset hole

See: [offset](#)

offset line

In surveying, a line established parallel to the main survey line, and usually not far from it; e.g., a line on a sidewalk, 2 ft (0.6 m) from the established street line, or a line parallel to the centerline of a bridge and 50 ft (15.2 m) from it. *Seelye, 2*

offset ridge

A ridge that is discontinuous because of faulting. *AGI*

offset staff

In surveying, a rod, usually 10 links (0.2012 m) long, used in measuring short offsets. *Webster 2nd*

offset well

See: [offset](#)

off-sider

A driller or drill-crew-worker working on the opposite shift. Also called drill helper. *Long*

offtake

A length of boring rods unscrewed and detached at the top of a borehole. Also called rod stand; setout. *BS, 9*

offtake lad

See: [shackler](#)

offtake rod

One of the auxiliary rods at the top of a winding shaft for guiding and steadying the cages during decking or loading and unloading operations. *Nelson*

off-the-road hauling

Hauling that takes place off the public highways, generally on a mining or excavation site. The hauling units used are generally higher and wider than those used in over-the-road hauling since highway restrictions do not limit size, weight, etc. CF: [over-the-road hauling](#)

off the solid

In this type of blasting, coal is blasted from the solid with no precutting or shearing. *McAdam, 2*

ogie

The space before the fire in a kiln. Also called killogie. *Standard, 1*

ohm

The practical mks unit of electric resistance that equals the resistance of a circuit in which a potential difference of 1 V produces a current of 1 A; the resistance in which 1 W of power is dissipated when 1 A flows through it. The standard in the United States. Symbols, Omega and omega . *Webster 3rd; Zimmerman*

ohmmeter

A type of galvanometer that directly indicates the number of ohms of the resistance being measured. *Crispin*

Ohm's law

The formula expressing Ohm's law is $I = E/R$, in which I is the electric current in amperes; E is the electromotive force in volts; and R is the resistance in ohms. *Handbook of Chemistry and Physics, 2*

-oid

A suffix meaning "in the form of." *AGI*

oikocryst

In poikilitic fabric, the enclosing crystal. *AGI*

oil agglomeration

A coal beneficiation process in which an oil is used to preferentially wet the coal particles, which have an affinity to agglomerate into masses that are then selectively removed by screening, e.g. See also: [selective agglomeration](#)

oil base

The residuum from the distillation of petroleum. When paraffin is obtained from petroleum, the original oil is said to have a paraffin base; when the residue is entirely asphaltic, the original petroleum is said to have an asphaltic base. Some petroleums have both an asphaltic and a paraffin base. *API, 1*

oil-bearing shale

Shale impregnated with petroleum. Not to be confused with oil shale. *Tomkeieff*

oiled

A term used in flotation when a particle is given a water repellent surface. When such a coating has been formed, the particle is said to be oiled or treated and ready to be floated. *Newton, 1*

oiler

a. In flotation, oil that provides a film around a mineral particle. b. One of several types of mechanical devices that deliver oil to machines and into air or steam lines in controllable amounts. Also called atomizer; line oiler; lubricator; oil pot; pineapple; pot. *Long*

oilfield winch

An extremely powerful low-speed winch on a crawler tractor. *Nichols, 1*

oil flotation

A process in which oil is used in ore concentration by flotation. Syn: [flotation process](#)

oil of vitriol

Concentrated sulfuric acid.

oil pot

See: [line oiler](#); oiler.

oil pump

A hydraulic pump supplying oil under pressure to the hydraulic-feed cylinders and pistons of a hydraulic-type swivel head on a diamond drill. *Long*

oil shale

A kerogen-bearing, finely laminated brown or black sedimentary rock that will yield liquid or gaseous hydrocarbons on distillation. CF: [bituminous shale](#) petrolo-shale. *AGI*

oilstone

A fine-grained stone used for sharpening edged tools or other similar metal surfaces. *Fay*

oil-temper

To harden steel by quenching in oil after heating. *Webster 3rd*

okenite

A triclinic mineral, $\text{Ca}_{10} \text{Si}_{18} \text{O}_{46} \cdot 18\text{H}_2 \text{O}$; white; fibrous; commonly associated with zeolites in basalts.

old age

a. The stage in the development of a stream at which erosion is decreasing in vigor and efficiency, and aggradation becomes dominant as the gradient is reduced. It is characterized by a broad open valley with a flood plain that may be 15 times the width of the meander belt; numerous oxbows, bayous, and swamps; a sluggish current; and slow erosion, effected chiefly by mass-wasting at valley sides. *AGI* b. The final stage of the cycle of erosion of a landscape or region, in which the surface has been reduced almost to base level and the landforms are marked by simplicity of form and subdued relief. It is characterized by a few large meandering streams flowing sluggishly across broad flood plains, separated by faintly swelling hills, and having dendritic distributaries; and by peneplanation. *AGI* c. A hypothetical stage in the development of a coast, characterized by a wide wave-cut platform, a faintly sloping sea cliff pushed far inland, and a coastal region approaching peneplanation. The stage is probably a theoretical abstraction, since it is doubtful whether stability of sea level is maintained long enough for the land to be so reduced. *AGI*

oldhamite

An isometric mineral, (Ca,Mn)S ; pale brown; occurs in some meteorites and slags; rapidly oxidizes in contact with air.

Oldham stone duster

A self-contained transportable stone duster. A high-velocity current of air from a fan or blower is mechanically fed from a hopper above, both the fan and the feeding mechanism being driven from the tub axle as it is drawn along by rope haulage, horse, or manually. It delivers about 3/4 lb (0.34 kg) of dust per yard (0.9 m) of travel. *Sinclair, 1*

Oldham-Wheat lamp

A cap lamp designed for full self-service. This lamp, weighing 6-5/8 lb (3.0 kg), has a 4-V lead-acid battery in a hard rubber case with covers of stainless steel or nickel-plated hard brass. The switch is magnetically operated and is situated in a sealed plastic moulding. A 4-W bulb burning 11 h or a 2-W bulb burning 14 h is used. The lamp is of one-piece construction and no dismantling is needed to charge the accumulator. *Sinclair, 1*

old hole

See: [main hole](#)

oldland

a. Any ancient land; specif. an extensive area (such as the Canadian shield) of ancient crystalline rocks reduced to low relief by long-continued erosion and from which the materials of later sedimentary deposits were derived. *AGI* b. A region of older land, behind a coastal plain, that supplied the material of which the coastal-plain strata were formed. *AGI* c. A term proposed by Maxson and Anderson (1935) for the land surface of the old-age stage of the cycle of erosion, characterized by subdued relief. *AGI*

Old Red Sandstone

A thick sequence of nonmarine, predominantly red sedimentary rocks, chiefly sandstones, conglomerates, and shales, representing the Devonian System in parts of Great Britain and elsewhere in northwestern Europe. *AGI*

old scrap

Scrap derived from consumer goods that have outlived their usefulness in the economy; it includes discarded white goods, automobiles, electrical equipment, machinery, etc.

old silver

Silver made to appear old by the application of graphite and grease.

old waste

Scot. Old or abandoned workings. *Fay*

old working

Mine working that has been abandoned, allowed to collapse, and perhaps sealed off. Unless proper safeguards are taken, old workings can be a source of danger to workings in production particularly if they are waterlogged and their plan position is uncertain. See also: [inrush of water](#)

oleander-leaf texture

Leaf-shaped masses of stromeyerite (or other minerals) in a matrix of chalcocite (or other mineral). *AGI*

oleic acid

$\text{CH}_3(\text{CH}_2)_7\text{CH}=\text{CH}(\text{CH}_2)_7\text{COOH}$; a mono-unsaturated fatty acid used in ore flotation; insoluble in water; and soluble in alcohol, ether, and in most other organic solvents. *CCD, 2*

oligist

See: [hematite](#)

oligist iron

See: [hematite](#)

Oligocene

An epoch of the early Tertiary Period, after the Eocene and before the Miocene; also, the corresponding worldwide series of rocks. It is considered to be a period when the Tertiary is designated as an era. *AGI*

oligoclase

A triclinic mineral, $(\text{Na,Ca})[(\text{Si,Al})\text{AlSi}_2\text{O}_8]$; plagioclase series of the feldspar group; has NaSi (albite) 10 to 30 mol % and CaAl (anorthite) 90 to 70 mol %; pseudomonoclinic with prismatic cleavage and characteristic polysynthetic twinning commonly visible on cleavage traces; white; may be chatoyant; a common rock-forming

<https://t.me/Geologybooks>

mineral in igneous and metamorphic rocks of intermediate to high silica content; forms the entire mass in some anorthosites; less commonly a vein mineral.

oligonite

A former name for manganoan siderite, $(\text{Fe},\text{Mn})\text{CO}_3$.

oligosiderite

A meteorite containing a small amount of metallic iron. *AGI*

oligotrophic peat

Peat poorly supplied with nutrients. *Tomkeieff*

olivenite

An orthorhombic mineral, $\text{Cu}_2 \text{AsO}_4 (\text{OH})$; adamantine to vitreous; a secondary mineral in copper deposits.

Oliver filter

A continuous-type filter made in the form of a cylindrical drum with filter cloth stretched over the convex surface of the drum. The drum rotates slowly about a horizontal axis, and the lower part is immersed in a tank containing the pulp to be filtered. Arrangement of pressure and suction pipes on the interior of the drum permits the application of suction to the filtering surface. As the filter passes through the tank, it picks up a layer of solid material and emerges carrying a layer of filter cake. Syn: [continuous filter](#)

olivine

A mineral group including fayalite, $\text{Fe}_2 \text{SiO}_4$; forsterite, $\text{Mg}_2 \text{SiO}_4$; liebenbergite, $(\text{Ni},\text{Mg})_2 \text{SiO}_4$; and tephroite, $\text{Mn}_2 \text{SiO}_4$; orthorhombic; olive green, grayish green, brown, or black; members intermediate in the forsterite-fayalite crystal solution series are common rock-forming minerals in gabbros, basalts, peridotites, and dunites; alters hydrothermally to serpentine. Fayalite occurs in some granites and syenites, forsterite in thermally metamorphosed dolomites, and tephroite in iron manganese ore deposits and their associated skarns. Syn: [peridot](#); [chrysolite](#); [olivinoid](#).

olivine rock

See: [dunite](#)

olivinite

a. In the International Union of Geological Sciences classification, Syn: [dunite](#) b. An olivine-rich ore-bearing igneous rock that also contains other pyroxenes and/or amphiboles. Syn: [leucochalcite](#)

olivinoid

An olivinelike substance found in meteorites. See also: [olivine](#) *Standard, 2*

olivinophyre

Porphyry containing olivine phenocrysts. *Fay*

ollenite

A type of hornblende schist characterized by abundant epidote, sphene, and rutile. Garnet is one of the accessories. *AGI*

O.L.P. steel process

A steelmaking method similar to the L.D. except that powdered lime is blown with the oxygen stream (therefore, the letters O.L.P.--oxygen- lime-powder). See also: [L Nelson](#)

ombrogenous peat

Peat, the nature of which is determined by the amount of rainfall. *Tomkeieff*

omnibus

In glassmaking, a sheet-iron cover to protect, from drafts, the glass articles in a leer. *Standard, 2*

omnidirectional hydrophone

A hydrophone whose response is essentially independent of angle of arrival of the incident sound wave. *Hy*

omphacite

A mineral of the pyroxene group intermediate among aegirine, jadeite, and augite; i.e., high in aluminum and sodium, and of high-pressure origin; monoclinic; pale to grass green; occurs in eclogites.

o.m.s.

a. Output (usually in hundredweights) per manshift. It is a method of expressing the productivity of mines, miners, and management. *Nelson* b. N. of England. Output (usually tons) per manshift. Interpretation depends on the basis for calculating manshifts, e.g., face o.m.s. is based on manshifts at the face; seam o.m.s. on piecework and bargain work manshifts in the seam; overall (pit) o.m.s. on all manshifts underground, including datal labor. *Trist*

on air

a. The state of a pump which is operating although having no liquid in its working parts. *BS, 10* b. Scot. Said of a pump when air is drawn at each stroke.

oncosimeter

An instrument for determining the specific gravity of a molten metal by the immersion of a ball made of another metal and of known weight. *Standard, 2*

onegite

A variety of goethite. *Hey, 1*

one on two

A slope in which the elevation rises 1 ft (m) in 2 horizontal ft (m). *Nichols, 1*

one-part line

A single strand of rope or cable. *Nichols, 1*

one-piece set

A term applied to a single stick of timber, called a post, stull, or prop. Post and prop are applied to vertical timbers, and stull is applied to inclined timbers, or those placed horizontally. See also: [set](#) *Lewis*

one shot

a. A borehole-survey instrument that records a single inclination and/or bearing reading on each round trip into a borehole. *Long* b. Single shot.

one-shot exploder

See: [Little Demon exploder](#)

one-spot strip mining

Consists of three operations: the top material is cast out of the way; pay material is dug and trucked away; and the top is pushed or cast back in. *Nichols, 1*

one-way ram

A hydraulic cylinder in which fluid is supplied to one end so that the piston can be moved only one way by power. Syn: [single-acting ram](#) *Nichols, 1*

one-way ventilation

See: [peripheral ventilation](#)

onion-skin weathering

See: [spheroidal weathering](#)

onlap

a. An overlap characterized by the regular and progressive pinching out, toward the margins or shores of a depositional basin, of the sedimentary units within a conformable sequence of rocks, in which the boundary of each unit is transgressed by the next overlying unit and each unit in turn terminates farther from the point of reference. Also, the successive extension in the lateral extent of strata (as seen in an upward sequence) due to their being deposited in an advancing sea or on the margin of a subsiding landmass. Ant: offlap. Syn: [transgressive overlap](#) CF: [overlap](#) b. The progressive submergence of land by an advancing sea. CF: [transgression](#)

on line

a. A linear underground excavation advancing in compliance with a predetermined surveyed direction or line. b. A borehole the course of which is not deviating from the intended direction. *Long* c. Said of a diamond drill when its drive rod is centered on and parallel to a borehole. *Long*

on long awn

A face between end and crosscut. *Sinclair, 6*

onofrite

A former name for selenian metacinnabar Hg(S,Se) .

on plane

Scot. In a direction at right angles to, or facing, the plane or main joints. Syn: [plane course](#)

onsetter

a. The person in charge of loading and unloading of cages or skips at the pit bottom, and also the signaling to the pithead. In modern mines, the onsetter is stationed in a cabin and all controls are within reach for the loading and unloading of the cages, shaft signaling, and other car control equipment at the shaft bottom. See also: [cager](#); [hitcher](#). *Nelson* b. The person in charge of winding operations underground, who is stationed at the shaft side and gives all signals to the winding engineman. *Mason*

onsetting machine

Eng. A mechanical apparatus for loading cages with full tubs and discharging the empties, or vice versa, at one operation. *Fay*

on short awn

A face in a direction between bord and crosscut. *Sinclair, 6*

on sights

a. Following sights placed by a surveyor. *Fay* b. On line.

Ontarian

a. Stage in New York State: Middle Silurian (middle and lower parts of Clinton Group). *AGI* b. An obsolete name for the Middle and Upper Ordovician in New York State. *AGI*

on-the-solid

a. Applied to a blasthole extending into coal farther than the coal can be broken by the blast. *Fay* b. That part of a blasthole that cannot be broken by the blast. *Fay* c. A practice of blasting coal with heavy charges of explosives, in lieu of undercutting or channeling. *Fay*

on the track

Diamonds inset in the crown of a bit in concentric circles so that the diamonds in any one circle follow the same groove cut into the rock. *Long*

onyx

a. A chalcedonic variety of quartz with color, chiefly white, yellow, red, or black, in straight parallel bands; used esp. in making cameos. See also: [banded agate](#); agate; [chalcedony](#); [sardonyx](#); [jasponyx](#). CF: [onyx agate](#) b. A name applied incorrectly to dyed, unbanded, solid-color chalcedony; esp. black onyx. c. Adj. Parallel banded; e.g., onyx marble and onyx obsidian. d. Jet black translucent layers of calcite from cave deposits, often called Mexican onyx or onyx marble. See also: [travertine](#)

onyx agate

Banded agate with straight parallel layers of differing tones of gray; not a syn. for onyx. CF: [onyx](#)

onyx marble

Translucent, generally layered, cryptocrystalline calcite with colors in pastel shades, particularly yellow, brown, and green. See also: [cave onyx](#); [Egyptian alabaster](#); [oriental alabaster](#); Mexican onyx; travertine. *ASTM*

oolite

a. A sedimentary rock, usually a limestone, made up chiefly of ooliths cemented together. The rock was originally termed "oolith." Syn: [roestone](#); [eggstone](#). *AGI* b. A term often used for oolith, or one of the ovoid particles of an oolite. Etymol. Greek oon, egg. CF: [pisolite](#)

oolith

One of the small round or ovate accretionary bodies in a sedimentary rock, resembling the roe of fish, and having diameters of 0.25 to 2 mm (commonly 0.5 to 1 mm). It is usually formed of calcium carbonate, but may be of dolomite, silica, or other minerals, in successive concentric layers, commonly around a nucleus such as a shell fragment, an algal pellet, or a quartz-sand grain, in shallow, wave-agitated water; it often shows an internal radiating fibrous structure indicating outward growth or enlargement at the site of deposition. CF: [pisolith](#) ovulite. *AGI*

oolitic

Pertaining to an oolite, or to a rock or mineral made up of ooliths; e.g., an oolitic ironstone, in which iron oxide or iron carbonate has replaced the calcium carbonate of an oolitic limestone. *AGI*

oolitic limestone

An even-textured limestone composed almost wholly of relatively uniform calcareous ooliths, with virtually no interstitial material. It is locally an important oil reservoir (such as the Smackover Formation in Arkansas), and is also quarried for building stone. *AGI*

oolitic texture

The texture of a sedimentary rock consisting largely of ooliths showing tangential contacts with one another. *AGI*

ooze

a. A soft, slimy, sticky mud. *Fay* b. To emit or give out slowly. *Webster 3rd* c. A fine-grained pelagic deposit that contains more than 30% of material of organic origin. *AGI* d. An unconsolidated deposit composed almost entirely of the shells and undissolved remains of foraminifera, diatoms, and other marine life; diatom ooze and foraminiferal ooze. *Hy*

opacite

A general term applied to swarms of opaque, microscopic grains in rocks, esp. as rims that develop mainly on biotite and hornblende phenocrysts in volcanic rocks, apparently as a result of post-eruption oxidation and dehydration. Opacite is generally supposed to consist chiefly of magnetite dust. CF: [ferrite](#)

opacity

The quality of being opaque. See also: [opaque](#)

opal

An amorphous or microcrystalline mineral, $\text{SiO}_2 \cdot n\text{H}_2\text{O}$; may be tridymite or cristobalite; has a varying proportion of water (as much as 20% but commonly 3% to 9%); occurs in nearly all colors; transparent to nearly opaque; typically shows a marked iridescent "play of color"; differs from quartz in being isotropic; has a lower refractive index than quartz and is softer, more soluble, and less dense; generally occurs massive and may be pseudomorphous after other minerals; deposited at low temperatures from silica-bearing water; occurs in cracks and cavities of igneous rocks, in flintlike nodules in limestones, in mineral veins, in deposits of thermal springs, in siliceous skeletons of various marine organisms (such as diatoms and sponges), in serpentinized rocks, in weathering products, and in most chalcedony and flint. The transparent colored varieties exhibiting opalescence are valued as gemstones. Syn: [opalite](#)

opalescence

A milky or somewhat pearly appearance or luster of a mineral, such as that shown by opal and moonstone. CF: [play of color](#)

opaline

a. Any of several minerals related to or resembling opal; e.g., a pale-blue to bluish-white opalescent or girasol corundum, or a brecciated impure opal pseudomorphous after serpentine. *AGI* b. An earthy form of gypsum. *AGI* c. A rock with a groundmass or matrix consisting of opal. adj. Resembling opal, esp. in appearance; e.g., opaline feldspar (labradorite) or opaline silica (tabasheer). *AGI*

opalite

See: [opal](#)

opalized wood

Silicified wood. See also: [wood opal](#)

opaque

Said of a material that is impervious to visible light or has metallic luster. CF: [transopaque](#); [translucent](#); [transparency](#); [transparent](#); opacity

opaque-atrrite

Attritus that is opaque in thin sections. Syn: [opaque-durit](#) *Tomkeieff*

opaque attritus

Refers to coal material of which the most prominent and important constituent is opaque matter and also referred to as opaque matrix, black fundamental matter or matrix and residuum. *IHCP*

opaque-durit

See: [opaque-atrrite](#)

open area

See: [effective screening area](#)

opencast

A working in which excavation is performed from the surface. Commonly called open pit. See also: [bench](#); [quarry](#). CF: [strip mine](#) Syn: [opencut](#); [opencut mine](#). *Webster 3rd*

opencast method

A mining method consisting of removing the overlying strata or overburden, extracting the coal, and then replacing the overburden. When the overlying material consists of earth or clay it can be removed directly by scrapers or excavators, but where rock is encountered it is necessary to resort to blasting to prepare the material into suitable form for handling by the excavators. See also: [strip mining](#)

opencast mine

See: [opencast](#)

opencast working

See: [opencast](#); strike working.

open circuit

In mineral dressing, a flow line in which the solid particles pass from one appliance to the next without being screened, classified, or otherwise checked for quality; no fraction is returned for retreatment. *Pryor, 2*

open-circuit mill

A grinding mill without classifiers. *Nelson*

open-crib timbering

Shaft timbering with cribs alone, placed at intervals. *Fay*

opencut

a. To increase the size of a shaft when it intersects a drift so as to form a puddle wall behind the sets of timber. b. Open pit; surface working in which the working area is kept open to the sky. See also: [opencast](#)

opencut mine

An excavation for removing minerals which is open to the weather. See also: [opencast](#)

opencut mining

See: [surface mining](#); openpit mining.

open-drive sampler

A drive-type soil-sampling device that is essentially a headpiece, threaded to fit a drill rod, to which is attached a removable length of thin-wall brass or steel tubing. An example is the Shelby tube. *Long*

open end method

A method of mining pillars in which no stump is left; the pockets driven are open on the goaf side and the roof is supported on timbers. *Lewis*

opener hole

The first hole or holes fired in a round blasted off the solid to create an additional free face in a coal mine. *CFR, 4*

open fault

A fault in which the two walls are separated. CF: [closed fault](#) *AGI*

open fire

Fire occurring in a roadway or at the coal face in a mine. Such fires may or may not be easily accessible. They may be in the roof of a roadway or seam, or in the kerf of a machine-cut face. However, they are quite distinct in their initiation from gob fires. An open fire may be ignited by a blown-out shot, electrical failure, or from sparks produced by friction. See also: [spontaneous combustion](#)

open fold

A fold in which the limbs diverge at a large angle. *AGI*

open front

The arrangement of a blast furnace with a forehearth. *Fay*

open-graded aggregate

Mineral aggregate containing very few small particles so that the void spaces are relatively large. *Shell*

open hearth

The form of regenerative furnace of the reverberatory type used in making steel by the Martin, Siemens, and Siemens-Martin processes. See also: [furnace](#); [open-hearth furnace](#).

open-hearth furnace

A reverberatory melting furnace with a shallow hearth and a low roof. The flame passes over the charge on the hearth, causing the charge to be heated both by direct flame and by radiation from the roof and sidewalls of the furnace. In the ferrous industry, the furnace is regenerative. See also: [open hearth](#)

open-hearth process

A process for manufacturing steel, either acid or basic, according to the lining of the reverberatory furnace, in which selected pig iron and malleable scrap iron are melted, with the addition of pure iron ore. The latter, together with the air, contributes to the oxidation of the silicon and carbon in the melted mass. The final deoxidation is sometimes produced by the addition of a small quantity of aluminum or ferromanganese, which at the same time desulfurizes and recarburizes the metal to the required extent. See also: [L Fay](#)

open-hearth steel

See: [open-hearth process](#)

open hole

a. Coal or other mine workings at the surface or outcrop. Also called opencast; opencut; open pit. b. A borehole that is drilled without cores. *Nelson* c. Uncased portion of a borehole. *Pryor, 3* d. A borehole free of any obstructing object or material. *Long*

opening

a. A widening out of a crevice, in consequence of a softening or decomposition of the adjacent rock, so as to leave a vacant space of considerable width. *Fay* b. A short heading driven between two or more parallel headings or levels for ventilation. *Fay* c. Surface entrance to mine workings. Syn: [mine opening](#)

opening out

The formation of a longwall face by driving headings and cross headings and connecting the faces to form a continuous line of coal face. It may be viewed as the final stage in development, leading to full coal production. In pillar-and-stall mining, opening out would imply the setting off of the main headings and subsidiary drivages for the formation of coal pillars. See also: [branch headings](#); [mechanized heading development](#). *Nelson*

openings

a. The parts of coal mines between the pillars, or the pillars and ribs. *Fay* b. A series of parallel chambers or openings, separated by pillars or walls, in slate mining. The width of an opening varies from 35 to 50 ft (11 to 15 m) depending on roof conditions. *Nelson*

opening shot

In blasting into solid rock, the wedging shot, gouging shot, or burn cut. Leading shot fired to open up the rock face by creating a cavity and therefore easing the work done by later shots in a round. *Pryor, 3*

opening stock

Quantity on hand at start of accounting period--ore, concentrates, stores, etc. *Pryor, 3*

open lagging

Lagging placed a few inches apart.

open light

A naked light. Not a safety light. *Fay*

open off

a. To turn stalls off stalls, or to drive branch roadways from crossheadings. *Nelson* b. Eng. To begin the longwall system from the shaft pillar, or the far end of the royalty, or from any headings previously driven out for the purpose of commencing such system. *Fay* c. To start any new working, as a heading, entry, gangway, room, etc., from another working, as a slope, gangway, etc. *Fay*

openpit mine

A mine working or excavation open to the surface. See: [strip mine](#)

openpit mining

a. A form of operation designed to extract minerals that lie near the surface. Waste, or overburden, is first removed, and the mineral is broken and loaded, as in a stone quarry. Important chiefly in the mining of ores of iron and copper. *Barger* b. The mining of metalliferous ores by surface-mining methods is commonly designated as openpit mining as distinguished from the strip mining of coal and the quarrying of other nonmetallic materials such as limestone, building stone, etc. See also: [strip mining](#)

openpit quarry

A quarry in which the opening is the full size of the excavation. One open to daylight. *Fay*

open pot

Fireclay pot for melting glass--open at the top. *Mersereau, 2*

open rock

Any stratum sufficiently open or porous to contain a significant amount of water or to convey it along its bed. *AGI*

opens

Large, open cracks or crevices and small and large caverns. *Long*

open-sand casting

Casting made in a mold simply excavated in sand, without a flask. *Fay*

openset

Scot. An unfilled space between pack walls. See also: [cundy](#)

open shop

A shop, or mine, where the union price is paid, but where the workers are not all union members. CF: [union shop](#)

open split

A split in which no regulator is installed. Syn: [free split](#) *Higham*

open stope

a. An unfilled cavity. *Nelson* b. Underground working place either unsupported, or supported by timbers or pillars of rock. *Pryor, 3*

open-stope method

a. Stopping in which no regular artificial method of support is employed, although occasional props or cribs may be used to hold local patches of insecure ground. The

walls and roof are self-supporting, and open stopes can be used only where the ore and wall rocks are firm. *Jackson, 2 b.* See: [overhand stoping](#)

open-tank method

A method of treating mine timber to prevent decay in which the timber is immersed in a tank of hot preservative and then in a tank of cold preservative. The preservatives used are creosote, zinc chloride, sodium fluoride, and other chemicals. See also: [timber preservation](#); Bethell's process. *Lewis*

open timbering

The usual method of setting timber or steel supports in mines--they are spaced from 2 to 5 ft (0.6 to 1.5 m) apart, with laggings and struts to secure the ground between each set. The method is used in ground that does not crumble or flow. See also: [close timbering](#)

open-top carrier

The main use of this type of bucket elevator has been in handling the product of the larger crushers. Steel buckets of large capacity, which may be as long as 7 ft (2.1 m), are attached rigidly to a heavy flat bar chain, each strand made of two bars with a pitch of 2 and with self-oiling flanged rollers at each intersection. The elevator rises at an angle of about 60 degrees, and the rollers run on ways made of light T-rails. The buckets have overlapping edges, so that there is no spill between them. *Pit and Quarry*

open-top tubbing

A length of tubbing having no wedging crib on the top of it. *Fay*

open traverse

A surveying traverse that starts from a station of known or adopted position but does not terminate upon such a station and therefore does not completely enclose a polygon. CF: [closed traverse](#)

open working

Surface working, e.g., a quarry or opencast mine. Among the minerals often exploited by open workings are coal, brown coal, gems; the ores of copper, gold, iron, lead, and tin; and all kinds of stone. Also called open work. *Nelson*

operating carrier

The mechanism used with the automatic duckbill through which the extension and retraction of the shovel trough are controlled. *Jones, 1*

operating cost

The sum of the costs of mining, beneficiation, and administration gives the operating cost of a mine. *Nelson*

operating engineer

See: [hoistman](#)

operating point

A ventilation system is composed of a fan and a set of connected ducts. In a mine ventilation system, mine openings comprise the ducts. At a given air density and with the fan operating at constant speed, there is only one head and quantity of airflow that can result. This is an equilibrium condition and is known as the operating point of the system. *Hartman, 2*

operation

In crystallography, the rotation, reflection, or inversion of an attribute of a crystal structure to complete its symmetry. CF: [element](#)

operational capacities

Figures given on flowsheets to indicate quantities passing various points in plant per unit time, taking account of fluctuations in the rate of supply and composition (as to size and content of impurity), as follows: (1) design capacity, the rate of feed, defined by limits expressing the extent and duration of load variations, at which specific items of plant subject to a performance guarantee must operate continuously and give the guaranteed results on a particular quality of feed; (2) peak design capacity, a rate of feed in excess of the design capacity, which specific items of plant will accept for short periods without fulfilling the performance guarantees given in respect of them; and (3) mechanical maximum capacity, the highest rate of feed at which specific items of equipment, not subject to performance guarantees, will function on the type and quality of feed for which they are supplied. *BS, 5*

operative temperature

Operative temperature is that temperature of an imaginary environment in which, with equal wall (enclosing areas) and ambient air temperatures and some standard rate of air motion, the human body would lose the same amount of heat by radiation and convection as it would in some actual environment at unequal wall and air temperatures and for some other rate of air motion. *Strock, 2*

ophicalcite

A recrystallized metamorphic rock composed of calcite and serpentine, commonly formed by dedolomitization of a siliceous dolostone. Some ophicalcites are highly veined and brecciated and are associated with serpentinite. *AGI*

ophiolite

A group of mafic and ultramafic igneous rocks ranging from spilite and basalt to gabbro and peridotite, including rocks rich in serpentine, chlorite, epidote, and albite derived from them by later metamorphism, whose origin is associated with an early phase of the development of a geosyncline. The term was originated by Steinman in 1905. *AGI*

ophite

A general term for diabases that have retained their ophitic structure although the pyroxene is altered to uralite. The term was originated by Palasson in 1819. *AGI*

ophitic

Applied to a texture characteristic of diabases or dolerite in which euhedral or subhedral crystals of plagioclase are embedded in a mesotaxis of pyroxene crystals, usually augite. Also said of a rock with such a texture. CF: [poikilitic](#)

optical anomaly

Optical properties apparently at variance with optical rules, such as: anisotropy in isotropic minerals, such as birefringent diamond; biaxiality in uniaxial minerals, such as quartz; and erratic variation in birefringence near optical absorption bands--e.g., some epidote minerals.

optical calcite

Crystalline calcite so clear that it has value for optical purposes; e.g., polarizers. Syn: [Iceland spar](#)

optical centering device

An optical device that enables a theodolite to be accurately positioned over or under a survey station. Also called optical plummet (undesirable usage). *BS, 7*

optical character

The designation as to whether optically positive or optically negative; said of minerals. *Fay*

optical constant

In optical mineralogy, any of the following: indices of refraction, birefringence, optic sign, axial angles, extinction angles, and dispersion of a nonopaque mineral. In ore microscopy (mineragraphy), any of the reflectances and anisotropy of opaque minerals. See also: [reflected-light microscope](#)

optical crystallography

The study of the behavior of light in crystals. *Hurlbut*

optical diffraction

Constructive interference of monochromatic light; e.g., labradorescence in plagioclase, fire in opal. See also: [diffraction](#)

optical flat

Glass or other surface rendered truly planar. *Pryor, 3*

optical glass

Carefully made glass of great uniformity and usually special composition to give desired transmission, refraction, and dispersion of light. *CCD, 2*

optical mineralogy

The determination of optical properties of minerals for the purpose of characterization and identification. See also: [index of refraction](#)

optical property

Any of several effects of a substance upon light. Refractive index, double refraction, (and its strength, birefringence), dispersion, pleochroism, and color are gemmologically the most important optical properties.

optical pyrometer

A type of pyrometer that measures high temperature by comparing the intensity of light of a particular wavelength from the hot material with that of a filament of known temperature. It is used to determine the temperature of incandescent lavas. See also: [pyrometer](#)

optical sign

When a translucent crystal is viewed under microscope, light travels through the mineral at a speed which corresponds with its refractive index, as this is affected by the crystal

planes. A uniaxial crystal has a negative optical sign when the velocity of its extraordinary ray exceeds that of the ordinary ray and vice versa. Calcite is negative; quartz positive. For biaxial crystals, the three principal directions of vibration are mutually at right angles. *Pryor, 3*

optical square

A hand-held instrument enabling right angles to be set out accurately on a site.
Hammond

optical twinning

A type of twinning in quartz in which the parts of the twin are alternately left- and right-handed. So named because it can be recognized by optical tests in distinction to Dauphine (electrical) twinning. Optical twinning as ordinarily applied includes all twin laws in quartz with the exception of the Dauphine. Also called Brazil twinning; chiral twinning. *Am. Mineral., 2*

optic angle

The angle between the two optic axes of a biaxial crystal; its symbol is $2V$ (less than 90 degrees), $2V_{\alpha}$, or $2V_{\gamma}$, depending on whether the optic direction X or Z is in the acute bisectrix. Syn: [axial angle](#); [optic-axial angle](#). CF: [acute bisectrix](#); obtuse bisectrix.

optic-axial angle

See: [optic angle](#)

optic axis

A direction of single refraction in a doubly refracting mineral. Hexagonal and tetragonal minerals have one such axis, and are termed uniaxial; rhombic, monoclinic, and triclinic minerals have two optic axes and are thus biaxial. See also: [uniaxial](#); [dispersion](#). CF: [extinction](#) *Anderson*

optics

The sub-field of physics that covers the behavior of light.

optic sign

a. Indicates the type of double refraction in a mineral. In uniaxial minerals, the material is said to be positive when the extraordinary ray has a higher refractive index than the ordinary ray and negative when the ordinary ray has the greater index. In biaxial minerals, which have three basic optical directions, the refractive index of the

intermediate or beta ray is the criterion; if its refractive index is nearer that of the low or alpha ray, it is said to be a positive mineral or stone; if it is nearer the high or gamma ray, it is said to be a negative mineral or stone. b. More technically, in uniaxial minerals, the material is positive when the extreme refractive index (n_{epsilon}) is greater than the apparently isotropic one (n_{omega}) and negative when the extreme refractive index is less. In biaxial minerals, which have extreme refractive indices both above and below the apparently isotropic one (n_{beta}), the material is positive when the lower refractive index (n_{alpha}) is closer to the apparently isotropic one and negative when the higher one (n_{gamma}) is closer. Syn: [optical sign](#); optical character. See also: [interference](#)

optimization

Coordination of various processing factors, controls, and specifications to provide best overall conditions for technical and/or economic operation. *Pryor, 4*

optimum depth of cut

That depth of cut required to completely fill the dipper in one pass without undue crowding. *Carson, 1*

optimum moisture content

The water content at which a soil can be compacted to the maximum dry unit weight by a given compactive effort. Also called optimum water content. *ASCE*

option

a. A privilege secured by the payment of a certain consideration for the purchase, or lease, of mining or other property, within a specified time, or upon the fulfillment of certain conditions set forth in the contract. b. S. Afr. The word option may refer to shares under option to the holder of option certificates. In regard to mining activities, options are granted to acquire the mineral rights and/or surface rights over some farm at a price fixed in the agreement. This price may be a sum of money or a participation in a mining company still to be formed. The option itself can be acquired for a lump sum or for a payment of so much per morgen a year. The option contract is generally connected with the permission for the option holder to prospect for minerals and briefly referred to as option and prospecting contract. *Beerman*

optional-flow storage

In coal preparation, optional-flow setups are those where coal usually goes to the plant but can be diverted into storage, either in bins or hoppers or on the ground. *Coal Age, 3*

opx

Abbrev. for orthopyroxene. CF: [cpx](#)

oral agreement to locate

An agreement to locate need not be in writing. If a party, in pursuance of an oral agreement to locate at the expense of another, locates the claim in his or her own name, he or she holds the legal title to the ground in trust for the benefit of the party for whom the location was made. Such a party could, upon making the necessary proofs, compel the locator of the mining claim to convey the title to him or her, although the agreement to do so was not in writing. Such an agreement is not within the statute of frauds.

Ricketts

orange heat

A division of the color scale, generally given as about 900 degrees C.

orangepeel

A variant of the clamshell bucket with four or five leaves instead of the clamshell's two. Each leaf ends in a reinforced point. Its digging ability is less than that of the clamshell, and its principal use is for underwater excavation and digging. *Carson, I*

orangepeel sampler

An apparatus consisting of four movable jaws that converge to a point when closed; used to obtain samples of underwater sediment. *AGI*

orbicular

Adj. Describes rounded to spherical, commonly banded, textures within minerals or rocks; e.g., orbicular diorite.

orbicular structure

A structure developed in certain phanerocrystalline rocks (e.g., granite and diorite) due to the occurrence of numerous orbicules. Syn: [spheroidal structure](#); [nodular structure](#).

orcelite

A hexagonal mineral, $\text{Ni}_{5-x}\text{As}_2$; rose-bronze; at the Tiebaghe massif, New Caledonia.

ordered solid solution

A condition when atoms in a solid solution arrange themselves in regular or preferential positions in the lattice, rather than at random. *Newton, I*

order of crystallization

The apparent chronological sequence in which crystallization of the various minerals of an assemblage takes place, as evidenced mainly by textural features. See also: [paragenesis](#)

order of persistence

See: [stability series](#)

order of reaction

A classification of chemical reactions based on the index of the power to which concentration terms are raised in the expression for the instantaneous velocity of the reaction; i.e., on the apparent number of molecules which interact. *CTD*

ordinary kriging

A variety of kriging which assumes that local means are not necessarily closely related to the population mean, and which therefore uses only the samples in the local neighborhood for the estimate. Ordinary kriging is the most commonly used method for environmental situations. See also: [kriging](#)

ordinary ray

a. In a uniaxial crystal, that ray that travels with constant velocity in any direction within it. *Anderson* b. In mineral optics, a light ray that, because of its crystallographic orientation, follows Snell's law, $n = \sin i / \sin r$, where n is the refractive index, i is the angle of incidence, and r is the angle of refraction. In anisotropic crystals, not all light rays follow Snell's law and are, hence, "extraordinary rays." CF: [law of refraction](#)

ordinate

Y-axis; the vertical scale of a graph.

ordnance bench mark

Survey station the level of which has been officially fixed with reference to the ordnance datum, the arbitrary mean sea level at Newlyn in Cornwall, England. *Pryor, 3*

ordnance survey

Originally, a military mapping activity; now a precise survey maintained by government which maps land and building features of Great Britain in close detail. *Pryor, 3*

ordonezite

A tetragonal mineral, ZnSb_2O_6 ; brown.

ore

a. The naturally occurring material from which a mineral or minerals of economic value can be extracted profitably or to satisfy social or political objectives. The term is generally but not always used to refer to metalliferous material, and is often modified by the names of the valuable constituent; e.g., iron ore. See also: [mineral](#); [mineral deposit](#); ore mineral. Syn: [orebody](#) b. The term ores is sometimes applied collectively to opaque accessory minerals, such as ilmenite and magnetite, in igneous rocks. *AGI*

ore band

Zone of rock rich in ore.

ore-bearing fluid

See: [hydrothermal solution](#)

ore bed

a. Metal-rich layer in a sequence of sedimentary rocks. *AGI* b. Economic aggregation of minerals occurring between or in rocks of sedimentary origin.

ore bin

a. A receptacle for ore awaiting treatment or shipment. *Fay* b. Robustly constructed steel, wooden, or concrete structure which receives intermittent supplies of mined ore and can transfer them continuously by rate-controlled withdrawal systems (bottom gates and ore feeders) to the treatment plant. Thus a buffer stock is held which allows a mine to hoist ore intermittently without bringing milling operations to a standstill. It characteristically receives a weighed-in input of finely broken ore from the final dry-crushing section (usually between 1-in and 3/8-in (2.54-cm and 9.5-mm) maximum particle size). The surge bin is a much smaller one, able to receive a dumped load of run-of-mine ore and to transfer it at a regular rate to the crushing system between arrivals of further skip loads. *Pryor, 3*

ore blending

Method whereby a mine, or a group of mines, served by a common mill, sends ores of slightly varied character for treatment and separate bins or stockpiles are provided. From these, regulated percentages of ores are drawn and blended to provide a steady and predictable feed to the mineral dressing plant. *Pryor, 3*

ore block

A section of an orebody, usually rectangular, that is used for estimates of overall tonnage and quality. See also: [blocking out](#)

ore blocked out

See: [developed reserve](#)

ore boat

A boat constructed esp. for transporting iron ore on the Great Lakes. *Mersereau, 2*

orebody

A continuous, well-defined mass of material of sufficient ore content to make extraction economically feasible. See also: [ore](#); [mineral deposit](#). *AGI*

ore boil

A reaction that occurs in an open-hearth furnace in which the carbon monoxide released by the oxidation of carbon causes a violent agitation of the metal as it escapes. *Newton, 1*

ore bridge

A large electric gantry-type crane which, by means of a clamshell bucket, stocks ore or carries it from a stockpile into bins or a larry car on a trestle. *Fay*

ore-bridge bucket

A clamshell grab bucket of 5 to 7 tons capacity. *Fay*

ore car

A mine car for carrying ore or waste rock. *Weed, 2*

ore chute

An inclined passage, from 3 to 4 ft (approx. 1 m) square, for the transfer of ore to a lower level, car, conveyor, etc. It may be constructed through waste fills. See also: [orepass](#)

ore cluster

A genetically related group of orebodies that may have a common root or source rock but that may differ structurally or otherwise. *AGI*

ore control

Any tectonic, lithologic, or geochemical features considered to have influenced the formation and localization of ore. *AGI*

ore crusher

a. A machine for breaking up masses of ore, usually prior to passing through stamps or rolls. See also: [crusher](#) b. See: [crusher man](#)

ore delfe

a. Ore lying underground. b. Right or claim to ore from ownership of land in which it is found.

ore deposit

a. A body of ore. See also: [mineral deposit](#) b. A mineral deposit that has been tested and is known to be of sufficient size, grade, and accessibility to be producible to yield a profit. (In controlled economies and integrated industries, the "profit" decision may be based on considerations that extend far beyond the mine itself, in some instances relating to the overall health of a national economy.)

ore developed

See: [positive ore](#)

ore developing

Ore exposed on two sides. First class, blocks with one side hidden; second class, blocks with two sides hidden; third class, blocks with three sides hidden. See also: [probable ore](#)

ore dike

An injected wall-like intrusion of magmatic ore, forced in a liquid state across the bedding or other layered structure of the invaded formation. *Schieferdecker*

ore district

A combination of several ore deposits into one common whole or system.

ore dressing

The cleaning of ore by the removal of certain valueless portions, such as by jigging, cobbing, vanning, etc. See also: [concentration](#); beneficiation; preparation. Syn: [mineral dressing](#); [ore preparation](#). *Fay*

ore expectant

The whole or any part of the ore below the lowest level or beyond the range of vision. The prospective value of a mine beyond or below the last visible ore, based on the fullest possible data from the mine being examined, and from the characteristics of the mining district. See also: [possible ore](#); [prospective ore](#). *Fay*

ore face

An orebody that is exposed on one side, or shows only one face, and of which the values can be determined only in a prospective manner, as deduced from the general condition of the mine or prospect. *Fay*

ore-forming fluid

A gas or fluid that dissolves, receives by fractionation, transports, and precipitates ore minerals. A mineralizer is typically aqueous, with various hyperfusible gases (CO₂, CH₄, H₂S, HF), simple ions (H⁺, HS, Cl⁻, K, Na, Ca), complex ions (esp. chloride complexes), and dissolved base and precious metals. Syn: [geologic mineralizer](#); mineralizer; [hydrothermal solution](#).

ore genesis

The origin of ores.

ore geology

The branch of applied geology dealing with the genetic study of ore deposits. Syn: [metallogeny](#); [mining geology](#). See also: [economic geology](#)

oregonite

Probably Ni₂FeAs₂; hexagonal. From Josephine Creek, Josephine County, OR. Named from the locality. Also spelled oregonit. *Hey, 2*

ore grader

In metal mining, a person who directs and regulates the storage of iron ores of various grades in bins at shipping docks so that the grade of ore contained in each bin will contain the approximate percentage of iron guaranteed to the buyer (iron and steel mills). *DOT*

ore guide

Any natural feature--such as alteration products, geochemical variations, local structures, or plant growth--known to be indicative of an orebody or mineral occurrence. *AGI*

ore hearth

A small, low fireplace surrounded by three walls, with a tuyere at the back. Three important types are called: ore hearth, waterback ore hearth, and Moffet ore hearth; used in smelting. *Fay*

oreing down

A blocking operation in which ore is added to an open-hearth bath to oxidize the bath and to further reduce the carbon. *Henderson*

ore in sight

a. A term frequently used to indicate two separate factors in an estimate, namely: (1) ore blocked out; i.e., ore exposed on at least three sides within reasonable distance of each other; and (2) ore that may be reasonably assumed to exist, though not actually blocked out; these two factors should in all cases be kept distinct, because (1) is governed by fixed rules, while (2) is dependent upon individual judgment and local experience. The expression ore in sight as commonly used in the past, appears to possess so indefinite a meaning as to discredit its use completely. The terms positive ore, probable ore, and possible ore are suggested. b. See: [developed reserve](#)

ore intersection

The point at which a borehole, crosscut, or other underground opening encounters an ore vein or deposit; also, the thickness of the ore-bearing deposit so traversed. *Long*

ore magma

A term proposed by Spurr (1923) for a magma that may crystallize into an ore; the sulfide, oxide, or other metallic facies of a solidified magma. *AGI*

ore microscope

See: [reflected-light microscope](#)

ore microscopy

The study of opaque ore minerals in polished section with a reflected-light microscope. See also: [reflected-light microscopy](#); microscopy. *AGI*

ore mineral

The part of an ore, usually metallic, which is economically desirable, as contrasted with the gangue. See also: [ore](#)

ore partly blocked

Said of an orebody that is only partly developed, and the values of which can be only approx. determined. See also: [probable ore](#)

orepass

A vertical or inclined passage for the downward transfer of ore; equipped with gates or other appliances for controlling the flow. An orepass is driven in ore or country rock and connects a level with the hoisting shaft or with a lower level. See also: [ore chute](#)

ore personal property

Ore, or other mineral product, becomes personal property when detached from the soil in which it is imbedded. *Ricketts*

ore pipe

A long and relatively thin deposit commonly formed at the intersection of two planes. See also: [pipe](#)

ore plot

A place where dressed ore is kept. *Fay*

ore pocket

a. Excavation near a hoisting shaft into which ore from stopes is moved, preliminary to hoisting. *Pryor, 3* b. Used in a phrase such as a rich pocket of ore, to describe an unusual concentration in the lode. *Pryor, 3*

ore preparation

See: [ore dressing](#)

ore province

A well-defined area containing ore deposits of a particular kind; e.g., the porphyry copper deposits of the Southwestern United States. Related to, but not exactly synonymous with, metallogenic province, which need not contain economic ore deposits.

ore reserve

a. The term is usually restricted to ore of which the grade and tonnage have been established with reasonable assurance by drilling and other means. *Nelson* b. The total tonnage and average value of proved ore, plus the total tonnage and value (assumed) of the probable ore. *Hoover* c. A mine's substantial asset, without which none of the surface works are economically viable. A body of ore that has been proved to contain a sufficient tonnage of amenable valuable mineral to justify the mining enterprise. The British Institution of Mining and Metallurgy, which regulates the professional standards of its membership, considers that the term ore reserves should be restricted to ore of which the quantity and grade have been established with reasonable assurance by a responsible, professionally qualified person. Additional ore insufficiently developed or tested for inclusion in ore reserves should be clearly described in simple terms best suited to the circumstances; modes of mineral occurrence vary too widely to permit standardization of categories. *Pryor*, 3 d. S. Afr. Orebodies made available for mining through drives connected by winzes (a connection driven down) and raises (a connection driven up), thus forming blocks that are accessible from four sides. Some companies record partially developed ore reserves in which this making of blocks has not been completed. Newcomers in gold mining occasionally speak of ore reserves when they mean the orebodies contained in a mining area and in copper mining this method of expression has been accepted by large concerns. *Beerman* e. See: [reserve](#)

ore sampling

The process in which a portion (sample of ore) is selected in such a way, that its composition will represent the average composition of the entire bulk of ore. Such a selected portion is a sample, and the art of properly selecting such a sample is called sampling. *Newton*, 1

ore separator

A cradle, frame, jigging machine, washer, or other device or machine used in separating the metal from broken ore, or ore from worthless rock. *Standard*, 2

ore shoot

a. An elongate pipelike, ribbonlike, or chimneylike mass of ore within a deposit (usually a vein), representing the more valuable part of the deposit. Syn: [shoot](#) b. Concentration of primary ore along certain parts of a rock opening. *Bateman*, 2 c. A large and visually rich aggregation of mineral in a vein. It is a more or less vertical zone or chimney of rich vein matter extending from wall to wall, and has a definite width laterally. Sometimes called pay streak, although the latter applies more specif. to placers. d. An area of payable lode surrounded by low values. See also: [shoot](#) *Spalding*

ore sill

A tabular sheet of magmatic ore, injected in a liquid state along the bedding planes of a sedimentary or other layered formation.

ore stamp

A machine for reducing ores by stamping. *Standard, 2*

ore-storage drier man

One who removes moisture from ore or other material preparatory to roasting or electrolytic processing, using a gas or hot-air drier. Also called drier operator. *DOT*

ore strand

Individual mass of quartz with a halo of alteration and ore minerals, or close assemblage of seams of such quartz and accompanying altered ground. *AGI*

ore trend

A term used on the Colorado Plateau to indicate the extension of an orebody along its major axis; the average trend of ore in a particular area, or the regional trend of mineralization over a large area. The local trend of individual orebodies may vary from the regional trend of so-called mineral belts. *Ballard*

ore vein

A tabular or sheetlike mass of ore minerals occupying a fissure or a set of fissures and later in formation than the enclosing rock. *Schieferdecker*

ore washer

A machine for washing clay and earth out of earthy brown hematite ores. The log washer is a common type. *Fay*

ore zone

A horizon in which ore minerals are known to occur. *Long*

Orford process

A process for separating the copper and nickel in the matte obtained by Bessemerizing. The matte, which consists of copper-nickel sulfides, is fused with sodium sulfide, and a separation into two layers, the top rich in nickel and the bottom rich in copper, is obtained. Also known as top-and-bottom process. *CTD*

organ

A series of closely spaced props placed at the borders of the chamber at the coal face. Such an arrangement protects the future, adjoining chamber from caving. *Stoces*

organic

Being, containing, or relating to carbon compounds, esp. in which hydrogen is attached to carbon whether derived from living organisms or not. Usually distinguished from inorganic or mineral. CF: [inorganic](#) *Webster 3rd*

organic ash

Ash in coal derived from the incombustible material contained in plants. *Tomkeieff*

organic colloid

Any of the depressants used in the flotation process. They include glue, gelatin, albumen, dried blood, casein (proteins), tannin, licorice, quebracho extract, and saponin (complex polyhydroxy carboxylic acids and glucosides). *Pryor, 3*

organic deposit

A rock or other deposit formed by organisms or their remains.

organic efficiency

The ratio (normally expressed as a percentage) between the actual yield of a desired product and the theoretically possible yield (based on the reconstituted feed), both actual and theoretical products having the same percentage of ash. *BS, 5*

organic soil

A general term applied to a soil that consists primarily of organic matter such as peat soil and muck soil. *AGI*

organic sulfur

The difference between the total sulfur in coal and the sum of the pyritic sulfur and sulfate sulfur. *BS, 1*

organic test

A test in which organic matter in soil is destroyed by oxidizing agents and the loss measured. This test is used in preparation of soil for a sedimentation test, and gives an indication of the amount of organic matter present. See also: [sedimentation test](#)

organogenic

Derived from or composed of organic materials; e.g., a crinoidal limestone.

organolite

Rock formed from organic substances, esp. those of vegetable origin, such as coal, oil, resins, and bitumens. *Tomkeieff*

orichalcum

An ancient copper alloy resembling gold in color. *Hess*

orient

a. To place a deflection wedge in a borehole in such an attitude that the concave surface is pointed in a predetermined direction. *Long* b. To place a piece of core in the same relative plane as it occupied below the surface. See also: [core orientation](#) c. To turn a map or planetable sheet in a horizontal plane until the meridian of the map is parallel to the meridian on the ground. *Seelye, 2* d. In a transit, to turn the instrument so that the direction of the 0 degrees line of its horizontal circle is parallel to the direction it had in the preceding, or in the initial, setup. *Seelye, 2* e. To place a diamond in a bit mold in such an attitude that when it is embedded in the crown matrix one of its hard vector planes will come in contact with the rock to be abraded or cut by the diamond. *Long* f. The characteristic sheen and iridescence displayed by pearl. *Anderson* g. To align an optical or crystallographic direction of a mineral with a rotation axis of a microscope stage.

oriental

a. Frequently used in the same sense as precious when applied to minerals; from an old idea that gems came principally from the Orient; e.g., oriental amethyst, oriental chrysolite, oriental emerald, and oriental topaz, all of which are varieties of sapphire. Syn: [precious](#) *Fay* b. Specially bright, clear, pure, and precious; said of gems. *Standard, 2*

oriental alabaster

Calcium carbonate in the form of onyx marble. Gibraltar stone. Syn: [Algerian onyx](#); [onyx marble](#). *Hess; CTD*

oriental cat's-eye

See: [cat's-eye](#); tiger's-eye.

oriental powder

An explosive consisting of tan bark, sawdust, or other vegetable fiber, or resins, such as gamboge, impregnated with a nitrate or chlorate and mixed with gunpowder. *Standard, 2*

orientation

a. Arrangement in space of the axes of a crystal with respect to a chosen reference or coordinate system. See also: [preferred orientation](#) *ASM, 1* b. In surveying, the rotation of a map (or instrument) until the line of direction between any two of its points is parallel to the corresponding direction in nature. c. In structural petrology, refers to the arrangement in space of particles (grains or atoms) of which a rock is composed. *AGI* d. The act or process of setting a diamond in the crown of a bit in such an attitude that one of its hard vector planes will contact the rock and be the surface that cuts or abrades it. e. As used in borehole surveying and directional drilling practice, orientation refers to the method and procedure used in placing an instrument or tool, such as a deflection wedge, in a drilled hole so that its directional position, bearing, or azimuth is known. *Long* f. The position of important sets of planes in a crystal in relation to any fixed system of planes. *CTD* g. The spatial relationship between crystallographic axes and principle optic directions in anisotropic minerals. h. The characteristic sheen or iridescence displayed by pearl.

orientational twinning

See: [electrical twinning](#)

orientation survey

In geochemical prospecting, a geochemical survey normally consisting of a series of preliminary experiments aimed at determining the existence and characteristics of anomalies associated with mineralization. This information is then used in selecting adequate prospecting techniques and in determining the factors and criteria that have a bearing on interpretation of the geochemical data. *Hawkes, 2*

oriented

Said of a specimen or thin section that is so marked as to show its original position in space. *AGI*

oriented bit

A surface-set diamond bit with individual stones set so as to bring the hard vector direction or planes of the crystal into opposition with the rock surface to be abraded or cut. See also: [orient](#)

oriented core

A core specimen that can be positioned on the surface as it was in the borehole prior to extraction. Such a core is useful where the general dip of the strata is required from one borehole. A magnetic method may be used to disclose the polarity the core specimen possessed while in situ. See also: [true dip](#); [borehole surveying](#); [oriented sample](#). CF: [core orientation](#)

oriented core barrel

An instrument used in borehole surveying, which marks the core to show its position in space. *Hammond*

oriented diamond

A diamond inset in the crown of a bit in such an attitude that one of its hard vector planes will be the surface that cuts or abrades the rock. See also: [orient](#)

oriented sample

See: [oriented core](#)

oriented specimen

a. In structural petrology, a hand specimen so marked that its exact arrangement in space is known. *Billings* b. In paleontology, a fossil whose position is known in regards to such features as anterior and dorsal sides, dorsal and ventral sides, the axis of coiling, the plane of coiling, etc. *AGI*

oriented survey

A borehole survey made by lining up a reference mark on the clinometer case with that on the drill rods, which in turn are oriented as they are lowered into the borehole.

orienting coupling

A rotatable coupling on a Thompson retrievable wedge-setting assembly that may be set and locked in a predetermined position in reference to the gravity-control member. This places the deflection wedge so as to direct the branch borehole in the desired course.

Long

orientite

An orthorhombic mineral, $\text{Ca}_2 \text{Mn}^{2+} \text{Mn}^{3+}_2 \text{Si}_3 \text{O}_{10} (\text{OH})_4$; forms minute, brown to black, radiating, prismatic crystals.

orifice

a. In ventilation, a hole in a very thin plate. *Mason* b. A hole or opening, usually in a plate, wall, or partition, through which water flows, generally for the purpose of control or measurement. *Seelye, 1* c. The end of a small tube, such as the orifice of a Pitot tube, piezometer, etc. *Seelye, 1* d. An opening through which glass flows. In a feeder, an opening in bottom of spout formed by orifice ring. *ASTM* e. Opening. Formerly applied to discs placed in pipelines or radiator valves to reduce the fluid flow to a desired amount. *Strock, 2*

orifice meter

A form of gas or liquid flowmeter consisting of a diaphragm in which there is an orifice placed transversely across a pipe; the difference in pressure on the two sides of the diaphragm is a measure of flow velocity. *Lowenheim*

orifice of passage

Said of a fan with an orifice comparable to the equivalent orifice of a mine; i.e., the area in a thin plate that requires the same pressure to force a given volume of air through as is required to force the same volume through the fan. Orifice of passage $O = 0.389 Q/w.g.f.$, where Q = volume of air passing in thousands cubic feet per minute; $w.g.f.$ = loss of pressure in the fan in inches of water gage. *Nelson*

origin

The source or ground of the existence of anything, either as cause or as occasion; that from which a thing is derived or by which it is caused; esp., that which initiates or lays the foundation; e.g., the origin of ore deposits. *Standard, 2*

original dip

The attitude of sedimentary beds immediately after deposition. Syn: [initial dip](#); [primary dip](#). *AGI*

original hole

See: [main hole](#)

original lead

The common lead in a uranium mineral. *AGI*

original mineral

See: [primary mineral](#)

ormolu

a. Gold ground for use in gilding; also metal gilded with ground gold. *Webster 3rd* b. A brass made to imitate gold and used in mounts for furniture and for other decorative purposes. Also called mosaic gold. *Webster 3rd*

ornamental stone

See: [gemstone](#)

ornansite

A stony meteorite composed of bronzite and olivine in a friable mass of chondri. *Hess*

orocline

An orogenic belt with an imposed curvature or sharp bend, interpreted by Carey (1958) as a result of horizontal bending of the crust, or deformation in plan. *AGI*

orogen

A belt of deformed rocks, in many places accompanied by metamorphic and plutonic rocks; e.g., the Appalachian orogen or the Alpine orogen. *AGI*

orogenesis

See: [orogeny](#)

orogenic

Adj. of orogeny.

orogeny

The process by which structures within fold-belt mountainous areas were formed, including thrusting, folding, and faulting in the outer and higher layers, and plastic folding, metamorphism, and plutonism in the inner and deeper layers. Syn: [orogenesis](#); [mountain building](#); [tectogenesis](#). Adj: orogenic; orogenetic. *AGI*

orometer

An aneroid barometer having a second scale that gives the approximate elevation above sea level of the place where the observation is made. *Webster 3rd*

oronite

An enamel paint for protecting metal surfaces from the action of hot vapors. *Fay*

O'Rourke car switcher

A crossover switch that consists essentially of a single-acting cylinder hoist on a crossrail fastened to the roof at right angles to the track. While a car is being loaded, the switcher picks up the empty car next to the locomotive and holds it to one side. As soon as a car is loaded the locomotive pulls the train back past the switcher, and the empty car is placed at the front of the train and pushed under the slide. *Lewis*

orphaned mine land

Abandoned and unreclaimed mines for which no owner or responsible party can be found. The reclamation and environmental conditions of such lands is then defaulted to the State or Federal Government. *SME, 1*

orpiment

a. A yellow arsenic trisulfide, $As_2 S_3$, containing 61% arsenic; monoclinic. Syn: [yellow arsenic](#) b. A monoclinic mineral, $4[As_2 S_3]$; soft; pearly lemon yellow with one perfect cleavage; in powdery foliated masses and coatings, botryoidal or fibrous; a low-temperature alteration of other arsenides; associated with realgar and gold in hot springs. Syn: [yellow ratsbane](#)

Orsat gas-analysis instrument

An instrument for analyzing flue gases. Although outside its normal field of application, it may be used for analyzing mine air. *Nelson*

orthite

A former name for allanite, esp. when found in slender prismatic or acicular crystals.

ortho-

a. A combining form meaning straight; at right angles; proper. *AGI* b. In petrology, a prefix that, when used with the name of a metamorphic rock, indicates that it was derived from an igneous rock, e.g., orthogneiss, orthoamphibolite; it may also indicate

the primary origin of a crystalline, sedimentary rock, e.g., orthoquartzite as distinguished from metaquartzite. *AGI* c. A prefix to the name of a mineral species or group to indicate orthorhombic symmetry as opposed to "clino" indicating monoclinic symmetry.

orthoamphibole

The orthorhombic subgroup of amphiboles including anthophyllite, gedrite, and holmquistite. CF: [clinoamphibole](#)

orthochlorite

a. A group name for distinctly crystalline forms of chlorite (such as clinochlore and penninite). b. A group name for chlorites conforming to the general formula: $(R^{2+}, R^{3+})_6 (Si, Al)_4 O_{10} (OH)_8$.

orthoclase

A monoclinic mineral, $KAlSi_3 O_8$; feldspar group; prismatic cleavage; partly ordered, monoclinic potassium feldspar dimorphous with microcline, being stable at higher temperatures; also a general term applied to any potassium feldspar that is or appears to be monoclinic; e.g., sanidine, submicroscopically twinned microcline, adularia, and twinned analbite. It is a common rock-forming mineral and occurs esp. in granites, granite pegmatites, felsic igneous rocks, and crystalline schists, and is commonly perthitic. Syn: [common feldspar](#); [orthose](#); pegmatolite. CF: [microcline](#); [plagioclase](#); [anorthoclase](#).

orthoclase gabbro

A descriptive name for rocks now known as monzonite, in which the plagioclase is at least as calcic as labradorite. *Holmes, 2*

orthoclasite

An orthoclase-bearing porphyritic intrusive rock, such as granite or syenite. The term is sometimes restricted to rocks containing more than 90% orthoclase. Not recommended usage. *AGI*

orthoclastic

Cleaving in directions at right angles to each other. *Webster 3rd*

orthodolomite

a. A primary dolomite, or one formed by sedimentation. *AGI* b. A term used by Tiejie (1921) for a dolomite rock so well-cemented that the particles are interlocking. *AGI*

orthodome

A monoclinic crystal form whose faces parallel the orthoaxis and cut the other axes. CF: [dome](#); [clinodome](#). *AGI*

orthoferrosilite

An orthorhombic mineral, $(\text{Fe,Mg})_2 \text{Si}_2 \text{O}_6$; pyroxene group; now simply called ferrosilite. CF: [ferrosilite](#); [clinoferrosilite](#).

orthogneiss

Applied to gneissose rocks that have been derived from rocks of igneous origin. CF: [paragneiss](#)

orthogonal

At right angles. *Hammond*

orthoguarinite

Cesaro's name for an orthorhombic form of guarinite, through superposition of hemitropic lamellae of the monoclinic mineral, clinoguarinite. See also: [clinoguarinite](#)

orthohydrous maceral

Maceral having a normal hydrogen content, such as vitrine. *Tomkeieff*

orthokalsilite

An artificial orthorhombic high-temperature polymorph of KAlSiO_4 .

ortholimestone

A term proposed by Brooks (1954) for sedimentary limestone. CF: [metallimestone](#); [orthomarble](#). *AGI*

orthomagmatic

See: [orthomagmatic stage](#)

orthomagmatic stage

Applied to the main stage of crystallization of silicates from a typical magma; the stage during which perhaps 90% of the magma crystallizes. CF: [pegmatitic stage](#)

orthomarble

A crystalline limestone that will take a polish; e.g., the Holston orthomarble of Tennessee. CF: [metamarble](#); [metalimestone](#); [ortholimestone](#).

orthomic feldspar

Triclinic feldspar, which by repeated twinning (orthomimicry) simulates a higher degree of symmetry with rectangular cleavages; e.g., orthoclase, anorthoclase, and cryptoclase. *English*

orthophotography

The product of a procedure that corrects the distortions in aerial photography due to the instability of the camera platform, the terrain relief, and the angle of the light rays entering the camera lens. The ortho instrumentation attached to a stereo plotting instrument rectifies the image in a transfer process so as to reposition it in its correct planar position. *SME, 1*

orthophyric

Said of the texture of the groundmass in certain holocrystalline, porphyritic, igneous rocks in which the feldspar crystals have quadratic or short, stumpy, rectangular cross sections, rather than the lath-shaped outline observed in trachytic texture. Also, said of a groundmass with this texture, or of a rock having an orthophyric groundmass. *AGI*

orthopinacoid

In the monoclinic system, the form consisting of two planes parallel to the vertical and orthodiagonal axes. See also: [pinacoid](#) *Standard, 2*

orthoprism

A monoclinic prism, the orthodiagonal intercept of which is greater than 1. *Standard, 2*

orthopyroxene

The subgroup name for pyroxenes crystallizing in the orthorhombic system, commonly containing no calcium and little or no aluminum; e.g., enstatite, hypersthene, and ferrosilite. CF: [clinopyroxene](#) Syn: [labrador hornblende](#)

orthoquartzite

A clastic sedimentary rock that is made up almost exclusively of quartz sand (with or without chert), and relatively free of or lacks a fine-grained matrix, derived by secondary

silicification; a quartzite of sedimentary origin, or a pure quartz sandstone. The term generally signifies a sandstone with more than 90% to 95% quartz and detrital chert grains that are well-sorted, well-rounded, and cemented primarily with secondary silica (sometimes with carbonate) in optical and crystallographic continuity with the grains. The rock is characterized by stable but scarce heavy minerals (zircon, tourmaline, and magnetite), by lack of fossils, and by prominence of cross-beds and ripple marks. It commonly occurs as thin but extensive blanket deposits associated with widespread unconformities (e.g., an epicontinental deposit developed by an encroaching sea), and it represents intense chemical weathering of original minerals other than quartz, considerable transport and washing action before final accumulation (the sand may experience more than one cycle of sedimentation), and stable conditions of deposition (such as the peneplanation stage of diastrophism); e.g., St. Peter Sandstone (Middle Ordovician) of midwestern United States. See also: [quartzite](#) *AGI*

orthorhombic

a. Any mineral crystallizing with orthorhombic symmetry. b. See: [orthorhombic system](#)

orthorhombic system

In crystallography, that system of crystals whose forms are referred to three unequal mutually perpendicular axes. Syn: [prismatic system](#); rhombic system; orthorhombic. *Fay*

orthoschist

A schist derived from an igneous rock. CF: [paraschist](#); schist. *AGI*

orthoscope

A polarizing microscope in which light is transmitted by the crystal parallel to the microscope axis, in contrast to the conoscope, in which a converging lens and Bertrand lens are used. CF: [conoscope](#)

orthose

A name for the whole feldspar family before it was divided into separate species. Syn: [orthoclase](#)

orthotectic

See: [magmatic](#)

orthotectic stage

See: [orthomagmatic stage](#)

orthotropic

The description applied to the elastic properties of material, such as timber, which has considerable variations of strength in two or more directions at right angles to one another. See also: [isotropic](#) *Hammond*

Orton cone

a. Pyrometric cone made in one of two sizes: 2-1/2 in (6.4 cm) high for industrial kiln control, and 1-1/8 in (3.2 cm) high for pyrometric cone equivalent testing. See also: [pyrometric cone](#) b. Used in the United States for heat recording, Orton cones are similar to Seger cones, but the same numbers do not indicate the same temperatures; e.g., Orton cone 14 corresponds to Seger cone 13. *Rosenthal*

oryctognosy

The description and systematic arrangement of minerals; mineralogy. See also: [mineralogy](#)

oryctologist

See: [mineralogist](#)

oryctology

See: [mineralogy](#)

Osann's classification

A purely chemical system of classification of igneous rocks. *AGI*

osarizawaite

A trigonal mineral, $\text{PbCuAl}_2(\text{SO}_4)_2(\text{OH})_6$; alunite group; the aluminum analog of beaverite; a yellow, powdery secondary crust; at the Osarizawa Mine, Akita prefecture, Japan.

oscillating beam

See: [walking beam](#)

oscillating conveyor

A type of vibrating conveyor having a relatively low frequency and large amplitude of motion. See also: [vibrating conveyor](#) Syn: [grasshopper conveyor](#)

oscillating feeder

See: [conveyor-type feeder](#)

oscillating grease table

An assembly of 4 to 8 metal trays, usually 30 in (76.2 cm) wide and 8 to 15 in (20.3 to 38.1 cm) long, arranged in series in the direction of flow. The trays are detachably mounted in the assembly by steps, so that the overflow from one tray overlaps the next tray by 1 in (2.54 cm) and is 2 to 4 in (5.1 to 10.2 cm) above it. The trays are inclined downward in the direction of the flow at an angle adjustable from 14 degrees to 18 degrees. The entire assembly is mechanically oscillated transversely to the direction of the flow at about 200 strokes/min with an adjustable stroke of about 1/2 in (1.27 cm). The storage bin and feed roller are independently mounted and discharge a layer 1 grain thick. *Chandler*

oscillation

Independent movement through a limited range, usually on a hinge. *Nichols, 1*

oscillator plate

A thin slab of quartz which, by mechanical vibration, controls the frequency of a radio transmitter. *Hurlbut*

oscillator quartz

Flawless quartz, which can be used in the manufacture of oscillator plates.

oscillatory twinning

Repeated twinning in which a crystal is made up of thin lamellae alternately in reversed position; polysynthetic twinning; found in some feldspars. Syn: [polysynthetic twinning](#)

oscillatory zoning

Repetitious concentric compositional variation in minerals resulting from cyclical changes in the chemical environment during crystal growth; e.g., garnet and plagioclase.

oscillogram

A record of phenomena observed on an oscillograph. *ASM, 1*

oscillograph

An instrument that renders visible, or automatically traces, a curve representing the time variations of various phenomena. The recorded trace is an oscillogram. *AGI*

oscilloscope

An instrument for showing visual representations of electrical outputs from measuring devices. *Hunt*

osmite

See: [iridosmine](#)

osmium

The native element, Os; occurs in magmatic deposits in mafic and ultramafic rocks and placers derived from them.

osmosis

The passage of a solvent through a membrane from a dilute solution into a more concentrated one, the membrane being permeable to molecules of solvent but not to molecules of solute. *AGI*

osteolite

A massive, earthy mineral (apatite) consisting of an impure, altered phosphate.

ostracod

A minute crustacean with a bean-shaped bivalve shell completely enclosing the body. *AGI*

otavite

A trigonal mineral, CdCO_3 ; calcite group; associated with oxidized base-metal ores.

other rock in place

As used in the Mining Law of 1872, means any rocky substance containing mineral matter. *Ricketts*

other valuable deposits

Includes nonmetalliferous as well as metalliferous deposits. *Ricketts*

otisca process

A process that uses an inert heavy liquid with a specific gravity between that of coal and free mineral matter to separate coarse or fine-size coal in a static bath or cyclone separator.

Otisca-T process

A selective agglomeration process under development, in which ultra-fine grinding of the feed coal to 15 μ m releases almost all the associated impurities prior to agglomeration with a low-molecular-weight hydrocarbon. The agglomerant is then recovered and recycled.

Otto cycle

In a four-stroke internal combustion engine two complete revolutions of the crankshaft correspond with the working cycle-inlet stroke (suction downstroke of piston in cylinder); compression upstroke; explosion at peak of compression followed by expansion of hot exploded gases on driving downstroke; rising exhaust stroke to complete the cycle. *Pryor, 3*

Ouachita stone

See: [novaculite](#)

oued

See: [wadi](#)

outburst

The name applied to the violent evolution of combustible gases (usually together with large quantities of coal dust) from a working face. The occurrence is violent and may overwhelm the workings and fill the entire district with gaseous mixtures. Roadways advancing into virgin and stressed areas of coal are particularly prone to outbursts in certain seams and faults often intersect in the area. See also: [floor burst](#); blow; bump. *Roberts, 1*

outby

Nearer to the shaft, and therefore away from the face, toward the pit bottom or surface; toward the mine entrance. The opposite of inby. Also called outbyeside. Syn: [out-over](#)

outcrop

a. The part of a rock formation that appears at the surface of the ground. *Webster 3rd* b. A term used in connection with a vein or lode as an essential part of the definition of apex. It does not necessarily imply the visible presentation of the mineral on the surface of the earth, but includes those deposits that are so near to the surface as to be found easily by digging. *Fay* c. The part of a geologic formation or structure that appears at the surface of the Earth; also, bedrock that is covered only by surficial deposits such as alluvium. CF: [exposure](#) outcropping. *AGI* d. To appear exposed and visible at the Earth's surface; to crop out. *AGI*

outcrop map

A special type of geologic map that represents only actual outcrops. Areas without exposures are left blank. *Stokes*

outcropping

See: [outcrop](#)

outcrop water

Rain and surface water that seeps downward through outcropping porous and fissured rock, fault planes, old shafts, or surface drifts. *AGI*

outdoor stroke

That stroke of a Cornish pumping engine by which the water is forced upward by the weight of the descending pump rods, etc.

outer continental shelf

All submerged lands lying seaward and outside of the area of lands beneath navigable waters as defined in Section 2 of the Submerged Lands Act (Public Law 31, 83rd Congress, 1st Session), and of which the subsoil and seabed appertain to the United States and are subject to its jurisdiction and control. Abbrev. OCS. See also: [continental shelf](#)

outer core

The outer or upper zone of the Earth's core, extending from a depth of 2,900 km to 5,100 km, and including the transition zone; it is equivalent to the E layer and the F layer. It is inferred to be liquid because it does not transmit shear waves. Its density ranges from 9 to 11 g/cm³. The outer core is the source of the principal geomagnetic field. CF: [inner core](#)

outer gage

Syn. for outside diameter. *Long*

outer stone

A diamond set on the outside wall of a bit crown. Also called reamer; reamer stone. Syn: [outside stone](#); [kicker stone](#). *Long*

outfall

a. Eng. A seam cropping out at a lower level. b. The mouth of a stream or the outlet of a lake; esp. the narrow end of a watercourse or the lower part of any body of water where it drops away into a larger body. *AGI* c. The vent or end of a drain, pipe, sewer, ditch, or other conduit that carries waste water, sewage, storm runoff, or other effluent into a stream, lake, or ocean. *AGI*

outlay

a. The act of laying out or expending. *Webster 3rd* b. Something that is laid out; expenditure. *Webster 3rd* c. The cost of equipping a mine and placing it on a producing basis. *Fay*

outlet

An opening from a mine to the surface. Syn: [upcast](#)

outlier

a. An isolated mass or detached group of rocks surrounded by older rocks; e.g., an isolated hill or butte. CF: [inlier](#) b. Ore or favorable geologic indications distant from the main ore zone of a district.

out of gage

a. Bits and reaming shells having set inside or outside diameters greater or lesser than those specified as standard. *Long* b. A borehole the inside diameter of which is undersize or oversize. *Long*

out-over

See: [outby](#)

output

a. The quantity of coal or mineral raised from a mine and expressed as being so many tons per shift, per week, or per year. *Nelson* b. The power or product from a plant or

prime mover in the specific form and for the specific purpose required. See also: [concentration of output](#); productivity. *Nelson* c. Amount delivered; e.g., volume of a liquid discharged by a pump; volume of air discharged by a compressor; horsepower delivered by a motor. *Long* d. Current or signal delivered by any circuit or device. *NCB* e. The terminal or other point at which a current or a signal may be delivered. *NCB*

output device

Machine that prints information computed from its memory or store. *Pryor*, 3

output shaft

A shaft that transmits power from a transmission or clutch. *Nichols*, 1

outrigger

An outward extension of a frame that is supported by a jack or block. Used to increase stability. *Nichols*, 2

outside angling

See: [angling](#)

outside clearance

One-half the total difference between the outside diameter of any piece of downhole equipment and the inside diameter of the borehole. *Long*

outside face

The peripheral portion or that part of a bit crown, roller bit cutter, or any cutting edge of a bit in contact with the walls of a borehole while drilling. *Long*

outside foreman

In bituminous coal mining, a person who supervises all operations at the surface of a mine. *DOT*

outside stone

See: [outer stone](#)

outside tap

See: [bell tap](#)

outside upset

The act or process of thickening a length of tubing at its ends by increasing its outside diameter without changing the inside diameter; a length of tubing or drill rod so processed. See also: [upset](#) *Long*

outside wall

That part of a bit crown, bit shank, reaming shell, core barrel, drill rod, casing, or other piece of downhole equipment that when in use, comes in contact with the wall of a borehole. *Long*

outside work

Drilling operations conducted on the surface, as opposed to drilling done in underground or enclosed workplaces. *Long*

outslope

The face of the spoil or embankment sloping downward from the highest elevation to the toe.

outstation

A location which provides local monitoring and control, and provides a communications interface between a sensor and the trunk connected to a central station computer. Also called field data station. *SME, 1*

outtake

The passage by which the ventilating current is taken out of the mine; the upcast. The return air course. An outlet. *Fay*

oval socket

A fishing tool used to recover broken drill rods from a borehole. *Long*

oven

A chamber in which substances are artificially heated for the purposes of baking, roasting, annealing, etc.; specif.: (1) a kiln, such as a coke oven; and (2) a leer, which is used in glassmaking. *Standard, 2*

overaging

Aging at a higher temperature, or for a longer time, or both, than required for critical dispersion, thus causing particle agglomeration of the precipitating phase and, as a result, loss of strength and hardness. See also: [aging](#)

overall concentration

The ratio of pithead output in tons (P) to length of main haulage roads in yards (L) or tons per yard of main haulage roads; i.e., P/L. See also: [concentration of output](#)

overall drilling time

The sum of the times required for actual rock drilling, setting up and withdrawal, moving drills from hole to hole and machine delays. The overall drilling time is a better basis for estimating drilling efficiency than penetration speed alone. *Nelson*

overall efficiency

a. Of an air compressor, the product of the compression efficiency and the mechanical efficiency. *Fay* b. Ratio of power output of an engine to the power input; the measure of the difference between indicated and brake horsepower. *Brantly, 2*

overall fan efficiency

The ratio of the horsepower in the air to the horsepower absorbed by the driving motor of the fan. *BS, 8*

overall reduction ratio

With reference to a crusher, mean size of feed/mean size of product. See also: [reduction ratio](#)

overall ventilation efficiency

The ratio between the air horsepower and the indicated horsepower of a driving unit. The percentage is expressed by air horsepower x 100/indicated hp of driving unit. Measurements are taken of the air pressure and volume in the fan drift, and the power absorbed by the driving unit. See also: [volumetric efficiency](#); [thermometric fan test](#). *Nelson*

over-and-under conveyor

Two endless chains or other linkage between which carriers are mounted and controlled, so that the carriers remain in an upright and horizontal position throughout the complete cycle of the conveyor.

overarching weight

The pressure of the rocks over active mine workings. It is the roof weight that acts on the packs and the solid coal in the working area. See also: [abutment](#); [nether roof](#); [underweight](#). *Nelson*

overbreak

Excessive breakage of rock beyond the desired excavation limit. See also: [neat lines](#)

overbreaking

See: [overhand stoping](#)

overburden

a. Designates material of any nature, consolidated or unconsolidated, that overlies a deposit of useful materials, ores, or coal--esp. those deposits that are mined from the surface by open cuts. *Stokes* b. Loose soil, sand, gravel, etc. that lies above the bedrock. Also called burden, capping, cover, drift, mantle, surface. See also: [baring](#); [burden](#); top. *Stokes*

overburden bit

A special diamond-set bit, similar to a set casing shoe, used to drill casing through overburden composed of sand, gravel, boulders, etc. *Long*

overburden drilling

a. A technique developed in Sweden that involves the sinking, by percussive-rotary drilling, of a drill casing through the overburden to where it seats in the underlying rock. A rotary percussion drill hole is then continued to the desired depth in the rock. While the casing is being sunk through the overburden it is coupled to the drill rod and rotates and reciprocates with it. The rock bit on the end of the drill rod projects about an inch beyond the end of the ring bit with which the casing is fitted and acts as a pilot bit for the casing bit. *Woodruff* b. A drilling method whereby drilling is carried out through subsoil and boulders or underwater to and through bedrock. *Eng. Min. J.*, 2

overcast

a. An enclosed airway that permits an air current to pass over another one without interruption. Syn: [overcrossing](#); [overgate](#). CF: [undercast](#) See also: [air crossing](#) b. To place the overburden removed from coal in surface mines in an area from which the coal has been mined. c. Pushed forward, so as to overlie other rocks, such as in thrust faults. See also: [jack pit](#)

overcasting

A procedure used in certain mining activities including strip mining and in some heavy construction work such as channel excavation. Overcasting may be performed in a simple operation consisting of digging out the material, lifting it from one position, moving it over, and dumping it in the spoil position where it remains, for practical purposes, indefinitely. The mechanics of the operation are called "simple overcasting." *Woodruff*

overcharging

Adding material in excess of the capacity of the equipment used for processing.

overconsolidated soil deposit

A soil deposit that has been subjected to an effective pressure greater than the present overburden pressure. *ASCE*

overcrossing

See: [air crossing](#); overcast.

overcurrent relay

Relay used to trip circuit breakers when an abnormal current of two to three times the normal flow is detected in a circuit. Relays are adaptable to transmission lines, buses, feeder circuits, transformers, and motors. *Coal Age, 3*

overcut

a. A machine cut made along the top or near the top of a coal seam; sometimes used in thick seams or a seam with sticky coal. By releasing the coal along the roof, its mining becomes easier. See also: [overcut](#); turret coal cutter. *Nelson* b. The process of producing a larger size hole than the outside diameter of a bit and/or reaming shell used, due to the eccentric rotational movements of the bit, core barrel, or drill stem. *Long*

overcutting machine

Coal-cutting machine that is an adaptation of a shortwall machine, designed to make the cut, or kerf, at desired place in the coal seam some distance above the floor. The main difference between an overcutting machine and an ordinary shortwall machine is that the cutter bar in the overcutting machine is mounted at the top of the machine instead of at the bottom. See also: [turret coal cutter](#)

overdense medium

Medium of specific gravity greater than that in the separating bath; usually produced in the medium recovery system and used to maintain the desired specific gravity in the bath. *BS, 5*

overdrilling

The act or process of drilling a run or length of borehole greater than the core-capacity length of the core barrel, resulting in loss of the core. *Long*

overdrive

The act of inducing a velocity higher than the steady state velocity in a column of explosive material upon detonation by the use of a powerful primer or booster; it is a temporary phenomenon and the explosive quickly assumes its steady state velocity.

overfired

A term related to the condition of a ceramic product which has been heated to a temperature in excess of that required to produce proper vitrification.

overfiring

Heating ceramic materials or ware above the temperature required to produce the necessary degree of vitrification. Usually results in bloating, deformation, or blistering of the ware.

overflow stand

A standpipe in which water rises and overflows at the hydraulic gradeline. *Seelye, 1*

overgate

See: [air crossing](#); overcast.

overgrinding

Comminution of ore to a smaller particle size than is required for effective liberation of values before concentrating treatment. Opposite of undergrinding. *Pryor, 3*

overhand cut-and-fill

In this method, two level drives are first connected, the lower and upper one by a raise, from the bottom of which mining is begun. The work proceeds upwards, filling the mined-out room, but in the filling, chutes are left through which the broken ore falls. In inclined seams the chutes, also inclined, have to be timbered. The lower-level drive is

protected either by timbering or vaulting, or by a fairly strong pillar of vein fillings. Stopping in the different cuts always proceeds upwards, but as a whole it proceeds between the two level drives in a horizontal direction. Overhand cut-and-fill, esp. in mining irregular orebodies of greater size, is also called back stopping. *Stoces*

overhand stope

a. Stope in which the ore above the point of entry to the stope is attacked, so that severed ore tends to gravitate toward discharge chutes and the stope is self-draining. *Pryor, 3* b. An overhand stope is made by working upward from a level into the ore above. *McKinstry*

overhand stoping

a. In this method, which is widely used in highly inclined deposits, the ore is blasted from a series of ascending stepped benches. Both horizontal and vertical holes may be employed. Horizontal breast holes are usually more efficient and safer than vertical upper holes, although the latter are still used in narrow stopes in steeply inclined orebodies. *McAdam, 2* b. The working of a block of ore from a lower level to a level above. In a restricted way overhand stoping can be applied to open or waste-filled stopes that are excavated in a series of horizontal slices either sequentially or simultaneously from the bottom of a block to its top. Stull timbering or the use of pillars characterize the method. Filling is used in many instances. Modifications are known as backfilling method; back stopping; block system; block system of stoping and filling; breast stoping; combined side and longwall stoping; crosscut method of working; cross stoping; Delprat method; drywall method; filling system; filling-up method; flatback stoping; longwall stoping; open cut system; open stope and filling; open-stope method; open-stope, timbering with pigsties, and filling; overhand stoping on waste; resuing; rock filling; room-and-pillar with waste filling; sawtooth back stoping; side stoping; slicing-and-filling system; stoping and filling; stoping in horizontal layers; transverse with filling. Syn: [combined side and longwall stoping](#); Delprat method; overbreaking. CF: [back-filling system](#); [chimney work](#); underhand stoping.

overhand stoping and milling system

See: [combined overhand and underhand stoping](#)

overhand stoping on waste

See: [overhand stoping](#)

overhand stoping with shrinkage and delayed filling

See: [shrinkage stoping](#)

overhand vertical slice

See: [square-set stoping](#)

overhang

a. Cliff overhang. *AGI* b. A part of the mass of a salt dome that projects out from the top of the dome much like the cap of a mushroom. *AGI*

overhaul

a. Describes a condition when a journey travels towards a haulage engine at a faster rate than the rope, which then becomes slack and liable to foul the drum. Also called overrun. *Nelson* b. The transportation of excavated material beyond certain specified limits. *Seelye, 1* c. In many highway contracts, a movement of dirt far enough so that payment, in addition to excavation pay, is made for its haulage. *Nichols, 1* d. Applied to inspection, cleaning, and repairing of machines or plant. *Nelson*

overhead cableway

A type of equipment for the removal of soil or rock. It consists of a strong overhead cable, usually attached to towers at either end, on which a car or traveler may run back and forth. From this car a pan or bucket may be lowered to the surface, subsequently raised and locked to the car, and transported to any position on the cable where it is desired to dump its contents.

overhead conveyer

See: [trolley conveyer](#)

overhead monorail

This system is popular for use in mines since it can be suspended from the roadway supports as the face advances and can carry supplies over equipment installed in the roadway; transport is by means of endless, main-and-tail, or main-rope winches. They are generally slow-moving and can carry light loads into and around many places inaccessible to other forms of transport. See also: [monorail](#)

overhead-rope monorail

In this system, the loads are carried by bogies running on a taut wire rope instead of steel joists or flat-bottomed rails. See also: [monorail](#) *Sinclair, 3*

overhead ropeway

See: [aerial ropeway](#)

overhead shovel

A tractor loader that digs at one end, swings the bucket overhead, and dumps at the other end. *Nichols, 1*

overhead traveling crane

A crane that traverses the whole width of a workshop along the rails on which it runs. *Hammond*

overhead trolley conveyor

See: [trolley conveyor](#)

overlap

a. A general term referring to the extension of marine, lacustrine, or terrestrial strata beyond underlying rocks whose edges are thereby concealed or overlapped, and to the unconformity that commonly accompanies such a relation; esp. the relationship among conformable strata such that each successively younger stratum extends beyond the boundaries of the stratum lying immediately beneath. CF: [onlap](#) b. The area common to two successive aerial or space photographs or images along the same flight strip, expressed as a percentage of the photo area. *AGI* c. The portion of a borehole that must be redrilled after caving of the hole, cementing a section of the hole, or bypassing unrecoverable material. *Long* d. A reversed fault or thrust. *BS, 11* e. The lineal portion of a branch hole that nearly parallels the parent hole. *Long*

overlap auxiliary ventilation

To combine the forcing and exhausting systems, it is not necessary to provide two ducts, one forcing and one exhausting, throughout the length of the heading. An arrangement that serves the same purpose is the overlap system. In this system a main exhausting duct is used within a convenient distance of the face, often about 100 ft (30.5 m). Some of the intake air in the heading, before reaching the end of this duct, enters a short length of tubing and is blown onto the face. The advantages of both systems are thus obtained. Precautions must be taken against recirculation of air by the forcing unit, to prevent concentration of dust, and in collieries, combustible gases, at the face. The two ducts must overlap by a minimum distance which, in practice, is usually taken as 30 ft (9.1 m). See also: [auxiliary ventilation](#) *Roberts, 1*

overlap fault

a. See: [thrust fault](#) b. A fault structure in which the displaced strata are doubled back upon themselves. *AGI*

overlay

a. Scot. The material above the rock in a quarry. See also: [overburden](#) *Fay* b. Graphic data on a transparent or translucent sheet to be superimposed on another sheet (such as a map or photograph) to show details not appearing, or requiring special emphasis, on the original. Also, the medium or sheet containing an overlay. *AGI*

overlay tracing

A tracing on which the workings in a seam are shown. A series of such tracings allows the workings in several seams to be seen in their correct horizontal relationship. Also called layover tracing (undesirable usage). *BS, 7*

overload

a. In general, a load or weight in excess of the designed capacity. The term may be applied to mechanical and electrical engineering plants, to loads on buildings and structures, and to excess loads on haulage ropes and engines. *Nelson* b. To apply an excessive pressure, by stretching beyond the yield point, to a drill string and bit. CF: [crowd](#)

overloader

A loading machine of the power-shovel type for quarry and opencast operations. It may be either pneumatic-tired or continuous-tracked. It need not turn from the face to the truck if the latter can be spotted parallel to the face. The bucket is filled, the machine retracted, and the bucket swung over to the discharge point; used chiefly in sand and gravel pits. *Nelson*

overmining

S. Afr. Mining a grade of ore above the average grade of the ore reserves. This practice has the effect of leaving the lower grade ore in the reserves. The opposite is undermining. *Beerman*

overpoled copper

In refining blister copper by reducing its oxides through stirring a molten bath of metal with a green timber pole, continuation of this process until the desirable characteristic fracture of tough-pitch refined metal is lost. Some reoxidation then becomes necessary. See also: [tough pitch](#)

overprint

The superposition of a new set of structural features on an older set. Syn: [superprint](#); [metamorphic overprint](#). *AGI*

override

A royalty or percentage of the gross income from production deducted from the working interest. *Wheeler, R.R.*

overriding royalty

The term applied to a royalty reserved in a sublease or assignment over and above that reserved in the original lease. *Ricketts*

overrope

A winding or hoisting rope. *Fay*

overrope haulage

Usually applied to endless rope haulage in which the rope is carried on top of the mine cars, which may be either clipped or lashed to the rope. See also: [underrope haulage](#)

overrun

See: [overhaul](#)

overrun brake

A special brake fitted to a towed vehicle that operates as soon as the towing vehicle slows down. *Hammond*

overrunning clutch

A coupling that transmits rotation in only one direction, and disconnects when the torque is reversed. *Nichols, I*

oversaturated rock

A rock that contains silica in excess of that necessary to form saturated minerals from the bases present. CF: [saturated rock](#)

overshot

A fishing tool for recovering lost drill pipe or casing. *Inst. Petrol.*

overside

Discharging over the side; e.g., by a dredge. *Standard, 2*

oversize

a. In reference to a mixture of material screened or classified into two products of definite size limits, the larger is the oversize and the smaller the undersize. See also: [classifier](#) b. In quarry or opencast blasting, that size of rock or ore which is too large to handle without secondary blasting. *Nelson*

oversize control screen

A screen used to prevent the entry into a machine of large particles that might interfere with its operation. Syn: [guard screen](#); [check screen](#). *BS, 5*

oversize core

a. Core cut by a thin-wall bit, as opposed to a standard-diameter core. *Long* b. A core the diameter of which is greater than a standard size. *Long*

oversize coupling

a. See: [swelled coupling](#) b. Sometimes used in Canada as a synonym for reaming shell. *Long*

oversize hole

A borehole the diameter of which is excessive because of the whipping action or eccentric rotation of the drill string and bit. *Long*

oversize rod

See: [drill collar](#); guide rod.

overspringing

See: [springing](#)

overstressed area

In strata control, describes an area where the force is concentrated on pillars. This type of area is said to be overstressed or superstressed. This superstressing is limited by the strength of the seam or pillar. CF: [destressed area](#)

Overstrom table

Similar to a Wilfley table but of diamond shape (rhomboid), thus eliminating the waste corners. *Liddell*

over-the-road hauling

Hauling over public highways, usually by a dump truck. Various restrictions, such as weight, width of vehicle, safety features, guard against spillage, etc. must be considered in the type equipment used. CF: [off-the-road hauling](#)

overthrust

A low-angle thrust fault of large scale, with displacement generally measured in kilometers. CF: [underthrust](#) *AGI*

overthrust block

See: [overthrust nappe](#)

overthrust fault

See: [overthrust](#)

overthrust nappe

The body of rock that forms the hanging wall of a large-scale overthrust; a thrust nappe. Syn: [overthrust block](#); [overthrust sheet](#); overthrust slice. *AGI*

overthrust plane

See: [thrust plane](#)

overthrust sheet

See: [overthrust nappe](#)

overthrust slice

See: [overthrust nappe](#)

overtime

The period beyond the normal shift time when a worker, on request by the management, performs emergency tasks that are necessary for safety or efficient operation of the oncoming shift. *Nelson*

overtopping

Flow of water over the top of a dam or embankment. *Nichols, 1*

overtravel

See: [overwind](#)

overtub system

An endless-rope system in which the rope runs over the tubs or cars in the center of the rails. This system is generally adopted on undulating roads, where the tension in a heavily loaded rope would cause the rope to lift in swilleys and derail tubs. It is also generally adopted in highly inclined roads, as the lashing chain, often adopted with this method of haulage, obtains a good positive grip on the rope and is easier to detach than a clip. The rope is kept from rubbing on roof supports by holding-down pulleys: six or eight small pulleys are mounted in circular cheeks, allowing chains or clips to be accommodated in the spaces between the pulleys; or large diameter pulleys may be used, of the hat or mushroom shape, often starred to provide recesses for chains and clips. Similar large pulleys direct the rope around curves. CF: [undertub system](#) *Sinclair, 5*

overturned

Said of a fold, or the limb of a fold, that has tilted beyond the perpendicular. The sequence of strata thus appears reversed. Syn: [inverted](#); [inverted fold](#); [reversed](#). *AGI*

overturning skip

A type of skip commonly used at metal mines, but not as often at coal mines, because of increased breakage. This skip consists of a rectangular receptacle for the material and a suspending frame of bail to an upper crosspiece of which is attached a suspension gear connecting the rope to the skip. Three guide shoes are generally provided at each side of the bail to keep it vertical. The skip body turns about a horizontal shaft at the lower end of the bail. Two rollers on the upper part are mounted on a shaft and cause the skip to tilt at an angle of 35 degrees at the tipping point in the headgear, where rollers run onto the curved guides. To prevent shocks in the case of an overwind the skips are fitted with overwind guides which glide along rollers fitted to the headgear above the tipping point. *Sinclair, 5*

overventilation

Too much air in the mine workings. *Fay*

overvoltage

The difference between the actual electrode potential, when appreciable electrolysis begins, and the reversible electrode potential. *ASM, 1*

overvoltage relay

Relay that serves primarily the same purpose as an overcurrent relay except that it is connected in the line by a potential transformer which measures the voltage across the line. When an overvoltage exists the relay operates and opens the circuit breaker. *Coal Age, 3*

overwind

a. To hoist a cage into or over the top of a headframe. Syn: [overtravel](#) *Fay* b. In hoisting through a mine shaft, failure to bring a cage or skip smoothly to rest at the proper unloading point at the surface. If severe, it can lead to a serious accident unless the special preventive devices function effectively. Overwind can also cause a cage to be lowered into the sump at the bottom of the shaft, also with serious consequences. *Pryor, 3*

overwinder

One of the best known overwinder prevention devices consists of two vertical-screwed spindles, each carrying two traveling nuts and chain driven from the drum shaft so as to rotate in opposite directions. The nuts are prevented from rotating by projections engaging with a fixed plate and therefore travel up and down according to the movement of the cages. The upper nut takes care of overwinding and the lower nut of overspeeding. *Mason*

overwinding

a. A term applied to a continued pull on the hoisting rope of a cage, after the cage has reached the top of the shaft. The result of this carelessness, or accident, is a broken hoisting rope and all the danger that implies. *Stauffer* b. A rope or cable wound and attached so that it stretches from the top of a drum to the load. *Nichols, 1*

overwind switch

A switch that may be used on winders, or haulages, to cause the power to cut off from the driving motor, or engine, and the brakes to be applied. Such a switch may be: (1)

situated in the headgear and operated by the conveyance, (2) mounted on the automatic contrivance, or (3) operated by the depth or distance indicator. *BS, 13*

ovulite

See: [oolith](#)

Owen process

A flotation process involving the violent agitation of the pulp in cold water to which a small percentage of eucalyptus oil, about 62.5 g, is added. *Fay*

Owen's borehole surveying instrument

A clockwork photographic apparatus that records clinometer and compass readings on sensitized paper. It is used during borehole surveying. *Hammond*

Owen's jet dust counter

An instrument similar to the konimeter but differing in that the air to be sampled undergoes humidification prior to being blown through the jet. The velocity of impingement is about 200 to 300 m/s and the jet is rectangular instead of circular. The prior humidification of the air causes condensation of moisture upon the dust particles by super saturation due to the pressure drop at the jet, and so assists in the deposition and retention of the particles on the slide. The Bausch and Lomb dust counter is the American counterpart of this instrument. *Osborne*

oxalcalcite

See: [whewellite](#)

oxalite

See: [humboldtine](#)

oxammite

An orthorhombic mineral, $(\text{NH}_4)_2 \text{C}_2 \text{O}_4 \cdot \text{H}_2 \text{O}$; transparent; yellowish-white; forms lamellar and pulverent masses in guano.

oxiallyphite

A variety of aliphite hydrocarbon containing oxygen; light-yellow; soft. *Tomkeieff*

oxidate

Sediment composed of the oxides and hydroxides of iron and manganese, crystallized from aqueous solution. It is one of Goldschmidt's groupings of sediments or analogues of differentiation stages in rock analysis. *AGI*

oxidation

a. The firing of a kiln in such a manner that combustion is complete and in consequence the burning gases are amply supplied with oxygen, which causes metals in clay and glazes to give their oxide colors. *ACSG, 1* b. Combination with oxygen; increase in content of a molecular compound; increase in valency of the electropositive part of compound, or decrease in valency of the electronegative part. *Pryor, 3* c. A reaction in which there is an increase in valence resulting from a loss of electrons. CF: [reduction](#) d. In fuel practice, the combination of oxygen with a substance, with or without the production of food. *Francis, 2*

oxidation of coal

The absorption of oxygen from the air by coal, particularly in the crushed state; this engenders heat which can result in fire. Ventilation, while dispersing the heat generated, supports oxidation that increases rapidly with a rise in temperature. Fresh air should not gain access to the coal. See also: [gob fire](#)

oxide

A compound of oxygen with another element. *CTD*

oxide discoloration

Discoloration of a metal surface caused by oxidation during thermal treatment. *Light Metal Age*

oxide mineral

A mineral formed by the union of an element with oxygen; e.g., corundum, hematite, magnetite, and cassiterite. *Leet, 1*

oxide of iron

An iron ore with oxygen as its main impurity; also iron rust. *Mersereau, 2*

oxidized deposit

A deposit that has resulted from surficial oxidation. *Bateman, 2*

oxidized ore

Metalliferous minerals altered by weathering and the action of surface waters, and converted, partly or wholly, into oxides, carbonates, or sulfates. These compounds are characteristic of metalliferous deposits at the surface and often to a considerable depth. See also: [mixed ore](#) *Nelson*

oxidized zone

The portion of an orebody near the surface that: (1) has been leached by percolating water carrying oxygen, carbon dioxide, or other gases; or (2) in which sulfide minerals have been partially dissolved and redeposited at depth, the residual portion changing to oxides, carbonates, and sulfates. CF: [gossan](#); [sulfide zone](#). Syn: [zone of oxidation](#) See also: [supergene enrichment](#)

oxidizer

A material that readily yields oxygen or other oxidizing substances needed for an explosive reaction to take place; solid oxidizers common in industrial explosives are ammonium nitrate and sodium nitrate.

oxidizing flame

In blowpiping, the outer, least visible, and less intense part of the flame, from which oxygen may be added to the compound being tested. See also: [blowpiping](#)

oxidizing fusion

An oxidation process used for fire refining bismuth, gold, and silver; the crude metals are melted down with oxidizing fluxes, so that the impurities are oxidized during the melting period and become part of the slag. *Newton, 1*

oxidizing smelting

See: [pyritic smelting](#)

oxonite

An explosive prepared by dissolving picric acid in nitric acid. *Fay*

oxyacetylene

A mixture of oxygen, O_2 , and acetylene gas, C_2H_2 , in such proportions as to produce the hottest flame known for practical use. Oxyacetylene welding and cutting is used in almost every metalworking industry. *Crispin*

oxyacetylene cutter

An appliance for cutting metals by means of a flame obtained from acetylene and compressed oxygen, which are stored in separate steel cylinders. Oxyhydrogen and oxycoal gas flames are also used. *Nelson*

oxychloride cement

A plastic cement formed by mixing finely ground caustic magnesite with a solution of magnesium chloride. *AGI*

oxygen

A nonmetallic element, normally colorless, odorless, tasteless, nonflammable diatomic gas. Symbol, O. Occurs uncombined in the air to the extent of about 21% by volume and is combined in water, in most rocks and minerals, and in a great variety of organic compounds. Oxygen is very reactive and capable of combining with most elements. Essential for respiration in all plants and animals and for practically all combustion. Oxygen enrichment of steel blast furnaces accounts for the greatest use of the gas. Used in manufacturing ammonia, methanol, and ethylene oxide. *Handbook of Chemistry and Physics, 3*

oxygen balance

The amount of oxygen in an explosive mixture, expressed in weight percent, liberated as a result of complete conversion of explosive material to CO₂, H₂O, SO₂, Al₂O₃, and other non-toxic gases; referred to as positive oxygen balance; negative oxygen balance is a deficient amount of oxygen leading to incomplete oxidation of explosive materials resulting in the possible formation of toxic gases, such as CO and NO.

oxygen-Bessemer

A steelmaking process in which the air blown through the bottom tuyeres is enriched with oxygen. If oxygen alone is used, tuyere wear is excessive. Oxygen plus steam or oxygen plus carbon dioxide can be used. Also called oxy-Thomas. See also: [O](#)

oxygen consumption

A person working hard requires about 10 ft³/min (283 L/min) of air to supply adequate oxygen. *Hammond*

oxygen deficiency

See: [anoxia](#)

oxygen-deficient atmosphere

A concentration of oxygen in the atmosphere equal to or less than 19.5% by volume. *OSHA*

oxygen-enriched atmosphere

An atmosphere containing more than 23.5% oxygen by volume. *OSHA*

oxygen-flash smelting process

Employed as an autogeneous matte smelting process for smelting copper-nickel concentrate. *Newton, I*

oxygen-free copper

Electrolytic copper free from cuprous oxide; produced without the use of residual metallic or metalloidal deoxidizers. *ASM, I*

oxygen impingement process

A process used in steel making in which pure oxygen is blown down onto the bath in a converterlike vessel. *Osborne*

oxygen index

Volumetric ratio of oxygen to the total gases in a mixture. *Van Dolah*

oxygen lance

A device made up of a welding oxygen bottle and a length of rubber hose attached to a valve which is fitted to a steel pipe, so that when the tip of the lance is ignited it can be used to melt the solidified metal out of the iron tap hole in a blast furnace.

oxygen process

A process for making steel in which oxygen is blown upon or through molten pig iron, whereby most of the carbon and impurities are removed by oxidation. *Harbison-Walker*

oxygen steel

The use of oxygen instead of air to convert molten pig iron into steel. The oxygen is used in different ways in different furnaces, but the fastest ones utilize the direct oxidation effects of a relatively pure (99.5%) oxygen. See also: [L](#)

oxyhornblende

A hornblende with (OH+F+Cl) less than 1.0. Also called basaltic hornblende. Syn: [lamprobolite](#)

oxyhydrogen

Of, relating to, or utilizing a mixture of oxygen and hydrogen. *Webster 3rd*

oxyhydrogen blowpipe

A blowpipe in which hydrogen is burned in oxygen. Streams of the two gases in the proportion to form water are forced under pressure from separate reservoirs, and issue together from a jet, igniting just as they issue. The temperature produced which has been estimated at 5,000 degrees F (2,760 degrees C), is sufficient to fuse very refractory substances. Also called compound blowpipe. *Standard, 2; Fay*

oxymagnite

A former name for maghemite, isometric Fe_2O_3 ; also called ferromagnetic ferric oxide.

oxyphile

See: [lithophile](#)

ozarkite

A white, massive variety of thomsonite, from Arkansas. *Fay*

ozocerite

A mineral paraffin wax, of dark yellow, brown, or black color with a melting point of 55 to 110 degrees C and sp gr, 0.85 to 0.95. Is soluble in gasoline, benzene, and turpentine and is found near the Caspian Sea region and in Utah as narrow seams in sandstone. Also called mineral wax; fossil wax; native paraffin; earth wax. Also spelled ozokerite. Syn: [ader wax](#); [earth wax](#); [mineral fat](#). See also: [fibrous wax](#) CF: [hatchettine](#); [hatchettite](#). *CTD*

ozone

An allotropic, triatomic form of oxygen, O_3 ; a faintly blue, irritating gas with a characteristic pungent odor, but at -112 degrees C it condenses to a blue magnetic liquid. It occurs in minute quantities in the air near the Earth's surface and in larger quantities in the stratosphere as a product of the action of ultraviolet light of short wavelengths on ordinary oxygen. Ozone is generated usually in dilute form by a silent electric discharge in oxygen or air. It decomposes to oxygen (as when heated) and it is a stronger oxidizing agent than oxygen. Used chiefly in disinfection and in deodorization (such as in water purification and in air conditioning), in oxidation and bleaching (such as in the treatment

of industrial wastes), and in ozonolysis (such as in the manufacture of azelaic acid from oleic acid). *Webster 3rd*

ozonizer

Electrical apparatus that converts atmospheric oxygen to ozone; used in sterilizing water for drinking purposes and for purifying air. *Pryor, 3*

P

pachnolite

A monoclinic mineral, $\text{NaCaAlF}_6 \cdot \text{H}_2\text{O}$; white; distinct cleavage; dimorphous with thomsenolite; an alteration of cryolite.

Pachuca tank

A cylindrical tank with a conical bottom. It contains a pipe that is coaxial with the leaching tank and open at both ends; compressed air is introduced at the lower end of this pipe, which behaves as an air lift. The density of the pulp within the pipe is less than that of the pulp surrounding it because of the column of air bubbles contained in the pipe, and the pressure of the denser pulp causes the pulp in the central pipe to rise and overflow, thus circulating the entire charge. Syn: [Brown agitator](#); [Brown tank](#). See also: [Patterson agitator](#) *Newton, 1*

Pacific suite

One of two large groups of igneous rocks, characterized by calcic and calc-alkalic rocks. Harker (1909) divided all Tertiary and Holocene igneous rocks of the world into two main groups, the Atlantic suite and the Pacific suite. Because there is such a wide variation in tectonic environments and associated rock types in the areas of Harker's Atlantic and Pacific suites, the terms are now seldom used to indicate kindred rock types. CF: [Mediterranean suite](#)

pacite

An iron arsenosulfide near arsenopyrite in composition.

pack

a. A pillar, constructed from loose stones and dirt, built in the waste area or roadside to support the roof. See also: [double packing](#); solid stowing; strip packing. *Nelson* b. A pack built on a longwall face between the gate-side packs is called an intermediate pack.

SMRB c. Waste rock or timber support used for a roof over underground workings or used to fill excavations. Also called fill. *Pryor, 3* d. To cause the speedy subsidence of ore in the process of washing by beating a keeve or tub with a hammer.

pack builder

a. Person who builds packs or pack walls. See also: [pack](#) b. In anthracite and bituminous coal mining, a worker who: (1) fills worked-out rooms, from which coal has been mined, with rock, slate, or other waste to prevent caving of walls and roofs; (2) builds rough walls and columns of loose stone, heavy boards, timber, or coal along haulageways and passageways and in rooms where coal is being mined, to prevent caving. Also called packer. See also: [pillar man](#); [timber packer](#); waller. *DOT*

pack cavity system

See: [methane drainage](#)

pack drawer

In anthracite and bituminous coal mining, a laborer who draws (tears down) stone or timber packs (pillars constructed by pack builders in the working place to support the roof during extraction of coal) to permit the roof to cave behind as the mining of the coal recedes toward the entrance of the working area. *DOT*

packer

a. A short expansible-retractable device deliberately set in a cased or uncased well bore to prevent upward or downward fluid movement; generally for temporary use. *AGI* b. A miner employed in stowing or packing the waste area. Also called gobber. *Nelson*

packfong

Chinese. A silver-white alloy of copper, zinc, and nickel; German silver.

pack hardening

Case carburizing, using a solid carburized medium, followed by a hardening treatment. *CTD*

pack hole

The space adjacent to a gate end at the face and between the face end of a gate-side pack and the coal face into which packs will be inserted when the gate is ripped or dented. *TIME*

packing

a. Occurs in crushing plants when the material in the chamber is so compacted as to be nearly without voids. It occurs when free downward movement is inhibited. *South Australia* b. The filling of a waste area with stones and dirt. See also: [solid stowing](#) c. The method of giving support to a roof by the insertion of waste material placed or built into space from which coal or ore has been extracted. *TIME* d. The spacing or density pattern of the mineral grains in a rock. CF: [fabric](#) e. See: [blocking](#) f. With gyratories, packing copy refers to an accumulation of sticky fines on the diaphragm. *South Australia*

packing density

The bulk density of a granular material, when packed under specified conditions. It is commonly determined, particularly for foundry sands.

packing factor

Ratio of true volume to bulk volume. *Van Vlack*

packing gland

An explosion-proof entrance for conductors through the wall of an explosion-proof enclosure, to provide compressed packing completely surrounding the wire or cable, for not less than 1/2 in (1.27 cm) measured along the length of the cable.

packsand

A very fine-grained sandstone that is so loosely consolidated by a little calcareous cement as to be readily cut by a spade. *AGI*

pack wall

A dry-stone wall built along the side of a roadway, or in the waste area, of a coal or metal mine. The wall helps to support the roof and also to retain the packing material and prevent it spreading into the roadway. *Nelson*

pad

a. Ground-contact part of a crawler-type track. *Nichols, 1* b. See: [wallplate](#) c. The refractory brickwork below the molten iron at the base of a blast furnace. *Dodd*

paddle

a. Numbered wooden marker which shovelers put in the cans of ore that they load. *Hess* b. A straight iron tool for stirring ore in a furnace. *Standard, 2* c. A bat or pallet, as used

in tempering clay. *Standard, 2 d.* A scoop for stirring and mixing, as used in glassmaking. *Standard, 2*

paddle conveyor

See: [paddle-type mixing conveyor](#)

paddle loader

A belt loader equipped with chain-driven paddles that move loose material to the belt. *Nichols, 1*

paddle mixer

A form of worm conveyor having two noncontinuous spirals that form paddles; the shafts are contrarotating and the spirals opposite. See also: [paddle-type mixing conveyor](#)

paddle-type mixing conveyor

A type of conveyor consisting of one or more parallel paddle conveyor screws. See also: [blending conveyor](#); [paddle conveyor](#).

paddle washer

A type of conveyor consisting of one or two inclined parallel paddle conveyor screws in a conveyor trough having a receiving tank and an overflow weir at the lower end and a discharge opening at the upper end.

paddle-wheel fan

A centrifugal fan with radial blades. *Strock, 2*

paddy

A borehole drill bit having cutters that expand on pressure. Also called expansion bit; paddy bit. *Long*

paddy bit

See: [paddy](#)

paddy lamp

A portable battery-operated lamp attached to the front or rear of a personnel train. *BS, 13*

padlock sheave

a. The bucket sheave on a dipper or hoe shovel. *Nichols, 1* b. A sheave set connecting inner and outer boom lines. *Nichols, 1*

page

a. A small wooden wedge used in securing the timbering for excavations. *Hammond* b. In brickmaking, a track carrying the pallets bearing newly molded bricks. *Standard, 2*

pagodite

Ordinary massive pinite in its amorphous compact texture and other physical characters, but containing more silica. The Chinese carve the soft stone into miniature pagodas and images. See also: [agalmatolite](#); lardite; pinite. *CTD*

Pahrump

A provincial series of the Precambrian in California.

paint

a. A term used in the western United States for an earthy, pulverulent variety of cinnabar. b. A film of molybdenite in fractures and veinlets.

paint gold

A very thin coating of gold on minerals.

painting

The painting of the mine roof with a coal-tar paint that seals the bottom strata of the roof to prevent air from entering the crevices of the roof. *Kentucky*

paint mill

A machine for grinding mineral paints. *Fay*

paint rock

A soft, incompetent, fine-grained mass of quartz, pyrolusite, and kaolin with subangular fragments of chert, hematite, and goethite. *Woodruff*

paint-rock ore

See: [natural ore](#)

pair

A party of co-workers; a gang. Also spelled pare. *Webster 2nd; Fay*

pair production

The transformation of a high-energy gamma ray into a pair of particles (an electron and a positron) during its passage through matter. *Lyman*

palagonite

Devitrified basaltic glass.

palasome

The host rock or mineral in a replacement deposit.

pale brick

Brick that is underfired. *Fay*

paleo-

a. A combining form denoting great age or remoteness in regard to time (Paleozoic), or involving ancient conditions (paleoclimate). Sometimes given as pale- (palevent). Also spelled: palaeo; palaio-. *AGI* b. A prefix indicating pre-Tertiary origin, and generally altered character, of a rock to the name of which it is added, such as paleopicrite; by some the prefix has been applied to pre-Carboniferous rocks or features, such as the PaleoAtlantic Ocean. *AGI*

paleobotany

The study of plants of past geological ages through the investigation of fossils. CF: [paleontology](#); [palynology](#).

paleoclimatology

The branch of science that treats of climatological conditions during the history of the Earth.

paleocurrent

A current, generally of water, that influenced sedimentation or other processes or conditions in the geologic past.

paleoecology

The science of the relationship between ancient organisms and their environments. *AGI*

paleogeography

a. The study and description of the physical geography of the geologic past, such as the historical reconstruction of the pattern of the Earth's surface or of a given area at a particular time in the geologic past, or the study of the successive changes of surface relief during geologic time. b. The study of the relative positions of land masses as part of tectonic reconstructions of Earth history.

paleogeologic map

A map that shows the areal geology of an ancient surface at some time in the geologic past; esp. such a map of the surface immediately below an unconformity, showing the geology as it existed at the time the surface of unconformity was completed but before the overlapping strata were deposited. Paleogeologic maps were introduced by Levorsen (1933). *AGI*

paleolithologic map

A paleogeologic map that shows lithologic variations at some buried horizon or within some restricted zone at a particular time in the geologic past. *AGI*

paleomagnetism

Faint magnetic polarization of rocks that may have been preserved since the accumulation of sediment or the solidification of magma whose magnetic particles were oriented with respect to the Earth's magnetic field as it existed at that time and place. *AGI*

paleontological facies

a. The paleontological aspect of a particular sedimentary lithology; e.g., nummulitic facies, crinoid facies, etc. *Schieferdecker* b. Sedimentary facies differentiated on the basis of fossils. *AGI*

paleontologist

Person who studies the fossilized remains of animals and/or plants. *AGI*

paleontology

A science that deals with the life of past geological periods, based on the study of fossil remains of plants and animals, and gives information esp. about the phylogeny and relationships of modern animals and plants and about the chronology of the history of the Earth. CF: [paleobotany](#); paleoclimatology; paleogeography. *Webster 3rd*

paleozoology

That branch of paleontology dealing with the study of fossil animals, both invertebrate and vertebrate. *AGI*

palimpsest

Said of a structure or texture of metamorphic rocks in which remnants of some pre-existing structure or texture are preserved.

palingenesis

Formation of a new magma by the melting of pre-existing magmatic rock in situ. Considered incorrectly by some workers as a syn. of anatexis. Adj: palingenic. *AGI*

palladinite

A poorly defined ocherous coating on palladian gold, probably PdO.

palladium

A soft, ductile, steel-white metallic element of the platinum group metals. Symbol, Pd. Found along with platinum and other metals of the platinum group in placer deposits; also found associated with nickel-copper deposits. Used as a catalyst, in dentistry, watchmaking, surgical instruments, and electrical contacts. *Handbook of Chemistry and Physics, 3*

palladium amalgam

A former name for potarite. See also: [potarite](#)

palladium gold

Same as porpezite, or gold, containing palladium up to 10%. See also porpezite; gold. *Fay*

pallas iron

See: [pallasite](#)

pallasite

a. Any ultramafic rock, whether of meteoric or terrestrial origin, that contains approx. 60% iron if meteoric, or more iron oxides than silica if terrestrial. *AGI* b. A stony-iron meteorite composed essentially of large single glassy crystals of olivine embedded in a network of nickel-iron. Pallasites are believed to have been formed at the interface of the stony mantle and metal core of a layered planetoid. Syn: [pallas iron](#)

palleting

A light platform in the bottom of powder magazines to preserve the powder from dampness. *Fay*

pallet molding

A method of forming bricks in sanded molds, from which they are dumped on a board called a pallet. *Standard, 2*

pallet-type conveyor

A series of flat or shaped wheelless carriers propelled by and attached to one or more endless chains or other linkage.

Palo-Travis analyser

A sedimentation apparatus for determining particle size, based upon the settling of powder through a long sedimentation tube filled with liquid. The instrument consists of the sedimentation tube, a smaller reservoir at the top joined to the tube through a large bore stopcock, and a calibrated capillary mounted concentrically at the bottom of the tube. *Osborne*

paludal

Pertaining to swamps or marshes, and to organic, clay, or other material deposited in a swamp environment. CF: [palustrine](#)

paludification

Process of formation of a peat bog. This requires a steady growth of new peat-forming plants in phase with a steady general sinking of the depression in which this occurs. *Pryor, 3*

palustrine

Pertaining to material deposited in a swamp or marsh environment. CF: [paludal](#)

palygorskite

a. A monoclinic and orthorhombic mineral, $(\text{OH})_2 (\text{Mg,Al})_4 (\text{Si,Al})_8 \text{O}_{20} \cdot 8\text{H}_2\text{O}$; fibrous; in desert soils. b. A general name for lightweight fibrous clay minerals showing significant substitution of aluminum for magnesium; characterized by distinctive rodlike shapes under an electron microscope. Syn: [attapulгите](#)

palynology

a. A branch of science concerned with the study of pollen of seed plants and spores of other embryophytic plants, whether living or fossil, including their dispersal and applications in stratigraphy and paleoecology. *AGI* b. The study of the fossilized spores and pollen grains of the plants, esp. those whose remains contributed to the formation of coal seams. CF: [paleobotany](#); [paleontology](#). *Nelson*

pan

a. A shallow steel or porcelain dish in which drillers or samplers wash drill sludge to a gravity concentrate and separate the particles of heavy minerals from the lighter-density rock powder to ascertain if the rocks traversed by the borehole contain minerals of value. Syn: [tin dish](#) *Long* b. Hardpan. c. Fireclay or underclay of coal seams. d. A trough or section of a pan conveyor or shaker conveyor. *Nelson* e. The framework of a belt or chain conveyor. See also: [tray](#) *Mason* f. A circular steel dish from 10 to 16 in (25 to 40 cm) in diameter at the top, from 2 to 2-1/2 in (5.1 to 6.4 cm) deep, and with sides sloping at 35 degrees to 40 degrees to the horizontal, used for testing and working placer deposits. Syn: [batea](#); [miner's pan](#); [prospecting pan](#); [gold pan](#). CF: [dish](#) g. A carrying scraper. *Nichols, I* h. See: [panning](#)

panabase

See: [tetrahedrite](#)

panabasite

A former name for tetrahedrite. See also: [tetrahedrite](#)

pan amalgamation

See pan-amalgamation process.

pan-amalgamation process

Method of recovering silver and gold from their ores, in which a cast iron pan or barrel is used for contacting a slurry of the crushed ore with salt, copper sulfate, and mercury; the released silver and gold form an amalgam with the mercury. Syn: [pan amalgamation](#)

Pan-American jig

Mineral jig developed for treatment of alluvial sands. *Pryor, 3*

pancake

a. See: [ribbon](#) b. Any of concrete discs that are stacked to form concrete columns for stope support. They are cast at the surface and are usually 30 in (76.2 cm) diameter by 4 in (10.2 cm) thick with reinforcement from wire rope. *Higham*

panclastite

An explosive composed of liquid nitrogen tetroxide mixed with carbon disulfide or other liquid combustible, in the proportion of three volumes of the former to two of the combustible. *Fay*

pan conveyor

a. A conveyor comprising one or more endless chains or other linkage to which usually overlapping or interlocking pans are attached to form a series of shallow, open-topped containers. Some pan conveyors have been known also as apron conveyors. b. Jigging conveyor; a trough down which coal slides after mining and loading in dipping seams, with motion being aided by a shaking action. See also: [jigger](#) c. A trough conveyor or gravity conveyor. *Nelson*

pandermite

a. See: [priceite](#) b. A name for firm, compact, porcelainlike masses of colesmanite.

pan-edge

a. A runner mill for grinding or mixing granular material. b. Steel supporting plates on which furnace bottom refractories are placed.

panel

a. A large rectangular block or pillar of coal. b. A method of working whereby the workings of a mine are divided into sections, each surrounded by solid strata and coal with only necessary roads through the coal barrier. Also spelled pannel. *Mason* c. The working of coal seams in separate panels or districts; e.g., single unit panel. See also: [panel working](#) d. Rectangle of lode ore that is defined by means of levels and winzes and

then considered to be proved as regards volume for valuation purposes. *Pryor, 3 e.* A group of breasts or rooms separated from the other workings by large pillars. *Fay f.* A small portion of coal left uncut. *Webster 3rd*

panel barrier

The pillar of coal left between the adjacent panels. These pillars are often worked on the retreat after the coal in the panels has been extracted. In the panel system of bord-and-pillar mining, the panel barrier may be 22 yd (20 m) (minimum) wide and about 300 yd (274 m) apart. In longwall panel mining, the barriers may be made of sufficient width for extraction by a conveyor face on the retreat. Also called panel pillar. See also: [Bolsover experiment](#)

panel slicing

a. In stoping, the process of mining out a panel either from above, below, or one side as described by a qualifying term. *Pryor, 3* b. See: [top slicing and cover caving](#)

panel working

a. Working laid out in districts or panels, which are then extracted as single units. The panel system of working may be adopted with pillar-and-stall and longwall methods. See also: [pillar methods of working](#) b. A system of working coal seams in which the colliery is divided up into large squares or panels isolated or surrounded by solid ribs of coal of which a separate set of breasts and pillars is worked, and the ventilation is kept distinct; i.e., every panel has its own circulation, the air of one not passing into the adjoining one, but being carried direct to the main return airway. *Zern*

pan feeder

See: [conveyor-type feeder](#)

pan-feeder operator

See: [mill feeder](#)

panhead

A head to a rivet or screw having the shape of a truncated cone. *Hammond*

panidiomorphic

A textural term for rocks in which all or almost all of the mineral constituents are idiomorphic or euhedral.

panman

a. A worker who places in position and tends the operation of underground trough conveyors for the transportation of coal or other minerals. These conveyors are built in sections, and the principal task of the panman is to move the sections from one position to another. *Hess* b. One engaged in dismantling or building conveyors. Also called panner. *Mason*

panning

A technique of prospecting for heavy metals, such as gold, by washing placer or crushed vein material in a pan. The lighter fractions are washed away, leaving the heavy metals behind in the pan. See also: [pan](#) *AGI*

pantellerite

A peralkaline rhyolite or quartz trachyte with normative quartz exceeding 10%. It is more mafic than comendite. *AGI*

pantograph

a. A type of drawing instrument consisting of rods linked together in the form of a parallelogram, used for copying a drawing to any required scale. *Hammond* b. The hinged diamond-shaped structure mounted on the roof of an electric locomotive to collect electric power from an overhead wire. *Hammond*

pan-type car

Doorless car of two-way, side-dump design; built in capacities from 4 to 10 yd³ (3.1 to 7.6 m³). The car body is reversible and may be dumped to either side. Dumping is accomplished by means of an external hoist at the dumping point. *Pit and Quarry*

Panzer conveyor

See: [armored flexible conveyor](#)

Panzer-Forderer snaking conveyor

A very strong, armored conveyor that is moved forward behind a coal plow by means of a traveling wedge pulled along by the plow or by means of jacks or compressed-air-operated rams attached at intervals to the conveyor structure. *Sinclair, 5*

papa

a. A bluish white, massive New Zealand clay like pipe clay; used for whitening fireplaces. When hard, it is called papa rock. Etymol: Polynesian. b. Sp. A nugget of gold or silver. c. A nodule of mineral.

papagoite

A monoclinic mineral, $\text{CaCuAlSi}_2\text{O}_6(\text{OH})_3$; forms blue crystals; secondary; at Ajo, Pima County, AZ.

paper clay

A fine-grained, white, kaolinic clay with high retention and suspending properties, high reflectance, and a very low content of free silica. It is used for coating or filling paper. *AGI*

paper coal

a. Coal in which cuticular matter may be prominent. *AGI* b. A variety of brown coal deposited in thin layers like sheets of paper. *Fay*

paper shale

A shale that easily separates on weathering into thin layers or laminae suggesting sheets of paper; it is often highly carbonaceous. *AGI*

paper spar

A crystallized variety of calcite found in thin lamellae or paperlike plates. *Standard, 2*

par-

See: [para-](#)

para-

a. A prefix applied to the names of metamorphic rocks that have been derived from sediments; e.g., paragneiss. *Stokes* b. Prefix meaning beside or nearby. c. Indicating a polymorph. d. Indicating a schist or gneiss derived from a sedimentary protolith. e. A matrix-rich clastic sedimentary rock. f. In chemistry, a prefix indicating: (1) an isomeric or polymeric modification; such as paracyanogen, paraldehyde, etc.; (2) a modification or a similar compound that is not necessarily isomeric or polymeric; such as, paramorphine; (3) a benzene derivative in which the substituted atoms or radicals are directly opposite each other on the benzene ring--i.e., occupying the positions 1 and 4--such as paraxylene; or (4) an inactive isomer produced by a combination of its dextro- and levo- modifications--such as, paratartaric acid. A Greek prefix meaning beside.

Abbrev., p-. Syn: [par-](#) g. A Greek prefix meaning beside. In the name of a metamorphic rock, such as paragneiss, it means derived from an original sediment. *Webster 3rd*

parabola

The shape taken by the curve of a bending moment diagram for a uniformly distributed load on a beam simply supported. *Hammond*

parabutlerite

An orthorhombic mineral, $\text{Fe}^{3+}(\text{SO}_4)(\text{OH}) \cdot 2\text{H}_2\text{O}$; dimorphous with butlerite; orange; an alteration product of copiapite.

paracelsian

A monoclinic mineral, $\text{BaAl}_2\text{Si}_2\text{O}_8$; feldspar group; pale yellow; dimorphous with celsian; at Candoglia, Italy. Syn: [barium feldspar](#)

parachrosis

Discoloration in minerals from exposure to weather. *Standard, 2*

paraconformity

An unconformity at which strata are parallel and the contact is a simple bedding plane. *AGI*

paraconglomerate

A term proposed by Pettijohn (1957) for a conglomerate that is not a product of normal aqueous flow, but is deposited by such agents as subaqueous turbidity slides and glacier ice; it contains more matrix than gravel-sized fragments (pebbles may form less than 10% of the rock). Examples include tillites, pebbly mudstones, and relatively structureless clay or shale bodies in which pebbles or cobbles are randomly distributed. Syn: [conglomerate mudstone](#)

paracoquimbite

A trigonal mineral, $\text{Fe}^{3+}_2(\text{SO}_4)_3 \cdot 9\text{H}_2\text{O}$; dimorphous with coquimbite; pale violet; astringent tasting; secondary; in oxidized iron sulfide deposits.

paradamite

A triclinic mineral, $Zn_2(AsO_4)(OH)$; rare; dimorphous with adamite and isomorphous with tarbuttite; transparent; vitreous; pale yellow; forms sheaflike aggregates and striated equant crystals; at the Ojuela Mine, Durango, Mexico.

paraffin shale

See: [oil shale](#)

paragenesis

A characteristic association or occurrence of minerals or mineral assemblages in ore deposits, connoting contemporaneous formation. CF: [mineral sequence](#)

paragenetic

a. Pertaining to paragenesis. *AGI* b. Pertaining to the genetic relations of sediments in laterally continuous and equivalent facies. *AGI*

paragneiss

In petrology, a gneiss formed by the metamorphism of a sedimentary rock. CF: [orthogneiss](#)

Paragon

Trade name for a nonrotating rope of 12 by 6 over 3 by 24 strand construction. *Hammond*

paragonite

A monoclinic mineral, $NaAl_2(AlSi_3)O_{10}(OH)_2$; mica group; pseudo-hexagonal with basal cleavage; forms fine-grained, massive, scaly aggregates; occurs in metamorphic rocks and in soils; not common as it is incompatible with potassium feldspar (albite plus muscovite is more stable); rarely identified because of its similarity to muscovite. Syn: [soda mica](#)

paragonite schist

A variety of schist in which paragonite supplants muscovite or biotite.

paraguanajuatite

A trigonal mineral, $Bi_2(Se,S)_3$; paramorphous after orthorhombic guanajuatite.

parahilgardite

A mineral trimorphous with monoclinic hilgardite and triclinic hilgardite. See also: [hilgardite](#)

parahopeite

A colorless hydrous zinc phosphate, $Zn_3(PO_4)_2 \cdot 4H_2O$, triclinic. Minute tabular or prismatic crystals; fan-shaped aggregates. From Broken Hill, Northern Rhodesia; Salmo, BC. *English*

parajamesonite

An orthorhombic mineral, $Pb_4FeSb_6S_{14}$; dimorphous with jamesonite; metallic; black; distinguished by its X-ray pattern.

paralaurionite

A monoclinic mineral, $PbCl(OH)$; dimorphous with laurionite; soft; forms white pseudo-orthorhombic prismatic crystals; a secondary mineral in lead deposits.

paralic

Said of deposits laid down on the landward side of a coast, in shallow fresh water subject to marine invasions. Thus, marine and nonmarine sediments are interbedded; as exemplified in the lower part of the Coal Measures, the nonmarine (paralic) predominate, with relatively thin marine bands. CF: [limnic](#)

paralic coal basin

A coal basin that originated near the sea--as opposed to a limnic coal basin. *AGI*

parallax

a. In survey work, incorrect reading of a graduation on an instrument if the observer's eye is not truly normal to the graduated plate. *Pryor, 3* b. The change in bearing or apparent position of an object produced by a change in the observer's position. *NCB* c. The apparent displacement, or change in position, of the crosshairs of a focusing telescope with reference to the image of an object, as the eye is moved from side to side, when the focus of the eyepiece or objective is imperfect. *Seelye, 2*

parallel blasting circuit

An electric blasting circuit in which the leg wires of each detonator are connected across the firing line directly or in parallel through bus wires. Syn: [series-in-parallel circuit](#) *Atlas*

parallel circuit firing

A method of connecting together a number of detonators that are to be fired electrically in one blast. The electric detonators are connected to two common points. Each detonator offers a path for the electric current, independent of all the other detonators in the circuit, and therefore calls for a higher amperage than a series circuit in which there is but one path. *Nelson*

parallel cut

Group of parallel holes, not all charged with explosive, that creates the initial cavity to which the loaded holes break in blasting a development round. *Pryor, 3*

parallel displacement fault

A fault along which all straight lines on opposite sides of the fault and outside the dislocated zone that were parallel before the displacement are parallel afterward. *AGI*

parallel drum

A cylindrical form of drum on which the haulage or winding rope is coiled. The drum roll may be plain or grooved. For deep winds, multilayering of rope is often used to reduce the drum size required. Also, for deep winding (3,000 ft or 915 m or more), a balance rope is almost essential with a parallel drum. Syn: [cylindrical drum](#) *Nelson*

parallel duplex mine cable

See: [portable parallel duplex mine cable](#)

parallel entry

Usually an intake airway parallel to the haulageway. *USBM, 1*

parallel extinction

In mineral optics, refers to crystal edges or cleavage traces parallel to the optic directions of the mineral. CF: [extinction](#)

parallel firing

The firing of detonators in a round of shots by dividing the total supply current between the individual detonators. CF: [series firing](#) *BS, 12*

parallel flow

Flow in the same direction of two or more streams within a stream system.

parallel fold

A fold in which beds maintain the same thicknesses throughout. CF: [similar fold](#); [supratenuous fold](#). Syn: [concentric fold](#)

parallel growth

Two or more crystals with corresponding faces parallel. *Fay*

parallel lines

Lines that lie in the same plane and are equally distant from each other at all points. The term is ordinarily applied to straight lines. *Jones, 2*

parallelogram

Quadrilateral that has opposite sides parallel and opposite angles equal. *Jones, 2*

parallel ripple mark

A ripple mark with a relatively straight crest and an asymmetric profile; specif. a current ripple mark. *AGI*

parallel series

Two or more series of electric blasting caps arranged in parallel. See also: [multiple series](#)

parallel series circuit

A method of connecting together a number of detonators to be fired electrically in one blast. The circuit consists of a number of series circuits connected in parallel. Syn: [series-in-parallel circuit](#) *Nelson*

parallel unconformity

See: [disconformity](#)

parallel wire method

An electrical prospecting method using equipotential lines or curves in prospecting for orebodies. In the parallel wire method, two bare copper wires about 3,000 ft (915 m) long, placed about 2,000 ft (610 m) or more apart, are used as electrodes. Current is supplied from the generator, and the electrodes are connected to the ground at 100 ft (30

m) intervals by iron grounding pins. Equipotential lines are located by two electrodes or wooden rods, to one end of which are fastened metal spikes about 6 to 7 in (15 to 18 cm) long. The electrodes are connected by some 150 ft (46 m) of wire that runs down the rods to the spikes. If a head telephone is placed in the circuit, the absence of sound in the telephone indicates that the two electrodes are at the same potential. By this method, the equipotential lines can be traced. *Lewis*

paramagnetic

Having a small positive magnetic susceptibility. A paramagnetic mineral such as olivine, pyroxene, or biotite contains magnetic ions that tend to align along an applied magnetic field but do not have a spontaneous magnetic order. CF: [diamagnetic](#)

paramagnetism

a. The magnetism of a paramagnetic substance. The property by which the north pole of a magnet that is magnetized by induction is repelled to 180 degrees by the north pole of the inducing magnet. *Standard, 2* b. The property possessed by a substance of producing a higher concentration of magnetic lines of force within itself than in the surrounding magnetic field when it is placed in such a field. *Miall* c. A property of many substances, related to ferromagnetism, by virtue of which, when placed in a nonuniform magnetic field, they tend to move toward the strongest part. Permanent magnetism is practically absent and the susceptibility, which is much less than that of iron, is constant at any given temperature, but in most substances it is nearly inversely proportional to the absolute temperature. CF: [ferrimagnetism](#); diamagnetism. *Holmes, 1*

paramelaconite

A tetragonal mineral, $\text{Cu}^+ \text{Cu}^{2+} \text{O}_3$; purplish black; at Bisbee, AZ.

parameter

a. A constant or variable in a mathematical expression that distinguishes various specific situations. b. In crystallography, one of the three non-coplanar vectors which describe a lattice. Syn: [lattice parameter](#)

paramontroseite

An orthorhombic mineral, VO_2 ; forms by loss of hydrogen and iron from montroseite in an initial stage of oxidation of uranium-vanadium deposits.

paramorph

A pseudomorph with the same composition as the original crystal, caused by a phase transformation; e.g., calcite with aragonite morphology. CF: [pseudomorph](#)

paramorphism

a. The alteration of one mineral into another without change of composition, such as augite into hornblende in uralitization. *Fay* b. With metamorphism, it describes such thorough changes in a rock that its old components are destroyed and new ones are built up. See also: [allomorphism](#)

paramoudra

Large flint nodule. See also: [potstone](#)

pararammelsbergite

An orthorhombic mineral, NiAs_2 ; loellingite group; trimorphous with rammelsbergite and krutovite; metallic tin-white; commonly massive.

pararealgar

A monoclinic mineral, AsS ; trimorphous with realgar and $\alpha\text{-AsS}$; powdery; bright yellow to orange-brown; easily mistaken for orpiment.

paraschist

A schist derived from a sedimentary rock. See also: [orthoschist](#); schist.

paraschoepite

An orthorhombic mineral, $\text{UO}_3 \cdot (2-x)\text{H}_2\text{O}$; bright yellow; a dehydration product of schoepite. Formerly called schoepite III. See also: [schoepite](#)

parasymplesite

A monoclinic mineral, $\text{Fe}^{2+}_3(\text{AsO}_4)_2 \cdot 8\text{H}_2\text{O}$; vivianite group; dimorphous with symplesite and isomorphous with koettigite; bluish green.

paratacamite

A trigonal mineral, $\text{Cu}_2(\text{OH})_3\text{Cl}$; forms twinned rhombohedra; massive or powdery; green to green-black; a secondary mineral in copper deposits.

paratellurite

A tetragonal mineral, TeO_2 ; rutile group; soft; waxy; gray-white; dimorphous with tellurite; at Cananea, Mexico.

paratomous

Having planes of cleavage inclined to the axis; also, abounding with facets of cleavage.
Standard, 2

parautochthonous granite

A mobilized portion of an autochthonous granite that has moved higher in the crust or, more usually, into tectonic domains of lower pressure. It shows variable marginal relations, in some places migmatitic in others characterized by a thermal aureole.
Schieferdecker

paravauxite

A triclinic mineral, $\text{FeAl}_2(\text{PO}_4)_2(\text{OH})_2 \cdot 8\text{H}_2\text{O}$; colorless; forms small prismatic crystals; at Llallagua, Bolivia.

parbigite

See: [messelite](#)

pargasite

A monoclinic mineral, $\text{NaCa}_2(\text{Mg,Fe})_4\text{Al}(\text{Si}_6\text{Al}_2)\text{O}_{22}(\text{OH})_2$; amphibole group; prismatic cleavage; occurs in dolomitic marbles and in skarns.

Parian marble

One of the most famous of ancient statuary marbles; from the island of Paros, Greece.

parisite

A trigonal mineral, $6[(\text{Ce,La,Nd})_2\text{CaCO}_3]_3\text{F}_2$; vitreous to resinous; forms acute hexagonal bipyramids; in veins, such as the emerald deposits of Columbia; also in alkalic pegmatites. Named for J.J. Paris.

parkerite

A monoclinic mineral, $\text{Ni}_3(\text{Bi,Pb})_2\text{S}_2$; metallic; bronze; has three cleavages; in a magmatic sulfide deposit, Insizwa, South Africa.

Parkerizing

Treatment of steel in hot aqueous solution of free phosphoric acid and manganese dihydrogen phosphate, other salts sometimes being used as accelerators. A fine-grained

insoluble film of ferric phosphate is formed in a few minutes, which is corrosion resistant. *Pryor, 3*

Parker process

A method for producing low-temperature coke in which each retort is a monobloc iron casting 9 ft (2.7 m) high, containing 12 tubes, which taper from 4-1/2 in (11.4 cm) at the top to 5-1/4 in (13.3 cm) at the bottom. A battery contains 36 retorts in 2 rows of 18. Retorts and combustion chambers are arranged alternately, so that each retort is located in a radiation chamber formed by the walls of adjacent combustion chambers. The retorts are heated only by radiation from these walls, so that there is no overheating and the inside temperature of the retorts can be maintained accurately at 1,112 degrees F (600 degrees C). A cooling chamber is fitted below each pair of retorts, of a size sufficient to hold the coke from both. The pairs of retorts are charged and discharged every 4 h. Syn: [Coalite process](#)

Parkes process

A process used to recover precious metals from lead. It is based on the principle that if 1% to 2% of zinc is stirred into molten lead, a compound of zinc with gold and silver separates out and can be skimmed off. *ASM, 1*

parmalee wrench

A wrench that has a smooth segmented sleeve that when tightly clamped around the tube of a core barrel, will not mar or distort the thin tube when the core barrel is taken apart. *Long*

parral agitator

An agitator using a number of small airlifts disposed about a circular, flat-bottomed tank in such a way as to impart a circular swirling motion to the pulp. *Liddell*

Parr formula

The simplest method for determining the amount of mineral matter present in a coal is to determine the ash and sulfur contents and to make corrections for the changes taking place in these during combustion. The Parr formula for doing this is: total inorganic matter=moisture+1.08 ash+0.55 sulfur, where moisture, ash, and sulfur represent the percentages of these substances found by analysis of the coal. *Francis, 1*

Parrish arm

Long arm made of a flexible board for the suspension of a shaker screen. *Zern*

Parrish shaker

A screening shaker with flexible wooden hangers and flexible drive arms; used for sizing anthracite. *Mitchell*

Parr's classification of coal

A classification system based on the proximate analysis and calorific value of ash-free, dry coal. The heating value of raw coal is obtained, and from these data a table is drawn up, at one end of which are the celluloses and woods of about 7,000 Btu/lb (16.3 MJ/kg). These data are then plotted against the percentage volatile matter in unit coal. *Hess*

parsonsite

A triclinic mineral, $\text{Pb}_2(\text{UO}_2)(\text{PO}_4)_2 \cdot 2\text{H}_2\text{O}$; forms pale citron-yellow crusts, powders, and tiny laths; nonfluorescent; radioactive; a secondary mineral in uraniferous pegmatites and other uranium deposits.

part

In founding, a section of a mold or flask specif. distinguished (in a three-part flask) as top part, middle part, and bottom part. *Standard, 2*

part 90 miner

A miner employed at an underground coal mine or at a surface work area of an underground coal mine who has exercised the option under the old section 203b program (36 FR 20601, October 27, 1971), or under 90.3 (Part 90 option; notice of eligibility; exercise of option) of this part to work in an area of a mine where the average concentration of respirable dust in the mine atmosphere during each shift to which that miner is exposed is continuously maintained at or below 1.0 mg/m^3 of air, and who has not waived these rights. *CFR, 1*

part-face blast

Either of two stages of blasts when the height of the rock face is too great to blast in one operation. *McAdam, 2*

partially fixed

An end support to a beam or a column that cannot develop the full fixing moment. *Hammond*

partial melting

a. Melting of part of a rock; because a rock is composed of different minerals, each with its own melting behavior, melting does not take place at one temperature (as for ice at 0 degrees C) but takes place over a range of temperatures; melting starts at the solidus temperature and continues, nonlinearly, as the temperature increases to the liquidus temperature when the rock is totally molten. *Fowler* b. A situation in which only certain minerals in a rock are melted, due to their lower melting temperature.

partial pressure

a. That part of the total pressure of a mixture of gases contributed by one of the constituents. *Strock*, 2 b. See: [Dalton's law](#)

partial pyritic smelting

Blast furnace smelting of copper ores in which some of the heat is provided by oxidation of iron sulfide and some by combustion of coke. See also: [pyritic smelting](#)

partial roasting

Roasting carried out to eliminate some but not all of the sulfur in an ore. *CTD*

partial subsidence

Any amount of subsidence that is less than full subsidence; such as with solid or strip packing. *Nelson*

particle

A general term, used without restriction as to shape, composition, or internal structure, for a separable or distinct unit in a rock; e.g., a sediment particle, such as a fragment or a grain, usually consisting of a mineral. *AGI*

particle diameter

The length of a straight line through the center of a sedimentary particle considered as a sphere; a common expression of particle size. See also: [particle size](#)

particle mean size

See: [particle size](#)

particle size

The general dimensions (such as average diameter or volume) of the particles in a sediment or rock, or of the grains of a particular mineral that make up a sediment or

rock, based on the premise that the particles are spheres or that the measurements made can be expressed as diameters of equivalent spheres. It is commonly measured by sieving, by calculating settling velocities, or by determining areas of microscopic images. See also: [particle diameter](#)

particle-size analysis

Determination of the statistical proportions or distribution of particles of defined size fractions of a soil, sediment, or rock; specif. mechanical analysis. Syn: [size analysis](#)

particle-size distribution

The percentage, usually by weight and sometimes by number or count, of particles in each size fraction into which a powdered sample of a soil, sediment, or rock has been classified--such as the percentage of sand retained on each sieve in a given size range. It is the result of a particle-size analysis. Syn: [size distribution](#); size-frequency distribution. *AGI*

particle-size reduction

The process of crushing or grinding material to reduce the particle size. *BS, 2*

particle sorting

Separation of solid particles, in a fluid (air, water, etc.), because of different densities or masses. *Bennett*

particle velocity

A measure of the intensity of ground vibration generated from a blasting event, specif. the time rate of change of the amplitude of ground displacement, given in inches (or millimeters) per second.

particulate

Refers to particles collected by filtration from ambient air. *SME, 1*

parting

a. A lamina or very thin sedimentary layer separating thicker strata of a different type; e.g., a thin layer of shale or slate in a coal bed, or a shale break in sandstone. Strata tend to separate readily at partings. CF: [band](#) b. A small joint in coal or rock, or a layer of rock in a coal seam. See also: [back](#) c. The physical property of some specimens of mineral species to break along specific crystallographic planes because of twinning or chemical alteration along them; e.g., rhombohedral parting in corundum. CF: [cleavage](#);

[fracture](#). Syn: [mineral parting](#) d. Cutting simultaneously along two parallel lines or along two lines which balance each other in the matter of side thrust. e. The final process after cupellation to remove the silver from bullion bead. f. A side track or turnout in a haulage road on which empty or loaded cars are collected for distribution to points for loading or for haulage to the surface or to the shaft or slope bottom for hoisting.

parting and connection man

In bituminous coal mining, a laborer who directs the movement of mine cars from a parting (a side track). Also called connection man; parting boy. See also: [parting](#)

parting boy

See: [parting and connection man](#)

parting cleaner

In bituminous coal mining, one who only picks out seam partings (layers of rock) in the coal working face prior to blasting, using a long-handled pick. *DOT*

parting density

Density maintained in the bath in dense media separation. *Pryor, 4*

parting flask

A flask used to separate gold and silver, such as by quartation, in assaying procedures. Syn: [parting glass](#)

parting glass

See: [parting flask](#)

parting liquid

Any of several liquids--such as tetrabromethane, ethylene dibromide, pentachlorethane, and trichlorethylene--that are used in the DuPont mineral separation process. See also: [DuPont process](#)

parting powder

A powder made from chalk, bone meal, or similar nonsiliceous material, suitably waterproofed, which is applied to a pattern to ensure a clean strip from the molding sand. *Osborne*

parting slate

A term applied to a thin layer of slate between two seams of coal. *Fay*

partition curve

A curve indicating, for each specific gravity (or size) fraction, the percentage that is contained in one of the products of the separation; e.g., the reject. Syn: [distribution curve](#)

partition density

The density corresponding to 50% recovery as read from a partition curve. Syn: [tromp cut point](#)

partition factor

The percentage of a specific gravity (or size) fraction recovered in one of the products of the separation; e.g., the reject. Syn: [distribution factor](#)

partitioning method

A resistivity method in which a special electrode configuration is used, consisting of five electrodes, instead of the usual number of four, to provide a check on the observations. *Schieferdecker*

partition size

The separation size corresponding to 50% recovery as read from a size partition curve. *BS, 5*

partly filled stope

See: [square-set stoping](#)

parts of line

Separate strands of the same rope or cable used to connect two sets of sheaves. *Nichols, 1*

part-swing shovel

A power shovel in which the upper works can rotate through only part of a circle. *Nichols, 1*

party chief

In seismic prospecting, the person who supervises the personnel of the crew and generally is in charge of interpretation of the data. *Dobrin*

party foreman

In seismic prospecting, the person who supervises the work of a field party. Subordinate to a nonresident party chief who is responsible for the interpretation of the data. *AGI*

party manager

a. In seismic prospecting, this person's function is to handle the operational phases of the work, particularly those involving logistics and access in difficult or remote areas, giving the party chief more time for interpretation of the data. *Dobrin* b. In gravity and magnetic prospecting, the person in charge of the operations of a field party. *AGI*

Pasadenian orogeny

Mid-Pleistocene diastrophism. *AGI*

Pascal's law

The component of the pressure in a fluid in equilibrium that is due to forces externally applied is uniform throughout the fluid. *Webster 3rd*

pascoite

A monoclinic mineral, $\text{Ca}_3 \text{V}_{10} \text{O}_{28} \cdot 17\text{H}_2 \text{O}$; forms yellow-orange to dark red-orange crusts and tiny laths; a secondary vanadium mineral in uranium-vanadium deposits of the Colorado Plateau, and at Minasragra, Peru.

pass

a. An inclined opening in a mine, a raise or a winze, through which coal or ore is delivered from a higher to a lower level. At the lower end, the pass is normally provided with a chute or hydraulic gate through which the material is discharged into cars or trams. See also: [chute](#) *Nelson* b. A raise or winze for workers to travel in from one level to another. *Zern* c. The running of a sample through a sample divider. d. In surface mining, a complete excavator cycle in removing overburden. *BCI*

passage

a. A cavern opening or underground tunnel having greater length than height or width; large enough for human entrance and larger by comparison than a lead. *AGI* b. See: [pass](#)

passby

a. The double-track part of any single-track system of transport. *Mason* b. A siding in which cars pass one another underground; a turnout. *Zern*

passing boss

See: [motor boss](#)

passing point

a. On haulage roads, the point at which the loaded trams going outby pass the empty trams going inby. *Nelson* b. In shafts, the point at which the loaded ascending cage or skip passes the empty descending cage or skip. *Nelson*

passing track

A sidetrack with switches at both ends. *Kentucky*

passivation

The changing of the chemically active surface of a metal to a much less reactive state. CF: [activation](#)

passivator

A type of inhibitor that changes the electrode potential of a metal, causing it to become more cathodic or electropositive.

passive coefficient of earth pressure

The maximum ratio of the major principal stress to the minor principal stress. This is applicable where the soil has been compressed sufficiently to develop an upper limiting value of the major principal stress. *ASCE*

passive earth pressure

The maximum value of lateral earth pressure exerted by soil on a structure, occurring when the soil is compressed laterally, causing its internal shearing resistance along a potential failure surface to be completely mobilized; the maximum resistance of a vertical earth face to deformation by a horizontal force. CF: [active earth pressure](#) *AGI*

passive fault

Fault not liable to further movement. CF: [active fault](#) *Carson, 2*

passive metal

A metal on which an oxide film that prevents further attack on the metal is readily formed. When a metal other than a noble metal has a high resistance to corrosion, it is because of passivity; e.g., chromium, nickel aluminum, tin, and various alloys. See also: [passivity](#) *CTD*

passive state of plastic equilibrium

Plastic equilibrium obtained by a compression of a mass. *ASCE*

passive transducer

A transducer whose output waves are independent of any sources of power controlled by the actuating waves. *Hy*

passivity

a. A metal that is normally active according to its position in the electromotive-force series is said to be passive whenever its electrochemical behavior is that of a less active metal. b. A metal is passive when it is relatively resistant to corrosion in an environment in which a large decrease in free energy is associated with the corrosion reaction. c. A condition in which a piece of metal, because of an impervious covering of oxide or other compound, has a potential much more positive than the metal in the active state. *ASM, I*

pass pipe

An iron pipe connecting the water at the back of one set of tubing with that of another, or a pipe only in communication with one tub and open to the interior of a shaft. *Fay*

paste

a. The claylike matrix of a dirty sandstone; e.g., the microcrystalline matrix of a graywacke, consisting of quartz, feldspar, clay minerals, chlorite, sericite, and biotite. *AGI* b. The mineral substance in which other minerals are embedded; groundmass (as of a porphyry). *Webster 2nd* c. An imitation gemstone made from a certain type of lead glass; loosely applied to all glass imitation gemstones. *Anderson* d. A white clay body. e. In magnetic particle suspension, finely divided ferromagnetic particles in paste form used in the wet method. f. A slurry of sulfur and water, usually containing 30% to 50% of finely divided elemental sulfur. g. Material of which a porcelain body is formed. Hard paste (pite dure), composed of china stone and china clay, is true porcelain. Soft paste (pite tendre), composed of glass or frit with white, is artificial porcelain. h. Comparatively concentrated dispersion (greater than 10% by volume) of fine-solid or semisolid particles in a liquid; often shows elastic or plastic behavior. *Bennett*

paste fill

a. A class of backfills that has low water content; high densities ($>$ or $\approx 75\%$ by lot); and consistency, transport, and deposition properties different from those of traditional low-concentration slurries or other types of high-concentration backfill. *Aref* b. Paste fill (high pulp density) that does not settle out of suspension at zero flow density and does not produce free water when placed in a stope. Uncemented paste fill can generally be mobilized reasonably easily by pumping if left standing in a pipe for many hours.

paste pumping

The transport and placement of high-concentration, low-slump material by positive displacement through pipelines by pumps, similar to those used for concrete pumping.

See also: [paste fill](#)

pasting

The operation of mudcapping or plaster shooting whereby rock is blasted without drilling. An explosive is placed on top of the rock and covered by a cap of mud or similar material.

patch

a. A mine village, usually built and owned by a coal company. *Korson* b. A small placer property.

patchy

Distributed in an irregular manner, as when ore occurs in bunches or sporadically. *Fay*

pat coal

Scot. The bottom, or lowest, coal sunk through in a shaft. *Fay*

patent

A document that conveys title to the ground, and no further assessment work need be done; however, taxes must be paid. The procedure of obtaining a patent is divided into five steps: (1) a mineral surveyor is paid to make a patent survey, to adjust boundaries and correct errors, in which case an amended location should be made; (2) at least \$500 worth of improvement must have been made per claim; (3) the presence of valuable mineral must be proven beyond reasonable doubt; (4) the matter is taken up with the local land office, and the proper notices must be published in the papers for a specified time; and (5) the purchase price of the land is paid and the patent is received. *Lewis*

patent ax

A type of surfacing machine employed to remove irregularities from the surface of blocks of stone.

patented claim

A claim to which a patent has been secured from the U.S. Government, in compliance with the laws relating to such claims. See also: [patent](#)

patented rope

Galvanized steel rope. *Pryor, 3*

patent survey

An accurate survey of a mineral claim by a U.S. deputy surveyor as required by law to secure a patent (title) to the claim. *Fay*

Patera process

A metallurgical process consisting of a chloridizing roasting, leaching with water to remove base metals (some silver is dissolved and must be recovered), leaching with sodium hyposulfite for silver, and the precipitation of silver by sodium sulfide. The process was first carried out by von Patera at Joachimstal (Jachymov), Czech Republic. *Liddell; Fay*

paternoster pump

A chain pump; named from fancied resemblance of the disks and endless chain to a rosary. *Standard, 2*

pathfinder

In geochemical exploration, a relatively mobile element or gas that occurs in close association with an element or commodity being sought, but can be more easily found because it forms a broader halo or can be detected more readily by analytical methods. A pathfinder serves to lead investigators to a deposit of a desired substance. Often called indicator element, but this latter term is restricted by some authors to elements that are important components of the ores being sought. *AGI*

path of percolation

See: [line of creep](#)

patina

Strictly, the green film formed on copper and bronze after long exposure to the atmosphere. By extension, the term is applied to a film of any sort formed on wood, marble, chert, or other material after weathering or long exposure. See also: [desert varnish](#)

patinated chert

Chert nodules with weathered or case-hardened surface layers. *AGI*

patio

a. Mex. Cloth used by miners. b. Sp. Place where minerals are concentrated. The patio floor is one on which silver and/or gold ore is amalgamated. See also: [patio process](#); arrastre. *Pryor, 3*

patio process

The patio process, dating back to the 16th century, was a crude chemical method for the recovery of silver by amalgamation in low heaps with the aid of salt and copper sulfate (magistral). See also: [patio](#) *Liddell*

patronite

A monoclinic mineral, VS_4 (?); synthetic VS_4 is soft, gray-black, fine-grained; impure material constitutes an important ore mineral in the vanadium deposit at Minasrgra, Peru.

pattern

a. As applied to diamond bits, the design formed by spacing and distributing the diamonds in conformance with a predetermined geometric arrangement on the crown of a bit. See also: [concentric pattern](#); eccentric pattern. *Long* b. The system followed in spacing boreholes. See also: [checkerboarded](#); pattern shooting. *Long*

pattern molder

One who makes sand molds for castings; a molder. *Standard, 2*

pattern shooting

In seismic prospecting, the use of a number of energy sources arranged in a definite geometric pattern. *AGI*

Patterson agitator

An agitator of the Pachuca-tank type in which air is replaced by a solution or water, under pressure from a centrifugal pump. See also: [Pachuca tank](#)

Pattinson process

A process for separating silver from lead in which the molten lead is slowly cooled, so that crystals poorer in silver solidify out and are removed, leaving the melt richer in silver. *ASM, 1*

Pattinson's pots

A series of pots for separating silver and lead by making use of the fact that the melting point of their alloys rises as the percentage of silver increases. *Standard, 2*

Paulin altimeter

This instrument measures barometric pressure and is quite accurate for a portable instrument. It can be used for finding the difference in pressure between points at various elevations without checking the setting of the pointer, or it can be checked against a mercury barometer and then used as a portable barometer. It is useful in making a survey of the drop in ventilation pressure throughout a mine.

paulingite

An isometric mineral, $(K_2, Ca, Na_2, Ba)_5 [Al_{10} Si_{32} O_{84}] \cdot 34-44H_2O$; zeolite group; forms rhombic dodecahedra; at the Columbia River Rock Island Dam, Wenatchee, WA.

Pauling's rules

Generalizations about coordination polyhedra and the ways they fit together in stable ionic crystal structures: (1) A coordination polyhedron of anions forms about each cation. (2) Electronic neutrality is maintained over short atomic distances. (3) Coordination polyhedra tend not to share edges or faces. (4) Highly charged cations minimize sharing of polyhedral elements.

pavement

a. A layer immediately underlying coal or any other workable material. *Arkell* b. The floor of a mine. c. Any construction superimposed on a subgrade to reduce loading stresses and to protect it against the abrasive effects of traffic and weather. *Nelson* d. See: [base rock](#) e. A bare rock surface that suggests a paved road in smoothness, hardness, horizontally, surface extent, or close packing of its units; e.g., boulder pavement, glacial pavement, desert pavement, limestone pavement, erosion pavement. *AGI*

pavilion

Any of the undersides and corners of a brilliant-cut gem; they lie between the girdle and the collet. *Hess*

paving breaker

An air hammer that does not rotate its steel. *Nichols, 1*

paving sand

A type of commercial sand with applications divided into three general classes: concrete pavements, asphaltic pavements, and grouting.

pavonite

A monoclinic mineral, $(\text{Ag,Cu})(\text{Bi,Pb})_3 \text{S}_5$; at the Porvenir Mine, Bolivia. The synthetic phase, $\text{AgBi}_3 \text{S}_5$, has the same X-ray pattern.

pawl

A tooth or set of teeth designed to lock against a ratchet. *Nichols, 1*

paxite

A monoclinic mineral, CuAs_2 ; pseudo-orthorhombic; forms intergrowths with novakite, koutekite, and arsenic; in Bohemia, Czech Republic.

pay

(a) That portion of a formation, deposit, prospect, or mine in which valuable mineral, oil, or gas is found in commercial quantity.

(b) Profitable ore. See also: pay dirt.

pay dirt

a. Gravel. Of alluvial deposits, sand rich enough to be excavated and treated to recover its valuable contents. See also: [pay streak](#) *Pryor, 3* b. S. Afr. The same as payable ore, but in an alluvial deposit. Also called pay rock. See also: [pay ore](#) c. Earth, rock, etc., that yields a profit to a miner. *Webster 3rd*

pay formation

A layer or deposit of soil or rock whose value is sufficient to justify excavation. *Nichols, 1*

pay gravel

a. Gravel containing sufficient heavy mineral to make it profitable to work. *Nelson* b. In placer mining, a rich strip or lead of auriferous gravel. See also: [pay ore](#)

pay limit

S. Afr. Grade below which the mining of ore is considered to become unpayable. There has been much discussion about mining below the pay limit for technical reasons, as a result of taxation, or to conserve natural resources. *Beerman*

pay load

a. In any winding or haulage system, the pay load is the weight of coal, ore, or mineral handled as distinct from dirt, stone, or gangue. *Nelson* b. The mineral raised up the shaft from an underground mine. *Sinclair*, 5

pay material

The mineral to be recovered. *Austin*

pay ore

Rock that, at current cost of discovery, development, and exploitation, can be mined, concentrated and/or smelted profitably at the ruling market value of products. Ore below this value or cut (the threshold value) is unpay. Syn: [pay rock](#) pay gravel. *Pryor*, 3

pay out

To slacken or to let out rope.

pay rock

See: [pay ore](#)

pay shoot

A portion of a deposit composed of pay ore; generally a dipping band within a more continuous vein. See also: [pay streak](#)

pay streak

a. The area of economic concentration of gold in a placer deposit. *Bateman*, 2 b. The part of a vein or area of a placer deposit that carries the profitable or pay ore. See also: [pay dirt](#); [pay shoot](#). CF: [pay ore](#)

peachblossom ore

See: [erythrite](#)

pea coal

In anthracite only, coal small enough to pass through a mesh 3/4 to 1/2 in (1.9 to 1.3 cm) square, but too large to pass through a 3/8-in (9.5-mm) mesh. When buckwheat coal is made, the size marketed as pea is sometimes larger than the above; known also as No. 6 coal. See also: [anthracite coal sizes](#)

peacock coal

Iridescent coal, the iridescence of which is due to a thin film of some substance deposited on the surface of the coal along minute cracks. *Arkell*

peacock ore

Informal name for an iridescent copper mineral having a lustrous, tarnished surface exhibiting variegated colors, such as chalcopyrite and esp. bornite. Also called peacock copper. See also: [bornite](#)

pea gravel

Clean gravel, the particles of which are similar in size to that of peas. *AGI*

pea grit

The term pea grit has been used for a coarse pisolitic limestone. Such usage should be discontinued; it is erroneous. The term grit should be reserved for a coarse-grained sandstone composed of angular particles. *Rice, 1*

pea iron ore

A variety of pisolitic limonite or "bean ore" occurring in small, rounded grains or masses. Syn: [pea ore](#)

peak load

Maximum permitted power draft from an electric supply main. *Pryor, 3*

peak loading

The maximum number of tons of a specified material to be carried by a conveyor per minute in a specified period of time. *NEMA, 2*

peak particle velocity

The maximum rate of change of ground displacement with time.

peak stope

Flat stope advanced (overhand if deposit is inclined) in slanted steps, each flat forming a separate working place. *Pryor, 3*

pea ore

a. Eng. Rounded grains of hydrated peroxide of iron, or silicate of iron, commonly found in cavities of Jurassic limestone. See also: [bean ore](#) b. A variety of pisolitic limonite or bean ore occurring in small, rounded grains or masses. Syn: [pea iron ore](#)

pearceite

A monoclinic mineral, $\text{Ag}_{16} \text{As}_2 \text{S}_{11}$, having copper as an apparent necessary minor component; forms pseudorhomboidal tabular crystals or may be massive; metallic black; brittle; in low-to moderate-temperature silver and base-metal ores.

pearl

A dense spherical calcareous concretion, usually white or light-colored, consisting of occasional layers of conchiolin and predominant nacrous layers of aragonite (or rarely calcite); deposited concentrically about a foreign particle within or beneath the mantle of various marine and freshwater mollusks; occurs either free from or attached to the shell.

pearl ash

Potassium carbonate, $\text{K}_2 \text{CO}_3$; esp., an impure product obtained by partial purification of potash from wood ashes. *Webster 3rd*

pearlite

The lamellar mixture of ferrite and cementite in the microstructure of slowly cooled iron-carbon base alloys occurring normally as a principal constituent of both steel and cast iron. *Webster 3rd*

pearlite iron

a. In general, pearlite iron is gray cast iron consisting of graphite in a matrix of pearlite; i.e., without free ferrite. *CTD* b. In particular, pearlite iron is a German proprietary name denoting an iron of low silicon content, which is caused to solidify gray by the use of heated molds. *CTD*

pearl mica

See: [margarite](#)

pearl opal

See: [cacholong](#)

pearl sinter

A variety of opal. Syn: [fiorite](#) *Fay*

pearl spar

Dolomite occurring in rhombohedrons having a pearly luster. Syn: [ankerite](#); [bitter spar](#).
See also: [dolomite](#)

pearlstone

See: [perlite](#)

pearly

Applied to minerals having a luster like a pearl; e.g., talc, brucite, and stilbite. See also: [nacre](#)

peastone

See: [pisolite](#)

peat

There are two types of peat, low moor (Flachmoor) and high moor (Hochmoor) peat. Low moor peat is the most common starting material in coal genesis. It therefore constitutes a caustobiolith of low diagenetic degree. Peat is formed in marshes and swamps from the dead, and partly decomposed remains of the marsh vegetation. Stagnant ground water is necessary for peat formation to protect the residual plant material from decay. Peat has a yellowish brown to brownish black color, is generally of the fibrous consistency, and can be either plastic or friable; in its natural state it can be cut; further, it has a very high moisture content (above 75%, generally above 90%). It can be distinguished from brown coal by the fact that the greater part of its moisture content can be squeezed out by pressure (e.g., in the hand). Peat also contains more plant material in a reasonably good state of preservation than brown coal. Individual plant elements, such as roots, stems, leaves, and seeds, can commonly be seen in it with the unaided eye. Failing that, treatment of peat with dilute alkali will make visible many of these plant tissues. Further, peat is richer in cellulose than brown coal (reaction with Fehling's solution). Unlike brown coal, peat still contains cellulose, protected by lignin

or cutin, which gives a reaction with chlorzinc iodide. Correspondingly, peat shows under the microscope tissues that have not undergone either lignification, suberization, or cutinization; this is not the case in brown coal. The reflectance of peat is low (about 0.3%). Microscopic examination is best undertaken with transmitted light. *IHCP*

peat bed

An accumulation of peat. *Fay*

peat blasting

A method enabling a road to be built across peat deposits. Hard filling is first dumped over the route to a height equal to the ascertained depth of the peat, into which blasting charges are inserted. By the action of blasting, the peat is displaced outwards and the hard fillings sink into place and can then be consolidated. *Hammond*

peat bog

A bog containing peat; an accumulation of peat. *Webster 3rd*

peat gel

See: [dopplerite](#)

peat hag

A pit or quag formed by digging out peat. *Standard, 2*

peat machine

A machine for grinding and briquetting peat. *Webster 3rd*

peatman

A digger or seller of peat. *Webster 3rd*

peat moss

Any moss from which peat has formed or may form. *Webster 3rd*

peat press

A machine for making bricks of peat fuel. *Standard, 2*

peat spade

A spade with an L-shaped blade for cutting out peat in blocks. *Webster 3rd*

peat-to-anthracite theory

The theory that there were progressive stages in the conversion of vegetable matter into the various grades of coal of the Carboniferous system. Thus, peat forms at an early stage in coal formation and lignite at an intermediate stage, and by further compression and alteration, bituminous and anthracite coals were formed. See also: [Hilt's law](#) *Nelson*

pebble

a. A general term for a small, roundish, esp. waterworn stone; specif. a rock fragment larger than a granule and smaller than a cobble, having a diameter in the range of 4 to 64 mm (-2 to -6 phi units, or a size between that of a small pea and that of a tennis ball), being somewhat rounded or otherwise modified by abrasion in the course of transport. In Great Britain, the range of 10 to 50 mm has been used. The term has been used to include fragments of cobble size; it is frequently used in the plural as a syn. of "gravel". Syn: [pebblestone](#) b. Transparent and colorless quartz crystal, such as Brazilian pebble. *Webster 3rd* c. Grinding media for ball or semi-autogeneous mills. As a rule, these are either hard-flint pebbles or hard-burned, white porcelain balls.

pebble armor

A concentration of pebbles coating a desert area. The pebbles are usually the residual product of wind erosion and are closely fitted together so as to cover the surface in the manner of a mosaic. Also called desert pavement. See also: [lag gravel](#)

pebble dike

a. A clastic dike composed largely of pebbles. *AGI* b. A tabular body containing sedimentary fragments in an igneous matrix, as from the Tintic district in Utah; e.g., one whose fragments were broken from underlying rocks by gaseous or aqueous fluids of magmatic origin and injected upward into country rock, becoming rounded owing to the milling and/or corrosive action of the hydrothermal fluids. *AGI*

pebble gravel

An unconsolidated deposit consisting mainly of pebbles. *AGI*

pebble jack

Sphalerite in small crystals or pebblelike grains not attached to rock, but found in clay in wall rock cavities.

pebble mill

Horizontally mounted cylindrical mill, charged with flints or selected lumps of ore or rock. Usually long and high discharge. See also: [ball mill](#)

pebble phosphate

A secondary phosphorite of either residual or transported origin, consisting of pellets, pebbles, and nodules of phosphatic material mixed with sand and clay, such as occurs in Florida; e.g., land-pebble phosphate and river-pebble phosphate. See also: [phosphorite](#)

pebble powder

A gunpowder or black powder pressed and cut into large cubical grains so as to make it slow burning. *Webster 3rd*

pebblestone

See: [pebble](#)

pecopteris

A fernlike tree of the coal forest, with small ovate pinnules that are attached to the pinnate axis by their whole breadth. *Nelson*

Pecos ore

a. A gossan containing lead and silver. *Fay* b. Tasmania. A yellowish, earthy mixture of oxides of iron, lead, and antimony containing silver; mostly massicot. *Fay*

pectolite

A triclinic mineral, $\text{NaCa}_2\text{Si}_3\text{O}_8(\text{OH})$; isomorphous with serandite; forms compact masses or fibers; commonly associated with zeolites in cavities and veins in mafic rocks.

pedalfer

Soil enriched in alumina and iron in regions of high temperature and humid climate that are marked by forest cover. CF: [pedocal](#)

pedestal

A relatively slender neck or column of rock capped by a wider mass of rock and produced by undercutting as a result of wind abrasion (as in the Southwestern United States.) or by differential weathering. See also: [pedestal rock](#)

pedestal boulder

a. A class of blocks perched on pedestals of limestone. *AGI* b. Isolated masses or rock above and resting on a smaller base or pedestal.

pedestal rock

An isolated, residual or erosional mass of rock supported by or balanced on a pedestal. The term is also applied to the entire feature. See also: [pedestal boulder](#)

pedestrian-controlled dumper

A small dumper controlled by a person walking alongside it. Syn: [power barrow](#)

pediment

A broad, gently sloping rock-floored erosion surface or plain of low relief, typically developed by running water in an arid or semiarid region at the base of an abrupt and receding mountain front or plateau escarpment; underlain by bedrock that may be bare, but is more often partly mantled with a thin discontinuous veneer of alluvium derived from the upland masses and in transit across the surface. *AGI*

pedimentation

The process of pediment formation.

pediment pass

A narrow, flat, rock-floored tongue extending upslope from the main pediment and penetrating a mountain sufficiently to meet another pediment slope extending into the mountain from the other side.

pedion

A crystal form consisting of a single crystal face.

pediplane

Broad, rock-cut, thinly alluviated surface formed by the coalescence of adjacent pediments and desert domes.

pedis possessio

The actual possession of a piece of mineral land to the extent needed to give the locator room to work and to prevent probable breaches of the peace, but not necessarily to the extent of a mining claim.

pedocal

Soil enriched in calcium carbonate, accumulating in regions of low temperature, low rainfall, and prairie vegetation. CF: [pedalfer](#)

pedogenesis

The formation of soil from parent material.

pedogeochemical prospecting

Synonymous with geochemical soil survey. *Hawkes, 1*

pedologic horizon

See: [soil horizon](#)

pedology

The science that treats soils, their origin, character, and utilization. *AGI*

pedometer

A pocket-size instrument that registers the number of steps taken by the person carrying it. *AGI*

pedosphere

The part of the Earth in which soil-forming processes occur.

peeler

a. One of a set of blades that picks up and channels water moved outward by the impeller of a centrifugal pump. *Nichols, 1* b. An iron implement with a flattened end and ring handle, which is used by a baller in placing blooms, ingots, etc., in a reheating furnace. *Standard, 2* c. See: [calk](#)

Peerless explosive

High explosive; used in mines. *Bennett*

peg

a. A surveyor's mark. b. To mark out a miner's claim at the four corners by pegs bearing the claimant's name. Sometimes used as "peg out." *Webster 3rd; Fay*

peg adjustment

The adjustment of a spirit-leveling instrument of the dumpy-level type in which the line of collimation is made parallel with the axis of the spirit level by means of two stable marks (pegs) the length of one instrument sight apart. *AGI*

pegleg

An abrupt change or sharp bend in the course of a borehole. Also called dogleg. *Long*

pegmatite

An exceptionally coarse-grained igneous rock, with interlocking crystals, usually found as irregular dikes, lenses, or veins, esp. at the margins of batholiths. Most grains are 1 cm or more in diameter. Although pegmatites having gross compositions similar to other rock types are known, their composition is generally that of granite; the composition may be simple or complex and may include rare minerals rich in such elements as lithium, boron, fluorine, niobium, tantalum, uranium, and rare earths. Pegmatites represent the last and most hydrous portion of a magma to crystallize and hence contain high concentrations of minerals present only in trace amounts in granitic rocks. Adj: pegmatitic. Syn: [giant granite](#) CF: [symplectite](#)

pegmatitic

a. Said of the texture of an exceptionally coarsely crystalline igneous rock. *AGI* b. Occurring in, pertaining to, or composed of pegmatite. Syn: [pegmatoid](#)

pegmatitic stage

a. A final stage in the normal sequence of crystallization of a magma at which the residual fluid is sufficiently enriched in volatile materials to permit the formation of coarse-grained rocks (pegmatite) more or less equivalent in composition to the parent rock. CF: [orthomagmatic stage](#) *AGI* b. The late stages of magma crystallization in S-type, 2-mica granites.

pegmatitization

The process of formation of, introduction of, or replacement by pegmatite.

pegmatoid

See: [pegmatitic](#)

pegmatolite

See: [orthoclase](#)

peg point

A pointed bar in a slide clamp. Used to brace a machine during work. *Nichols, 2*

peg structure

A structure characterized by tiny peg-shaped cavities, some with intricate profiles, penetrating the interior of crystals; typical of melilite. *AGI*

Pehrson-Prentice process

A method of producing steel direct from ore. *Osborne*

Peirce-Smith converter

A cylindrical-type converter having a basic (magnesite) lining; used for treating copper. *Newton, 1*

Peirce-Smith process

A basic converting process for copper matte in a magnesite-lined converter. The iron of the matte is fluxed by silica added before the process begins. *Liddell*

Peissenberg ram

See: ram scraper.

PEL

See: [permissible exposure limit](#)

pelagic deposit or sediment

Deposit found in deep water far from shore and may be predominantly either organic or inorganic in origin. Such deposits are light colored, reddish or brown, fine grained, and generally contain some skeletal remains of plankton organisms. Those that contain less than about 30% of organic remains are called red clay; those that contain more than about 30% of organic remains are known as oozes. *Hunt*

pelagochthonous

A term applied to coal deposits formed from submerged forests and driftwood. *Tomkeieff*

Pelatan-Clerici process

A continuous process of dissolving silver or gold in cyanide solution and simultaneously precipitating the precious metals with mercury in the same vessel, with an electrical current assisting precipitation. *Liddell*

peldon

An English term for a very hard, smooth compact sandstone with conchoidal fracture that occurs in coal measures.

Pele's hair

A natural spun glass formed by blowing-out during quiet fountaining of fluid lava, cascading lava falls, or turbulent flows, sometimes in association with Pele's tear pyroclast. A single strand, with a diameter of less than 1/2 mm, may be as long as 2 m. Etymol: Pele, Hawaiian goddess of fire. *AGI*

Pele's tears

Small, solidified drops of volcanic glass behind which trail pendants of Pele's hair. They may be tear shaped, spherical, or nearly cylindrical. Etymol: Pele, Hawaiian goddess of fire. *AGI*

pelite

a. A sediment or sedimentary rock composed of the finest detritus (clay- or mud-size particles); e.g., a mudstone, or a calcareous sediment composed of clay and minute particles of quartz. The term is equivalent to the Latin-derived term lutite. *AGI* b. A fine-grained sedimentary rock composed of more or less hydrated aluminum silicates with which are mingled small particles of various other minerals; an aluminous sediment. Etymol: Greek pelos, clay mud. See also: [psammite](#); [psephite](#). Also spelled pelyte. *AGI*

pelitic

a. Pertaining to or characteristic of pelite; esp. said of a sedimentary rock composed of clay, such as a pelitic tuff representing a consolidated volcanic ash consisting of clay-size particles. *AGI* b. Said of a metamorphic rock derived from a pelite; e.g., a pelitic hornfels or a pelitic schist, derived by metamorphism of an argillaceous or a fine-grained aluminous sediment. *AGI*

pelitic gneiss

A gneiss derived from the metamorphism of argillaceous sediments.

pelitic hornfels

A fine-grained, nonfissile metamorphic rock derived from an argillaceous sediment. See also: [hornfels](#)

pelitic schist

A schistose metamorphic rock derived from an argillaceous sediment. See also: [schist](#)

pelletizing

A method in which finely divided material is rolled in a drum or on an inclined disk, so that the particles cling together and roll up into small, spherical pellets. The addition of a binder may be required to produce a pellet of acceptable mechanical strength. *Newton, I*

Pelletol

A waterproof, free-running blasting agent. Pelletol is a high explosive, but is not considered cap sensitive and normally cannot be initiated with a cap, except under perfect confinement in small-diameter boreholes. *Du Pont, I*

pellet powder

Black powder pressed into cylindrical pellets 2 in (5.1 cm) in length and varying from 1-1/4 to 2 in (3.2 to 5.1 cm) in diameter. Each pellet has a 3/8-in (9.5-mm) hole through its center to permit fuse insertion. *Carson, I*

pellet texture

A concretionary texture characterized by minute pellets of colloidal or replacement origin and closely resembling oolites. *Schieferdecker*

pell-mell structure

Coarse deposits of waterworn materials in which there is an absence of bedding. *AGI*

pelter

A worker employed in a coal mine to take down pelt (shaly stone) from the roof of a narrow seam, to make enough height for a coal cutting machine. *CTD*

Pelton wheel

An impulse water turbine with buckets bolted to its periphery, which are struck by a high velocity jet of water. This turbine is most efficient under a head of from 900 to 1,000 ft (274 to 305 m) or more. See also: [impulse turbine](#)

pelyte

See: [pelite](#)

pena

A large stone or boulder. Etymol: Spanish, "rock."

penalty

a. In connection with a contract for purchase of mineral concentrates by a custom smelter, a deduction from an agreed price for failure to reach an agreed assay value or to eliminate specified contaminants; charged at so much per unit of mineral or metal concerned. *Pryor, 3* b. In a construction contract, a penalty clause is one that imposes a penalty for failure to complete work to agreed time, specification, etc. *Pryor, 3*

Penang tin

Pig tin of about 99.95% purity, obtained from the Penang Mines in Malaysia. *Bennett*

Penberthy anoloader

A simple powder loader with a high air velocity that is used in Canada in underground work for charging holes with a depth of up to 14 ft (4 m).

pencil-core bit

The very-thick-wall, medium-round nose bit that cuts a pencil-size core. The bit is essentially a noncoring bit, and in most instances no attempt is made to recover the very-small-diameter core as a sample. Syn: [pencil-coring crown](#)

pencil-coring crown

See: [pencil-core bit](#)

pencil ganister

A variety of ganister characterized by fine carbonaceous streaks or markings; so called from the likeness of these to pencil lines. The carbonaceous traces are often recognizable as roots and rootlets of plants. *AGI*

penciling

Reduction in the fire face area of the brick, in which slag erosion at the joints is pronounced.

pencil mark

Aust. A thin bed of dark slate, about the thickness of the lead of a carpenter's pencil, that is parallel to the indicator. See also: [indicator](#)

pencil ore

Hard, fibrous masses of hematite that can be split up into thin rods. *CMD*

pencil stone

A compact pyrophyllite used for making slate pencils. *Webster 3rd*

pencil structure

A very pronounced lineation, such as that produced by intersecting bedding and cleavage planes in slate.

pendant

See: [roof pendant](#)

pendletonite

See: [karpatite](#)

pendulum

In mechanized mining, the arm that extends between the fulcrum jack and the swivel or angle trough or turn. *Jones, 1*

pendulum buffer

In Vermont, large wooden blocks covered with felt pads that are propelled back and forth by means of a crank and pitman. Used for polishing monumental stone.

pendulum mill

See: [Griffin mill](#); Huntington mill.

penecontemporaneous structure

Small folds and faults that form in sediments shortly after they are deposited, in igneous rocks as they solidify, and in metamorphic rocks as they recrystallize.

peneplain

A nearly horizontal surface of slight relief and very gentle slopes, formed by the subaerial degradation of the land almost to baselevel; the penultimate stage of the old age of the land produced by such degradation. By extension, such a surface uplifted to form a plateau and subjected to renewed degradation and dissection. See also: baseleveled plain.

peneplanation

The subaerial degradation of a region approx. to base level, forming a peneplain.

penetrating pulley

A pulley around which a wire cable runs in cutting marble. Its thickness is less than the diameter of the wire and consequently, it can follow the wire as the latter cuts into the stone.

penetration feed

See: [feed rate](#)

penetration log

The penetration speed of a drill related to the size of the hole and bit, mud pressure, speed of rotation, weight on bit, etc. From the results, which are plotted as penetration curves, the thickness of coal and dirt bands in the borehole can be determined with reasonable accuracy. *Nelson*

penetration macadam

Screened gravel or crushed stone aggregate, bound by bituminous grouting, the binder being introduced after compaction of the aggregate. *Nelson*

penetration per blow

The distance a drive-type soil sampler, casing, drivepipe, pile, or penetrometer is driven into the formation being tested by each blow delivered by a specific-size drivehammer allowed to fall a specific distance. *Long*

penetration rate

The actual rate of penetration of drilling tools. See also: [feed rate](#); drilling rate. *BS*, 9

penetration resistance

a. The number of blows of a hammer of specified weight falling a given distance required to produce a given penetration into soil of a pile, casing, or sampling tube. Also called standard penetration resistance; proctor penetration resistance. *ASCE* b. The unit load required to maintain constant rate of penetration into soil by a probe or instrument. *ASCE* c. The unit load required to produce a specified penetration into soil at a specified rate by a probe or instrument. For a proctor needle, the specified penetration is 2-1/2 in (6.35 cm) and the rate is 1/2 in/s (1.27 cm/s). *ASCE*

penetration resistance curve

The curve showing the relationship between the penetration resistance and the water content. Also called proctor penetration curve. *ASCE*

penetration speed

The speed at which a drill can cut through rock or other material. See also: [overall drilling time](#)

penetration test

A test to determine the relative densities of noncohesive soils, sands, or silts; e.g., the standard penetration test that determines the number of blows required by a standard weight, when dropped from a standard height (30 in or 76.2 cm per blow), to drive a standard sampling spoon a standard penetration (12 in or 30.5 cm); or the dynamic penetration test, which determines the relative densities of successive layers by recording the penetration per blow or a specified number of blows. See also: [cone penetration test](#)

penetration twin

A twin crystal in which two parts interpenetrate with each other and share a common volume. Syn: [interpenetration twin](#)

penetrometer

An instrument to assess the strength of a coal seam, its relative workability, and the influence of roof pressure. See also: [sounding](#); coal penetrometer. *Nelson*

pennant flag

Unproductive grit and sandstone between the Lower and Upper Coal Measures, South Wales and Bristol, England, coalfield. Largely quarried for paving and building. Also called pennan grit; pennant stone. *Arkell*

pennantite

A monoclinic mineral, $Mn_5 Al(Si_3 Al)O_{10} (OH)_8$; chlorite group; excellent cleavage with flexible laminae; commonly associated with manganese deposits.

pennine

A pseudotrigonal variety of clinochlore. See also: [penninite](#)

Pennine system

Eng. The original and typical series of Carboniferous rocks, comprising the Upper Old Red Sandstone, the Mountain limestone, the Millstone grit, and the Coal Measures. *Standard, 2*

penning

See: [cribbing](#)

penning gate

Regulating device used to govern the draft of water from a dam; may incorporate arrangements for holding back sediment or floating detritus. *Pryor, 3*

penninite

A green crystallized chlorite from the Penninic Alps. Composition essentially the same as that of clinochlore, $(Mg, Fe^{2+})_5 Al(Si_3 Al)O_{10} (OH)_8$. See also: [pennine](#). *Fay*

Pennsylvanian

A period of the Paleozoic Era (after the Mississippian and before the Permian), thought to have covered the span of time between 320 million years and 280 million years ago; also, the corresponding system of rocks. It is named after the state of Pennsylvania in which rocks of this age are widespread and yield much coal. It is the approximate equivalent of the Upper Carboniferous of European usage. *AGI*

pennyweight

One-twentieth troy ounce (1.56 g). Used in the United States and in England for the valuation of gold, silver, and jewels. Abbrev.: dwt; pwt. *Standard, 2*

penroseite

An isometric mineral, $(\text{Ni,Co,Cu})\text{Se}_2$; pyrite group; cubic cleavage; forms radiating columnar masses; occurs in Bolivian mines near Colquechaca. Formerly called blockite.

penstock

a. A sluice or gate for restraining, deviating, or otherwise regulating the flow of water, sewage, etc.; a floodgate. *Webster 3rd* b. The barrel of a wooden pump. c. A closed conduit for supplying water under pressure to a water wheel or turbine. *Seelye, 1*

pentagon

A polygon having five sides. *Jones, 2*

pentahydrate

A triclinic mineral, $\text{MgSO}_4 \cdot 5\text{H}_2\text{O}$; chalcantite group; highly soluble. Formerly called allenite.

pentahydroborate

A triclinic mineral, $\text{CaB}_2\text{O}(\text{OH})_6 \cdot 2\text{H}_2\text{O}$; colorless; forms small anhedra at a skarn in the Ural Mountains, Russia.

pentasol xanthate

Collector agent use in flotation, in which the hydrocarbon group is crude and unfractionated amyl alcohol. Symbol, Z-6. *Pryor, 3*

pentavalent

a. Having a valence of five. *Webster 3rd* b. Having five valences. *Webster 3rd; Handbook of Chemistry and Physics, 2*

Pentelic marble

One of the most famous of ancient statuary marbles; from Mount Pentelicus, Greece.

penthrin

See: [penthrite](#)

penthrite

Pentaerythritol tetranite. Used as an explosive. Syn: [penthrit](#); niperyth. *Bennett*

pentice

a. A rock pillar left, or a heavy timber bulkhead placed, in the bottom of a two-or-more-compartment-deep shaft through which to sink it further. A small, auxiliary steam or air hoist, dumping apparatus, and pocket or bin are installed above the pentice; through an opening in it, sinking by short lifts is carried on while the shaft is in use above the pentice. Practiced in the Michigan copper country. *Hess* b. A cover, protection, or roof over a sinking shaft. The cover contains a trapdoor through which the rope and bowk pass. See also: [Galloway stage](#) *Nelson* c. In shaft sinking, a solid rock pillar left in the bottom of the shaft for overhead protection of miners while the shaft is being extended by sinking.

pentlandite

a. An isometric mineral, $(\text{Fe,Ni})_9\text{S}_8$; octahedral parting; metallic; pale bronze-yellow; nonmagnetic; generally associated with pyrrhotite, less commonly associated with chalcopyrite in magmatic sulfide deposits; the principal sulfide ore of nickel. b. The mineral group argentopentlandite, cobalt pentlandite, geffroyite, manganese-shadlunite, pentlandite, and shadlunite.

pentolite

A mixture of PETN and TNT used primarily for boosters and cast primers; military grade pentolite is usually 50% of each ingredient by weight; commercial pentolite often has a lower PETN content.

pentrough

The trough in which the penstock of a water wheel is placed. *Fay*

peon

a. The movable vertical post of an arrastre. b. A prop, post, or stall. c. Mex. Helper; a common laborer.

pepper-and-salt texture

Said of disseminated ores, esp. with dark grains in a light matrix. *AGI*

peptization

a. Liquefaction of a gel; deflocculation and dispersion of solids in a pulp; conversion of a substance to its colloidal state by subdivision. *Pryor, 3* b. A dispersion due to the addition of electrolytes or other chemical substances. *Brantly, 1*

peptize

To bring into colloidal solution; to convert into a solution. Syn: [deflocculate](#)

peralkaline

Said of igneous rocks in which the molecular proportion of alumina is less than that of soda and potash combined.

peraluminous

Said of igneous rocks in which the molecular proportion of alumina exceeds that of soda, potash, and lime combined.

percentage extraction

The proportion of a coal seam that is removed from a mine. The remainder may represent coal in pillars or coal that is too thin or inferior to mine or is lost in mining. Shallow coal mines working under townships, reservoirs, etc., may extract only about 50% of the entire seam, the remainder being left as pillars to protect the surface. Under favorable conditions, longwall conveyor mining may extract from 80% to 95% of the entire seam. With pillar methods of working, the extraction ranges from 50% to 90%, depending on local conditions. *Nelson*

percentage ore

N.S.W. In most cases, understood to be the percentage of the metallic element present in the ore. *New South Wales*

percentage subsidence

The measured amount of subsidence expressed as a percentage of the thickness of coal extracted. See also: [full subsidence](#)

percentage support

The percentage of the total wall area of a mine that will actually be covered by supports. *Spalding*

perch

a. Any of various units of measure for stonework, (including 24-3/4 ft³ (0.70 m³) representing a pile 1 rod (5.0 m) long by 1 ft (0.3 m) by 1-1/2 ft (0.46 m); or 16-1/2 ft³ (0.47 m³); or 25 ft³ (0.71 m³). *Webster 3rd* b. A measure of length equal to 5-1/2 yd or 16-1/2 ft (5.0 m); a rod, or pole; also, a square rod (25.3 m²). *Webster 2nd*

perched ground water

Unconfined ground water separated from an underlying main body of ground water by an unsaturated zone. *AGI*

perched water

See: [perched ground water](#)

perched water table

The water table of a body of perched ground water. See: [vertical sand drain](#)

percolation

a. In the leaching treatment of minerals, a process whereby a solvent flows gently upward or downward through a bed of ore-bearing material sufficiently coarse textured to permit this flow. See also: [sand leaching](#) b. Slow laminar movement of water through small openings within a porous material. Also used as a syn. of infiltration. Flow in large openings such as caves is not included. CF: [infiltration](#)

percolation leaching

The selective removal of the metal values from a mineral by causing a suitable solvent or leaching agent to seep into and through a mass or pile of material containing the desired mineral.

percolation rate

The rate, expressed as either velocity or volume, at which water percolates through a porous medium. *AGI*

percussion bit

A rock-drilling tool with chisel-like cutting edges, which when driven by impacts against a rock surface, drills a hole by a chipping action. *Long*

percussion cap

See: [detonator](#); primer.

percussion drill

a. Drill in which the drilling bit falls with force onto rock. Also, a pneumatic drill in which a piston delivers hammer blows rapidly on the drill shank. Syn: [churn drill](#); [cable-tool drill](#); [percussion machine](#). *Pryor, 3* b. Sometimes limited to large blasthole drills of the percussion type. *Nichols, 1*

percussion drilling

Act of using a percussion drill. See also: [percussion drill](#)

percussion figure

A pattern of radiating lines produced on a section of a crystal by a blow from a sharp point.

percussion machine

See: [percussion drill](#)

percussion powder

Powder so composed as to ignite by a slight percussion; fulminating powder. *Fay*

percussion sieve

An apparatus in which material is sorted according to size. It consists essentially of superimposed, oppositely inclined sieves, both mechanically agitated by vertical lever and having water sluices.

percussion system

Applicable to drill machines and/or the methods used to drill boreholes by the chipping action of impacts delivered to a chisel-edged bit. See also: [churn drill](#); [percussion drill](#). *Long*

percussion table

Early form of shaking table. See also: [concussion table](#); [shaking table](#). *Pryor, 3*

percussive boring

A system of boring using solid or hollow rods or ropes; may be used for exploratory drilling and for blasting purposes. See also: [boring](#) *Nelson*

percussive drill

A pneumatic drill that is used widely in mining for exploration and for blasting purposes. See also: [rock drill](#)

percussive drilling

a. A method of drilling whereby repeated blows are applied by the bit, which is repositioned by intermittent rotation. *BS, 12* b. A form of drilling in which the rock is penetrated by the repeated impact of a reciprocating drill tool. *Fraenkel*

percussive machine

Any of several types of machine, including heading machines, air picks, and the numerous types of percussive drills. *Mason*

perfect-discharge elevator

In the so-called perfect-discharge elevator, there is an extra set of traction or sprocket wheels on the discharge side, so set that they bend the chains back under the head wheels. As a consequence, the discharging chute may be placed directly under the buckets. This elevator will also handle material that packs, and both types of gravity-discharge elevators may be run much slower than the centrifugal type. *Pit and Quarry*

perfect frame

A structural frame that is stable under loads imposed upon it from any direction, but which would become unstable if one of its members were removed or one of its fixed ends became hinged. *Hammond*

performance curve

Any curve used to show the relationship between properties of coal and results of a specific treatment. *BS, 5*

perhydrous maceral

Maceral having a high hydrogen content, such as exinite and resinite. *Tomkeieff*

peri-

A prefix meaning around or beyond. *AGI*

periblain

A kind of provitrain in which the cellular structure is derived from cortical material. CF: [suberain](#); [xylain](#). *AGI*

periblinite

a. The micropetrological constituent, or marceral, of periblain. It consists of cortical tissue almost jellified in bulk, but still showing indications of cell structure under a microscope. *AGI* b. A distinction of telinite based on botanical origin (cortical tissue). CF: [suberinite](#)

periclase

a. An isometric mineral, MgO; cubic cleavage; colorless to yellow or brown; may be strongly colored by inclusions; occurs in high-temperature metamorphic rocks derived from dolomite. Syn: [periclasite](#) b. The mineral group bunsenite, manganosite, monteponite, periclase, and wuestite.

periclasite

See: [periclase](#)

periclinal

Said of strata and structures that dip radially outward from, or inward toward, a center, to form a dome or a basin. CF: [quaquaversal](#); centroclinal. *AGI*

pericline

a. A general term for a fold in which the dip of the beds has a central orientation; beds dipping away from a center form a dome, and beds dipping toward a center form a basin. The term is generally British in usage. See also: centrocline; [dome](#); [quaquaversal](#). *AGI* b. A variety of albite elongated in the direction of the b-axis and often twinned with this as the twinning axis. It occurs in veins as large milky-white opaque crystals. Pericline is probably an albitized oligoclase. *AGI*

pericline twin

A twin crystal, in the monoclinic system, whose twinning axis is the orthoaxis of the crystal. *Fay*

peridot

a. A transparent to translucent green gem variety of forsterite in the olivine group. Also spelled peridote. Syn: [bastard emerald](#) b. A yellowish-green or greenish-yellow variety of

tourmaline, approaching olivine in color. It is used as a semiprecious stone. See also: [olivine](#)

peridote

See: [peridot](#)

peridotite

A general term for a coarse-grained plutonic rock composed chiefly of olivine with or without other mafic minerals such as pyroxenes, amphiboles, or micas, and containing little or no feldspar. Accessory minerals of the spinel group are commonly present. Peridotite is commonly altered to serpentinite. *AGI*

peridot of Ceylon

See: [Ceylonese peridot](#); peridot.

perimeter blasting

A method of blasting in tunnels, drifts, and raises, designed to minimize overbreak and leave clean-cut solid walls. Holes in the outside row are loaded with very light, continuous explosive charges and are fired simultaneously, so that they shear from one hole to the other. *Nelson*

perimeter of airway

In mine ventilation, the linear distance in feet of the airway perimeter rubbing surface at right angles to the direction of the airstream.

perimorph

A crystal of one species enclosing one of another species. *Webster 3rd*

period

a. The geochronologic unit lower in rank than era and higher than epoch, during which the rocks of the corresponding system were formed. It is the fundamental unit of the worldwide geologic time scale. *AGI* b. A term used informally to designate a length of geologic time; e.g., glacial period. *AGI* c. The interval of time required for the completion of a cyclic motion or recurring event, such as the time between two consecutive like phases of the tide or a current. *AGI* d. The duration of one complete cycle of a periodic function; the reciprocal of the frequency of such a function. The independent variable is limited to time. *ASM, 1* e. The elements between an alkali metal and the rare gas of next highest atomic number, inclusive, occupying one (a short period)

horizontal row or two (a long period) horizontal rows in the periodic table. *CTD* f. The time required for the power level of a reactor to change by the factor 2.718, which is known as *e. Lyman*

periodic law

The physical and chemical properties of the elements depend on the structure of their atoms and are for the most part periodic functions of the atomic number. See also: [periodic table](#)

periodic reverse

Pertains to periodic change in the direction of flow of the current in electrolysis. It applies to the process and also to the machine that controls the time for both directions. Symbol, PR. *ASM, I*

periodic table

An arrangement of elements based on the periodic law and proposed in various forms that are usually either short with only short periods (as in Mendeleev's original table) or long with long as well as short periods (as in most modern tables). See also: [periodic law](#)

peripheral fault

A fault along the perimeter of a geologically elevated or depressed region. *AGI*

peripheral speed

The distance a given point on the perimeter of a rotating circular object travels, expressed in feet or meters per second; sometimes incorrectly called lineal travel by some drillers. Syn: [surface speed](#)

peripheral-turbine pump

This pump--sometimes called a regenerative pump--is classified with centrifugal pumps, but is designed to develop several times the head obtained from a centrifugal pump having the same-diameter impeller and the same speed. The maximum head developed does not have the same relation to the impeller diameter and speed of the centrifugal pump; it involves size and spacing of the impeller vanes, fluid channels, and other factors. *Pit and Quarry*

peripheral ventilation

A mine ventilation system in which the upcast shaft for taking air out of a mine is situated at the limits of the mining field or away from the downcast shaft. Also called transverse or one-way ventilation. Syn: [transverse ventilation](#)

peritectic

Said of an isothermal reversible reaction in a crystallizing melt or magma in which a liquid phase reacts with a solid phase to produce another solid phase on cooling. *ASM, I*

perlite

a. A siliceous volcanic glass having numerous concentric spherical cracks that give rise to an onion-skin structure. Most perlite has a higher water content than obsidian. When perlite is heated to the softening point, it expands, or pops to form a light fluffy material similar to pumice. It is used as lightweight aggregate in concrete, as insulation for liquid fuels, and in potting soils. b. A pearly volcanic glass.

perlitic

a. Said of the texture of a glassy igneous rock that has cracked owing to contraction during cooling, the cracks forming small spheruloids. It is generally confined to natural glass, but occasionally found in quartz and other noncleavable minerals and as a relict structure in devitrified rocks. *AGI* b. Pertaining to or characteristic of perlite. *AGI*

permafrost

A permanently frozen layer of soil or subsoil, or even bedrock, which occurs to variable depths below the Earth's surface in arctic or subarctic regions. It underlies about one-fifth of the world's land area.

permafrost drilling

a. Boreholes drilled in subsoil and rocks in which the contained water is permanently frozen. *Long* b. Holes drilled into perennially frozen ground that may be superficial unconsolidated material, bedrock, and ice. When no ice is present, it is called dry permafrost.

permalloy

An iron-nickel alloy with high magnetic permeability. *Nelson*

permanent adjustment

The adjustment of a surveying instrument that is made infrequently and not at each setup. See also: [temporary adjustment](#)

permanent expansion

Increase in bulk volume as a result of decrease in specific gravity.

permanent hardness

Hardness of water that cannot be removed by boiling. Opposite of temporary hardness.

permanent hard water

Hard water that cannot be softened by boiling; water containing magnesium sulfate or calcium sulfate. *Bennett*

permanent magnetism

Magnetic property of a substance maintained without external excitation. *Pryor, 3*

permanent monument

A monument of a lasting character for marking a mining claim. It may be a mountain, hill, ridge, hogback, butte, canyon, gulch, river, stream, waterfall, cascade, lake, inlet, bay, arm of the sea, stake, post, monument of stone or boulders, shafts, drifts, tunnels, open cuts, or well-known adjoining patented claims. *Fay*

permanent pump

A permanent main pump is one on which a mine depends for the final disposal of its drainage. As it is usually not moved during the life of the mine, its location, installation, and design require careful consideration. A permanent main pump may discharge on the surface, into an underground sump, or into some other part of a mine.

permanent set

The amount of permanent deformation of a material that has been stressed beyond its elastic limit. *AGI*

permanent shaft support

After a shaft has been sunk to a certain depth, the final or permanent lining is inserted. This may consist of: brick walling; concrete blocks shaped to the curvature of the shaft; concrete lining put in liquid form behind shuttering; brick coffering; and cast-iron tubing. The permanent lining is generally built up in sections, during which operation the temporary lining (such as skeleton tubing) is removed. Concrete is now widely used as a permanent shaft support. See also: [brick walling](#); lining; steel rectangular shaft supports. *Nelson*

permanent way

The completed assembly of rails, sleepers, fixings, and ballast forming the finished track for a railway. *Hammond*

permanganate

A salt of permanganic acid of the type, MnO_4 ; dark purple; good oxidizing agent; often used as a disinfectant. *Enam. Dict.*

permeability

a. The permeability (or perviousness) of rock is its capacity for transmitting a fluid. Degree of permeability depends upon the size and shape of the pores, the size and shape of their interconnections, and the extent of the latter. It is measured by the rate at which a fluid of standard viscosity can move a given distance through a given interval of time. The unit of permeability is the darcy. See also: [millidarcy](#); coefficient of permeability. *AGI* b. In geophysics, the ratio of the magnetic induction to the magnetic intensity in the same region. In paramagnetic matter, the permeability is nearly independent of the magnetic intensity; in a vacuum, it is strictly so. But in ferromagnetic matter, the relationship is definite only under fully specified conditions. *AGI* c. See: [coefficient of permeability](#) d. In magnetism, a general term used to express various relationships between magnetic induction and magnetizing forces. These relationships are either absolute permeability, which is the quotient of a change in magnetic induction divided by the corresponding change in magnetizing force, or specific (relative) permeability, the ratio of the absolute permeability to the permeability of free space. *ASM, 1* e. In founding, the characteristics of molding materials which permit gases to pass through them. Permeability number is determined by a standard test. *ASM, 1* f. In powder metallurgy, a property measured as the rate of passage under specified conditions of a liquid or gas through a compact. *ASM, 1*

permeable

Pertaining to a rock or soil having a texture that permits passage of liquids or gases under the pressure ordinarily found in earth materials. Syn: [pervious](#)

permeameter

An instrument for measuring permeability. *AGI*

permineralization

A process of fossilization wherein the original hard parts of an animal have additional mineral material deposited in their pore spaces. *AGI*

permissible

a. Means completely assembled and conforming in every respect with the design formally approved by the U.S. Mine Safety and Health Administration for use in gassy and dusty mines. b. A machine or explosive is said to be permissible when it has been approved by the U.S. Mine Safety and Health Administration for use underground under prescribed conditions. All flameproof machinery is not permissible, but all permissible machinery is flameproof. c. A low-flame explosive used in gassy and dusty coal mines. *Nichols, 1*

permissible blasting device

Any device, other than explosives, for breaking down coal that is approved by the U.S. Mine Safety and Health Administration.

permissible blasting unit

An electrical device for firing blasts, approved by the U.S. Mine Safety and Health Administration.

permissible dustiness

See: [dust-free conditions](#)

permissible explosive

Explosive that has been tested for safety in handling and approved for use in mines by the U.S. Mine Safety and Health Administration.

permissible exposure limit

An exposure limit published and enforced by the U.S. Occupational Safety and Health Administration (OSHA) as a legal standard. *NSC, 2*

permissible hydraulic fluid

Any of several commercially available, fire-resistant fluids that are water-in-oil emulsions and can be substituted for flammable hydraulic fluids by users of large machinery, whether the equipment is operated underground or on the surface.

permissible lamp

Any electric or flame safety lamp that is similar in all respects to a lamp tested and approved by the U.S. Mine Safety and Health Administration. *Hess*

permissible machine

Any drill, mining machine, loading machine, conveyor, or locomotive that is similar in all respects to machines tested and approved by the U.S. Mine Safety and Health Administration for use in gassy mines.

permissible mine equipment

Equipment that is formally approved by the U.S. Mine Safety and Health Administration after having passed the inspections, the explosion tests, and other requirements specified by the Administration. (All equipment so approved must carry the official approval plate required as identification for permissible equipment.)

permissible mine locomotive

See: [electric permissible mine locomotive](#)

permissible motor

A motor the same in all respects as a sample motor that has passed certain tests made by the U.S. Mine Safety and Health Administration and installed and used in accordance with the conditions prescribed by the Administration. See also: [explosion-proof motor](#)

permissible velocity

The highest velocity at which water may be carried safely in a canal or other conduit; the highest velocity throughout a substantial length of a conduit that will not scour. *Seelye, I*

permit man

A member of a geophysical field party whose duty is to obtain permission from landowners for the party to work on their lands, or from public officials for the party to work along highways. *AGI*

permitted

See: [permitted explosive](#); permitted light.

permitted explosive

a. Explosive that has passed the Buxton tests and has been placed on the British list of authorized explosives, implying that they are reasonably safe to manufacture, handle, transport, and use in safety-lamp mines. Upon detonation, a permitted explosive: (1) gives off the minimum possible quantity of noxious gases, and (2) produces a flame of the lowest possible temperature and shortest possible duration, to lessen the risk of

combustible gases ignition. The explosive contains cooling agents, such as sodium chloride and sodium bicarbonate. The first British list of permitted explosives was published in 1899. *Nelson* b. A permitted explosive is one that has been approved for use in coal mines where there is any possible risk of igniting combustible gases or coal dust. In Great Britain, an explosive is approved by the Minister of Power and placed on the Permitted List after it has passed the official gallery tests prescribed for the particular class of explosives to which it belongs. These tests are carried out at the Safety in Mines Research Establishment's Testing Station at Buxton. *McAdam*, 2 c. Permitted explosives are divided into four groups: P.1., normal permitted explosives; P.2., sheathed explosives; P.3., eq.s. explosive; P.4., permitted explosives that have passed additional and more stringent tests. *BS, 12* d. The term "permissible explosive" is used in the United States. See also: [permissible explosive](#)

permitted light

Locked safety lamp or any other means of lighting, the use of which below ground in British coal mines is authorized by Regulations under the Act. See also: [safety-lamp mine](#)

permitting process

A process in which an applicant files forms to a regulatory agency with required narratives, maps, mine plans, etc., to ensure in advance of mining that the proposed operation will be in compliance with the applicable environmental standards. *SME, 1*

Permocarboniferous

Strata not differentiated between the Permian and Carboniferous systems, particularly in regions where there is no conspicuous stratigraphic break and fossils are transitional. *AGI*

Permotriassic

Strata not differentiated between the Permian and Triassic systems, particularly in regions where the boundary occurs within a nonmarine, red beds succession. *AGI*

permutite process

See: [base exchange](#)

perofskite

See: [perovskite](#)

Perosa process

A process by which beryllium is extracted from beryl.

perovskite

a. An orthorhombic mineral, CaTiO_3 ; may have Ca replaced by rare earths and Ti replaced by niobium and tantalum; pseudocubic; massive or in cubic crystals; yellow, brown, or grayish black; occurs in silica-deficient metamorphic and igneous environments such as skarns; also occurs in mafic and alkaline igneous rocks. Also spelled perofskite. b. The mineral group latrappite, loparite, leushite, and perovskite.

perpend

a. A header extending through a wall so that one end appears on each side of it; a perpendstone border, bondstone, throughstone; through binder. Also called parping; perpenders; perpent. *Fay* b. A vertical joint, such as in a brick wall. *Standard, 2*

perpendicular separation

The separation of a fault as measured at right angles to the fault plane. *AGI*

perpendicular slip

The component of the slip of a fault that is measured perpendicular to the trace of the fault on any intersecting surface. *AGI*

perpendicular throw

The distance between the two parts of a disrupted bed, dike, vein, or of any recognizable surface, measured perpendicular to the bedding plane or surface in question. It is measured in a vertical plane at right angles to the strike of the disrupted surface. See also: [throw](#)

persilicic

A term proposed by Clarke (1908) to replace acidic. Syn: [silicic](#) CF: [subsilicic](#); [mediosilicic](#). *AGI*

persistent

Continuous; orebodies are often persistent in depth and metal contents. *von Bernewitz*

personnel proximity survey

A survey of radiation conditions at positions occupied by personnel working near apparatus emitting radioactivity. *NCB*

persorption

Deep sorption of gas by liquid. *Pryor, 3*

persuader

A common term for crowbar, lever, or some such article used as a manual aid in moving heavy objects. *Crispin*

perthite

A variety of alkali feldspar consisting of parallel or subparallel intergrowths in which the potassium-rich phase (commonly microcline) appears to be the host from which the sodium-rich phase (commonly albite) exsolved; such exsolved areas may be visible to the naked eye, typically forming strings, lamellae, blebs, films, or irregular veinlets; where texture is invisible to the eye but can be resolved with a microscope, it is microperthite. CF: [antiperthite](#); [cryptoperthite](#); [microperthite](#).

perthorite

A deep-seated igneous rock consisting of alkali feldspar with less than 3% dark minerals. Feldspar, both orthoclase and albite, may be perthitically intergrown as cryptoperthite or as anorthoclase. *Hess*

pervious

See: [permeable](#)

petalite

A monoclinic mineral, $\text{LiAlSi}_4\text{O}_{10}$; perfect cleavage; vitreous; resembles spodumene; a source of lithium salts; in granite pegmatites.

petaloid

Resembling a flower petal in form, appearance, or texture. Applied to the structure seen in minerals that split into pieces with a smooth polished concave-convex surface that fit into one another somewhat like the petals of an unopened flower bud. *Webster 3rd; Fay*

petcock

A small drain valve. *Nichols, 1*

peter

To fail gradually in size, quantity, or quality; e.g., the mine has petered out. Also called peter out. *Fay*

petering out

The gradual thinning of a vein until it disappears. *Statistical Research Bureau*

Petersen grab

In the Petersen (or van Veen) type of grab, two semicircular buckets of varying sizes are hinged along a central axis. The buckets are held apart for lowering from a ship to the bottom by some form of catch. On striking the bottom, this is released so that on hoisting, the buckets move around on their axis, take a bite out of the sediment, and come together to form a closed container. With this configuration, the rate at which the grab hits the bottom affects the bite, and when the ship is drifting, a poor sample may be obtained if the grab does not hit the bottom vertically. See also: [grab sampler](#)

PETN

Abbrev. for pentaerythritol tetranitrate. See also: [penthrite](#) *Bennett*

petralite

An explosive compounded of ammonium carbonate, nitrated wood or charcoal, and saltpeter. *Standard, 2*

petrification

A process of fossilization whereby organic matter is converted into a stony substance by the infiltration of water containing dissolved inorganic matter (e.g., calcium carbonate, silica), which replaces the original organic materials, sometimes retaining the structure. Syn: [petrification](#)

petrification

See: [petrification](#)

petrified moss

See: [tufa](#)

petrified rose

An aggregate or cluster of tabular crystals of barite, forming chiefly in sandstone, enclosing sandy grains within the crystals; sand cemented by barite with the crystal form of the latter. Syn: [barite rosette](#) See also: [rosette](#)

petrified wood

See: [silicified wood](#)

petro-

Combining form meaning stone or rock.

petrochemical

Any of several materials and compounds present in, or derived from, natural gas or crude petroleum by physical refining or by chemical reaction. *Bennett*

petrochemistry

a. The study of the chemical composition of rocks. *AGI* b. The study of the chemistry of petroleum and its products. *AGI*

petrofabrics

The study of spatial relations, esp. on a microscale, of the structural-textural units that comprise a rock, including a study of the movements that produced these elements. The units may be rock fragments, mineral grains, or cleavages.

petrogenesis

A branch of petrology that deals with the origin of rocks. Syn: [lithogenesis](#); [petrogeny](#). CF: [genesis](#)

petrogenic element

An element that is characteristically concentrated in ordinary rock types as opposed to ore deposits. CF: [metallogenic element](#)

petrogeny

See: [petrogenesis](#)

petrographer

Person who is versed in or engaged in petrography, or the study of rocks. *Fay*

petrographic

Pertaining to the study of rocks. *Stokes*

petrographic microscope

A microscope specially fitted with optical, esp. polarizers, and mechanical accessories for identifying and studying the properties of minerals in granular form or in thin section.

petrographic province

A natural region within which some or all of the igneous rocks present certain well-marked peculiarities in their mineralogical and chemical composition, structure, texture, etc., that set them apart from rocks of other petrographic provinces. Consanguineous, comagmatic. Syn: [comagmatic region](#)

petrography

A general term for the science dealing with the description and systematical classification of rocks, based on observations in the field, on hand specimens, and on thin sections. Petrography is thus wider in its scope than lithology, but more restricted than petrology, which implies interpretation as well as description. *Holmes, 2*

petroleum coke

Cokelike material found in cavities of igneous rocks intrusive into carbonaceous sediments. *Tomkeieff*

petroleum ether

A mixture of hydrocarbons boiling from 40 to 60 degrees C; a mixture of low-boiling liquid alkanes. *Handbook of Chemistry and Physics, 1*

petroleum-oil cannel coal

See: [oil shale](#)

petrology

A general term for the study, by all available methods, of the natural history of rocks, including their origins, present conditions, alterations, and decay. Petrology comprises petrography on the one hand, and petrogenesis on the other, and properly considered, its subject matter includes ore deposits and mineral deposits in general, as well as rocks in the more limited sense in which that term is generally understood. *Holmes, 2*

petrolo-shale

See: [oil shale](#)

petrophysics

Study of the physical properties of rock. *AGI*

petrotectonics

See: [structural petrology](#)

petrous

Said of a material that resembles stone in its hardness; e.g., petrous phosphates. Little used. *AGI*

petuntze

See: [china stone](#)

petzite

An isometric mineral, $\text{Ag}_3 \text{AuTe}_2$; metallic; steel gray to iron black; massive; sp gr, 8.7 to 9.02; in gold-bearing telluride veins; may be a significant source of gold and silver.

pH

The negative logarithm (base 10) of the hydrogen-ion activity. It denotes the degree of acidity or of basicity of a solution. At 25 degrees C, 7 is the neutral value. Acidity increases with decreasing values below 7, and basicity increases with increasing values above 7. *ASM, 1*

phacellite

See: [kaliophilite](#)

phacolith

A concordant intrusive in the crest of an anticline and trough of a syncline; in cross section, it has the shape of a doubly convex lens. Adj: phacolithic. See also: [laccolith](#)

phanerite

An igneous rock having the grains of its essential minerals large enough to be seen macroscopically. *AGI*

phaneritic

Said of the texture of an igneous rock in which the individual components are distinguishable with the unaided eye, i.e., megascopically crystalline. Also, said of a rock having such texture. CF: [aphanitic](#) Syn: [macromeritic](#); [phanerocrystalline](#); [phenocrystalline](#). *AGI*

phanerocrystalline

See: [phaneritic](#)

Phanerozoic

That part of geologic time represented by rocks in which the evidence of life is abundant, i.e. Cambrian and later time. CF: [Cryptozoic](#) *AGI*

phantom crystal

A crystal or mineral aggregate within which an earlier stage of crystallization or growth is outlined by dust, tiny inclusions, or bubbles; e.g., a trigonal scalenohedron of calcite coated with hematite and overgrown with a clear calcite rhombohedron in crystallographic continuity. Syn: [ghost crystal](#)

phantom horizon

a. In seismic reflection prospecting, a line drawn on seismic sections so that it is parallel to nearby dip segments thought to indicate structural attitude. It is used where actual events are not continuous enough to be used alone. *AGI* b. Horizon on a reflection profile that is obtained by averaging the dips of the reflections within a band, thus indicating the trend of the dip, but not necessarily coinciding with an actual boundary plane. *Schieferdecker*

pharmacolite

A monoclinic mineral, $\text{CaHAsO}_4 \cdot 2\text{H}_2\text{O}$; white to gray; forms silky fibers; occurs in the oxidized parts of arsenical deposits. Syn: [arsenic bloom](#)

pharmacosiderite

An isometric mineral, $\text{KFe}_4(\text{AsO}_4)_3(\text{OH})_4 \cdot 6-7\text{H}_2\text{O}$; crystallizes in cubes or tetrahedra with cubic cleavage; rarely massive; occurs widely as an oxidation product of arsenical ores. Syn: [cube ore](#)

phase

a. The sum of all those portions of a material system that are identical in chemical composition and physical state. *CTD* b. A homogeneous, physically distinct portion of matter in a heterogeneous system. *AGI* c. An interval in the development of a given process; esp. a chapter in the history of the igneous activity of a region, such as the volcanic phase and major and minor intrusive phases. *AGI* d. A lithologic facies, esp. on a small scale, such as a minor variety within a dominant or normal facies, or a facies of short duration or local occurrence; e.g., a marine phase or a fluvial phase. *AGI*

phase angle

An angle expressing phase or phase difference. *Webster 3rd*

phase-balance relay

Relay that protects an electrical system from faults occurring in any phase of a three-phase system. Quite often a fault current will not be large enough to trip the overcurrent relay, but will operate the phase-balance mechanism. *Coal Age, 3*

phase control

The process of varying the point within the cycle at which anode conduction is permitted to begin. *Coal Age, 1*

phase converter

A machine for converting an alternating current into an alternating current of a different number of phases and the same frequency. *Webster 3rd*

phase diagram

A graph designed to show the boundaries of the fields of stability of the various phases of a system. The coordinates are usually two or more of the intensive variables temperature, pressure, and composition, but are not restricted to these. Syn: [equilibrium diagram](#)

phase disengagement

In solvent extraction or liquid-liquid extraction procedures, allowing the mixture of aqueous liquor and organic solution phases to separate for individual recovery and further treatment.

phase disengagement rate

In solvent extraction technology, the rate of disengagement of phases (aqueous and organic carrier).

phase displacement

The angle by which the amount of difference of phase between two alternating-current magnitudes is expressed. *Standard, 2*

phase equilibria

The study and determination of stable phases present under various conditions of pressure, temperature, and composition according to the Gibbs phase rule; used in the study of mineral genesis. CF: [crystallogeny](#)

phase inversion

In the Convertol process, replacement of the film of water covering a coal particle by a film of oil. *BS, 5*

phasemeter

A device for measuring the difference in phase of two alternating currents or electromotive forces. *Webster 3rd*

phase rule

The statement that for any system in equilibrium, the number of degrees of freedom is two greater than the difference between the number of components and the number of phases. It may be symbolically stated as $F = (C-P) + 2$. See also: [mineralogical phase rule](#)

phase shifter

A device employed to alter the phase of a wave. *NCB*

phase system

Any portion of the universe that can be isolated completely and arbitrarily from the rest for consideration of the changes that may occur within it under varied conditions. In a closed system, energy may cross the system boundary, but matter may not. In an open system, both energy and matter may enter or leave as required. An equilibrium system is closed with all phases in their lowest energy states. The variance (degrees of freedom) of an equilibrium system is its number of components minus its number of phases plus two. A steady-state system is open with all phases in their lowest energy states while matter streams through it. Systems may be described by the number of their components;

e.g., unary for one component, binary for two, ternary for three, etc. They are commonly defined in terms of their components; e.g., the system CaO-MgO-SiO₂-H₂O is a quaternary system.

phase transformation

The inversion of one crystalline assemblage of components from one symmetry to another; e.g., calcite to aragonite.

phenacite

See: [phenakite](#)

phenakite

A trigonal mineral, Be₂SiO₄; colorless to yellow, red, or brown; a minor gemstone sparsely found in granite pegmatites. It is sometimes confused with quartz. Not to be confused with fenaksite. Syn: [phenacite](#)

phengite

a. A variety of muscovite having high silica. b. A transparent or translucent stone (probably crystalline gypsum) used by the ancients for windows.

phenhydrous

a. Applied to certain conditions under which coal was formed, namely those of open waters into which the plant debris was swept from the adjoining land. *Tomkeieff* b. Refers to vegetable matter deposited under water in contrast to that laid down on a wet substratum. CF: [cryphydrous](#)

phenocryst

A term for large crystals or mineral grains floating in the matrix or groundmass of a porphyry. Syn: [inset](#)

phenocrystalline

See: [phaneritic](#)

phenol

A soluble, crystalline acidic compound; C₆H₅OH; has a characteristic odor. It is present in coal tar and in wood tar. It is a powerful caustic poison and in a dilute solution, a useful disinfectant. Used chiefly in making resins and plastics, dyes, and

pharmaceuticals (such as aspirin). Syn: [benzenol](#); [hydroxybenzene](#); [carbolic acid](#).
Handbook of Chemistry and Physics, 2

phi grade scale

A logarithmic transformation of the Wentworth grade scale in which the negative logarithm to the base 2 of the particle diameter (in millimeters) is substituted for the diameter value (Krumbein, 1934); it has integers for the class limits, increasing from -5 for 32 mm to +10 for 1/1,024 mm. The scale was developed specif. as a statistical device to permit the direct application of conventional statistical practices to sedimentary data. See also: [Wentworth grade scale](#)

Philadelphia rod

A leveling rod in which the hundredths of feet, or eighths of inches, are marked by alternate bars of color the width of the measurement. *Nichols, 1*

phillipite

A compact, blue, hydrated copper and iron sulfate, $\text{Fe}_2 \text{Cu}(\text{SO}_4)_4 \cdot 12\text{H}_2\text{O}$, produced by decomposition of chalcopyrite. *Standard, 2*

phillipsite

A monoclinic mineral, $(\text{K},\text{Na},\text{Ca})_{1-2} (\text{Si},\text{Al})_8 \text{O}_{16} \cdot 6\text{H}_2\text{O}$; zeolite group; commonly occurs in complex twinned crystals; in basalt amydules, in pelagic red clays, in palagonite tuffs, in alkaline saline lakes from silicic vitric volcanic ash, in alkaline soils, and around hot springs in Roman baths.

Phleger corer

Designed to obtain cores up to about 4 ft (1.2 m) in length, the Phleger corer is utilized where only the upper layers of the sea bottom are to be analyzed. *Hunt*

phloem

In coal, the outer conducting part of the central cylinder or vascular tissues. It consists primarily of sieve tubes and companion cells, phloem fibers or bark fibers, stone cells, and parenchymatous cells. *Hess*

phlogopite

A monoclinic mineral, $\text{K}_2 \text{Mg}_6 (\text{Si}_6 \text{Al}_2 \text{O}_{20})(\text{F},\text{OH})_4$; a magnesium-rich end-member of the biotite crystal solution series; mica group; pseudohexagonal with perfect basal cleavage; occurs in crystalline limestones as a product of dedolomitization, in potassium-

rich ultramafic rocks, as an alteration mineral in sulfur-rich hydrothermal assemblages, and in kimberlites. Syn: [magnesium mica](#); amber mica; brown mica.

pH modifier

Proper functioning of a cationic or anionic flotation reagent is dependent on the close control of pH. Modifying agents used are soda ash, sodium hydroxide, sodium silicate, sodium phosphates, lime, sulfuric acid, and hydrofluoric acid. *Fuerstenau*

pholerite

A claylike mineral closely related to or identical with kaolinite. *Fay*

pholidoide

The group of aluminous glauconites grading into normal (ferruginous) glauconite and occurring in sedimentary rocks. Includes skolite and bravaisite. Distinct from pholidolite of Nordenskiöld. CF: [illite](#) *English*

phonolite

The extrusive equivalent of nepheline syenite. The principal mineral is soda orthoclase or sanidine. Other major minerals are nepheline and aegirine diopside, usually with other feldspathoidal minerals such as sodalite or haueyne. Accessories include apatite and sphene. Phonolite is an important ore progenitor, as at Cripple Creek, CO. Syn: [clinkstone](#)

phosgenite

A tetragonal mineral, $4[\text{Pb}_2(\text{CO}_3)\text{Cl}_2]$; forms stubby crystals; may be massive; adamantine; sp gr, 6.13; a secondary mineral in lead deposits and from action of seawater on lead slags and artifacts; commonly associated with cerussite and anglesite. Syn: [horn lead](#)

phosphalite

Phosphorite that occurs as beds of small concretions resting on clay surfaces or scattered in sands and limestone. *AGI*

phosphate

a. n. Any mineral containing essential tetrahedral phosphate, $(\text{PO}_4)^{3-}$, structural entities; e.g., apatite, amblygonite, or monazite. b. A mineral commodity supplying phosphorus, usually for agricultural or chemical purposes. The source materials for phosphate are marine phosphorite and, less commonly, guano and apatite-rich igneous rocks. c. Adj.,

phosphatic. Pertaining to or containing phosphates or phosphoric acid; said esp. of a sedimentary rock containing phosphatic minerals, such as phosphatic limestone produced by secondary enrichment of phosphatic material, or a phosphatic shale representing mixtures of primary and secondary phosphate and clay minerals. CF: [vanadate](#)

phosphate lands

In mining law, a leased area for phosphate lands may not exceed 2,560 acres (1,034 ha). A certain expenditure for mine development and operations is required. A royalty of not less than 2% of the gross value of the output must be paid, and an annual rental, similar to that for coal lands, is imposed. *Lewis*

phosphate of lime

See: [apatite](#)

phosphate rock

Any rock that contains one or more phosphatic minerals of sufficient purity and quantity to permit its commercial use as a source of phosphatic compounds or elemental phosphorus. About 90% of the world's production is sedimentary phosphate rock, or phosphorite; the remainder is igneous rock rich in apatite. Syn: [rock phosphate](#)

phosphatic nodule

Black to brown, rounded mass, variable in size from a few millimeters to 30 or more centimeters. Usually consists of coprolites, corals, shells, and bones, more or less enveloped in crusts of collophane. Found in many horizons of marine origin. Also covering the ocean floors at many locations around the world. *AGI*

phosphide

A compound that is a combination of phosphorus with a metal; e.g., schreibersite, $(\text{Fe,Ni})_3\text{P}$.

phosphochalcite

See: [pseudomalachite](#)

phosphophyllite

A monoclinic mineral, $\text{Zn}_2(\text{Fe,Mn})(\text{PO}_4)_2 \cdot 4\text{H}_2\text{O}$; forms tabular crystals with perfect cleavage; vitreous; colorless to pale blue-green; a secondary mineral from pegmatites; possibly in some oxidized base-metal deposits.

phosphor

Any material that has been prepared artificially and has the property of luminescence, regardless of whether it exhibits phosphorescence. *CCD, 2; Lee*

phosphorate

- a. To combine or to impregnate with phosphorus; as phosphorated oil. Syn: [phosphorize](#)
- b. To make phosphorescent. *Standard, 2*

phosphor bronze

An elastic, hard and tough alloy, composed of 80% to 95% copper, 5% to 15% tin, with phosphorus up to 2.5%. *Nelson*

phosphorescence

- a. Luminescence in which the stimulated substance continues to emit light after the external stimulus has ceased; also, the light so produced. The duration of the emission is temperature-dependent, and has a characteristic rate of decay. CF: [fluorescence](#); [luminescence](#). *Webster 3rd*
- b. A misnomer for the property of emitting light without sensible heat; luminescence. Although light is produced by a biochemical reaction involving phosphorus, bioluminescence is the preferred term. *Hy*

phosphoric acid

A clear, colorless, sparkling liquid or a transparent orthorhombic crystal; H_3PO_4 (orthophosphoric acid), depending on the concentration and the temperature. At ordinary atmospheric temperature (20 degrees C), the 50% and 75% acids are mobile liquids, the 85% acid is syrupy, and the 100% acid is in crystals; specific gravity, 1.834 (at 18 degrees C); melting point, 42.35 degrees C; boiling point, 260 degrees C; soluble in water and in alcohol; and very corrosive to ferrous metals and alloys. *CCD, 2; Handbook of Chemistry and Physics, 2*

phosphorite

A sedimentary rock with a high enough content of phosphate minerals to be of economic interest. Most commonly it is a bedded primary or reworked secondary marine rock composed of microcrystalline carbonate fluorapatite in the form of laminae; pellets; oolites; nodules; skeletal, shell, and bone fragments; and guano. Aluminum and iron phosphate minerals (wavellite, millisite) are usually of secondary formation. See also: [brown rock](#); [bone phosphate](#); [pebble phosphate](#). *AGI*

phosphorize

See: [phosphate](#)

phosphorized copper

A general term applied to copper deoxidized with phosphorus. The most commonly used deoxidized copper. *ASM, 1*

phosphorochalcite

See: [pseudomalachite](#)

phosphorogen

A substance that promotes phosphorescence in a mineral or other compound. *Hess*

phosphorus

A nonmetallic element of the nitrogen group. Symbol, P. Never found free in nature, but is widely distributed in combination with minerals. An important source is phosphate rock, which contains the mineral apatite. Ignites spontaneously, and is very poisonous; must be kept under water. Used in safety matches, pyrotechnics, pesticides, incendiary shells, smoke bombs, tracer bullets, and fertilizers. Syn: [amorphous phosphorus](#)
Handbook of Chemistry and Physics, 3

phosphorus copper

Copper that contains about 15% phosphorus. Used chiefly as a deoxidizer for molten metals. *Henderson*

phosphorus steel

Steel in which phosphorus is the principal hardening element. *Fay*

phosphosiderite

A monoclinic mineral, $\text{Fe}^{3+} \text{PO}_4 \cdot 2\text{H}_2\text{O}$; iron may be replaced by aluminum; dimorphous with strengite; isomorphous with metavariscite; forms tabular crystals or reniform crusts; vitreous; occurs in a wide variety of settings where iron and phosphate are in proximity. Formerly called metastrengite, clinostrengite.

phosphuranylite

An orthorhombic mineral, $\text{Ca}(\text{UO}_2)_3(\text{PO}_4)_2(\text{OH})_2 \cdot 6\text{H}_2\text{O}$; radioactive; deep yellow; earthy or as crusts or tiny scales; associated with autunite and other secondary uranium minerals, esp. in pegmatites.

photicite

Described as altered rhodonite; carbonated rhodonite. *Dana, 1*

photoelasticity

A property of certain transparent substances that enables the presence of strain to be detected by examination in polarized light. If models of complicated engineering structures are made of such a substance, the stress distribution in the structure may be resolved. See also: [model analysis](#); isochromatic lines; [stress analysis](#). *Hammond*

photoelectric cell

Broadly, any device in which the incidence of light causes a change in the electrical state. *Nelson*

photofluorography

The photography of images produced on a fluorescent screen by X-rays. Varieties include photoradiography, photoroentgenography, miniature radiography. *ASM, 1*

photogeology

The identification, recording, and study of geologic features and structures by means of photography; specif. the geologic interpretation of aerial and space photographs and images and the presentation of the information so obtained. It includes the interpretation of second-generation photographs obtained by photographing images recorded on television-type tubes (the images recording wavelengths outside the visible spectrum). *AGI*

photogeomorphology

Study of earth forms as revealed by aerial photographs.

photogrammetry

The art and science of obtaining reliable measurements from photographic images. Methods utilize horizontal, vertical, and oblique views, with or without the aid of the stereoscopic principle and with or without computer-based image processing and analysis. See also: [infrared photography](#)

photographic borehole survey

A method of checking verticality and/or orientation of a long borehole. A compact camera inserted at a known depth takes a photograph of a magnetic needle and/or a clinometer. Instruments have been developed by Oehman, Owen, and Wright. *Pryor*, 3

photographic interpretation

See: [photointerpretation](#)

photographic-paper recorder

A small device for registering photographically the passage of flame. This must not be confused with the photographing of the flame on the manometer record. *Rice*, 2

photointerpretation

The extraction of information from aerial photographs and images for a particular purpose, such as mapping the geologic features of an area. Syn: [photographic interpretation](#)

photolithotroph

Autotrophic microorganism that derives energy to do metabolic work by converting radiant energy into chemical energy and assimilates carbon as CO_2 , HCO_3^- , or CO_3^{2-} (photosynthesis). See also: [autotroph](#)

photomacrograph

See: [macrograph](#)

photomagnetic borehole surveying

A method of borehole surveying, consisting essentially of a timing clock, batteries and light bulb, a floating light-transparent compass, an inclination unit, and a photographic film for recording both the position of the compass and the crosshairs of the inclinometer. The instrument is enclosed in a nonmagnetic casing. See also: [multishot gyroscopic instrument](#) *Nelson*

photometric method

A dust-sampling method in which samples of dust are collected on filter paper and then placed in a photometer. The instrument shows the intensity of a beam of light after it has passed through the paper, and the fall in intensity is a direct measure of the dust concentration. With dark dust, such as in coal mines, a rough indication of the dustiness may be obtained by comparison of the depth of tone with a graded series of samples that have been calibrated against some other instrument. There are two methods of collecting

samples for photometric estimation: (1) by passing the air through a filter paper, as for gravimetric estimation; or (2) by impingement, as in the konimeter. *Spalding*

photomicrograph

A photographic enlargement of a microscopic image such as a petrologic thin section; a type of micrograph. Less-preferred syn: microphotograph. *Webster 3rd*

photomultiplier

A sensitive detector of light in which the initial electron current, derived from photoelectric emission, is amplified by successive stages of secondary electron emission. *NCB*

photon

A discrete quantity of electromagnetic energy. Photons have momentum but no mass or electrical charge. *Lyman*

photosensitive

Term applied to minerals (e.g., chlorargyrite, utenbogaardite) that are visibly injured by light.

photostat printing

A method of reproducing a drawing on opaque paper by printing from a photographic negative, which enables the original drawing to be enlarged or reduced. *Hammond*

phototheodolite

A ground-surveying instrument used in terrestrial photogrammetry, combining the functions of a theodolite and a camera mounted on the same tripod. *AGI*

phototropism

The reversible change in color of a substance produced by the formation of an isomeric modification when exposed to radiant energy (such as light). *Webster 3rd*

phragmites peat

Peat composed of reed grass and other grasses. *Tomkeieff*

phreatic

Pertaining to ground water. *AGI*

phreatic explosion

A volcanic eruption or explosion of steam, mud, or other material that is not incandescent; it is caused by the heating and consequent expansion of ground water due to an underlying igneous heat source. *AGI*

phreatic gas

Any of the vapors and gases of atmospheric or oceanic origin which, coming into contact with ascending magma, may provide the motive force for volcanic eruptions. *CTD*

phreatic line

See: [line of seepage](#)

phreatic surface

See: [water table](#)

phreatic water

A term that originally was applied only to water that occurs in the upper part of the zone of saturation under water-table conditions (syn. of unconfined ground water, or well water), but has come to be applied to all water in the zone of saturation, thus making it an exact syn. of ground water. *AGI*

phreatic zone

See: [zone of saturation](#)

pH regulator

Substance used in flotation processes to control the hydrogen-ion concentration. See also: [pH](#)

phthanite

Siliceous shale. The term is used esp. by European geologists. Also spelled phtanite. *AGI*

phthisis

Miner's occupational disease, a form of lung consumption associated with or aggravated by work in dusty surroundings, such as badly ventilated underground workings. See also: [pneumoconiosis](#)

phyllitic alteration

Hydrothermal alteration typically resulting from removal of sodium, calcium, and magnesium from calc-alkalic rocks, with pervasive replacement of silicates, muting the original rock texture. It is a common style of alteration in porphyry base-metal systems around a central zone of potassic alteration. See also: [propylitization](#)

phyllite

a. A metamorphic rock, intermediate in grade between slate and mica schist. Minute crystals of sericite and chlorite impart a silky sheen to the surfaces of cleavage (or schistosity). Phyllites commonly exhibit corrugated cleavage surfaces. CF: [illite](#); [phyllonite](#). *AGI* b. A general term for minerals with a layered crystal structure. *AGI* c. A general term used by some French authors for the scaly minerals, such as micas, chlorites, clays, and vermiculites.

phyllite-mylonite

See: [phyllonite](#)

phyllitic cleavage

Rock cleavage in which flakes are produced that are barely visible to the unaided eye. It is coarser than slaty cleavage and finer than schistose cleavage. *Leet, 1*

phyllonite

A rock that macroscopically resembles phyllite but that is formed by mechanical degradation (mylonization) of initially coarser rocks (e.g., graywacke, granite, or gneiss). Silky films of recrystallized mica or chlorite, smeared out along schistosity surfaces, and formation by dislocation metamorphism are characteristic. Syn: [phyllite-mylonite](#) See also: [mylonite gneiss](#)

phyllonitization

The processes of mylonitization and recrystallization to produce a phyllonite. *AGI*

phylloretin

Crystalline hydrocarbon similar to fichtelite and extracted along with fichtelite from fossil pine wood. *Tomkeieff*

phyllovitrinite

Vitrinite in which the plant remains are discernible under a microscope. *Tomkeieff*

phyre

A suffix used in naming rocks that are porphyritic, such as vitrophyre, orthophyre, or granophyre.

physical depletion

The exhaustion of a mine or a petroleum reservoir by extracting the minerals. *Williams*

physical geology

A broad division of geology that concerns itself with the processes and forces involved in the inorganic evolution of the Earth and its morphology, and with its constituent minerals, rocks, magmas, and core materials. CF: [historical geology](#)

physical mineralogy

That branch of mineralogy which treats of the physical properties of minerals. CF: [chemical mineralogy](#)

physical oceanography

That marine science which treats of the Earth's water mass as a fluid and studies its physical properties of motion, density, temperature, etc. *Hy*

physical shock

A state of collapse that interferes with the normal heart action, respiration, and circulation. This condition is probably due to derangement or lack of proper balance within the sympathetic nervous system and may be caused by any number of things, such as serious injury, loss of blood, severe burns, fright, and many others. It is important to look for shock when rendering first aid since it may cause death even when the injury is less serious. *Kentucky*

physics

The science, or group of sciences, that treats of the phenomena associated with matter in general, esp. in its relations to energy, and of the laws governing these phenomena, excluding the special laws peculiar to living matter (biology) or to special kinds of matter (chemistry). Physics treats of the constitution and properties of matter, mechanics,

acoustics, heat, optics, electricity, and magnetism. More generally, it includes all the physical sciences. *Standard, 2*

physiographic province

A region of which all parts are similar in geologic structure and which has consequently had a unified geomorphic history; a region whose pattern of relief features or landforms differs significantly from that of adjacent regions. *AGI*

phyteral

The term was introduced by G. H. Cady in 1942, to designate plant forms or fossils in coal as distinguished from the material of which the fossils may be composed. Phyterals are identified in general botanical terms that are usually morphological, such as spore coat, sporangium, cuticle, resin, wax, wood substance, bark, etc. The initial composition of the phyterals differed; these or other differences produced during diagenesis may or may not be perpetuated by and during carbonification (coalification). Phyterals are recognized with increasing difficulty in high rank coals. In contrast to macerals which represent a purely petrographical concept, the concept phyteral demands strict correlation with certain organs of the initial plant material. *IHCP*

phytogenous rock

Rock formed from plant remains. *Tomkeieff*

phytolith

A rock formed by plant activity or composed chiefly of plant remains. The term was applied by Grabau to a large group including coal, peat, lignites, some types of reef limestones, and oolites. *AGI*

phytoplankton

The plant life division of plankton, including diatoms and algae. Unattached plants that are at the mercy of the currents. *Hy*

piano wire screen

A screen formed by piano wires stretched tightly, lengthwise, on a frame 2 to 3 ft (0.61 to 0.91 m) wide and 4 to 8 ft (1.2 to 2.4 m) high. The screen is set up at an angle of about 45 degrees and crushed material is fed to it from above. The mesh size varies from about 4 to 16. Because there are no cross wires, and because the taut wires can vibrate, there is less tendency for blinding, but some elongated particles inevitably pass the screen. *Dodd*

picacho

A peak or sharply pointed hill or mountain; commonly a volcanic rock. The term is used in desert regions of the Southwestern United States.

pick

a. Steel cutting point used on a coal-cutter chain. See also: [coal-cutter pick](#) b. A miner's steel or iron digging tool with sharp points at each end. It weighs from 3 to 6 lb (1.4 to 1.7 kg) and has a wood handle, fitted to the center or head, from 2 to 3 ft (0.6 to 0.9 m) in length. Syn: [miner's pick](#) c. To dress the sides of a shaft or other excavation. d. To remove shale, dirt, etc., from coal. e. To select good ore out of a heap. f. In seismic prospecting, any selected event on a seismic record. *AGI*

pick-a-back conveyor

A short conveyor which takes the coal from, and advances with, a face power loader or continuous miner. It delivers the coal onto a gate conveyor over which it runs on a bogey. See also: [long piggyback conveyor](#)

pick-and-shovel miner

See: [pick miner](#)

Pickard core barrel

A double-tube core barrel in X-group sizes. The distinguishing feature of the Pickard barrel is that when blocked, the inner barrel slides upward into the head, closing the water ports and stopping the flow of the circulating liquid; no additional drilling can be done without irreparably damaging the bit until the barrel is pulled and the blocked inner tube is cleared. *Long*

pick boy

In bituminous coal mining, a person who carries sharpened picks or bits for coal-cutting machines to the machine operator in underground working places. Also called pick carrier. *DOT*

pick breaker

A breaker developed as the mechanical equivalent of the miner's pick. In the modern type, the picks are mounted on alternating arms, the primary and secondary picks being at different spacings so that breaking is performed in two stages. The breaker and plate belt are usually supplied as a standard unit driven from a common motor. *Nelson*

pick carrier

See: [pick boy](#)

picker

a. An employee who picks or discards slate and other foreign matter from coal in an anthracite breaker or at a picking table, or one who removes high-grade ore, iron, or scrap wood from ore as it passes on a conveyor belt to crushers. *BCI; DOT* b. A mechanical arrangement for removing slate from coal. c. A miner's needle, used for picking out the tamping of a charge that has failed to explode. Syn: [piercer](#)

pickeringite

A monoclinic mineral, $MgAl_2(SO_4)_4 \cdot 22H_2O$; hallotrichite group; forms acicular crystals and tufts; astringent taste; a product of surficial acid sulfate attack on aluminous rocks in mines and arid regions. Syn: [magnesia alum](#)

picket

a. A sighting hub. See also: [backsight hub](#); [foresight hub](#). *Long* b. A short ranging rod about 6 ft (1.8 m) long. An iron rod, pointed at one end, and usually painted alternately red and white at 1-foot (30.5-cm) intervals; used by surveyors as a line of sight. See also: [range pole](#) *CTD; Fay*

picking

a. Operation performed between mine and mill in which waste rock, wood, detritus, steel (tramp iron), or any specially separated mineral is removed from the run-of-mine ore material by hand sorting. Usually done during transit of material on belt conveyors, preferably after very large lumps and smalls have been screened off and the ore to be picked has been sufficiently washed to display a true surface. Also done on a picking table, a rotating circular disc around which hand sorters stand or sit to remove part of the ore fed radially from a central point. Picking can also be mechanized. *Pryor, 3* b. The falling of particles from a mine roof about to collapse. c. Extracting over a prolonged period an undue proportion of the richest ore from a mine, thus lowering the average grade of the remaining ore reserves; "picking the eyes out" of a mine. d. Rough sorting of ore. *Webster 2nd*

picking belt

A continuous conveyor (e.g., in the form of a rubber belt or of a steel apron, steelplate, or link construction) on which raw coal or ore is spread so that selected ingredients may be removed manually. Syn: [picking table](#); [picking chute](#); [picking conveyor](#). *BS, 5*

picking chute

A chute along which workers are stationed to pick slate from coal. See also: [picking belt](#)

picking conveyor

See: [picking belt](#)

picking out eyes

Mining in which only the high-grade spots are taken out. *Hoover*

picking table

A flat, or slightly inclined, platform on which the coal or ore is run to be picked free from slate or gangue. See also: [picking belt](#); picking conveyor.

pick lacing

The pattern to which the picks are set in a cutter chain. In this respect, it may be a balanced or an unbalanced cutter chain. Pick lacing is important as it has a bearing on the stability of the machine, on dust formation, and even on dangerous sparking. *Nelson*

pickle

a. An acid dip used to remove oxides or other compounds from the surface of a metal by chemical action. *Lowenheim* b. To use such an acid dip.

pickling

The process of removing scale or oxide from metal objects by immersion in an acid bath to obtain a chemically clean surface prior to galvanizing or painting. *Hammond*

pick machine

Coal-cutting machine which acts percussively, and cuts with a large chisel fixed at the end of a piston reciprocated by compressed air in much the same way as a rock drill is operated. *Kiser*

pick mine

A mine in which coal is cut with picks. *Kiser*

pick miner

In anthracite and bituminous coal mining, a person who: (1) uses hand tools to extract coal in underground workings; (2) cuts out a channel under the bottom of the working

face of coal (undercutting) with a pick, working several feet back into the seam; (3) breaks down a coalface with a pick; (4) bores holes with an augerlike drill for blasting, and inserts and sets off explosives in holes to break down coal; (5) shovels coal into cars and pushes them to a haulageway. Also called hand cutter; hand miner; hand pick miner; pick-and-shovel miner. *DOT*

pick money

An earlier practice whereby miners paid a blacksmith for sharpening their picks. *Nelson*

pickrose hoist

A small haulage engine used for pulling light loads over short distances; used at junctions, loading points, and haulage transfer points. See also: [winch](#); [spotting hoist](#). *Nelson*

pick tongs

Tongs for handling hot metal. *Webster 3rd*

pickup

a. Syn. for lift, as applied to hoisting drill rods from a borehole. *Long* b. An angular crosscut, through which coal is hauled from one entry to another. See also: [shoo-fly](#) c. See: [geophone](#); detector. d. Transfer of metal from tools to a part, or from a part to tools, during a forming operation. *ASM, 1* e. In Alaska, a gold nugget picked up during mining operations prior to sluicing.

pickup test

A laboratory procedure used in investigating the floatability of minerals. A few grains, sized between 60 and 120 mesh, are placed, after suitable surface cleansing, under water in an observation cell which is controlled for pH, reagent concentration, temperature, and conditioning time. An air bubble is pressed down on the particles and then raised; the degree and tenacity with which they cling to it are observed. *Pryor, 3*

pickwork

Cutting coal with a pick, as in driving headings. *Fay*

picky poke bar

A steel bar, usually of 7/8-in (2.22-cm) stock and about 4 ft (1.2 m) long, with each end sharpened, bent out at an angle of 45 degrees, the bends being 3 to 6 in (7.6 to 15.2 cm) from each end. *Hess*

picotite

A former name for chromian spinel, $(\text{Mg,Fe})(\text{Al,Cr})_2 \text{O}_4$.

picral

An etching reagent consisting of a 2% to 5% solution of picric acid in ethyl alcohol. It may be used for plain carbon and low-alloy steels. *Osborne*

picric acid

A yellow crystalline compound, $\text{C}_6 \text{H}_3 \text{N}_3 \text{O}_7$, obtained variously, such as by the action of nitric acid on phenol. It is used in dyeing and is an ingredient in certain explosives. Also called carbazotic acid; chrysolepic acid; trinitrophenic acid. *Standard, 2*

picrite basalt

Olivine-rich basalt, as formed by the settling of olivine in thick flows and sills. Commonly contains 50% or more olivine. *AGI*

picrochromite

Magnesium chromite, $\text{MgCr}_2 \text{O}_4$; melting point, 2,250 degrees C; sp gr, 4.41. This spinel can be synthesized by heating a mixture of the two oxides at 1,600 degrees C; it is formed (usually with other spinels in solid solution) in fired chrome-magnesite refractories. Picrochromite is highly refractory but when heated at 2,000 degrees C, the $\text{Cr}_2 \text{O}_3$ slowly volatilizes. See also: [magnesiochromite](#)

picrolite

An asbestiform antigorite serpentine.

picromerite

a. A monoclinic mineral, $\text{K}_2 \text{Mg}(\text{SO}_4)_2 \cdot 6\text{H}_2 \text{O}$; forms highly soluble masses or crusts around fumaroles; also a rare, advanced desiccation constituent of marine evaporites. Formerly called schoenite. b. A mineral group including boussingaultite, cyanochroite, mohrite, nickel-boussingaultite, and picromerite.

picture

A screen to shelter workers from falling water. *Zern*

Pidgeon process

A process for the production of magnesium by the reduction of magnesium oxide with ferrosilicon. *ASM, 1*

pie

A local term for an intermediate pack without supporting walls. *TIME*

piecemeal stoping

A process by which magma eats into its roof by engulfing relatively small isolated blocks, which presumably sink to depth where they are assimilated. See also: [magmatic stoping](#)

piece weight

See: [effective piece weight](#)

piecework

The performance of underground work on the basis of an agreement between a miner and the mine manager. Payment may be made by the yard of advance of a heading or tunnel or per ton or cubic yard of coal or ore removed. In ripping work, payment may be made by the yard advance of excavation to a specified width and height; strip packing may be built at a certain sum per yard advance or cubic yard of filling. See also: [contract work](#); yardage. *Nelson*

piedmont

Adj. Lying or formed at the base of a mountain or mountain range; e.g., a piedmont terrace or a piedmont pediment.---n. An area, plain, slope, glacier, or other feature at the base of a mountain; e.g., a foothill or a bajada. In the United States, the Piedmont is a plateau extending from New Jersey to Alabama and lying east of the Appalachian Mountains. Etymol: from Piemonte, a region of NW Italy at the foot of the Alps. *AGI*

piedmont alluvial plain

See: [bajada](#)

piedmontite

See: [piemontite](#)

piedmont plain

See: [bajada](#)

piedmont scarp

A small fault scarp at the foot of a mountain range and essentially parallel to the range.

AGI

piel

An iron wedge for piercing stone. *Standard, 2*

piemontite

A monoclinic mineral, $\text{Ca}_2(\text{Al,Mn,Fe})_3(\text{OH})\text{O}(\text{Si}_2\text{O}_7)(\text{SiO}_4)$; epidote group; less common than epidote; occurs in a variety of environments: low-grade regional metamorphic rocks, manganese deposits, and some intermediate to silicic volcanic rocks, perhaps due to metasomatism. Syn: [manganepidote](#); [piedmontite](#). CF: [withamite](#)

pier

A rectangular or sometimes circular form of column, constructed usually of concrete, hard brickwork, or masonry, and designed to support heavy concentrated loads from arches or a bridge superstructure. *Hammond*

pier cap

The upper or bearing part of a bridge pier; usually made of concrete or hard stone; designed to distribute concentrated loads evenly over the area of the pier. *Hammond*

piercement

Salt plug that rises and penetrates rock formations to shallow depths. *Wheeler, R.R.*

piercement dome

See: [diapir](#)

piercement fold

See: [diapir](#)

piercer

A blasting needle. See also: [picker](#)

piercing

A prospecting method used in soft soil free from stones, in which small drivepipes are used to secure samples of underlying material or to determine the thickness of the soil. *Lewis*

pier dam

Dam or jetty to influence current. CF: [weir](#)

pietra della raja

It. A fine-grained Permian sandstone suitable for sawing and finishing. *Hess*

piezocrystallization

Crystallization of a magma under pressure, such as pressure associated with orogeny. *AGI*

piezoelectric axis

One of the directions in a crystal in which either tension or compression will cause the crystal to develop piezoelectric charges. *Gaynor*

piezoelectric detector

A type of detector that depends upon the piezoelectric effect by which an electric charge is produced on the faces of a properly cut crystal of certain materials, particularly quartz and Rochelle salt, when the crystal is strained. The detector is constructed from a pile of such crystals with intervening metal foil to collect the charge. An inertia mass is mounted on the top of the crystal stack that is included in an electronic circuit. *AGI*

piezoelectricity

The property exhibited by some asymmetrical crystalline materials which when subjected to strain in suitable directions develop electric polarization proportional to the strain. Inverse piezoelectricity is the effect in which mechanical strain is produced in certain asymmetrical crystalline materials when subjected to an external electric field; the strain is proportional to the electric field. Quartz is an industrially important example. *Hunt*

piezometer

An instrument for measuring pressure head; usually consisting of a small pipe tapped into the side of a closed or open conduit and flush with the inside; connected with a pressure gage, mercury, water column, or other device for indicating head. See also: [manometer](#)

piezometric surface

See: [potentiometric surface](#)

pig

a. A crude casting of metal convenient for storage, transportation, or melting; esp. one of standard size and shape for marketing run directly from the smelting furnace. CF: [ingot](#)
b. A mold or channel in a pig bed. *Webster 3rd* c. A heavily shielded container (usually lead) used to ship or to store radioactive materials. d. An air manifold having a number of pipes which distribute compressed air coming through a single large line. *Nichols, I*

pig and ore process

Modification of the open-hearth process of steel manufacture with pig iron and iron ore as the charge. *Bennett*

pig and scrap process

Modification of the open-hearth process of steel manufacture with pig iron and steel as the charge. *Bennett*

pig bed

A series of molds for iron pigs, made in a bed of sand. Connected to each other and to the taphole of the blast furnace by channels, along which the molten metal runs. *CTD*

pig caster

Person who pours molten metal into hand ladles, and from ladles into molds to form ingots. *DOT*

pigeonhole

a. A room driven directly into a coal seam from the edge of a strip pit. b. Any small poorly equipped coal mine. c. A hole in the shaft house floor through which the bucket or skip is raised or lowered. *Hess* d. An opening left at the meeting of two sections of arch work, permitting the workers to close the arch and to come out. The pigeonhole itself is closed from below. *Stauffer*

pigeonhole checker

An arrangement of checkerbrick such that each course of brick is laid in spaced parallel rows with the brick end to end; each alternate course above and below has its parallel rows at right angles to the intervening course. *ARI*

pigeonite

A monoclinic mineral, $(\text{Mg,Fe,Ca})(\text{Mg,Fe})\text{Si}_2\text{O}_6$; pyroxene group; crystallographically distinct from augite; occurs only in quickly chilled lavas. CF: [augite](#)

pig foot

a. An iron clamp shaped like a pig's foot used to attach the jack to the feed chain of a continuous electric coal cutter. *Fay* b. A pipe jack with a pig foot at one end. *Fay*

Piggot corer

A device for sampling bottom sediments. A core barrel is driven into unconsolidated material by an explosive charge. *AGI*

piggyback conveyor

See: [long piggyback conveyor](#)

pig handler

A laborer who removes metal pigs from molds manually and stamps heat numbers on pigs with hammer and punch. *DOT*

pig lead

Commercial lead in large oblong masses or pigs.

pigment mineral

A mineral having economic value as a coloring agent. The most important are the red and yellow ochers and brown sienna, which consists of iron oxides with some impurities, and the brown umbers in which manganese oxide is also present. When the iron-oxide content is high the term oxide is used in preference to ocher. *AGI; Nelson*

pig metal

Metal, such as brass or copper, in its first rough casting. *Standard, 2*

pigotite

A salt of alumina and organic acid, $4\text{Al}_2\text{O}_3 \cdot \text{C}_{12}\text{H}_{10}\text{O}_8 \cdot 27\text{H}_2\text{O}$; formed on the surface of granite under the influence of wet vegetation. *Tomkeieff*

pigsticker

A person delegated to the duty of punching or knocking pig iron out of chills or molds at a blast-furnace or pig-casting machine. *Fay*

pigsty

Timber support used in stopes to hold up the roof, consisting of a square frame of chocked round timbers and filled with waste rock. See also: [cog](#)

pigsty timbering

Hollow pillars built up of logs laid crosswise for supporting heavy weights. See also: [cribbing](#)

pig tailer

A laborer who helps a pusher to push loaded mine cars over long distances and up inclines where mechanical or mule haulage is not used. Also called helper-up. *DOT*

pike

A term used in England for any summit or top of a mountain or hill, esp. one that is peaked or pointed. Also, a mountain or hill having a peaked summit. *AGI*

Pike process

A method for the direct production of steel by passing reducing gases over iron oxide ore, carburizing the reduced ore, and alloying it in an electric furnace. Thus, a reducing gas, heated to 900 degrees C is passed over iron oxide ore to produce metallic iron and spent gas. The carburized, partially reduced metal is melted, reduced, and alloyed in the electric furnace. *Osborne*

piking

See: [cobbing](#)

pilarite

An aluminous variety of chrysocolla. *Standard, 2*

pile

a. A timber, steel, or reinforced concrete plate or post that is driven into the ground to carry a vertical load (bearing pile) or a horizontal load from earth or water pressure (sheet pile). *Nelson* b. A spiked or sharpened-edged plank, beam, or even pipe or girder that is forced forward or downward (sinking) into running ground with a view to

support. *Mason* c. A stack of ore or stones. *Gordon* d. A prop of timber. *Gordon* e. Long thick laths, etc., answering in shafts in loose or quick ground, the same purpose as spalls in levels, piles being driven vertically.

pile dam

A dam made by driving piles and filling the interstices with stones. The surfaces are usually protected with planking.

pile drawer

See: [pile extractor](#)

pile driver

a. A machine for driving down piles; usually consisting of a high frame with appliances for raising and dropping a pile hammer or for supporting and guiding a steam or air hammer. Also called pile engine. *Webster 3rd* b. An operator of a pile driver. *Webster 3rd*

pile extractor

A sheet piling extractor that works on the same principle as the piling hammer, except that the force of the blow is upward rather than down. *Carson, 1*

pile group

A number of piles driven or cast in situ, will sustain a much heavier load than a single pile can carry, esp. when connected by a pile cap. *Hammond*

pilehammer

This may be a drop hammer, a steam hammer, or a diesel hammer of which the last two are completely automatic. Steam hammers are also able to operate on compressed air. See also: [jetting](#)

pile head

The top of a precast concrete pile, protected during driving by packing under a pile helmet and sometimes by a timber dolly. The top of a timber pile is protected by a driving band. *Hammond*

pile helmet

A cast-steel cap covering and protecting the head of a concrete pile during driving. See also: [drophammer](#)

pile sinking

A method of sinking a circular or rectangular shaft through 20 to 30 ft (6.1 to 9.1 m) of sand or mud at the surface. It cannot be used for greater depths as each ring of piles reduces the inside dimensions of the shaft. See also: [pile](#); [piling](#). *Nelson*

piling

A structure or group of piles. See also: [cofferdam](#)

pill

A loosely rolled cylinder of burlap and 1/4-in-mesh (0.6-cm-mesh) hardware cloth pushed down into a borehole ahead of a string of drill rods to the point where a large crevice or small cavity has been encountered. At this point the cylinder tends to unroll partially, forming a mat that acts as a barrier against which other hole-plugging agents may collect and help seal off the opening. *Long*

pillar

a. A column of coal or ore left to support the overlying strata or hanging wall in a mine, generally resulting in a "room and pillar" array. Pillars are normally left permanently to support the surface or to keep old workings water tight. Coal pillars, such as those in pillar-and-stall mining, are extracted at a later period. Syn: [stump](#) See also: [barrier pillar](#); [shaft pillar](#). b. A block of ore entirely surrounded by stoping, left intentionally for purposes for ground control or on account of low value. *Spalding* c. A column of rock remaining after solution of the surrounding rock. See also: [hoodoo](#)

pillar-and-breast

A system of coal mining in which the working places are rectangular rooms usually five or ten times as long as they are broad, opened on the upper side of the gangway. The breasts usually from 5 to 12 yd (4.6 to 11.0 m) wide, vary with the character of the roof. The rooms or breasts are separated by pillars of solid coal (broken by small cross headings driven for ventilation) from 5 to 10 yd (4.6 to 9.1 m) or 12 yd (11 m) wide. The pillar is really a solid wall of coal separating the working places. When the object is to obtain all the coal that can be recovered as quickly as possible, the pillars are left thin; but where this plan is likely to induce a crush or squeeze that may seriously injure the mine, larger pillars are left and after the mine has been worked out, the pillars are "robbed" by mining from them until the roof comes down and prevents further working. In the steeply inclined seams of the anthracite regions the pillar-and-breast system is

employed by working the bed in "lifts". Also called pillar-and-stall; post-and-stall; bord-and-pillar. Syn: [board-and-pillar](#); [board-and-wall](#). *Fay*

pillar-and-chamber

A pillar method of working often adopted in extracting a proportion of thick deposits of salt or gypsum. The method may be adopted where the value of the mineral in the pillars is less than the cost of setting artificial supports. *Nelson*

pillar-and-room

A system of mining whereby solid blocks of coal are left on either side of miner's working places to support the roof until first-mining has been completed, when the pillar coal is then recovered. See also: [room-and-pillar](#)

pillar-and-stall

a. A system of working coal and other minerals where the first stage of excavation is accomplished with the roof sustained by coal or ore. See also: [pillar-and-breast](#); [post-and-stall](#). b. One of the earliest methods of working coal seams in Great Britain. It is employed in thick seams and where valuable surface buildings require protection from damage by subsidence. A number of narrow roadways are driven in the coal seam to a predetermined boundary. There are two sets of roadways, driven at right angles to each other, and thus the seam is divided into a large number of square or rectangular pillars. These pillars are extracted at a later period. The driving of the narrow roadways is termed working the whole while pillar working is known as working the broken. The width of the roadways and their distance apart are governed by the thickness and nature of the coal seam and the type of roof and floor. The main headings are driven forward and connected at intervals by crosscuts or stentons for ventilation and as a second exit. The bords are driven off the main headings at fixed distances apart, and are connected at intervals by walls. The width of the main headings, crosscuts, and bords varies from 3 to 5 yd (2.7 to 4.6 m). The bords are driven from 15 to 60 yd (13.7 to 54.9 m) apart. The walls are about 2 to 3 yd (1.8 to 2.7 m) wide and driven at similar or greater intervals according to the size of pillars to be formed. Modern pillar-and-stall mining is highly mechanized. See also: [crosscut](#); mechanized heading development; stenton. Also called bord-and-pillar. *Nelson*

pillar boss

In bituminous coal mining, a person who supervises the work of robbers in removing pillars of coal that were left to support the roof of working places during mining operations. Syn: [rib boss](#)

pillar burst

Failure of remnants, promontories, as well as pillars, by crushing. *Spalding*

pillar caving

Removal of ore from a series of stopes or rooms, leaving pillars between. Eventually the pillars are forced or allowed to cave under the weight of the roof.

pillar coal

Coal secured in pillar robbing. *Fay*

pillar drive

A wide irregular drift or entry, in firm dry ground, in which the roof is supported by pillars of natural earth or by artificial pillars of stone, without using timber. *Fay*

pillar extraction

The recovery or working away of the pillars of coal that were left during the first operation of working in the pillar-and-stall method. Also called pillar mining. See also: [jenkin](#); [jud](#); [pillar robbing](#); [pillar extraction](#). *Nelson*

pillaring back

The operation of extracting coal pillars, on the retreating system, in a pillar method of working. *Nelson*

pillar line

a. The line along which pillars are being mined. b. Air currents which have definitely coursed through an inaccessible abandoned panel or area or which have ventilated a pillar line or a pillared area, regardless of the methane content or absence of methane in such air.

pillar man

A person who builds stone packs in mine workings. See also: [pack builder](#)

pillar methods of working

Methods of working coal seams, which have been given different names in different coalfields, such as stoop-and-room in Scotland; bord-and-pillar in Durham, England; and single and double stalls in South Wales. There are many modifications of pillar mining, but in general, there are two stages: (1) the driving of narrow roadways and thus forming a number of coal pillars, and (2) the extraction of the pillars--often on the retreating

system. Pillar methods of mining are widely used in the United States, while the longwall method is favored in Great Britain. Pillar methods also are used for working stratified deposits of ironstone, rock salt, slate, and other layered minerals. *Nelson*

pillar mining system

Any of several systems, including the room-and-pillar system, the block system, and the bord-and-pillar system. *Woodruff*

pillar recovery

Mining of pillars during retreat mining to increase the overall recovery of the reserve.

pillar road

a. Roadway formed in coal pillars. *Nelson* b. Working road or incline in pillars having a range of longwall faces on either side. *Fay*

pillar robber

See: [robber](#)

pillar robbing

a. The systematic removal of the coal pillars or ore between rooms or chambers to regulate the subsidence of the roof. Also called pillar drawing. *Fay* b. The removal of ore pillars in sublevel stoping or slicing. See also: [sublevel stoping](#) c. Formerly, in pillar-and-stall mining, the coal pillars left were too small, and miners were satisfied to gain some coal by robbing the pillars, usually from middle portions, the remaining coal being too dangerous to extract. *Nelson*

pillar robbing and hand filling

See: [sublevel stoping](#)

pillar split

An opening or crosscut driven through a pillar in the course of extraction.

pillar strength

The formula for pillar strength can be expressed as follows: $S = C (L/T)^{1/2}$ where the coefficient, C, is directly dependent upon friction, L is the least pillar width, and T is the thickness. *Coal Age, 3*

pillar working

Working coal in much the same manner as with the pillar-and-stall system.

pillow

A rock texture characterized by piles of lobate, pillow-shaped masses; individual pillows range up to several meters across; typical of basalt that has erupted under an appreciable depth of water.

pillow block

A metal-cased rubber block that allows limited motion to a support or thrust member.
Nichols, 1

pillow lava

A general term for lava that exhibits pillow structure, mostly basalts and andesites that erupted and flowed under water. The ocean floor sodium-rich basalts known as spilites are commonly pillowed.

pillow structure

A structure, observed in certain extrusive igneous rocks, that is characterized by discontinuous pillow-shaped masses ranging in size from a few centimeters to a meter or more in greatest dimension (commonly between 30 cm and 60 cm). The pillows are close-fitting, the concavities of one matching the convexities of another. The spaces between the pillows are few and are filled either with material of the same composition as the pillows, with clastic sediments, or with scoriaceous material. Grain sizes within the pillows tend to decrease toward the exterior. Pillow structures are considered to be the result of subaqueous extrusion, as evidenced by their association with sedimentary deposits, usually of deep-sea origin. See also: [pillow lava](#); [mammillary structure](#). *AGI*

pilot

a. A cylindrical steel bar extending through and about 8 in (20 cm) beyond the face of a reaming bit. It acts as a guide that follows the original unreamed part of the borehole and hence forces the reaming bit to follow and be concentric with the smaller-diameter, unreamed portion of the original borehole. Syn: [reaming pilot](#) *Long* b. A cylindrical diamond-set plug, of somewhat smaller diameter than the bit proper, set in the center and projecting beyond the main face of a noncoring bit. See also: [pilot bit](#); [stinger](#). *Long*

pilotaxitic

Said of the texture of the groundmass of a holocrystalline igneous rock in which lath-shaped microlites (typically plagioclase) are arranged in a glass-free mesostasis and are generally interwoven in irregular unoriented fashion. CF: [trachytic](#)

pilot bit

A noncoring bit with a cylindrical diamond-set plug of somewhat smaller diameter than the bit proper set in the center and projecting beyond the main face of the bit. See also: [plug bit](#); [drag bit](#). *Long*

pilot bob

The weight attached to a shaft plumbline for the purpose of lowering the line down the shaft. *BS, 7*

pilot burner

A small burner kept lighted to rekindle the principal burner when desired (as in a flash boiler). The light so maintained is called a pilot light or pilot flame. *Webster 3rd; Fay*

pilot drill

A small drill used to start a hole in order to insure a larger drill running true to center. *Crispin*

pilot hole

a. A small hole drilled ahead of a full-sized, or larger borehole. *Long* b. A borehole drilled in advance of mine workings to locate water-bearing fissures or formations. *Long* c. A small tunnel driven ahead of, and subsequently enlarged to the diameter required in the following full-size tunnel. *Long*

pilot-hole cover

See: [cover](#)

pilot lamp

A small electric bulb that lights when power is turned on in a circuit. *Hammond*

pilot method

The method of excavating a tunnel by driving a small tunnel ahead, and then enlarging its dimensions.

pilot plant

A small-scale processing plant in which representative tonnages of ore can be tested under conditions which foreshadow (or imitate) those of the full-scale operation proposed for a given ore. *Pryor, 4*

pilot reamer

An assemblage of a pilot, a pilot reaming bit, and a reaming barrel. See also: [pilot](#); [pilot reaming bit](#). *Long*

pilot reaming bit

A box-threaded, diamond-set, annular-shaped bit designed to be coupled to a pilot and used to ream a borehole to a specific casing size. See also: [pilot](#)

pilot sampling

The taking of preliminary samples of a mineral deposit to study its mode of occurrence and its detailed structure. Syn: [reconnaissance sampling](#) *Nelson*

pilot sequence

Sequence control by means of a pilot cable is effected by means of a low-voltage supply from one contactor panel to the next, or by means of a line voltage pilot cable. Each contactor has an auxiliary contact that controls the supply to the next contactor. In the low-voltage system, the secondary of each potential transformer is earthed at the preceding panel through an auxiliary switch which closes with the contactor. Until these secondary potential transformer circuits are completed, by closing the auxiliary contact, the next conveyor cannot start. See also: [sequence starting](#)

pilot shaft

See: [pilot tunnel](#)

pilot tunnel

A small tunnel or shaft excavated in the center, and in advance of the main drivage, to gain information about the ground and create a free face, thus simplifying the blasting operations. *Nelson*

pilot valve

a. A small balanced valve, operated by a governor or by hand, which controls a supply of oil under pressure to the piston of a servometer or relay connected to a large control

valve, which it is desired to operate. Also called relay valve. *CTD* b. In a compressor, an automatic valve that regulates air pressure. *Nichols, 1*

pilot wedge

A half-cylinder member, about 5 in (12.7 cm) long, coupled to the lower end of a Hall-Rowe deflection wedge, by means of which the deflection wedge may be oriented in a specific manner in reference to a matching half-cylinder surface on the upper end of the wedge (drive wedge). This is driven into the wooden plug placed about 8 ft (2.4 m) below the point in a borehole where a deflection is to be made. Also called wedge pilot. *Long*

Pilz furnace

A circular or octagonal shaft furnace, maintaining or increasing its diameter toward the top, and having several tuyeres; used in smelting lead ores. *Fay*

pimelite

A massive or earthy, apple-green, nickel-bearing phyllosilicate; probably willemseite or kerolite having disordered stacking; $(\text{Ni,Mg})_6 \text{Si}_8 \text{O}_{20} (\text{OH})_4$.

pimple metal

Crude copper matte of about 78% copper, obtained from the smelting of sulfide copper ores. *Bennett*

pin

See: [wedge rock](#)

pinacoid

An open crystal form consisting of two parallel faces. *AGI*

pinch

a. A marked thinning or squeezing of a rock layer; e.g., a coming-together of the walls of a vein, or of the roof and floor of a coal seam, so that the ore or coal is more or less completely displaced. See also: [nip](#) CF: [make](#); [want](#). *Standard, 2* b. A thin place or a narrow part of, an orebody; the part of a mineral zone that almost disappears before it widens out in another place to form an extensive orebody. *AGI* c. The binding action caused when drillhole walls close in before casing is emplaced, resulting from failure of soft or plastic formations. *Long*

pinchbar

A kind of crowbar with a short projection and a heel or fulcrum at the end; a pinch. Used to pry forward heavy objects. *Standard, 2*

pinched

Where a vein narrows, as if the walls had been squeezed in. Where the walls meet, the vein is said to be pinched out. See also: [pinching out](#); pinch.

pinching out

Where a lode or stratum narrows down and disappears. See also: [pinch](#) *BCI*

pinch out

To taper or narrow progressively to extinction; to thin out. *AGI*

pinder concentrator

A revolving table on which are tapering spiral copper cleats on a linoleum cover. The tailings are washed over the riffles and off the edge, while the concentrates are delivered at the end of the riffles. *Liddell*

pineapple

a. A cast roller, designed to keep the haulage rope centered between rail tracks. Spiral grooves on the sides return a straying rope to the central grooves. Works in one direction only. *Pryor, 3* b. See: [line oiler](#)

pine tar

Very viscous; dark brown to black; liquid or semisolid; strong characteristic odor; sharp taste; translucent in thin layers; hardens with aging; sp gr, 1.03 to 1.07; boiling point, ranges from 240 to 400 degrees C; soluble in alcohol, ether, chloroform, acetone, glacial acetic acid, fixed and volatile oils, and sodium hydroxide; and insoluble in water. Chief constituents are complex phenols; also present are turpentine, rosin, toluene, xylene, and other hydrocarbons. Used in flotation. *CCD, 2*

ping

An acoustic pulse signal projected by an echo-ranging transducer. *Hy*

pinguite

A former name for nontronite. See also: [nontronite](#)

pinion

Smaller of a pair of toothed wheels, e.g., the pinion geared to the driven crown wheel of a ball mill. *Pryor, 3*

pinion gear

A drive gear that is smaller than the gear it turns. *Nichols, 1*

pinite

A compact, fine-grained, generally impure mica near muscovite in composition; dull-gray, green, or brown; derived from the alteration of other minerals, esp. cordierite, nepheline, scapolite, spodumene, and feldspar.

pinnacle

a. Any high tower or spire-shaped pillar of rock, alone or cresting a summit. A tall, slender, pointed mass; esp., a lofty peak. *AGI* b. A sharp pyramid or cone-shaped rock under water or showing above it. *AGI* c. In alluvial mining, a spine or pillar in limestone bedrock of an irregular and serrated type, in which it is difficult for dredge buckets to work. *Pryor, 3*

pinned coupling

A drill-rod coupling that has been permanently attached to the body of the rod by a metal dowel (or pin) driven into a small hole drilled at the point in the rod where the coupling is screwed into the body of the rod. *Long*

pinnel

a. Boulder clay, from Cumberland, Northumberland, and Lancashire, England, and North Wales. *Arkell* b. Coarse gravel or sandstone conglomerate. *Arkell*

pin puller

A laborer who removes studs from aluminum reduction pots by operating a motor-driven hydraulic jack. *DOT*

pintadoite

a. A vanadium ore. *Osborne* b. A mineral, $\text{Ca}_2 \text{V}_2 \text{O}_7 \cdot 9\text{H}_2 \text{O}$; green; forms water-soluble efflorescences; associated with uranium-vanadium deposits of the Colorado Plateau.

pin thread

A thread on the outside surface of a cylindrical or tubular member. Syn: [male thread](#)

pin timbering

A roof support method following two basic principles: (1) that of drilling holes vertically or at an angle into the roof and anchoring roof bolts into a strong firm structure above the lower weak layers, thereby suspending the weak roof on bolts from the strong roof above; and (2) the binding of several layers of weak strata into a beam strong enough to support its weight across the working place. The advantage of pin timbering is that support can be provided at the face without posts being in the way of equipment and more freedom is provided for shuttle cars and other equipment in tramming. See also: [timbering](#); [roof bolting](#). *Kentucky*

pintle

A vertical pin fastened at the bottom that serves as a center of rotation. *Nichols, I*

pintle hook

A towing device consisting of a fixed lower jaw, a hinged and lockable upper jaw, and a socket between them to hold a tow ring. *Nichols, I*

pin-to-box

The currently accepted term for a coupling, one end of which is threaded on the outside (pin) and the opposite end threaded on the inside (box). Formerly designated as a male-to-female coupling. *Long*

pin-to-pin

The currently accepted term for a coupling, both ends of which are threaded on the outside. Formerly designated as a male-to-male coupling. *Long*

pin-type slat conveyor

Two or more endless chains to which crossbars are attached at spaced intervals, each having affixed to it a series of pointed rods extending in a vertical plane on which work is carried. Used principally in spraying or washing operations where the least amount of area of the product is contacted.

pion

An elementary particle; the contraction of pi-meson. The mass of a charged pion is about 273 times that of an electron. An electrically neutral pion has a mass 264 times that of an electron. *Lyman*

pioneer bench

The first bench in a quarry which is blasted out. It is usually at the top of the rock to be quarried.

pioneer road

A primitive, temporary road built along the route of a job, to provide means for moving equipment and workers. *Nichols, I*

pioneer wave

U.K. The advance vibration set up by a coal dust explosion. See also: [advance wave](#); [shock wave](#). *Nelson*

piotine

See: [saponite](#)

pipe

a. A cylindrical, more or less vertical orebody. Syn: [chimney](#); [ore pipe](#); shoot; stock. *AGI*
b. A vertical conduit through the Earth's crust; e.g., a kimberlite pipe of South Africa, through which magmatic materials have passed. It is usually filled with volcanic breccia and fragments of older rock. As a zone of high permeability, it is commonly mineralized. *AGI*
c. A tubular cavity from several centimeters to a few meters in depth, formed esp. in calcareous rocks, and often filled with sand and gravel; e.g., a vertical joint or sinkhole in chalk, enlarged by solution of the carbonate material and filled with clastic material. See also: [piping](#) *AGI*
d. The name given to the fossil trunks of trees found in coalbeds. *Fay*

pipe bit

A bit designed for attachment to standard coupled pipe for use in securing the pipe in bedrock. Can be set with diamonds or other abrasive materials. *Long*

pipe clamp

a. A device similar to a casing clamp, used in the same manner on pipe as a casing clamp is used on casing. See also: [casing clamp](#) b. A pipe wrench constructed like a parmalee wrench. *Long*

pipe clay

a. Originally a clay suitable for making tobacco pipes, but the term is now used to include any white-burning plastic clay. *Nelson* b. A mass of fine clay, generally of lenticular form, found embedded in or below a placer gravel bank.

pipe coil

A device which measures only the density of the magnetic components of a slurry. This electromagnetic sensing unit is mounted on a section of rubber or stainless-steel pipe which is installed as a section of the slurry-carrying pipeline. All components are exterior to the pipe, and there is no obstruction to flow. The pipe coil is used widely in magnetic taconite and heavy-media plants. By combining this device with other instruments, it is possible to continuously measure the ore-to-media ratio. *Nelson*

pipe coupling

An internally threaded, short, sleeve-like member of ordinary steel used to join lengths of pipe. Sometimes incorrectly called pipe collar; pipe sleeve. *Long*

pipe cutter

A tool for cutting wrought iron or steel pipes. The curved end which partly encircles the pipe carries one or more cutting disks. *Crispin*

pipelined air

Air conducted to workings or a tunnel face through air pipes. See also: [auxiliary ventilation](#)

pipe drivehead

a. A drivehead that is coupled to a pipe. See also: [drivehead](#) Syn: [drive collar](#) b. Extra thick walled pipe or casing coupling against which the blow of a drive block is delivered when driving or sinking drivepipe or casing. *Long* c. An oversize rod or casing coupling on which the blows of a drive block are delivered when casing is being driven or an attempt is being made to jar loose stuck casing or a drill-rod string. *Long* d. Incorrectly used as a synonym for drive shoe; drive hammer. *Long*

pipe elevator

A device similar to a casing elevator, used to raise and lower outside-coupled pipe in a borehole. *Long*

pipe factor

a. Correction made when drilling running ground, alluvial gravels, and sands. The volume actually extracted over a measured depth is compared with that which would be obtained over the true drill pipe area and distance, any discrepancy being due to inrush of sands or forcing out of sand by the pumping action during drilling. *Pryor, 3* b. The assumed cross-sectional area of a length of borehole when estimating the in situ volume of a core sample. Also called pipe constant. *Nelson*

pipe fitting

A general term referring to any of the ells, tees, various branch connectors, etc., used in connecting pipes. *Crispin*

pipe friction

The drag created on the outside of a pipe being driven into overburden material, which presses and rubs against the outside surface of the pipe and its couplings. See also: [skin friction](#)

pipe grab

A clutch for catching and raising a well pipe. *Standard, 2*

pipe jack

An iron pipe with a clamp or pigfoot on one end and a curved point on the other. It is wedged between the floor and roof of a mine room to hold the feed chain of a continuous electric coal mining machine. *Fay*

pipeline transport

Long distance pipeline used for hydraulic transport of coal, gilsonite, copper concentrates and similar materials. See also: [hydraulic transport](#)

pipeman

a. A person engaged in laying or repairing pipelines. Also called pipefitter. *BS, 10* b. Mine worker who repairs, lengthens, and maintains the pipelines for air and water in mines. *Stoces* c. A worker in charge of a pipe, esp. in hydraulic mining. *Webster 2nd*

pipe prover

An apparatus for testing the tightness of a pipeline or system, usually by hydraulic pressure. *Standard, 2*

piper

Sometimes applied to a blower of gas in coal mines. *Nelson*

pipe sampler

A device for sampling a pile of ore, consisting simply of a small iron pipe that is driven into the pile and which, when withdrawn, brings a core of ore with it.

pipe sampling

Sampling by means of a drivepipe in accumulations of crushed residues or of material where the larger pieces are not usually greater than 2 in (5.1 cm). The advancing end of the pipe is generally sharpened to provide a cutting edge, and sometimes contracted in diameter so that material once entered will not readily fall out when the pipe is lifted. Also called gun sampling. See also: [drivepipe](#)

pipestone

See: [catlinite](#)

pipette analysis

The size analysis of fine-grained sediment made by removing samples from a suspension with a pipette. *AGI*

pipette method

A method for the determination of particle size. See also: [Andreasen pipette](#)

piping

a. In hydraulic mining, discharging water from nozzles at auriferous gravel. b. The act or process of driving standpipe, drivepipe, or casing into and through overburden. *Long*
c. Erosion by percolating water in a layer of subsoil, resulting in caving and in the formation of narrow conduits, tunnels, or pipes through which soluble or granular soil material is removed; esp. the movement of material, from the permeable foundation of a dam or levee, by the flow or seepage of water along underground passages. See also: [water creep](#) *AGI* d. The flow of water under or around a structure built on permeable foundations that will remove material from beneath the structure. *Nelson* e. The tubular depression caused by contraction during cooling, on the top of iron and steel ingots. See also: [pipe](#)

piracy

Stream piracy.

pirssonite

An orthorhombic mineral, $\text{Na}_2 \text{Ca}(\text{CO}_3)_2 \cdot 2\text{H}_2 \text{O}$; forms colorless to white short prisms or tablets; in nonmarine evaporites, particularly the Green River oil shales in Wyoming, and Borax Lake, CA.

pisanite

A blue to green cuproan melanterite $(\text{Fe,Cu})\text{SO}_4 \cdot 7\text{H}_2 \text{O}$.

pisolite

a. A sedimentary rock, usually a limestone, made up chiefly of pisoliths cemented together; a coarse-grained oolite. Syn: [peastone](#) b. A term often used for a pisolith, or one of the spherical particles of a pisolite.---Etymol: Greek pisos, pea. CF: [oolite](#) c. An individual unit in a mass of accretionary lapilli. *AGI*

pisolith

One of the small, round or ellipsoidal accretionary bodies in a sedimentary rock, resembling a pea in size and shape, and constituting one of the grains that make up a pisolite. It is often formed of calcium carbonate, and some are thought to have been produced by a biochemical algal-encrustation process. A pisolith is larger and less regular in form than an oolith, although it has the same concentric and radial internal structure. The term is sometimes used to refer to the rock made up of pisoliths. CF: [oolith](#)

pisolitic tuff

An indurated pyroclastic deposit composed chiefly of accretionary lapilli or pisolites. *AGI*

pistacite

A pistachio-green ferric-iron-rich variety of epidote. Also spelled pistazite.

pistol pipe

In metalworking, the tuyere of a hot-blast furnace. *Fay*

piston

The working part of a pump, hydraulic cylinder, or engine that moves back and forth in the cylinder; it is generally equipped with one or several rings or cups to control the passage of fluid. It ejects the fluid from the cylinder, as in a pump, or receives force from the fluid, which causes a reciprocating motion, as in an engine. *Long*

piston corer

An oceanographic corer containing a piston inside the cylinder which reduces friction by creating suction. There are several varieties, including the Ewing corer, the Mackereth sampler, and the Kullenberg corer. CF: [gravity corer](#)

piston drive-sampler

See: [piston sampler](#)

piston sampler

A drive sampler equipped with either a free or a retractable-type piston that retreats up into the barrel of the sampler in contact with the top of the soil sample as the sampler is pressed into the formation being sampled. CF: [drive sampler](#)

piston speed

Total feet or meters of travel of a piston in 1 min. *Nichols, 1*

piston-type sampler

See: [piston sampler](#)

piston-type washbox

See: [plunger-type washbox](#)

pit

a. Depression produced in a metal surface by nonuniform electrodeposition or by corrosion. *Lowenheim* b. Excavation to hold quantities of water and drilling fluids. *Wheeler, R.R.* c. So. Wales. Long, open-air fire for converting coal into coke for blast-furnace purposes. *Fay* d. A mine, quarry, or excavation worked by the open-cut method to obtain material of value. e. The shaft of a mine; a shaft mine; a trial pit. *Nelson* f. The underground portion of a colliery, including all workings. Used in many combinations, as pit car, pit clothes, etc. g. In hydraulic mining, the excavation in which piping is carried forward. h. Commonly, a coal mine, but not usually called so by workers, except in reference to surface mining where the workings may be known as a strip pit. *BCI* i. See: [abyss](#)

pit ash

Ash in coal derived from the dirt bands, adjoining shales or cleat minerals. *Tomkeieff*

pit bank

a. Eng. The raised ground or platforms upon which the coal is sorted and screened at the surface. See also: [heapstead](#); [pit brow](#); [pithead](#); pit hill. b. Scot. The surface of the ground at the mouth of a pit, or shaft.

pit bar

One of the wooden props bracing the sides of a pit. *Standard, 2*

pit boss

A mine foreman who is in direct charge of workers in a specific portion of a pit or mine. Also called shift boss. See also: [pit foreman](#) *DOT*

pit bottom

The bottom of a shaft and all the equipment and roadways around it. See also: [loop-type pit bottom](#)

pit brow

The pithead, and in particular, the mouth of the shaft. The edge or brow of a pit. See also: [brow](#)

pit cage

The structure used in mine shafts for transport purposes. See also: [cage](#)

pit-car loader

A short, electrically powered, lightweight elevating conveyor designed for use in working places, to facilitate the loading of large cars or to aid in shoveling long distances. The loader shovels into the hopper end and the conveyor carries the coal to the car. *Jones, 1*

pit-car-loader operator

In bituminous coal mining, a person who operates a machine to load coal in mine (pit) cars. *DOT*

pit-car repairer

See: [mine-car repairman](#)

pitch

a. The angle between the horizontal and any linear feature, such as an ore shoot or lineation, measured in the plane containing the linear feature. See also: [rake](#) b. The angle between the horizontal and an axial line passing through the highest or lowest points of a given stratum in an anticline or syncline. c. Loosely, the grade, rise, or incline of a seam or bed. d. A vein-form deposit that follows dipping joint planes. This usage is confined largely to the Upper Mississippi Valley lead-zinc deposits. e. The slope of a roof, in inches (or centimeters), of vertical rise per horizontal foot (or meter). f. The distance between tooth centers, as in a gear wheel, or the number of teeth per unit of diameter. See also: [pitch line](#) g. The grade of an incline or the rise of a coal seam. *BCI* h. The solid or semisolid residue from the partial evaporation of tar. Strictly, pitch is a bitumen with extraneous matter, such as free carbon, residual coke, etc. *Nelson* i. The angular inclination of an ore shoot with respect to the surface, measured in the direction of the strike. *Nelson* j. Of a lode, angle of deviation from the vertical taken by a section of ore having some special characteristic, such as enhanced value. *Pryor, 3* k. The angle that a directional feature, for example, slickensides, in a plane makes with a horizontal line within the plane. *BS, 11* l. In dredging, the distance between the center of any pin and that of the pin in the next adjacent bucket. *Fay m.* See: [dip](#) n. The slope of a surface or tooth relative to its direction of movement. *Nichols, 1* o. In a roller or silent chain, the space between pins, measured center to center. *Nichols, 1* p. The amount of advance of a single-thread screw in one turn, expressed in lineal distance along or parallel to the axis, or in turns per unit of length. *Standard, 2* q. The distance between corresponding points on adjacent projections produced on work by a cutting tool. *ASM, 1*

pitch arm

One of the rods, usually adjustable, which determine the digging angle of a blade or bucket. *Nichols, 2*

pitchblende

The massive variety of uraninite, $UO_{(2+x)}$; radioactive; black to dark brown; the most important ore of uranium; occurs widely in hydrothermal veins and the disseminated uranium-vanadium deposits of the Colorado Plateau type. Syn: [pitch ore](#)

pitch circle

The circle passing through the chain joint centers when the chain is wrapped on the sprocket. *Jackson, 1*

pitch diameter

The diameter of a circle that passes through the points of average contact between the teeth of two gears running in mesh, or between the teeth of a sprocket and the roller of its companion chain, or between a male and a female thread that are engaged. *Brantly, 2*

pitcher

One who picks over dumps for pieces of ore. *Webster 3rd*

pitches and flats

See: [flats and pitches](#)

pitching bar

A kind of pick used, esp. by miners, in beginning a hole. *Webster 2nd*

pitching chisel

A chisel used for making an edge on the face of a stone. Also called pitching tool. *Webster 3rd*

pitching seam

A highly inclined seam. In coal mining, called edge coal. *Nelson*

pitch length

The length of an ore shoot in its greatest dimension.

pitch line

a. The line on which the pitch of gear teeth is measured; an ideal line, in a toothed gear or rack, bearing such a relation to a corresponding line in another gear with which the former works that the two lines will have a common velocity, as in rolling contact. See also: [pitch](#) *Webster 3rd* b. The line along which the pitch of a rack is marked out, corresponding to the pitch circle of a spur wheel. *CTD*

pitch off

A quarry worker's term for trimming an edge of a block of stone with a hammer and set. *Fay*

pitch ore

See: [pitchblende](#); pitchy copper ore.

pitchstone

A dark, resinous volcanic glass.

pitchwork

In coal mining, work done on shares. *Standard, 2*

pitch working

Mine working in a steeply inclined seam.

pitchy

adj. Resembling the appearance or properties of pitch.

pitchy copper ore

a. A dark, pitchlike oxide of copper. Syn: [pitch ore](#) b. A mixture of chrysocolla and limonite.

pitchy iron ore

a. An old syn. for pitticite. See: [pitticite](#) b. See: [triplite](#)

pit efficiency

In order to allow for the friction of the skips on the guides and between the air and the skips in the shaft and for other small losses, it is usual to divide the total static torque at any point of the wind by 0.9 for a new shaft with rope guides, or 0.85 for an old shaft with rigid guides. This factor is generally referred to as pit efficiency. *Sinclair, 5*

pit eye

Bottom of a pit shaft from which the sky is visible. *Pryor, 3*

pit-eye pillar

A barrier of coal left around a shaft to protect it from caving. *Fay*

pit foreman

In bituminous coal mining, a foreman who is in immediate charge of all mining operations in a strip mine. See also: [pit boss](#)

pit frame

a. The framework carrying the pit pulley. See also: [headframe](#) *Fay* b. The framework in a coal mine shaft. *Standard, 2*

pit guide

An iron column that guides the cage in a mine shaft. *Standard, 2*

pit hand

In the iron and steel industry, a general term applied to workers who perform varied duties around the processing furnaces. *DOT*

pithead

a. Landing stage at the top of a shaft. *Pryor, 3* b. The top of a mine shaft including the buildings, roads, tracks, plant, and machines around it. See also: [pit brow](#)

pithead output

The total tonnage of raw coal produced at a colliery, as distinct from saleable output. It is the tonnage of coal as weighed before it enters the coal-preparation plant. See also: [run-of-mine](#)

pit hill

Eng. See: [pit bank](#)

pit lamp

An open lamp worn on a miner's cap, as distinguished from a safety lamp.

pit limit

Either the vertical or lateral extent to which the mining of a mineral deposit by open pitting may be economically carried. The cost of removing overburden or waste material versus the minable value of the ore so exposed is usually the factor controlling the limits of a pit.

pitman

a. The worker who regularly examines the condition of mine infrastructure. *Nelson* b. A connecting rod, such as in the Blake type of jaw crusher; the vertical member linking the eccentric shaft with the toggles between the frame and the lower end of the movable jaw.

pitman arm

An arm having a limited movement around a pivot. *Nichols, 1*

pitmen

Workers employed in shaft sinking or shaft inspection and repair. *CTD*

pit mining

Surface mining in which the material mined is removed from below the surrounding land surface. *AIME, 2*

pitotmeter

An instrument that consists essentially of two pitot tubes one of which is turned upstream and the other downstream and that is used to record autographically the velocity of a flowing liquid or gas. *Webster 3rd*

Pitot-static tube

When the Pitot tube and static tube are combined, they form the Pitot-static tube, and as such they can be used as an anemometer. The tubes are usually arranged concentrically. When they are connected to the opposite sides of a manometer, the dynamic or velocity pressure will be measured directly. *Roberts, 1*

Pitot tube

Consists of two concentric tubes bent in an L shape. In operation, the instrument is pointed in the direction of air flow: the inner tube, open at the end directed upstream, measures total head, and the outer tube, perforated with small openings transverse to the air flow, records static head. Each tube is connected to a leg of a manometer, when reading velocity head. *Hartman, 1*

pit pony

A pony used for packing or haulage in a mine. *Webster 3rd*

pit prop

a. A piece of timber used as a temporary support for a mine roof. *Zern* b. Length of timber used as a roof support in longwall mining. Modern variants include expandable steel props which can be hydraulically or mechanically lengthened; used in stratified deposits. *Pryor, 3*

pit quarry

An openpit quarry sunk below ground level. Access is gained by stairs, ladders, or mechanical hoists, and material is conveyed from the quarry by inclined tracks, trucks, derricks, or cableway hoists. These pits may reach depths of several hundred feet. A drainage scheme will in most cases be necessary, as the pit will form a natural sump for both surface and subsoil water. This type of quarry is often used for gravel or soft rock that can be extracted by some form of digging. See also: [hillside quarry](#)

pit room

a. The number of working places, or the length of a longwall face, available in a mine for coal production. *Nelson* b. The extent of the opening in a mine; pit space. *Fay*

pit rope

Eng. Winding rope; a hoisting rope. *Fay*

pit sampling

a. Use of small untimbered pits to gain access to shallow alluvial deposits or ore dumps for purpose of testing or valuation. *Pryor, 3* b. Sampling shallow deposits by means of trial pits, usually about 2 to 3 ft (0.6 to 0.9 m) in diameter. In reasonably dry ground, depths of 50 ft (15.2 m) or more may be reached. Pit sampling is often used to assist site investigations as it provides the maximum of information regarding the nature of deposits and bedrock. See also: [trial pit](#)

pit sand

a. Sand usually composed of grains that are relatively angular; it often contains clay and organic matter. When washed and screened it is a good sand for general purposes. *Zern* b. Sand from a pit, as distinct from river or sea sand. *Arkell*

pit shale

The name given to the shale from a drift opened in the side of the ravine at a level 62 ft (18.9 m) below that of the Pittsburgh coal seam. *Rice, 2*

pit slope

The angle at which the wall of an open pit or cut stands as measured along an imaginary plane extended along the crests of the berms or from the slope crest to its toe.

pittasphalt

An old name give to viscid bitumen. Syn: [maltha](#) See also: [mineral tar](#)

pitticite

The mineral amorphous, hydrous, ferric arsenate sulfate. It is brown to yellow and red; earthy; occurs as crusts and botryoidal layers; a common oxidation product of arsenical ores. Also spelled pittizite. Syn: [pitchy iron ore](#)

pitting

a. The act of digging or sinking a pit. *Fay* b. Testing an alluvial deposit by the systematic sinking of small shafts, the material recovered being subsequently tested. The practice is confined to shallow depths; i.e., down to about 50 ft (15.2 m) in fairly dry soft ground.

Nelson

Pittsburgh bed

The Pittsburgh coal which outcrops prominently in the vicinity of Pittsburgh and extends under a large area of western Pennsylvania, northern West Virginia, northwestern Maryland, and eastern Ohio. It belongs in the Carboniferous system, Pennsylvanian series, at the base of the Monongahela formation. *Rice, 2*

pit water

Water from the underground workings of a mine. *BS, 5*

pit wood

The various kinds of timber used at a mine, mainly as supports. *Nelson*

pitwork

Cornish pumps and other engineering appliances in and near a mine shaft. *Pryor, 3*

pivot

A nonrotating axle or hinge pin. *Nichols, 1*

pivoted-bucket carrier

The highest type of combined elevator and conveyor. It consists of two long-pitch roller chains joined by crossbars on which are hung the buckets in such a way that they can be completely turned over. *Pit and Quarry*

pivoted-bucket conveyor

A type of conveyor using pivoted buckets attached between two endless chains that operate in suitable guides or casing in horizontal, vertical, inclined or a combination of these paths over drive-corner and take-up terminals. The buckets remain in the carrying position until they are tipped or inverted to discharge. Syn: [bucket elevator](#)

pivot shaft

A tractor dead axle, or any fixed shaft that acts as a hinge pin. *Nichols, I*

pivot tube

A hollow hinge pin. *Nichols, I*

place

a. See: [in situ](#) b. The part of a mine in which a miner works by contract is known as his "place" or "working place." c. A point at which the cutting of coal is being carried on.

placer

A deposit of sand or gravel that contains particles of gold, ilmenite, gemstones, or other heavy minerals of value. The common types are stream gravels and beach sands. See also: [alluvial deposit](#); [beach placer](#).

placer claim

a. A mining claim located upon gravel or ground whose mineral contents are extracted by the use of water, by sluicing, hydraulicking, etc. The unit claim is 1,320 ft² (122.6 m²) and contains 10 acres (4.1 ha). See also: [mining claim](#) b. Ground with defined boundaries that contains mineral in the earth, sand, or gravel; ground that includes valuable deposits not fixed in the rock. See also: [claim](#); [lode claim](#). c. The maximum size of a placer claim is 20 acres (8.1 ha). Association claims of two or more persons may be located up to an area of 160 acres (64.8 ha) for eight persons. Placer claims must have a discovery. They should be staked, a location notice posted, and recorded in the same manner as for lode claims, stating the mineral for which the location is made. *Lewis*

placer digging

a. The action of mining by placer methods. *Craigie* b. A place at which placer mining is or may be carried on. *Craigie*

placer gold

Gold occurring in more or less coarse grains or flakes and obtainable by washing the sand, gravel, etc., in which it is found. Also called alluvial gold. See also: [stream gold](#)

placer ground

Ground where placer mining can be done; i.e., where valuable minerals can be obtained by digging up the earth and washing it for the valued mineral. *Craigie*

placer location

A location of a tract of land for mineral-bearing or other valuable deposits upon or within it that are not found within lodes or veins in rock in place; a claim of a tract of land for the sake of the loose deposits on or near its surface. *Ricketts*

placer mine

a. A deposit of sand, gravel, or talus from which some valuable mineral is extracted. *Hess* b. See: [placer mining](#)

placer mining

a. The extraction of heavy mineral from a placer deposit by concentration in running water. It includes ground sluicing, panning, shoveling gravel into a sluice, scraping by power scraper and excavation by dragline, dredge or other mechanized equipment. *Nelson* b. Extracting the gold or other mineral from placers, wherever situated--in dry channels and in channels temporarily filled with water. The mineral may be found in deep channels, in navigable streams, or in estuaries or creeks and rivers where the sea ebbs and flows. *Ricketts* c. That form of mining in which the surficial detritus is washed for gold or other valuable minerals. When water under pressure is employed to break down the gravel, the term hydraulic mining is generally employed. There are deposits of detrital material containing gold which lie too deep to be profitably extracted by surface mining, and which must be worked by drifting beneath the overlying barren material. The term "drift mining" is applied to the operations necessary to extract such auriferous material. See also: [dredge](#) d. The extraction and concentration of heavy metals or minerals from placer deposits by various methods, generally using running water. CF: [alluvial mining](#); [hydraulic mining](#); [drift mining](#). *AGI*

placodine

See: [maucherite](#)

plaffeiite

A fossil resin found in Switzerland. *Tomkeieff*

plagihedral

See: [plagihedral](#)

plagioclase

a. Any of a group of feldspars containing a mixture of sodium and calcium feldspars, distinguished by their extinction angles; crystal; triclinic; Mohs hardness, 6; and sp gr, 2.6 to 2.7. *Bennett* b. A series of triclinic feldspars of general formula: $(\text{Na,Ca})\text{Al}(\text{Si,Al})\text{Si}_2\text{O}_6$; at high temperatures it forms a complete crystal solution series from albite, $\text{NaAlSi}_3\text{O}_8$, to anorthite, An , $\text{CaAl}_2\text{Si}_2\text{O}_8$; the series is arbitrarily subdivided and named according to increasing mole fraction of the An component: albite (An 0% to 10%), oligoclase (An 10% to 30%), andesine (An 30% to 50%), labradorite (An 50% to 70%), bytownite (An 70% to 90%), and anorthite (An 90% to 100%). The Al:Si ratio ranges with increasing An content from 1:3 to 1:1. Plagioclase feldspars are common rock-forming minerals, have characteristic polysynthetic twinning, and commonly display zoning. The term was originally applied to all feldspars having an oblique angle between the two main cleavages. CF: [alkali feldspar](#); [orthoclase](#). Syn: [sodium-calcium feldspar](#)

plagioclase rhyolite

A porphyritic extrusive rock with phenocrysts of plagioclase and quartz in a groundmass of orthoclase and quartz. Also called plagioliparite. Syn: [dellenite](#)

plagioclastic

Having the cleavage of plagioclase; breaking obliquely. *Standard, 2*

plagihedral

Having an oblique spiral arrangement of faces; specif., being a group of the isometric system characterized by 13 axes of symmetry but no center or planes. Also spelled plagihedral. *Webster 3rd*

plagionite

A monoclinic mineral, $\text{Pb}_5\text{Sb}_8\text{S}_{17}$; metallic black to lead-gray; forms stubby tablets; an uncommon associate of other lead sulfosalts in hydrothermal veins.

plain

a. An extent of level, or nearly level, land; a region not noticeably diversified with mountains, hills, or valleys. *Fay* b. A flat, gently sloping or nearly level region of the sea floor. *Hunt* c. Archaic. Relatively free of gaseous inclusions. *ASTM*

plain clinometer

A clinometer having only its upper end threaded to fit drill rods. Also called end clinometer. See also: [clinometer](#) wedge clinometer. *Long*

plain concrete

Concrete with no reinforcement. *Hammond*

plain detonator

A detonator for use with a safety fuse. It consists of an aluminum tube closed at one end and partly filled with a sensitive initiating explosive. The tube is only partially filled because a plain detonator is always used in conjunction with a safety fuse, and the empty space enables the fuse to be inserted into the tube until it comes into contact with the detonating composition. The safety fuse is then secured in position by indenting the detonator tube, this process being known as crimping. The combination of safety fuse and plain detonator is called a capped fuse. *BS, 12; McAdam, 2*

plain pilot

A pilot in the surface of which no cutting points, such as diamonds or slugs, are inset. See also: [pilot](#)

plaiting

A texture seen in some schists that results from the intersection of relict bedding planes with well developed cleavage planes. *AGI*

plan

a. A map showing features--such as mine workings, geological structures, and outside improvements--on a horizontal plane. See also: [colliery plan](#) b. A scheme or project for mine development. See also: [planning](#) *Nelson* c. The system on which a colliery is worked, such as longwall, room-and-pillar, etc. *Zern*

planar

Lying or arranged as a plane or in planes, usually implying more or less parallelism, as in bedding or cleavage. It is a two-dimensional arrangement, in contrast to the one-dimensional linear arrangement. *AGI*

planar cross-bedding

a. Cross-bedding in which the lower bounding surfaces are planar surfaces of erosion. It results from beveling and subsequent deposition. *AGI* b. Cross-bedding characterized by planar foreset beds. *AGI*

planar element

A fabric element having two dimensions that are much greater than the third; e.g., bedding, cleavage, and schistosity. CF: [linear element](#) *AGI*

planar flow structure

See: [platy flow structure](#)

planar gliding

Uniform slippage along plane surfaces. *AGI*

planar structure

See: [platy flow structure](#)

planation

The widening of valleys through lateral corrasion by streams after they reach grade and begin to meander and form floodplains. Also, by the extension, the reduction of divides and the merging of valley plains to form a peneplain; peneplanation.

plane

a. Any roadway, generally inclined but not necessarily so, along which ore or workers are conveyed by mechanical means from one bed to another or to a lower elevation in the same bed. See also: [bedding plane](#); [fault plane](#); slope. *Nelson* b. A road on the natural floor of a seam. *Mason* c. A two-dimensional form that is without curvature; ideally, a perfectly flat or smooth surface. In geology the term is applied to such features as a bedding plane or a planation surface. Adj: planar. See also: [surface](#) *AGI* d. In crystallography, a plane of symmetry dividing a crystal structure into two mirror images. See also: [symbols of crystal faces](#) e. A level surface bounded by straight lines, such as the faces of crystals. *Gordon*

plane course

Scot. In the direction facing the joint planes. Syn: [on plane](#)

plane engineer

See: [slope engineer](#)

plane fault

A fault with a surface that is planar rather than curved.

plane figure

A plane surface bounded either by straight lines or curved lines or by a combination of straight and curved lines. *Jones, 2*

plane group

The 17 possible combinations of symmetry elements which may coexist in 2 dimensions. CF: [space group](#)

plane man

See: [incline man](#)

plane of saturation

See: [water table](#)

plane of stretching

A low-angle gravity (normal) fault resulting from stretching of the solidified top of an igneous intrusion.

plane of symmetry

Any plane which divides a crystal, crystal structure, or crystal symmetry such that each side is a mirror reflection of the other. Represented as m or 2 and graphically as a solid or heavy line. Syn: [mirror plane](#)

plane or rectangular coordinate

Either of two perpendicular distances of a point from a pair of rectangular coordinate axes. *Seelye, 2*

plane-polarized light

Light with its electric vector confined to a plane.

planer

a. First developed as a fixed-blade device for continuous longwall mining of narrow seams of friable coal, this machine is pulled along the coal face, planing a narrow cut. Vibrating-blade planers were designed later in an attempt to apply the technique to harder coal; they have also been experimented with in the phosphate mines in western Montana and northern Idaho. b. A machine provided with a cutting tool having lateral and vertical adjustment that is widely used in stone trimming. Both sides and tops of blocks may be planed to desired dimensions. Some planers may be adjusted to cut curved forms.

planerite

A triclinic mineral, $\text{Al}_6(\text{PO}_4)_2(\text{PO}_3\text{OH})_2(\text{OH})_8 \cdot 4\text{H}_2\text{O}$; turquoise group.

plane schistosity

A type of schistosity characterized by the arrangement of tabular and prismatic grains in parallel planes.

plane shear

One of four types of slope failure. Plane shear failure results when a natural plane of weakness, such as a fault, a shear zone, or bedding plane exists within a slope and has a direction such as to provide a preferential path for failure. Large intact portions of the slope rock may slide along this plane surface. *Woodruff*

plane strain

A state of strain in which all displacements that arise from deformation are parallel to one plane, and the longitudinal strain is zero in one principal direction. *AGI*

plane stress

A state of stress in which one of the principal stresses is zero.

plane surveying

Ordinary field and topographic surveying in which Earth curvature is disregarded and all measurements are made or reduced parallel to a plane representing the surface of the Earth. The accuracy and precision of results obtained by plane surveying may decrease as the area surveyed increases in size. CF: [geodetic surveying](#)

plane table

a. An instrument for plotting the lines of a survey directly from the observations; consisting essentially of a drawing board mounted on a tripod and fitted with a ruler that is pointed at the object observed, usually with the aid of a sighting device, such as a telescope. *Webster 3rd* b. An inclined ore-dressing table. *Standard, 2*

planetary geared drum

A drum containing planetary gearing that is used to control the motion of the rope drums on certain types of mining machines. In planetary gearing, which is used when a large ratio of speed reduction with only a few operating gears is required, some or all of the gear wheels in the train of mechanism have a motion about an axis and a revolution about the same axis. *Jones, 1*

planetary lap

A type of machine lap employing a number of geared workholders that rotate with an epicyclic motion between two stationary lapping plates. The crystals being lapped, when contained in pentagonal holes in the workholder, have an imposed rotatory motion. Also known as the Hunt-Hoffman lap or Bendix lap. *Am. Mineral., 2*

planetary mill

Mill used for making very large reductions on slabs by one pass through the mill. The mill consists of two large plain rolls, each surrounded by many small work rolls. *Osborne*

planetary set gear

A gearset consisting of an inner (sun) gear, an outer ring with internal teeth, and two or more small (planet) gears meshed with both the sun and the ring. *Nichols, 1*

plane tender

See: [slope engineer](#)

planet gearing

Gearing in which one gear wheel revolves around another. *Mason*

planimeter

An instrument for measuring the area of any plane figure by passing a tracer around its boundary line. *Webster 3rd*

planimetric analysis

Analysis of patterns in a fabric diagram based on distribution of points and areal comparisons. *AGI*

planimetric map

A map that presents only the relative horizontal positions of natural or cultural features, by lines and symbols. It is distinguished from a topographic map by the omission of relief in measurable form. Syn: [line map](#)

planimetry

a. The measurement of plane surfaces; e.g., the determination of horizontal distances, angles, and areas on a map. *AGI* b. The plan details of a map; the natural and cultural features of a region (excluding relief) as shown on a map. *AGI*

planisher

A device for flattening thin sections cut for microscopic examination. *Standard, 2*

plank timbering

The lining of a shaft with rectangular plank frames. See also: [box timbering](#)

plankton

The whole community of drifting small plants and animals in layers of the water. This term is frequently used to describe all life forms, regardless of size, which have no means of significant self-locomotion. This community can be divided into the phytoplankton (plants) and the zooplankton (animals). *Hy*

plankton bloom

The rapid growth and multiplication of plankton, usually plant forms, producing an obvious change in the physical appearance of the sea surface, such as coloration or slicks. Also called sea bloom; florescence. *Hy*

planktonic

Relating to the chiefly simple types of floating and surface-dwelling forms of organisms of the ocean waters. *Schieferdecker*

plank tubbing

The lining of a shaft with planks, spiked on the inside of curbs. See also: [tubbing](#)

planning

The predesign of the detailed layout, main roadways, and workings of a mine or group of mines. The scheme usually involves the introduction of mechanical equipment for the working and transport of the coal or mineral. The selection of mining methods and machines properly adapted to the local conditions is part of planning. *Nelson*

planning engineer

A mining engineer responsible for mine planning. The engineer is attached to the planning department of a large mine or a group of smaller mines and is qualified by training, experience, and technical qualifications to envisage new development work and coordinate the ideas of other experts such as a mechanization engineer, ventilation engineer, mining geologist, etc. *Nelson*

planometric projection

Pictorial view of an object showing it in plan with oblique lines showing the front, side, and thickness. See also: [projection](#)

planosol

A great soil group in the 1938 classification system; an intrazonal, hydromorphic group of soils having a leached surface layer above a definite clay pan or hardpan. These soils develop on nearly flat upland surfaces under grass or trees in a humid to subhumid climate. *AGI*

plant

a. The shaft or slope, tunnels, engine houses, railways, machinery, workshops, etc., of a colliery or other mine. b. To place gold or any valuable ore in the ground, in a mine, or the like to give a false impression of the richness of the property. To salt, as to plant gold with a shotgun. See also: [salting a mine](#) c. In mining, the mechanical installations, machines, and their housings. Earthworks are sometimes loosely included. *Pryor, 3* d. Used to include the machinery, derricks, railway, cars, etc., employed in tunnel work. *Stauffer*

plant mix

The process of soil stabilization in which the soil is carried to a stationary mixer, returned to the site after mixing and then spread. CF: [mix-in-place](#)

plant-mixed concrete

Concrete that is mixed at a central mixing plant and delivered to a site in special equipment designed to prevent its segregation. *Hammond*

plant-mix method

A method of preparing aggregates for bituminous surfaces in which aggregates and bitumen are combined in a plant situated at the road or at a relatively long distance from the road. Also known as the premixed method. *Pit and Quarry*

plant scrap

Scrap metal produced in the plant itself; e.g., sprues and gates in a foundry or defective ingots and hot tops in a steel mill. Also called home scrap. *Newton, 1*

plasma

a. Gas comprising equal amounts of positively and negatively charged particles; a fourth state of matter (solid, liquid, gas, plasma) capable of conducting magnetic force. *Pryor, 3*
b. A bright-, leek-, to emerald-green subtranslucent variety of cryptocrystalline (chalcedonic) quartz. The green color is attributed to chlorite. CF: bloodstone; [heliotrope](#).
c. That part of a soil which can be or has been moved, reorganized, and/or concentrated by soil-forming processes.

plasma jet

a. A jet formed by passing a high-speed current of nitrogen or a mixture of nitrogen and hydrogen over a tungsten electrode placed in a specially designed narrow orifice in a cutting torch. An arc is struck between this electrode and the earthed nozzle of the torch, which is cooled by a water jacket. When a plasma jet is used to cut rock, two separate zones of action can be expected. *Min. Miner. Eng., 1*
b. Ionized gas produced by passing an inert gas through a high-intensity arc, causing temperatures up to tens of thousands degrees centigrade. *Harbison-Walker*

plastering

See: [mudcapping](#)

plaster mill

A machine consisting of a roller or set of rollers for grinding lime or gypsum to powder. *Fay*

plaster pit

Derb. A gypsum mine.

plaster shooting

a. A surface blasting method used when no rock drill is available or is not necessary. It consists of placing a charge of gelignite, primed with safety fuse and detonator, in close contact with the rock or boulder and covering it completely with stiff damp clay. The charges vary from 8 to 16 oz/yd³ (297 to 593 g/m³) of rock. See also: [popping](#); snakeholing. *Nelson* b. A form of secondary blasting in which the explosive is detonated in contact with the rock without the use of a shothole. See also: [secondary blasting](#); [mudcapping](#). *BS, 12*

plaster stone

See: [gypsum](#)

plastic

Said of a body in which strain produces continuous, permanent deformation without rupture. CF: [elastic](#)

plastic and semiplastic explosive

Any of several explosives used for commercial purposes. The consistency is such that the explosive can be shaped by moderate pressure to fill a drill hole. The difference between plastic and semiplastic form is primarily dependent on the difference in equipment which has been found necessary in manufacturing cartridges of the explosive. The viscosity of the plastic type makes it possible to produce cartridges by a process of extrusion through tubes. *Fraenkel*

plastic clay

Any clay, but chiefly kaolinite, which, when mixed with water, is easily shaped and retains this shape until fired.

plastic deformation
